and one at the hamlet of Mersington; and they also were annexed to the convent, and, along with the parish-church, continued to be connected with it till the Reformation. The nunnery stood in the neighbourhood of the mansion of Eccles, and appears to have occupied an area of six acres. The only remains of it are part of a wall and 2 vaulted cells. The convent, like other religious houses on the border, did homage to Edward III., after his capture of Berwick. In 1523, it gave a few hours lodging to the Duke of Albany, when retreating from Wark castle; in 1545, it was destroyed in the course of the devastating excursion of the Earl of Hertford; and in 1569, it was formally, as to its property, erected by Queen Mary into a temporal lordship for George Hume, who became Earl of Dunbar.

ECCLESCRAIG. See **ST. CRRUS.**

ECCLESFECHAN. See **ECCLEFECHAN.**

ECCLESIAMAGIRGLE. See **DRON.**

ECCLESMACHAN, a parish, containing the hamlets of Ecclesmachan, Threemiletown, and Waterston, in Linlithgowshire. It consists of two detached and nearly equal parts, the one near the centre of the county, and the other somewhat to the north-east. The south-western part is bounded on the north by Linlithgow, on the east by Uphall, on the south by Uphall and Livingston, and on the south-west and west by Bathgate; and lies within $\frac{1}{2}$ a mile of the post-office of Uphall, and railway station of Houston. It is of an oblong figure; and in its greatest length measures $2\frac{3}{4}$ miles, and in its greatest breadth $1\frac{1}{2}$. The north-eastern part, lying at the nearest point a mile apart from the other, is bounded on the north by Abercorn and the Auld-cathie portion of Dalmeny, on the east by Kirkliston, on the south by Uphall, and on the west by Linlithgow; and it reaches within a mile of the post-office and railway station of Winchburgh. It is of irregular outline, and measures about $1\frac{3}{4}$ mile in length, and, over half that length, $1\frac{1}{2}$ in breadth, but over the other half only $\frac{3}{4}$. Except the south-western section of the south-western part, where the low hills of Bathgate begin to rise, the whole parish is a flat corn country, producing in abundance all sorts of grain raised in West Lothian. Coal seems to stretch athwart all its extent. Excellent freestone also abounds. Near the manse is a mineral spring, called the Bullion-well, having the same properties as the mineral springs of Moffat. There are four principal landowners. The real rental is nearly £3,000. The yearly value of raw produce was estimated in 1843 at £7,960. Assessed property in 1843, £2,718 9s. 6d. The village of Ecclesmachan stands on the southern verge of the north-eastern section of the parish, $2\frac{1}{2}$ miles west-south-west of Winchburgh. Population of the village, 97. Houses, 19. Population of the parish in 1831, 299; in 1861, 309. Houses, 56.

This parish, formerly a rectory, is in the presbytery of Linlithgow, and synod of Lothian and Tweeddale. Patron, the Earl of Hopeton. Stipend, £256 11s. 8d.; glebe, £15. Unappropriated tithes, £140 11s. 1d. Schoolmaster's salary, is £52 10s., with about £35 school-fees. The parish church was a very ancient structure, but was in great part rebuilt in the beginning of last century, and repaired in 1822. Sittings, 153.

ECHT, a parish in the Kincardine O'Neil district of Aberdeenshire. It contains a post-office station of its own name, and lies from 10 to 14 miles west of Aberdeen. It is bounded on the north by the parishes of Cluny and Skene; on the east by Skene and Peterculter; on the south by Drum-oak parish and part of Kincardineshire; and on the west by the parish of Midmar. Its form

is nearly square, measuring $4\frac{1}{2}$ miles from east to west and from north to south. Though this is a hilly district, few of the hills are of great height, and many of them are under tillage to the very summit. The hill of Fare, which has an elevation of 1,794 feet above sea-level, stands partly within the south-western boundary. See **FARE.** The total extent of area under cultivation is about 8,000 acres; the extent never cultivated, 5,700 acres; the extent under wood, from 2,000 to 2,500 acres. The arable soil is partly clay and partly light sand, and in general is highly improved. The How of the Echt is a valley in the centre of the parish, where the air is very mild and salubrious. The Loch of Skene is on the north-eastern boundary; and various burns effect the general drainage southward to the Peterculter burn, which falls into the Dee. There are four principal landowners. The valued rental is £2,364 15s. Scots. The yearly value of raw produce was estimated in 1842 at £3,362 9s. Assessed property in 1843, £5,690. Echt-house, the seat of Lord Lindsay, the most extensive heritor, is an elegant modern mansion, surrounded with extensive and thriving plantations. On the top of the Barmekin, one of the highest hills, is an ancient circular fortification concerning which tradition is silent. Here are also several cairns and druidical edifices. The road from Aberdeen to Alford goes across the northern border of the parish, and that from Aberdeen to Tarland through its centre. Fairs are held on the estate of Echt on the Monday in July before St. Sairs, on the Tuesday in October before Kinkell, and on the first Tuesday of each of the other ten months in the year. Population in 1831, 1,030; in 1861, 1,287. Houses, 241.

This parish is in the synod of Aberdeen, and presbytery of Kincardine O'Neil. Patron, the Earl of Fife. Stipend, £182 16s. 8d.; glebe, £10. Schoolmaster's salary, under the recent act, £45, and other emoluments. The parish church was built in 1804, and contains 600 sittings. There is a Free church: attendance, 200; receipts in 1865, £77 15s. 10d. There are a female school and two other endowed schools.

ECK (Loch), a fresh-water lake in the parishes of Strachur and Dunoon, Cowal, Argyleshire. It stands nearly northward and southward, with a length of about 7 miles, and a pretty uniform breadth of about $\frac{1}{2}$ a mile. Its depth varies from shallowness to about 60 fathoms. The Cur enters its head, and the Eachaig issues from its foot. See **CUR,** **EACHAIG,** and **DUNOON.** To the scenery around Loch-Eck the epithet of beautiful may, with much propriety, be applied. The mountains are not so lofty as in some other districts of the country; but all are finely formed, and present a graceful and varied outline. Many of them are green to the top, and slope gently down towards the lake, while others are more precipitous and rocky; but throughout their aspect is singularly pleasant and interesting. There are no extensive woods near this lake; but its shores, particularly on the east side, are delightfully fringed with trees and copses. The road from Ardintenny to Strachur is carried for some miles along that side, and presents to the traveller a most agreeable succession of landscapes.

Near the head of Loch-Eck is a little round hill called Tom-a-Chorachasich, or 'the hill of Chorachasich.' The tradition with regard to this mount is, that a prince of Norway, or Denmark, having been defeated by the natives, was pursued, overtaken, and killed at this place, where his grave is pointed out. He is said, of course, to have been of gigantic stature, and is still called in Gaelic, An Corrach.

asach mhor, mac Rìgh Lochlan, 'the great Corrach-asach, son to the King of Denmark.' Another tradition says that a battle was fought with the Norwegians, in a field near the head of Glen-Finnart, and within a short distance of Loch-Eck, where the Norwegians were defeated with great slaughter. The field is still called 'the Field of Shells,' from the number of drinking-shells belonging to the slaughtered Norwegians said to have been found on it after the battle. This tradition, in all probability, alludes to an incursion made up Glen-Finnart by some Norwegians, from that part of Haco's fleet which sailed up Loch-Long at the time he invaded Scotland in 1262; an invasion that terminated with the battle of Largs.

ECKFORD, a parish, containing the villages of Eckford, Eckfordmoss, Cessford, and Caverton, in the lower part of Teviotdale, Roxburghshire. It is of nearly triangular form, having its angles to the north, south, and west; and is bounded on the east by Sprouston, Linton, Morebattle, and Hounam; on the south-west by Jedburgh and Crailing; and on the north-west by Roxburgh and Kelso. From its southern to its northern angle it measures $6\frac{1}{2}$ miles, and from its western angle to Hutt $4\frac{1}{2}$. A small part of it lies on the west of the Teviot; the main body is intersected westward, and divided into nearly equal parts, by the Kail; and a rill, which rises in Sprouston parish, forms, till flowing into the Kail, its eastern boundary-line. The parish has throughout an undulating surface, and rises gradually toward the south. Its heights are, in general, only knolls; but, in the instances of Woodenhill in the south, and Cavertonhill in the centre, are noticeable eminences. Cavertonhill commands a far and minute view of the picturesque valley of the Teviot, and the interesting vale of the Kail, with the fuc, though somhre, background of the Border range of mountains. Within the parish itself the Kail ploughs its impetuous way between hold, romantic, and well-wooded banks. Plantation is so abundant as to afford the district ample shelter, and add abundantly to its decoration. The soil, on the low grounds in the west, is a light loam, and on the higher grounds toward the south, is clayey; hut, in different parts of the parish, and even on the same farm, is various, though, in general, richly productive. About 7,740 acres are under cultivation, about 1,140 uncultivated, and about 814 under wood. The Duke of Roxburgh and the Duke of Buccleuch are the principal landowners; but there are several others. The real rental rose from £3,700 in 1791 to £8,676 in 1836. The yearly value of raw produce was estimated in 1836 at £26,891 12s. Assessed property in 1864, £10,751 4s. 11d. There are in the parish an agricultural implement manufactory, a saw-mill, and three corn-mills. The parish is traversed a short way, from north to south, by the great road from Berwick to Carlisle; and, in the same or other directions, by 7 subsidiary or cross-roads. There are two stone bridges over the Kail, and a beautiful suspension-bridge, 16 feet broad and 180 long, over the Teviot. The village of Eckford stands on the right bank of the Teviot, on the principal intersecting road, 6 miles south by west of Kelso, which is the parish's post-town. Population of the village, 81. Houses, 18. Population of the parish in 1831, 1,148; in 1861, 957. Houses, 190.

Eckford parish, situated as it is within a few miles of the Border, was laid waste, in former times, by many feuds and forays; and it had several towers or strongholds, particularly those of Eckford, Ormiston, Woodenhill, the Moss, and Cessford. The last, even from the appearance of its ruins, may be con-

jectured to have been a place of considerable importance; and, in a letter to Henry VIII., it was represented by the Earl of Surrey, after he had vainly attempted to carry it by storm, and had obtained possession of it by capitulation, as being the strongest fastness in Scotland except Fast castle and Dunbar castle. Cessford castle was the original patrimonial property of the Dukes of Roxburgh. Here, according to Wodrow, Henry Hall of Haughhead and other Covenanters were incarcerated in 1666. See CESSFORD. On the farm of Hospital-land a tumulus was opened, and there were found two earthen pots containing fragments and dust of human bones. Anciently, to the east of the village of Caverton, stood a chapel, the cemetery of which still exists. In 1554, the parish-church of the period was burnt by the English.

This parish is in the presbytery of Jedburgh, and synod of Merse and Teviotdale. Patron, the Crown. Stipend, £219 14s. 7d., with 42 lbs. of cheese as vicarage teinds; glche, £12 5s. Unappropriated teinds, £1,254 0s. 10d. The ancient church belonged to the abbey of Jedburgh. The present church was built in 1662, and has been frequently repaired. Sitings, about 300. There are two parochial schools, at respectively Eckford and Caverton-mill. Salary of the Eckford master now fixed at £50, with fees; of the Caverton-mill master, under the recent act £30, and some other emoluments. There are two private schools and a public library. At Marlefield, in this parish, was born Sir William Bennet, the intimate patronial friend of the poets Ramsay and Thomson; and in the vicinity of Marlefield-house is a spot which some persons contend to be the scene of the Gentle Shepherd. In opposition to this fancy, however, see the article HABNIE'S HOW.

ECKFORDMOSS, a village in the parish of Eckford, Roxburghshire. Population, 48. Houses, 11.

EDAY, a parish near the middle of the North Isles of Orkney. It comprises the inhabited islands of Pharay and Eday, and five uninhabited islets. Pharay lies to the west of the northern half of Eday, and will be described in its own alphabetical place. The inhabited islets are the Holm of Pharay and the Red Holm, lying to the north of Pharay; the Calf of Eday, lying to the north-east of Eday; and the Little Green Holm and the Muckle Green Holm, lying to the south-west of Eday. All these islets are pastoral. Eday extends north and south, with a length of $7\frac{1}{2}$ miles, and an extreme breadth of 3 miles. Its north end is $1\frac{1}{2}$ mile west of Sanday, and $2\frac{1}{2}$ miles east of Westray; its south end is $2\frac{1}{2}$ miles west of Stronsay, and 5 miles east of Rousay; and its southern extremity is $3\frac{1}{2}$ miles north by east of Papinshay, and $13\frac{1}{2}$ north-north-east of Kirkwall. It consists chiefly of hills of moderate height, and contains much moss, from part of which the neighbouring islands are supplied with fuel; yet it is extensively pastoral, and has also a good proportion of excellent arable land. The yearly value of its produce, together with that of Pharay and the Holms, was estimated in 1841 at £5,933 17s. 7d.; but this includes live stock, fish, peats, and kelp. The island, near its middle, is indented by the sea on both sides, so as to leave only a narrow isthmus connecting the two ends. It possesses two good harbours or roadsteads, each sheltered by an islet, where vessels of any burden may ride in safety. One of these, called Fier's-Ness, lies on the west side, in the central indentation of the coast, sheltered by Pharay; and the other, called Calf Sound, lies on the north-east, about $1\frac{3}{4}$ mile in length and comparatively narrow, sheltered from end to end by the Calf of Eday, which is much the largest of the

Holms, and distinguished for its fine turf and sheep pasture. Eday belonged in the 17th century to Lord Kinclaven, who built a house here, and erected salt-pans which were worked with equal spirit and success during the lifetime of their patron. This nobleman—who was brother of Patrick Stewart, Earl of Orkney—had been by Charles I. created Earl of Carrick, which name he conferred on a village near the harbour of Calf sound, and which was through his influence erected into a burgh-of-barony. But, as he died without lawful issue, the title became extinct, the house crumbled down, and the village sunk into obscurity. In 1725, the pirate Gow, trusting to the defenceless state of the country, entered this harbour; but one of the proprietors, then residing in the house of Carrick, supported by his equally intrepid neighbours, seized the pirate, his crew, and his ship, and thus promptly freed the world of one who had been for a long time a pest to society. The Red-head, which forms one of the sides of the harbour, contains an excellent freestone quarry, which, it has been supposed, notwithstanding the distance, furnished stones for the cathedral of St. Magnus in Kirkwall. Here is a standing stone, of about 16 feet in height, called the Great stone of Seter, similar to those which are observed in the other islands. Here are also the remains of several Picts' houses; and a number of tumuli. Population of the island of Eday in 1861, 897. Houses, 166. Population of the parish of Eday in 1831, 756; in 1861, 979. Houses, 175.

This parish is in the presbytery of North Isles, and synod of Orkney. But it is united to Stronsay, and forms one charge with that parish. See STRONSAY. There is a parish church in Eday, which was built in 1816, and is served by a missionary of the Royal Bounty. Salary of the missionary, £50, with a manse. There are also in Eday an United Presbyterian church, built in 1831, and containing 308 sittings, and a Baptist meeting-house. There are an Assembly's school, and one or two private schools.

EDDERACHILLIS, a parish, containing the post-office village of Scourie, on the west coast of Sutherlandshire. It is bounded by the Atlantic ocean, and by the parishes of Durness, Farr, Lairg, Creech, and Assynt. Its length, in the direction of south-south-east, is 27 miles; its length in a straight line southward on the coast is 18 miles; its extreme breadth westward is 17 miles; but its land area, in consequence of great contractions of its breadth, and great intrusions of sea-lochs and fresh water lakes, is only about 175 square miles. Numerous isles and islets on the coast and in the sea-lochs belong to it; much the most noticeable of which is Handa, situated within about a mile of the central part of its sea-board. See HANDA. The great sea-loch Kyle-Skou projects far south-eastward along the southern boundary; and the smaller though still considerable sea-lochs, Laxford and Inchar, project westward into the interior, at 3 miles distance from each other, and the former $9\frac{1}{2}$ miles north of Kyle-Skou, the latter $5\frac{1}{2}$ miles south of the northern boundary. These sea-lochs divide the mainland of the parish, or at least the inhabitable parts of it, into three sections,—Edderachillis proper, or Scourie, between Kyle-Skou and Loch Laxford, Ceathramh-garbh or 'the rough territory,' between Loch Laxford and Loch Inchar, and Ashir or 'the cultivable country,' between Loch Inchar and the extreme north.

Edderachillis is justly reputed the wildest and most rugged parish in Scotland. The inland parts of it are a Highland chaos, one of the grandest Scottish haunts of the red-deer and the eagle, presenting

a vast group of rugged mountains, their summits enveloped in clouds, and divided from one another by deep and narrow glens, whose declivities are so rugged and steep as to be dangerous to travellers unfurnished with guides. The sea-board parts, along a public road from Kyle-Skou to the vicinity of Loch Laxford, are graphically described as follows by the Messrs. Anderson, in their Guide to the Highlands:—"After leaving the ferry, the road proceeds with a long hut not very steep ascent, until, rounding the shoulder of the hill, it declines gently along the high side of a deep valley. For a considerable distance the road winds up and down in many a tortuous flexure through narrow defiles, the view being limited by the surrounding masses of rock and hill; but several small tarns and lochs occasionally of some size, each completely girdled round with rocky eminences, and frequently adorned with beautiful aquatic plants, appear at almost every bend of the road. The number of these lakes here, as in Assynt, especially in the north-west division, is incredible; and, being distinguished either by dark, still water, indicative of great depth, at the foot of rugged rocks, or by green sedgy banks and shallow margins, beautifully ornamented with the stately hulrush and the elegant flowers and handsome leaves of the white water lily, are very pleasing features amid the singular scenery of the district. The road is generally pretty much elevated; but here and there it descends to the coast. From the top of the mountains, many of which attain an elevation of 3,000 feet, the country, intersected by arms of the sea, and chequered with lakes, rivers, and ravines, presents a peculiar aspect. Viewed from some miles' distance at sea, the landboard is considered to be a close resemblance to the Norwegian coast. A few miles further on, the road passes through a small wild glen, along a noisy stream that foams down its rocky bed into the sea at the safe harbour of Loch Colva. The projecting and angular ledges of rock that form the south side of this glen are very striking, and form a marked and beautiful variety in the scenery. Beyond this glen, the scenery retains a similar character until we reach the sheltered bay of Badcaul; improved, however, at a few points, by occasional vistas of the ocean. Badcaul, where the manse and parish church are situated, and a large establishment for the preserving of the salmon caught all along the coast, is distant 9 miles from the ferry at Kyle-Strome. Here a great many small islands attract attention from their number and grouping. About three miles further on, through the same description of country, we reach the inn and township of Scourie, surrounded on all sides, except the west, by an amphitheatre of rugged ledges of rock, hacked by the pyramidal summit of Stack, and having in front a bay, wide at the opening, but receding at its upper extremity behind sheltering rocks. This place is comparatively verdant and arable, though the arable ground is of small extent; but then in Edderachillis there is no such thing as ground capable of cultivation, except on the most confined scale, and it derives additional attractions from the contrast it presents to the sterile and rocky surface that encompasses it. Nearly opposite to Scourie, and at no great distance, is the large hut of late uninhabited island of Handa. This island forms the most wonderful object along this coast, from its towering and majestic cliffs, and the immense number of wild sea-fowl that inhabit every crevice of its rocks. Nor is it the cliff scenery alone which distinguishes Handa. It stands so high, and far enough from the land, to command a most comprehensive view of the coast from Rustoir past Loch

Inchard, and of the huge mountain masses which, throughout this wide circuit, uprear their gigantic and varied forms, each apart from the other, above the encircling zone of rocky hills, which form, as it were, a common base to the whole. Such a magnificent mountain panorama can hardly be surpassed; for the mountains here are all giants. These, it may be remarked, generally range towards the east and west; so that, in progressing from north to south, they assume an infinite variety of appearance. The sea to landward, all around, is diversified by long projecting rugged headlands, and lines of rocky islands, while to the west extends the boundless surface of the Atlantic, one glorious expanse of cerulean line, patched with shifting masses of brown, produced simply by the shade of the varying sky. The most striking-looking mountain from this quarter is Stack, the terminal aspect of which is that of an enormous pyramid, rising to a perfect point. Suilvein appears under quite a new character, the two summits being far removed, and it shows itself to be in reality a long mountain, instead of the terminal sugar-loaf figure from which it is so well known." The parts of the seaboard of the parish, north of Scourie, as seen from the public road, are similar to those to the south,—except that the tract between Loch Laxford and Loch Inchard eminently vindicates its name of 'the rough territory,' and that the loch scenery in the gorges is largely an intermixture of salt and fresh. The profile views of the country, also, as seen from skiff or ship in almost any place in the offing, just as much as from Handa, are brilliantly savage or magnificently grand.

"Stranger, if e'er thine ardent steps have traced
The northern realms of ancient Caledon,
Where the proud queen of wilderness hath placed,
By lake and cataract, her lonely throne,
Sublime and stern delight thy soul hath known,
Gazing on pathless glen and mountain high,
Listing where from the cliffs the torrents thrown,
Mingle their echoes with the eagle's cry,
And with the sounding lake, and with the roaring sky,
'Tis known amid the pathless wastes of Reay."

A vast proportion of the parish of Edderachillis is included in the Duke of Sutherland's deer forest; another vast proportion is disposed in sheep-walks; and only a remarkably small aggregate is available for cultivation. Many of the inhabitants combine the pursuits of farming and fishing. The Duke of Sutherland is the sole landowner. The real rental is about £2,500. The yearly value of all kinds of raw produce is about £23,000. Assessed property in 1860, £3,760 0s. 0d. The whole district was anciently a part of the barony of Skelbo, and afterwards a part of the Reay country. About the end of the 12th century, or beginning of the 13th, it was conveyed from an ancestor of the Duke of Sutherland to his brother Richard Moray of Culbyn; about the year 1440, it was carried by an heiress, Egidia Moray, into the family of Kinnaird of Kinnaird; in 1515, it was disposed by Andrew Kinnaird to John Mackay, son of Mackay of Strathnaver, the superiority remaining with the Earls of Sutherland; and in 1829, it was repurchased by the Sutherland family, who forthwith altered its economy, and greatly improved its dwellings, roads, and communications. The inhabitants of it, in remote times, were few in number, and acknowledged no landlord or superior. The first who are said to have held it in property were of the clan Macleod, akin to the Macleods of Lewis; and these continued to retain possession till the middle of the 16th century, when the Mackays from Strathnaver, by means of a rude, sudden, sanguinary inroad, displaced them, and sat down as proprietors under the

title of Mackays of Scourie. A descendant of these Mackays was the famous General Mackay, commander-in-chief of the forces in Scotland under William III. Population of the parish in 1831, 1,965; in 1861, 1,641. Houses, 279.

This parish is in the presbytery of Tongue, and synod of Sutherland and Caithness. Patron, the Crown. Stipend, £158 6s. 8d.; glebe, £20. Schoolmaster's salary, is now £50, with only trivial fees. The parish church is in good repair, and contains 275 sittings. The districts north of Loch Laxford were erected, in February 1846, into the quoad sacra parish of Kinloch-Bervie. The church is situated near the mouth of Loch Inchard, about 18 miles from Badaul. It was a government erection, in 1829, and contains 350 sittings. Stipend, £120; glebe, £2. There are two Free churches, respectively in Edderachillis proper and in Kinloch-Bervie. Attendance at the former, 300,—at the latter, 470; sum raised in 1865 at the former, £42 17s. 3½d.,—at the latter, £45 16s. 3½d. There are a Society school in Ashir, several private schools in various parts, and a reading club in Scourie. The parish of Edderachillis was formerly a part of DUMKES: which see. The name Edderachillis signifies "between the kyles," and alludes to the situation of the Scourie district, or Edderachillis proper, between Kyle-Skon and Loch Laxford.

EDDERTON, or EDDERDOUN, a parish on the northern border of the eastern division of Ross-shire. It is bounded on the north by the Dornoch frith; and on other sides by the parishes of Tain, Logic-Easter, Kilmuir-Easter, Rosskeen, and Kincardine. Its length is 10 miles, and its breadth 8. Its post-town is Tain, 5 miles east-south-east of the manse. The surface consists principally of three ledges, environed by four hills. The lowest ledge extends from end to end of the parish along the shore, and looks to have been at a remote period under the sea, and is partly sandy and partly covered with rich alluvium. The second ledge is shallow and gravelly, partly under cultivation, and partly in a state of utter waste, yet easily capable of remunerating reclamation. The third ledge contains some good soil, in tillage, but lies so high as to suffer the severe evils of late springs and fitful autumns. Two of the environing hills are wholly within the parish, and the other two are on its boundaries. They vary in altitude from 600 to 1,300 feet, and all command delightful prospects. Four burns drain the parish to the frith. About 300 acres are under wood. The landowners are C. W. A. Ross, Bart. of Balnagown, A. Matheson of Ardross, and Macleod of Cadboll. The real rental is about £2,370. Assessed property, in 1860, £2,988 0s. 0d. The family of Ross reside on their estate of Balnagown, and have been in possession of it since about the beginning of the 13th century. The original abbey of Fearn, previous to its removal to the place 12 miles to the south, which is now named after it, stood at the west end of Edderton parish. Teutonic round towers, of the kind called dunes, were also numerous here, but have all been either much dilapidated or entirely destroyed. A number of rude stones and cairns in the plain of Carrilhair, are said to point out the spot where a prince of Denmark and his followers lie interred. The parish is traversed by the roads from Bonar-Bridge to Tain and to Dingwall. There is a good harbour at Ardmore. See ARDMORE. There is a distillery at Balblair. Population in 1831, 1,023; in 1861, 836. Houses, 191.

This parish is in the presbytery of Tain, and synod of Ross. Patron, the Marchioness of Stafford. Stipend, £203 14s. 6d.; glebe, £14. Schoolmas-

ter's salary, is now £35. The parish church was built in 1842, and contains about 700 sittings. The old parish church, built in 1743, and recently remodelled, is now a Free church. Attendance at it, 500; receipts in 1865, £55 10s. 6d. There is a Free church school. Edderdoun is the correct name of the parish, having been corrupted into Edderton; and it signifies 'between the hills,' alluding to the situation of the original church.

EDDLESTONE, a parish, containing a post-office village of its own name, in the north of Peebles-shire. It is bounded by Edinburghshire, and by the parishes of Inverleithen, Peebles, Lync, and Newlands. It is of an oblong form, stretching from north to south; but has a considerable projection on the south-west. Its extreme measurement from the confluence of Harehope burn and Meldon burn on the south, to Ferynhole on the north, is 10 miles; and from the confluence of two brooks at the base of Courhope hill on the west, to Burnhead on the east, is 5½ miles. Eddlestone water intersects it from north to south, and divides it into nearly equal parts. This stream rises in the extreme north of the parish, pursues a course due south, receives on its way 8 or 10 tributary rills from the adjacent heights; and after leaving the parish flows direct toward the core of Peebles-shire, and there, at the burgh, the capital of the county, falls into the Tweed. At Cowey's linn, it has a fall of 35 feet. Its entire course, which is remarkably straight, does not exceed between 11 and 12 miles. In the eastern division of the parish, about a mile from the boundary, is Loch Eddlestone, nearly of a circular form, 2 miles in circumference, and abounding in pike, eels, and perch. Issuing from this lake is the South Esk, which pursues a course directly the reverse of that of Eddlestone water, flowing 3 miles due northward through the parish, and leaving it within about a mile of the Eddlestone's primary sources. The entire surface of the parish may be described as an agglomeration of smooth hills, verdant to their summits, tame in their general appearance, but at intervals surprising the tourist by sudden disclosures of picturesque varieties, and romantic cleughs and dells. Along the eastern boundary, the summits are towering and alpine, one of them rising to the height of 2,100 feet above the level of the sea. See DUNDOICH. The vales or basins of the streams are in general little other than gigantic furrows in the wide field of hills. If the entire area of the parish be reckoned at 264 parts, 54 of them are in tillage, 13 under wood, and 197 pastoral or waste. The principal landowners are Mackenzie of Portmore and Lord Elibank. Real rental in 1834, £6,364. Estimated yearly value of raw produce in 1834, £13,693. Assessed property in 1860, £7,568 0s. 0d. The parish is traversed along the vale of Eddlestone water by the road from Peebles to Edinburgh, and by the Peebles railway, now nearly completed. The village of Edleston stands on the Peebles and Edinburgh road, 4 miles from Peebles and 17 from Edinburgh. A fair formerly held here has become extinct. Population of the parish in 1831, 836; in 1861, 753. Houses, 133.

This parish is in the presbytery of Peebles, and synod of Lothian and Tweeddale. Patron, Lord Elibank. Stipend, £249 5s. 11d.; glebe, £20. Unappropriated tithes, £98 16s. 8d. The parish-church was built in 1829. Sittings, 420. Schoolmaster's salary, is now £50, with about £52 other emoluments. Four ministers in direct line of generation, great-grandfather, grandfather, father, and son, have held the incumbency of Eddleston from 1697 to the present day.

EDDRACHILLIS. See EDDERACHILLIS.

EDEN (THE), the chief stream of the northern half of Fifeshire. It rises among the Ochills, in the Kinross-shire portion of the parish of Arngask, at a point within 2 miles of that where Kinross-shire, Perthshire, and Fifeshire meet, and about 3¾ miles north of the town of Kinross. It, however, has several head-streams of nearly equal length of run; and it speedily begins to be fed by affluents from the Lomonds. Its course thence lies through the parish of Strathmiglo,—between the parishes of Auchtermuchty, Collessie, and Monimail on the left bank, and the parishes of Falkland, Kettle, and Cults on the right bank,—through the parish of Cupar,—and between the parishes of Dairsie and Leuchars on the left bank, and the parishes of Kembach and St. Andrews on the right bank,—to the middle of the head of St. Andrew's bay. Its prevailing direction is at first east by north, and afterwards east-north-east; and its length of course, exclusive of sinuosities, is about 24 miles. Its tributaries are numerous, but all small. Its basin, for the most part, is a fine flat valley, luxuriant in produce, ornate in cultivation, soft in feature, more beautiful than bold in its screens, and bearing the names of Stratheden and the How of Fife. Large portions of land on its banks were formerly devastated by its floods, but are now protected by canals and embankments. Its current, throughout the greater part of its course, particularly below the town of Cupar, is very slow, yielding but a scanty water-power, yet is remarkably well husbanded for the propelling of mills. Trouts formerly abounded in it, but have been greatly diminished by the action of manufactories. The river might at no great expense be made navigable to Cupar; yet, except at high spring-tides, it is not at present affected by the tide above Nidie mill-dam, about 4 miles from its mouth. Its bed, over most of the tidal part, or for about 2½ miles from its mouth, expands into an estuary of 1½ mile of maximum width; the greater part of which, however, is left with a bare surface of silt by the receding tide. Toward the middle of the estuary are extensive beds of cockles and mussels. The name Eden signifies, in the Celtic language, 'a gliding stream,' and is perfectly descriptive of this river.

EDEN (THE), a small river in the district of Merse. It rises in the parish of Gordon, near Heckspeth; and flows first eastward, and then southward, dividing the parish of Earlston from the parishes of Hume and Nenthorn. It then suddenly debouches to the east, and flows through the parish of Nenthorn, and over a neck of Roxburghshire, intersecting in its course the parish of Ednam, and falls into the Tweed 3½ miles below Kelso. Its whole course is about 17 or 18 miles. The lower part of its course is very beautiful, being through rich and finely-wooded pastoral scenery.

EDEN-CASTLE. See KING-EDWARD.

EDENDON (THE), a rivulet of the north-west of Perthshire. It rises in the western part of the forest of Athol, among the heights immediately adjoining Inverness-shire; and after a course of a few miles to the south, falls into the Garry, a little above the inn of Dalnacardoch.

EDENHAM. See EDNAM.

EDENKILLIE, a parish in the west side of Morayshire. It is bounded by Dyke, Rafford, Dallas, Knockando, Cromdale, Ardclach, and Auldearn. Its post-town is Forres, 3¾ miles north of the parish-church. But it is traversed by the mail-road from Grantown to Aviemore. Its outline is irregular. Its greatest length north and south is 13 miles; its greatest breadth is 7 miles; and its

area is about 50 square miles. It extends along the right bank of the Findhorn, and is watered by the Divie, and other streams tributary to the Findhorn. It is a pastoral and hilly district, but not mountainous. The highest hill, the Knock of Moray, has an elevation of about 1,000 feet above sea-level, and commands a series of rich, diversified, extensive views. The general body of the parish is often called Brae-Moray, on account of its exhibiting a gradual rise from the plains of the Moray sea-board. On the banks of the Findhorn and the Divie are some of the most romantic scenes which wood, water, rocks, and variety of ground can produce. The natural woods of the forests are very extensive. The ancient forest of Darnaway covers about 900 acres here, with natural wood of almost every kind indigenous to Scotland. Farther up the river—the banks of which are in general covered with trees—is the wood of Dundaff, of considerable extent. These forests belong to the Earl of Moray. There are also considerable aggregates of natural wood on the other estates; but the plantations are still more extensive. Altogether there are in the parish about 4,700 acres under wood, about 3,330 in tillage, and about 25,000 waste or pastoral. There are five principal landowners. The mansions are Dunphail, Relugas, Logie, and a shooting lodge of the Moray family. In 1829, some of the woods and plantations, with the low grounds, suffered severely from the floods. Southwards, up the Dornach, one of the branches of the Findhorn, is Loehindorb, in the middle of which is an island, with the ruins of Loehindorb castle. Part of that island is within Edenkilleie; and the ruins also have been commonly represented as within it, but are really within CROMDALE: which see. The Downe hill of Relugas is a conical hill, round a considerable part of which runs the rapid Divie in a deep rocky channel. On the summit are the remains of a strong fortress of antiquity far beyond the period of authentic history. Higher up the river Divie, stands the castle of DUNRUAL: which see. The very singular bridge of Rannich here, is of great antiquity. Tradition derives its name from the illustrious Randolph, Earl of Moray and regent of Scotland. There is a considerable salmon fishery on the Findhorn at Sluie. There are corn-mills at Dunphail, Logie, and Half-Davoch. The yearly value of the raw produce of the parish was estimated in 1842 at £12,192 10s. Assessed property in 1843, £2,774 3s. 1d. Population in 1831, 1,300; in 1861, 1,303. Houses, 264.

This parish is in the presbytery of Forres, and synod of Moray. Patron, the Earl of Moray. Stipend, £174 8s. 2d.; glebe, £10. Schoolmaster's salary, £35, with an annuity of £38 for retired schoolmaster. The parish church was built in 1741, and repaired in 1813, and contains 500 sittings. There is a Free church: attendance, 240; receipts in 1865, £155 5s. 2d. There are Society's schools at Conicaval and Tullydivie, and female schools at Half-Davoch and the Knock. There are a parochial library and a savings' bank.

EDENSHEAD, or GATESIDE, a village near the centre of the parish of Strathmiglo, Fifeshire. Here is an United Presbyterian church, with an attendance of about 300.

EDENSTON, a modern village on the southern border of the parish of Collesie, Fifeshire. Its houses are neat, comfortable, and well-arranged. Population, 45.

EDENWOOD. See CERES.

EDERDOUN. See EDBERTON.

EDERHAM. See EDROM.

EDERLIN (Loch), a fresh-water lake in the parish of Glassary, Argyleshire. It approaches within

¼ of a mile of the north-west end of Loch-Awe, and lies only a few feet higher, embosomed in mountains, and adorned with plantations.

EDGAR'S WALLS. See COLDINGHAM.

EDGEBUCKLIN BRAE. See PINKIE.

EDGERSTON, an estate, with a quoad sacra parish church, in the detached part of the parish of Jedburgh, 7½ miles south-south-east of the town of Jedburgh, Roxburghshire. Here also, in old times, was a Border castle. See JEDBURGH and DUNIAN.

EDINAMPLE. See EARN (Loch).

EDINBURGH,

The metropolis of Scotland. It is romantically situated on a congeries of hills, in the north of Mid-Lothian, within from 2 to 4 miles of the frith of Forth. Its observatory stands in 55° 57' 23" north latitude, and in 3° 10' 30" west longitude from Greenwich. Its direction is south-west of Crail, south-south-west of Aberdeen, south by west of Dundee, south by east of Perth, south-east by east of Stirling, east by north of Glasgow, north-east of Ayr, north by east of Dumfries, north-west by north of Jedburgh, west-north-west of Dunse, and west by south of Dunbar. Its distance in straight line, as "the crow flies," is 66 miles from the head of the Solway frith, 127 from Ardnarehan-point, 186 from John o' Groat's house, and 337 from London. Its distance, by road, is 16 miles from Dunfermline, 17 from Haddington, 22 from Peebles, 29 from Cupar-Fife, 31 from Lanark, 35½ from Stirling, 36 from Melrose, 38 from Selkirk, 42 from Kelso, 42 from Dundee, 42½ from Glasgow, 44 from Perth, 47 from Coldstream, 48 from Jedburgh, 49 from Hawick, 50 from Moffat, 57 from Berwick-upon-Tweed, 61½ from Kilmarnock, 71 from Dumfries, 73½ from Ayr, 92½ from Carlisle, 104½ from Wigton, 108 from Aberdeen, 115½ from Whithorn, 156½ from Inverness, and 392 from London. And its distance, by railway, is 6 miles from Musselburgh, 14 from Kirkcaldy, 17½ from Haddington, 17½ from Linlithgow, 19 from Bathgate, 25½ from Falkirk, 29 from Dunbar, 32 from Cupar-Fife, 36 from Stirling, 45 from Perth, 47½ from Glasgow, 49 from Coatbridge, 49½ from Dundee, 52½ from Kelso, 53 from Hawick, 55 from Dunse, 57½ from Berwick-upon-Tweed, 74 from Loekerry, 100 from Carlisle, 112½ from Aberdeen, and respectively 398½, 402, and 407½ from London, the first of these being by way of the Trent valley, the second by way of Carlisle and Birmingham, and the third by way of Berwick and Birmingham.

General Description.

The Site of the City.—The hills, which partly form the site of the city, and partly overshadow it, lie within a circumference of about 6 miles; and at their northern termination, about 2 miles from the frith, they yield to a base, which slopes gently away, over a gradient of from 50 to 100 feet, to the sea. These hills seem to have been thrown up from a smooth surface by a series of stupendous upheavals,—afterwards much modified by denudation and other processes of change; and, in their natural state, just before being overrun by man, they must have formed a grouping of scenery strikingly peculiar, and remarkably picturesque. The highest and most easterly is ARTHUR'S SEAT, [which see,] rising 822 feet above the level of the sea, having a slope to the east, which goes rollingly down over a base of nearly a mile, and presenting to the west a precipitous, nearly perpendicular, and very varied face of rugged rock. The outline of this hill, as seen from the west, or a little to the south of west, undulates so strangely as to bear a close resem-

blance to the sculptured figure of a lion crouching; the summit of the hill, or head of the gigantic sculpture, rising on the south, and the shaggy mane and reclining body stretching toward the north. From the deep dell at the western base of Arthur's Seat, the ground rises regularly over a base of about 700 yards, till it attains a height of 574 feet above the level of the sea; and then in a semicircle, sweeping round from the south to the north, breaks perpendicularly down, in a picturesque face of naked, rugged greenstone rock; and, after an esplanade several feet in width—on which a promenade of most commanding and gorgeous prospect is carried round—descends in an inclined plane of sandy or earthy surface so rapid as to be traversable only by an adventurous and firm-footed tourist. See SALISBURY CRAGS. These two hills, except in the romantic dell which lies between them, and which is as sequestered, and as congenial to the musings of solitude or genius, as the haunt of a poet in a far-away spot of Highland seclusion, possess no surface which could ever, without prodigious labour, be made the site of any suburban extension of the city. Two hundred yards north-west of the northern end of the Salisbury semicircle, rises the Calton-hill, lifting a rounded eminence, 344 feet above the level of the sea, presenting an abrupt and bending face to the north-west, and descending in other directions by rapid though not untraversable declivities. See CALTON-HILL. This hill—as will afterwards be seen—hears aloft one or two of Edinburgh's proudest public structures, and has been compelled by art to afford place for some rows of her private though palace-looking buildings; yet it is principally remarkable, like the loftier and more untamable hills to the south-east, for the magnificence of the panoramic landscape which a spectator sees from its summit, and for the contributions of boldness and romance which it makes to the grouped scenery of the city.

From the hollow along the western base of Salisbury-erags, the ground rises westward by a rapid gradient thickly crowded with streets, till, at the distance of 500 yards, it attains an elevation of about 150 or 180 feet, forming a broad-backed ridge of about 1,400 yards from east to west, which falls first gently and next acclivitously down on its northern side, and which, on its southern side, slopes insensibly away, till, at the distance of a mile, it is lost in the soft undulations of the country. Nearly all this extensive rising ground is covered with buildings, and forms the site of the new or modern district of the Old Town. Parallel to it, on the north side, lies a hill—which has been aptly compared to a long wedge lying flat on the ground—which gradually ascends westward from the hollow between Salisbury-erags and Calton-hill, till, at the distance of 1,800 yards, it swells aloft in the craggy heights of Edinburgh-castle, 445 feet above the level of the sea, and presents to the west a perpendicular, romantic, and far-seen face of naked basaltic rock. The gorge along the south side of this ridge, lying between it and the one formerly described, is ploughed by an ancient line of street, once the abode of the elite of the city, but now the putrid haunt of the poorest of the poor, and bearing nearly the same relation to Edinburgh which the district of St. Giles does to the metropolis of the south. The ridge or wedge-like slope itself is the site of the original city,—a street stretching along its centre, sending off numerous lanes and alleys down the brief descents on its southern and northern sides, and presenting some resemblance to a reptile, with the Castle for its head, the lanes for its lateral members, and Holyrood-house for its tail. Along the north-

ern base of the ridge, extends a deep hollow—formerly covered with water, but now drained and variously disposed of by art—about 200 yards in average breadth. From this hollow, another eminence, or very gentle and broad-backed ridge, greatly less marked in its features than any other of the eminences, ascends softly northward over a distance of 250 yards; and then gracefully, in an easy gradient, slopes away into the plain which intervenes between it and the sea. This eminence is of soft and nearly imperceptible declivity at its western end; but on the east it breaks suddenly down, and leaves a gorge between its own base and that of Calton-hill. Along this beautiful flat ridge stands the original New Town; and on its northern, slow descent, as well as on the plains beyond it, both northward and westward, stands the second New Town, or most magnificent portion of the metropolis of Scotland.

Resemblance to Athens.—Most travellers who have visited both cities have remarked a resemblance, as to site and general appearance, between Edinburgh and Athens. Stuart, the author of 'The Antiquities of Athens,' was the first who vividly depicted it; and he has been followed by Dr. Clarke, Mr. H. W. Williams, and so many other literary painters well-qualified to form a correct judgment, that the names 'Modern Athens,' and 'the Athens of the North,' have been assigned to Edinburgh by general consent. Mr. Williams says: "The distant view of Athens from the Ægean sea is extremely like that of Edinburgh from the frith of Forth; though certainly the latter is considerably superior." "There are," he adds, "several points of view on the elevated grounds near Edinburgh, from which the resemblance" between the two cities "is complete. From Tor-Phin, in particular, one of the low heads of the Pentlands, immediately above the village of Colinton, the landscape is exactly that of the vicinity of Athens, as viewed from the bottom of Mount Anthesmus. Close upon the right, Brilessus is represented by the mound of Braid; before us, in the abrupt and dark mass of the castle, rises the Acropolis; the hill Lycabetus, joined to that of the Areopagus, appears in the Calton; in the frith of Forth we behold the Ægean sea; in Inch-Keith, Ægina; and the hills of the Peloponnesus are precisely those of the opposite coast of Fife. Nor is the resemblance less striking in the general characteristics of the scene; and for, although we cannot exclaim, 'these are the groves of the Academy, and that the Sacred Way!' yet, as on the Attic shore, we certainly here behold—

—A country rich and gay,
Broke into hills with balmy odours crowned,
And—joyous vales,
Mountains and streams,
And clustering towns, and monuments of fame,
And scenes of glorious deeds, in little bounds!

It is, indeed, most remarkable and astonishing, that two cities, placed at such a distance from each other, and so different in every political and artificial circumstance, should naturally be so alike. Were the National monument to be erected upon the site of the present barracks in the Castle, an important additional feature of resemblance would be conferred upon the landscape; that being the corresponding position of the Parthenon in the Acropolis." But when he peers into the interior of the two cities, that distinguished artist paints the brilliant metropolis of Scotland in tints far richer than he dares bestow upon the ancient capital of Greece. He says: "The epithets Northern Athens and Modern Athens have been so frequently applied to Edinburgh, that the mind unconsciously yields to the illusion awak-

ened by these terms, and imagines that the resemblance between these cities must extend from the natural localities and the public buildings, to the streets and private edifices. The very reverse of this is the case; for, setting aside her public structures, Athens, even in her best days, could not have coped with the capital of Scotland. The truth is, that the comforts of the Athenians were constantly sacrificed to the public benefit; and the ruins which still remain to attest the unrivalled magnificence of the temples of Athens, afford no criterion by which we may judge of the character of her private dwellings. Athens, as it now exists, independent of its ruins, and deprived of the charm of association, is contemptible,—its houses are mean, and its streets scarcely deserve the name. Still, however, 'when distance lends enchantment to the view,' even the mud-walls of Athens assume features of importance, and the modern city appears almost worthy of the Acropolis which ornaments it. It is when seen under this advantage that the likeness of Edinburgh to Athens is most strikingly apparent."

Scenery.—Edinburgh presents, from almost every point whence it can be viewed, such scenic groupings as are unrivalled in any existing city in the world. It possesses attractions peculiarly its own, and challenges the admiration of a spectator by displays of general excellence, unaided by the sumptuousness of any one object, and undegraded by deteriorations from its prevailing style of magnificence. A tourist coming within view of the city sees no aerial dome rising from a sea of houses, as in Rome or London; and no forest of turrets shooting up from a huge cathedral, as in Milan or York; but he looks on a singularly varied and uniformly rich display of imposing architecture,—sheltered in the vale,—climbing up the acclivity,—stretching away on the plain,—or surmounting the precipice, and crowning the romantic hill. Even the picturesque confusion of the ancient part of the city combines with the symmetrical proportions of the streets and squares of the modern part, to render the architectural covering of the congeries of hills peculiarly attractive. Nowhere is the eye offended with the vicinity of meanness to elegance, or with a dingy commonplace field of houses spread around a magnificent edifice, or attached to an elegant and airy street; but neatness, beauty, novelty, picturesqueness, grandeur, and nearly all the principles which thrill the beholder with mingled wonder and pleasure, seem everywhere to struggle for ascendancy, and, like a harmony of sounds, combine their powers to produce an unique and superb effect.

The views exterior to the city, whether seen from points within itself, or combining with it outwardly into a general landscape, are not less striking. They extend from the Lammermoors to the Grampians, and from the sources of the Forth to the German ocean; they comprise, on their backgrounds, a diversified series of mountain range and isolated hill, and on their middle grounds, great part of the waters of the Forth, great part of Fifeshire, and a still greater part of the luxuriant, gardenesque, undulating plain of the Lothians; and, excepting the grandly terrible, or the wildly solemn, or the desolate, they exhibit both specimens and combinations of almost all styles of scenery. The portions nearest the city, in particular, are brilliantly picturesque, a very gallery of landscape, almost a terrestrial glory. And if by the environs might he understood as much of the country as lies well depicted under the eye from vantage-grounds within the city or in its near neighbourhood, these may be said to extend, on some sides, to the limits of vision; for bold features in the distance are so blended by intermediate

frith or plain with bold features close at hand as to hold equally distinct place in the one gorgeous picture. Hence has Dr. Moir, the "Delta" of Blackwood, sung, in the well-known lines,—

" Traced like a map the landscape lies
In cultured beauty stretching wide;
There Pentland's green acclivities,
There Ocean, with its azure tide,
There Arthur's Seat, and, gleaming through
The southern wing, Dunedin blue;
While in the orient Lammer's daughters,
A distant giant range, are seen,
North Berwick Law, with cone of green,
And Bass amid the waters."

The picturesque views of the city from without, either by itself or in combination with the environs, are exceedingly numerous, and nearly all of a high order. Some close ones on the west, especially on the lands of Coates, comprise the princely piles of the newest part of the New town on the foreground,—the dome of St. George's church and the tower and pinnacles of St. John's episcopal chapel in the distance,—and the rounded, frowning, but sublime face of the castle, as it stoops precipitously to the west. More remote ones on the same side, particularly from certain spots of Corstorphine hill, command a full prospect of the greater part of the New town and of the lofty part of the Old in reclining profile, immediately shaded by Salisbury Crags and Arthur's Seat, and lying like a mass of witchery or a poet's dream on an expanse of fairy-land, which stretches away to the ocean. Numerous close views on the north side, especially one from the Experimental gardens and another from the Warriston cemetery, are filled with the New town, in all its length and regularity, occupying the whole of the broad acclivity from the Water of Leith to the line of summit-elevation, and seeming to send aloft there not only grand architectural aspirations of its own, but also the cloud-kissing edifices of the castle, the towers and spires of the high parts of the Old town, and the various picturesque monuments of the Calton-hill,—the last immediately foiled behind and on the left by the romantic masses of Arthur's Seat. The best distant views on this side are all from points on the coast or sea-board of Fifeshire, so remote as to reduce the city to miniature, but marvellously enriched by having the Forth, the Leith ports and the Lothian sea-board on the front-grounds, and the ranges of the Lammermoors and the Pentlands on the sky-line.

The views on the east side, excepting very partial ones, are chiefly from the eminences of Calton hill, Salisbury Crags, and Arthur's Seat. Those from the Calton hill are the completest, perfectly commanding, nearly panoramic, looking absolutely into the city, along some of its principal thoroughfares, and down its very dells, yet are not less remarkable for comprehending a survey of greater part of all the exterior landscape, even from Benlomond to the sea. The view from the face of Salisbury Crags, as depicted by Sir Walter Scott, is noticed in our article on ARTHUR'S SEAT; and that from the crown of Arthur's Seat itself differs principally in having the crest of the Crags on the foreground, and in carrying the eye around great part of the exterior panorama. Perhaps the best view of the mere city from the east, exclusive of the environs, is one from St. Anthony's chapel. A spectator there sees at his feet the verdant memorials of the royal park, and the quadrangular palace of Holyrood, with the venerable ruins of the royal chapel abutting from one of its angles; he looks over it along the deep hollow on the east of the Old town, with its thickly-figured carpeting of houses, till his view is arrested by the North bridge, with its palace-looking sum-

mit of buildings above, stretching off toward the east, and with its lofty arches below, occasioning an air of mystery to hang over the scenery beyond, of which they allow only a narrow view; and he looks up on his right to the double ascent of Calton-hill, overhung on its first precipitous acclivity by the classic monument of Burns, and the bold castellated forms of the county-jail and bridewell,—decorated, on the esplanade at the middle of its ascent, with the fine Grecian structure of the Royal High school, and the beautiful sweep of buildings called Regent-terrace,—and crowned on its rounded acclivitous summit with the towering pillar erected to the memory of Nelson, and the naked antique-looking colonnade of the National monument; and he surveys, a little to his left, the whole of the elaborated surface of the ancient city, struggling crowdedly upward from the point of the wedge-like hill, stratum above stratum, or ridge above ridge, sending aloft in its progress the picturesque steeple of the Tron church, the high broad tower of St. Giles, with its architectural crown, the grand Gothic tower of Victoria Hall, with its mass of pinnacles and its soaring spire, and terminating in the citadel works, the lofty eminence, and the ragged but romantic outline of Edinburgh castle.

Good views of the city from the south, both near and distant, are numerous, yet all similar to one another, commanding prime profiles of Arthur's Seat and Salisbury Crags on the right and the Castle rock on the left, together with expressive massings of the intermediate-romantic architecture of the Old town. But much the finest are those from eminences, particularly Braid hill and Blackford hill, which at the same time command a background prospect of the Forth and Fifeshire. Sir Walter Scott has immortalized that from Blackford hill by describing it as a landscape which rivetted the gaze of his Lord Marmion,—“the fairest scene he e'er surveyed.” Said he,—

“The wandering eye could o'er it go,
And mark the distant city glow,
With gloomy splendour red;
For, on the smoke-wreaths, huge and slow,
That round her sable turrets flow,
The morning beams were shed,
And tinged them with a lustre proud,
Like that which streaks a thunder-cloud,
Such dusky grandeur clothed the height
Where the huge castle holds its state,
And all the steep slope down,
Whose ridgy back heaves to the sky,
Piled deep and massy, close and high,
Mine own romantic town!
But northward far, with purer blaze,
On Ochil mountains fell the rays,
And as each heathy top they kissed,
It gleamed a purple amethyst.
Yonder the shores of Fife you saw;
Here Preston-Bay and Berwick-Law;
And, broad, between them rolled,
The gallant Frith the eye might note,
Whose islands on its bosom float
Like emeralds chased in gold.”

In all the great exterior views of the city, from all sides, a prominent feature, or rather great group of features, is the castle. “From whatever side you approach the city,” remarks an eloquent writer, “whether by water or by land, whether your foreground consist of height or of plain, of heath, of trees, or of the buildings of the city itself, this gigantic rock lifts itself high above all that surrounds it, and breaks upon the sky with the same commanding blackness of mingled crags, cliffs, buttresses, and battlements. These, indeed, shift and vary their outlines at every step; but everywhere there is the same unmoved effect of general expression, the same lofty and imposing image, to which the eye turns with the same unquestioning worship. Whether

you pass on the southern side, close under the bare and shattered blocks of granite, where the crumbling turrets on the summit seem as if they had shot out of the kindred rock in some fantastic freak of nature, and where, amidst the overhanging mass of darkness, you vainly endeavour so desecrate the track by which Wallace scaled—or whether you look from the north, where the rugged cliffs find room for some scanty patches of moss and broom, to diversify their barren grey—wherever you are placed, and however it is viewed, you feel at once that here is the eye of the landscape, and the essence of the grandeur. Neither is it possible to say under what sky or atmosphere all this appears to the greatest advantage. The heavens may put on what aspect they choose, they never fail to adorn it. Changes that elsewhere deform the face of nature, and rob her of half her beauty, seem to pass over this majestic surface only to dress out its majesty in some new apparel of magnificence. If the air is cloudless and serene, what can be finer than the calm reposeful dignity of those old towers—every delicate angle of the fissured rock, every loop-hole, and every lineament seen clearly and distinctly in all their minuteness? Or, if the mist be wreathed around the base of the rock, and frowning fragments of the citadel emerge only here and there from out the racking clouds that envelop them, the mystery and the gloom only rivet the eye the faster, and the half-baffled imagination does more than the work of sight. At times, the whole detail is lost to the eye—one murky tinge of impenetrable brown wraps rock and fortress from the root to the summit—all is lost but the outline; but the outline makes up abundantly for all that is lost. The cold glare of the sun, plunging slowly down into a melancholy west beyond them, makes all the broken labyrinth of towers, batteries, and house-tops paint their heavy breadth in tenfold sable magnitude upon that lurid canvass. At break of day, how beautiful is the freshness with which the venerable pile appears to rouse itself from its sleep, and look up once more with a bright eye into the sharp and dewy air! At the grim and sultry hour of noon, with what languid grandeur the broad flag seems to flap its long weight of folds above the glowing battlements! When the daylight goes down in purple glory, what lines of gold creep along the hoary brow of its antique strength! When the whole heaven is deluged, and the winds are roaring fiercely, and ‘snow and hail and stormy vapour,’ are let loose to make war upon his front, with what an air of pride does the veteran citadel brave all their well-known wrath, ‘cased in the unfeeling armour of old time!’ The Capitol itself is but a pigmy to this giant.”

The good interior views of Edinburgh are at once exceedingly numerous, exceedingly diversified, and eminently picturesque. No other city in the world can show their equal. Not only is architecture here in her finest forms of both romance and beauty; not only does statuary lend large aid to her sister art; not only are there grand street views, great expanses of masonry, all varieties of urban magnificence; but there are also mighty natural features—cliffs, dells, and ravines,—and remarkable breadths of artificial rural decoration,—gardens and pleasure-grounds, elaborate productions of landscape gardening. The streets of the city, too, even in its central parts, afford multitudinous prospects, brilliant and extensive, through sudden openings, along vistas, or over masses of house-tops, away to the distant country, over frith and dale to the mountains or the ocean. One of the richest of these prospects is seen at the head of Castle-street, on emerging to the east side of the castle-esplanade, or still better from the bomb-

battery of the castle itself, where the space between the Old town and the New town appears almost perpendicularly under the eye, with the Scott monument on its further verge, the Melville monument a little beyond, and the masses of greater part of the New town all around.

"Saint Margaret, what a sight is here!
Long miles of masonry appear;
Scott's Gothic pinnacles arise,
And Melville's statue greets the skies,
And sculptured front and Grecian pile
The pleased yet puzzled eye beguile;
From yon far landscape where the sea
Smiles on in softest witchery;
Till, riant all, the hills of Fife
Fill in the charms of country life."

But many and rich and varied as are the Edinburgh views, there is one, as we formerly hinted, which in a considerable degree comprises them all. This is the view from the Calton hill. Yet it is properly not one view, but a circle of views; and, if we do not mistake, it is what first suggested to artists both the idea and the name of a panorama. The prospect here is so gorgeous, so grand, so replete with every thing in either city or sea or country landscape which can thrill and animate with delight, that he is a daring artist who attempts to depict with either quill or pencil the multitudinous splendours of the scene. We must simply say, in general, that a spectator walking around the higher part of the hill, along a path cut out for his accommodation, commands in succession a full survey of most parts of both the Old town and the New, and, in addition, looks away north, east, south, and west, over scenery which, even if no queen-city, in royal costume, presided in its centre, would compete, in the power and variety of its charms, with nine landscapes in every ten which poetry has immortalized in song. The noble estuary of the Forth, reflecting from its mirror-surface the image of many a smiling town and village and mansion which sit joyously on its banks, and bearing along on its bosom yawl and ship and steam-vessel, till it glides past the Bass and North Berwick law, and becomes lost in the horizon,—the undulating verdant country beyond it, receding in distant loveliness till it is obscured in the shadowy splendour of the Ochil hills and the Grampians,—the fertile fields and varied park and woodland scenery which flaunt gaily along the southern shore of the frith,—and, close at hand, the solitary grandeur of Arthur's Seat, and the wild beauty of Salisbury-crag, with their precipitous descents, their pastoral slopes, and their sequestered hollows,—these are some features, faintly coloured and rudely sketched, of a landscape which combines in a magnificent expanse the richest elements of the beautiful and the sublime, and which are seen over a foreground of portions of Edinburgh opulent beyond parallel in the attractions of city-scenery.

Advantages of Site.—The situation of Edinburgh, while so replete with beauty, is scarcely less contributive to utility. The prevalence of rapid slopes in all directions, and in all parts, promotes drainage and provokes to cleanliness. The elevation of the hills, and the disseverment of them by great natural funnels, produce strong baffling breezes, with the effect of healthful ventilation. The vicinity of coal-fields on all sides, and the near neighbourhood of seaports, together with ready access to them, present valuable facilities for manufacture, commerce, and general trade, whenever it shall please capitalists to attempt here enterprises which have long been successfully carried on in far less favourably situated towns, such as Dunfermline, Hawick, Preston, Manchester, Leeds, Halifax, Sheffield, Birmingham, and

many other places. The profusion of materials for a good natural schooling of the mind, particularly splendid scenery, diversified walks, and a rich neighbouring flora and fauna, enhanced by metropolitical influences, and kept in play by at least an equal profusion of the best known artificial appliances, renders Edinburgh second to not another place on earth as a seat of learning. Nor, if need should happen, might her ravines, her cliffs, her bastioned crags, her relations to sea and territory enable her to figure less as a retreat of freedom or a seat of empire. Where else could there be such stern street-fighting? where such a war of barricades? where such an urban Thermopylæ? where, except at Constantinople, such a fit place for a mistress-city of many nations? "What the tour of Europe was necessary to see elsewhere," said Sir David Wilkie, "I now find congregated in this one city. Here are alike the beauties of Prague and of Salzhurgh; here are the romantic sites of Orvietto and Tivoli; and here is all the magnificence of the admired bays of Genoa and Naples; here, indeed, to the poet's fancy, may be found realized the Roman Capitol and the Grecian Acropolis." And says Mr. Hallam,—

"Even thus, methinks, a city reared should be,
Yea an imperial city, that might hold
Five times a hundred noble towns in fee,
And ether with their might of Babel old,
Or the rich Roman pomp of empery
Might stand compare, highest in arts enrolled,
Highest in arms, brave tenement for the free,
Who never crouch to thrones, or sin for gold.
Thus should her towers be raised; with vicinage
Of clear bold hills, that curve her very streets,
As if to vindicate 'mid choicest seats
Of art, abiding Nature's majesty,—
And the broad sea beyond, in calm or rage,
Chainless alike, and teaching liberty."

Climate.—The climate of Edinburgh is of the same general nature as that of all the east coast of Scotland, but rather colder than in the surrounding valleys, rather less severely scourged by the east winds of spring than places nearer the German ocean, and perceptibly modified in some other particulars by Arthur's Seat and the other hills. Some spots in the city, also, as compared to others, for example Holyrood as compared to the Castle, or Newington as compared to Broughton, are sheltered and warm. The mean annual fall of rain is about 24 inches, being nearly one half less than that on the western coast of Scotland. The fall in 1834 was 20·98 inches; in 1837, 26·77 inches; in 1840, 25·26 inches; in 1847, 20·82 inches; and in 1848, 30·21 inches. The wettest months, or at least those in which there is the greatest average of rain-fall, are July, August, and September; and the driest months are March and April. The mean temperature of the year is 47° 1'; of summer, 57° 2'; of winter, 38° 4'. The summer temperature is lower than that of most parts of England; and the winter temperature is higher. Snow seldom lies for any length of time. East winds prevail in April and May, sometimes also in March; and are usually cold and dry, frequently very chilling, and sometimes accompanied by injurious fogs. West and south west winds prevail in all the other months; and are usually genial, and often highly charged with moisture. In a recent year, north winds blew 10 days, north-east winds 18 days, east winds 101½ days, south-east winds 14 days, south winds 42 days, south-west winds 30½ days, west winds 133 days, and north-west winds 11 days. Thunder-storms are most common in the latter part of May and throughout June, and almost invariably come from the south; but in summers which have a prevalence of easterly or northerly winds, they are of rare occurrence near the city, the electric collisions taking

place more to the west or the north. The comparative salubrity of the climate will afterwards be shown in a section on the vital statistics of the city.

Natural History.—To speak of natural history in connexion with most cities, is absurd,—in connexion even with the immediate environs of many, is almost unmeaning; but to speak of it in connexion with Edinburgh very fully, as to the immediate environs, and in a considerable degree as to some large spots within the city, is perfectly appropriate. Nature, in the exhibition of many of her characteristic productions, continues here in grand power,—partly invaded by art, indeed, and partly modified,—but also compensated for injuries done to her, and on the whole rather helped than hindered in her displays.

All the hills, in many parts, give interesting lessons on the igneous rocks. Calton hill, Salisbury Crags, and Arthur's Seat, afford fine instructions on the varieties of these rocks, and on their connexions with stratified rocks. Many places in the environs, and some within the town, exhibit pleasing specimens of the composition, dips, and mutual relations of various strata belonging to the coal formation,—sandstones, conglomerates, shales, and arenaceous limestone. Two localities in the near vicinity, Craighleith and Burdiehouse, have furnished many magnificent fossils. An overlying diluvium in many a place contains coprolites and other exuviae of ancient fishes. Salisbury Crags and Arthur's Seat contain some gems and many curious minerals; and they display, in some parts, remarkable evidences of peculiar geognostic action which have been the subject of much discussion among most eminent geologists.

"Perhaps few cities," remarks the writer of the New Statistical Account, "possess within their immediate boundaries such a variety of botanical productions as Edinburgh. On Arthur's Seat there are not fewer than 400 species of plants. Some of these are perhaps not strictly indigenous, the fancy or partiality of botanists having naturalised several there to the soil. Yet the diversity of hill and valley, and the favourable exposures and congenial soil at all seasons of vegetation, afford an interesting treat to the lovers of the simple productions of nature. On the slopes and hollows of this beautiful hill will be found, among others, the *Asplenium septentrionale*, *Arenaria verna*, *Potentilla verna*, *Salvia verbenaca*, *Euonymus Europæus*, or spindle-tree, and *Pyrus aria* or white-beam. A considerable variety of mosses and lichens also cover the green sward, and clothe the hoary and rugged rocks around. The zoological specimens are no less abundant in this favoured locality. Although so near the hum of the great city, the hare is not unfrequently seen limping across the hollows of Arthur's Seat. The fox is also an occasional visitor; while the note of the cuckoo never fails to enliven the long and still summer evening. The *Pupilio Artaxerxes*, a butterfly not common in other parts of Scotland, is found in the Queen's Park; the *Lacerta agilis* and *Anguis fragilis*, two reptiles, are also not unfrequent among the debris of Salisbury Crags; while, in the same localities, a great variety of shell molluscs—the *helix*, *bulinus*, *succinea*, pupa, *clausilia*, and many others, are found in great plenty. The blue-backed shrike, *Lanius excubitor*, is an inhabitant of Arthur's Seat; the kestrel builds its nest on the castle rock; and the kingfisher is not uncommon on the banks of the Water of Leith."

Nor are artificial aids to the observation of Nature's productions, whether for amusement or for study, either few or trivial. The Botanic garden, the Experimental garden, Lawson's arboretum, the

numerous public nurseries, the college museum, and the industrial museum, render natural history as patent here as the highways. The very walks and shrubberies and public gardens, also, are in a degree so many invitations to science. To have robinias, lirodendrons, and auracarias as familiar here as oaks and elms are elsewhere, might be provocative to a curious taste in trees; and to have rare flowering exotics and many rare shrubs continually under the eye, would seem to bespeak that, in the elegant department of wisdom which consists in knowing all sorts of plants, from the cedar of Lebanon to the hyssop on the wall, every Edinburgh boy might, by mere casual observation, grow up to be a Solomon. The music of the groves, also, may be enjoyed as fully in many of the public walks, and even in some of the streets of this most lovely city, as in the finest park or the most sequestered woodland. "The walks of the Prince's-street gardens," remarks a periodical writer, respecting a spot which, besides being almost in the centre of the city, and flanked by some of the busiest thoroughfares, is resonant along the middle with the frequent rush of the railway train, "These walks are made especially delightful by the number of feathered choristers that here, amid trees and thickets seeking shelter, fill the air morning and evening with their music. In this respect we may fancy them to resemble the natural aviaries which are said to be preserved in Prussia; for these choristers find a constant retreat from depredators in the lofty and inaccessible steepes of the castle rock; so that around its base, at their several seasons, the black-bird, the mavis, the linnet, the robin, the chaffinch, the hedge-sparrow, and other little birds fill the air with their notes and songs."

Area.—Edinburgh, in proportion to its population, covers a larger area than almost any other town of Britain. From the north end of Scotland-street on the north, to Crosscauseway on the south, it measures geographically 2,400 yards; and from Manor-place on the west, to Montgomery-street on the east, 2,600 yards; and these points may indicate the lines of a rectangle, the area of which, with some unimportant exceptions, is all covered with town. But on various parts of this rectangle, especially on the north, on the north-west, and on the south, the city has wings of considerable extent, which, if included in its measurement, would make its extreme length from north to south about 4,000 yards, and its extreme breadth from east to west upwards of 3,000. Considerable space, however, in the very core of the city, is either wholly or principally unoccupied with building. The area of Prince's-street gardens and the Castle rock alone extends 900 yards from east to west, and between 200 and 270 from north to south; and, excepting the barracks in the Castle, and the buildings on the Mound, has not a single inhabitable edifice. The Queen-street gardens also are an open area, and extend 850 yards by 130.

The limits we have stated are those of the edified city. Other limits, defining jurisdictions of various kinds, ancient and modern, differ widely from these and from one another; but some are either uninteresting or perplexingly intricate, and neither these nor the rest afford any aid to topographical description. We may simply notice that the city, as defined by four sets of them, is successively concentric,—first, the ancient royalty, nearly identical with the space within the old town walls,—second, the city of Edinburgh, comprising both the ancient royalty and an extended royalty,—third, the county of the city, comprising all the former, and considerable tracts beyond,—and fourth, the

 WITH
CRANTON & OTHER SUBURBS.

Scale of $\frac{1}{2}$ a Mile

parliamentary burgh, including the county of the city and a largo district around it, and forming altogether an irregular polygon of nearly ten miles in circumference, with St Giles' church in the centre.

Street Alignments.

We shall now attempt—yet without, at present, noticing public buildings, or glancing at minute features—to give a general topographical view of the arrangements of the city. This must necessarily be succinct, and, if taken by itself, may be neither clear nor interesting; but, if slowly read in connexion with a map of the city, it will be very distinctly understood, even by a stranger, and will convey as full and accurate ideas of all the streets and masses of the city, piece by piece, as are attainable by any means short of minute, laborious, personal survey; it will exhibit both the arrangements and the edifying of the streets incomparably better than could be done by any amount of mere general description; and, at the same time, it will promote distinctness in indicating the positions of public buildings and other remarkable objects.

The Old Town.—At the Abbey area in front of Holyrood-house, situated in the middle of the hollow between Salisbury-crags and Calton-hill is the eastern termination and lowest part of the old or original town. Leaving this area at its north-west angle, the Canongate moves away westward, over a distance of 650 yards,—climbing, on its middle or highest part, the wedge-like ridge or central hill on which the chief part of the city stands,—and sending down, over the northern face of the hill, New-street, Leith-wynd, and numerous closes, and over the southern face, St. John-street, Mary's-wynd, and various alleys. Continuous with the Canongate, the High-street climbs the upper part of the hill,—sending down Niddry-street and some lanes to the south,—undergoing an intersection at right angles by a great line of street which runs south and north through the whole extent of the Old town, and ploughing its way, under the names of Lawn-market and Castle-street, up to an esplanade or open and elevated area before the gate of the Castle, at a distance of 900 yards from the commencement of the Canongate. In its progress it sends off Cockburn-street, Bank-street, and numerous lanes to the north, and Blair-street and George IV.'s bridge to the south; and it opens on its southern side, round both ends of St. Giles' cathedral, into Parliament-square. This street, after merging from the lower or Canongate part, till it bends and narrows into the brief termination of Castle-street or Castle-hill, is very spacious; and, over its entire length, it consists of very high houses, interspersed with various public edifices, and wears an antique and remarkably imposing appearance. From the great height of its buildings, the varied yet harmonious forms of their projected gables and battlements, and the long sweep which they make, interrupted by few transverse cuts, and marked at intervals by massive, ornamental architecture of an age long gone by, this street possesses a simple and majestic unity of antique aspect, which is probably unparalleled in any city of Britain.

Near the western end of this great thoroughfare, 170 yards before it opens into the esplanade of the Castle, a spacious street-way goes off from its south side, suddenly debouches, and runs on parallel to it at an aerial elevation; and passing along the edge of the Castle rock, spans the yawning hollow below, in an airy and magnificent erection called King's bridge, and sends off Castle terrace, nearly parallel to the western face of the Castle, to open a communication with the south-west angle of the

New town, while it bends round its main road south-westward and passes into Bread-street, 800 yards from its commencement near the top of High-street. This remarkable road-way is called the New West approach. It passes over a seeming impracticability of ground, and possesses a peculiarity of position, from the dark cliffs of the Castle overhanging it on one side, and an extent of town stretching away in the plain beneath it on the other, which give it an appearance of romance peculiarly its own.

Bread-street, which the New West approach transversely enters, is one of a large cluster of streets forming an irregular but fine south-west suburb of the Old town. The principal streets of the suburb are Lotbrian-road, running north and south, parallel with the western face of the Castle, and forming, with its north end, a right angle with the west end of Prince's-street,—Fountain-bridge, running south-west and north-east, and forming the great thoroughfare to Biggar and Lanark,—and Gilmore-place, running parallel to Fountain-bridge, 300 yards to the south. These three streets are all spacious, and wholly or partially lined with good modern buildings; and they are clustered in various directions and by various tendrils of communication with Bread-street, St. Andrew's-place, Castle-harns, Gardner's crescent, Semple-street, Earl Grey-street, Ponton-street, Home-street, Leven-street, Tollcross, High Riggs, Portland-Place, Laurieston-street, and other localities which, though singly or severally unimportant, are aggregately an interesting suburb. At the southern termination of Lothian-road, where it forms an angle with Fountain-bridge, is Port-Hopeton, the terminating basin and yard of the Union canal.

We now return to the area before Holyrood-house. Leaving this at its south-west angle, a narrow street called the South back of Canongate, runs westward, parallel to Canongate, and, in its progress, looks up St. John-street on its north side, and sends off, on its south side, parallel to the west base of Salisbury crags, the celebrated path of Dumbiedykes. The South back of the Canongate is 750 yards in length; and it pursues its way along the southern base of the central hill of Edinburgh, and, for some little distance, lies along the gorge between it and the southern hill. Just before it terminates on the west, it looks up on the south into the opening to St. John's hill; and at its termination, is met at right angles by the end of Pleasance, coming in upon it by a long sweep from the south. Cowgate, a continuation of the Back of the Canongate, wends along the deepest part of the gorge; and, in its progress, looks up Mary's-wynd, Niddry-street, and Blair-street, coming down upon it with a rapid descent from the north, and various laes and the Horse-wynd descending upon it from the south; and, though high in its lines of antique houses, it passes quite underneath the over-spanning central arch of South bridge, and the spacious stride of George IV.'s bridge. Cowgate is narrow and not quite straight, and, along with the lanes which run up from it, is the most densely peopled and the poorest district of the metropolis,—altogether squalid in its appearance, and seeming to cover along the deep gorge of its locality in order to escape observation. Seen from George IV.'s bridge, or the open part of the South bridge, it looks like a dark narrow river of architecture moving sluggishly along a dell, and teeming with animated being, so as to have an appearance quite in keeping with the romantic character of the Old town; but were it raised out of its hiding-place, and stretched out upon a plain or ridgy eminence, it

would be an utter blot and defilement on the whole picture of the metropolis. Its length, from the angle of Pleasance to an angle of Candlemaker-row which comes down upon it from the south-east at its western end, is about 800 yards.

"Auld Reekie," says a writer in Fraser's Magazine, with special reference to the Cowgate, "is built on and between and up that succession of rocky ridges which makes it the most wonderful town in the world to look upon, but the most difficult to erect. The houses, almost all, stand with their limbs gathered underneath them on one side, and hanging down over a precipice on the other. They are like giraffes, with short hind legs and long front ones, or *vice versa*. There is hardly one which is privileged to stand comfortably on level ground. Modern improvements enable the spectator to take the construction of the town at a glance. We step on to that grand George IV.'s bridge, which now conveys all the traffic of this side of the capital at one leap from one ridge to another. A wilderness of ragged roofs, and garret windows, and smoking chimneys, all tumbling and hattered in irregular rows, like a jaw of broken teeth, are level with our feet; the gilt weathercock of a venerable church-tower seems within arm's length; the grand pile of the Castle rock towers in the distance above; while deep below us runs that other muddy current of life, the Cowgate, with a repetition of the same scenes we have just related going on—coal-heaps, dirt-heaps, children, herrings, and all. From this depth, up to the level of the High-street, the houses go climbing like trees up a mountain side, the foundations of some level with the tops of others; like trees, too, on uneven ground throwing out deep roots of masonry in search of support,—a wild and rugged scene of artificial growth, with those alleys or wynds deep between the houses, looking like gorges and gullies worn by the action of mountain torrents. These wynds are the most wretched features of all. The traveller's greatest enthusiasm cannot gild the misery that too obviously dwells there. There is a species of dirt and wretchedness which goes beyond the spell of the picturesque. Some of them are wider and less squalid; and still tenanted here and there by the brass plates and iron scrapers of such few respectable householders as still linger on in the Old town; but the greater number are such as it seems purgatory to dwell in, and not always safety to pass through. Nature does all she can to cleanse the filthy pavement, and purify the mouldering walls; blasts of wind whistle through them, and deluges of rain pour down them; but not all the rivers of Damascus, nor the breezes of Arabia, could sweeten those wretched ravines. The traveller feels, as, overcoming his strong disgust, he stoops under the dark cavern-like entrance, and plunges into the murky twilight of the wynd, that he has entered that atmosphere of poverty which brings fever and pestilence, and every ill, moral and physical, to which flesh is heir, in its train. Here are none of the light and sunshine of the High-street, which make all look free, if they did not look happy. The blackened, broken windows, stuffed up with clouts of rags, look directly on a blank wall, or down on to the opposite dwellers' misery. Neighbours can shake hands out of the second story, or break heads, which they are more likely to do, out of the third; for the houses project at each story till they almost meet, and you look up at a sepulchral light at top as through a dark chimney."

Continuous with Cowgate, but suddenly expanding into three times its width, is the Grass-market. This is a spacious rectangle, 230 yards in length,

communicating at its south-east angle, through Candlemaker-row, with the southern part of the Old town, and, at its north-east angle, up the acclivitous curving thoroughfare of West bow and Victoria-street, to George IV.'s bridge, and sending off, on its south side, an alley of communication with Heriot's hospital. The Grass-market is darkly overhung on the north by the precipitous side of the esplanade of the Castle, friezed by the New West approach; but, on its south side, it is subtended by a gently inclined plane, the southern hill of the Old town beginning, at the end of Cowgate, to slope toward the west. The west end of the rectangle is closed up by the old Corn-market, with openings, however, at both sides; and the east end of the rectangle is deeply associated with the holiest and most affecting reminiscences of Scottish history, as the scene of the last sufferings, the fervid testimony, and the dying supplications of many a devout martyr during the sanguinary persecutions of the Stewarts,—of Cargill and Renwick, and multitudes more, "of whom the world was not worthy." The Grass-market is now the chief rendezvous of carriers and farmers, and persons of various classes connected with the country market; and has, for an ancient street, a remarkably airy and imposing appearance. Leaving it on the south side of the Corn-market, Westport continues the line of street westward over a distance of 330 yards,—narrowed into a width similar to that of Cowgate,—sending off toward the south, the Vennel and Lady Lawson's-wynd,—and meeting at its termination Bread-street, Fountain-bridge, High Riggs, and Laurieston, all stretching in different directions to form the suburb which has been already described. The point or small area in which these streets and Westport meet, bears a certain degree of resemblance to the Seven Dials of London; but, for the most part, looks dewy rows of architecture greatly superior in aspect.

Let us now adopt as a starting-point for rapid topographical tours over the remaining parts of the Old town, the south end of Clerk-street, at Newington church. This point is 800 yards due west from the base of Salisbury crags, and 1,200 yards south of the Tron church, or nearest part of High street. Stretching half-a-mile away south from the point we have selected, is the elegant and opulent suburb of Newington. Its principal feature is Minto-street, the great thoroughfare to the towns of Roxburghshire, to Peebles, and to places intermediate. This street consists of detached two-story houses, sitting back from the road-way, and surrounded by flower plots and iron railings; and it has on its western, but especially on its eastern side, well-feathered and beautiful wings of building, disposed in the form of short streets, single rows, or spacious openings. The entire suburb is a little town of no common beauty; a picture in every part, of cheerful ease and refined taste; and almost quite free from shop or city appliance, to indicate participation in the common cares of the every-day world.

At Newington church, Montague-street breaks off from Clerk-street, and runs eastward, or toward Salisbury-craggs, 180 yards. The street in which it terminates, and which it meets at right angles, is St. Leonard's-street, and commences a line of communication from the east wing of Newington on the south, to the south back of Canongate on the north. Running away northward, St. Leonard's-street sends down to the east a street called St. Leonard's hill, in which is the terminus of the Edinburgh and Dalkeith railway; and, at a distance of 320 yards, opens into a little area, whence emerge the Pleasance right onward, a small street to the east, and Cross-

causeway to the west. The Pleasance, a continuation of St. Leonard's-street, is spacious, but of irregular width, somewhat winding, and lined with antiquated architecture; and extends 600 yards till it meets at right angles the South Back of the Canongate. In its progress, it sends off to the east Carnegie-street, Brown-street, Salisbury-street, Arthur-street, and St. John's hill, all descending over an average distance of 180 or 190 yards, down a rapidly inclined plane to the Queen's park, or narrow vale at the base of Salisbury-crags, and consisting of plain but neat and uniform houses, built of hewn but unpolished stone. From the west side of Pleasance, go off Richmond-street, Adam-street, and Drummond-street; all about 220 yards in length, and intersected by two lines of street running parallel with Pleasance. This district, including a continuation southward to Crosscauseway, and consisting of a wing the whole length of Pleasance, is of considerably modern aspect, and exhibits a transition-state between the antique and the modish parts of the city.

Returning again to Newington church, we find Clerk-street a continuation of Minto-street, or the great thoroughfare to the middle districts of the south of Scotland. Clerk-street is spacious and well-built; and, after seuding off two modern and uniform streets, Montague and Rankellour, to St. Leonard's-street, and opening on the west into a small area called St. Patrick-square, terminates at its intersection by Crosscauseway, 380 yards north of Newington church. Nicolson-street continues the line of Clerk-street, over a distance of 440 yards, till it is met at right angles by Drummond-street from the east, and South College-street from the west. In its progress, it looks down Richmond-street, sends off Hill-place, leading into Hill-square, opens into the small area of Surgeons' hall on the east, sends off some unimportant communications, and expands into the neatly-built area of Nicolson-square on the west. South bridge continues the line of Nicolson-street 390 yards, sweeping past the extensive and sumptuous front of the College on the west,—sending off, on the same side, North College-street, and opposite to it, on the east side, Infirmary-street,—passing over the top of Cowgate,—and, just before meeting the High-street, opening into the area of Hunter square, on the north-east part of which stands isolatedly the Tron church, forming the angle of South Bridge-street and High-street. North Bridge-street now continues the northerly line over a distance of 370 yards, till it is finally pent up by the majestic front of the Register office, in the line of Princes-street. North Bridge-street, over one-third of its length, consists simply of the lofty road-way of North bridge; and over another third, at its northern end, is built only on one side,—yet presents there in its single row of edifices, owing to their height and elegance and singular position, one of the most prominent objects in the city. The entire line of street commencing in Clerk, or rather Minto-street, and terminating in Prince's-street, is wide, regular, well-edified, and of imposing aspect; and from about the middle of Nicolson-street northward, is lined with commodious and elegant shops, vying with one another in brilliancy of display, and surpassed only by a few lines of shops in the New town, and such localities as the Regent-street of London and the Grafton-street of Dublin.

Returning once more to our late starting-point, we go round the west or rear of Newington church, and speedily find ourselves at the south end of Buccleuch-street, 100 yards west of Clerk-street. Buccleuch-street runs parallel with the latter, till it falls

in with Crosscauseway, and has a plain appearance. Branching off from it on the west, and extending 270 yards is Buccleuch-place,—a spacious and retired street of uniform architecture, but possessing a chilled and forsaken aspect. Fifty or sixty yards north of Buccleuch-place, and communicating with the latter by two openings, expands the fine rectangle of George-square, 220 yards by 150; once the boast of Edinburgh, but now jilted and forgotten for the fascinating squares and octagons and crescents of the New town. Behind it, on the west and south, spreads the fine expanse or public promenade of the Meadows or Hope-park, formerly covered with water, and known as the South Loch. Returning to the north end of Buccleuch-street, we find Chapel-street continuing it, but with a bend to the west of north, and extending only about 120 yards. At the end of that distance, Chapel-street runs up against an acute angle of building which separates it into two continuous lines. The more easterly of these is Potterrow, which goes in a direction a little to the west of north, and is afterwards continued by West College-street and Horse-wynd, till the latter plunges down into the gorge of Cowgate. The second continuous line from Chapel-street is Bristo-street; which runs north-westward, sending off various communications to Potterrow, and is afterwards continued by Candlemaker-row to the head of Grass-market, and by George IV.'s bridge, leading off Candlemaker-row, over the top of Cowgate, to the Lawn-market or High-street. All the district from Buccleuch-street onward, which we have hitherto noticed, is strictly akin in character to that on the west wing of Pleasance, and consists of unornamented masonry, free alike from the antique forms which surprise a visitor in High-street and Canon-gate, and the regularity and elegance which delight him in the strictly modern parts of the city. From Bristo-street, about 260 yards north-west of the north end of Chapel-street, Lothian-street goes off in a north-east direction over a distance of 170 yards, till it touches Potterrow; and it is thence continued by the line of South College-street eastward into South Bridge-street. Both these streets are comparatively modern and uniform, and contain some elegant shops. From the west side of Bristo-street, opposite the exit of Lothian-street, Teviot-row leads away due west, past the City Poor-house and Herriot's hospital on the north, and Watson's hospital on the south, to the beautiful suburb of Laurieston. This suburb consists of an elegant short street, Archibald-place, stretching south into the Meadows, and symmetrical rows of building, Wharton-place and Laurieston-place, stretching westward in continuation of Teviot-row, and leading on, at a few yards' distance, to the suburb formerly described as lying on the south-west corner of the city. Behind Laurieston, or on its south side, expands the Meadows or Hope-park, adorned at this part with the fine form of the Merchant Maiden hospital.

We have now to notice only one small section more of the Old town; and, in order to trace distinctly its locality, must return to the foot of the Canongate, within a few yards of our first starting-point, at the area before Holyrood house. Just after leaving that area, we find, off the foot of the Canongate, an opening to the north; which offers a winding path in front, up the acclivity to London-road, and at the same time branches off right and left into Abbey-hill and the North back of the Canongate. Abbey-hill—of no importance in itself—opens an easy communication, at the distance of 360 yards, with London-road, and thence with the portion of the New town which sweeps round the base, or mounts aloft on the terraces, of Calton-hill. The

North back of the Canongate runs due west, leaving the foot of the Canongate at a very acute angle, and receding from it till, at its termination in Calton, after a progress of 800 yards, it is distant from it, or rather from the continuous line of High-street, 230 yards. The triangle thus formed on two sides, is completed by Leith-wynd, which comes down from the head of Canongate, in a direction west of north, to the west end of the North hack of Canongate. Much of this triangle, and of the streets which form it on the north and west, is the abode of squalidness and poverty; much of it also is occupied with densely-peopled lanes and closes, which seem pressing together to conceal the misery at their base beneath the romantic and rugged outline of the summits of their lofty houses. Leith-wynd is considerably rapid in descent, and, before closing in to form the triangle, sweeps past the terminus of the North British railway, situated in the hollow which is spanned by the lofty North bridge, and lying under the shadow of its arches. The North back of Canongate lies along the gorge between the base of Calton-hill and the central hill of the site of Edinburgh; at every part of its progress it is frowned upon by precipitous declivities which Calton-hill sends down in near contact with its buildings; and, at its west end, in particular, it is overhung by perpendicular rocks which bear aloft the extensive walls and towers of the city jail. Communicating with this street, but deochoning round to the north, and nearly on a line with Leith-wynd, Calton-street leads off along the gorge between the western base of Calton-hill and the abrupt eastern termination of the rising ground on which stands the original part of the New town; and, conducting beneath the lofty and beautiful arch of Regent-bridge, ascends, at a distance of 300 yards from the foot of Leith-wynd, to a junction with Leith-street, and thence to a communication with all the eastern parts of modern Edinburgh.

The North Loch Valley.—The valley between the Old town and the New, extending from east to west about 900 yards, with an average width of about 220 yards, was formerly occupied by a lake, called the North Loch. The eastern extremity of it, immediately under the open part of the North bridge, is now disposed principally in spacious vegetable, fish, and flesh markets, which are accessible by various paths from the New town, by rapidly descending alleys from High-street, and by commodious flights of steps from the North Bridge. The next part of it, to the west and north, is occupied by the termini, partly conjoint and partly contiguous, of the North British railway, the Edinburgh and Glasgow railway, and the Edinburgh, Perth, and Dundee railway. Then follows a low new bridge, with descending approaches serving chiefly for the railway termini, but partly also as a communication between the Old town and the New. Next are recently formed gardens, open to all the public, and magnificently superintended, on an esplanade on their north side, by the Scott monument. Next strides from side to side, at a high level, the huge broad earthen mass of the Mound, crowned by the Royal Institution and the National Gallery, and overhung on a high steep at the south end by the Free Church College. And thence the valley stretches away westward, again laid out in garden-ground, and sweeping past the northern face of the Castle, till it becomes the site of St. Cuthbert's church and the Episcopal chapel of St. John's, and is lost beneath the new streets of the south-west wing or suburb of the New town. Over half of its total extent, or from the North bridge to the esplanade of the Castle, this lovely valley is overhung along the south by the lofty

gables and abutments of the towering edifices which terminate the northern alleys from the High-street; and, in grouping with them, as well as with the dark, craggy, vast outline of the overshadowing Castle, it presents an aspect of romance, and of mingled beauty and sublimity, which probably was never rivalled by any other city-view in the world.

The New Town.—The New town of Edinburgh may be regarded as consisting of four sections,—the original New town,—the second New town,—the New town of the lands of Coates,—and the New town around and on Calton-hill. A briefer nomenclature, and one sufficiently accurate, would be the southern, the northern, the western, and the eastern New town. All are distinctive in their respective features, and, viewed in the aggregate, are rather caricatured than pictured by the phrase which royalty is said to have applied to them in compliment, "a city of palaces." Were all the palaces of Britain aggregated on one arena, and arranged in palace order, all with their clusters of attendant buildings, and each with its colonnades, or towers, or turrets, or abutments and gables of Grecian, Gothic, Mixed, or Elizabethan architecture, they would present an architectural landscape motley as the trappings of a stage-drawn, compared with the dress of simple elegance, unique grandeur, and rich but chaste adorning which arrays the New town of Edinburgh.

The southern or original New town, stretches along the summit of the most northerly of the three longitudinal and parallel hills which form the site of Edinburgh; and extends, in length, from nearly the line of the North bridge on the east, to a line considerably west of the west face of the Castle. Its form is a regular parallelogram, the sides of which measure 3,900 feet and the ends 1,090. Its principal longitudinal streets are three, Prince's-street on the south, George-street in the middle, and Queen-street on the north. But between Prince's-street and George-street, and again between George-street and Queen-street, run, over the whole length, meaner and narrower streets, called respectively Rose-street and Thistle-street, which have been judiciously interposed for the accommodation of a middle class in society.—Prince's-street—as far east, at least, as it strictly belongs to the original New town, or to a point 160 yards west of the northern termination of North bridge—consists of only one row of houses, having the form of terrace, and facing the northern front, or towering and picturesque heights, of the Old town. Originally the houses were all of one figure and elevation,—three stories high, with a sunk area in front, enclosed by an iron railing; all were constructed in the manner of elegant and commodious dwelling-houses; and they differed only in acquiring a finer polish of stone, and a freer accession of ornament, as the street proceeded toward the west. But during a considerable series of years preceding 1840, and increasingly from that time to the present, the street's uniformity of aspect, specially over the eastern half of its length, has been destroyed. Many of the houses have been transmuted into shops, warehouses, public offices, or hotels; others, for the same or similar uses, have been enlarged, refaced, or architecturally adorned; some have given place to large, magnificent new edifices; and the whole vie so much with one another in character, as to have lost utterly their old appearance of simple modest contrast to the romantic irregularities of the opposite Old town.

George-street, previous to the brilliant erections of the northern and western New town, was said to have no rival in the world; and even yet, in combined length, spaciousness, neatness of architecture,

and magnificence of vista and termination, it may be pronounced unparalleled. It is 115 feet broad, and, like its sister-streets, as straight as an arrow; it presents over great part of its western half that uniformity of house-structure which originally characterised Prince's-street; and it displays throughout its eastern half grand varieties of feature, in intermixture of some of the finest public buildings of the city with some of its most ambitious shops, warehouses, and private dwellings. At its ends are superb and spacious squares—the western, called Charlotte-square, and the eastern, St. Andrew's-square; both sumptuous in the architecture of their sides, and ruralized and lovely in the garden-plots and shrubbery of their area. Rising from the centre of St. Andrew's-square, is a lofty, fluted column surmounted by a monumental statue of Lord Melville; and standing up from the back of Charlotte-square, is the huge form of St. George's church, bearing aloft a magnificent cupola and cross; and these, on the ends of George-street, decorate and shut up the view. St. Andrew's-square, however, quite as much as Prince's-street, and in a grander fashion, has been transmuted from its original character of a place of opulent dwelling-houses to a place of commercial stir. "Its old aristocratic occupants have one and all disappeared, to give place to banks, insurance-offices, hotels, and warerooms; yet, with this altered occupation, the architectural adornments of the sons of commerce have so greatly exceeded those of the old gentry, that the few mansions of the latter still intact appear as ungainly intruders among their showy and beautiful neighbours."

Queen-street, with not much exception, maintains its original form, so as to be nearly a fac-simile of what Prince's-street would still have been, had it not been touched by the modelling hand of innovation. But the grouping of Queen-street with surrounding objects, and the aspects thrown upon it by its peculiar locality, are entirely different and even contrasted. This terrace is not, like Prince's-street, overlooked at a brief distance by the dark and strange forms of a loftily situated city of antiquity; but it looks down, over its whole length, on a tastefully dressed expanse of public garden; and, across this it is confronted by an array of edifices more sumptuous and modern than its own; and it thence looks over all the assembled beauties of the second New town, away to the joyous Forth and the dim but beautiful landscape in the distance.—Crossing the parallelogram of the original New town, from Prince's-street to Queen-street, cutting George-street at right angles, are seven streets, St. Andrew's-street, on the extreme east, and afterwards St. David's, Hanover, Frederick, Castle, Charlotte, and Hope streets, the last forming the extreme west. These streets rise, from each end, by a gentle ascent to George-street; and are not inferior in spaciousness of width and in elegance of architecture, to the principal longitudinal streets which they intersect. But while those toward the west maintain, like Queen-street, their original aspect; those toward the east have, like Prince's-street, been modified and altered, in order to become suitable seats of business.

The second or northern New town considerably resembles, in its general outline and arrangement of streets, the original New town, but has some graceful peculiarities, and greatly excels in the splendour of its architecture. Separated from the other by the area of Queen-street gardens, it, too, has the form of a parallelogram, disposed in two lateral terraces, a central spacious street, and two intervening minor streets,—intersected by cross streets, and terminated by spacious areas. But the parallelogram is shorter

and broader than that of the northern New town; the terraces assume, in their eastern part, the form of crescents; and the terminating area on the west is circular. The southern terrace, in its straight part, is Heriot-row, and, in its crescent part, is Abercromby-place. The central street is Great King street, opening on the east end into the large, elegant, symmetrical square called Drummond-place, and on the west end into the circular and gorgeously edified area, called the Royal circus. The smaller longitudinal streets are Northumberland-street along the southern section, and Cumberland-street along the western. The northern terrace, in its straight part, is Fettes-row; and in its curved part, which forms a deep arc of a circle, is the Royal crescent. The intersecting streets are Dublin-street, continued by Scotland-street, on the extreme east,—Nelson-street, continued by Duncan-street,—Dundas-street, continued by Pitt-street,—Howe-street, continued by St. Vincent-street,—and in the extreme west, India-street. The northern New town, consisting of the terraces, streets, and areas, which have been named, must simply be described in the aggregate, but with special reference to the Circus, the two terraces, and Great King-street, as unparalleled, except in a portion of the western New town, for the symmetry and taste of its arrangements, and the superabundance and impressment of its architecture.

Extending out like a fan from the north-west corner of the northern New town, is the beautiful suburb of Stockbridge, having its main communication with Edinburgh through the Royal circus. This cluster of variously arranged, and extensively elegant, rows of buildings, lies on both sides of a beautiful bend of the water of Leith; the straight line of the river being here from south to north, and the bend from that line being toward the east. The buildings on the east side are, for the most part, arranged in short, continuous streets, called Saxe-Coburg-place, Claremont-street, Clarence-street, Brunswick-street, and India-place—nearly in the form of the half of an octagon, each side of the semi-octagonal figure facing the river in the progress of its bend. The buildings on the west side of the stream are chiefly arranged into five radii of a circle, or stretch between these in brief intersecting streets. The principal radii are Dean-terrace along the river,—a street which expands into St. Bernard's crescent; and Dean-street, and Raeburn-street. The western and eastern sections are connected by a bridge, from which the suburb has its name, and which sends off, on the west, an intersecting street, to communicate through the Royal Circus with Edinburgh.

Stretching away east from the northerly part of Stockbridge, is another suburb of the northern New town, separated from it by an open area 530 yards in length, and 170 yards in average breadth, called Canonmills meadow. In this suburb, at the west, are the Institution for the deaf and dumb, and the Edinburgh academy. The principal lines of buildings are Claremont-place, connecting it with Stockbridge, and Henderson-row, continuous with the former, and Brandon-street running north and south on a line with Pitt-street and Dundas-street. From the north end of Brandon-street, Huntly-street curves off eastward, and communicates on the right with the mean, plebeian, confused little suburb of Canonmills, and on the left, by a handsome bridge across the Water of Leith, with the interesting suburbs of Tanfield and Inverleith,—the former including a mass of moorish edifices, originally built for an oil gas-work, and containing the quondam assembly-hall of the Free church,—the latter comprising Warriston-crescent, some fine rows of houses

along the main road to Granton, or on rectangular deflections from it, and several aristocratic mansions and great public gardens.

The western New town commences 140 yards west of the south-west corner of the northern New town, or of the west end of Heriot-row, in a spacious dodecagon, called Moray-place. This dodecagon is pre-eminent in the sumptuousness of domestic architecture which has won for modern Edinburgh the epithet of palatial. Its houses are massive Doric structures, built on a uniform plan, with truly august effect, after designs by Gillespie Graham. From one side of this dodecagon opens Darnaway-street, going eastward to form a continuous line with Heriot-row. Off Darnaway-street, at right angles, goes Wemyss'-place, to ascend at right angles to Queen-street. From another side of the dodecagon opens Forres-street, ascending parallel with Wemyss'-place, and forming a continuous line with Charlotte-street. From still another side of the dodecagon goes south-westward, over a distance of 320 yards, what forms distinctly the continuation of the western New town,—Stuart-street. This is a magnificent thoroughfare, worthy to connect the opulent displays of Moray-place, with displays scarcely if at all less rich, which we shall find at its other extremity. Stuart-street expands at its middle and over half its length, into a double crescent, called Ainslie-place; the two arcs of a circle being exactly opposite, and presenting exquisitely symmetrical fronts. The south-west end of Stuart-street passes into the middle of a very deep and spacious crescent, or more properly a semicircle, called Randolph's crescent, which has a grandeur of character similar to Ainslie-place, with a curious group of old trees before it.

On a line with the chord of Randolph's crescent, Queensferry-street runs 230 yards south-east, to fall there at an obtuse angle upon the west end of Princes-street; and, on the same line, Lynedoch-place runs north-west toward Dean bridge, which spans and overlooks the deep, beautiful, romantic ravine of Leith water, and forms the great thoroughfare with Perth and other places in the north by way of Queensferry. Above the bridge, but quite at the bottom of the deep ravine, are the mills and village of Water of Leith, looking to be as distinct a locality as if they were scores of miles from Edinburgh, a total contrast to all the magnificence of architecture by which they are so nearly overhung. Below the bridge, for a distance of 430 yards on the right, and then also for some small distance on the left, ranges of lofty symmetrical edifices—Randolph-cliff, the rear of Moray-place, and the front of Deanterrace—surmount the rocky steepes of the ravine, while these latter soar up from the shelving banks of the river, in a manner of singular romance,—the rear of Moray-place, in particular, “sustained on a series of arches that give its hanging gardens an altogether Babylonish aspect, whilst woods and shrubberies and sloping lawns throw in everywhere the brilliant and grateful varieties of the tint termed green to relieve the perpetual rigidity of huge precipitous crags, cliffs, or buildings.” On the west side of the ravine, on and near the Queensferry road, forming grand groups immediately beyond the Dean bridge, are new fine ranges of private dwelling-houses, and several very imposing public buildings.

From the middle of the chord of Randolph's crescent, to the intersection of Queensferry-street with the head of Prince's-street, is the side of a square of streets, which lies in the form of a lozenge, with its angles to the four cardinal points, and measures about 400 yards on each side. The streets

running north-east and south-west are Melville-street, the most spacious,—William-street, continued by Alva-street,—and Coates' crescent, continued by Maitland-street; and the streets which intersect these, are Melville-place, continued by Queensferry-street, Stafford-street, Walker-street, and Manor-street. This part of the western New town, though beautiful to a degree which would challenge prime admiration anywhere but in Edinburgh, is markedly inferior to the part first noticed. Its south-west side, however, previous to the railway period, was wont to create a thrill of surprise and delight in the breast of many a tourist, from its being the grand thoroughfare to Glasgow and other places in the west, and the first of the numerous architectural displays of Edinburgh which strangers arriving from these quarters used to see. This side we noticed as formed of Coates' crescent and Maitland-street; but Coates' crescent, like Ainslie-place, is double, one of the arcs being called Atholl crescent. The area in each is tastefully adorned with shrubbery; and, in one, has a row of stately trees, which yields, like the line of edifice, to the curve of the arc. Immediately behind Maitland-street, and running parallel with it, is Rutland-street, terminating in Rutland-square,—neither the street nor the square remarkable for airiness, but both of them very neatly edified, and perfectly symmetrical. South-westward of the crescents, and on a line with their chord, are Atholl-place, and, in continuation of it, West Maitland-street; and going off from these at acute angles eastward, are the parallel streets, Torpicheu-street and Morrison-street, which connect the western New town with the suburb of the Old town south-west of the Castle.

The eastern New town, owing partly to the nature of the ground on which much of it stands, but chiefly to the various dates and conflicting plans of its erection, will not be so easy of description as the other sections. Along its entire western limit it is strictly compact with the northern and the southern New towns, being divided from the former simply by the roadway of Scotland-street and Duhlin-street, and from the latter by the roadway of St. Andrew's-street. In its extreme north it is narrow, and commences at Canonmills. There stands Bellevue-crescent, with its back to the back of Scotland-street, and formed on a plain of neat uniformity and considerable elegance, with the fine facade and spire of St. Mary's church in its centre. But only the southern half of it has been built; and this is prolonged southward by Mansfield-place, a range of edifices of similar character and extent to itself. Claremont-street, chiefly a one-sided range, very neat, with good scope of view both in front and in rear, runs away 250 yards north-eastward, opposite St. Mary's church, and expands into the handsome semicircle of Claremont-crescent,—only half of which, however, is edified. From the south end of Mansfield-place, Broughton-street—a spacious and pleasingly edified thoroughfare, but irregular in its plan and sufficiently plain in some of its buildings—runs in a direction to the east of south, till it falls, at an obtuse angle, on Catherine-street, or the line of Leith-walk. Broughton-street, previous to the railway period, was the grand thoroughfare to Fife, Dundee, and other places in the north, by way of the Newhaven ferry. From its west side go off London-street, to Drummond-place, on a line with Great King-street,—Barony-street, on a line with Northumberland-street,—Alhany-street, on a line with Abercromby-place,—and York-place, on a line with Queen-street,—thus forming a junction or compact union with the northern and southern

New towns. London-street is in a style of elegance akin to the street with which it communicates; Albany-street is neat and uniform; and York-place is a spacious and pleasing thoroughfare, not a little adorned by the beautiful turrets and architectural carvings of St. Paul's episcopal chapel. From the east side of Broughton-street go off Broughton-place, opposite the exit of Barony-street,—Forth-street, opposite the exit of Albany-street,—and Picardy-place, opposite the exit of York-place. All these are airy, well-built, two-sided, modern streets.

Between York-place and the line of Prince's-street, lanes and little streets and an area called a square, are huddled together in a style of grotesque confusion, which—apart from superiority in architecture—has no parallel in even the most sinuous nook of the Old town. What adds to the effect produced—the feeling of surprise at the utter contrast exhibited to the spaciousness and regularity of the street arrangements in the other sections of the New town—is that most of this cluster occupies the rounded and declivitous brow of the northern longitudinal hill of Edinburgh. From the middle of York-place, a narrow street called Elder-street, enters the section we are describing, and after a progress of 170 yards up the face of an acclivity, terminates with a bend at the small area of St. James'-square, on the summit of the hill; and from this area two narrow streets descend on rapidly inclined planes,—one to fall at right angles on the south-eastern termination of Broughton-street, and the other to fall at right angles on the head of Leith-street, a few yards east of the north end of the North bridge. As St. James'-square, and the lanes and little streets sloping down from it were built, not upon a public plan but upon a private one of the proprietor of the site, they consist of loftier and less ornate houses than other parts of the New town; and, owing to their position, they present to a spectator, at a little distance, the appearance of successive ridges of building, towering aloft one above another, like the seats of a theatre. Though much more akin in character to the Old town than the New, they possess the property of impressing a stranger who approaches Edinburgh from Leith with ideas of the aspiring architecture and wonderful aspect of the city.

At the south end of St. Andrew's-street we are again in Prince's-street, a continuation of which thence to the North bridge, properly belongs to the eastern New town. Prince's-street is here built on both sides; and has thoroughly—more so, indeed, than any other part of Edinburgh—an aspect of business. Here are as many spacious shops, and bustling coach-offices, and noisy inns, and multiform appliances of stir and traffic, as can well be crowded into the limited space. So great is the bustle in the constant arrival or starting of stage-coaches, in the rush of carriages and cabs and omnibuses, and in the broad current of pedestrians pouring over this central point of intercommunication of streets, that one is forcibly reminded here, at least—if nowhere else in Edinburgh—of the Tron-gate and Argyle-street of Glasgow,—and faintly even of Cbeapside, or Ludgate-hill, or Fleet-street of London.—Near the north-east angle of the North Bridge stood the Theatre royal, within a confined dingy area called Shakespeare-square, swept away in 1859–61 to give place to the new General Post-Office. Opening out by a curve from the space before the Post-Office is Leith-street, which goes away north-eastward, descending a slope, and is continued in the same direction by Catherine-street, till the latter forms an obtuse angle with Broughton-street. Leith-street presents a medium appearance of architecture between the Old

town and the New,—more akin, however, to the former than the latter; and it has, on its north side, what is called a terrace, a story of building abutted or projecting from the line of the upper stories, and having a pathway along its summit. At the foot of Leith-street, where it has descended to the hollow, and where it receives the communication from beneath Regent-bridge with Leith-wynd and North haek of Canongate, a narrow street or lane, called Calton-hill, goes off and climbs the steep side of the eminence whence it has its name, till, at an acute angle, it merges contiguous to the flight of steps by which ascent is made to the site of Nelson's monument. Catherine-street is similar in appearance to Leith-street; the houses high, and plain in architecture.

At the foot of Catherine-street, the thoroughfare which it and Leith-street had formed from Prince's-street, becomes considerably widened and very spacious, shoots off in a direction a little more to the east, and henceforth, till it passes into Leith, at a distance of nearly 2 miles, is nearly as straight, and in some respects, almost as picturesque as Princes-street. From the foot of Catherine-street, as well as farther on, this thoroughfare is properly Leith-walk; but, for a considerable space, it has subordinate names, each of which applies to a portion of only one side. On the north side it is called successively Union-place, Antigua-street, Gayfield-place, and Haddington-place; on the south side it is called Greenside-street, Greenside-place, Baxter's-place, and Elm-row; and then, losing most of its town character, and becoming a debatable ground between the metropolis and its port, it is quietly allowed, except at its edified intervals, to pass under its proper name of Leith-walk. Over all the so-called streets and places which we have mentioned it is of pleasing though not superb appearance, and is romantically overhung by the rapid northern slope of Calton-hill, covered with verdure, terraced with promenades, and surmounted by its gorgeous architectural structures. Elm-row is an elegant line of uniform buildings; and opposite to it is the deep recess or open area of Gayfield square, not unpleasing in its aspect. From the south-west end of Elm-row a beautiful and spacious line of street, called Leopold-place, opens eastward, expands for a while into the fine form of Hillside-crescent, and stretches away eastward along the north base of Calton-hill, forming one of two grand thoroughfares to the east coast of England, by way of Haddington and Berwick-upon-Tweed. From the north-east end of Elm-row goes off Montgomery-street, parallel with Leopold-place, to which it sends the cross-communications of Windsor-street and Brunswick-street. Nearly opposite the exit of Montgomery-street, Annandale-street goes off to the north-west, and bends round into the beautiful figure of Hope-crescent, facing Leith-walk.

Returning to the area, at the end of North Bridge, or in front of the new Post-Office, we find a grand continuation of Prince's-street, far surpassing it in the opulent architecture of its edifices, leading off in a straight line with it, and along a complete though artificially-formed level, to a point about a third or a half-way up the ascent of Calton-hill. This is called Waterloo-place. For about 50 feet in its centre it is lined by ornamental pillars and arches surmounting the ledges of Regent-bridge, which carries it across the gorge at the base of Calton-hill; and, in general, it consists of superbly-finished houses of four stories, which, toward Prince's-street, have a pediment and pillars above the lower story. On the north side of Waterloo-place, is a large tenement, built at an expense of £30,000, and long used

as a hotel; on its south side are the Inland revenue office and the old Post-office; and though these edifices are in the best style of Grecian architecture, they no more than symbolize with the other structures of the street. At nearly 300 yards distance from Prince's-street, Waterloo-place runs against a shoulder or projection on the side of Calton-hill, and debouches to the south-east. At the point of contact with the bulky obstacle, it sends up, from its north side, an airy flight of steps, by which the level of the far-seeing promenades of Calton-hill, and the esplanade of the paths which lead up to its summit, are attained. While Waterloo-place, or rather the spacious road-way, called Regent-road, in continuation of it, is making its debouch, it is winged on its south side by the gaol and bridewell,—of very picturesque appearance, and romantically seated on a cliff, which overhangs part of the Old town. Regent-road again and a third time debouches, running along the side of Calton-hill, and forming an esplanade or shelf in its declivity; and after passing the Royal High school on the north, and the Low Calton burying-ground on the south, slopes gently away to the north-east, becomes lined with good modern buildings, under the name of Norton-place, forms a junction about 230 yards from the eastern base of Calton-hill, with the great thoroughfare to London, leading off in Leopold-place from Leith-walk, and thence stretches away by Comely-green and St. Margaret's, to Pierhill barracks and Portobello. Just after passing the Royal High school, Regent-road sends off at an acute angle on its northern side, a communication round the eastern face of Calton-hill, with the upper parts of Leith-walk. This, like the road itself, is an esplanade or shelf on the face of the hill, and is lined on the higher side with a row of superb and uniform houses, which command much of the brilliant prospect seen from the more elevated promenades, and which, under the names of Regent-terrace, Carlton-terrace, and Royal-terrace, sweep round the hill, over a distance of about 1,000 yards, describing the figure of the orbit of a comet when approaching and leaving its perihelion; and at its west end, Royal-terrace sends down a communication with Leopold-place and Leith-walk.

Holyrood.

In the preceding description of the street arrangements of Edinburgh, we began at the area in front of Holyrood, and have gone over all the hills and valleys of the city. Such a maze of architecture, so intricate, so diversified, piled so romantically upon every available spot of ground, and yet spread out so beautifully in every form of symmetry, nowhere else exists in the world. And after considering it as we have done, we feel curious to know what was the condition of its site, two thousand years ago, when the Caledonian Ottadini were its masters, long before Holyrood was built, and what were the circumstances which changed its character, and made it royal.

The Origin of Holyrood.—The ravines and hill-skiirts were then in all their natural ruggedness; the old North loch filled all the valley between the Old town and the New; some rude earth-works stood on the crown of the Castle-hill; a few savages, almost naked and of brutal aspect, burrowed among the earth-works; and a native forest, shaggy and silent, or tenanted only by wild beasts, and forming part of a sylvan wilderness many scores of miles long, spread over most of the hills and most of Arthur's-Seat, holding possession of all the soil, and leaving nothing to view but patches of rock and water. The Romans came and departed; the Picts and the Romanised Britons chased one another in

frequent conflict over the ground; the Northumbrian Princes took root, and gave the place its name of Edwin's-Burgh; the Scots, from Dalriada, acquired mastery over all the land; and even the Scoto-Saxon dynasty became established and famous; and still Holyrood was not yet in embryo. But at length arose David I., a prominent ancestor of the present Sovereign, but widely different from her in character.—fond of hunting and display, a slave of superstition, and a "sair saunt for the croon o' Scotland" by lavish expenditure of the royal revenues in the endowing of monasteries; and he took a fancy to the forest of the Edwin's-Burgh hills as a convenient hunting-ground, and founded on the most meadowy part of it, an edifice for monks and mummery. The earth-works on the Castle-hill had then become transmuted into a citadel; a collection of thatched houses had been built contiguous to the citadel, under protection of its walls; and the King had sometimes occasions of state to lodge in the fort, and then found it pleasant to riot at will, in the day time, among the umbrageous heights and hollows of what is now the Queen's park. Where could he more excitedly pursue the chase than through the waving woods, over the dells and crags of Arthur's Seat? or where more refreshingly draw breath and tell his beads, than beside the huddling fountains in the adjacent meadows? And a story is told, that, once on Rood-day, the festival of the Exaltation of the Cross, he rode, with hunter's haste, from the Castle, and dashed headlong into the forest,—that, in the hollow, near the north end of Salisbury-crags, when separated from all his followers, he came suddenly upon a giant hart of terrible aspect, and with mighty antlers,—that he was assailed by the creature, unhorsed, and driven to desperate defence—that in mortal extremity, with no more power against the antlers than if all his arms and arts had been idle straws, a "haly rude," or holy cross, came miraculously into his hand, composed of such unique material that no man could ever "schaw qwhat it was, metal or tre,"—that one flourish of this supernatural weapon made the hart vanish,—and that in gratitude for his deliverance, and in everlasting honour of the "haly rude," he founded on the spot a magnificent religious edifice. But all this story is a fable, invented several years after the monarch's death; and probably had never an atom of sanction beyond some circumstance connected with the festival of the "haly rude." The edifice, however, had all the magnitude and pomp of a first-class abbey; and was designed, not in any degree as a royal residence, but entirely as a house for a fraternity of the order of monks, called Canon-regular. And as to the date of its foundation, old Wyntoun records in his "Cronykill," that—

"Ae thousand ae hundyr and twenty-yhere,
And awcht to thair to rekyne clere,
Fowndyd wes the Hallyrwd Hows,
Frae thine to be illygyws."

The Abbey of Holyrood.—The abbey soon became one of the richest and most splendid monastic establishments in the kingdom; and, like every other, it contained apartments for hospitably lodging both poor and wealthy wayfarers; and, more than any other, it was visited by the noble and the royal of the kingdom. That was a time when mitred abbots were more than a match for civil grandees, and sometimes dared to measure their strength with kings; and the situation of Holyrood, in the vicinity of one of the strongest military posts in Scotland, where the royal court had increasingly frequent occasion to sojourn, caused its hospitality to be often welcome to Scotland's kings. Parliaments of Robert Bruce and Edward Baliol were held in it;

James I. and his Queen loved it better than any of their own palaces; James II. put it into close proximity to the throne, by constituting Edinburgh the national metropolis; James III. resided in it for lengthened periods; and most of the other kings and great nobles, down to the sixteenth century, made it transient visits. Its original accommodations were soon found to be too small, and were from time to time extended and adorned; and in the reign of James V., they seem to have been formally appropriated by the royal family; so that at length the old abbey became a subordinate pile, and the successive adjunctions to it assumed the form of a massive royal palace. The church of the abbey is the only part of the monastic pile still standing. It was large and magnificent, in the most ornate fashion of Gothic architecture, with tower and buttresses, mullioned window, and sculptured pillars, mouldings, niches, tracery, and most other features of elaborate art. The first reformers converted it into a parish church; the English, under the Earl of Hertford, in 1543, burned and desolated it; Charles II. restored it and made it a chapel royal; and a mob, at the Revolution, in revenge of James VII. having used it as a mass-house, unroofed and gutted it, and left it permanently a ruin. It is now a place of tombs and desolation, of silence and sadness, but still possesses interest for containing the dust of many members of the royal line, and for standing picturesquely up as an adjunct to the palace. Exterior views of it on the north or east with a large breadth of it before the eye, and its intricate outline well defined, are full of character; and an interior view, under a cloudy sky, or especially in moonlight, is solemnly impressive.

The Palace of Holyrood.—The group of edifices which constituted the original palace of Holyrood was destroyed by the English at the time when they destroyed the abbey. But very soon after it was restored and greatly enlarged; and the palace of that time was much more extensive than the present pile, and contained not fewer than five courts, and was altogether a place of imposing magnitude and dazzling splendour. One court occupied much of the area between the present palace and the foot of Canongate, and had at its north-west corner a strong gate, with Gothic pillars, arches, and towers; and the second and third courts were nearly coincident with the present quadrangle; while the fourth and fifth were of small size, and situated to the south. But the most noticeable part of the pile is a part still standing, and in complete repair, forming the north wing of the present main front, and flanked with plain, low, conical-roofed circular towers. Here resided Mary, the most beautiful and mournful of all the monarchs of Scotland; and here are shown her apartments, with the furniture she used and the embroidery she worked, all so venerated that a special order was given by the present Sovereign to leave them undisturbed; and here, when the youthful Queen had just been whirled into the torrent of her life-long course of sorrow, and was far gone in pregnancy of the babe James VI., occurred one of the direst tragedies which ever horrified royal eyes, the assassination of her secretary Rizzio.

"It was an eve of raw and surly mood,
And in a turret-chamber high of ancient Holyrood
Sat Mary, listening to the rain, and sighing with the winds.
That seemed to suit the stormy state of men's uncertain minds.
She thought of all her blighted hopes, and dreams of youth's bright day,
And summoned Rizzio with his lute, and bade the minstrel play,
But hark! the tramp of armed men! the Douglas battle-crie!
They come, they come, and lo! the scowl of Ruthven's hollow eye!

The ruffian steel is in his heart, the faithful Rizzio's slain
And swords are drawn, and daggers gleam, and tears and words
are vain.
Then Mary Stuart brushed aside the tears that trickling fell
'Now for my father's arm!' she cried, 'my woman's heart farewell!'"

One remarkable appendage to the palace in Mary's reign, and earlier, was a lion's den, a small embellished enclosure adjoining one of the windows; and another was a superb suite of gardens, extending about a mile or more to a sheet of water in the vicinity of Restalrig. The royal demesne, comprising all Arthur's Seat and Salisbury-crag, and a great expanse of the low lands around them, from the skirts of the burgh and of the Calton-hill away to Duddingston, all that is at present a pastoral surface, without one scratch of cultivation, and almost as naked of wood as a desert—was then a fairy field of romance and beauty, a labyrinth of crags, hanging shrubberies, and outspread parterres, and sent up its mountain summits, like watch-towers from the bosom of Eden, to carry the eye round a panorama of the most glorious landscapes, stretching away in a world of wonders to the far-distant filmy horizon. But, in the time of Cromwell, the ploughshare of ruin passed over this lovely tract, and even overturned the greater part of the palace's own massive masonry. The main part of the present edifice, originally of very plain appearance, was built by Charles II; a facing of the south and east fronts with polished stone, and an enclosure with grand iron palisade, were added in 1826; extensive renovations of the state apartments were done in preparation for the visits of Queen Victoria; and clearances of an adjacent collection of old houses, together with a great extension of the enclosure, were made in more recent years. The entire pile forms a hollow quadrangle, or consists of four sides, with an open enclosed court. The north side stands partly in juxtaposition with the ruin of the abbey-church, and acquires from it a grand and venerable appearance; the east and south sides are neat, plain, many-windowed masses of uniform elevation; and the west side consists of two projecting wings and a centre—each wing as high as the rest of the pile, and flanked by circular cone-capped turrets, and the centre a story lower, pierced with the grand entrance, and surmounted by a gigantic crown. And over the grand entrance is a great sculpture of the royal arms; and beside the crown rises the flag-staff which, when the Queen is present, holds the royal standard fluttering in the breeze.

The situation of Holyrood is bad. The palace stands on low ground, below the meeting of the Calton and Cowgate ravines, amid all the Old town's natural drainage; and its main entrance is only about a hundred yards from the dingy and malodorous tail of the Canongate. But in recent years, on to 1862, improvements have been made, to remove unsightliness and create amenities. One feature of these is a range of offices in the castellated style, along the north side of the palace yard; and another is a sculptured octagonal fountain, in the centre of the yard, in the renaissance style of the 16th century, 35 feet high, in three tiers, with profusion of quaint figures and statuettes. The chief rural views from the palace windows are on the east side, where the Queen's apartments are situated; and these comprise the review grounds of the Queen's park, and the rolling northern declivities of Arthur's Seat, and are pleasant and considerably picturesque; yet they have not at all a "royal" character, and are inexpressibly poorer than thousands of views from most of the higher situations about Edinburgh. Holyrood itself, however, is a fine feature of a general landscape; and as seen in the hollow from the

Calton-hill, across the antique architectural masses of the Canongate, with the wild crags of the mountain on the back ground, it strongly strikes a reflecting observer, and fires him with a passion for the lessons and wonders of the olden time. These naked precipices behind it too, are an amazing object, and very distinctly tell a geologist about awful convulsions of the earth at this place in ancient epochs of creation, and how the liquid lava here swelled up through crevices in the heaving rocks, and disspread itself into a cap of whinstone over formations which had long before been deposited by water.

Since the days of Queen Mary, Holyrood has been but slightly and fitfully inhabited by royal personages. James VII. before he got to the throne, and was only Duke of York, resided in it, and made it odious with his bigotry; and he had such a habit of pacing up and down the meadow on the east, that the public have ever since called that place the Duke's walk. Prince Charles Edward, in the rebellion of 1745, kept house and revelry in Holyrood during the few weeks of his holding military possession of Edinburgh; and the Duke of Cumberland, after chasing him to the north, occupied the same apartment and the same bed. Charles X. of France both at the Revolution of the first republic in 1795, and at that of his own dethronement in 1830, took up his abode as an exile in Holyrood. George IV. in 1822, and Queen Victoria in 1842, gladdened the halls of Holyrood with royal ceremonial; and the Queen and her family have spent two nights in it, in each of most years since 1850, on their way to and from Balmoral. The enthusiasm of Edinburgh, on each of these occasions, has been great to welcome their visit, and to woo them to come again,—mighty multitudes, well-dressed and joyous, all in the spirit of a holiday, standing amassed along the whole route from St. Margaret's to Holyrood, as well as on the nearest adjacent vantage-grounds, to greet them with shouts of loyalty, and make their progress through the park an imperial ovation.

The Park of Holyrood.—The present park or royal domain of Holyrood extends southward to the vicinity of Newington, south-eastward to Duddingston loch, and eastward to the vicinity of Jock's Lodge, and comprises a circuit of nearly five miles. Its chief parts are Arthur's Seat, Salisbury Crags, a small expanse of somewhat level ground to the north of these, and a narrow, curving, romantic valley, flanked on the west by St. Leonard's hill, between Salisbury Crags and the Old town. It is entirely pastoral, and owes most of its attractions to natural contour and grassy sward. Great improvements were made upon it in 1844,—draining a large marsh at the north end of the valley, smoothing the level ground in the vicinity of the palace, removing boulders, destroying unsightlinesses, enriching the sward, and especially forming a grand carriage-drive round the extremity, or nearly so, of the whole park. This drive traverses the low ground on the north and the valley on the west, and there commands a series of rich close views, or at least views comparatively close, comprising the eastern outskirts of the city, Holyrood itself, the Calton-hill, some parts of the Old town, and the grandest precipices of the Crags and of Arthur's Seat; but it ascends a shoulder of the mountain on the south, climbs gently above the basaltic cliffs of Samson's ribs, and curves upon the mountain's sides and slopes around all the east, so as to command distant gorgeous views athwart Edinburghshire, Haddingtonshire, the frith of Forth and Fifeshire, away to the Pentlands, the Lammermoors, the Bass, the Lomonds, the Ochills, and the Gramplans,—many of the views entirely different from

any which can be seen in grouping with Edinburgh, and the rest under totally different combinations. This drive is open to the public, without the intervention of any toll; the whole park also is always open to pedestrians; a part of the level ground on the north is ever available for athletic games; and a secluded part below St. Anthony's well is marked off as a washing and bleaching-green for the poor. Nothing could be less like a royal domain, as to either decoration or exclusiveness. Nothing could be more like a well kept place of privilege for the people. Nor is the perfectly free access to it for a moment interrupted or limited during the yearly hours of the Queen's presence. The palace itself, too, has of late been thrown open to gratuitous exhibition on every Saturday, and for a small fixed fee on every other lawful day.

The rangership of the park of Holyrood was obtained by charter, for himself and his heirs, by Sir James Hamilton, in the 17th century, from Charles I., as a security for a large sum advanced to him in his necessities during the civil war; but it was repurchased by the Crown, in February 1844, from the Earl of Haddington, the descendant of Sir James Hamilton, for £30,674. The precincts of the abbey, extending from the foot of the Canongate to the limits of the park, were anciently a sanctuary for criminals, and are still a sanctuary for debtors. This privilege seems to have arisen from the following clause in David's charter:—"I strictly forbid all persons from taking a poind [distrain] or making a seizure, in or upon the lands of the said Holy Cross, unless the abbot refuse to do justice to the person injured." Any refugee to the abbey precincts was thus secure, if the abbot chose to protect him; for what temporal judge would dare to accense the holy abbot of injustice? Refugees from creditors in modern times are secure from arrest for twenty-four hours, simply by entering the territory, and are afterwards secure indefinitely by obtaining a "protection" from the local bailie; but, except on Sabbath, they require always to remain strictly within the precincts. They are ironically called "abbey lairds,"—and have long been so called, for the name occurs in a pretty old comic song entitled "the Cock-laird." But legal alterations have rendered "the privilege of sanctuary," to a certain extent, unnecessary; and most of the houses in which "the lairds" found residence have been removed.

The Castle.

The Castle Rock.—Edinburgh Castle—meaning thereby the artificial fortress, as distinguished from the hill—occupies an area of about six imperial acres. The rock on which it stands is columnar trap, of the variety called basaltic clinkstone. Its mineral constituents are principally lamellar felspar and titan iron, with very little augite. It presents a striking specimen of an erupted mass, soaring steeply up, and comparatively little weathered. The northern, western, and southern sides are precipitous,—in some places almost perpendicular; and the highest part rises nearly 300 feet above the vale below, and 383 feet above the level of the sea. The northern skirts, at least in their eastern parts, undulate down in grassy pleasure-grounds to the West Prince's-street gardens; the western skirts go down in bare rock almost sheer to the valley; and the southern skirts have been profusely altered by art in connexion with the improvements of the New Western approach. On some parts of the shoulders of the slopes, beyond the present ramparts, are vestiges of former fortifications. In the sloping pleasure-ground on the north, in particular, is a curiously sculptured stone, in an upright position;

and a walk there is carried through the subterraneous remains of some old outworks. On the face of the precipice, on the north side, also, is perched a fragment, called Wallace's cradle, while at the base is an old ruin called Wallace's tower,—the name Wallace, in both instances, being a corruption of Well-house.

The Castle-Esplenade.—The east side of the Castle is continuous with the central wedge-like hill of the city; and the slope from it commences with the same easy inclination which prevails over every successive part of the hill, all the way to its foot at Holyrood. The rock of the hill, except at and near the Castle, is principally sandstone, with red and blue slate-clay, the strata inclining toward the trap in its immediate vicinity, but dipping away from it elsewhere. An esplanade, measuring about 100 yards by about 120, intervenes between the entrance of the Castle and the head of Castle-street or High-street. This esplanade is entirely open, has parapet walls along the sides, overlooks the romantic masses of the south-western part of the Old town, commands most magnificent views of the New town and of the country beyond, and is used both as a parade-ground for the military and as a promenade for the citizens. In 1850, during the progress of deep excavations in the part of the esplanade nearest the city, there were discovered remains of successive periods, down to the times of the first rude village which was built around the primitive ramparts of the Castle. First were coins of the early mintage of George III.; next were vestiges of an outer fortress, or of the city-wall, destroyed in the 16th century; next was a stratum of moss containing a well-preserved coin of the Lower Empire; and finally, below the moss, at the depth of more than twenty feet from the present surface, were sepulchral relics, indicating a burying-ground of apparently not later date than the eighth or ninth century. Even some of the extant buildings of the city contiguous to the esplanade are curious objects to the antiquary; and a much greater mass of them, still more curious, stood both there and a little further down only a few years ago, but were removed to make room for the new water reservoir, Short's observatory, the Free church college, the Assembly hall, and the New western approach. One of the removed buildings was a squalid tenement, originally occupied as a palace by Mary of Guise, widow of James V., and Queen Regent of Scotland from 1554 to her death in 1560.

The Castle Buildings.—On the western verge of the esplanade is advanced the outer pallisaded barrier of the fort. Behind this are a dry ditch and a drawbridge, flanked by low batteries. Within these the road winds past a guard-house, and passes under an arched gateway, secured by strong gates, and bearing aloft an edifice which was used as a state-prison. On the right, after passing the gateway, is the Argyle battery, mounted with 10 guns of 12 and 18 pounders, which are pointed toward the New town, and from which, in general, the salutes are fired. The road thence leads past the arsenal, which is capable of containing 30,000 stands of arms, and exhibits a display of trophies and military stores curiously arranged, and highly attractive to a stranger who has looked little on the muniments of war,—the houses of the governor and other functionaries, which are of plain appearance,—and a huge pile of buildings, called the New barracks, built in 1796, three stories in front but four in the rear, resting there upon piazzas, and so firmly disfiguring the outline of the Castle as to appear, even at a considerable distance, like a large factory sitting on the brink of a precipice. The road sweeps

past these buildings in a curve, and during its progress is climbing an ascent; and it now, through a second strong gateway, enters the inner and higher vallum of the fort.

Within are the ancient erections of the Castle, and nearly all its most interesting objects. On the south side is a lofty pile of buildings with a court in the centre. The south-east portion of this pile was partly built in 1565 by Queen Mary as a palace, and contains, on the ground-floor, a small apartment in which she was delivered of James VI. In the same buildings is the crown-room, in which the regalia of Scotland are exposed three hours a-day to the view of visitors who have been furnished at the Royal exchange with gratuitous tickets of admission. The regalia were lodged here on the 26th of March, 1707, immediately after the act of Union, and were long supposed to have been secretly conveyed to London; but, on the 5th of February, 1818, were discovered by commissioners appointed by the Prince-Regent, carefully and even elaborately secured in a large oaken chest. They consist of the crown, the sceptre, the sword of state, and the lord-treasurer's rod of office; and are placed on a table, surrounded from ceiling to floor with a barred cage, and made visible by gas-lights. In the crown-room are also a ruby ring, set round with diamonds worn by Charles I., at his Scottish coronation,—the golden collar of the order of the Garter, sent by Elizabeth to James IV.,—and the badge of the order of the Thistle, set with diamonds, and bequeathed by Cardinal York to George IV.

On the east side of the Castle, immediately north of the square court, is the half-moon battery, mounted with 14 guns, overlooking the Old town, and entirely commanding the access along Castle-street and the Castle-hill. On this battery are a flag-staff, behind which King George IV. and Queen Victoria surveyed the city; and a very deep draw-well, the water of which fails when the guns are fired. Farther to the north, and overlooking the Argyle battery, is the bomb-battery, the highest point of the rock, whence a magnificent view is obtained of the gorgeous and far-spreading panorama hung out on all sides toward the distant horizon. On the bomb-battery was placed in March, 1829, the celebrated piece of ordnance called Mons Meg, of 20 inches of the bore,—composed of long pieces of heat iron which are held together by a close series of iron hoops,—employed in 1497 by James IV., at the siege of Norham castle on the English border,—rent, in 1682, when firing a salute to James, Duke of York,—and bearing on both sides of its elegant frame an inscription which supposes it to have been forged in 1486 at Mons. Behind the bomb-battery stands the small Norman chapel of Queen Margaret, the most ancient extant building in Edinburgh.—The Castle, except on the east side, is exceedingly ill-adapted for the purposes of a fort, and presents an outline either of high houses or walls or points of rock having little capacity for gunnery; the fortifications corresponding with none of the rules of art, but accommodating their form and their uses to the irregular sweep of the rock on which they stand. The garrison has a non-resident governor, a deputy-governor, a fort-major, a store-keeper, a master-gunner, and two chaplains, the one presbyterian and the other episcopalian.

Extinct Castle Buildings.—The appearance of the Castle, both inside and out, was formerly much different from what it is at present. Its condition in 1572, for example, is well described as follows in the Memoirs of Kirkcaldy of Grange:—"On the highest part of the rock stood, and yet stands, the square tower where Mary of Guise died, James VI. was

born, and where the regalia have been kept for ages. On the north, a massive pile called David's tower, built by the second monarch of that name, and containing a spacious hall, rose to the height of more than forty feet above the precipice, which threw its shadows on the loch 200 feet below. Another, named from Wallace, stood nearer to the city; and where now the formidable half-moon rears up its time-worn front, two high unshattered walls, bristling with double tiers of ordnance, flanked on the north by the round tower of the Constable, fifty feet high, and on the south by a square gigantic peel, opposed their faces to the city. The soldiers of the garrison occupied the peel, the foundations of which are yet visible. Below it lay the entrance, with its portcullis and gates, to which a flight of forty steps ascended. The other towers were St. Margaret's, closed by a ponderous gate of iron, the kitchen tower, the larch-munition house, the armourer's forge, the hake-house, brewery, and gun-house, at the gable of which swung a sonorous copper bell, for calling the watchers and alarming the garrison. Between the fortress and the city a strong round rampart, called the Spur, and another named the Well-house tower, defended a narrow path which led to St. Cuthbert's well. The Castle then contained a great hall, a palace, the regalia, a church, and an oratory endowed by St. Margaret, who five hundred years before, expired in a room which tradition still names 'the blessed Margaret's chamber.'

The History of the Castle.—The historical events of the Castle are so intimately blended with those of the town, that they must be woven into one tissue with them in the concluding section of this article. Yet there is one historical event, which may be introduced here, of too romantic a nature not to be deeply interesting, and too full of incident to be afterwards incorporated with our necessarily condensed narrative. And we shall give it as told by Leitch Ritchie, with some poetical license in the manner of telling it, though with strict accuracy as to the substantial facts; and we shall merely premise that it illustrates well the remark which has often been made, that those attacks upon fortresses are not infrequently the most successful which are made upon points where the attempt appears the most desperate:—

In 1296, during the contest for the Crown between Bruce and Baliol, the Castle was besieged and taken by the English. It still remained in their possession in 1313, at which time it was strongly garrisoned and commanded by Piers Leland, a Lombard. This governor having fallen under the suspicion of the garrison, was thrown into a dungeon, and another was appointed to the command, in whose fidelity they had complete confidence. Randolph, Earl of Moray, was one day surveying the gigantic rock, and probably contemplating the possibility of a successful assault upon the fortress, when he was accosted by one of his men-at-arms with the question, 'Do you think it impracticable, my lord?' Randolph turned his eyes upon the querist, a man called William Frank, a little past the prime of life, but of a firm, well-knit figure, and bearing in his bright eye, and bold and open brow, indications of an intrepidity which had already made him remarkable in the Scottish army. 'Do you mean the rock, Frank?' said the Earl; 'perhaps not, if we could borrow the wings of our gallant hawks.' 'There are wings,' replied Frank, with a thoughtful smile, 'as strong, as buoyant, and as daring. My father was keeper of yonder fortress.' 'What of that? you speak in riddles.' 'I was then young, reckless, high-hearted; I was mew'd up in that convent-like castle: my mistress was in the plain below—'

'Well, what then?' 'Sdeath, my lord! can you not imagine that I speak of the wings of love? Every night I descended that steep at the witching hour, and every morning before the dawn I crept back to my barracks. I constructed a light twelve-foot ladder, by means of which I was able to pass the places that are perpendicular; and so well, at length, did I become acquainted with the route, that in the darkest and stormiest night, I found my way as easily as when the moonlight enabled me to see my love in the distance, waiting for me at her cottage door.' 'You are a daring, desperate, noble fellow, Frank! However, your motive is now gone; your mistress—' 'She is dead: say no more; but another has taken her place.' 'Ay, ay, it is the soldier's way. Woman will die, or even grow old; and what are we to do? Come, who is your mistress now?' 'My Country. What I have done for love, I can do again for honour; and what I can accomplish, you, noble Raudolph, and many of our comrades, can do far better. Give me thirty picked men, and a twelve-foot ladder, and the fortress is our own!'

The Earl of Moray, whatever his real thoughts of the enterprise might have been, was not the man to refuse such a challenge. A ladder was provided, and thirty men chosen from the troops; and in the middle of a dark night, the party, commanded by Randolph himself, and guided by William Frank, set forth on their desperate enterprise. By catching at crag after crag, and digging their fingers into the interstices of the rocks, they succeeded in mounting a considerable way; but the weather was now so thick, they could receive but little assistance from their eyes; and thus they continued to climb, almost in utter darkness, like men struggling up a precipice in the nightmare. They at length reached a shelving table of the cliff, above which the ascent, for ten or twelve feet, was perpendicular; and having fixed their ladder, the whole party lay down to recover breath. From this place they could hear the tread and voices of the 'check-watches' or patrol above; and surrounded by the perils of such a moment, it is not wonderful that some illusions may have mingled with their thoughts. They even imagined that they were seen from the battlements; although, being themselves unable to see the warders, this was highly improbable. It became evident, notwithstanding, from the words they caught here and there, in the pauses of the night-wind, that the conversation of the English soldiers above related to a surprise of the Castle; and at length these appalling words broke like thunder on their ears: 'Stand! I see you well!' A fragment of the rock was hurled down at the same instant; and, as rushing from crag to crag, it bounded over their heads, Randolph and his brave followers, in this wild, helpless, and extraordinary situation, felt the damp of mortal terror gathering upon their brow, as they clung, with a death-grip, to the precipice. The startled echoes of the rock were at length silent, and so were the voices above. The adventurers paused, listening breathless; no sound was heard but the sighing of the wind, and the measured tread of the sentinel, who had resumed his walk. The men thought they were in a dream, and no wonder; for the incident just mentioned—which is related by Barhour—was one of the most singular coincidences that ever occurred. The shout of the sentinel, and the missile he had thrown, were merely a boyish freak; and while listening to the echoes of the rock, he had not the smallest idea that the sounds which gave pleasure to him, carried terror, and almost despair, into the hearts of the enemy. The adventurers, half uncertain whether they were not the vic-

tims of some illusion, determined that it was as safe to go on as to turn back; and pursuing their laborious and dangerous path, they at length reached the bottom of the wall. This last barrier they scaled by means of their ladder; and leaping down among the astonished check-watchers, they cried their war-cry, and in the midst of answering shouts of 'treason! treason!' notwithstanding the desperate resistance of the garrison, captured the Castle of Edinburgh.

Civil Edifices.

Some of the other public buildings of Edinburgh, either singly or in groups, might almost challenge as much attention as Holyrood or the Castle. All the rest, however, for sake of necessary brevity, we must notice more cursorily, and shall arrange into classes. And these classes may be five,—the civil, the educational, the charitable, the ecclesiastical, and the extinct. Some of these classes, indeed, particularly the charitable and the educational, will be found to run considerably into each other, yet not so much so as to cause any confusion. The civil class, also—to which we devote the present section—must be very miscellaneous, including everything which cannot be more appropriately assigned to any of the other classes; but even thus, it will be much better than any kind of chance-medley collocation; and we shall promote its clearness by bringing edifices of similar kinds or similar uses, such as banks, bridges, and monuments—and first of all the remarkable old extant buildings of the Canongate—into groups.

Canongate Buildings.—On the north side of the Canongate, a brief distance from the foot, in a most uninviting close, called Davidson's-land, is a squalid singular-looking mass of houses, formerly occupied as the White Horse Inn, long a principal inn of the metropolis, and now the best representative of the old Scottish inns in existence. Even Dr. Johnson took house here on his arrival in Edinburgh, and he got a speedy taste in it of some of those manners which made him ever afterwards speak ill of Scotland.—A little further up on the opposite side of the street, is Queensberry-house, a large plain building, erected by William, 1st Duke of Queensberry. It was inhabited by him, by the 2d and the 3d Dukes, and by the Duchess of the 3d, daughter of Lord Clarendon, and cousin of Queen Mary and Queen Anne. It was likewise at one time the residence of the Duke of Douglas; and in 1747, the celebrated Earl of Stair died in it. It is now used as a house of refuge for the destitute.—Nearly opposite this, within a gate at the head of a close or alley, is Whitefoord-house—a large modern mansion, built by Sir John Whitefoord, and afterwards inhabited by Dugald Stewart.—About half-way up the Canongate, on the north side, is the Canongate-tolbooth,—a dark, plain, antique building, surmounted by a small spire. Fixed to the wall, at the south-east corner, is the Canongate cross.

Farther up, on the south side of the street, is the conspicuous mansion of Moray-house, the ancient residence of the Earls of Moray, built, most probably, after the union of the Crowns. In front is a massive stone-balcony, communicating with one of the apartments and overlooking the street; and from this balcony the Marquis of Argyll and his family beheld the Marquis of Montrose conducted ignominiously to prison, precurrent to his execution. Moray-house was also the residence of Oliver Cromwell, on occasion of his visit to Edinburgh in 1648; and a garden behind it bears reminiscences of Queen Mary, and of the negotiations for the union of the kingdoms. The mansion, after losing its

ancient grandeur, was successively a linen warehouse, a banking office, a paper warehouse, a sugar-refinery, and a temporary hospital; and now it is occupied as the Normal school of the Free church.—A little below Moray-house is an antique building, said to have been a town residence of the Dukes of Gordon.—At the head of the Netherbow, on the north side, is the house where John Knox resided both in 1559 and 1563, and where he wrote his *History of the Reformation*. It is an irregularly shaped building in the Flemish style, with small windows, small rooms, and an external stair; and it has on the projecting angle some quaint sculpture, whose chief figure represents Moses at the burning bush. In 1849, this interesting memorial of the great reformer was so shaken by age as to be condemned by the public authorities; but through means of a spirited subscription, it was so thoroughly repaired as to promise now to stand for centuries.

The Exchanges.—On the north side of High-street is the Royal exchange, commenced in 1753, and finished in 1761 at an expense of £31,457. It is a large and elegant square, with a court in the centre. The south side, or that fronting the street, consists of a range of archways, about 25 feet high, with a platform on the top adorned with balusters and vases. The archways are seven; and all, excepting the central one, arc built up and constructed into shops. From the end of the archways, two wings extend northward 131 feet till they touch the inner front, or 182 feet till they reach the rear of the entire edifice. The north side of the square extends 111 feet over wall, and is 51 feet broad. Pillars and arches, supporting a platform, run along its front, and form a piazza. In the centre, four Corinthian pillars, whose bases rest upon the platform, support a pediment on which are engraved the armorial-bearings of the city. The building contains the magistrates' court-room, the apartments of the town-council, and various offices connected with the city, and is ascended to its upper floors by a hanging stair, the well of which is 20 feet square, and 60 feet deep. The court in the centre, including the piazza, is 96 feet south and north, and 86 feet east and west. The building is, in its south front, 60 feet high; but it stands on the slope of the hill, and in its rear is 100 feet high.

On the south side of the Grassmarket, near the west end, stands the Corn exchange, erected in 1849, at the cost of nearly £20,000. It was constructed after a design by Mr. Cousin, the city architect. It is massive, elegant, and well suited to its site. The doorway is in handsome Doric, with two rustic columns; the windows are effectively varied in design in all the three stories; and the mouldings are rich and imposing. The facade comprises a main front of 98 feet in breadth and 60 feet in height, and two small wings, both receding about 13 feet and having stair-cases within, that on the west being carried up as a bell and clock tower. Only the vestibule of the exchange, however, is connected with the facade. The main part for business, in which the sample-bags of grain produce are ranged in line for inspection, extends backward to the distance of 152 feet, somewhat in the style of a railway station. It is lighted entirely from the roof by means of patent tile-glass; and the roofing is lower than that of the vestibule, and has a triple arrangement, being supported within the area by two rows of metal pillars.—The old corn market across the foot of Grassmarket is now disposed in shops and warehouses.

Parliament Square.—Parliament close, the original of Parliament Square, comprised only a small area on the south side of St. Giles' cathedral com-

municating by narrow entries, past the ends of that pile, with High-street and Lawnmarket. It was at first a burying-ground, the most ancient in the city, and afterwards a scene of the busiest traffic, surrounded with irregular masses of heterogeneous buildings, devoted variously to legislation, imprisonment, and trade. But now it is all a dignified recess, occupied entirely round its east, south, and west sides, by a splendid, uniform, modern range of edifices, belonging severally to the Exchequer, the Union Bank, the Judiciary Court, the Court of Session, the Parliament house, and the libraries of the advocates and the writers to the signet. The square also includes now a considerable winged extension opposite the east end of St. Giles', occupied along the east by the new police buildings, and a still larger winged extension, comparatively a very large one, sometimes called the County square, opposite the west end of St. Giles', occupied along the south by the main part of the law libraries, and along the west by the County hall.

The police buildings are entered principally from the High-street, but make as large a display on their west side as on the south. They were erected in 1849; they are of huge bulk, and were sufficiently expensive; and, occupying so conspicuous a site, they ought to have been eminently ornamental; but they cannot be pronounced better than very lumpishly neat.—The uniform range of facade round the three sides of the quondam Parliament close, partly belongs to recent buildings, and is partly a new front to old ones. Its basement story is 20 feet high, pierced with semicircular arches, so as to form arcade-piazas; its central part projects several feet from the rest, and bears aloft six massive Doric columns, surmounted by a handsome pediment; its two retiring portions, instead of being angles, are curves; and these portions, together with portions of the east side and of the west side, exhibit colonnades and open galleries, uniform with those of the portico, and supporting a continuous cornice.—The court-room of the Court of Exchequer is on the second story, lighted partly from the roof, and of very moderate dimensions.—The apartments of the Union bank are commodious and elegant.—The buildings belonging to the Court of Session occupy large portions of both the south and the west sides of the square, and at the same time extend far back on the slope toward the Cowgate, having a height of 40 feet in the front and of 60 feet in the rear, a breadth of 60 feet at the narrowest part and of 98 feet at the widest part, and a total length of 133 feet. The old parts of these buildings were begun in 1631, and completed in 1640, at an expense of £14,600; and their present front was erected in 1808.

The large hall, formerly occupied by the parliament of Scotland, and now known as the outer house of the court of session, is entered by a plain door-way and dark lobby at the north-west curve of the square. This hall is one of the noblest apartments in the United Kingdom; and extends 122 feet in length, and 49 in breadth. It has a beautiful oaken floor and roof,—the latter arched, supported by abutments, and constructed in the same style of open wood-work as the roof of Westminster hall, with gilded knobs. The hall, besides 4 windows on its west side, has, on its south end, a large and beautiful window of stained glass, on which is depicted a female figure of Justice, with her sword and balance, amid radiated clouds. In various parts of the hall, at the north end and on the sides, are a statue by Chantrey, of the first Viscount Melville,—one by Roubilliac, of Lord President Forbes,—one by Steell, of Lord Jeffrey,—one by

Chantrey, of Lord President Blair,—and another by Chantrey, of Lord Chief Baron of Exchequer, Robert Dundas of Arniston. The hall formerly contained portraits of some of the sovereigns of Britain; and, on occasion of George IV.'s visit to Edinburgh, was the scene of the banquet given to him by the Corporation. In the days of the Scottish parliament, there stood, at the south end, beneath the great window, a high throne for the sovereign; along the sides were seats for the bishops and nobility; before these, were forms for the representatives of counties and burghs; in the middle, was a long table for the use of the Lord-clerk-register and his assistants, and having spread out, on its upper end, "the honours," or regalia; at the foot of the table, was the bar of the house; behind a wooden partition, farther north, was a pulpit, whence sermons were preached to parliament; and at the north end was a small gallery for the accommodation of strangers. All these appliances of the quondam parliament, however, were long since swept away, leaving the hall nearly a quite unoccupied area, and a magnificent promenade. During sessions, it is a daily resort of most gentlemen of the legal profession, and a frequent resort of many persons of all classes; exhibiting a scene of such bustle and apparent confusion as is bewildering to a stranger. On the east side of the hall, north and south of the entrance, are recesses, with benches and a small projecting and enclosed area, formerly used as courts of the lords ordinary. Beneath the great window are entrances to all the places now used for these courts, five of which are held daily during session. Leading off from the hall, on its east and west sides, are the court-rooms of the first and the second division of the court of session. These were fitted up respectively in 1808 and 1813, and are of such inadequate dimensions as frequently to be found annoyingly incommodious.

Projecting westward from Parliament-house towards George IV.'s bridge, and presenting a rear-front toward the spacious thoroughfare along that bridge, is the Advocates' library. The apartments are chiefly two noble and very elegant rooms, on different floors. The upper room has a carved and gilded roof; and is adorned with busts or other sculptures of George II. by Roubilliac, Lord Jeffrey by Steell, Baron Hume, Lord Erskine, Lord Rutherford, and Sir Walter Scott, and with portraits of Sir George Mackenzie, Lord President Spottiswood, Lord-president Forbes, Lord-president Lockhart, and several other famous lawyers. But a large portion of the books is deposited in rooms beneath Parliament house, situated at its south end, and accessible by flights of steps from a door at the north-west curve of the square. The library was founded, in 1682, by Sir George Mackenzie, deau of faculty; and, by several large accessions and a constant accumulation, has become the largest and most valuable in Scotland. The number of printed volumes is 190,000; and of manuscripts, 2,000. The volumes, in the department of Scottish poetry alone, are nearly 400; and are extremely rare and curious. Among the manuscripts, are those of Wodrow the historian, and many of considerable value in the civil and ecclesiastical history of Scotland. The library is one of five which receive from Stationer's hall a copy of every new work published in Great Britain or Ireland; and it excels most, and is equalled by few, of the public institutions of the country, in the liberality of the principles on which it is conducted. Any person who is even slightly known is allowed to read and write in the apartments; and even a stranger is admitted, without any introduction, to

survey the literary stores, and examine numerous articles of *virtu*. Members are allowed to possess or carry away 25 volumes at one time, and to lend any or all of that number to friends. The funds are derived chiefly from fees paid by each advocate on his becoming a member of the faculty; and they admit of about £1,000 a-year being disbursed in the purchase of rare or useful works. The library is under the charge of five curators, a librarian, and three assistants. The office of principal librarian has been filled by men of distinguished literary character,—Thomas Ruddiman, David Hume, Adam Ferguson, David Irving, LL.D., and Samuel Halkett.

The Signet library adjoins Parliament house on the north, and stretches westward, presenting architectural fronts to Parliament-square and Lawn-market. It is of Grecian architecture, with handsome uniform elevation of two stories, and possesses a principal spacious, elegant apartment in each of the stories. The upper apartment is probably the most superb room of its kind and size in Scotland, and of very beautiful proportions. It has on each side a range of 12 Corinthian pillars, and in the centre a cupola. On the cupola are painted the nine muses, and groups of historians, philosophers, and poets. The roof also is exquisitely ornamented; and galleries are carried along the two sides of the hall. The room is 132 feet long and 39 broad; and is accessible by a grand staircase, adorned, in its progress and round the walls of its landing-place, with some splendid portraits and busts. This splendid apartment was used as a sort of drawing-room by George IV., on the day of the banquet in Parliament-house. The library contains about 60,000 volumes. It is peculiarly rich in British and Irish history; and is under the charge of a body of curators, and conducted on principles of liberality akin to those which distinguish the management of the Advocates' library. The funds are drawn solely from the contributions of the writers to the Queen's signet.

The County hall stands at right angles with the western extremity of the Signet library, and presents a rear front to George IV.'s bridge, an ornamental side front to the Lawnmarket, and the principal front to Parliament or County square. The last of these possesses no common beauty. An elegant portico, consisting of four fluted Ionic columns, with finely carved capitals, overshadows a flight of steps leading up to the main entrance, which is modelled after the Choragic monument of Thrasylus. The whole edifice, as to its general plan and its style of ornament, is an imitation of the temple of Eretheus at Athens. This handsome structure was designed by Archibald Eliot, Esq., and erected in 1817. The court-room has a gallery at the south end, and is neatly fitted up; and measures 43½ feet in length, 29 in width, and 26 in height. The room in which the county-meetings are held is in the north end of the edifice, and very elegant,—measuring 50 feet in length, 26½ in width, and 26 in height. There are apartments also for the sheriff's court, and for various functionaries employed in the business of the county.

Banking-offices.—In Parliament-square, as already noticed, is the elegant office of the Union Bank.—Facing Bank-street, and looking up the slope of that short street to High-street, but presenting a back front to the New town, and situated a few paces eastward of the southern end of the Mound, is the office of the Bank of Scotland. This is an edifice of high architectural merit, elegantly ornamented in its front and surmounted by a dome; and was erected at an expense of £75,000. From the

area before it romantic and distinctive views are obtained of the groupings of the New town and Calton-hill, with the brilliant scenery which forms the back-ground. The building itself is a marked and beautiful feature of the picturesque and extraordinary city-view of the north side of the Old town.—At the east corner of George-street and North Hanover-street, with the principal front to the former, though with a longer one to the latter, stands the principal office of the Clydesdale Bank. It is a large, handsome, Grecian edifice, erected in 1842. Its principal front has two pairs of fluted Corinthian columns, on lofty basements, and between them a recessed centre, with pilasters.—On the south side of George-street, midway between Hanover-street and St. Andrew's-square, is the office of the Commercial Bank. This is a superb Corinthian edifice, built in 1847, after designs by David Rhind. Its facade is 95 feet in length, and exhibits the finest portico in the city. The pillars of this are six in number, fluted, 35 feet high, and have bold, graceful, well-relieved capitals; the entablature is about 9 feet; and the pediment measures 14 feet from the base to the apex, and is filled with beautiful statuary, from the chisel of A. H. Ritchie, representing the conjoint enterprize of agriculture, manufactures, and commerce. The interior of the edifice is correspondingly grand. The vestibule is lofty and imposing, and is surrounded by a gallery, supported by Ionic columns, and approached by two elegant staircases; this gallery leads to the principal apartments in the upper division of the building, and is richly panelled and ornamented; and the whole is lighted from a panelled roof, which is supported by Corinthian columns rising in the same vertical line with those supporting the gallery. The telling-room is a magnificent apartment, about 90 feet by 50 feet, with dome roof supported by Corinthian columns and antae, the entire entablature and dome enriched with flowing ornaments in alto-relievo.

On the west side of St. Andrew's-square is the office of the Scottish Widows' Fund Insurance Company,—a large, symmetrical edifice, in the Italian style, built in 1848, with screen balustrade, neat porch, handsome window-mouldings, and heavy projecting roof.—On the east side of the same square, directly opposite, is the office of the National Bank,—a large plain building, one of the earliest aristocratic structures of the New town.—At the extremity of a considerable recess, at the middle of the east side of the square, fenced off by an iron paling, and directly confronting George-street, stands the office of the Royal Bank,—an edifice of good proportions and some elegance, originally the town mansion of Sir Lawrence Dundas.—On the same side of the square, between the National and the Royal, is the office of the British Luen Company's Bank. This is a magnificent Corinthian edifice, built in 1852, after designs by Mr. Bryce. The facade, measured from the pavement to the top, is about 60 feet in height, and exhibits a rusticated basement story, surmounted by six fluted Corinthian columns, all standing up in individual isolation like those of the triumphal arches at Rome. The windows of the basement story are plain; those of the second story have highly decorated pediments and carved trusses, the tympanums filled with sculpture; and those of the third story have small balconies supported on carved consoles, and massive wreaths of ash-leaves suspended by rosettes at the top of the architraves. The six columns, inclusive of their pedestals, are about 31 feet high. A balustrade, from the top of the cornice of the basement story, about 4 feet high, runs between the pedestals. The entablature of the columns is about 7 feet high.

having its frieze sculptured in alto relievo, and is recessed from the sides of each column to nearly the face of the wall. On the entablature over the columns stand six statues, 8 feet high, from the chisel of A. H. Ritchie, representing agriculture, mechanics, architecture, industry, commerce, and navigation. A balustrade about 7 feet high runs behind the statues on the top of the building, perpendicular with the face of the wall. The interior of the building is entered by a flight of steps, the whole breadth of the lobby, 15 feet. The telling-room is a salloon of regal splendour, cruciform, 74 feet by 69, and lighted by a well-adapted cupola, of about 30 feet in diameter, with its top 50 feet from the floor. The cupola consists chiefly of slightly obscured plate glass, bent to the curvature of the dome-ribs, and admitting a copious flood of light. Beneath the cupola, which rests upon a square basement of considerable depth, is a range, containing sixteen circular panels, in each one of which is placed a cleverly modelled head, so large as to appear the full size of life when viewed from the floor of the salloon, and fully relieved from the panel. This richly sculptured compartment in its turn rests upon the upper member of a fully decorated entablature of the Corinthian order, supported by eight columns and twenty-four pilasters of the same order. The shafts of these columns and pilasters are of polished Peterhead syenite, their pedestals of marble, and their capitals of bronze. The floor of the salloon, as also that of the entrance-hall, is a brilliant mosaic of coloured tiles. The proprietors' room, in the front of the second story, measures 54 feet in length, 22 in breadth, and 18½ in height; and the staircase leading to it is lighted by a large Venetian window.

The Register Office.—The General Register house of Scotland, situated at the east end of Prince's-street, opposite the thoroughfare of North Bridge, comprises two edifices, front and rear. The front edifice was founded in 1774, and aided in the erection by a grant of £12,000 from George III., out of the proceeds of forfeited estates; but, at first, was completed in only half its present extent, and did not attain the complement of its original plan till 1822. It was constructed from a master-design of the celebrated Robert Adams; and combines the utmost internal commodiousness with exterior architectural beauty in the best taste of the simple Grecian style. The building stands 40 feet back from the line of Prince's-street, and is screened by an elegant curtain wall, on each side of a central, spacious, double flight of steps, much improved by an alteration made in 1850 for widening the pavement. The front of the edifice is of smooth ashlar work, 200 feet long, and two stories of visible height, besides a sunk floor; and it is ornamented from end to end with a beautiful Corinthian entablature, and, in the middle, has a projection of three windows in breadth, where four Corinthian pillars support a pèdiment, in the centre of which are sculptured the armorial bearings of Britain. The entire building is square—200 feet on each side—with a small quadrangular court in the centre. This court is surmounted or canopied by a dome, 50 feet in diameter, which leaves just sufficient space at the four angles for the ingress of light to the inner front of the outer side of the edifice. Each corner is surmounted by a turret, projecting a little from the rest of the building, having clock-dials on the exterior sides, and a cupola and vane on the top. The interior of the edifice is partly arranged into nearly 100 small arched apartments, on both floors, leading off from long corridors. There are also small rooms for the use of functionaries connected

with the supreme courts, and larger apartments for the stowage of records. The great room, or library, where are deposited the older records, is in the centre of the building, lined with books over all its walls, and balconied all round, at mid-elevation, with a railed gallery. This salloon is 50 feet in diameter and 80 feet high, lighted from the top by a window of 15 feet diameter; and its roof is divided into compartments elegantly ornamented with stucco-work. From the salloon, communications lead off into 23 subordinate apartments, all occupied in the conservation of documents. The rear edifice was erected in 1857–60, at a cost of £26,440, and is a very spacious quadrangular structure, in similar style to the front edifice, but with richer façades. The entire interior of both edifices is constructed with reference on the one hand to facility of consultation, and on the other to protection from damp and fire. The whole establishment is under the immediate management of the depute-clerk register, and is supported by government.

Houses of Amusement.—Opposite the Register-house and presenting a side-front to the North Bridge, stood the Theatre-royal. This was one of the plainest public buildings in Edinburgh, with ambitious front but barn-like character, a blot upon the most important and crowded thoroughfare of the city, and was demolished in 1860–1, to be superseded by the new General Post-Office, a grand quadrangular Grecian edifice, founded in the autumn of 1861 by the late Prince Consort.—Another Theatre, called the Adelphi, and used chiefly in summer, while the Royal theatre was shut, stood at the intersection of Broughton-street and Leith-walk, with its rear on the ascent toward St. James' square, but was burnt in 1853; and a new theatre, now the only one in Edinburgh, was erected soon afterwards on its site, in sufficiently staring style, but without any features to be creditable to the city.—On the south side of George-street, midway between Hanover-street and Frederick-street, are the Assembly-rooms. The front is plain and unpretending, relieved chiefly by four Doric columns as an apology for a portico. The principal room is 92 feet long, 42 wide, and 40 high; and, for many years, besides being appropriated to balls and concerts, was often used for public meetings, political, civic, charitable, and religious. These rooms were built in 1787 by subscription. The Music hall adjoins them behind, or rather is an addition to them, accessible by the same entrance, and extending back to Rose-street. This was built in 1843, after a design by Messrs. Burn and Bryce, at the cost of upwards of £10,000. The hall measures 108 feet in length and 91 feet in breadth, has a richly panelled ceiling and shallow central dome, is fitted up in a style of much splendour, and contains a large excellent organ.—Other places of amusement are either coarse structures, without any architectural attraction, or large halls variously and temporarily occupied.

Waterloo-Place.—About the most popular of the amusement-halls, though used also for other purposes, are the Waterloo-rooms, on the north side of Waterloo-place. Connected with those rooms, and elsewhere in the same street, are magnificent hotels. In the central part of both sides of the street, also, as we noticed in a former section, are the splendid pillars and arches which surmount the ledges of Regent's bridge. On the south side, too, as likewise we formerly noticed, stand the Inland Revenue office and the old Post-office,—the former the central building to the west of Regent-bridge, and the latter immediately to the east. But though the Post-office has a spacious open porch, and both are splendid Grecian edifices four stories high, they are

distinguishable from the contiguous erections mainly by the sculpture, in relief, of the royal arms on their summit. The light colonnades of the street, and the general magnificence and fine proportions of all the buildings, combined with the overshadowing heights and erections of Calton-hill, surprise and delight every visitor from England or the European continent, and drew from George IV., as he slowly rode, amid his triumphal procession, within range of the view, the impassioned exclamation, "How superb!" The central buildings of the street, contiguous to Regent-bridge, are remarkable also for the great depth to which they descend into the ravine, with side and haek fronts to the thoroughfares below, forming as large masses of edifice there as above the Waterloo-place level. Yet the Post-office, in spite of occupying one of these buildings, was found too inconvenient, and also suffers the evil of deep contact with the High Calton burying-ground; hence the necessity for the new erection opposite the Register-house.

The mere roadway of Waterloo-place, together with its continuation of Regent-road, along the southern breast of Calton-hill, was formed at the expense of £52,000. A part of Shakespeare-square which projected northward from the other part, and looked along Prince's-street, was destroyed; a part of the High Calton burying-ground was cut away, with the effect of removing the putrid bodies to other graves; and in the course of cutting and leveling the road, 100,000 cubic yards of rock had to be removed, and upwards of £1,000's worth of gunpowder was consumed. But the sum of £35,000 was immediately recovered by the sale of building-stands. All the part of the south side of Waterloo-place east of the Post-office is faced with a retaining-wall, to exclude the view and support the delicacy of the remaining part of the High Calton burying-ground. The wall, however, is so lofty, ornamental, and symmetrical, so well adorned with projections, niches, pillars, and cornice, as to look much better than many a range of very neat dwelling-houses. A considerable part of the south side directly opposite, also, is built in a manner of exact counter-part; and the eastern-most portion of this, with a terminal semicircular sweep of Doric three-quarter columns facing eastward, is the front of the Calton convening-rooms,—likewise much used for popular exhibitions and amusements.

Prisons.—Adjoining the east end of Waterloo-place on the south side, and extending thence along Regent-road, is the Town and County jail. It consists of three parts, the original jail, the quondam bridewell, and a recent extension. The original was founded in 1815, and finished in 1817. It is an extensive building, in the Saxon style of architecture, somewhat castellated. The front, on the line of street, presents to the observer on the road-way simply a high wall with a massive gateway. But seen from many points of view in the Old town, and especially from the summit, immediately before it, of Calton-hill, it has a multiform and architecturally—though certainly not in moral association—a very interesting aspect. Along the street-line are apartments for the turnkeys. Behind these, with an area intervening, is the jail itself, 194 feet long, 40 feet wide, and 4 stories high, with rows of small grated windows. In the centre is a division formerly used as a chapel with windows larger and not grated. Along the interior run corridors, opening into 48 cells, 8 feet by 6, besides some other apartments of larger dimensions. From the lower flat behind, a number of small airing grounds, separated by high walls, radiate to a point, where they are all overlooked and commanded by a small octangular watch-

house occupied by a deputy-governor. Farther back, and perched on the edge of a precipice which overhangs the Old town, is the castellated house of the governor, having in its front a small area of flower-plots. The jail has classified wards, is clean and well-managed, and possesses facilities for the practice of approved prison-discipline.

Bridewell was founded in 1791, opened in 1796, and incorporated with the jail in 1840. It stands immediately east of the original jail, from which it was never separated by anything more than a high spiked wall. In front of it, shielded by a high wall and ponderous gate on the street-line, is a neat house erected for the governor. Bridewell itself is of a semicircular form, and has five floors, the highest of which is distributed into storerooms and an hospital. All round on each floor, at the middle of the breadth, is a corridor, with cells on each side, lighted respectively from the interior and the exterior of the curvature. Those on the inner side are chiefly used as workshops, and can all be surveyed from a dark apartment in the governor's house, without the observer being himself observable.—The new extension jail stands contiguous to bridewell on the east, and was completed in 1847. It is a strong castellated edifice of four stories, terminated on the east, where it looks along the Regent-road, with massive towers and a grand gate, presenting there architectural features in keeping with those of the original jail on the west, but more imposing both in itself and in its site, figuring largely on the face of the Calton hill between precipices below and steeps above, and appearing in the distance, especially from points of view in the Queen's park, not at all like a prison, but like a romantic citadel or like a very sumptuous baronial hall.

Bridges.—The South bridge consists of 21 arches, and was founded in 1785, and opened in 1788. To the eye of a stranger, its existence is not readily obvious. Except at the central arch which spans the Cowgate, and where there are simple ledges with lofty iron railings, nothing is seen upon it but two lines of neat buildings, and spacious shops, forming a level, a hustling, and in all respects an ordinary-looking street. Three lanes were pulled down in order to make way for its erection; and when a trench was dug for the foundation of the central pier, at a depth of no less than 22 feet, there were found many coins of Edward I., II., and III.—The North bridge was founded in 1763, commenced in 1767, interrupted by the giving way of the vaults and side-walls at the south end in 1769, and completed in 1772, at an expense of about £18,000. It consists of three great arches, two small open side arches, and a series of small arches at each end which are occupied as vaults. The width of each of the great arches is 72 feet; the breadth or thickness of each of the piers is 13½ feet; the width of each of the open small arches is 20 feet; the length of the whole open part of the bridge is 310 feet; the length of the entire bridge, from High-street to Prince's-street, is 1,125 feet; the height of the bridge, from the top of the parapet to the base of the great arches, is 68 feet; the breadth, within wall, is, over the open arches, 40 feet, and at each end, 50 feet. Along the south end are very strong buttresses and counterforts, supporting rows of lofty building which run up on both sides to the High-street, and conceal that part of the bridge entirely from view, giving it the appearance of a regular street. On the north end there is a counterfort only on the east side; but on the west side a line of building is carried up from the level of the bridge's foundation, having in the rear about double of the height which it presents on the street-line in its front.

George IV.'s bridge, which goes off at right angles from the Lawn-market opposite Bank-street, and stretches across the Cowgate to a point near the south end of Candlemaker's-row, was projected in 1825; and after being begun, and for some time left in an unfinished state through a failure of funds, was completed in 1836. It is, in all respects, a splendid erection, and has three open double arches over the Cowgate, besides seven concealed arches at the ends. Part of the line is edified with houses and public buildings, and wears the appearance of a street.—The King's bridge, constituting the principal feature of the New Western approach, was projected and completed about the same time as George IV.'s bridge. It spans the hollow ground on the south side of the Castle-rock in a single arch, and has long approaches along the face of the Castle-bank to the Lawn-market on one end, and on to a point near Port-Hopetoun on the other.—Regent bridge, in Waterloo-place, was founded in 1815, and completed in 1819. It has one open arch over the Low-Calton, 50 feet in width, and about the same measurement in height. The ledges over this arch, or in the space where the bridge has not strictly a street-appearance, bear aloft triumphal arches, supported by Corinthian pillars, and winged with Ionic colonnades.—The Dean bridge, over the water of Leith near Randolph crescent, was completed in 1832. It is a stupendous and brilliant structure, carried across a ravine, and consists of four arches, each 96 feet wide. The bridge is 447 feet long, and between the parapets, 39 feet broad. The road-way is higher than that of almost any other bridge in Scotland, passing at 106 feet above the bed of the stream.—The Waverley bridge is a neat substantial structure, agglomerated with the works of the railway termini, and occupying the centre of what was formerly called the Little Mound.—The several bridges over the Water of Leith, connecting the city with its suburbs, are all good.

The Mound.—The Earthen Mound is a line of communication between the New town and the Old town second in importance only to the North bridge; and, though not a bridge itself, or in any proper sense an edifice, yet, as to both situation and use, it is a perfect succedaneum for a bridge, and at the same time has evoked much more play of architectural skill than many a most massive edifice; so that it may be allowed a description in a place where there ought to have been a great bridge to be described. It stretches across the site of the quondam North loch, with a considerable ascent southward, from a point in Prince's-street nearly opposite the end of Hanover-street to a point on the declivity of the central hill of the Old town whence two divergent thoroughfares wend off toward respectively the foot of Bank-street and the head of Castle-street. The length of the Mound is upwards of 800 feet; its height, on the north, is upwards of 60 feet, and on the south is about 100 feet; and its breadth is proportionally much greater than its height, averaging probably 300 feet. Huge as the mass is, it consists entirely of shot earth, and originated in a very trivial and almost accidental operation.

About 75 years ago, when the North loch valley was still a marsh, and when the operations for building the New town were still in infancy, a Lawn-market shop-keeper of the name of George Boyd, who had frequent occasion to visit these operations, and wished to reach them by the shortest route, accommodated himself with "steps" across the marsh, and soon made the passage sufficiently good to let him go over dry-shod. Other persons who had similar business, or who passed over from curiosity, made use of his contrivance, and grate-

fully or waggishly designating it "Geordie Boyd's brig," added to it from time to time stones and sticks and rubbish, till it became heightened and widened into a good foot-road. A discovery was thus accidentally made of an excellent public use to which rubbish could be put; and permission was soon asked and obtained by the constructors of the New town to deposit on "Geordie Boyd's brig" the masses of earth which they were excavating to form the sunk floors of houses. Thus was the Mound commenced; and from 1781 till 1830, it continued to receive constant or occasional augmentations; and at the latter date, it was levelled, put into final shape, and softened off with as much embellishment as its lumpy outline would admit. A computation was made, that it received, from first to last, about two millions of cart-loads; and the inference was thence drawn that if it had been formed on purpose, at the rate of only 6d. per cart-load, it would have cost about £50,000.

But the subsequent changes on it are still more striking, and strongly illustrate what art can do. The Mound was one of the ugliest objects in the metropolis, and figured long as a monstrous eyesore in the estimation of all admirers of Edinburgh scenery. But partly through indirect circumstances, partly through design, it has become in some degree the centre, and in some degree the site, of some of the chief architectural glories of the city; standing up, at the same time, as a grand vantage-ground for viewing all the scenery of both divisions of the valley in combination with the confronting faces of the two towns, and of the Calton-hill and Castle. Opinions, indeed, have widely differed respecting the main improvements on it,—as well they might, seeing that scarcely ever a stiffer problem presented itself to engineer or architect than how to work such an amorphous mass into harmony with the intricate romance which surrounds it. Yet have such changes taken place around and on it as oblige at least all general observers to acknowledge it now to be one of the most ornate localities in the world,—not a great deal inferior to the ancient Roman Forum. First rolled off from its western base the luscious pleasure-grounds of the Castle-slopes and the West Prince's-street gardens. Next rose on its north end the Royal institution,—whose profusion of Grecian pillars and of sculptures accords well with the pride of "Modern Athens." Next soared into view, over the great masses of old masonry which overhung its south end, the cloud-cleaving fairy-looking spire of the Assembly-hall. Next rose near the end of its east flank the gorgeous Gothic arches and pinnacles of the Scott monument. Next went through its centre the tunnel of the Glasgow railway, whose difficulty, as a specimen of engineering, is to the full as interesting as any master-piece of architecture. Next stood up across its south end, in such a remarkable position as almost to take on the Assembly-hall spire, the broad, massive, Elizabethan turcted front of the Free Church college. Next spread away from its eastern base, up the adjacent slopes, and on to the Waverley-bridge, the smiling beauties of the East Prince's-street gardens. Next was formed a broad carriage-way, with fine pavements and a handsome iron railing up the west side of the Mound, and obliquely across its south end. And last of all rose over all the rest of its available space, with four grand architectural fronts, all just long and low enough to be in keeping with the site, the splendid Grecian pile of the National gallery. These last improvements alone—those of the roadway and gallery—were estimated to cost no less than £40,000.

Railway Structures.—The terminus of the Edin-

burgh and Glasgow railway and the terminus of the North British railway are conjoint, at the east side of Waverley-bridge, in the centre of the North loch valley, midway between the North bridge and the Mound. The front has only a one-story elevation above the level of Waverley bridge, and the roof all eastward to the extremity of the station is broad, flat, and lower than the level of Prince's-street; yet the whole presents a handsome appearance, the front having a massive stone verandah with elegant arches, and the roof being well filled with glass in neat uniform compartments. The hall of the hooking-offices is on a level with the pavement, very spacious, and lighted principally from the roof, whose compartments here are sustained by Corinthian pillars. The centre of the floor is boxed off semicircularly, with slits in the panelling for the issuing of tickets; and large open spaces at the sides lead to spacious flights of steps, by which easy descent is made to the platform of the carriages. The flight on the south side leads to the Edinburgh and Glasgow line, and that on the north side to the North British line; there are also separate exits,—both of them with every facility for wheeled conveyances from the bottom of the valley; and the combined stations of the two lines, under the long, wide, lofty roof, form a grand arcade which is not excelled, in elegance and airiness, by anything of its kind in the world.

The very workshops, sheds, parapets, and other adjuncts of these termini are so neat as to excite the surprise of strangers. The whole structures, in fact, are fitted into the valley as neatly as possible, rather to adorn than to deform so remarkable a space between such remarkable city-facades. The approaches, also, are ornamental; and that on the south side is in line with the picturesque new thoroughfare of Cockburn-street, opened in 1861. Nor are the portions of the railways themselves within the limits of the city devoid of considerable interest. The Edinburgh and Glasgow dives curiously through the tunnel of the Mound, passes under neat light pedestrian bridges within the West Prince's-street gardens, almost hugs the skirts of the romantic cliffs of the Castle, and then plunges into a tunnel to run about 3,000 feet under the streets of the Western New town, to an emergence at its original terminus at the Haymarket. And the North British expands its depot eastward beyond the piers of the North-bridge, has there some works which interlace curiously with the North back of the Canongate, traverses the southern spur of the Calton-hill in a tunnel right below Burns' monument, and curves thence away, above the level of the surrounding hollows, on an artificial level, which is partly embankment and partly arched viaduct, till it reaches the vicinity of St. Margaret's.

The terminus of the Edinburgh, Perth, and Dundee railway communicates with the joint termini of the Edinburgh and Glasgow and the North British, and stands contiguous to it on the north, occupying the space thence to Prince's-street. Its principal feature, as seen from that street, looks to be a raised platform, supported in front by a row of elegant columns, closed round by offices, and presenting a chaste and tasteful appearance. The passengers' station is beneath that platform, in front of the offices, and is reached either circuitously by way of the approaches to the other termini, or directly for pedestrians by long flights of steps and galleries from the pavement of Prince's-street. A square brick chimney-stalk, connected with a house for working a stationary engine, stands immediately east of the station, but so much dwarfed in stature, and masked with stone-coloured ornaments, as not

to be a very serious disfigurement of the scenery. A tunnel commences, in decorated arch-work, beneath the brow of Prince's-street, swallowing up the trains at the instant of their starting, and descends on a rapidly inclined plain beneath the whole breadth of the New town, to the foot of Scotland-street. This tunnel is one of the most remarkable pieces of engineering in modern times, only a degree or two less wonderful than the subfluviate tunnel of the Thames, and with so steep a gradient that the trains require all to be passed through it by means of an endless cable worked by the stationary engine. There is likewise a curious tunnel on the old Dalkeith railway, immediately south-east of the terminus at St. Leonard's. And there is a remarkable piece of engineering, in the transit of the Caledonian railway close beneath the foundations of very lofty houses at Gardner's crescent.

Market-structures.—The town-markets of the city, situated under the North bridge, consist of a series of terraces on the southern slopes, terminating in a large quadrangular area at the bottom of the valley, surrounded by a piazza, and partitioned into departments. All are well arranged and tidy, and as to both quantity and quality, are always well supplied. There are also smaller town-markets at West Nicolson-street, at Stockbridge, and at Dublin-street; and a sort of dismembered market is dispersed, in the form of single or clustered shops, for the sale of flesh or vegetables, throughout almost every part of the city. Large quantities of fish are brought from the coast, chiefly from Newhaven and Fisher-row, and sold in a fresh state variously in markets, in shops, and on the streets. A great weekly market of country produce in quantity, connectedly with the sample-sales of grain in the Corn-exchange, is held every Wednesday in the spacious area of the Grassmarket. The cattle market is a commodious enclosure, in the triangular space between Westport, Lady Lawson's-wynd, and Laurieston-place, and has a market inn in its centre. Sales are commonly effected here, early on every Wednesday morning, of about 800 or 900 cattle and about 2,000 sheep.

The abattoirs, or slaughter-houses, though not themselves market-structures, are so intimately connected with them that they may be noticed here. The old shambles stood contiguous to the town-markets under the North bridge, and were a horrible nuisance. The new abattoirs, opened in 1852, are situated on the grounds of Lochrin, between Fountain bridge and Lochrin distillery, at the south-western extremity of the city. They extend over an area of nearly four acres. The entrance is by a grand Egyptian facade at Fountain bridge, displaying emblematic figures, and stone caryatides of cattle, supporting the arches and introduced as corbels; and the interior is fitted up with every convenience, containing ranges of killing-houses which are let out to the butchers of the city.—The basin of the Union Canal, immediately north of the abattoirs, in the space between Fountain bridge, Downie-place, and St. Anthony-place, possesses much market interest as a vast coal depot, and was originally a very curious place for its works, wharves, stores, and bustle, but now exhibits a forlorn appearance.

Gas-Works.—The chief premises of the Edinburgh gas-light company stand in the space between Canongate, New-street, North Back of Canongate, and the Canongate burying-ground. This company was formed in 1817, and incorporated in the following year, with a capital of £100,000 in shares of £25. The premises are very extensive, and comprise eight gasometers, one of which is 101½ feet in diameter. The principal chimney is a cylindrical

brick column springing from a square stone pedestal, and finished at the top with belts and coping,—the pedestal 30 feet square, the shaft tapering in diameter from 26 feet to 16 feet, and the top standing 341½ feet from the foundation. This chimney was built in 1847. It is furnished with an endless chain, going up the inside of the shaft, and giving the means of ascending at any time to the top. In consequence of rising from nearly the bottom of the hollow at the southern base of the Calton-hill, it does not figure largely in most of the good architectural groupings of the city; but, as seen from some vantage-grounds of the southern environs, particularly about Liberton, it looks to soar beautifully aloft in very aspiring symmetry.

Extensive premises for an oil-gas manufactory were erected in 1825 at Tanfield. But the principle of the manufactory proved unsuccessful; and they were ultimately purchased by the previous company. Parts of them, comprising four gasometers, were then reserved for the supply of the northern parts of the city from the Canongate manufactory; and the rest came to be occupied, some as warehouses, and some as the Free church assembly-hall. No less than about 80 miles of pipes of the Edinburgh gas-light company, varying in diameter from 1½ inch to 15 inches, extend through the streets of the city.—A new gas company, formed in 1839, purchased the Leith gas works, took the name of the Edinburgh and Leith gas company, and laid pipes through the streets of Edinburgh, so as to supply both towns from the Leith works.

Water-Works.—A reservoir, for holding water brought to it in pipes from Comiston on the acclivities of the Pentland hills, was constructed, about the year 1674, at the head of Castle-street, on the north-east verge of the Castle esplanade. This used to be regarded as one of the sights of the city—not on account of anything attractive in itself, for it was a remarkably plain structure—but from a feeling of wonder that a building full of water should stand on such an elevated situation. A deep hollow puncture in the west end of its roof, also, never failed to draw the attention of strangers, having been caused by a cannon-shot from the Castle during the time of the blockade by the Highland army in 1745, and bearing an inscription round it in paint to authenticate its origin. This reservoir was 5 feet deep, 30 feet broad, and 40 feet long, and contained about 6,000 cubic feet of water. But being vastly too small for the modern wants of the city, it was demolished in the autumn of 1849, in order to give place to a new and much larger one. Its successor now stands on the same site, has an ornamental appearance, is constructed with great strength, measures 30 feet in depth, 90 in breadth, and 110 in length, and contains about 297,000 cubic feet of water. From the bottom of it is a series of pipes for distributing the water to all the high parts of the city. And in order to supply the houses in Castle-street and the upper part of High-street, which are situated at a greater altitude than the reservoir, and at the same time to furnish an ample ready supply to the troops in garrison, a large cistern was constructed in 1850 in the shot-yard of the Castle. There is also an old large reservoir in the green of Heriot's hospital.

All the supplies of water are brought from springs and rills within the river-systems of the North Esk and the Water of Leith, on the northern slopes of the Pentlands; and all the works, except the city reservoirs, consist of erections for damming the water at its sources, appliances for filtering it, trunk-pipes for bringing it to Edinburgh, and ramification-pipes for distributing it through the city.

In 1621, the magistrates obtained an act of parliament empowering them to cast "seuchs and ditches" in the lands between the city and the Pentlands, and to construct means of bringing water; but, for half a century, they seem either to have found no engineer, or to have wanted resources, to execute their project. In 1674, however, they engaged a German plumber, for £2,950, to lay down a leaden pipe of 3 inches in diameter from the springs of Comiston to the reservoir on the Castle-hill. A larger pipe, with supply from additional springs, was soon found necessary; and a new one of 4½ inches in diameter began to be laid, but was slowly carried on, and not completed till 1722. The supply being still insufficient for the increasing wants of the city, a new act of parliament was obtained, authorizing the extension of the works. In 1787, a cast-iron pipe of 5 inches in diameter was added for increased conveyance from Comiston; and in 1790, another of 7 inches in diameter was laid from springs on the lands of Swanston. These works were executed from the city funds, at the cost of £20,000; but even they proved speedily unsatisfactory; nor could sufficient ones any longer be expected except on some basis of compulsory assessment.

A water company, with the town-council holding large shares in it as representatives of the citizens, was formed in 1810, and incorporated in 1819, and obtained new powers in 1826. Its capital was limited at first to £135,000, but extended in 1826 to £253,000. A new grand source of supply was now opened at Crawley, nearly 9 miles from Edinburgh. A cistern was formed there 6 feet deep, 15 broad, and 45 long, with outside walls and an arched roof; a great artificial pond, at the same time, was formed for giving compensatory supply to the mills on the North Esk; and a cast-iron pipe of from 15 to 20 inches in diameter was laid from the cistern along the valley of Glencorse, thence through a tunnel of a mile in length, thence by Straiton, Burdiehouse, and Liberton Dams to the north side of the Meadows, and thence through a second tunnel, across the Grass-market, and through a third tunnel to Prince's-street, but sending off main communications to the two reservoirs respectively near Heriot's hospital and on the Castle esplanade. These works cost nearly £200,000; and they raised the total supply of water to the city to the rate of about 298 cubic feet per minute. Still, amid the increase of demand, and under the disaster of great occasional scarcity in times of drought, even these works were not enough. A new company was now projected, but soon made a compromise with the old, on terms which stimulated enterprise. A new bill was obtained in 1843,—extended powers also at a later date; and negotiations with the town council, as well as a pressure from without, continued for years to increase the stimulus already given. Hence were new works of supply constructed, and old ones repaired, which, together with the works on the Castle-hill and elsewhere in the city, cost about £80,000 against the end of 1851; and still further works of supply were then projected, on an estimated cost of £45,000. The total supply to the city was then 522 cubic feet per minute,—all pure spring water; and the additional supply from the projected works was estimated at 126 cubic feet,—chiefly burn water. The company's gathering reservoirs at Crawley, Loganlea, Clubbiedean, Bonally, and Tor-duff, had then aggregately a capacity of 112,962,267 cubic feet. The yearly income was £21,450; the yearly ordinary expenditure was £7,770, and the amount available for dividends £13,680.

Monuments.—In the centre of Parliament-square is an equestrian statue of Charles II., erected in

1685, at the cost of £1,000, which, in vigour of design and general effect, is far from the worst specimen of bronze statuary in the metropolis.—On the north side of the Castle esplanade is a splendid bronze statue of the Duke of York, placed on a pedestal, and erected in 1839.—In Adam-square is a beautiful sandstone statue of James Watt, in a sitting posture, on a granite pedestal, erected in 1853.—In George-street, at the point of its intersection by Frederick-street, is the bronze statue of Pitt, executed by Chantrey, and erected in 1833. The statue is placed on a granite pedestal, and possesses considerable dignity of expression.—In George-street, at the point of its intersection by Hanover-street, is the bronze statue of George IV., also executed by Chantrey, and erected in 1832. This monument is utterly inferior to that of Pitt, and has the worse effect from suffering comparison by its immediate vicinity. "The majesty of the monarch must be admitted to be somewhat transcendental. The figure is so far thrown back, as to give it the appearance of deriving a share of its support from the drapery behind, an expedient suggesting some particulars in the natural history of the kangaroo, which by no means contribute to sublimity of effect. It must, however, be granted, that by caricaturing the monarch the artist has exalted the minister, for the exaggerated pomp of the one, powerfully contrasts with the intellectual elevation of the other."—In the centre of St. Andrew's-square, at the east end of George-street, stands Lord Melville's monument. This is a remarkably handsome column, begun in 1821, and finished in 1828, by subscriptions chiefly of naval officers. It rises to the height of 136 feet, and is then surmounted by a statue 14 feet high. The design is, in general, a copy of the Trajan column in Rome; but deviates from that model in the shaft being fluted instead of ornamentally sculptured, and in the pedestal being a square instead of a sphere. The column is 12 feet 2 inches thick at the bottom, and gradually diminishes in its ascent, till it is 10½ feet thick at the top. Up the interior is a spiral staircase, lighted by almost imperceptible slits in the fluting. The base is adorned with some beautiful architectural devices; and the colossal statue, formed of stone, appears, on its giddy elevation, of the natural size of the human figure.—In front of the Royal bank in St. Andrew's-square is a statue, in Roman costume, of the Earl of Hopetoun, erected in 1835. The Earl leans on a charger paving the pedestal, and is eulogized in inscriptions commemorative of his military exploits.

A colossal sitting statue of Queen Victoria, in grey sandstone, surmounts the front of the Royal institution, looking up South Hanover-street. It was sculptured in 1844 by Steel. "Though somewhat rigid in outline, from the effect principally of the mural crown encircling the Sovereign's brow, this figure is finely proportioned. It is not easy to conceive how a sitting figure can be gracefully placed; and the monks have so caricatured it in the grotesque Gothic, that the pyramidal effect here imparted to the mass, harmonized by Steel into a regular geometrical figure, is quite unexpected. Enviroined by finely sculptured sphinxes, by the same artist, looking forth prophetically into the future, from the four angles of the building, this statue is one of the finest sculptures we possess."—A standing statue of Queen Victoria, in sandstone, admirably chiselled, on a highly enriched pedestal in bas-relief, by A. H. Ritchie, was erected in 1850 in the middle of the area in front of Holyrood palace, but removed in 1857.—On the south side of Regent-road, 260 yards east of the new prison, on a rock ten feet higher than the level of the roadway, and conspicu-

ously overlooking all the valley of the Canongate and of the Queen's-park, stands Burns' monument. It was designed by Hamilton. It is a circular temple of florid character, with Corinthian cyclostyle of twelve columns, raised on a quadrangular base, the entola after the monument of Lysicrates at Athens, supporting a tripod with winged fabulous creatures. A marble statue of Burns by Flaxman was originally placed in it; but, in consequence of its sustaining injury from exposure, was removed to the splendid library-hall of the College. Such a place as that focus of learning for the unlettered bard, may seem curious enough; but the manner of the statue itself is still more so, being, not that of a peasant apostrophising the mountain daisy, but that of a Roman senator, with scroll in hand, addressing the conscript fathers of the senate.

On the west face of Calton-hill, overlooking Waterloo-place, is Dugald Stewart's monument, erected in 1831. It was built from a design by Mr. Playfair; and is in the style of a Grecian temple,—a restoration, with some variations, of the Choric monument of Lysicrates. It has seven Corinthian columns, a rich entablature, and a beautiful funereal urn.—Higher up, on the same face of the hill, at the south-east corner of the new observatory, is Professor Playfair's monument, also designed by Mr. Playfair, a small, square, solid, unincised, Doric edifice, enclosed with a railing.—In the High Calton burying-ground, a few yards west of the jail, surmounting the cliff which soars up from the Low Calton, and forming a conspicuous object in various points of view in the Old town, as also from the Calton hill, is David Hume's monument, a dark, low circular tower, of huge size for a mausoleum.—In the vicinity of this, figuring with odious conspicuousness, a perfect pinnacle of bad taste, a great finger of vulgarity, pointing up with impotent ridicule amid the maze of architectural beauties around it, is a lofty obelisk erected in 1845 to the memory of Muir, Palmer, Skirving, Gerald, and Margaroit, who suffered banishment in 1794 for their efforts in the cause of political reform.—A small monument to the poet Fergusson in the Canongate burying-ground is remarkable for being a restoration by subscription of an original one placed there by the poet Burns.—A monument in the Greyfriars' burying-ground, though possessing no attractions as a work of art, is intensely interesting to a large portion of the community for its commemorating the martyrs of the Covenant who were executed at Edinburgh during the twenty-seven years preceding the Revolution.—A monument, from the chisel of A. H. Ritchie, on the west side of the basement of the tower of St. Cuthbert's church, to the memory of the Rev. Dr. Dickson, is a remarkably beautiful piece of sculpture, representing him in his gown administering consolation to the widow and the fatherless.—Another monument, by Steel in the same burying-ground, to the memory of Mr. Jamieson, an eminent lawyer, the son of Dr. Jamieson, beautifully represents innocence protected and oppression exposed.—Multitudes of monuments, in the several burying-grounds, particularly in the newer ones, display much beauty; while not a few, such as those of Dr. Chalmers and Sir Andrew Agnew in the Grange cemetery, possess intense interest for their associations.—A monument of the second Viscount Melville, consisting of a standing bronze statue on a sandstone pedestal, was erected in 1857 in Melville-street.

On the summit of the highest rocky eminence of Calton-hill stands Nelson's monument,—a conspicuous object in almost every view of Edinburgh from sea or land, and an aspiring termination to the view

along Prince's-street from the west. It was commenced shortly after Lord Nelson's death, but was not finished till 1815. Fastidious criticism has, in one instance, described it as "more ponderous than elegant;" and in another instance, has forgotten its own dignity by representing the monument as "modelled exactly after a Dutch skipper's spy-glass, or a butter churn;" yet, as if fearful of a rebound of the witticism upon itself, has added that the monument, "from the grandeur of its site and the greatness of its dimensions, must be admitted to possess those attributes of sublimity which are independent of grandeur of design." The base is a battlemented octagon, divided into small apartments, and occupied by a restaurateur; and has, over its entrance, the crest of Nelson and sculpture in bas-relief representing the stern of the San Joseph, and, underneath, an appropriate inscription. From this edified base rises, to the height of 102 feet, a circular, four-story, battlemented tower, with a crowning one-story, battlemented turret, surmounted by a time-ball and a flag-staff. Around the edifice are a garden and plots of shrubbery. The precipice from the edge of which the monument rises possesses an outline, which, as seen from a point south of Holyrood house, is alleged to be a profile of Nelson. The time-ball on the monument was erected in 1852. It has a diameter of 5½ feet, and is raised by machinery every day at 1 o'clock to the height of 15 feet. It serves the purpose both of synchronising the clocks of the city, and of regulating the chronometers of the vessels at Leith and Granton.

Near Nelson's monument, a little to the north, on the summit of a knoll, stand the twelve pillars of the National monument. This structure was projected in commemoration of the Scotsmen who fell in the land and sea fights consequent on the French revolution; and, with a splendour of design corresponding to the greatness of the object, was meant to be a literal restoration of the Parthenon of Athens. No little enthusiasm was displayed in the prospect of its erection, and promised to draw out the requisite though vast amount of money for its completion; but either it subsided or felt its energies to be factitious; so that, though sanctioned and aided by Royal concurrence, it has hitherto left the monument as commemorative of incompetency of pecuniary means on the part of admiring survivors, as of the deeds and bravery of departed heroes. The monument was founded in 1822, during George IV.'s visit to Edinburgh, and was commenced in 1824. The pillars of it which have been erected are of gigantic proportions and great beauty, cost upwards of £1,000 each, and were designed to form the western range of the entire structure. The architect was Playfair; and the work, had it been completed, would have done the highest credit to his genius. Various projects have recently been talked of, and some magnificent proffers of liberality been made, to re-inkindle enthusiasm, and get the monument completed. Speculation says respecting the desired result of these,—“It is intended to form a repository of sculpture and the fine arts, commemorative of the national greatness, whether in great men who have flourished in its history, or in the triumphs of war or peace by which it has been distinguished; as at the Wallhalla in Germany, which the building, when completed, will very much resemble.”

In front of the Register office, at the part where the screen-wall of that edifice is interrupted by the double flight of steps leading up to the grand entrance, stands the equestrian statue of the Duke of Wellington, on a pedestal of Peterhead syenite. The pedestal is 13 feet high, and very plain. The statue is nearly 14 feet high, and all life, energy,

and grace, the grandest work of its kind in the world. The horse is in high action, rearing in air under the curb, as if pulled suddenly up when in hot speed; while the rider sits in dignified equipoise, issuing an imminent order connected with the evolutions of a battle, and pointing to the part of the field where the order is to be executed. The weight of the whole figure rests on the horse's hind-legs and tail; and this occasioned great skill in such a distribution of the metal throughout the parts as to produce a secure equipoise. The only other equestrian statue with a rearing horse is that of Peter the Great at St. Petersburg; and there the difficulty of the equipoise is mainly overcome by the grotesque introduction of a serpent, on which the horse tramples, and which not only strengthens the hind-legs, but projects very far behind so as to serve as a balance. The Duke in the Edinburgh statue is a portrait, with the additional advantage that he rode to the artist as well as sat to him, so as to give exact ideas of his style of horsemanship. His posture is truly grand,—just what a good imagination, well informed, would ascribe to the British hero in the heat of battle,—all erect, calm, noble, massively intelligent, lifting his curved right hand in a manner of the most significant command, holding gracefully in his left the horse's reins and his own plumed hat,—and withal raimented in a fashion most classically martial. The cost of the work was only £10,000. The weight of the bronze is nearly 12 tons. The different parts of the work are not, as in most bronze statues, rivetted together, but fused. The artist was Steel of Edinburgh, so that the work is a double boast to Modern Athens,—the finest of its kind, and of native produce; and at the same time is the first bronze statue which was ever cast in Scotland. So generally has this work been admired that copies of it, in picture and in statuette, have been immensely multiplied. The inauguration of it took place, with great ceremony, on the 18th of June, 1852.

On an esplanade on the north side of the East Prince's-street gardens, on a level with the roadway of Prince's-street, opposite the foot of St. David's-street, stands the monument of Sir Walter Scott. Designs for it were made a subject of public competition; and the successful one was furnished by George M. Kemp, who, from being a common artisan, rose to artistic eminence through enthusiastic study of Roslin chapel, but who did not live to see the Scott monument completed. His conception was no less than to construct out of the models of Melrose abbey a grand Gothic aspiring cross; and this conception has been so nobly realised as to render the monument an architectural wonder of the age. It is just the select parts of Melrose abbey, first beautifully restored, and next symmetrically piled into a Gothic spire. Four grand basement arches are connected together exactly in the same manner as those beneath the central tower of any cruciform Gothic cathedral. Four other grand arches spring diagonally from the outer side of the piers of these arches, and rest exteriorly on isolated buttressed piers, which are surmounted by lofty pinnacles. Elegant pierced flying buttresses ascend from the inner side of the base of these pinnacles, and from the end of a pierced horizontal parapet over the contiguous spandrels, to the middle of the second stage of the monument. A contracting series of galleries, arches, turrets, and pinnacles soars aloft from the summit of the four grand basement arches, stage above stage, till it attains a height of 200½ feet from the ground, and terminates there in a single finial. The capitales, mouldings, niches, parapets, crocketings, and

other ornaments are all in the style of decorated Gothic, closely after the pattern of Melrose. A stair of 287 steps ascends to within a few feet of the top, and reveals there a most magnificent bird's-eye view of the city. In each front of the monument, above the archivolt of the basement, are six small niches, —making a total of 24 there; and in the piers, abutment-turrets, and other prominent positions of the first and second stages are 32 others, —making a total of 56 within clear view from the ground; and all these were originally intended to be filled with statistic representations of the characters in Scott's poems and novels. But as yet there are statues of only Prince Charles Edward, Meg Merrilies, the Lady of the Lake, the Last Minstrel, and George Heriot. Flights of steps from the ground on all the four sides converge to a platform beneath the four grand basement arches; and there on a pedestal, with the figure of his dog Maida at his feet, is a sitting statue, in Carrara marble, of Scott himself. But the proportions and position of this statue relatively to the vault around it are much too small; causing the figure, though really large in itself, to look almost dwarfish. The upper part of the monument, also, though designed by Kemp in perfect harmony with all the rest, and though figuring in that harmony in all the prints of it which we have seen, was so "drawn up" by order of the Committee, for the poor reason of making it be better seen from the near vicinity, as to render it very inharmonious. The monument was founded in 1840, and completed in 1844, and, exclusive of the statue, cost £15,650. The statue was sculptured by Steel, who received £2,000 for it; and was inaugurated, with great pomp, in August, 1846.

Miscellaneous Buildings.—The Standard Insurance Company's office, near the east end of George street, has a neat attached portico, with surmounting sculpture of the parable of the ten virgins. The Caledonian insurance Company's office, in the same street, has four beautiful Corinthian columns, with massive entablature. The Life Association of Scotland office, in Prince's-street, is a superb edifice of 1855-8, in florid Roman style, so richly ornate as to seem, at first sight, to be all a mass of colonnade and sculpture. The New Club, adjoining this, belonging to an association of noblemen and gentlemen, and enlarged in 1860, is a spacious elegant edifice. Several insurance offices, besides those we have named, particularly in George-street, and St. Andrew's-square, and several of the hotels, particularly in Prince's-street, St. Andrew's-square, Queen-street, and Waterloo-place, are very fine buildings. Multitudes of the shops and warehouses, also, in all the transmuted parts of the New town, are highly decorated. The passion for pillared doorways, porticos, mouldings, sculptures, and other ambitious ornamentations, which has been displayed in the re-edifications and remodellings of the last twenty-five years, is wonderful. Nor in even the smallest colonnades has Tuscan or Doric simplicity been often deemed sufficient; but either Ionic grace or Corinthian finery, generally too with good taste in the detail, has borne pre-eminence. The necessity of refashioning old dwelling-houses into new shops at the smallest possible cost, also, has produced what may be called a new style in street architecture, —covering over the area of the sunk flats, projecting a new front to the first story half-way across that area, and giving to the new front an aspect of pretentiousness or elegance, so as to make it appear to be related to the old building in the same manner as a porch or a verandah. The reconstructions of this kind, however, are not always contiguous to

one another, and even when contiguous are of different projections and in different fashions; so that the whole innovation is "a regular irregularity."

Many a range of building in the New town, and many an entire street, are constructed on some plan of a single facade; the uniformity in the architecture being, not a monotony, but a symmetry, with great diversity of detail, and part answering to part, as in the facade of a single building. Rustication of the basement story, isolated iron balconies on the next story, and balustrated parapets along the summit pervade some places, such as Alva-street. Pillared doorways, continuous iron balconies, and very massive cornices pervade other places, such as Regent-terrace. Massive pilasters, rising from the top of the basement story, facing the next two stories, and surmounted by an attic story, characterise many chief divisions or conspicuous ranges, such as the central divisions of Great King-street and of the Royal circus. Massive attached columns, variously Doric, Ionic, and Corinthian, collocated sometimes in twos, sometimes in fours, and sometimes in sixes, rising from the top of the projected basement story, facing the next two stories, and surmounted by an attic story, characterise some divisions, such as part of Albyn-place, great part of Moray-place, and the greater part of the Royal-terrace. The same features, but with the columns standing, not on a projected basement, but in antis, characterise other places, such as the arc at the south-west extremity of Forbes-street, the two arcs at the south end of Wudsor-street, and the two arcs at the wide opening from Leith-walk leading to respectively the Royal-terrace and the London-road. The same features, but with the columns surmounted by a pediment, or by a lofty entablature, characterise other places, such as the central part of Albyn-place, the central part of Melville-street, and the central part of the north and south sides of Charlotte-square. True porticos in any similar relative situation are more rare; yet three tetrastyle Ionic ones occur respectively on the two west gables of Waterloo-place, and on a gable above the low houses of Blenheim-place looking toward the Royal-terrace. Festoons and other florid tracery occur in some places, such as Charlotte-square and Drummond-place; even massive pieces of sculpture are not wanting, such as two great sphynxes on the summit of the extremities of the north side of Charlotte-square; and most of the minor kinds of Græco-Italian ornamentation, such as rusticated basements, moulded architraves, window pediments, string-courses, carved cornices, and various sorts of balustrades, are almost everywhere abundant.

The contrast to all this beauteous symmetry of the New town displayed by the romantic irregularity of the Old town, as it climbs all the central hill of the city from Holyrood to the Castle, is ever regarded by the eye of both stranger and denizen as one of the most remarkable characters of Edinburgh. Every part of the contrast is wonderful, —whether in the east, where the terraces of the New town on the face of the Calton-hill look down upon the masses of the Old huddled wildly together on the cliff-screeded hollow, —or in the middle, where the two towns are not far from being on a common level, with only the North loch valley yawning between, —or in the west, where the streets and squares and vistas of the New, back even to long distances down its own northward slope, look up to the soaring structures of the Old, beetling far aloft in broken skyline, and appearing, in certain states of the weather, as if they belonged to a city in the clouds. One striking new feature in the view is the range of houses along Cockburn-street, in the

old Scottish baronial style, curving up the ascent from the end of Waverley bridge to the middle of High-street; and another is the large, lofty, imposing pile of the Free church offices, in a florid variety of the same style, erected in 1859-61, on the site of buildings destroyed by fire in 1857, immediately east of the Free church college. The destroyed buildings were the western half of a vast, plain, uniform range, no less than nine stories high, the eastern half of which still stands. The entire range formed the back of James'-court, on a steep declivity, the south front several stories less than the north one, yet all on a higher level than the tops of the highest houses in the confronting part of the New town, soaring clear up on the hill, with not the slightest break to the view between it and Prince's-street; and, in that connexion, it acquired a curious and unique celebrity. "Entering one of the doors opposite the main entrance, the stranger is sometimes led by a friend, wishing to afford him an agreeable surprise, down flight after flight of the steps of a stone staircase; and when he imagines he is descending so far into the bowels of the earth, he emerges on the edge of a cheerful, crowded thoroughfare, with the North loch valley and the New town spread before him,—a contrast to the gloom from which he has emerged."

James'-court is entered from Lawnmarket; was built in 1727 as a fashionable quarter; and continued till the founding of the New town to be highly aristocratic. Several ancient closes which it supplanted contained residences of nobles and judges; and several still extant in the Lawnmarket still contain houses of remarkable note. Baxter's-close, for example, contains one which belonged to the Countess of Elgin, the governess of the Princess Charlotte; Lady Stair's-close contains one in which the Dowager Countess of Stair long presided over the fashionable circles of Edinburgh; Riddle's-close contains one in which Baillie Macmoran entertained at his table James VII. and his queen; and Dunbar's-close contains some which were the headquarters of Cromwell's army after the battle of Dunbar. A number of closes in the High-street also, particularly Stamp-office, Fleshmarket, Fishmarket, Bishop's, and Strichen's closes, Milne-square, and Blackfriars'-wynd, have quondam residences of noblemen, judges, and hishops; while others, such as Anchor-close, Covenant-close, and Carrubber's-close, contain houses which were famous in other ways. The Cowgate likewise has still the palace of Cardinal Beaton, where the citizens gave a feast to Queen Mary on her return from France; the Mint-house, in whose great hall a banquet was given to the Danish ambassadors who came to Scotland with Queen Anne; the mansion of Sir Thomas Hope, the King's advocate, and leader of the Covenanters in the reign of Charles I.; and the Tailors' hall, in which a great meeting of citizens, clergymen, gentry, and nobles was held on the 27th of February, 1638, preparatory to the signing of the Solemn League and Covenant next day in Greyfriars' church.

Educational Edifices.

The University.—The edifice of the Edinburgh university presents its main front to South Bridge-street, and forms an entire side respectively of North College-street, West College-street, and South College-street. It is a regular parallelogram, 358 feet long and 255 wide, extending its length east and west, and having in the centre a very spacious court. The main front is of exquisite proportions, in superb Grecian architecture; but, in common

with the street that it can nowhere be seen to advantage. Were the edifice situated in a large park, particularly upon a rising ground, it would appear almost sublime, and be without a parallel among the modern edifices of Scotland; but situated as it is, it makes, upon the mind of a stranger, in its exterior views at least, impressions chiefly of bewilderment and confusion. The building comprises four stories of very unequal height,—the basement one rusticated, the second well adorned with window mouldings, the third similar to the second, but neither so high nor so well adorned, and the fourth an attic. The entrance is through the main front on the east, by three lofty archways, the side ones for pedestrians and the central one for carriages. A grand Doric portico, of two wings and a centre, adorns the entrance; the two wings having each two columns, and covering the side archways, and the centre recessed, and having two attached columns,—all the six columns of equal elevation, and each 26 feet high and formed of a single block of stone. Over the summit of the front, directly above the portico, forming what was originally intended as the front part of the basement of a dome, is a large stone entablature, with the following inscription: "Academia Jacobi VI. Scotorum Regis anno post Christum natum M,D,LXXXII instituta; annoque M,DCC,LXXXIX. renovari coepta; regnante Georgio III. Principe munificentissimo; Urbis Edinensis Praefecto Thoma Elder; Academiae Primario Gulielmo Robertson. Architecto Roberto Adam."

The continuous range of building round the inner court is in a very tasteful Grecian style; and has an elegant stone halustrade, forming a kind of gallery, which is interrupted only by the entrance, and by flights of steps to the library, the museum, the hall of the Senatus Academicus, and the several class-rooms. At the angles, and on the west side, are spacious piazzas. The library occupies a large portion of the south side, includes a noble hall 198 feet long and 50 broad, with a beautiful roof of stucco-work, and contains about 91,000 books, besides some manuscripts, and a collection of antiquities, sculptures, and articles of vertu. Accessions to its hooks are obtained by means of an annual sum of £575 from government, £1 a-year from each student at his matriculation, £5 from each professor at his induction, and certain contributions from the members of the college of surgeons. About 800 volumes, on the average, are added every year. The library was founded in 1580, in a bequest of hooks by Mr. Clement Little, an advocate in Edinburgh; "for the use of the citizens;" but it came eventually to be regarded as an exclusive institution confined entirely to the university; and a recent report upon it says,—"As the main object of it is to serve as an auxiliary to academical study, and as the collection is not more than adequate to supply the demands made upon it by professors, students, and members of the college of surgeons, all of whom are contributors to the funds, there cannot be any considerable provision for the accommodation of strangers. But literary gentlemen, or others, who have occasion to consult or to borrow books, on application to the curators or to individual professors willing to be responsible for them, are allowed every facility."—The museum, situated on the west side, occupies two rooms, each 90 feet by 30, on separate floors, together with contiguous galleries and small apartments; and contains about 950 specimens of mammals, one of the best collections of birds in the world, and large collections of insects, shells, corals, and minerals.—A national industrial museum, of

great extent and much value, was organized about the year 1854; has been temporarily deposited in old neighbouring buildings, in Argyle-square; and will be transferred to an elegant large edifice adjacent to the north-west corner of the college, founded in 1861 by the late Prince Consort, and planned on admirable arrangements, and estimated to cost £41,200.—The music class-room was originally in the college, but has now an edifice to itself, spacious and handsome, in Park-place, a brief distance to the south-west.

The original college buildings were both unsightly and inconvenient. Part of the ground belonging to them was alienated to form South College-street; and the proceeds of this, together with the proceeds of other property, and the proceeds of special public subscriptions, were set apart by the magistrates toward the erection of the new edifice, —which, with more zeal for the celebrity of their city than prudential regard to the extent of their resources, they resolved should be in a style of superb magnificence. This was founded in 1789; and though, for a brief period, it was briskly carried forward, it had even the front part finished with difficulty, and stood in its slender and fragmentary state about twenty years, the monument of combined vanity, rashness, and poverty. But Government having, in 1815, resolved to expend £10,000 a-year upon it till it should be completed, it was a second time set in progress, and advanced, through intermediate years and by successive additions, to a finished state in 1834. The original part was constructed after the original design by Adam; but the other parts, and particularly the interior facades, after a modification of that design by Playfair.

The University originated in a bequest of 8,000 merks by Robert Reid, Bishop of Orkney, before the Reformation. The magistrates, who were vested with power to found it, purchased, in 1563, the ground on which it stands; but, in consequence of opposition from the prelates of St. Andrews and Aberdeen, were not able, till 1581, to make a fair commencement. But previous to that date they had, by a remote grant from Queen Mary, and a confirmed and immediate one from James VI., received, towards its erection and support, all the houses belonging to the religious foundations within the city. James VI. besides, watched over the infant institution with paternal care, and endowed it with church-lands, tithes, and other immunities. In 1583, it was opened for the labours of a single professor, the amiable Robert Rollock; and, in 1597, it acquired a second professorship, and was presided over by Rollock as principal. The original building was a tenement which had belonged first to the provost and canons of the Kirk of Fields, and next, as a residence to the Earl of Arran. In 1617, a college-hall and several apartments for classes were erected. In 1685, it had risen to possess 8 professorships, and was currently attended by a large body of students. Previous to the Revolution, it was disturbed and degraded by the contests of faction; but since that event, it has enjoyed quietude, and been marked by the calm destitution of incident peculiar to a well-managed seat of learning. In 1720, the study of medicine was introduced to its curriculum, and rapidly promoted its prosperity, till it eventually won for the university the proudest name in Europe. No college probably can boast of a longer or more brilliant array of eminent men, whether as professors or alumni. So numerous have been the men, in the walks of medicine, of metaphysics, of polite and classical literature, and of the various physical sciences, who, from 1720, have shed lustre over it by their genius and their fame, that a mere list of

their names is nearly incompatible with the limits of condensed narrative.

An idea of the progress of the university may be formed by glancing at the names, dates, and emoluments of its chairs. These are,—the principalship, 1585, £700; humanity, 1597, £687; divinity, 1620, £637; Hebrew and oriental languages, 1642, £400; mathematics, 1674, £698; botany, 1676, £880; institutes of medicine, 1685, £640; practice of physic, 1685, £465; divinity and church history, 1695, £445; anatomy, 1705, £1,900; public law, 1707, £350; Greek, 1708, £737; natural philosophy, 1708, £622; moral philosophy, 1708, £502; logic and metaphysics, 1708, £672; civil law, 1710, £375; chemistry and chemical pharmacy, 1713, £1,310; history, 1719, £230; Scottish law, 1722, £505; midwifery and diseases of women and children, 1726, £550; clinical medicine, 1741; rhetoric and English literature, 1741, £410; natural history, 1767, £765; dietetics, materia medica, and pharmacy, 1768, £556; practical astronomy, 1786, £300; agriculture, 1790, £150; clinical surgery, 1803, £550; military surgery, 1806; medical jurisprudence and police, 1807, £410; conveyancing, 1825, £535; surgery, 1831, £550; general pathology, 1831, £445; music, 1839, £420; biblical criticism and biblical antiquities, 1846, £767. The emoluments, as now stated, are those fixed by the University commissioners in November 1861; and they include the estimated amounts of fees, but are exclusive of allowances for assistants and for class expenses. The patronage of fifteen of the chairs, with part of that of six others, was formerly held by the town-council of Edinburgh, but, under the University act of 1858, was transferred to seven curators, four of them chosen by the town-council, and three by the University court. That of nine is held by the Crown; that of one, by the University court; that of another, by the Crown and the curators; that of two by the faculty of advocates and the curators; that of one, by the society of writers to the signet and the curators; and that of two, by the lords of session, other parties, and the curators. The chief officers are a chancellor, chosen by the general council; a rector, chosen by the matriculated students; a principal, chosen by the curators; and five assessors, chosen by respectively the chancellor, the town-council, the rector, the general council, and the senatus academicus. The university court consists of the rector, the principal, the lord provost of Edinburgh, and the five assessors. The senatus academicus consists of the principal and the professors. The general council meets twice a-year, on the first Tuesday after the 14th of April, and on the last Friday of October. The winter session opens in the beginning of November, and closes in the end of April; the summer session opens in the beginning of May, and closes in the end of July. The number of members of the general council, in 1861, was 2,276; of matriculated students, about 1,411; of students who graduated in arts, 62,—who graduated in medicine, 67. Honorary degrees have always been charily given, and are in higher estimation than those in some other universities. The bursaries are 80, and yield £1,172 a-year.

Medical Schools.—On the east side of Nicolson-street, a short distance south of the university, stands Surgeon's hall, or the hall of the royal college of surgeons. It is a large, modern, Ionic building, one of the most elegant edifices in the city, and cost about £20,000. Its character is purely Grecian; and its general appearance that of an ancient temple. Its street front is principally covered with a hexastyle portico, the base continuous, and serving also as a curtain-wall, the columns fluted, and the frieze and tympanum filled with

sculpture. The entrance from the street is by two pedimented door-ways at the ends of the curtain-wall. The interior contains apartments for meetings, tastefully-fitted galleries, and large, valuable, medical museums. The royal college of surgeons dates from 1778, or, through a previous body, from 1505. It maintains courses of lectures, issues diplomas, and serves as a coadjutor to the medical faculty of the university. Its winter course of lectures comprises surgery, chemistry, physiology, medical jurisprudence, clinical medicine, clinical surgery, anatomy, pathology, and practice of physic; and the summer course includes some of these, and adds midwifery, botany, natural philosophy, histology, insanity, history of medicine, dental surgery, venereal diseases, and surgical appliances. Both this body and that noticed in next paragraph are recognized in the Medical act of 1858.

In Queen-street, midway between Hanover-street and St. David's-street, stands Physicians' hall, or the hall of the royal college of physicians. This body was incorporated so early as 1681. They have an exclusive privilege of practising medicine within certain old limits of Edinburgh, and are charged with the public duty of preventing the sale of adulterated drugs; and, though not supporting the medical schools of the city in a direct manner, they support them so strongly in an indirect manner, as to be well entitled to high notice in connexion with them. A previous hall of theirs stood on the site now occupied by the Commercial bank. It was an edifice of much beauty, built in 1775, three stories high, purely Grecian, with a tetrastyle Corinthian portico. The present edifice was built in 1845, from designs by Mr. T. Hamilton. It has a Corinthian portico of unique character, comprising successively a tetrastyle, an entablature, a distyle, an entablature, and a pediment. The columns of the tetrastyle are of the rare quasi-Corinthian kind which some architects call the Attic order. On the summit of the ends of the first entablature are statues of Esculapius and Hippocrates, and behind the apex of the pediment is a statue of Hygeia, all sculptured by A. H. Ritchie. The building contains a select library, a good museum, and a fine hall for the meetings of the fellows.

In Clyde-street stands the modern, three-story, Doric building of the veterinary and zoiatric college. This institution was established in 1818, and has lectures, in seven classes, by five professors, on veterinary medicine and surgery, chemistry and veterinary materia medica, zoological anatomy and demonstrations, microscopic zoology and pathology, practical chemistry, practical pharmacy, and clinical instruction. The session extends from the early part of November till the end of April.—In Lothian-road are the premises of the new veterinary college, established in 1857. This college has lectures in nine classes, by six professors, on nearly the same subjects as the others, and on botany and shoeing. The winter session commences in the beginning of November; the summer session in the beginning of May.

Art Schools.—On the north end of the Mound, presenting shorter fronts to Hanover-street and the Old town, and longer ones to the views along Prince's-street, stands the magnificent oblong edifice called the Royal institution. This is hut partly an art school,—being at the same time devoted to some other purposes; yet it ranks better here than with any other class of buildings. It was founded in 1823, and completed according to a design by Playfair at the cost of £40,000. It stands on a sub-structure of wooden piles and cross-bearers, rendered necessary by the ground being travelled earth,

and formed at the cost of upwards of £1,600. The edifice is purely Grecian, grandly Doric, and nearly of the character of what the architects call a peripteral temple; all its four fronts being faced, to their whole height, with fluted Doric columns, resting on flights of steps, and surmounted by an uniform entablature. The north front, which is the chief one, has a portico with three lines of columns; the first line and the second line containing each eight columns, but the third line containing only two, so as to render the entire arrangement what is called pseudo-tripteral. The south front has a projection exactly similar to this portico, but neither so far nor so full, comprising only two lines of columns, the first with eight columns, and the second with four in antis. The two flanks, or east and west fronts, are precisely alike; each of them having at each end a distyle projection, and between the two projections seventeen columns. The walls, at the intercolumniations, are pierced with windows; the summit of the north front, as we noticed in a former section, is crowned with a colossal statue of Queen Victoria and with sphynxes; and the summit of the corresponding part of the south also has sphynxes. The building contains the apartments of the royal institution for the encouragement of the fine arts, which has also the administration of the Spalding fund for the support of aged and decayed artists; the apartments of the Board of trustees for the encouragement of arts, fisheries, and manufactures; a gallery of casts from the antique, for the use of students attending the school of design; the museum of the society of antiquaries of Scotland, gratuitously open to the public; and the apartments of the Royal society of Edinburgh, comprising library, museum, and select gallery. The school of design has a salaried staff of directors, two preceptors, and a lecturer.

The edifice of the Art galleries stands on the central and southern parts of the Mound. It was founded with great ceremony, in August 1850, by the late Prince Consort, and did not arrive at completion till 1858. Immense excavations had to be made, and substructions formed, for its site; and very extensive collateral improvements were done for harmonizing it with the Mound, and for harmonizing both the Mound and it with the surrounding scenery. The object in erecting it was to provide suitable accommodation for the annual exhibition of the Scottish royal academy, for the extension of the school of design, for the better preserving and rendering more useful the gallery of casts in the Royal institution, and for the instituting of a Scottish national gallery of painting and sculpture. The edifice is about the same width as the Royal institution, but nearly a third longer; it also extends north and south, but has large projections at the centre, so as to be, not strictly oblong, but cruciform. The north and the south fronts are exactly alike; but the former is in a great degree hidden from all distant view by the Royal institution, while the latter stands so low relatively to the roadway above it as to seem almost to be in a pit. The flanks, however, are everywhere conspicuous to all points, high and low, whence the Mound itself can be seen. Each front, north and south, is completely faced with an Ionic portico of two projecting wings and a centre; each wing having four columns and a pediment, the centre having two columns in antis and a balustrade. The projecting part of each flank is faced with a hexastyle Ionic portico; and the other parts of the flanks are little else than dead wall, poorly relieved by bald pilasters, and by a balustered parapet. The interior arrangements for exhibition are all octagonal, and lighted entirely

from above. The estimated cost of the edifice, inclusive of the site and of the concomitant improvements, was £40,000.

The western suite of apartments in the Art galleries is occupied by the national gallery of painting and sculpture, open to the public, free of charge; and the eastern suite is set apart for the annual exhibition of the Royal Scottish academy of painting, sculpture, and architecture, held from February to May.—A hall in George-street is used for the ordinary meetings of the Royal Scottish society of arts; who, though they have no public lectures, yet give from time to time expositions on interesting subjects connected with the useful arts.—A plain building, with a large hall, in Adam-square, belongs to the Watt institution and school of arts, which has a public library, two lecturers on respectively chemistry and mechanical philosophy, and teachers of respectively mathematics, the French language, the structure of the English language, ornamental modelling, and architectural, mechanical, and ornamental scroll drawing, serving altogether as an academy of arts, science, and literature to the operative classes.—In Lothian-road is the building of the Royal academy for teaching exercises, better known as the Riding-school. It is a large handsome edifice, and contains suites of apartments, some of which are rented by the Scottish military and naval academy. The Riding-school is superintended by 2 masters, and governed by 7 directors.—The military and naval academy has no fewer than 12 or 13 teachers, is governed by 27 extraordinary, and 14 ordinary directors, with chairman and trustees, and affords, in addition to technical tuition for the navy and army, a circle of instruction in several of the fine arts, in science, in foreign languages, and in general literature.

Classical Schools.—On the south face of Calton-hill, a little above the line of Regent-road, stands the High-school. This building is worthy of its magnificent site; and while it commands one of the richest of town and country landscapes of Edinburgh and its environs, is itself a beautiful feature of the scenery with which it is grouped. It is built of pure white stone, and consists of a central part and two wings, extending about 270 feet in front. The central building shows a pediment advanced upon a range of Doric columns; and the end buildings are nearly flat-roofed and of plain architecture, but connected with the central building by open colonnaded corridors. The entire edifice pleases and delights the eye as much perhaps as any single erection in the metropolis. A spacious flight of steps leads up to it from the enclosing wall in front; though the access in use is by a gateway on a higher level considerably to the west, and a fine play-ground intervenes thence to the entrances to the various class-rooms. The interior is distributed into a large hall, 73 feet by 43,—a rector's class-room, 38 feet by 38,—4 class-rooms for masters, each 38 feet by 28,—a room for a library,—and two small rooms attached to each of the class-rooms. On the margin of the road-way, on a lower site than the main building, are two neat lodges, two stories high; the one occupied by the janitor, and the other containing class-rooms, respectively 36 feet by 18, and 40 feet by 18, for writing and practical mathematics. The area of the school and play-ground is two acres, and was formed into a level by deep cutting in the face of the hill. The edifice was founded in 1825, amid pompous processional pageantry; and cost, with its appurtenances, about £30,000. There are a rector and four classical teachers, each of the teachers carrying a class round a circle of four years of progressive study, and then

receiving a new class. Except small allowances from the town council, the fees constitute the salary, and are 15s. a quarter for the masters' classes, and 16s. for the finishing or maturing class of the rector.—The High-school is traceable under the name of the High grammar-school, as far back as 1519. In 1578, when the magistrates had, for a while, made vain efforts to found an university, a school-house of respectable capacity, was erected on the grounds which now form the termination of Infirmary-street, or lie between that termination and Surgeon's-square. In 1777, a new and neat and commodious edifice was reared on the site of the old; but, owing to the plebeian character of its vicinity, and the inodorous and perhaps unhealthy associations of its locality, it became distasteful to the citizens of the New town, and continued to sink in estimation proportionally to the growing extension and the rising attractions of that successful rival of the ancient city.

North of Henderson-row, near the water of Leith, is the Edinburgh academy, of similar character and design to the High-school. The edifice is a low, neat, Doric structure, built after a design by Mr. Burn, at the cost of about £12,000, having a large fine play-ground in front, and constructed with reference more to interior commodiousness than to exterior display, yet not unsuited in appearance to the architecturally opulent district in its neighbourhood. The academy was founded in 1823, by a society who had, by proprietary shares of £50 each, a capital of £12,900, capable of being augmented to £16,000. It is more aristocratic in its plan than the High-school, or rather is conducted on principles which render it less accessible to the children of the middle classes, and has a longer period of study and larger fees,—the former being 7 years, and the latter £7 for the first year, £9 for the second, £11 for the third, and £11 10s. for each of the succeeding years. There are a rector, four masters for classics, and eight or nine for other departments.—Several other seminaries for a conjointly classical and general education have each a large staff of masters; but even the most conspicuous one of them, bearing par excellence the name of the Edinburgh institution, and ostensibly competing, though on a plan of its own, with the Edinburgh academy and the High-school, has no better an edifice than a plain commodious house in Queen-street, built originally for a private residence.

Elementary Schools.—The normal school, belonging to the Established church, is a large handsome edifice, in Castle-place, erected in 1845, at the cost of about £8,500, containing not only class-rooms and other appliances for a large attendance of pupils, but also dormitories for male students, and having a fine play-ground attached. This institution embraces a wide range of training, and is conducted by a rector, three masters, two tutors, and five teachers.—The normal school belonging to the Free church is an exactly similar institution, in Moray-house, Canongate.—Several of the parish schools, the Free church schools, and the other public schools, such as the Lancasterian and Bell's, have school-houses remarkable either for commodiousness, for elegance, or for both.

Eight very commodious and handsome buildings, for the gratuitous education of the poor children of deceased burgesses, freemen, and poor citizens of Edinburgh, have been erected by the governors of Heriot's Hospital, in respectively Cowgate-port, Heriot-bridge, Old-assembly-close, High-school-yards, Brown-square, West Rose-street, and Broughton-street. The one in Broughton-street is the latest of the eight, and was built in 1855;

and, though situated amid a tolerably fair display of New-town architecture, is so ornate with ground arcades, upper mouldings, and crowning statuary as to be, in a mere architectural respect, a decided accession to the neighbourhood. The one in Cowgate-port was built in 1840, and looks like a jewel in a setting of hogwood, or a flower-plot in the midst of a putrid marsh. It has piazzas, towers, ornamented windows, and various other architectural decorations; and situated in the most squalid district of the metropolis, and existing for the benefit of the poorest order of children, it seems, by the exhibition of its beauties as a foil to the deformities around it, to be a type of the transition which the blessings of education may effect from ignorance and filth, to mental polish and to elegance of character.

Museums, &c.—The Highland and Agricultural society's museum is a massive, handsome, recent edifice, standing isolated at the south corner of Victoria-street and George IV.'s bridge. The door is surmounted by an emblematical group of sculpture by A. H. Ritchie; and all the internal arrangements are admirably adapted to the display of the museum's surpassingly rich and diversified contents.—There is also a smaller agricultural museum in the college.—The antiquarian museum in the Royal institution, contains Continental, Egyptian, Romano-Scottish, early Scottish, and late Scottish antiquities,—among the last, the maiden or guillotine, John Knox's pulpit, the stool which Janet Geddes hurled at the bishop of Edinburgh in St. Giles', some colours carried by the Covenanters during the civil war, and a specimen of the old iron hridle for taming the tongues of railers.—There is an interesting recently constructed museum of vegetable wonders in the botanic garden.—The museums of the university, of Surgeon's hall, and of the Royal society, have already been incidentally alluded to.

On a flat exposed piece of ground, on the summit of the Calton-hill, north of the National monument, stands the new observatory. It has the form of a St. George's cross, 62 feet long each way. On each of the four ends or terminations are six columns supporting a handsome pediment. The centre is surmounted by a dome, 13 feet in diameter, and has a pillar rising up to the dome, 19 feet high, for the astronomical circle. Near it, on the north-west shoulder of Calton-hill, is the old observatory, a plain, dingy building three stories high.—At the head of Castle-street, contiguous to the reservoir, is Short's observatory, a plain, large, lofty structure of 1855, furnished with attractions to visitors, at a charge of a shilling.

On the lands of Iverleith, about half a mile north of Canonmills, is the Royal botanic garden, twelve acres in area, enclosed by high walls, and transplanted from a former site in 1822-4. The surface declines slightly to the south, and is disposed in plots and promenades of great beauty and variety. Within the area are the superintendent's house, the museum, the lecture-room, extensive hot-houses suited variously to the plants of all climes, a spacious palm-house, an aquarium, a Linnæan arrangement, a Jussieuan arrangement, and many beautiful groupings of trees and shrubs.—Contiguous to the botanic garden on the south is the experimental garden of the Caledonian horticultural society. This has an area of eight acres,—the surface undulatingly diversified and very tastefully allotted; and it contains superintendent's house, several hot-houses, and a variety of open departments for respectively culinary plants, fruits, flowers, and ornamental shrubs.—On the lands of Broughton, opening from the north end of Claremont-street, were the

zoological gardens, tastefully laid out in promenades and flower-plots, containing for a number of years a tolerable collection of quadrupeds, birds, and reptiles, and frequently let out for temporary exhibitions entirely alien in character from every thing connected with zoology, but found to be uncomensating, and abolished in 1860.

The residences or haunts of persons who have figured prominently in literature may be noted here for want of a more suitable place; for, though in no sense schools, they act so suggestively on the mind as to be surely educational. The early poets, Dunbar, Gawin Douglas, and Sir David Lindsay, as also some early distinguished prose writers, were long resident in Edinburgh, and stand associated generally with the existing memorials of the ancient city. The poet Gay was for some time a resident, under the hospitality of Lady Catherine Hyde, in Queensberry-house. William Fowler, secretary to Anne of Denmark, and a poet, lived in a house still standing in the Anchor-close, High-street. Drummond of Hawthornden, one of the finest of the cavalier poets, figured in intimate connection with the original college of the city. Allan Ramsay lived at the head of Castle-street, and has bequeathed his name to Ramsay-lane which now leads off thence to the head of the Mound. Goldsmith, when studying medicine at the university of Edinburgh, lodged in College-wynd. Boswell, the biographer of Johnson, lived in James'-court, and entertained there that lion of literature on his way to the Hebrides, and also Paoli the patriot Corsican chief. Hume, the historian, lived for some time in the same neighbourhood, but finished his days in the house at the south-west corner of St. Andrew's-square; where he gave a farewell dinner, toward the close of his life, to a select company of Edinburgh literati, comprising Lord Elibank, Professor Fergusson, Dr. Blair, Adam Smith, Dr. Black the famous chemist, and Home the author of Douglas. Thomas Campbell, while engaged in writing his 'Pleasures of Hope,' lived in an obscure house in Alison-square, Potter-row; and Grahame, the poet of the Sabbath, stands associated, as visitor at least, with the same house. Mrs. Maclehoze, the Clarinda of Burns, lived in a decayed mansion, originally the residence of the second Earl of Stair, in a dismal old court, called General's-entry, near the junction of Potter-row and Bristo-street. Fergusson, the poet, died in a forlorn house in the same neighbourhood, originally the office of the famous Darien enterprize, hut, at the time of the poet's death, a pauper lunatic asylum. Burns, during his brief residence in Edinburgh, when he enacted his part of "Sylvander," resided in the house No. 30 at the south-west corner of St. James'-square. Sir Walter Scott was born at the head of College-wynd, resided for some time with his father in George-square, and afterwards had his own town-house for many years at 39 Castle-street. Macvey Napier, the great editor, afterwards resided in the same house in Castle-street. Lord Brougham's father lived for some time in a house still standing in Cowgate; but afterwards removed to the house at the north-west corner of St. Andrew's-square; and there Lord Brougham was born. Lord Jeffrey long had his town residence at 24 Moray-place.

Benevolential Edifices.

Sanative Asylums.—The Royal infirmary, built during the reign of George II., stands on the south side of Infirmary-street. The edifice consists of a body and two projecting wings, all four stories high, substantially built, and abundantly perforated with windows. The body is 210 feet long, and, in the

central part, 36 feet wide,—in the end parts, 24 feet. Each of the wings is 79 feet long, and 24 wide. The central part of the body projects from the main line, and is elegant in its architecture; a range of columns, being surmounted by a cornice, whence arises a curiously adorned attic structure, bearing aloft a glazed turret. Between the columns are two tablets with sacred inscriptions; and in a recess above the entrance, is a statue of George II. in a Roman dress. The access to the different floors is by a large staircase in the centre of the building, so spacious as to admit the transit of sedan chairs, and by two smaller staircases, one at each end. The floors are distributed into wards, fitted up with ranges of beds capable of accommodating 228 patients,—the smaller rooms for the nurses and the medical attendants,—a manager's room, a waiting-room for students, and a consulting-room for the physicians or surgeons. Two of the wards, devoted to patients whose cases are considered most curious and instructive, are set apart for clinical lectures, attended by students of surgery, and delivered by the professors of clinical medicine in the university. Within the attic, in the centre of the building, is a spacious apartment formerly used as a theatre for surgical operations. The house has separate wards for male and female patients, and contains about 400 beds. The infirmary was first contemplated in 1725 by the royal college of physicians, but was encouraged by only a very small portion of the clergy or influential population; and, in 1729, it was commenced on quite a tiny scale, with the pitiful capital of £2,000. In 1736, the contributors to it having begun to be somewhat appreciated, were incorporated by royal charter. The Earl of Hope-toun, during the last 25 years of his life, when the institution was young and of slender means, contributed to it £400 a-year. In 1750, Dr. Archibald Ker of Jamaica, bequeathed to it an estate worth £200 a-year. In 1755, the Lords of the Treasury gave it £8,000. But the institution owed most to George Drummond, Esq., who was seven times Lord-provost; and a bust of him, by Nollekins, was afterwards set up by the directors in the hall. Other extensive buildings are connected with the institution, and serve variously as fever, lock, and surgical hospitals. One is the old High school, another the old hall of the college of Surgeons, another a neat new structure of 1855; and they stand in a large area, extending eastward to the back of Pleasance, and separated on the south from Drummond-street by the old city wall, cut down to half its height, and frilled with an iron railing. The number of patients treated in the infirmary is about 3,500 a-year. The annual expenditure is about £11,000; and the income is derived mainly from voluntary contributions, and partly from property estimated to be worth about £26,000, exclusive of buildings which do not yield any revenue.

Sciences-house, in the suburb of Grange, is used for male convalescents, and a house in West Preston-street, for female convalescents, from the infirmary, till they are able to go home.—Minto house, in Argyle-square, originally the town-residence of the Earls of Minto, was converted, in 1829, into a surgical hospital for paying patients, and became afterwards a lying-in hospital; but is now a training institution of the Scottish Episcopal church.—There is still, in the city, a lying-in hospital; there are also three institutions for delivering poor married women at their own houses; and there are an hospital for sick children, an institution for the relief of incurables, several public general dispensaries, and a public eye infirmary.—The Royal lunatic asylum, at Morningside, about a mile south-south-west

of Edinburgh, is partly a large edifice of 1810-3, partly an extensive addition about 40 years later, jointly costing upwards of £80,000; and it has accommodation for from 500 to 600 persons, and possesses all the most approved arrangements, and fine contiguous garden grounds.

Refuge Asylums.—Queensberry-house, in the Canongate, is used as a temporary pauper home of houseless wanderers and as a pauper night asylum.—Another place also, in Old Fishmarket close, off the High-street, is used as a pauper night asylum.—The Victoria lodging-houses in Cowgate, Merchant-street, and Westport are establishments maintained by a benevolent association for giving a lodger a comfortable bed and the use of kitchen, cooking-utensils, sitting-room, and library for three pence per night.—The metropolitan lodging-house in Grassmarket is an establishment exactly similar to the Victoria lodging-houses, but with a scale of charges, and an appendage of reading-room and baths.—The Shelter, in Grassmarket, is a house for the reception of young women who, having thrown themselves loose from society or been in prison, are desirous to be reclaimed.—The Magdalen asylum, within a court off the Canongate, and the Alnwick-Hill industrial home, near Liberton, are used for the refuge and reformation of prostitutes.—The Dean-bank and Boroughmoor-head institutions are maintained for the reformation of juvenile female delinquents.

School Asylums.—In Nicolson-street are two buildings, both originally private houses, fitted up the one in 1806, the other in 1822, as asylums for respectively the adult male and the adult female blind. Instruction is given in trades, in religion, and in general education. The inmates vary in number from 90 to 100; all are industriously employed; and nearly one third of the males are married.—A house in Gayfield-square, also originally a private residence, is an asylum school for blind children of both sexes, from 6 to 14 years of age.—North of Henderson-row, and near the Edinburgh academy, is the institution for the deaf and dumb, instituted in 1810. The building, raised by subscription, is large, commodious, and of not unpleasing appearance; and the system of training so excellent as to have been a model for similar institutions in other cities.—In St. John's-street is the house of industry and servants' home, where girls of 14 years of age and upwards are trained to be servants, and where respectable young women out of place enjoy a temporary retreat, where also is a school attached for both girls and boys.—Two other institutions may be mentioned here, rivals to each other, yet in a peculiar sphere, entirely schools in one sense, yet emphatically asylums in another, asylums at once refugial, educational, and reformatory, and serving at the same time as a grand example of benevolence which has begun to be well followed in some other large towns. These are the Edinburgh original ragged or industrial school and the United industrial school of Edinburgh, both instituted in 1847.

Workhouses.—The city workhouse stands within a high-wall enclosure on the west side of Forrest-road, contiguous to the grounds of Heriot's hospital. The original part of it was built in 1743, and other parts within comparatively recent years. The whole exhibits neat separate offices immediately within the gates, and a huge barrack-looking mass behind, four stories high, very spacious, and of the plainest possible aspect, with the old part very dingy. The accommodation originally was for 450 persons, together with a children's hospital for 220; but was eventually increased first to 691, and then to 909. The number of inmates at midsummer

1850 was 627; and at midsummer 1860, it was 514. The city parochial board for the poor comprises a body of 34 managers, and three departments of officials,—respectively the office department, the house department, and the medical department.

The St. Cuthbert's workhouse stands in an area to the west of Lothian road. The original part of it was built in 1762; other parts were added at different periods previous to 1845; and the whole was altered and enlarged in 1853, at the cost in that year of £4,500. The number of inmates at midsummer 1850 was 554; and the number at midsummer 1860 was 469. The board connected with it comprises 45 heritors, 6 members of session, and 30 elected managers, and has a numerous and varied staff of functionaries.—The Canongate workhouse stands at the foot of a wynd behind the Canongate tolbooth. It contains accommodation for 160 persons, and had 70 inmates at midsummer 1860. Its board of management is numerous and has five salaried functionaries.

Boys' Hospitals.—Heriot's hospital, situated on the summit of the southern ridge of Edinburgh, and surrounded by a spacious area or open park, with a main gateway from Laurieston, and an everyday thoroughfare from Grassmarket, is a magnificent and even princely structure. The edifice was commenced in 1628, and finished in 1650, at the cost of £30,000. It is the finest and most regular of the specimens of Gothic architecture designed by Inigo Jones. It is a noble quadrangle, 162 feet each way in the exterior, having an open court measuring 94 feet each way in the centre. This court is paved with square stones, and has a fountain in the centre; and is decorated, on the north and east sides, with piazzas 6½ feet broad, and, on the second story of the north side, with an effigy of the founder, placed in a niche. Over the gateway of the edifice, which is on the north side, fronting the Grassmarket, is a tower, projecting from the main line, surmounted by a small dome and lantern, and provided with a clock. The corners, or end parts of each front, project like the tower, and have the form and adornings of oriental turrets. In the projecting parts the house is four stories high; and in the other parts, three stories. The windows are 200 in number; but, owing to a whim of one of Heriot's executors, are architecturally adorned in a vast variety of ways, and, on a near inspection, give the edifice, which seems so superb and tasteful at a little distance, an offensive and caricatured appearance. On the south side, opposite the entrance, is the chapel, 61 feet by 22, neatly fitted up, and occasioning a projection in the building, which resembles a turret surmounted by a small spire, and gives balance to the tower on the north side. Till some years ago, the chapel presented to the view only a clay floor and bare walls, with a crazy rostrum for the preacher, and a row of stone seats for the inmates; but now it has a splendid pulpit, a richly-adorned ceiling, and beautiful oaken carvings, and is the principal interior attraction of the edifice. A terrace, with elegant stone balustrade, now surrounds the building; the grounds also are beautifully embellished; so that the whole place has a palatial appearance.

This establishment originated in a bequest of George Heriot, goldsmith, first on a small scale and in a humble way in Edinburgh, next to Anne of Denmark, consort of James, and afterwards to James VI. himself, both before and after his succession to the English crown. Many readers will form an idea—perhaps not an incorrect one—of his position in the King's household after the removal of the court to London, from the picture drawn of him as "Jingling Geordie," in the 'Fortunes of Nigel.'

On his death, in 1624, the sum of £23,625 10s. 3½d. was found, after deducting from his property payment of other bequests, to be available for maintaining and educating the sons of poor burgesses of Edinburgh. The civil disturbances which broke out in 1639 retarded the progress of the building; and, even after it was finished, occasioned it to be used for 8 years as an hospital for the forces under General Monk. In April, 1659, it was opened for 30 boys; and it was made available, in August of the same year, for 40,—in 1661, for 52,—in 1753, for 130,—and in 1763, for 140,—and eventually for 180. Boys are admitted when from 7 to 10 years of age, and usually leave when about 14. They are comfortably lodged and fed, wear a uniform dress, receive a very liberal education, and at leaving are presented with a bible, and a large supply of clothing of their own choice. Those of them who are destined to become tradesmen, are provided with an apprentice-fee of £50, and, at the close of their apprenticeship, with another supply of apparel, or a present of £5. Those who are distinguished for mental power, or give promise of being able to make fair attainments in scholarship, have their stay in the hospital prolonged, and afterwards receive bursaries of £30 a-year for 4 years, to enable them to attend the university. Ten other bursaries of £20 each for 4 years are given from the funds to aid boys of superior talents and acquirements, unconnected with the hospital. In 1836, the governors obtained parliamentary sanction to extend the benefits of the institution in the erection of free-schools in various parts of the city; and eight schools have since been erected. The management of the hospital is vested in the town-council and the city ministers of the Establishment. The increase of revenue arose from the executors' purchase of lands which were of small value at the time, but became of great value as part of the site of the New town. The yearly income in 1780 was £2,169; and now it is about £15,000.

George Watson's hospital stands 200 yards south of Heriot's hospital, at the entrance to the meadows, amid open grounds railed off from the meadow-walk and Laurieston. Part of the building is a large, plain, three-story oblong, extending east and west, surmounted at the centre by a small tower terminating in the figure of a ship, and was erected in 1738–41, at a cost of about £5,000; and another part consists of two massive wings, projecting southward from the oblong, and uniform with it in elevation, and was erected in 1857. The hospital originated in a bequest of £12,000 by George Watson, first a merchant in Holland, and afterwards an accountant in his native city, Edinburgh, who died in 1723. When the building was commenced, the fund had accumulated to £20,000. Twelve boys originally were admitted on the foundation, but now 80, who wear a uniform dress, and are lodged, fed, educated, and provided for in a similar way to the boys of Heriot's hospital. They are received from 7 to 10 years of age, and remain till 15. Those who leave to become tradesmen, receive an apprentice-fee of £10 a-year for five years, and afterwards, at the age of 25, if unmarried and well-conducted, receive a gift of £50; and those who prefer an academic education, and appear qualified for it, receive £20 a-year for 6 years. The managers are the master, assistants, and treasurer of the Merchant company of Edinburgh, five members of the town-council, and the ministers of the Old and Greyfriars churches.

Stewart's hospital stands a short distance north-west of the Dean bridge, overlooking the road to Queensferry. It was founded in 1849, and finished

in 1853. Its length is about 230 feet; and its shortest breadth is upwards of 100 feet. Its chief mass is quadrangular, with a height of two and three stories, and has an open court, with a screen and gatehouses in the centre. Two main towers rise from the angles of the court to a height of upwards of 120 feet, finished round the exterior with turrets and embattled parapets, but crowned in their centre with lanterns terminating in oggee-roofs and vanes. Two smaller towers also rise from each of the four angles of the building; and several turrets occur in the intervals. The central part of the back-front projects considerably, and comprises, in successive heights, first an arcade for exercise in inclement weather, next the dining-hall, and next the chapel. The architect was Mr. David Rhind. This establishment originated in a bequest of Mr. Daniel Stewart, of the Exchequer, who died in 1814. The amount was about £13,000, together with some houses in the Old town. The object of the hospital is "the maintenance and education of boys, the children of honest and industrious parents, whose circumstances in life do not enable them suitably to support and educate their children at other schools." Boys of the names of Stewart and Macfarlane have a preference. The age for admission is between 7 and 10, and that for leaving not later than 14.

Girls' Hospitals.—The Merchant Maiden hospital stands on the north side of the meadows, nearly 200 yards west of George Watson's hospital, the lines between these hospitals and Heriot's forming the sides of nearly an equilateral triangle. The edifice is Grecian, 180 feet long, and 60 wide, and has a handsome Ionic portico, of four columns and pediment. It presents its front to the meadows, but stands across the extremity of Archibald-place, so as to block up that street with its rear. It was built in 1816, after a design by Burn, at the cost of £12,250. The institution was founded in 1695, for the benefit of daughters of merchant burghesses in Edinburgh; and originated in voluntary contributions of the citizens, in a considerable grant by the company of merchants, and in a donation of property of the value of 12,000 merks by Mrs. Mary Erskine, the widow of an Edinburgh druggist. In 1707, the contributors obtained from parliament an act of incorporation. Before the creation of the present edifice, the inmates were lodged in a large tenement in Bristo-street. From 90 to 100 girls are maintained at one time on the foundation. They enter from 7 to 11 years of age, and depart at 17; they receive an education both substantial and ornamental; and, when leaving, each is presented with £9 6s. 8d. The governors are the Earl of Mar, some of the city clergy and the town-council, but principally official and elected members of the Merchant company.

The Trades' Maiden hospital was formerly a plain edifice in Argyle-square, on the site of the Industrial museum; and is now a commodious house, with large garden, a little south of the meadows. The institution was commenced in 1704, and obtained a charter of incorporation in 1707. The girls eligible for admission are the daughters of decayed tradesmen. They are received at the same age, and have their attention directed to the same departments of education, as the inmates of the Merchant Maiden hospital; and, when leaving, at the age of 17, each receives a Bible and £5 11s. The charity was founded and endowed by the incorporated trades of the city; but was greatly aided by Mrs. Mary Erskine, the benefactress of its sister and more opulent institution. The governors comprise the Earl of Mar and the deacons of the thirteen incorporated trades.

Boys' and Girls' Hospitals.—The Orphan hospital stands on the left side of the Water of Leith ravine, about 500 yards west of the village of Water of Leith. It was built in 1833, after a design by Mr. Thomas Hamilton, at the cost of nearly £16,000. It is raised upon a terrace, and reached by a broad flight of steps. It comprises a spacious centre, and two moderately projecting wings, all two stories high. On the central part of the centre is a beautiful portico, with Tuscan columns and plain pediment; and behind this, on a line with the main wall, is a small quadrangular superstructure, neatly surmounted by a clock. Inward, contiguous to the wings, rise two noble quadrangular towers, each of two stages, having all the faces of both stages pierced with open arches, and terminating all the four angles with uniform small turrets. The effect of the edifice altogether is unique, light, and graceful. Orphans of both sexes are received into this establishment, at the age of from 7 to 10, and receive in it a good plain education, the girls at the same time being trained to become good domestic servants. About 150 can be accommodated; and they are eligible from any part of Scotland. The institution was founded by voluntary contribution in 1733; and next year a large and commodious building, ornamented with a spire, was erected in the hollow between the Old and the New town, immediately east of the central arches of the North-bridge. But this was found to be unhealthy, and was eventually swept away by the operations for the North-British railway terminus. The contributors were erected into a corporation in 1742.

John Watson's hospital stands also on the left side of the Water of Leith, about 200 yards west of the Orphan hospital. It was founded in 1825, and finished in 1828, after a design by Mr. Burn. The edifice is of Grecian architecture, large and showy, having in front a splendid portico. About 120 destitute children are maintained and educated,—admissible between 5 and 8 years of age, and dismissed when 14. The course of education is substantial and valuable, but not so extensive or of so lofty an aim as that of Heriot's and George Watson's charities. The institution originated in a bequest of John Watson, a writer to the signet, which was obtained in 1759, and which amounted in 1781 to £4,721 5s. 6d., but eventually accumulated to upwards of £90,000. The original specification of the bequest was for a foundling hospital, but this was altered, by authority of an act of parliament, to an hospital "for the maintenance and education of destitute children, and bringing them to be useful members of society, and also for assisting in their outset in life such of them as may be thought to deserve and require such aid."

Donaldson's hospital is a pile of great size and surpassing splendour. It stands on a swelling ground, on the north side of the road to Bathgate and on the right side of the Water of Leith, 500 yards south of John Watson's hospital, and 600 yards west of the Haymarket. It was founded in 1842, and finished in 1851. A remarkable road-screen and elegant gates separate it from the highway; and a fine lawn, a grand stone balustrade, and a spacious terrace environ it. The edifice is in the Elizabethan style, after a design by Playfair. It covers a quadrangular space of 258 feet by 207, and contains a court of 176 feet by 164. Its height, except at the towers, is about 50 feet, and is divided into two stories and crowning embellishments. Four octagonal towers, of five stories, rise in the centre of the main front, flanking the grand entrance, and attaining a height of 120 feet; four square towers, of four stories, rise at each of the

angles to a medium height between the smaller finials and the central towers; and all the twenty towers have ogee roofs, and terminate in vanes. The number of window-lights is 600. The whole exterior, with perforated scroll ornament surmounting its oriels, ornamental lace-work and armorial bearings on its corner towers, flowers and cherub-heads on the tympanums of its buttresses, and shields with thistles, shamrocks, roses, and fleurs-de-lis on the embrasures of its parapets, is exceedingly elegant. Nor is the inner quadrangle less impressive; for there the symmetrical proportions of the masses and apertures, the picturesque groupings of the towers and turrets, the continuous lines of the mouldings and string-courses, and the richly ornate central pedestal, rising like a grand bouquet from the substantial pavement, fill the mind with wonder and delight. The interior also is in good keeping with the exterior. The corridors are between 3,000 and 4,000 feet in aggregate length; the principal staircases are about 20 feet square, and from 40 to 50 feet high; the apartments average 17 feet in height, and are 164 in number; the public rooms average about 65 feet in length by 25 in breadth, and have panelled ceilings, corbelled, bossed, and painted in imitation of oak; and the corridors, staircases, and public rooms have a wainscot lining to the aggregate length of upwards of 4 miles. The chapel, in particular, is finished with high brilliance; and Queen Victoria, on making a visit to the scarcely completed pile in 1850, lingered here with unmistakable gratification.

This splendid institution was founded by bequest of James Donaldson of Broughton Hall, proprietor of the Edinburgh Advertiser, who died in 1830. The amount bequeathed was about £200,000; and the specification was for the erection and endowment of an hospital for poor boys and girls, after the plan of the Orphan hospital of Edinburgh and John Watson's hospital. The trustees, by deed of constitution in 1844, vested the management of the institution in the Lord-justice-general, the Lord-clerk-register, the Lord-advocate, the Lord-provost of Edinburgh, the Lord-lieutenant of Edinburghshire, the principal of Edinburgh university, six other Edinburgh functionaries, and an elected body of fourteen other gentlemen. The hospital has accommodation for 150 boys and 150 girls. No children are admissible whose parents are able to maintain them. Children of the names of Donaldson and Marshall have the preference. A large proportion of those already admitted are deaf and dumb. The age of admission is from 6 till 9; and that of dismission not later than 14.

Adults' Hospitals.—Trinity hospital is the oldest charitable institution in Edinburgh. The original edifice stood on the east side of Leith-wynd, but at a remote date became ruinous, and was demolished. The subsequent edifice stood at the foot of Leith-wynd, on the west side, not far from the site of the North bridge, grouping there with other public buildings which were all swept away in 1845 by the operations for the terminus of the North British railway. It was originally the residence of the provost and prebendaries of Trinity College church; and, though afterwards repaired and somewhat altered, it continued to be a fine specimen of the architecture and monastic accommodations of the age in which it was erected. It was two stories high, and formed two sides of a square, or rather of a parallelogram. Along the interior of the upper story of the longer side ran a gallery about half the width of the house, lighted from the west, serving at once as a promenade, a library-room, and a grand corridor, and winged with a range of small cots.

each of which had a bed, a table, and a chair, for a single occupant. The other parts of the building were distributed into sitting-rooms, modern bedrooms, and other apartments. The hospital was founded and amply endowed by Mary of Gueldres, consort of James II. What became of the bedesmen who occupied it in the times of popery, or how they were situated as inmates, does not appear. At the Reformation the hospital shared, for a season, the fate of institutions of a similar origin; but was repurchased, for its original purposes, by the town-council in 1585, and afterwards confirmed in its rights by a deed of James VI. Upon its resettlement it was destined for the support of decayed burghesses of Edinburgh, their wives, and their unmarried children, not under 50 years of age. At first only 5 men and 2 women were admitted; but in 1700 the number of inmates had increased to 54; and afterwards it was usually about 20 men and 20 women, the sexes having distinct accommodations and sitting-rooms, and meeting only at meals and at morning and evening worship. Those who were inmates in 1845 were pensioned off upon £26 a-year each; and persons elected since that time receive each £20 a-year. There used always to be also a considerable body of out-pensioners, who received a regular pittance from the funds; and about 80 persons, corresponding to this class, now receive £6 a-year each. The charity is managed by the magistrates and town-council as governors, and by a regular staff of officiates.

Gillespie's hospital is salubriously situated in an extensive park at the head of Burntsfield-links, near the south-west extremity of the Old town. The edifice is a commodious, oblong, elegant structure, partly in a castellated form, having turrets at the angles, and was built in 1801. The establishment is fitted up for the accommodation and support of persons of both sexes, not under 50 years of age, who have sunk from wealth or competence to destitution, and admits at one time about 50. In its vicinity is a school, opened in 1803, for the education of about 150 boys, who are admissible from 6 to 12 years of age, and are allowed to attend 3 years. Both institutions originated in a bequest by James Gillespie, a tobacconist of Edinburgh, of £12,000, besides considerable lauded property. The governors are the master and 12 assistants of the Merchant company, some retired members of the magistracy, and two of the city ministers, who have a charter of incorporation. The sum of £2,000 was set aside from the entire bequest for the support of the school—Chalmers' hospital, "for the sick and hurt," is a large, oblong, pleasing edifice of 1861-2, in Laurieston, opposite the cattle-market. This institution originated in a bequest of about £30,000 by George Chalmers, plumber in Edinburgh, who died in 1836. The management of it is vested in the dean and faculty of advocates.

Ecclesiastical Edifices.

Established Church Edifices.—Victoria hall, or Assembly hall, where the general assembly of the Established church holds its meetings, stands at the point where the Lawnmarket forks into Castle-street and the New Western approach. Its site is high, only a few feet lower than the Castle esplanade, and on a line with the head of the Grassmarket and the west side of the Mound. The edifice stands east and west, presenting the whole length of its flanks to the thoroughfares which go past it, yet is prevented by a curve in the Lawnmarket from showing its east end or main front to any great extent of view. Its steeple, however, soars so loftily above the neighbouring houses, all standing on the

West Port Church, Edinburgh.

very crest of the hill's declivities, as to be fully seen from most parts of the city and of the circumjacent country, forming one of the most conspicuous features of the urban landscape. The building was founded in 1842, on occasion of the Queen's visit, and finished in 1844. It is in the decorated Gothic style, after a design by Gillespie Graham. Its length from east to west is 141 feet. Each flank displays five windows and an appropriate number of buttresses and pinnacles. The east end is surmounted by a lofty tower, gorgeous all over with Gothic decoration, looking in the distance almost like a sheaf of pinnacles, disclosing at near view much elaborated window-work, and sending up from its summit an octagonal spire to the height of 241 feet from the ground. The edifice cost about £16,000, and was raised at the joint expense of the government and the city. It is used also as the parochial church of the Tolbooth parish.

St. Giles' church stands on the north side of Parliament-square, separating the old area of that square from High-street. It is the most ancient ecclesiastical edifice in Edinburgh, but of unknown or uncertain date. It was originally of the cathedral or cruciform shape, in the Gothic style of the periods preceding any dehasement in pointed architecture; but it has, in the effluxion of ages, been subjected to so many alterations, renovations, and repairs that its pristine character, excepting in its central tower and spire, has been almost wholly lost. Its general appearance now is irregular, heavy, and comparatively tasteless, with little of either the symmetry of form or the grace of decoration so commonly found in edifices of its age and class, its very pinnacles stumpy in form and coarsely crocketed, yet the whole pile, especially with the aid of its fine old tower and spire, grandly massive and pleasingly impressive. Its length is 206 feet; and its breadth, at the west end, 110 feet,—at the middle, 129 feet,—at the east end, 76 feet. Its great square tower, rising from its centre, is decorated at the top with open-figured stone-work, and sends off from its angles four arches which have pinnacles in their progress, and a small spire at their point of meeting, and produce the figure of an ornamented imperial crown. This figure rises 161 feet above the base of the edifice, and, occupying a high and commanding site, is seen from a great distance, and forms one of the most characteristic features of the city landscapes of Edinburgh. In the old times of traffic in the Parliament-close, St. Giles' church was packed round with shops, booths, stalls, and other places of trade, the very forge and work-shop of the famous George Heriot, the royal goldsmith, having been there; and so late as the year 1817, all the spaces between the buttresses were occupied by small shops, called krames, which had been grafted upon the walls, with the effect of not only disfiguring the hasement of the edifice by their own forms, but also blackening its very pinnacles by the sooty smoke of their fires. A general renovation of the pile, however, was effected in 1830, under the direction of Mr. Burn, aided by a government grant of no less than £10,000; and this so completely swept away all excrescences and decays, and gave such an entirely new facing to the walls, together with replacements of salient decorations, that the whole building now looks as fresh and strong as many a new erection of the present century. St. Giles', in fact, is young again; and every fifteen minutes he appears joyous withal, ringing out from his tower a set of most beautiful chimes.

"Hoary Saint Giles, as he towers in height,
Shines like a monarch enthroned in light;

His bright crown blends with the sunny sky;
He gazeth aloft with gleaming eye;
He rings his bells with a merry chime,
Nodding and laughing at Father Time.

Proudly he towers, exulting and gay,
But his old companions where are they?
Old men and dwellings have come and gone,
The place which held them is void and lone;
Still the Old Saint, as in youthful prime,
Nodded and laugheth to Father Time."

St. Giles is first mentioned in a charter of David II., dated 1359. In 1466, it was made a collegiate church, and contained about 40 altars dedicated to different saints. After the Reformation, it was partitioned into four churches, and some lesser apartments, and put into repair by the proceeds of the sale of vessels and paraphernalia belonging to its numerous altars, and the pompous ceremonies of its original worship. From 1633 to 1638, it was the cathedral of the brief bishopric of Edinburgh; and it was the scene of the well-known cutty-stool exploit of Janet Geddes, which acted like a disturber of the perilous equipose on an alpine summit, sending down upon the whole episcopacy of Scotland an enshrouding and eutombing avalanche. In 1643, the Solemn League and Covenant was sworn and subscribed within the walls of St. Giles, by the representatives of the public bodies of Scotland. Near the middle of its south side, are monuments over the remains of Regent Moray and the great Marquis of Montrose; and under a window near the north-east corner is the monument of Napier of Merchiston, the inventor of logarithms. The edifice is now divided into three parts, the High church, the Old church, and the New North church. The High church is attended by the magistrates of the city, the judges of the Court of session, and the harons of Exchequer, in their respective robes of office; and, owing probably to this circumstance—though on a strictly ecclesiastical or presbyterial level with the other parish-churches of the country—it holds a place in popular estimation, and invests its ministers with a species of influence, as the metropolitan church of Scotland,—the St. Paul's of Edinburgh.

Trinity College church was an object of strong antiquarian interest. It was founded by Mary of Gueldres, consort of James II.; and was very generally regarded as one of the finest Gothic edifices of its age. It stood on the west side of the foot of Leith-wynd; but being, in common with other buildings there, in the way of the operations of the North British railway company, it was taken down in 1848. Its materials were removed under registry by a skillful architect; and sharp disputes about re-erecting them were carried on till 1857. The edifice never was completed, but comprised only choir, central tower, and transepts. An unfinished wall closed up the area where the nave should have commenced. "Many of the details of it," says the author of the Memorials of Edinburgh in the Olden Time, "are singularly grotesque. The monkey is repeated in all varieties of position in the gurgouls, and is occasionally introduced in the interior among other figures that seem equally inappropriate as the decorations of an ecclesiastical edifice, though of common occurrence in the works of the 15th and 16th centuries. The varied corbels exhibit here and there an angel or other device of beautiful form; but more frequently they consist of such crouching monsters, labouring under the burden they have to bear up, as seem to realize Dante's Purgatory of Pride, where the unpurged souls dree their doom of penance underneath a crushing load of stone." The interior was seated only over the central area, leaving the pillars fully exposed to view. Mr. Rickman pronounced it "a very beautiful decorated

composition, with the capitals of the piers enriched with foliage, not exceeded in design or execution in any English cathedral." On one of the buttresses were sculptured the arms of Gueldres quartered with those of Scotland. The mortal remains of the royal foundress lay interred in an aisle on the north side; and at the taking down of the church, they were removed to the royal cemetery at Holyrood. The chapter of the church, according to the deed of foundation, consisted of a provost, 8 prebendaries, and 2 choristers. Before the Reformation, the place was called the Collegiate church of the Holy Trinity; but, after it became a Presbyterian place of worship, it was usually called the College kirk.

Canongate church, situated on the north side of the Canongate, several yards back from the street line, has a cruciform shape, with nave, transepts, and chancel. But though built in that form to humour the popish fancies of James VII., it is a pitiful imitation of the ecclesiastical structures of a preceding and less enlightened age. On the outside, it has only a little ornament, and that in such poor taste as to be almost a ludicrous apology for the obvious want of means to attempt something more grand. There is neither tower, spire, pinnacle, nor any piece of adorning which can be called either Gothic or Grecian. The street-front has considerably the appearance of a glazed gable, with a thing intended to do service as a portico at the middle of the base. On the pinnacle of this gable is the absurd ornament of a horned deer's head, surmounted by a cross, copied from the Canongate crest, and allusive to the monkish fable respecting the miraculous cross put into the hand of David I. when hunting the stag,—the same cross or 'rood' which gave name to the neighbouring abbey and palace.—For a long period, the parish of Canongate had for its church the abbey-church of Holyrood. After being ejected thence, in 1672, the parishioners were accommodated, for about 15 years, in Lady Yester's church. But having represented to James VII. that 20,000 merks had been hequeathed, in 1649, for their use, they obtained possession of the sum, and got the present edifice erected in 1688.—New-street church, a chapel of ease to the Canongate, is a plain building.

The Tron church stands isolatedly at the intersection of High-street and South Bridge-street, occupying the north-east angle of the small area called Hunter's-square. It was built in 1647, at a cost of £6,000. Its main front, presented to the High-street, and seen for some way up the ascent of North Bridge-street, is of pleasing appearance. In the middle is the base of a square tower, ornamented with pilasters; and there are 4 semi-gothic windows, and 3 door-ways. The square tower was originally surmounted by a curious wooden spire covered with lead; but, this having been wholly destroyed by the falling of embers upon it in the great fire of 1824, the tower was, in 1828, decorated and carried aloft with a handsome spire of stone. The Tron church derived its humble and malapropos name from its vicinity to the ancient Tron or public beam for weighing merchandise. The clock-dial in each face of the tower has a plate of dimmed glass, which is lighted with gas from the inside after nightfall.

The Greyfriars' churches, Old and New, are situated in a recess from the head of Candlemaker-row, or south end of George IV.'s bridge, immediately north of the city workhouse. Their site is the south-east part of an enclosure which was long the garden of the ancient monastery of the Greyfriars, and which rises gently from the skirts of the Grassmarket, to the summit of the ancient boundary of the city. The monastery stood on the south side of the Grassmarket, and was demolished in 1559; and the

garden was bestowed by Queen Mary on the city, to be used as a place of public interment. The Old Greyfriars church was built here in 1612, and was adorned at its west end with a steeple. But, in 1718, the steeple was blown up by the ignition of a quantity of gunpowder which had been lodged in it by the authorities of the city; and the town-council resolved, instead of re-edifying the towering appendage of the church, to add, by elongation, a new place of worship. This, constructed uniformly with the Old, was finished in 1721, at the cost of £3,045. The two churches then formed externally a plain oblong structure, with Gothic windows, and internally a place of Gothic construction, with heavy pillars and arches; and were entered by a common porch in the centre. Both were gutted by fire in January 1845. The new church needed only to be refitted, and was soon restored for use; but the old one sustained injury in the walls, was not rendered again serviceable till 1857, and was then adorned with windows of stained glass. This pile is famous for a great signing of the National Covenant, partly within its walls, and partly in the burying-ground around it, in 1638.

"They met within the ancient walls, where once the Greyfriars ruled,

A concourse vast of earnest men, in common danger schooled.
Oh! Arthur's Seat gave back the shout of that assembled crowd,
As one bare forth the mighty bond—and many wept aloud—
They spread it on a tombstone head—(a martyr slept beneath)—
And some subscribed it with their blood, and added 'Until death!'"

Lady Yester's church, situated on the north side of Infirmary-street, is a plain but agreeable-looking edifice, without a spire. It was built in 1803. Dame Margaret Ker, Lady Yester, founded the original building, the predecessor of the present, in 1647, and gave the magistrates 15,000 merks to defray its cost, and aid its support. A small cemetery which formerly belonged to it is now covered with buildings.—Newington church, situated on the west side of Clerk-street, and built in 1823, has a Roman front, with a steeple 110 feet high. It measures 162 feet in length and 73 in width, and is chaste though not showy in appearance.—St. John's parish church stands on the south side of Victoria-street, and was built in 1838. It is a somewhat coarse building, in a mixed manner of architecture, without any tower, but with some ambitious ornamentation and a Saxon doorway.—Greenside church stands on the northern face of the Calton hill, on the line of the Royal-terrace, sufficiently isolated to expose all its sides to distant view. The greater part of the tower was built in 1851; but the rest of the pile was built in 1838. The whole is a Gothic abortion, all the more displeasing to the eye for occupying so conspicuous a site, in the near neighbourhood of Grecian masses.

St. Cuthbert's church stands in the hollow under the north-west face of the Castle-rock, a little inward from the angle of Prince's-street and Lothian road. It is a huge plain edifice, with a double slated roof; and is redeemed, in the ungainliness of its aspect, only by a lofty spire, rising at its west end, and erected some years later than the church. The whole was erected in the later part of last century, at the cost of £4,231. "It is said that, when the heritors determined upon building it, they pitched upon the architect whose estimate was least expensive, and who excluded from his plan the unnecessary ornament of a steeple; but, after getting time to contemplate the ground cumbered by an enormous oblong barn, with huge disproportioned windows, they regretted the error which they had sanctioned, and endeavoured to repair it by building a steeple in a style of ornamented and florid architecture, as

if the finery of such an appendage could relieve the heaviness of the principal building, which it only rendered more deformed by the contrast. In truth, however, even the steeple is by no means burdened with any excess of ornament; though, from its large proportions and prominent situation, it forms a marked and not unpleasing feature in some of the finest general views of the city." The original St. Cuthbert's church is older than Scottish record,—perhaps as old as the age succeeding the demise of St. Cuthbert, the end of the 7th century. It had several grants before the date of the charter of Holyrood; and, with its parish and kirk-town and rights, was granted by David I. to the monks of that abbey. St. Cuthbert's was not only the oldest parish in the lowlands of Mid-Lothian, but the most extensive; and it was the most opulently endowed in Scotland, except that of Dunbar. See the article CUTHBERT'S (St.).

Newington church, which we formerly noticed, and Buccleuch church, St. Bernard's, the Gaelic, Dean, St. David's, Morningside, and Lady Glenorchy's churches, were all erected as chapels of ease to St. Cuthbert's; and the four last continue to be such, while the four first have become quoad sacra parochial. Buccleuch church was the earliest of the chapels of ease, and is a dingy, old, cruciform structure in Chapel-street. St. Bernard's is a pleasing edifice of 1823, with a low neat steeple, in West Claremont-street. The Gaelic church is a plain building at the corner of Horse-wynd and Argyle-square. Dean church is a plain cruciform structure of 1836, with a belfry, in the suburb of Dean, north-west of Dean bridge. St. David's is an edifice with a Grecian portico, but with very plain flanks, in Gardiner's-crescent. Morningside church is a neat modern erection in the village of Morningside. Lady Glenorchy's, originally Roxburgh church, is a plain building of 1809 in Roxburgh-place.

St. George's church stands on the north side of Charlotte-square, on a line with the termination of George-street. It was commenced in 1811, and completed in 1814, at a cost of £33,000. Its architecture is a debated object among critics,—denounced by some as heavy, shapeless, and insufferably dull, and panegyrised by others as grand, chaste, and handsome,—superior to that of any other modern church of the Scottish Establishment. The architect was Robert Reed. The edifice is on a square ground-plan, and in a massive Greco-Italian style. Its front, 112 feet in length, presents between two comparatively plain projecting wings a lofty Ionic portico, with four columns and two pilasters,—surmounted, however, by only an entablature and a balustrade. And from the summit of the whole pile, rises first a grand square basement with massive cornice, next a very wide circular tower, zoned by an Attic-Corinthian colonnade, next a great lead-covered dome, crowned by successively cyclostyle-lantern, eupola, and cross, to the height of 150 feet from the ground. This domical feature of the edifice was designed as a mimic resemblance of the dome of St. Paul's in London; but far surpasses the excellences of a miniature imitation, and attracts the eye, and challenges admiration, from many points of view in the metropolis, but especially when so grouped as to appear on the background.—St. Luke's church, a chapel of ease to St. George's, is a plain building, without any tower, in Young-street.

St. Andrew's church stands on the north side of George-street. It was built in 1785, but was originally without a steeple. Its form is oval. Its front presents to the view a pedimented portico, with four remarkably elegant Corinthian columns. A tower of three stages, very symmetrical and

adorned with pillars, rises behind this, and sends aloft an octagonal spire to the height of 168 feet from the ground. The steeple is not only one of the finest in Edinburgh, figuring conspicuously in almost every general view of the New town, but also one of the most beautiful in the sky-line of any city; and it contains a fine chime of eight bells.—St. Stephen's church stands at the west end of Fettes-row, fronting the line of St. Vincent-street. It was built in 1826–8, at the cost of £21,000. It is in an order of architecture called the mixed Roman. From an obtuse angle in front rises a massive tower 163 feet high, terminated by a balustrade; and from each angle of the balustrade springs an elegant double cross. But whatever attractions to the taste, or challenges to criticism, the edifice offers to the view, are in a great measure marred by the lowness of its situation, overlooked by the ascent of the whole of the New town toward the summit on the line of George-street.—St. Mary's church, situated in the centre of Bellevue crescent, was built in 1824. It is of an oblong form, having one of the ends as its front. A range of six elegant Corinthian columns supports a pediment. A tower of three stages rises behind this; the first stage square, with Doric pillars at the angles; the second and the third stages circular, with respectively Ionic and Corinthian pillars around them; and a cupola surmounts the topmost stage, crowned by a small open cyclostyle, in the form of a small lantern.

Free Church Edifices.—The Free church College and High church at the head of the Mound, is one of the most prominent buildings in the city. It was founded in 1846, and opened in 1850; and is believed to have cost upwards of £30,000. It has a frontage of 165 feet, and extends backward 177 feet. The eastern part is the High church; and the rest, comprising a hollow quadrangle, is the College. The style is Elizabethan, of the variety called English collegiate, though with some deviations belonging to the perpendicular pointed. The architect was Playfair. The High church is comparatively plain; but has a buttressed, pinnacled, square tower of 96 feet in height at the north-east angle, and a neat little porch on the east side. The College is divided into two stories, crowned by a range of dormer windows. The main entrance is an elegant archway, with groined ceiling. Two towers flank it, exactly similar to the tower at the corner of the High church, but 121 feet in height. Projecting windows and embattled parapets occupy the space between the towers; embattled parapets also surmount the main wall; ornamental tympanums crown the dormer windows; and decorated clusters of chimney-shafts figure on the summit of the building behind the towers. The general effect of the facade, however, is heavy. The ground-line also is severely injured by the road in front of it being an ascent, not toward it, but across it. But the interior quadrangle, which measures 85 feet by 56, is very fine; and the south end of this is adorned by two octagonal towers, finished with ogee roofs and gilt vanes. The College contains nine class-rooms, a number of small apartments, a senate hall, and a library hall,—the last adorned with a statue of Dr. Chalmers by Steel. There are six professorships.—one of them on natural science, one on Hebrew and Oriental languages, one on church history, one on exegetical theology, and the other two on divinity.

Canongate or John Knox's church fronts the Canongate immediately east of John Knox's house. It has a remarkably beautiful facade of florid Gothic, terminating in four richly crocketed pinnacles, and in a decorated pediment surmounted by a cross.—Holyrood church is a much plainer structure, amid

a block of buildings immediately west of the palace yard.—The Tron church stands quite concealed from general view in a close off the High-street.—The New North church is a beautiful Gothic edifice, looking northward along George IV.'s bridge, and presenting its flanks to Forrest-road and Bristo-place. The lower part of its front, containing the great doorway, projects about twelve feet from the main wall, containing the great window, and is finely decorated with a mimic Gothic colonnade of shafts and archlets.—Greyfriars church, in Graham-street, has a very neat Saxon front, with two small turrets and a pediment.—Buccleuch church, confronting Buccleuch-street, is a pleasing Gothic edifice of 1856, with a lofty well-proportioned steeple, added in 1861-2.—A large church was founded, in 1862, on the western verge of Burntsfield-links, and will be in the early decorated Gothic style, with two steeples 108 and 250 feet high.

Roxburgh church is a plain Gothic building, with a neat porch opening into Hill-square, and a rear-front facing Richmond-place.—Davie-street church is a plain large building, formerly belonging to the Original Secession.—St. Paul's church stands in St. Leonard-street, nearly opposite the extremity of Rankellour-street. It has a plain Roman front, surmounted by a quadrangular belfry, each of whose faces is pierced with a wide arch.—Newington and Liberton church stands on the east side of Clerk-street, a short distance south of the Established Newington church. It is a comparatively large pile, formed upon the nucleus of an originally small one, and has a Gothic front.—St. John's church stands on a very steep acclivity, facing the New Western approach on the west, the Assembly hall on the north, the West bow on the east, and Victoria-street on the south,—almost overhanging on the last of these sides its namesake of the Establishment. It is in a mixed style of early Gothic, and displays a considerable amount of pleasing embellishment, but is remarkable chiefly for the manner in which it adapts itself to its surpassingly awkward site, having only a moderate elevation on the north, but standing far aloft like a castle in the air on the south, and perched there at its apparent foundation upon an edified terrace of two stories facing Victoria-street.—St. Cuthbert's church, the Gaelic church, and the two Chalmers' territorial churches, are structures of Gothic character, respectively in Spittal-street, Lothian-road, West-port, and Fountainbridge.—St. David's church and Dean church are plain buildings, respectively in Morrison-street and near the Dean-bridge.—St. Bernard's church, on the south side of Henderson-row, is a handsome Gothic erection of 1856, consisting of nave and aisles, with a small spiral tower.

St. George's church stands on the west side of Lothian-road, a short distance from the end of Prince's-street, but throws back its main body in a direction diagonal to its front, along the line of a lane which descends to the south-west. It is an elegant edifice in the Anglo-Norman style, but looks in some degree like two buildings fused into one. The architect was Mr. Cousin. The front part, on which the chief decoration is expended, has a slated roof parallel to Lothian-road, and exhibits a gable at each end and a pediment in the centre. The pediment is pierced with a circular window; two beautifully carved turrets flank it; some well-executed mimic arcades, in the Norman fashion of small attached shafts and arches, adorn the main wall; and a very handsome porch, elaborately decorated with chevron-work, forms the main entrance.—St. Andrew's church, in George-street, stands behind the street line, and is entered through a house be-

fore it.—St. Luke's church, in Queen-street, is situated similarly to St. Andrew's, but has a factitious street-front, in the Elizabethan style, with two crocketed turrets.—St. Stephen's church, in Wemyss place, was formed out of the upper parts of a large private house, and shows nine lofty windows, surmounted by a broad entablature.—Tolbooth church, in a lane off North St. David-street, is a Gothic structure of 1857, with large end window and roof-lights.—Lady Glenorchy's church, in Greenside-place, has a factitious front in the Elizabethan style, with low, broad embattled tower.—St. Mary's church, in Broughton-street and Alhany-street, is a large beautiful edifice of 1859-61, in late Gothic and Tudor, with a richly carved steeple 180 feet high.—Pilrig church, in Pilrig-street and Leith-walk, is a structure of 1861-2, in the early decorated Gothic style, with double transept and a steeple 150 feet high.—The Assembly-hall, on Castle-hill, is an edifice of 1858-9, in the late Gothic style, built at a cost of £7,000, and has accommodation for about 1,700 persons.

United Presbyterian Edifices.—The Synod-hall and offices of the United Presbyterian church are in Queen-street. A plain porch forms the approach. A large refitted house, originally a private building, contains the theological class-rooms, the library-hall, and the secretary's apartments. And an edifice in the rear, erected in 1847, containing sitting-accommodation for 1,100 persons, and handsomely fitted up for the purposes of public business, forms the Synod-hall. This place is also in great request on hire for public meetings of an educational or philanthropic kind, and has hitherto been used as the lecture-hall of the Edinburgh philosophical institution. There are five professorships in connection with the theological hall; but the classes meet only during the autumnal months.

Arthur-street United Presbyterian church was originally Baptist, and passed in 1835 to the Relief for £2,100. Newington church also was originally Baptist, and passed in 1847 to the United Secession; and it will be superseded by a new edifice, in the early Gothic style, with a tower, founded in 1862. Nicolson-street church was built in 1819, at a cost of £6,000, and has a broad Gothic front, with turret-pinnacles, 90 feet high. Potterrow church was built in 1793, at a cost of £1,290, and repaired in 1831 at a cost of £300. Bristo church, in a court off Bristo-street, was built in 1802, at a cost of £4,084, enlarged at a cost of £1,515, and is neat and very spacious. South College-street church was rebuilt in 1857, has a front in the Florentine style, and is roofed and lighted in the manner of a Gothic clerestory. Infirmary-street church belonged originally to the protesting Antiburghers, came into its present connexion in 1856, and is adorned in front with only Doric pilasters. North Richmond-street church is small and neat. The two High-street churches are places occupied by recently-formed mission congregations. Laurieston-place church is a large handsome Gothic structure of 1859. Portsburgh church was built in 1828, at a cost of £1,947. Union church, in Bread-street, has a Roman front with pilasters and pediment, and was built in 1831. Lothian-road church has an Italian front of three stories, with recessed centre, rusticated basement and surmounting balustrade, and was built in 1831. Dean-street church, in Stockbridge, was built in 1828, at a cost of £2,100. Rose-street church was rebuilt in 1830, at a cost of £3,042, and presents to the street the greater side of an oblong, in Roman architecture, with pilasters and balustrades. St. James'-place church was built in 1800, at a cost of £3,600, and repaired in 1828 at a cost of £650

Broughton-place church, standing across the east end of Broughton-place, was built in 1821, at a cost of £7,095, and repaired in 1853 at a considerable cost; and has a Roman front, with elegant tetra-style Doric portico.

Episcopalian Edifices.—St. Paul's Episcopal church stands on the north side of York-place, contiguous to Broughton-street. It was built in 1818, after a design by Mr. Archibald Elliott, at a cost of about £12,000. It is an elegant edifice of nave and side aisles, chiefly in the later Gothic style, but with Elizabethan doorways. Its length is 123 feet, and its breadth 73 feet. Its mouldings are profuse and beautiful; its pinnacles are symmetrical and finely crocketed; and four octagonal turrets rise from the four angles of the inner walls, to display themselves above the general mass in handsome open stonework. The effect of the whole pile, in the general street-line, is exceedingly fine. The great east window was decorated anew with stained glass representations in 1850. The organ here is said to be the finest in Scotland. This church, in consequence of having the Edinburgh bishop of the Scottish Episcopal community for one of its officiates, is regarded by some persons as a cathedral.

St. John's Episcopal church stands a few yards north of St. Cuthbert's, in the angle between Prince's-street and Lothian-road. It was built in 1818, after a design by Burn, at a cost of £15,000. It is a splendid oblong edifice, of nave and aisles, 113 feet long and 62 feet wide, in the florid Gothic style, in imitation of St. George's chapel at Windsor. It rises on built vaults, with a terrace and apertures to the south, and has attached to its east end a vestry externally in keeping with the main building. A grand square tower rises from the west end, pierced through the basement with the main entrance, relieved in its sides by beautiful windows, and terminating at its summit, 120 feet high, in ornamented pinnacles. The decorations of the main entrance, of all the windows, and of the whole of both flanks, are in the finest manner of the later Gothic. The pinnacles, in particular, have exquisitely wrought finials, and some large niches on the flank walls are decorated with tabernacle-work. The pillars and arches of the interior also are light and symmetrical; and the middle roof is ornamented with mouldings and a profusion of decorations. The great window in the east is 30 feet high, and exhibits figures of the apostles in stained glass by Egginton of Bristol.

Trinity Episcopal church stands at the north-west end of the Dean bridge, overhanging the village of Water of Leith, and figuring conspicuously in many views of the west end and western suburbs of Edinburgh. It was built in 1839, after a design by Mr. John Henderson. It is a beautiful Gothic pile, of kindred character to St. Paul's and St. John's, and looks in the distance, partly owing to the nature of its site, not unlike one of the best of the English cathedrals. Below it are crypts; and its east front is ornamented by a square tower.—St. George's church is a small neat octagonal structure, with decorated front in mixed architecture, built in 1794, on the south side of York-place.—St. James' church is a large plain building, uniform with the contiguous range of private houses, on the north side of Broughton-place.—St. Columba's is a Gothic building, with only one flank exposed to full view, and with a low square battlemented tower at its west end, in Castle-place, on the New Western approach.—St. Peter's, in Luton-place, is a plain, high-roofed, Gothic-windowed edifice of 1858.—St. Paul's, in Carrubber's-close, was built by the Jacobites immediately after the Revolution.—St. Andrews, in

South Back of Canongate, is a small oblong structure of 1857, in the Saxon style, with an apse and a low square tower.—St. John's school-chapel, in Earl Grey-street, a school on work-days and a chapel on Sabbaths, is a low, coarse, cruciform erection of 1852, enlarged in 1862.

St. Thomas' English Episcopal church has one front in Rutland-street and another front in the recess-angle facing the point in which Prince's-street, Hope-street, Queensferry-street, and Maitland-street meet. Its south front is uniform with the contiguous private houses in Rutland-street; but its north front is in the Norman style, with a beautiful porch, some exquisite mimic arcade work, and a profusion of the chevron ornament.—St. Vincent's English Episcopal church, at the foot of St. Vincent-street, is a small Gothic edifice of 1856, with nave, chancel, north aisle, and spirelet.—St. Margaret's chapel, on the summit of the castle, was the private oratory of Margaret, the queen of Malcolm Canmore; underwent degradation so as to be long used for a powder magazine, but was a number of years ago re-appreciated and restored; serves now as a baptistry to the Episcopalian chaplain of the garrison, and is an interesting structure, with chancel-arch and simple apse.

Edifices of other Denominations.—The Reformed Presbyterian church, on George IV.'s bridge, is a Gothic edifice of 1860. The Original Secession church, in Laurieston-street, is a plain building. The Augustine Independent church, on George IV.'s bridge, is an elegant structure of 1859-61, in the Byzantine style, with tower and minaret. The Independent chapel in Richmond-place is a pleasing edifice of 1842, in early Gothic. The Independent chapel in Albany-street and Broughton-street was built in 1816, at a cost of £4,009, and has a neat front in mixed Roman style. The Catholic Apostolic church, in Broughton-street, has a neat Ionic front. The Evangelical Union chapel, blocking the head of Brighton-street, has a Roman front of curved contour, with pilasters and pediment. The Methodist chapel, in Nicolson-square, has a handsome Roman front, with basement arcade and crowning balustrade. The Baptist chapel in Dublin-street is a handsome Gothic edifice of 1858, with a double transept and a spirelet. The Baptist chapels in Bristo-place and West Rose-street have neat Roman fronts. The Baptist chapels in Leith-walk and Roxburgh-place, and the Glassite chapel in Barony-street, are plain buildings. The Unitarian chapel, in Castle-terrace, has a Roman-Corinthian front, and is curious for having been closely undermined by the tunnel of the Edinburgh and Glasgow railway.

St. Mary's Roman Catholic church, in Broughton-street, was built in 1813, at a cost of £8,000; shows a handsome Gothic front, with pinnacles 70 feet high; and has a fine organ and a splendid altar-piece. St. Patrick's Roman Catholic church, in Cowgate, was built in 1771-4, at a cost of £7,000; belonged originally to the Episcopalians, and was long occupied by Presbyterians; is in the Italian style, with a small steeple; and contains wall-paintings by Runciman. A St. Patrick's church, in Lothian-street and Bristo-place, occupied by the Roman Catholics prior to their purchase of the present one, was built in 1839, has a handsome pinnaced Gothic front, and is now used for Roman Catholic schools. The Roman Catholic church of the Sacred Heart, in Laurieston-street, was built in 1859-60, and has an Italian front and cupola lights. St. Margaret's convent, at the southern extremity of Burntsfield-links, was erected in 1835, after designs by Gillespie Graham. The convent of the

sisters of mercy, in Laurieston, adjacent to Chalmers' hospital, is an edifice of 1861, in the collegiate style.—The Protestant institute of Scotland, on George IV.'s bridge, a plain pleasing edifice, with large hall, in the course of erection in 1862, may be noticed in this place as a more appropriate one for it than any other. Its promoters are persons of various evangelical denominations; and its objects are to give training in controversial matters against Roman Catholicity to students for the Christian ministry.

Cemeteries.—Burying-grounds, though not edifices themselves, contain much sculptural work and some architectural work; and being always associated with churches either in fact or in fancy, they may be noticed more appropriately here than in any other connexion. And in order that they may all be seen in one group, the extinct ones may be noticed conjointly with the extant.

The first great cemetery of Edinburgh lay around St. Giles' church, in the area afterwards occupied by Parliament-close, and was extended down the slope toward the Cowgate, on the ground afterwards occupied by parliament-house and the law-courts. Part of this continued in use in the latter part of the 16th century, for the remains of John Knox were interred in it in 1572; but the whole was soon afterwards so completely secularized that, in 1607, the site of it was made the scene of a magnificent civic banquet to King James on occasion of his return to his Scottish capital. In 1800, the last relic of it was discovered at the head of Forrester's-wynd, which had been the cemetery's western boundary. This was a long stone, part of a decorated gateway, curiously sculptured with a group resembling Holbein's Dance of Death; but it was almost instantly destroyed by the workmen who discovered it. The whole cemetery was for a long time horribly overcrowded; yet so complete became the effacement of it that even the locality of Knox's grave totally ceased to be known.—Several other ancient burying grounds within or near the city became extinct; but none of them, except this, was either extensive or famous.

The cemetery of Holyrood was for ages the cemetery of the Canongate; but it afterwards came, like the abbey-church itself, to be restricted to the palace. Only the parts of it containing the ashes of the great and the noble, therefore, have escaped obliteration. The royal vault is within the church ruins, and contains the remains of David II., James II., James V., and Henry Lord Darnley.—The present Canongate burying-ground dates only from 1688. It possesses all the interest of any crowded urban cemetery, and has an interest of its own for containing the remains of Dr. Adam Smith, Professor Dugald Stewart, the poet Fergusson, the attainted Lord Cromarty, and the philanthropic Provost Drummond.—St. Cuthbert's burying-ground, around the church of St. Cuthbert's, is at once ancient, large, and crowded, containing many a pleasant monument, together with the ashes of not a few persons who have variously figured on the roll of fame. Branch-connexions of this cemetery also exist at Buccleuch-church and at Newington.—The High Calton burying-ground has already been incidentally noticed in connection with Waterloo place and with Humm's monument. It is a cemetery sufficiently curious for some of its contents, and not a little remarkable for its site, surmounting a lofty cliff on one side, and enclosed on the three others by respectively the metropolitan prison, a lofty retaining-wall, and the general post-office.—The Low Calton burying-ground occupies large part of the slope between the Regent-road and the North-back of the

Canongate, but, except for being in some degree ultra-mural and ornamental, it has not any particularly noticeable feature.

The Greyfriars' cemetery succeeded St. Giles' as the chief cemetery of the city; and, in spite of its comparatively great extent, it soon and long became overcrowded,—eventually to such a degree as to be noisome and pestilential. But of late years, it has been relieved from pressure, and dressed out tastefully with walks and shrubs. "Around its walls," remarks the writer of *Modern Edinburgh*, "are a number of beautiful and richly sculptured monuments of the 16th and 17th centuries, in the ornate style of the period, many of them quaintly adorned with emblems and ingenious devices, representative of mortality, the resurrection, hope, &c., as well as with heraldic decorations, monograms, &c. To these the touch of time has added additional riches; and the effect of the whole is exceedingly striking, when we look on these monuments as the memorials of distinguished men whose graves lie crowded around." There are also some fine monuments of modern style, mingling and contrasting with the olden ones; while great part of the walks commands most impressive views of the castle-rock, the castle-hill, and the architectural masses of the eastern Old town, picturesquely blending the ancient and the modern, the durable and the evanescent, a great multitude of things in many a fashion speaking all of the mortality of man. There lie in this cemetery the remains of George Buchanan, George Heriot, Alexander Henderson, some of the martyrs of the Covenant, Sir George Mackenzie, Sir James Stewart, Principal Carstairs, Principal Robertson, Dr. Pitcairn, Sir John de Medina, Allan Ramsay, Colin Maclaurin, Dr. M'Crie, and many other men of high celebrity.—St. John's cemetery, around St. John's Episcopal church, is small but very tasteful, and blends, in the general view, with the contiguous cemetery of St. Cuthbert's.

Warriston cemetery is a modern ultra-mural burying-ground, in the manner of the Parisian Pèrè-la-chaise. It occupies a southward slope, on the north side of the Water-of-Leith, 600 yards north by east of Canonmills. It was so unfortunate as to be bounded along the west by the main trunk of the Edinburgh, Perth, and Dundee railway, and cut across the middle by that railway's branch to Leith; but it has been tolerably well retrieved from these disadvantages by high walls; and in all other respects it is very finely situated, exposing nearly its whole surface to multitudes of points of observation within the New town, and commanding from all its walks one of the richest of the many rich northern views of the city and its environs. One approach is by a bridge over the railway on the north-west; and another is by a bridge over the Water of Leith, on the south. The grounds of the cemetery are laid out most tastefully; the walks broad and winding; some buildings for catacombs, and for sheltered places of interment, so constructed both in themselves and with reference to the contiguous surfaces as to produce a very pleasing effect; and a handsome Gothic chapel, for the burial-service of the Episcopalians, rising in the centre. Five other ultra-mural burying-grounds were formed subsequently to the Warriston, all on the same general plan as it, and all vying with it and with one another in both embellishment and economy, yet none of them equal to it in beauty of situation. One of them, the Rosebank, is on the Pilgrig-road, near North Leith; two, the Dean and the Dalry, the former containing the remains of Lords Jeffrey, Cockburn, and Rutherford, and Professors Wilson

GREYFRIARS CHURCHYARD, EDINBURGH.

and Forbes, are in the western environs; and two, the Grange and the Newington, the former containing the remains of Dr. Chalmers, Sheriff Spiers, Sir Andrew Agnew, Sir Thomas Dick Lauder, and Hugh Miller, are in the southern environs.

Extinct Edifices.

The City Walls.—In 1450, James II. empowered the magistrates of Edinburgh to fortify the city with a wall, and to levy money from the inhabitants for its erection. The line of this wall, together with that of its subsequent enlargements, affords a joint view of the ancient structures of the city, and of its early extent and progress. A wall of defence, constructed before the time of James II., ran on the west, almost directly north from the foot of the Castle-esplanade; it was then interrupted by the North Loch, which served as a substitute; and probably the wall was thence continued to the foot of Leith-wynd. From the latter locality to the head of Canongate or foot of High-street, an uninterrupted range of houses on the west side, continued the line of defence. The wall of James II. was strengthened at the foot of the north-east rock of the Castle with a small fortress; it thence ran eastward along the south side of the North Loch till it came nearly opposite the foot of the Castle-esplanade; it then took a southerly direction till it gained the summit of the hill; and it was there cut with a gate of communication between the town and castle. The wall now ran obliquely down the hill toward the south-east till it arrived at the first turn in the descent of the West Bow; and it was here perforated with a gate called the Upper-Bow-port. From this gate it proceeded nearly due east along the face of the ridge between High-street and Cowgate, till it struck Gray's-close or Mint-close; thence it debouched, north-eastward, till it touched the High-street a little west of the head of Leith-wynd; here, it was intersected by a gate of communication between the city and Canongate; and afterwards it went down the west side of Leith-wynd, and then turned westward to make a junction with its commencement at the north-east foot of the Castle rock. The ancient city was thus shut up within very narrow limits. It consisted of simply the High-street, part of some of the alleys leading from it, and the whole of others; and was obliged to acquire extension by lifting its buildings upward in the air, rather than by the usual method of extending them along the surface,—especially as, while its area was so small, the fashion of the age urged multitudes of persons to seek residence within the royalty.

In 1513 an extended wall was built. This affected chiefly the southern district. It began at the base of the south-east corner of the Castle rock; it thence extended obliquely to the west end of the Grassmarket, and was there intersected by the gate called the West-port; it now ascended part of the hill called the High-riggs, and, turning eastward, ran along the north side of the park of Heriot's hospital; it next, on approaching Bristo-street, debouched northward, passing through part of what is now the cemetery of Greyfriars; it then turned eastward, leaving openings for gates called Bristo-port and Potterrow-port, in the line of those streets; it next went southward for a few yards, from Potterrow-port, and then, making an abrupt turn, wended its way along the south side of the present college, and the north side of the present Drummond-street, till it touched the Pleasance; and it there debouched almost at a right angle to the north, and thenceforth pursued its way, intersected by Cowgate-port and St. Mary-wynd-port,

to the point of the original wall west of the head of Canongate. Considerable parts of this wall, especially where it stretches along the north of Drummond-street, and the west of the north end of Pleasance, still exist.

The gate called the Netherbow, with which the wall was pierced on its crossing the High-street, stood originally about 50 yards west of the present termination of High-street; but, being found to occupy a position unfavourable to defence, was superseded, in 1571, by another, on the line of St. Mary's-wynd and Leith-wynd, which was built by the adherents of Queen Mary. A third, and very beautiful gate, supplanted the latter in 1606, and was reared on its site. This port was the principal entrance to the city, and has been rendered famous in history by a hill, in consequence of the indignation excited by what was called the Porteous' mob, having passed parliament for razing it to the ground. The buildings of the port went quite across the High-street, and disappeared in the houses on the sides. The gate was in the centre, perforating a house-like structure of two stories high, springing its arch from the summit of the lower story, and surmounted by a handsome square tower, terminating in battlements, and bearing aloft a tapering hexagonal spire. South of the gate was a wicket for foot-passengers. But the whole structure, pursuant to the decree of parliament, was pulled down in 1764.—At the foot of Leith-wynd was a gate called Leith-wynd-port; beside which was a wicket giving access to Trinity college church.—A wall also was thrown round the Canongate; and on the east was perforated with a gate, called the Water-gate.

The Ancient Street-Architecture.—From paucity of space, and in imitation of the Scottish nation's allies, the French, the houses of ancient Edinburgh were piled to an enormous height, rising, in many instances, to twelve stories. The access to the separate lodgings in these huge structures, called lands, was by common stairs, combining the inconveniences of steepness, filth, and darkness.—The earliest architecture of the city consisted, as in other contemporaneous burghs, of domestic buildings only a degree superior to the primitive cottage, and presenting to the eye, at best, a strongly built ground flat, with a frail superstructure of timber, and a front garniture of balcony or open gallery. A second stage of the city's architecture exhibited houses of three stories, the first of stone, and the second and third of timber. A third stage improved upon the second, simply in constructing all the stories of stone, and occasionally aspiring to a fourth story of the same material. A fourth stage, overpowered by an influx of inhabitants, and pent in by walls which assigned it a very limited area, sprung aloft like the lark into the air, and sought those enjoyments in aspiring towards the clouds which could not be obtained by an attempt to move along the surface. A fifth stage, incomparably the brightest and most brilliant of them all, burst the cerements of the ancient walls, and walked forth in architectural life and beauty, constructing the North bridge and the South bridge as media of extension towards the wide fields north and south of the hill-ridge of the original site, conjuring up the southern New town between 1774 and 1790, completing the northern New town between 1801 and 1826, branching off into the most splendid part of the Eastern New town between 1813 and 1828, shooting away into the Western New town between 1823 and 1830, and luxuriating in all directions round the ancient city with the freedom of movement and the gaudiness of attire indicative of transition from slavery to

freedom, or from incarceration to the breathing of the open air, and the surveying of the joyous scenes of one of the most beautiful landscapes in the world.

What we have called the fourth stage of the city's architectural progress extended from at least the middle of the 16th century till considerably past the middle of the 18th. Fynes Moryson, an English traveller who visited Edinburgh in 1598, says,—“The houses are built of unpolished stone, and in the fore-street good part of them is of freestone, which in that broad street would make a fair show, but that the outsides of them are faced with wooden galleries, built upon the second story.” John Taylor, another English traveller who visited Edinburgh in 1618, says, after noticing the castle,—“I descended lower to the city, wherein I observed the fairest and goodliest street that ever mine eyes beheld; for I did never see or hear of a street of the length, the buildings on each side of the way being all of squared stone, five, six, and seven stories high. And there are many hy-lanes and closes on each side of the way, wherein are gentlemen's houses much fairer than the buildings in the High-street, for in the High-street the merchants and tradesmen do dwell, but the gentlemen's mansions and goodliest houses are obscurely founded in the aforesaid lanes. The walls are exceedingly strong, not built for a day, a week, a month, or a year, but from antiquity to posterity, for many ages.” The houses, however, did not, according to the picture of them in Marmion, lift “Gothic frontlets to the sky,” but were in a great degree in what is usually called the Flemish style. There were in all Edinburgh, in 1753, according to Maitland's account, just 12 churches, 260 closes, 8 courts or small squares, 22 wynds, and the following 12 streets, Lawnmarket, Luckenbooths, High-street, Canongate, Cowgate, Grassmarket, Portsburgh, Pleasance, Potter-row, Newington, Bristo-street, and Lauricston.

Extinct Civil Edifices.—The improvements on Edinburgh, especially the last and the long one, were not unattended by demolitions of important or interesting buildings. The demolished erection which of all others is the most regretted, and, if allowed to remain, would have continued to be the most beautiful and ornamental, was the Cross, situated on the High-street, a little below St. Giles'. This was a structure of mixed architecture, partly Grecian and partly Gothic, octagonal in form and 16 feet in diameter. After rising about 15 feet in height, it shot aloft from its centre an octagonal pillar equal in height to itself, and surmounted by an unicorn embracing an upright spear of nearly twice its own length. At each angle of the main building was an Ionic pillar projecting at the top into a species of Gothic bastion; and between the pillars, before being surmounted by the bastions, were modern arches. Over the arches, in the spaces between the bastions, heads were sculptured in the manner of a modern medallion; and over that which fronted the eastern part of the High-street were sculptured in alto-relievo the city-arms. The access to the building was by a door which fronted the Netherbow, and gave ingress to a staircase leading to the platform on the summit. The pillar which rose from this platform was 18 inches in diameter, and had a Corinthian capital, spangled with thistles. The town-council of the day,—proving themselves to be of the same kidney as the Mohammedan destroyers of the Alexandrian library, the Goth and Vandal desolators of Rome, and the plodding ‘turn the penny’ speculators, once potato-fed weavers, but eventually monied, opulent, and signally illiterate and self-conceited ‘practical men’ of a manufacturing town,—conceived the beautiful cross—such a structure

as their booby heads could not have devised in a millennium—to be an obstruction in the thoroughfare of the High-street, where a dozen structures of its bulk might have stood without molesting even the ten thousand carters of Glasgow, had it been placed in that noisiest of all other cities, and much less the few carriage and cab-drivers of Edinburgh; and, in 1756, it was ordered to be pulled down. The demolishers believed, very justly, that they were working for a name among posterity; and they have fully obtained what they sought, though of very different quality from what they desired. Scotland's mightiest minstrel, for example, has said—he whose own monumental cross is now the grandest structure of its class in the world—

“Dunedin's cross, a pillar'd stone,
Rose on a turret octagon.
But now is razed that monument
Whence royal edict rang,
And voice of Scotland's law was sent
In glorious trumpet clang.
O! be his tomb as lead to lead;
Upon its dull destroyer's head
A minstrel's malison is said.”

With strange perversity of taste, a huge hulk of a building, erected in the reign of Charles II., which served as a guard-house to the military police, and had at the west end a dungeon or blackhole for the incarceration of the unruly, and which was situated on the south side of Upper High-street, was allowed to incumber the thoroughfare more than 30 years after the demolition of the elegant cross.—At the head of the Lawn-market, or foot of Castle-street, formerly stood a public Weigh-house, rearing aloft a neat spire. When this erection and the Netherbow and the cross existed, their spires combined with those of St. Giles and the Tron-church, to give the line of High-street an appearance of city architectural decoration greatly superior to what it now possesses. But for some surpassingly strange reason, which is not recorded, the Weigh-house was, about 1666, denuded of its spire, and left, in the naked clumsiness and deformity of its hulk, to disfigure the thoroughfare till 1822.—The principal incumbrance to the High-street was a range of buildings, called the Luckenbooths, rising to nearly the height of the houses on the street-line, stretching parallel with the side of St. Giles', and terminating at the west end in the Old Tolbooth of the city. A lane for foot-passengers ran between the Luckenbooths and St. Giles', and was lined on both sides with small shops,—those on the south side adhering like excrescences to the ecclesiastical edifice, and bearing the name of the krames. From the east end of this lane, a flight of steps led off past St. Giles'; and from a statue of the Virgin Mary being placed in a niche on the side, was called St. Mary's steps. The Luckenbooths were built to serve as warehouses or shops, probably as early as during the reign of James III.; and the krames began to be erected in 1555; and both, along with the Tolbooth, were pulled down in 1817,—their demolition laying the north front of St. Giles' fully open to the view, and converting the Old High-street and the Lawn-market into a continuous and uniform thoroughfare.

The Old Tolbooth, coeval with the Luckenbooths, was originally used for the confinement of prisoners, for the shops of tradesmen, for the courts of the burgh, and even for the meetings of parliament. But after 1640 it was wholly distributed, on the ground-floor, into shops, and, on the other floors, into the apartments of a prison. The building consisted of two parts: the eastern was a square tower, with a spiral stair, and was closely akin in structure to the numerous strongholds which dotted the border-counties, and were used as residences and rally-

ing-points by the ravens of a marauding age; the western part was a parallelogram of rubble-work, and of later origin than its curious companion. In the tower were first a large room for the use of incarcerated debtors, next and higher up apartments for the confinement of criminals, and over the top of all a strong box for the safe custody of an important and peculiarly dangerous felon. The parallelogram was distributed into apartments for debtors. The Old Tolbooth, under a quaint name popularly applied to it, furnished at once title, incidents, and graphic materials to the novel which more than any other of his productions gave celebrity to Sir Walter Scott,—that of 'The Heart of Mid-Lothian.'—The buildings around the Parliament-close, immediately preceding those which now stand there, were a curious medley in both their architecture and their uses. "The dead wall of the old parliament-house was partially broken up with sundry motley patches of ornament, and surmounted with a barbarous embrasured balcony, terminated at the corners with turrets of similar character. On the south was to be seen, towering to the clouds, a certain lofty tenement, in its day one of the lions of Edinburgh, containing above a dozen stories, all densely peopled by a respectable class of inhabitants. On the east side was the fine old house or land which was burned down in 1824, with its piazza walk, under which was situated John's coffeehouse, once the resort of Dr. Pitcairn and other wits of the day; and farther on were situated the shops of the principal jewellers and booksellers, wherein were wont to congregate daily the great and learned of the land."

The West Bow, which ascended from the foot of the Grassmarket to the head of the Lawnmarket, forming the principal avenue by which wheel carriages reached the elevated parts of the city, contained a large amount of curious old architecture. Though one of the narrowest, steepest, noisiest, and most tortuous carriage-ways in the world, it was a centre of at once trade, wealth, fashion, and popular display, where fortunes were made, great deeds were done, nightly assemblies were held, and at least six monarchs made a public entry into the city. "Scarcely anything can be conceived more curious and whimsically grotesque than its array of irregular stone gables and timber galleries, which seemed as if jostling one another for room along the steep and narrow thoroughfare. Here were the Templar lands, with their antique gables surmounted by the cross that marked them as beyond the reach of civic corporation laws, and with their old world associations with the knights of St. John of Jerusalem. Here was the strange old timber-fronted tenement where rank and beauty held their assemblies in the olden time. Here was the provost's lodging, where Prince Charles and his elated counsellors were entertained in 1745; and adjoining it there remained till the last a memento of his royal ancestor James II.'s massive wall, and of the old port or bow whereat the magistrates were wont to present the silver keys, with many a grave and costly ceremonial, to each monarch who entered his Scottish capital in state." Here also were the mansion of Lord Ruthven, the slayer of Rizzio, and memorials of Porteous, and of the martyrs of the covenant, on their way to execution. The greater part of the West Bow was swept away by the making of the New Western approach, George IV.'s bridge, and Victoria-street; and strangers who look at the remains of it have difficulty in believing that it could ever have been a carriage-way, the more so as the present communication from the upper part of it to the lower is a long flight of steps which dives right into the

causeway, and winds through the heart of an edified terrace.

In a small park through which Nicolson-street was cut, stood a pillar to the memory of Lady Nicolson. It was a very neat and chaste fluted Corinthian column, rising 30 or 40 feet from a pedestal which bore an appropriate inscription. When the improvements of the South bridge extension were made, it was 'underfooted,' and in that state it remained for many years at the north end of Nicolson-street; but it was eventually removed in some manner unrecorded, and was not long ago seen as a piece of lumber in the Riding-school.—The part of Shakespeare-square which was removed at the forming of Waterloo-place, stood across the end of Prince's-street with its front, and overhung the ravine of Low Calton with its rear. About the middle of it, looking down Prince's-street, was the Shakespeare-tavern and Coffee-house, which was the resort of the elite, and the most celebrated house of its class in Scotland.—In the eastern part of the open area of Drummond-place, on a line with Dublin-street and Scotland-street, stood a large fine edifice, originally the mansion of General Scott, but afterwards the excise-office. This was removed in 1845, in consequence of being undermined by the tunnel of the Edinburgh, Perth, and Dundee railway, the house itself being sold to the railway company for £3,200 to make way for their tunnel, and the site of it, together with the attached ground, for £1,280 to the proprietors of Drummond-place, for conversion into permanent pleasure-ground.

Extinct Ecclesiastical Edifices.—The Collegiate church of St. Mary in the Fields was situated on the ground now covered by the university, or probably a little to the southward, very nearly on the site of the present United Presbyterian church in South College-street. Attached to it were a provost and 10 prebendaries. From its originally standing beyond the city-walls, though afterwards included within them, it was called the Kirk-of-Field,—the name by which principally it is known in history. Within the church was held the celebrated assembly of Scottish ecclesiastics, convoked by Bagimont the papal nuncio, for the purpose of ascertaining the value of benefices throughout the country. The valuation made by this assembly was made the standard at Rome for taxing the ecclesiastics of Scotland, and, under the name of Bagimont's roll, is a standard authority with historians in glancing at the financial matters of the Scottish ante-Reformation establishment. The provost's house connected with the Kirk-of-Field has been rendered immortally infamous in history as the scene of the murder of Darnley.

The monastery of Blackfriars was instituted by Alexander II., in 1230, and stood within the grounds of the Kirk-of-Field, on the site of the Old High school. The gardens around it occupied the whole space on the south side of the Cowgate, between the Pleasance and Potter-row. The monks received also from the royal founder of their convent a piece of ground long since covered with buildings, and along which extends the narrow street appropriately called Blackfriars-wynd. The monastery had frequently as a resident within its walls the person of its founder; and, in consequence, came currently to be called 'Mansio Regis,' the king's dwelling-house. A building belonging to the monks was an episcopal residence of the archbishop of St. Andrew's, which not long ago could be traced in Blackfriars-wynd. In 1528 the monastery was destroyed by fire; and it was hardly re-edified, when, along with its appurtenances, it was swept away by the Reformation. The lands belonging to it were bestowed by Queen

Mary upon the magistrates for building an hospital and supporting the poor; and, under James VI., they were disposed of in feus, and the proceeds applied to the building and endowing of Trinity hospital.—The monastery of Greyfriars, situated on the south side of the Grassmarket, nearly opposite the West-bow, was established by James I. The house was so splendid that the first monks, invited from Cologne in Germany, refused for a while to enter it, and were with difficulty prevailed upon to adopt it as their abode. Around it were spacious gardens, which afterwards became the site of the existing Greyfriars churches and cemetery.

East of the monastery of Greyfriars was an hospital of remote but unknown antiquity, called *Maison Dieu*. This structure having, at the beginning of the 16th century, become ruinous, a citizen erected beside it a chapel and hospital dedicated to St. Mary Magdalene. This foundation was designed to accommodate a chaplain and 7 poor men; but it was endowed with a pitiful annuity, and vested in trust with the corporation of hammermen,—whose poor still reap the benefit of its funds. The chapel still exists; and, though very small, was not long ago let and occupied as a place of worship. The steeple of it also continues entire, and is one of the most noticeable old curiosities of the city, the more so for having its top but a trifle higher than the neighbouring roadway of George IV.'s bridge.—About the middle of Niddry-street was a chapel dedicated to God and the Virgin Mary, and founded in 1505 by Elizabeth, Countess of Ross. The corporations of wrights and masons, in 1618, acquired a right to it, and, in consequence, assumed the name of the united corporations of St. Mary's chapel.—Near the head of St. Mary's-wynd, on the west side, were a chapel and convent of Cistercian nuns, and an hospital dedicated to the Virgin Mary. From the last the narrow street has its name.—In Leith-wynd an hospital for the support of 12 poor men was founded in 1479, by Thomas Spence, bishop of Aberdeen, and dedicated to the Virgin Mary. At the Reformation it passed into the possession of the town-council, obtained the unaccountable name of Paul's work, and was converted first into a workhouse, next into a house of correction, and next into a broad-cloth factory. Its name of Paul's work is bequeathed to a court and cluster of buildings on and around its site.—A little north of Paul's work, on the face of the bank leading up to the New town, stood a chapel dedicated to St. Ninian, which, till a recent date, gave to the thoroughfare of Low Calton the name of St. Ninian's-row.

On the west side of the foot of Canongate, immediately adjoining the Watergate, was an hospital, founded in the reign of James V., by George Crichton, bishop of Dunkeld, and dedicated to God, the Virgin Mary, and all saints. This was a foundation of great celebrity; and, besides lodging and supporting 7 poor men, provided out-door allowance to 30 poor persons, and a salary to two chaplains to officiate at the altars of St. Andrew and St. Catherine in the chapel of Holyrood. In 1617 the magistrates of Canongate purchased it from the chaplains and bedesmen, and converted it, under the new name of St. Thomas' hospital, into a lodging-house for their poor; and in 1634 they sold it to the kirk-session, to be still used as an hospital. Eventually it suffered an embezzlement of its entire revenues, and, for 30 years before being pulled down, in 1773, was converted into coach-houses.—Near the base of the north side of Arthur's-seat stood the chapel and hermitage of St. Anthony. The site, though in the immediate neighbourhood of a populous city, is still remarkably sequestered.

The cell of the hermitage still remains, 16 feet long, 12 broad, and 8 high. The rock rises within 2 feet of the stone arch which forms its roof, and overlooks a beautiful crystal rill celebrated in an old Scottish ballad. Nine yards east of the hermitage stood the chapel. This was a beautiful Gothic building, 43 feet long, 18 wide, and 18 high. At its west end rose a tower, 19 feet square, and 40 feet high.—At the north-east base of Calton-hill a Carmelite monastery or friary was erected in 1526; but it was destroyed at the Reformation. On its site was built an hospital for lepers, subject to regulations which evince both the frequent prevalence of leprosy in a former age, and the great dread in which the distemper was held.—On the south side of the city, in various localities within the parish of St. Cuthbert, stood seven old ecclesiastical edifices which have been noticed in our article CUTHBERT'S (St.).

The most celebrated of all the extinct ecclesiastical edifices of Edinburgh is Holyrood abbey. This, as regards its history and general character, has already been noticed in the section on "Holyrood." It was an edifice of great size, as well as of great magnificence, comprising all the parts of a first-class cathedral, nave, transepts, and choir, together with a large extent of residence for its princely abbot, its numerous canons, and its frequent noble or royal guests. What now remains of it is only the ruins of the nave; and as even this measures 148 feet in length and 66 feet in breadth, the vastness of the whole when entire may easily be surmised. The transepts, choir, and cloisters were totally demolished by the English in 1543; but they may be presumed to have exactly corresponded in style and execution with the nave. The walls of this were strengthened by elegant flying buttresses, and ornamented with tiers of small pointed arches resting on slender shafts. Each of the principal windows was divided into two apertures by pillars; these apertures were headed with pointed arches; one arch of a similar form enclosed both; and in the spandril between them were quatrefoil ornaments. At the restoring of the ruined nave into a chapel-royal by Charles II., a throne was erected for the sovereign, twelve stalls were erected for the knights of the thistle, and the floor was paved with marble. The original charter of the abbey still exists in the archives of the town-council. This document conferred on the canons the privilege of erecting the burgh which took from them the name of Canongate. It also bestowed upon them the churches of Edinburgh-castle, St. Cuthbert's, Liberton, Corstorphine, and Airth, and the priories of St. Mary's Isle in Galloway, Blantyre in Clydesdale, Rowadill in Ross, and Crusay, Oronsay, and Colonsay in the Hebrides. They had also the fishings of the Water of Leith, the privilege of mills at the place still called from them Canonmills, the right of certain revenues from the Exchequer, grants of lands in various places additional to those we have mentioned, a very extensive jurisdiction, and a right of trial by duel and of the water and fire ordeal. Their yearly income at the Reformation comprised 442 bolls of wheat, 640 bolls of bear, 560 bolls of oats, 500 capons, 24 hens, 24 salmon, 12 loads of salt, and £250 in money.—A pretty little Gothic well, in the vicinity of the abbey, built about the beginning of the 14th century, and long regarded as "holy," still yields a limpid stream. Another well in the southern outskirts of the city, impregnated with the bituminous substance petroleum, called the balm well of St. Catherine, and long treated with superstitious awe by the Romanists, was formerly covered with a beautiful little chapel. There also existed a chapel of Holyrood in

the lower part of the cemetery of St. Giles', called the Nether kirk-yard, on the ground now occupied by the law-courts.

Sanatory Condition.

Sewerage.—By sanatory condition, in this place, we do not mean either vital statistics or the comparative salubrity of the climate, but we mean the local terrene circumstances by which the public health is affected. And one of the most prominent of these is sewerage. The state of this throughout the greater part of the New town, and in some of the new parts of the Old, is unexceptionable,—all under-ground, minutely ramified, and receiving all fluid impurities, through pipes, from every house. But in some parts of the New town, and throughout the greater part of the Old, it is only a surface-drainage for even the foulest matters to gratings and great ducts; and wherever unconnected, as it extensively is unconnected, by pipes with the interior of houses, it is all a monster-nuisance,—at some hours of the twenty-four utterly horrible to both health and smell, and at all hours offensive. The declivity of many of the streets, indeed, is strongly favourable to natural flushings in the time of rains; and the efforts of the police, in late years, have been arduous and most praiseworthy to make artificial flushings at all times of threatened pestilence. Still the state of the drainage is essentially bad, and must ever remain so till the whole city and suburbs shall be put under the same system as the best parts of the New town. The Water of Leith, which receives great part of the sewerage, has not near water enough, especially in times of drought, to carry it off; so that it is often, for weeks together, little else than a great open reeking common sewer. The attention of the authorities has of late been much devoted to this matter; and some remedies have been applied, which have materially mitigated the evil.

Police-Manure.—Edinburgh has little of that system of diffused manurial accumulation which prevails in Glasgow and some other large towns, and which acts there as a constant provocative of pestilential diseases. Ashes, rubbish, and all occasional refuse, are carried off daily, at a stated hour, under a code of special regulations, by well-appointed police waggons. The regulations, however, cannot always be enforced,—indeed are very generally infringed,—inasmuch that the contents of buckets, instead of being discharged direct into the waggons, are very generally emptied on the street, to lie there it may be for hours, or to be utterly scattered by bone-gatherers and by the winds. Excrementitious matters, also, in all the parts of the town where no connecting-pipes exist between the houses and the sewers, are treated and carried off in the same manner as the ashes; and there the nuisance is frightful,—all the more so that these parts of the town are just the parts where the population is densest, and the houses highest and most crowded. The general deposits of the street manure, too, the prodigious heaps which are formed by the daily discharge of the waggons, are perhaps not far enough from the town, not secluded enough from the nearest suburbs, not disposed of quickly enough to farmers; so that they have been blamed, we do not say with what justice, as an appreciable exciting cause of pestilence.

The general physical condition of the inhabitants in the worst-drained parts of the city—as also their moral condition in as far as that can be affected through the physical—is deplorable. We are, indeed, glad to say that something considerable is in the course of being done to ameliorate it; we would

likewise feel horror to say, even though it were immensely worse than ever it has been, that moral influence, especially the Divine influence of Christianity, cannot renovate it; still we feel bound to quote the following account of it, which figured conspicuously, not long ago, in the public prints:—“In this part of the town there are neither sewers nor any private conveniences whatever belonging to the dwellings; and hence the excrementitious and other refuse of at least 50,000 persons is, during the night, thrown into the gutters, causing (in spite of the scavenger's daily labours) an amount of solid filth and fetid exhalation disgusting to both sight and smell, as well as exceedingly prejudicial to health. Can it be wondered that, in such localities, health, morals, and common decency should be at once neglected? No; all who know the private condition of the inhabitants will bear testimony to the immense amount of their disease, misery, and demoralization. Society in these quarters have sunk to a state indescribably vile and wretched; and as Mr. Chambers observes, in a letter to the poor-law commissioners, ‘they have gravitated to a point of wretchedness from which no efforts of the pulpit, the press, or the schoolmaster can raise them, for they are too deeply sunk in physical distress, and far too obtuse in their moral perceptions, to derive advantage from any such means of amelioration.’ The dwellings of the poorer classes are generally very filthy, apparently never subjected to any cleaning process whatever, consisting in most cases of a single-room, ill-ventilated and yet cold, owing to broken, ill-fitting windows, sometimes damp and partially under ground, and always scantily furnished and altogether comfortless, heaps of straw often serving for beds, in which a whole family, male and female, young and old, are huddled together in revolting confusion. The supplies of water are obtained only from the public pumps, and the trouble of procuring it of course favours the accumulation of all kinds of abominations. The result of such a state of things will be found by referring to Dr. Alison's work on the ‘Management of the Poor in Scotland.’ It is there stated that, owing to the crowded and intolerably filthy state of the lodgings, the lanes and closes of the Old town are scarcely ever free from malignant fever, and that in the city itself the mortality (1837-8,) amounted to 4½ per cent (1 in 22,) almost equal to that of the plague-depopulated Constantinople. Such facts are quite appalling, and should rouse the authorities to exertion. Nothing short of a pretty extensive demolition of the Old town will stay the evil; and surely if the lives of thousands are at stake, the consideration of property should not be allowed to retard the reform.”

Irrigated Meadows.—Some small tracts of low ground in the northern and western outskirts of the city, and a very large tract in the eastern environs, extending all the way from the vicinity of Holyrood by Restalrig to the frith of Forth, are disposed in foul-water irrigation meadows,—being kept in a state of constant swamp by the effusion over them of the contents of great common sewers from the city. This irrigation produces large crops of herbage, but is a serious monster-nuisance, loathsome to look upon, horrible to the olfactory nerves, and probably not hindered by the abundant dilution of the noxious gases arising from it with the pure air of the surrounding high-grounds from doing material injury to the public health. And even though it could not be proved to aid directly any pestilence, it at least is damaging to cheerfulness and mental energy. In winter, when the irrigation is not much practised, and the water is, for the most part, either diluted with rains or allowed to flow directly to the

frith, very little disagreeable odour arises from the meadows; but in summer, when the irrigation is vigorously prosecuted, a strong odour, sometimes a heavy stench, is diffused; and in dry, sunny, hot weather, in particular,—especially if a keen wind blow from the east, bringing up to the city the exhalations from the whole length of the meadows, and from their greatest breadths, and holding these close to the ground by means of thick fogs—the odour becomes comparatively far-spread and is disgusting offensive.

Public Promenades.—The spacious garden-areas of the New town, the wide valley between the New and Old, the protrusion of the skirts of the Castle-rock, the protrusion of the Calton-hill, and the overhanging of Salisbury-crag and Arthur-seat, all serve as “lungs” to the city, for exhaling bad air and inhaling good. The scenery of the gardens and of the environs also acts well on the public health by contributing to the cheerfulness of the mind. The right of access to the enclosed gardens, likewise, by families all around them who own houses or pay for garden-keys, is or might be an aid to the health of these families only a degree less powerful than the exclusive possession of small pleasure-parks in the country. The public right of entrance to the Botanic gardens, too, together with extensive leave of promiscuous admission to public nurseries and to the horticultural society’s garden, is a privilege of health, as well as of instruction, worth much money, but which, through some strange perversity, does not appear to be greatly appreciated.

Public promenades, always open, readily accessible, containing “ample scope and verge enough” for games and exercise, are not so good or abundant in Edinburgh as they ought to be, but nevertheless are much better than in many large towns. The Queen’s-park, as we noticed in the section on “Holyrood,” is a large grand privilege of this kind; and while hitherto specially valuable to the inhabitants of the Old town, it was recently enhanced to the inhabitants of the New, by the forming of a pleasant access direct from the Abbey-hill, so as to avoid the abominations of Croft-an-righ and the Watergate. The Calton-hill was monstrously curtailed by the Regent and the London roads, by the Regent and the Royal terraces, and especially by the enclosing of all its gentler slopes to form pleasure-grounds to the houses of these terraces and to the High-school, so that little more than the crown of it was left available for the public; yet this has been so well enriched with walks, and been made so easily accessible by stairs and gravelled-paths and carriage-way as to form, together with the hill’s own attractions of height and isolation and scenery, one of the finest public promenades in the empire. The Borough-Moor, once a common of great extent on the south side of the city, has piece by piece been alienated in even larger proportion than the Calton-hill, having parted with all the beautiful pendicles which now aggregately form what is popularly called Canaan; yet a very fine tract of it, with rich sward, undulating surface, and charming side-views, still remains under the name of Bruntfield-links, serving not only for pedestrian exercise and all ordinary games, but for the excursive game of golf. The Meadows, extending eastward from Bruntfield-links, to the vicinity of Newington, are a still finer piece of ground, and larger. They are the site of an ancient lake, called the Borough-loch. In the 17th century, that lake was gradually drained; and in 1722, the marshes left by it were let to Mr. Thomas Hope, under an obligation to drain and enclose them. These parts were the eastern section of the Meadows, and have ever since borne the name of Hope-park. The whole of

the Meadows were afterwards completely drained, nicely levelled, beautifully enclosed, clumped with wood, zoned all round and cut across the middle by broad level avenues between lines of trees, and a portion let for drying clothes, the rest for grazing cattle. But by a new arrangement, made in 1854, the whole, under certain regulations, have been thrown open as a public promenade. The principal entrance to them is from the east end of Laurieston, opposite the end of Forrester-road, and is distinguished by sculptured unicorns, bearing the old Scottish banner, “In defence.” The archers’-hall, where the Queen’s body-guard for Scotland hold their meetings, adjoins the walk at the north-east of the Meadows; and the butts for archery are set up, on field days, in Hope-park.

A large field at Raeburn-place, in Stockbridge, was given to the public in 1854, by Mr. Hope of Moray-place, under special regulations, as a public promenade and place of athletic sports. West Prince’s-street gardens and the adjoining slopes of the Castle-hill, like the enclosed parts of the Calton-hill and the Borough-moor, are alienations of city commonage; and attempts have of late been made by the town-council, though as yet unsuccessfully, to obtain repossession of them by purchase, or conjoint access to them by rental, for the uses of the public. The East Prince’s-street gardens were formed in 1849–50, by means of a sum of £4,400 received from the Edinburgh and Glasgow railway Company. They extend from the Mound to Waverley-bridge, and from Prince’s-street to the vicinity of the Bank of Scotland. A level terrace about 100 feet broad, with a gravel walk along its centre 20 feet broad, extends along the north side of the gardens. This terrace is on the same level as the roadway of Prince’s-street, and is partly occupied by the Scott monument. The south margin of it is supported by a stone wall, and surmounted by a handsome parapet, four feet high, having pedestals at regular intervals for the reception of a series of six statues. Two fine flights of steps, each 15 feet wide at the top and branching out towards the bottom with circular wing-walls to nearly 30 feet, lead from the ends of the terrace to a walk about 10 feet wide along the middle of the face of the slope. The part of the bank above this walk is carpeted with sward; and the part below is planted with shrubbery, and interspersed with walks. A large portion of the ground at the bottom is occupied by the railway, and of course neither belongs to the gardens nor contributes anything to their beauty; but this, besides being enclosed by stone walls 4 feet high, is materially concealed by a grassy embankment gently rising to a level with the coping of the wall, and planted on the top with a hedge and shrubbery. The grounds on the skirts of the Mound and all on the south side have a much more diversified character, largely dashed with the rural and the sylvan, in consequence of the previous existence of old plantations and paths; and they combine with the symmetry of the north side, the flower-borders of the walks, the transit of the railway, and the environing romantic city views of the New town and the Old, of the North bridge and the Calton-hill, to produce the most extraordinary groupings of scenery, together with the most rapid and startling transitions, which exist anywhere in the world.

Baths.—Excellent facilities for summer sea-bathing exist at the parts of the frith nearest the city, especially at Granton, Seafield, and Portobello. The dwelling-houses of even the New town of Edinburgh are not near so generally provided with fixture-baths as the dwelling-houses in the new parts of Glasgow.

Good public baths exist for the upper and middle classes, both in the city and in the neighbourhood. Public baths for the working-classes were long desiderated by some of these classes themselves; and at length, in 1844, subscriptions were set a-foot to provide such a suite of them as should be accessible on the most moderate terms. The subscriptions began with spirit, but fell considerably short of the anticipated amount. A property was purchased at the Low Calton, and sold at a profit to the North British railway company. Another property was purchased in Nicolson-square, and fitted excellently up, but not without incurring a debt of upwards of £1,000, obtained on the personal obligation of some individuals, who necessarily became the immediate managers. "The number of baths taken," says a notice in 1852, "is gradually increasing,—a sure indication that a taste for the bath is spreading among the working and other classes in Edinburgh. There is in fact nothing to regret but the burden of debt which presses on the concern, and prevents the extension and cheapening of baths for workmen, for whose comfort no attention has been spared. The baths are open every lawful day for the inspection or use of visitors. In 1848, 17,529 baths were taken; in 1849, 19,465; in 1850, 22,913; and in 1851, 24,822. The money drawn in 1848 was £396 8s. 9½d.; and in 1851, £569 2s. 9d. Large public swimming baths, with very ample appliances, have subsequently been established at South Back of Canongate and at the foot of Pitt-street.

Judicial Courts.

National Functions.—Edinburgh is strictly the metropolis of Scotland,—the theatre of everything national which remained to the country after the union of its crown and its parliament with those of England. It is the central sphere of the officers of state, the theatre of a royal household, the residence of the Queen's body-guard for Scotland, and the seat of all parts of the general establishment for the administration of national justice, both politically and ecclesiastically, and at the same time, of course, the seat of the several jurisdictions for the city itself, and for the different kinds of territorial divisions which lie immediately around it.—So great is its character as the national theatre of justice, so vast the concourse to it in that character, so many the rich residents in it or well-paid functionaries in that character, that its people live by this, directly or indirectly, in almost as large proportion as the people of Glasgow or Manchester live by the cotton-manufacture.

Some of the officers of the state, such as the Keeper of the great seal, the Lord-privy-seal, the Lord-clerk-register, and the Lord-justice-clerk, do not necessarily reside in Edinburgh, and have either merely nominal duties or such as are performed by deputies. But the Lord-advocate, by a strange inconsistency, wields such vast, varied, local powers as would require his almost constant residence here though he could multiply himself threefold, and yet holds relations which compel him to spend a large proportion of his time in London. He performs the functions both of public prosecutor and of grand-jury; he can seize any suspected person without needing to name his informer,—can give liberty to an accused person at any period previous to trial,—and can interfere, even after trial, to avert capital punishment; he is the confidential counsel of the Crown in the national affairs of Scotland; he oversees and watches the whole country as to the conservation of its peace, and presides over or affects its entire executive; and as its functions are so

numerous, he delegates a portion of his power to a number of deputies.

The Court of Session.—The Court of Session is the supreme civil court of Scotland,—a court both of law and of equity, and possesses discretionary power. In fact, the business of this court comprises all that, in England, occupies the court-of-chancery,—the vice-chancellor and the master-of-the-rolls,—the courts of Queen's bench, and of common pleas and exchequer,—the court of admiralty (with the exception of prize cases),—the court of Doctor's commons, and the court of bankruptcy. The Court of Session at present consists of 13 judges. The Lord-president and 3 senior puisne judges form what is termed the first division of the court; the Lord-justice-clerk and 3 senior puisne judges form the second division of the court; and these two divisions are termed the Inner house. The remaining 5 puisne judges officiate in what is called the Outer house as Lords-ordinary, each sitting singly; the last appointed of those judges being more particularly occupied during the period of session in what is termed the Bill-chamber, or in those proceedings, of the nature of injunction or stay of process, which require the more summary interposition of the court. The great majority of cases—all cases indeed, with a few exceptions not worth mentioning here—are brought in the first instance, and in their earliest stage, before one or other of the Lords-ordinary; the record is made up before him, and under his superintendance, and the case prepared for decision. It is then argued before him, and, in general, decided by him. From his judgment there lies an appeal to the Inner house, in one or other of its divisions. The judgment of the division is final, subject only to appeal to the House of Lords. There is no appeal from one division to the other, nor from one division to the whole court. But either division may require the opinion of the other judges; in which case, judgment is given according to the opinion of the majority of the whole court.

The party who comes into court as plaintiff has it in his power to select, not only the Lord-ordinary before whom the cause shall in the first instance proceed, but also the division by which the judgment of the Lord-ordinary, if appealed from, shall be reviewed. The two divisions of the court, it may be proper to observe, are thus in all respects of equal and co-ordinate jurisdiction. The same may be said of the Lords-ordinary, with the exception of a few cases reserved for the exclusive determination of the Inner house; each Lord-ordinary having in himself, for the decision of the cases before him, the full jurisdiction of the court of session, and his judgment, if not brought under review of the Inner house, becoming the judgment of the court, not subject to appeal even to the House of Lords, which is only permitted when judgment has been given by the court of session in one of its inner chambers. The court thus constituted has, in virtue either of original or appellate jurisdiction, cognizance of all civil causes and matters, with the exception of those only which are reserved for the small debt courts, and of the revenue cases which are reserved for exchequer. It would be unnecessary, perhaps, to enter more minutely into the limits of its jurisdiction; but it may be proper to mention that the jurisdiction is exclusive as regards all questions of real property, and as to all other questions is subject only to this limitation, that no case under £25 value can be brought before it originally. Recent statutes, by abolishing the courts of admiralty and the consistory courts, have thrown into the court of session the whole business which came before those courts respectively. But besides this, though the court of

exchequer still remains as a separate jurisdiction, its judicial business is now discharged by two judges of the court of session, sitting as barons of exchequer.

A far more important duty, and one of great labour and responsibility, devolves upon the Lord-president, as Lord-justice-general, and the Lord-justice-clerk, and 5 puisne judges of the court of session under a separate commission, by which there is conferred upon them supreme criminal jurisdiction. The court of justiciary sits as occasion requires, in Edinburgh, for despatch of business, embracing there the criminal business of the three Lothians, with such cases as, from their importance or other reason, are brought to Edinburgh for trial. In each year, during the vacations of the court of session, there are three spring-circuits and three autumn-circuits, with an additional winter circuit for Glasgow. The business of the court of exchequer, and, during vacation, the business of the Bill-chamber department of the court of session, which require constant attendance, are discharged in rotation by those judges of the court of session who are not included in the commission of the court of justiciary. In enumerating the whole business thus devolving on the supreme judges of Scotland, the business of the Teind court (embracing all questions as to the modification of stipends to the clergy, and the respective liabilities of the parties subject to the payment of stipend) must not be overlooked, nor the still more important duty of presiding in the trial of civil cases by jury, where under recent statutes that course of procedure is resorted to.

The Law Faculties.—The faculty of advocates consists of between 400 and 500 harristers, who have the privilege of pleading before the supreme courts. Their affairs are presided over by a dean, and managed by a council, a treasurer, and a clerk; and are subject to the authority of the court of session. Every candidate for membership is examined on the Roman and the Scottish law, and must pay £100 toward the common fund, and £100 toward the Advocates' library. Members of the faculty alone are eligible to the judgeships of the court of session, the sheriffships of the Scottish counties, and several important offices and dignities connected with the government. The faculty, till about the commencement of the present century, was exclusive and aristocratic, requiring the adventitious qualifications of rank and noted ancestry, in addition to those which were strictly personal; but, though now more popular in constitution, and looking only to the talents and the scholarship of its members, it is probably the most influential body of the metropolis, and everywhere commands respect. A clerk, appointed by an advocate, is entitled, after paying fees and being found qualified, to act as an attorney in the supreme courts, and is called an advocate's first clerk.

The faculty of writers to the signet includes from 600 to 700 individuals, who are entitled to act in the supreme courts, and have the sole right of making documents valid by the signet or seal of her majesty. They were originally and literally clerks in the secretary of state's office. Their business was to record and issue writs passing the signet, on which various proceedings took place. They still receive commissions from the keeper of the signet; but, though never erected into a corporation, it has been held that they have acquired the rights and privileges of one by usage. Their advantages over the notaries and lawyers' clerks arose from their keeping together as a body. For a long period after advocates' clerks were recognised as a

sort of solicitors, writers to the signet not only excluded themselves, but were excluded by the court, from acting as agents. Tempted, however, by the growing emoluments of law-agency, and aided by qualifications superior, it is believed, to most of the advocates' clerks, their interferences, originally surreptitious, were at length acknowledged by the court, and their commission as writers to the signet is now held to authorize their acting also in the capacity of solicitors before all our highest courts. Their peculiar privileges as writers to the signet are of a trifling nature; and their peculiar duties may also be understood in the course of two months. Their library, however, is valuable, and their corporation funds are extensive. Their supporting a lecturer on conveyancing, and a widow's scheme, add to their consequence.—The solicitors before the supreme courts of Scotland are, as agents, on a footing, in every respect, with writers to the signet. The only distinction is, that the latter had a connection with the court, as clerks to the signet, before they had any connection with it as agents.

Miscellaneous Courts.—The high court of admiralty consisted, after the Union, of a judge appointed by the Lord-vice-admiral of Scotland, and functionaries of inferior jurisdiction appointed by the judges; and, in civil causes, it was subject to review by the court of session. The magistrates of Edinburgh also possessed an admiralty jurisdiction over the county of the city, and to the midwaters of the frith of Forth, limited on the west by a line drawn from Wardie brow to the Mickrie stone; and on the east by a line drawn from the extremity of the Pentland hills to the middle of the frith east of Inchkeith.—The Commissary court, or head consistorial court of Scotland, was, as to its business, nearly all merged in the court of session in 1830. A power of confirming the testaments of persons having property in Scotland who died abroad, remained with the officers of the defunct court, to devolve at their death to the sheriff of Edinburghshire.—Two deputies perform some unimportant or comparatively trivial duties of the Lyon-court, or, more strictly, of the sinecure office of Lyon-king-at-arms.—The sheriff-courts of the county are held in Edinburgh; but are not different from those of other counties.—The convention of royal burghs, a court constituted in the reign of James III., meets annually in Edinburgh, and is presided over by the Lord-provost of the city. It consists only of delegates chosen year by year from the individual royal burghs, yet has all the characters of a corporation, with qualities and privileges which have been conferred by statute. It discusses and determines questions of trade in which the interests of the burghs may be concerned; and before dissolving itself at the end of its sittings, it appoints a committee who wield its powers till the election of its successor. It has no funds, yet possesses a statutory power to assess the burghs annually for the supplies of the current year.

Ecclesiastical Courts.—The general assembly of the Church of Scotland holds a full meeting annually in May. A presbytery of fewer than 13 parishes, delegates to it 2 ministers and 1 elder; a presbytery of fewer than 19, but more than 12, delegates 3 ministers and 1 elder; a presbytery of fewer than 25, but more than 18, delegates 4 ministers and 2 elders; a presbytery of fewer than 31, but more than 24, delegates 5 ministers and 2 elders; and a presbytery of more than 30, delegates 6 ministers and 3 elders. Each royal burgh sends one member; Edinburgh sends two; and each university sends one. The Assembly has an ecclesiastical president or moderator, elected by the votes of its members,

and a civil president, or overseer, the representative of her Majesty, or, as he is called, the Lord-high-commissioner, appointed by the Crown. The former is the real president, acting very much as if the civil president did not exist. A commission of the assembly, consisting of a large portion of its members, are invested with all its ecclesiastical powers to despatch business which cannot be overtaken during the 10 days of its full session, and to watch over the interests of the church throughout the country; and this body holds several meetings in the course of the year.—The synod of Lothian and Tweeddale meets at Edinburgh on the first Tuesday of May and November; and the presbytery of Edinburgh, on the last Wednesday of every month except May.

The general assembly of the Free church of Scotland—which has a constitution exactly similar to that of the Established church, but without any of the civil elements—also holds a full meeting in Edinburgh annually in May; and a commission of it, exactly similar to the other's commission, meets here also in August, November, and March. The Free church's synod of Lothian and Tweeddale, and its presbytery of Edinburgh, likewise hold their meetings here.—The synod of the United Presbyterian church holds its meetings generally in Edinburgh, but occasionally in Glasgow. The Edinburgh presbytery of that body meets monthly in Edinburgh.—The synod of the Reformed Presbyterian church, and the synod of the United Original Seceders share their favours between Edinburgh and Glasgow.—The annual meetings of the Congregational Union of Scotland, as also meetings of other congregational bodies, have not the character of courts, and regard Edinburgh as only one of several great centres of influence.—Edinburgh is the seat of a bishop of the Scottish Episcopal church. It is the residence also of a Roman Catholic bishop.

Municipal Affairs.

The Town-Council.—The city of Edinburgh is governed by a Lord-provost, magistrates, and council, who are elected according to the provisions of a special act passed in 1856. The Lord-provost is styled right honourable, is *ex officio* high-sheriff of the royalty, and has precedence of all official persons within his jurisdiction. The magistracy consists of a lord-provost, a dean-of-guild, a treasurer, and six bailies, each of whom is *ex officio* a member of the council. The number of councillors is 39. For the purposes of the election the city is divided into wards or districts. The number of municipal electors in 1862 was 8,833. One-third part of the councillors go out of office every year, but are eligible for re-election. The provost, bailies, treasurer, and other office-bearers, are elected by the councillors. The provost's term of office is three years, and he is eligible for immediate re-election. The other office-bearers go out at the expiration of one year, and cannot be re-elected until each shall have been out of his particular office one year; but this does not prevent their being kept in the council from year to year by their being elected to fill the different offices in succession.

Previous to the burgh reform act, the corporation was of a close character, though not altogether without an admixture of popular representation. The return made to the house of commons in 1793, describing the constitution as settled by the authority of a decret-arbital of King James VI., 1583, a decret-arbital of Lord Islay, 1729–30, and two acts of council, 1658 and 1673, was as follows:—"Council consists of 17 merchants, 6 deacons, and 2 trades'

councillors, in all 25. These shorten the leets for 14 deacons, and elect 6 of them council deacons. They may continue two years. The 14 deacons are elected as follows:—Each corporation or trade vote a list, or leet of six, which they give in to the council, who return three of the six for the election of a deacon, who is chosen by a majority of the votes of the members of the respective corporations. The 25 members of council elect three merchants' and two trades' councillors. The old and new council, consisting of 30, leet for the office-bearers, who are elected by them and the eight deacons not of the council, making in all 38. Thereafter the council consists, as formerly, of 25; but the eight extra deacons have a vote in every case exceeding the value of £1 13s. 4d. The magistrates consist of a lord-provost, dean-of-guild, and treasurer, each of whom may be re-elected for one year more, and four bailies, who cannot be re-elected into the same office the succeeding year; and they must be out of council one year before they can be put in the leet for bailies; each of these office-bearers remains in council one year, *ex officio*, as councillors. A bailie, though he cannot be re-elected until he be out of council at least for one year, yet the sett does not prevent his being kept in council a considerable time, by being elected into other offices, such as treasurer, dean-of-guild, and provost, one after the other."

The Magistrates' Jurisdiction.—The magistrates, prior to the act of 1856, had ordinary burgh jurisdiction, civil and criminal, over only the ancient royalty and the extended royalty; but now they have it over all the parliamentary burgh. This is defined by a line drawn from a point on the Leith and Queensferry road, 400 yards west of the Inverleith road at Goldenacre, straight to the north-western corner of John Watson's hospital; thence straight to the second stone bridge on the Union canal; thence straight to the Jordan or Powburn at the enclosure of the Morningside lunatic asylum; thence down that burn to a point on it 150 yards below the transit of the Carlisle road; thence straight to the summit of Arthur's seat; thence straight to the influx of a burn at the west side of Lochend-loch; thence straight to the junction of Pilrig-street and Leith-walk; thence along Pilrig-street and the Bonnington-road to the Leith and Queensferry-road; thence along that road to the point first described. They have also, within these bounds, exclusive jurisdiction as to weights and measures, and co-ordinate jurisdiction with the sheriff as to offences against the public houses act. They likewise wield the authority formerly possessed by the police commissioners, and form committees to carry out police acts. They are also commissioners of supply for the city, and likewise members of the commission of the peace for the county of the city; which extends beyond the parliamentary burgh toward the frith of Forth. The lord-provost too is lord-lieutenant of the county of the city; and the lord provost, the junior bailie, and the dean of guild, are members of the city of Edinburgh paving board. The town-council also control the water company, govern Heriot's hospital and Trinity hospital, are patrons of the High School and of thirteen of the city churches, and appoint one of the assessors and four of the curators of the Edinburgh university. The chief committees of the council are the lord provost's, including watching and coal weighing; markets, including slaughter-houses; cleaning and lighting, including workshops; streets and buildings, including drainage, public parks, and bleaching-greens; plans and work, including fire-engines and police house department; police appeals; education; law; tho

hospitals; and the treasuries. Ordinary courts for the city, in all the departments of the burgh jurisdiction, are held daily; a sequestration court for the city is held every Friday; and a ten merk court and a small debt court for the city and county of the city are held every Monday. The ten merk court determines claims of servants' wages to any amount, and claims of other kinds for sums not exceeding 11s. 1½d., and is held by the bailies. The small debt court is held by the justices of peace. Much power and patronage formerly possessed by the town-council was taken from them by the University act of 1858 and the annuity tax abolition act of 1860.

The City Finances.—The revenues of the city are now derived principally from landed property, feu-duties, and market-dues; but were formerly derived also from the shore-dues of Leith, from imposts on wines and malt liquors, from the annuity tax for ministers' stipends, and from the seat-rents of the city churches. The amount of it in 1788 was about £10,000; in 1841-2, £19,884 6s. 9d.; and in 1853-4, £33,247 2s. 6½d. The value of the whole heritable and moveable property of the city in 1833,—exclusive of the Leith dues, the church-patronage, and the dead-worth of the High-school, the council-chambers, and the court-rooms—was £271,657. But notwithstanding this apparent opulence, the corporation, after having long lain under heavy embarrassment, was in 1833 declared insolvent.

There is not sufficient evidence that the disastrous state of the city affairs was caused by actual embezzlement or fraudulent malversation. Exaggerated expectations of the continued and indefinite increase of the city in prosperity and size may have led the managers of the corporation into an increase of expense far disproportioned to the really considerable growth of the revenue. Offices were multiplied, and salaries raised; a spirit of litigation prevailed; great profusion took place in the expenses of civic parade and entertainments; and extravagant sums were expended on public buildings and other public works, as ill-adapted in general to their object of embellishing the city as they invariably were disproportioned to its finances. The expense of law-proceedings for the city, for the period from 1819 to 1832 inclusive, was £24,162; and for the same period the expenses connected with passing local acts of parliament amounted to £12,156. For the year 1819 the cost of city-entertainments was £782. In 1820, it was £1,066; and the election dinner of the magistrates that year cost £533. St. George's church was built on a plan estimated at £18,000, but cost £33,000. The new High school was erected at a cost of about £30,000, of which £22,973 was defrayed by the city. A separate account, under the head of petty disbursements, was kept, which averaged for the last five years of the old regime about £1,200 per annum. The expense of keeping up the causeways, repairs of property, advances for college and churches, &c., was merely stated as casual payments; and whenever the expenditure exceeded the revenue, reference was made to a large sum of casual payments which, it was stated, would not likely occur again, although they always did occur. Some debts also, which had originated in transactions with the Crown, were of long standing; and a debt to government of no less than £228,374, for the works of Leith docks, had been recently contracted. In 1723, the total debt was £78,164; and in 1833, exclusive of the sum for the Leith docks, it was £407,181.

An act of parliament legalising a settlement was obtained in July 1838. "By this act the town-council are relieved of their responsibilities and of all concern with the Leith docks. The manage-

ment of these was placed under commissioners. Government agreed to postpone the interest on the debt due; an annual sum of £2,000 was secured to the city clergy, in lieu of the merk per ton, which was abolished; and £2,500 for the payment of the necessary expenses of the University and High-school. Another sum of £3,180, was appropriated to the city creditors, making in all £7,680 of annual payment to the city of Edinburgh out of the revenues of the Leith docks and harbour. The remaining revenue was to be appropriated, under the direction of the commissioners, to the improvement of the harbour, and the residue, if any, to be paid towards the ultimate extinction of the government debt. The affairs of the city of Edinburgh and those of Leith were also entirely separated. The arrangement with the creditors was, that for every hundred pounds of debt they were to receive a bond bearing three pounds of perpetual annuity—that these bonds were to be transferable, and the debt redeemable only by the payment of the full sum, or by purchasing the bonds at their market value. The revenues and the properties belonging to the city were divided into two classes. The first class contains all the alienable revenues, which are conveyed in security to the creditors for the payment of their annuities. The gross amount of this sum was calculated at the time to amount to £17,554, including an annuity of £3,180, payable from the harbour of Leith; and after deducting £1,600 as the expense of management, the net produce was taken at £15,954. The claim of the creditors of three per cent. on the whole amount of their debts amounted to £12,000 secured over the above sum. The second class contains the inalienable revenues, which are specially secured to the city, and declared by the act not to be liable, either directly or indirectly, for any debts or obligations contracted by the city prior to the 1st of January 1833, when it was declared to be bankrupt. The gross amount of this sum is £5,030; the net produce is £4,294." The income since then has grown apace; and in the year 1861-2, it amounted, exclusive of police revenue, to £40,729.

Police Establishment.—After the battle of Flodden, the citizens began voluntarily to perform the duty of what was called the watching and warding of the city; and did it in rotations of four. In 1648 a paid guard of 60 men was appointed to do all the duty, under the command of a captain and two lieutenants; but it proved distasteful to the inhabitants, and soon gave way to the resumption of the voluntary system. About 1689, another paid body of much greater permanency, and 126 strong, was raised under authority of an act of parliament; they were called the town-guard, and had their rendezvous in the lower portion of the old tolbooth; and they perambulated the streets at night, clothed in old military costume, with long blue coats and cocked hats, and carrying each a huge Lochaber axe. There was, in addition to these, a militia regiment, called the trained bands, comprising 16 companies of 100 men each, with the Lord-provost as colonel at its head; but this was called out only on great occasions, such as for some state pageant, or on the anniversary of the King's birth-day.

A better system was inaugurated in 1805, improved in 1812 and 1822, and matured in 1848. The territory comprehended by it included all the parliamentary burgh, together with a tract to the north; but the latter was transferred by the municipal extension act of 1856, to the police district of Leith. The administration was vested in commissioners, some ex officio, some elected by certain public bodies, most elected by rate-payers; and was transferred, by the municipal extension act, to the magis-

trates and town-council. The establishment comprised, in 1861, a superintendent, a first-lieutenant, 4 other lieutenants, a surgeon, an inspector of lighting and cleaning, 2 inspectors of nuisances, a salesman of manure, a superintendent of streets and buildings, an inspector of markets, a master of fire-engines, a billet-master, and a force of 339 men. The superintendent's salary was £400. The assessment is levied from houses and shops according to the rental, and varies in rate to suit the exigencies of expenditure. In the year 1851-2 it amounted to £32,123, and was levied at the rate of 1s. 5d. per £1 on rents at and above £10, and 8d. on rents below £10; and in 1861-2, it amounted to £45,621, but then included the amount of imposts in lieu of the annuity tax, as enacted in the previous year.

Two series of statistics throw light on the action of the police force, and on the state of public crime and immorality. The first series exhibits the crimes and misdemeanours reported at the police-office during the 3½ years from the commencement of 1842 to the 30th June 1845. The total number of persons apprehended during each year ranged from 10,000 to 12,000. The petty thefts gave an average, in round numbers, of fully 4,000 per annum; while, under the heads, "assaults and breaches of the peace," "beggars and vagrants," the average number was 5,000. The crimes of a more serious character, such as housebreakings, robberies, &c., were in 1842, 531; in 1843, 415; in 1844, 378; and for the first half of 1845, 183. In regard to housebreakings, the number of cases reported for the three years, was 271, 265, and 222 respectively, and for the half-year 101. A new system of night watching was attended with success. In 1842, about 5 out of every 7 cases reported were committed during night; in 1844, the proportion was reduced to 4 out of 7; and for the first half of 1845, not only were the cases of housebreaking much less frequent, but those committed during day exceeded those during night by 55 to 46, the latter number being little more than half as many as were committed by night in the corresponding period of any of the three previous years. The number of drunken cases brought before the police court in 1842, was 4,225; in 1843, 5,400; in 1844, 4,900.—The second series of statistics gives the totals of apprehensions, punishments, and cases of drunkenness in the years 1856-60. The number of persons brought before the judges of police in 1856 was 9,260, or 4,716 males and 4,544 females; in 1857, 8,552, or 4,594 males and 3,958 females; in 1858, 8,650, or 4,635 males and 4,015 females; in 1859, 10,652, or 5,604 males and 5,048 females; in 1860, 9,501, or 4,979 males and 4,522 females. The number punished was 5,748 in 1856; 5,350 in 1857; 5,651 in 1858; 7,519 in 1859; 6,708 in 1860. The numbers admonished was 1,659 in 1856; 1,563 in 1857; 1,490 in 1858; 1,670 in 1859; 1,393 in 1860. The number who were drunk when apprehended for crimes and offences, or who were found drunk in the streets and kept by the police till they became sober, was 7,736 in 1856; 7,785 in 1857; 8,308 in 1858; 8,753 in 1859; 7,016 in 1860. The number of drunk persons taken in charge on Saturdays, Sundays, and Mondays, was 3,365 in 1856; 3,530 in 1857; 3,742 in 1858; 4,189 in 1859; 3,291 in 1860. The per centage of drunk persons in the apprehensions for crimes or offences was 39 in 1856; 43 in 1857; 52 in 1858; 46 in 1859; 44 in 1860.

The Trades' Corporations.—The incorporated trades, formerly represented in the town-council, are:—1. Waulkers; constituted by seal of cause, 20th August, 1500. 2. Surgeons; seal of cause, 1st July, 1505; crown charters, 13th October, 1506, 11th May, 1567, 6th June, 1613; statutes, 1641,

1670; crown-charter, 28th February, 1694; statute, 1695. 3. Skinners; seals of cause, 1586, 1630. 4. Furriers; act of council, 7th September, 1593, 5th April, 1665. 5. Goldsmiths; seal of cause, 20th August, 1581; crown-charters, 3d January, 1586, 14th December, 1687. 6. Hammermen; seal of cause, 2d May, 1483. 7. Wrights; act of council, 15th October, 1475. 8. Masons; act of council, 15th October, 1475. 9. Tailors; seals of cause, 26th August, 1500, 20th October, 1531, 11th November, 1584; royal charters, 18th November, 1531, 4th June, 1594. 10. Baxters; before 1522. 11. Fleshers; seal of cause, 11th April, 1488. 12. Cordiners; seals of cause, 28th July, 1449, 26th November, 1479, 1st February, 1586; crown-charter, 6th March, 1598. 13. Websters; seals of cause, 31st January, 1475, 27th February, 1520. 14. Bonnet makers; seal of cause, 31st March, 1530; —, 1684. The corporation of candlemakers was constituted by charter from the magistrates, 5th September, 1517; confirmed by royal charter, 4th May, 1597; and ratified by act of parliament, 17th July, 1695, which conferred the usual privileges of incorporated trades. The corporation of barbers, originally united with the surgeons, had a separate constitution by seal of cause, granted by the town-council in 1722. These two corporations, however, were not represented in the conveyance or the town-council. All the trades chose their own deacons.

The Merchants' Company.—The Merchants company is intimately connected with the guildry, and has the virtual patronage of three public charities. The company was established by royal charter, dated 19th October, 1681, which erected "the then hall present merchants, burgesses, and guild brethren of the burgh of Edinburgh, who were importers or sellers of cloths, stuffs, or other merchandize, for the apparel or wear of the bodies of men or women, for themselves and successors in their said trade in all time coming, in a society or company, to be designed the Company of Merchants of the city of Edinburgh," which was ratified by act of parliament, 1693. A subsequent charter, and two successive acts of parliament, the last dated 28th May, 1827, have regulated the dues of entry, and authorized the company to admit all persons "being merchants, burgesses, and guild brethren, or entitled to be chosen merchant-councillors or magistrates of the city of Edinburgh." The rate of entry-money, as regulated by the last statute, is £63. The company's stock, at September, 1834, was £23,776. The income from interest of money, rents of real property, and entry money, &c., amounts to about £1,100 per annum, and is expended chiefly in supporting widows and decayed members.

Separate Jurisdictions.—Three portions of the city, situated beyond its old royalties, but lying contiguous to its old streets, and municipally incorporated with it by the municipal extension act of 1856, had previously separate jurisdictions. These are Canongate, Portsburgh, and Calton.—Canongate was one of the most ancient burghs of regality in Scotland, and had charters from David I., Robert I., and Robert III. The abbots of Holyrood had the superiority of the burgh, and are stated to have appointed as its earliest sett two bailies, a treasurer, and council, with right to make burgesses and craftsmen, and to hold courts civil and criminal, with privilege and liberty of chapel and chancellery, by issuing briefs, and serving the same before such courts. These powers and privileges, with certain feu-duties and other property, they afterwards conveyed to the community, reserving nothing but the bare superiority of the burgh. The abbots continued superiors till the Reformation. Robert Stewart,

commendator of Holyrood, exchanged the abbacy for the temporality of the bishopric of Orkney, with Adam, bishop of Orkney. The superiority passed successively into the hands of Sir Lewis Bellenden of Broughton, and others, and was at last acquired by the city of Edinburgh about the year 1630. The only property belonging to the burgh consisted of the superiority of certain properties within the burgh, the right to levy petty customs, market-dues, and causeway mail, and an annual allowance from the police-establishment of Edinburgh, "in lieu and place of 1-4th part of the monies arising from the sale of the dung or fuilzie of the streets of Canongate and Pleasance," which had previously belonged to the burgh. The burgh had no debt; and the magistrates had not for a number of years exercised their burghal jurisdiction in criminal matters. They held a weekly court for civil causes, in which they disposed of the same classes of questions that are competent to sheriffs and magistrates of royal burghs. They also held weekly a small debt court, in which causes not exceeding £5 sterling were tried *in vacuo*. The magistrates acted also as justices of the peace within the territory of the burgh, in all matters falling under the cognizance of justices; and were assisted by an assessor, who was a member of the faculty of advocates, and was appointed by the town-council of Edinburgh as superiors of the Canongate. The jurisdiction extended over the whole territory of the burgh, including Canongate-proper, the Abbey of Holyrood-house, Pleasance, North Leith, and Coal-hill. None but burgesses or freemen of the burgh were entitled to carry on trade or manufactures within the bounds; and in those callings which fell within the exclusive privileges of the incorporated crafts, it was necessary, besides the qualification of burgh, to be an entered member of the particular craft. The fee for admission as burgh was, to a stranger, £3 3s.; but to the children of a burgh only £1 11s. 6d. The number of burgesses could not be exactly ascertained; but it had been estimated to amount to about 400. There are eight incorporated crafts, all united under one convenery, and possessed of funds, which are appropriated to the support of poor members and the widows of deceased members. These are hammermen, tailors, wrights, bakers, shoemakers, weavers, fleshers, and barbers.

The Abbey sanctuary, which was noticed in the conclusion of our section on "Holyrood," has a court of its own, of a peculiar nature and jurisdiction. The sanctuary comprehends all the abbey yard, and all the Queen's park. In the times of Romanism, it gave protection from every kind and cause of legal prosecution; and after the Reformation, it continued to be regarded as an asylum for debtors, and perhaps petty offenders; and it still retains its privilege of exemption from personal arrest for civil debts. This privilege has been recognised by various decisions of the supreme court, and by an act of the Scottish parliament in 1696, and subsequently by the various acts of the imperial parliament called the bankrupt acts. The baillie of Holyrood is appointed by commission from the Duke of Hamilton, as hereditary keeper of the palace, and holds his office during pleasure. His commission gives him power to appoint a substitute, and to name fiscals, clerks, and other officers of court. The jurisdiction of the baillie is that of regality; and it was not affected by the act abolishing heritable jurisdictions, being a royal residence and a regality independent of a superior. The jurisdiction is both criminal and civil; and, from the diet-books of court, the baillie seems to have exercised it at different times to a very consi-

derable extent. It is in some respects privative. The baillie alone can grant warrants against persons within his jurisdiction, and his concurrence is necessary to the civil warrant of other judges.

The burgh-of-barony of Portsburgh comprehended two districts,—Easter and Wester Portsburgh, which are discontiguous. Easter Portsburgh lies wholly to the east of Bristo-street, and has been described as comprehending the east side of Bristo-street from Bristo-port southward, Potter-row, Lothian and South College-streets, Drummond-street to opposite to Adam-street, and Nicolson-street to nearly the entry to the York hotel on the west, and to the Surgeon's hall on the east. Wester Portsburgh lies wholly to the west of Wharton-lane and the Vennel, and has been described as comprehending the main street of Wester Portsburgh on both sides, from the old corn-market and foot of the Vennel to Main-point; the whole of Laurieston, both sides, from Wharton-lane to Lochrin, including Portland-place, Cowfeeder-row, on the west, and to Burntsfield-links on the east, including Home and Leven streets. There lies interjected between the two the whole territory along the southern boundary of Heriot's work and the old city-wall, comprehending the west side of Bristo-street, Park-place, Teviot-row, the Meadow-walk, the grounds of Watson's hospital, &c. This burgh had no corporation property, revenue, or debts. A baron-baillie and two resident baillies were annually appointed, and there were a clerk and a procurator fiscal. These were all officers appointed by the city of Edinburgh in its character of baron and superior; and any expense connected with their establishment was defrayed by the city. There had been no jurisdiction exercised of late years within the Portsburghs, either by the baron or resident baillies. Formerly courts were occasionally held for recovery of debts under 40s., and for deciding summary complaints for thefts, breaches of the peace, &c. But for a good number of years the former had been taken to the small debt courts of the county, and the latter to the police court. There were no burgesses and guild-brethren in Portsburgh; but there were eight incorporated trades deriving their rights from John Touris of Inverleith.

The lands of Calton formed part of the barony of Restalrig, belonging to Lord Balmerino. The magistrates and council of Edinburgh having bought them from Lord Balmerino, obtained, in 1725, a charter from the Crown, disjoining them from the barony and burgh-of-barony of Restalrig, and annexing them to the city of Edinburgh. This charter, however, does not erect the lands into a burgh-of-barony. The town-council appointed each year one of their number to be baillie of Canongate and Calton; but in the latter no judicial functions were exercised by him, nor does it appear that he had right to exercise any jurisdiction. The bailliary of Calton extended from the brewery a little to the eastward of the Shotts foundry at the north back of Canongate, westward along the street so called, including all the houses next the Calton-hill, and turning round and including the High Calton, passing through the archway of the Regent-bridge along Calton-street, and down the street leading to Wordsworth's stables, including all the buildings on the side of that street next the hill, and down to the Greenside well at the north-eastern extremity of the city's property of Calton-hill; whence the boundary crossed over the hill by the wall of the Regent-terrace garden and the east end of the High school to the brewery above-mentioned, all the intermediate property being included. As observed, however, in a report by the town-council, "it consisted of sev-

eral fragments, the limits of which, after the erection of the Regent-bridge and the extension of the royalty in that quarter, were extremely difficult to ascertain." The only corporation connected with that of the Calton was that of the incorporated trades.

Social Affairs.

The Classes of Society.—"A comparison of the population returns of Edinburgh with those of five

other of the large towns of the kingdom," says Black's Guide through Edinburgh, "will enable the reader to form some idea of the proportions which the professional and other liberally educated classes bear to the other orders of society. The returns for 1831 admitting of a more accurate classification than those of 1841, we adopt the former, as being more convenient for our present purpose.

Names of Towns and their Suburbs.	Total population.	Males Twenty Years of Age.					Male Servants.	Female Servants.
		Employed in Manufactures, or in making Manufacturing Machinery.	Employed in Retail or Handicraft Trades.	Capitalists, Bankers, Professional, and other liberally educated Men.	Labourers Employed in Labour not Agricultural.	Other Males (except Servants.)		
Edinburgh & Leith,	161,909	792	19,764	7,463	4,448	2,296	1,422	12,429
Glasgow,	202,426	19,913	18,832	2,723	574	4,012	946	8,006
Liverpool & Toxteth Park,	189,242	359	21,208	5,201	16,095	1,214	363	9,033
Manchester & Salford,	182,812	15,342	17,931	2,821	7,629	1,695	398	3,985
Bristol & Barton-Regis,	103,886	415	11,270	2,654	7,312	1,867	814	5,702
Birmingham,	146,986	5,028	19,469	2,388	5,292	1,371	966	5,233

This table, compiled from parliamentary documents, not only demonstrates the large proportion borne by the educated ranks to the general mass of the population, but from the number of male and female domestic servants it is also obvious, that the average number of families in comfortable circumstances must exceed that of any of the other large towns of the empire. It must not, however, be concluded, that there are many of the inhabitants of Edinburgh in circumstances of great opulence. In this respect it probably cannot vie with the other towns in the table; but competence is as generally possessed, and comfort as widely diffused, as in any other community of like magnitude."

Edinburgh is also, in the truly national sense of the word, metropolitical. "Nothing can be more erroneous," remarks Mr. Lorimer, in his recent brochure on the Universities of Scotland, "than to liken Edinburgh to such places as Bath or Cheltenham or any of the mere pleasure-towns of England. Edinburgh, after her quiet fashion, is a busy place enough, and London excepted, unquestionably fulfils the idea of a capital more than any other city in this country. She has nothing of that air of a provincial residence, which, while it confers on Dublin a certain external splendour, unfortunately renders her more like to what we imagine Calcutta or Montreal than to the capital of any European country, however small. There is no foreign ruling class in Edinburgh; what she has is Scotch, and what Scotland has is hers. The true centre of Scottish life, from her, as from the heart of the land, the life-blood of Scotland issues forth, and to her it returns freely again. Every Scotchman finds in her a common centre for his sympathies. The inhabitants of Glasgow, Aberdeen, Dundee, Perth, and the like, have no bond of union other than as the inhabitants of a common country; but every man of them feels that he has a tie to Edinburgh. It is to her that he looks for his news, his praise, his influence, his justice, and his learning. And there is always a large body of sojourners within her walls, who compose a fluctuating, but as regards both wealth and position, by no means an unimportant part of her population. These persons, we believe, are attracted hither for the most part by

one or other of the following causes,—the beauty of the place, the excellence and cheapness of the elementary education which they can here procure for their families, and the prospect which Edinburgh society holds out of their being able to gratify those refined and cultivated tastes which they may have elsewhere formed."

The city has also a calm steady character, in keeping with the predominance of legal and scholastic pursuits from which it derives its chief maintenance, and totally contrasted to the fluctuations, excitements, and mercantile convulsions which produce so much misery in manufacturing towns. On the other hand, as may be inferred from some of our statements on its sanitary condition, its poorer classes are excessively poor, not from any peculiar bad tendency in themselves, nor merely from the bad influence of their unhealthy domiciles, but chiefly from the want of scope for industry and of healthy stimulus to exertion. There is likewise a disproportion of females over males much greater than in almost any other town in the empire. This in the city and suburbs, exclusive of Leith, in 1831, out of a population of 136,301, was no less than 15,556; and in 1861, out of a population of 168,121, was 18,317. Two reasons have been assigned for so curious a phenomenon; one, the unusually large proportion of female servants in the city, tending to draw girls hither from the country; the other, the paucity of general industrial occupation, forcing young men to seek employment elsewhere, while compelling their sisters to remain in their native town.

Expenses of Living.—The rent of self-contained houses ranges from £40 to £150; and that of flats, or single floors, ranges from £10 to £40. The number of male householders, in 1859-60, at a rent of £10 and upwards, was 7,863; at from £6 to £10, 3,947; under £6, 10,248. The number who had no profession, business, or known occupation, was 1,726. The direct local taxes are levied on four-fifths of the actual rent. The following comparative statement of other expenses in Edinburgh, in the years 1790, 1821, and 1850, will enable readers to compare this city both with itself and with other places:—

	1790.	1821.	1850.
Assessed taxes, rent £45, and 12 windows,	£3 18s. 0d.	£10 15s. 0d.	£2 3s. 9d.
Beef, mutton, per lb.,	2½d. to 4d.	7d. to 8d.	5½d. to 7d.
Fowls, each,	10d. to 1s.	2s. to 2s. 6d.	1s. 6d. to 2s.
Eggs, per dozen,	3d. to 4d.	9d. to 1s. 6d.	9d. to 1s. 1d.
Butter, per lb.,	9d. to 10d.	1s. 4d. to 1s. 6d.	10d. to 1s. 2d.
Bread, 4 lb. loaf,	5½d. to 6d.	9d.	5d.
Oatmeal, per holl,	12s. to 13s. 4d.	20s. to 21s. 4d.	8s. to 12s.
Tea, black, per lb.,	4s. to 5s. 6d.	7s. to 10s. 6d.	4s. to 5s. 6d.
Lump sugar, per lb.,	6d. to 7d.	11d. to 1s. 2d.	6d. to 7d.
Pepper, per lb.,	1s. 6d. to 1s. 9d.	4s.	1s. 4d.
Salt, per bushel,	4s.	8s.	4s.
Soup, per stone, 16 lb.,	6s. 8d.	12s.	8s.
Candles, per do.,	6s. 8d.	13s. 4d.	6s. 8d.
Port wine, per doz.,	15s. to 20s.	42s. to 50s.	24s. to 36s.
Rum, per gallon,	9s. to 12s.	21s. to 22s.	12s.
Brandy, per do.,	10s. to 14s.	24s. to 30s.	24s.
Aqua vitæ, per do.,	2s. 6d. to 3s. 6d.	10s. to 15s.	9s.
Porter, per dozen,	3s. 6d. to 4s.	6s. to 8s.	4s. 6d. to 6s.
Ale, per do.,	3s. to 4s.	6s. to 8s.	4s. to 6s.
Coals, per cwt.,	6d.	9d. to 10d.	6d. to 10d.
Potatoes, per boll,	6s. 8d.	13s. 4d. to 16s.	12s. to 14s.
Superfine cloth per yard,	19s. to 19s. 6d.	30s. to 31s. 6d.	20s. to 25s.
Making a suit of clothes,	8s. to 10s. 6d.	26s. to 30s.	15s. to 30s.
Hats, each,	8s. to 14s.	26s. to 30s.	10s. 6d. to 30s.
Top hoots, per pair,	21s.	45s. to 50s.	40s. to 46s.
Boots, do.,	10s. to 14s.	30s. to 36s.	18s. to 24s.
Shoes, do.,	5s. to 6s.	10s. 6d. to 14s.	9s. 6d. to 11s. 6d.
High school fees, per quarter, each branch,	5s.	15s.	25s.
College, per class,	£3 3s.	£5 5s.	£4 4s.
Music, per 12 lessons,	12s. to 20s.	31s. 6d. to 63s.	44s. to 84s.
Drawing, per do.,	7s. to 10s.	12s. to 21s.	10s. 6d. to 84s.
Apprentice fee to a writer to the signet,	£40	£150	£200
Female servants' wages per annum,	40s. to 60s.	£6 to £12	£8 to £12
Board and lodging for a single person per annum,	£30 to £50	£80 to £100	£50 to £100
Horse hire, per day,	2s.	7s. to 9s.	7s.
Post chaise, per mile,	1s.	1s. 6d.	1s. 3d.
Bed-room, per night,	1s.	2s. 6d. to 3s. 6d.	2s. to 2s.
Breakfast,	8d. to 10d.	1s. 6d.	1s. 6d. to 2s. 6d.
Proceedings brought before Court of Session,	£3 3s.	£7 to £8	£7 to £8

Amusements.—Edinburgh has a strong passion for almost every kind of both private and public amusement. No place can exceed it in the constant, rapid, giddy whirl of social intercourse. The gravity of its literary influences goes all into gas with multitudes, and takes the firm solid form with but comparatively few. The drama, however, is much less in vogue than might be expected. Music, especially in the form of grand harmonies, is more in repute, and has of late years been enthusiastically pursued in great concerts, oratorios, and operas. A rush is made by multitudes to the Leith and Musselburgh races. The attractions of the circus are extensively acknowledged. All kinds of travelling celebrities visit Edinburgh, and, with scarcely an exception, are well patronized. Exhibitions of the fine arts have very numerous votaries. And athletic sports in the open air, from the coarsest to the most refined, are considerably practised and extensively admired. The general tone of society, however, as estimated by the principles of sound religion or of comprehensive policy, is not good.—far too light, too dissipated, too free from healthful restraint, too forgetful of the best interests of at once body, mind, and social man.

There are numerous clubs and societies who devote themselves to some particular amusement, either for its own sake or for sake of its connexions. The chief are the following,—the Edinburgh chess club, instituted in 1822; the Edinburgh amateur musical association; the Edinburgh harmonists' society; the Edinburgh St. Cecilia amateur orchestral society, instituted in 1848; the Edinburgh amateur choral society, instituted in 1854; the Edinburgh choral union, instituted in 1858; the Edinburgh solfeggio association, established in 1838; the Edinburgh tonic sol-fa association, instituted

in 1857; the Scottish vocal music association; the Association for the revival of sacred music in Scotland; the Edinburgh royal naval club; the Royal Eastern yacht club; the Skating club; the Duddingston curling club, instituted in 1795; the Royal Caledonian curling club, instituted in 1838; the Merchiston curling club; the Edinburgh curling club, instituted in 1830; the Coates curling club, instituted in 1854; the Drumdryan curling club; the Edinburgh burgh golfing society, instituted in 1735; the Honourable company of Edinburgh golfers, claiming an unknown antiquity, and figuring on record since 1744; the Royal Caledonian hunt, instituted in 1777; the Burntsfield-links golf club, instituted in 1761; the Burntsfield allied golf club, instituted in 1856; the Warrender golf club, instituted in 1858; the St. Leonard's golf club, instituted in 1857; the Merchiston golf club, instituted in 1860; the Salisbury archers club, instituted in 1836; the Edinburgh toxophilites club, instituted in 1858; the Grange cricket club, instituted in 1832; the Newington cricket club; the Edinburgh academical cricket club; the Edinburgh academical football club; the Forth swimming club, instituted in 1850; and the Eastern boating club, established in 1846. We may mention here also the Celtic society, which was instituted in 1820, for promoting the general use of the ancient Highland dress in the Highlands of Scotland, and for encouraging education among the Highlanders by the distribution of prizes in schools; and the Royal company of archers, which was instituted in 1703 by a charter of Queen Anne, holds field-days for practice, and is the Queen's body guard in Scotland.

Learned Societies.—The corporations, associations, clubs, and other bodies in Edinburgh, which may, in some sense or other, be called learned, are nu-

merous and diversified. One grand group comprises the Royal society of Edinburgh, instituted in 1783; the Royal college of physicians, instituted in 1681; the Royal college of surgeons, constituted in 1778; the Royal college of veterinary surgeons, incorporated in 1844; the Astronomical society, instituted in 1812; the Meteorological society of Scotland, instituted in 1856; the Royal physical society, instituted in 1771; the Edinburgh geological society; the Botanical society, instituted in 1836; the Society of antiquaries of Scotland, instituted in 1780; the Philosophical institution of Edinburgh; and the Educational institute of Scotland, instituted in 1847. Another group comprises the Board of trustees for the encouragement of manufactures and art in Scotland, instituted in 1727; the Royal institution for the encouragement of the fine arts in Scotland, established in 1819; the Royal Scottish society of arts, instituted in 1821; the Royal Scottish academy of painting, sculpture, and architecture, founded in 1826; the Royal association for the promotion of the fine arts in Scotland, founded in 1833; the Architectural institute of Scotland, constituted in 1850; the People's art union of Scotland; the Photographic society of Scotland; the Edinburgh photographic society; the Highland and Agricultural society of Scotland, instituted in 1784; the Caledonian horticultural society, instituted in 1809; and the Scottish arboricultural society. Another group comprises the associated societies of the university of Edinburgh; the Royal medical society, instituted in 1737; the Harveian society, instituted in 1782; the Hunterian medical society, instituted in 1824; the Edinburgh obstetrical society; the Medico-chirurgical society, instituted in 1821; the North British branch of the pharmaceutical society of Great Britain; the Phrenological society, instituted in 1820; the Edinburgh phrenological association; the Scots law society, instituted in 1815; the Juridical society, instituted in 1773; the Dialectic society, instituted in 1787; the Diagnostic society, instituted in 1816; the Speculative society, instituted in 1764; the Tusculan society, instituted in 1822; the Theological society of the university of Edinburgh, instituted in 1776; the Bannatyne club, instituted in 1823; the Edinburgh academical club; and the High school club, instituted in 1849. The principal public libraries are the Advocates', the Signet, the college, the subscription, the select subscription, the philosophical institution, and the mechanics' subscription libraries; and there are numerous others belonging to societies and congregations, and several excellent circulating ones.

Benevolent Societies.—The institutions, associations, and public funds which claim, in some manner or other, to be benevolent, range from the verge of mere self-gratification to the highest flights of philanthropy and religion, and are exceedingly numerous. The chief patriotic and quasi-patriotic ones are the Edinburgh city rifle volunteer corps, with nineteen companies; the Edinburgh city artillery volunteer corps, with nine companies; the Edinburgh city engineer volunteer corps; the Royal association of contributors to the national monument of Scotland; the Wallace monument committee; and the association for the protection of the public rights of roadway. The masonic ones are the grand lodge of the freemasons in Scotland; the religious and military order of the temple; the grand chapter of royal arch freemasons of Scotland; the royal order of Scotland, dating from Kilwinning; the supreme council for Scotland of the 33d and last degree of the ancient and accepted Scottish rite; and the lodges of Edinburgh, Mary's chapel, Edinburgh journeymen, Edinburgh defensive band, Ed-

inburgh and Leith Celtic, Canongate Kilwinning, Canongate and Leith, St. David's, St. Luke's, St. Andrew's, St. James', St. Stephen's, St. Clair, Roman eagle, Trafalgar, Caledonian, and Rifle. The principal provident institutions are the National security savings' bank of Edinburgh, instituted in 1836; the Burgh and parochial schoolmasters' widows' and children's fund, established in 1807; the Edinburgh society of teachers, instituted in 1737; the Society of messengers at arms, instituted prior to 1631; the Edinburgh school of arts friendly society; the St. Cuthbert's lodge of free gardeners, instituted in 1824; the Society for the sons of the clergy, instituted in 1790; the Widows' fund of the church and universities of Scotland; the Free church ministers' widows' and orphans' fund; the Society for the benefit of the sons and daughters of ministers and missionaries of the Free church; the Friendly society of ministers in connexion with the United Presbyterian church, instituted in 1792; the Dissenting ministers' widows' fund, instituted in 1797; the Society of sons of United Presbyterian ministers, instituted in 1854; the Scots episcopal fund, established in 1806; and the Scotch episcopal friendly society, instituted in 1793.

The principal philanthropic institutions are the numerous asylums, hospitals, and schools, noticed in our account of the edifices of the city; the Society for relief of the destitute sick, instituted in 1785; the Edinburgh benevolent and strangers' friend society, instituted in 1815; the Senior and Junior female societies, instituted in 1797; the Edinburgh society for the relief of indigent old men, instituted in 1806; the Benevolent fund for the relief of indigent gentlewomen, founded in 1847; the Indian relief fund, instituted subsequent to the Indian mutinies; the Edinburgh and Leith society for the relief of deserving foreigners in distress; the Society in Edinburgh for clothing the industrious poor, instituted in 1815; the Craigerook mortification for the benefit of orphans and the aged; the Fund of Scottish masonic benevolence, instituted in 1846; the Society for the education of imbecile children in Scotland; the Prison discipline society of Scotland; the Scottish society for prevention of cruelty to animals, established in 1839; the Scottish association for suppressing drunkenness; the Association for promoting improvement in the dwellings and domestic condition of agricultural labourers in Scotland; the Edinburgh society for the diffusion of information on capital punishments; the Saturday half-holiday association, instituted in 1854; the Edinburgh total abstinence society, instituted in 1836; the Edinburgh ladies' total abstinence society; and fourteen Edinburgh societies for the benefit, in various ways, of natives of Galloway, Ayrshire, Lanarkshire, Peebles-shire, Kinross-shire, Forfarshire, Kincardineshire, Aberdeenshire, Morayshire, Caithness, Orkney, and Shetland.

The principal religious institutions, together with such educational ones as may be appropriately ranked with them, are the missionary and school schemes of the several ecclesiastical bodies; the Society for propagating Christian knowledge, incorporated in 1709; the Edinburgh branch of the society for promoting Christian knowledge; the Scottish missionary society, instituted in 1796; the Scottish Bible society; the Edinburgh Bible society; the National Bible society of Scotland; the Scottish ladies' association for the advancement of female education in India; the Female society of the Free church of Scotland for promoting Christian education among the females of India; the Ladies' association for promoting the Christian education of Jewish females; the Edinburgh ladies' association

on behalf of Jewish females; the Ladies' Free church continental association; the Scottish coast mission, instituted in 1852; the Scottish branch society for the Irish church missions to the Roman Catholics; the Scottish ladies' society in aid of the Irish Presbyterian mission to Roman Catholics, instituted in 1841; the Society in Scotland for promoting religious knowledge among the poor, instituted in 1786; the Society for the support of Gaelic schools; the Ladies' association for the support of Gaelic schools, instituted in 1846; the Scottish ladies' association for promoting female industrial education in Scotland; the College for daughters of ministers of the Church of Scotland and of professors in the Scottish universities; the Congregational union of Scotland; the Baptist home missionary society for Scotland; the Baptist association of Scotland, instituted in 1856; the Scottish episcopal church society; the missionary association of episcopalians in Scotland; the Sabbath alliance; the Edinburgh subdivision of the evangelical alliance; the Scottish reformation society, instituted in 1850; the Protestant institute of Scotland, instituted in 1860; the Scottish Protestant association, instituted in 1854; the Religious tract and book society of Scotland, instituted in 1793; the Scottish 'Monthly Visitor' tract society; the Edinburgh auxiliary naval and military Bible society; the Edinburgh auxiliary to the London missionary society; the Edinburgh auxiliary to the Irish evangelical society; the Edinburgh association in aid of Moravian missions; the Edinburgh Church of England missionary association; the Edinburgh ladies' association in aid of the society for the support of Gaelic schools; the Edinburgh continental association; the Edinburgh city mission, instituted in 1832; the Edinburgh medical missionary society; the Edinburgh young men's Christian association, instituted in 1855; the Edinburgh gratis Sabbath school society, instituted in 1797; the Edinburgh Sabbath school teachers' union, instituted in 1841; the Edinburgh Sabbath school association; and the Edinburgh and Leith seamen's friend society, instituted in 1820.

Trade.

Manufactures.—Edinburgh abounds in productive industry, in all departments of ordinary artifice-ship, and in noble efforts of both skill and labour, yet has not, and never had, any staple produce of art for the supply of the general market. Her manufactures, perhaps, are more diversified, exhibit a larger aggregate of genius, than those of many other great towns; but some are of the common kinds for the supply of local wants, and therefore need not be mentioned, while the rest are all on so limited a scale as to require only the briefest notice.

The linen manufacture was at one time considerable, but sank, many years ago, into decline, and is now extinct. The making of rich shawls and plaids, in imitation of India shawls, was commenced in 1805, and promised for a time to become a staple, but never made much way against competition in other quarters, and has very greatly declined. A large handsome edifice, at Fountainbridge, was erected in 1841 as a silk spinning-mill, but did not succeed; and is now an American India-rubber over-shoe factory, employing about 350 hands. Another large neat edifice, in the same locality, built in 1861, is a comb factory, employing about 150 hands. Extensive suites of flour mills stand in various parts of the outskirts, and are owned by twelve mill-masters. There are also twenty-two malt liquor breweries, one barm brewery, six distilleries, and six rectifying establishments; several of the breweries and distilleries very large. A number of

paper-mills in the vicinity, particularly in the valley of the North Esk, may be regarded as belonging to Edinburgh, and are represented in it by twenty-one wholesale stationery warehouses. Carpet-making has seven establishments; floor-cloth making, two; fringe and tassel making, four; and furniture-printing, three. Coach-building is carried on in nineteen establishments, coach-lace-making in two, coach-spring-making in one, and saddlery and harness in twenty-one. Glass-making maintains ten establishments, glass-cutting three, glass-staining five, and the making of glass-chandeliers one.

There were likewise, in the city and its environs, in 1861, 12 iron-foundries, or warehouses connected with them, 6 establishments for making agricultural implements, 6 for making bricks and tiles, 14 for making machines, 4 for making tools, 3 for making carpenters' tools, 2 for making saws, 11 for making articles of cutlery, 1 for making steel punches, 5 for making beams and steel-yards, 6 for making wire-cloth, 4 for making wire-netting, 13 for basket-making, 17 for brush-making, 2 for making whips and thongs, 8 for making fishing-tackle, 2 for comb-making, 2 for glove-making, 4 for colour-making, 7 for candle-making, 2 for soap-making, 8 for making dies and stamps, 3 for making printers' types, 4 for making printers' presses, 1 for making printers' ink, 9 for making gas-meters, 1 for making globes, 8 for making trunks and portmanteaus, 3 for making buttons, 4 for making artificial flowers, 6 for making bandages and artificial limbs, 2 for making lasts, 4 for stuffing birds and quadrupeds, 3 for manufacturing chemicals, 1 for making chemical instruments, 3 for making philosophical instruments, 3 for making stucco-work, 5 for building organs, 17 for making musical instruments, 7 for making hats, 9 for making pocket-books and dressing-cases, 1 for making gold and silver lace, 1 for manufacturing hair, 2 for making coloured paper, 1 for making waterproofs and airproofs, 1 for making bows, 1 for making bits and spurs, 50 for making clocks and watches, 7 for making German clocks, 97 for making cabinet-work, 6 for making iron-bedsteads, 10 for making Venetian blinds, 12 for working leather, 15 for making ropes and sails, 1 for making millstones, 5 for cutting marble, 1 for making whiting, 1 for manufacturing gelatine, 1 for making varnish, 3 for making vinegar, 6 for making pipes, 1 for refining metal, and 1 for refining sugar. The proportions of all the finer classes of artificers also, especially those in fancy work and tinketry, are exceedingly large for the city,—clearly indicating that they serve for a great extent of general market.

The workers in all the fine arts, too, particularly painters and sculptors, were they reckoned merely by their numbers, and by the amount of money they command, might well be regarded as a great body of manufacturers. The nurserymen likewise are large producers for large part of Scotland, having amongst them in the environs of the city, or almost interlaced with some of its out-streets, no fewer than sixteen nurseries, most of which are very large. The work of education, too, in everything except tangibility, or as regards at once the attracting of money, the giving of employment, and the developing of industry, produces the effects of a real manufacture, and of a great one. And the book-trade, besides being in itself, as we shall immediately see, a large literal manufacture, is the maintaining cause of several of the manufactures which we have enumerated, and a strong stimulus to others.

The Publishing Trade.—Literature is not far from being a staple produce of the metropolis. In the printing of law papers for the legal functionaries, of bibles and school-books for general diffusion over

Scotland, of numerous periodicals of national circulation, and of volumes or ponderous works of popular attraction or standard and enduring value, a proportion of operatives and of literary persons—particularly the former—incomparably greater is employed in Edinburgh than in any other town of the three kingdoms except London. So late as near the close of the 18th century, literature, in the strict sense of the word, was little more an article of manufacture than in any Scottish provincial town; but it started up with an energy, and proceeded with attractions, and increased with a rapidity which have eventually earned for the city the name of Modern Athens, in compliment more to her learnedness and her being the emporium of the nation's means of knowledge, than even to the characteristic features of her topographical position. The *Encyclopaedia Britannica* was the first large work which the Edinburgh press produced; and, bulky and magnificent as it was, it gave but imperfect indication of the spirit of achievement which had been roused. The beautiful, incessant, and very varied productions of the Ballantyne press, combined with the princely speculations of Constable, and the coruscations of talent which played from the literary coteries of the Edinburgh Review and Blackwood's Magazine, were the first demonstrations to the world that Edinburgh was taking her place as a manufactory and a mart of literature. But the machinery of publishing was as yet chiefly propelled by one individual, and after his death, seemed, for a time, to be obscured partially from view; but it has since been greatly multiplied in its powers, and advantageously distributed among many possessors, so as to work with the vigour and the glee of healthful competition.

There are at present eight large establishments, besides agencies of some others, entirely devoted to wholesale or number publishing. There are nearly thirty other establishments which, in greater or less degree, combine the business of publishing with the business of retail bookselling. There are upwards of eighty other shops, besides boxes and stalls, devoted to the sale of books; many of them in such a manner as to render Edinburgh a book-mart scarcely more for itself than for a great extent of country; and seven of them having large circulating libraries attached. A number of the printing-offices, both those belonging to the great publishers and those employed in general customer-work, are very large, resembling far more factories than workshops. Engraving and lithographing, not only for general purposes, but in special connexion with map-making and with the producing of illustrated books, are in extensive request, there being at present fifty-nine engravers or engraving establishments, ten engravers on wood, and twenty-nine lithographic printing establishments.

The proportion of grave, informational, standard books, as contrasted to frivolous, fictionary, ephemeral ones, is very much greater than in London. The periodicals—though scarcely a fair index of either the amount or the quality of volumes and serials—are sufficient to indicate their prevailing tone. Those at present in course of publication—not to name two of the best in London which were removed thither some years ago from Edinburgh, nor several other weighty ones in England whose value materially consists in the contributions of Edinburgh literati—are the North British Review, the British and Foreign Evangelical Review, the Edinburgh Philosophical Magazine, the Quarterly Journal of Agriculture, the Journal of Jurisprudence, the Edinburgh Medical Journal, the Scottish Gardener, Blackwood's Edinburgh Magazine, Mac-

phail's Magazine, the United Presbyterian Magazine, the Reformed Presbyterian Magazine, the Scottish Congregational Magazine, the News of the Churches, the Scottish Ecclesiastical Journal, the Church of Scotland Home and Foreign Missionary Record, the Home and Foreign Record of the Free Church, the Missionary Record of the United Presbyterian Church, Chambers' Edinburgh Journal, the Christian Treasury, the Family Treasury, Good Words, the Bulwark, and the Eastern Females' Friend. The newspapers published in Edinburgh, in 1862, were—daily, the Caledonian Mercury, the Daily Review, the Courant, and the Scotsman; thrice a-week, the Witness; twice a-week, the Evening Courant, the Gazette, the North Briton, the Scotsman, and the Scottish Press; and weekly, the Edinburgh News, the Ladies' Own Journal, the Mid-Lothian Advertiser, the North British Advertiser, the Scottish Farmer, the Scottish Railway Gazette, the Week, the Weekly Mercury, the Weekly Review, and the Weekly Scotsman.

General Traffic.—Edinburgh is the seat of a very extensive general retail trade, for the supply of respectively its own stated population, its shoals of transient visitors, the shoals of travellers passing through it, and a large breadth of circumjacent populous country. In consequence, also, of its being the stated winter residence of many of the country gentry, and the occasional residence of all classes of wealthy families, considerable portions of the rents of distant estates and of the dividends of all sorts of stocks pass through the hands of its bankers. It is likewise the seat of a very great market for rural produce. Weekly markets of large value are held in the Grassmarket for grain, and in the cattle-market-place for sheep and black cattle; and annually, in November, all-hallow fair is held during two days, in the southern outskirts, for sheep, black cattle, and horses. A very large commerce also belongs to Edinburgh, the trade of Leith being chiefly and that of Granton wholly the trade of Edinburgh,—distinguishable by little else than the circumstance that these places are not within the city's municipal boundaries. Edinburgh is likewise the seat of numerous public bodies, boards, and committees who control or manage the traffic of great part of the kingdom; and it has its own Merchants' Company, established in 1681, its own Chamber of commerce and manufactures, instituted in 1786, and its own stock-exchange, formed in January 1845.

Banks.—The banking-offices in Edinburgh are those of the Bank of Scotland, the Royal bank of Scotland, the Commercial bank of Scotland, the British Linen Company's bank, the National bank of Scotland, the Union bank of Scotland, the Clydesdale bank, the City of Glasgow bank, the Oriental bank corporation, and the Agra and United Service bank,—the statistics of all of which, except the last, have been sufficiently given in our General Introduction.

Insurance Companies.—The insurance-offices in the city, variously head and branch, amount to no fewer than eighty-four. Some of the most prominent are the Friendly insurance company, established in 1720; the Caledonian insurance company, established in 1805, with a capital of £150,000; the Hercules fire and life insurance company, established in 1809, with a capital of £750,000; the North British fire and life insurance company, established in 1809, with a capital of £500,000; the Scottish widows' fund life assurance society, founded in 1815, with a capital of £1,000,000; the Edinburgh life assurance company, established in 1823, with a capital of £500,000; the Scottish union insurance company, instituted in 1824, with a capital of £5,000,000; the

Standard life assurance company, established in 1825, with a capital of £500,000; the Scottish provident institution for life assurance and annuities; the Scottish equitable life assurance society; the National fire and life insurance company of Scotland, established in 1841, with a capital of £200,000; the life association of Scotland, founded in 1838; the Colonial life assurance company, with a capital of £1,000,000; the English and Scottish law life assurance and loan association, established in 1839, with a capital of £1,000,000; and the insurance company of Scotland, originally established in 1821, with a capital of £760,000, and united in 1847 to the Alliance assurance company, with a capital of £5,000,000.

Hotels.—The number of hotels and large inns in Edinburgh is about eighty. The style of most of them is excellent. "No city out of London can offer better hotel accommodation. In this respect it presents at this day a striking contrast to what it did at the end of last century. Then there was scarcely a place that could be dignified with the name of hotel; and its inns were mean buildings, with dingy and dirty apartments, sloveuly attendants, and totally devoid of any semblance of comfort. Now the case is altered. Spacious hotels and clubs of princely appearance rear their heads in almost every street, and every thing that can be desired for the comfort of the inner or the outer man may be had. The accommodation some of these establishments offer is really snperb; and at the same time there is such a variety of houses of all grades as to suit every class of persons from the peer to the peasant, no man needing to go to the expense of a single shilling beyond what his purse warrants him in expending."

Among the first-class hotels are Barry's British in Queen-street, Douglas' in St. Andrew-square, and the Royal, the Caledonian, and the Balmoral in Prince's-street. Among family hotels are the London, the Waterloo, the Queen's, Lambre's, and Kennedy's. Among commercial hotels are the Bridge, the Crown, the Turf, the Star, the Ship, the Albert, the Regent, the Royal British, the English, Erskine's, and Sievwright's. Among temperance hotels are the Albion, the Waverley, Maelaren's, Jaap's, Brown's, Milne's, and Buchanan's. Other hotels of note are the Alma, the Bedford, the Clarence, Grieve's, the Café Royal, the Edinburgh, and the Cockburn. The great majority of the hotels are either in Prince's-street or in places near it. The number of small inns, and respectable lodging-houses, is exceedingly great; and that of inferior places of entertainment is so vast as to be an utter nuisance to both strangers and denizens. There are about twenty refreshment and reading-rooms for the working-classes.

Communications.—The North British, the Caledonian, the Edinburgh and Glasgow, and the Edinburgh, Perth, and Dundee railways diverge from Edinburgh as from a centre, each having here a grand terminus, all communicating here with one another, and all so freely ramifying into branches, and so abundantly connecting themselves with other railways, as to offer communication, more or less direct, with almost all parts of the kingdom. The Union canal, though now stripped of the greater part of its worth by the westward railways, still offers to Edinburgh the advantages of a cheap communication with the mineral fields of Linlithgowshire and Stirlingshire. Steamers from Leith, Newhaven, and Granton afford ready communication with Rotterdam, Hamburgh, Newcastle, Hull, London, the coast-towns of Fifeshire, Bo'ness, Alloa, Stirling, Dundee, Aberdeen, the coast-towns of the

Moray frith, Wick, Thnrso, Orkney, and Shetland. Coaches run from Edinburgh to Bilston, Blackshiel, Blythbridge, Corstorphine, Dalkeith, Dunfermline, Habbie's Howe, Inverkeithing, Lasswade, Loanhead, Musselburgh, Portobello, Penicnick, Queensferry, Ratho, Roslin, Pathhead, and West Linton. Omnibuses ply within the city and its environs, between High-street and Leith, between the Mound and Leith, between Newington and Stockbridge, between the Mound and Whitehorse, and between the Register-house and Morningside. A profuse supply of licensed cabs and hackney-coaches stands ever ready for hire, from an early hour till a late one, at numerous appointed stances throughout the city.

Statistics.

School Statistics.—Any attempt to ennumerate the public schools of Edinburgh, or the great private schools and the boarding schools, would occupy much more space than we can spare. The total number of day-schools in Mid-Lothian in 1851 was 399,—of which 232 were public and 167 were private; and considering that the population of the city comprises nearly two-thirds of that of the county, but especially that a considerable proportion of it is but temporarily resident for the express purpose of securing the education of children, we may infer that at least 300 of the schools, or at any rate that at least three-fourths of the apparatus of all the 399, must have been within the city. And a very large number of them, be the total what it might, must be estimated, as to both attendance and efficiency, on a very different principle from the aggregate of schools throughout the kingdom, their size, their appointments, and their range being far above the average. The proportion of children between 5 and 12 years of age reported in the Census returns of 1851 to be in attendance on the schools was 73·8 per cent. of the whole number of children of that age in the Old town, 87·1 per cent. in the New town, 82·4 per cent. in the whole city. The number of scholars of all ages reported in the Census of 1861 was 29,969. The number of teachers of classics whose names appear in the City Directory of 1862 is 18; of dancing, 9; of drawing, 13; of elocution, 4; of fencing, 3; of French, 13; of German, 9; of Italian, 1; of music, 58; of mathematics, 6; of navigation, 2; of writing and arithmetic, 12; of English and miscellaneous departments, 55.

Church Statistics.—In 1851, according to the Census, there were within the parliamentary burghs of Edinburgh and Leith 139 places of public worship. The attendance at 123 of these, on the 30th of March, was 48,886 in the forenoon, 47,227 in the afternoon, and 11,319 in the evening. The number of sittings in 106 of them was 81,873; of which 14,876 were free, and 53,897 appropriated. Of the Established Church, 26 had a forenoon attendance of 8,764, and 23 contained 19,994 sittings; and there were altogether 34. Of the Free Church, 29 had an attendance of 15,315, and 26 contained 20,830 sittings; and there were altogether 30. Of the United Presbyterian church, 20 had an attendance of 12,792, and 18 contained 20,465 sittings; and there were altogether 21. Of the Original Seceders, 1 had an attendance of 250, and contained 900 sittings; and there were altogether 3. Of the Reformed Presbyterians, 1 had an attendance of 317, and contained 540 sittings. Of the Episcopalians, 10 had an attendance of 3,052, and 7 contained 3,796 sittings; and there were altogether 11. Of the Independents, 6 had an attendance of 2,376, and contained 5,610 sittings. Of the Evangelical Union, there was one; no report from which was given.

Of the Baptists, 7 had an attendance of 1,654, and 6 contained 3,096 sittings. Of the Society of Friends, 1 had an attendance of 47, and contained 430 sittings. Of the Unitarians, 1 had an attendance of 110, and contained 750 sittings. Of the Wesleyan Methodists, 4 had an attendance of 682, and contained 1,865 sittings. Of the Primitive Methodists, 1 had an attendance of 50, and contained 250 sittings. Of the Glassites, 1 had an attendance of 150, and contained 260 sittings. Of the New Church, 1 had an attendance of 50, and contained 150 sittings. Of the Catholic and Apostolic church, 1 had an attendance of 185, and contained 300 sittings. Of the Jews, 1 had an attendance of 28, and contained 67 sittings. Of the Roman Catholics, four had an attendance of 2,454, and 2 contained 1,500 sittings; and there were altogether 5. And of isolated congregations, 8 had an attendance of 750, and 5 contained 1,070 sittings; and there were altogether 9.

Edinburgh is the seat of a presbytery, in the synod of Lothian and Tweeddale. The royalty contains the parishes of High church, Old church, New North, Tron, Tolbooth, Old Greyfriars, New Greyfriars, Trinity College, Lady Yester's, St. John's, St. George's, St. Andrew's, St. Stephen's, St. Mary's, and Greenside. The parliamentary burgh, now also the municipal burgh, contains likewise the parish of Canongate, the precincts of the castle, large part of the parish of St. Cuthbert's, most part of the parish of South Leith, and small parts of the parishes of North Leith, Duddingston and Liberton. The High, the Tron, St. Andrew's, Canongate, St. Cuthbert's, and South Leith parishes are collegiate. All the charges within the royalty were formerly in the patronage of the town-council; but by the annuity tax-abolition act of 1860, those of the Tolbooth, the Old church, the second High, the second Tron, and the second St. Andrew's, passed to the Edinburgh Ecclesiastical commissioners. These are ten persons, elected by certain public bodies, in terms of the act, to administer the temporal affairs of the city churches, and they have power, at the next vacancies, to allow those five charges to lapse. The patron of the first charge of Canongate, of both charges of St. Cuthbert's, and of the first charge of South Leith, is the Crown; the patrons of the second charge of Canongate are the heritors and the Kirk-session; and the patrons of the second charge of South Leith are the Kirk-session and the Leith incorporations. The stipend of the city ministers is all on one platform; it was paid, till 1860, mainly from the annuity tax, on houses and shops within the royalty, and it rose from £200 each in 1802 to £625 in 1850; but it is now paid chiefly from new taxes mixed up with the police assessment, and is fixed for the life-time of the present incumbents, at £600 each, but may be decreased afterwards to £550. Each of the ministers of Canongate has a stipend of £240; and the first has a manse,—the second £40 for house-rent. Each of the ministers of St. Cuthbert's had, till lately, a stipend of about £365, but now has more, and the one has a manse,—the other, £60 for house-rent. The stipend of the South Leith ministers will be stated in the article on Leith. In 1851, according to a return to a committee of the House of Commons by the kirk-sessions, the number of communicants in High church parish was 386; in Old church parish, 234; in the New North, 490; in the Tron, 300; in the Tolbooth and the Old Greyfriars, 235; in the New Greyfriars, 615; in Trinity College, 237; in Lady Yester's, 900; in St. John's, 432; in St. George's, 600; in St. Andrew's, 806; in St. Stephen's, 900; in St. Mary's, 715; and in Greenside, 1,060.

There are in Old Greyfriars' parish the quoad-sacra parochial Gaelic church; in St. George's parish, the chapel of ease of St. Luke; in Canongate parish, the chapel of ease of New-street; in the parish of St. Cuthbert's, the quoad-sacra parochial churches of Buccleuch, St. Bernard's, and Newington, and the chapels of ease of St. David's, the Dean, Lady Glenorchy's, and Morningside. The patrons of the Gaelic church are the Society for propagating Christian knowledge; of St. Luke's, the session of St. George's; of New-street church, members, &c.; of Buccleuch church, communicants and trustees; of St. Bernard's, the managers; of St. David's, the session of St. Cuthbert's; and of Newington, Dean, Lady Glenorchy's, and Morningside churches, trustees.—The total of contributions toward the General Assembly's schemes, in the year 1861–2, by the High church, was £27 19s. 7d.; the Old church, £5 10s. 10d.; the New North, £68 14s.; the Tron, £93 10s.; the Tolbooth, £9 18s.; Old Greyfriars, £32 16s. 10d.; New Greyfriars, £29 16s.; Trinity College, £15 12s.; Lady Yester's, £49 3s.; St. John's, £3 16s. 1d.; St. George's, £240 10s 7d.; St. Andrew's, £236 10s.; St. Stephen's, £237 14s. 1d.; St. Mary's, £66 15s. 8d.; Greenside, £151 7s.; Canongate, £3 8s. 5d.; St. Cuthbert's, £121 15s. 7d.; South Leith, £29 9s. 6d.; the Gaelic, £1 16s.; St. Luke's, £23 8s. 11d.; Buccleuch, £32 11s. 7d.; St. Bernard's, £51 10s.; Newington, £59 9s.; St. David's, 9s.; Dean, £5 5s.; Morningside, £14 3s. 4d.

The number of Free church places of worship was 25 in 1850, and 30 in 1862. The number of communicants in 1850, was—in the High church, 818; in the New North, 650; in the Tron, 344; in the Tolbooth, 975; in Greyfriars, 454; in St. John's, 962; in St. George's, 918; in St. Andrew's, 426; in St. Stephen's, 472; in St. Mary's, 507; in the Canongate, 371; in St. Cuthbert's, 251; in the Gaelic, 416; in St. Bernard's, 520; in Buccleuch, 316; in the Dean, 334; in Holyrood, 104; in Lady Glenorchy's, 749; in Newington, 650; in Pilrig, 252; in Roxburgh, 258; in St. David's, 350; in St. Luke's, 570; in St. Paul's, 550; and in Westport, 350. The sums raised by the congregations, in the year 1861–2, were—the High church, £3,115 15s. 5d.; the New North, £2,437 9s.; the Tron, £293 14s. 0½d.; the Tolbooth, £2,150 12s. 10d.; Greyfriars, £360 12s. 3¼d.; St. John's, £2,935 19s.; St. George's, £6,476 10s. 6d.; St. Andrew's, £2,667 8s. 9¼d.; St. Stephen's, £1,802 6s. 5¼d.; St. Mary's, £5,410 2s. 11¾d.; Canongate, £378 4s. 1¼d.; St. Cuthbert's, £625 4s. 6d.; the Gaelic, £1,135 2s. 8d.; St. Bernard's, £661 9s. 9d.; Buccleuch, £593 14s. 8d.; the Dean, £382 2s. 6d.; Holyrood, £468 19s.; Lady Glenorchy's, £755 19s 11¼d.; Newington, £955 10s. 5d.; Pilrig, £2,955 13s. 3d.; Roxburgh, £599 19s. 4d.; St. David's, £305 10s.; St. Luke's, £1,286 4s. 2¼d.; St. Paul's, £811 6s. 2d.; Westport, £533 14s.; Cowgate, £176 3s. 5d.; Cowgatehead, £261 6s. 6¾d.; Fountainbridge, £931 2s. 0½d.; Mc-Crie's, £509 8s. 1d.; and Pleasance, £150 8s. 2¾d.

The other places of worship, in 1862, were—Arthur-street United Presbyterian church, with 690 sittings; Bread-street or Union U. P. church, with 1,050 sittings; Bristo U. P. church, with 1,671 sittings; Broughton-place U. P. church, with 1,600 sittings; South College-street U. P. church, on the site of a previous church, which had 1,667 sittings; Dean-street or Stockbridge U. P. church, with 1,200 sittings; St. James's-place U. P. church, with 1,540 sittings; Infirmary-street U. P. church, belonging to a congregation who previously occupied what is now St. Patrick's Roman-Catholic church in Cowgate; Laurieston-place U. P. church, built by a congregation who removed to

it from Portsburgh church; Lothian Road U. P. church, with 1,284 sittings; Newington or Duncan-street U. P. church, with 700 sittings; Nicolson-street U. P. church, with 1,170 sittings; North Richmond-street U. P. church; Portsburgh U. P. church, with 832 sittings; Potterrow U. P. church, with 885 sittings; Queen-street U. P. church, the synod-hall; Rose-street U. P. church, 1,363 sittings; Henderson and Mary-chapel U. P. mission churches, in in High-street; the Reformed Presbyterian church, on George IV's Bridge; the Original Secession churches, in South-bridge, and Laurieston-street; the Augustine Independent church, on George IV's Bridge; the Albany-street Independent chapel, with 878 sittings; the Richmond-place Independent chapel; the Evangelical Union places of worship in Brighth-street and George-street, the former originally Presbyterian; the Dublin-street Baptist chapel, built by a congregation who removed to it from one with 480 sittings in Elder-street, the Leith-walk Baptist chapel, with 1,000 sittings; the Rose-street Baptist chapel, with 750 sittings; the Baptist places of worship in Bristo-place, Richmond-court, and Argyle-square; St. Paul's Episcopal church, in York-place, with 1,036 sittings; St. John's Episcopal church, in Princes-street, with 821 sittings; St. George's Episcopal church, in York-place, with 642 sittings; Trinity, St. James', St. Andrew's, St. Peter's, St. Paul's, St. John's-School, St. Thomas', and St. Vincent's Episcopal churches, respectively in Dean, Broughton-street, South back of Canongate, Luton-place, Carubber's-close, Earl Grey-street, Rutland-street, and St. Vincent-street; the Wesleyan Methodist chapel, with 1,278 sittings, in Nicolson-square; the United Methodist Free church, in Drummond-street; the Friends' Meeting-house, in Pleasance; the Catholic Apostolic church, in Broughton-street; the Roman Catholic churches of St. Mary, St. Patrick, and the Sacred Heart, in Broughton-street, Cowgate, and Laurieston-street; and the Jews' synagogue, in Richmond-court.

Life Statistics.—Longevity in Edinburgh as compared to longevity in other places has been computed as follows,—the proportion per 1,000 of persons who die above 60 years of age is 229 in England and Wales, 206 in London, 204 in Edinburgh, 198 in Bristol, 159 in Birmingham, 130 in Manchester, 129 in Glasgow, and 112 in Liverpool. The mean age of persons at death in Edinburgh has been computed at 47.22 in the class of gentry and professional men, 36.53 in the class of merchants, and 25.88 in the class of artisans. But comparative longevity in the New town and in the Old town, and again between the aggregate of the Old town and the most crowded parts of it, is very striking. "With a nearly equal population in the two grand departments of the city," says Mr. Thorburn, in his Statistical Analysis of the 1851 census of Edinburgh, "we find 677 persons in the New town above 70 years of age, while in the Old town that class amounts to only 384. The district in the Old town the least favourable to longevity is High church parish, lying between Bank-street and North-bridge-street, and that too among an almost purely Scottish population. While the ratio of persons above 70 in the ancient and extended royalty is 1.65 per cent. to the whole population, and that of the New town to its population is 2.04 per cent., the Old town shows to its population a ratio of only 1.24 per cent., and the High church parish falls so low as 0.79 per cent. There is thus in that parish only one person above 70 years of age in 120 of the population. In the entire royalty, the males above 70 amount to 338, being 1.44 per cent. of the male population; while the females amount to the greatly larger

number and ratio of 681 or nearly two per cent. of the population of that sex. And as to the mortality of the young, the total population in the first year is 962, while by the fifth year it has fallen to 583, the decrease between the two ages being equal to about 40 per cent. In the New town again, we find the following figures,—first year, 622; fifth year 503, or about 18 per cent. of decrease, showing a difference in favour of the New town of about 22 per cent. The difference is still more startling if we take the parish of St. Mary's, in which the numbers stand thus,—first year, 127; fifth year, 115, showing the small decrease of only about 9 per cent."

Population Statistics.—We shall state first the population of the urban section of the county, comprising Edinburgh, Leith, and their suburbs; next, the population of the parliamentary burgh of Edinburgh; next the population of the royal burgh of Edinburgh, ancient and extended; and next, the population of the parishes and parts of parishes contained within the parliamentary burgh. And we may premise that the parishes of the ancient royalty are High church, Old church, New North, Tron, Tolbooth, Trinity College, Lady Yester's, Old Greyfriars, New Greyfriars, and St. John's; that the parishes of the extended royalty are St. George's, St. Andrew's, St. Stephen's, St. Mary's, and Greenside; that the parishes of St. John's and Greenside were constituted subsequently to 1831, the former out of the New North and two Greyfriars, and the latter out of St. Andrew's; and that Edinburgh castle is ultra-parochial. It may be well also to indicate the individual situation of each of the parishes of the royalty. New Greyfriars lies south of the Grassmarket, and west of Candlemaker-row; Old Greyfriars, south of the Cowgate, east of Candlemaker-row, and west of College-wynd and West College-street; Lady Yester's, south of the Cowgate, and east of College-wynd and West College-street; the Old church, north of the Cowgate, south of the High-street, and east of South Gray's or Mint close; the Tron, north of the Cowgate, south of the High-street, west of South Gray's or Mint close, and east of Blair-street; the New North, north of the Cowgate, south of the High-street, west of Blair-street, and east of George IV's bridge; St. John's, north of the Cowgate and the Grassmarket, south of the Lawnmarket and the New Western approach, and west of George IV's bridge; the Tolbooth, north of the Lawnmarket and the New Western approach, and west of Bank-street; the High church, north of the High-street, east of Bank-street, and west of North-bridge-street; and Trinity College, north of the High-street, and east of North-bridge-street. St. George's lies south of Queen-street, and west of Hanover-street; St. Stephen's, north of Queen-street, and west of Dundas-street, Pitt-street, and Brandon-street; St. Mary's, north of Queen-street, York-place, Picardy-place, and Leith-walk, and east of Dundas-street, Pitt-street, and Braudon-street; Greenside, south-east of Leith-walk and of the continuation of that thoroughfare up toward Leith-street, and east of the entry to Nottingham-place and of the Calton-hill stairs; and St. Andrew's, south of Queen-street, York-place, and Picardy-place, west of the head of Leith-walk and of the entry to Nottingham-place, and east of Hanover-street.

Population of Edinburgh, Leith, and their suburbs in 1801, 82,560; in 1811, 102,987; in 1821, 138,235; in 1831, 161,909; in 1841, 166,450; in 1851, 193,929; in 1861, 201,749. Inhabited houses in 1851, 10,217; in 1861, 12,335. Population of the parliamentary burgh of Edinburgh in 1841,

140,241; in 1861, 168,121. Houses, 9,760. Population of the royal burgh of Edinburgh in 1841, 56,336; in 1861, 66,429. Houses, 3,585. Population of the ancient royalty in 1841, 24,390; in 1861, 31,979. Houses, 1,189. Population of the extended royalty in 1841, 29,588; in 1861, 34,450. Houses, 2,396. Population of the High church parish in 1831, 2,614; in 1861, 2,487. Houses, 101. Population of Old church parish in 1831, 1,952; in 1861, 4,444. Houses, 194. Population of the New North parish in 1831, 1,350; in 1861, 3,952. Houses, 126. Population of the Tron parish in 1831, 3,009; in 1861, 3,288. Houses, 133. Population of the Tolbooth parish in 1831, 3,016; in 1861, 2,321. Houses, 75. Population of Trinity College parish in 1831, 4,244; in 1861, 3,306. Houses, 127. Population of Lady Yester's parish in 1831, 2,890; in 1861, 2,708. Houses, 100. Population of Old Greyfriars parish in 1831, 4,345; in 1861, 3,365. Houses, 147. Population of New Greyfriars parish in 1831, 4,536; in 1861, 3,413. Houses, 90. Population of St. John's parish in 1841, 2,140; in 1861, 2,695. Houses, 96. Population of St. George's parish in 1831, 7,338; in 1861, 9,169. Houses, 687. Population of St. Andrew's parish in 1831, 7,339; in 1861, 4,310. Houses, 328. Population of St. Stephen's parish in 1831, 5,772; in 1861, 8,313. Houses, 542. Population of St. Mary's parish in 1831, 6,587; in 1861, 8,126. Houses, 644. Population of Greenside parish in 1841, 3,636; in 1861, 4,532. Houses, 195. Population of Canongate parish in 1831, 10,175; in 1861, 10,971. Houses, 501. Population of the part of St. Cuthbert's parish within the parliamentary burgh in 1841, 70,722; in 1861, 86,000. Population of the whole of St. Cuthbert's parish in 1831, 70,887; in 1861, 91,325. Houses, 5,955. Population of the part of South Leith parish within the parliamentary burgh of Edinburgh, in 1841, 3,229; in 1861, 4,017. Military in Edinburgh castle, in 1841, 754; in 1861, 668. The city sends two members to parliament.—In 1834, the parliamentary constituency was 7,714; the municipal constituency, 4,230. In 1861 the constituency, both parliamentary and municipal, was 8,833. The yearly value of real property, within the parliamentary burgh, in 1843, was £657,665, in 1861-2, £868,495.

History.

The Origin of Edinburgh.—Ancient Edinburgh was of such remote origin as to be for some time perceptible to modern inquiry only through the thick haze of fable and uncertainty which the early romancing annals of all old cities and countries delight to throw round their objects. Situated, too, in the Roman province of Valentia, within the territories of the Picts, at a point easily accessible from the plains of England, it witnessed numerous incursions and devastations during all the great roistering periods of Scotland's early history, so as to suffer successively from Romans, from Caledonians, and from the Anglo-Saxons, but most of all from the invading army of Edward I., severe obliterations of such records as had been framed on either stone or parchment of the circumstances of its origin and the events of its early cycles. Most writers, whatever opinions they may entertain respecting its antiquity as a mere town-seat of population, are agreed that the Castle-rock was fortified by the Ottadini long before their subjugation by the Romans. The most ancient name on record applied to the rock is *Castellum Agned*, which means, in the language of the Britons, 'the Fortress of the hill of Agnes.' Either, therefore, the rock was fortified after the time of St. Agnes, or it was bereft, in the Christian era, of its original name. At a later

date, when a monkish fable was fabricated as to its having been the residence of the daughters of the Pictish kings, it was called *Castrum Puellarum*. About or after the year 617, when the Anglo-Saxon domination in the Lothians had been established, and when Edwin, a powerful Northumbrian prince of that race, began his reign, it acquired the name of Edwin's-burgh. The Celtic population, moulding the name into affinity with their language, called it *Dun Edin*, and, at the same time, made the name descriptive of the site.—the words *Dun Edin* meaning 'the Face of a hill.' The town probably owed not only its name, but its origin, to the residence of the Northumbrian Edwin; for, according to the statements of Simon of Durham, it must have been a considerable village in 854.

Events till the death of James I.—In 1093 the castle was the refuge of the widow and children of Malcolm Canmore, at the period of his being slain; and was besieged by Donald Bane, the brother of Canmore, and the usurper of his throne, with the view of seizing the heir to the crown. In the reign of David I. the town, though consisting of thatched and mean houses, had grown to be one of the most important in Scotland, and appears to have been for some time erected into a burgh. David I., in his charter to the canons of the abbey of Holyrood, gave liberty to construct the burgh of Canongate, and recognised the previous existence of the church of St. Cuthbert's. William the Lion made Edinburgh castle his frequent residence, and materially promoted the progress of the town. But having been made prisoner during a hostile incursion into England, he surrendered it, in 1174, to Henry II., and did not regain it till his marriage, in 1186, with Ermengard the English princess, who brought it as a dowry. In 1215 Edinburgh was the scene of the first parliament of Alexander II., and, in 1239, of a provincial synod held by Cardinal L'Aleran, legate of Pope Gregory IX. Alexander III. resided in the castle, and made it the depository of the regalia and the archives; and he suffered in it a sort of invasion from the Earl of Dunbar, at the head of a party attached to the English interests, who expelled the patriot nobility, and dictated terms to the King.

The wars of the succession which followed the death of the Maid of Norway, grandchild to Alexander, involved Edinburgh in serious disasters. In 1291 Edward I., as the acknowledged superior of Scotland, received a surrender of the castle, and next year he received the fealty of the abbot of Holyrood. The castle having been withdrawn from him, he captured it, in 1294, after the battle of Dunbar; and, in 1296, he received the fealty of the magistrates and inhabitants of the burgh. In 1313 the castle was re-captured by Sir Thomas Randolph, Earl of Moray; and it was afterwards stripped of its fortifications by Robert Bruce. In 1322 the abbey of Holyrood was plundered by the army of Edward II.; in 1326 it was the scene of one of the parliaments of Robert Bruce; and, in 1328, it accommodated the celebrated parliament in which the representatives of burghs were first admitted among the seats, and which confirmed the treaty of Edward III. acknowledging the independence of Scotland. In 1334 the usurper and vassal-prince, Edward Baliol, held a parliament in Holyrood, and agreed to surrender to Edward III. the castle, town, and county of Edinburgh. In 1336 Guy, Count of Namur, approaching the town with an army in the service of the English king, the Earl of Moray encountered him on the Borough moor, drove his forces in headlong confusion into Edinburgh, pent up a portion of them to slaughter in the narrow

lane of St. Mary's-wynd, and chased the rest to a precarious and temporary retreat on the bare rock of the castle. In 1337 Edward III. rebuilt the castle, and left it in charge of a strong garrison. In 1341, by means of an expert stratagem as a fertile imagination could have invented, or a brave heart carried into execution, Sir William Douglas, the black knight of Liddesdale, recovered the castle to the patriots, and greatly contributed by the event to the expulsion of the English from Scotland.

The hostile incursions of the English being suspended, Edinburgh grew into more consideration. Robert Bruce had already bestowed on the burgh the harbour and mills of Leith. During the reign of David II. it was the seat of numerous parliaments, the source of frequent issues of coin, and confessedly the chief town, though not yet the actual capital, of Scotland. During the reign of Robert II., in 1384, a company of French knights having arrived in the town to aid the arbitrary schemes of the King, the church of St. Giles was occupied as the scene of deliberation respecting a predatory warfare on the borders. Edinburgh, then the royal residence, was called by Froissart, who accompanied the French knights, the Paris of Scotland, and described as consisting of 4,000 houses, so poor that they could not afford the knights due accommodation. In 1385 Richard II. making an excursion into Scotland, gave the church of St. Giles, the abbey of Holyrood, and the whole town to the flames; and, after looking on for five days in vengeful triumph, left all in ashes except the castle. John Stewart, Earl of Carrick, who acted as the King's lieutenant, and who soon after succeeded to the throne under the name of Robert III., now granted permission to the citizens to raise habitations within shelter of the castle-walls. In 1400 the castle was repeatedly assaulted by Henry IV., but successfully defended by the Duke of Rothesay, the heir apparent to the Scottish crown. In 1402 a parliament was held in Edinburgh to inquire into the assassination of the Duke of Rothesay. While James I. was a prisoner in England, Edinburgh partook of the desolation which swept generally over the country. In 1416 the castle was taken by Archibald, fourth Earl of Douglas, but restored in 1418; and, in 1423, when a ransom was proposed to be given for the King's release, the town had advanced so far in prosperity as to be able to contribute to the object 50,000 merks of English money. After the King's return, in 1424, he often honoured Edinburgh with his residence; and in 1429, he received, before the high altar of the church of Holyrood, the abject submission of Alexander, the rebellious Lord of the Isles. In 1430 the Queen was delivered of twins, one of them the future James II., in the abbey of Holyrood. In 1431 the town was scourged with pestilence; and, in 1436, it was the scene of the last parliament of James I.

The reign of James II.—On the murder of James I., in 1436-7, Edinburgh became, in every sense, the metropolis of Scotland. From the reign of David II. it had, in all public transactions, held the place of primary burgh, and had been frequently the seat of parliaments and the royal abode; but it shared its honours with other towns, and wanted in point of favour what it might have justly claimed in point of paramount importance and power. Now, however, its title to entire metropolitan dignity became fully recognised. Neither Perth, Stirling, nor any other resort of the King and court possessing sufficient means to protect the royal family from the murderous attacks of the ferocious nobles, James II.—then only 7 years of age—fled or was conveyed, after the assassination of his father, to Edinburgh

castle; and, in the same year was crowned and held his first parliament in the abbey of Holyrood, and set up in the city the machinery of his government. During the years 1438, 1439, and 1440, the castle was the scene of frequent contests and intrigues respecting the keeping of the King's person. In 1444 Crichton, the ablest man in Scotland, having, as the victim of faction, been dismissed from the high office of chancellor, provisioned the castle and gave defiance to Douglas of Balveny, the royal favourite. Next year, his estates having been escheated by a parliament held in the city, and partly laid waste by military emissaries of the favourite, Crichton sallied from the castle, and, after inflicting severe retaliation, returned within its walls. Being now besieged by the King in person, he defended himself with such skill and resolution that the castle was gladly accepted from him, in 1445-6, on terms of capitulation, which involved his restoration to his office and to the royal favour.

During these troubles, and up to 1456, James II. lavished upon the city such grants and immunities as made it much more indebted for its prosperity to him than to any other monarch. Among other favours, were permission to fortify the town with a wall, and levy a tax to defray the cost,—exemption of burgesses from the payment of any duties except a petty custom,—a grant of all the vale between Craigend gate on the east, and the highway leading to Leith on the west,—and a grant of the 'haven silver' and customs on ships entering the roadstead and harbour of Leith. In 1449 Mary of Gueldres, after having been espoused by proxy to James II. at Gueldres, was married to him in person, and pompously crowned, in the abbey of Holyrood. In 1460 James II. having been killed by the hursting of a cannon at the siege of Roxburgh castle, was brought a corpse to the city he had enriched with his munificence, and interred on the spot where he had received his crown. His Queen, who had imitated his taste in raising the dignity of the metropolis, and had founded and endowed Trinity church and hospital, died three years after him, and was laid in the church which she had reared.

The reign of James III.—James III., throughout his inefficient reign, conferred on Edinburgh the advantages of his residence and of several immunities. In 1461 Henry VI., after his defeat at Towton, sought refuge in Scotland, and was honourably entertained for a time in the capital. In 1469 the Princess Margaret of Denmark was married to the King, and crowned, amid splendid pageantry, in the abbey of Holyrood. In 1475 the city was so desolated with pestilence that parliament, though summoned, failed to assemble. In 1477, James III. gave to the city a charter minute, and now very curious, establishing the sites of its markets. In 1478 began those intrigues at Edinburgh of the King's brother, the Duke of Albany, to supplant him in the throne, which issued in extensive disasters to the town and country, and eventually terminated in the King's death. Albany, having been imprisoned in the castle, effected his escape to France; and passing thence, in 1482, into England, bargained with Edward IV. to hold the crown of Scotland under him, as superior of the realm. The Duke of Gloucester, deputed by the English king, marched on Edinburgh; and meeting no resistance, was induced by Albany to spare the town from a destruction with which he had menaced it, "only taking such presents," saith Hall, "as the merchants genteelly offered him." The English Garter King-at-arms now ascended the platform of the cross, and summoned the Scottish king, who had taken refuge in the castle, to perform

all he had promised to Edward IV., and to pardon Albany. The citizens, evincing both their wealth and their patriotism, agreed to repay to the English king certain sums which he had advanced in consideration of a concerted marriage between his daughter and James' son; and, the Duke of Gloucester having been wiled away by the permanent cession of the town of Berwick, and the Duke of Albany having been pardoned by a formal act of forgiveness, the provost and citizens, assisted by the latter, processed to the castle to escort the King from his durance. James III. and Albany mutually embraced, and then rode together to Holyrood-house, amid the tumultuous joy of a deluded people; and the King bestowed on the inhabitants some munificent expressions of his gratitude for their patriotism in the season of his distress. At the close of 1482 Albany, immediately after having been received into favour, and injudiciously constituted Lieutenant-general of the realm, intrigued once more against the King. James III., however, by retiring into the castle, and rousing the citizens, disappointed his purposes of treason. Edinburgh, by its loyalty to the sovereign, and especially by its prompt performance of all its stipulations with England, obtained great praise, and, in reference to the ample resources which it evinced itself to possess, was called by the Continuator of the Annals of Croyland "ditissimum oppidum." Early in 1488 the King, hard pressed by a powerful combination of insurgents, and obliged to leave the city and flee to the north, deposited his treasure and valuable effects in the castle, and supplied it with ordnance and provisions to sustain a siege; but he was assassinated in the same year, and proved to have been only heaping up store for his murderers.

The reign of James IV.—Late in 1488, the first parliament of James IV. assembled in Edinburgh, amid the guilty triumphs of rebellious faction; and for some time succeeding the early part of the next year, the castle, town, and shire were under the domination of Patrick, Earl of Bothwell. As James IV. grew up in years, he frequently invited the knights of every country to tournaments at Edinburgh, and took great delight in rendering the city a busy scene of magnificent entertainments. In 1503 the King was, with gorgeous parade and pomp, married, at Holyrood-house, to Lady Margaret, the eldest daughter of Henry VII. In 1508 the printing-press was introduced to Edinburgh by Chapman and Millar, under a royal charter; and it produced curious specimens, some of which are still preserved in the Advocates' library. About the same time, the King, continuing to reside in the capital, entertained the French ambassador at great expense, and with coarse profusion. In 1513, while a dreadful plague had broken out and was desolating Edinburgh, James, preparing for a hapless war, hurried himself in inspecting his artillery in the castle and the outfit of his navy at Newbaven; and, having summoned the whole array of his kingdom to assemble on the Borough-moor, he marched thence to his disastrous defeat and violent death on the field of Flodden.

The reign of James V.—The magistrates and numerous burgesses of Edinburgh having followed the late King in his fatal expedition, drew upon the city apprehensions of fearful retaliation. All men able to bear arms were instantly ordered to stand, if necessary, to the defence of the walls; and other vigorous measures were adopted to maintain a stern resistance. But the privy-council withdrew for some months to Stirling; and there James V. was crowned. Early in 1514 the magistrates of Edinburgh, fearful of disasters with which the city

seemed menaced, raised a permanent city-guard of 24 men, levied £500 Scots for the extending of the fortifications and the purchase of artillery, and ordered the erection of the second or southern wall. In 1515 the putative Duke of Albany, to whom all eyes were turned for giving stability to the fragile and shattered government, and vigour to the Scottish arms, was received in Edinburgh with unwonted magnificence and processional demonstrations of feeling; and he proclaimed at the cross the peace for Scotland which France had negotiated with England. In the same year a parliament which assembled in the city, appointed him protector and governor of Scotland during the minority of the infant King. But Albany, though residing at Holyrood-house, and wielding all the power of royalty, thought himself insecure unless he should obtain command of the young King and his mother's persons, who had retired to the castle. Forceful measures were adopted which first drove the Queen to take flight with the young Prince to Stirling,—next compelled her to yield up the fortress of that town, and return to Edinburgh castle,—and next converted the latter place into a state-prison for the infant monarch. In the meantime, the town became the scene of frequent tumults and copious bloodshed, from contentions among the nobles, and from strifes for superiority in the magistracy. On one occasion, upwards of 200 men were slain on the streets in a *melee*, popularly commemorated under the odd name of "Cleanse the causeway," between the Hamiltons and the Douglasses. On another occasion, there was an encounter with similar results, between the partizans of the Earls of Huntly and Moray, and those of Lords Rothes and Liudsay. These facts, and others of kindred character which occurred, evince that, under the regency of Albany, the metropolis enjoyed neither the amenity of civilized manners, nor the most ordinary protection of common law. In 1519 and 1520, while Albany was absent in France, the city lay prostrate beneath the twofold scourge of devastation by the plague, and of the ascendancy of lawless violence maintained with the aid of an armed force from the horders. In 1522, Albany having returned from France, a parliament held in the city authorised the removal of the young King from the castle to Stirling, but was too feeble to reform the popular profligacy of manners, or to strengthen the weakness of the laws. At the close of 1523, Albany met the parliament at Edinburgh for the last time; and in May 1524, he departed forever from Holyrood-house to France, leaving the Scottish government and the police of the metropolis in a state of utter confusion.

In July 1524, the Queen brought James V., now in his 13th year, from Stirling to Edinburgh, and caused proclamation to be made that he had assumed the government. In November of this same year, while parliament was sitting, the Earl of Angus, who had been married to the Queen, broke into Edinburgh, with several other chiefs and 400 armed followers; and, having vaunted or proclaimed themselves at the cross to be good subjects, went to the council of state, and demanded that the Queen should be deprived of the guardianship of the infant King. The castle immediately fired upon the town, and killed several innocent persons; and Angus, menaced, along with his fellow-insurgents, by a body of backbutters who had been called out against him, and having received a mandate from the King to retire from the city, withdrew to Dalkeith. Early in 1525, a coalition and division of patronage having been effected between the Queen and her opponents, the young King, who had taken refuge in the castle, removed his residence to Holy-

rood-house, and afterwards went in person to meet his parliament in the tolbooth, his crown being borne before him by Angus. In 1525, Angus acquired such an ascendancy as, while he dictated to the whole kingdom, enabled him to subject the metropolis to the will, and impoverish it for the pampering of his creatures; and, from that date till his final disgrace and forfeiture in 1528, he occasioned continual disturbances and tumultuous movements both in Edinburgh and throughout the country, in opposing first the Queen and next the Monarch.

About 1528, additional excitements arose in the city from the private diffusion of the principles of the Reformation. In May 1532, after various establishments for the administration of equity had been tried and rejected, the college of justice, or system of national law-courts the same *in limine* which exists at present, was founded. This event was the greatest in intrinsic importance which had yet graced the annals of Edinburgh, and immediately raised the dignity and influence of the city, and occasioned it to become the resort of many families from among the best portion of the community who possessed a competency of worldly wealth. In the same year, and during two or three years following, the magistrates, and even the parliament, adopted measures to remove nuisances which hitherto had defiled or obstructed the streets, and diffused putridity among the lanes, and occasioned the lampoonings of wit and the severities of satire; and they now ordered the thoroughfares to be paved, lanterns to be hung out at night, the meal-market to be removed from High-street to "some honest place," where it would be no obstruction, and a substantial wall to be built from Netherbow to Trinity College church. In August 1534, Norman Gourlay and David Straiton were tried and condemned, at Holyrood-house, for the heresy of the Protestant faith, and executed at Greenside. In 1537, Magdalene, the first consort of James V., arrived from France at Leith, made a triumphal entrance into Edinburgh amid magnificent processions and joyous acclaims, and, in forty days, was carried a corpse to the royal tomb in Holyrood abbey. In July 1538, Mary of Guise, James V.'s second wife, entered Edinburgh amid similar greetings to those which had been accorded to her predecessor, and was treated by the citizens with rich presents, and "with farces and plays." At the close of 1542, James V., having died at Falkland, was buried in Holyrood by the side of his first wife.

The reign of Mary.—The regents Arran and Beaton having rejected some ambitious schemes of Henry VIII. respecting the person of their infant Queen Mary, who was only a week old at her father's death, the Earl of Hertford arrived in the Forth with a numerous fleet and army, and, besides inflicting numerous devastations on other towns and the country, set fire to Edinburgh, burnt the abbey and palace of Holyrood, and made an unsuccessful attempt upon the castle. In 1548, the city, after being again menaced by an English force, was garrisoned by part of a French reinforcement of 6,000 men under D'Esse. In 1551, the queen-dowager, after conveying her infant-daughter to France, was received, on her return to Edinburgh, with distinguished honours; and in 1554, having been constituted regent of the kingdom, she encouraged plays in the city, and cajoled the magistrates to defray much of the expense. In October 1555, John Knox arrived in the city, and speedily occasioned a shifting of its scenes. Next year a concourse of people assembled in and around Blackfriars' church, to protect him from the hostile pro-

ceedings of an ecclesiastical judicatory. Early in 1557, Knox having gone to Geneva, Harlow and Willock, two other reformers, arrived and successfully preached their doctrines in Edinburgh and Leith. In December of the same year, a few nobles signed the first covenant in Edinburgh, and were the germ of "the Congregation." In June 1558, an invasion from England being apprehended, the burghesses of Edinburgh voluntarily agreed to maintain upwards of 700 armed men for the defence of the city. Next month the reformers and the queen-regent came to an open rupture. On the anniversary of St. Giles, when the priests carried an effigy of the patron saint with great processional pomp along the streets, the populace flamed forth in indignation, dispersed the ecclesiastics, and tore the effigy in pieces. In 1559, Knox having returned from Geneva, and the army of the congregation approaching the town from the north, the magistrates ordered all the gates except two to be sbut, and these two to be guarded; and they sent commissioners to meet the reformers at Linlithgow, and treat with them; and placed a guard of sixty men to protect St. Giles' church. When the army of the congregation entered Edinburgh, they took possession of the mint, and of the offices of government; but found the work of upsetting popish altars, destroying the paraphernalia of popish ceremonies, and converting monasteries into private dwellings, sufficiently accomplished by the populace.

Open hostilities now occurred in regular warfare between the troops of the reformed, and the troops of the queen-regent. Leith, which was in a fortified condition, was the head-quarters of the Romish or government party, who were aided by the opportune arrival of an auxiliary force from France; Edinburgh was the head-quarters of the reformed party, and entirely in their possession; and the fine plain which stretches between the Calton-hill and Leith, was the scene of frequent skirmishes and resolute onslaughts. The irregular troops of the reformed could ill cope with the well-disciplined auxiliaries from France; but, eventually aided by a force from Elizabeth of England, they succeeded, about the middle of 1560, to expel the queen-regent's forces from the kingdom, to dismantle Leith, and to remove every hinderance to the ascendancy and the civil establishment of the principles for which they contended. Edinburgh, now in undisputed possession of the reformers, and entirely freed from the influences which had hitherto swayed it, underwent an almost entire change of moral aspect, yet did not pass through the transition without some ebullitions of popular feeling, and some riotous movements on the part of small portions of its people. Women were prohibited from keeping taverns; the market-day was changed from Sunday to Saturday and Monday; measures were adopted for the suppression of immorality; the reformed religion was introduced to all the places of worship, and enforced on the attention of the whole population; and on the 20th December, 1560, the first general assembly of the Kirk assembled under the local sanction of the magistrates.

In August 1561, Mary, the young Queen, arrived at Leith from France; and she made a public entry into Edinburgh amid clamorous and showy demonstrations both of welcome to her person, and of caution against interference with the recent changes in religion. Splendid dresses were prepared; the public streets were ornamented; and as she issued from the castle, where she dined, a boy descended, as if from a cloud, and delivered to her a bible, a psalter, the keys of the castle gates, and some verses containing "terrible significations of the vengeance

of God upon idolaters." Having arranged her government at Holyrood-house, she set out on a progress to visit her principal towns throughout the country, and left the metropolis, as she found it, wholly under the power of the reformers. In June 1562, the town-council ordered the figure of St. Giles to be displaced from the banner of the city, and substituted by the thistle; and ordained that no one should be eligible to any civic office who was not of the reformed faith. In May 1563, the Queen, dressed in her robes and wearing her crown, met her parliament in the capital, and concurred in an act of oblivion as to the proceedings of the Lords of the Congregation. Edinburgh, with Knox for its minister, and the general assembly for its most influential court, now gave tone to the whole country, and lifted the spirit of religious reform up to a point of high dominance which was sufficiently menacing to the adherents of popery, and little careful of pleasing the monarch.

On the 28th July, 1565, Lord Darnley was proclaimed King at the market-cross; and at 5 o'clock on the following morning was married to the Queen within the chapel of Holyrood. On the 9th March, 1566, David Rizzio was assassinated in the Queen's presence in her supper-apartment at Holyrood; and on the 19th June of the same year, she was delivered, in a small room in the castle, of her son James. On the 10th February, 1567, Darnley, then lying in a convalescent state in the house of Kirk of Field, was blown up with gunpowder; and on the 15th May following, Bothwell, who was believed to have been the author of Darnley's murder, and who had repudiated his wife, was married to the Queen in Holyrood, by Adam Bothwell, bishop of Orkney. On the 6th of June, a smouldering popular indignation having begun to belch up in flames, Mary and her husband fled from the city, pursued by 800 horsemen. On the 11th, the associated insurgents, amounting to 3,000 men, marched upon Edinburgh, and though the gates were shut against them, easily entered, and took possession of the seat and the powers of government. On the 14th, she was brought from Carberry-hill to Edinburgh, and conducted through the streets, amid popular insults, to the house of Sir Simon Preston, the provost; and next day, she was sent off a prisoner to Lochleven castle. Her valuables within Holyrood-house were seized; her plate sent to the mint to be converted into coin; and her chapel in Holyrood spoiled of its furniture and ornaments, and generally demolished. The last of these acts, however, was chargeable, not on the body of the successful insurgent chiefs, but only on the Earl of Glencairn.

The reign of James VI.—A government was now formed in the name of James VI., the infant son of Mary; and on the 22d of August, 1567, the Earl of Moray was proclaimed, at the cross of Edinburgh, the regent of the kingdom. At the coronation of the infant King in the church of Stirling, three of the magistrates of Edinburgh attended to represent the city. In 1568, when the nation was violently excited by Mary's escape from her imprisonment and the brief civil war which followed, the metropolis was in arms to repress insurrection, and was, at the same time, desolated with pestilence. On intelligence of the regent Moray's assassination in January 1569-70, at Linlithgow, the city was thrown into great confusion, and put under a strong guard night and day; and the Lords of the court of session were with difficulty dissuaded from abandoning it as too tumultuous a scene to be the seat of their court. The chiefs of the Queen's party marched upon Edinburgh from Linlithgow, and were received within the walls by Kirkcaldy, the governor of the

castle, the provost of the town, and one of the ablest soldiers of the period. Kirkcaldy ordered all who opposed the Queen to leave the town within six hours, seized the arms of the citizens, planted a battery on the tower of St. Giles', and repaired the walls and strengthened the gates of the city. A war now commenced within the limits of the metropolis and its suburbs, the miseries of which did not soon come to an end. In May 1571, two parliaments sat in the harassed city,—the one on the Queen's side, in the Tolbooth,—the other, on the King's side, in the Canongate. While the two legislatures fulminated forfeitures at each other, their respective partizans fought frequent skirmishes in the neighbourhood and the streets. The castle was kept for the Queen, with great superiority of advantage; and Holyrood-house was retained for the King by the regent Lennox. A small army, sent from Berwick by Elizabeth, eventually crushed the Queen's party, and, on the 29th May, 1573, forced the castle to capitulate. Kirkcaldy and his brother, though they surrendered on the understanding of being favourably treated, were hanged at the cross. The quick succession of four regents, who fell amidst the furies of civil war, neither quieted the nation nor brought peace to the metropolis.

At length, in March 1577-8, James VI. himself came upon the unsettled stage. Having summoned a parliament to meet in Edinburgh, and resolved to remove his residence from Stirling, he made a magnificent entry into the metropolis on the 17th October, 1579, and passed to the palace of Holyrood, with a cavalcade of 2,000 horse. In December 1580, the Earl of Morton was called to account by the privy council for his many crimes, and, in particular, for being accessory to the murder of Darnley. He was first warded in Holyrood, next sent to the castle, next removed under a strong guard to Dumbarton, and eventually brought back to Edinburgh, and guillotined with the infamous instrument called "the Maiden," which he himself, it is believed, introduced to the country, and which afterwards drank the blood of patriots and martyrs. When the King's provocation of his reformed subjects by his attempted extensions of the royal prerogative, led, in 1582, to his capture in the raid of Ruthven, the conspirators brought him to Holyrood-house, and demanded of the magistrates a body of hackbutters to guard him in the palace. In January 1583 two ambassadors arrived from France to solicit his freedom. The King ordered the magistrates to entertain them with a banquet. But the ministers of the city appointed the day of feasting to be a day of fasting, and occupied the whole of it in successive religious services in St. Giles', in the course of which they used language less measured than the taste of a later age would approve, respecting all the parties connected with the banquet. The King, having freed himself from thraldom, established a guard of forty gentlemen on horseback for the protection of his person, and made adequate provision for the governor of the castle. Having arrived, in 1587, at the legal age of twenty-one, he made a royal banquet in Holyrood-house for reconciling his factious nobles; and, with puerile conceit, made irascible men walk hand in hand to the cross, and there partake a collation of wine and sweetmeats provided by the magistrates, and pledge one another in the juice of the grape to mutual forgiveness and future amity.

When intelligence arrived in August 1588, of the approach of the Spanish Armada, the magistrates commanded the citizens to provide themselves with arms in order to guard the coast, and raised a body of 300 men to defend the city. James was in the practice of ordering the magistrates to entertain his

friends; and, by draining their coffers with the costs of banquets, he brought the metropolis into a less opulent condition than had graced it during several preceding reigns; and now, in the prospect of his marriage with the princess Anne of Denmark, he commanded the magistrates to find suitable accommodation and entertainment for the royal bride, from the time of her arrival at Leith till Holyrood-house could be duly fitted out for her reception. The magistrates paid 5,000 merks to be excused; and afterwards, when the bride was driven back by adverse winds, and when James himself, with more enterprise than he was supposed to possess, determined to cross the ocean and convey her home, they provided him at enormous cost, with a beautiful and commodious ship for the voyage. In May 1590 the royal pair arrived at Leith, and were received in Edinburgh with acclamations of welcome; and six days after their arrival the Queen was crowned in Holyrood. In December 1590 the Earl of Bothwell having broken into the palace at the hour of supper, and laboured by fire and demolition to overcome obstructions in his way to the King's apartment, the citizens ran to the rescue, forced Bothwell to flee, and captured eight of his followers, who were executed on the morrow. In September 1593 James vainly renewed attempts, which he had formerly made, to dictate to the city in the choice of its council and magistrates; and in November he even issued a proclamation, forbidding any person to enter Edinburgh without his leave. In February 1594, when the Queen was delivered of Prince Henry at Stirling, the town-council of Edinburgh presented the King with ten tons of wine, and sent 100 citizens, richly accoutred, to attend the baptism; and next year, when Bothwell continued to raise treasonous tumults, they appointed the sovereign a body-guard of fifty citizens. In September 1595 the boys of the High school broke into rebellion; and one of them fired a pistol from the school-house, and shot one of the magistrates who had been summoned to reduce them to order. In August 1596, when the princess Elizabeth was born, the magistrates were invited to the baptism in Holyrood-house; and they made a promise of 10,000 merks to be paid to the princess on the day of her marriage,—a promise which not only was fulfilled, but raised to 15,000 merks.

In December 1596, the clergy and citizens being irritated and alarmed at what they believed to be menacing interferences of the King with religious liberty, a serious tumult broke out in the city, and rolled along toward the town-house to attack the King and his council, who sat in consultation. The provost and magistrates opportunely came upon the theatre, and, by skillful management, assuaged the storm. James fled from the city, issued a proclamation which painted in dark colours the objects of the uproarions but harmless tumult, and sent a charge to the magistrates to arrest the ministers, and, in consequence, obliged the latter to flee from the country. The privy-council also declared the tumult to have been traitorous; the several judicatories were removed to Leith; and the court of session was directed to sit at Perth after January 1597. The town-council, as well as the inhabitants, were now completely alarmed, and sent a deputation of citizens to Linlithgow, to make unqualified submissions, and to sue for pardon. James made a public entry into the city with great ceremony, and, in March 1597—moved partly by the people's tears and 30,000 merks of their money, and partly by the interposition of Elizabeth of England—formally pardoned the tumult, and drank with the provost and magistrates in token of reconciliation. In 1599 the King came once more into collision with

the ministers of Edinburgh, he having invited to the city a company of English players, and the presbytery denouncing histrionic performances as positively sinful. This company of actors was the first who appeared on a Scottish stage after the Reformation, and is supposed to have included Shakspeare. In 1600 Robert Bruce, the favourite minister of the city, and four of his clerical brethren, were banished by proclamation at the cross, and forbidden, on pain of death, to preach or to come within 10 miles of the King's residence, for the crime of being sceptical as to the reality of the Gowrie conspiracy; and the dead bodies of the Earl of Gowrie and his brother were brought from Perth to Edinburgh, and hung up at the market-cross as the bodies of traitors.

James having succeeded to the crown of England by the demise of Elizabeth, on the 24th March, 1603, many persons hastened from London to Edinburgh with the welcome news. On the 31st March the nobility and the Lyon King-at-arms proclaimed the event at the cross. On the Sabbath previous to his departure for England, James attended public worship in St. Giles', and, at the close of the sermon, delivered a formal valedictory address. At this period, and during some subsequent years, Edinburgh, in common with other Scottish towns, severely suffered by frequent visitations of plague. In 1608 James empowered the magistrates to wear gowns, and to have a sword of state carried before them in their processions. In 1616 the King, in fulfilment of a promise made at his departure, paid a visit to Edinburgh. Arriving at the West Port, he was received by the magistrates in their robes, and some citizens in velvet habits; and was treated to an oration by the town-clerk, abounding in the most fulsome and rhapsodical flattery. The citizens afterwards entertained him with a sumptuous banquet, and presented him with 10,000 merks of double golden angels, in a silver bason. In June 1617 James convened his 22d parliament in Edinburgh, and sanctioned, or rather instigated, its passing decrees for the resuscitation of prelacy, and the improved support of the castle. After presiding at a scholastic disputation of the professors of the university, he departed in September 1617 for London. News of his death, in March, 1625, having arrived, the ministers of the city praised him in funeral sermons, as a most peaceable and religious prince.

The reign of Charles I.—On the 31st March, 1625, Charles I. was proclaimed at the cross; and the town-council agreed to advance to him the assessment of the city, and to contribute to the maintenance of 10,000 men; and they, at the same time, provided for the city-guard, and for the discipline of all the citizens. On the 12th June, 1633, Charles visited Edinburgh, to be crowned King of Scotland. He was received at the West Port by the magistrates in red furred gowns, and 60 councillors in velvet dresses; and conducted along the streets with a display of pageantry more gorgeous than had graced the public entry of his father, and indicating an increase in civic wealth. On the 18th he was crowned in the abbey church of Holyrood with unwonted splendour; and on the 20th he assembled his first Scottish parliament, mainly for the purpose, as would appear, of carrying out his projects in favour of prelacy, and the introduction of a liturgy. By the acts of this parliament, and by the erection of the bishopric of Edinburgh, his brief residence, though hailed at the moment with demonstrations of delight, ignited a smouldering, far-spreading, fierce fire of discontent. Scarcely had he returned to London when the hidden fire burst forth into a blaze. When the liturgy, which was chiefly copied from that of

England, was read in St. Giles', a tumult ensued. In October 1637 a great concourse of persons of every rank resorted to Edinburgh to avow their discontent, and declare their opposition. A proclamation, commanding them to disperse, only produced a new tumult. The withdrawal of the privy-council and the court of session to Linlithgow was followed by increased uproar and confusion. During 1638 discontent was animated into organized insurrection. A convocation assembled in Edinburgh to oppose the liturgy, and adopted the strong measure of renewing the covenant.

The magistrates now ordered the citizens to prepare for war; and the Covenanters, on their side, drew to arms. On the 22d September proclamation was made—but at too late a date, and in too exacerbated a condition of the popular feeling—that the liturgy was abandoned. In December the Covenanters beleaguered the castle, and were aided by the town-council with a force of 500 men, and a subsidy of £50,000 Scotch. But a pacification taking place in May 1639, at Berwick, the castle was delivered to the Marquis of Hamilton as the King's officer. A parliament which sat in Edinburgh in December 1639, broke up amid mutual criminations of unconstitutional conduct. In 1640 fresh preparations were begun for determined war. The magistrates appointed a night-guard, exercised the citizens in arms, and raised fortifications to defend the town against the castle. Ruthven, the governor of the castle, fired upon the city, but being invested by Lesley, the general of the Covenanters, was forced to surrender. The treaty of Ripon put an end to hostilities. In August 1641 Charles revisited Edinburgh, and pardoned and conciliated the insurgents. Having been well-received by the magistrates, and sumptuously entertained at the cost of £12,000 Scotch, he departed in November. The magistrates still adhered to the covenant, and raised for its support a regiment of 1,200 men, at the expense of £60,000 Scotch. In October 1643 the solemn league and covenant was sworn in St. Giles'. In March 1645 a plague again desolated the city; but happily was the last with which it has been afflicted.

The reign of Charles II.—After the execution of Charles I. Edinburgh joined in the national engagement in favour of Charles II., and undertook to contribute a quota of 1,200 men. But, in lieu of the men, the town-council afterwards offered to pay £40,000 Scotch; yet, in consequence of impoverishment by plague and civil war, they were in so disastrous a predicament that they first thought of borrowing the money, and next pleaded exemption from paying it, on the ground that it had been promised in an unlawful cause. In May 1650 the Marquis of Montrose was brought a prisoner into the city, conveyed along the streets in ignominious parade, tried and condemned by the parliament, and publicly executed at the cross. Having obtained the consent of the exiled Charles II. to be their King, the magistrates, in July 1650, proclaimed him at the cross. Lesley, the commander of the Scottish troops, having been subdued at Dunbar, on the 3d September, by Cromwell, who had crossed the Tweed and menaced the metropolis, Edinburgh was abandoned to its own fears, and left by the magistrates without a government. On the 7th September Cromwell took possession of the city, and three months later forced the castle to capitulate. In December 1651 the magistrates returned and resumed the government. Commissioners from Cromwell for ruling Scotland having arrived, in January 1652, at Dalkeith, the citizens of Edinburgh were so humbled that they felt obliged to ask their

consent before proceeding to elect new magistrates. The metropolis now enjoyed, for several years, a degree of repose to which it had long been a stranger; but it was so impoverished that scarcely a person was able to pay a debt,—the city itself being unable to satisfy a claim upon it for £55,000 sterling.

When intelligence arrived in 1660 of the Restoration, the town-council addressed a letter to the King, congratulating him on his recovery of the throne; the town-clerk made a journey to London, and presented £1,000 sterling for the royal acceptance; and the citizens expressed their joy by partaking of a sumptuous feast at the market-cross. Charles ratified some old privileges, empowered the magistrates to levy a new civic tax, abolished the English tribunals in Scotland, and directed a parliament to meet at Edinburgh for the adjustment of the national affairs. Parliaments which met in January 1661, and May 1662, abolished presbytery, condemned the covenants, restored prelacy, and, in consequence, incited the Covenanters to arms, and threw the metropolis and the country into confusion. Edinburgh was put into a posture of defence; the gates were barricaded; ingress or egress was prohibited without a passport; the gentlemen of the neighbouring territory were called in to afford their aid; and the court of law placed its members under arms. In December 1666 ten of the Covenanters who had been captured in the action of Rullion-green, were executed in Edinburgh.

During the whole period of Charles II.'s reign, from the year 1663, the metropolis was the scene of the trial, torture, and execution of vast numbers of Covenanters, many of them the best and brightest men of the age. But the tyranny which was exercised, the inquisitorial proceedings which were carried on, the martyrdoms which were perpetrated, the demonstrations of a ferociously persecuting spirit which were made, and the military manœuvres of a standing army which were practised, did not for an hour awe the inhabitants into submission, and scarcely succeeded in even repressing them from attempting bold though hopeless deeds of insurrection. At the execution of one Mitchell, who was concerned in an attempt to assassinate the archbishop of St. Andrews in the High-street, bands of women assailed the scaffold, and made a strenuous endeavour to effect a rescue. During 1679 the Duke of York—the future James VII.—resided in Edinburgh, was magnificently entertained by the magistrates, and introduced the drama and other appliances of fashionable dissipation. In 1680 the students of the university having, in contempt, probably, of the Duke of York's religious creed, resolved to burn the Pope in effigy, the magistrates interposed, and a tumult ensued. The college was now, for a time, shut up; and the students exiled under a prohibition not to approach within twelve miles of the town. In May 1682 the Duke of York, after having utterly effeminated the capital, and diffused an idle and ruinous taste for show and extravagance, and lured the magistrates into numerous acts of mean servility, took his departure for London.

The reign of James VII.—Intelligence having arrived of the demise of Charles II., in February, 1685, a stage was erected at the cross, the militia drawn out, and proclamation, amid pompous displays, made of the accession of James VII. On the 20th June the Earl of Argyle was brought into Edinburgh, paraded along the streets, bound, uncovered, and preceded by the hangman, and publicly executed with every accompaniment of ignominy. On the 1st of November, a letter from the King, dispensing with the test, and indicating favour to papists, was read at the privy-council. Early in

1686 an order, dictated by the King, was issued by the privy-council, forbidding the booksellers of Edinburgh to print or sell any document which reflected upon popery. A subsequent order authorizing the public and open celebration of mass occasioned a popular tumult. A journeyman baker, who was concerned in the tumult, having been ordered by the privy-council to be whipped along the streets, a mob rose to his rescue, beat the executioner, and continued all night in riotous possession of the town. The King's guards and soldiers from the castle were brought out to the assistance of the town-guard, and, firing upon the mob, killed two men and a woman. Next day several of the rioters were scourged amid a double file of musqueteers and pikemen; a drummer was shot for having uttered an expression of strong antipathy to papists; and a fencing-master was hanged at the cross simply for having expressed approbation of the recent tumults, and drunk the toast of 'Confusio to Papists.'

On the 29th of April, 1686, a parliament was convened at Edinburgh, to which was read a letter from the King proposing indulgence to the Roman Catholics; which included among its members the Lord-chancellor Perth, who was a Papist, and had not taken the test required by law; and which, though sufficiently pliant, was not so servile as the King desired in adopting and enforcing his religious schemes. James, persecuting and spurning the sturdier members for their votes, did by his own authority what the parliament refused to do,—he took the Roman Catholics under his protection, assigned them for the exercise of their religion the chapel of Holyrood abbey, commanded the magistrates to be conservators of their privileges, and promoted as many of them as possible to places in the privy-council, and the offices of government. Watson, a popish printer, was appointed by the King the printer to the royal family, and by the privy-council the printer of all the prognostications in Edinburgh; and he carried through the press the numerous books whose imprints indicate their having been printed during the reign of James II. "in Holyrood-house." Some minor particulars mentioned by Lord Fountainhall sufficiently indicate the deep undercurrent in the direction of popery which flowed beneath the surface of the King's public enactments. "On the 23d of November, 1686," says he, "the King's yacht arrived from London, at Leith, with the altar, vestments, images, priests, and their apurtenants, for the popish chapel in the abbey of Holyrood. On St. Andrew's day the chapel was consecrated, by holy water, and a sermon by Wederington. On the 8th of February, 1688, Ogstoun, the bookseller, was threatened, for selling Archbishop Usher's sermons against the papists, and the History of the French Persecutions; and all the copies were taken from him; though popish books were printed and sold. On the 22d of March the rules of the popish college, in the abbey of Holyrood, were published, inviting children to be educated gratis."

But James VII. had now run his race of religious folly, and was about to forfeit for himself and his heirs the crowns which he had meretriciously adorned with Romish gems. Throughout the months of September and October, 1688, his officers of state at Edinburgh acted as if they expected an invasion from Holland. Throughout August and November the court of session almost ceased to sit, considering its functions to have ceased from the apparent dissolution of the government. On the 3d December the students of the university, acting as the tools of more influential parties, burned the Pope in effigy, and clamoured for a free parliament.

At length the Chancellor, the Earl of Perth, in whose person rested the whole government of Scotland, indicated, by his flight from Edinburgh to the Highlands, that the metropolis and the country were freed from the caprices and the tyrannies of the dynasty of the Stuarts.

The reign of William and Mary.—No sooner was it known that William, Prince of Orange, had landed, and that the regular troops were withdrawn from Scotland, than Edinburgh was peopled with crowds of Presbyterians pouring into it from every part of the country, and became a scene of tumultuous confusion. A mob rose, drums were beat through the streets, and a rush was made upon every thing identified with popery. The populace and the students ran to the abbey of Holyrood to demolish the chapel; but were fired upon and repulsed by the guard, 12 of their number being killed. Wallace, the captain of the guard, refusing, when called upon, to surrender, another rush was made upon his party, and terminated in the slaughter of some, and the capture of the rest. The mob now pillaged the abbey church and private chapel of Holyrood, pulled down the Jesuits' college, plundered and sacked the religious houses and private dwellings of Roman Catholics, burned at the cross the paraphernalia of the chapels for saying mass, and made a general demolition of whatever was popish, or connected with the ecclesiastical policy of the dethroned monarch. Guards were now placed throughout the city to prevent further tumults. Nor—owing to the discretion of the Duke of Gordon, the governor, who yet refused to resign his command—did the castle fire upon the town during the season of violence. On the 25th December the students paraded, with the college-mace before them, and a musical band, to the cross, and there again burnt the Pope in effigy,—the town-council, and the portion of the privy-councillors who had not fled, looking on with approbation.

The magistrates, notwithstanding their former sycophantish submission to James, were among the first to offer their services to the Prince of Orange; and on the 28th December they addressed him, congratulating him on his success, and assuring him of their cheerful concurrence in preserving their religion and their liberties. On the 14th of March, 1689, a convention of Estates was held at Edinburgh; and declared the forfeiture of James VII., offered the crown of Scotland to William and Mary, abolished prelacy, and re-established Presbyterianism. On the 26th of March the magistrates of the city gave their oath of fidelity to the Estates. On the 11th of April William and Mary were proclaimed at the cross King and Queen. During the sitting of the convention 6,000 Covenanters from the west protected its members, and preserved the peace of the city. Viscount Dundee, better known as Graham of Claverhouse, provoked about the city for a while with a small armed body of about fifty horse; and when about to retire before the forces which were accumulating within its walls, he climbed up the western side of the castle-rock to a postern now closed up, and held a conference with the Duke of Gordon, who still maintained possession of the fort. An alarm now arose that the castle was about to bombard the parliament-house, and scatter the convention; but was magnanimously quelled within doors by the president, the Duke of Hamilton, who turned the lock, and declared that members should not depart till there was actual danger. The adherents of the revolution were suddenly summoned to the streets by beat of drum; and, in crowding together into masses, gave the city the appearance of hurried preparation to resist a menac-

ing attack. On the 13th of June, 1690, the last hopes of the Jacobites having been slain at Killiecrankie, the castle was surrendered by the Duke of Gordon. Several Jacobite plots were at various periods discovered in the city, but were easily crushed.

In July 1690 the magistrates were empowered to raise a revenue for maintaining the city-guard. An act was soon after passed, though not without opposition, to enable the corporation to pay its debts. During the whole of the reign of William the city was disgraced with the practice of torture, in nearly as cruel a degree as under the later Stuarts. In 1698 a statute was enacted by the Scottish parliament, against erecting houses in Edinburgh of a greater height than five stories, or of less thickness of wall in the ground story than three feet. On the 3d of February, 1700, a dreadful conflagration broke out on the south side of Parliament-square, and consumed the treasury-room, the old Royal exchange, and extensive piles of building on the south and east sides of the square. Early in the same year the whole of the printers in Edinburgh, and some other parties, were severely prosecuted for the publication of pamphlets reflecting on the government. As the year 1700 advanced, the massacre of Glencoe, the disregard of the Scottish privileges at the treaty of Ryswick, and particularly the opposition of the King to the recently formed company for trading to Africa and the Indies, and the failure of the settlement which this company attempted to establish on the isthmus of Darien, exacerbated the people of Edinburgh and provoked them to open violence. On the arrival of news which were temporarily favourable respecting the Darien settlement, a mob obliged most of the inhabitants to illuminate, committed outrages on the houses which were not lit up in obedience to their dictation, secured the avenues to the city, hurned the doors of the Tolbooth and set at liberty the victims of prosecution for libel upon government. When news shortly after arrived that the settlement was destroyed, and the hopes and capital of the trading company demolished, the mob were so furious that the officers of state and the royal commissioner to parliament fled from the city to escape becoming victims to the popular indignation.

The reign of Anne.—Intelligence having arrived in March, 1702, of the demise of William, Queen Anne was proclaimed at the cross with the usual ceremonies. In March, 1704, a large quantity of popish paraphernalia, consisting of sacerdotal habiliments, communion-table linen, pictures, chaises, crucifixes, whipping-cords, rosaries, consecrated stones, relics, remissions and indulgences, were, by order of the privy-council, carried to the cross, and there hurned or otherwise destroyed. In March, 1705, a vessel belonging to the English East India company having put into the Forth, the crew were suspected of piracy, aggravated by murder, upon the crew of a Scottish vessel in the East Indies; and—more in retaliation of the uncompensated seizure in the Thames of a vessel belonging to the Scottish African company, than in due appreciation of their imputed conduct—they were tried in Edinburgh, and condemned. The evidence against them appearing slender, intercessions were made for the royal mercy on their behalf. But the populace were deeply enraged, and, on the day appointed for the execution, congregated in vast numbers round the parliament-house, where the privy council and the magistrates were assembled in deliberation whether and how the victims should escape. The magistrates, aware of the revengeful fury of the mob, assured them

that three of the criminals were ordered for execution. But the Lord chancellor, emerging from the privy-council to his coach, some person shouted that the magistrates had cheated them, and that the criminals had been reprieved. The mob now stopped the chancellor's coach at the Tron-church, broke its glasses, insulted and ill-treated the chancellor, and could eventually be appeased only by the criminals being brought out for execution.

In 1706, when the measure of the national union came before the Scottish parliament, the inhabitants of Edinburgh rose in insurrection against the constituted authorities. Even while it was known to them only *in limine*, they were under strong irritation; but when it became known in its details, they pressed in vast crowds toward the parliament-house, and hooted and insulted every member of parliament who was believed to favour it. On the 23d of October they attacked the house of Sir Patrick Johnston, their late provost, who was a strenuous advocate for the Union, and compelled him to seek refuge in a precipitate flight. Increasing in numbers and in fury, the mob scoured the streets, became absolute masters of the city, and seemed as if proceeding to shut up the gates. The commissioner ordered a party of soldiers to take possession of the Netherbow, posted, with the consent of the magistrates, a battalion of foot-guards in Parliament-square and other suitable localities, and speedily succeeded in quelling the riot, and restoring order. But so deep and general was the popular rage, and so strong the panic it had excited, that nothing less than the whole army, encamped in the vicinity, was deemed a force sufficient to protect the parliament and the city. Three regiments of foot were constantly on duty in the town,—a battalion of guards protected the abbey,—and the horse-guards attended the commissioner. Thus strongly protected, yet not undisturbed by popular hootings and insults, the parliament continued its deliberations on the Union, and at length, on the 16th of January, 1707, ratified the articles. But the members encountered severe difficulties, submitted to remarkable privations, and adopted devices not a little curious, in order to authenticate by their signatures the popularly detested contract, first retiring in small numbers to a summer-house behind the Earl of Moray's house in the Canongate; next, when discovered and scared away by the mob, taking refuge, under the darkness of night, in an obscure cellar in the High-street; and then, before they could be discovered by persons early a-foot in the morning, taking a precipitate leave of the city, and starting off for London.

Effects of the Legislative Union.—From the consummation of the Union on the 1st of May, 1707, Edinburgh, during half-a-century, lay prostrate and stunned under the blow which had been inflicted on her importance, stripped of the jewels and ornamented raimentings of her once courtly character, and pouring on the dust, unlamented by her nobles, the crimson hearts'-blood of her metropolitan pride. The city—as to nearly every thing which had rendered it opulent and illustrious—was utterly forsaken, and appeared to have lost all its attractions; and a thick gloom, such as had never before darkened its sky, hung over the dwellings and hearts of its citizens. But eventually the Union, the occasion of temporary and afflicting disasters, worked indirectly out for it an amount and a brilliance of well-being which have, in some respects, made it the envy and the wonder of every other city in the world. From the date of the Union down to the present day, only eight events or groups of events in its history are of sufficient

importance, or so detached from the history of particular institutions, and unanticipated in the early portions of this article, as to require notice. These events or groups of events are the rebellion of 1715, the Porteous mob, the rebellion of 1745, some tumults before and after the period of the French Revolution, the visit of George IV., the great fires of 1824, some demonstrations connected with the passing of the reform bill, and the several visits of Queen Victoria and Prince Albert.

The Rebellion of 1715.—The rebellion of 1715 commenced with an unsuccessful attempt to capture Edinburgh castle by surprise. Some well-concerted measures were arranged; but they were discovered before the appointed hour of action, and easily disconcerted. The Bank of Scotland was immediately subjected to an extraordinary demand upon its specie, and compelled, for a short time, to suspend payment. Fifteen hundred insurgents passed the Forth from Fife, and marched upon Edinburgh; but they found it so well-prepared by the exertions of the magistrates in fortifying it, and the presence of a military force under the Duke of Argyle to give them a warm reception, that they declined to attack it, and filed off, first to nestle in the decayed fort of Leith, and next to seek death and discomfiture in the south. The arrival, immediately afterwards, of 6,000 Dutch troops to aid the King's measures, prevented Edinburgh from being the scene of any further event during the brief remaining period of the rebellion.

The Porteous Mob.—In 1736 occurred the strange tumult called the Porteous mob, famous in the city's annals, and graphically described in the tale of the Heart of Mid-Lothian. Two smugglers—who had violated revenue laws recently extended from England to Scotland, and who attracted the sympathy rather than the reprehension of the populace—were tried, convicted, and condemned to death. On a Sabbath while at church, between two guard soldiers, one of them suddenly started up, and sprung upon the soldier at his side. The other, whose name was Wilson, now seized both the soldiers, and held them fast till his companion escaped; and he, in consequence, won no stinted meed of praise from the general population of the city. On the 14th of April, when Wilson was led out to execution in the Grassmarket, the mob pelted the executioner and the city-guard. John Porteous, the captain of the guard, enraged at the attack, ordered his men to fire. The guard, in the first instance, fired over the heads of the mob; but, enjoined by their angry captain, fired next among them, killing six persons, and dangerously wounding eleven. Porteous was tried for murder and condemned; but was reprieved by the Queen-regent Caroline. An opinion having gained general credit among the exacerated populace that Porteous would get a second reprieve, and even that, on the day named for his execution, he would be adroitly transferred for safety to the castle, a formidable conspiracy was formed with profound secrecy, and executed with singular promptitude. On the night preceding the day named for his execution, a mob, disguised in dress, broke into the jail, set at liberty all the prisoners except Porteous, drove off some gentlemen who attempted to lure them from violence, carried Porteous to the Grassmarket, suspended him on a dyer's pole till life had fled, and then dispersed with the utmost quietness and order. Great indignation was excited at court, and Edinburgh was menaced with a fearful retaliation. The lord-provost was taken into custody, and not admitted to bail till after three weeks of confinement; and he was commanded, along with the bailies and three lords of justiciary, to appear before

the House of Lords. A bill passed the upper house to unfrock the provost, to confine the provost in close custody for a year, to abolish the city-guard, and to destroy the city-gates; but in the lower house this severe bill was transmuted into an order upon the city to pay the widow of Porteous £200 a-year. Though a reward of £200 was offered for the discovery of each person who had acted in the conspiracy, and though it was accompanied with a proffered pardon to any accomplice who should turn informer, not one individual concerned in the affair was ever brought to justice, or even traced.

The Rebellion of 1745.—At the breaking out of the rebellion in 1745, the city-guard was augmented to 126 men, the trained bands were ordered to be in readiness, 1,000 men were raised by subscription, and placed under the direction of the town-council, a part of the King's forces were brought into the vicinity, the walls were repaired, ditches were thrown up, inquisition was made respecting strangers lodging in the city, the money of the banks and other public offices was removed to the castle, and all preparatory measures were adopted which might contribute to the defence or safety of the metropolis. On the 13th of September the Pretender crossed the Forth with 2,000 men, some miles west of Stirling; and on the 15th he had reached Linlithgow, and driven Gardiner's dragoons before him in retreat. The city's regiment and town-guard, marching out to assist the King's forces, in making a stand a mile to the westward of Edinburgh, saw the troops whom they went to support in full retreat, and fell back upon the city only to witness universal consternation among its inhabitants. While negotiations were attempted with the rebel camp for the safety of the city, 800 Highlanders, under Cameron of Lochiel, took advantage, on the afternoon of the 17th September, of the opening of the Netherbow for the admission of a carriage belonging to the negotiators, to rush quietly into the town, overpower the guard, and take immediate and entire possession of the streets. On the same day the Chevalier led his little army into the King's park, fixed his camp at Duddingstone, entered Holyrood-house, commanded the magistrates, on pain of military execution, to furnish stores which cost 2s. 6d. per pound on the real rental of the inhabitants, ordered the citizens to give up their arms, proclaimed James VIII. of Scotland at the cross, and at night held a splendid ball in the palace.

On the 18th Charles was joined by Lord Nairne, with 1,000 men from the North. On the 20th he marched out to the field of Prestonpans; and on the 21st won his easy victory there, and returned in triumph to Edinburgh. On the 25th the castle, alarmed by some noise among the rocks, fired upon the Highland guard at the West port. Charles now cut off communication between it and the city; and the castle being scantily supplied with provisions, the governor threatened a cannonading if the blockade should not be removed. A severe firing was now commenced upon the city, and filled all quarters with terror and confusion, demolished and burned a number of houses, and killed and wounded many of the inhabitants as well as of the Highland soldiers. At the end of two days, Charles removed the blockade, and restored quiet; and on the 31st of October, he, at the head of his army, left Edinburgh for England. After the final defeat of Charles, 14 standards taken at Culloden were ignominiously burned at the cross of Edinburgh; and the Duke of Cumberland visited the city in his way to the South, and occupied apartments in Holyrood-house. Archibald Stewart, Esq., who filled the office of lord-provost when the rebels entered

the metropolis, was brought before the justiciary-court, for malversation favourable to the Jacobites; but after a trial of six days, as remarkable for its interesting character as for its length, was acquitted.

Tumults between the years 1778 and 1812.—In 1778 the Earl of Scaforth's Highland regiment, then quartered in the castle, being required to embark for India, broke into mutiny, and encamped on Arthur's-seat; but were brought to allegiance through the interposition of Lords Dummore and Macdonald. In 1779, a mob—exasperated by measures in progress to repeal the penal laws against Roman Catholics—burnt one popish chapel, plundered another, and destroyed considerable property belonging to Romish priests and people, and even to some Protestant advocates of their civil rights. Military assistance was called in, and quelled the disturbance without loss of life or recourse to violence; but the city was afterwards obliged to compensate damages to the amount of £1,500. When the French revolution broke out, several citizens of Edinburgh were brought to trial for treason and sedition, and visited with rigorous punishment. During the atrocities of the French reign of terror, the city made zealous demonstrations of loyalty. After the breach of the peace of Amiens, four volunteer regiments were raised in the city, constituting a force of between 3,000 and 4,000 men. On the night of the 31st December, 1811, a hody of youths, united by previous conspiracy, and armed with bludgeons, scoured the streets, indiscriminately plundered persons in their way, drove the police headlong before them, killed one person and mortally wounded several others, and, during a considerable part of the night, maintained mastery over the town. Three of the youthful rioters were afterwards brought to trial, and publicly executed in the High-street. Some affecting incidents connected with their execution, and especially the horrors of the scene which caused it, excited salutary, general, and permanent feelings, both of aversion to the bacchanalian festival of celebrating the transition from an old to a new year, and of concern for the education and moral training of the young.

The Visit of George IV.—George IV.'s visit to Scotland in 1822, both in the event itself and in the preparations for it, stirred the whole kingdom from centre to circumference, and made immense excitement in the metropolis. The authorities at Edinburgh got scarcely a month's notice to prepare, yet exerted themselves so zealously, and were so zealously aided by all persons who could render them any help, as to perform wonders. "The apartments in Holyrood-house were cleaned, repaired, and fitted up with suitable elegance; a new approach was formed from the south side of the Calton-hill to the front of the palace; the road through the King's park was opened for the convenience of his Majesty travelling to and from Dalkeith-house, where it was intended he should reside; the Weigh-house was removed to clear the passage to the castle; a harrier, like the gates of a city, was constructed in Leith-walk, nearly opposite Picardy-place; and triumphal arches were erected at Leith, where it was presumed his Majesty would land, but in case that should not be found expedient, a communication was opened with Trinity chain-pier. At the same time an encampment was formed on Salisbury-crags and the Calton-hill, where guns were stationed, and poles erected for displaying the royal standard; and, in a word, every effort was used to receive his Majesty with becoming pomp and splendour. Meanwhile, crowds of people from all parts of the country, and equipages of every description, from the superb fa-

shionable chariot-and-four to the humble Glasgow noddy, poured in daily. All was bustle, anxiety and expectation, the novelty of the approaching spectacle heightening the interest with which it was anticipated, and raising to the highest pitch of excitement the loyal feelings which seemed to animate every bosom. The session of parliament having been closed by his Majesty in person on the 6th of August, he embarked at Greenwich for Scotland on the 10th. On the 14th the royal squadron arrived in Leith roads; but the state of the weather being unfavourable, it was announced that the landing would be deferred till the morrow.

"On the 15th, which proved a remarkably fine day, all was bustle and preparation. The whole of Leith-walk was lined with scaffolding on each side; every corner was crowded with well-dressed people; and the windows in every street through which the procession was to pass, exhibited clusters of heads densely packed together. Exactly at noon a gun from the royal yacht announced that his Majesty had embarked; and soon after, the royal barge entered the harbour amidst the thunder of artillery, and the still more gratifying peals of enthusiastic acclamations, sent forth by the immense multitude who had assembled to witness this magnificent spectacle. At the landing-place, which was a platform covered with scarlet-cloth, his Majesty was received by the Duke of Dorset, the Marquis of Winchester, the Earl of Cathcart, the Earl of Fife, Sir William Elliot, Sir Thomas Bradford, the judges of the supreme courts, and the magistrates of Leith, all of whom he shook cordially by the hand. His Majesty then proceeded to his carriage, which was opened at the top; and after being seated with the Duke of Dorset and Marquis of Winchester, it drove off at a slow pace, guarded by the company of royal archers, under the command of the Earl of Elgin, and a detachment of the Scots Greys. The train of the procession, which moved by Bernard-street, Constitution-street, and along Leith-walk, was of a more splendid kind than had ever been seen in Scotland, and consisted of all that rank and pomp could contribute to grace the ceremonial. The head of the cavalcade reached the barriers of Edinburgh about one o'clock, when the lord-provost, accompanied by the magistrates, presented his Majesty with the silver-keys of the city, which his Majesty immediately returned with a short and courteous speech. The procession then moved forward by York-place, and St. Andrew's-square to Prince's-street, and turning to the eastward, proceeded to the Regent-bridge, Waterloo-place. On entering Prince's-street, where, on the one hand, the picturesque irregularity of the Old town, surmounted by its venerable and majestic Acropolis, and, on the other, the elegance and splendour of the New town, with the Calton-hill in front, terraced with human beings, burst upon the view, his Majesty was charmed with the scene, then enlivened by every accompaniment that could heighten the feeling of admiration, and waving his hat, exclaimed, 'How superb!' About two o'clock his Majesty reached the palace of Holyrood-house, and his arrival was announced by salutes fired from the castle and from the guns placed on the Calton-hill and Salisbury-crags.

"After receiving the congratulations of the magistrates and other authorities, his Majesty set out in his private carriage for Dalkeith-house. Fireworks were exhibited in the evening, while a beacon blazed on the summit of Arthur's-seat; and the night following there was a general illumination. On the 17th his Majesty held a levee in Holyrood-house, which was most numerous and splendidly

attended; on the 19th he received the addresses of the Commission of the General Assembly of the Church of Scotland, of the four universities and of other public bodies; and on the 20th he held a drawing-room, which was graced by about 500 ladies, the most distinguished for rank, beauty, and fashion, which Scotland could boast of. On the 22d, his Majesty went in procession from Holyrood-house to the castle, which would have proved a gorgeous pageant had not the effect of the spectacle been impaired by almost incessant rain. On the following day he reviewed a body of about 3,000 cavalry, chiefly yomanry, on Portobello sands; and the same evening attended a splendid ball given in honour of the royal visit by the peers of Scotland. On the 24th a splendid banquet was given to his Majesty in the great hall of the Parliament-house by the lord-provost, magistrates, and town-council, on which occasion his Majesty honoured the city by creating the lord-provost a baronet; and the following day, being Sunday, he attended divine service in the High church,—Dr. Lamont, moderator of the General Assembly, officiating on the occasion. A hall given by the Caledonian Hunt was attended by his Majesty on the 26th; and on the 27th he made his last appearance before his Scottish subjects in a visit to the theatre, where with his accustomed good taste, he had commanded the national play of 'Rob Roy' to be performed, and where, both at his entrance and departure, he was hailed with long-continued and enthusiastic acclamations from all parts of the house. On the 29th his Majesty, after partaking of a splendid repast prepared at Hopetoun-house, embarked on board the royal yacht at Port Edgar, near Queensferry, amidst the cheers and cordial adieus of a vast body of spectators, assembled from all parts of the adjacent country."

The Great Fires of 1824.—Two great fires broke out in the Old town, in 1824, respectively on the night of the 24th of June and on the night of the 15th of November, and worked awful devastation. The former especially was one of the most dreadful fires of modern times, continued three days, destroyed the greater part of the section of the High-street between St. Giles' church and the South-bridge, as well as parts of some houses on the opposite side, and looked for some time as if it would destroy the whole city. Some of the houses consumed by it were of great height and vast capacity, containing each from forty to sixty dwelling-places of the poor, besides large well-stored basement-story shops; so that they were very doleful to look upon, both for their enormous disgorgitation of human beings, fleeing to the streets and carrying their bits of furniture along with them, and for the prodigious volumes of flame which they shot far aloft into the sky. Sir Walter Scott, who was a witness of the conflagration, said,—“I can conceive no sight more grand or terrible than to see those lofty buildings on fire from top to bottom, vomiting out flames, like a volcano, from every aperture, and finally crashing down one after another into an abyss of fire, which resembled nothing but hell; for there were vaults of wine and spirits which sent up huge jets of flames whenever they were called into activity by the fall of these massive fragments. Between the corner of the Parliament-square and the Tron church all is destroyed excepting some new buildings at the lower extremity.”

Political Reform Demonstrations.—No place in the United Kingdom exceeded Edinburgh in the excitements and demonstrations which accompanied the popular demand for parliamentary reform in 1830; nor did any place display a higher enthusiasm in the first exercise of the franchise which the reform

bill conferred. At the election of the city members in December 1832 for the first reformed parliament, the population poured into the streets in greater numbers and in higher glee than on any former occasion known to history,—almost rivalling the appearance of the crowds from all parts of the country who greeted the visit of George IV. And in the autumn of 1834, shortly after the retiring of Earl Grey from the premiership, a large portion of the citizens invited him to a public banquet, in order to testify their admiration of him for having obtained the reform bill; and as no hall in the city was large enough for their purpose, they procured the erection of a temporary pavilion on the Calton hill; and there, to the number of about two thousand, they sat down with the Earl to dinner,—the general body of the people, at the same time, making demonstrations abundantly enthusiastic. At subsequent periods, also, the ultraists, who accepted the reform bill only as an instalment of much greater changes, made various considerable excitements among the lower classes of the citizens. And in the spring of 1848, in particular, at almost the first crash of the sudden political revolutions throughout the continent of Europe, the mobocracy of Edinburgh burst hotly into sympathy with them, breaking the public lamps, smashing windows, scouring the streets, and threatening for two nights to do everything they could to overthrow all established order; but they were promptly and permanently hushed, partly by the vigorous behaviour of the authorities, and still more by the strong counter-demonstrations of the rest of the inhabitants, in every possible form of expression, but particularly in the form of powerful patrolling masses of special constables.

Visits of Victoria and Albert.—In September 1842, Edinburgh was honoured by a visit of Queen Victoria and Prince Albert. The intention of the royal personages was merely to pass through the city, with all possible quietness, on their way first to Dalkeith palace and next to Taymouth castle; so that no kind of processional display was contemplated. But the authorities of Edinburgh, in sub-concert with those of the royal household, made preparations to give a grand reception at a triumphal arch in Brandon-street; while multitudes of the citizens, as also multitudes of strangers from all parts of the country, nearly as numerous as those who had crowded the city on occasion of the visit of George IV., engaged places at windows, on platforms, and at all other available stances along the expected route, by way of Pitt-street, Dundas-street, Hanover-street, Prince's-street, Waterloo-place, and Regent-road, to enjoy a sight of the Queen and the Prince, and to render their progress through the city practically a jubilation. In consequence of some mistake in the management of the preconceived signals, however, the royal personages, on the morning of the 1st of September, landed so very early at Granton, and rode so very early into the city, and through it, as to take the magistrates, and the greater number of the people, entirely by surprise.

“The civic authorities, robed and chained in their council-room at the Royal exchange, sat solemn and silent as the Roman senators on the occasion of the irruption of the barbarians. Struck at once with surprise and dismay at the sound of the castle guns firing the salute, they started up to a man; and, learning that the Queen had already passed the barrier, they rushed to their carriages, *sauve qui peut*, filled with that natural eagerness to be blessed with a sight of Her Majesty, which they partook with their fellow-citizens. Seeing that their magisterial occupation was gone for that day, they drove off down the High-street, and while some of them

took the South Bridge, others pursued their break-neck way down the steep and narrow Canongate, with the anxious hope that, as they had missed their chance of appearing officially before the royal eyes at her Majesty's entrance into the city, they might at least behold her as humble individuals, as she was departing from it. The crowd that had assembled in the High-street, with the wise intention of taking its time and the direction of its motions from those of the magistrates, no sooner beheld them bolt out and escape in this manner than they followed pell-mell with all speed. But they could by no means catch the provost and bailies, and meeting with streams of people equally bewildered who were rushing across at right angles to the High-street, by the South and North Bridges, the confusion became quite like that of a routed army. Some of the civic authorities tried to gain their object by endeavouring to cut in before the Queen at different points, but, with one exception, they arrived everywhere just in time to be too late."

The citizens afterwards consoled themselves as well as they could with a general illumination. The Queen, also, on hearing of their disappointment, promptly consented to revisit the city on the 3d, with the express view of showing herself to her people, in a procession from Holyrood to the castle, thence by Bank-street, the Mound, Prince's-street, and Queensferry-street, on her way to lunch at Dalmeny-park, and once more along the southern outskirts of Leith, on her way back to Dalkeith; and the news of this being spread by proclamation of the magistrates, effectually restored all parties to the highest good humour. The procession, accordingly, took place, in the grandest style, though with much more of moral demonstration than of gaudy pageantry. But it so closely resembled that of George IV.'s public entry that it need not be described. On the 6th of September, also, and again on the 13th, the Queen and her Consort, on their way to and from their tour into Perthshire, were enthusiastically cheered by dense crowds along all their route within the city, between Newington and the western suburbs. And at their departure from Scotland on the 15th, their progress, by way of Nicolson-street, the North-bridge, and Hanover-street, from one extremity to another of the environs, was everywhere an ovation. "From the Dalkeith road at Newington, all the way to Granton, a distance of four miles, there was one continued mass of human heads on both sides of the way, with the exception of the bridges cleared by the military. Every window, balcony, or place of vantage along the line was tenanted by eager occupants at an early hour; and no position was yielded up even for a moment, lest the holder of it might thereby be prevented from giving one last enthusiastic greeting to the Queen, ere she should intrust her sacred person to the waves, and showering blessings on her head."

The Queen and her Consort and their children were again in Edinburgh on the afternoon of the 29th of August, 1850. But on this occasion they took up their abode at Holyrood, and remained there till the morning of the 31st. Arrangements had been attempted to organise a grand masonic procession, with Prince Albert at its head, on the 30th, to grace the laying of the foundation stone of the Art-Galleries on the Mound; but, for some cause connected with the notions of the masonic authorities, these arrangements had failed. The public, however, were understood to be under a tacit resolution to pay the same honours to Prince Albert alone which they would have paid to the entire intended procession; and right fully and heartily did they

fulfil this notion. The cortege which started from Holyrood at the appointed hour comprised only the carriage of the Sheriff and the carriage of the Prince; but it proved all the grander for its simplicity, and dazzled and pleased the mighty multitude all the more for its wanting the pomp and glare and outspread length of a pageant. The entire line of the progress, from Holyrood by way of Abbey-hill and Waterloo-place to the Mound, was a scene of dense and high excitement. The streets, roads, and adjacent grounds along the whole route, the balconies in front of Regent-terrace, the Regent-gardens, the spacious grounds along the lower side of the Regent road, the screens and projections of the High-school, the towers and battlements of the new jail, all the sudden slopes and terraces of the Calton-hill, the galleries of Nelson's monument, and all other places which could command any view of the cortege, either near or remote, were occupied by masses of well-dressed spectators. Probably not fewer than 150,000 persons turned out to view some part or other of the line of the procession. The reception of the Prince at every point was most enthusiastic, and all the romantic scenery through which he passed rang and echoed with the joyous acclamations of the people. The scene in Waterloo-place along Prince's-street up to the Royal institution was literally a triumph; and the erections on and around the Mound, both temporary and permanent, made a most imposing display,—all mottled with banners or clothed with men.

The Queen, the Prince Consort, and some of the royal children, again spent two nights in Edinburgh, in each of the years 1851-61, on their way to and from Balmoral; and the Prince of Wales resided at Holyrood during some months of 1859, to enjoy the benefits of Edinburgh as a seat of learning. A magnificent spectacle took place, in the Queen's park, in 1860,—the review, by her Majesty in person, of upwards of 20,000 volunteers from all parts of Scotland; another spectacle, of similar character, occurred on the same ground, next year,—a grand sham battle among the volunteers of Edinburgh and its neighbourhood, aided by the regular troops who were in garrison; and both spectacles were witnessed, and at the same time splendidly enhanced, by well-dressed multitudes, spread densely over the adjacent heights. Another grand display, precisely similar to that of August 1850, and at least equally triumphant, occurred in October 1861, at the laying of the foundation-stones of the New General Post-Office and the National Industrial Museum, by the Prince Consort; and this was afterwards remembered with peculiar emotion, on account of its happening only two months before the Prince's demise. The appreciation of the royal visits, on the part of the citizens, has ever been enthusiastic,—rather increased than diminished by the yearly repetition.

EDINBURGH AND BATHGATE RAILWAY.

See BATHGATE AND EDINBURGH RAILWAY.

EDINBURGH AND DALKEITH RAILWAY, a railway from St. Leonard's at Edinburgh to the South Esk river, with branches to Leith, Musselburgh, and Dalkeith. It makes an extent of about 14 miles; but also intersects or receives branches from the principal coal-fields of Mid-Lothian. It was formed under sanction of acts passed in 1826, 1829, and 1834; was originally projected solely for conveyance of coals, manure, and other bulky matters; crossed so many as seventeen highways or streets on a level; and described eleven bad curves within a distance of $7\frac{1}{2}$ miles, several of them about 500 feet in radius. It soon began to be used for passenger-traffic, but was worked only by horses,

so that locomotion on it was never speedier than on a common road; and it was purchased, in 1845, by the North British railway company, and very greatly altered. It leaves St. Leonard's on an inclined plane 116 feet long, descending 1 foot in 30, passes through a tunnel 1,716 feet long, and runs for 3 miles from the bottom of the inclined plane on a level; and all the part of it from the St. Leonard's terminus to the impact with the North British line is now used only for coal-traffic; but the other parts, after being cured of their faults by correction of their curves and otherwise, were linked into the North British railway system, and now form part of the grand railway ramification from Edinburgh to all the south-east of Scotland, traversed by locomotive engines, doing all the work of general traffic, and concentrating in the great terminus at Waverley-bridge. See NORTH BRITISH RAILWAY.

EDINBURGH AND GLASGOW CANAL. See UNION CANAL.

EDINBURGH AND GLASGOW RAILWAY.

This magnificent work, projected in 1825 but only resolved on in 1835, and an act for which was obtained on the 4th of July, 1838, after a parliamentary contest of three sessions, was begun at the end of that year, and was opened on the 18th of February, 1842. Measured from its original terminus at the west end of Edinburgh, it is 46 miles in length, being 2 miles longer than the Bathgate road betwixt the two cities, and 1 mile shorter than the Cumbernauld-road; but as carried into the heart of Edinburgh, at the North loch, its length is 47½ miles. With the exception of an inclined plane at Glasgow, it presents nearly a level line throughout, the ruling gradient being 1 in 880, or 6 feet a-mile, and that only for a few miles. The gauge or width of the rails is 4 feet 8½ inches, and their weight 75 lbs. to the yard. They are laid with 4 feet bearings on cast-iron chairs. In the cuttings, the chairs are placed on whinstone blocks of 4 cubic feet each; on the embankments, they are fixed on transverse sleepers of larch 9 feet long. The interval between the up and down rails is 6 feet. Pursuing a course to the south of west, through Prince's-street gardens, and St. Cuthbert's parish, the line is carried across the Water of Leith, at the distance of 1 mile from the original terminus, by a viaduct of three arches. One mile beyond this it enters Corstorphine parish; and thereafter runs for about half-a-mile through the parish of Currie, in which it passes the hamlet of Culton. It then enters the parish of Ratho, through which it runs for a distance of nearly 3½ miles, bending nearly due west after crossing Ratho-burn, but again turning to the south of west after leaving Norton-mains, in which direction it enters Kirkliston parish in Linlithgowshire, through which it sweeps in a curve of 1½ mile radius, a distance of 3½ miles. Hitherto the line has passed through a fertile and beautiful country, by an easy line presenting no extensive embankments or deep cuttings; but shortly after entering Linlithgowshire, it is conducted across the valley of the Almond by a stupendous viaduct, consisting of 36 arches, of 50 feet span each, with piers 7 feet wide, and varying from 60 to 85 feet in height; which is connected by a lofty embankment with another viaduct of 7 arches of 60 feet span, known as the Broxburn viaduct, by which the line is carried across the turnpike-road to Glasgow. The view from this part of the line is magnificent; but the eye of the amateur would have been still further gratified had the line of arches been continued between the two viaducts in place of the present lofty and ponderous, though probably less expensive embankment.

From the Broxburn viaduct the line proceeds in

a north-west direction, impinging on the Union canal, passing the solitary ruin of Niddry-castle on the right, and then plunging into a tunnel of 367 yards in length, by which it is conducted, at the depth of 100 feet, through a ridge of whinstone-rock at Winchburgh, soon after emerging from which, it enters Abercorn parish at the 11th mile from Edinburgh. A deep cutting of nearly 2 miles in length occurs in this parish, through which the line pursues a course more nearly west. Until the completion of the 12th mile from Edinburgh, the ascent has been gradual, amounting only to 63 feet; that is, on an average, only 1 in 1,000. From this point to the viaduct by which it is conducted across the Avon, and leaves Linlithgow parish, a distance of about 4½ miles, it has an inclination of 1 in 1,056. The line now skirts the ancient town of Linlithgow on the south, passing between the town and the Union canal, and commanding a fine view of the palace and the adjacent lake. The Avon, and the finely-wooded valley through which that romantic stream runs, is crossed by a viaduct of 20 arches of 50 feet span, and 3 of 20 feet, some of them upwards of 90 feet in height, and of beautiful light masonry, from which the magnificent aqueduct by which the Union canal is led across the same valley, at a point a little higher up the stream, is visible in its full extent. The surface of the Avon viaduct is only 38 feet above the level of the Edinburgh old terminus. It conducts the line into Muiravonside parish in Stirlingshire, through which it runs nearly due west for a distance of about 2 miles, passing the ruined castle of Almond on the left. A little beyond the 20th mile, it enters the parish of Polmont, in which it passes to the south of the village of Redding. From the 23d to near the 30th mile, it intersects the parish of Falkirk, in a line nearly parallel with the Union canal. The high ground immediately south of Falkirk, and part of Callendar-park, the seat of Mr. Forhes, is pierced, at the depth of 130 feet, by a tunnel of 830 yards in length, 27 feet wide, and 20 feet in height. A little beyond the 25th mile, at Tamfourhill, the line is conducted across the Union canal locks by a viaduct of a striking appearance and great solidity, the principal arch in which—a segment arch of 24 feet 6 inches rise—has a span of 131 feet. The stones of which this great arch is composed were brought from Forfarshire; they are five feet deep in the bed, of a bluish colour and peculiar strength. The weight of the arch-stones alone of this stupendous piece of masonry is upwards of 1,900 tons. The arch was thrown upon trussed centres, which required betwixt 12,000 and 13,000 cubic feet of timber for their construction. The other arches here are 2 of 20 feet, 2 of 16, and 1 of 63 feet span. The view on the portion of the line from the western extremity of the Callendar tunnel to the last-mentioned viaduct is very magnificent, presenting the rich carse of Falkirk stretching away towards the east, with that town close under the eye of the spectator,—the windings of the Forth and Stirling-castle, with the rich level carse-ground between in the centre,—and the towering heights of Benledi and the Ocbils, Benlomon and the Grampians, in the distance. It adds to the interest of the scene, that we are here traversing the ground on which the battle of Falkirk was fought in 1746.

Passing Tamfourhill, and crossing Bonnymuir, a little beyond the 29th mile, the railway enters Cumbernauld parish, in the shire of Dumharton, through which it runs in a waving line—having the Forth and Clyde canal on the right—a distance of nearly 6 miles. In the neighbourhood of Castlecary it crosses the road from Falkirk to Cumbernauld,

and the deep ravine of the Red-burn, by a viaduct of 8 arches, each of 50 feet span, and nearly 90 feet in height,—the one end terminating on a forced embankment, the other resting on the far-famed remains of the Roman camp at this spot. From a little beyond Castlecary the general direction of the line to its western terminus is to the south of west. Passing about a mile to the north of Cumbernauld, it continues on through rather a rough country, but commanding an extensive view of the valley stretching along the southern base of the Campsie-hills, till it approaches Croy-mill, which is the summit of the line, being 79 feet above the level of the old eastern terminus, and 49 feet above the top of the inclined plane at the Glasgow terminus. The cutting of the great ridge of whinstone-rock at Croy was a work of vast labour and expense. Towards the centre of the ridge, the rock rises to a height of 70 feet above the level of the rails. Running through Drumshanty moss, upon a formation of dry turf, on which layers of brushwood and sand are placed, and across the Luggie, by a sixth viaduct of 4 arches of 30 feet span, it is carried, a little beyond the 39th mile, over the Monkland and Kirkintilloch railway, by a seventh viaduct of 1 arch of 44 feet, 3 of 30 feet, and 1 of 15 feet span, with a height of from 33 to 48 feet. Entering the county of Lanark in Cadder parish, the line proceeds, with a few moderate cuttings and embankings, through a rude district of country, exhibiting the struggles of the husbandman with a uiggardly soil, until it crosses the Kirkintilloch road near Bishopbriggs, and enters the Barony-parish at the 43d mile. From this point to the head of the inclined plane at Cowlares, there is some heavy cutting and embanking. At the head of the inclined plane near Cowlares, the engine establishment is erected; and here were placed the fixed engines which worked the tunnel terminating in the depot in Queen-street, before the introduction of the powerful locomotive which now drags the train to the summit of the tunnel. The inclined plane is 2,077 yards in length, consisting of open cutting, and a tunnel divided by eyes or openings of 40 feet each in length, into three portions of 550, 300, and 297 yards. Its fall is 1 in 43. It is lighted by 43 gas-lamps. The terminus at the head of Queen-street opens into George's-square; and is within 200 yards of the Royal exchange, and 750 of the Clyde.

The stations on the direct line between Edinburgh and Glasgow are Corstorphine, Gogar, Ratho, Winchburgh, Linlithgow, Polmont, Falkirk, Castlecary, Croy, Campsie-Junction, and Bishopbriggs. There are connected with this railway, either by original construction, by purchase and incorporation, by leasehold, or by close agreement, the Union canal, which is now used as a canal only subordinatedly to the railway,—the Bathgate and Edinburgh railway which diverges from the main line at a point a little west of the Ratho station,—the Stirlingshire Midland Junction railway, which goes off at the Polmont station, to a junction with the Scottish Central railway near Lurbert,—two branches to the Monkland railways, from respectively the parish of Linlithgow and the parish of Kirkintilloch,—a branch from Greenhill, a little west of Croy, to the Scottish Central railway,—the Scottish Central railway itself,—the Stirling and Dunfermline railway,—the Wilsontown, Morningside, and Coltness railway, together with that railway's branches to Shotts and Bathgate,—the Dumbartonshire and Helensburgh railway,—a branch from Garrigibber to Lennoxtown of Campsie,—and a short branch from Cowlares to serve for connexion with the Caledonian railway. The directors got power, in 1855,

to subscribe £50,000 to the Dumbartonshire and Helensburgh railway, and to raise £180,000, by shares, to enlarge the Queen-street station, and for other purposes. The total amount raised, by shares and loans, till the close of 1860, was £4,408,004.

EDINBURGH AND NORTHERN RAILWAY.
See EDINBURGH, PERTH, AND DUNDEE RAILWAY.

EDINBURGH AND PERTH RAILWAY, a projected railway, which gave place to the project of the Edinburgh and Northern, but held for a time a stiff place in the popular imagination, to diverge from the Edinburgh and Glasgow at Gogar, to proceed thence to South Queensferry, and to go by a comparatively direct route from North Queensferry to Perth. The ferry on the Forth was to be passed by powerful steamers, which it was calculated would generally perform the voyage in five or six minutes. The railway thence was to pass Inverkeithing, to send off a branch of about 2 miles to Dunfermline, to traverse the great coal-fields in the parishes of Dunfermline, Beath, Aberdour, and Auchterderran, and to proceed by Kinross, Milnathort, and Glenfarg, to Strathearn and Perth. The extent of works required to be constructed would be only 34 miles, though the total distance from Edinburgh to Perth is about 43 miles.

EDINBURGH, LEITH, AND GRANTON RAILWAY. See EDINBURGH, PERTH, AND DUNDEE RAILWAY.

EDINBURGH, PERTH, AND DUNDEE RAILWAY. This railway is an amalgamation of the Edinburgh, Leith, and Granton railway to the south of the Forth, and the Edinburgh and Northern railway to the north of the Forth. The amalgamation was twice made,—respectively in 1849 and in 1851. The scheme was defined to be a line from Edinburgh, in conjunction with the North British railway and the Edinburgh and Glasgow railway, to Leith harbour and Granton pier, to Burntisland on the Fife shore and to Ladybank, a junction from Ladybank to the Scottish Central railway near Perth, a continuation from Ladybank to Cupar-Fife and to Tayport, to be joined from the latter place by ferry with the Arbroath and Dundee railway at Broughty-Ferry, and branches to Kirkcaldy harbour and to Newburgh harbour, a branch from Thornton to Dunfermline, and a branch from Loggie in the vicinity of Guard-bridge to the city of St. Andrews. All these parts of the scheme have been executed; as also a supplementary part, sanctioned in June 1852, comprising a branch from Thornton to Kirkcaldy-works and Leven harbour.

The line commences at the general terminus in the North loch valley of Edinburgh, opposite St. Andrew's-street, traverses a tunnel to the foot of Scotland-street, has there a depot-station, traverses another tunnel past Canonmills, crosses the Water of Leith on a handsome viaduct, sends off a branch down the left bank of that stream to North Leith in the vicinity of the docks, proceeds through deep cuttings to Trinity, curves rapidly there to the west, and descends an inclined plane, with a curve at its farther end, to Granton pier. Excellent appliances exist there for prompt pleasant transference to the ferry. This is five miles broad; and a powerful, beautiful steam-barge for each train passes it in about twenty minutes. The appliances of pier and terminus on the Burntisland side are equally good. The railway proceeds thence along the beach, under cliffs, and through cuttings, and at

one place through a short tunnel, to Kinghorn and Kirkcaldy, enters the latter town on a stupendous viaduct, sends off a branch to Kirkcaldy harbour, proceeds by the station of Sinclairtown and Dysart to Thornton-junction, sends off there a branch on the left hand to Dunfermline and a branch on the right hand to Leven, and proceeds thence by the stations of Markinch, Falkland-road, and Kingskettle to the Ladybank-juunction. This is 27 miles from Edinburgh; and here the line divides into its two great forks toward respectively Perth and Dundee. The general direction from Edinburgh hitherto had been nearly due north; but the general direction henceforth to Perth is north-westward, and to Tayport north-eastward.

The Perth fork proceeds to Collessie station, which is pitched upon a viaduct over cross-roads. It passes the pretty scenery of Lindores loch; and then, on a precipitous embankment, midway up the face of Clatchend crag, at an elevation of upwards of 100 feet above the level of the adjacent public road, it curves into a sudden view of the frith of Tay and the carse of Gowrie. It cuts off an upper terrace of Newburgh, but passes comparatively high above the rest of the town. It turns to a direction south of west to Abernethy, crosses the foot of Glenfarg, goes up Strathearn to the Bridge of Earn, defects there to the north, traverses a tunnel through the Hill of Moncrief, and terminates on the South Inch of Perth.—The Dundee fork passes down the valley of the Eden, by Springfield station, to Cupar-Fife, goes under a high bridge at Cupar station, crosses the Eden, proceeds by Daisie station to the vicinity of Guard-bridge, sends off there the branch to St. Andrews, and proceeds by Leuchars, and across the arid tract of Tents moor to Tayport. The ferry thence to Broughty castle is only seven furlongs; and is effected promptly and pleasantly by well-appointed steamers; communication at the same time being made direct with Dundee, for all persons who prefer it, by other steamers. The run on the part of the Dundee and Arbroath railway between Broughty and Dundee is similarly short and facile to the run from Edinburgh and Granton.

EDINBURGHSHIRE, or MID-LOTHIAN, situated in the eastern part of the southern division of Scotland, has a somewhat serrated outline, yet has proximately the figure of a half-moon, whose body rests on the frith of Forth, and whose horns stretch away south-east, and to the north of west. On the north it is bounded by the frith of Forth; on the east by Haddingtonshire, Berwickshire, and Roxburghshire; on the south by Selkirkshire, Peeblesshire, and Lanarkshire; and on the north-west by Linlithgowshire. It lies between 55° 39' 30" and 55° 59' 20" north latitude, and between 2° 52' and 3° 45' 10" longitude west from Greenwich; and measures in extreme length from east to west about 37 miles, in average breadth from north to south a little under 10 miles, and in superficial area 367 square miles or 234,925 statute acres. These are the measurements of the recent Ordnance survey; but those of the author of 'Caledonia' and of the author of the 'Agricultural Survey of Mid-Lothian,' which formerly were much relied upon, gave only 229,120 and 227,832 English acres. The boundary-line along the Forth runs nearly east and west, and is about 12 miles; that on the east runs nearly north and south, and is about 23 miles; that on the south runs west-north-westward, and is about 38 miles; and that with Linlithgowshire follows, with one brief exception, the course of Breich-water and Almond-water, runs north-eastward, and is about 21 miles.

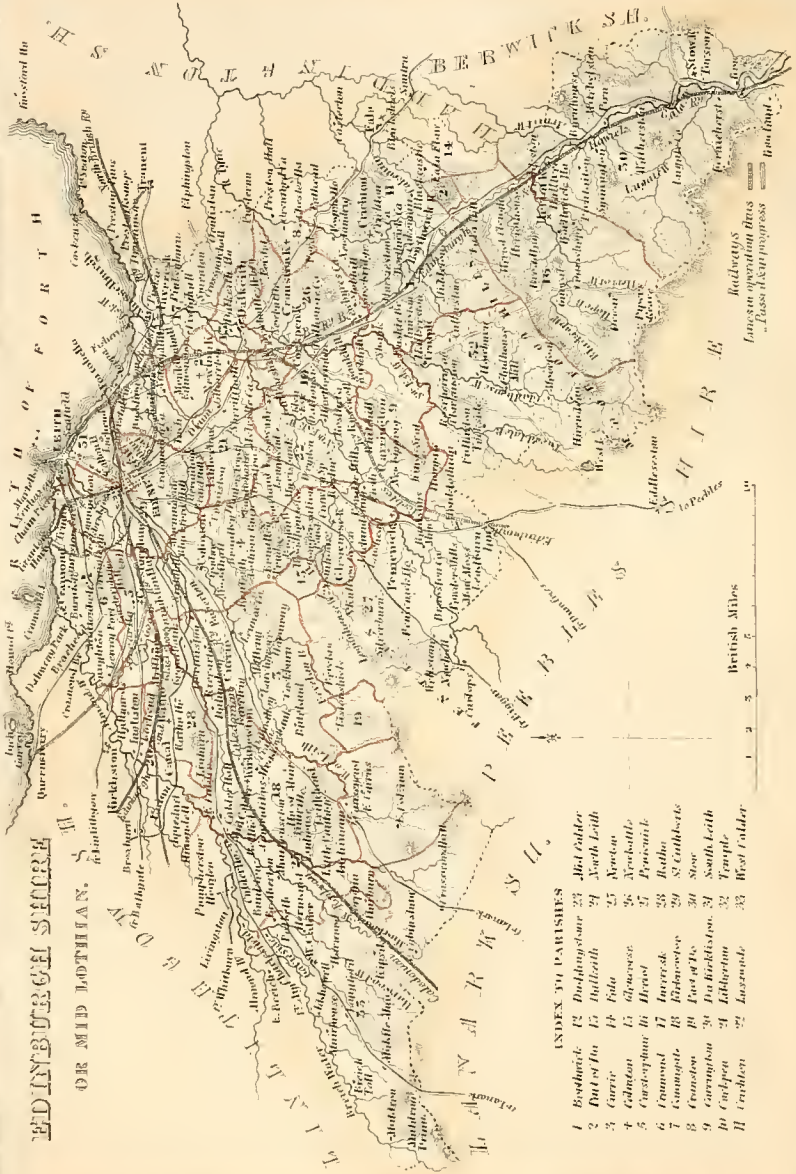

Edinburghshire may, in the most general point of view, be considered as consisting of an inclined plane or hanging level, descending northward or eastward of north toward the frith of Forth; and a section, 11 miles in length, of upland ploughed by streams, and inclining southward at its south-eastern horn.—The most prominent hills are the Pentlands, which come in upon the county in continuous and parallel ranges from Peebles-shire, and sweep northward nearly along its middle, over a distance of 12 miles, till they terminate in bold outlines 6 miles from the sea, or 4 from the capital. East-Cairn-hill, near the middle of a continuous group of eminences not greatly inferior to it in elevation, rises 1,802 feet above the level of the sea at Leith. See the article PENTLANDS. Next to the Pentlands, the Moorfoot hills, which are a continuation of the Lammemoor hills, are the most conspicuous ranges. From Coatlaw, on the west side of Moorfoot water, the most northerly one of two ranges, coming in from Peebles-shire, stretches about 10 miles east-north-east, and terminates in Cowberry hill, near the source of Gala water. This range cuts off the parishes of Heriot and Stow from the main body of the county, and forms a line between waters which flow northward, and the sources of the southward streams which are carried off toward the Tweed. The other range of the Moorfoot hills also branches off from Coatlaw on the western point, and extends, with a wider spread than the former, about 10 miles, in a south-east direction, over the country which is drained by the Heriot and the Luggate waters. The two Moorfoot ranges may, as to the geographical lines which they form, be regarded as two sides of a triangle which has Gala water on the east as its base. The area of this triangle, and the stripe along the Gala water, are irregularly studded by hills of the transition series, generally round, sometimes insulated, and nowhere linked into a continuous range.

Along the extensive inclined plane which stretches between the Pentland and the Moorfoot ranges and the sea, are several brief hilly chains, or remarkable congeries of elevations. The most singular, romantic, and curiously agglomerated are those which partly environ and partly bear aloft the capital, and which were briefly described in the articles, ARTHUR'S SEAT, CALTON, and EDINBURGH. Between the parishes of Cranston and Crichton on the east, and the parishes of Dalkeith and Cockpen on the west, a continued ridge of hill stretches nearly 6 miles from north to south; but, though rising in various places from 550 to 680 feet above the level of the sea, does not much obstruct a road which crosses its centre from Edinburgh to Coldstream. Through the parish of Corstorphine run the hills of the same name, in a curving direction from north-west to south-east, over a distance of 2 miles; but, rising only 474 feet above the level of the sea, they derive their conspicuousness of appearance, partly from some remarkable indentations in their summits, and chiefly from their being surrounded by a rich extensive plain. In Ratho parish a small congeries of hills, called the Plat hills, rising 600 feet above the level of the sea, runs about 1½ mile from north to south. In the southern extremity of the same parish, at the head-springs of the Gogar burn, are three trap hills in a line, called Dalmahoj-crags, two of which rise respectively 660 and 680 feet above the level of the sea. Other hills in the county are either rising grounds of inferior note, or spurs of the Pentland range.

The northern and western sections of the county are in general arable, fertile, and variegated only to an agreeable and highly beautiful degree with

rising grounds; and the southern and south-eastern sections, especially the latter, are, to a large extent, pastoral. About one-third of the whole county may be estimated as the proportion of hill or grounds inaccessible to the plough. On the great inclined plane which forms the northern division, is a tract of upwards of 50,000 Scotch acres of arable and fertile lands, stretching about 15 or 16 miles from east to west, and 6 or 8 from north to south. The hills and rising grounds which diversify this tract, while they greatly embellish the landscape, abound in fine pasture, and are nearly equal in territorial value to the level grounds. Farther south, and nearer the mountain-ranges, is another tract of plain country, situated from 600 to 900 feet above the level of the sea, with a northern exposure, having in general a good soil, not unfriendly to vegetation, abounding in warm and wealthy spots which carry luxuriance up to the very base and along the lower face of the mountains, and containing stretches of moorland and moss which, in many instances, have accepted opulence and adornment from the hand of culture. Interspersed among the mountains, especially among the Moorfoot ranges, are several dales or valleys, consisting of good arable land. The pasture in the hilly and unploughable districts is in general sweet and healthy, and enriches the country with the breed of sheep which it supports. The soil of the county is much diversified. Clay, sand, loam, and gravel, are all, in many cases, to be seen on the same farm, and frequently in the same field, with many variations of quality; and they are so blended, and compete so briskly for pre-eminence, that one cannot easily determine which predominates.

"Almost the whole of the county may be seen at once from the summit of Allernore, the most elevated of the Pentland hills to the north. Its waters may be traced by the fringe of wood with which their banks are generally ornamented. The numberless villas in the vicinity of Edinburgh, and gentlemen's seats, all over the county, are seen beautiful and distinct, each in the midst of its own plantations. These add still more to the embellishment of the scene from the manner in which they are disposed; not in extended and thick plantations, which turn a country into a forest, and throw a gloom upon the prospect, but in clear and diversified lines, in clumps and hedge-rows, or waving in clouds on the brows of hills and elevated situations, useful as well as ornamental; protecting, not injuring, cultivation. In fact, Mid-Lothian, when viewed on a fine summer-day from almost any of its hills, displays a prospect of as many natural beauties, without being deficient in those embellishments which arise from industry and cultivation, as perhaps can be met with in any tract of the same extent in Great Britain. The expanse of the Forth, which forms the northern boundary, adds highly to the natural beauty of the scene; and the capital, situated upon an eminence adjoining to an extensive plain, rises proudly to the view, and gives a dignity to the whole. Descending from the bills to the low country, the surface, which had the appearance of an uniform plain, undergoes a remarkable change to the eye. The fields are laid out in various directions according to the natural figure of the ground, which is unequal, irregular, and inclined to every point of the compass. The most part, however, of the land lies upon a gentle slope, either to the north or the south, in banks which are extended from west to east all over the county. This inequality in the surface contributes much to the ornament of the country, by the agreeable relief which the eye ever meets with in the change of objects; while the uni-

versal declivity, which prevails more or less in every field, is favourable to the culture of the lands, by allowing a ready descent to the water which falls from the heavens."

Edinburghshire is well watered; though, from its peculiar configuration, it is washed by no stream of sufficient length or volume to be called a river. All the numerous streams, which touch or intersect it, are designated either burns or waters. But its deficiency as to natural inland navigation is abundantly compensated by the sweep along its northern boundary of the broad navigable sea-waters of the Forth. The frith where it rolls past the county is from 7 to 12 miles broad, and swarms with white fish and herrings, and profusely scatters on the beach some of the best kinds of shell-fish. But for many ages it has been making encroachments on the land; and, in consequence, it stretches out in long shallows from the shore, and offers greatly less and fewer facilities for navigation than would seem to be promised by the expanse of its waters, and the declination of its coast. Almond water, the most westerly stream of the county, comes down upon it at the northern angle of the parish of West-Calder from Linlithgowshire, intersects a wing of the parish of Mid-Calder, and, thence to the sea, forms the north-western boundary-line. The water of Leith rises in the south-eastern extremity of the parish of Mid-Calder, and flows generally in a deep channel between wooded banks, over a distance of 20 miles to the sea at Leith. The Esk—the largest stream in the county—is composed of two main branches which unite below Dalkeith, and fall into the sea at Musselburgh; and, by its head-waters and its numerous tributaries, it drains the whole country lying between the Pentland and the Moorfoot ranges of mountain. The Tyne rises near the north-east termination of the Moorfoot hills, and after flowing 7 miles northward in the county, debouches to the east, and passes away into East Lothian. The Gala rises in the northern limit of the Moorfoot hills, and flows 10 miles southward through the parishes of Heriot and Stow, receiving from the west the waters of the Heriot and the Luggate, and leaves Edinburghshire at its south-eastern angle. All these streams form the subject of separate articles in the present work.—The lakes are so inconsiderable as to be fit objects of notice only in the articles on the parishes.

A continuous bed of coal, nearly 15 miles in length, and from 7 to 8 in breadth, extends across the county from Carlops to Musselburgh, in a northerly direction, stretching beneath the vale of the North Esk. Coal is worked, however, chiefly in the lower part of the vale, and there occurs in seams from 20 to 25 in number, partly on edge and partly flat, and from 2 to 15 feet in thickness. In one estate, in the parish of Lasswade, coal appears to have been worked as far back as the beginning of the 17th century. The quantity annually dismembered from the earth during many years, was so considerable as to yield a rental for the pits of about £12,000; and has been materially increased since the construction of the Edinburgh and Dalkeith railway. But owing to the prevalence of 'dikes,' the great expense of working the mines, and the spirited competition of the Fife and Western coal-districts, it has not yielded large remuneration to proprietors. In the rising ground south of Newbattle, on the estate of the Marquis of Lothian, fine parrot-coal occurs in abundance, and is thence carried to Edinburgh for the manufacture of coal-gas.—Limestone abounds in the coal-district, and also between that district and the hills by Middleton, Crichton-Dean and Fala, as well as in the

south-west angle of the county, in the parish of East Calder. The most remarkable and abundant strata are near Gilmerton, in the parish of Liberton. One mine—which has been abandoned from time immemorial, and which evinces that limestone was first worked in localities where it looked out from the surface—"presents the appearance of an immense series of arcades upon a considerable declivity, reaching from the surface to a most profound depth under the incumbent fields, and forming quite a local wonder."—Sandstone of excellent quality and various kinds is abundant. One principal quarry is at Craighleith, in the parish of St. Cuthbert's, and near the metropolis; and has produced the immense quantity of beautifully white and very durable stone, of which the greater part of the New town of Edinburgh is built. The six columns in front of the college, each consisting of one stone 23 feet by 3, and supposed to be superior to any similar pillars in Britain, are from this quarry. Another principal quarry is at Hales, in the parish of Colinton, about 4 miles west of Edinburgh, and yields a slaty stone which is easily worked, and of great value for pavement. Several other quarries of inferior note occur in various localities. Rocks of the eruptive kinds are found in every parish of the county, and have been quarried not only for local buildings, and for paving the streets of Edinburgh, but for transportation in considerable quantity to London. Millstones, petrifications, and beautiful specimens of marble, are produced in the parish of Penicuik. Lead was, at a former date, found on the south side of the Pentlands, at the head of the North Esk. Copper is believed to exist in several parishes; but, though tried for a time in Currie, is not sufficiently abundant to be remuneratingly worked. Iron is much more frequent, particularly in the vicinity of coal. Gems are now very rarely met with, but anciently were not altogether scarce. The Arthur-seat pebble, a species of jasper, was, at no remote date, occasionally seen.—Mineral waters, chalybeate and sulphureous, spring in two localities near Edinburgh, in Cramond, Mid-Calder, and Penicuik, and in various other districts.

However early, during rude and tumultuous ages, the plough may have been introduced to Mid-Lothian, agriculture appears to have there made some progress before the close of the 11th century. At that epoch, and for ages afterwards, the county was for the most part covered with forests. But while the feeding of flocks among the woods and in vast pastures on the Gala water was pursued by the opulent, husbandry was practised by the poor. David I. raised agriculture in the popular estimation, and threw around it the dignity and eclat of royal adoption; becoming himself the greatest farmer in Mid-Lothian, and maintaining many agricultural establishments. David I. also showed his people an example of horticulture; and speaks, in his charter of Holyrood, of his garden under the castle. Horticulture was generally practised in Scotland during the Scoto-Saxon period; and commanded much attention, in the instance of the royal gardens of Edinburgh, during the disastrous reign of David II. But the prevalence of groves and shrubberies long obstructed, in every shape, the cultivation of the soil. Edward III. did much to abridge the domination of the forests; yet even he left large clusters of native oak to spread their dark wings over the rich plains, and send down their hungry roots into the productive soil, so late as the 16th century. While woods lifted their umbrageous covering over the country, and warriors and freebooters prowled beneath them to trample upon luxuriance, and break through the fences reared by the hand of cultiva-

tion, agriculture could not make material progress. Mills, kilns, and breweries, indeed, were not few in number, and afforded no unambiguous intimation that the farmer was quietly and unostentatiously resisting the soldier, as well as subduing the asperities of the soil. Yet the lower orders of the inhabitants—those chiefly who practised agriculture—were the slaves rather than the tenants of the landowners, and laboured unwillingly for others rather than willingly for themselves. The tillers of the ground—especially when coin was scarce, and the circulation of it nearly unknown—could not, in consequence, possess sufficient capital to enable them advantageously, for either their families or the population around them, to follow the plough. The tenant, therefore, rented from the landlord—who copied the example of the freeholders of England—not only the land but the materials with which it was stocked; and was bound to deliver up all he possessed whenever he vacated his farm. The strange tenure by which the cultivator of the soil thus held the lauds on which he expended his labour was called a steelbow, and long and almost hopelessly obstructed the progress, or rather the beginning, of improvement.

A patient, persevering, and assiduous course of quiet industry,—a course possessing these properties in a degree inconceivable by an age of stir and speculation and rapid evolutions,—was indispensable in combination with frugal economy to carry up the value of agricultural capital from the cypher of the steelbow age, to the flourishing and opulent period of identity of farmership with independence, luxury, and social greatness. The era of improvement, to an extent fully visible, was so late as about the end of the first quarter of the 18th century. At that period a society of improvers formed in Edinburgh, and now, according to the usual ingratitude of the world, almost entirely forgotten, issued agricultural instructions, and illustrated them by example. Other parties, near and after the same date, followed in their wake. In particular, Sir James Macgill, and, 60 years later, Sir John Dick of Prestonfield in Duddingston, carted away manure from Edinburgh, and demonstrated how, by artificial appliances, a barren soil may be converted into the seat of luxuriance and agricultural wealth and beauty. At later dates, down toward the close of the 18th century, Sir John Dalrymple of Cousland, Hamilton of Fala, Thomas Hope of Raukeilor, and the Duke of Buccleuch, aided or directed by Dr. Carlyle of Inveresk and Dr. Irvine of Dalkeith, achieved great improvements in the introduction of grasses and succulents, of hedges and ditches, and of economical ploughs and well-adapted implements of husbandry.

The present state of agriculture in the county is as high and prosperous as modern science and capital can well desiderate. A territory around the metropolis is extensively laid out in nurseries and garden-grounds, and is maintained or forced in its luxuriance by the importation of manure from the city. A district beyond is distributed chiefly into potato fields, enriched and supported by the same manurial appliance; and this district, patched with spots of the former territory, has been extended away westward, in consequence of the facilities for conveying manure which have been afforded by the opening and traffic of the Union canal. The ulterior and larger parts of the arable division of the county are laid for crops of wheat, barley, oats, pease, beans, potatoes, summer tares, rye-grass, and clover. In the moorlands, though a few miles of ascent from the plain reveals a difference of almost as many weeks in the date of harvest, cultivation rapidly ex-

tends, striding along heath and bog, and even making a considerable ascent up the acclivities of the hills. Well-constructed fences, sheltering plantations, draining, manuring, and all the arts of improvement, are contributing their quota to enhance the opulence of the wealthy soils, and confer value and ornament upon the poor. The farmers are well-educated, experimental, generally affluent, and distinguished by the bearing of independence and reflection.

The agricultural statistics of Edinburghshire were obtained, for the year ending in the harvest of 1846, under the direction of the Lords of the Committee of Privy Council for Trade. The total area represented in these was found to be 176,874 acres, 1 rood, 35 poles, Scotch measure; and of this 8,182 a. 2 r. 28 p. were under wheat, 9,108 a. 1 r. 31 p. under barley, 82 a. 8 p. under rye, 21,661 a. 2 r. 9 p. under oats, 928 a. 3 r. 10 p. under beans, 380 a. 1 r. 18 p. under pease, 6,625 a. 1 r. 23 p. under potatoes, 9,374 a. 10 p. under turnips, carrots, and mangel wurzel, 3,537 a. 1 r. 29 p. under clover, tares, lucern, and artificial grasses, 7,591 a. 1 r. 7 p. under hay, 663 a. 3 r. 21 p. under other crops, 88,414 a. 1 r. 12 p. in pasturage, 1,829 a. 38 p. in fallow, 7,200 a. 1 r. 15 p. under wood, 8,720 a. 2 r. 4 p. waste, and 1,297 a. 2 r. 12 p. of allowance for the difference between inside and outside measure. And the number of cattle was 4,693 cows, 9,638 other bovine animals, 68,797 sheep, and 3,075 swine. Another set of statistics, on a different plan, was obtained, for the year 1854, under the direction of the Highland and Agricultural Society. The gross produce comprised 262,128 bushels of wheat, 454,116 bushels of barley, 868,376 bushels of oats, 1,582 bushels of here or bigg, 48,468 bushels of beans, 245,762 tons of turnips, and 26,212 tons of potatoes. The average produce per imperial acre was 32 bushels 1 peck of wheat, 40 bushels 2 pecks of barley, 38 bushels of oats, 31 bushels 2 pecks of bere or bigg, 31 bushels 1 peck of beans, 17 tons 4 cwt. of turnips, and 4 tons 15 cwt. of potatoes. And the number of cattle was 4,582 horses, 5,430 milk cows, 7,784 other bovine animals, 2,540 calves, 83,395 ewes, gimmers, and ewe-hogs, 26,148 tups, wethers, and wetber-hogs, and 6,403 swine.

The landed property, on the whole, is well divided; yet a considerable number of the estates are rather large. Farms are of various sizes, but generally of an extent to suit well the present practices of husbandry. The usual time for leases is nineteen years. The old valued rental was £15,921. The real rental of land in 1810-1811, was £277,828; in 1861-2, £387,310. The yearly value of assessed property in 1815, was £770,865; in 1843, £1,057,562. The average of the far prices from 1854 to 1860, was for first wheat, 49s. 11½d.; for second wheat, 46s. 10½d.; for first barley, 35s. 6½d.; for second barley, 32s. 8½d.; for third barley, 30s. 1½d.; for first oats, 26s. 1d.; for second oats, 23s. 9½d.; for pease and beans, 41s. 5½d.; and for oatmeal, 19s. 2½d. Farm labourers get 9s. or 10s. of weekly wages; young unmarried men, living as farm-servants in the farm-house, receive from £5 to £7 a-year, with bed and board; and married farm-servants, or hinds, get £16 in money, 6½ bolls of meal, 3 bolls of potatoes, a house and garden, coals driven, and one month's meat in harvest.

During the reigns of the earliest Scoto-Saxon kings, the people must have enjoyed the benefit of those domestic fabrics without which society can hardly exist. Yet at that period manufactures were represented only by the achievements of handieraftsmen. The making of salt and the art of distillation, were the sole and miserable indications of progress at the demise of Alexander III. During the

14th and 15th centuries, an independent but ruined nation scarcely enjoyed the most common handicrafts; nor could two centuries of distractions, subsequent to the reign of James I., give much energy to the incipient, the hardly-existing, manufactures of the county. Legislation, during that period, vainly interposed encouragements to men without skill or capital or social support to engage in the useful labours of the loom; and even after the Restoration it strove assiduously, but without success, to introduce various manufactures. A hundred and forty years ago, or little more, the fabrication of linen was, almost perceptibly and on a very small scale, introduced. The board of trustees for encouraging manufactures in North Britain, aided by several of the nobility and gentry, soon made a strong and favourable impression. In 1729 a number of Dutch bleachers from Haarlem commenced a bleachfield on the Water of Leith, a few miles west from Edinburgh; and soon exhibited to the gaze and the imitation of Scotland the printing and stamping of all colours. Extensive bleachfields were afterwards formed in the neighbourhood of the city, and on the banks of the Esk, particularly in the parish of Lasswade. A very large establishment for the preparation of linen-yarn was also erected at Kirkhill, south from Edinburgh. Various kinds of fabrics are at present woven, though not by any means to an amount proportioned to the bulk and facilities of the county, in Edinburgh, Leith, and Musselburgh. At Stobbs and Roslin are the only manufactories of gunpowder in Scotland.

Mid-Lothian, however, while possessing high advantages equal or superior to those of many a district whose manufacturing industry has made its weavers princes, and has covered its surface with a swarming population, is exceedingly and almost unaccountably deficient in the amount and spirit of its manufactures. Its principal factorial produce consists of soap, candles, shoes, glass, intoxicating liquors, pottery, leather, iron, paper, and books. A massive, handsome, quadrangular edifice, erected in 1841, on the banks of the Union canal, at the western outskirts of Edinburgh, introduced the manufacture of silk into the county, but not with any better effect than the previous introduction of the manufactories of flax and wool. And as to the manufacture of cotton, Edinburghshire knows next to nothing. Home-made paper, however, first issued from this county; and is now manufactured at Lasswade, Balerno, Melville, Penicuik, Colinton, Polton, Auchindinny, and various other places on the waters of Leith and Esk, occupying 16 mills, and employing about 4,000 hands; and, though not able to compete in the finer qualities with the paper of the south of England, it supplies nearly all Scotland with the best material for the press. Edinburghshire, viewed in the aggregate, is far from being a manufacturing district, and appears by its factorial produce, rather to apologize for its indolence, or its aristocratic spirit, or its fondness for luxuriating in the wealth and finery of its landscape, than to offer competition to the plodding and matter-of-fact districts of the kingdom.

Edinburgh is the only royal burgh in Mid-Lothian. Leith, Portobello, and Musselburgh, are municipal and parliamentary burghs. Dalkeith is a burgh of barony. Canongate and Portsburgh were burghs of regality, but are now incorporated with Edinburgh. The villages and hamlets are Water of Leith, Dean, Morningside, Wardie, Granton, Davidson's Mains, Cramond, Corstorphine, Gogar, Newbridge, Bonnington, Ratho, Colinton, Hailes' Quarry, Juniper-Green, Slateford, Swanston, Longstone, Currie, Balerno, Hermiston, Kirknewton, East

Calder, Wilkinston, Bell's Quarry, Mid-Calder, West Calder, Trinity, Newhaven, Restalrig, Jock's Lodge, Duddingston, East Duddingston, West Duddingston, Joppa, Inveresk, Cowpits, Craighall, Monkton-hall, Stoney-hall, New Craighall, Gilmerton, Morton, Niddry, Niddrymill, Adamsrow, Claybarns, Edmonston, New Engine, Old Engine, Easter Millerhill, Wester Millerhill, Pentecox, Redrow, Sheriffhall, Engine, Squartown, Lugton, Whitehill, Chesterhill, Sauchenside, Preston, Cowsland, Crichton, Pathhead, Fala, Faladam, Stow, Clayhouse, Dewarton, Middleton, North Middleton, Newlandrig, Stobbsmills, Gorebridge, Easthouses, Newbattle, Stobhill, Westhouses, Bonnyrig, Dalhousie, Gowkshill, Hillhead, Hunterfield, Poltonstreet, Prestonholm, Shiltymoor, Stobhill-Engine, Westmill, Carrington, Thornton, Whitefaugh, Lasswade, Loanhead, Rosewell, Roslin, Penicuik, Howgate, and Kirkhill. Among the principal seats are Dalkeith-palace, the Duke of Buccleuch; Duddingston-house, the Marquis of Abercorn; Dalhousie-castle, the Earl of Dalhousie; Newbattle-abbey, the Marquis of Lothian; Dalmahoy-house, the Earl of Morton; Oxenford-castle, the Earl of Stair; Melville-castle, Viscount Melville; Calder-house, Lord Torphichen; Colinton-house, Lord Dunfermline; Roseberry, the Earl of Roseberry; Bellwood and Dun-Edin, Baroness Sempill; Hailes-house, the Rev. Sir William H. Carmichael, Bart.; Penicuik-house, Sir George Clerk, Bart.; Prestonfield, Sir W. H. Dick Cunyngnam, Bart.; Greenhill, Sir John Stuart Forbes, Bart.; Woodhall and Milburn-tower, Sir J. L. Foulis, Bart.; Pinkie-house, Sir Archibald Hope, Bart.; Grange-house, Sir John Dick Lauder, Bart.; Ravelston, Sir P. Keith Murray, Bart.; Gilmerton-house, Sir David Baird, Bart.; Riccarton-house, Sir W. Gibson Craig, Bart.; Hawthornden, Sir James Walker Drummond, Bart.; Beechwood, Sir David Dundas, Bart.; Comiston, Sir John Forrest, Bart.; Clifton-hall, Sir A. C. G. Maitland, Bart.; Bruntfield house, Sir John Warrender, Bart.; Arniston, Robert Dundas, Esq.; Niddry, Andrew Wauchope, Esq.; Morton-hall, Richard Trotter, Esq.; Edmonston, John Wauchope, Esq.; Whitehill, R. B. Wardlaw Ramsay, Esq.; Calderhall, S. B. Hare, Esq.; Woodhouselee, James Tytler, Esq.; Drun-house; Harburn; Redhall; Craigieball; Braid; Muirhouse; Ravelrig; Craiglockart; Baberton; Saughton; Vogrie; Malley; Dreghorn; Clermiston; Beechwood; Dryden; Mavisbank; New Hailes; and a multitude of others.

The maritime traffic of Mid-Lothian, and also of East and West Lothian, Peebles-shire, and Selkirkshire, is concentrated at Leith, and is of considerable extent. Fisherrow or Musselburgh has some commerce, and is largely a port for fishing-boats. Newhaven also is a large fish-port; and both it and Trinity pier were formerly points of communication with Fife. Granton is now the chief point of that communication, and is the station for the railway ferry, and for the steamers to Stirling, Aberdeen, and London. The Union canal, stretching between Edinburgh and the Forth and Clyde canal at a point near Falkirk, traverses the parishes of St. Cuthbert's, Colinton, Currie, Ratho, and Kirkliston. The Edinburgh and Glasgow railway runs in the same direction as the canal, intersecting the county a little farther to the north. The Caledonian railway goes off from the capital south-westward, through the parishes of St. Cuthbert's, Colinton, Currie, Kirknewton, Mid-Calder, and West-Calder, traversing the south-eastern wing of the county to nearly its utmost extremity. The Edinburgh, Perth, and Dundee railway, in its short course to Granton and North Leith, traverses the parishes of St. Andrew's,

St. Mary's, St. Cuthbert's, North Leith, and Cra-mond. The North British railway sends off its main trunk eastward, through the parishes of Trinity-College, Canongate, South Leith, Duddingston, and Inveresk; its Hawick branch south-eastward, through the parishes of Liberton, Newton, Dalkeith, Newbattle, Cockpen, Borthwick, Heriot, and Stow; and its Peebles communication from Eskbank south-westward, through the parishes of Cockpen, Carrington, and Penicuik. All the great lines of road in the county diverge from the metropolis. One leading to Haddington, Berwick-upon-Tweed, and the east of England, runs down to Portobello, and thence proceeds along the shore. Another leading to Lauder, passes through Dalkeith, and leaves the county near the village of Fala. A third, leading through Selkirk and Hawick to Carlisle, and through Jedburgh to New-castle-on-Tyne, passes a little to the west of Dalkeith, and traverses the parishes of Newbattle, Borthwick, Heriot, and Stow, running along the banks of Gala water from near its source till, in its company, it leaves the county. A fourth, leading to Peebles, breaks off from the former in the parish of Liberton, and thence intersects the parishes of Lasswade and Penicuik. A fifth, leading to Biggar and Dumfries, goes through the village of Morningside, skirts the easterly part of the parish of Colinton, and intersects the parishes of Glencorse and Penicuik. A sixth, leading to Lanark, passes through the villages of Slateford and Currie, and leaves the county near Crosswoodhill. A seventh, leading to Glasgow by way of Whitburn, passes through the villages of Hermiston, East-Calder, and Mid-Calder. An eighth, leading to Glasgow by way of Bathgate, passes the village of Corstorphine, and leaves the county a mile south of the village of Kirkliston; and it sends off, in the parish of Corstorphine, a slightly diverging branch which leads to Linlithgow and Falkirk. The ninth and last great line of road passes through the metropolitan suburb of the Dean, and intersects the parish of Cra-mond, leading on to Queensferry, there to communicate by steam-boat across the Forth with the great road to Perth. Every part of the county, or at least its non-pastoral districts, is freely intersected with intermediate and cross roads.

Edinburghshire sends one member to parliament; and has its polling-places at Edinburgh, Dalkeith, and Mid-Calder. The parliamentary constituency in 1861 was 1,904. The city of Edinburgh also sends two members; and Leith, Portobello, and Musselburgh, conjointly send one. The court of lieutenancy is divided into six districts. The sheriff courts arc held in the County Buildings at Edinburgh; and a sheriff court for the Leith district, which comprises the parishes of North Leith and Duddingston, and the greater part of the parish of South Leith, is held every Tuesday in the courtroom in Constitution street, Leith. The sheriff small debt court is held at Edinburgh on every Wednesday and Friday, and at Leith on every Tuesday. The sheriff circuit court is held at Dalkeith on the third Thursday of every month. The justice of peace small debt court is held at Edinburgh on every Monday. The police force, in 1861, was 47; the salary of the chief constable was £400; and the police stations were Jock's Lodge, Portobello, Duddingston, Musselburgh, Dalkeith, Pathhead, Gorebridge, Stow, Penicuik, Birdiehouse, Lasswade, Gilmerton, Slateford, Currie, Kirknewton, West Calder, Mid-Calder, East Calder, Ratho, Corstorphine, David-son's-Mains, Coltbridge, Granton, Newhaven, Newton-grange, Milton-cottages, Roslin, Miller-hill, Carrington, and Newbridge. The number of com-

mittals for crime, in the year, within the county, was 556 in the average of 1836-40, 600 in the average of 1841-45, 729 in the average of 1846-50, 631 in the average of 1851-55, and 547 in the average of 1856-60. The total number of prisoners in the jails on the Calton-hill of Edinburgh during the year ending 30th June 1860, was 4,813; the average duration of their confinement 26 days; the net cost per head, £15 14s. 6d. The total of prisoners in the cells of the court-buildings, in the same year, was 805; the average duration of confinement, 5 days; the net cost per head, £15 9s. 7d. The number of registered poor in the year 1851-2 was 8,802; in the year 1859-60 8,962. The number of casual poor in 1851-2 was 4,217; in 1859-60, 3,761. The sum expended on the registered-poor in 1851-2 was £46,869; in 1859-60, £59,060. The sum expended on the casual poor in 1851-2, was £2,337; in 1859-60, £1,713. The assessment for prisons, in 1861, was $\frac{3}{4}$ d. per £1; for police and rogue-money, $\frac{1}{4}$ d.; for militia expenses, $\frac{1}{4}$ d. The births in 1856 were 8,650,—in 1860, 8,941; the marriages in 1856, 2,034,—in 1860, 2,311; the deaths, in 1856, 6,324,—in 1860, 6,454. The percentage of illegitimate births in 1858 was 8·2; in 1860, 8·3. Population in 1801, 122,597; in 1811, 148,607; in 1821, 191,514; in 1831, 219,345; in 1841, 225,454; in 1851, 259,435; in 1861, 273,997. Males, in 1861, 126,390; females, 147,607. Inhabited houses in 1811, 24,162; uninhabited, 802; building, 308. Total of rooms in 1861, 185,866; number of rooms to each family, 2·9; number of persons to each room, 1·4; total of scholars of all ages, 47,617.

There are in Edinburghshire 48 *quoad civilia* parishes, and part of two others. There are also 8 *quoad sacra* parishes, and 8 chapels of ease. Two of the parishes and one of the parts are in the presbytery of Linlithgow: 17 of the parishes and the other of the parts, together with one parish of Haddingtonshire, constitute the presbytery of Dalkeith; and the rest of the parishes constitute the presbytery of Edinburgh,—all in the Synod of Lothian and Tweeddale. In 1851, the number of places of worship within the county was 230; of which 66 belonged to the Established church, 49 to the Free church, 40 to the United Presbyterian church, 2 to the Reformed Presbyterian church, 3 to the Original Seceders, 16 to the Episcopalians, 14 to the Independents, 9 to the Baptists, 1 to the Society of Friends, 1 to the Unitarians, 6 to the Wesleyan Methodists, 1 to the Primitive Methodists, 1 to the Glassites, 1 to the New church, 13 to isolated congregations, 5 to the Roman Catholics, 1 to the Catholic and Apostolic church, and 1 to the Jews. The number of sittings in 48 of the Established places of worship was 35,735; in 43 of the Free church places of worship, 28,580; in 34 of the United Presbyterian meeting-houses, 27,535; in the 2 Reformed Presbyterian meeting-houses, 940; in 11 of the Episcopalian chapels, 4,656; in 10 of the Independent chapels, 6,720; in 6 of the Baptist chapels, 3,096; in the six Wesleyan Methodist chapels, 2,125; in 7 of the places belonging to isolated congregations, 1,320; and in the other reported places of worship, the numbers noted in the statistic section of our article on EDINBURGH. The maximum attendance, on the Census Sabbath, at 53 of the Established places of worship was 15,264; at 46 of the Free church places of worship, 18,858; at 36 of the United Presbyterian meeting-houses, 17,462; at the two Reformed Presbyterian meeting-houses, 610; at 14 of the Episcopalian chapels, 3,608; at 13 of the Independent chapels, 3,318; at the 9 Baptist chapels, 1,742; at the 6 Wesleyan Methodist chapels, 925; at the 13 meeting-houses of isolated con-

gregations, 750; at the 5 Roman Catholic chapels, 2,650; and at the other reported places of worship, the numbers noted in the statistic section of our article on EDINBURGH. There were in 1851, in Edinburghshire, 232 public day-schools, attended by 15,465 males and 13,793 females,—167 private day-schools, attended by 4,103 males and 3,918 females,—61 evening schools for adults, attended by 1,510 males and 632 females,—and 321 Sabbath schools, attended by 12,734 males and 14,462 females.

The antiquities of Mid-Lothian, most instructive and valuable, though least noticed and hut partially interesting, are the traces, in the names of its localities, of the presence and influence successively of the Britons, the Romans, the Anglo-Saxons, and the Scots-Irish. The Ottadini and the Gadeni, the British descendants of the first colonists, enjoyed their original land during the second century, and left memorials of their existence in the names of the Forth, the Almond, the Esk, the Leith, the Breich, the Gore, and the Gogar, and of Cramond, Cockpen, Dalkeith, Dreghorn, Inch-keith, Roslin, and Pendreich. The Romans, though untraceable in the topographical nomenclature, have left roads, encampments, baths, and sepulchres sufficient to attest their temporary dominance. The Anglo-Saxons, who came into Mid-Lothian in fewer numbers than into Berwickshire and East-Lothian, have bequeathed a much smaller proportion of names than in the latter counties, but have left sufficient indications of their presence in the names Stow, Newbattle, and Lasswade, and in the occurrence in the south and south-east of *Lau, Rig, Dod, Shiel, Lee, Dean, Hope, Ham, Burgh, Law, Cleugh, and Holm*. But there does not occur in the county the word *Fell*, applied to a mountain, or any intimation of the presence at any period of a Scandinavian people. The Scots-Irish, who came in from the west, and acquired entire ascendancy, are abundantly commemorated in the local nomenclature, and have bequeathed Gaelic names too numerous to be exhibited in a list, and so obvious as to be noticeable by even a careless observer. The Gaelic names were imposed partly after the year 843, when the Scottish period commenced; but chiefly, perhaps, after the year 1020, when Lothian was ceded to the Scottish king. Owing, probably, to the comparatively recent superinduction of English names upon Gaelic ones, the proportion of Anglo-Saxon in the nomenclature of the county is about four times more than that of the Celtic or British.

British antiquities, though not abundant, occasionally occur. Druidical circles appear in the parish of Kirkcubright and on Heriot-town-hill. Cairns, which may be regarded as funeral monuments of the Britons, exist in the parishes of Borthwick and Colinton. Tumuli, which mark the scenes of British conflict, and whence stone coffins were dug, occur in the parish of Mid-Calder, and were levelled at dates not remote in the parishes of Newbattle and Lasswade. Oval or circular camps, indicating by their form that they owed their construction to the Britons, may be traced, or are still of conspicuous outline, in the parishes of Penicuik, Borthwick, Crichton, Lasswade, and Liberton. Strengths, which probably were, in their original shape, fortlets of the Britons, are the maiden castles of Roslin and Edinburgh. The caves of Hawthornden, though improved by warriors of a later date, were very likely hiding-places of the British tribes.—The Romans, who entered Mid-Lothian toward the conclusion of the first century, and did not finally retire from it till after the lapse of 360 years, seized the best places of defence, and secured their power by a raminication of camps, forts, and roads, which

have left so numerous traces as to draw largely on attention in minute topographical description; and they reared altars, baths, granaries, and other works of art, which still occasionally meet the eye, and dropped innumerable coins and weapons and other minor relics, which have for generations arrested the delighted gaze of many an antiquary, and continue, to the present hour, to be not unfrequently disclosed to view in turning up the soil.—The Anglo-Saxons and the Scots bequeathed numerous castles and strengths, many of which have totally disappeared, while others are wholly or partially in a ruinous condition. The most remarkable are Craigmillar castle, in the vicinity of Edinburgh; Crichton castle, 10 miles south-east of Edinburgh; Borthwick castle, 2 miles farther south; Dalhousie castle, in the parish of Cockpen; Hawthornden and Roslin castles, in the parish of Lasswade; Ravensnook castle, in the parish of Penicuik; Dalkeith castle, now obliterated by the hand of modern improvement; Cousland castle, in the parish of Cranston; Lennox tower, in the parish of Currie; Cateune castle, on the Gore water; Locherwart castle, near the sources of the Tyne; Luggate castle, on Luggate water; and Fala tower, on the northern side of Fala moss. Many of these form the subject of separate articles in the present work. Of all the castles, Craigmillar, both for the beauty of its situation, and for its extensive means of defence, is most worthy of notice. See CRAIGMILLAR CASTLE.

The ecclesiastical antiquities of the metropolis and its suburbs are numerous and interesting, and are noticed in the article on EDINBURGH. Extensive monasteries existed at Newbattle and Temple. Corstorphine church, and the church of Duddingston, are curious remains, still in use, of a considerably high antiquity. On Soutra hill, united to an Edinburghshire parish, are vestiges of an ancient hospital. In the parish of Cranston are the ruins of some buildings and enclosures which are conjectured to have been monastic. But the most beautiful ecclesiastical relic of antiquity out of Edinburgh, is Roslin chapel, in the parish of Lasswade: See ROSLIN.—The Roman legionaries, who delighted to dwell along the salubrious shores of Mid-Lothian, possibly enjoyed, to some extent, the surpassingly rich religious benefits of the Christian dispensation. The Saxon colonists of the county derived much religious instruction from the efforts of Baldred, and from the more excursive and productive labours of Cuthbert. The bishopric of Lindisfarne, established in 635, appears to have included Mid-Lothian; but was obliged permanently to renounce it at the abdication of the authority of the Northumbrian Saxons. After the ascendancy of the Scottish kings the county was annexed to the bishopric of St. Andrews, and continued to be attached to it till the period of the Reformation. Under the reforming processes of David I., the churches of Edinburghshire were probably placed under the subordinate authority of the deans of Lothian and Linlithgow. Anciently, the archdeacons and deans of Lothian were persons of great consideration, and acted a conspicuous part in national affairs; rising, in many instances, to the rank of bishops, serving occasionally as chancellors of the King; and one of them wore the hat and the dignity of cardinal. The office of archdeacon, however, became eventually merged in that of the official of Lothian. This was a person who ranked high, and wielded prodigious influence; and he usually resided in Edinburgh, and acted a conspicuous part in the public conventions and the royal councils. In general, the ecclesiastical affairs of the county were fitfully managed till the Reformation freed them from the noxious influences of the Romish

superstitions and errors, and placed them under the popular regimen of presbyteries and synods. In 1633, Charles I., in the prosecution of his wild scheme for imposing episcopacy upon the reformed and presbyterian Scottish people, erected Edinburgh into a bishopric, and gave the incumbent prelatial domination over all Mid-Lothian, and various other territories; but though he thus, at the latest practicable hour, technically raised the metropolis to the dignity of a city, he could not prevent the new bishopric, only five years after its erection, from falling permanently to ruin amid the summary overthrow of the whole episcopalian fabric of the kingdom.

Fields of battle, with the reminiscences which they suggest, hold a middle place between antiquities and history, and partake the character of both. Every foot of ground covered by the metropolis and its environs, and many a spot throughout the county, were the scenes of sanguinary contests which, in many instances, involved the fate of the kingdom. Places in which the successive colonists, conquerors, and lords of the ascendant during the lapse of thirteen centuries, fought for victory or possession, are either identified with the castle and town of Edinburgh, or so obscurely intimated as to be, in a great degree, matter of conjecture. Near Roslin, in the parish of Lasswade, a Scottish army of from 8,000 to 10,000, led by Sir Simon Fraser and Sir John Cumyn, achieved three successive victories, on the 14th of February, 1303, over an aggregate English force of 30,000 men under Ralph Confrey, treasurer to Edward I. The Borough-moor, in the vicinity of Edinburgh, was, in 1334, the scene, after a desperate conflict, of the utter discomfiture and dispersion of an English force under Count Guy of Naumur, by the Scottish patriots the Earls of Murray and March, Sir Alexander Ramsay, and their followers. A spot in the parish of Crichton witnessed, in 1337, another sharp conflict between the Scotch and English troops; and various other localities in the county were drenched with blood during the sanguinary and prolonged wars of the succession. Sir Alexander Ramsay of Dalwolsie, the ancestor of the present noble family of Dalhousie, often sallied from the caves of Hawthornden, and chased the mercenary forces of England from the vicinity of the metropolis. In 1385, Mid-Lothian was, in many places, devastated by pillage and conflagration during the retaliatory incursion of Richard II.; and a century and a half later, it considerably suffered in several localities from the invasions which were made by England, to resent the disarrangement of Henry VIII.'s plan of marrying his son to the young Scottish Queen. In 1547, the field of Pinkie, lying between the village of Inveresk and Walliford and Carberry, witnessed a disastrous onslaught, in which 10,000 Scottish troops were killed, and 1,500 made prisoners, by an English force, commanded by the Duke of Somerset. In 1567, Carberry-hill, in the parish of Inveresk, was the scene of a battle array, though not of an actual conflict, and of the surrender of Queen Mary immediately prior to her imprisonment in Lochleven-castle. In 1666, on Rullion-green, in the parish of Glencorse, an armed body of Covenanters twice repulsed a party of the King's troops under Dalziel; but, on a third attack, were routed, and upwards of 50 of them slain.

The history of Mid-Lothian is, in most particulars, so identified with that of the metropolis, which has already been sketched in the article EDINBURGH, and in others has been so anticipated in our views of its agriculture, antiquities, and fields of battle, that little remains to be told except the facts which refer

to territorial distribution, and the erection of the district into a county. Mid-Lothian, very probably, was placed under the salutary regimen of a sheriff, as early as the epoch of the introduction of the Scots-Saxon laws. A sheriffdom is apparent from the reign of Malcolm IV. down to the restoration of David II.; and appears, during this period, to have extended over Haddingtonshire on the east, and Linlithgowshire on the west. But from the time of David II., down to its adjustment in its present form, the sheriffdom or shire suffered successive limitations; in every age it was abridged in its authority by various jurisdictions within its bounds; and, for a considerable period, it was confused in its administration by distribution into wards, each of which was superintended by a sergeant. In August, 1744, James, Earl of Lauderdale, succeeded his father in the sheriffdom, and was the last who held the office under the old regime. The first sheriff under the present improved practice, was Charles Maitland of Pitriche, who received his appointment in 1748, with a salary of £250. A constable was attached, from an early period, to the castle of Edinburgh; and, as early as 1278, appears to have exercised civil jurisdiction.—From the year 1482, the provost of Edinburgh had the power of sheriff, coroner, and admiral, within the territories of the city, and those of its dependency of Leith.—The abbot of Holyrood acquired from Robert III. a right of regality over all the lands of the abbey, wherever situated, and particularly over the barony of Broughton in Mid-Lothian. The jurisdiction was acquired after the Reformation by the trustees of Heriot's hospital, and, at the epoch of the abolition of hereditary jurisdictions, was compensated by £486 19s. 8d.—The monks of Dunfermline obtained from David I. baronial jurisdiction over the manor of Inveresk, including the town and port of Musselburgh, and maintained their lordship and regality till the period of the Reformation. The jurisdiction was hestowed by James VI. upon Sir John Maitland, sold in 1709 to the Duchess of Buccleuch, and eventually compensated, in common with all the baronial jurisdictions of the Buccleuch family, by £3,400.—The regality of Dalkeith was obtained by the Douglasses of Lothian; passed into the possession of the family of Buccleuch; and ceased in 1747.—The barony of Ratho, when Robert II. ascended the throne, was erected, in common with the other estates of the Stuarts, into a royal jurisdiction, and given by Robert III. to his son James; and it was disjoined from Mid-Lothian and annexed to Renfrewshire, when the sheriffdom of Renfrew was settled by dismemberment from Lanarkshire.—The extensive estates in Mid-Lothian which belonged to the archbishop of St. Andrews were erected into a regality, and were under the control of a bailie appointed by the proprietor.—The baronies or lands of Duddingston, of Preston-hall, of Carrington, and of Carberry, were also all regalities administered, in the case of the first, by a bailie, and in the case of the others, respectively by the Duke of Gordon, Lord Dalmeny, and Sir Robert Dickson.—In addition to all the privileged authorities now enumerated—which in the aggregate must have greatly embarrassed the civil administration of the county—there existed from the reign of Malcolm IV., a justiciary of Lothian, who exercised a greater power than even the sheriff, and must have very materially abridged and restrained the jurisdiction of the sheriffship. The power of the Archbishop of St. Andrews, both baronial and ecclesiastical, must likewise have thrown impediments continually in the way of the sheriff's movements; and even after the Reformation, when prelacy and its appliances were abolished,

continued for a time to be perpetuated as to its effects. The overthrow of all hereditary jurisdictions, in 1747, was one of the happiest events in the diversified history of Mid-Lothian.

EDINGTON CASTLE, an ancient fortalice, of which the southern side still remains, 2 miles east of the village of Chirnside, in Berwickshire.

EDINKILLIE. See **EDENKILLIE**.

EDINKLENS. See **INNERWICK**.

EDINSHALL, a curious, quondam, ancient tower, now levelled with the ground, on the north side of Cockburnlaw, in Berwickshire. It is supposed to have been erected in the 7th century by the first Saxon invaders of Britain. See **COCKBURN-LAW**.

EDINVILLE, a hamlet in the parish of Dallas, Morayshire. Population, 17.

EDLESTON. See **EDDLESTONE**.

EDMONSTONE, a village and an estate in the parish of Newton, 4 miles south-east of Edinburgh. The village stands contiguous to the village of Woolmet, and shares with that village and with other villages in the vicinity the character of rows of red-tiled cottages, grotesquely chequering the landscape. Population, 143. The mansion of Edmonstone, in the midst of a finely wooded park, is in the neighbourhood of the village. The estate of Edmonstone has belonged since the beginning of the 18th century to the family of Wauchope; but it belonged from a remote period till about the beginning of the 17th century to the family of Edmonstone, who are said to have come to Scotland with the queen of Malcolm Canmore. An owner of it in the latter part of the 17th century was a senator of the college of justice under the name of Lord Edmonstone. There are very extensive coal-mines on the estate.

EDMONSTONE-EDGE. See **PINKIE**.

EDNAM, a parish, containing a village of the same name, on the northern verge of Roxburghshire. It is bounded by Berwickshire, and by the parishes of Sprouston, Kelso, and Stitchell. Its post-town is Kelso. Its outline approaches the parallelogramic, lying from south-west to north-east, but has sinuosities, and expands at the north. Its greatest length, from Spittal on the south to the boundary beyond Girth-ridge-hall on the north, is $3\frac{1}{4}$ miles; and its greatest breadth, in a line drawn over High-ridge-hall, is $2\frac{3}{4}$. The Tweed forms the south-east boundary-line; and the Eden intersects the parish from east to west, dividing it into not very unequal parts. Along the banks of both rivers are beautiful and rich low grounds. The district, as a whole, is low and level, but delightfully diversified. The generally flat ground gently rises, in some places, into inclined plains; and, in two spots, swells into fine elevations, one near the village called Ednam hill, and the other between the Tweed and the Eden called Henderside hill. The land is among the best in the Merse, and is well-cultivated, well-enclosed, and agreeably variegated with plantation. There are five landowners. The only mansion is Henderside-park. The yearly value of raw produce was estimated in 1839 at £15,395. Assessed property in 1843, £8,329 7s. 5d. There are three corn-mills and a brewery. The parish is traversed along the Tweed, by the road from Kelso to Coldstream, and through its centre by the road from Kelso to Berwick by way of Swinton. James Thomson, the author of 'The Seasons,' and the son of the first minister of the parish after the Revolution, was born in 1700, in the manse of Ednam. An obelisk to his memory, 52 feet high, and built in 1820, stands on a rising ground about a mile from the village. Ednam village is beauti-

fully situated on the Eden, $2\frac{1}{2}$ miles north-east of Kelso. In 1558, it was burnt by the earl of Northumberland. The name is a contraction of Edenhām,—a word signifying the village on the Eden, and appropriately descriptive. Population of the parish in 1831, 637; in 1851, 658. Houses, 123.

This parish is in the presbytery of Kelso, and synd of Merse and Teviotdale. Patron, the Crown. Stipend, £158 6s. 8d.; glebe, £15 1s. 8d. The parish-church was built in 1800. Sittings about 260. Schoolmaster's salary, £34, with about £35 or £36 school-fees. As early as the 12th century, the mother or parish-church of Ednam had two dependent chapels; one at Newton, now Newton-don; and the other at Nathanthorn, now Nanthorn; and, along with these chapels, it belonged to the monks of Kelso. The kings had at Ednam a mill, whence David, in 1128, granted to the monks of Kelso, 12 chalders of malt, with the turbary in the moor of Ednam.

EDRACHILLIS. See EDDERACHILLIS.

EDRADOUR. See MOULIN.

EDRICK. See ELDRIG.

EDRINGTON CASTLE, a small old ruin, at the south-eastern verge of the parish of Mordington, contiguous to the boundary with the Liberties of Berwick. It is situated on a steep rock, overhanging the Whitadder, and totally inaccessible from the west. The original castle seems to have been a solid and substantial strength, well-fitted, in feudal times, to check incursions and depredations from the south side of the Tweed. It was frequently the scene of strife during the Border wars, and was more than once an item among the objects of treaty between the Scottish and the English kings. In 1534 Henry VIII., in demonstration of his friendship for Scotland, restored it to James V., from whom it had been taken during an international war.

EDROM, a parish, containing the post-office villages of Edrom and Allanton, in the district of Merse, Berwickshire. It is bounded by Bunclie, Chirnside, Hutton, Whitsome, Swinton, Fogo, Langton, and Dunse. In form it presents extreme angles to the north, south, and east, and would be nearly an equilateral triangle, but for having a deep indentation and a small wing on the west, and a less considerable indentation on the south-east. Its greatest length is $7\frac{1}{2}$ miles; its greatest breadth 4 miles; and its superficial area 13 square miles. Except in the north-west division, where there are considerable rising grounds, the surface is flat. Whitadder water comes down upon the parish at its north-west angle, and, over a distance of six miles, forms its northern and north-eastern boundary-line. Blackadder water comes in from the south-west, forms, for $1\frac{1}{2}$ mile, the boundary-line with Fogo, and then runs 5 miles north-eastward through Edrom, and falls into the Whitadder at Allanton. Langtonburn, and another brook flowing from the west, unite with the Blackadder, the former drawing, for $2\frac{1}{4}$ miles, the boundary-line with Dunse. Near Langton-burn, on the Edrom side, is a mineral well, called Dunse spa, which was long celebrated for its reputed medicinal qualities, but has latterly fallen into disrepute, and become quite neglected. The soil in a small part of the district is naturally moorish, but in general is rich and fertile, and, excepting in about one-eighth of the area, devoted to plantations, buildings, and roads, is all arable. Pools and lochlets formerly generated marsh, and rendered the climate insalubrious; but they have been completely drained, to the benefit alike of health and of agricultural produce. On the estate of Kimmergham on the Blackadder is a valuable

bed of shell-marl, which has contributed much to the enrichment of neighbouring soils. Sandstone abounds, and is worked in several quarries. Blackadder-house, on the right bank of the Blackadder near its embouchure, is an elegant modern edifice, accompanied with extensive shrubberies and green-houses, and a beautiful Gothic conservatory which was constructed at the cost of several thousand pounds. Allanbank-house, Kelloe, and Kimmergham, all on the same stream, Broomhouse on the Whitadder, and Nisbet, a seat of Lord Sinclair, at the western boundary, are all mansions possessing the attractions either of architecture or of beautiful demesne and cheering situation. There are nine landowners. The real rental is about £16,000. Assessed property in 1843, £15,020 7s. 9d. Estimated yearly value of raw produce in 1834, £32,500. The Dunse branch of the North British railway traverses the parish, and has a station in it. There are four corn-mills and a saw-mill on the Blackadder, and two paper-mills on the Whitadder. There were anciently fortalices at Broomhouse, Blackadder, and Nisbet, and keeps or bastells at Kelloe and two or three other places. Allanbank is celebrated as the scene, in 1674, of a Covenanters' conventicle, between 3,000 and 4,000 in number, to whom the eminent and devout ministers, Blackadder and Welch, assisted by three of their brethren, preached and dispensed the Lord's Supper. The village of Edrom stands in the north-west corner of the parish, $3\frac{1}{2}$ miles north-east of Dunse, on the road between that town and Berwick, and is the seat of the parish-church and delightfully situated. It is now, and has ever been, a mere hamlet, yet is a place of much antiquity. *Adder* or *Ader* is the Cambro-British *Awedur*, signifying 'a running stream;' and *Ader-ham*—first twisted into Ederham, and then abbreviated into Edrom—means 'the hamlet on the running stream,' and well describes the position of the village, overlooking the stream of Whitadder. Population of the parish in 1831, 1,435; in 1851, 1,474. Houses, 271.

This parish is in the presbytery of Chirnside, and synd of Merse and Teviotdale. Patron, the Crown. Stipend, £242 16s. 7d.; glebe, £15. Unappropriated teinds, £337 13s. 11d. Schoolmaster's salary, £34 4s. $4\frac{1}{2}$ d., with about £15 school-fees. The parish-church is supposed to have been built about the year 1499; and was repaired in 1696, reseat and repaired in 1782, and subsequently fitted up with two private galleries. Sittings, 407. There is a Free church at Allanton: attendance, 558; sum raised in 1854, £202 2s. 11d. There are two private schools, and two or three small public libraries. Robert Blackadder, first archbishop of Glasgow—whose family derived its surname from the river of the parish—built to the ancient church of Edrom a vaulted aisle, part of which is still standing. The church, with its lands, was granted by Gospatrick, Earl of Dunbar, and afterwards confirmed by David I., to the monks of Coldingham; and continued to be held by them, and served by a vicar, till the Reformation. During the minority of James V., the most murderous contests for the lands of Blackadder continued between the Homes on the one side, and the Blackadders of Blackadder on the other, and violently, though not rightfully, terminated in favour of the Homes.

EDZELL, a parish partly in Kincardineshire, but chiefly in Forfarshire. It contains in its Forfarshire district, a post-office village of its own name. It is bounded by Strachan, Fettercairn, Strickathrow, Lethnot, and Lochlee. Its length, south-eastward, is $12\frac{1}{2}$ miles; and its greatest breadth is $6\frac{1}{2}$ miles. Its south-eastern part, for $4\frac{1}{2}$ miles, is a sort

of peninsula, the East and the West waters flowing along its limits, and forming a confluence, under the name of the North Esk, at its extremity. Both of these streams approach the parish from the west; the former intersecting it over a distance of $5\frac{1}{2}$ miles in passing to the eastern limit, there to become its boundary line. In the western and northern sections, the parish is hilly; but in the southern section, and in places traversed by the East water, it is more open, and well-sheltered with plantation. The greater part of the parish being bleak and unsheltered, the air is generally sharp and piercing, but is not insalubrious. The Kincardineshire district forms about one-seventh of the whole, bears the name of New Dusk, was formerly a separate parish, and is the property of Gladstone of Fasque. The Forfarshire district belongs all to Lord Panmure. So large a proportion of the parish as about 46 square miles is upland, chiefly heath; and only about 4,270 acres are arable,—only about 200 under wood. The yearly value of raw produce was estimated in 1842 at £17,241. Assessed property in 1843, £2,505 2s. 11d. Three of those monuments of antiquity, called Druidical temples, are in this parish; two within a few yards of each other at Culindir, and one at Dalbogg. They consist of tall upright stones, enclosing elliptical spaces, the area of the largest being 45 feet by 36. The castle of Edzell is a magnificent ruin. It consists of two stately towers, in different styles of architecture, and evidently built at different periods, but connected by an extensive wall, and formerly winged with buildings in the rear. The proprietors of this castle, the Lindsays of Glenesk, surpassed in power any other family in Forfarshire. One of them became heir to his cousin, Earl Crawford, but did not retain the peerage in his family. Another, about the beginning of the 16th century, built in Edzell a small castle called Auchmull, and in Lochlee another called Invernark, and was compelled to harrow in them as hiding holes from the inquisition made after him for the murder of Lord Spynie. The parish is provided with two lines of road along the vale of the East water, one on each bank, and with numerous cross-roads in its peninsular division. The village of Edzell stands in the lower part of the parish, 6 miles north by west of Brechin. It formerly bore the name of Slateford. It began to undergo great improvement in 1839, and is now a beautiful assemblage of neat stone houses, with flower-plots in front of them, surrounded by pleasant scenery, and much frequented by summer lodgers. Fairs are held on the first Monday of May, on the Friday in July after Aikey, on the Wednesday after the 26th of August, and on the Friday in October before Kirriemuir. There are in the parish a woolen mill and about 50 linen looms. Population of the village, about 397. Population of the parish in 1831, 974; in 1861, 1,025. Houses, 205. Population of the Forfarshire portion in 1831, 901; in 1861, 968. Houses, 194.

This parish is in the presbytery of Brechin, and synod of Angus and Mearns. Patron, the Crown. Stipend, £158 6s. 8d.; glebe, £9. Schoolmaster's salary, £34 4s. 4½d., with other emoluments £30. The parish church was built in 1818, and contains 650 sittings. There is a Free church: attendance, 460; sum raised in 1854, £182 7s. 2½d. There are a Free church school in the village, and two other schools at Killoch and New Dusk.

E'EN. See OYNE.

EFFOCK (THE), a head-stream of the Forfarshire North Esk, flowing about 4 miles north-eastward down Glen-Effock, to a disemboisement about $\frac{1}{2}$ mile below Lochlee church.

EGG. See EIGG.

EGGERNESS. See EAGERNESS.

EGILSHAY. See EAGLESHAY.

EGLINTON CASTLE, a noble mansion, the seat of the Earl of Eglinton, situated on the banks of the Lugton, in the south of the parish of Kilwinning, district of Cunningham, $2\frac{1}{2}$ miles north of Irvine in Ayrshire, and 26 from Glasgow. This edifice is of a castellated yet modern and very stately and magnificent structure, and was built about the year 1798. A spectator, looking upon it from any part of the lawns, has high conceptions of its grandeur, and of the taste and opulence of its proprietor; and the more minutely he surveys it, he experiences these conceptions becoming more lofty and brilliant. There is a large circular keep, and at the corners are circular turrets joined together by a curtain,—to use the language of fortification. The whole is pierced with modern windows, which in some degree destroy the castellated effect, but add to the internal comfort. The interior of the fabric corresponds with the magnitude and the beauty of its exterior. From a spacious entrance-hall, a saloon opens, 36 feet in diameter, the whole height of the edifice, and lighted from above; and from this the principal rooms enter. All the apartments are spacious, well-lighted, and furnished and adorned in the most superb manner. One of them in the front is 52 feet long, 32 wide, and 24 from floor to ceiling. Every thing about the castle contributes to an imposing display of splendid elegance and refined taste. Nor are the lawns around it less admired for their fine woods, varied surfaces, and beautiful scenery. The park is 1,200 acres in extent, and has one-third of its area in plantation.

The first of the ancient and originally Norman family of Montgomery, who settled in Britain, was Roger de Montgomery, or Mundegumtrie. Under the banner of William the Conqueror—to whom he was related—he obtained great distinction; and, accompanying that monarch into England, he, in 1066, commanded the van of his army at the battle of Hastings. In regard to his bravery, he was created Earl of Chichester and Arundel, and afterwards Earl of Shrewsbury, and, in a short period, lord of no fewer than 57 lordships throughout England; and, at the same time, received extensive possessions in Salop. Having made a martial incursion into Wales, he captured the castle of Baldwin, and imposed upon it his own name of Montgomery,—a name which not only it, but the romantically situated town in its vicinity, and the entire county in which it stands, have permanently retained. The first of the family who settled in Scotland, was Robert de Montgomery. Walter, the son of Allan, the first steward, having obtained from David I. several Scottish estates, Robert accompanied him from Wales to take possession of them, and received from him the manor of Eaglesham in Renfrewshire. This was, for two centuries, the chief possession of the Scottish section of the Montgomeries. John de Montgomery, seventh laird of Eaglesham, married Elizabeth, daughter and sole heir of Sir Hugh de Eglinton, and niece of King Robert II., and obtained through her the baronies of Eglinton and Ardrossan. At the battle of Otterburn he had the command of part of the Scottish army under the brave Earl of Douglas, and, by his personal valour and military conduct, contributed not a little to the celebrated victory which was achieved. The renowned Henry Percy, well known by the name of Hotspur, who was general of the English army, Sir John Montgomery took prisoner with his own hands; and with the ransom he received for him, he built the castle of Polnoon in

Renfrewshire. See the article EAGLESHAM. His grandson, Sir Alexander Montgomery, was raised by James II., about 1488, to the title of Lord Montgomery, and inaugurated into the office of king's haillie of Cunningham. His son, Hugh, was elevated, about 1508, to the title of Earl of Eglinton; and, a few years previously, in June, 1498, obtained a charter to himself and his heirs of the office of baillie of Cunningham, and chamberlain of the town of Irvine. About the time of his obtaining this charter, a feud arose between him and Lord Kilmaurs, which continued between the families, and occasionally blazed forth in deeds of violence, and originated tedious and fruitless appeals to umpires, till after the union of the crowns.

Hugh, one of the line of Earls, came into possession of the earldom when considerably under 16 years of age; and having, for a time, been placed or rather coercively brought under the curatorship of his grand uncle, Sir Neil Montgomery, of Langshaw, he eventually enjoyed his inheritance during only ten months when he fell the victim of his family's hereditary feud. Riding from his own castle, towards Stirling, on the 20th of April, 1586, he was, at the river Annock, waylaid and shot by David Cunningham of Robertland, and other Cunninghams, the emissaries of the Earl of Glencairn, the descendant of Lord Kilmaurs. Though this atrocious act of assassination created a strong sensation throughout the country, and was afterwards partly punished by Robert, the master of Eglinton, it was at length, under the feeble and capricious administration of the pedant, James VI., formally pardoned. So late as twenty years after this event, on the 1st of July, 1606, the old feud broke out in a violent tumult at Perth, under the very eyes of parliament and the privy-council. In the 18th century, all the valuable improvements in gardening, planting, and agriculture, which, during half-a-century, were made in the parish of Kilwinning, and throughout a great part of Ayrshire, proceeded, in a great measure, from the spirited exertions, combined with the fine taste of Alexander, Earl of Eglinton. Nor was his successor in the peerage less distinguished for his magnificent and costly, though considerably unsuccessful, schemes to enrich the district of Cunningham, and advance the public weal of Scotland, by improving the harbour of Ardrossau, and cutting a canal to it from the city of Glasgow. See ARDROSSAN.—At Eglinton castle, in the month of August, 1839, occurred a gorgeous pageant, in imitation of the tournament of the Middle ages,—a "passage of arms," as a tilt with wooden poles smoothly rounded at the end, over lists carefully strewn with sawdust five inches deep, yielding soft repose to unhorsed knights, was somewhat facetiously termed.—Susanna, the third wife of Alexander, the ninth Earl of Eglinton, and daughter of Sir Archibald Kennedy of Culzean, is celebrated for her personal beauty, and for her transmission of a nobleness of mien, distinguished at the period as "the Eglinton air," to a family of one son and seven daughters.

EGLIS, a prefix in topographical names,—the same as EAGLES: which see.

EGLISHAY. See EAGLESHAY.

EGLISMONICHTY, an ancient chapelry, now included in the parish of Monifeith, Forfarshire. The chapel stood on a crag above Dichty water, nearly opposite the mill of Balmossie.

EGMORE. See CUPAR-FIFE.

EIGG, or EGG, an island in the parish of Small Isles and county of Inverness. It is $6\frac{1}{2}$ miles in length, and from 2 to 3 in breadth; and is about 8 miles west of Arasaig, the nearest part of the mainland. It is partly flat, and partly hilly and rocky,

having a small valley running through it. The low grounds are tolerably productive. The superficial area is 5,580 Scots acres, whereof 935 are arable; and the gross rental, in 1826, was £650. Basaltic pillars here and there appear over the whole island. Along the coast, the rocks are chiefly of a light honey-comb lava, having a great resemblance to other volcanic productions. Scure-Eigg is the highest part of the island. This hill, from its peculiar shape, has at a distance a singular appearance; but, as we approach nearer, it rises in grandeur, and at length, a stupendous columnar promontory bursts on our view. The whole of this promontory is perfectly mural, extends for upwards of $1\frac{1}{2}$ mile, and rises to the height of 1,340 feet. It is entirely columnar, and the columns rise in successive ranges until they reach the summit, where, from their great height, they appear diminutive. Staffa, the most magnificent assemblage of natural columns that has yet been discovered, is the only one that can bear a comparison with Scure-Eigg. On the south coast of Eigg, there is a small island, called Eilan-Chastel, or Castle Island, on which a few persons, tending cattle, live during part of the summer months. The sound between this island and Eigg makes a tolerable harbour for vessels not exceeding 70 tons. The air is generally moist, and the weather rainy: the climate, however, is healthy. The language principally spoken and universally understood is Gaelic, and from it the names of places seem mostly to be derived. There are various Danish forts; and, on the farm of Kildonnain, near an old Popish chapel, is a barrow which is said to be the burial-place of Donnan, the tutelary saint of Eigg. A road was formed across the island by the statute labour of the inhabitants. The parish school and the manse are in Eigg. Here also is an inn. Population in 1831, 452; in 1861, 309. Houses, 54.

EIL (Loch), the upper part of an inlet from the sea, on the borders of Argyle and Inverness-shire, which, nearer the ocean, is known by the name of Loch Linnhe. Near its head is the house of Loch Eil, the residence of the chief of the family of Cameron. At the point where the loch turns northward, and changes its name from Linnhe to Eil, stand Fort-William and the village of Maryburgh.

EILAN. See ELLAN.

EILDON, a hamlet in the parish of Melrose, Roxburghshire. Population, 56. Houses, 14.

EILDON HILLS, a brief mountain-range of three conical summits, in the parishes of Melrose and Bowden, Roxburghshire. The central summit, according to Ainslie's map of Scotland, rises 1,330 feet, and, according to Sir John Leslie, 1,364 feet above the level of the sea, and is celebrated for the opulence of the scenery which it overlooks; and the north-eastern summit, scarcely less elevated, and commanding a minute view of the rich beauties at its base, and a full view of most of the landscape seen from the loftier summit, is famous for its monuments of antiquity. From the north only these summits—each more important than the third—are visible; and, as seen from that quarter, they possess a lovely outline, and exquisite proportions, towering aloft on a base of irregular but generally rapid acclivity from the banks of the Tweed, and forming a magnificent back-ground to a picture full of minute and various beauties. Seen from the south, all the summits are in view, but heathy and bleak in their appearance, and serving as a foil to the luxuriance and the brilliant displays of the surrounding country. Looking down from the Eildons, an observer sees at his feet the fine abbey of Melrose peering out from among trees, and the

joyous movements of the Tweed, windingly prolonging its stay among villas and clusters of plantation and verdant slopes and all the varieties of a gay river's adornments. Lifting his eye higher, he surveys a sea of hills, wearing the uniform hue of pastoral wildness, till they terminate in the distant ranges of Lammermoor and the Yarrow braes; and, turning slowly southward, he observes minutely the attractions of Cowdenknows and the lands of Dryburgh, and sees all Teviotdale and the Merse—rich in scenery as in song—hung out before him like a panorama, till the horizon is hemmed in by the long blue line of the hazily seen Cheviots. The rocks of which the Eildons consist are chiefly porphyritic traps, with large quantities of felspar. Many parts show clinkstone; and a large portion of the surface glitters in the sunshine:—

"Broad Eildon's shivery side, like silver, shines,
As in the west the star of day declines."

On the side of the Eildons is an artificial tumulus, called the Bourgo, of great extent, and currently believed to have been the scene of Druidical orgies. On the north-eastern summit are vestiges of a Roman camp, fortified with two fosses and earthen mounds more than $1\frac{1}{2}$ mile in circuit, and having a level space near the centre, where was the pretorium, or general's quarters. The camp included springs of good water, and an ample supply of wood for fire; and—affording abundant space for man, beast, and baggage, and lifting the eye away to even a very distant view of an enemy—it had all the properties of a well-chosen station. Appearances have been discovered on the Eildon hills of the same kind as the famous parallel roads of Glen Roy. There are no fewer than sixteen distinctly traceable terraces running round these hills, and rising one above another like the steps of a stair.

EILLAN. See ELLAN.

EIRE. See FINDHORN (THE).

EISDALE. See EASDALE.

EISHART (LOCH), an arm of the sea, about 7 miles in length, bounding the west side of the peninsula of Sleat in the island of Skye.

ELANDONNAN. See ELLANDONAN.

ELCHAIG (THE), a mountain stream, traversing a rugged alpine glen, to which it gives the name of Glenelchaig, and flowing into the head of Lochlong, in the northern division of the parish of Kintail, Ross-shire.

ELCHIES. See KNOCKANDO.

ELCHO CASTLE, an ancient residence of the noble family of Wemyss, on the river Tay, in the parish of Rhynd, north-east of Moncrieff hill, and 4 miles below Perth. Though in a ruinous condition, it is still entire, and was not long ago re-roofed. It is of considerable extent, strong and thick in its walls, very hard and durable in its materials, and must formerly and for a long time have been a place of note. The battlements which crown it, and which are accessible by several well-preserved winding stairs, command splendid prospects along the river. Elcho gives the title of Baron to the eldest son of the Earl of Wemyss,—whose ancestor was created Baron Wemyss of Elcho in 1628, and Baron Elcho and Methol, as also Earl of Wemyss, in 1633.

ELDERSLIE, a village in the Abbey parish of Paisley, Renfrewshire, about 2 miles west from the cross of that town. The inhabitants are chiefly weavers, cotton-spinners, and workmen at the neighbouring coal-pits and quarries. As the village is intersected by the high-road leading from Paisley westward, and as the canal from Glasgow to Johnstone, and the railway from Glasgow to Ayrshire,

both pass close to it, it enjoys great facilities for commercial intercourse. There is a copious supply of excellent spring water, especially from the Bore, a spring so called from its water having come in contact with a shaft which was put down about the beginning of this century, when boring for coal. A chapel of ease, containing 800 sittings, was built here in 1840. The patronage of it is vested in the subscribers. Elderslie, as a village, is a straggling place, with only common-place attractions; but it stands on the ground where Scotland's famous champion, "the Wallace wight," was born, where he flourished, and whence he took his designation of "the Knight of Elderslie;" and for that reason it challenges the earnest thoughts of all Scotchmen, yet looks to many of them to be a degrading intruder on so sacred a spot. Mr. Ramsay, in his Notices of Renfrewshire, says: "The place called Elderslie, also written Ellerslie, has been rendered classical by its association with the name of the renowned Sir William Wallace:—

"At Wallace' name what Scottish blood
But boils up in a spring-tide flood!
Aft have our fearless fathers strode
By Wallace' side,
Still pressing onward red-wat-shod,
Or glorious died."

Near the west end of the village, and close to the north side of the turnpike-road which passes through it, stand the shattered remains of the celebrated tree, called 'Wallace's Oak,' among the branches of which, when in full leaf, tradition affirms that our great patriot-hero concealed himself from the English. In transmitting this tradition, the popular voice, ever prone to exaggerate, has magnified it so much as to assert that the branches afforded shelter, not only to Wallace, but also to 300 of his followers. The modified form of the narrative is surely sufficient to induce every true Scotsman to contemplate this 'monumental oak' with reverence. In the year 1825 the trunk measured 21 feet in circumference at the ground, and 13 feet 2 inches at 5 feet from the ground. It was 67 feet high, and the branches extended 45 feet east, 36 west, 30 south, and 25 north, covering altogether a space of 19 English poles. Since that time the dimensions of the tree have been much diminished, partly through natural decay, but chiefly by the cutting-off of portions, which are preserved in many a form as mementos of the indomitable supporter of his country's independence. The harony of Elderslie belonged to Sir Malcolm Wallace; and here, as is generally believed, his heroic son first saw the light. Near the oak-tree, but on the south side of the road, a plain building of rather ancient appearance is pointed out as the very house in which Wallace was born; but the architecture and the condition of this edifice show that it must be referred to an era much more recent than that in which he flourished. Any mansion which then existed at this place must have decayed, or been destroyed, in the course of the five centuries which have since rolled away. Adjoining the house just noticed is an old garden, from the foundations of the walls of which there was dug, about 30 years ago, a stone bearing the following inscription, cut in Roman letters: 'W. W. W. CHRIST IS ONLY MY REDEEMER.' These initials probably indicate two proprietors of Elderslie, William Wallace, father and son, who lived in the 16th century. In the garden there is to be seen a fine and very old specimen of the Scottish yew. The name of 'Wallace's Yew' has been assigned to it, probably for no other reason than because it stands at a spot hallowed by his name. Elderslie remained for nearly five centuries, after Wallace's time, in the possession of various

branches of the family from which he was descended. In 1729 it fell to an heiress, Helen Wallace, only child of John Wallace of Elderslie, and wife of Archibald Campbell of Succoth. The late Sir Ilay Campbell, Bart., Lord-president of the court of session, was one of the children of this marriage." In 1769 Mrs. Campbell sold the estate to the great-grandfather of the present proprietor, Arch. A. Speirs, Esq. Elderslie house, the seat of the present Mr. Speirs, is situated upon the left bank of the Clyde, adjacent to the burgh of Renfrew, at the distance of $5\frac{1}{2}$ miles from the village of Elderslie. It was built in 1777-82 by his ancestor, who, in 1760, had purchased the ground on which it stands, and who gave it the name of the estate from which he took his designation. Elderslie house has, since that time, been enlarged and improved. It fronts to the south, and is surrounded by a fine park. Population of the village of Elderslie, in 1861, 784.

ELDRIG, the highest part of the ridge of upland on the mutual border of Lanarkshire and Renfrewshire. It has an altitude of at least 1,600 feet above sea-level; and it cradles the head-streams of both the Rotten Calder and the White Cart. See KILBRIDE (EAST).

ELDRIG, or EDERICK, a village in the south of the parish of Mochrum, 10 miles north-west of Whitehorn, Wigtonshire. Population, 217. Houses, 37.

ELEIN. See ELLAN.

ELGAR, or ELLA, one of the Orkneys, constituting part of the parish of Shapinsay. It lies about a furlong to the south of Shapinsay, and is separated from it by a reef of rocks that are almost dry at low water.

ELGIN, a parish, containing a royal burgh of the same name, in Morayshire. It is bounded on the north by New Spynie; on the east by St. Andrew's Lhanbride; on the south by Birnie; and on the west by Alves. It is of irregular form, but extends about 10 miles in length, and 6 in breadth. Its superficial contents have been estimated at about 18 square miles. Excepting a part lying westward of the Lossie, and comprising the vales of Pluscardine and Mosstowie, which are separated from each other by a steep hilly ridge, the parochial surface rises with a gentle acclivity from the town on its northern extremity to the base of the Blackhills, and thence rapidly to the summit of these hills, on its southern boundary. The only river of any importance is the Lossie, to which a tributary runs northward from the Blackhills. The Lossie flows slowly through the low lands also northward, partly through the parish, but dividing it from Spynie on the north before it falls into the Moray frith at Lossiemouth. This river frequently overflows even its artificial banks. In 1829 the Morayshire floods, so graphically described by Sir Thomas Dick Lauder, committed great havoc here. In the back parts of the parish the soil is chiefly light and sandy clay with calcareous particles; but many places, particularly on the river banks, are of a rich loam and clay, exceedingly fertile, and yielding excellent crops. Great part of the parish is under cultivation. Even in remote times tillage seems to have been attended to in this part of Scotland, and indeed considerably advanced, as the scattered facts collected from among the less useful and important records of political and military history by the writer of the Old Statistical Account of this parish sufficiently evince. About 3,000 acres, however, are still waste, or in pasture. Thriving plantations now cover much of the old wastes. Some of these are extensive, while others consist of scattered belts and clumps of various foliage, which add greatly to the beauty of the landscape. The secluded glen, at the

west end of the parish, in which the fine ruins of Pluscardine priory stands, has been so judiciously wooded that the interest and romantic beauty of the scene are greatly enhanced. See the article PLUSCARDINE ABBEY. The chief mineral product of this parish is a bed of secondary limestone, tinged of a dark colour by the oxide of iron. It is used as manure, and for mortar. It runs from the southern vicinity of the town eastward as far as the Moray frith. The hilly ridge between Mosstowie and Pluscardine consists of strata of a peculiar, hard, pale-coloured sandstone, which is considered superior to all others found in Scotland, except, perhaps, that of Craigeleith, near Edinburgh. In 1826 a considerable quantity of it was exported to London for the building of the new London bridge. The old red sandstone also appears in this district; and about 15 years ago, a curious cave was discovered in it, which Mr. Duff, the geologist, speaks of as follows:—"A considerable part of the cave had been quarried away before its interest was suspected, nor until considerable quantities of bones had been exposed. It would appear, from the quantity of calcined wood and burnt stones which strewed the outer entrance, that the cave had been used by man as a shelter, in which the process of cooking had gone on; subsequently it had been taken possession of by foxes, or other predacious animals, which had hoarded the bones now found of deer, dogs, hares, rabbits, seals, birds, and fishes; but the most interesting feature of the cave is, that it proves by its contents, the upheavement of an ancient sea-beach, with its rolled pebbles, sea-sand, and shells, lying undisturbed, and above them a mass of brown mould evidently derived from the decomposition of animal matter. Many of the shells—such as the turbo and patella—may have been carried there for food; but the sand, besides being nearly half made up of fragments of shells, contains many entire specimens of minute shells which could not have been brought thither for any economical purpose, either by man or animals. Here, then, we have a portion of the sea-shore or beach elevated from 17 to 20 feet above high water-mark, with its sand, shells, and pebbles lying undisturbed, as they are seen lying and undisturbed on the beach which is every day washed by the ocean waves." The principal landowners of the parish are the Earl of Fife, the Earl of Moray, Duff of Milton-Duff, and six others. The real rental is about £9,000. Assessed property in 1843, £15,591 17s. 4d. Estimated yearly value of raw produce in 1835, £21,300. There are in the parish eight grain mills, a saw mill, a wool carding-mill, two distilleries, two breweries, and a tannery. The parish is traversed southward by the roads to Knockando and Rothes, and westward across its north end by the great communications between Aberdeen and Inverness. Population in 1831, 6,130; in 1861, 8,726. Houses, 1,446.

This parish is the seat of a presbytery in the synod of Moray. Patron, the Crown. The charge is collegiate. Stipend for both charges, £523 3s. 11d.; glebe of each, £18. Unappropriated teinds, £82 18s. 7d. The parish church was built in 1828, and contains 1,800 sittings. There was formerly a mission church of the Royal Bounty at Pluscardine; but it ceased to be connected with the Establishment in 1843. Four places of worship belonging to the establishment stand within the parliamentary burgh of Elgin, which comprehends parts of the parishes of St. Andrew's Lhanbride and New Spynie; and these four places aggregately contain 2,680 sittings, and were attended on the census day by 1,452 persons. There are two Free churches in the town—the High and the South—jointly containing 1,460

sittings, and attended on the census day by 1,340 persons. There is also a Free church at Pluscardine. The sum raised in 1854 by the High Free church was £572 2s. 11d.; by the South Free church, £663 3s. 1½d.; by the Pluscardine Free church, £85 9s. 6d. There are in the town two United Presbyterian churches, with jointly 1,226 sittings, and an attendance of 881; an Episcopalian chapel, with 300 sittings, and an attendance of 140; an Independent chapel, with an attendance of 260; a Baptist chapel, which, along with another returned for the parliamentary burgh in 1851, contained 600 sittings, and had an attendance of 150; and a Roman Catholic chapel, with 250 sittings, and an attendance of 109. The principal school in the town is an academy, partly endowed, partly supported from the burgh funds, and comprising three departments, classical, mathematical, and English, but conducted by six teachers, and affording instruction, not only in the branches strictly belonging to its three departments, but also in French, German, practical astronomy, drawing, elocution, &c. The salary of the three head-masters is £50, £45, £45, with fees. There are 16 other schools in the parish, attended by about 600 children; and among those of them in the town are a school of industry, a free school, an infant school, two schools for young ladies, and two dancing schools.

ELGIN, a royal burgh, the capital of Morayshire, once an important episcopal city, the cathedral seat of the great bishopric of Moray, is situated 174 miles north of Edinburgh, 63½ north-west of Aberdeen, 12 east-north-east of Forres, 9 west-north-west of Fochabers, and 5 south-south-west of Lossiemouth, its sea-port. The name of Elgin is generally supposed to have been derived from Helgy, a general of the army of Sigurd the Norwegian Earl of Orkney, who, about 927, conquered Caithness, Ross, Sutherland, and Moray, and probably made a settlement at Elgin, which is so ancient as to have been a town of some note, and a favourite and usual royal residence, even before it became the episcopal seat of the diocese. As the word Helgyn is still used in the inscription on the corporation seal, it is probable that this etymology is correct. The town extends nearly a mile along the south side of the Lossie, in the midst of scenery so beautiful and vegetation so luxuriant that the inhabitants delight, and justly so, in claiming, for the environs of their ancient city, the distinguished appellation of "the Garden of Scotland." Of all the Scottish towns, Elgin bears the strongest resemblance to St. Andrews. Doubtless this must be attributed to the circumstance of its having once been, like that ecclesiastical metropolis, the seat of an important and wealthy see,—the sumptuous residence of a numerous corps of dignified Papistical, and quite as dignified Episcopal ecclesiastics, and of affluent provincial gentry, drawn together here as to a common centre of attraction. Many of their houses are still pointed out:

"Bright towers of warlike chiefs around appear,
The lowly roof and noble dome are here
Sweet is the scene; yet, Scotia, turn thine eyes
And weep, for lo! thy church a ruin lies."

Although, like those of a similar character in Edinburgh and elsewhere, the ancient mansion-houses here were long since 'handed down' to artizans and others in the lower ranks of life; and though it may be said, not only that a new town has sprung up, but that the old has, in a measure, 'cast its skin,' and now become completely renovated; nevertheless the period is by no means remote, when Elgin wore the antiquated, still, and venerable aspect which so well befits the habits and

harmonizes with the repose of genuine ecclesiastics, in the full enjoyment of an intellectual '*otium cum dignitate*.'

The houses of the long main street of Elgin, as it then existed, were of venerable age, with high-crowned roofs, overlaid with heavy slabs of priestly gray; presenting, to the street, like those—we may now almost also say of *old*—in Dysart, Edinburgh, and other towns, the portly fore-stair, and a double range of the more distinguished open piazza, consisting of a series of pillared arches in the front wall, over the entrance to a paved and sheltered court within, in which, as well as in his humbler small dark shop or cellar, was the ancient 'merchant' wont, at times, with carelessness, but with complete security, to leave his goods, and walk unceremoniously off,—his "half-door on the bar,"—to breakfast, dinner, or his evening stroll. But few of these piazzas now exist, and some that do are either built entirely up, or otherwise converted into shops of modern style. The last house which retained them open was Elchies-house, lately removed. Diverging from the main street, the essential form of which—as widened in the centre of the town, to comprehend 'the Muckle kirk,' 'the Little kirk,' its adjunct, and the Town-house, or Tolbooth,—is still the same, though much improved in length and breadth as well as substance, numerous lanes and closes, flanked by houses of inferior grade, stretched off, rectangularly, as they still do, like the ribs from a spinal ridge. The dates of their erection, and the names of their proprietors, were usually inscribed upon the lintels of these ancient domiciles, with here and there a holy benediction. The pavement of the main street was an ancient causeway, which tradition modestly reports to have been the work of no more ancient hands than those of Cromwell's soldiers; though, most likely, it was many ages older. It rose high in the middle; and 'the crown of the causeway,' where the higher minded folks delighted to parade, was elevated and distinguished by a row of huge stone blocks, while those of a more moderate calibre occupied the sloping sides. The drains which ran along the street were crossed, rectangularly, by the common gutter, which, in heavy rains, was often swelled into a mighty torrent. The street had no side-pavements, till Lord Fife, aided by the citizens, and the road-trustees, introduced them in 1821.

St. Giles's, or 'the Muckle kirk,' was razed, in 1826, to make way for the present splendid substitute. The period when the original St. Giles was built is not on record. It was very ancient, and is early mentioned as a parsonage. In the palmy days of the cathedral's glory, it was in the bishop's pastoral charge. It stood upon two rows of massive pillars, spreading into pointed Gothic arches, with a vaulted roof, weighed down by heavy hewn stone, instead of slate. In 1679, on Sunday, 22d June, and, providentially, in the interval between the services, the roof fell in, and, except the arched tower in the centre, and the pillars at the sides, the total fabric was destroyed. In 1684, it was rebuilt, when two long aisles were added, on each side, to the original form of the church. The Little kirk, where service was performed on week days, was appended to the middle tower, upon its eastern side, but was demolished sixty years ago. Although the interior of the Muckle kirk, with its rows of massive sandstone pillars running along its aisles, and terminating upwards in the high peaked arches which upheld its vaulted roof, possessed a dignity and grandeur of no common order, heightened and enhanced as was the *tout ensemble* by its richly carved and massive oaken pulpit, galleries, and seats, the

exterior was by no means rich in architectural display—presenting nothing worthy of record, except the lofty pointed gable of its western aspect, which was occupied by a large fine Venetian three-arched window, and the central, Gothic, grand front entrance from the paved square called the Plainstones. The central tower was a square heavy mass without a steeple. It possessed a curious old fashioned clock, however, and a bell whose long familiar tones were held in veneration by the natives, as indeed was every thing connected with the Muckle kirk;—so much so that its demolition caused a general feeling of deep regret, if not dismay, amongst them, which the unequivocal symptoms of decay, and the impending probability of other dangers such as those of 1679, did little to diminish.

“The Tolbooth, biggit wt stanes frae ye kirk-yard dyke, and sclaited wt stanes frae Dollass,” in the year 1605, is now, like ‘the kirk-yard dyke’ itself, amongst the things that were. It stood in the middle of the market-place, and consisted of the court-house and the jail, a square uncomely tower, which terminated in a short spired roof. A new and elegant court-house having been erected, it was doomed, in 1840, no longer to encumber the ground; and immediately behind the court-house a new prison, containing 15 separate apartments, and costing about £1,500, was erected at the joint expense of the county of Moray, the city of Elgin, and the town of Forres. ‘The Muckle cross’ stood also in the market-place, but was many years ago removed. ‘The Little cross’ still stands entire near the entrance to Grant-lodge,—Lord Seafield’s house,—and opposite an old piazzada mission. Here it probably marked the old burgh-boundary on the east. The burgh, it is thought, was once surrounded by a wall; at all events there were two entrances or gateways to the town, one called the East port, and another called the West.

On the flattened summit of the Lady-hill, a mount with conical and precipitate slopes, north-west of the High-street, there was anciently a royal fort erected so early as the reign of William the Lion, for protection to the town, which probably then crept close around it. Ruins of the castle-walls, of extraordinary thickness, are still visible. They seem to have been cemented into one hard mass, as durable as rock, with hot run lime. As the warlike spirit of the age subsided, Elgin castle fell into decay; but legends of the nursery give other causes for its disappearance. These assure us that the inmates were afflicted with the plague or pest, and that, *hac causa*, we presume,—

—“the castle in a single night,
With all its inmates sunk quite out of sight.
There, at the midnight hour, is heard the sound
Of various voices talking under ground.
The rock of cradles,—wailing infants’ cries,
And nurses singing soothing lullabies.”

A place is now occupied beside the castle by a monumental pillar to the memory of the late Duke of Gordon, the funds for which were raised by a county subscription. In the hollow ground to the east of the cathedral stands a pool, which is traditionally believed, by every Elgin school-boy, to be of unfathomable depth. It is called ‘the Ordeal pot,’—most probably a name corrupted from ‘the Ordeal pot,’ a place where witches underwent their ordeal by water, or were made to ‘choose their horn’ of the rather grave dilemma into which our fathers, in the plenitude of a sagacity profound as the Ordeal pot itself, beguiled ‘the devil’s bairns’ by the simple practical alternative of—‘sink or swim.’ So late as 1560, witches were publicly and legally punished in the burgh of Elgin. There are no

authentic records of the Ordeal pot, however; but there is an ancient prophecy, believed to be one of that worthy old orthodox seer, Thomas-the-Rhymer, that—

“The Ordeal Pot and Lossie gray
Shall sweep the Chan’ry kirk away.”

At all events, it requires no seer’s eye to perceive that some peculiar and mysterious subterranean communication must exist between the Ordeal pot and the Lossie; for, “whenever the Lossie is swelled by unusual floods, it makes for its old haunt,” the Ordeal pot,—a phenomenon which has led to the natural supposition that the channel of the Lossie—which is known to have deviated in this vicinity—must have passed, at an era more or less remote, through the Ordeal pot.

Amongst other features of the ancient consequence of Elgin, as a city, is Thunderton-house, the ancient town-house of the family of Sutherland of Duffus. In its pristine grandeur, it consisted of a great imposing edifice, adorned with a tower and bartizan, the top of which was skirted by a curiously chiseled balustrade. This house fell ultimately into the possession of a jocular auctioneer, named Batchen, who, when questioned as to what he meant to make of ‘the Muckle house,’ dryly assured his inquisitive friends that he “meant to make a kirk and a mill of it,”—a joke, the point and edge of which they came to see, when John had let the great hall as a chapel, and had fitted up a windmill in the bartizan. The property has since been sold in building-lots; and a neat Congregational chapel was built upon a part of the site in 1821. In the train of the Roman Catholic establishment were numerous institutions and religious houses,—Friars “black and gray,” knights of St. John, with wandering monks, innumerable. The ruins of a chapel, and a portion of the convent walls, once occupied by a brotherhood of the Grey friars, and endowed by Alexander II., may be still seen, near the Elgin institution, at the east end of the town. The Elgin institution was itself erected on the site of ‘the House of God,’—‘Maison Dieu,’—a kindred institution, founded in the 13th century, and largely endowed, by Bishop Andrew Moray, for reception of poor men and women. It was burnt near the end of the 14th century by Alexander Stuart, the lord of Badenoch. The extensive revenues of it were given to the magistrates for special purposes, in 1620, by King James; but from the funds some beadsmen are supported still, in houses near the site of the original establishment. A Leper-house stood also in the neighbourhood, some crofts still passing by the name of ‘Leper lands.’ Upon the ground called Black-friars-haugh, between the Lossie and the North-back-street, and at the point whence the river is supposed to deviate from its ancient course, was formerly a Black-friars’ monastery. No vestige of it now remains. A turretted edifice, occupied in modern times as a library, is said to have been inhabited by Templars. In the front of it are escutcheons of the family of Rothes.

The cathedral, the seat of the see of Moray, in the days of its perfection, was no less the chief glory of Elgin than it was the boast of Moray. Nay, Bishop Barr characterized the original edifice not only as the chief ornament of the district, but as “the glory of the kingdom, and the admiration both of foreigners and natives.” “It is an allowed fact, which the ruins seem still to attest,” says Chambers in his Picture of Scotland, “that this was by far the most splendid specimen of ecclesiastical architecture in Scotland, the abbey church of Melrose not excepted. It must be acknowledged that

the edifice last mentioned is a wonderful instance of symmetry and elaborate decoration; yet, in extent, in loftiness, in impressive magnificence, and even in minute decoration, Elgin has manifestly been superior. Enough still remains to impress the solitary traveller with a sense of admiration mixed with astonishment." Shaw, in his description of it, even ventures to assert, that this "church, when entire, was a building of Gothic architecture inferior to few in Europe." "The prevailing impulse of the religion of the period," observes Mr. Rhind, "led its zealous followers to concentrate their whole energies in the erection of such magnificent structures; and while there was little skill or industry manifested in the common arts of life, and no associations for promoting the temporal comforts of the people, the grand conceptions displayed in the architecture of the Middle ages, the taste and persevering industry and the amount of wealth and labour bestowed on those sacred edifices, find no parallel in modern times." When entire, then, and in its pristine glory, this magnificent temple must have afforded a splendid spectacle. A vast pile, extending from the western entrance to the high altar, a length of 289 feet, with its richly ornamented arches crossing and recrossing each other to lean for support on the double rows of stately massive pillars—the mellowed light streaming in at the gorgeous windows above, and flickering below amid the deep and dark shades of the pointed aisles, while the tapers of the lit up altars twinkled through the rolling clouds of incense—the paintings on the walls—the solemn tones of the chanted mass—the rich modulated music of the choir—and the gorgeous dresses and imposing processions of a priesthood sedulous of every adjunct to dazzle and elevate the fancy,—must have deeply impressed with awe and veneration a people in a remote region, in a semi-barbarous age, and with nothing around them, or even in their uninformed imaginations, in the slightest degree to compare with such splendour. No wonder that the people were proud of such a structure, or that the clergy became attached to it! It was a fit scene for a Latin author of the period, writing on the "tranquillity of the soul," to select, for his 'Temple of Peace,' and under its walls to lay the scene of his philosophical dialogues. This great edifice owed its origin to Bishop Andrew Moray, who is said to have founded it on the site of an old church in the year 1224. But after standing 166 years, the original fabric was destroyed in June 1590, by the lord of Badenoch, Alexander Stuart, son of Robert II., usually called the Wolf of Badenoch. From resentment against the bishop, Alexander Barr, who had excommunicated him, for keeping violent possession of church property, this ferocious incendiary burnt the city, Maison Dieu, the parish church, and another edifice devoted to religion, with 18 houses of the canons, besides the cathedral itself. His only punishment was doing penance in the Black friars' church at Perth, before the altar. Bishop Barr began soon after to rebuild it; but many painful years were spent, together with a third of all the revenues of the bishops, ere that one dark day's disaster was repaired; and even after its completion, in 1506, the great central tower fell down. This new misfortune was also remedied, however; and, from 1538, the fabric continued in a state of perfect preservation till the Reformation. But in 1568, the privy-council actually had the meanness to appoint the Earl of Huntly, sheriff of Aberdeen and Elgin, with some others, "to take the lead from the cathedral churches of Aberdeen and Elgin, and sell the same" for the maintenance of Regent Moray's soldiers. The vessel freighted

with the metal, however, had scarcely left the harbour of Aberdeen, on her way to Holland, where the plunder was to be sold, than she sunk with all her cargo. Since that period, the cathedral of Elgin, unprotected from the weather, has gradually gone to ruin. Still, however, do its splendid ruins amply justify even the highest estimate of its original magnificence, and constitute the chief attractions of this limited but interesting city. Government latterly caused much attention to be paid in clearing out the ruins, and in preventing them from falling into complete decay. John Shanks, also, who was appointed in 1825 to superintend them, set personally to work, and cleared out from the ruins no less than nearly 3,000 barrow loads of rubbish. Numerous dilapidated ornaments, figures, tombs, and other objects, were thus discovered, or laid open, and additional interest and gratification thereby afforded to the visitor. This noble pile, therefore, has now become intensely attractive alike to the artist, the antiquary, and the general observer.

Like all similar fabrics of its time, the cathedral of Elgin stood due east and west, and was built in the form of a Jerusalem or Passion cross. The choir faced the east, or head of the cross; the transepts extended to the north and south; and the grand entrance was through the western extremity, or foot of the cross. The grand tower rose from its centre. The west gate, flanked with two massive but elegant towers, and the chapter-house, appended to the northern cloisters, with parts of the transepts, are all tolerably perfect; the whole displaying workmanship of the most intricate and exquisite beauty. The western towers, however, form the most entire part of the ruin. The great gate, between these, is ornamented with fluted pilasters; and above it is a central window, lancet arched, 28 feet high, and originally fitted up with mullions and tracery. The great gateway is entered by a flight of steps, and leads to the nave where the numerous and splendid Papal processions took place, while the multitudes who witnessed them were present in the aisles, at the sides, which were separated from the nave by rows of stately pillars, rising up to support the roof; but only the foundations of these, and a few of the pedestals, remain. Between the nave and the choir where the rites were performed, stood the walls of the great central tower, and on each side were the transepts. The choir extends eastward to the chancel, at the head of the cross, where stood the grand altar. The chancel was separated from the choir by a screen. The grand altar stood beneath the eastern windows, and was lighted up by a double row of five slender windows, with pointed arches,—the whole surmounted by a large wheel window, with rich ornamental tracery. The choir and the nave were also lighted by a double row of windows with pointed arches, the lower range being the largest, while both tiers ran along the whole extent of the church. The windows were filled with richly tinted glass, in various devices, fragments of which have been found amongst the ruins. The authors of the 'Sketches of Moray,' have succeeded in effecting a very beautiful restoration of the plan of this cathedral, whereby it appears abundantly evident, from the consummate harmony of effect, though mixture of Norman and Saxon styles, displayed throughout the whole sketch, and from the massive form, broad buttresses, and general severity of architectural style in the two great western towers themselves, that these were surmounted, each by four small turrets, and not raised and tapered into spires like the central tower, as has been erroneously conjectured. The spire of the central tower, as restored in 1538, rose to the height

of 198 feet, and, in the sketch alluded to, it forms a superb and appropriate coronal ornament to the whole, the effect of which would have been manifestly injured by association with other spires of any magnitude in the same edifice. The great tower fell in 1711. The dimensions of the cathedral given in the New Statistical Account, and which are said to be "nearly accurate," are as follow:—Length of cathedral over walls, 264 feet; breadth, 35; traverse, 114; height of centre tower, 198; eastern turrets, 60; western towers without the spires, 84; side wall, 36. According to the elevation above alluded to, however, the dimensions furnished by the architect, Mr. Kemp, the author of the beautiful design for the monument to Sir Walter Scott, at Edinburgh, are as follow:—Length from east to west, including towers, 289 feet; breadth of nave and side aisles, 144; breadth of choir, including walls and aisles, 79; length of transept, including walls, 120; height of west towers, 83; height of east towers, 64; height of middle tower, including spire, 198; height of grand entrance, 26; height of chapter-house, 34; breadth of chapter-house, with walls, 37; height of great western window, 28; diameter of eastern wheel window, 12; height of side walls, including choirstry, 43; breadth of side aisles, 18.

The chapter-house, attached to the northern cloister of the cathedral, is extremely elegant. It is an octagon, with a pillar of elaborate workmanship in the centre, supporting a richly groined roof. Arched pillars from every angle terminate in the grand pillar, which is 9 feet in circumference, crusted over with 16 pilasters or small pillars, alternately round and fluted. It is lighted by seven large windows, and in the walls are niches, where the oaken stalls of the dignified clergy, who formed the bishop's council, were placed; the central one for the bishop or dean being more elevated than the rest. This apartment was richly ornamented with sculptured figures, and it now also contains the grotesque heads and other devices which occupied niches and capitals of the pillars in other parts of the church. This, like similar choice portions of other ecclesiastical edifices of the Middle ages, is called, 'The apprentice's aisle,' having been built, according to the curious but hackneyed legend, by an apprentice in the absence of his master, who, from envy of its excellence, murdered him on his return,—a legend so general [see article ROSLIN] that probably it never did apply to any cathedral in particular, but originated in the mysticisms of those incorporations of free-masons, who, in the Middle ages, traversed Europe furnished with papal bulls and ample privileges to train proficients in the theory and practice of masonry and architecture. The Elgin pillar, a Runic obelisk, discovered in 1823, about 2 feet beneath the surface, when the streets of the town were under repair, is now preserved in the cathedral. It is 6 feet long, 2½ broad, and 1 thick; but it is evidently incomplete. Surrounding the cathedral was a substantial wall, 8 feet in height, and entered by five gates. It enclosed an area 900 yards in circumference, called the College, and included the manses and gardens of the dean, the prebendaries, and the other dignified members of the chapter. A paved street ran round this area. The only gate to the precincts now remaining is the eastern, named the Water-gate, or Pann's port, which was formerly defended by an iron portcullis. Near it is a large and venerable beech, with wide-spread branches. The college was the residence of the dean, who was rector of Auldearn. The manse of the sub-dean still exists, but has been much enlarged and altered. The

episcopal palace is on the south of the cathedral. In the reign of James IV., it became the property of Alexander Seaton, Earl of Dunfermline, and was hence named Dunfermline-house. Only part of it now stands, and is within the park of the Earl of Seafield. In the immediate vicinity of the college, westward, was a small suburb under the jurisdiction of the bishop.

The chapter consisted of 22 canons who resided within the college. They were chosen from the clergy of the diocese, and officiated in the cathedral. Part of them constituted the council of the bishop. Besides a manse and garden in the college, each had a portion of land, called a prebendum, allotted to him for his services. Hence they were also called prebendaries. They enjoyed these benefits over and above the revenues of their vicarages in the country parishes whence they were chosen. The dean presided in the chapter during the absence of the bishop; he also presided in synods and all church-courts, and was anciently superior over ten canons. The archdeacon was the visitor of the diocese and the bishop's vicar. The chancellor was judge in the court of the bishop, secretary to the chapter, and keeper of their seal. The names of the chanter and treasurer also denote their respective offices. The bishop had civil, criminal, and ecclesiastical courts and officers; and his power within his diocese was almost supreme. The seat of the bishopric was originally at Spenic; and indeed, prior to the 13th century, the bishop transferred his chair from one church to another as suited his convenience; but, at the request of the chapter, and of King Alexander II., it was translated to Elgin, in virtue of a bull from Pope Honorius, dated 10th April, 1224. The diocese was a very extensive one. It comprehended the whole of the present counties of Moray and Nairn, and part of those of Aberdeen, Banff, and Inverness. The precise date of its erection is not known, the early records of it having been destroyed on the burning of the cathedral, by the Wolf of Badenoch, and the chartulary going no farther back than the year 1200; but it is supposed to have been about the beginning of the eleventh century, in the reign of Alexander I., previous to which, the bishops in Scotland wore blue gowns, with their hair tucked under a cap, and, having no particular diocese assigned them, were itinerant. The first bishop on record was Gregory, in the end of Alexander's reign, or the beginning of the reign of his successor, David I. From this period till the Revolution, the see was filled by, at least, 36 bishops, of whom 28 were Roman Catholic, and 8 Protestant.

The revenues of the bishopric were, no doubt, at first very limited; but by the bounty of our kings, nobility, and private individuals, they became very ample. King William the Lion was a liberal donor. At a very early period he granted to it the tenth of all his returns from Moray. Grants of forests, lands, and fishings were also made by Alexander II., David II., and other sovereigns, besides the Earls of Moray, Fife, &c. Some of these lands were in Inverness, Ross, &c.; and among them were the lands of Rothiemurchus and Strathspey. The rental, for the year 1565, as taken by the steward of the bishopric, was £1,675 2s. 4d. Scots, besides a variety of articles paid in kind. At this period, however, more than a half of the church-lands had been "frittered and sold and squandered;" the full rents were not stated, and probably the rental then given did not amount to a third of the actual income in the high and flourishing period of the bishopric. The estates or temporalia of the bishopric, with the patronages belonging to the bishop, remained after

the Reformation, in the Crown till 1590, when James VI. assigned them all to Alexander Lindsay, a son of the Earl of Crawford, and grandson of Cardinal Beaton, for payment of 10,000 gold crowns, the sum which he had lent his Majesty when in Denmark, Lindsay being at the same time, as already observed, created Lord of Spynie. After the King had prevailed on Lord Spynie to resign the lands to obtain a revenue for the Protestant bishops, the latter's rights of patronage were reserved till the extinction of his family in 1670, when they were re-assigned by the Crown as *ultimus hæres*. The Crown conveyed them by charter, in 1674, to James, Earl of Airlie, who disposed them to the Marquis of Huntly in 1682.

Elgin's ancient glory has departed with its bishopric; but the light of a new regeneration, while it has been rapidly obliterating even the shadow of its former glory, is as rapidly providing a solatium for the loss more truly in accordance with the march of human progress. "Forty years ago," observes the writer of the New Statistical Account of Elgin, "there were no turnpike roads leading to or from it, no stage-coaches, no gas-work, no lighting or side pavement to the streets, no hospital for the sick, no institution for the support of old age and the education of youth, no academy, no printing-press or newspaper published in the town." In 1812 the first mail-coach was started in the north. "The blast of its horn, as it entered the town of Elgin with a couple of horses and a guard in royal livery, excited no small interest among the inhabitants, and was hailed as the harbinger of a new era." So indeed it was. The mail and several stage-coaches now enter and leave the town every day; carriers regularly go to Huntly, Banff, Inverness, and all the adjacent towns and villages. The turnpike roads are excellent, and diverge in every direction, crossing, here, the river Lossie, by four modern one-arched bridges, three of stone and one of iron. A railway was opened in September, 1852, connecting the town with Lossiemouth. The Great North of Scotland railway, when completed, will connect it on the one hand with Inverness, and on the other with all the south of Scotland. An extensive corn-trade, arising out of general agricultural improvement in all the central and eastern parts of the low grounds of Moray, has Elgin for its focus. The modern society of the town comprehends an unusual proportion of persons in easy or affluent circumstances. New and very handsome houses occupy the places of the old. New streets have even started up; and villas, built in an elegant style, and interspersed with shrubberies and gardens, now adorn the southern suburbs. The streets and shops, and even private houses, are brilliantly lighted with gas, and the town is now well-drained and cleaned. And owing to the vicinity of very excellent sandstone quarries, the edifices of the new streets, the new houses in the old streets, and the villas in the suburbs, have a much better appearance than the generality of new structures in small provincial towns, and for the most part are tastefully designed. Yet, strange to say, some moody minds, of the antiquarian cast, rather bewail the modern improvements than rejoice in them. A recent sheriff of the county, C. Innes, Esq., for example, says:—"Within the memory of some yet alive, Elgin presented the appearance of a little cathedral city, very unusual among the burghs of Presbyterian Scotland. There was an antique fashion of building, and withal a certain solemn, drowsy air about the town and its inhabitants, that almost prepared a stranger to meet some church procession, or some imposing ceremonial of the picturesque old religion. The

town is changed of late. The dwellings of the citizens have put on a modern trim look, which does not satisfy the eye so well as the sober grey walls of their fathers. Numerous hospitals, the fruits of mixed charity and vanity, surround the town, and with their gaudy white domes and porticoes, contrast offensively with the mellow colouring and chaste proportions of the ancient structures. If the present taste continues, there will soon be nothing remaining of the reverend antique town, but the ruins of its magnificent cathedral."

The new parish-church is one of the most elegant structures in the north of Scotland. It has a spacious portico of Doric columns covering its western entrance, and a handsome tower with ekeok and bells, surmounted by a lantern with a richly chiselled cupola. The Episcopial chapel, with a handsome Gothic front, forms a neat termination to North-street. The South Free church, built at a cost of about £2,000, and opened on the first of January, 1854, is a remarkably neat structure.—Elegant Assembly-rooms were erected and tastefully fitted up in 1822; and Sir Archibald Dunbar's town mansion, Westerton-house, &c., are of recent erection. The Elgin Institution, at the east end of the town, was founded and endowed in 1832, from funds amounting to £70,000, bequeathed for the maintenance of aged men and women, and the maintenance and education of poor or orphan boys or girls, by General Anderson—a native of Elgin, who rose from the rank of a private soldier to that of Major-General in the Honourable East India Company's service. The edifice, besides being perfectly appropriate to its own philanthropic object, is both a splendid monument to the General's memory, and a fine architectural ornament to the town. With the simple elegance of outward proportions, and built of native sandstone which even marble cannot excel, its internal accommodations present every comfort suited to the inmates,—advantages which are enhanced by able and methodic management. It is a quadrangular building of two stories, surmounted by a circular tower and dome. The institution for the children contains a school-of-industry. The children are apprenticed also to some trade or useful occupation. The house-governor and teacher of the school of industry has a salary of £55 per annum, and his maintenance and lodging in the institution. A public school, on the Lancasterian system, is attached to the institution as a free-school, for the education of male and female children whose parents, though in narrow circumstances, are still able to maintain and clothe them. The male and female teachers have a joint salary of £75. Gray's hospital, or infirmary and dispensary, was also founded by a native of Elgin, Dr. Gray, who was afterwards resident at Calcutta. It is intended for relief of the sick poor of the town and county of Elgin, and was founded and endowed from a bequest of £26,000. The building was erected in 1815, on a slight but spacious eminence at the west end of the town. Its situation is singularly well chosen, and being a very handsome edifice, in the Grecian style, with a projecting portico of Doric columns on its eastern front, from a design of Gillespie, it forms a splendid termination to the High-street.—A small Lunatic asylum for paupers was erected a few years ago on the hospital grounds. The founder also established a charity "for reputed old maids of the town of Elgin."

Elgin is the seat of numerous interesting institutions,—benevolent, religious, literary, mercantile, and miscellaneous. The principal benevolent ones, additional to those which have been already mentioned, are alms-houses, supported out of the preceptory of Maison Dieu; the Guildry charitable fund, with an

income of about £300 a-year, for the benefit of decayed brethren, widows, and children; the funds of the six incorporated trades for the benefit of their poor decayed members and widows; and Cummings', Braco's, Petrie's, and Laing's mortifications, for the benefit variously of decayed burgesses, decayed merchants, and orphans or poor children. The principal religious institutions are Sabbath-schools, missionary auxiliary associations, and the Elgin and Morayshire Bible Society. The principal literary institutions are the literary association, established in 1818; the scientific association, with museum; the mechanics' institute; and corresponding connexions with fine arts' societies in Edinburgh and Glasgow. The principal mercantile institutions are the water company, established in 1843, with a capital of £5,500; the gas company, established in 1830, with a capital of £5,000; the market company, established in 1850, with a capital of £2,200; the property investment company, established in 1851; branch-offices of the Union, the Commercial, the British Linen, the Royal, the Caledonian, and the North of Scotland banks; and offices of upwards of twenty insurance companies. And the principal miscellaneous institutions are a national security savings' bank; a society for promoting industry among the poor; two mason-lodges; a chess club; a cricket club; a curling club; the Morayshire coursing club; and a horticultural society. Three weekly newspapers are published in Elgin—the Elgin Courant and the Elgin Courier on Friday, and the Elgin and Morayshire Advertiser on Wednesday.

Elgin was made a royal burgh by William I. It is classed with Banff, Cullen, Inverury, Kintore, and Peterhead, in returning one member to parliament. The parliamentary constituency, in 1862, was 297. The constitution of the burgh, previous to the operation of the burgh reform act, was fixed by an act of the convention of burghs, 8th July, 1706. The council consisted of a provost, four bailies, dean-of-guild, treasurer, and two other councillors. It is now governed by a provost, four bailies, and twelve councillors. Its municipal constituency, in 1854, was 272. The revenue of the burgh, in 1859-60, was £835. In 1832 it was £715 0s. 4d., inclusive of £74 for anchorage and shore-dues at Lossiemouth, where the corporation built a harbour, on which the burgh had from time to time expended considerable sums for repair, which the revenue thus arising was not nearly sufficient to meet. A joint stock company was, therefore, afterwards formed for the erection of a deeper harbour at Stotfield point, to the north of the old harbour; and this new harbour at Stotfield was successfully completed at an expense of £14,000. Of the burgh-revenue, in 1832, £241 4s. 1d. arose from feu-duties, £107 18s. 9d. from rental of land, and £187 11s. 11d. from entries of feu-vassals, burgesses, &c. and other casualties. The expenditure on an average of five years to 1832 was £887 18s. 4½d. The amount of debt then due by the burgh was £794 10s., besides the sum of £18 12s. 7d. per annum for the application of which the burgh was answerable, arising from sums mortified in their hands for charitable purposes. Besides the appointment of the burgh-officers, the principal patronage of the corporation in 1832 consisted of the academy. The number of burgesses, in 1852, was 141, of whom 40 had rents or tenancy under £5. The incorporated trades are the hammermen, the glovers, the tailors, the shoemakers, the weavers, and the square-wrights. Assessed property in 1815, £2,435; in 1845, £9,031 17s.

The sheriff-courts for Morayshire are held at Elgin. Weekly markets are held on Tuesday and Friday. Cattle-markets are held on the third Fri-

day of January, February, March, and April, on the second Friday of May, on the first Tuesday of June, on the third Tuesday of July, August, September, and October, on the second Friday of November, and on the third Wednesday of December. Sheep-markets are held on the day before the April cattle-market, and on the last Friday of July. The principal inns are the Gordon Arms, the Star, and the Railway. The Great North of Scotland Railway connects Elgin on the one side with Inverness and Ross-shire,—on the other side with Banff and Aberdeen; the Lossiemouth railway connects it northward with Lossiemouth; and the Morayshire railway connects it south-eastward with Craigellachie. The railway to Lossiemouth makes Elgin virtually a sea-port. A suburb of the town, included within the parliamentary burgh, stands on the north side of the Lossie. See BISHOPMILL. Population of the royal burgh in 1831, 4,493; in 1861, 6,403. Houses, 1,003. Population of the parliamentary burgh in 1861, 7,543. Houses, 1,221. Population, in 1861, of the part of the parliamentary burgh within New Spynie, 1,082; of the part of it within St. Andrew's Lhanbride, 58.—Elgin gives the title of Earl to a branch of the illustrious and royal house of Bruce. Thomas, third Lord Bruce of Kinloss, was created Earl of Elgin, in 1633, by Charles I. A descendant of this noble family, Thomas, the seventh earl, formed the valuable collection of the Elgin marbles in the British museum. The family seat is Broomhall in Fifeshire.

ELGINSHIRE. See MORAYSHIRE.

ELHARDHOLM. See SHAPINSHAY.

ELIBANK, an estate in the parish of Yarrow, on the right bank of the Tweed, 8 miles north-west of Selkirk. An ancient peel-house still stands there which is associated, in Border story, with deeds of barbarous bravery. In 1618, Sir Gideon Murray was appointed a lord of session, by the title of Lord Elibank; and in 1643, Sir Patrick Murray was raised to the peerage under the title of Baron Elibank. The seats of his lordship's descendants are Elibank-cottage in Selkirkshire, Ballencrieff in Haddingtonshire, Darnhall in Peebles-shire, and Pithcarlis in Perthshire. Elibank was the birth-place of Russell, the historian of ancient and modern Europe.

ELIE, or ELY, a parish, containing a post-town of its own name, on the south coast of Fifeshire. It is bounded by the frith of Forth, which here forms the bay of Elie, and by the parishes of St. Monance, Kilconquhar, and Newhunn. It comprises a main body of about 2 miles in length from east to west, and nearly 1 mile in breadth, and two detached portions to the north-west, the one containing two farms at the distance of 2 miles, and the other constituting one farm at the distance of 3 miles. There are no hills, and scarcely even a rising ground in the parish, the whole surface being flat, and a considerable part of it near the sea-shore forming sandy links. The promontories which form the two extremities of the bay of Elie consist of amygdaloid and basalt, the latter exhibiting sometimes a columnar structure. Between these headlands the beach is low, and composed of alternating, thin beds of sandstone and shale, with occasionally seams of coal and strata of limestone,—the whole belonging to a carboniferous system, and inclined at high angles in different directions, and without any regularity. Basalt occurs in numerous places, extending in long reefs far into the sea,—the beds of sandstone and shale dipping from them on both sides; but at one point in the western part of the bay the strata are said to dip under the basalt. The greater proportion of the parish original-

ly formed what was called the barony of Ardross, and belonged to a family of the name of Disclington, from whom it came about the beginning of the 17th century, to Sir William Scott, who held the office of director-of-chancery during a part of the reign of Charles I. From his descendants the barony was acquired, about the close of that century, by Sir William Anstruther of Anstruther. The ruins of the ancient castle of Ardross, the manor-place of the barony, still remain, about a mile east of the village. Elie-house, the present mansion-house, is situated north of the village, and in its immediate vicinity. It is a large building, erected apparently rather more than 160 years ago, in the semi-classic style introduced by Sir William Bruce of Kinross. The grounds are beautifully wooded, and have been laid out with great taste. There are 1,570 imperial acres in the parish, of which 56 acres have never been cultivated; and about 50 acres are in wood. The rent of the arable land varies, according to its quality, from £1 to £4 per acre; the average being nearly £1 15s. per acre. The valued rent is £4,105 13s. 4d. Scots. The real rental in 1836 was about £2,562. Estimated yearly value of raw produce in 1836, £5,200. Assessed property in 1843, £3,661 6s. Population in 1831, 1,029; in 1861, 826. Houses, 203.

This parish is in the presbytery of St. Andrews, and synod of Fife. Patron, William Baird of Elie. Stipend, £149 8s. 8d.; glebe, £28 17s. 6d. Schoolmaster's salary, £34 4s. 4½d., with about £40 fees and £7 other emoluments. The parish church is a neat structure, with a spire, built in 1726, thoroughly repaired in 1831, and containing nearly 600 sittings. There is a Free church, whose people in the year 1854 raised £161 2s. 7½d. An Independent chapel, though named of Elie, is within Killeonquhar. There are two private schools and a subscription library. There is also a joint savings' bank with Earlsferry. Elie parish was originally a part of Killeonquhar, and became a separate erection about the year 1639.

The VILLAGE OF ELIE stands at the head of Elie bay, 2½ miles south-south-east of Colinsburgh, and 5 miles east-south-east of Largo. It is a burgh of barony. It stands so close to the sea that the water frequently washes the walls of the houses. It must formerly have been a place of some importance; for it contains, in a street near the beach, several substantial ancient residences, which evidently must have been inhabited by families of distinction. And though now it has little trade, and not much local consequence, it is still a pleasant place, with some sea-side stir and considerable attractions. It is neat and well-built. The streets are wide, clean, and regular. It is well-sheltered from the east wind, and has for a long time been a place of considerable resort during summer for sea-bathing. No market is held in the town; but Colinsburgh, which is easily accessible from it, has regular weekly and yearly markets. A coach from Anstruther passes regularly through Elie in communication with the Leven railway; and a steamer touches thrice a-week in transit between Anstruther and Leith. The harbour is naturally an excellent one, and forms a safe and accessible shelter for vessels, during a gale from the west or south-west. Some care appears to have been at one time taken to improve its natural advantages, by the erection of quays and a pier; and Mr. Baird has recently spent large sums in extending its improvements, and purposes spending more. To the east of the harbour, and at a small distance from it, is Wadehaven, so called, it is said, from General Wade, who recommended it to Government as a

proper harbour for men-of-war. It is very large, and has from 20 to 22 feet water at common tides. Notwithstanding the advantages which Elie enjoys as a fishing-station, very little profit is derived by its inhabitants from that branch of industry. There are few fishermen in the place; and these merely fish along shore for white fish, to supply the consumption of the village and neighbourhood. This supply, however, is generally both cheap and excellent. Population in 1861, 706.

ELLOCK. See ELLOCK.

ELISTON, a very ancient baronial pile, on the left bank of the Almond, on the estate of the Earl of Hopetoun, in the parish of Kirkliston, Linlithgowshire. It is supposed to have been anciently a hunting-seat of the Kings of Scotland, particularly James II. and James IV.

ELLACHIE. See CRAIGELLACHIE.

ELLAM, or ELLA, an ancient rectory, now comprehended in the parish of Longformacus, Berwickshire. It belonged to the Earls of Dunbar; and, after their forfeiture, was given by Robert to Thomas Erskine. The ruins of the ancient church and hamlet are traceable on the north bank of the Whitadder, near the passage which is still called Ellam-ford.

ELLAN, EALAN, or EILAN, a prefix in Gaelic topographical names, signifying "island."

ELLAN-AIGAS. See AIGAS.

ELLAN-AN-RIGH. See LAGGAN (LOCH).

ELLAN-CHAISTAL. See CASTLE-ISLAND.

ELLAN-CHOLUIMCILLE, a small island in Portree bay, in Skye. The name signifies St. Columba's island. The bay was anciently called Loch-Choluimcille.

ELLAN-DHEIRRIG, or ELLAN-GHEIRRIG, a small island in Loch Riddan, in the parish of Inverchaolain, Argyleshire. It lies in the mouth of the loch, about 100 yards from the mainland. It was strongly fortified by Archibald, Earl of Argyll, and made the depot of his reserve arms and ammunition, in his expedition to co-operate with the Duke of Monmouth's invasion in 1685. The fort was taken from his garrison, and blown up; but a small portion of it still stands, and can be seen from the steam-boats passing through the Kyles of Bute. A branch of the Campbells who possessed a large estate in the circumjacent country, and were celebrated as warriors in Gaelic song, took from the island the designation of Campbell of Ellan-Dheirrig.

ELLANDONAN CASTLE, a picturesque ruin, on the small rocky island of Donan, at the head of Loch-Alsh, where that sea-lake forks into Lochs Long and Duich, at the south-west corner of Ross-shire. It was once the manor-place of the 'high chiefs of Kintail.' It is a magnificent ivy-clad ruin, backed by a noble range of hills. This castle was originally conferred on Colin Fitzgerald, son of the Earl of Desmond, in 1266, by Alexander III. In 1331, it was the scene of a severe act of retributive justice by Randolph, Earl of Moray, then warden of Scotland, who executed fifty delinquents here, and placed their heads on the walls of the castle. In 1537, Donald, fifth baron of Slate, lost his life in an attack on Ellandonan castle, then belonging to John Mackenzie, ninth baron of Kintail, and was buried by his followers on the lands of Ardclou, on the western side of Loch-Long. William, fifth Earl of Seaforth, having joined the Stuart cause in 1715, his estate and honours were forfeited to the Crown and his castle burnt. The attack on Ellandonan castle, by the baron of Slate, is the subject of a ballad by Sir Walter Scott's friend, Colin Mackenzie, Esq. of Portmore, published in the Scottish Minstrelsy.

ELLAN-DUIRINISH. See DUIRINISH.
 ELLAN-FADA, an island near the head of Loch-Killieport, on the west side of South Knapdale, Argyshire. It affords shelter from the heavy swells raised by the south-west gales; and there is good anchorage for vessels on its lee side.

ELLAN-FINNAN. See ARDNAMURCHAN.

ELLAN-FREUCH, an islet in the Sound of Islay, on which are the ruins of a castle.

ELLAN-GHEIRRIG. See ELLAN-DHEIRRIG.

ELLAN-ISSA. See ISSAY ISLAND.

ELLAN-MAREE. See MAREE (LOCH).

ELLAN-MORE, an uninhabited isle contiguous to the northern coast of Coll, Argyshire.

ELLAN-MORE, a pastoral isle, famous for the quality of its pasture, off the west side of South Knapdale, and within the southern mouth of the Sound of Jura, Argyshire. An ancient chapel here, arched over and covered with flags, is in a state of high preservation.

ELLANMÜNDE, an ancient parish, now comprehended in the united parish of Lismore and Appin, Argyshire. The seat of the parish church was an island, which is Ellanmunde proper, in Loch-Leven, contiguous to the mouth of the river Coe. The ruins of the church are still there. The cemetery also continues there, and is still in use. The founder of the original church was an abbot of the name of Munde, who flourished about the middle of the tenth century. The parish of Ellanmunde comprehended Glencoe, the adjacent parts of Appin, and the districts of Mamore and Ouriah.

ELLAN-NA-COOMB, or ELLAN-NA-NAOIMH, a small island closely contiguous to the east coast of the parish of Tongue, Sutherlandshire. Here was formerly a chapel and a burial-place, the remains of which are still visible. On the south side of the island the sea, after passing for several yards through a narrow channel, spouts up into the air, sometimes to the height of thirty feet, through a large circular hole in the rock; and a few seconds afterwards there is a discharge of water from the east side of the island, with a loud noise resembling the detonation of cannon. This happens only when it is half-flood, and a gale at north-west.

ELLAN-NA-GAMHNA, an isle, with excellent pasture, in the parish of South Knapdale, Argyshire.

ELLAN-NA-KELLY. See SHIANT ISLES.

ELLAN-NA-LEEK, an isle near the north-west coast of the parish of South Knapdale. Argyshire.

ELLAN-NA-MUICK, an isle off the west coast of the parish of South Knapdale, Argyshire.

ELLAN-NA-NAOIMH. See ELLAN-NA-COOMB.

ELLAN-NAN-CAORACH, an isle off the coast of the parish of Kildalton, in Islay.

ELLAN-NAN-CON. See LAGGAN (LOCH).

ELLAN-NAN-GOBHAR, an islet in Loch Aylort, in the parish of Ardnamurchan, Argyshire. It is an abrupt irregular mass of micaceous schist rock; and it contains two vitrified forts within a few yards of each other,—the one of an oblong figure, and 140 paces in circumference,—the other of a circular figure, and 90 paces in circumference.

ELLAN-NA-ROAN, or SEAL ISLAND, an uninhabited island, of about 2 miles in circumference, in the parish of Tongue, Sutherlandshire. It lies off the east side of the entrance of the Kyle of Tongue. "It has the appearance of two islands, particularly at high water. Part of it is scooped out into the form of a basin, in which the soil is very fertile. Its rocks are high and precipitous, and to the north side abound with deep narrow fissures, through which the wind rushes with great violence. As this wind, besides being sharp and piercing, is im-

pregnated with saline matter, from its blowing across the ocean, or perhaps from carrying along with it the spray which dashes from off the rocks beneath, the natives take advantage thereof for economical purposes. In these fissures they season their fish without using salt. On this north side also there is a spacious and elegant-looking arch, about 150 feet span, and 70 feet broad. About the middle of the island there is a large circular hole, which has fallen in many years ago, and is supposed to communicate with the sea by a subterranean cavern." Population, 42. Houses, 7.

ELLAN-RORY-MHORE. See MAREE (LOCH).

ELLAN-SOON. See MAREE (LOCH).

ELLAN-USNICH, a small island in Loch Etive, Argyshire.

ELLAN-WIRREY. See SHIANT ISLES.

ELLAR. See ELGAR.

ELLEN-A-BAICH, a village in the parish of Kilbrandon, Argyshire. Population, 311. Houses, 64. See EASDALE.

ELLEN'S ISLE. See KATRINE (LOCH).

ELLERHOLM. See SHAPINSHAY.

ELLIM. See ELLAM.

ELLINOR (PORT). See PORT-ELLINOR.

ELLINORTON, a village in the parish of Kirriemuir, Forfarshire. It was founded about 30 years ago by Mr. Meason of Lindertis. Population about 120.

ELLOCK, a burn and an estate in the parish of Sanquhar, Dumfries-shire. The burn runs about 3 miles northward to the Nith, at a point about 1½ mile below the town of Sanquhar. Ellock-house, on Ellock burn, is notable as the birth-place of the Admirable Crichton; and the apartment in which he was born is watchfully preserved in its original state. His father was an eminent advocate, and a lord of session in the reigns of Mary and James VI.; and soon after the birth of his distinguished son, he sold Ellock estate to the Dalzells, afterwards Earls of Carnwath, and removed to an estate which he had acquired in the parish of Clunie, in Perthshire,—a circumstance which has frequently occasioned Clunie to be mistakenly named as the place of the Admirable Crichton's nativity.

ELLIOTT (THE), a rivulet in Forfarshire. It rises in Dely moss, on the western verge of the parish of Carmylie, and flows through that parish to the south-eastward, dividing it into two nearly equal parts, and receiving several small tributaries in its course; it next, over 1¼ mile's distance, flows eastward, forming the boundary-line between Carmylie and Arbirlot; and it then enters the latter parish, cuts it from north-west to south-east into parts of one-third and two-thirds, receives, about its centre, the waters of Rotten-Raw burn flowing to it from the west, and eventually falls into the German ocean about 1½ mile south-west of Arbroath. Its whole course is about 8½ or 9 miles. Its banks towards Guynd are naturally picturesque and romantic, and have been beautified by the pleasure-grounds of the proprietor of the soil; and, near its confluence with the ocean, they are finely covered with trees, and rise into an overhanging precipice which is surmounted by the romantic-looking castle of Kelly.

ELLIOTSTON. See CASTLE-SEMPLE (LOCH).

ELLISLAND. See DUNSCORE.

ELLON, a district of Aberdeenshire. It comprises the central portion of the eastern region of the county, and forms the southern part of Buchan. It is bounded by the sea on the east; by the northern rim of the Cruden basin on the north; and by the southern rim of the Ythan basin on the south-west. Its length is about 18 miles; and its breadth

about 13. It comprehends the parishes of Udney, Foveran, Slains, Logie-Buchan, Cruden, Ellon, Tarves, and Methlick. Population in 1831, 12,831; in 1861, 16,909. Houses, 3,010.

ELLON, a parish, containing a post-office village of its own name, in the centre of the sea-board region of Aberdeenshire. It is bounded by Deer, Cruden, Logie-Buchan, Udney, Tarves, and New Deer. It extends north and south at an average distance of about $6\frac{1}{2}$ miles from the sea. Its length is about 10 miles; its breadth is about 7 miles; and its area is about 42 square miles. The river Ythan intersects it east-south-eastward, placing nearly one-third of the area on the right bank, and is navigable for large boats to within half-a-mile of the village. There is an excellent salmon-fishery on this river. Near it are some small plantations of fir, ash, elm, and alder; but they serve more for ornament than for use. The surface of the parish is uneven, rough, and leak in appearance, and not very productive. Though there is a good deal of rising grounds, the height of these is not considerable. The soil on the low ground is dry; but in the northern parts it is generally wet and mossy. The grounds, especially near the river, are well-cultivated. The aggregate of arable land is about three-fourths of the whole area. The tops of many of the rising grounds, in consequence of the prevailing lowness and comparative flatness of the surrounding country, command extensive prospects, along the coast and far inland, even to the Bennachie, the Grampians, and the Speyside mountains. The principal landowners are the Earl of Aberdeen, Gordon of Ellon, and six others. The present mansion on the estate of Ellon was built in 1851, and stands a little east of some small remains of the favourite residence of the present Earl of Aberdeen's grandfather. The chief mansions on the other estates are those of Eslemont, Arnage, Turner-hall, and Dudwick. The real rental is about £12,000. The estimated yearly value of raw produce is between £22,000 and £23,000. Assessed property in 1843, £9,678. There is, on Lord Aberdeen's estate, a small carding and spinning mill. The parish is traversed by the road from Aberdeen to Peterhead and Fraserburgh. Population in 1831, 2,304; in 1861, 3,913. Houses, 640.

This parish is the seat of a presbytery in the synod of Aberdeen. Patron, the Earl of Aberdeen. Stipend, £219 2s. 7d.; glebe, £18. Unappropriated tithes, £568 11s. 8d. The parish church is a very plain edifice, erected in 1777, and repaired in 1828; and contains nearly 1,200 sittings. There is a Free church: attendance, 340; sum raised in 1854, £157 8s. 5d. This was formerly a Congregational chapel, and was erected in 1825. There are also an United Presbyterian church, built in 1827, and containing 340 sittings; and an Episcopal chapel, built in 1815, and containing 262 sittings. There are two parochial schools,—the one in the village, with a total of about £100 emoluments, and the other in the northern part of the parish, with a total of about £70 emoluments. There are four non-parochial schools. The church and church-lands of Ellon anciently belonged to the abbey of Kinloss in Moray; and on that account the place was often called Kinloss-Ellon.

The VILLAGE OF ELLON stands on the left bank of the Ythan, and on the road from Aberdeen to Peterhead and Fraserburgh, $5\frac{1}{2}$ miles north-west of Newburgh, 16 north by east of Aberdeen, and 18 south-west by south of Peterhead. It was anciently the seat of the jurisdiction of the earldom of Buchan. The court of the earldom was held on a slight eminence, called anciently the Earl's hill, but called in more modern times the moat hill of Ellon, and now

occupied by the stables and yard of one of the principal inns of the village. The bridge which takes the highway across the Ythan stands about ninety yards above that spot, and is a handsome structure. A monthly market for cattle and grain is held in Ellon. Six annual fairs also are held,—two of them in the village, and the other four on a piece of waste ground in the neighbourhood. The village has three benefit societies, a savings' bank, and branch-offices of the Union bank, the Aberdeen Town and County bank, and the North of Scotland bank. Public conveyances run regularly to Aberdeen,—also in transit between Aberdeen and Peterhead, between Aberdeen and Fraserburgh, and between Aberdeen and Strichen.

ELLRIDGE-LOCH, a lake of $\frac{3}{4}$ of a mile in length, in the north-east of the parish of Slamannan, Stirlingshire. It sends off a tiny stream, of some water-power, south-westward to the Avon.

ELLSRICKLE, or ELLSRIDGEHILL, a village on the southern border of the parish of Wainston, 4 miles north by east of Biggar, Lanarkshire. It is a pleasant place, in a picturesque situation, and decidedly superior to most of the small villages of Scotland. Some stone coffins, a number of years ago, were dug up at its east end. The estate on which it stands, and from which it takes its name, was anciently called Elgerith and Elgerigill,—the name Ellsrickle being a corruption. The village has a Free church and a school. Population, 211. Houses, 48.

ELLWICK. See SHAPINSHAY.

ELPHINSTONE, a village and an estate in the parish of Tranent, Haddingtonshire. The village stands on the road from Dalkeith to Haddington, $\frac{3}{4}$ of a mile from the county boundary, and nearly 2 miles south-south-west of Tranent. The estate was anciently held in fief of the Winton family, and belonged in the 15th century to the Johnstone family. A massive, square, baronial tower stands here, said to have been built about the close of the 14th century; and is attached to a mansion which was built in 1600. The estate has long been famous for its collieries. Population of the village, in 1861, 388.

ELPHINSTONE. [Stirlingshire.] See DUNMORE.

ELSHIESHIELDS. See LOCHMABEN.

ELSICK, a quondam estate, now much divided, in the north of the parish of Fetteresso, Kincardineshire; also a burn of about 4 miles in length of course, which runs eastward through the lands of Elsieck to the sea.

ELSSNESS. See SANDA.

ELSRICKLE. See ELLSRICKLE.

ELSWICK. See SHAPINSHAY.

ELVAN (THE), an upland stream of the parish of Crawford, Lanarkshire. It rises close on the boundary-line with Dumfriesshire, at the centre of the backbone of the Southern Highlands, and runs about 8 miles north-eastward to a confluence with the Clyde at Elvanfoot. It is famous for the particles of gold which have been occasionally found in its sands.

ELVANFOOT, an inn on the road from Glasgow to Carlisle, and a station on the main trunk of the Caledonian railway, at the confluence of the Elvan and the Clyde, $5\frac{1}{2}$ miles south-east of Abington and 12 north-west of Moffat. See CRAWFORD and CALEDONIAN RAILWAY.

ELY. See ELIE.

ELZIOTSTOUN. See CASTLE-SEMPLE LOCH.

EMANUEL, or MANUEL PRIORY, an ancient edifice, now in ruins, in the parish of Muiravonside, on the north bank of the Avon, about a mile above Linlithgow bridge. It was founded in 1156, by Malcolm IV., surnamed the Maiden, and was occupied by nuns of the Cistercian order. Besides the

endowments bestowed by the royal founder, it received considerable donations from others at different periods. The prioress of this house swore fealty to Edward I., on the 28th of July, 1291; as did Alice, her successor, at Lintlithgow, in 1296. Of this nunnery little now remains except the western end of the church. It is of hewn stone, but unadorned; yet there is an elegant simplicity in it, and with the beauty of the surrounding objects, it makes a very picturesque appearance. Grose has preserved a view of it.

EMBO, a fishing village in the parish of Dornoch, Sutherlandshire. Population about 200.

ENDER (THE), a streamlet in the parish of Blair-Athol, formed by the junction of several smaller brooks, which, uniting a little above Dalmeau in the west part of Athol, fall into the Garry at Dalmeau.

ENDRICK (THE), a small river, chiefly of Stirlingshire, and partly of Dumbartonshire. It rises in the Gargunnoch hills, and flowing towards the south-east, is joined a small distance from its source by the Burnfoot burn; after which it forms, for about $1\frac{1}{2}$ mile, the western boundary of the parish of St. Ninian's. It then makes a sharp turn to the westward, entering the parish of Fintry a little below the old ruin called Sir John de Graham's castle. A little farther on, it falls over a perpendicular rock 60 feet in height, forming a singular cataract well-known in the district by the name of 'The Loup of Fintry.' Continuing its westerly course, it leaves the kirk of Fintry on the left, and the woods of Culcreuch a little on the right; and then, quitting the parish of Fintry, it forms for about 5 miles, the boundary between the parish of Balfron on the north, and that of Killearn on the south. Near the western extremity of these parishes it makes a bend towards the south-west, and enters the parish of Killearn between the mansion-houses of Boquhan and Carbeth. After describing various windings it turns directly southward, forms a singular and romantic waterfall called the 'Pot of Gartness,' near the once favourite residence of the illustrious Napier, and is joined by the Blane near Croyleeky. On receiving this accession to its waters, it describes a sort of curve, and turning abruptly towards the west, enters the parish of Drymen. It is shortly afterward joined by the Catterburn from the south; upon which it makes a slight northerly bend; but, immediately reverting to the original direction of its course, it passes a little to the south of the kirk-town of Drymen and the Duke of Montrose's noble mansion-house of Buchanan, forms the bounding-line between the counties of Stirling and Dumbarton, and finally falls into Lochlomond at Balmaha, little more than a mile south-west from the kirk of Buchanan, and about half-a-mile from the small island Aber in Lochlomond. Many parts of the banks of the Endrick are of great beauty; and the valley through which it flows has been celebrated in Scottish song under the name of 'Sweet Innerdale.' Franck, in his quaint 'Northern Memoirs,' (1694), speaks of "the memorable Anderwick, a rapid river of strong and stiff streams; whose fertile banks refresh the borderer, and whose fords, if well examined, are arguments sufficient to convince the angler of trout; as are her deeps when consulted, the noble race and treasure of salmon; or remonstrate his ignorance in the art of angling. Besides this Anderwick," he adds, "there are many other small rivulets that glide up and down these solitary parts."

ENGINE, NEW ENGINE, and OLD ENGINE. Three collier villages in the parish of Newton, Edinburghshire. They are situated between Dalkeith and Niddry, near the route of the Hawick branch of

the North British railway. Engine is also called Sheriffhall Engine. Population of Engine, 47; of New Engine, 51; of Old Engine, 49. Houses in Engine, 11; in New Engine, 9; in Old Engine, 12.

ENHALLOW, one of the Orkneys, constituting part of the parish of Rousay. It is about a mile in circumference, and is separated from Rousay by a reef of rocks, which being covered at high water, have sometimes proved fatal to the unwary mariner. The Sound of this name is on the south, between it and the island of Pomona. As it is narrow, and the tide rapid, it should only be attempted with a fair wind, and in moderate weather. Population of Enhallow in 1831, 20; in 1851, 24. Houses, 3.

ENNERIC (THE), a romantic stream of Glenurquhart in Inverness-shire. It flows from Corrymouny into the still basin of Loch Meiky, and runs eastward thence to Loch Ness, performing altogether a course of about 10 miles. A very picturesque cascade, called the Fall of Moral, occurs a little below its source; and near this is a large cave in which some leading Jacobites concealed themselves for a time after the rebellion of 1745.

ENNERURIE. See INVERURY.

ENNERWICK. See INNERWICK.

ENNICH (LOCH), the chief of several lakes in Glenennich, in the parish of Rothiemurebus, Inverness-shire; overhung on all sides except one by sublime precipices.

ENOCH (LOCH). See MINNIGAFF.

ENOCH HILL. See CUMNOCK (NEW).

ENSAY, an island of about 5 miles in circumference, situated 2 miles south-west of the main body of Harris, in the Outer Hebrides. It is verdant all over, and well cultivated. Population in 1841, 16; in 1861, 15. Houses, 2.

ENTERKIN (THE). See DURRISDEER.

ENZIE, a district of the north-west of Banffshire. It extends from the burn of Buckie to the Spey; but is popularly regarded as comprising the whole of the parishes of Rathven and Bellie.

ENZIE, a quoad sacra parish, comprising the western part of Rathven and eastern part of Bellie, Banffshire. Its length is about 6 miles; and its breadth about 4. It has a post-office station of its own name; also contains the post-office village of Port-Gordon. The patrons are the Duke of Richmond, and other trustees. The stipend is £62 8s., together with about £8 other emoluments and the profits of a farm. The church was built in 1785, and enlarged in 1815 and 1822, and contains 400 sittings. There is also a Free church of Enzie: attendance, 320; sum raised in 1854, £126 15s. 11½d.

EOLAN (THE), a small tributary of the Etive, in the parish of Ardochattan, Argyleshire.

EORODALE-POINT, a headland in the island of Lewis, 3 miles south-east of the Butt of Lewis.

EORSA, a small island in the parish of Kilfinichen, Argyleshire. It lies near Iona, and formerly belonged to the abbey of that place. It was described by Dean Munro in 1549 as "fertile and full of corn;" but it is now used solely as a piece of sheep pasture. It belongs to the Duke of Argyll.

EOUSMIL, an insulated rock about half-a-mile in circuit, lying on the west side of North Uist. It is noted for its seal-fishing.

EOY, a small island of the Hebrides, lying between Barra and South Uist.

ERCHLESS-CASTLE, a modernized stately old tower, in the parish of Kiltarlity, Inverness-shire. It stands in Strathglass, a little below the confluence of the Glass and the Farrar, about 7 miles north-west of Beauly. "It belongs," says Miss Sinclair, "to the descendants of that old chief, who said there were but three persons in the world en-

titled to be called 'The,'—the King, the Pope, and the Chisholm. This place is beauty personified; and you would fall in love with it at first sight. The castle is a venerable white-washed old tower, so entirely surrounded by a wreath of hills that the glen seems scooped out on purpose to hold the house and park."

ERILDOUNE. See EARLSTON.

ERIBOLL (Loch), an arm of the Northern Atlantic ocean, in the parish of Durness, Sutherlandshire. See DURNESS. It is about 11 miles in length, and varies in breadth from 1 to 3 miles, and in depth from 15 to 60 fathoms. At Camisendun-bay, about 7 miles from its entrance, is excellent anchorage, and a ferry 2 miles broad. Its eastern shore, from the Whiten-head southwards, presents a series of caves and arches "the most extensive and extraordinary," according to Macculloch, "on any part of the Scottish coast." At its upper end is some fine alpine scenery, amongst mountains of quartz and grey slate, in which Benhope is conspicuous. See BENHOPE.

ERICKIE (THE), a mountain stream in the north of Perthshire. It rises near the eastern part of the watershed between Loch Ericht and Loch Rannoch, and runs about 10 miles eastward, down a wild glen named from it Glen-Erickie, to a confluence with the Garry at a point about 4 miles above Blair-Athole.

ERICHT, or EROND (Loch), a lake partly in the parish of Fortingall, county of Perth, and partly in the parish of Laggan, county of Inverness. It is about 16 miles in length, and 1 mile in breadth. The New Statistical Account mentions, that according to an ancient tradition, the district now covered by the waters of this lake was formerly dry, and constituted an entire parish called Feadail; and that the entire parish, with its inhabitants, was overwhelmed in one night, by the sudden bursting of an immense body of subterranean water. The tradition also states, that for long afterwards the church and part of the principal village could be seen under the water in clear weather. There is no road to Loch-Ericht; but it may be visited at its southern extremity, either from the head of Loch-Rannoch, or from the inn at Dalnacardoch; though from either of these places a huge extent of bog, moor, moss, and mountain has to be traversed. There is no road along its banks, and no house upon them, with the exception of a solitary hunting-ledge, and the hut of a shepherd near its upper extremity. Nothing can exceed the solitude and desolation of its shores. Rocks bared by the winter storm—lofty, precipitous, and sometimes perpendicular—surround it; and every where are scattered huge blocks of stone which frost or torrents of rain have detached from the mountains. Vegetation seems here almost at an end. The bleating of sheep, the barking of the dog, or the cry of the shepherd, seldom if ever break the silence of this silent place. The visitor finds himself alone amid the silence of nature,—of nature in its wildest form. At the south end, is a rock of 300 or 400 feet perpendicular height. Its summit is accessible with great difficulty; and here is to be seen an ancient fortification, the laborious work of an early people who had at one time inhabited this district. It is about 500 feet in length, and 250 in breadth, over the walls. The walls are upwards of 15 feet in thickness, and are constructed of large squared broad stones, firmly laid together, though without mortar. The general purpose of such an erection is abundantly obvious; but the time when or the people by whom, it was erected, it is now impossible to ascertain. On the east side of the lake, about a mile or two from the south end, a small cave is pointed out

as having afforded shelter and concealment to the young Chevalier after the battle of Culloden. He had wandered previously for some time amid the wilds of Moidart, the islands, and Lochaber, and had made many hairbreadth escapes from being taken by his ruthless pursuers, when, learning that Cameron of Lochiel and M'Donald of Keppoch, two of his most devoted followers, were concealed in Badenoch, he set off to them, and found them at this cave on the shores of Loch-Ericht. The cave is small, and is formed by detached blocks of stone which, having fallen down to their present situation, form a small opening which might receive two or three individuals. The fugitives, however, had enlarged its dimensions, by erecting a hut of trees in front of its entrance, from which circumstance it obtained the name of the cage, by which it was popularly known at the time. A more effectual place of concealment, or one less likely to be intruded upon than this at Loch-Ericht, could hardly have been selected. Dr. Macculloch says: "At the southern extremity, Loch-Ericht terminates in flat meadows, vanishing by degrees in the moor of Rannoch, and in that wild and hideous country which extends to Glen-Spean along the eastern side of Ben Nevis. This is indeed the wilderness of all Scotland. The wildest wilds of Ross-shire and Sutherland are accessible and lively, compared to this. They might, at least, contain people, though they do not; which this tract never could have done, and never will nor can. I know not where else we can travel for two days without seeing a human trace—a trace, a recollection, of animal life—and with the dreary conviction that such a thing is impossible. It is indeed an inconceivable solitude, a dreary and joyless land of hogs, a land of desolation and grey darkness, of fogs ever hanging on Auster's drizzly beard, a land of winter and death and oblivion. Let him who is unworthy of the Moor of Rannoch be banished hither. Where he can go next, I know not; unless it be to New South Shetland."

ERICHT (THE), a stream of the parish of Fortingall, Perthshire. It issues from the foot of Loch Ericht, and runs about 5 miles southward to Loch Rannoch. For a mile or two, it is slow and deep; but afterwards it is a sheer torrent, lashing and tearing its banks with wild fury.

ERICHT (THE), a river in the east of Perthshire. It is formed by the junction of the Airdle and the Shee in the parish of Blairgowrie, which it crosses, and flowing in a south-easterly direction forms the boundary between that parish and the parish of Rattray. It then flows through the parish of Bendochy in the same direction, and falls into the Isla nearly opposite Balbrogy, in the parish of Cupar-Angus. Its channel is rocky, and its stream rapid and turbulent. The scenery on its banks is in many places singularly romantic, particularly in the neighbourhood of Blairgowrie, at a spot called Craigloch, where the rocks rise perpendicularly on each side to a height of more than 200 feet, and for about 700 feet along the western bank are as smooth as if hewn with the chisel. The entire course of the river does not exceed 17 miles.

ERICKSTANEBRAE, a lofty hill, contiguous to the point in which the counties of Lanark, Peebles, and Dumfries meet. Along the side of it, above a dangerous declivity, the public road from Edinburgh to Dumfries passes. Here an immense hollow, or a square form, made by the approach of four hills towards each other, receives the popular name of the Marquis of Annandale's Beef-stand,—the Annandale reavers having, in former times, often concealed stolen cattle in this place.

ERIGIE. See DORES.

ERISA (LOCH). See MULL.

ERISAY, one of the smaller Hebrides, lying between North Uist and Harris.

ERISKA, an island in the mouth of Loch Crean, Argyshire. See CREAN (LOCH).

ERISKA, a small island of the Hebrides, on the south side of South Uist. It is noted for having been the first place upon which Prince Charles Stuart landed, in his attempt to regain the throne of his ancestors. It measures about 3 miles in length from north to south, and is separated by only a narrow sound from South Uist. Population in 1841, 80; in 1861, 396. Houses, 79.

ERISORT (LOCH), a sea-loch, about 10 miles in length, but comparatively narrow, entering the east side of the island of Lewis, at a point about 8 miles south of Stornoway, and penetrating south-westward to within 2 miles of the head of Loch Seaforth. The mouth of it contains many excellent anchorages for ships of any size. It is much frequented by sea-craft, and is known to mariners as the Barkin Isles, from a cluster of islets at its entrance. A large cave challenges the attention of the curious in one of these islets called Tanneray.

ERIVIST (THE), a small stream of Haddingtonshire, Berwickshire, and Edinburghshire. It rises on Soutra hill, runs 4 miles south-westward along the boundary between Haddingtonshire and Berwickshire, and proceeds $1\frac{1}{2}$ mile farther in the same direction through the parish of Stow, to a confluence with the Gala.

ERNAN (THE), an early affluent of the Don, in the uplands of Aberdeenshire. It rises on the confines of Banffshire, and runs about 6 miles eastward, chiefly through the upper section of Tarland, to a confluence with the Don at Inverman.

ERNCRAGS (LOCH), a small lake near the centre of the parish of Crossmichael, Kirkcudbrightshire. It contains two islets, which were formerly frequented by sea-gulls. It emits a stream, which drives a meal-mill, to which nearly all the parish is thirled; and, but for this, it might be in a main degree or altogether drained.

ERNE. See EARN.

ERNSHEUCH. See COLDINGHAM.

ERRICKSTANEBRAE. See ERICKSTANEBRAE.

ERROL, a parish, containing a post-office village of its own name, also the villages of Leetown, Westtown, Grange, Drums, Pitrodie, and Mains of Errol, in the Carse of Gowrie, Perthshire. It is bounded by the Tay, and by the parishes of St. Madoes, Kinfauns, Kilspindie, Kinnaird, and Inchture. Its average length is about $5\frac{1}{2}$ miles; its average breadth about 3 miles; and its superficial extent 8,626 imperial acres, or rather more than 15 square miles. Its surface, like that of the rest of the Carse of Gowrie, is generally flat. In the west, however, there are several ridges of slight elevation, which extend in a direction nearly parallel with the Tay, and give a pleasing diversity to the landscape. The soil is principally composed of alluvial clay; and scarcely a single rood of land is out of cultivation. At the quarry of Clashbennie, near the western extremity of this parish, a number of remarkable fossil remains and impressions were some years ago discovered. The quantity of sandstone excavated from this quarry yearly was between 4,000 and 5,000 tons. The chief wealth of the district consists in the agricultural produce. The valued rent is £16,982 Scots. The real rent in 1829 was £26,000 sterling. The principal landowners are Lord Kinnaird, Allan of Errol, Allan of Inchmartin, Milne of Murie, Craigie of Glendoick, Hay of Leys, and ten others. The

yearly value of raw produce was estimated in 1837, at £63,940. Assessed property in 1843, £20,260 5s. 6d. About 300 persons are employed as weavers of linen fabrics. Considerable traffic in the way of export and import is done at the small harbour of Port-Allen. The parish is traversed by the great road from Perth to Dundee, and by the Perth and Dundee railway; and its extremities are distant respectively, 7 miles from Perth and 9 from Dundee. Population in 1831, 2,992; in 1861, 2,759. Houses, 576.

This parish is in the presbytery of Perth, and synod of Perth and Stirling. Patron, Allan of Errol. Stipend, £310 13s. 10d.; glebe, £18. Unappropriated teinds, £407 17s. 5d. Schoolmaster's salary, £34, with about £35 fees, and £25 other emoluments. The parish church is a chaste cruciform structure, in plain Saxon style, with a quadrangular tower, erected in 1831 after designs by Gillespie Graham, and contains 1,450 sittings. There is a Free church: attendance, 250; sum raised in 1854, £195 1s. 9d. There are two United Presbyterian churches at Errol, with respectively 242 and 751 sittings. There is also an United Presbyterian church at Pitrodie, with 320 sittings. There are in the parish four private schools; and there is now building a large industrial school for girls.

The VILLAGE of ERROL is situated near the Tay, about half-way between the eastern and western boundaries of the parish. Its position is very delightful, on a slight rising ground which commands a delightful prospect, particularly towards the south and west. Its inhabitants are principally weavers and operatives. A fair, principally for hiring, is held on the last Wednesday of July. There is a station for the village at a near point of the Perth and Dundee railway. A charter of the time of William the Lion, constituted Errol a burgh of barony. This place gives the title of Earl to the noble family of Hay; whose ancestors were proprietors of the estate of Errol, but were obliged to sell it in 1634. The earldom was created in 1452; and the modern seat of the family is Slaines castle in Aberdeenshire. Population of the village, in 1861, 1,086.

ERSKINE, a parish on the northern border of Renfrewshire. It contains the post-office village of Bishopton, and the hamlets of Blackstown and Easter Rosslan. It is bounded by the Clyde, and by Inchinnan, Kilbarchan, Houston, and Kilmacolm. Its length, east and west, is about $8\frac{1}{2}$ miles; and its average breadth is from 2 to 3 miles. The New Statistical Account distributes it, in imperial measure, into 5,121 acres, 2 roods, 24 poles of arable land, 1,431 acres, 1 rood, 28 poles of waste land, pasture, moss, &c., and 554 acres, 27 poles of wood. The name is probably derived from the British *ir-issyn*, signifying 'the green rising ground;' though a foolish legend derives it from a person who is said to have received the surname *Eriskyne*, on occasion of a military achievement in the reign of Malcolm II. The tract along the Clyde is flat and fertile. Behind that plain the ground rises considerably. A hilly ridge extends through the western district. The soil in general is light; but some tracts are a deep clay. In the north-east division, a dark grey mould is mixed with gravel; and in some places there is till on a bed of freestone. This parish abounds with good water, but it does not contain any lake or river,—only some small streams or burns. The Clyde greatly increases in breadth, and begins to assume the appearance of an estuary, as it passes along the border; and it is here crossed by two ferries. One of these, called Erskine ferry, nearly opposite the village of Kilpatrick, being furnished with quays, serves for transporting horses and carriages, as well as foot

passengers; the other, called the West ferry, is opposite the castle of Dumbarton, and is chiefly used for foot passengers. In the eastern part of the parish, there are some freestone quarries. The two great lines of communication between Glasgow and Greenock, namely, the railway and the turnpike-road, pass through the parish; and the former has a station in it at Bishopton. There is also ready access to all the river steamers at Erskine ferry. About one half of the parish belongs to Lord Blantyre; and the rest is distributed among nearly a dozen landowners. The yearly value of raw produce was estimated in 1840 at £27,797. Assessed property in 1843, £8,182 3s. 3d. Population in 1831, 973; in 1861, 1,448. Houses, 176.

The lands of Erskine were the most ancient possession of the distinguished family who assumed that as their surname, and afterwards became Lords Erskine and Earls of Mar. They remained in the possession of this estate till the year 1638, when it was sold by John, Earl of Mar, to Sir John Hamilton of Orbiston. In 1703, it was purchased from the Hamiltons, by the noble family of Blantyre; to whom it still belongs. The old mansion-house of Erskine, which was but recently removed, was situated near the bank of the Clyde. On a rising-ground, a little farther down the river, stands the magnificent modern mansion, the building of which was commenced by Robert Walter, 11th Lord Blantyre, who perished accidentally during the commotions at Brussels, in September, 1830. The structure is in the Elizabethan style, and presents a fine appearance from the river. From the house itself the views are varied, beautiful, and extensive. The pleasure-grounds are finely wooded; and a handsome obelisk, which was erected to the memory of the lamented person just mentioned, by the nobility and gentry of the county, forms a striking and appropriate accessory to the scene.—The estate of Bishopton, now the property of Lord Blantyre, has passed through a number of hands, and belonged originally to the family of Brisbane. The estate of Dargavel belongs to J. Hall Maxwell, Esq., the Secretary of the Highland Society, and the representative of the two very ancient families of Hall and Maxwell. The mansion is in the French style which was introduced to Scotland in the reign of Mary, and is partly a renovated erection of the year 1574, and partly a new erection of only a few years ago, the two parts being well matched. Facing the gate there is an ancient yew, which in size and beauty excels any other tree of the same kind in Renfrewshire. Two other mansions are Drums and East-Bank.—Bargarran, a noted scene of witchcraft, has been described in a separate article.—Walter Young, D.D. and F.R.S. Edinburgh, minister of this parish, from about 1770 till his death in 1814, was distinguished for his profound and scientific knowledge of harmony. His successor, Andrew Stewart, M.D., who died in 1839, possessed great skill in pulmonary complaints.

This parish is in the presbytery of Greenock, and synod of Glasgow and Ayr. Patron, Lord Blantyre. Stipend, £279 2s. 9d.; glebe, £9 12s. 6d. Unappropriated tithes, £352 2s. 4d. Salary of parochial schoolmaster, £30, with about £31 fees and other emoluments. The parish-church is a handsome Gothic structure, built in 1813, and containing 500 sittings. There is a Free church: attendance, 190; sum raised in 1854, £221 12s. 3³/₄d. There are two non-parochial schools, a parochial library, a friendly society, and a savings' bank.

ERVARY, a hill in the parish of North Knappdale, Argyleshire, commanding a series of delightful prospects.

ERVIE, a post-office station, subordinate to Stranraer, Wigtonshire.

ESK, a Celtic name, used both by itself and as a prefix, signifying 'water,' but applied most commonly to a stream.

ESK (LOCH), a small mountain lake, emitting one of the head-streams of the South Esk, near the upper extremity of the parish of Clova, on the western border of Forfarshire.

ESK (THE), a river of Dumfries-shire, formed by the Black Esk and the White Esk. From the point where these streams unite, the Esk flows 3¹/₂ miles south-south-eastward through the parish of Westerkirk. Hemmed in here by Craighill, it sweeps with a rapid circuit round its base, and then, for 1¹/₄ mile, forms the boundary between Westerkirk and Langholm. Entering the latter parish, it flows east, north, and east, and debouches to the south, within the space of 1¹/₂ mile; and thenceforth continues, with the exception of unimportant sinuosities, to have a direction to the east of south, till it receives the waters of the Liddel, and thence to the west of south, till it falls into the Solway frith. It intersects Langholm parish considerably to the eastward of its middle, and flows past the town of Langholm, and there receives Ewes water from the north-east, and Wauchope-water from the south-west. At the point of leaving Langholm-parish, it is joined by Tarras water from the east; and, entering Canonbie, it cuts that parish into two nearly equal parts. At Canonbie-holm, it receives from the north-east the wealthy tribute of the Liddel; and afterwards, for about a mile, forms the boundary between Scotland and England. It then enters Cumberland, and having become an English river, it receives from its fatherland the tribute of Glenzier burn, and from the land of its adoption the richer tribute of Liue river, and, having flowed past Kirkandrews and Longtown, runs along toward the Solway frith at a point about 1¹/₂ or 2 miles from Sarkfoot, the extreme verge of Scotland. The Esk is a river of no common beauty. Till it reaches Broomholm in the south of Langholm parish, it has its path among mountains or uplands; and afterwards it traverses a fertile plain. But even in its upland regions, especially in the vicinity of the town of Langholm, it is brilliant in the ornaments of river-beauty. Over a great part of its entire course, it has a shelving or gravelly bottom, and glides along amidst woodland scenery and luxuriant haughs, which, in former ages, oft re-echoed the shouts of war. Measured from the confluence of the Black and the White Esk, its course, before leaving Scotland, is about 16 miles; and after entering Cumberland, between 7 and 8.

ESK (THE), a river of Edinburghshire, formed in Dalkeith park by the confluence of the North Esk and the South Esk, and running 3 miles northward thence, through the centre of the parish of Inveresk, along a luscious lovely vale, past the village of Inveresk, and between the towns of Musselburgh and Fisherrow, to the frith of Forth at Musselburgh links.

ESK (THE BLACK), a river of Dumfries-shire. It rises near the north-western point of the parish of Eskdalemuir. For 6 miles it flows in a southerly direction, cutting its way through a mass of mountains, and receiving numerous tributary rills in its course; it then debouches almost at a right angle, and for 1¹/₂ mile flows due east; it now bends suddenly round, and for another 1¹/₂ mile flows to the east of south; and afterwards, over a distance of 2¹/₂ or 3 miles, it wends in remarkably bold sinuosities, east, south, west, east, north-east and east, forming part of the way, the boundary-line between Eskdalemuir and Westerkirk, and eventually, at the south

east extremity of the former parish, forming a confluence with the White Esk. Its whole course is about 12 miles through rugged mountain scenery, and terminates at a place called Kingpool, where, according to tradition, a Pictish King was drowned.

ESK (THE NORTH), a river of Forfarshire, formed, according to some representations, by the confluent streams called the East water and the West water, but including, according to others, the whole course of the former of these streams. Even the East water, otherwise the North Esk, is formed of three confluent streams, the Mark, the Lee, and the Brany, which unite their waters near the centre of the parish of Lochlee, at Invermark castle. All the three rise amidst the mountain-range of the Grampians, on the northern boundary of the county. The Brany, the shortest of them and the most easterly, rises at the hill of Cairney, and flows due south over a distance of $4\frac{1}{2}$ miles. The Lee, the most westerly, rises at the base of Bousties-Ley, and flows very sinuously in an easterly direction, bearing the name of the Water of Urick till it enters Lochlee, and on its egress thence assuming its proper name; and traversing altogether, till the point of confluence with the other streams, a distance of about 11 miles. The Mark, the central stream and the longest, rises between Wester Balloch and the Black hill of Mark, flows northward for about $5\frac{1}{2}$ miles, and then bends round to the south-east, and traverses $6\frac{1}{2}$ miles further distance till it meets the Brany, and a $\frac{1}{4}$ of a mile farther down, the Lee. The East water, or North Esk, now formed by these united streams, flows eastward $5\frac{1}{2}$ miles till it touches the parish of Edzell; it then debouches and goes northward about $1\frac{1}{2}$ mile, forming the boundary-line between that parish and Lochlee; it now enters Edzell and intersects it, flowing first eastward, and next south-eastward, over a distance of 6 miles; and it finally forms, for 5 miles, the boundary-line between Edzell and Kincardineshire, and at the extreme south-east angle of Edzell, makes a junction with the West water. In its course it receives the Effock, the Tarf, the Kienny, the Turret, and numerous brooks and rills; and till it emerges from among the Grampians, 4 miles above the point of confluence, it careers rapidly along a rugged path, and wears the character of strictly a Highland river.

The West water, called also the Dye, rises at Stoney loch, in the extreme west of the parish of Lethnot, and flows south-east $6\frac{1}{2}$ miles, north-east $1\frac{1}{2}$ mile, east 2 miles, and again south-east 4 miles, cutting the parish into two nearly equal parts, receiving numerous small tributaries, and bearing for a while the name of the Water of Saughs. It now flows north-eastward for $2\frac{1}{2}$ miles, forming the boundary-line between Lethnot on the west, and Menmuir and Strickathrow on the east; and then flows south-westward 5 miles, dividing the latter parish on the south from Edzell on the north, when it unites with the East water to form what all nomenclatures agree in calling the North Esk. In the upper and longer part of its course it resembles the East water in being strictly a mountain-stream; and it flows altogether, in its independent course, about 22 miles.—The North Esk of the united waters pursues a direction somewhat sinuous, but in general easterly, traversing a distance of 9 miles,—dividing the parishes of Strickathrow, Logiepert, and Montrose on the south, from Kincardineshire on the north,—diffusing its treasures over a basin of generally a pleasing, and at intervals a beautiful appearance,—and gliding away from an overhanging bank tinted with the hues of fine landscape, to lose itself in the German ocean, 3 miles north of Mon-

trrose. Its entire course, from the head-waters of the Mark, is about 40 miles.

ESK (THE NORTH), a small river, partly of Peeblesshire, but chiefly of Edinburghshire. It rises in the parish of Linton in Peeblesshire, in two sources, respectively at the Boar-stone and the Easter-Cairn-hill, amid black and barren mountain-scenery. Having flowed $\frac{2}{3}$ of a mile eastward, it first turns to the south-east, and next resumes its easterly direction, forming for nearly 5 miles the boundary-line between Peeblesshire and Mid-Lothian, and receiving, in its course, several tiny tributaries, the chief of which is Carlops-burn on its right bank. Entering Edinburghshire at the Powder mills, it flows about 4 miles north-eastward, till it sweeps past the village of Penicuik; when it turns northward, and, for about $1\frac{1}{2}$ mile, forms the boundary-line between the parish of Penicuik on the west and that of Lasswade on the east. It now runs sinuously for nearly a mile, turning successively to nearly every point of the compass, and receiving on its left bank the tribute of Glencross-burn, and touching over a brief space the parish of Glencross, and then, over a direct distance of 4 miles, but with constant meanderings in its course, flows in a direction east of north to Polton. Over half-a-mile hence it touches the parish of Cockpen on its right bank, next sweeps past the village of Lasswade, and then, over the distance of a mile, bends eastward, intersecting a wing of Lasswade parish. It now, a little eastward of Melville castle, enters, in an easterly direction, the parish of Dalkeith, and, after a mile's run, flows past the town and the ducal mansion of Dalkeith; and having already assumed a direction east of north, it forms, half-a-mile farther on, at the northern limit of the parish of Dalkeith, a junction with its sister-stream, the South Esk. Its banks, over nearly its whole course, after entering Mid-Lothian, are delightfully picturesque and romantic. Though an inconsiderable brook, while traversing the parish of Penicuik, it then forms the grand charm of the beautiful demesnes of Penicuik and Newhall; and over the parish of Lasswade, it wends its course through a deep, sequestered, and richly scenic vale, sweeps round and almost encompasses the venerable pile of Roslin castle, and runs thenceforth along a deep and romantic glen past the caves and mansion of Hawthornden, and past the finely wooded grounds of Melville castle, on to the gorgeous scenery of Dalkeith.

"Who knows not Melville's beechy grove,
And Roslin's rocky glen,
Dalkeith, which all the virtues love,
And classic Hawthornden?"

Some of the tributaries of the North Esk, also, are replete with the beauties of landscape and the associations of song; and two of them, in particular, contest with each other the fame of possessing the original scenery of Allan Ramsay's 'Gentle Shepherd.' See HABBIE'S HOWE. The North Esk, too, in addition to all the poetic boast of its beauty, possesses the grand prosaic boast of contributing largely to the productive aims of agriculture and manufacture,—driving, in its progress, the machinery of numerous paper and other mills. Its manufactories and its mills, however, have destroyed its reputation as a fishing-stream.

ESK (THE SOUTH), a river of considerable magnitude in Forfarshire. It rises in the extreme north-west of the county, among the highest of the Grampian range, within half-a-mile of the source of a chief tributary of the Aberdeenshire Dee. It flows eastward 5 miles, and south-eastward 7, intersecting longitudinally the oblong parish of Clova, in the

extreme west of which it rises, and receiving in its progress White water, and a large number of mountain-rills. It now enters the parish of Cortachie, and in a south-easterly direction traverses it over a distance of 7 miles. Hitherto it moved along a mountain-path, and was cheerless in its aspect; but henceforth it luxuriates amid the beauties of Strathmore, and the richest part of the coast-district between that fine strath and the sea. For 3 miles after its intersection of Cortachie, it continues to flow south-eastward, and divides that parish on the west from Tannadice on the east; and then, coming in contact with Prosen water, pouring down upon it from the west, it makes a gentle bend, and, over the rest of its course, maintains a direction generally due east. From the point of its confluence with the Prosen, it divides the parishes of Kirriemuir, Oathlaw, and Aberlemno on the south, from those of Tannadice, Menmuir, and Brechin on the north; it then enters the last of these parishes, sweeps past the town of Brechin, situated on its northern bank; and after leaving the parish, divides for 2 miles Marytown on the south from Dun on the north; and then suddenly expands into the beautiful lagoon, $2\frac{1}{2}$ miles by 2, called Montrose basin. See DUN and MONTROSE. From this fine expanse,—which alternately gleams in splendour under the flow of the tide, and, during the recess of the waters, darkens into the desolate aspect of a wide field of mud—the river emerges by two narrow outlets, which fork round an island, and then converge into a channel $\frac{1}{2}$ of a mile wide, along which the river runs to embrace the ocean at the distance of $1\frac{1}{2}$ mile from the exit from the basin. So narrow are the two gullets along the sides of the island, compared with the area and depth of the lagoon, that the tide, both in entering and in receding, moves with the impetuosity of a resistless current. Chiefly on this account, the South Esk, though here washing the walls and forming the harbour of the populous town of Montrose, and having on its opposite bank the flourishing fishing-village of Ferrydon, and though overlooked in its inland progress by the important town of Brechin, and many of the opulent lands as well as some of the stirring villages of Forfarshire, is of no benefit as a watery highway of communication further than $\frac{3}{4}$ of a mile from the sea. The banks of the river are adorned with numerous elegant seats and demesnes, and, in particular, with those of Brechin castle, Rossie, and Kinnaird. The family of Carnegie, the proprietors of the last of these, are descended from noble ancestors who, accepting title from the river, were called Earls of Southesk. This river, in a former age, produced pearls of great value, but has eventually suffered such an exhaustion of its mussel-beds that no shells have, for a considerable period, been found old enough to contain the precious gems.

ESK (THE SOUTH), a small river, partly of Peebles-shire, but chiefly of Edinburghshire, the sister-stream of the North Esk. It issues from a small lake in the parish of Eddleston in Peebles-shire, and flows due north over a distance of $3\frac{1}{2}$ miles, forming the boundary-line between Peebles-shire and Mid-Lothian over the last $\frac{3}{4}$ of a mile of that distance, and entering Mid-Lothian at a point only 5 miles east from that where the North Esk enters. Running for half-a-mile first north and then east, it intersects a small wing of the parish of Temple, receives on its right bank the tribute of Tweeddale-hurn, as far-fetched and as wealthy as its own waters, and begins, over a distance of $2\frac{1}{2}$ miles, and flowing in a northerly direction, to divide the parish of Penicnick on the west from that of Temple on the east. It now, though beginning to run in constant

beautiful sinuosities which characterize all its subsequent course, assumes a general direction east of north, and, over a distance of 2 miles, divides the parish of Carrington from that of Temple, and receives the wealthy tribute of Gladhouse water, which, after traversing the whole parish of Temple from a point on the limits of Mid-Lothian 2 miles farther south than the source of the South Esk, flows down upon that river where it debouches to the east, and drives it suddenly round to a northerly direction. The South Esk, after its junction with the Gladhouse, divides, over a distance of 2 miles, the parish of Carrington on the west from that of Borthwick on the east, and receives another important accession in Borthwick water. It now, for $\frac{3}{4}$ of a mile, meanders north-westward, dividing the parish of Carrington on its left bank from that of Cockpen on its right; it then, resuming its northerly direction, intersects the latter parish over a distance of $1\frac{1}{2}$ mile; and thenceforth till, 3 miles farther on, it blends its waters with those of the North Esk, it intersects a wing of the parish of Newbattle, and sweeps past the town and the palace of Dalkeith, enclosing them between its own waters and those of its sister-stream in a long and beautiful peninsula. The banks of the South Esk are, in general, richly clothed in sylvan dress, and possess a romance and an attractiveness little inferior to the banks of the North Esk, though less frequented by the tourist and more seldom celebrated in description and song.

"Sweet are the paths,—Oh passing sweet,—
By Esk's fair streams that run,
O'er airy steep, through copsewood deep,
Impervious to the sun."

ESK (THE WHITE), a river of Dumfries-shire, of similar character to the Black Esk, and flowing parallel to it at an average distance of 3 miles to the east. Its sources, according to popular nomenclature, are in the mountains a mile east of Ettrick Pen. But a stream called Bloodhope burn rises a little to the north-east of these, and flows circuitously over a considerably longer course than is traversed by the nominally parent stream previous to their confluence. The White Esk, with the exception of numerous but brief sinuosities, flows, over its whole course, almost due south, intersecting the parish of Eskdalemuir, a little to the eastward of its middle; and it receives, in its progress, the tributes of Davington and Garwald from the west, and of Langshaw burn and Rae burn from the east,—all, like itself, rising in the central mountain-range of the Southern Highlands of Scotland. Its basin, though looking occasionally up some cleughs, and containing a few spots of some interest, is rather the deeply-cut course of a mountain-stream than a dale or valley. The course of the river, till it forms a confluence with the Black Esk, is, including windings, about 15 or 16 miles.

ESKADALE, a hamlet and a mansion in the lower part of Strathglass, midway between Beaully and Erechless-castle, Inverness-shire. Here is a neat Roman Catholic chapel, erected some years ago, at considerable expense, by Lord Lovat. Eskdale-house is a handsome place, and commands an extensive view of the strath.

ESKBANK, a station on the Hawick branch of the North British railway, $\frac{1}{2}$ a mile south-west of Dalkeith, and 8 miles south-east of Edinburgh. Eskbank-house, built in 1794 by the minister of Newbattle, and now belonging to the Duke of Buccleuch, overlooks the finely wooded banks of the North Esk, and commands a beautiful prospect to the west and the north.

ESKDALE, the eastern district of Dumfries-

shire, the smallest of the three sections into which that county is popularly divided. These sections seem never to have had fixed or accurately defined boundaries, and are loosely represented as corresponding with the watersheds of the great rivers, the Nith, the Annan, and the Esk, by which they are respectively traversed. The considerable territory, consisting of the parishes of Gretna, Half-Morton, Kirkpatrick-Fleming, Dornock, and part of Middlebie, would thus be debateable-ground between Annandale and Eskdale, or rather would properly belong to neither. But as that portion of this ground which lies nearest the Annan is popularly reckoned part of Annandale, so Half-Morton is fairly viewed as belonging to Eskdale. What lies within the watersheds of the Esk and its tributaries, is the territory of the large parishes of Eskdalemuir, Westerkirk, Ewes, Langholm, and Canonbie. But in some old documents, Ewes, consisting of the basin of the tributary river Ewes, is treated as itself a section of Dumfries-shire, in common with these large sections; and in popular language, it is still styled Ewesdale.—Excepting the parish of Canonbie, and a stripe of the southern part of that of Langholm, which are a fine flat country, all Eskdale is hilly or mountainous, constituting a large part of the Southern Highlands of Scotland, and presenting a bleak and rugged aspect relieved at intervals by glimpses of beauty. The immediate basin of the Esk, till it approaches the southern boundary of Langholm, is rather a deep river-course than a valley; and it opens, at frequent intervals, particularly at the confluences with its own stream of the Black Esk, the Meggot, the Ewes, and the Wauchope, into lateral river-courses similar in character to itself. Nearly the whole of the upland and greatly larger section of Eskdale is, in consequence, pastoral and thin in population.

In all its parts, Eskdale was settled, early in the 12th century, by Anglo-Norman barons and their followers. Robert Avenel received from David I., in reward of military services, Upper and Lower Eskdale. He seems to have been a councillor of Malcolm IV., and a courtier of William the Lion. Having granted a large portion of the estates to the monks of Melrose, he retired from the world and joined their society. Gervaise, his son and heir, confirmed to the monks the grant of Upper Eskdale, and, in 1219, was buried in their cemetery. Roger Avenel, the successor of Gervaise, though acknowledging the monks' property in the lands they had obtained, disputed their right to hunt upon them, and successfully made an appeal against that right to Alexander II. and his barons. The property of the Avenels seems now to have passed, by female heirs, into the possession of other families. The manor of Westerkirk, occupying the middle part of Eskdale, was probably granted, along with Liddesdale and some lands in Teviotdale, by David I., to his follower Ranulph de Soules. This estate, however, was forfeited by the Souleses during the critical and tempestuous period of the war of the succession. During the reign of Malcolm IV., the lower part of Eskdale was held chiefly by two brothers of the name of Rossedal. Guido de Rossedal possessed lands on both sides of the Lower Liddel. Turgot de Rossedal, and afterwards his successor William, owned a large part of the lands between the Esk and the Liddel, and between the Esk and the Sark; and Turgot founded a religious house, called the Priory of Canonbie, on the former section of the property, and bestowed the adjacent estate on the monks of Jedburgh. During the reigns of Robert I., and his feeble son David II., Eskdale, including Ewesdale, was in a great mea-

sure acquired by the grasping Douglas, and, with ample jurisdiction, erected into a regality. This extensive and powerful lordship remained with the Douglasses till their forfeiture in 1455; and was then acquired by the Maxwell family, and continued with them throughout the 16th and 17th centuries. In 1610, John, Lord Maxwell, erected the town of Langholm into a baronial burgh; and the jurisdiction of Eskdale was sometimes, in consequence, called the regality of Langholm. After the regality came into the possession of the family of Buccleuch, it was enlarged by the annexation of what had belonged, in upper Eskdale, to the monks of Melrose. In 1747, the Duke of Buccleuch was compensated for the jurisdiction by the receipt of £1,400 sterling.

ESKDALE, a post-office station, subordinate to Langholm, Dumfries-shire.

ESKDALEMUIR, a parish in the north-west of Eskdale, Dumfries-shire. Its post-town is Langholm. It is bounded by the counties of Selkirk and Roxburgh, and by the parishes of Westerkirk, Hutton, and Moffat. Its length, southward, is $11\frac{1}{2}$ miles; its extreme breadth is $9\frac{1}{2}$ miles; and its area is about 66 square miles. Nearly all its surface is mountainous, heathy, and of a moory appearance, appropriately designated *Eskdale-muir*. The highest summits are Ettrick Pen on the northern boundary, and Loch Fell on the western. The former rises 2,200 feet above the level of the sea, and is also, and more justly, called Eskdalemuir Pen, constituting a prominent feature in the landscape of Eskdalemuir; and being imperfectly and limitedly seen in Etterick. The soil of the parish is, in general, very deep, but mossy, unproductive of fine vegetation, and carpeted with carices or with a coarse grass. Along the banks of the White Esk the hills are, for the most part, green, and afford excellent pasture; and there are a few meadows or holms which repay cultivation. The parish is cloven into mountain-ridges by the White and the Black Esk, and very numerous tributaries. Near the northern boundary, on the brook Finglandhope, is a cascade called Wellsburnspout, of about 56 feet in height. In the western division, on Garvald water, is another cascade, peculiarly romantic. See GARVALD WATER. On almost every hill of the parish are marks of encampments, some rectangular, and some of a circular or oval form. On the top of a hill on the farm of Yetbyre, near the confluence of the Esks, is a very complete oval encampment, which has long and generally been regarded as the celebrated Roman camp of Castle-over, Castle-o'er, or Overbie, which, as an upper station, communicated by a causeway with the camps of Middlebie and Netherbie. But Dr. William Brown, the venerable minister of the parish, the statistical reporter of it both in the Old Account and in the New, though he followed the prevailing opinion in his first report, became of opinion that the encampment in question is of Saxon origin; and he discovered, considerably to the north of it, on a tongue of land at the confluence of the White Esk and Rae burn, what appears to be the true Castle-o'er. This camp, elaborately described by Dr. Brown in the New Statistical Account, contains, in its present state, an area of 5 acres, 1 rood, and 30 poles, English; and is supposed to have contained, in its original condition, 6 acres, 3 rods, and 24 poles. Within the larger area is a space, 270 feet by 100, enclosed and fortified. The vallum and fosse remain still distinct; and the ditch, 20 feet wide, is, on an average, 5 feet deep. On the farm of Coatt are two circles of erect stones, in the form of what are popularly styled Druidical temples; the one entire, measuring about 90 feet; and the other, worn partly

away by the Esk, measuring about 340 feet. On the peninsula at the confluence of the Esks, an annual fair was, in former times, held, at which a remarkable custom prevailed. At any anniversary of that fair, unmarried persons, of the two sexes, chose companions suitable to their taste, with whom they agreed to live till next anniversary. This strange paction was called 'hand-fasting,' or 'hand in fist.' If, at the return of the fair, they were mutually pleased with their companionship, they continued together for life; and if not, they separated and were free to make another choice. The parish is traversed from north to south along the White Esk by one line of road, and diagonally from south-west to north-east by another. About two-thirds of the parish belong to the Duke of Buccleuch; and the rest is distributed among nine landowners. The total area under the plough is only about 500 acres. Population in 1831, 650; in 1861, 590. Houses, 110. Assessed property in 1843, £6,765 10s. 9d.

This parish is in the presbytery of Langholm, and synod of Dumfries. Patron, the Duke of Buccleuch. Stipend, £240 19s. 2d.; glebe, £20. Unappropriated tinds, £699 10s. 8d. The parish originally constituted part of Wester Kirk, and was disjoined from it in 1703. The church was built in 1826. Sittings nearly 400. There is also a Reformed Presbyterian meeting-house; and there are a parochial library, a parochial school, and a private school. Parochial schoolmaster's salary, £34 4s. 4½d., with about £10 fees.

ESKSID. See MUSSELBURGH.

ESLEMONT. See ELLON.

ESRAGAN, two streams, the greater and the lesser Esragan, flowing southward into Loch-Etive in Argyleshire. They are separated from each other by Benvean, and terminate respectively at Inveresragan and at Blarcrea. Their length of course is about 5 miles.

ESSCUMHAN, a cascade on Leven Water, in the parish of Kilmorie, in Arran.

ESSENSIDE, a lake of about 20 acres in area, near the centre of the parish of Ashkirk, Roxburghshire.

ESSET (TNE). See TULLYNESSLE.

ESSIE, an ancient parish now united to Rhynie in Aberdeenshire.

ESSIE AND NEVAY, an united parish on the western border of Forfarshire. The two parishes comprised in it were united before the middle of the 17th century; and they are of nearly equal size, and perfectly compact. Essie on the north and Nevay on the south. The post-town Glammis is 1½ mile east of the nearest part of Essie; and the post-town Meigle is 1½ mile west of the nearest part of Nevay. The united parish is bounded by Perthshire, and by the parishes of Airlie, Glauinis, and Newtyle. Its length southward is 4½ miles; its extreme breadth is 2½ miles; and its area is about 8 square miles. The eastern division consists of part of the slopes of the Sidlaw-hills; and the western division consists of a portion of Strathmore. The Dean river flows sluggishly along the north, forming the boundary-line over a distance of 2½ miles; and is noted for the large size and delicious flavour of its trouts. Three rivulets, two of them indigenous, intersect the parish, or, for a short way, trace its boundary. One of these, the burn of Essie, rises at the hill of Auchterhouse, in the parish of the same name, flows northward through Glammis, and after entering Essie, drives a mill, bathes the wall of the church-yard, and at length, 6 miles sinuously from its source, falls into the Dean. The soil of the eastern or upland division is a thin black mould on

a bottom of mortar, and more fertile than that of any part of the opposite declivity of the Sidlaws; but toward the summit of the hills it degenerates, and is suitable only for plantation or for pasturage. The soil of the eastern or strath division is, in the south, a level and marshy tract continuous with the moss of Meigle; and, in the north, it is in some places thin but fertile, and in others a strong and rich clay, partially subject to occasional overflowings of the Dean. Nearly all the arable land is in a state of high cultivation; and only about 540 acres in the whole area, inclusive of 33 of wood, have not been subjected to the plough. By far the largest landowner of the united parish is Lord Wharmcliffe; and there are three others. The principal rock is the old red sandstone; and this in some parts is of a quality to furnish good building stones. A vein of silver ore, too inconsiderable, however, to be worked, was at one time discovered in the south-east corner. The road from Perth to Forfar and the Scottish Midland Junction railway traverse the parish; and the latter has a station in Essie, 2½ miles west of Glammis. Population in 1831, 654; in 1861, 748. Houses, 152. Assessed property in 1843, £4,019 4s. 7d.

This parish is in the presbytery of Meigle, and synod of Angus and Mearns. Patron, Lord Wharmcliffe. Stipend, £161 5s. 2d.; glebe, £15. Schoolmaster's salary, £34 4s. 4½d., with £17 5s. 7d. fees. There were formerly two churches, for respectively Essie and Nevay, in which divine service was performed alternately; but an elegant new commodious one was built a few years ago, in a situation central for both parishes; and the two former churches were allowed to go to ruin. The old manse stood near the church of Essie, but a new manse was built contiguous to the new church. There is a parochial library.

ESSIEMORE. See ARRAN.

ESSIL, an ancient parish, now comprehended in that of Speymouth. See SPEYMOUTH.

ESSMORE. See AUCHINCHEW.

ETHIE. See CROMARTY.

ETHIEHAVEN, a small desolate fishing village, on the south side of Lunan bay, in the parish of Inverkeilor, 6 miles north-east by north of Arbroath, Forfarshire.

ETIVE (Loch), a navigable inlet of the sea, extending far inland among the mountains, in the manner of an intricate frith, in the district of Lorn, Argyleshire. It enters immediately north of the island of Kerrera, nearly opposite the south-east end of the Sound of Mull, penetrates eastward 10 miles to Bunawe ferry, adjacent to the influx of the river Awe, and stretches thence about the same distance north-eastward, till it terminates in a point, where it receives the waters of the Etive river, descending to it through Glen Etive. Its breadth varies from 200 yards to 2 miles, and is ever changeful and diversified. Its depth, in what may be called its channel, varies from 20 fathoms to upwards of 100 fathoms. Its shores are indented with numerous creeks and bays, which afford safe anchorage in any wind. A contracted part of it at Connal ferry has a very dangerous channel, with, at certain states of the tide, an impracticable current; yet the whole loch is regularly navigated by vessels of from 60 to 100 tons. The tide rises 14 feet at Connal, but only 10 feet in the parts above.

"Loch Etive, between the ferries of Connal and Bunawe," says Professor Wilson, "has been seen by almost all who have visited the Highlands—but very imperfectly. To know what it is you must row or sail up it, for the banks on both sides are often richly wooded, assume many fine forms, and

are frequently well embayed, while the expanse of water is sufficiently wide to allow you from its centre to command a view of many of the distant heights. But above Bunawe it is not like the same loch. For a couple of miles it is not wide, and it is so darkened by enormous shadows, that it looks even less like a strait than a gulf—huge overhanging rocks on both sides ascending high, and yet felt to belong but to the bases of mountains that, sloping far back, have their summits among clouds of their own in another region of the sky. Yet are they not all horrid; for nowhere else is there such lofty heather—it seems a wild sort of brushwood. Tall trees flourish, single or in groves, chiefly birches, with now and then an oak; and they are in their youth or their prime; and even the prodigious trunks, some of which have been dead for centuries, are not all dead, but shoot from their knotted rhind symptoms of life inextinguishable by time and tempest. Out of this gulf we emerge into the Upper Loch, and its amplitude sustains the majesty of the mountains, all of the highest order, and seen from their feet to their crests. Cruachan wears the crown, and reigns over them all—king at once of Loch Etive and of Loch Awe. But Bua-chaille Etive, though afar off, is still a giant, and in some lights comes forward, bringing with him the Black Mount and its dependents, so that they all seem to belong to this most magnificent of all Highland lochs. ‘I know not,’ says Macculloch, ‘that Loch Etive could bear an ornament without an infringement on that aspect of solitary vastness which it presents throughout. Nor is there one. The rocks and bays on the shore, which might elsewhere attract attention, are here swallowed up in the enormous dimensions of the surrounding mountains, and the wide and ample expanse of the lake. A solitary house, here fearfully solitary, situated far up in Glen Etive, is only visible when at the upper extremity; and if there be a tree, as there are in a few places on the shore, it is unseen; extinguished as if it were a humble mountain-flower, by the universal magnitude around.’ This is finely felt and expressed; but even on the shores of Loch Etive there is much of the beautiful; Ardmatty smiles with its meadows and woods and bay and sylvan stream; other sunny nooks repose among the grey granite masses; the colouring of the banks and braes is often bright; several houses or huts become visible no long way up the glen; and though that long hollow—half a day’s journey—till you reach the wild road between Inveruran and King’s house—lies in gloom, yet the hillsides are cheerful, and you delight in the greensward, wide and rock-broken, should you ascend the passes that lead into Glencreran or Glencoe. But to feel the full power of Glen Etive you must walk up it till it ceases to be a glen. When in the middle of the moor, you see far off a solitary dwelling indeed—perhaps the loneliest house in all the Highlands—and the solitude is made profounder, as you pass by, by the voice of a cataract, hidden in an awful chasm, bridged by two or three stems of trees, along which the red-deer might fear to venture—but we have seen them and the deer-hounds glide over it, followed by other fearless feet, when far and wide the Forest of Dalness was echoing to the hunter’s horn.”

ETIVE (Tne), a river of the north-east of Lorn, Argyleshire. It rises near King’s-house, and runs in a south-westerly direction about 16 miles, to the head of Loch Etive. Though at first but a rill, it receives so many little tributaries as to swell eventually to the volume of a river. It has two fine cascades, respectively near Coinletter and contiguous

to Dalness; and it is a good fishing-stream. The glen through which it flows, and to which it gives the name of Glen Etive, has been already noticed in the concluding part of the preceding article. All this glen, though now so naked and lonely, was once a royal forest, clothed with majestic firs and oaks.

ETTLETON, a district in the parish of Castleton in Roxburghshire, formerly a rectory and vicarage, and the churchyard of which is still in use. It is situated on the west side of the Liddel, at the head of the dale.

ETTRICK, a parish in Selkirkshire. Its post-town is Selkirk, 18 miles from its church; but Hawick is as near, and Moffat 2 miles nearer. The parish is bounded by the counties of Peebles, Dumfries, and Roxburgh, and by the parishes of Robertson, Kirkhope, and Yarrow. Its length south-westward is $12\frac{1}{4}$ miles; its extreme breadth is 10 miles; and its area is about 68·69 square miles. Its name was anciently written Attarick and Atterick, and probably is a corruption of the Gaelic words *Alt-Ericht*, applied to its cognominal stream, and signifying a stream of rapid descent. The surface of the parish is a sea of hills, beautiful and varied in appearance, and everywhere wearing the mantle of romance. Seen along the water-courses, they rise crest above crest, hazy and of bleak aspect in the distance; but seen in succession, or in near groupings, they are, in general, exquisitely rounded, and richly arrayed in verdure, with just a sufficient number of heathy spots and clumps of plantation to be ornamental to their dress. Toward the sources of the streams, along the western and the southern boundaries, the summits tower aloft to a considerable elevation. Old Ettrick hill is 1,860 feet above the level of the sea; Wardlaw or Weirlaw hill, 1,986; and Ettrick Pen, 2,200. But the last, though the highest summit in the parish, and commanding over three-fourths of a circle a most extensive prospect, is so situated behind a congeries of elevations at the head waters of the Ettrick, as to be very limitedly a prominent feature of the landscape. The streams of the parish, the Ettrick, and its tributaries, Tima water, Rankle burn, and Tushielaw burn, are rapid and impetuous in their upper course, appearing, from the overseeing heights, like threads of silver in fair weather, and like thin long wreaths of soiled snow when swollen into torrents; and they cut their way through gorges or narrow defiles which afford no scope for expansion into vale or basin. The Ettrick, however, begins, about the middle of the parish, occasionally to smooth down the surface on its banks into rich, luxuriant, blooming haughs; and, when receiving the waters of its chief tributaries, it is joyous and opulent in its scenery, and looks aside among the mountains through vistas delightfully picturesque. The parish, from its extreme south-west angle to the middle of its north-east boundary, is cut into two nearly equal parts by the Ettrick; and is traversed southward in its southern section by Tima water and Rankle burn, and eastward in its northern section by Tushielaw burn. In the north-western verge is the Loch of Lowes, less than a mile in length, fed by five mountain-rills, and particularly by the incipient stream of Yarrow, flowing into it like the drainage from a city. Communicating with the Loch of Lowes, lying within a furlong south of it, and stretching away from the boundary-line into the conterminous parish of Yarrow, is the beautiful lake called **ST. MARY’S LOCH**: which see. Half a mile west from this lake, at the north-west angle of the parish, a scarcely visible tract styled the King’s road, mounts over the summit of the bill of Mere-

elenghead, and is pointed out as the path by which James V. entered the district to inflict the summary and unsparring chastisement so lugubriously commemorated in song and story. On Ettrick water, almost at the centre of the parish, stands the little hamlet of Ettrick, presided over by the chastely constructed parish-church. The heights immediately around are lofty and of highland aspect, suggesting thoughts of solitude and mountain might and darkness which are almost oppressive. A house, no longer standing, near the lonely church and its burying-ground and its little straggling retinue of trees, was the birth-place of Hogg, the Ettrick Shepherd. In the sequestered cemetery is a fine monument, of recent erection, over the ashes of probably the best man who ever hallowed the 'bushy dells' of Ettrick with the breathings of sentiment as superior to mere earthly poetry as the music of the spheres excels the creaking of a rusty hinge,—the adopted and cherished instructor, for three generations bygone, of the wisest of Scotland's peasantry—Thomas Boston, the well-known author of "The Fourfold State."

On the south side of the Ettrick, nearly opposite the church and beneath the shadow of an existing stronghold called old Ettrick house, formerly stood a village, which was barbarously destroyed about the commencement of the 18th century. A mile-and-a-half below the church, on the same side of the stream, are the modern mansion and the ancient tower of Thirlestane, both finely shaded by some venerable ash-trees, and beautified by a rising plantation. Thirlestane is the seat of Lord Napier, the lineal descendant of the ancient family of Scotts of Thirlestane, and the inheritor, by maternal right, of the name of Napier. On the opposite side of the river, at half-a-mile's distance, are vestiges of the tower of Gamescleuch, built by one of Lord Napier's ancestors. Two miles farther down the vale of the Ettrick is touched from the south by the minor vale of Rankle burn. Following the latter between a dense press of hills, and a sabbath silence and an awfulness of solitude, a tourist arrives, after a progress of 2½ miles, at the two lonely farm-steadings of the Buccleuchs, on one of the earliest estates of the powerful family to whom it has given title: for

"In Scotland no Buccleuch was then,
Before the buck in the cleuch was slain."

Both tradition and song trace the name to the seizing and killing of a buck in a cleuch; and they minutely describe and even identify the localities of the event—a spot in the cleuch where the buck was taken, and the spot on which it was slain. In the cleuch thus celebrated by association with the name and the splendours of a ducal family, are moss-grown traces of an old corn-mill, sung and satirized by poetry,—there never having been an acre of corn raised in the whole gleu. A mile-and-a-half higher up Rankle burn, in a deep solitude, frequented only by the sheep in their upland walks, are traces of the wall and the church-yard dyke of the old parish-church of Buccleuch. See BUCCLEUCH. Overlooking the confluence of Rankle burn with the Ettrick, on a declivity rising from the left bank of the latter stream, stand the dingy ruins of the old tower of Tushielaw, celebrated alike in song, in tradition, and in history. Tushielaw was the property and stronghold of a powerful section of the clan Scott, and figures in many a story of their stirring and ruthless movements as reavers and freebooters. Adam Scott, one of the family, and currently called 'king of the thieves,' and 'king of the border,' roused by his exploits the slumbering wrath of James V.; and, in the course of a judicial

excursion of the monarch among the fastnesses of 'the forest,' is traditionally reported to have been one morning seized by him before breakfast, and summarily hung up under the shadow of his own stronghold. The tree from which he was suspended is an old ash, still standing among the ruins, and still currently called the gallows-tree; and, strangely enough, long bearing upon its branches numerous nicks and hollows traced by ropes in his ruthless execution of wretched captives on whom he inflicted the fate which eventually became his own.—A road, in excellent condition, leading up from Selkirk, passes along the whole vale of the Ettrick, and leaves the parish at Permanscore, to lead down to Moffat. A branch-road from this strikes off half-way between Thirlestane and Ettrick church, and goes up Tima water, leaving the parish at the source of that stream to pass through Dumfriesshire on to Carlisle. Another road leads off, from the head of Ettrick, round along the west to the head of the vale of Yarrow. The principal land-owners are the Duke of Buccleuch and Lord Napier; the latter of whom is resident. The yearly value of raw produce was estimated in 1833 at £12,745. Assessed property in 1843, £7,844 6s. 9d. Population in 1831, 530; in 1861, 454. Houses, 79.

This parish is in the presbytery of Selkirk, and synod of Merse and Teviotdale. Patron, Lord Napier. Stipend, £253 10s. 8d.; glebe, £28. Unappropriated tithes, £506 2s. 9d. Schoolmaster's salary, £34 4s. 4½d., with about £16 fees. The present church was built on the site of a previous one in 1824, and contains nearly 500 sittings. The present parish includes, on the east, the old parish of Buccleuch. In the south-west, in the glen of Kirkhope burn, there was, in ancient times, a church called Kirkhope. In the north-west corner, in a vale called Chapel-hope, at the south-west angle of the Loch of Lowes, there was a chapel, probably subordinate to the mother-church of St. Mary in Yarrow.

ETTRICK (THE), a river of Selkirkshire. It rises, in the extreme south-west angle of the county; and, with few sinuosities, pursues a north-easterly direction over its whole course. The source of its highest head-water is on the south side of the central summits of the highest mountain-range of the Southern Highlands, among some rushes between Loch-fell and Capel-fell, 2 miles above a farm-house which stands 1,212 feet above the level of the sea, and is reported to be the most loftily situated house in Scotland. For 12 miles, including windings, the river intersects the parish of Ettrick, receiving innumerable rills or mountain-torrents, and three considerable tributaries in its course, and spanned by a bridge above the confluence with Tima water. It now, for half-a-mile, divides Ettrick from Yarrow; and, having entered the latter, traverses it over a distance of about 8½ miles, making a beautiful detour below Gilmanscleuch, and crossed by a bridge at the village of Ettrick-Bridge. It then, for 2½ or 3 miles, very circuitously forms the boundary-line between Yarrow and Selkirk; receives, on the left bank, the rejoicing waters of the Yarrow; and, over a distance of 2½ miles, intersects the parish of Selkirk, flowing past the burgh, and crossed there by a neat bridge. It now, for half-a-mile, intersects a tiny wing of Roxburghshire; next, for 1½ mile, divides that county from Selkirkshire; and then falls into the Tweed 2 miles below the town of Selkirk. Its entire course is about 28 miles. As to the appearance of its banks, see the articles ETTRICK, YARROW, and SELKIRK.

ETTRICK-BAY, a bay, about 1½ mile wide, penetrating the land nearly 2 miles, a little north

of the middle of the west side of the island of Bute. A dingle extends from the head of this bay to the head of Kames bay, directly across the island; and a vale, called Glenmore, descends southward to the north side of Ettrick bay, bringing down a rivulet from a point within 2 miles of the northern extremity of the island.

ETTRICK-BRIDGE, a village in the parish of Kirkhope, Selkirk-shire. It stands on the Ettrick, 7 miles south-west of Selkirk. Population, 108. Houses, 26.

ETTRICK-FOREST, a popular, poetie, and historic name for the whole or chief part of Selkirk-shire, together with some contiguous parts of Peebles-shire and Edinburghshire. All the country drained by the Ettrick and the Yarrow, and part of that drained by some of the other head-streams of the Tweed, as also the country now forming the upper ward of Clydesdale, were anciently a literal forest, the remains of the ancient Caledonian forest. The most numerous woods were oaks, mingled with birch and hazel. Great numbers of oaks have even very recently been dug up in mosses which evidently owed their formation to the stagnation of waters upon the neglected woodlands. The forest, judging from the prevalence of a Saxon nomenclature throughout the district, appears to have been early settled by the Northumbrian Saxons. From the time of Earl David, through several centuries, many grants were made, chiefly to the abbeyes of Selkirk, Melrose, and Kelso, of various 'easements' within the ample scope of the forest. At the close of the 13th century Edward I., acting as the sovereign of Selkirkshire, gave away the forest's timber; and was followed in his conduct by Edward II. and Edward III. At the accession of Robert Bruce the forest was given to Sir James Douglas in guerdon of his services; and it continued with his family till their forfeiture in 1455. On the 4th of August, in that year, Ettrick forest was, by act of parliament, annexed to the Crown. Abounding in beasts of chase and birds of prey, the forest now became again—what it had been before its possession by the Douglasses—a favourite hunting-ground of the Scottish kings. In 1528, James V. "made proclamation to all lords, barons, gentlemen, landward-men, and freeholders, that they should compare at Edinburgh, with a month's victuals, to pass with the King where he pleased, to danton the thieves of Tiviotdale, Ammandale, Liddisdale, and other parts of that country; and also warned all gentlemen that had good dogs to bring them, that he might hunt in the said country as he pleased: the while the Earl of Argyle, the Earl of Huntly, the Earl of Athole, and so all the rest of the gentlemen of the Highland, did, and brought their hounds with them in like manner, to hunt with the King, as he pleased. The second day of June the King past out of Edinburgh to the hunting, with many of the nobles and gentlemen of Scotland with him, to the number of twelve thousand men; and then past to Meggitland, and hounded and hawked all the country and bounds; that is to say, Pappert-law, St. Mary-laws, Carlavriek, Chapel, Ewindoores, and Longhope. I heard say, he slew, in these bounds, eighteen score of harts." [Pitseaotie's 'History of Scotland,' folio edition, p. 143.] After this stately hunting, James, who 'made the rush-bush keep the eow,' in order to increase his revenues, poured into it 10,000 sheep, to figure there under the tending of a thrifty keeper, instead of 10,000 bucks which scoured its woodlands during the bounteous age of Edward I.; and by this act, he led the way to such a conversion of the entire forest into sheep-pasture, as occasioned a rapid and

almost total destruction of the trees. The last sovereign of Scotland who visited it for the sake of the chase was the beautiful Mary. Excepting a few straggling thorns, and some solitary birches, no traces of 'Ettricke foreste fair' now remain, although, wherever protected from the sheep, eopces soon arise without any planting.

ETTRICK PEN. See **ETTRICK**.

EU (Loch). See **EWE (Loch)**.

EUCHAN WATER, a rivulet in the northern part of Nithsdale, Dumfries-shire. It rises in Black Larg-hill, on the boundary between Dumfries-shire and Ayrshire; flows 3 miles north-eastward, and then $5\frac{1}{2}$ eastward; having its whole course in Sanquhar parish, amid mountain-scenery, and falling into the Nith opposite the old castle of Sanquhar.

EUCHAR (The), a rivulet of the district of Lorn, in Argyleshire. It issues from Loch Seammodale, and flows about 2 miles westward, and about the same distance northward, to the sea at Kilniver. It has many tributaries and a large volume. Its banks are finely wooded; and its course, at a place about a mile from the sea, is along a deep rocky ravine, grandly picturesque.

EUR (The). See **FINDHORN (The)**.

EVAN, or AVON (The), a rivulet of Lanarkshire and Dumfries-shire. It rises in the parish of Crawford at Clydes-law, so near the source of what is popularly reckoned the parent-stream of the Clyde, as now to receive the waters of a rill which formerly was a tributary of that noble river. It first flows about 2 miles westward; then suddenly debouches, and flows $3\frac{1}{2}$ miles south-eastward; and now assumes a southerly direction, passing $1\frac{1}{2}$ mile to the boundary of the two counties, and there entering the parish of Moffat, to intersect it over a distance of $2\frac{3}{4}$ miles. It now receives Cloffin burn, and enters the parish of Kirkpatrick-Juxta, taking a direction to the east of south on entering it; and, after traversing that parish over a distance of $4\frac{1}{2}$ miles, and receiving in its progress the tribute of Garpool burn, it forms a confluence with the river Annan, at the point where that river receives on its opposite bank the tribute of Moffat water, 2 miles south of the town of Moffat. Its entire course is about 14 miles; one half in Lanarkshire, and the other in Dumfries-shire. The rivulet is chiefly remarkable for its cutting a practicable transit through a high and precipitous part of the Southern Highland mountains, for the Glasgow and Carlisle turnpike and for the Caledonian railway. Its upper course is over rugged rocks, among hills and mountains generally acclivitous, and, in some instances, nearly perpendicular. As it rises, and for some distance flows, at an elevation nearly 1,000 feet above the level of the sea, it has in many places the impetuous motion of a torrent. In its lower course, as it approaches the Annan, it flows between two hilly ridges, and has become comparatively tranquil.

EVANTOWN, a post-office village in the parish of Kiltearn, Ross-shire. It stands 7 miles north-north-east of Dingwall, on the road thence to Invergordon. It originated only about 46 years ago, and has a regular alignment and a neat appearance. Its site was a piece of waste ground; but the immediately circumjacent scenery is very fine. Here are a meeting-house with 400 sittings, and a school-house. Fairs are held on the second Tuesday of May, August, and November. Population, 462. Houses, 80.

EVELAN. See **WESTRUTHER**.

EVELICK, an ancient estate, now divided, in the parish of Kilspindie, Perthshire. Evelick-hill, 832 feet high, commands one of the most gorgeous panoramic prospects in Scotland. On the summit

of the hill are vestiges of an ancient fortification, which seems to have comprised two concentric stone walls and a fosse. A little to the south-east of the hill are the ruins of Evclick-castle, the ancient seat of the Lindsays, knights of Evclick, and originally a place of strength.

EVELICKS (THE). See EVLIX.

EVERYMAN'S LAND. See SCONE.

EVIE AND RENDALL, an united parish, containing the post-office station of Evie, in Orkney. It comprehends the north-eastern part of the mainland, and the contiguous island of Gairsay. Evie is the northern section, and Rendall the southern; and to the latter belongs Gairsay. The length of the united parish, south-eastward, is about 10 miles; and its greatest breadth, exclusive of Gairsay, is $4\frac{1}{2}$ miles. The coast is free from those deep indentations which abound elsewhere in Orkney. The beach, excepting in one small bay of beautiful shell sand, is rocky. The bay of Woodwick, nearly opposite Gairsay, is of considerable size. Costa-head, at the north-western extremity of Evie, is a bold promontory, with precipitous face to the sea, and a high hilly contour to the interior. A range of hills, of monotonous character, generally about 300 or 400 feet high, clothed in moorish garb of moss or heath, with admixture of coarse grass, occupies all the western border and considerable part of the interior. The arable land is all a gentle slope, from the skirts of the hills to the shore, varying in breadth from $\frac{1}{2}$ a mile to $1\frac{1}{2}$ mile. The loch of Swana, about $1\frac{1}{2}$ mile in length, and emitting a stream strong enough to drive a meal-mill at any time of the year, lies on the boundary about $1\frac{1}{2}$ mile south of Costa-head. There are three principal landowners, and seven other considerable landowners. Fairs for cattle and horses are held in Evie on the last Wednesday of June and the last Friday of October. Population of the united parish in 1831, 1,450; in 1861, 1,408. Horses, 313. Population of Evie in 1831, 839; in 1851, 857. Houses, 189.

This parish is in the presbytery of Kirkwall, and synod of Orkney. Patron, the Earl of Zetland. Stipend, £154 6s. 10d.; glebe, £50. Schoolmaster's salary, £30. The parish church is in Evie, within a mile of the nearest part of Rendall, and was built about the end of last century. Sittings, 498. There is a Free church; and the sum raised in connexion with it in 1854 was £97 16s. There is a Congregational chapel in Rendall, with an attendance of 150. There are a Society's school, and four other non-parochial schools. The date of the union of the parishes is not known; but it is supposed to have been as early as the Reformation.

EVIGAN BAY, a bay on the west side of Stronsay in Orkney.

EVLIX, or EVELICKS (THE), a rivulet of the south-east of Sutherlandshire. It rises about the head of Strath-Achvaich, and runs about 13 miles, principally south-eastward and partly southward, to the Dornoch frith at a point not far from the Meikle ferry. Its banks are beautifully wooded with natural birches and alders; and its waters abound with trout and salmon.

EVORT (LOCH), an intricate sea-loch, forming a safe harbour, on the east coast of North Uist, $3\frac{1}{2}$ miles south of Loch-Maddy. See UIST (NORTH).

EWES, a fertile, well-cultivated island, nearly 2 miles long, a little outward from the middle of Loch-Ewe, in the parish of Gairloch, Ross-shire. Population, 24.

EWES (LOCH), an arm of the sea, 7 miles in length and $3\frac{1}{2}$ in extreme breadth, penetrating the land south-eastward, in the parish of Gairloch, on the west coast of Ross-shire. Into the head of it, at Pool-

Ewe, a broad and rapid river called the Ewe, issuing from Loch Marec, empties itself, after a course of only a mile in length. This loch, and Loch Marec, appear to have originally formed one loch, under the name of Loch Ewe, as the village at the head of Loch Marec is named *Cean-Loch-Ewe*, that is, 'the Head of Loch Ewe.' See article MAREC (LOCH). The river Ewe is praised by Sir Humphrey Davy for its finely-stocked pools, from which, at certain times, a couple of skilful anglers might load a horse with grilse and sea-trout.

EWES (THE). See EWE (LOCH).

EWES, a parish, containing a post-office station of its own name, at the north-east extremity of Dumfries-shire. It is bounded on the north and east by Roxburghshire; on the south by Canonbie and Langholm; and on the west by Wester Kirk. Its figure is a broad oval, with indentations on the north-east and south. It is 8 miles in length from north to south, and $5\frac{1}{2}$ miles in average breadth; and contains $34\frac{1}{2}$ square miles. In some ancient writings it is regarded as a separate and independent district of Dumfries-shire. "Beyond the Tweed," says Boethius, "to the middle march under the Cheviot hills, lieth Tevidale, that is to say, the vale of Tiffe. Beyond it is Eskedale, or the vale of Eske, of a river so called that runneth through the same. Over against Eskedale, on the other side, lieth Eusdale, so named of the river Eus, that passeth thereby, and falleth into the water of Annand." The whole parish is a double basin, surrounded on three sides by mountains which form a water-line; and it discharges all its aggregated waters, in the two streams Ewes and Tarras, through openings on the south. The Tarras rises at Hartsgarth Fell, and intersects the eastern division for $4\frac{1}{2}$ miles, and then, for $1\frac{1}{2}$ mile, forms the boundary-line between it and Langholm. The Ewes rises at Moss-paul, in the extreme north. After a progress southward of $2\frac{1}{2}$ miles, it receives on its left bank Blackhall burn, which had flowed $3\frac{1}{2}$ miles from Tudhope hill. Passing onwards, it receives the waters of Uthauk burn, Mosspebble burn, Muckledale burn, and numerous tiny streams; and after a course from its origin, of windingly $9\frac{1}{2}$ miles, it enters the parish of Langholm, and, $1\frac{1}{2}$ mile farther on, closes in, with the river Esk and Wauchope water, to decorate the brilliant scenery in which the town of Langholm lies embosomed. Ewesdale, along the banks of this stream, is one of the most beautiful districts in the Southern Highlands. The hills on both sides are mostly covered with verdure, and fringed with thriving plantations, belted or spotted at intervals with heath; and they exhibit many groupings and phases of picturesque landscape. Haughs and stripes of valley stretch along the margins of the river, and luxuriate under culture. The New Statistical Account distributes the whole area into 200 acres of wood, 23,169 of pasture, and 1,100 of arable land. The chief proprietors are the Duke of Buccleuch and three others. The parish is traversed, in its whole length, down the vale of the Ewes, by the road from Edinburgh to Carlisle. Population in 1831, 335; in 1861, 356. Houses, 59. Assessed property in 1843, £4,951 8s. 9d.

This parish is in the presbytery of Langholm, and synod of Dumfries. Patron, the Duke of Buccleuch. Stipend, £240 19s. 2d.; glebe, £35. Unappropriated tithes, £637 1s. 4d. Schoolmaster's salary, £34 4s. $4\frac{1}{2}$ d., with £9 other emoluments. The parish church was repaired in 1831, and contains about 230 sittings. Before the Reformation there were two churches and two chapels. The principal church was dedicated to St. Cuthbert, and stood on the west side of the Ewes, at a

hamlet which was called Kirk-town of Nether Ewes. The other church was situated in the upper part of the vale, at a place now uninhabited except by a solitary shepherd, and called Ewes-durris, or the pass of Ewes, where a pass leads into Teviotdale. Of the two chapels vestiges still exist, respectively at Unthank and at Moss-paul.

EWES (THE), a rivulet of the parishes of Ewes and Langholm, Dumfries-shire. See EWES.

EWES (THE), one of the head-streams of the Luggate, and formerly the name of the Luggate itself, in the parish of Stow, Edinburghshire.

EWESDALE. See EWES and ESKDALE.

EWIESIDE-HILL. See COCKBURNSPATH.

EYE (LOCH), a small lake in the parish of Fearn, in Ross-shire, about 2 miles long, and half-a-mile broad. From it proceeds the small river Eye, forming in its course a succession of smaller lakes, which are much frequented by aquatic fowls. It falls into the Moray frith, near the fishug-village of Balintore.

EYE (THE), a small river in Berwickshire. It rises among the Lammermoor hills in the parish of Cockburnspath, pursues a south-eastward course over a distance of 11 miles, and then making a sudden bend, flows $3\frac{1}{2}$ miles north-eastward to the sea at Eyemouth. Over $2\frac{1}{2}$ miles it intersects Cockburnspath; over the next mile it divides a detached portion of Oldhamstocks from Coldingham; over 6 miles it traverses the latter parish; over the next $1\frac{1}{2}$ mile it divides Coldingham from Ayton; and it now receives a small tributary from the west, and makes its debouch to the north-east. Half-a-mile from this point, it sweeps past the village of Ayton; $1\frac{1}{2}$ mile farther on it receives, from the west, the considerable tribute of Ale water; and it thence, to its embouchure, divides Ayton on the east from Eyemouth on the west. The river abounds in trouts, of excellent quality, though small in size; and as to the appearance of its banks, is, in many parts, pleasing and beautiful.

EYE (THE), ROSS-SHIRE. See EYE (LOCH).

EYEBROCHY, or IRIS, a small island in the frith of Forth, belonging to the parish of Dirleton, Haddingtonshire.

EYEMOUTH, a small parish, containing a post-town of the same name, on the coast of Berwickshire. It is bounded on the north by the German ocean; on the east and south by Ayton; and on the west by Coldingham. It may, in a general view, be regarded as a square figure, $1\frac{1}{2}$ mile deep; but it has a rugged outline on the north and west, and embosoms in its centre a small detached portion of Coldingham parish. The boundary line on the south is the Ale, and on the east is the Eye. Both streams, while they touch the parish, are picturesque and ornamental. The tide flows about half-a-mile up the Eye. The coast rises, along the whole line, in rocky and precipitous abruptness from the sea, to 89 or 90 feet above its level; and is sliced down at intervals by deep fissures or gullies, and at one place perforated by a cavern; but, except at two points where roads have been scooped down its openings, and at Eyemouth, where its gigantic breastwork is interrupted by the Eye, it admits no access to the beach. So far back as sixty years ago, not a foot of bad or waste ground was in the parish. The soil, in general, is excellent, and throws up prime crops of every sort of grain. The only landowner, except of some small parts, is Home of Wedderburn. The yearly value of raw land produce was estimated in 1835 at £6,839. Assessed property in 1843, £2,683 9s. 2d. Upon a bold small promontory called the Fort, north of the town, are the remains of a regular forti-

fication, erected by the Duke of Somerset in his invasion of Scotland, while he held the regency of England under the minority of Edward VI. Though all the rocks along the coast are of the common hard whinstone, the promontory of the Fort consists of puddingstone remarkably hard, capable of a polish like marble, and offering strong resistance to the action of fire. This fortification, soon after its erection, was, in the reign of Mary, demolished in terms of a treaty between France and England which followed the battle of Pinkie. A few years afterwards it was reconstructed under Regent Moray to aid a contemplated interference of Scotland in the war which was going on between France and England; but, at the subsequent peace, it was again demolished; and, the crowns becoming united in the next reign, it was allowed thenceforth to continue in ruin. Grassy mounds, indicating the lines of demolished wall, are almost the only traces of its existence; but they sufficiently show it to have been a place of considerable strength and importance. The old manor-house of Linthill, overlooking the confluence of the Ale and the Eye, is the only noticeable mansion; and in 1752 was the scene of the murder of the widow of Patrick Home, its proprietor. The great Duke of Marlborough received from Eyemouth, though he had no connexion with it, the title of Baron in the Scottish peerage. The parish, though not touched by the North British railway, has short easy access to both the Ayton and the Burnmouth stations. Population in 1831, 1,181; in 1861, 1,804. Houses, 190.

This parish is in the presbytery of Chirnside, and synod of Merse and Teviotdale. Patron, the Crown. Stipend, £130 19s. 6d., exclusive of vicarage teinds not valued; glebe, £48. Schoolmaster's salary, £72, with £30 fees. Attached to the parish school is an endowed female one; and there are two other schools. The parish church, situated in the town, was built in 1812, and contains about 550 sittings. There is a Free church with an attendance of 270; and the sum raised in connexion with it in 1854 was £308 18s. 7d. There is an United Presbyterian church, which was built in 1842, and contains 500 sittings. Eyemouth parish was formerly included in the territory of Coldingham priory, and did not assume a parochial form earlier than the reign of James VI. A chapel connected with Coldingham, and served by a nominee of the prior, anciently stood within its limits.

EYEMOUTH, an ancient sea-port, and a burgh-of-barony, lies at the mouth of the Eye, in the north-east angle of Eyemouth parish, $2\frac{1}{2}$ miles north-east of Ayton, 3 south-east of Coldingham, and $8\frac{1}{2}$ north-west by north of Berwick. Its plan is altogether irregular, and, considering its size, is not a little intricate. "The whole town," says Chambers, in his 'Picture of Scotland,' "has a dark, cunning look, is full of curious alleys, blind and otherwise; and there is not a single individual house of any standing but what seems as if it could unfold its tales of wonder." But he alludes, in this summary picture, to the character which it once wore as a nest of smugglers, and looks upon it through the thick screen which contraband traders hang around their scene of action. The town, though not elegant, contains many good houses, possesses a neat spire towering up from its church, and is supplied with water by iron pipes kept in a state of cleanness and repair. Coal fuel is cheap and plentiful, being easily procured by land-carriage from Berwick, or sea-communication from the Forth and the Tyne. A large building, formerly occupied as a barrack, and several modern and spacious erections, are used as granaries, and indicate the existence of important

traffic with the surrounding agricultural country. The bay and the harbour, too, are objects of unusual interest. The bay, though only $\frac{1}{2}$ of a mile in breadth, and on the north or more extended side little more in length, is both beautiful in landscape, and highly adapted to utility. On one side it is overhung by the high promontory of the Fort, and on the other is overlooked by the projection of Guns-green. From point to point it sweeps gracefully round in a semicircle, washing the town at its extremity, and receiving the waters of the Eye considerably south-eastward of the centre of its outline; and in front it is protected by a singular ridge of rocks called the Harkers or Hureers, past either end of which vessels sail inward to the harbour. Its encircling coast-line everywhere, but especially on the Fort, commands a magnificent and most extensive sea-view; and its bed slopes, in most places, so gently from the beach, and is so finely sheeted with a gravelly bottom, as to allure to its waters many a summer bather. An old rhyme says curiously respecting the prospect:—

"I stood upon Eyemouth fort,
And guess ye what I saw?
Fairieside and Flemington,
Newhouses and Cocklaw.
The fairy folk o' Fosterland,
The witches o' Edinerau,
The rye-rigs o' Reston,
And Danse dings a'."

Eyemouth is the market for a somewhat extensive district, and the only sea-port in Berwickshire. Yet territorial limitation, or the drawing of an artificial line over the corner of a district geographically unique, does not prevent the population of the county from viewing Berwick as still, what it anciently was, their principal port and their county town. Eyemouth, in consequence, is, both as a market and a port, but a gleaner of straws in the vicinity of a reaper of sheaves. It has likewise suffered severe damage to its trade from the opening of the North British railway. For a long series of years it was the depot and the shipping-place of a large quantity of exported grain. Half-a-century ago 20,000 bolls annually, and in some years more than 40,000 bolls, were shipped here for Leith and other places; and in the years following 1832, grain to the value of £20,000 was yearly sold in its market. But now scarcely any grain is shipped here; and the weekly market has ceased to be held. The contraband trade, which once characterized it to such a degree, that every house is said to have had its secret cellars for the concealment of goods, and which has winged and poisoned many an envenomed shaft of satire against the modern population, has long since entirely disappeared. The latest dealers in it had all died or removed to distant places several years before the writer in the Statistical Account of 1792 drew up his report; and both they and their predecessors had all, according to his statement, sunk into poverty, bankruptcy, or at best the possession of a mere competence. The herring-fishery trade succeeded the contraband one, and has been remarkably fitful. "This," said the New Statistical Account in 1835, "has at various periods been very productive; from 1809 to 1820, not less than 10,000 barrels being brought into Eyemouth yearly. Upon these occasions, from 100 to 150 boats assembled at Eyemouth, and few sights more gratifying could be witnessed than that of the little fleet setting sail on a fine summer evening to take up their stations on the fishing-ground, or returning at break of day loaded with the treasures of the deep. Since 1820, this fishing has been on the decline; and for some years past even the boats belonging to Eyemouth have

not remained on this coast, but proceeded to Sunderland, Wick, &c., to prosecute the fishing." Of late years, however, the local fishery has not only re-acquired its former importance, but far exceeded it; inasmuch, that in the year 1853, the number of persons employed in it was 2,643, the value of boats, nets, and lines engaged in it, was £28,670, the quantity of herrings caught and cured was 52,299 barrels, and the quantity caught but not cured was 45,980 barrels. This trade, indeed, belongs to a district of 30 miles in extent along the coast, and has Eyemouth only as its head-quarters; yet, probably not much less than one-half of it is strictly proper to the town, and its near vicinity, belonging in every sense to the local population; for of a total of 166 boats engaged in it in a recent year, 48 belonged strictly to Eyemouth, and 29 to the immediately adjacent creeks of Ross and Burnmouth. A fishery of cod and haddock is also considerable and of long standing. There are at present 26 large boats regularly employed in it, each of which has a crew of 6 or 7 men, and earns to the value of from £300 to £400 a-year.

Eyemouth harbour, when viewed at high water from the contiguous heights, appears to possess a sufficiency of both capacity and shelter to be available as a harbour of refuge for the perilous stretch of coast between the Bass and Holy Island. But on being specially surveyed under the direction of the Admiralty in 1839, it was found, even if provided with an artificial breakwater, to be incapable of offering a sheltered anchorage to more than a dozen laden vessels. Nor is it even very well appointed for its own local trade. "The mouth of the river," says a recent official report upon it, "is protected from the heavy run of the sea by a stone pier (one of Smeaton's earliest designs), carried out from the eastern shore in 1768, and by a short pier on the west side, with an entrance between 154 feet in width, having 14 feet depth at high-water spring tides. A quay wall, rebuilt in 1843, along the middle of the river, forms an inner basin, and gives great shelter to vessels lying at the quays against the river freshes, which occasionally bring down large quantities of gravel, and do much damage to the harbour. But it appears that the old pier and the river wall along the ballast quay, are out of repair; that there is no crane on the quays, nor any warping buoy off the harbour's mouth; that the bed of the river requires to be deepened, and the rocky skares to be removed; that there is no beaching-place in the harbour to run a vessel on in case of need; no light at the pier-head, nor any beacon on the Inner Bass, a dangerous rock which lies in the fair way of the entrance to the bay." The flow of the tide here, as generally in other harbours on the east coast, averages 10 feet at neap-tides, and 16 feet at spring-tides. The number of arrivals and departures of vessels—not including any which run into the bay simply for shelter—was for a long time about 200 in the year; but it recently rose to 305, of an aggregate burden of 13,067 tons,—30 of which were vessels from foreign ports. The cargoes outwards are miscellaneous produce, principally fish; and those inwards are coals, slates, tiles, bricks, timber, rags, bones, and merchant goods. The yearly revenue levied is about £314. Eyemouth, together with the creeks belonging to it, was formerly an annexation of the port of Leith, but was transferred in 1848 to the port of Berwick.

Eyemouth acquired early consequence as a dependency of the monks of Coldingham, and as the only port within their limits. So early as the reign of William the Lion, or between the years 1174 and 1214, it is mentioned in a charter among the re-

records of the priory. In the 14th century, the harbour had sufficiently become a place of resort as to incite, on the part of the lord of the manor, a demand for anchorage dues. In 1597, by a charter from James VI., in favour of Sir George Home of Wedderburn, it was erected into a free burgh-of-barony, with the privilege of a free port. A little before the accession of James VI. to the throne of England, Logan, the Laird of Restalrig, had a house or castle in the town; and dated from it one of his well-known letters relative to Gowrie's conspiracy. A notorious inhabitant, at the same epoch, was the famous or infamous Sprott, the professional agent of Logan, and a notary or writer of the town, who, coming under suspicion of being in the secret of Gowrie's conspiracy, was, in 1608, apprehended, tried, and executed. See **FAST CASTLE**. The Protector Cromwell, in his progress into Scotland, visited Eyemouth with the view of examining its capabilities as a harbour; and soon after ordered, as a means of defending the entrance to the Eye, the construction of a place of strength, on the site of the ruined fortification on the promontory called the Fort, and appointed the place to be under the authority of the governor of Berwick.—By the charter of barony, the inhabitants and free burgesses were empowered, with the consent of Sir George Home and his heirs, to make an annual election of magistrates,—to buy and sell and exercise every art and trade as in other free burghs,—to hold a weekly market and two annual fairs,—and to build a gaol, hold courts, and appoint clerks and officers; but, as regards everything municipal or jurisdictional, they seem never to have exercised the privileges conferred, but to have yielded themselves unreservedly

to the will of their superior. The Homes of Wedderburn have been in the practice of appointing and paying a baron bailie and baron officer for the government of the town. Occasionally, during the last century, and even within these few years, the bailie has held a court for the determination of petty causes; but, in general, he has no scope within the small community of his jurisdiction for acting as a judicial functionary. The town formerly paid £10, and now pays £5 a-year, in name of cess, to the convention of royal burghs, for participating in the privilege of foreign trade. The town has a branch-office of the Commercial Bank of Scotland, a parochial library, a friendly society, a reading club established in 1847, a total abstinence society, and a free mason lodge. The poet Burns received masonic initiation here to the St. Abb's lodge. Fairs are held on the first Thursday of June and the last Thursday of October. The population of the town comprises all the population of the parish excepting about 80.

EYLT (LOCH), or **ALT**, a small lake, about 3 miles in length by half-a mile in greatest breadth, in the district of Moydart, Inverness-shire. Its superfluous waters flow into the head of Loch Aylort, by a stream of about 1½ mile in length, which sweeps around the northern base of Benebeg.

EYNORT (LOCH), a very irregular arm of the sea, 3 miles in length, indenting the east coast of the island of South Uist, and nearly meeting the head-arms of Loch Bee from the opposite side of the island. The scenery of Loch Eynort is remarkably wild and picturesque; and only wants trees or a clothing of copse-wood to be, in many places, enchantingly beautiful.

F

FAD (ISLE). See **INCH-FAD**.

FAD (LOCH), a lake, 2 miles south-west of Rothesay in the island of Bute. It extends in a stripe south-westward, on the mutual boundary of the parishes of Rothesay and Kingarth, and covers about 400 acres. From the rude, rocky, and picturesque appearance of the hills which surround it, it presents quite a miniature picture of some of the larger Highland lakes. The slopes of a few of these hills are cultivated; but the greater proportion, especially towards the head of the loch, are in a state of nature. Though not remarkable for height, their outline is in general broken, varied, and interesting; and the serrated summits of the Arran mountains on the one hand, or the hills of Cowal on the other, afford fine terminations to the view. Loch-Fad forms a pleasant excursion for tourists or sea-bathing visitors at Rothesay; and since the period that Kean made it a place of repose during the intervals from his professional exertions, it has been much more visited than it had ever previously been. The house erected by Mr. Kean, though of sufficient size, is a very ordinary looking one, and generally disappoints the visitors. Had it been somewhat more in the cottage-style, it would have better pleased the eye, and been more in accordance with the situation,

which is indeed well-chosen. The grounds are very agreeably laid out, and form a singular contrast with the rudeness and romantic nature of the surrounding scenery.

FAD (LOCH), Argyshire. See **COLONSAY**.

FADA (ISLE). See **ELLAN-FADA**.

FAIFLEY, a manufacturing village in the vicinity of Duntocher, in the parish of Old Kilpatrick, Dumbartonshire. See **DUNTOCHER**. Population, 321.

FAIL, the site of an ancient monastery of Red or Trinity friars, in the Barnwell section of the parish of Tarbolton, Ayrshire. The monastery was founded in 1252, and stood on a rivulet of its own name, which flows about 5 miles southward and south-eastward, from the skirts of Craigie, and through Tarbolton, to the water of Ayr. A ford across the rivulet at the place was called Failford,—a name now given to a locality near the rivulet's embouchure; and a lake in the vicinity was called Loch-fail. Spottiswoode, misled by this clustering of cognate names round one locality, exhibits in his catalogue of religious houses, three several establishments under the designations respectively of Fail, Failford, and Loch-fail, the first of which he makes a cell of Cluniac monks belonging to the abbey of Paisley, and the second and the third convents of

Red friars. The three supposed establishments, however, were in reality only one. The chief of this convent bore the designation of "minister." He was provincial or head of the Trinity order in Scotland, and, in that capacity, had a seat in parliament. The convent possessed 5 parish churches, Barnwell, Galston, and Symington in Kyle, Torthorwald in Annandale, and Invercaolin in Cowal. In 1562, Robert Cunningham, the minister, gave up as the rental £174 6s. 8d. in money, 15 chalders of meal, 3 chalders of bere, 30 stones of cheese, 10 young sheep, 3 bullocks, and 24 salmon. William Wallace, who was minister during the reign of James VI., died in 1617, and his son William seems to have considered the monastery, and what remained of its property, as his inheritance. In October 1690, William, Earl of Dundonald, was served heir of his father in the benefice of Fail or Failford temporaliter et spiritualiter. The ruins of the convent still exist $1\frac{1}{2}$ mile north-north-west of the village of Tarbolton. An old satirical poem says of the Friars of Fail, that "they never wanted gear enough as long as their neighbour's lasted;" and another says:—

"The friars of Fail drank berry-brown ale,
The best that ever was tasted;
The monks of Melrose made gude kail,
On Fridays, when they fasted."

FAILFORD. See FAIL.

FAIRAY. See PHARAY.

FAIRBHEIN. See DURNESS.

FAIR-ISLE, an island belonging to the parish of Dunrossness in Shetland, but lying nearly midway between Shetland and Orkney, 29 miles south by west of Sunburgh-head. It is upwards of 3 miles in length, and nearly 2 in breadth; and rises into three lofty promontories. It is everywhere inaccessible, save at one point upon the north-east, where it affords a safe station for small vessels. One of the promontories, the Sheep-craig, is nearly insulated, rising from the ocean in a conical shape to the height of 480 feet. The soil is tolerably fertile, and the sheep-pasture on the hills excellent. The inhabitants all live on the south side of the island, and employ themselves much in fishing. The minister of Dunrossness, when health and weather permit, visits them once a-year, and remains with them two Sabbaths. There is a schoolmaster on the island, under the Society for propagating Christian knowledge. The Duke of Medina Sidonia, the admiral of the celebrated Spanish armada, when retreating northward in the year 1588, pursued by the English squadron, was shipwrecked on Fair-Isle. The greater part of his crew, after enduring severe hardships, were murdered by the semi-barbarous natives, with the view of preventing a famine; but the Duke himself, along with a small number of them, was allowed to escape in a little vessel to the mainland of Shetland, whence he obtained a passage to the continent of Europe. Population of the island in 1831, 317; in 1861, 380. Houses, 53.

FAIRLEY, a post-office village in the parish of Largs, Ayrshire. It is beautifully situated on the coast, opposite the larger Cumbræ, 2 miles south of the town of Largs. The coast, on both sides of it, is for a short way studded with neat villas. Opposite to it is a good roadstead, sheltered by the Cumbræ, and affording safe anchorage. Fairley castle, an old square tower, formerly the seat of a family of the name of Fairley, stands in the vicinity of the village. An ancient barony, connected with that town, belonged for 400 years to the Fairley family, but was sold in the beginning of the 18th century to the Earl of Glasgow. A small island formerly lay in front of the site of the village, but has been obliterated by the receding of the water. The whole

sound between the mainland and the larger Cumbræ bears the name of Fairley roads; and a rivulet which runs on the boundary between Largs parish and West Kilbride parish is called Fairley burn. A chapel-of-ease was built in 1833. It contains 300 sittings; and is in the presentation of the managers and communicants. Here also is an elegant Free church; attendance, 150; sum raised in 1854, £270 2s. 3½d. Population of the village, together with some circumjacent territory classed temporarily with it before 1843, as a quoad sacra parish, 521. Houses, 93.

FAIRLEY BURN. See FAIRLEY.

FAIRLEY HEAD, a headland in the parish of West Kilbride, at the north side of the entrance of the bay of Ayr, and 5 miles south by west of the village of Fairley, Ayrshire.

FAIRY-BRIDGE. See DURINIST.

FALA, a parish, adjoining the post-office hamlet of Blackshields, and containing the village of Fala, and part of Fala-dam, on the south-east verge of Edinburghshire. It is united to the parish of Soutra, on the south-west verge of Haddingtonshire, the two together bearing the name of Fala and Soutra. Each parish is a stripe of territory stretching from north to south; and the two jointly form a parallelogram, 4 miles long and three broad. One-half of Fala, and one-third of Soutra, constituting the northern division of the united parish, are a slightly undulating but on the whole level tract of country, well-cultivated and fertile, composed of a clayey soil, and producing all the variety of crops common in the Lothians. The rest of the district, commencing on the north with Soutra hill, which rises about 1,230 feet above the level of the sea, is part of the most westerly ridge of the Lammermoor mountains, covered for the most part with heath, and, excepting a few cultivated spots, all laid out in sheep-pasturage. To a traveller from the south, who has, over a considerable distance, traversed a dreary moorland carpeted with heath, Soutra hill suddenly discloses the finely cultivated and beautiful expanse of the Lothians, variegated with hill and dale, woods and waters, and richly foiled on the back-ground with the gay estuary of the Forth and the brilliant scenery of the coast of Fife; and a panorama is thus hung out to the view which as much enchants by its attractions, as it astonishes by the suddenness of its revelation. On the south-east of Fala are marshy grounds, extending to some hundreds of acres, called Fala-Flow, from part of which peats are dug for fuel. On the north side of Soutra hill is a fountain of excellent water, called Trinity well, which, though not now appearing to possess any medicinal qualities, was formerly in great repute and much frequented among invalids. The Earl of Stair is the sole proprietor of Fala; and there are five principal proprietors of Soutra. The real rental of the united parish is about £3,000. Assessed property of Fala in 1843, £1,583; of Soutra, £1,297 10s. The Hawick branch of the North British railway has two stations within a short distance of the western extremity of Fala. The road from Edinburgh to Lauder intersects the united parish south-eastward through its northern division; and sends off several cross-roads to the north, and one to the south, which runs along the eastern verge of Soutra, to form a junction with the road down Gala water in the parish of Stow. On the Edinburgh and Lauder road stands the village of Fala, $15\frac{1}{2}$ miles from Edinburgh, the seat of the parish church and of an United Presbyterian meeting-house, with their respective manse. The church and part of the village are situated on a small conical hill of the class called "laws;" and hence the

name Fallaw, abbreviated into Fala, and signifying 'the speckled hill.' Population of the united parish in 1831, 437; in 1861, 382. Houses, 77. Population of Fala proper in 1831, 312; in 1861, 249. Houses, 52.

The united parish of Fala and Soutra is in the presbytery of Dalkeith, and synod of Lothian and Tweeddale. Patrons, the Earl of Stair and George Grant, Esq. Stipend, £169 6s. 10d.; glebe, £25 10s., with pasturage for 20 sheep. Unappropriated tithes, £76 6s. 8d. Schoolmaster's salary, £34 4s. 4½d., with £25 school-fees. The parish church is an old and very plain building, with 250 sittings. The United Presbyterian church has an attendance of about 365. Fala parish was united to Soutra about the year 1600, its church becoming the place of worship for both parishes. On the summit of Soutra hill formerly stood the church and village of Soutra, appropriately and graphically designated by that name, which signifies, in the Cambro-British, 'the hamlet with a prospect.' This village was anciently a place of consideration and resort, and a scene of the stirring ostentatious charity of the Middle ages. Malcolm IV. founded here, in 1164, an hospital for the relief of pilgrims, and the shelter and support of the poor and the afflicted; and he endowed the institution with some lands near St. Leonard's in the vicinity of Edinburgh, and conferred upon it the privileges of a sanctuary. The masters and brothers of the hospital were owners of the property and apurtenances of the church. A causeway leading from the vale of the Tweed to Soutra, and still commemorated in various traces among the sinuosities of the mountains, bore the significant name of Girthgate, meaning the asylum or sanctuary-road, and affords proof that the refuge of Soutra was potent and famous. A small rising ground about half-a-mile south of the site of the hospital, is still called Cross-chain-hill, and would appear to have had a chain suspended for a considerable way along its summit to mark the limits of the privileged ground. When Mary of Gueldres founded the Trinity-college church of Edinburgh, she pervertedly bestowed upon it the endowments of Soutra hospital, and converted its dependent church into a vicarage. The Town-council of Edinburgh, getting possession in 1560-1 of Trinity church and its pertinents, became in consequence proprietors of the ecclesiastical apurtenances of Soutra, and the patrons of its church. By the seizure of its charity revenues, the ruin of its hospital, and the reduction, and afterwards the abandonment of its church, the village of Soutra was suddenly stripped of its importance, and brought to desolation. The seat of conviviality and busy though doubtful charity, of many public-houses, of a great hospital and of a general refuge for the distressed debtor, the weary traveller, the friendless pauper, and the afflicted invalid, is now silent and wild, and utterly abandoned to the lonely visits of the mountain sheep. Some hardly perceptible tumuli, overgrown with herbage, faintly indicate the site of prostrate dwellings. Slight irregularities of surface, with not a tomb-stone or the small tumulus of a grave, dimly mark the limits of a cemetery. A single aisle of the chapel, rising amidst a dreary sward of heath, and conserved from the common trackless ruin by its enclosing the burial-place of the Maitland of Pogbie family, is the sole memorial of Soutra, and the only monitor on this once-stirring and famous area of the instability and utter vanity of the institutions and creations of mortal man. The town of the pleasant prospect, Soutra, which once looked joyously down upon the gay and far-spreading landscape of the Lothians and the Forth, has utterly disappeared.

"Sweet smiling village, loveliest of the lawn,
Thy sports are fled, and all thy charms withdrawn;
Sunk are thy bowers in shapeless ruin all,
And the long grass o'ertops the mouldering wall."

FALA-DAM, a village in the parishes of Fala and Crichton, Edinburghshire. It stands on Cake-moor water, and on the road from Edinburgh to Lauder, $\frac{3}{4}$ of a mile north-west of the village of Fala, and $14\frac{3}{4}$ miles south-east of Edinburgh. Population of the entire village, 64; of the Fala section, 27. Houses in the whole, 22; in the Fala section, 11.

FALA-HALL, an extinct ancient baronial tower, whose site is now occupied by a farmery, about $\frac{1}{2}$ a mile north of the village of Fala, on the south-eastern verge of Edinburghshire. Nisbet designates it "an ancient monument of arms," and makes reference to it upwards of twenty times, in the first volume of his Heraldry, in illustration of the armorial ensigns of as many barons—"illuminated," he says, "in the house of Fala-hall."

FALA-HILL, a hamlet in the north-east corner of the parish of Heriot, 6 miles south of Ford, Edinburghshire.

FALBEY (Loca), a small lake in the parish of Parton, Kirkcudbrightshire.

FALFEARNIE BURN, one of the head-streams of the South Esk, in the parish of Cortachie, Forfarshire.

FALKIRK, a parish in the eastern part of Stirlingshire. It contains the towns of Falkirk and Grangemouth, the suburban villages of Brainsford and Grahamstown, the post-office villages of Camelon and Laurieston, and the villages of Bonnybridge, Glen, and Barley-side. It is bounded on the north by Dunipace, Larbert, and Bothkennar; on the east by Polmont and Muiravonside; on the south by Slamannan and Lanarkshire; and on the west by Dumbartonshire and Denny. In figure, it is nearly an oval, stretching north-east and south-west, but has a small flattened oval attached to its south-east side. Its greatest length is $8\frac{1}{2}$ miles; its greatest breadth is $5\frac{3}{4}$ miles; and its average breadth is none or little more than 3 miles. Nearly all its boundaries are traced by streams. A head-stream of Bonny water rises at Sauchierigg, on the southern boundary of the south-west end of the great oval of the parish, and bends away westward, northward, and north-eastward, receiving from without two streams which combine with it to form the Bonny, and every where over a distance of $5\frac{3}{4}$ miles, tracing the boundary till within a mile of the Carron, when it runs across a small wing to make a confluence with that river. Carron water touches the boundary 5 furlongs north-west of where the Bonny makes its detour inward; and thence, over a geographical distance of 6 miles, traces, in general, the boundary on the north; but, in the lower part of this course, it becomes somewhat sinuous, and being rivalled in sinuosity by the capriciousness of the boundary-line, it intersects three tiny wings, and makes three brief recessions, all within $1\frac{3}{4}$ mile of Grangemouth. West Quarter burn rises at the line of attachment between the large oval of the parish and the small flattened oval, runs to the limit of the former, and flowing north-eastward and northward, traces the boundary over a distance of six miles, and then near Grangemouth falls into the Carron. Avon water rises 3 furlongs south of the source of West Quarter burn, flows $2\frac{1}{2}$ miles westward through the parish, and thence runs south-westward, south-eastward, and eastward, tracing, over a distance of $7\frac{1}{2}$ miles, the boundary with Dumbartonshire, Lanarkshire, and Slamannan. Four rills rise in the parish, three of which run northward to the Bonny

or the Carron, and one eastward to West Quarter burn. Three small lakes lie in the upper part of the parish; but they possess little interest. The parish, at its north-east end, approaches within $\frac{3}{4}$ of a mile of the Forth; and from its boundary in that direction, till near the town of Falkirk, as well as further inland along the banks of the Carron, it is a sheet of perfectly level and exceedingly rich land. But fame has completely anticipated any modern topographical writer in proclaiming through Scotland the opulence and the peerless agricultural beauty of "the carse of Falkirk." Behind the carse, the surface slowly rises, and becoming quite changed in the character of its soil, belongs, for the most part, to the class of dryfield. Though it is here materially less fertile, and presents a different picture to the eye, yet it possesses, in the undulations and softly hilly risings of its surface, and in its fine enclosures and thriving woods, its villas and burgh and villages, not a few features of interest, which challenge and fix the attention of a tourist. But in the small oval of the parish, or the tract which marches with Slamannan, the whole surface was originally a dismal bog; and even with the aids and results of georgical operation, still retains a strong dash of its pristine appearance. Yet nowhere than in this parish as a whole has agricultural skill been more vigorously plied or more successful in improvements. Almost every useful novelty in the art of husbandry which appears in other districts, is copied or adopted; and the farmers are conspicuous for the enterprising spirit which has won fame to Stirlingshire as an agricultural county. About one-eighth of the entire area is under wood; somewhat more than one-seventh is either waste or in pasture; and all the rest is either regularly or occasionally under the plough. Coal of excellent quality is so abundant as to be largely exported. Ironstone, limestone, and sandstone occur in the same districts as the coal. Silver, copper, cobalt, and lead, have been found, but not in considerable quantity. The principal landowners are Forbes of Callendar, the Earl of Zetland, Sir Thomas Livingstone, Bart., and sixteen others. The value of assessed property in 1843 was £28,747 14s. 2d.

Some of the more elevated parts of the parish—including not only eminences, but such stretches of territory as permit a tourist or traveller to move along and possess a continuous enjoyment of the intellectual treat—are hung round by a panorama of no common beauty. The view from the mause and churchyard of Falkirk, is noticed by Sir Walter Scott, as one of the finest in Scotland. From this point, or from other places northward and north-westward of the town, a luxuriant country, 12 or 14 miles square, spreads out before the eye, almost luscious in the beauties of its vegetation, dotted with mansions and rural spires, chequered by the masts and rigging of ships passing along the canal or harboured at Grangemouth, intersected by the opening estuary of the frith of Forth, bearing along its sail-clad ships or its smoking steamers, and shut in by the fine outline of the Ochil hills, over whose summits look up in the far distance the cloud-wreathed or snow-capped tops of some Highland mountains. When this prospect is mantled in the darkness of night, crimson and lurid flashes bursting fitfully up from the Carron iron-works, give it an aspect like that of beauty conflicting with death, and, when refracted by a thick moist atmosphere, or borne down by a pressure of clouds, assume by turns a majestic or a sublime and awful appearance. A hill on the grounds of Mr Forbes of Callendar, a little to the south-east of Falkirk, commands a prospect scarcely inferior in beauty, and considerably greater in ex-

tent, and one which Bruce, the traveller to the sources of the Nile, declared to be finer than any which he had seen in the whole course of his wanderings. Callendar, besides being the largest estate, is otherwise remarkable; so that we have separately noticed it. See CALLENDAR. Kerse-house, the seat of the Earl of Zetland, is an Elizabethan pile, of various dates, situated in a finely wooded park, in the eastern part of the carse. Bantaskine house, the seat of Mr Hagart, is an elegant modern edifice, situated amid beautiful grounds, on an eminence $\frac{1}{2}$ a mile south-west of the burgh. There are in the neighbourhood of the burgh four nurseries and four tan-works; at Grahamstown, two works for the manufacture of pyroligneous acid; at Bonnymoor and Camelon, three distilleries; on the canal, a ship-building yard and a saw-mill; and in various parts of the parish, six corn-mills, two saw-mills, four breweries, four wood-yards, three brick and tile-works, and eight or nine quarries. The Carron iron-works, though not in the parish, stand close on its boundary, not 2 miles distant from the town, and have an intimate connexion with both its population and its interior trade. See CARRON. The Forth and Clyde canal commences at the north-east limit of the parish at Grangemouth; runs south-westward past Grahamstown and Camelon; is carried over the Glasgow and Edinburgh north road, at the latter place, by a short and low arched aqueduct; now bends westward till it nearly touches Bony Water, the boundary-line of the parish, at Bonny mill; and thence runs south-westward along the bank of Bony water, till it enters Dumbartonshire at Woodneuk; thus intersecting the parish at its greatest length, and describing a course through it of 9 miles. About $4\frac{1}{4}$ miles from its commencement, at a point where it has been raised by sixteen locks from the level of the sea, it sends off, on its south side, the Edinburgh Union canal. The latter, immediately on retiring, describes the arc of a circle, and over that arc is lifted up by a rapid series of locks, which have a shelving appearance, along the face of the gentle and curved acclivity; it then runs a mile eastward, penetrates the body of a hill, and passes through it in a tunnel upwards of half-a-mile in length; and after a further course of $1\frac{1}{2}$ mile, first south-eastward, and next eastward, passes away into Polmont. See articles FORTH AND CLYDE CANAL, and UNION CANAL. The Edinburgh and Glasgow railway traverses the parish through an extent of 7 miles, great part of it in a course entirely parallel with that of the Union canal, having a tunnel of 880 yards in length, afterwards commanding a gorgeous view of the basin of the Forth, and spanning the locks of the Union canal on a remarkably fine viaduct. The junction railway, from the Edinburgh and Glasgow at Polmont to the Scottish Central at Larbert, also traverses the parish, and has a station in it at Grahamstown. The north road from Edinburgh to Glasgow traverses the parish nearly due westward, through Laurieston, Falkirk, and Camelon. At the last of these places, the road to Stirling branches off, but runs along only $1\frac{1}{4}$ mile before passing into Larbert. Other roads are so numerous and intricately ramified that to trace them would be insufferably tedious. Population of the parish in 1831, 12,743; in 1861, 17,026. Houses, 2,160.

In the barony of Seabegs, in this parish, are several of those artificial earthen mounds, called moats, which occur in so many localities in Scotland, and were anciently the seats of justiciary courts and deliberative assemblies. In various places, urns filled with ashes, and stone coffins containing human bones, have been dug up; and in the

hollow of a freestone quarry near Castlecary, some wheat was found 85 years ago, which had become black, and was supposed to have lain concealed from the period of the Roman possession. In several parts of the parish are traces of ANTONINUS' WALL: which see. From the line of this wall, nearly opposite Callendar house, an earthen wall of considerable height and thickness, without a fosse—broad at the top, and designed apparently to be both a road and a line of defence—branches off eastward, runs through West Quarter house garden, and passes away toward the old castle of Almond. Though it can hardly, if at all, be traced beyond that castle, it may be presumed to have originally extended to the Roman camp in Lulithgow, on the spot which afterwards became the site of the royal palace. Old Camelon—houses and streets of which were traceable at a comparatively late date—was anciently a Roman town; and is even spoken of—fahulously, we suspect—as the scene of opulence and royal adornings at the period when the Romans took possession. See CAMELON. Several interesting organic remains have, in recent years, been found in the parish, particularly part of the skeleton of a whale, 18 inches below the surface of the ground, about 3 miles from the sea, and a petrified tree, about 5 feet in girth, in the rock of the railway tunnel, 129 feet from the surface.

The parish of Falkirk is notable in history as the scene of two important battles. The first battle of Falkirk was fought on the 22d of July, 1298, between Scottish and English armies, headed respectively by Sir William Wallace, the guardian of Scotland, and Edward I. of England. The Scottish army, consisting of 30,000 men, collected by Wallace and other chiefs, took post somewhat more than half-a-mile north of the town of Falkirk, to await the approach of the English; and were drawn up in three—the English writers say four—divisions of a circular form, with their spears advanced horizontally, and with intermediate lines or bodies of archers, and the cavalry about 1,000 strong in the rear. While Wallace had the chief command, Sir John Comyn of Badenoch, Sir John Stewart of Bonkill, Sir John Graham of Abercorn, and Macduff, the uncle of the Earl of Fife, shared his responsibilities, and appeared with him in the field. The English army, amounting, according to some accounts, to 86,000 foot, but really consisting of a conjectural number of infantry, and a fine body of veteran cavalry, who constituted the main strength, advanced in three great bodies; the first led by the Earl Marshal of England and the Earls of Hereford and Lincoln, the second by the Bishop of Durham and Sir Ralph Basset de Drayton, and the third—which was probably intended as a corps de reserve—by King Edward in person. A morass which was in front of the Scottish army, but is now drained by the canal, considerably embarrassed the English in their attack. The first division, advancing with great ardour, became momentarily embarrassed, and found that they could not rush onward to the front of the foe; but, turning to the left, they found firm ground, and ran down upon the Scottish army's flank. The second division, more wary of the ground, and hurried on by the impetuosity of Sir Ralph Basset, their commander, assailed the left wing of the Scots almost at the moment of the first division charging the right. The Scots made so brave a resistance that the English, depending mainly on their cavalry, could not, for some time, make any impression; but eventually they were thrown into disorder, and subjected to fearful carnage, while the whole of their cavalry, commanded by nobles who feared and hated Wallace, fled. Stewart and his division were

surrounded; and, after a gallant defence, both the commander and the most of his troops were hewn down. Wallace, for a brief period, continued the combat against the whole power of the enemy; till seeing himself about to be attacked in the rear and surrounded, he retreated with such valour and military skill as to cross the Carron, at a ford near Arthur's Oven, in view of the victorious army. The total loss of the Scots was about 15,000 men. Though no monuments exist on the field, there are two in its vicinity. On the summit of a hill, a mile south-east of Callendar wood, stands a stone 3 feet high, 1½ broad, and 3 inches thick, called Wallace' stone, commanding a full prospect of the field of action at the distance of two miles, and probably marking the spot on which Wallace took post previous to the battle. In the churchyard of Falkirk, is the gravestone of Sir John Graham, who fell in the action, and who, as well as Sir John Stewart, was buried in the cemetery. The gravestone has been trebly renovated; or rather there are three superincumbent stones, each of the upper ones being a copy of the one beneath it. On all are the following inscriptions:

"Mente manque potens, Vallæ fidus Achates,
Conditur hic Gramus, bello interfectus ab Anglis.
xxii. Julii, anno 1298."

"Heir lyes Sir John the Grame, bath wight and wise,
Ane of the chiefs who reschewit Scotland thrice.
Ane better knight not to the world was lent,
Nor was guile Grame of truth and hardiment."

The second battle of Falkirk was fought on the 17th of January, 1746, between 6,000 of the royal troops, and about an equal or probably superior number of the troops of Prince Charles Edward. While the Pretender invested Stirling, Lieutenant-general Hawley, at the head of the small royal army, marched from Edinburgh to relieve the castle; and arriving at Falkirk, he encamped between the town and the former field of battle, intending to wait there till he should obtain sufficient intelligence for the effective arrangement of his operations. His antagonists, so far from being intimidated by his approach, resolved to attack him in his camp; and, marching from their rendezvous, adroitly used such stratagems to divert and deceive the royal troops, that they were about to cross the Carron at Dunipace, before they were perceived. Hawley, the commander, was not at the moment in his camp; but, finding his troops formed on his hurried arrival from the vicinity, and seeing the Highland infantry rapidly marching toward a hill upwards of a mile south-west of his position, and about a mile due south of the aqueduct bridge since erected, he ordered his dragoons consisting of three regiments, to take possession of the hill, and commanded his infantry to follow. The Highlanders won the race, which was now run for the occupancy of the vantage-ground, and drew up in a battle-array of two lines, with a reserve in the rear. The royal troops, making the most of their circumstances, formed in two lines along a ravine in front of the enemy; but, owing to the convexity of the ground, saw their antagonist force, and were seen in their turn, only in the central part of the line. Their dragoons were on the left, commanded by Hawley in person, and stretching parallel to more than two-thirds of the enemy's position; and their infantry were on the right, partly in rear of the cavalry, and outlined by two regiments the enemy's left. The armies standing within 100 yards of each other, both unprovided on the spot with artillery, Hawley ordered his dragoons to advance, sword in hand. Meeting with a warm reception, several companies, after the first onset, and receiving a volley at the distance of 10 or

12 paces, wheeled round, and galloped out of sight, disordering the infantry and exposing their left flank by the flight. The Highlanders taking advantage of the confusion, outflanked the royal forces, rushed down upon them with the broadsword, compelled them to give way, and commenced a pursuit. The King's troops were greatly incommoded by a tempest of wind and rain from the south-west, which disturbed their vision and wetted their gunpowder, but did not annoy their antagonists; and, but for the spirited exertions of two unbroken regiments and a rally of some scattered battalions, who checked the pursuers, they would have been entirely routed. Prince Charles with his army remained during the night at Falkirk, and next day returned to Bannockburn. Hawley's total loss in killed, was 12 officers and 55 privates, and in killed, wounded, and missing, 280. Among the persons of rank who were left dead on the field, were Sir Robert Munro of Foulis, Bart., and his brother Duncan, a physician. They were buried beside each other in the churchyard of Falkirk, and commemorated in a superb monument erected over their ashes, and inscribed with a succinct statement of the circumstances of their death. The ground on which the battle was fought is now intersected by the Union canal and the Edinburgh and Glasgow railway.

The parish of Falkirk is in the presbytery of Linlithgow, and synod of Lothian and Tweeddale. Patron, the Crown. Stipend, £339 4s. 2d.; glebe, £10 10s. Unappropriated teinds, £1,474 18s. 1d. Inconsiderably populated parts of the parish, *quoad civilia*, are annexed *quoad sacra* to the parishes of Slamannan and Cumbernauld. The parish church was built in 1811, and contains 1,300 sittings. There is a church at Camelon, built in 1840, constituted *quoad sacra* parochial in 1853, and containing 660 sittings. There is at Grangemouth a large school-room belonging to the Earl of Zetland which is employed as a chapel of ease. There are two Free churches at respectively Falkirk and Grangemouth: attendance at the former, 565,—at the latter, 350; sum raised in 1854 in connexion with the former, £335 0s. 4½d.,—in connexion with the latter, £210 18s. 2d. There are three United Presbyterian churches in Falkirk,—the East, with an attendance of 500; the West, with an attendance of 600; and the South, with an attendance of 270. There is a Reformed Presbyterian church at Laurieston, with 250 sittings, and an attendance of about 60. There are also in Falkirk a Congregational chapel, an Evangelical Union chapel, a Baptist chapel, and a Roman Catholic chapel. The census of 1851 exhibits, as within the parliamentary burgh of Falkirk, two Establishment places of worship, with 2,050 sittings, and an attendance of 1,081; two Free church places of worship, with 1,620 sittings, and an attendance of 915; two United Presbyterian places of worship, with 2,651 sittings, and an attendance of 835; one Reformed Presbyterian place of worship, with 250 sittings, and an attendance of 60; one Congregational chapel, with 1,000 sittings, and an attendance of 440; two Baptist chapels, with 160 sittings, and an attendance of 37; and one Roman Catholic chapel, with 300 sittings, and an attendance of 313.—There are two parochial schools, one of them English, and the other classical. The master of the former has £34, besides fees; and the master of the latter, who employs an assistant, has £17 2s. 2½d. salary, with about £35 fees, and £8 6s. 8d. other emoluments. There are in the parish about 40 other schools, attended by about 2,000 children. One of these is a charity school, with an elegant school-house. A bequest was left in 1853 by Mr. Gaff of Falkirk for another charity school. Several others are aided by local

endowments, or by public salaries. And in the burgh are good private seminaries, some for boys, and others for girls.

Large as the parish of Falkirk still is, it was formerly so extensive as to include the present parishes of Denny, Slamannan, Muiravonside, and Polmont. All of these, except the last, must have been detached from it at a very early period; and Polmont was detached in 1724. When the estate of Callendar was sold after its confiscation in 1715, such tithes as were not made part of it, were conveyed under the stipulation that they should be subject to the stipend of a minister for a new parish to be detached from Falkirk. Polmont accordingly draws stipend from the parishes both of Falkirk and of Denny, in which the estate is situated. The church of Falkirk was formerly called *Ecclesbrae*, or 'the Church on the brow;' and according with the descriptiveness of this name, it and the town around it stand on an eminence or rising ground which, on all sides, has a declivity or brae. In the Gaelic language, it is called *Eaglais bhris*, but more commonly *Eglaìs bhrec*. The former of these phrases signifies 'the Broken church;' and is not inaptly translated, 'Falkirk,' or 'the fallen or falling church.' Nor may the name have been without allusion; the parish place of worship which preceded the present one having presented undoubted appearances of not being all built at one epoch. In 1166, it was given by the Bishop of St. Andrews to the monks of Holyrood; and, as it now became a mere vicarage, and may have suffered neglect, it possibly fell into ruin, and assumed the properties, and consequently the name, of a 'fallen kirk.' The other Gaelic designation, *Eglaìs bhrec*, signifies 'the spotted church,' and is adopted by Buchanan in the translated name, 'Varium Sacellum,' applied by him to Falkirk, and supposed to allude to the party-coloured appearance of its stones. Another derivation of the modern name is from *val-lum* and *kirk*, easily transmutable into Falkirk, and signifying 'the church upon the wall,' in allusion, as is alleged, to the near vicinity of the wall of Antoninus.

FALKIRK, a post and market town, a parliamentary burgh, the capital of the eastern part of Stirlingshire, is situated near the centre of the parish of Falkirk, about a mile from the Falkirk station of the Edinburgh and Glasgow railway, 11 miles south-east of Stirling, 22½ north-east by east of Glasgow, and 24 west by north of Edinburgh. It stands, as to its main body, on a gently rising ground, dotted round in its environs with neat and beautiful villas, and sending off in different directions two elongated and thin suburbs. Seen from the soft eminences to the north and north-west, it presents, with its fine spire and its thick grouping of buildings, a beautiful foreground to the brilliant landscape over which it presides; but, when entered, the town is far from being in general of a pleasing aspect. An utter want of uniformity or tastefulness in its buildings, the absence of all spaciousness and plan in the arrangement of its streets, and a deficiency in the indications of enterprise and refinement in the number or architecture of its public edifices, depreciate it as a town far below the importance which belongs to it as a market, and as the seat of a great population. Its High-street, or main street, indeed, is, over most of its length, of half-a-mile from east to west, wide and airy,—and has in its wide part large houses and good shops,—and about its middle, sends back in one side a recess in which stands the town-hall; but even this is uniform in nothing, mean in some of its edifices, constantly changeful in its breadth, and destitute of the

trivial grace of straightness. Over nearly half its length, from a little west of its middle eastward, the sides of this street are subtended by mimic crowds of tiny streets, which, pressing in upon it at various angles of junction, or of divergency from parallelism—though they do give the town an extreme breadth of not more than 300 yards—occasion more serious perplexity to a stranger than he feels in two-thirds of the far-spreading New town of Edinburgh. The branch-streets, and their divergent and intersecting alleys, are no fewer than about 20 in number, several of them only about 100 yards in length, some of them not more than about 60 yards; and, with scarcely an exception, they are confined, narrow, unpleasing thoroughfares. An area, however, at the west end of the clustered part of the town, and graced with the stately form of the parish church, fully partakes the airy appearance of the principal part of the High-street. But the town, properly viewed, is quite as remarkable for the straggling extension of its limbs away among cornfields, and an open agricultural territory, as for the squeezing up of its main body within oriental street limits. Both the east and the west ends of its High-street are, in fact, solitary street lines which look as if they were wandering away from the town with which they communicate. Another thoroughfare, called Kerse-lane, after being reached by angular turnings, or irregular debonchings through the north wing of the town, straggles away in utter loneliness upwards of $\frac{1}{4}$ of a mile on the road to Grangemouth. But, more surprising than all, a thoroughfare, leading due north from the area at the middle of the High-street, runs onward to fully the distance of a mile, $3\frac{1}{2}$ times the length of the body or compact part of the town, and 6 times its breadth; and this enormous elongation, over two-thirds of its way, is but a solitary street, and over the other third, which is the central one, sends off branch streets averaging not more than 160 yards in length. The extreme third of it begins on the north side of the canal, and is the village or suburb of Brainsford; and the central third is the village or suburb of Grahamstown. These suburbs owe their rise to their being on the road to the great iron works of Carron, leading down on the one side from these works, and on the other from Falkirk to the most convenient point on the canal. At Brainsford a basin projects out from the canal; and a railway communication comes up to this from the iron-works. On the other or Grahamstown side of the canal, are the premises of the Falkirk foundry. Grahamstown, had it occupied an independent position, or been unassociated as a suburb with a town of utterly irregular arrangement, would have been a village of pleasing aspect, presenting, in its uniformity of plan, and the spaciousness of its street called the Avenuc, and the villa form of several of its houses, a neat and orderly appearance.

The steeple of the town-hall in the central area or market-place of Falkirk, is an elegant structure, 140 feet high, containing a clock and two bells, one of them large and full-toned. It was built in 1813, on the site of a former steeple, which had been erected in 1697 and taken down in 1803. The office of the Commercial Bank, in the High-street, erected about 26 years ago, is a very elegant structure. The parish church is a square building, with windows of a Gothic form, and a circular gallery. Its predecessor was a cruciform structure, with a central area of four lofty arches, forming the body of the church, and surmounted by a steeple; and these arches and the steeple still remain, doing service as a porch to the present church. The dis-

senting places of worship, in a general view, are very plain buildings; though several of them draw attention by their commodiousness. The Roman Catholic chapel was built in 1840, and is a Gothic edifice, with belfry and ornamental cross. The prison is strictly a place of confinement, without any airing ground. The poor-house contains accommodation for 224 persons; and the number of inmates on the 1st of July 1850 was 131,—on the 1st of July 1860, 128. There is an almshouse for four aged persons, founded in 1640 by Lord Livingstone. There are several associations for the support of the aged, the infirm, and the sick. A bequest of £500 was left by W. Simpson of Plean for behoof of the poor. The town has two public reading-rooms, a subscription library, two other public libraries, a school of arts, a horticultural society, an agricultural association, a savings' bank, twenty-one insurance offices, and branches of the Commercial bank, the National bank, the Clydesdale bank, the Royal Bank, and the Bank of Scotland. Two newspapers are published, the Falkirk Herald, and the Advertiser. The principal inn is the Red Lion. The town has a good supply of water from the high grounds to the south.

Falkirk is not, in the strict sense, a manufacturing town. Its principal manufacture appears to be leather; but even this is not of considerable extent. The town has no factories; and has even ceased to have any hand-loom weaving of cottons. The foundry at Grahamstown employs about 1,000 men and boys, in the manufacture of all sorts of cast-iron articles; and the various works noticed in our account of the parish, employ a large proportion of the town's inhabitants. The general retail trade also is large. A weekly market for agricultural produce is held on Thursday, and is well attended. Some general dealers in corn and cattle make Falkirk their head-quarters, and draw hither periodically a considerable influx of strangers. In the neighbourhood of the town, also, are held the most extensive fairs in Great Britain for black cattle, sheep, and horses. These are famous all over the kingdom, and have been so from time immemorial, under the name of the Falkirk trysts. They have been held since about the year 1775 on Stenhouse-moor, an uncultivated field of about 80 acres in extent, on the estate of Steuhouse, in the parish of Larbert, about 3 miles north-north-west of Falkirk. Before that time, they were held for many years on Bonnymoor, 3 miles west-south-west of Falkirk, the scene of the skirmish between the radicals and the military in 1820; and at a still more remote period they were held on the Reddingrig-moor, a large uncultivated piece of ground, on an elevation in which a monument to Sir William Wallace was erected in 1810. These trysts serve generally for the meeting of the Highland sellers of live stock with the Lowland buyers, or for transferences from the great rearers to the great fatteners and the general dealers; and they may, without much exaggeration, be designated the grand focus of the cattle trade of Scotland, or the main centre toward which the subordinate cattle fairs converge. They are held thrice a-year, on the second Tuesday of August, the second Monday of September, the second Monday of October, and following days, generally for three days at a time.

For many days previous to the September and the October trysts, all the highways which lead from the north to the trysting-ground exhibit, from morning to night, an almost uninterrupted line of sheep and oxen. And on a recent occasion, when some unexpected obstacle presented itself at the St. Ninian's toll-bar to the passing of the droves, the whole

line of road northward from that point as far as to Sheriffmuir, a distance of not less than 5 or 6 miles, was, in the course of a few hours, completely blocked up. The stir which the trysts occasion in the neighbourhood is remarkably great. The inns at and around Falkirk are completely occupied for several days before each. Not less than from fifty to a hundred large and commodious tents are erected on the ground for the purpose of affording refreshments to the crowds which resort thither; and agents of the principal banks in Scotland always attend in temporary booths for the purpose of facilitating monetary transactions. Pennant mentions that the number of cattle yearly exposed for sale at these trysts, when he visited Scotland in 1772, amounted to 24,000. Dr. Graham, in his 'View of the Agriculture of Stirlingshire,' published in 1812, states that at the August tryst there are generally exhibited from 5,000 to 6,000 black cattle; at the September tryst about 15,000 black cattle, and 15,000 sheep; and at the October tryst from 25,000 to 30,000, and even 40,000 black cattle, and about 25,000 sheep. At the last two trysts, especially at that of October, a great number of horses are also exposed to sale. "Thus it appears," says Dr. Graham, "that there are annually exhibited at these trysts above 50,000 black cattle, together with about 40,000 sheep. Taking the former at the moderate average value of £8, and the latter at that of 15s. each, the value of the whole will amount to £430,000. An intelligent friend who lives near the spot calculates that 50,000 black cattle are exposed to sale at the last two trysts alone; and he estimates on good ground that the total value of the cattle bought and sold at these trysts must amount to half-a-million sterling." The estimates, by competent judges, at more recent periods, are variously higher and lower, seeming to indicate a very considerable fluctuation; and one of them goes so high as to make the average number of cattle at the three trysts yearly no less than at least 300,000.

The sheep market is held on the first day of each tryst; and here are found lots from almost every district in the north and north-west of Scotland, including Sutherland, Ross, Inverness, Argyle, and the Western Islands. Some of the droves have travelled from 200 to 300 miles; but as the stages are short and easy, and the time occupied by the journey from three weeks to a month, the seller generally contrives to bring his lot to the ground in good condition, neither foot-sore nor weary. The black cattle are shown and sold on the second day, or continued over to the third, should the market be a dull and hanging one. There are the runts from Angus, Aberdean, and Banff, milkers from Ayrshire, short-horned from the Lothians, and the small hardy kyloes from Argyle, the Western Islands, and even Shetland. There are also droves of Shetland ponies, shaggy and unkempt, which have never known the trammels of bit or bridle. The men who have accompanied and tend the lots, are so dissimilar in tongue, dress, and aspect, that it is difficult to believe they owe the same Sovereign and belong to the same country as their Lowland brethren. Although the kilt is now rarely seen, there is plenty of the bonnet and tartan, and Gaelic is heard on every side. At times when the market is densely crowded, and there is danger of the separate lots being mixed, the Celt is seen in all his fury and excitement; his Highland blood is up, and he screams himself hoarse in shouting to his dogs, ordering his neighbours or assistants, and threatening with the infliction of his cudgel those who show a disposition to encroach upon his stance, or throw his lot into confusion. The maledictions between the herdsmen are ex-

changed in Gaelic; and as the colleys seem to catch the spirit of their masters, the contention is generally wound up by a general worry—presenting altogether a scene of the most admired disorder, and of no little amusement to those who have nothing else to do but to look on. In the main, however, the Highland drovers are good-natured fellows, and disposed to be civil and obliging; but occasional squabbles are unavoidable where so many are gathered together, and where there is so much risk of the various lots getting mixed and confused. Apart from the more important business of the tryst, there is ample scope for the small traffic, the treatings, and the amusement which characterise all the great Scottish fairs. Caravan "shows" are abundant; Wombell's menagerie perhaps is there; stalls, huxtery-carts, merry-go-rounds, tumblers, tricksters, fiddlers, and all the motley tribe akin to them, crowd the ground. The tents also supply but too plentifully the means of coarse conviviality and of drunkenness; and on many a spot behind them, for the assuaging of the honest hunger of the herdsmen and other peasants, hangs over a hot fire an immense broth-pot, almost of the capacity of a cauldron, in which potatoes and the "king of grain" are

"Tumbling in the boiling flood
WT' kail and beef."

Falkirk occupies the site of one of those military stations on the wall of Antoninus, known by the name of the forts of Agricola. Hence a number of the relics of the Roman people have been found from time to time here and the neighbourhood. About 45 years ago there were discovered at Parkhouse, about a quarter of a mile to the north-west of Falkirk, two urns containing human bones, which bore evident marks of having been subjected to the action of fire; and these must have been Roman, for no other people ever possessed this country with whom increment was a customary practice. About 27 years ago a number of fragments of earthenware were dug up in a garden in the Pleasance of Falkirk, and among them one vessel, round the margin of which the word 'Nocturna,' was legible. They were generally unglazed, of a white or brown colour, and some ornamented with raised figures on the outer surface. A piece of ornamental brass, that apparently had been used as the top of a flag-staff, was also discovered near Camelon, by workmen employed in digging the foundations of a distillery. The original town of Falkirk was evidently a place of considerable antiquity; and is supposed to have once been wholly comprehended within the ancient barony of Callendar. After having become dependent first on the see of St. Andrews, and next on the abbey of Holyrood, its lands came to be included in the extensive barony and lordship of Kerse, belonging to this abbey, which was, in 1393, erected by Robert III. into a free regality. At the Reformation, the monastery of Holyrood feued out its temporal possessions to Sir John Bellenden, Lord-justice-clerk, whose son, Sir Lewis, obtained in 1587 a Crown-charter from James VI. of these acquisitions, which were constituted into the new barony of Broughton. The barony of Kerse, called Abhotts-Kerse, comprehending the lands of Falkirk, and the patronage of the church, was included in this new barony. In 1606, Sir Lewis Bellenden conveyed the lands of Falkirk to his brother-in-law, Alexander, 7th Lord Livingstone, who possessed the barony of Callendar. The family of Livingstone obtained the barony of Callendar in the reign of David II. Part of the town of Falkirk held of this family. In 1600 James VI. granted a charter of *novi damus* in favour of Alexander Lord Livingstone, of the barony of

Callendar, in which the town of Falkirk was erected into a free burgh-of-harony, with privileges of merchandise and artificers, as in other free burghs, and with power to Lord Livingstone of creating burghesses, holding weekly markets, having two fairs annually, of electing bailies and other officers for the government of the burgh, and of holding courts within the burgh. This charter also contained a grant of regality, but which it was provided should evacuate on payment of £10,000, said to be due to Lord Livingstone by the Crown. In 1634 Alexander, Earl of Linlithgow, granted the barony of Callendar to his brother, Sir James Livingstone, who was created by Charles I. successively Lord Almond and Falkirk, and Earl of Callendar.

In 1637 the Bishop of Edinburgh, to whose see the possessions of the abbots of Holyrood had been annexed, with consent of his dean and chapter—the minister of Falkirk being one of his prebendaries—conveyed to Lord Almond, by charter of *novo damus*, the whole barony of Falkirk, with all the feudal casualties and powers formerly held by the abbots of Holyrood. This charter confirmed the grant of Alexander Earl of Linlithgow to Lord Almond, and conveyed a power to the grantee of bailiary and justiciary, &c. In 1646 the Earl of Callendar obtained a charter from the Crown, erecting his estates, including the baronies of Callendar and Falkirk, into a free regality, to be called the regality of Callendar, with the usual powers and privileges. By this charter, the town of Falkirk, as well as that part of it which from ancient times was held of the abbots of Holyrood as the remaining part of the town which was from ancient times part of the barony of Callendar, is united and erected into one whole and free burgh-of-regality, to be called the burgh of Falkirk. Power is given to build a court and prison, to erect a market-cross, to elect and name bailies and other magistrates, to create free burghesses, with liberty to them to sell all staple goods and others imported from within or without the kingdom, and generally to exercise all the privileges of a burgh of regality. There is also a grant of two weekly market-days and four free fairs, with power to the Earl and his bailies to draw the customs of the fairs and markets, and to apply them as they think proper. This charter was ratified by parliament, March 27th, 1647; but the ratification is now lost. The estate of Callendar, on the Earl's resignation, passed to Alexander Lord Livingstone, his nephew, who, in 1663, obtained a charter from Charles II., which recites the charter of Charles I., and besides conferring various privileges, and constituting the whole estates of the grantee into an earldom, it of new erects the town of Falkirk, with the pertinents thereof, into a free burgh-of-regality, with all the privileges in the charter recited. The town continued to hold of the family of Livingstone till the attainder, in 1715, of the Earl of Linlithgow and Callendar. During the time of the estate of Callendar being held by the York buildings' company, there was always a resident baron-bailie; and, after it was acquired by Mr. Forbes, a person continued to be appointed by him to that office till about the end of the last century. Since then the office has been vacant, and the old barony jail was allowed to go to ruin, and afterwards removed.

The management of the affairs of the town and community became now vested in two separate bodies, the stent-masters and the committee of feuars. The stent-masters are a very ancient body, and their records go back more than 150 years. They are elected annually, and are 24 in number; four being chosen by the merchants, two by each of the trades of hammermen, wrights, weavers, shoe-

makers, masons, tailors, bakers, and brewers, and four from the suburbs of the town. Every person who carries on business in any of these trades is qualified to vote for and be elected a stent-master of his craft. After election the stent-masters name out of their body a preses and treasurer, and they have also a clerk. The stent-masters are the governing body in the town, and their powers are founded on immemorial usage. They have no jurisdiction, however, and apply to the sheriff by ordinary action, in name of their preses and treasurer, to have their decreets enforced; and, it is said, that judge has uniformly supported their authority. The committee of feuars is of more recent origin. The greater part of the town is held in feu of the estate of Callendar. The feuars had by their titles generally a right of pasturage, and of feal and divot, and quarrying stones in the moor of Falkirk. But a declarator of division of the community having been brought by the proprietor of Callendar, the feuars obtained, by a decree of the court of session, in return for a renunciation of their rights of property, community, or servitude in the moor, certain important privileges and immunities. Since the date of this decree the feuars have held meetings as a separate body. They elect a preses, treasurer, and clerk, and keep a record of their proceedings. The property of the town consists of its water-works and wells; of a piece of land called the washing-green; of Callendar riggs, extending to about an acre, on which the markets are held; of the customs of the town, formerly levied by the superior; and of the town's steeple, with a shop under it. The revenue arises chiefly from an assessment collected from the inhabitants under the name of stent, or water-money, amounting to about £200 per annum; and the annual expenditure was estimated some years ago at £174 2s. The powers of the stent-masters extend over the regality, which includes some arable land, but excludes the suburbs of Grahamstown, Brainsford, &c., which are comprehended within the parliamentary boundary.

There is no burgh-jurisdiction of any sort; but justice-of-peace courts for the district are held in the town once a-month, the ordinary sheriff court for the eastern district of Stirlingshire is held on every Monday and Wednesday during session, and the sheriff small debt court is held every Wednesday. There is no corporation now possessed of exclusive privileges. During the existence of the regality powers in the family of Livingstone, burghesses were created, and corporations of craftsmen erected. The burghesses were admitted by the superior himself, who subscribed the burghess ticket. The corporations appear to have had charters from the superior, one of which to the hammermen, dated 1st July, 1689, is still extant, granting them exclusive privileges, and giving power to choose a deacon and box-master. These privileges are now obsolete, and the only remnant of the privileges of the corporations is their voice, as separate bodies, in choosing the stent-masters. By the act 3 and 4 William IV. c. 77, the town obtained a municipal constitution. The council consists of a provost, three bailies, a treasurer, and seven councillors. A sheriff-substitute, and the procurator-fiscal for the eastern district of Stirlingshire reside in Falkirk. On any emergency the inhabitants watch the town, under the name of the town-guard. Falkirk unites with Linlithgow, Hamilton, Lanark, and Airdrie, in returning a member to parliament. Constituency in 1862, 355. Population in 1841, 8,209; in 1861, 9,030. Houses, 1,026.—Among distinguished natives or denizens of Falkirk may be mentioned the engineers William Symington and Dr. James

Walker, the admiral Sir Charles Napier, and the divines Dr. James Wilson, Dr. Henry Belfrage, and John Brown Patterson.

FALKLAND, a parish, containing the royal burgh of Falkland, the post-office village of Freuchie, and the villages of Balmhrac and Newton of Falkland, in the Cupar district of Fifeshire. It is bounded by Strathmiglo, Auchtermuchty, Kettle, Markinch, Leslie, and Portmoak. Its length eastward is 6 miles; and its greatest breadth is about 4 miles. Its ancient name was Kilgour, signifying "the pleasant church;" and its modern name, which seems to have arisen in some allusion to the old princely sport of hawking, was applied successively to the royal park or chase of Falkland, to the castle, to the palace, to the town, and to the parish. The Eden flows on part of the northern boundary-line; and an affluent of the Leven on part of the southern. The parochial surface is beautifully diversified; and in many places finely ornamented with wood. At the north, near the Eden, there is a considerable tract of level ground, which ascends as we proceed south, until it rises into the East Lomond hill, and the high ridge which connects it with the West Lomond; and on the south of this range it descends until it joins the parish of Leslie; but the lowest elevation of the southerly district parish is considerably above that of the northern. In the general landscape of this portion of the county, the range of the Lomonds, with the two lofty peaks which form their eastern and western terminations, are beautiful and interesting features; and the different views from their summits are extensive and finely diversified. See LOMOND HILLS. Of the ancient forest of Falkland, in which the Scottish kings so often enjoyed the pleasures of the chase, nothing now remains, except the natural wood at Drumdree in the neighbouring parish of Strathmiglo. It had been carefully preserved, so long as Falkland remained a royal residence; but it is probable that after the departure of James VI. to England, less care had been taken of it. It was utterly destroyed, however, in 1652, by Cromwell, who ordered the trees to be cut down, for the purpose of their being used in the construction of the fort he erected at Dundee. "This year," says Lamont, "the English began to cut downe Fackland wood; the most part of the trees were oakes." About a mile west of Falkland, amidst pleasant and well-wooded enclosures, is Nuthill, the residence of Mrs. Bruce, a splendid Elizabethan edifice, erected in 1839-1844, after a design by Mr. Burn of Edinburgh, at the cost of at least £30,000. Farther west is Kilgour, where the old church once stood, also the property of Mrs. Bruce. On the south side of the Lomonds, and at the west end of the parish, a lead-mine was at one time worked, and silver extracted from the ore, but it has been long given up. Few parishes have made greater advances in agricultural improvement than this. The extensive drainage effected by the late Mr. Bruce, and by some other proprietors, has reclaimed a great extent of ground; and excellent grain crops are now produced far up the Lomonds, where formerly there was only pasture for sheep. At the time when the Old Statistical Account was written, about one half of the parish was pasture-ground; but at the time of the New Account, in 1845, only 10 acres were in undivided common, only 2,000 were occasionally waste, about 1,000 were capable of being profitably improved, about 400 were under wood, and all the rest, amounting to about 8,000, were either regularly or occasionally in tillage. There are sixteen landowners possessing an yearly value of £50 and upwards. The valued rent is £5,824 Scots. Assessed property in 1843,

£8,605 18s. 7d. A great part of the population in the town of Falkland, and in the villages, are employed in the weaving of linen goods of different descriptions. Dowlas and sheeting are chiefly made for the manufacturers of Dundee, Newburgh, Cupar, and Ceres; diaper and towelling for the manufacturers of Dunfermline; and drills for those of Kirkcaldy and Dysart. There are no manufacturers carrying on business on their own account in the town of Falkland; but one manufactures dowlas and sheeting in the village of Newton of Falkland; and six are engaged in the manufacture of window-blinds in the village of Freuchie. The parish is traversed by the road from Dysart to Newburgh, and by the Perth fork of the Edinburgh, Perth, and Dundee railway; and it has a station on the latter at Falkland-road. Population in 1831, 2,658; in 1861, 2,937. Houses, 628.

This parish is in the presbytery of Cupar, and synod of Fife. Patron, Bruce of Falkland. Stipend, £252 8s. 8d.; glebe, £18. Unappropriated tithes, £842 18s. 3d. Schoolmaster's salary, £34 4s. 4½d., with about £50 fees. The parish church was erected about 5 years ago, and has an attendance of about 900. The previous church was a very old building, of no architectural beauty. There is a Free church at Falkland; and the sum raised in connexion with it in 1854 was £67 17s. 5½d. There is an United Presbyterian church at Freuchie, with an attendance of about 250. There was recently a Congregational place of worship, with an attendance of above 60. There are three non-parochial schools; one of which is a subscription school in Freuchie.—The church of Falkland, previous to the Reformation, belonged to the priory of St. Andrews. On the Lomond hills are traces of ancient fortifications which the late Colouel Miller, in a paper on the battle of Mons Graupius, endeavoured to connect with the movements of the Roman and the Caledonian armies; and on the lands of Nuthill, are the remains of extensive lines which he supposed had been constructed by the Roman general previous to his taking up his position in the camp at Pitlour. Among distinguished men connected with the parish of Falkland have been David Murray of Gospetrie, first Viscount of Stormont, the ancestor of the Earls of Mansfield,—Sir David Lindsay of the Mount,—Richard Cameron, the famous Covenantanter,—and, in recent times, Dr. Doig of the Stirling grammar-school. The "Jenny Nettles" of song hanged herself upon a tree in Falkland wood.

THE TOWN OF FALKLAND stands at the north-east base of the East Lomond hill, 4 miles north-west of Markinch, 8 south-west of Cupar-Fife, and 25 north of Edinburgh. It is a sequestered place, out of the way of any thoroughfare, and has a curious, antique, almost primitive appearance. Though enlivened by a few modern erections, it consists mainly of unpaved roadways, sloping alleys, intricate lanes, and picturesque old small houses; and it still retains vestiges of former greatness in some of its local names, such as Parliament-square, College-close, and West-port. Most of its inhabitants are proprietors of their own dwellings, and have each a kail-yard. It was once affected with malaria from neighbouring marshes, but, these having been completely drained, and the air always circulating fresh around the Lomonds, the place is now remarkably healthy. Though now little better than an ordinary village, it was formerly a town of great resort, and of considerable importance. The frequent residence of the royal family at the palace, during the reigns of the three last Jameses, brought the nobility and the wealthier of the lesser barons often to the town; and many of them had residences

within it or in its immediate neighbourhood. A natural consequence of this was, it may easily be supposed, the superior refinement of the inhabitants; and 'Falkland bred,' had become an adage. The superiority, however, of Falkland breeding is, like the former grandeur of the town and palace, now among the things that were. The place is remarkable also for a reminiscence of a totally opposite kind. "A singular set of vagrants existed long in Falkland called Scrapies, who had no other visible means of existence than a horse or a cow. Their ostensible employment was the carriage of commodities to the adjoining villages; and in the intervals of work they turned out their cattle to graze on the Lomond hill. Their excursions at night were long and mysterious, for the pretended object of procuring coals; but they roamed with their little carts through the country-side, securing whatever they could lift, and plundering fields in autumn. Whenever any inquiry was addressed to a Falkland Scrapie as to the support of his horse, the ready answer was—'Ou, he gangs up the (Lomond) hill ye ken.'" The enclosing of the hill and the decay of the town, however, put an end to this vagrancy.

Falkland was originally a burgh-of-barony belonging to the Earls of Fife; but it was erected into a royal burgh in 1458, during the reign of James II. The preamble to the charter of erection states, as the reasons for granting it, the frequent residence of the royal family at the manor of Falkland, and the damage and inconvenience sustained by the many prelates, peers, barons, nobles, and others of their subjects, who came to their country-seat, for want of innkeepers and victuallers. This charter was renewed by James VI. in 1595. Among the privileges which these charters conferred, was the right of holding a weekly market, and of having four fairs or public markets annually. To the public markets two others were subsequently added,—one called the linsed market, held in spring, and the other the harvest market, held in autumn. There are now seven public markets held throughout the year. These occur in the months of January, February, April, June, August, September, and November; but only the last is well-attended. Like the neighbouring burgh of Auchtermuchty—although certainly entitled originally to have done so—Falkland does not appear at any time to have exercised its right of electing a member to the Scottish parliament; consequently its privileges were overlooked at the time of the Union; but since the passing of the reform bill, its inhabitants having the necessary qualification are entitled to a vote in the election of a member for the county. In all other respects, however, this burgh enjoys the privileges of a royal burgh. It is governed by a town-council, consisting of 3 magistrates, 15 councillors, a treasurer, and a town-clerk. The revenue of the burgh amounts on the average to about £60 yearly. The magistrates, besides managing with the council the civil affairs of the burgh, hold courts from time to time for the decision of questions arising out of civil contracts and petty delicts. The town-house, which is ornamented with a spire, was erected in 1802, and contains a hall in which the burgh-courts and the meetings of the town-council are held, and two rooms for a prison, which, however, are but seldom used, except for the temporary purpose of a lock-up-house. No town probably in Scotland is better supplied with spring-water. This was begun to be brought in 1781 from the neighbouring Lomonds by means of pipes, and is distributed by wells situated in different parts of the burgh. This useful public work cost about £400 sterling, and was executed at the expense of the in-

corporation. It has a branch office of the City of Glasgow Bank. Population in 1841, 1,313; in 1861, 1,184. Houses, 310.

The lands of Falkland, including what now constitutes the burgh, belonged originally to the Crown; and were obtained from Malcolm IV. by Duncan, 6th Earl of Fife, the fifth in descent from Macduff, upon the occasion of his marriage with Ada, the niece of the King. In the charter conferring them, which is dated in 1160, the name is spelled "Falecklen." The lands of Falkland continued, with the title and other estates, with the descendants of Duncan, until 1371, when Isobel, Countess of Fife, the last of the ancient race, conveyed the earldom and estates to Robert Stuart, Earl of Monteith, second son of Robert II., who thus became 16th Earl of Fife, and was afterwards created Duke of Albany. On the forfeiture of his son, Murdoch, in 1424, the lands of Falkland reverted to the Crown; and the town was shortly afterwards erected into a royal burgh. The courts of the stewardry of Fife—which comprehended only the estates of the earldom—were also removed from the county-town of Cupar to Falkland, where they were afterwards held as long as the office of steward existed. In 1601, Sir David Murray of Gospetrie, 1st Viscount Stormont, obtained a charter of the Castle-stead of Falkland, with the office of ranger of the Lomonds, and forester of the woods; and he also held the office of captain or keeper of the palace, and steward of the stewardry of Fife. The lands called the Castle-stead, with the offices and other parts of the lauds of Falkland, were afterwards acquired by John, 1st Duke of Athole, who was appointed one of his Majesty's principal secretaries of state in 1696, and lord-high-commissioner to the Scottish parliament the following year. He was twice appointed to the office of keeper of the privy seal, and was made an extraordinary lord of session in 1712. The lauds and offices thus connected, afterwards, so far as not abolished in 1746, came into the possession of the family of Skene of Halyards, from whom they were purchased by the late J. Bruce, Esq., descended from the family of Bruce of Earlishall, one of his Majesty's printers for Scotland. At his death, he was succeeded in these estates—consisting of 1,025 acres—by his niece, Miss Bruce, afterwards the wife of O. T. Bruce, Esq.—Falkland gives the title of Viscount to the English family of Carey; Sir Henry Carey having been created Viscount Falkland by James VI., 1620.

At an early period, the Earls of Fife had a residence here, called the castle of Falkland. Not a vestige of this building now remains; but its site appears to have been in the immediate neighbourhood of where the palace was afterwards built. This fortalice had in effect the honours of a palace, while it was occupied by one of the blood-royal, Robert, Duke of Albany, who, for 34 years, had all the power of the state in his hands, under the different titles of lieutenant-general, governor, and regent. Although Robert gives it the more humble designation of "Manerium nostrum de Fawkland," it was in fact the seat of authority; for his aged and infirm father constantly resided in the island of Bute. It receives its first notoriety, in the history of our country, from the horrid cruelty here perpetrated by Albany on his nephew David, Duke of Rothesay, eldest son of Robert III. The governor, in consequence of the great promise of this young prince, fearing that he would prove the rival of his power, used the basest means to prejudice his imbecile father against him, and prevailed with him to issue an order to arrest and confine him for some time, it being represented to him that this was necessary for

curling the violent humours of the youth. Being inveigled, under false pretences, into Fife, he was shut up in the tower of Falkland, where he was consigned to the cruel fate of dying by famine. His life was for some days feebly sustained by means of thin cakes, pushed through a small crevice in the wall, by a young woman, daughter to the governor of the castle; but her merey being viewed by her ruthless father in the light of peridy to him, she was put to death. Even this brutal act did not deter another tender-hearted female, employed in the family as a wet-nurse, who supplied him with milk from her breasts by means of a long reed, until she, in like manner, fell a sacrifice to her compassion.

After the lands and castle of Falkland came to the Crown by the forfeiture of the earldom, the first three Jameses occasionally resided at the castle, enjoying the pleasures of the chase in the adjoining forest, and on the Lomond hills; and in consequence of this the charter was granted by James II., erecting the town into a royal burgh. It is impossible now to ascertain whether James III. or James IV. began to build the palace, as both of these monarchs were fond of architecture, and both of them employed workmen at Falkland; but the work was completed by James V., and the palace from that time became a favourite residence with the Scottish monarchs. Here James V. held his court in all the barbaric magnificence of the period; and here he died of grief, at the disgrace brought upon his Crown and his country by the opposition of his factious and turbulent nobility. Here Mary of Guise, his widowed queen, often resided, while she governed the kingdom for her infant-daughter; and here she found it necessary to give her reluctant consent to the armistice agreed to at Cupar-moor, between the lords of the Congregation, and the Duke of Chatelherault and Monsieur D'Oysel. Here, too, the unfortunate Mary, after her return from France, oft sought relief in the sports of the field from the many troubles of her short but unhappy reign. She appears first to have visited it in September, 1561, on her way from St. Andrews to Edinburgh. She returned in the beginning of the following year, having left Edinburgh to avoid the brawls which had arisen between Arran and Bothwell; and resided partly at Falkland, and partly at St. Andrews, for two or three months. She occupied her mornings in hunting on the banks of the Eden, or in trials of skill in archery in her garden, and her afternoons in reading the Greek and Latin classics with Buehanan, or at chess, or with music. During 1563, after her return from her expedition to the north, she revisited Falkland, and made various short excursions to places in the neighbourhood; and again, in 1564, and after her marriage with Darnley in 1565. After the birth of her son, she once more visited Falkland; but this appears to have been the last time, as the circumstances which so rapidly succeeded each other, after the murder of Darnley, and her marriage with Bothwell, left her no longer at leisure to enjoy the retirement it had once afforded her.

James VI., while he remained in Scotland, resided often at the palace of Falkland; and indeed it seems to have been his favourite residence. After the raid of Ruthven, James retired here, calling his friends together for the purpose of consulting as to the best means of relieving himself from the thralldom under which he had been placed; and he was again at Falkland in 1593, when the Earl of Bothwell made one of his desperate attempts on the King's person, which led to the imprisonment of Wemyss, 'the wanton laird o' young Logie,' whose escape forms

the subject of an ancient ballad. After the riots in Edinburgh, in 1596, James again retired here, where he employed himself partly in hunting, and partly in plotting the destruction of the Presbyterian religion, and the introduction of Episcopacy. In the end of 1600, he was again residing at Falkland, when the Gowrie conspiracy, as it has been called, took place. The King, one morning, was about to mount his horse, to follow his favourite sport, when the mysterious message was delivered to him by Alexander Ruthven, brother to the Earl of Gowrie, which led to the death of both these young noblemen. In 1617, when James, now King of Great Britain, visited Scotland, he, in his progress through the kingdom, paid his last visit to Falkland. In 1633, when Charles I. visited Scotland, he slept three nights here, on his way to Perth; and on his return, he slept two nights in going to Edinburgh, and created several gentlemen of the county knights. Upon the 6th of July, 1650, Charles II., who had returned from the continent on the 23d of the preceding month, visited Falkland, where he resided some days, receiving the homage of that part of his subjects who were desirous of his restoration to the crown of his ancestors; and here he again returned, after his coronation at Seone, on the 22d of January, 1651, and remained some days.

The oldest portion of the palace, which was erected either by James III. or James IV., forms the south front, and is still partially inhabited. On each floor there are six windows, square-topped, and divided by mullions into two lights. Between the windows, the front is supported by buttresses, enriched with niches in which statues were placed, the mutilated remains of which are still to be seen, and terminating in ornamented pinnacles which rise considerably above the top of the wall. The lower floor is the part inhabited, and the upper floor is entirely occupied by a large hall, anciently the chapel of the palace. The western part of this front of the palace is in the castellated style, and of greater height than the other; it is ornamented with two round towers, between which is a lofty archway which forms the entrance to the courtyard behind, and which, in former times, was secured by strong doors, and could be defended from the towers which flank it. James V. made great additions to the palace, and appears to have erected two ranges of building, equal in size to that described, on the east and north sides of the court-yard. As completed by him, therefore, the palace occupied three sides of a square court, the fourth or western side being enclosed by a lofty wall. The range of building on the north side of the court has now entirely disappeared, and of that on the west, the bare walls alone remain; these two portions of the palace having been accidentally destroyed by fire in the reign of Charles II. Having erected his addition to the palace, in the Corinthian style of architecture, James assimilated the inner front of the older part of the building, by erecting a new façade in the same style with the rest of the building. The building consisted of two stories, a basement or lower floor, and a principal one, the windows of which are large and elegant, when we consider the period. Between the windows, the façade is ornamented with finely proportioned Corinthian pillars, having rich capitals; and above the windows are medallions, presenting a series of heads carved in high relief, some of which are beautifully executed, and would lead us to believe that more than native talent had been engaged in the work. On the top of the basement which supports the pillars, the initials of the King and of his Queen Mary of Guise, are carved alternately. The architect who designed this building,

and superintended its erection, was in all probability Sir James Hamilton of Finnart, a natural son of the 1st Earl of Arran, who was cup-bearer to James V., steward of the household, and superintendent of the royal palaces. He was accused of high treason, tried, convicted, and executed as a traitor, in August, 1540.

The palace of Falkland, deserted by its royal inmates, was for a long series of years suffered to fall into decay:

"The fretted roof looked dark and cold,
And tottered all around;
The carved work of ages old
Dropped wither'd on the ground;
The casement's antique tracery
Was eaten by the dew;
And the night-breeze, whistling mournfully
Crept keen and coldly through."

But it is now the property of Mrs. Bruce, who takes great interest in its careful preservation, as well as in ornamenting the court-yard with flowers and shrubs, and the ground in its immediate neighbourhood, which she has laid out as a garden. The view from the southern parapet of the palace has long been admired; and as it can now be attained not only with safety but even without any apprehension of danger, it will be often resorted to and enjoyed. On the one hand, the Lomond hills spread out their green sides, and point their conical summits to the sky; on the other, the whole strath of Eden, the Howe of Fife from Cupar to Strathmiglo, lies open and exposed; and whilst the spectator will naturally inquire after and regret the woods of Falkland, he will find that the present proprietor is doing all that he can to make up for the spoiliations of Cromwell's soldiery. There is a large plain, on the east of the palace, in which little knolls rise here and there above the level. This consists of moss, which not very many years ago was well-drained; exhibiting the remains of what was called the Rose-loch,—the knolls having been islets. The water of this lake must then have washed that part of the building which was discovered at the bottom of the garden. Some persons quite recently deceased said they had shot wild ducks on this loch.

It might reasonably be supposed, that, while Falkland continued to be the occasional residence of royalty, it was not only a place of resort to the higher classes, but that the peasantry would be permitted to enjoy that festivity here which was most congenial to their humours. As it was a favourite residence of that mirthful prince James V., it might well be conjectured, from his peculiar habits, that he would be little disposed to debar from its purlieus those with whom he was wont frequently to associate in disguise. Accordingly,—although it is still matter of dispute among our poetical antiquaries, whether the palm should not rather be given to his ancestor James I.,—one of the most humorous effusions of the Scottish muse, which contains an express reference to the jovial scenes of the vulgar at Falkland, has, with great probability, been ascribed to the fifth of this name:

"Was nevir in Scotland hard nor sene
Sic dansin nor deray,
Nouthir at Falkland on the Grene,
Nor Pebillis at the Play,
As wes of wowaris, as I wene,
At Christis kirk on ane day?" &c.

According to Allan Ramsay and the learned Callander, 'Chrystis Kirk' is the kirktown of Leslie, near Falkland. Others have said, with less probability, that it belongs to the parish of Leslie, in that part of the county of Aberdeen called the Garioch. Pinkerton thinks that, besides the poems of 'Christis Kirk,'

and 'Pebilis to the Play,' a third one, of the same description, had been written, which is now lost, celebrating the festivities of 'Falkland on the Grene.' This phraseology might refer to what has been called 'the park at Falkland.' Sir David Lindsay, being attached to the court, must have passed much of his time at this royal residence. According to his own account—notwithstanding the badness of the ale brewed in the burgh—he led a very pleasant life here; for, in the language of anticipation, he bids adieu to the beauties of Falkland in these terms:

"Fare weil, Falkland, the forterress of Fyfe,
Thy polite park, under the Lowmound law:
Sun tyne in the, I led a lustie lyfe,
The fallow deir, to se thame walk on raw.
Court men to cum to the, thy stand grait aw,
Sayand, thy burgh bene of all burrows bail,
Because, in the, they never gat gude all."

FALKLAND (NEWTON OF), a village in the parish of Falkland, about a mile east of the town of Falkland, Fifeshire. It is an irregularly built, disagreeable place, inhabited principally by weavers. Population, 236. Houses, 59.

FALLIN, a small harbour at which coals and lime are shipped, on the river Forth, in the parish of St. Ninian's, Stirlingshire. See ALLOA.

FALLOCH (THE), a rivulet of Perthshire and Dumbartonshire. It rises on the north-east side of Benschroan, on the southern limit of the parish of Killin, runs $3\frac{1}{2}$ miles northward to Coilater-More; turns there abruptly round, and thence runs $3\frac{3}{4}$ miles south-west, receiving on its right bank the waters of Auld-Ennochbay and Auld-Churn, the former coming $3\frac{1}{4}$ miles from Loch Suss, and the latter $5\frac{1}{2}$ miles from Mealmicran; and after its confluence with Auld-Churn, it flows 2 miles due south to the head of Loch Lomond. Its entire length of course is upwards of 9 miles; and its motion, except near the loch, is rapid and garrulous. From Coilater-More downward, it flows along a romantic glen to which it gives its name, overlooked by high mountains, the lower acclivities of which, for some way, as well as up the vale of Auld-Churn, are clothed in plantation. The Loch Lomond steamers sometimes go about a mile up the stream.

FALSIDE. See INVERESK.

FANA. See DUNIAN.

FANKERTON, a village on the northern border of the parish of Denny, Stirlingshire. It stands on the right bank of the Carron, 2 miles west of the town of Denny. Population, 68. Houses, 17.

FANNICH (LOCH), an alpine lake, nearly in the centre of Ross-shire, and along the southern boundary of one of the interspersed penicles of Cromarty-shire. It extends about 12 miles in the direction of east-south-east, with a breadth of from 1 to $1\frac{1}{2}$ mile; and sends off its superfluous waters about 5 miles to Loch Luichart, whence they are conveyed to the river Conon. Contiguous to it are the hills of Fannich, one of the Ross-shire alps, and the forest of Fannich, an extensive deer-chase.

FANNYSIDE. See CUMBERNAULD.

FANS, a village in the parish of Earliston, 3 miles north-east of the town of Earliston, Berwickshire. Population, 153. Houses, 28.

FAR. See FARR.

FARA, a small island of the Hebrides, lying between Barra and South Uist.

FARA, one of the small Orkney islands, about a mile south-east of Hoy.

FARAY. See PHARAY.

FARE (HILL OF), a broad-based eminence, of 17 miles in circumference, and 1,794 feet in altitude, on the mutual border of Aberdeenshire and Kincardine.

dineshire. It forms part of the north screen of the Dee, and belongs to the parishes of Echt, Midmar, Kincairdine O'Neill, and Banchory-Ternan. It affords excellent pasture for numerous flocks of sheep, producing mutton of a very superior flavour. The interior part contains valuable moss for fuel; and its luxuriant and beautiful heaths abound in moor-fowl, hares, and other game. Here are chalybeate springs, the water of which is dyed of a deep black by a small infusion of tea. "In the middle of this eminence," says the old Statistical Account of Midmar, "is the vale of Corriche, well-known as the scene of battle, wherein the contending parties were headed by the Marquis of Huntly, and the Earl of Murray. Huntly fell in this engagement, in which his forces were routed by those of his antagonist, the general of the unfortunate Mary. A small possession on the north side of the hill, retains, at this day, the name of Craig-Hume, in memory of one of that family, who was slain in that battle, and is interred in the neighbourhood."

FARG (TUE), a rivulet in the extreme east of Perthshire. It rises among the Ochil hills, on the boundary between the parishes of Forgandenny and Arngask; traces that boundary southward for $1\frac{1}{2}$ mile; then suddenly debouches, and for $2\frac{1}{2}$ miles eastward, traces the boundary between Perthshire and Kinross-shire; then, after another sudden bend, traces for $2\frac{3}{4}$ miles north-eastward, the boundary between Perthshire and Fifeshire, passing the church of Arngask, and carrying down the turnpike from Edinburgh to Perth along its banks. It now runs into Perthshire and soon enters Strathearn, and, after a northerly course of $3\frac{3}{4}$ or 4 miles from the point of its leaving the boundary of the county, loses itself in the river Earn at Culfargie. Its entire length of course is about $10\frac{1}{2}$ miles; and till it reaches Strathearn, it flows along a deep, narrow, wooded glen of much romantic beauty, to which it gives the name of Glenfarg.

FARNELL, or FARNWELL, a parish in the eastern division of Forfarshire. Its post-town is Brechin, $3\frac{3}{4}$ miles north-north-west of the church. It is bounded by the parishes of Brechin, Maryton, Craig, and Kinnell. Its length north-eastward is $5\frac{1}{2}$ miles; and its greatest breadth is $3\frac{1}{2}$ miles. The river South Esk flows along the eastern half of the northern boundary. The northern district occupies the centre of a strath, which extends eastward about 5 miles to Montrose; and—with the exception of a hilly ridge of inconsiderable height which rises in the south-west, and forks away in two lines into the parishes of Maryton and Craig—is, in general, flat. The soil on the rising grounds and in the west, is of an inferior quality, consisting chiefly of light black earth; but, in the other parts of the parish, it is a very fine clay and rich loam, equal to the best soil in Scotland, and very much resembling that of the carse of Gowrie between Perth and Dundee. The South Esk has here tastefully wooded banks, and is opulent in its fishery. Pow water rises in numerous head-streams among moorlands south and west of the parish, and sometimes brings down upon the eastern district, before disemboguing into the Esk, such inundating freshets as overflow the fields, break down the fences, and spread around extensive though temporary desolation. In the western division is a moorland of 1,500 or 1,600 acres covered with plantation. See МОХЛИННОСТ. About 560 acres elsewhere are also under wood. But all the rest of the parish, excepting about 50 acres, is in a state of luxuriant beauty, either under the plough or in grassy decoration. On the north side of the church, near the centre of the parish, stands an ancient castle, kept in repair as a sort of almshouse,

which was formerly the seat of the Ogilvies of Airlie. Sir James Carnegie, Bart. of South Esk, is the proprietor of the whole district. His seat, Kinnaid castle, situated in the north, has a very magnificent appearance. It is built in the form of a square, with a tower at each angle; but is at present undergoing extensive alterations on a plan by Mr. Bryce of Edinburgh. The parish is traversed by the Aberdeen railway, and has a station on it. The yearly value of raw produce was estimated in 1833 at £14,716. Assessed property in 1843, £5,425 18s. 11d. Population in 1831, 582; in 1861, 703. Houses, 118.

This parish is in the presbytery of Brechin, and synod of Angus and Mearns. Patron, the Crown. Stipend, £270 9s. 2d.; glebe, £20, with the privilege of feal and divot. Unappropriated teinds, £385 17s. 8d. Schoolmaster's salary, £30, with £13 10s. fees, and £4 15s. 3d. other emoluments. The parish church is a handsome oblong Gothic structure, built in 1806, and containing 330 sittings. There are two private schools and a parochial library. The real name of the parish, according to the ancient spelling of it, is Fernell. This is said to be of Gaelic origin; *fern*, signifying in that language, 'a den,' and *nell*, 'a swan;' so that it should seem to have derived its name from an adjoining den, which, at that time, had been the abode of swans. The district of Kinnaid, forming the western division, was disjoined from Farnell, and erected into a separate parish, about the year 1633; but, excepting a small part which was incorporated with Brechin, it was reannexed by the court of session in 1787.

FARNESS. See ARDCLACH.

FARNESS (MEIKLE), an extinct village in the parish of Cromarty.

FARNUA. See KIRKILL.

FAROUTHEAD, a conspicuous promontory in the parish of Durness, Sutherlandshire. It is situated 7 miles east by south of Cape Wrath. It projects 3 miles north-north-westward from the mainland, forming the east shore of Durness bay. The rocks on both sides of it have a sullime appearance, ascending from 200 to 700 feet almost perpendicularly from the water.

FARR, a mountainous parish, containing a post-office station of its own name, in the northern division of Sutherlandshire. It is bounded by the Northern ocean, and by Reay, Kildonan, Clyne, Rogart, Lairg, Edderachillis, and Tongue. Its length, south-south-westward, is nearly 40 miles; and its breadth varies from 8 miles to 20. Strath Water drains all the north-eastern district northward to Strathly hay. Armidale Water drains a district of about $5\frac{1}{2}$ miles in length, and lying to the west of Strathstrathly, northward to Armidale hay. The river Naver gathers its head-streams from the southern extremities of the parish, contiguous to the central watershed of the county, and traverses all the interior north-north-eastward and northward to Farr hay. Borgia Water, together with the superfluence of lakes running into it, traces most of the western boundary northward to Torrisdale hay. The parish is wholly the property of the Duke of Sutherland; and is chiefly laid out in sheep-walks. The soil is in general barren and shallow; but on the banks of the Naver and the Borgia it is deep and tolerably fertile. The extent of sea-coast is 13 miles. The shore is high and rocky, and consists of Strathly-head and hay, Armidale-hay, Farr-head and hay, and several other smaller promontories and bays. The whole coast is excavated into extensive caves; which afford retreat to immense numbers of seals. Loch Naver is the principal lake in the dis-

tract; and there are several smaller lakes, from which rise a few rivulets. Benclybric, on the boundary with Lairg, has an altitude of about 3,200 feet, and figures very grandly in the scenery of the upper part of Strathnaver; but all the other heights are of much lower elevation, and comparatively uninteresting. The principal antiquities are barrows, standing-stones, the remains of unmortared domes, and the ruins of a mortar-built castle. "Betwixt Farr and Kirtomy, in this parish," says Pennant, "is a most singular curiosity, well worth the pains of a traveller to view, being the remains of an old square building or tower, called Borge, standing upon a small point joined to the continent by a narrow neck of land not 10 feet wide. This point or head is very high, consisting of rock, and some gravel on the top; on both sides is very deep water, and a tolerable harbour for boats. This tower seems to be built by the Norwegians; and a tradition is that one Thorkel, or Torquil, a warrior mentioned by Torfæus, was the person that built it. They speak likewise of a lady that was concealed there; she is said to be an Orkney woman, and Thorkel was an Orkney man. But what is most curious, is, that through the rock upon which the tower stands, there is a passage below of 200 feet in length, like a grand arch or vault, through which they row a boat. The writer has been one of a company that rowed through it. The passage is so long, that when you enter at one end, you fancy that there is no possibility to get out at the other, and vice versa. How this hard rock was thus bored or excavated, I cannot say; but it is one of the most curious natural arches, perhaps, in the known world." The parish is traversed through the interior by the road from Tongue to Bonar-Bridge, and along the coast by that from Tongue to Thurso. The yearly value of raw produce was estimated in 1834 at £14,330. Assessed property in 1843, £808 7s. 3d. Population in 1831, 2,073; in 1861, 2,103. Houses, 421.

This parish is in the presbytery of Tongue, and synod of Sutherland and Caithness. Patron, the Duke of Sutherland. Stipend, £166 14s. 8d.; glebe, £8. Schoolmaster's salary, £34 4s. 4½d., besides fees and other emoluments. The parish church was built in 1774, and contains 750 sittings. There is a government church at Strathry, 10 miles east of the parish church. It was erected in 1826, and constituted a quoad sacra parochial church in 1846, and contains 350 sittings. There are two Free churches, at respectively Farr and Strathry: attendance at the former, 320,—at the latter, 300; sum raised in 1854 in connexion with the former, £65 17s.,—in connexion with the latter, £46 15s. There are in the parish an Assembly's school, a Society's school, a Gaelic school, and a savings' bank. A fair for general traffic is held on the first Wednesday of November at Bettyhill.

FARR, Inverness-shire. See DAVIOT and DUNCLINTY.

FARRAGON. See DULL.

FARRALINE (Loch), a small sheet of water in the high mountains on the east side of Loch-Ness, in the parish of Dores; on the left of the road leading from the top of Strathnairn into Stratherick; 16 miles from the Perth road, and 2½ from the banks of Loch-Ness, by the pass of Inverfarrakaig. In May 1841, as some men were engaged in the drainage of part of this loch, they came upon a quantity of old fire-arms, a brass blunderbuss, in excellent preservation, about a dozen of muskets, the scabbard of a sword, and several other articles. "There has been a tradition among the people of the district for many years," says the editor of the 'Inverness Courier,' "that a quantity of arms was

thrown into the lake at the stormy period of the rebellion in 1745, which seems to be confirmed by this occurrence. In the immediate neighbourhood is the house of Gortuleg which, in 1745, was the property of the chamberlain and agent of Lord Lovat. Old Lovat himself resided at Gortuleg at this interesting time; and hence we may suppose took place this accumulation of fire-arms which were afterwards thrown into the loch when the battle of Culloden had decided the fate of the Jacobites."

FARRER (THE), one of the forming-streams of the river Beauly in Inverness-shire. It rises in Loch Monar, on the north-west point of the county, and flows eastward through Gleu-Farrer until it joins the Glass, the other main forming-stream of the Beauly, near Erchless castle. A little above the junction of the two streams, nearly opposite Struey, 10 miles from Beauly, there is a fine bridge across the Farrer, by which the road from Beauly is carried into Strathglass. There is a black-lead mine in Gleu-Farrer, of which the following account is given in *The New Philosophical Journal*: "Nearly opposite to Struey, beautiful veins of red granite are to be seen traversing the gneiss strata, which range from north-east to south-east, and dip to the south, and generally at a pretty high angle. The glen to the black-lead mine, appears—as far as we had an opportunity of examining it, in our rapid journey—to be principally composed of gneiss, which frequently, when the quartz predominates, passes into mica-slate. The rock in which the graphite or black-lead occurs is gneiss, in which the direction is a little to the east of north, and dip west 80°. The gneiss in some places is very micaceous, contains garnets, and here and there is traversed by veins of granite. The graphite is not in beds or veins, but in masses imbedded in the gneiss. The first mass, or bed, as it is called, is fully three feet thick where broadest. The whole mass appeared to be scaly foliated; no regular crystals were observed."

FASKINE, an estate and a village, in the parish of Old Monkland, Lanarkshire. A coal and ironstone mine here is the oldest of the numerous works of their class in this eminently rich district of the Clydesdale mineral field. Population of the village, 408. Houses, 74.

FASNACLOICH, a post-office station, subordinate to Bnawae, Argyleshire.

FASNAKYLE, a hamlet in the parish of Kilmorack, Inverness-shire. It stands in Strathglass, nearly opposite Invercannich. Here are an old chapel and burying-ground; and in the vicinity are Fasnakyle-house and a neat modern Roman Catholic chapel,—the latter embosomed among weeping birches.

FASNEY WATER, a streamlet of the Lammermoors. It runs about 6 miles eastward, along the southern border of Haddingtonshire, chiefly within the parish of Whittingham, to a confluence with the nascent Whitadder. It possesses great interest to geologists for exposing a fine section of the Lammermoor rocks.

FASQUE, an estate on the north-east border of the parish of Fettercairn, about 1½ mile north by west of the village of Fettercairn, Kincardineshire. The mansion was erected in 1809 by Sir Alexander Ramsay of Balmain. It is a large castellated edifice, commanding an extensive view; and the policies around it are extensive, and contains a lake of 20 acres. There is at Fasque an Episcopalian chapel, with an attendance of about 50.

FAST CASTLE, a relic of feudal ages, situated on a peninsulated rock of 70 feet in height, which overlies the German ocean, near St. Abb's Head.

courteously invited his Majesty to take the apple, and the King, amused with the conceit, put forth his hand and did so, when instantly he was pierced with arrows, and mortally wounded. He was shortly after found by his attendants, who, coming for their royal master, could not gain admittance to the castle, whence the assassin had already fled; and "having brak the dure, fund him bullerand in his blude."

FENTON, a village in the parish of Dirleton, $1\frac{3}{4}$ mile north of Drem, Haddingtonshire. There are near it several other places of the same name,—such as East Fenton, Fenton-barns, and Fenton-tower. Population, 201. Houses, 44.

FENWICK, a parish, containing a post-office station of its own name, and the villages of Kirk-town of Fenwick, Upper-Fenwick, and Rose-Fenwick, in Cunningham, Ayrshire. It is bounded on the north by Renfrewshire; on the east by Loudon; on the south by Kilmarnock; and on the west by Stewarton. It is about 9 miles long from east to west, and 6 miles broad, and contains an area of 14,500 acres. Though high above the level of the sea, it is not mountainous; and seen from the hills of Craigie in Kyle, it appears a large plain; but it possesses, in reality, a sloping surface, inclining easily from its boundary with Renfrewshire to the south-west, and commanding on many spots, or from almost every farm and every house, extensive views toward Kyle and Carrick, the frith of Clyde, and the Arran and Argyleshire mountains. At a former period the district was almost all a fen or bog; and, in 1642—when it was disjoined from Kilmarnock, and erected into a separate parish—was considered as a moorland region. Except in the southern or lower division, the soil in every part is still mossy; and nearly one-fifth of the entire parish continues to be bog. All the surface of the reclaimed sections, though thinly sheltered with plantation, has a verdant and cultivated aspect, and is distributed chiefly into meadow and natural pasture, with about 8,000 acres of tillage. The climate, though humid, is not unhealthy. Two small brooks, each having tiny tributaries, rise in the northern limits of the parish and flow south-westward through it to make a confluence after entering the parish of Kilmarnock. The brooks abound with trout, and not destitute of scenic beauties. A thin seam of coal and a freestone quarry occur on the western limits. Lime-stone is abundant, and exhibits numerous fossils. Good seams of ironstone, together with coal and lime-stone, occur on the estate of Rowallan. The great road from Glasgow to Kilmarnock traverses the parish in a direction west of south, and sends off one branch-road southward to Galston, and another westward to Stewarton. The village of Kirktown of Fenwick stands on the right bank of the Fenwick water; and Upper-Fenwick, a pleasant modern village, stands on the Glasgow road, nearly 4 miles north by east from Kilmarnock. Rose-Fenwick, also called Loughtown, stands about half a mile south-west of this; and is a considerable assemblage of small houses occupied almost all by weavers as dwelling-houses and work-shops. Population of the parish in 1831, 2,018; in 1861, 1,532. Houses, 251. Assessed property in 1860, £11,687.

This parish is in the presbytery of Irvine, and synod of Glasgow and Ayr. Patron, the Earl of Glasgow. Stipend, £149 8s. 1d.; glebe, £23. Schoolmaster's salary, £52 10s., with from £15 to £18 fees, and about £3 other emoluments. The parish church was built in 1643, and contains about 750 sittings. There is a Free church; and the sum raised in connexion with it in 1865 was £184 10s.

There is an United Presbyterian church, with an attendance of 650. There is a subscription school at Waterside; and there are adventure schools at Waterside, Kingswell, Rose-Fenwick, and Upper Fenwick. The original name of the parish was New Kilmarnock, in allusion to that from which it was disjoined; and the present name was borrowed from the site of the church, and signifies the village of the fen. This parish is celebrated for having enjoyed the ministry of the devout though eccentric Guthrie, not the least of Scotland's worthies, a firm assertor of the cause of Presbyterianism under the persecuting innovations of the Stuarts, and the author of writings which have shed the light of heaven over the hearts and minds of the inmates of many a cottage. In this parish is the venerable dwelling of the Howies of Lochgoin, that during the persecution frequently afforded an asylum to those who for conscience' sake were obliged to flee from their homes,—to such men as Captain Paton, and to many such ministers as the intrepid Donald Cargill, which rendered this house so obnoxious that, during these trying periods, it was twelve times plundered, and the inmates forced to take refuge in the barren meors around. Here are preserved many of the relics of those days of "fiery trial,"—such as the Bible and the sword used by Captain Paton,—the flag of Fenwick parish,—the drum heat at the battle of Drumclog, &c. If antiquity can add any lustre to birth, the present generation of the Howies may lay claim to a remote ancestry; being descended from the great Waldenses, three brothers of whom, of the name of Howie—probably *Houy*, still common in France—fled for safety and settled in Ayrshire, in 1178. One of these brothers took up his residence in Lochgoin, and his posterity to this day inhabit the same spot, retaining all the primitive and pastoral habits which distinguished the Waldenses. The father of the present generation, John Howie, compiler of the lives of the 'Scots Worthies,' will be remembered by every Scotsman with a peculiar interest, in having furnished his country with short though valuable sketches of the most remarkable transactions of those who suffered for the covenanted work of reformation.

FENZIES (LOCH). See LETHENDY.

FEOCH (THE). See DNUISK (THE).

FEOCHAN. See FEACHAN.

FERDUN (THE), a streamlet of Kincardineshire, principally of the parish of Fordoun. It is formed by two burns which descend from the Grampians and unite at Clattering-Briggs; and it runs in a southerly direction, past the west side of Strath-fenella hill, and on to a junction with the Luther below Thornton.

FERGUS (LOCH). See AYR.

FERGUS (ST.), a parish, containing a post-office village of its own name, also the village of Invergie, on the coast of Buchan. It is bounded by the German ocean, and by the parishes of Peterhead, Longside, and Crimond. It thus lies on the Aberdeenshire sea-board, at a distance of at least 14 miles from the nearest boundary-point of that county; and yet it belongs politically to Banffshire,—"to which it was annexed at a very early period by an act of the legislature obtained through the influence of the Cheynes, the ancient proprietors, who, being the hereditary sheriffs of Baiff, were naturally very desirous to have their own domains placed under their own jurisdiction." Except, however, for the purposes of the Census and the purposes of taxation, it is, in all respects, practically treated as an Aberdeenshire parish. Its greatest length, south-eastward, is $5\frac{1}{2}$ miles; its greatest breadth $3\frac{1}{2}$ miles

and its area is about 12 square miles. The river Ugie traces all the southern boundary. The parochial surface exhibits an alternate and beautiful succession of rising grounds and valleys; but there is no hill, except a small eminence in the vicinity of Inverugie castle. The lower grounds near the sea are flat, and bordered, seaward, by a natural rampart of clay and sand-hills, carefully fixed with bent, which protects the laud, in the interior, from the blowing of the sand. Extending along the coast for several miles, but of unequal breadth, within this ridge, is ground called the Links of St. Fergus, constituting, probably, one of the most pleasant plains in Scotland, and producing—from its wild thyme, white clover, and short grass, it is thought—nutton of peculiar delicacy and fineness of flavour. Along the shore, which is low and sandy, is an inexhaustible quantity of shells, which have been advantageously used as manure. The soil of the sea-board district is sandy loam and moss; of the middle district, strong adhesive clay; and of the western district, reclaimed moor and moss. The New Statistical Account distributes the entire area into 5,048 acres of arable land, 208 of pasture on farms, 26 of woodland, 563 of moss, 40 of partially improved moss, and 215 of links, bents, and stances of houses. The principal landowner is Ferguson of Pitfour. The real rental is about £5,720. Assessed property in 1860, £7,082. Yearly value of raw produce, as estimated in 1840, £17,207. The salmon fishery on the Ugie was formerly good, but has been much injured by a sand-bar at the mouth of the river, and has of late been let at only £45 a-year. There are three corn-mills in the parish. The road from Peterhead to Fraserburgh passes along the sea-board district. The village of St. Fergus stands on that road, 5 miles north-west of Peterhead. Population of the parish in 1831, 1,334; in 1861, 1,608. Houses, 307.

On a bend of the Ugie stands the castle of Inverugie, now in ruins. Within a few paces of the wall of the north court are the ruins of an old ice-house, probably the first of its kind in Scotland. This castle was the ancient seat of the family of Cheyne; and the most ancient portion of the ruins has, from time immemorial, been called Cheyne's tower. It is probable, however, that the principal part of the edifice—which appears to have been a very noble one—was erected by the great family of the Earls Marischal of Scotland; especially by George, Earl Marischal, the founder of Marischal college, Aberdeen, whose chief and principal residence, Inverugie castle, became the seat of the Cheynes, by the intermarriage of one of his family with that of the Cheynes. At what particular period the Cheynes became proprietors of this parish, is not certainly known; but it would appear, that they were in possession of this estate before the Cumines succeeded to the earldom of Buchan. Sir Reginald Cheyne of Inverugie was the founder of the Carmelites' house in Aberdeen; and, besides other revenues, bestowed upon it 40s. yearly out of his lands of Blackwater, in this parish. By his wife, a daughter of Cumine, Lord Badenoch, he had two sons; Sir Reginald, who, in 1267, was promoted to the office of Lord Chamberlain of Scotland, and Henry Cheyne, who was elected bishop of Aberdeen in 1281. He was one of those who swore fealty to Edward, anno 1296. As he was nearly related to the Cumines, he adhered to that party, and was obliged to leave this country, and take refuge in England, where he remained in exile until King Robert was pleased to recall him. He was so happy in being allowed to resume his functions, that he applied all the revenues of the see—which,

during his absence had increased to a very considerable sum—in building the bridge over the Don at Aberdeen. He died anno 1329, having been bishop of Aberdeen 48 years. The direct male line of the Cheynes of Inverugie failed in the reign of David II., and the parish of St. Fergus, with the other estates belonging to the family, fell to two heiresses, the eldest of whom, Mariottha Cheyne, married John Keith of Ravenscraig, second son of Sir Edward Keith, Marischal of Scotland, who in her right became proprietor of this parish about the year 1360. The direct male line of John Keith failed in the person of Sir William Keith of Inverugie, who fell in the battle of Flodden. He left two daughters, the eldest of whom was married to William, the 4th Earl Marischal, some time before 1538. By this marriage Earl Marischal became proprietor of St. Fergus. He was possessed of one of the greatest land-estates at that time in Scotland. In the years 1530 and 1540, he got charters on many lands lying in the counties of Caithness, Inverness, Moray, Banff, Aberdeen, Kincardine, Angus, Fife, Linlithgow, &c. It is said that after Queen Mary's captivity he took no concern in public affairs, and by living a retired life in his castle of Dunnottar, he got the name of William in the Tower. He so much improved his estate, that at his death it was reckoned worth 270,000 merks Scots, or £14,208 6s. 8d. sterling. This estate was so situated, that in travelling from the north point of Caithness to the borders of England, he could sleep every night on his own ground. This Earl was a zealous promoter of the Reformation, but opposed all violent proceedings in it. He died in an advanced age in 1581, and was succeeded by his grandson George, the 5th Earl Marischal, one of the most eminent men of his time. After having studied at Geneva, under the famous Theodore Beza, he travelled through Italy and Germany, where he visited the Landgrave of Hesse, Prince of the Catti, who understanding who he was, received him kindly, and treated him with great magnificence, as a Scotch descendant of the ancient Catti. In 1589 he was sent ambassador-extraordinary to the court of Denmark, to espouse the Princess Anne in the name of James VI. of Scotland, and I. of England. Being possessed of a great estate, he appeared with all the magnificence with which the wealth of Scotland could adorn him, and that chiefly on his own expenses. In 1593, he made the noble foundation of the Marischal college, and obtained from the Crown, for the support of it, the lands and houses belonging to some of the religious at Aberdeen, which had not been feued off before the Reformation. Inverugie continued to be the residence of the succeeding proprietors, until the attainder of George Earl Marischal, who engaged in the rebellion of 1715; when it escheated to the Crown, by whom it was afterwards sold and again purchased by George Earl Marischal, a son of the attainted Earl, in 1761. It was again sold by him, however, in 1764, to James Ferguson, Esq., a senator of the College of Justice, with whose family it has ever since continued. While the great lords of Inverugie were yet in all the pride of their wealth and power, Sir Thomas Learmont, the Rhymer, is traditionally said to have fulminated the following vaticination, from a place in the vicinity of the castle, still called Thamas's stane:

'Inverugie by the sea.

Lordless shall thy lands be.'

The parish of St. Fergus is in the synod of Aberdeen and presbytery of Deer. Patron, the Crown. Stipend, £217 9s. 4d.; glebe, £18. Schoolmaster's salary, £50 0s. 0d., with about £30 fees, and a

sharo in the Dick bequest. The parish church was built in 1763, and repaired in 1836, and contains 610 sittings. There is a Free church, and the sum raised in connexion with it in 1865 was £125 14s. There is a Baptist chapel with about 75 sittings. There are five private schools, a parochial library, and a savings' bank. This parish did not take the name of St. Fergus till about the year 1616, but was previously called Langley, and originally Invergie. One of its most distinguished natives was Field-marshal Keith, the brother of George, last Earl Marischal.

FERGUSHILL, a collier village in the parish of Kilwinning, Ayrshire. It sprang up about 20 years ago. Here is a school for the children of the colliers. Population, 279.

FERGUSLIE, one of the western suburbs of Paisley, in Renfrewshire. An ancient estate of the same name, now divided, belonged at one time to the monks of Paisley. There still exist the remains of the old castle of Ferguslie. See **PAISLEY**.

FERGUSON'S WELL. See **DUMFRIES**.

FERRINTOSH, a barony, containing a post-office station of its own name, in the vicinity of Dingwall, and on the south side of the river Conon and the Cromarty frith. It is encompassed by Ross-shire, but belongs politically to Nairnshire; and it forms the central district of the united parish of Urquhart and Logie-Easter. It comprises part of the Mullhuy, and part of the strath at that ridge's northern base; and commands, in many parts, most brilliant prospects. According to a survey of it made in 1810, it then contained 1,826 Scotch acres of arable land, 1,610 of pasture, 1,051 of moor, 211 of woods, 11½ of gardens and house-stances, and 16½ of roads. But its extent of arable land is now very much greater; and its real rental is about £2,500. It belongs to Forbes of Culloden. It long possessed the privilege—granted on account of services during the rebellion of 1745—of distilling whisky from grain of its own growth, free of duty; but this privilege was withdrawn in 1785, the government granting as a compensation for it about £20,000.

FERRISTOWN, a post-office station, subordinate to Kirkwall, Orkney.

FERN. See **FEARN**.

FERNELL. See **FARNELL**.

FERNESSE, or **FIERNESSE**, a bay and a promontory at the middle of the west side of the island of Eday, in Orkney.

FERNIE, an estate in the parish of Monimail, 3 miles west of Cupar, Fifeshire. It appears to have been part of the original estate of the Earls of Fife; and is even said by tradition, though without any good evidence, to have been one of the fastnesses of Macduff. The extant mansion on it, or castle, is a building of great antiquity, and must at one time have been a place of considerable strength; and was surrounded by marshy ground, which defended it from any sudden or facile assault.

FERNIE (EASTER), a village in the parish of Monimail, Fifeshire. Population, 44. Houses, 13.

FERNIGAIR, a village in the parish of Hamilton, Lanarkshire. Population, 74.

FERNIHIRST CASTLE, a seat of the ancient family of Ker, on the right bank of the Jed, 2 miles south of Jedburgh, Roxburghshire. It was built in 1598, and has received some modern additions and alterations; and it has a weather-worn but serene appearance, amid beautiful woodland scenery. It stands on the site of a predecessor, the stronghold of the ancestors of the Marquis of Lothian. In 1523 the original castle was captured by Surrey; in 1549, it was, after a severe struggle, retaken by the Scots, with the aid of French auxiliaries, then sta-

tioned at Jedburgh; in 1569, it sheltered the Earl of Westmoreland from the vengeance of Elizabeth; and in 1570, in revenge of an incursion which its chief and other border leaders made into Northumberland, it was captured and demolished by the Earl of Sussex and Sir John Foster. In the near vicinity are vestiges of some ancient camps.

FERTOWER. See **CRIEFF**.

FERNYHOLE. See **EDDLSTONE**.

FERRINTOSH. See **FERRINTOSH**.

FERRY (EAST and WEST). See **BROUGHTY FERRY**.

FERRY (LITTLE and MEIKLE). See **DORNOCH FRITH**.

FERRYDEN, a fishing village, with a post-office, on the estate of Rossie, in the parish of Craig, Forfarshire. It stands on the left bank of the South Esk, opposite Montrose, about ¾ of a mile from the sea; and, but for the width and rapidity of the intervening stream, and circuitousness of communication by the bridge, it would be strictly a suburb of Montrose. It formerly was the ferry-post which connected that burgh and the great northern road with the south of Scotland; and it suffered considerable temporary declension when the ferry was superseded by the line of spacious bridges higher up the river. The village is now important, partly for supplying hands to the vessels belonging to the port of Montrose, but chiefly for its very extensive and productive fishery. Six-sevenths of its population are wholly employed in fishing, and have about 25 boats, each carrying 6 men, besides a number of smaller boats. Women and children, as well as men, work hard to raise the productiveness and the opulence of the place; the females gathering bait in the lagoon of Montrose, carrying fish to the market of the burgh, and in general possessing that hardness of character for which their class are so remarkable in the fishing-villages of Newbaven and Fisherrow on the Forth. Fish-cadgers from the adjacent districts, and from Brechin, Forfar, Coupar-Angus, Dundee, and Perth, used to resort at all times of the year to Ferryden for loads of fish. The fishery is richly abundant, and sometimes supplies most of the boats of the village, after 10 or 12 hours' labour, with freights nearly as heavy as they can carry, and simultaneously, or in the same day, brought into the port. Haddocks are very plentiful and good ten months in the year. Fish of all kinds are now salted or "smoked," and extensively exported by fish-curers in Montrose to the markets of the south. There is also a productive salmon fishery in the South Esk and along the coast. The Free church of the parish and three endowed schools are situated in Ferryden. Two of the schools, male and female, are supported by the proprietor of Rossie, and one, an infant school, is supported by a bequest of the late Miss Ross. The fishing portion of the population are a muscular, weather-beaten race; but they are gradually approaching in manners and dress to the dwellers in the burgh of the opposite shore. Ferryden is the birth-place of the late Joseph Hume, Esq., M.P. or at least of his paternal ancestors. Population, in 1861, 1,113.

FERRYFIELD. See **BOLTON**.

FERRYHILL. See **DEESIDE RAILWAY**.

FERRYHILL, a peninsula in the parish of Inverkeithing, Fifeshire. It bears on its point the village of North Queensferry, has a somewhat circular outline of about a mile in diameter, and is connected with the mainland by an isthmus of about 300 yards in breadth.

FERRY-PORT-ON-CRAIG, a parish, containing a post-town of its own name, in the extreme north-east of Fifeshire. It is bounded by the German ocean, the frith of Tay, and the parishes of Forgan

and Leuchars. Its length south-eastward is 4 miles; and its breadth varies from $\frac{1}{2}$ a mile to $1\frac{1}{2}$ mile. The narrowest part is near the middle, a little south-east of the town. The north-western district is rocky and comparatively high; but the south-eastern district is low and flat. The shore westward of the town is rocky and irregular, but eastward to the mouth of the Tay is flat and for the most part sandy, with a large extent of sloop at low water. In the north-western district, the soil is a black loam, on a bottom of whinstone rock, and produces excellent crops of all kinds. Towards the east it is sandy, with light loam in some places on a bottom of sand, which yields good crops of oats and harley. At the south-eastern extremity, there is a considerable extent of links, which afford pasturage for sheep and cattle, and are besides stocked with rabbits. There are altogether about 1,350 acres in regular cultivation. The annual value of real property assessed, in 1866, was £5,972 12s. 9d. The real rent is about £2,500. The valued rent is £2,183 Scotch. There is an extensive salmon-fishery extending along the whole shore of the parish, which is in the hands of the proprietor. The net and coble are now alone used; but formerly, when stake-nets were used, the rent was sometimes as high as £2,000 per annum. The average gross yearly value of all sorts of raw produce of the parish was estimated in 1836 at £6,410. The Dundee fork of the Edinburgh, Perth, and Dundee railway, crosses the parish and has its ferry-station at the town. Two lighthouses on the shore to the west of the town serve with those on the opposite part of the coast in Forfarshire to guide the night navigation of the mouth of the frith. The whole of the parish is comprised in the estate of Scotsraig; and the mansion of the proprietor, a large substantial edifice built in 1807, stands amid pleasant enclosures on the north-west border. This estate at an early period belonged to the bishops of St. Andrews, by one of whom it was feued during the reign of Alexander II. to Sir Michael Scott of Balvarie, the father of the famed Sir Michael Scott, with whose descendants the lands for some time continued. It was in consequence of this that they came to be denominated Scotsraig. From the family of Scott, Scotsraig came by purchase to Dury of that ilk, from whom it passed to the Ramsays, ancestors of the Marquis of Dalhousie. It afterwards became the property of a family of the name of Buchanan, from whom it came to a family named Erskine. During the reign of Charles II. the whole estate became the property of Archbishop Sharp, from whose successors it was purchased by Mr. Alexander Colville, the representative of the Lords Colville of Culross. From this family the lands were afterwards purchased by the Rev. Robert Dagleish, D.D., who was minister and proprietor of the whole parish. The present proprietor is Captain W. M. H. Dougal. Population of the parish in 1831, 1,680; in 1861, 2,013. Houses, 373.

This parish is in the presbytery of St. Andrews, and synod of Fife. Patron, the Crown. Stipend, £159 13s. 1d.; glebe, £50. Schoolmaster's salary, £45, with £22 fees, and about £12 other emoluments. The parish church is a neat substantial edifice, built in 1825, and containing about 850 sittings. There are a Free church, an United Presbyterian church, and a Baptist chapel. The sum raised in connexion with the Free church in 1865 was £263 6s. There are two private schools, a female boarding school, and a savings' bank. Ferry-Port-on-Craig was erected into a separate parish in the year 1606; and it is supposed to have previously formed part of the parish of Leuchars. Its name is derived from the original ferry at the town, which

was conducted from the point of a rock or "craig."

The Town of FERRY-PORT-ON-CRAIG is now very generally called TAYPORT,—a name which it began to assume after the formation of the Edinburgh, Perth, and Dundee railway; but it still retains its old name in the Census and Post-office lists. It stands close to the shore, $3\frac{3}{4}$ miles in a straight line from Dundee, 5 north of Leuchars, and 44 by railway north-north-east of Edinburgh. Here are the churches and schools of the parish, a fine sea-bathing accommodation, and a large saw-mill. Many of the inhabitants are handloom weavers. A fair is held on the first Tuesday of June, old style, but it is of very trivial consequence. The town has long been of some note for its ferry; and it received a great increase of this by the formation of the Edinburgh, Perth, and Dundee railway. Great works were constructed here in order to render the railway's communication with Broughty-Ferry, on the opposite shore, effective and easy. A deep-water basin of large capacity was excavated; an exterior mole or breastwork was raised, with great skill and at vast expense, to shelter the basin from the east and north winds; an interior breastwork or landing-slip, about 600 feet long and 30 feet deep, divided into two inclined planes, with rails on them, was constructed for ready conveyance of the carriages to the steamers' decks at all states of the tide; and a quay-wall, about 200 feet long, was built at the eastern end of the basin, to facilitate embarkation and debarkation, in even the most unfavourable circumstances of tide and weather. The harbour thus comprises a completely protected floating basin, fully 600 feet in length by 200 of average breadth, with a depth of 28 feet of water at full spring tides, and not less than 8 feet at the lowest tides. The amplest communications are enjoyed by the townspeople to the south by railway, and to Broughty-Ferry and Dundee by steamers. The town is lighted with gas. Population in 1831, 1,338; in 1861, 1,773.

FERRYTOWN-OF-CREE. See CREETOWN.

FERNESSE. See FERNES.

FESHIE, a stream of Badenoch, in Inverness-shire. It rises near Cairncillar in Mar, flows first north-east, and then bends suddenly north-west to the eastern base of Cairn-dearg-mhore, where it strikes north, and pursuing a northerly course falls into the Spey near the church of Alvie. It flows through a picturesque district.

FETHELAND. See NORTHMAVEN.

FETHERAY. See FIDDIE.

FETLAR, one of the northerly Shetland islands. It lies 3 miles east of Yell and 4 miles south of Unst. It is about 7 miles in length, and $3\frac{1}{2}$ in breadth. It contains about 12,000 acres, with a tolerably fertile soil of loam and sand; but there is neither tree nor shrub to be seen upon it. There is a considerable quantity of that species of iron-stone called bog-ore, of a very rich quality; there are also some veins of copper ore. The coast-line of this island is very irregular and of great extent, being much indented by bays and marine inlets. Funzie is a ling-fishing station; Urie bay has a kind of pier; and Mowiek is a small harbour whence peats are exported. The surface of the island comprises several hills and valleys, but does not anywhere rise higher than about 300 feet above sea-level. Population in 1841, 761; in 1861, 548. Houses, 104.

FETLAR AND NORTH YELL, an united parish in the north of Shetland. Its post-town is Lerwick. Fetlar comprises the island described in the preceding article; and North Yell comprises the northern part of the island of Yell, which will be described in the article Yell. The chief landowners are the

Earl of Zetland and Sir Arthur Nicholson, Bart.—the latter of whom has a seat in Fetlar; but there are about twenty-six others. Assessed property in 1860, £1,375. Population in 1831, 1,680; in 1861, 1,480. Houses, 292.

This parish is in the presbytery of Burray, and synod of Shetland. Patron, the Earl of Zetland. Stipend, £180; glebe, £9. The minister officiates on alternate Sabbaths in Fetlar and in North Yell. The church of Fetlar was built in 1790, and contains 267 sittings. The church of North Yell was built in 1832, and contains 327 sittings. There is in Fetlar a Free church preaching station; attendance, 200; sum raised in 1865, £49. There is also in Fetlar a small Methodist chapel. The parish school is in North Yell. Schoolmaster's salary, £35 15s., with about £8 fees. There are in Fetlar a Society's school, two private schools, and a parochial library.

FETTER-, a prefix in some Celtic names of places, —signifying a pass or a ravine.

FETTERANGUS, a post-office village in the Banffshire section of the parish of Old Deer. It stands near the right bank of the Ugie, 2 miles north-north-west of Mutilaw, and 4 south-east of Strichen. It is on the property of Ferguson of Pitfour. Most of its inhabitants are employed in the manufacture of linen yarn. Population, 345.

FETTERCAIRN, a parish, containing a post-office village of its own name, on the south-western border of Kincardineshire. It is bounded by Forfarshire, and by the parishes of Edzell, Straehan, Fordoun, and Marykirk. Its length southward is 8 miles; and its greatest breadth is $4\frac{1}{2}$. It commences on the north, in a part of the lower Grampians, whose utmost altitude above sea-level is about 1,600 feet; and it descends to a long sweep along the North Esk, and considerably into the How of Mearns. The New Statistical Account distributes the whole area into 7,490 imperial acres of arable land, 349 of moss or waste which might be profitably reclaimed, 1,780 of woodland, and 3,573 of waste or pasture. The ground in the west is light and sharp, with a small mixture of moss; but in the east it becomes deeper, consisting of a fertile clayey loam. Cultivation is in a highly advanced state; and enclosures are done with hedge and ditch, or with stone fences. There are eight principal landowners. The real rental is about £8,230. Assessed property in 1866, £10,695 10s. 5d. Yearly value of raw produce, about £15,500. A principal mansion is Burn-house, built by Lord Adam Gordon in 1791, and situated amid beautiful grounds. Other interesting objects will be found noticed in the articles FASQUE and FENELLA'S CASTLE. The North Esk traces $6\frac{1}{2}$ miles of the boundary with Forfarshire. There are also several rivulets, but none of any importance. On the bank of one, running past Balnakettle, very fine porcelain clay is quarried. Limestone, red freestone, and slaty rock are also found. A romantic bridge, called Ganachy bridge, consisting of one arch, 52 feet in width, was thrown over the North Esk, in 1732, and widened, in 1796, at the private expense of Lord Adam Gordon and Lord Paumure. Its foundations stand on two stupendous rocks, elevated to a great height above the surface of the river. Most of the farms of this parish have thrashing mills. At Arnhall there is a small establishment for carding and manufacturing wool into coarse cloth; and at Nethermill, near the village of Fettercairn, is a distillery. The parish is not traversed by any turnpike road, but has good commutation roads, and lies within a few miles of the Marykirk and Laurencekirk stations of the Aberdeen railway. Popu-

lation in 1831, 1,637; in 1861, 1,700. Houses, 367

This parish is in the presbytery of Fordoun, and synod of Angus and Mearns. Patron, the Crown. Stipend, £240 6s. 8d.; glebe, £20. Unappropriated tithes, £145 6s. 6d. Schoolmaster's salary, £60, besides fees and other emoluments valued at £45. The parish church was built in 1804, and contains 800 sittings. There is a Free church; whose receipts in 1865 amounted to £110 10s. 1½d. There is a handsome Episcopalian chapel at Fasque, erected recently by Sir John Gladstone, Bart. There are five non-parochial schools.—two of which, as also an almshouse for eight aged persons, were founded and endowed by Sir John Gladstone.

The VILLAGE of FETTERCAIRN stands on the eastern verge of the parish, on a small affluent of the North Esk, $4\frac{1}{2}$ miles west by north of Laurencekirk, and 12 north-west of Montrose. It is a burgh of barony on the estate of Fettercairn. This estate was anciently called Middleton, and belonged so early as the reign of Alexander III. to the family of that name, who became ennobled in the reign of Charles II. by the titles of Earl of Middleton and Viscount Fettercairn; and, though for some time alienated from that family, it became re-possessed by them, and continued to be theirs till the year 1777. It is now the property of Sir John S. Forbes, Bart. The mansion, comprising a structure built in 1666 by John Earl of Middleton, and a tasteful addition built a few years ago by the present proprietor, stands a brief distance north by east of the village. An octagonal pillar, with a capital bearing the insignia of the Earl of Middleton, stands in the village, surmounting a circular mass of masonry, in the form of a flight of steps. This pillar is believed to have been the cross of the extinct town of Kineardine, and bears the date of 1670. On one side is an iron rivet to which the old Scottish tool of punishment, the joughs, appears to have been suspended. The village has a gas-work, two inns, four insurance offices, an office of the North of Scotland bank, a savings' bank, and two public libraries. It is also the seat of an agricultural club for the south-western division of the county. Population in 1841, 280; in 1851, 284; in 1861, 339.

FETTERESSO, a parish, containing the post-office station of Muchalls, and the northern division of the post-town of Stouehaveu, on the coast of Kincardineshire. It is bounded by the sea, and by Dunnottar, Glenberrie, Durris, Maryculter, and Bauchory-Deveniek. Its length south-westward is about 10 miles; and its breadth is between 5 and 6 miles. The river Carron flows on the southern boundary; and the Cowie Water, the Muchalls-burn, and the Elsiek-burn, which all run independently to the sea, drain the greater part of the interior. "The surface of the parish is irregular, but not mountainous—presenting a landscape, varying from the most pleasing to the most bleak. The new town of Stonehaven, the banks of the Carron and Cowie, through the whole of their course, the grounds adjoining Fetteresso Castle, Ury, Riekar-ton, and Netherly, may be considered as belonging to the former. Nor is there wanting at Elsiek, Muchalls, and Cowie, and in the bold rocky coast, much that is also pleasing to the eye. Most of the other districts, particularly the great common of Cowie, in the centre of the parish, are bleak, even where cultivation is carried on upon a regular and improved system. But there is in some districts great want of wood and enclosures, and of course of shelter; and much mossy, wet, and bleak land." The total extent of plantation is about 2,000 acres. There are several extensive landowners, also sev-

eral smaller ones. The total real land rental is about £16,800. Assessed property in 1866, £25,710 15s. 9d. The principal mansions are Fetteresso-castle, a large pile, partly ancient, and partly modern, in a fine park on the Carron; Ury-house, at present being rebuilt on the Cowie; Rickarton-house, about a mile west of the preceding; and Muchalls-house, an old pile on a rising ground near the sea, about 4 miles from Stonehaven. There are also the mansions of Elsick, Netherby, Covie, Berryhill, and Newhall. There are three fishing stations respectively at Cowie, Sketraw, and Shanathro. There are also several salmon-fisheries. The parish shares largely in the manufactures and general traffic of Stonehaven; and it is traversed by the Aberdeen railway, and has stations on it at Stonehaven and Muchalls. On the hill called Rhi-dikes, or King's-dykes, there are very distinct vestiges of a rectangular encampment, supposed to have been Roman, and occupied by Agricola's troops, previous to his engagement with Galgacus, the Scottish king. On a moor 2 miles east of the camp, are a great many tumuli, or small cairns, and some very large ones, which are supposed to be sepulchral monuments, raised on the field of battle, to the memory of the dead. The moor is called the Kemp-stane hill, and on each side is a morass. In almost every part of the parish, remains of Druidical temples have been met with, but some of them have been demolished by the farmers. On the coast, about 1½ mile north of Stonehaven, are the remains of a castle, the ancient residence of the Thanes of Cowie or Mearns; and, on a rising ground, near the Thane's castle, there was formerly a place of worship, the gables and part of the walls of which are still standing. Adjoining is a burying-ground, enclosed with stone walls, where many of the inhabitants, especially in the northern parts of the parish, still continue, on account of its vicinity, to bury their dead. Population in 1831, 5,109; in 1861, 5,527. Houses, 1,035.

This parish is in the presbytery of Fordoun, and synod of Angus and Mearns. Patron, the Crown. Stipend, £253 11s.; glebe, £16. Unappropriated tithes, £322 6s. 7d. The parish church stands near Stonehaven, was built in 1813, and contains 1,600 sittings. The ruins of the former church stand adjacent to the southern boundary, upwards of a mile from Stonehaven; and an extensive burying-ground adjoins them, and is still in use. A chapel of ease, of somewhat recent erection, and containing 700 sittings, stands at Cockney, on the estate of Muchalls. There is an United Presbyterian church at Stonehaven, which was built in 1803, and contains 400 sittings. There is an Episcopalian chapel on the estate of Muchalls, which was built in 1831, and contains 176 sittings. There are two parochial schools, the one for the southern district, and the other for the northern. Salary of the first master, £50 4s. 4d., with £20 fees; salary of the second, £30, with £10 fees. There are two endowed schools, several adventure schools, a savings' bank, and a dispensary.

FETTERNEAR. See CHAPEL-OF-GARIOCH.

FEUCHAN. See FEACHAN.

FEUGH (THE), a rivulet in the north-western quarter of Kincardineshire, tributary to the Dee. It rises in the forest of Birse, in Aberdeenshire, and running eastward 8 miles, enters Kincardineshire, where it is joined by the Aan, and soon after by the Dye, when, continuing an easterly course for a few miles more, it turns north, and dashes over a ledge of rocks into the Dee. See BRSE.

FEWNI (LOCH), a lake of about 2½ miles in length, on the mutual boundary of Sutherlandshire

and Cromartysire, at a point about 3½ miles south east of the village of Inver.

FIDDICH (THE), or **FEDDICH,** a river in Banffshire, tributary to the Spey. It rises in a mountainous tract between the parishes of Kirkmichael and Mortlach, flows through the beautiful vale of Glen Fiddich, and unites its waters with those of the Spey, in the parish of Boharm, about a mile below Elchies. "Fiddichside for fertility," is a proverb in the district. The stream, not reckoning sinuosities, has altogether a run of about 14 miles; and it performs the first half in a north-north-easterly direction,—the second half in variously a westerly and a north-westerly direction.

FIDDRIE, or **FETWAY,** a rocky islet in the frith of Forth, opposite to Dirleton, and 4 miles from the Bass rock. On it are the ruins of a small chapel.

FIELD-CRAIGHTON, a village in the parish of New Kilpatrick, Dumbartonsire. Population, 69 Houses, 10.

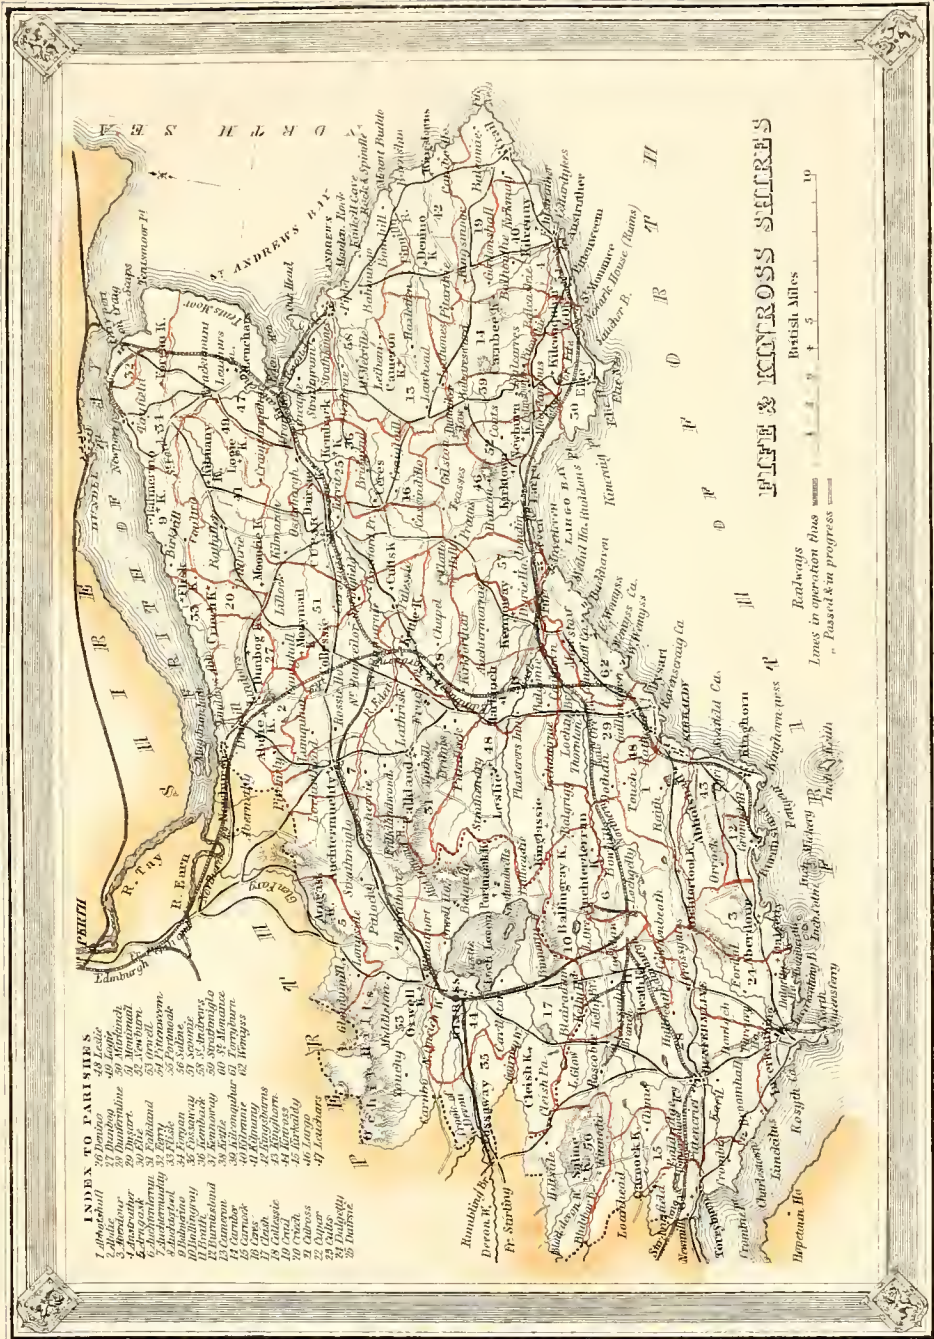

FIERSNESS. See FERNES.

FIFE. See FIFESHIRE.

FIFE-KEITH, a village in the parish of Keith, Banffshire. It stands on the left bank of the Isla, opposite the village of Old Keith; and communicates with that place by two bridges. It consists of a principal street along the high road from Aberdeen to Inverness, three other streets running parallel north and south, a neat square in the centre, and a handsome crescent facing the Isla. It was begun to be built in 1817 by Lord Fife, and is a clean, healthy place, and has a fine building adapted for an inn; but the whole village, commercially viewed, has been an utter failure. Fairs for cattle are held on the third Thursday of May, the second Thursday of July, and the last Thursday of October, all old style. Population, in 1861, 897.

FIFENESS, the easternmost point of land in Fifeshire, which projects into the German ocean, in North lat. 56° 17', and West long. 2° 36'. From it a ridge of rocks, called the Carr-rocks, projects a considerable way into the sea, rendering it very dangerous to mariners. See CARR-ROCK and CRAIL. The point of Fifeness is 2 miles east by north of Crail, 5 north by east of the island of May, and 10½ south-west by west of the Bell Rock.

FIFESHIRE, or **FIFE,** a maritime county of the east side of Scotland, lying nearly in the middle of the lowland region, which is bounded by the Lammermoors on the south, and the Grampians on the north. It is a peninsula, enclosed by the frith of Tay on the north, the German ocean on the east, and the frith of Forth on the south; and it marches on the west with Perthshire, Kinross-shire, and Clackmannanshire, the second of which it almost encloses, except on the west and north-west, where it joins Perthshire. The western boundary—the line of which is very irregular—extends about 23 miles from its extreme point on the Tay to the corresponding southern point on the Forth. The county gradually contracts to the east, and terminates there in the narrow projecting headland of Fifeness, which runs out into the German ocean, and where a beacon has been erected for the protection of coasting vessels. The length from east to west, along the shore of the Forth, is 41 miles; about the centre, in the same direction, from St. Andrews to Loeh Leven, it is 23½ miles; and from Ferry-Port-on-Craig to the small stream at Mugdrum that falls into the Tay, it is 18 miles. Its breadth across the centre, from Balambreich point on the north to Leven on the south, is 14 miles. The southern coast is, for the most part, indented by small rocky bays with corresponding projecting headlands; but along the banks of the Tay, the grounds slope gently toward

the beach, and are generally cultivated to the river's edge. Along the north-eastern shore, towards St. Andrews, it presents one large plain, terminating in a flat beach of sand containing a considerable quantity of broken shells. The shore in this direction, and generally onwards to Kingsharns and Craik, becomes extremely rocky; the outcrop of the sandstone running in the form of long narrow dykes into the sea, and rising into considerable mural cliffs towards the land. According to Sir John Sinclair's General Report of Scotland, the number of cultivated acres in this county, about 50 years ago, was 209,226, and of uncultivated, 89,664. Playfair estimates the superficies at 500 square miles, of which about four-fifths are arable. Macculloch, in his 'Statistical Account of the British Empire,' estimates the total area at 300,800 acres. The Ordnance Survey determined the real area to be 328,427 acres.

The general surface partakes more of the gentle, undulating outline of the middle districts of England, than of those bolder and more striking aspects of Nature which characterize the scenery of Caledonia. The Ochils, which skirt its northern border, and the Lomonds, which run nearly parallel to the Ochils, divide the county into three well-defined districts, which—as will be afterwards described—correspond to three equally marked subordinate geognostic formations. These two ranges of hills—which attain their greatest elevation towards the west—are separated by the intervening and finely-wooded valley of Stratheden, in the centre of which the county-town of Cupar is beautifully situated. The ground, on the south of the Lomonds, stretches out in a broad uneven surface towards the Forth; eastwards, there rises an elevated table-land, which forms what is characteristically termed "the Moors of Fife," but which gradually merges in the rich and extensive plains locally designated "the East Neuk," comprising an extent of several parishes.—The Ochils consist of a chain of trap-hills, extending through a course of upwards of 50 miles, to the vicinity of Stirling, gently rising on the south bank of the Tay above Ferry-Port-on-Craig, to about 400 feet, and attaining at the western extremity, in Benclough and Dumnyat, an elevation of nearly 3,000 feet above the level of the sea. The saddle-shape, the round-back, and the conical peak are severally developed in the course of this range; but only in a few instances—as Craig-sparrow, Clatchart, and Craig-in-Crune—do the hills present an abrupt, precipitous front; so that, for the most part, they are either cultivated to the summit, or covered with a rich carpeting of excellent pasturage. Towards the south-eastern district, they break up into several parallel ridges, or small mountain-arms—some of them completely detached—which, with extensive tracts of fertile corn-fields intervening, form an extremely pleasing and diversified contour of country. The whole is intersected by innumerable valleys, some of which form lateral passes into the adjacent plains of Stratheden and Strathearn; and one of them, commencing near the eastern shore, traverses the county as far as Newburgh, in a line almost parallel with the principal chain; when, after a contracted course, varying from a few hundred yards to half-a-mile in breadth, it opens suddenly upon the extensive basin in which the loch of Lindores is contained. A little to the westward, on the verge of Strathearn, and near the celebrated cross of Macduff, the poet thus glowingly describes the prospect:—

—"You do gaze—
Strangers are wont to do so—on the prospect.
You is the Tay, rolled down from Highland hills,

That rests his waves after so rude a race.
In the fair plains of Gowrie.—Further westward,
Proud Stirling rises.—Yonder to the east,
Dundee, the gift of God, and fair Montrose:
And still more northward, lie the ancient towers
Of Edzell."

Fife derives great commercial facilities from the friths of Tay and Forth upon its boundaries; and it has three rivers of its own which, though comparatively small in volume, possess considerable economical value. These are the Eden, which takes its rise near the western extremity of the county, in the parish of Strathmiglo, and, after a course of about 24 miles through the entire extent of the valley, falls into the sea at the Guard-bridge, near the bay of St. Andrews; the Leven, which issues from the loch of the same name, and runs along the southern escarpment of the Lomonds; and the Orr, which rises in the south-west corner of the county, and joins the Leven a few miles to the north of Largo bay, into which they pour their united waters. See articles EDEN, LEVEN, and ORR. The portion of the county traversed by the Orr is neither fertile nor interesting; but the vale that is irrigated by the Leven is extremely picturesque; the windings—which are short, abrupt, and frequent—expose unexpectedly to the traveller's eye scattered cottages along the sides of the river, bleachfields, mansion-houses, villages, and coal-works, giving to the whole an extremely animated outline. In addition to these rivers are certain streams, which, from the shortness of their course, and the small quantity of water they discharge into the sea, do not seem entitled to any particular notice.—The lochs connected with the county are Loch Fitty, Loch Gelly, Loch Leven, Loch Mill, the Black Loch, and the lochs of Lindores and Kilconquhar; all of which are well stocked with pike and perch, and some of them with excellent trout; and generally they are frequented by various species of wild-fowl, while their banks are adorned with the flowering aquatic plants.

The most striking feature of the county, both as connected with its general contour and as connected with the largest and finest of its lakes, is the ridge of the Lomond hills. The eye of the painter Wilkie has often rested with delight upon their fine outline—"mine own blue Lomonds," he calls them; and seen from every spot and corner of the shire, towering majestically above all the surrounding heights, they unquestionably form a grand and interesting object. This ridge consists of an elevated table-land, about 4 miles in length, completely insulated from the neighbouring hills, and has a gentle and gradual slope towards the south, but on the north the acclivity is precipitous and rocky, and springs immediately from the valley of Stratheden to the height of 800 or 900 feet. Two lofty conical peaks surmount the extremities of the ridge, the one rising to the additional height of 666, and the other to about 821 feet—thus making what is termed the East law 1,466, and the West law 1,721 feet above the level of the sea. Overlooking the whole county, and the two noble estuaries by which it is almost encompassed, with the German ocean to the east, the towers of Stirling and "the lofty Ben-Lomond" to the west, the rugged, serrated outline of the Grampians to the north, and the extensive plains of the Lothians, begirt by the Pentlands and the Lammermoors to the south—the prospect from either summit of these twin hills may vie with any in the kingdom, presenting at once to the eye whatever is necessary to form the beautiful, the picturesque, or the sublime. See LOMOND HILLS. Some of the objects in the immediate vicinity give additional interest to the scene. The palace of Falkland, which lies at the base of the East peak, is

still a place of considerable attraction, and presents no mean specimen of the architectural taste of other days. See FALKLAND. Loch Leven washes the sloping defiles of the other; and in the middle of this deep blue lake, may still be observed the ruins of the castle in which the unfortunate Mary Stuart was imprisoned by her subjects. See LEVEN (LOCH).

The rocks of the carboniferous series, irregularly disrupted and superseded by trap rocks, prevail in Fifeshire from the one extremity to the other. These, named in ascending order, are old red-sandstone, limestone, yellow sandstone, limestone, coal, clay ironstone, bituminous shale, slate clay, and sandstone. The old red-sandstone rocks are of comparatively limited extent, and are almost exclusively confined to the northern division. Some very interesting sections of the yellow sandstone, along with strata of the coal-field, may be observed in Dura-Den. The mountain limestone forms a kind of crescent around the out-crop of the coal-field, ranging from the south-west extremity of the county at Broom-hall, and passing through the parish of Cleish towards the Lomonds, where it attains an elevation of 1,100 feet above the level of the sea. Its course towards the east is by Forther, Cults, Ceres, Ladadda, and Mount Melville; and, after a considerable interruption here, it emerges at Randerston in the parish of Kingsbarns, on the south-east confines of the county. It may be considered also as occupying much of the district intermediate between the line now indicated and the Forth; although it has only been brought to the surface, and rendered available for practical purposes, in a few localities along the southern shore, as at Seafeld, Tyrie, Innertiel, Raith, Chapel, and Pittenweem. This limestone, however, is not to be confounded with another of more limited extent, included among the coal strata, and which, for the sake of distinction, has been termed the upper limestone. From Pettycur to Inverkeithing, the stratified rocks are much intersected and disturbed by those of an igneous origin. The limestone, shale, and sandstone also abound with organic remains, many of which are rare, peculiar, or otherwise remarkable. Hence does this district possess interest of no common degree for students of geology.

The coals of Fifeshire are distinguished by the proportion of bitumen which they yield. Two varieties occur,—the common or caking-coal, which yields about 40 per cent. of bitumen, and emits a considerable quantity of smoke in burning; and the parrot or cannel-coal, which affords about 20 per cent. of bitumen. The former has a splintery, imperfect conchoidal fracture, and swells in burning; the latter burns with a bright flame, and, generally, during combustion, decrepitates and flies into small angular fragments. No coal has yet been found to the north of the Lomonds and the Drumcarro hills; but towards the south and the west, it is most abundantly distributed, sometimes in basins of inconsiderable extent, and sometimes in outstretching continuous beds of indefinite dimensions. There are coal-works at Torry, Blair, Elgin, Wellwood, Protis, Hallbeath, Crossgates, Fordel, Donibristle, Dundonald, Keltie, Beath, Rashes, Lochgelly, Kippledrae, Cluny, Dunnikier, Dysart, Orr-Bridge, Balbimie, Rothesfield, Wemyss, Drummochoy, Lundin Mill, Grange, Rires, Balcarres, St. Monance, Pittenweem, Kellie, Gilmerton, Largoward, Bung, Fallfield, Lathockar, Cairlthurlic, Teasess, Ceres, Drumcarro, Kilmux, Carriston, Clatto, and Burnturk; and in these upwards of 2,500 men and boys are employed. The breadth of the coal country is from 6 to 9 miles; and the length of it from Torry to Pittenweem is 35 miles, and from Blairadam to Drumcarro, along

the line of the northern limit, 22 miles. It thus occupies an area of rather more than 200 square miles. Beds of parrot or cannel-coal occur generally in the upper series of the coal deposits, at Torry, Dysart, Fall-field, Clatto, Teasess, Burnturk, and Kippledrae. At the latter locality there are two seams, separated by a thin layer of shale, and whose average thickness is about 5 feet. Besides the parrot, a vertical section of a coal-basin frequently exhibits upwards of twenty different seams of the common coal; and these seams vary from a foot to 20 feet in thickness.

Basalt occupies almost exclusively the southern boundary of the shire, along the shores of the Forth, where, at Queensferry, Pettycur, Orchil near Auchtertool, Kincaraig hill, Earlsferry-point, and several other localities to the east, it exhibits beautiful specimens of the columnar structure, consisting of small, sometimes of larger, pentagonal masses jointed into one another with perfect symmetry and order. Clinkstone generally forms the cap or highest portion of the Ochil ridge, but by no means uniformly so. The Lomonds are capped with greenstone and amygdaloid. Largo law, Hall-hill-craig, and Craighall rock are composed of a greyish black compact basaltic clinkstone. Between Kincaraig and Earlsferry-point, in a small bay of not more than a mile in extent, the whole series of trappean rocks may be observed, arranged in no systematic order, and scarcely distinguishable at their lines of junction with each other. In Glenfarg the prevailing rocks are claystone, highly indurated and of a variegated yellow and brownish-red colour, and amygdaloid, extremely vesicular, having cavities from an inch to a quarter of an inch in diameter, filled with green earth, chalcedony, calcareous spar, aulacime, quartz, and zeolites. Veins of carbonate of barytes and carbonate of lime traverse the hills here in every direction, varying from an inch to several feet in thickness, and exhibiting beautiful specimens of crystallization.

Alluvium is confined almost to the north-west section of the county, the valley of Stratheden, and a few places along the banks of the Leven and Orr. Sandrüt occurs only in a small tract of sea-board between St. Andrews and Ferry-Port-on-Craig, and does not attain an elevation of more than 40 to 50 feet. Peat-moss exists in greater abundance, and occupies generally the highest table-land in the district. Brunshiels towards the east and Moss-morran in the south-west, are the most extensive. Mossmorran is about 1,200 acres in extent, and in some places about 25 feet in depth. Diluvium abounds in Stratheden. From the church of Collessie to the river Eden, and through a range of several miles to the east and west, the bottom of the valley is filled to an unknown depth with the debris of the old red sandstone, generally consisting of small gravelly fragments. The high table-land at Mugdrum, near Newburgh, is completely covered with diluvium, as well as the sloping ground on which the town stands. The valley, which commences at the rock of Clatchart, and stretches eastwards, is also filled with diluvium; and to the combined action of the currents which swept along the northern and southern acclivities of the Ochils—through the valleys of Stratheden, Lindores, and the Tay—may be ascribed vast accumulations of sand and gravel on the western confines of the parishes of Leuchars and Forgan. Two interesting examples of sub-marine forests are situated in this deposit, the one at Largo hay, and the other at Flisk. They are placed within the limits of the tide, and are covered at high-water to the depth of nearly 10 feet. They consist of the roots of

trees, imbedded in a peat-moss which rests upon a bed of clay of unknown depth.

The progress of agriculture in Fife has been very great since the end of the 18th century. About four-fifths of the county is considered as arable land; and it is at present under the management of intelligent, active, and judicious agriculturists. Indeed, the agriculture of the county is behind no other, and far in advance of that of many of the counties of Scotland. Previous to 1790, the farmers generally lived in low smoky houses, badly lighted, and having no other divisions but those made by the large wooden bedsteads, which formed what was called a hut and a ben. The offices were then also, as was to be expected, mean and deficient in the extreme. The farmers of that period wanted, in many instances, the capital, as they were deficient in the intelligence and energy, to engage in and effect profitable improvements. All this, however, is now happily altered. The agriculturists of the present day are, with little exception, all capitalists; and, from their more enlarged education and higher intelligence, are enabled to adopt every improvement in the management of their land, and to take advantage of every new market which the general improvement of modern times has opened up to them. The farm-houses are now all of a superior description, and many of the farm-offices are models for convenience. Drainage has been conducted in Fife on a very extensive scale, and the appearance of the county has, in consequence, been greatly improved, while its productions have been increased and benefited in quality. Several pretty extensive lochs and marshes, which were formerly profitless to the proprietor, have been completely drained, and the ground they occupied put under tillage. Farrow-draughting, where thought necessary, has been adopted, and is in many instances still extending with great advantage. The old breed of horses, which was small and unsightly, and ill-fitted for either draught or saddle, has almost entirely disappeared; and the breed of horses now used for agricultural purposes will vie, either in power or in appearance, with those in any county in Scotland. The Fife breed of cattle has long been celebrated both for feeding and for the dairy. Their prevailing colour is black. They are small horned, and easily fattened; and at Smithfield bring a higher price than almost any other kind. In general they weigh from 30 to 50 or 60 Dutch stones when ready for the knife. From 10 to 14 Scotch pints of milk per day, at the best of the season, is the ordinary produce of a good Fife cow. For about twenty-six weeks annually she will produce from 7 to 9 pounds of butter each week. But the dairy is not the chief object with the farmers of this county, excepting in the vicinity of towns.

The cultivation of oats is more extensive in Fife than that of any other sort of grain. Oats are better suited both to the soil and to the climate; and oatmeal is the principal article of food among the middle and lower classes. Barley is cultivated to a very considerable extent, and more so now than at any former period. The vast number of distilleries, both here and in Perthshire and Clackmannanshire, insure a ready market to the grower; and the consequent high price is a strong inducement to the farmer to sow every field with barley that will produce any thing like a crop. The long-eared barley, with two rows, is cultivated on all lands which lie low and warm, and are under an improved state of husbandry. Wheat appears to have been anciently more generally cultivated in Fife than at a later period. In the statements of the revenues of some of the old monasteries, it

appears that wheat was delivered as rent by the farmers,—produced, no doubt, from lands upon which, 60 or 70 years ago, nobody would have attempted to rear a crop of that kind. During the last 60 years, however, the cultivation of wheat has been rapidly extending, and has uniformly kept pace with the improvements in agriculture. Many parts of the county are well-adapted for this valuable grain, and crops of wheat are frequently reared here equal to any produced in the richest counties of England. Beans and pease are cultivated to the extent of about 6,000 acres annually. Potatoes are grown on every farm both for family use and for sale. And as the county abounds in small towns and villages, a much greater quantity, in proportion, is raised in the immediate vicinity of these than upon farms that are more remote. Many farmers, too, are in the habit of letting small portions of potato-land to such villagers as have none of their own. Turnips are general all over the county, except in the immediate vicinity of villages, where they are exposed to the depredations of juvenile intruders. On almost every farm, rye grass, and red and white clovers are cultivated; and strong, heavy crops of hay are produced in suitable seasons. The gross produce of the county in 1854 comprised 697,252 bushels of wheat, 1,075,603 bushels of barley, 1,656,467 bushels of oats, 540 bushels of bere or bigg, 111,952 bushels of beans, 405,445 tons of turnips, and 68,087 tons of potatoes. The average produce per imperial acre was 28 bushels 3 pecks of wheat, 38 bushels 2 pecks of barley, 38 bushels of oats, 33 bushels 1 peck of bere, 28 bushels 3 pecks of beans, 14½ tons of turnips, and 4 tons 14 cwt. of potatoes. And the aggregate live stock in 1854 comprised 10,953 horses, 8,586 milk cows, 22,371 other bovine cattle, 8,311 calves, 32,550 ewes, gimmers, and ewe-hogs, 33,866 tups, wethers, and wether-hogs, and 11,485 swine.

The agricultural prosperity of Fife is highly promoted by the peninsular form of the county, placing sea-borne conveyance almost at the door of a large proportion of its most productive tracts, and even within ten miles or so of its most sequestered farms; and it has been greatly stimulated, first by the introduction of steam navigation, and next by the formation of the railways. The size of the farms ranges from 50 to 500 acres. The lands, with the exception of grass parks within gentlemen's enclosures, are all let on lease, usually for 19 years. The rents, where paid in money, are various, rising from £1 to £5, and in some few localities higher; but in many instances, a grain-rent is paid, regulated by the fair-prices of the county, which are fixed yearly by the sheriff. Thorn hedges are not so prevalent for enclosure as in some other counties; stone walls being more extensively used, and being preferred for this purpose, though neither possessing the beauty nor affording the warmth of the other. Scarcely any natural wood exists in the county; and wood of any kind was formerly so scarce as to render all the sea-boards and all the eastward slopes, not only bleak in aspect, but woefully unsheltered from the bitter easterly winds which prevail so long in the spring season over all the east of Scotland. But during the last forty or fifty years, "there has been a great deal of planting, and nowhere to such an extent as in the low district east from Rossie, partly in the proprietary of the Earl of Leven. There is here now a forest of Scotch firs stretching for many miles in length, and within the boundaries of which are found the mansions and pleasure grounds of Crawford Priory and Melville. In the territory adjacent to the Forth, near Kirkcaldy, there is much of the higher grounds

planted, chiefly on the estate of Mr. Ferguson of Raith. In the western district there has been also considerable planting. There does not appear to be much old or hard-wood in Fife, the principal and largest collection of trees, dignified by age and magnitude, being in the grounds around the charming seat of Leslie House, in the vale of the Leven. The valued rent of the county in 1674 was £363,129 Scots; in 1695, £369,786 18s. 8d. Scots. The real rental in 1811 was £335,291; in 1843, £381,572. The value of assessed property in 1815 was £405,770; in 1843, £490,033. The average of the fiars from 1843 to 1851 was, white wheat, £2 5s. 4½d.; red wheat, £2 2s. 2½d.; barley, £1 6s. 10½d.; bere, £1 3s. 3½d.; oats, £1 1s. 0½d.; pease and beans, £1 10s. 6½d.; rye, £1 7s. 10½d.; malt, £2 12s. 2½d.; and oatmeal, 16s. 8½d.

The principal manufacture in Fife has long been that of linen, which, from small beginnings, has gradually increased to its present great importance. Many mills have been erected—and these are still increasing—for the spinning of tow and flax into different qualities of yarn. The cloths woven are of various kinds,—sail-cloth, bed-ticking, brown lineu, dowlas, duck, checks, shirting, and table-linen. The damask manufacture of Dunfermline is probably unequalled in the world, for the beauty of its designs, and the skill with which it is executed. The cotton-manufacture has never been an object of the expenditure of capital in this county; but many workmen are employed in this manufacture for Glasgow houses. Iron-founding and the making of machinery are carried on in different places. The tanning of leather is also carried on in two or three localities. Bricks and tiles are made for local use; and earthenware and china manufactured to some extent. Coach-building is likewise carried on. There are numerous breweries and some pretty extensive distilleries, which afford the farmer a ready market for his barley. Ship-building also forms a part of the trade of the county.—The weights and measures, before the act for the equalization of these, were Tron, reckoning 16 Scots Troy lbs. to the stone, and 20 Troy ozs. to the lb., for wool, butter, cheese, hides, and other home-productions; Dutch for butcher meat—except in Kirkcaldy presbytery, where Tron was used—meal, foreign flax, and hemp, iron and Dutch goods; and aivordupois for groceries. The stone of flax was 22 lbs. aivordupois. The measure for wheat, pease, and beans, was a firlo, containing 2274.888 cubic inches, being 35.29 per cent. better than standard measure; and for oats, barley, and malt, a firlo containing 3308.928 cubic inches, or 3.225 per cent. better than the standard. Home-made woollen cloth sold by the ell of 37½ inches.

Fifeshire is remarkable for the number of its royal burghs, its burghs-of-barony, its populous villages, and its landed proprietors. This seems to have attracted the notice of Pennant, the tourist, who is quite enthusiastic in his description of the county. "Permit me," says he, "to take a review of the Peninsula of Fife, a county so populous, that, excepting the environs of London, scarcely one in South Britain can vie with it; fertile in soil, abundant in cattle, happy in collieries, in iron-stone, in lime and freestone; blest in manufactures; the property remarkably well divided,—none exceedingly powerful to distress, and often depopulate a county,—most of the fortunes of a useful mediocrity. The number of towns is, perhaps, unparalleled in an equal tract of coast; for the whole shore, from Crail to Culross, about 40 English miles, is one continued chain of towns and villages." The royal burghs, exercising the burgh parliamentary franchise, are

Anstruther Easter, Anstruther Wester, Burntisland, Crail, Cnpar, Dunfermline, Dysart, Inverkeithing, Kilrenny, Kinghorn, Kirkcaldy, Pittenweem, and St. Andrews. Four royal burghs, not now exercising the burgh parliamentary franchise, are Anchtarmuchty, Earlsferry, Falkland, and Newburgh. Four burghs of barony or of regality are Elie, Leven, West Wemyss, and Linktown. The other small towns, villages, and principal hamlets are Ferry-Port-on-Craig, Largo, Colinsburgh, Kilconquhar, Ceres, St. Monance, Leuchars, Kennoway, Leslie, Pathhead, Lochgelly, Aberdonr, North Queensferry, Charlestown, Limekilns, Drumochy, New Gilston, Lundinmill, Temple, Woodside, Drmmeldrie-Moor, Baruyards, Williamsburgh, Liberty, Kingsbarns, Blebo-Craig, Boarhills, Grange, Kincaple, Strathkinness, Balmullo, Marytown, Newport, Woodhaven, Balmerino, Galdry, Kilmarny, Rathillet, Logie, Lucklawhill-Fens, Osnaburgh, Gladney, Springfield, Chance-Inn, Craigothie, Pitlessie, Crossgates, Cutts-Mill, Hospital-Mill, Walton, Easter Fernie, Letham, Monimail, Brunton, Luthrie, Glenduckie, Lindores, Grange of Lindores, Collessie, Edenton, Giffordton, Kinloch, Ladybank, Monkston, Dunsbelt, Dambead, Strathmiglo, Balmbræ, Frichie, Newton-Falkland, Kettle, Balmaleom, Bankton-Park, Coalto, Hole-kettle-Bridge, Muirhead, Myreside, Baneton, Star, Scoonie-Burn, Coalto of Balgonie, Markinch, Woodside, Dubhiesie, Balcurrie, Burns, Haugh-Mill, Milton, Thornton, Windygates, Kinglassie, Sinclairtown, Chapel, Anchtortool, Newbigging, St. David's, Fordel-square, Hillend, Crumie-Point, Torry, Torryburn, Cairniehill, Carnock, Gowkhal, Saline, Crossford, Halbeath, Masterton, Patimoor, Cowdeubeath, Keltie, and Oakfield. Among the principal seats are Broomball, the Earl of Elgin; Crawford-priory, the Earl of Glasgow; Melville-house, the Earl of Leven; Kelly-eastle, the Earl of Mar; Donbristle-house, the Earl of Moray; Aberdour-house, the Earl of Morton; Lochgelly-house, the Earl of Minto; Leslie-house, the Earl of Rothes; Dysart-house, the Earl of Rosslyn; Balvaired-house, the Earl of Mansfield; Denog, the Earl of Zetland; Balbeadie-house, Sir John Malcolm, Bart.; Pitfirrane, Sir P. A. Halket, Bart.; Balcaskie, Sir R. A. Anstruther, Bart.; Kilconquhar-house, Sir J. T. Bethune, Bart.; Cambo-house, Sir Thomas Erskine, Bart.; Raith, Robert Ferguson, Esq.; Falkland-house, O. Tyndall Bruce, Esq.; Blebo, A. Bethune, Esq.; Montrave-house, Major A. Anderson; Durie-house, Charles M. Christie, Esq.; Balfour-castle, Captain C. R. D. Bethune, R. N.; Scots-craig, Captain W. M. H. Dongal; Strathere-house, J. Fergus, Esq.; Dunino-house, Lord W. R. K. Douglas; Fordel, G. W. M. Henderson, Esq.; Pit-tencrief, James Hunt, Esq.; Balearras, Major-General J. Lindsay; Dunnikier-house, J. T. Oswald Esq.; Charton-house, John A. Thomson, Esq.; Birkhill-house, F. L. S. Wedderburn, Esq.; Wemyss-hall, James Wemyss, Esq.; Elie-house; Airdrie; Pitmilny; Dunbog; Kankeillor; Incbdaimny; Strathendry; Mugdrum; Rossie; Bellevue; Torry; Largo-house; Cunnquoehie; Tarvit; Nuthill; Keuback; Hillside; Gask, &c.

The maritime traffic of Fifeshire is not concentrated at any one or two ports, but diffuses itself round nearly all the coasts, at the numerous towns and villages on at once the Tay, the German ocean, and the Forth, though chiefly on the latter, and is of considerable aggregate extent. The only head-port of the county is Kirkcaldy; and the chief shipping companies are the Kirkcaldy and London, the Kirkcaldy and Glasgow, the Kirkcaldy, Leith, and Glasgow, the Leven and Leith, the Elie and Leith, the Anstruther and Leith, and the Inver-

keithing and Leith. But the northern parts of the county have large transactions with Dundee.—The principal ferries are from Newport to Dundee, from Ferry-Port-on-Craig to Broughty-Ferry, from Kirkcaldy to Newhaven, from Burntisland to Granton, and from North Queensferry to South Queensferry,—all of which are so multitudinous, regular, and well-appointed as to be only a degree or two less convenient across the friths than good bridges are across rivers; and there are, in addition, numerous steam-conveyances, either direct or in transit, from many of the other coast-towns.—The road-trusts are distributed into districts of very unequal extent, and those in the west comprise Kinross-shire; but all work well, and maintain the highways in good condition. The Cupar district comprises 85 miles of turnpike roads and 126 miles of statute labour roads; the Cupar, Kinross, and Pitcairly roads extend to about 22½ miles; the Dunfermline district has 25½ miles of turnpike roads and 49½ miles of statute labour roads; the Outh and Nivington district has 26½ miles of turnpike roads; the St. Andrews district has 135½ miles of turnpike roads and 73½ miles of statute labour roads; the Kirkcaldy district has 77 miles of turnpike roads and 67½ miles of statute labour roads; the Leven trust has 7½ miles of road; the Kinross-shire district has 42¾ miles of turnpike roads and 40¾ miles of statute labour roads; the Cleish and Tullybole trust has 9 miles of statute labour roads; the great north road comprehends 39½ miles of turnpike; and the Kinross and Alloa road comprehends 18 miles of turnpike.—The Edinburgh, Perth, and Dundee railway traverses the coast from Burntisland to Sinclairtown, goes northward thence to the centre of the county, and ramifies to Dunfermline, Newburgh, and Ferry-Port-on-Craig. The Leven railway and the St. Andrews railway, the former 6 miles long and the latter 5, connect the Edinburgh, Perth, and Dundee railway with respectively Leven and St. Andrews. The Stirling and Dunfermline railway goes westward from Dunfermline to a junction with the Scottish Central in the vicinity of Stirling. Other lines of railway within the county, particularly interior lines on the east, and a transit line from Edinburgh to Perth by way of Queensferry on the west, have at various periods been speculated upon; but only those which we have named have been executed.

Fifeshire was anciently of much greater extent than it now is. Under the names of Fife and Fothrik or Fothrif, the whole tract lying between the rivers and friths of Forth and Tay appears to have been comprehended; including, besides what now constitutes the county, Monteith, the lordship of Strathcarn, Clackmannanshire, Kinross-shire, and that portion of Perthshire which borders on the Forth. From the great extent and value of this district, and from its forming so important a portion of the Pictish dominions, it unquestionably received, at an early period, its popular appellation of 'the Kingdom of Fife,'—a name still fondly cherished by its sons, especially those to whom distance renders still more dear the place of their nativity. At different periods, the extent of 'the kingdom' was diminished. So early as 1426, the district of Kinross was formed into a distinct county; and in the time of Buchanan—who wrote towards the end of the following century—Fifeshire seems to have been reduced nearly to its present dimensions. "The rest of the country," says he, speaking of this district, "the ambition of man has divided into several stewartries, as the stewartry of Clackmannan, of Culross, and of Kinross." A farther dismemberment, however, took place in 1685, when the parishes of Portnoak, Cleish, and Tullybole, were

disjoined from Fife, and, with some lands of Perthshire, incorporated with the shire of Kinross. Nor have all the jurisdictions of what now constitutes Fifeshire been retained. Among the more important of the courts now abolished, were that of the steward of the stewartry of Fife, held heritably by the Duke of Athole, and in compensation for which he claimed and obtained the sum of £1,200 sterling at its abolition; that of the bailie of the regality of Dunfermline, for which the Marquis of Tweeddale received £2,672 7s. sterling; that of the bailie of the regality of St. Andrews, for which the Earl of Crawford received £3,000 sterling; that of the regality of Aberdour, for which the Earl of Morton received £93 2s. sterling; that of the regality of Pittenweem, for which Sir John Anstruther of Anstruther obtained £202 15s. 3d. sterling; that of the regality of Lindores, for which Antonia Barclay of Collerny, and Mr. Harry Barclay, her husband, obtained £215 sterling; and the regality of Balmerino, which was not valued, as it was forfeited to the Crown by the accession of Lord Balmerino to the rebellion in 1745.

Fifeshire, as a county, sends one member to parliament. Its polling-places are Cupar, St. Andrews, Crail, Kirkcaldy, Dunfermline, and Auchtermuchty. Its constituency in 1839 was 2,967; in 1854, 3,280. By the reform bill, also, Cupar, St. Andrews, Easter and Wester Anstruther, Pittenweem, Kilrenny, and Crail, elect one member; Kirkcaldy, Dysart, Kinghorn, and Burntisland, elect another; and Dunfermline and Inverkeithing are conjoined with the Stirling district of burghs in the election of a third. The total constituency of these burghs, independent of that for the county, is about 2,000. This county, therefore, has its fair share in the representation of Scotland in the British parliament. The county is divided into the eastern district of Cupar, and the western district of Dunfermline, each under the jurisdiction of a sheriff's substitute; and for civil purposes, it is divided also into the four districts of Cupar, St. Andrews, Kirkcaldy, and Dunfermline. The commissary courts for the county and the sheriff courts for the eastern district are held at Cupar on every Tuesday and Thursday during session, and sheriff small debt courts on every first and third Thursday of each month during session, and on every first Thursday during vacation. The sheriff ordinary courts for the western district, and also the sheriff small debt courts, are held at Dunfermline, on every Friday during session. Quarter sessions are held on the first Tuesday of March, May, and August, and on the last Tuesday of October. Sheriff circuit small debt courts are held at St. Andrews, Colinsburgh, Leven, Kirkcaldy, Auchtermuchty, and Newburgh. The stations of the county police, for the Cupar district, are Cupar, Kettle, Strathmiglo, Trafalgar, Newburgh, and Gaudry; for the St. Andrews district, St. Andrews, Leuchars, Ferry-Port-on-Craig, Newport, Crail, Anstruther, Colinsburgh, Largo, and Pittenweem; for the Kirkcaldy district, Kirkcaldy, Linktown, Pathhead, Dysart, Leven, Markinch, Leslie, Lochgelly, Burntisland, and Kinghorn; and for the Dunfermline district, Dunfermline, Crossgates, Aberdour, Torryburn, Saline, Carnock, and North Queensferry. The number of committals for crime, in the year, within the county, was 167 in the average of 1836–1840, 147 in the average of 1841–1845, 138 in the average of 1846–1850, 89 in 1851, 85 in 1852, and 110 in 1853. The total number of persons confined in Cupar jail within the year ending 30th June, 1853, was 346; the average duration of the confinement of each was 37 days; and the net cost of their confinement per head, after deducting

earnings, was £20 5s. 7d. The total number confined in Dunfermline jail in the same year, was 216; the average duration of confinement, 30 days; and the net cost per head, £18 3s. 3d. The number of parishes in the county assessed for the poor is 39; the number unassessed, 22. The number of registered poor in the year 1851-2 was 3,892; in the year 1852-3, 3,792. The number of casual poor in 1851-2 was 1,372; in 1852-3, 1,357. The sum expended on the registered poor in 1851-2, was £18,442; in 1852-3, £19,110. The sum expended on the casual poor in 1851-2 was £1,230; in 1852-3, £984. The assessment in 1853-4, per £100 of real valued rent, was 3d. for rogue-money, 8s. 8d. for county police, 4s. 5d. for prisons, and 1s. 3d. for court-houses. Population of the county in 1801, 93,743; in 1811, 101,272; in 1821, 114,556; in 1831, 128,839; in 1841, 140,140; in 1861, 154,770. Males in 1861, 72,608; females, 82,162. Inhabited houses in 1861, 26,029; rooms, 93,371; families, 37,143.

There are in Fifeshire 61 quoad civilia parishes, and part of two others. There are also 3 quoad sacra parishes, and 8 chapels of ease. Twenty of the quoad civilia parishes constitute the presbytery of St. Andrews. Nineteen of the quoad civilia parishes, and one of the quoad sacra parishes, constitute the presbytery of Cupar. Fourteen of the quoad civilia parishes, together with one belonging to Kinross-shire, constitute the presbytery of Kirkcaldy. Eight of the quoad civilia parishes, and two of the quoad sacra parishes, together with three parishes belonging to Kinross-shire, and one belonging to Perthshire, constitute the presbytery of Dunfermline. And these four presbyteries constitute the synod of Fife. But the two quoad civilia parishes which belong but partly to Fifeshire, are in the presbytery of Perth, and synod of Perth and Stirling. In 1851, the number of places of worship within the county was 219; of which 77 belonged to the Established church, 49 to the Free church, 45 to the United Presbyterian church, 1 to the Reformed Presbyterian church, 2 to the Original Secession, 7 to the Episcopalians, 12 to the Independents, 9 to the Baptists, 1 to the Wesleyan Methodists, 1 to the New church, 1 to the Campbellites, 1 to the Evangelical Union, 6 to isolated congregations, 3 to the Roman Catholics, 1 to the Catholic and Apostolic church, and 3 to the Mormonites. The number of sittings in 61 of the Established places of worship was 39,578; in 43 of the Free church places of worship, 21,022; in 41 of the United Presbyterian places of worship, 22,027; in the Reformed Presbyterian meeting-house, 300; in 1 of the Original Secession meeting-houses, 800; in 6 of the Episcopalian chapels, 1,123; in 9 of the Independent chapels, 2,766; in 8 of the Baptist chapels, 2,000; in the New church chapel, 80; in the Campbellite chapel, 80; in the chapels of 5 of the isolated congregations, 1,220; in one of the Roman Catholic chapels, 300; and in one of the chapels of the Mormonites, 81. The maximum attendance, on the Census Sabbath, at 64 of the Established places of worship, was 21,274; at 45 of the Free church places of worship, 13,083; at 42 of the United Presbyterian places of worship, 14,167; at the Reformed Presbyterian meeting-house, 230; at the 2 Original Secession meeting-houses, 418; at 5 of the Episcopalian chapels, 419; at 10 of the Independent chapels, 1,008; at 8 of the Baptist chapels, 1,025; at the Wesleyan Methodist chapel, 69; at the chapel of the New church, 13; at the Campbellite chapel, 14; at the chapel of the Evangelical Union, 105; at the chapels of 5 of the isolated congregations, 300; at one of the Roman Cath-

olic chapels, 450; at the Catholic and Apostolic chapel, 12; and at the 3 Mormonite chapels, 173. There were in 1851, in Fifeshire, 173 public day-schools, attended by 9,839 males, and 7,369 females,—112 private day-schools, attended by 2,743 males, and 3,194 females,—19 evening-schools for adults, attended by 263 males, and 176 females,—and 133 Sabbath-schools, attended by 6,371 males and 8,382 females.

The aboriginal inhabitants of Fife were Celts. At the period of the Roman invasion, the peninsula between the Forth and the Tay, together with the eastern part of Strathearn, and the country lying westward of the Tay as far as the river Brand, was inhabited by the Horestii. They had no towns within the bounds of what now constitutes Fife; but their hill forts were numerous, all over the county; and the remains of several of these are still to be traced. On Dunearn hill there was a British fort of great strength, which soon yielded to the art of the Romans. Upon Carneil hill near Carnock, the Horestii had another fort, which in all probability came into possession of the Romans, as in 1774, upon opening some tumuli on the hill, several urns were found containing Roman coins. About 1½ mile north from Carnock there was a fort on a hill called Craigluscar; and 3 miles north-north-west there was one on Saline hill, and another at no great distance below. The situation of several others can also still be traced on the heights in the northern part of the parish of Strathmiglo, as well as on the hills near Newburgh. In the year 83, Agricola entered the country of the Horestii; and being informed that it was the intention of the Caledonians to attack him on all sides, in a country with which he was unacquainted, he divided his army into three divisions. It seems probable that with one of these he marched to Carnock, near which are still to be traced the remains of two Roman military stations. From thence he pushed forward the 9th legion to Loch Orr, about 2 miles from Loch Leven. Here the Romans pitched their camp, having two ranges of hills in front, the Cleish range on their left, and Bennarty hill on their right. In the summer of 84, Agricola left the country of the Horestii, on his expedition to the north; and after the battle of the Grampians, he took hostages from the Horestii, for their future tranquillity, and conducted his troops into winter quarters on the south of the Forth.

In subsequent proceedings, in connection with the Roman invasions of Caledonia, the inhabitants of Fife bore their part, first under the name of Horestii, and afterwards under that of Vecturiones, a tribe of the people called Picts. The county of Fife, and the lower portion of Perthshire and Angus, formed the most important portion of the Pictish territory; and were more extensively peopled than the more central or northern parts. The Picts were instructed in the truths of Christianity by the Culdees. About the year 700, the island in Loch Leven was bestowed on St. Serf. Setting aside the fable of St. Regulus having landed at St. Andrews, about the year 365, there is absolute certainty that the Culdees had a settlement there in the 9th century; and such was the fame they had attained in the 10th century, that Constantine III. took up his residence among them, and died in 943, a member or, according to Winton, abbot of their monastery. At Dunfermline there was an early Culdee establishment formed, as there was also at Kirkcaldy; and, according to Winton, Bridei, the son of Derili, founded one at Culross, about the year 700. St. Serf, we are informed by Winton, resided here for many years before he went to Loch Leven; and by the

same authority we are informed that he afterwards went there, where he died and was buried. Here St. Mungo, the supposed founder of the see of Glasgow, was for some time a disciple, previous to his removing to the west. There was another society of Culdees at Portnoak, near Loch Leven. The union of the Scots and Picts brought the whole of Pictavia, and of course Fife, under the government of the Scottish kings. In 881 the Danes entered the Forth, and made a descent upon the shores of Fife; and at subsequent periods their incursions were renewed. Indeed tradition even yet recollects with horror the various conflicts which the inhabitants of Fife had from time to time to maintain with the Danish rovers; and the Statistical accounts inform us that the skeletons, which have been on various occasions found upon the shore, from the river Leven to the eastern extremity of Largo hay, are regarded as the remains of the heroes who fell in these conflicts.

In very early times, the Maormors or Earls of Fife were entitled to place the King of Scotland on the inaugural stone, to lead the van of the King's army into battle, and to enjoy the privilege of a sanctuary to the clan Macduff. During Celtic times, the different divisions of the kingdom were governed by chiefs, under the title of Maormor; and accordingly we have the Maormors of Ross, of Strathearn, of Moray, and of Fife. In subsequent times, these titles gave place to the Saxon title of Earl. Macduff, who lent powerful assistance to Malcolm Canmore, is alleged to have been the first Earl of Fife; but it would be absurd to suppose that he, a Celtic chief, was ever designated by this Saxon title. He was Maormor of the district; and must have been a nobleman of great power and influence. The period of his death is unknown; but Gillimichel Macduff, the third in succession from him, and an influential noble at court, died in 1139. Duncan, the next Earl, witnessed charters of David I. and Malcolm IV., and performed for the latter the ceremony of placing him on the inaugural stone at his coronation. Duncan II., the son of this Earl, is often named in charters of Malcolm IV. and William. He was, in 1175, associated with Richard Comyn, in the office of Justiciarius Scotiae, and married Ada, the niece of the King. With her he received the lands of Strathmiglo, Falkland, Kettle, and Rathillet in Fife, and of Strathbraan in Perthshire. He died about 1203; so that he held the office of justiciary for 28 years. Malcolm, his son, married Matilda, daughter to the Earl of Strathearn, and received with her the lands of Glendevon, Carnbo, Abdie, and Fossaway. It is during the reign of William that we first hear of a sheriff of Fife. In June 1300, a body of English invaders were attacked by Wallace, and completely defeated, in the forest of Black-Ironside, or Earnside, near Lindores. In this battle Sir Duncan Balfour, sheriff of Fife, who with the men of the county had joined Wallace, was killed. Immediately after the battle of Falkirk, Edward sent a division of his army across the Forth, into the shires of Clackmannan and Fife, which ravaged the country and burned the villages in the course of its destructive march. Fife, in consequence of the resistance made at Falkirk by Macduff and his vassals, was particularly obnoxious, and was delivered over to military execution. In the words of Hardyne, all was "clene brent." The city of St. Andrews was deserted by its inhabitants, and delivered over to the flames. In 1303, also, Edward made great havoc at Dnufemline. A feeble show of resistance had till now been kept up by Comyn the governor; but he also was at length compelled to submit. At Strathore in Fife—obviously some place on the Orr

water—he met with the Earls of Pemhroke and Ulster, and Sir Henry Percy, when a solemn negotiation was entered into. The number of those who joined the standard of Bruce was but few. The bishop of St. Andrews, however, and Robert Wishart, bishop of Glasgow, were among the first to give the example. Bruce proceeded immediately to Scone, where, upon the 27th of March, 1306, he was solemnly crowned by Lamberton. On the second day after the coronation, and before Bruce and his adherents had left Scone, they were surprised by the sudden arrival of Isabella, Countess of Buchan, the sister of the Earl of Fife, who immediately claimed the privilege of placing the King on the inaugural chair. The Earl himself was of the English party, and at the court of Edward. His sister, therefore, a romantic and high-spirited woman, leaving her husband, joined Bruce, and claimed the privilege of her family. This ancient solemnity was of too much consequence in the eyes of the people for Bruce to refuse the lady's request; and accordingly, he was a second time installed in the sacred chair, by her hands.

In 1317, Edward again coming with fresh troops into the Forth, landed them at Donibristle. The fighting men of the county would appear to have then been with Douglas, who was ravaging the English borders; for a general panic was created by this invasion, and the sheriff had great difficulty in gathering together a force of 500 cavalry. With these he made an attempt to repel the invasion; but, intimidated by superior numbers, his soldiers disgracefully took to flight. A spirited churchman, however, Sinclair, Bishop of Dunkeld, putting himself at the head of sixty of his servants, and with nothing ecclesiastical in his dress except a lineu frock or rochet cast over his armour, rode off to meet the fugitives. "Whither are you flying?" said he, addressing their leaders, "Ye are recreant knights, and ought to have your spurs hacked off!" He then seized a spear from the nearest soldier, and calling out, "Turn for shame! let all who love Scotland follow me!" he furiously charged the English. The Fifemen instantly rallied; the attack was renewed; and the English speedily gave way, and were driven back to their ships with the loss of 500 men, besides many who were drowned by the swamping of one of the vessels. During the invasion of England in 1327, under Randolph, Earl of Moray, and Sir James Douglas, the Earl of Pemhroke landed in Fife, and stormed the castle of Leuchars. At the battle of Halidon-hill the Earl of Fife had again changed sides, and with his vassals fought in defence of his country. The carnage among the Scots at this battle was immense; and the probability is that the Earl of Fife was killed here. He was succeeded by his son Duncan, who was the last Earl of Fife, in the male line of their great ancestor Macduff. Several fortresses still held out against the English; and in 1335, a parliament was called to meet at the strong castle of Dairsie in Fife, which was the residence of the bailies of the regality of St. Andrews, and which had been built or greatly strengthened by Lamberton, bishop of that see. This parliament was attended by many powerful Scottish harons; but the overweening pride and ambition of the Earl of Athol embroiled its deliberations, and kindled animosities among the leaders. Another parliament was then held at Dnufemline, at which Sir Andrew Murray of Bothwell was unanimously chosen regent. On learning these events, Edward again invaded Scotland, wasting the country wherever he went; and for the purpose of more effectually keeping down the spirit of resistance, he maintained a powerful fleet in the frith of

Forth, as well as on the east and west coasts. Sir Andrew Murray, upon Edward's departure, issued from his fastnesses, and several of the castles in possession of the English were wrested from them; among which were the castle of St. Andrews and the tower of Falkland. Assisted by the Earls of Fife and March, the regent made himself master of both the town and castle of St. Andrews, after a siege of three weeks; but in 1338 he died. The command of the Scottish army now fell upon the Steward; and shortly afterwards he obtained, by the treachery of its defender, possession of the castle of Cupar, which the late regent had in vain attempted by force. By the exertions of the Steward the English were driven from the country, with the exception of some of the places of strength; and taking advantage of a short peace, he used every endeavour for the re-establishment of order and the distribution of justice.

In 1371, the Steward ascended the throne under the title of Robert II. The male line of the ancient Earls of Fife was now extinct; and Robert, the second son of the King, succeeded to the earldom by agreement with the heiress of the last Earl. The new Earl of Fife, accompanied by the Earl of Douglas, and by the Lord of Galloway, made an incursion at the head of 30,000 men across the Solway, and plundered the rich district of Cockermouth and the adjacent parts of Westmoreland, returning with great booty. He was likewise, in 1389, appointed regent of the kingdom; and next year, on the accession of his brother to the throne, he was continued in the regency. At a parliament held at Perth in April, 1398, the King created his eldest son David, Earl of Carrick, Duke of Rothesay, and his brother, the Earl of Fife, Duke of Albany. Rothesay, now past his twentieth year, did not long submit to be kept under the control of his uncle, Albany; and, before a year had expired, Albany was removed from the government, by a parliament held at Perth, and the Duke of Rothesay appointed regent in his stead. For this, however, the Duke of Rothesay was destined soon to pay very dearly; and the county of Fife was to be made the scene of an occurrence which, for barbarous cruelty, was totally unexampled even amid the "great and horrible destructions, herschips, burning, and slaughter," which the acts of parliament that appointed him regent declare to have been so common at this time. This was the plot which ended in the cruel death of that unhappy prince, at FALKLAND: which see. At the coronation of James I., in 1424, the Duke of Albany, as Earl of Fife, performed the ancient ceremony of placing him on the inaugural stone. Soon after this, the Duke of Albany, his second son Alexander, and his father-in-law, the aged Earl of Lennox, were tried upon some unrecorded charges, found guilty, and executed on that fatal eminence in front of Stirling castle, popularly called the Heading-hill. The earldom of Fife, and all its manors and castles, were forfeited to the Crown; and the castle of Falkland, which had been so long a principal residence of the ancient race of Macduff, now became a royal palace. About this time and afterwards, as well as some years earlier, occurred remarkable events in the academic and reformation history of Scotland, which will be found narrated in our article on St. Andrews. In 1480, Andrew Wood, who then belonged to Leith, but afterwards became known to history as the knight of Largo, attacked and repulsed a hostile English squadron which appeared in the frith of Forth; for which exploit, as well as for a series of subsequent services tending to exalt the marine of Scotland, and to humble the flag of England, he afterwards received a royal grant of the

lands and village of Largo. In the battle of Stirling, fought in June, 1488, the central division of the Scottish army, commanded in person by the King, comprised a body of 3,000 footmen, and 1,000 horse, which had been suddenly levied in the counties of Fife and Angus.

The Scottish kings had always maintained their right to nominate to vacant sees and abbeys, notwithstanding the papal pretensions to this power. But the minority of James V. seems to have occasioned applications to Leo X., who then occupied the papal chair, with regard to the vacant benefice of St. Andrews. The Queen-dowager supported the claim of her own relation, Gawin Douglas, afterwards bishop of Dunkeld, and one of the early ornaments of Scottish literature. His servants had seized possession of the archiepiscopal castle at St. Andrews, and he for a brief period maintained that fortress. The chapter of St. Andrews met, in the meantime, and elected Hephurn, the prior, to the office, who immediately besieged the castle, and being favoured by most of the nobility, gained possession of it. The Earl of Angus, who favoured the claim of his kinsman, Douglas, set off with 200 horse to rescue this important fortress from the archbishop-elect; but he was too late in arriving, and Hephurn for a short time held the castle, and nominally the rank of primate of Scotland. To put an end to this dispute, the Duke of Albany obtained the dignity to be conferred on Andrew Forman, bishop of Moray; and in 1522, when Forman died, James Beaton, bishop of Glasgow, who had been chanceller of the kingdom, received the appointment. In September, 1526, the Douglasses having defeated their opponents at Linlithgow, advanced into Fife, and pillaged the abbey of Dunfermline, and afterwards the castle of St. Andrews; but the archbishop had fled. "They could not find the bishop," says Lindsay of Pitcottie, "for he was keeping sheep on Bogrian-knowe, with shepherd's clothes upon him, like as he had been a shepherd himself." By gifts, however—which his wealth well-enabled him to bestow—the archbishop effected an apparent reconciliation with Angus; and at the festival of Christmas, in 1527, he entertained the King, the Queen-dowager, Angus, and others of the Douglas party, at his castle of St. Andrews. "There," says Lindsay, "he made them great cheer and merriness, and gave them great gifts of gold and silver, with fair hawkneys and other gifts of tacks and steedings, that they would desire of him, that he might pacify their wrath therewith, and obtain their favours." So the King tarried there a while quiet, and used hawking and hunting upon the water of Eden."

In 1559 John Knox made a preaching-tour in Fifeshire. His hearers in the collegiate church of Crail, comprising the people of that town and a body of followers from other places, rose in a mass and smashed to pieces the altars, the images, the decorations, and whatever else pertained to the Romish worship. Next day, the same mob, greatly augmented in numbers and increased in excitement, proceeded to Anstruther, and there made havoc of every thing which was or seemed to be popish. The major part of them went next to Pittenweem, and there destroyed a large Augustinian priory belonging to the abbey of St. Andrews; while a detachment proceeded to St. Monance, and gutted the parish church of that place of every article which it contained. Knox and his followers now moved toward St. Andrews. Archbishop Hamilton, who was then at Falkland with the Queen-Regent, either learning or suspecting their intention, set out for St. Andrews at the head of 100 armed men from the royal troops; and sent word thence to Knox that he would order

Published by G. B. Putnam & Co., New York

the soldiers to shoot him if he came to the cathedral. But the archbishop found the citizens much disaffected, got exaggerated accounts of the numbers who followed Knox, and speedily went back, dispirited and mortified, to Falkland. Knox's eloquence no sooner burst upon the citizens, than it produced its usual effect. All classes of the people, even the very magistrates, were excited; and the most magnificent cathedrals, already time-hallowed, and on which the wealth of provinces had been expended, was laid in ruins. The other churches also were deprived of their decorations; and the monasteries of the Franciscans and Dominicans were destroyed. The Queen-regent, speedily learning that Knox's followers were far from being so formidable as had been at first reported, hastily summoned her troops at Falkland, and made an attempt to come on them at St. Andrews by surprise. But many Protestants in Forfarshire so opportunely received notice of the critical situation of their brethren, and came with such celerity and good will to their assistance, that the combined forces were able to face the royal army at Cupar-moor; and there the Queen-regent, afraid to risk a battle, consented to a truce, and engaged to remove her French troops from Fife. The Protestant leaders now proceeded to Perth; and on their way thither sanctioned or promoted the destruction of the abbey of Lindores, the abbey of Balmerino, and every other edifice, large or small, which seemed a prop of the Romish worship.

In 1563, Queen Mary spent nearly four months in Fife, variously in affairs of state and in amusements, moving frequently from place to place, but residing chiefly at Falkland and at St. Andrews. Next year also she spent some time in the same way, at the same places, going finally to Wemyss, where she had her first interview with Lord Darnley. In 1592, occurred at Donihristle the tragical event which is noticed in our article DALGETY; and in 1600 happened at Falkland the antecedent of the mysterious affair called the Gowrie conspiracy. See PERTH. The accession of James VI. to the crown of England, and the removal of the court to London, by weakening the connection with France, and causing the nobility and gentry to reside much in London, gave a severe blow to the prosperity of Scotland, and more especially to Fife, and the rest of the eastern coast. The rebellion against Charles gave rise to a protracted struggle, during the continuance of which, neither trade, manufactures, nor agriculture, could flourish. In the dissensions thus created, the inhabitants of Fife took an active part, and had their own share of the calamities which ensued. The fatal battle of Kilsyth was most injurious to this county. "Three regiments from Fife," says Dr. Adamson, in his notes to Sibbald's History, "perished almost to a man. Most of the principal traders, and shipmasters, with their seamen, besides a multitude of the people of all classes, were engaged in that most disastrous enterprise." The tyranny of Charles II. and James VII., and their attempt to force episcopacy on the Scottish nation, created an accumulation of misery in Fife which prevented the possibility of any attempt to improve commerce or encourage manufactures. The revolution of 1688 might have been expected to produce a favourable change, yet it did not do so. A long-continued severe famine quickly followed, and exhausted almost every resource the country possessed. The imposition of duties ruined the trade with England in malt; and also destroyed the trade which had been carried on in salt. The jealousy of the merchants of England, together with the favour shown them by the government of William III., was an

additional injury, ever presenting a check to the commerce of the numerous sea-ports of Fife, and especially aggravating, if it did not even in a great measure occasion, the tremendous disaster of the utter failure of the Darien expedition. Every family of respectability in Fife, even more than in most other parts of Scotland, was involved in that ill-fated adventure; in such a degree as to suffer from it a fearful fracture of their fortune. These latter events, as well as some of the preceding ones, prevented any material advance in social prosperity from being realized after the death of James IV., and may be said, until comparatively recent times, by gradual degrees to have almost entirely annihilated the trade and commerce of Fife and the eastern coast.

FIGGET-BURN, a streamlet running northward to the frith of Forth, through the north-west end of Portobello, in the parish of Duddingston, Edinburghshire.

FIGGET-WHINS. See **DUDDINGSTON**.

FILE MOUNTAIN. See **MAREE (LOCH)**.

FILLAN (TINE), a rivulet in the extreme west of Perthshire. It rises on the side of Benloy, on the water-shedding mountain-line which forms the boundary with Argyleshire; and, after having flowed $1\frac{1}{2}$ mile eastward, 1 mile northward, describes over a distance of $7\frac{1}{2}$ miles the arc of a circle, with the convexity toward the north, and falls into the west end of Loch Dochart. Its entire course of 10 miles is in the parish of Killin; and most of the course is through a valley to which the stream gives the name of Strathfillan. As Loch Dochart emits at its west end the chief stream by which its superfluous waters are poured into Loch Tay, the Fillan is usually and correctly regarded as the head-water of the magnificent river to which Loch Tay, in discharging eastward its receipt of waters from the west, gives name. On the north bank of the Fillan, near Auchtertyre, stand the ruins of St. Fillan's church.

FILLAN (Sr.), a village at the east end of Loch Earn, in the centre of the parish of Comrie, Perthshire. A range of houses, almost all slated, one story in height, ornamented in front with ivy, honeysuckle, and other parasites, and receding from enclosed plots of laurel and various shrubbery and flowers, stretches chiefly along the river and partly along the side of the lake. At the west end are some very neat houses with large gardens in front; and in their vicinity are an inn and the St. Fillan's Society hall. The village is probably the most pleasant, as to both appearance and situation, in the Highlands of Scotland. The St. Fillan's society used to hold an annual exhibition, toward the end of August, for athletic exercises. The scene of manly sport and trials of strength, is a level green fronting the village, at the base of an isolated, grass-clad, terraced eminence; and, usually attracting a large concourse of persons—many of whom appeared in Celtic costume—was not a little animated and interesting. St. Fillan filled, in the days of his mortality, the office of prior of Pittenweem, and afterwards was the favourite saint of Robert Bruce; and a relic of him was carried in a shrine by Maurice, abbot of Inchaffray, at the battle of Bannockburn. His well, at the village, was long believed to have miraculous power over disease, and even yet is venerated by the superstitious Highlanders as possessing saintly virtue. East of the village is a verdant conical hill, about 600 feet high, called Dunfillan; and on its summit is a rock from which the saint is said to have bestowed his benedictions on the surrounding country, and which bears the name of St. Fillan's chair. Population of the village, 172. Houses, 41.

FIN, a prefix in British names of places,—signifying a boundary.

FINART. See DUNOON.

FINCASTLE, a district in the parish of Dull, Perthshire. It stretches along the northern bank of the Tummel; and is said to take its name from the great number of old castles with which it abounds. It gives the title of Viscount to the Earl of Dunmore. See DULL.

FINDHAVEN. See FINHAVEN.

FINDHORN (THE)—in Gaelic ERNE—a river of the counties of Inverness, Nairn, and Moray. It rises in the Monadleadh hills, between Strathdearn and Stratherrick, in Inverness-shire; and flows in a north-easterly though not very straight course, through part of Inverness, Nairn, and Moray shires, to a loch, or arm of the sea, called Findhorn harbour, in the Moray frith, at a distance of 60 miles in direct extent from its source, increased, by its windings, to 30 miles more. It runs, to a considerable extent, nearly parallel with the river and the strath of Nairn. Struggling through many opposing barriers of granite mountains, it rushes through the narrow gorges with boiling and tumultuous current; now reposing its still waters in some round sweeping dark pool, and now patiently but assiduously wearing its way through the dark red sandstone cliffs, which jut out from its channel, or range in layer above layer, forming high barriers on its banks, while shrubs and trees crown and encompass the steep heights, and finely contrast their variegated green with the deep red of the cliffs on which they grow. Here, in some overshadowed dells, where the sun with difficulty penetrates, we find the solitary eryies of the eagle or the falcon, with the dwellings of the congregated heron, thickly perched among the trees, while the ascending salmon rest, by dozens, during the summer's noonday heat, in the deep dark pools beneath. As the stream winds towards the sea, its course becomes less interrupted and boisterous. It now sweeps along fertile meadows and wooded copses, till at last, all opposition giving way, it flows out into a broad, placid sheet of water, meeting the tides of the ocean half-way up the smooth sandy bay of Findhorn. A low level district surrounds its estuary; and, during the ever-memorable floods of August, 1829, such was the rapid rise of the stream, then swelled into another Amazon, that the whole plain, to the north and west of Forres, became one sea of waters, so that a large boat in full sail swept along the fields to within a few yards of that burgh! From its sudden speats, without the slightest warning, rushing in upon the fords, and overflowing all its banks, this river is, perhaps, the most dangerous one in Scotland; and it is fully entitled to be reputed such from the frequent falls of its bridges, and the injuries done, almost every year, along its banks, as well as on the low grounds near its mouth. It is crossed by only three bridges,—one at Forres, a second at Dulsie, and a third on the military road from Inverness to Aviemore. The scenery on this river, in its course through Moray, is the finest in that county; and on its romantic banks are situated a succession of gentlemen's seats, among which are Altyre, Logie, Rebugas, Dumphail, Kincorth, and Tannachy. The Findhorn is navigable for boats no farther than the tide flows; but, if the demands of commerce on its lower stretches were ever to rise high, it could be very facilely aided by either canal or railway. There is an excellent salmon fishery in it. The river, at a point about 4 miles from the sea, begins to expand into the tidal lagoon of Findhorn harbour, about 3 miles long and $1\frac{1}{2}$ mile broad; but at the end of that lagoon it again contracts, so as to flow within proper river limits over its last mile to the sea.

FINDHORN, or FINDHERN, a small post-town and

sea-port, in the parish of Kinloss, Morayshire. It stands on the right side of the mouth of the Findhorn river, on the point of a peninsula between Findhorn harbour and Burgh-head bay, 5 miles north-north-east of Forres, and 7 south-west of Burgh-head. It has changed its site more than once. A former town stood a mile to the north-west of the present one, but was swallowed up in one tide, by an inundation of the sea and river, in 1701; and the place where it stood is now the bottom of the sea. The entrance of the river Findhorn itself to the sea, being formerly two miles to the westward of its present situation, was shifted, and the ancient town of Findhorn said to be swallowed up, by the drifting sands of Culhin. See the article DYKE. The present town is still beset with sand-banks, which are continually shifting, with a heavy surge in general beating on them. A piece of land opposite to it has already been greatly destroyed, and fears have been entertained that the town itself must again be deserted. The town has a tolerable foreign and coasting trade; exporting salmon, grain, and other goods, and importing coals, groceries, and manufactured goods. It was long celebrated for curing and drying haddocks in a peculiar way, universally known as Findern speldings; and it is the centre of a herring-fishery so extensive that, in 1853, the number of harrels of herrings cured here was 34,880, the number of persons employed in the fishery was 1,420, and the value of boats, nets, and lines, £15,840. The natural harbour in front of the town is one of the best on the Moray coast; and there are a stone pier, two quays of hewn stone, and a breastwork connecting one of the quays with the pier. The depth of water in the shallowest part of the channel at the entrance from the sea is $10\frac{1}{2}$ feet in the lowest neap-tide, and from 13 to 17 feet in spring-tides. Ship-building has of late years been considerably carried on. Fairs for sheep, cattle, and horses are held on the second Wednesday, old style, of March, July, and October. The town has a good new Free church and a public library. A place of worship here, which had been insubstantially built, and which was used first as a dissenting meeting-house and next as a chapel of ease, fell to the ground in January, 1843. Findhorn is a burgh of barony; and, being situated at the mouth of the river designated in Gaelic the Erne, it is usually called by Highlanders Invererne. Population in 1861, 891.

FINDLATER, a district on the coast of the parish of Fordyce in Banffshire. It gave the title of Earl to the family of Ogilvie of Deskford from 1683 to 1811. The earldom became extinct in the latter year by the death of James the 7th Earl, and is now claimed by Sir W. Ogilvie of Carnoustie, Bart., and by John Farquharson, Esq. of Haughton. The estates now belong to the Earl of Seafield. The old castle of Findlater stands on a peninsulated rock, overhanging the sea, and is a picturesque, curious ruin. It was formerly a place of considerable strength, and made some figure in the history of the feudal wars. It was one of the places which refused to receive Queen Mary on her visit to the north.

FINDOCHTIE, a fishing-village in the parish of Rathven, $3\frac{1}{2}$ miles west of Cullen, Banffshire. It was founded by a colony of fishermen from Fraserburgh in 1716. It possesses about 24 large fishing boats and 15 small. The depth of water in its harbour is 24 feet; and the breadth of the entrance 270 feet. The harbour is well sheltered. An aperient spring within high-water mark is used medicinally by the inhabitants. Population, in 1861, 393.

FINDOGASK. See GASK.

FINDON, or **FINNAN**, a fishing village in the parish of Banchory-Dovenick, Kincardineshire. It is situated about 6 miles south of Aberdeen. It is a small place, with no more consequence than other fishing-villages on the east coast; but has acquired celebrity for having been the original source of the dried fish called Finnan haddocks. Population, 190. Houses, 42.

FINDON, an estate in the parish of Urquhart and Logie-Wester, Ross-shire. It forms the eastern part of the parish, and comprises an area of 4,214 imperial acres. It is the property of Sir James J. R. Mackenzie, Bart. The real rental of it, a few years ago, was £1,766. A fine cascade of about 20 feet, in a yawning bosky gorge, occurs on the Findon burn.

FINDRASSIE. See **SPYNE (NEW)**.

FINE (LOCH). See **FYNE (LOCH)**.

FINELLA. See **FENELLA**.

FINGASK, an estate in the parish of Kilspindie, Perthshire. It belongs to Sir P. Threipland, Bart. The rental of it, a few years ago, was £1,259. The mansion is a castellated pile, partly ancient and partly modern, situated in a picturesque opening in the Gowrie hills, and commanding a very fine view. Fingask was remarkable in the last century for the Jacobitism of its proprietors. Sir David Threipland was engaged in the insurrection of 1714, and his lady entertained at this house the unfortunate Prince for whose sake the party had taken up arms, while on his progress from Peterhead to Perth. The estate was consequently forfeited, and the family for a time dispossessed of their ancient seat.

FINGASK, an estate in the parish of Daviot, Aberdeenshire. A small enclosure on it appears to have comprised an ancient Roman Catholic chapel and cemetery. The present mansion is a handsome structure, built in 1834.

FINGLANDHOPE. See **ESKDALEMUIR**.

FIN-GLEN. See **CAMPSIE**.

FINHAVEN, or **FINDHAVEN**, an estate, together with other localities, in the centre of Forfarshire. Finhaven was anciently the name of the parish of Oathlaw; and it adheres so firmly to the popular nomenclature of the district, and sits so undisputedly on at least two localities, while the word Oathlaw is almost a stranger in its own territory, that every one wonders at the old name having been superseded, while no one can well assign the reason of the change. The late proprietor and patron of the parish, the Marquis of Huntly, wished, with characteristic good taste, that the ancient name should be restored. The name, in the meantime, has uncontested possession of a hill-range, a castle, and a hamlet. The hill-range of Finhaven stretches along the whole of the southern boundary of the parish of Oathlaw, and even extends some distance on the east into the parish of Aberlemno; and lifts its highest summit 573 feet above the level of the adjacent country, commanding a rich and extensive view of the great valley of Strathmore. On the summit of the hill is an extensive vitrified fort, in the form nearly of a parallelogram, about 450 long, and on the average 111 feet broad, built apparently without mortar, and so exactly constructed according to the rules of military art as to oversee and command every point of access. The castle of Finhaven, now in ruins, and exhibiting to the view only two decayed sides of a lofty square tower, stands on the north side of Finhaven-hill, overlooking a beautiful sweep of Lemno-burn, and was anciently the seat of the Earl of Lindsay and Crawford. Finhaven hamlet, or what at present is, without any adjunct, termed simply Finhaven, stands on the right bank of the

South Esk, at the confluence with it of Lemno-burn, near the northern limit of the parish of Oathlaw. Though small in itself, a considerable factory gives it influence and importance. The estate of Finhaven is about 5½ miles in length from east to west; and from 1 to 2 miles broad. It is intersected by the South Esk for about 2 miles, and by the great north road from Edinburgh to Aberdeen for about 5 miles. Its superficies is 4,048 imperial acres, of which 2,217 are arable, 165 in pasture or uncultivated, 723 under wood, and 104 are occupied by roads and rivers.

FINK (St.), an extinct hamlet in the parish of Bendochy, 2½ miles east-north-east of Blairgowrie, Perthshire. Here was anciently a chapel dedicated to St. Fink; and that part of the parish which lies eastward of the confluence of the Erich and the Isla, would seem to have belonged to it. The adjacent houses are called the Chapel town; and there are also vestiges of the chapel and of the burying-ground.

FINLAGAN (LOCH), a lake about 3 miles in circumference, in the centre of the island of Islay, Argyleshire. It abounds with salmon and trout, and discharges itself into the ocean at Lagan bay, by a rivulet of the same name. On an island within the lake are the ruins of an ancient castle, where Macdonald, Lord of the Isles, frequently resided, and which he made the seat of his government.

FINLARIG CASTLE, a ruined ancient seat of the Breadalbane family, in the parish of Killin, about 1½ mile from the village of Killin, Perthshire. It is a narrow, three-storey, ivy-clad building, with a square tower at one corner, picturesque in appearance, and situated amid noble old trees in an undulating park.

FINLASS (THE), a stream of about 4½ miles in length of course, in the parish of Luss, Dumbartonshire. It rises at the middle of the western verge of the parish; runs south-westward down a glen to which it gives the name of Glenfinlass; and enters Loch-Lomond, below Finlass mill, opposite Inchmurrin.

FINLAY'S CASTLE. See **NAIRN**.

FINLAY'S MIRE. See **MONTQUHITTER**.

FINLAYSTON. See **KILMALCOLM**.

FINNAN. See **FINDON**.

FINNAN (St.), a small beautiful island in Loch-Shiel, belonging to the parish of Ardnamurchan, Argyleshire. Here are the ruins of the ancient parish church; which appears to have been a small rude edifice.

FINNAN (THE), a stream of about 5 miles in length of course, on the south-west verge of Inverness-shire. It traverses a wild, narrow, rocky, mountain glen, to which it gives the name of Glenfinnan, and flows into the head of Loch-Shiel. The form of the glen toward the mouth of the stream is very uncommon. It opens in four different directions, like four gigantic streets, diverging from one centre. A large level space of ground, at the head of the lake, forms the common centre of these glens, which, wild in every part, are in many points highly picturesque. Several miles of the lake can be seen from the top. It is here long and sinuous,—bounded by lofty and rugged mountains,—silent, solitary, and deserted,—its quietude seldom disturbed, save by the flight of an eagle, or other bird of prey. It was in Glen-Finnan that Prince Charles Edward first raised his standard in 1745. The Marquis of Tullibardine, to whom, from his rank, was allotted the honour of unfurling the standard, took his station on a small knoll in the centre of the glen, where, supported by two men, he displayed the banner, and proclaimed the Chevalier

de St. George as King before the assembled host, who rent the air with their acclamations. And though the acclaiming host at the moment was not considerable, the prospective one involved in the proceedings was believed to be great and magnificent; so that Mr. Ayton may not be thought bombastic in describing it as,—

“The array
That around the royal standard
Gather'd on the glorious day,
When in deep Glenfinnan's valley
Thousands on their bended knees,
Saw once more that stately ensign
Waving in the northern breeze,
When the noble Tullibardine
Stood beneath its weterling fold
With the Ruddy Lion ramping
In the field of tressur'd gold!”

A monument was erected by McDonald of Glenalladale, on the spot where the Prince's standard was unfurled, to the memory of those “who fought and bled” in the rebellion. It is a sort of tower, with a small house attached, displaying any thing but taste; but even as it is, it has a striking effect, when associated with the wildness which reigns around, and the romantic and unfortunate adventure it commemorates. There is an inscription on it in three languages,—Gaelic, Latin, and English.

FINNARD-HILL. See ROW.

FINNICH. See DRYMEN.

FINNISTON, an edificed district in the Barony parish of Glasgow, Lanarkshire. It is a suburb of Glasgow, or rather a suburb of a suburb, being situated to the west of Anderston, and adjacent to the Clyde. Population in 1841, 2,096. See GLASGOW.

FINNY (THE). See DUNNICHEN.

FINNYFELD, a village in the parish of Cruden, Aberdeenshire. Population, 107.

FINSTOWN, a post-office station subordinate to Kirkwall in Orkney.

FINTRAY, a parish, containing a post-office station of its own name, in Aberdeenshire. It is bounded on the north-east and east by New Machar; on the south by the river Don, which separates it from Dyce; and on the west and north-west by Keith-hall. It is of a triangular form, with an apex pointing to the north, and the base extending nearly 6 miles along the Don. Its mean breadth is between 3 and 4, and its length from north to south nearly 5 miles; superficial contents about 10,000 acres. The surface is not hilly, though it rises considerably from the river. The lands in the northern outskirts of the parish also lie low. The farms have been thoroughly drained, and the land much improved. There is limestone, though not used for manure or other purposes, and abundance of granite, but a scarcity of fuel. On the banks of the Don the soil is rich and fertile. The middle parts of the parish have an inferior soil, consisting partly of peat-moss, and partly of moor, interspersed with patches of arable land, some of which has a strong clay soil. The soil between these parts and the Don is light, and of good quality; so also is that of the northern district. There are several very good and well-cultivated farms. In all, between 5,000 and 6,000 acres are cultivated, or occasionally in tillage. About 300 acres are waste, and upwards of 600 acres, on Sir W. Forbes's estate of Craigievar, and others, are covered with thriving plantations. Numerous cattle are fed, and a few excellent horses reared. The Don has often here overflowed its banks, and done a great deal of damage. There are several rivulets, the streams of which are used as powers in working meal and barley mills. At Cothal mills there is a manufactory of tweed and woollen cloth. Fintray house, on the estate of

Craigievar, is a spacious and elegant mansion, adorned with fine lawns and pleasure-grounds; and the house of Disblair is a commodious and well planned residence. Here are vestiges of old religious buildings, said to have belonged to Lindores abbey, Fifeshire; and there are two cairns. The parish enjoys ready communication with Aberdeen, from 8 to 13 miles distant, by road and railway. There are six considerable landowners; but by much the most extensive is Sir W. Forbes. The real rental is about £5,000. Assessed property in 1860, £5,583. Population in 1831, 1,046; in 1861, 1,003. Houses, 192.

This parish is in the presbytery and synod of Aberdeen. Patron, Sir W. Forbes, Bart. of Craigievar. Stipend, £217 9s. 3d.; glebe, £10. Unappropriated tithes, £107 2s. 4d. Schoolmaster's salary, £45, with fees, &c., £24, besides an interest in the Dick bequest. The parish church was built in 1821, and can accommodate nearly 800 persons. There is in the northern district a school endowed by the Rev. Dr. Morrison of Disblair, and yielding the teacher a salary of £28, besides other emoluments.

FINTRY, a parish, containing a post-office village of its own name, and likewise the villages of Gnoehan and Claehan, a little west of the centre of Stirlingshire. It is bounded by Killearn, Balfron, Gargunnoch, St. Ninians, Kilsyth, and Campsie. Its length, from east to west, is about 6 miles; its breadth is about 5 miles; and its area is about 20 square miles. Its surface consists chiefly of hills, forming part of the range which stretches between Stirling and Dumbarton, and immediately north of the summits called the Campsie fells. The hills are in general small, soft in their outline, finely diversified in form, gaily dressed in verdure, and when dotted over with flocks of sheep, suggesting delightful thoughts of pastoral quiet and enjoyment. Two-thirds of the parish, on the eastern side, and including all the north, consist of three broad hilly ranges, running east and west, with very little intervening plain. The northern range, which is the broadest, is called the Fintry hills. The central range is flanked by various detached hills, which run out to the western angle of the parish, and wear a somewhat rugged and rocky aspect. The only inhabited parts of the parish are the two intersecting valleys, watered respectively by the Carron and the Endriek, and carpeted for the most part, with light fertile soil. The Carron, rising in the south-west, flows 2 miles eastward, and there receives a tributary rill of $1\frac{3}{4}$ mile of course, which had flowed from its source onward along the boundary; it now, for half-a-mile, forms the southern boundary-line, receives another rill from the south, and then intersects the parish north eastward and south-eastward over a distance of 3 miles. Along its banks is the commencement of the Carron bog or meadow, probably the largest level of its class in Scotland. Beginning in Fintry, it runs eastward between the parishes of Kilsyth and St. Ninians, to the extent of 4 miles; and being in some places 2 miles in breadth, and in none less than 1 mile, it comprehends an area of about 500 acres. This remarkable meadow, besides its utility in producing hay and affording pasturage, imparts great loveliness to the landscape which surrounds it. In the months of July and August, it is thickly dotted over with hay-rieks and with parties of hay-makers; and during winter, the greater part of it being naturally flooded by the Carron, and the rest brought industriously under water to fertilize it for the ensuing crop, it assumes the appearance of a large lake. Endriek water comes down upon the parish from the Gargunnoch hills to the north, traces the eastern boundary for $1\frac{3}{4}$ mile, then abruptly

bends and flows westward, between the central and the northern range of hills, through the whole breadth of the parish. Over its whole course in this district, it is a rapid stream; and a mile after it has proceeded inward from the boundary, it rushes headlong over a precipice of 94 feet in height, and forms a superb cascade called 'The Loup of Fintry.' In rainy weather, and particularly after a thunder-storm or a water-spout, this cascade is a very grand object. The trout, with which the Endrick abounds, are esteemed of superior quality; and as they may be taken in great numbers, even by an unskilful angler, they attract numerous gentlemen of the fishing-rod. The valley through which the stream flows, though narrow at the east end, gradually widens till it becomes a mile broad; and it spreads out before the tourist a picturesque, though limited prospect. The cultivated fields, interrupted by waving groves, along the banks of the river, the hedge-rows and plantations around Culerueih on the north side of the valley, and some well-arranged clumps of trees on the opposite hills, form altogether a very fine scene; and on both sides, the view is pent up by mountain summits, occasionally broken and precipitous, sometimes wreathed in clouds, and always wearing an aspect of dignity and grandeur; while away westward, in the distant perspective, the towering Benlomond looks up majestically above the neighbouring Grampians. Near the village of Fintry, in a hill called the Dun, is a magnificent range of basaltic pillars. In front are 70 columns, some of them separable into loose blocks, and others apparently unjointed and unique from top to bottom. They stand perpendicular to the horizon, and rise to the height of 50 feet,—some of them square, and others pentagonal and hexagonal. At the east end of the range, they are divided by interstices of 3 or 4 inches; but as the range advances, they stand increasingly closer, till nothing between them but a seam is discernible; and they at last become blended in one solid mass of honey-combed rock. The mountain with which the colouade is connected contains very extensive beds of red ochre. The chief heritors are the Duke of Montrose and Mr. Speirs of Culerueih. The total extent of arable land is about 1,000 acres; and of land under wood, about 100 acres. The real rental a few years ago was £3,822. Assessed property in 1860, £4,532. The parish is traversed by the road from Glasgow to Kippen. Population in 1831, 1,051; in 1861, 685. Houses, 100.

This parish is in the presbytery of Dumbarton, and synod of Glasgow and Ayr. Patron, the Duke of Montrose. Stipend, £155 3s. 10d.; glebe, £22. Schoolmaster's salary, £50, with about £12 or £15 fees. The parish church is a neat plain building, with a tower, erected in 1823, and containing 500 sittings. There is a free school in the village, endowed by the late Mr. John Stewart with £3,000, and provided with a handsome commodious schoolhouse. There are also a friendly society and a small library.

The VILLAGE of FINTRY stands in the western district of the parish, 16 miles west by south of Stirling, 17 north of Glasgow, and 22 east by north of Dumbarton. It is delightfully situated on a rising ground along the side of the Endrick, and presents an unusually handsome appearance. The houses, built according to a regular plan, stand in one row, some of them of two stories surmounted by garrets; and, ranged on one side of the public road, they overlook, on its other side, their respective gardens sloping down to the margin of the river. A large cotton factory was erected here about 60 years ago, and gives employment to about 260 per-

sons. A distillery also was for several years in operation in the village, erected in 1816, and of such extent as to distil about 70,000 gallons of whisky annually. There is likewise in the parish a small woollen factory. Population of the village in 1861, about 367.—Fintry gives the title of Baron to the Duke of Montrose. An old castle, vestiges of which still exist on the south side of Fintry hill, was the ancient residence of the Grahams of Fintry, and a place of considerable military strength.

FINTRY-CASTLE, an extinct ancient edifice, long the property of the Grahams of Fintry, in the Mains district of the parish of Mains and Strathmartin, Forfarshire. It was built in 1311, had several outworks, and seems to have been a place of great strength. It comprised a quadrangle, with a strong tower, perforated by a principal gate, facing the west; had a passage over this gate, where missiles could be secretly showered upon assailants; and surmounted the steep bank of a rivulet, surrounded and almost hidden by very lofty trees. The property connected with it was acquired by the Grahams by marriage with a daughter of the noble house of Angus. On this property was Claverhouse, the residence of the notorious Lord Dundee, the persecutor of the Covenanters.

FINTRY-CLACHAN, a village in the parish of Fintry, Stirlingshire. Population, 53.

FIR BURN, a small tributary of the Lossie, in the parish of Dallas, Morayshire.

FIRDON (THE), a rivulet running into the sea, in the parish of Applecross, Ross-shire.

FIRMOUTH, the highest mountain in the forest of Glentanner, in Aberdeenshire. It is elevated about 2,500 feet above the level of the sea, and commands a prospect of Aberdeen, Montrose, and Arbroath, with the mouth of the Tay.

FIRTH AND STENNESS, an united parish in the centre of Orkney. It comprises a portion of the Orkney mainland, extending diagonally south-south-westward from sea to sea, and the two small islands of Damsay and the Holm of Gimbister off the east coast, in an indentation of the sea called Firth bay. Its post-town is Kirkwall, 5 miles east-south-east of Firth church. The parish of Firth is on the north; and that of Stenness is on the south. The united parish, except where washed by the sea, is bounded by the parishes of Harray, Rendall, Kirkwall, Orphir, Stromness, and Sandwick. Its length is about 9 miles; and its greatest breadth is about 8 miles. The surface presents moors and hilly ridges covered with heath and peat-moss to the summit. An extensive and curious lake diversifies the west, and will, together with a remarkable Druidical monument, be found noticed in our article on STENNESS. The total extent of coast, including that of the islands, is about 10 miles. There are three principal landowners, and about sixty smaller ones. The only mansion is the house of Burness. The real rental is about £1,310. Assessed property in 1815, £207. Population of the united parish in 1860, 1,104; in 1861, 1,493. Houses, 317. Population of Firth in 1831, 560; in 1851, 692. Houses, 160.

This parish is in the presbytery of Cairnston, and synod of Orkney. Patron, the Earl of Zetland. Stipend, £156 14s. 10d.; glebe, £23. There are two parish churches. That of Firth was built in 1813; and that of Stenness, in 1793. There are also two Free churches. Attendance at the Firth F. church, 236,—at the Stenness F. church, 163; sum raised in 1865, in connexion with the former, £70 19s. 10d.,—in connexion with the latter, £24 19s. There is an United Presbyterian church in Firth. There is a parochial school for the united parish; and there are two Society's schools for respectively Firth

and Stenness. Parochial schoolmaster's salary, £39, with £4 10s. other emoluments.

FISHERROW, a sea-port and fishing-town in the parish of Inveresk, Edinburghshire. It is situated on the left bank of the Esk, in the angle or peninsula formed by the embouchure of that river and the frith of Forth, and forms a suburb or component part of Musselburgh, communicating with the main body of that town by three bridges across the Esk. It consists of a main street, some subordinate streets parallel to these, several cross-streets or alleys, and some detached clusters of houses. The main street runs nearly in a line with the central thoroughfare of Musselburgh, and is continued down to the Esk. On the north bank of this is a street called the North Back of Fisherrow. The main street is distributed in shops, and in the dwellings of the wealthier inhabitants; and the rest of the town is occupied almost wholly by fishermen, and presents the untidy and repulsive appearance of a place in paramount possession of men of their vocation. Good houses and handsome villas straggle along the coast of the Forth in the vicinity of the town, and also surmount the rising grounds on the south, indicating in both situations the presence, not only of taste, but of competence and wealth. Between part of the town and the sea is an open area called Fisherrow links; and at the west end of the town is a harbour of about two acres in extent, enclosed by stone piers, one of which has been recently rebuilt. The entrance to the harbour faces the north, is 70 feet wide, and has a depth of 10 feet at high water spring-tides. There is a debt on the harbour of about £7,000; and the dues levied by authority of an act of 1840, amounts to about £812 a-year. The number of fishing-boats is about 70, employing about 350 men and boys. The trade of the port consists principally in timber, bark, and coals; and the arrivals in a recent year comprised 457 vessels, of aggregately 20,027 tons; of which vessels, 29 were from the colonies or foreign. Fisherrow is under the government of the magistrates of Musselburgh; and, in its turn, exercises so powerful a control over the affairs of that burgh, as to return nearly one-half of its town councillors. In consequence of its virtual identity with Musselburgh, it looks chiefly to the east side of the Esk for its places of worship and its schools; yet it possesses several of these, as well as other social appliances of well-being, within its own bounds. The shore of the frith contiguous to the town is extremely flat and sandy; but is entirely relieved, in the dulness and monotony of its effect, by the rich and exuberant exhibitions of the territory which rises gently upward from the southern limits of the town.

Fisherrow—as its name imports—is, in its main features, a fishing-town; and it presents the features of a beau-ideal of whatever is at once hardy, weather-beaten, and contemptuous of civilized refinements, in a sea-faring and fish-catching life. Almost constantly it exhibits men in a slovenly dress, making their way from a long sleepless excursion at sea to their homes, or from a hastily abandoned repose to their fishing boats, and groups of females and children in a disgusting condition of filth and indolence. The women, however, both wives and daughters, share largely in the labours of the fishery, and are so industrious, athletic, and singular a race, as to have drawn considerable observation and surprise. They gather baits for the use of the men, and fasten baits on the lines used in fishing. But, chief of all their labours, they carry the produce of the fishery in osier baskets or creels to Edinburgh, and drive hard bargains with the citizens. The boatmen of Fisherrow, however, do

not always themselves catch the fish which their wives carry to Edinburgh. When haddocks—which are one of the most abundant and favourite sorts of the produce of the fishery—are scarce on the Lothian coast, the Fisherrow boatmen are accustomed to meet boats from the east end of Fife, half-way down the frith, and to purchase their fish; and they thus keep their wives in full employment, even when their own fishing-grounds yield an incompetent produce. From the kind of life these women lead, their manners and character may naturally be expected to have marked peculiarities. Having so great a share in the work of maintaining their families, they wield quite a masculine sway; and when speaking of a young woman reported to be on the point of marriage, they may be heard to say, 'Hoot! how can she keep a man who can hardly maintain herself?' As they do the work of men, their manners, and even their amusements, are masculine. On holidays, they used to play at golf; and on Shrove Tuesday, there was a standing match at football, between the married and the unmarried women, in which the former were generally victors. Their mode of life and their business habits whet their faculties, and give them great dexterity in bargaining. They have likewise a species of rude eloquence,—an extreme facility in expressing their feelings by words or gestures,—which is very imposing, and often enables them to carry their point against even the most wary; nor do they feel abashment, or seem to suffer any shame of detection, when an inexperienced purchaser discovers an attempt on their part to extort from him thrice the value of his goods. Yet, though accustomed to ask far more than their fish is worth, and to practise extortion whenever they can, they possess a sort of savage honesty on which reliance may be placed. When they have regular customers, who form a sort of acquaintance with them, and express a confidence that they will furnish articles as cheap and good as can be obtained in the market, they seldom or never fail, in such cases, to act honourably; and, in their transactions with the shopkeepers of Edinburgh, whom they sometimes supply with herrings, they practise unimpeachable fairness of dealing. Though, too, they seriously and revoltingly indulge in licentiousness of speech, they are believed to be, as a class, exemplarily chaste in their conduct.

FISHERTON, a fishing-hamlet in the parish of Maybole, Ayrshire. Here was commenced about 35 years ago a preaching-station in connexion with the Established church; and out of this arose a chapel of ease, the presentation to which is vested in the communicants.

FISHERTON, Banffshire. See CULLEN.

FISHERTON, Inverness-shire. See CONNAGE.

FISHIE (GLEN). See BRAEMAR.

FISHLIN, a small island 6 miles south of Yell, in Shetland.

FISH-HOLM, one of the Shetland isles, constituting part of the parish of Delting. It is situated in the north-east of the parish, in Yell sound.

FISHWICK, an ancient parish, now comprehended in the parish of Hutton, in Berwickshire. The church, which stood on the northern bank of the Tweed, below the village, is now in ruins. It formerly belonged to the monks of Coldingham. It is 6 miles west-south-west of Berwick. See HURTOX.

FITFUL-HEAD, a bold large headland, in the south-west of the parish of Dnurossness, in Shetland. It flanks the west side of Quendal bay, 6 miles north-west of Sumburgh-head. It consists of a large assemblage of strata composed of clay slate. It rises 400 feet perpendicularly out of the ocean, and

is seen at a great distance by vessels approaching from the south-west. At Gauhsness near Fifehead, occurs a vein or perhaps bed of iron-pyrites, which was a number of years ago unsuccessfully wrought for the purpose of finding copper-ore, whilst many hundred tons of iron-pyrites were thrown into the sea.

FITHIE (Loch), a beautiful lake, about a mile in circumference, in the parish of Forfar, Forfarshire. See FORFAR.

FITHIE (THE), a small river in Forfarshire. It rises on the south side of the hill of Bockello, in the parish of Glamis. After flowing, first eastward and then southward, over a distance of nearly 2 miles, it resumes its original direction, and over a distance of $3\frac{1}{2}$ miles divides the parishes of Strathmartine, Mains, and Murroes on the south, from the parish of Teahug on the north. It now runs 2 miles south-eastward, dividing the detached part of the parish of Dundee on the north from the parish of Murroes on the south, and traversing part of the latter parish. It then turns suddenly round to the southward, and after a run of $1\frac{1}{2}$ mile, forms in the parish of Dundee, a confluence with Dighty water, $1\frac{1}{2}$ mile above the disembogement of the latter stream in the frith of Tay. Its entire course, from its origin to its junction with the Dighty, is about 9 miles. At and near its embouchure, in the parish of Dundee, it makes valuable alluvial deposits, which form rich holm-lands on its banks.

FITTY-HILL. See WESTRAY.

FITTY-LOCH. See BEATH.

FIVE-MILE-HOUSE, a post-office station subordinate to Dundee, Forfarshire.

FLADDA, an island in the parish of Portree, Inverness-shire. It lies $4\frac{1}{2}$ miles east of the nearest part of Skye, and is separated by a narrow strait from the north-west point of Rasay. It is 2 miles in length, and half-a-mile in breadth. The strait betwixt it and Rasay is dry at half-tide. Population in 1841, 29; in 1861, 45. Houses, 11.

FLADDA, an island in the parish of South Uist, Inverness-shire. It lies about $2\frac{1}{2}$ miles south-east of the nearest part of North Uist, and $3\frac{1}{2}$ miles north-east of the nearest part of Benbecula. It lies contiguous to Rona, and measures about $4\frac{1}{2}$ miles in circumference. Population in 1841, 53; in 1861, 48. Houses, 7.

FLADDA, a small island in the Hebridean parish of Barra, Inverness-shire. It lies about 2 miles south of Watersay. Population in 1841, 7; in 1861, 7.

FLADDA, one of the Treshinish isles, near the Isle of Mull, Argyleshire. Its surface is flat and monotonous.

FLADDA, a large flat islet in the district of Harris, Inverness-shire; at the entrance of Loch Resort.

FLADDA, a small pastoral island, without any human inhabitants, off the east coast of the parish of Kilmuir, $4\frac{1}{2}$ miles south-east of Aird-point, in Skye.

FLADDA-CHUAIN, a small pastoral island, off the north coast of the parish of Kilmuir, 6 miles north-west of Aird-point, in Skye. It measures $\frac{3}{4}$ of a mile in length, and 300 yards in average breadth. It is carpeted with remarkably fine grass, and was formerly inhabited by a family or two who kept a considerable portion of it in tillage. It was anciently the site of a Druidical place of worship. There were also in less ancient times three burying-places on it; one of which still bears a name signifying the Monks' burying-place.

FLANDERS MOSS, an extensive tract of low, flat ground in the valley of the Forth, on the borders of Perthshire and Stirlingshire. It extends from

the north-east of the parish of Drymen, all the way eastward to the vicinity of Stirling, and is computed to comprise an area of about 10,000 acres. The moss upon it is believed to have originated in the overthrow of a great forest by the Roman army in the time of Severus; but a large portion of it has, in modern times, been the scene of very remarkable and most enriching georgic improvements. See PERTHSHIRE and BLAIR-DRUMMOND.

FLANNAN or FLANNEL ISLES, a group of seven small uninhabited islands, in the Hebridean parish of Uig, Ross-shire. They lie about 15 miles north-west of Gallan-head in Lewis. They contain some remains of Druidical temples, and are supposed to have been the residence of Druidical priests. They are the resort of immense flocks of sea-fowl. Dr. McCulloch says,—“I have often been entertained with the extraordinary concerts of the sea fowl in Ailsa, in the Shiant isles, and elsewhere; but I never heard any orchestra so various and so perfect as one in the Flannan isles, which seemed to consist of almost all the birds that frequent the seas and rocks of these wild coasts. I should perhaps do injustice to the performers, did I attempt to assign the parts which each seemed to take in this concert; but it was easy to distinguish the short shrill treble of the puffins and auks, the melodious and varied notes of the different gulls, the tenors of the divers and guillemots, and the croaking basses of the cormorants. But the variety of tones was far beyond my powers of analysis, as, I believe, Pennant had found it before me. It may appear ludicrous to call this music melodious, or to speak of the harmony formed by such ingredients; yet it is a combination of sounds to which a musician will listen with interest and delight, although the separate cries of the different individuals are seldom thought agreeable. Few of the notes in this concert could, perhaps, have been referred to the scale, if separately examined; yet the harmony was often as full and perfect as if it had been the produce of well-tuned instruments, and the effect was infinitely superior to that which is often heard in a spring morning among the singing birds of the forest, while it was so entirely different as not to admit of any comparison. In the sea-birds there are few tones and few notes, but they are decided and steady. The body of sound is also far greater; and however inferior in variety or sweetness the notes of the individuals may be, there is much more variety in the harmonious combinations, and in that which musicians would call the contrivance and design. Very often they reminded me of some of the ancient religious compositions, which consist of a perpetual succession of fugue and imitation on a few simple notes, and sometimes it appeared as if different orchestras were taking up the same phrases. Occasionally the whole of the sounds subsided, like those of the Æolian harp as the breeze dies away, being again renewed on the excitement of some fresh alarm. In other places I have heard similar concerts performed among colonies of gulls alone; and with a variety and effect still more surprising, when the limited tones and powers of this tribe are considered. On one of these occasions, at Noss Head, in Shetland, I could scarcely avoid imagining that I was listening to a portion of Rossini's ‘Barbiere di Siviglia,’ ‘Mi par d'esser colla testa in un orrida fucina,’ so exact was the rhythm, as well as the air and the harmony.”

FLAWCRAIG, a village in the parish of Kinnaid, Perthshire. Population, 44. Houses, 9.

FLEET (THE), a river in the western division of Kirkcudbrightshire. It consists of two main parent-streams, called Big water of Fleet and Little water of Fleet. The Big water, though the greater of the

two in name, is the lesser in length; and rises in four small streams of nearly equal claim to be the head-water. Two of these issue respectively from the south and from the north side of Cairnsmuir, in the parish of Kirkmabreck; the third, called Mid-Bura, issues from Craig-Ronal, and forms from its source onward the boundary-line between Kirkmabreck and Girthon; the fourth issues from Bengae, near the source of Little Fleet; and all unite about 2½ miles from their several sources, and thenceforth pursue their united course, 4½ miles, in a direction east of south, dividing Kirkmabreck and Auwoth on the west, from Girthon on the east, till a confluence is formed with the Little water of Fleet near Castramount. The Little water of Fleet has justly the reputation of being the parent-stream of the united rivulets, and issues from Loch Fleet, which is about 1½ mile in circumference, situated not far from the northern limit of the parish of Girthon, and fed by two short rills flowing into it from the north. The Little water of Fleet, after pursuing a course of 1¼ mile south-eastward, runs almost due south, over a distance of 6 miles, traversing the parish of Girthon, till it unites with the Big water of Fleet. Nearly at their point of junction, the two Fleets receive from the east the tribute of Carstramman burn; and thenceforth Fleet water which they form, pursues a course a little to the east of south, dividing the parishes of Anwoth and Girthon, till it sweeps past the small town of Gatehouse on its left bank; and it then bends round to a direction west of south, and, after traversing a space of 1½ mile, suddenly expands into an estuary 3½ miles in length, and 1 mile in average breadth. The Highlands of Scotland have no scenes of greater beauty than what the vale of the Fleet displays; and they have hardly any wilder than the hills among which both branches of the river take their rise. The basin of the Fleet, for a good many miles above Gatehouse, is exquisitely fine. Rough, heath-clad hills, indeed, overlook the stream on both sides; but declivities and plains, opulent in soil, ornate in tillage, and plentiful in groves, form its immediate banks. The river, immediately after the confluence of its Big and its Little streams, flows past a handsome hunting-seat of the proprietor of the lands on its left bank; and soon after, it leaves, on its right bank, the tower of Rusco, once a seat of the Viscounts of Kenmore. The river is, at Gatehouse, spanned by a handsome bridge; and is navigable thither by small vessels, and enriches the territory along its banks by a plentiful supply of salmon.

FLEET (THE), a stream of the south-east of Sutherlandshire. It rises in several head-waters in the south-east of the parish of Lairg, and runs about 13 miles south-eastward, partly through the parish of Rogart, and partly on the boundary between the parishes of Golspie and Dornoch, to the sea at Little Ferry. The upper and the middle parts of its course are along a fine glen, to which it gives the name of Strathfleet, and which will be described in our article on Rogart. The greater part of its course between Golspie and Dornoch forms an expansion, called Loch Fleet, about 4½ miles in length and 1,500 imperial acres in area. This expansion is a lagoon or estuary, swept by the tide, of similar character to the lagoons of the South Esk and the Findhorn; and it contracts to a kind of neck, of comparatively proper river limits, a brief distance from the sea. There was formerly a ferry on the neck, taking across the thoroughfare along the coast northwards from Dornoch; but the public road is now carried across the loch by an embankment or mound of 995 yards in length, which, with the roads of approach to it, cost £12,500. At the east end of the mound

are placed 4 arches, with sluices, by which the water of Fleet, and occasional land-floods, pour to the sea at low water. Strathfleet extends into a district so rugged and mountainous that no other practicable pass could be discovered; that through Strathcarnoc being at such an elevation as to be liable to obstruction from snow during the winter months. About 400 acres of land have been reclaimed from the sea by this mound. The mouth of the loch serves as a harbour at about a mile from the sea. The harbour is about 260 yards broad, has about 18 feet of depth at ebb tide, and affords perfect shelter in any weather. The depth of water over the bar at the embouchure of the river is about 18 feet at full spring tide and 4½ feet at ebb tide. The harbour serves for the importation of coals, lime, bone-dust, and general merchandise, and for the exportation of agricultural and distillery produce.

FLEMINGTON, a district comprising two estates, and containing a lake, on whose banks are traces of a Flemish camp, in the parish of Petty, Invernesshire. The district formerly formed one estate, which was conjoined with Kilravock, and belonged to the Earl of Moray.

FLEMINGTON BURN, a tributary of the Lyne, of about 4½ miles length of run, in the parish of Newlands, Peeblesshire.

FLEURS or FLOORS CASTLE, the family mansion of the Duke of Roxburgh, situated on the left bank of the river Tweed, a mile above the town of Kelso. It is a magnificent pile, "combining," says Sir Walter Scott, "the ideas of ancient grandeur with those of modern taste." But Sir Walter Scott saw only the attractions impressed on it, at its erection, in 1718, by the architectural skill of Sir John Vanbrugh; and must have spoken of it with enthusiasm could he have beheld the additional polish which has been given it, and the additional decorations with which it has been beautified, by Mr. Playfair of Edinburgh. Adjoining it is a handsome conservatory, erected by the late Duke James, and containing a choice collection of rare and valuable plants. The old gardens ran down into the town of Kelso, and occasioned the rasure of a considerable part of one of the principal streets, in order to obtain sufficient space for their expansion. The new gardens lie nearer the castle, stretching along its west side, and are laid out on a grand scale, with united taste and splendour. The delightfully wooded and picturesque demesne forms, for a considerable distance, the skirting of the joyous waters of the Tweed, and runs away from them inland over undulating grounds, constituting, with the ducal mansion in its centre, so lovely a landscape that a spectator from Kelso bridge, or from the heights on the right bank of the river, feels as if a revelation were before him of some nook of an unfallen world.

FLINT-HILL, a summit, with an elevation of 1,621 feet above sea-level, in the parish of Stobo, Peeblesshire.

FLISK, a parish on the northern sea-board of Fifeshire. It lies 3 miles east of Newburgh, and 8 north-west by north of Cupar. It is bounded by the frith of Tay, and by the parishes of Balmerino, Criech, Dunbog, and Abdie. It is rather more than 4 miles in length, from east to west; but is only about a mile in breadth, except at the western extremity, where its breadth is about 1½ mile. The surface, for about ¼ of a mile from the Tay, is nearly level or but slightly rising; it then rises rapidly, so as to comprise part of the hill-range which flanks the frith, attaining here an extreme elevation of about 750 feet; and it finally subsides once more into a valley on the southern skirts of its

broadest parts. About 2,120 acres are under cultivation, 134 in natural pasture, and 264 under wood. The only village is the small one of Glenduckie. There are three principal landowners,—all non-resident. There are 3 small quarries, and 5 or 6 salmon fishing stations. The yearly value of raw agricultural produce was estimated in 1837 at £7,743. Assessed property in 1866, £3,666 16s. 3d. Population in 1831, 286; in 1861, 313. Houses, 69.

The barony of Ballanbreich, comprising the western part of Flisk, or as it is usually pronounced Bambreich, originally formed part of the great lordship of Abernethy. This extensive barony remained for nearly 500 years in the family of Rothes, and was purchased from them by Sir Lawrence Dundas, grandfather of the first Earl of Zetland. The castle of Bambreich is a large and very fine ruin, picturesquely situated on a steep bank overhanging the Tay, surrounded by a number of fine trees, and forms a noble object in the landscape as seen from the frith. It appears originally to have been a parallelogram, 180 feet in length by 70 in breadth, with a court-yard in the centre. Three of the sides of the court-yard were formed by the buildings of the castle, which were four stories high; while the fourth side was formed by a high wall or curtain, connecting the north and south sides of the castle together. The whole of the doors to the different parts of the building opened into the court-yard; and the principal entrance to the whole seems to have been on the north. When inhabited, it was surrounded by a ditch or moat, the traces of which, though pretty distinct some years ago, are now nearly effaced. This once magnificent castle has suffered sad ravages from time, but greater still from the depredations of man; as it had formed a convenient quarry for those who had buildings to erect, either in its own neighbourhood, or on the opposite banks of the Tay. There is sufficient remaining of its original height, however, to show what its extent and grandeur once were. The oldest portion appears to be that which forms the western side of the parallelogram; and the southern side, although much dilapidated, to be the most recent. From the beauty of the ashlar work of the walls remaining, it is not likely that any portion is as ancient as the time when the barony was acquired by Sir Andrew de Lesly; yet the oldest portion cannot be much more recent. The Earls of Rothes, the descendants of Sir Andrew de Lesly, long resided here; and they take from the barony the title of Baron Ballanbreich. Contiguous to the east side of the ruins, and within the remaining plantation, is Chapel-hill, where anciently stood a place of worship.

Flisk is in the presbytery of Cupar and synod of Fife. Patron, the Earl of Zetland. Stipend, £151 11s.; grass glebe, £1 13s. 4d. Schoolmaster's salary, £52 10s., with £10 fees. The parish church was built in 1790, and contains 153 sittings. There is a Free church for Flisk and Creich; whose receipts in 1865 were £96 14s. 3d. The church of Flisk was anciently a parsonage, the patronage of which was laic, and pertained to the earldom of Rothes. John Waddell, parson of Flisk, was one of the early judges of the Court of session. His name first appears as a judge in the sederunt of court, 8th May, 1534. Little else is known of this clergyman, except that he was, in 1527, rector of the university of St. Andrews, and as such one of the judges who condemned Patrick Hamilton to death. James Balfour, his successor in the parsonage of Flisk, was also a judge of the Court of session, under the title of Lord Pittendreich.

FLOAT (BAY or), or PORT-FLOAT, a small bay in the parish of Stonykirck, 6 miles south-east by

south of Portpatrick, Wigtonshire. It takes its name from a tradition that some of the vessels of the Spanish armada or "flota" were wrecked on it.

FLOAT-MOSS, a large extent of low marsh and wet holm on the banks of the Clyde, in the parishes of Carstairs, Carnwath, and Pettinain, Lanarkshire. It is frequently overflowed, so as to resemble at times a large lake, with flat banks and dreary scenery. The Caledonian railway goes across it, on works which were formed at great expense, and has here timber viaducts for allowing free scope to the river in its freshets. A float or large boat, which cost £500, was formerly a succedaneum for a bridge here, and gave rise to the name of Float-Moss.

FLODDA. See FLADDA.

FLOORS CASTLE. See FLEURS CASTLE.

FLOORS HILLS, a range of eminences, of interesting character, but of no great height or extent, in the parish of Avondale, Lanarkshire.

FLOSH. See CUMMETTREES.

FLOTA, a parish comprehending the inhabited islands of Flota, Pharay, and the uninhabited islands of Flota-Calf, Switha, and Little Rysay, in the south of Orkney. It is united to WALLS, which see. It lies wholly between Scalpa Flow on the north and the Pentland frith on the south. The island of Flota lies at nearly equal distances from the nearest part of South Ronaldshay on the east and the nearest part of Hoy island on the west. Its length south-south-westward is about 3 miles, and its greatest breadth is about 3 miles. It is mostly encompassed with high rocks. Its heaths afford excellent sheep-pasture, and abound with moor-fowl. Its general surface is low; but in several places there are cliffs upon the shore of considerable height. It is entirely composed of sandstone and sandstone-flag. It was the residence of the historiographer appointed by the crown of Norway to collect information with regard to the north of Scotland; whose narrations formed a work called 'Codex Flotticensis;' to which Torfaeus is indebted for much of his history of the northern parts of Scotland. There is an excellent harbour in the island, called Panhope, from a salt-pan which was formerly worked here. The parish of Flota has a church for itself, with about 180 sittings, which is served by an ordained missionary under the auspices of the society for Propagating Christian Knowledge. Population of Flota parish in 1841, 460; in 1861, 465. Houses, 90. Population of Flota island in 1841, 405; in 1861, 420. Houses, 82.

FLOTA-CALF, a pastoral island about 2 miles in circumference, adjacent to the north-eastern extremity of the island of Flota, in Orkney.

FLOWERDALE. See GARLROCK.

FOCHABERS, a small post-town and burgh of barony, in the parish of Bellie, Morayshire. It stands on the right bank of the Spey, 9 miles north-west of Keith, 9 south-east by east of Elgin, 12 south-west of Cullen, and 52 east of Inverness. Its site is an elevated gravel terrace, in a deep rural valley a few hundred yards from the Spey. It formerly stood in the immediate vicinity of Gordon castle; but, like the burgh of Cullen, it was removed to a more respectful distance from the mansion of its superior. It now occupies a site about a mile south of its former locality, in the line of the North road from Edinburgh to Inverness. It has a square in the centre, and streets entering it in a cruciform manner, at right angles. Exteriorly, its form is that of a parallelogram, the sides of which consist of thatched cottages. There are other streets, or cross lanes, of good houses; and altogether Fochabers is not only a pretty little town, but a thriving and a

rapidly increasing one. It has several good inns; and, on one side of the central square, is the Established church of the parish, a modern edifice, with a portico and a neat spire. The town also contains a Free church, an Episcopalian chapel, and an extremely elegant Roman Catholic chapel. It likewise has a splendid suite of free schools, founded by bequest of about £20,000 by Alexander Mylne, a native of the town, who died in America. These schools were opened with great ceremony in 1846; and they are conducted by a rector and three other teachers. There is also a girls' school; but the parochial school, which formerly was here, has been removed to Bogmore. Fochabers is governed by a baillie, appointed by the Duke of Richmond. A sheriff small debt court is held on the Saturday following the second Monday of February, June, and October. The town is lighted with gas. It has a subscription library, a savings' bank, an office of the Union bank, and offices of two insurance companies. A corn market is held weekly on Thursday; and fairs or cattle-markets are held on the third Wednesday of January, the fourth Wednesday of March, the fourth Wednesday of May, the second Wednesday of August, the fourth Wednesday of October, and the fourth Wednesday of December. The ancient cross of Fochabers stands within the Duke of Richmond's park. Over the Spey in the vicinity of the town is a handsome three-arched bridge, 382 feet in length. This bridge was damaged, and indeed partly destroyed, in the great floods of 1829, when the Spey rose nearly 9 feet above its ordinary level. Population of Fochabers, in 1861, 1,149.

FODDERTY, a mountainous parish in the counties of Ross and Cromarty. It contains the post-office station of Strathpeffer, and the villages of Auchterneid, Keilhtown, and Maryburgh. Its principal part is a valley surrounded on the north, west, and south, with high hills, and intersected through its whole length by the small river Peffer, from which it derives the name of Strathpeffer. This valley is 4 miles in length, and half-a-mile broad; but the total extent of the parish is 9 miles from east to west, by 15 from north to south. It is bounded by Kincardine and Kiltarn on the north, by Dingwall on the east, by Urray on the south, and by Contin on the west. A part of Benyvis is in it; and in the opposite or south side of the valley is the celebrated Knockfarril with its ancient British hill-fort. See the articles STRATHPEFFER, BENYVIS, and KNOCKFARRIL. To the south of Knockfarril is Loch Ussie, which contains several small islands. On the west side of the strath is Castle Leod, an ancient seat of the Earls of Cromarty. It is a strong edifice of red sandstone, five stories in height, and surrounded with fine old trees. There are in Strathpeffer several chalybeate and sulphurous springs, which are resorted to for stomachic complaints. The most extensive estate is that of Cromarty; and there are six others. The value of assessed property in 1860 was £7,538. Population in 1831, 2,232; in 1861, 2,247. Houses, 465.

This parish is in the presbytery of Dingwall and synod of Ross. Patron, the Marchioness of Strafford. Stipend, £255 8s. 9d.; glebe, £14. Schoolmaster's salary, £50, with about £20 fees. The parish church was built in 1807, and enlarged in 1835, and contains 640 sittings. There is a chapel of ease at Maryburgh; the presentation to which belongs to the Hon. Misses Mackenzie of Seaforth. There is a Free church for Fodderty and Contin; attendance, 700; sum raised in 1865, £131 4s. 11d. There is also a Free church at Maryburgh; attendance, 470; sum raised in 1854, £68 14s. 10½d.

There are in the parish a Gaelic school, an Assembly's school, and a Free church school.

FOFFARTY. See KINNETTLES.

FOGO, a parish in the central part of the Mersodistrict of Berwickshire. It contains a hamlet or small kirktown of its own name, on the Blackadder, 3½ miles south-south-west of Dunse, which is the post-town. It is bounded by Edrom, Swinton, Eccles, Greenlaw, and Polwarth. Its greatest length, eastward, is 5 miles; and its greatest breadth is somewhat less than 2½ miles. The southern division is a plain; and the northern consists of two ridges of inconsiderable heights, the most elevated of which rises probably not more than 100 feet above sea-level. The ridges are separated by Blackadder water; and the southern one slopes gradually away into the plain of the southern division. The entire surface, with the exception of about 300 acres which are under plantation, and about 40 acres of natural pasture, has been turned up by the plough, and is in a state of high cultivation. On the higher grounds the soil is a deep black loam, very fertile; and on the plain it is, though thinner and lying on a stiff subsoil of till, very far from being unproductive. The Blackadder enters the parish on the south-west; traverses it north-eastward over a distance of 3 miles; and then, for 1½ mile, divides it from Edrom. Though destitute of salmon, it produces eels and excellent trout. Its basin is a sort of huge furrow, seldom closing in upon the river in steepness of banks, yet forming a hollow between parallel ranges of low heights; and having the church immediately on the margin of the stream, it suggested to the early colonists the name Fog-hou, which is the ancient and legitimate form of the word Fogo, and means the foggage pit, den, or hollow. In the few places where the banks are abrupt are strata of till mixed with clay or marl, and superincumbent on petrifications of moss; and in the channel of the stream, which is in general stony and gravelly, are occasional strata of bastard whinstone and limestone, which are easily quarried, and make excellent coverts for drains. At Chesters, near the south-western boundary, are faint yet decisive traces of a Roman encampment. The parish is intersected by the roads from Dunse to Coldstream and Kelso. The lands are distributed into four estates, which vary in rental from about £150 to upwards of £3,000. The value of assessed property in 1865 was £7,202 2s. 8d. The average yearly value of raw produce was estimated in 1834 at £20,067. Population in 1831, 433; in 1861, 559. Houses, 101.

This parish is in the presbytery of Dunse, and synod of Merse and Teviotdale. Patron, the Crown. Stipend, £219 5s. 10d.; glebe, £18 10s. Unappropriated teinds, £188 18s. 2d. Schoolmaster's salary, £53, with about £20 school-fees. The parish church is an old building, repaired in 1817, enlarged in 1853, and containing 260 sittings. Fogo parish is ancient, and, under David I., belonged to the opulent Earls of Dunbar. In 1147, the monks of Kelso obtained a grant of the church, along with some appurtenances, from Earl Gospatrick; and they retained possession of it, and had it served by a vicar, till the Reformation. In 1253 the monks obtained a grant also of a chapel which had been built on the manor of Fogo; and, in consideration of accompanying gifts of property, were bound over to provide for its service either three monks or three secular chaplains. In 1296, the vicar of Fogo swore fealty to Edward of England, and, in return, was reinstated in his vicarage.

FOLLART (Loch). See DUBRINISH.

FOODIE. See DAIRIE.

FOODIECASIL. See DAIRIE.

FOOTDEE. See **ABERDEEN.**

FOPACHY, a landing-place for vessels, but without any proper harbour, on the south side of the Beauly frith, within the parish of Kirkhill, Inverness-shire.

FORBES, a parish and a post-office station, on the north bank of the Don, 26½ miles west-north-west of Aberdeen, Aberdeenshire. The parish is united to **TULLYNESSLE**: which see.

FORD, a post-office village on the road from Edinburgh to Lauder, in Edinburghshire, so curiously situated as, though tiny in dimensions, to occupy a place in the three parishes of Borthwick, Crichton, and Cranston. The village stands on the banks of the Tyne, 10½ miles south-east of Edinburgh. At a former date, it was prosperous and beautiful, quietly and thriftily embosomed in a small valley, which secluded it from the bustling activities of life; but latterly it has fallen considerably into decay, and rejoices more in the loveliness of the landscape than in the prosperity of its condition. A splendid bridge or viaduct here stretches across the vale of the Tyne. Fairs are held on the first Thursday of August and September. An United Presbyterian church, built in 1851, stands in the Cranston section of the village; and a predecessor of it stood in the Borthwick section.

FORD-LOCH-AWE, a post-office station subordinate to Lochgiphead, Argyleshire.

FORD OF PITCURE, a village in the parish of Kettins, in the vicinity of Cupar-Angus, on the south-west border of Forfarshire. Population, 45. Houses, 11.

FORDARROCH. See **DAVIOT** and **DUNLICHITY.**

FORDEL. See **DALGETY.**

FORDEL-SQUARE, a village in the parish of Dalgety, Fifeshire. Population, 157. Houses, 26.

FORDOUN, a parish, containing a post-office station of its own name, also the post-office village of Auchinblae, in Kineardineshire. It is bounded by Strachan, Glenbervie, Arbuthnot, Laureneekirk, Marykirk, and Fettercairn. Its greatest length, westward, is about 10 miles; its greatest breadth is about 7 miles, and its area is about 44 square miles. It extends along the southern side of the Grampians, and the northern side of Strathmore, comprising two divisions, named 'the How district,' and 'the Brae district;' the latter of which, to the north, consists of a range of glens or valleys, watered by rivulets, fringed, more or less, with picturesque strips of plantation, but possessing a thin soil, far inferior in fertility to the southern or 'How' district. The latter is level; the soil consisting either of excellent brown gravelly loam or red ferruginous clay. It is highly cultivated, and presents a rich and fertile aspect. The arable lands amount to nearly 12,000 acres; and no part of the parish can be called waste, except the summits of the mountains; for the Grampians themselves afford pasturage to numerous flocks of sheep, and the subordinate ridges consist of valuable land. The most conspicuous of these subordinate ridges is Fenella hill, which is completely apart from the Grampians, being separated from them by a valley called Strath-fenella; and this hill is the object designated in the name of the parish, or gave rise to that name, the word Fordoun or Fordun signifying "the anterior or prominent hill." The only stream of any note is the Luther, into which several small streams empty themselves. The Luther rises amongst the hills north of Drumtochty, and runs east and then south through the romantic vicinity of Drumtochty castle, and by Auchinblae and the wooded banks near Fordoun kirk, to the parish of Laureneekirk. The river Bervie also rises, by numerous feeders, from the Grampians, in the northern

district of this parish, and running eastward to the boundary, divides it from the parishes of Glenbervie and Arbuthnot, to the point where Garvoek parish meets a point of Fordoun, between Laureneekirk and Arbuthnot. The principal landowners are the Earl of Kintore, Viscount Arbuthnot, Sir John Stuart Forbes, Bart., and nine others. The real rental in 1855 is £12,533. Assessed property in 1866, £19,438 6s. 1d. Yearly value of raw produce in 1837, £41,518. Population in 1831, 2,238; in 1861, 2,297. Houses, 460.

In the western part of the parish are vestiges of the ancient county town and regal castle of Kincardine. See articles **KINCARDINE** and **CASTLETON OF KINCARDINE**. On the west flank of Fenella hill, overlooking the Fordoun rivulet, is an artificial mound which has been variously regarded as a Caledonian or Pictish fort, and as the vestige of a castle of Fenella. See **FENELLA'S CASTLE**. John of Fordoun, author of the *Scotichronicon*, one of the oldest and most authentic histories of Scotland, was incumbent of this parish in 1377. George Wishart, the illustrious Protestant martyr, was a native of Fordoun; and a beautiful monument to his memory, comprising a granite column, with large pedestal, flaming urn, and a spiral inscription, was recently erected in Fordoun church-yard. This parish also gave birth to Lord Monboddo,—a man well known in the literary world by his peculiar writings on ancient metaphysics, and on the origin and progress of the human species and of language. Monboddo house is a respectable old mansion in the parish, surrounded with fine trees. Near the mansion-house of Fordoun there are distinct vestiges of the prætorium of a Roman encampment; and, in Friars' glen, beside Fenella hill, are the ruins of a Carmelite religious house. On the Drumtochty estate is a splendid modern mansion, in the castellated Gothic style, erected at the cost of about £30,000, after designs by Gillespie Grabam; and on the Phesdo estate stands another elegant mansion, built also at great expense, with Aberdeen granite, in the Grecian style, with fluted Doric portico.—On the top of a precipitous and wooded eminence, overhanging the sequestered and romantic glen through which the Luther runs, and opposite Auchinblae, stands the kirk-town of Fordoun, consisting principally of the church, the chureyard, the manse, and the village inn. It is 5 miles north-north-east of Laureneekirk, but shares closely in the advantages of **AUCHINBLAE**: which see. It is the seat of a presbytery, and has the privilege of holding a weekly market for cattle and horses from Michaelmas to Christmas, with two annual fairs; one of which is called 'Paldy fair,' from Palladius; for here, according to the monkish tradition, did that holy saint establish his headquarters, on being sent "in Scotiam." "This parish," says the Rev. Alexander Leslie, author of the *Old Statistical Account*, "is remarkable for having been for some time the residence, and probably the burial-place of St. Palladius, who was sent by Pope Celestine into Scotland, some time in the 5th century, to oppose the Pelagian heresy, and by whom it is thought bishops were first appointed in Scotland, having before that time been governed by monks. That Palladius resided, and was probably buried here, appears from several circumstances. There is a house which still remains in the church-yard, called St. Palladius's chapel, where, it is said, the image of the saint was kept, and to which pilgrimages were performed from the most distant parts of Scotland. There is a well at the corner of the minister's garden, which goes by the name of Paldy well." But, says Mr. Chambers, "It is now the general opinion of the more rigorous antiquaries.

that Palladius never was in Scotland, and that the claims of Fordoun to have been his resting-place, arose at first from a misapprehension, either wilful or through ignorance, on the part of the monks. Palladius, according to the only proper authority, was sent 'in Scotiam,' that is, to Ireland; for such was the designation of the sister-isle at that period." The parish is traversed by the Aberdeen railway, and has a station on it.

This parish is in the presbytery of Fordoun, and synod of Angus and Mearns. Patron, the Crown. Stipend, £257 12s. 2d.; glebe, £6. Unappropriated tithes, £160 17s. 9d. Schoolmaster's salary, £35 12s. 11d., with about £50 fees, and £8 other emoluments. The parish church is a handsome building, in the Gothic style, erected in 1829, with a tower 93 feet high, and contains 1,230 sittings. There is a Free church: attendance, 450; sum raised in 1865, £233 7s. 6d. There are 7 non-parochial schools, a large parochial library, and a savings' bank. The celebrated Dr. Beattie of Aberdeen was for some time schoolmaster of Fordoun.

FORDYCE, a parish, containing the post-towns of Portsoy and Fordyce, and the villages of Sandend and Newmills, on the coast of Banffshire. It is bounded by the Moray frith, and by the parishes of Boyndie, Ordiquhill, Grange, Deskford, and Cullen. Its outline is nearly triangular, with the base or shortest side on the coast, and the apex on the south; and it measures about 6 miles along the coast, about 8 miles inland, and about 28 square miles in area. The coast is somewhat bold and rocky, and has some conspicuous headlands, but is indented by two bays, that of Portsoy, where there is a good commodious harbour, and that of Sandend, where there is a sandy beach of about half-a-mile in length. Several caves penetrate the coast rocks, though not to any great depth; and an interesting object adjacent to one of these is the old castle of Findlater. See the article FINDLATER. The general surface of the parish is diversified; part of it being a fine flat, with frequent inequalities or rising grounds, and part a series of hills, with intervening and flanking vales and dales. In the centre of it are the hills of Down and Fordyce, extending continuously, with crescent curve, from north-east to south-west, with an extreme elevation of about 700 feet above sea-level. In the south, on the boundary with Grange, rises Knock-hill, with majestic appearance, to an altitude of about 1,300 feet above sea-level, serving as a landmark to mariners throughout a considerable sweep of the Moray frith. Three small rivulets effect most of the drainage,—the burn of Boyne along the eastern boundary, the burn of Down to the sea at Portsoy, and the burn of Fordyce to the sea at Sandend bay. The soil varies with the substrata; but in general is deep and fertile, yet naturally wet, so as to require much artificial draining. The New Statistical Account distributes the area into 9,306 imperial acres regularly or occasionally in tillage, 5,960 constantly waste or in pasture, 670 of the latter capable of profitable reclamation, 1,500 in a state of undivided common, and 1,234 under wood. The geognostic features of the parish, particularly in the vicinity of Portsoy, are eminently interesting. A beautiful serpentine occurs in two masses, respectively 73 feet and 1,500 feet wide. "Along with it hornblende-slate, quartz rock, clay-slate, limestone, and talc or mica-slate, with granite veins, occur in various alternations; but their exact relations to this rock are not very clearly exhibited. The colours of the rock are different shades of green and red, disposed in clouds, veins, spots, and dots; all these varieties being sometimes found even in hand specimens. Yellowish, greenish, and greyish white tints

also occur. Its structure is massive, with an even splintery fracture. It contains numerous imbedded minerals, as asbestos, amianthus, mountain cork, steatite, talc, schiller spar, magnetic iron, chromate of iron, &c. It is often named Portsoy marble, and is much valued as an ornamental stone, having been even exported to France, to adorn the palace of Versailles." In the same neighbourhood occur also veins of graphite granite, comprising quartz and felspar crystals so arranged, that the polished surface resembles rudely formed letters. A beautiful quartz rock, suitable for potteries, is quarried on the north side of the hill of Durn for exportation to England. Limestone is worked in three quarries. Sea-fisheries are carried on at Portsoy and Sandend, and a salmon fishery at the mouth of the burn of Boyne. The landowners are the Earl of Seafield, Sir Robert Abercromby, Bart., and A. Abercromby, Esq., of Glassaugh,—the last of whom is resident in Glassaugh-house, one of the neatest and largest mansions in the county. The yearly value of raw produce was estimated in 1842 at £41,250. Assessed property in 1843, £8,712 3s. 5d. There are, in this parish, remains of some Druidical temples, with harrows or tumuli, and cairns, in which stone coffins, with skeletons and urns, have been found. There is a triple fosse, or rampart, on the sides and top of the hill of Durn. General Abercromby of Glassaugh was a native of Fordyce; so also, according to some accounts, was Archbishop Sharpe. The village of Fordyce stands in the vale of the Fordyce burn, about 3 miles south-west of Portsoy. It is a hurch of barony, under the Earl of Seafield. It received its first charter in 1499, and another in 1592. Fairs for sheep and cattle are held here on the last Wednesday of October, and on the fourth Thursday of November, both old style. Population of the village, 212. Population of the parish in 1831, 3,364; in 1861, 4,145. Houses, 777.

This parish is the seat of a presbytery in the synod of Aberdeen. Patron, the Earl of Seafield. Stipend, £245 17s. 2d.; glebe, £5. Unappropriated tithes, £771 16s. 3d. The parish church was built in 1804, and contains about 1,100 sittings. There is a chapel of ease in Portsoy, which was built in 1815, and contains nearly 700 sittings. It is in the presentation of the Earl of Seafield. There are two Free churches, respectively at Fordyce and at Portsoy. Attendance at the Fordyce Free church, 150; sum raised in 1860, £28 1s. 6d. Attendance at the Portsoy Free church, 450; sum raised in 1865, £198 1s. 1d. There are in Portsoy an Episcopalian chapel and a Roman Catholic chapel, the former built in 1841, the latter in 1829. The salary of the parochial schoolmaster is £40, with about £30 fees, and some other emoluments. There are 11 schools besides the parish school; and the majority of them are aided by either public bodies or private subscribers. There are various beneficiary institutions in Portsoy. The parish of Fordyce, previous to the Reformation, comprehended also the districts which now form the parishes of Ordiquhill, Deskford, and Cullen.

FOREBANK. See DUNDEE.

FOREHOLM, a small island in the parish of Sandsting, $\frac{1}{2}$ mile east of the nearest part of the mainland, and 5 miles south by west of the southern extremity of Yell, Shetland.

FOREMAN-HILL, a beautiful eminence, of a somewhat conical form, rising from the right bank of the Deveron, to an elevation of about 1,000 feet, at the northern extremity of the parish of Fergie, and on the north-western verge of the county of Aberdeen. Its sides, for a good way up, are finely wooded; and its top commands an extensive and

diversified prospect. Queen Mary, when on her way to Rothiemay house, passed over this hill, by what is still called the Queen's road.

FORENESS, a small peninsula, opposite the island of Forcholum, on the east coast of the mainland of Shetland.

FOREST-MILL, a hamlet in the parish of Clackmannan, $3\frac{1}{2}$ miles north-east of the town of Clackmannan. In 1766, the poet, Michael Bruce, taught a school here.

FORFAR, a parish, containing a royal burgh of its own name, and the villages of Carseburn and Lunanhead, nearly in the centre of Forfarshire. It is bounded on the north by Rescobie; on the east by Rescobie, Dunnichen, and Inverarity; on the south by Inverarity; and on the west by Kinnetles, Glammis, and Kirriemuir. It is of very irregular outline, but convenient and compact in form; and measures, in extreme length from north to south, 5 miles; in extreme breadth from east to west, $4\frac{1}{2}$ miles; and in superficial area, 16 square miles. The surface—as it all lies within the How of Angus, or the portion of Strathmore which belongs to Forfarshire—presents a level prospect to the eye. The uniform plain is variegated only by extensive and fine plantations in the northern section; by two lakes respectively on the north-east and in the west; and by the hill of Balnashinar, which rises immediately south of the burgh, stands partly within the royalty, and commands a map-like view of the whole parish and adjacent country. The soil of the district is, in the middle division, a spouty clay; and in the northern and southern divisions, a light and thin loamy earth with a gravel bottom. Lemno-burn, over a distance of $2\frac{1}{2}$ miles, forms the northern boundary-line. Three streams rise in the parish, two flowing westward and one southward; but, as long as they traverse it, they are very inconsiderable rills. The loch of Forfar, a mile in length and $\frac{1}{4}$ of a mile in breadth, stretches from near the burgh to the western limit of the parish, and there seuds off the parent or head-stream of Dean water. This loch was formerly of larger size; but was drained of about 16 feet perpendicular depth of water, and gave up a very valuable supply of moss and marl. Previous to the draining, an artificial island, composed of large piles of oak and loose stones, covered with a stratum of earth, and planted with aspen and sloe trees, looked out from the waters near the northern shore, and is supposed to have been a place of religious retirement for Queen Margaret, when Malcolm Canmore made Forfar his place of residence. The quondam island is now a very curious peninsula, and preserves some vestiges of a building which probably was a place of worship. Loch Fithic is a smaller lake than the loch of Forfar, similar in form, and situated near the north-eastern angle of the parish. It is surrounded by a beautiful rising bank, richly tufted with plantation; and, lying concealed from the view till one approaches its margin, and abounding in pike and perch, while the groves which overhang it are vocal with singing-birds, it is a delightful retreat to the lovers of rural retirement. There was formerly another loch in the parish, called the loch of Restenet; and on a peninsula of it, now a pleasant eminence, stood a priory subordinate to the abbey of Jedburgh. See the article RESTENET. A fosse, which some antiquaries supposed to have been a work of defence formed by the Piets, and strengthened by a rampart, anciently extended from the loch of Forfar to the loch of Restenet. Vestiges of a large camp, which some suppose to have been Roman, others suppose to have been Pictish, are traceable about $1\frac{1}{2}$ mile east of the

burgh. The largest landed estates in the parish are Lower and Restenet; and there are eight others. The valued rental is £2,590 19s. Scots. Assessed property in 1866, £17,434. Two lines of railway, of extensive connexion, the Scottish Midland Junction, and the Arbroath and Forfar portion of the Aberdeen, converge at the burgh; and the western turnpike from Dundee to Aberdeen intersects the parish, cutting it into two nearly equal parts. Population in 1831, 7,949; in 1861, 10,838. Houses, 1,426.

This parish is the seat of a presbytery in the synod of Angus and Mearns. Patron, the Town-council of Forfar. Stipend, £329 10s. 11d.; glebe, £20. Unappropriated teinds, £246 5s. 3d. The parish church was built in 1791, and altered in 1836, and contains about 1,800 sittings. It is a plain substantial edifice, and has a handsome well-proportioned steeple, which was erected in 1814. A chapel of ease, called St. James', is in the presentation of such male seat-holders as are communicants, and has accommodation for about 950. There are two Free churches,—the Forfar and the East Forfar. Attendance at the Forfar Free church, 1,100; at the East Forfar Free church, 150. Sum raised in 1865 by the Forfar Free church, £600 8s. 8½d.; by the East Forfar Free church, £194 2s. The other places of worship are an United Presbyterian, built in 1854, and containing 550 sittings; a Congregational, built in 1836, at the cost of about £650, and containing 460 sittings; an Episcopalian, built in 1824, at the cost of about £1,000, and containing 350 sittings; and a Roman Catholic. The U. P. church is a handsome structure. There are four public schools,—the parochial school, the East Town-end burgh school, the West Town-end burgh school, and the burgh academy. The last of these has two teachers, classical and English; and each of the others has only one teacher. The parochial schoolmaster has a salary of £45 0s. 0d., with an allowance for a dwelling-house; and one of the burgh teachers has a salary of £40; but the other teachers have only small salaries along with fees. There are also a female industrial school, and 9 or 10 private schools.—Forfar parish, in all writings concerning the patronage, tithes, &c., is designed the parish of Forfar-Restenet; though the latter part of the name is seldom mentioned in conversation or in common writing. Restenet was perhaps the name given to the priory, expressive of the purpose for which it was built, namely a state repository for the charters, &c. of the monastery of Jedburgh; but some take its derivation from a Gaelic word, *Risk*, signifying, as they say, 'a bog or swamp,' which indeed answers to the situation. Forfar is conjectured to be the same with the ancient *Or*, and the Roman *Orreo*, signifying a town situated on a lake; to which description it exactly answers; and the lake on which it stands has for many ages been known by the name of Forfar. It has been conjectured that the name Forfar may have been formed of two Gaelic words, *fuar*, 'cold, chilly,' and *bar*, *bhar*, or *var*, 'a point;' 'the cold point.' In common language the name is invariably pronounced *Farf*. In Welsh, *fair* signifies 'an eminence.'—The learned Dr. Jamieson, the author of the Scottish Dictionary, the History of the Culdees, and several other well-known works, literary and theological, was for a number of years the minister of the Secession congregation of Forfar.

FORFAR, a royal burgh, a market town, and the political capital of Forfarshire, is situated nearly in the centre of the parish of Forfar, 5 miles east-north-east of Glammis, 6 east-south-east of Kirriemuir, 12 south-west of Brechin, 14 north by east of

Dundee, and 56, by way of Cupar and Dundee, from Edinburgh. The ground on which it stands, as well as that over a considerable way around it, is remarkably uneven, and thrown up into little hillocks. Though the town occupies the bottom of a sort of basin, the immediately circumjacent ground sloping gently toward it on almost every side, it stands high in comparison to the general level of the country. Waters, which rise not far from its vicinity, flow respectively north, south, east, and west, and fall into streams, which respectively run toward the Tay long before it expands into an estuary, and toward the northern part of the eastern sea-board of the county. The town, while overlooked by gentle slopes, commands, through their openings and over their summits, extensive views of the Sidlaw hills, the great valley of Strathmore, and a wide sweep of the shelving ranges of the Grampians. Though forming a singular instance of a town of any note built at a distance from any river, it possesses remarkable capacities of sending down turnpike, railway, or canal, by a very easy descent, westward to the river Tay, southward to the frith of Tay, and eastward and north-eastward to the German ocean; and these capacities, in all respects except by canal, have now been turned to such great practical account as to give it a very large amount of first-class facilities of communication.

In one line of street, called West-port and High-street, which makes repeated bends and is of very unequal width, Forfar extends from south-west to north-east about 1,200 yards. From the middle of High-street, or rather from the middle of the whole central line, Castle-street goes off and runs northward over a distance of about 400 yards, sending westward a branch street of about 160 yards, and eastward an alley called Back-wynd, which, at a distance of 400 yards from Castle-street, enters High-street by an acute angle. Subtending most of the main line of street on the south side, are several lanes and short new streets, which, added to the length of Castle-street, give the town an extreme breadth of between 500 and 600 yards. Like most old towns, Forfar was originally without any regular plan, and received peculiarities and varieties of configuration from the caprice of self-accommodation of every man who was able to add to its structures. About a century ago, its sinuous and ill-compacted streets consisted chiefly of old thatched houses, and were redolent of filth; but now the streets, though generally irregular in outline, are well-built, and of modern and comfortable appearance; and in the south wing of the town, they evince the adoption of the movement spirit of civic and architectural reform which has of late years venerated so many beauties upon the rough repulsive surface of the important burgh of Dundee. In the latter quarter is situated the Forfar academy, for teaching the languages, mathematics, and geography. In Castle-street stands a handsome suite of county-buildings, of recent erection, built at the cost of nearly £5,000, and highly ornamental to the town. A new prison was erected in 1842 a little to the north of the town. The parish-church, with its steeple, the new church of St. James, the U. P. church, and the Episcopal chapel are all ornamental to the burgh; and there is also a beautiful new ultra-mural cemetery.

Forfar cannot, as a manufacturing town, bear comparison with Arbroath or Dundee. Its chief trade is the weaving of osnaburghs and coarse linens. Hardly any factory work is done; but, in 1838, 2,569 hand-looms were employed on various common linen fabrics. The osnaburgh weavers

earned, in 1824, from 12 to 14 shillings a-week; but, for 9 years preceding 1838, were able, on the average, to earn in nett wages little or nothing more than 7s. 6d. for the first class of work, and 6s. for the second. Another manufacture, but now nearly extinct, is the making of a kind of shoes well-adapted for a highland district. So ancient and famous is this manufacture, that the craft employe in it, "the sutors of Forfar," are popularly spoken in identification with the whole population, in the same way as, "the sutors of Selkirk," are made to represent all the burghers of the capital of the Forest. A shoemaker's earnings amount to about 12s. a-week. The town is the centre of considerable transit traffic, and the seat of a considerable retail trade. There is a weekly market on Saturday; and fairs are held on the last Wednesday in February, the second Wednesday in April, the first Wednesday in May, old style, the first Tuesday and two following days in July, the first Wednesday and Thursday in August, the last Wednesday in September, the third Wednesday in October, and the first Wednesday in November. The town has branches of the Commercial Bank, the Union Bank, the National Bank, the Royal Bank, and the Dundee Bank, a number of insurance agencies, a town-hall, a news-room, a mechanics' reading-room and library, a subscription library, a deaf and dumb association, a horticultural society, and a curling club. It has also a fund, called Strang's mortification, for the support of the poor within the burgh.

The town-council of Forfar consists of a provost, 2 bailies, a treasurer, 11 councillors, and 4 deacons of crafts. Previous to the Reform act, all the council's members, except the deacons of crafts, were elected by itself. There is no separate establishment for lighting, cleansing, watching, and paving; the expense of these matters being defrayed out of the common good. The inhabitants subscribed to sink wells, and are usually allowed a small contribution towards the object from the town-funds. There is no gildry incorporation. A company or corporation of merchants was established in 1653, but possesses no exclusive privileges. Three incorporated trades,—the glovers, the shoemakers, and the tailors,—have the exclusive right of exercising their respective callings within the burgh, and claim fees of admission from strangers. The weavers' incorporation formerly possessed the same right, but was denuded of it by an act of parliament for improving the linen trade. The shoemakers' incorporation is the most ancient; and it is the only one which possesses property to a noticeable amount, drawing an annual revenue of about £100, and expending £80 in allowances to decayed and sick members. The magistrates exercise jurisdiction over the whole royalty, which extends about 2½ miles in length, and half-a-mile in breadth, and over some adjacent liberty lands defined in a charter given to the town by Charles II. The only court held in the burgh, is the baillie court, into which civil causes of a personal nature can be brought to any amount. The magistrates, while in court, are assisted by an assessor, who is the town-clerk. The town-council have no patronage, except the appointment of the municipal officers, and of the parochial minister. The gross value of the property of the town was estimated, in 1832, at £18,867 15s. 7½d. The gross revenue for the same year was £1,616 1s. 6½d.; and the gross expenditure £2,193 13s. 4d.,—so large a portion of this expenditure, as £1,416 17s. 4d., being casual, and having for its object public improvements. During the years 1827-1831, the average annual revenue was £1,715 5s. 9½d.,—and the average annual expenditure £1,625

9s. 1 $\frac{3}{4}$ d. In October, 1853, the total value of the burgh property was estimated at £18,844 4s. 9d.,—the debts and obligations at £6,440; and in the year 1860-1, the revenue amounted to about £2,110. The sheriff and commissary courts for the county are held at Forfar on every Thursday during session, and once during each vacation. A sheriff small debt court also is held on every Thursday during session. Forfar unites with Arbroath, Montrose, Brechin, and Bervie, in sending a member to parliament. Its parliamentary boundaries are the same as the municipal. Constituency in 1862, 316. Population in 1841, 8,362; in 1861, 9,258. Houses, 1,107.

There are few places within the royalty in which a quarry of some kind may not be found. Stone and slate quarries have been plentifully worked on the south side of the town, and have greatly aided its trading prosperity and architectural improvement. But Forfar long suffered serious disadvantage, and even was menaced with a destruction of its well-being, by the scarcity and dearth of fuel. Turf or peat, procured in no great abundance, and sought by the draining of Loch Forfar and Loch Restenat, was, for many years, its chief dependence. Coal was vainly sought in the vicinity, and could be procured from the coast only at high prices. But by means of the railway communications which have recently been opened, the town has surmounted nearly all its disadvantages; and, if prosperous before, ought now to career speedily toward consideration and opulence.

Forfar is a town of high but unascertained antiquity. Its nucleus, in the form of a village or hamlet, must have been created under the protection of an ancient castle of great note and importance, all vestiges of which have long ago disappeared. When this castle was built, and what form it originally possessed, are matters lost to history; but it is recorded to have been the scene of the parliament which was held in the year 1057, by Malcolm Canmore, after the recovery of his kingdom from the usurpation of Macbeth, and in which surnames and titles were first conferred on the Scottish nobility. The castle stood on a rising ground to the north of the town, and appears, from traces of it which existed 60 years ago, and from the amount of its conjectured dilapidation in building the modern town, to have been very extensive. As if it had been a quarry rather than an edifice, it seems to have furnished the materials of the old steeple, the west entry to the old church, and probably a large portion of the houses which, previous to the era of modern improvement, lined the streets. A figure of it, cut in stone, remains upon the old market-cross, and forms the device of the common seal of the burgh. Forfar, in consequence of the attractions of its castle, was, for a considerable period, the occasional residence of royalty, and received a considerable number of royal favours. Queen Margaret, the celebrated consort of Malcolm Canmore, had—as noticed in the article on the parish—a separate and apparently a cherished residence on the loch. Weapons and instruments were, about 70 years ago, found in the vicinity of the town, which are believed to have belonged to the murderers of King Malcolm II. Memorials of royal residence and favour survive in the extensiveness of the burghal territory, and in the names of some localities, such as the King's moor, the Queen's well, the Queen's mauer, the palace dykes, and the court-road. In the vicinity we find the King's buru, the King's seat, and the Wolf law, where the nobles were wont to meet for hunting the wolf. A farm, about half-a-mile distant from Forfar, is called Turf-big, because, as tradition as-

tures us, the peats or turfs used in the palace were biggit or stacked there. Another place, near this, retains the name of Heather-stacks, where, it is said, the heath required for the royal kitchen was cut down and piled up. A charter of confirmation granted by Charles II., in 1665, assumes earlier charters and rights to have been conferred on the burgh, and narrates the plundering of the inhabitants, in 1651, for their attachment to the royal family, noticing in particular, "the faithful testimony and dissent given by Alexander Strang, late provost of Forfar, and commissioner for the said burgh, against passing of the unjust act of the pretended parliament, the 16th of January, 1647, entitled Declaration of the Kingdom of Scotland concerning his Majesties Person." In 1684 the market-cross was erected at the expense, it is said, of the Crown; and it stood for a century-and-a-half, an incumbrance in the thoroughfare, and a monument of the loyalty of the town; but was afterwards removed by the magistrates to the site of the old castle, to mark and commemorate the scene of the royal residence.

A feud, or party animosity, has long subsisted between 'the sutors of Forfar' and 'the weavers of Kirriemuir'; and, though now prompting only hard words and contemptuous nicknames, expressed itself, during a less civilized period, in acts of violence and deeds of clanship. Drummond of Hawthornden relates a ludicrous instance of how it operated in the 17th century, and of the barbarous ideas with which it was associated. Arriving at Forfar in the summer of 1648, he stood convicted before the burghers of the two works of defending his King and writing poetry,—offences which they deemed in no ordinary degree criminal; and, though intending to spend the night in the town, he found himself spurned from every door, and was obliged to proceed onward to Kirriemuir. The 'weavers' of the latter town were innately just as indignant at his two crimes as their rivals; yet, happy to have an opportunity of showing their contempt for 'the sutors,' by totally differing from them in conduct, they gave Drummond an hospitable reception; and they so far won him over by their kindness, that he praised them in a song of stinging satire upon the sutors of Forfar.—In the steeple of the church is preserved a small circle of iron, called the Witches' bridle, consisting of four parts connected by hinges, and adapted as a collar for the neck. Behind is a short chain; and in front, pointing inwards, is a gag which entered the mouth, and pressed down the tongue. This infamous instrument was fastened upon any poor wretch whom the ancient sages of Forfar condemned to the stake, for having acquired, through private malice or popular superstition, the reputation of witchcraft; and was used both as a halter for leading the victim forth to the place of execution, and as a means of preventing speech or cries amidst the torture of the flames; and, when the execution had been completed, it was usually found among the mingled ashes of the body and the faggots. The place of incremation was a small hollow, a little north of the town, called the Witches' howe, and surrounded by several small eminences which were convenient stations for spectators. In the records of the burgh is still preserved the process verhal of a man, who, about the year 1682, suffered the infliction of the horrid 'bridle,' and was burnt to death in the Witches' howe, for the imputed crime of sorcery.—Antiquities of a very different class, are large hell sent by Robert Strang, a native of Forfar, who settled as a merchant and became wealthy in Stockholm, as a tribute of respect to his native place; and a table of donations to the poor, of which the

same individual and his brother were the principal contributors.

FORFAR AND ARBROATH RAILWAY. See **ARBROATH AND FORFAR RAILWAY.**

FORFARSHIRE, or **ANGUS,** a maritime county of the east side of Scotland, extending from the river North Esk to the frith of Tay. It is bounded on the north-west and north by Aberdeenshire; on the north-east by Kineardineshire; on the east and south-east by the German ocean; on the south by the frith of Tay; and on the south-west and west by Perthshire. Its form—with the exception of an indentation on the north-east, another indentation on the south-west, and a projection on the north-west, all about 5 or 6 miles deep—is very nearly circular. The county lies between latitude $56^{\circ} 27'$ and $56^{\circ} 57'$ north, and between longitude $2^{\circ} 25'$ and $3^{\circ} 25'$ west from the meridian of Greenwich. Its medium extent, from north to south, is $28\frac{1}{2}$ miles, and from east to west, 29 miles, of $69\frac{1}{2}$ to a degree; and its superficial area is 889 square miles, or 568,750 English acres. The county consists of four parallel and very distinctively marked districts,—the Grampian, the Strathmore, the Sidlaw, and the maritime.

The Grampian district forms the north-western division, and includes about two-fifths of the superficial area. Like the rest of the range, the Grampian mountains here run from south-west to north-east, forming the barrier between the Highlands and the Lowlands of Scotland; and exhibit ridge behind ridge, with many intervening valleys cut out by streams and torrents, till they form, at their water-line or highest ridge, the boundary line of the county. They are formed of granite, gneiss, mica-slate, and clay-slate, flanked by a lower range of old red sandstone associated with trap. The portions of them included in Forfarshire, are called the Binehinnin mountains; and, viewed in the group, are far from possessing either the grandeur of the alpine districts of the west, or the picturesqueness and beauty of the highlands of the south. See **BINEHINNIN MOUNTAINS** and **GRAMPIANS**. From the higher summits of the Grampians, a brilliant view is obtained, not only of Forfarshire and part of Perthshire, but of Fife, East Lothian, and the heights of Lammernoor.

The Strathmore district of Forfarshire is part of the great valley of that name, [see **STRATHMORE**,] and stretches from the western boundary of the parish of Kettins, away north-eastward through the whole county, to the lower part of the North Esk. From its northern point south-westward it lies along the foot of the Forfarshire Grampians, till it forms the parish of Airlie; and it thenceforth, till the termination of the parish of Kettins, shares the continuation of Strathmore with Perthshire. This district is called the How or Hollow of Angus; and is 33 miles long, and from 4 to 6 miles broad. Its surface is beautifully diversified by gentle eminences, fertile fields, plantations, villages, and gentlemen's seats. Small portions of it are covered with water during wet seasons, and, in other respects, have perhaps not received due attention from the cultivators of the soil. The geological formation of this district is that of old red sandstone; and it is intersected by numerous longitudinal ridges, some of which rise 200 or 300 feet above the adjacent valleys.

The Sidlaw district of Forfarshire derives its distinctive features from the Sidlaw hills. These hills, composed of old red sandstone accompanied by trap, and overspread with an impervious boulder formation, are a continuation or offshoot of a range which runs parallel to Strathmore or the Grampians, from

the hill of Kinnoul near Perth, to the north-east extremity of Kineardineshire. Seen from Fifeshire, the Sidlaws appear to rise at no great distance from the estuary of the Tay, and shut out from view the scenery of Strathmore and the lower Grampians. They lift several of their summits upwards of 1,400 feet above the level of the sea; and in some places are covered with stunted heath, while in others, they are cultivated to the top. The Sidlaw district terminates at Red-head, a promontory on the coast, in the parish of Inverkeilor, between Arbroath and Montrose; and measures about 21 miles in length, and from 3 to 6 miles in breadth. From some of the detached hills, respectively on the north-western and the south-eastern sides of the range, brilliant views are obtained, on the one hand, of the whole extent of Strathmore, and, on the other, of the scenery along the frith of Tay and the German ocean. See **SIDLAW HILLS**.

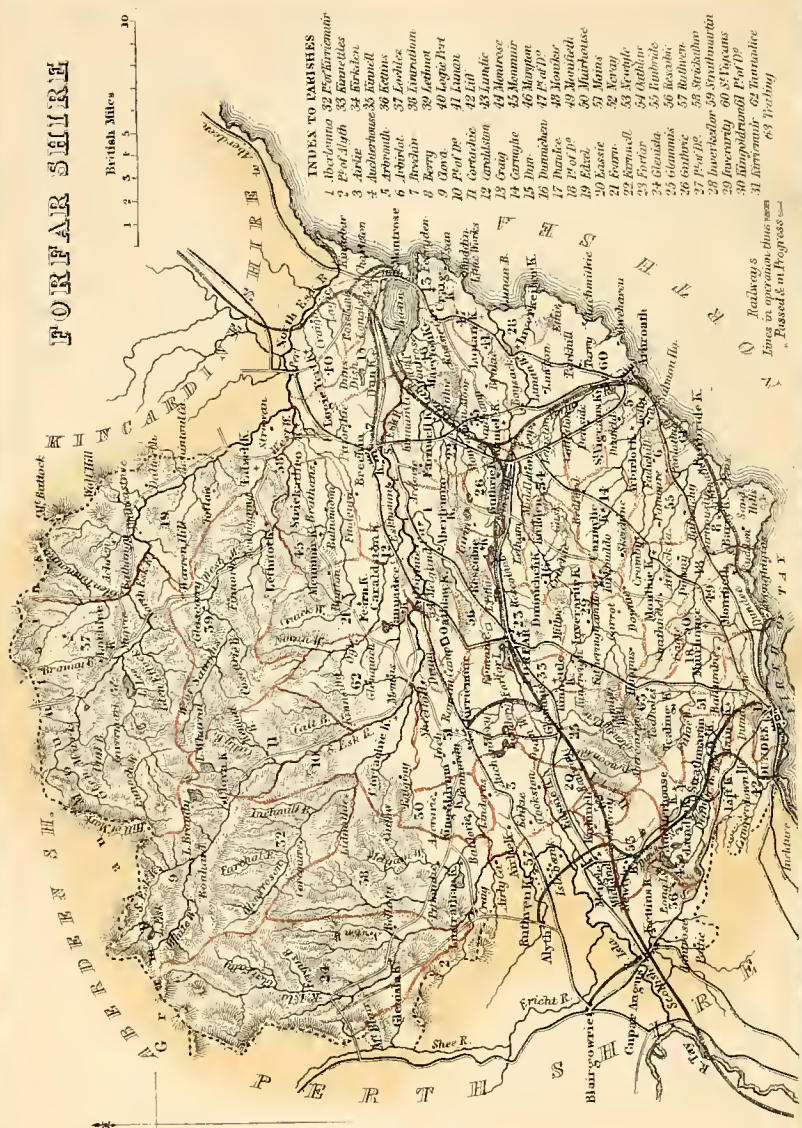

The maritime district of Forfarshire is, for a brief way, in the parish of Inverkeilor, identified with the Sidlaw district, but extends from the Tay and the limits of Liff and Lundie on the south to near the mouth of the North Esk on the north. In its southern part, it is at first of very considerable breadth; but it gradually narrows as it becomes pent up between the Sidlaw hills and the ocean; and, overlapping the former, it thence stretches northward parallel to the How of Angus. In extreme length, it measures upwards of 27 miles; in breadth, it varies from about 3 miles to upwards of $8\frac{1}{2}$; and in superficial area, it includes upwards of 222 square miles. This district is, with a few exceptions, fertile and highly cultivated. Excepting a few rounded jutting hills—some of which are designated by the Gaelic name of Duns—its surface slopes gently to the frith of Tay on the south, and the German ocean on the east. At Broughty-Ferry, where the frith of Tay is very much contracted, an extensive tract of links or sandy downs commences, and thence sweeps along a great part of the parishes of Monifeith and Barry. Two other sandy tracts of inconsiderable breadth stretch along the coast respectively between Panbride and Arbroath, and between the embouchures of the South Esk and the North Esk. In many places, these downs evince, by extensive beds of marine shells, at heights varying from 20 to 40 feet, that they were at one period covered with the sea. The maritime district is adorned with towns and villages, elegant villas and comfortable farm-steads, numerous plantations, and, in general, ample results of successful culture and busy enterprise.

No waters enter Forfarshire from the eontermi-nous counties; and only inconsiderable rills at two points come down thence upon waters which form its boundary-line. All its waters, with the exception of the Isla and its tributaries which run into Perthshire to join the Tay, have their termination also within its limits, or at its boundaries. The principal streams, in consequence, are not of the class which the usage of Scotland dignifies with the name of rivers, but belong to the more humble class of "waters." The most northerly is the North Esk, whose principal tributaries are West water and Cruick water, both on its right bank, and which forms, for a considerable distance before entering the sea, the north-eastern boundary-line of the county. The next is the South Esk, which traverses the whole breadth of the county from the highest range of the Grampians to the sea at Montrose, and whose principal tributaries are the Prosen on its right bank, and the Neran on its left. The Lunan rises near the centre of the county, and flows eastward to the sea at the point of division between

 Proposed in Progress—

the parishes of Lunan and Inverkeilor. Of a number of other streams which flow toward the German ocean or the frith of Tay, all, with the exception of the Dighty, are very inconsiderable, rarely having a course of more than 8 or 9 miles. The Isla rises, like the two Esks, in the Grampians, but flows in general southward, forms, for a number of miles, the western boundary-line, and through its own immediate tributaries and those of the Dean, which joins it immediately after entering Perthshire, drains the waters of about one-sixth of the county away toward a junction with the Tay 10 miles above Perth.—The lakes of Forfarshire are all small—in no case much upwards of one mile in length—and are chiefly Lochlee, Lintrathen, Rescobie, and Forfar lochs, in the parishes of their respective names, and Balgavies loch in the parish of Aberlemno. These lakes, as well as some smaller ones, abound in pike, perch, and various kinds of trout. Several of them are valuable also for marl; and others, not now in existence, were drained for sake of obtaining easy and profitable access to that substance. The Tay, though it expands into an estuary 12 miles before touching the county, and cannot, while it washes its shores, be considered as a river, is greatly more valuable to Forfarshire than all its interior waters. Sand banks in various places menace its navigation, but are rendered nearly innocuous by means of lighthouses and other appliances.

From the mouth of the Tay to near Westbaven, the coast on the German ocean is sandy; and thence north-eastward to near Arbroath, it cannot safely be approached on account of low, and, in many cases, sunk rocks. About 10½ miles south-eastward of the centre of this perilous part the Bell-rock lighthouse lifts its fine form above the bosom of the ocean. See BELL-ROCK. A mile north-eastward of Arbroath the coast becomes bold and rocky, breaching down in perpendicular precipices, and, in many places, perforated at the base with long deep caverns, whose floors are boisterously washed by the billows of the sea. The Red-head, a rocky promontory, upwards of 200 feet perpendicular, terminates this bold section of coast, as it does the inland range of the Sidlaws. Lunan hay now, with a small sweep inward, presents for nearly 3 miles a fine sandy shore, and offers a safe anchorage. The coast again becomes rocky and bold as far as to the mouth of the South Esk; and thence to the extremity of the county, it is low and sandy.

Forfarshire is not remarkable for its minerals. Many searches have been made in the south-western district, sometimes with temporarily flattering prospects, but eventually without success, for coal. A thin seam has more than once been found, but nothing sufficiently important to warrant a hope that any part of the coalfield of Scotland lies beneath. Peat long served as a desideratum in the central districts; but now, in every quarter except among the Grampians, may be regarded as exhausted. The manufacturing and most populous parts of the county are hence wholly dependent for their fuel upon the collieries of Fife and Newcastle.—Limestone occurs in the Grampian, the Sidlaw, and the maritime districts. That, among the Grampians, is what mineralogists call mountain-limestone; and is composed of crystals, or spar of lime, in very small grains. In Glen Esk and Glen Clova it abounds; but owing to the want of appropriate fuel, is very limitedly worked. Several veins of rhomboidal spar of lime intersect the sandstone strata of the Sidlaws; and is wrought, though to only a small extent, in various places in the district. In the neighbourhood of Brechin, the stratum is about 12 feet thick, inclining to the north at an angle of about 45 degrees;

and consists of a great congeries of fragments of limestone, of various colours, most of which have been rounded into a globular form, and cemented together by means of a sparry cement crystallized among their interstices. It is mined from between strata of red sandstone, and burned with coal fetched from Montrose. Were blocks of it found sufficiently compact and free of cracks, they could be polished into a remarkable species of marble. Limestone, yielding three bolls of powdered slacked lime from one boll of shells, is worked at Hedderwick north of Montrose, and Budden on the coast 3 miles south of that town, from strata of an aggregate thickness of 25 feet. But though worked in the latter locality since about the year 1696, and though occurring in sufficient plenty in the county, the limestone of Forfarshire, on account of the dearth of fuel, cannot compete, even on its own soil, with lime imported from Sunderland and from Lord Elgin's works on the frith of Forth.—Sandstone abounds in all the districts except the Grampian; but nowhere is so fine a building material, as to either grain or colour, as the sandstone of Fife or Mid-Lothian. Much of it is red, incapable of being cut with the chisel, and, dressed with the hammer or the pick, is employed in rubble-work. But in several of the Sidlaw parishes it occurs in strata of various thickness, some of them only from half an inch to an inch, which are cut into plates for roofing and flags for paving. The strata are coated with scales of mica or talc, of a greyish-blue colour, and, in consequence, are easily separated. The most extensive range is in the parish of Carmylie, and along the south-eastern declivity of the Sidlaw hills, and is worked in various extensive quarries. The strata here are of a very fine grain, white in colour, or with a slight tendency to blue or green, and are quarried or carved into columns, lintels, grave-stones, steps for stairs, and especially paving-flags of from three to six inches in thickness, which are shipped in large quantities at Arbroath, and, under the name of Arbroath paving stones, find a ready market in London and Edinburgh.

Lead ore, of the species called galena, black in colour, and metallically lustrous, occurs in various localities in micaceous rock; and was for some time wrought in the upper part of the parish of Lochlee, and at Ardoch, near the Mill-den, on the Esk, till the mines got under water. Copper is supposed to exist in the Sidlaw hills, and in the spurs of the lower Grampians.—An iron mine in the lower part of the parish of Edzell was for some time worked, but has long been abandoned.—A very thick vein of slate occurs in the mouth of Glen Prosen, and in many other places along the declivity of the Grampians, and is of a dark-blue colour, inclining to purple; but it seems not to be appreciated, or is supposed to be less valuable for roofing than the thin plates of sandstone with which the county abounds.—Shell-marl, formed from the exuvie of several kinds of fresh water molluscs, and greatly enriching to the country as a manure, abounds in various parts of Strathmore, or in contiguous lakes and swamps; and has been removed in large quantities from the beds of seven lakes, four of which, Kinordie, Lundie, Logie, and Restenet, have been wholly drained, and three, Forfar, Rescobie, and Balgavies, partially drained, in order to its removal. Clay-marl, used for consolidating sandy and gravelly soils, occurs in Dunnichen, Kinnettles, Tannadice, Lethnot, and the lower part of Westwater. Rock or stone marl, which readily dissolves into clay on exposure to the air, and imparts extraordinary fertility to a superincumbent soil, occurs as a subsoil in the parishes of Craig and Dun, and

probably in other localities.—Vast masses of jasper, varying in colour from a bright yellow to a deep red, and capable of being cut and finely polished into ornamental trinkets, are immersed in mica schistose rocks on the property of Burn, at the mouth of Glen Esk, and at the bridge of Cortachie, where the South Esk issues from among the Grampians.—Chalybeate springs, of important medicinal quality, well up in numerous places; but those chiefly resorted to are one near Montrose, three west of Arbroath, and one in the parish of Dunnichen.

The general colour of the soils of Forfarshire is red, of various intensity, inclining often to brown, or dark brown, or black. The moist soils are, in all cases, darker than the dry. On the uplands of the Grampians, a thin stratum of moorish earth generally covers the surface, over a whitish retentive clay, but frequently perforated by jutting rocks. In the glens of the Grampians, the secondary or alluvial soils are generally much mixed with sand, and, in consequence, are loose and friable; and, in many instances, they are unmaungeably stony. In the lower part of the country, the primary soils are of various qualities: those on gravel stone rocks are generally thin, mossy, and encumbered with loose stones; those on sandstone rocks are chiefly a tenacious clay, very unferile, yet capable of being so wrought and manured as to produce excellent wheat; those upon subsoils of what, in this county, are called mortar, because they serve as a succedaneum for cement in building, consist also of clay, but are more vivid in the redness of their colour than the former class, and decidedly superior in quality; those upon whinstone are, in general, friable clays, and very fertile, though, on the northern declivity and among the valleys of the Sidlaw hills, they are often too shallow to admit the plough, and are sometimes perforated and displaced by the solid rock. Never, in this county, does whinstone look out from the surface at or near the summit of a hill, without giving intimation that a sheet of alluvial whinstone soil, rich and very fertile, stretches away from the base of the hill, increasing in depth as it recedes. The alluvial soils, in the lower parts of the county, are often so intermixed with the primary that they can hardly be distinguished; but they prevail in the basins of rivers, and frequently extend to a considerable elevation above the present beds of the streams, in hollows which seem to have originally been the beds of lakes, or of expansions of running waters. In the How of Angus, the soils are all alluvial, but, only in the minority of instances, fertile. In many places, the soil is gravelly, the stones being in general of small size; in some places, it is a dead sand, which scarcely compensates the cost of cultivation; in several places, it consists of sheets of alluvial whinstone, or of earths mixed with vegetable mould, which have been deposited by rivulets from the Sidlaw hills, and are very fertile; in other places, it is an alluvial clay, resembling carse-land, deposited by sluggish brooks, and, when rendered dry, is abundantly productive. Part of the strath which these varieties of soil carpet, has grown up into moss; and part of it is so flat as, in rainy weather, to be saturated with moisture and converted into fens. At Little Mill, north of Montrose, and in various other places round Montrose Basin, are stripes and patches of real carse-clay, similar to that of the carses of Gowrie and Falkirk. No very extensive mosses occur in the county. Those among the Grampians are situated in hollows on the summits of the sides of the mountains. The principal one in the low country is Dely moss, on the lands of Carbuddo.

About 130 years ago, a great proportion of Forfarshire was in the hands of a few ancient families; the most conspicuous of whom were the Lyons, Maules, Douglasses, Ogilvies, and Carnegies. But since the introduction of manufactures and trade, property has undergone many changes, and been parcelled out in smaller divisions. Of 40 barons mentioned by Edward in 1676, not one-third are represented by descendants who are proprietors in the county. A portion even of the few ancient families who remain have their principal property in other counties, and do not reside in Angus. So rapidly has landed property passed, in many parishes, from hand to hand, that the average term of possession by one family does not exceed 40 years. The money-value of estates has also, for a long period, fluctuated, and, up to 1815, kept steadily increasing. A great proportion of the landed properties, when the Rev. James Headrick drew up, in 1813, his General View of the Agriculture of Forfarshire, were from £100 to £1,000 a-year in value; some were from £2,000 to £6,000; and one, or perhaps two, were reckoned to exceed £12,000.—The greater number of the estates are freehold, or held by charter from the Crown. Some, but none of large extent, are held in feu, or by charter, from a subject superior; but, as to the practical nature of the tenure, are really occupied, for a trifling rent, upon a perpetual lease. A considerable proportion of the entire property of the county is placed under deeds of entail, and debarred from the full advantages of improvement.—The farm-houses of all Angus, about 70 or 80 years ago, were miserable hovels; and those of even the present day in the pastoral parts of the Grampian district, are generally wretched, dark, and sordid huts. But through out the arable sections of every district of the county, most of the present farm-houses are substantial in structure, convenient in situation, and comfortable in aspect, and have usually their attached offices in the form of three sides of a square.

Forfarshire, as to its agricultural capabilities, continued long in the state of inaction which, till a comparatively recent date, characterized most other divisions of Scotland; but, except on a small minority of its estates, it is now fully aroused and energetic, and displays an activity and a success of effort little inferior to those of the most flourishing and embellished portions of the Lowlands. The farmers, in general, have been equal in intelligence and practical skill to the cultivators of the soil in the choicest agricultural arenas of Scotland; and have, for the most part, kept pace with them in the adoption or invention of plans of improvement. The earliest agricultural association in the county was the Lunan and Vinney water society, presided over by the late patriotic George Dempster, Esq. of Dunnichen, and composed of proprietors, farmers, and clergymen residing in the basins of the streams mentioned in its title. The Strathmore society, the Angus and Mearns Agricultural society, the Angus and Perthshire Agricultural society, and the Eastern Forfarshire Farming association, followed. At an early period in the era of improvement, some proprietors employed professional men to plan and mark out such drains as were necessary or desirable upon their lands; and set a spirited and successful example, which speedily prompted very extensive and enriching draining operations throughout the county. Vigorous, highly beneficial, and far spread manuring operations were also from an early period conducted with shell-marl and lime. Of comparatively modern improvements none has been so remarkable in the energy of its prosecution, or the beneficial nature of its results, as the use of bone-

dust. The first persons who freely used this manure were the Honourable W. Maule, in the eastern part of the county, and Mr. Watson of Keilor, in the western,—both assiduous and astute agriculturists, and judicious and enterprising improvers. The mode of cropping, in the lower parts of the county, is similar to that of the more southern parts of Scotland; but, in the upland districts, does not, in general, admit of wheat. The gross produce of the county in 1854 comprised 380,658 bushels of wheat, 908,010 bushels of barley, 2,001,583 bushels of oats, 7,611 bushels of here, 21,067 bushels of beans, 407,304 tons of turnips, and 51,998 tons of potatoes. The average produce per imperial acre was 29 bushels 3 pecks of wheat, 36 bushels of barley, 39 bushels 1 peck of oats, 32 bushels 1 peck of here, 30 bushels 2 pecks of beans, 12 tons 13 ewt. of turnips, and 4 tons 3 ewt. of potatoes.

The improvement in live stock has been parallel with the improvement in cultivation. Before the introduction of enclosures, turnips, and sown grasses, the black cattle were diminutive in size, and were yoked to the plough in teams of eight or ten. Among those parts of the uplands which are least improved the breed is still much smaller than in the well-cultivated districts. The grazing and the feeding of cattle are prosecuted, throughout the county, to a much greater extent than the rearing of them. Graziers, in consequence, make large purchases at the fairs of Mearns, Aberdeenshire, and Moray, and even travel to the North Highlands to procure cattle for the stocking of their farms. A distinction between the best feeding and the best milking breeds, which seems founded in nature, and very intimately connected with improvement, is by no means attended to in Angus as in Ayrshire and other districts which are enriched by their dairy produce. About 80 or 90 years ago, sheep were to be found on almost every farm, proportioned in number to the extent of its pasturage; but, except for connexion with the turnip husbandry, they have long since been gradually driven by the plough to a banishment among the unreclaimable uplands. The original breed was the small white-faced sheep, or spotted with yellow, which seems to have been the aboriginal breed of the British isles; but it was, 45 years ago, almost wholly superseded by the black-faced sheep, which was annually brought, in considerable numbers of a year old, from Linton in Peebles-shire. The aggregate live stock of the county in 1854 comprised 9,123 horses, 11,816 milk cows, 25,459 other bovine cattle, 10,728 calves, 53,169 ewes, gimmers, and ewe-hogs, 51,349 tups, wethers, and wether-hogs, and 7,760 swine. Goats were at one time kept in the mountainous districts; but they were extirpated about 60 or 70 years ago, on account of their hostility to plantations. The red deer or stag, at one period, abounded among the Grampians; but, for many years, have disappeared. The horns of the mouse-deer, which are haunched like those of the stag, but are much larger, are sometimes found in mosses.

Large trees, found in mosses and marshy-grounds, seem to indicate that the lower parts of Forfarshire abounded, at one period, in forests. The Grampian glens are, in some instances, overrun with natural birches, or with oak coppice, containing a mixture of hazels and other shrubs; and, in other instances, they are adorned with thriving plantations. In the lowlands of the county, and the Sidlaw hills, plantations, with the exception of the parks and pleasure-grounds, are chiefly confined to places which are inconvenient for the plough, or to thin moorish soils which rest on clay or gravel, and are remote from the means of improvement. In many parts

the public roads wind among plantations, and disclose to the delighted traveller ever-changing prospects of sylvan beauty. Near the shore trees do not thrive, except in ravines or behind banks, where they are sheltered from the sea-spray. During the early part of the era of improvement, Scotch fir was almost the only arborial species planted, and was believed to be that chiefly, or that alone, which would suit the soil and climate; but it was soon discovered to be, except on particular spots, the least thriving and the most unprofitable; and, in the second period of improvement, it began to be generally substituted by the larch. Hard woods, as they are called, or all sorts of deciduous trees, as oaks, ashes, elms, planes, beeches, poplars, form also numerous plantations, interspersed with spruce and silver firs. To enumerate all the noblemen and gentlemen who have beautified and enriched their estates with extensive and thriving plantations, would be to write a list of most of the great and secondary proprietors of the county. "Owing to the annual extension of plantations," says the Rev. Mr. Headrick, writing in 1813, "it is difficult to assign the proportion of surface planted at present. But from Mr. Ainslie's very accurate map of the county, it appears that, in 1792, there were about 15,764 Scotch acres of plantation. Since that time there cannot be less than 5,000 additional acres planted. This brings the whole plantations of the county to 20,764 acres." As the annual increase, especially on the declivities of the Sidlaws, and along the face of the lower Grampians, and on the extensive poorer soils of Strathmore, has hitherto continued at a ratio not less than during the period for which Mr. Headrick allows an increase of 5,000 acres, the entire extent of plantation, in 1855, cannot be less than from 30,000 to 35,000 Scotch acres. The largest forest is that of Monrithmont moor, distributed among the parishes of Breehin, Farnell, Aberlemno, Guthrie, Kirkden, and Kinnel. The most extensive planters have been Carnegie of Southesk and the Earl of Airlie; the latter, according to a report of his lordship to the Highland society, in 1830, having, between 1811 and that year, planted upwards of 3,000 acres.

Forfarshire is the chief seat of the coarse linen manufactures of Scotland, and conducts a very extensive commerce in fabrics made up from foreign flax and hemp. In the large towns the spinning of yarn in large mills, and the working of canvass, broad-sheetings, bagging, and other heavy fabrics, in factories, are conducted on a vast scale; and in the smaller towns and the villages, the manufacture of osnaburghs, dowlas, and common sheetings, employs an enormous number of hand-looms. Of 4,000 power-looms employed in Scotland on coarse linen fabrics, greatly the larger proportion are in the towns of Angus. A fair idea of the manufactures of the county will be formed by glancing at those of the towns, Dundee, Arbroath, Forfar, Kirriemuir, Montrose, and Breehin, in which—especially in Dundee—they are concentrated. In all the villages and hamlets the principal trade is the weaving of the prepared materials into cloth, and the purifying of them by heaching.

Excepting roads which run up Glen Isla, Glen Esk, Glen Lethnot, and Glen Mark, the Grampian district is almost wholly unprovided with facilities of communication. But the other districts of the county, for the most part, abound in roads, and, as to either their number or their quality, are not behind any portion of Scotland. One great line of road comes in from the Carse of Gowrie, and runs along the coast through Dundee, Arbroath, and Montrose; another goes off from Dundee, through

Monikie, Dunnichen, and Brechin, toward Laurence-kirk; another stretches from Dundee, through Forfar, to join the former at Brechin; two others come respectively from Meigle and Blairgowrie, and traverse the How of Angus; two lines of road radiate inward from Arbroath, and two from Montrose; and connecting lines and branch-roads everywhere ramify the country. Lines of railway run from Dundee toward Perth, from Dundee to Strathmore, from Dundee to Arbroath, with a branch to Broughty-Ferry, in communication toward Edinburgh, from Arbroath to Forfar, from Forfar to Strathmore toward Perth, and from Forfar to the north-eastern extremity of the county toward Aberdeen, with branches to Montrose and Brechin.

The royal burghs of Forfarshire are Dundee, Arbroath, Brechin, Montrose, and Forfar. The other towns, containing each more than 2,000 inhabitants, are Kirriemuir, Broughty-Ferry, and part of Coupar-Angus. The principal villages are Lochee, Liff, Benvie, Invergowrie, Monifieth, Drumsturdy-Moor, Barnhill, Barry, Carnoustie, Westhaven, Easthaven, Panbride, Gallowlaw, Muirdrum, Newton of Panbride, Craigton, Guildie, Guildie-Muir, Newhigging, Balkello, Balgray, Todhills, Baldovan, Dronly, Kettins, Peatie, Campmuir, Ford of Pitcur, Newtyle, Bridgend, Balbirnie, Barbaswalls, Whines, Northmuir, Southmuir, Maryton, Padanaram, Westmuir, Douglstown, Glammis, Charlestown, Thornton, Drumleg, Armyfoul, Carseburn, Lunanhead, Frioekheim, Letham, Drummietermon, Cotton of Lowuie, Bowriefauld, Craichie, Dunnicheu, Arbriol, Bonnington, Auchmithie, Marywell, Gowankbank, St. Vigeans, Colliston-Mill, Ferryden, Usan, Tannadice, Edzell, Craigo, Logie, and Muirside. Among the principal seats are Airlie-castle, Cortachy-castle, and Auchterhouse, the Earl of Airlie; Camperdown-house, the Earl of Camperdown; Glammis-castle, the Earl of Strathmore; Ethie-house, the Earl of Northesk; Careston-castle, the Earl of Fife; Gray, Lord Gray; Brechin-castle and Panmure house, the Earl of Dalhousie; Melgund, the Earl of Minto; Kinnaird-castle, Sir P. M. Thriepand, Bart.; Ochterlony-house, Sir C. M. Ochterlony, Bart.; Baldovan-house, Sir Johu Ogilvy, Bart.; Balnamoon, J. C. Arbuthnot, Esq.; Boysack, W. F. L. Carnegie, Esq.; Clova, Hon. Donald Ogilvy; Guthrie, John Guthrie, Esq.; Kinnordy, Sir Charles Lyell; Craigo, J. F. Grant, Esq.

Forfarshire, as a county, sends one member to parliament. Constituency in 1861, 3,722. The county is divided into the sheriff-districts of Forfar and Dundee, and into the justice-of-peace districts of Forfar, Dundee, Arbroath, Montrose, Brechin, and Kirriemuir. The Dundee sheriff division comprises only the parishes of Liff and Benvie, Invergowrie, Dundee, Monifieth, Barry, Panbride, Monikie, Murroes, Tealing, Mains, Strathmartine, Auchterhouse, and Lundie and Fowlis. The sheriff-courts are held at Forfar every Thursday, and at Dundee on every Tuesday during session, also once in each place during vacation. The commissary courts are held at Forfar on every Thursday, and at Dundee on every Tuesday during session. Sheriff small debt courts are held at Forfar on every Thursday during session, at Dundee on every Tuesday and Friday during session, and at Arbroath, Montrose, Brechin, and Kirriemuir, once in each January, March, May, July, September, and November. The stations of the county police are Forfar, Glammis, Newtyle, Ruthven-bridge, Lintrathen, Cortachy, Finhaven, Brechin, Frioekheim, Carnoustie, Broughty-Ferry, Letham, Edzell, Hillside, Marywell, Birkhill-fens, Ferryden, Monifieth, Kirriemuir, and Dighty-water-toll. The number of

commitments for crime, in the year, within the county, was 267 in the average of 1836-1840, 321 in the average of 1841-1845, 343 in the average of 1846-1850, 275 in that of 1851-5, 245 in that of 1856-60. The total number of persons confined in Forfar jail within the year ending 30th June, 1860, was 167; the average duration of the confinement of each was 41 days; and the net cost of their confinement per head, after deducting earnings, was £17 11s. 9d. The total number confined in Dundee jail in the same year was 1,061; the average duration of confinement, 26 days; and the net cost per head, £16 2s. 9d. The total number confined in Arbroath jail in the year 1853 was 145; the average duration of confinement, 13 days; and the net cost per head, £30 14s. 10d. The total number confined in Montrose jail in the year 1860 was 98; the average duration of confinement, 22 days; and the net cost per head, £35 10s. 4d. The number of districts in the county, either parochial or quasi-parochial, assessed for the poor, is 31; the number unassessed, 22. The number of registered poor in the year 1851-2 was 5,035; in the year 1859-60, 5,663. The number of casual poor in 1851-2 was 1,651; in 1859-60, 1,242. The sum expended on the registered poor in 1851-2 was £25,902; in 1859-60 £31,334. The sum expended on the casual poor in 1851-2 was £1,299; in 1859-60, £773. The valued rent in 1674 was £171,239 Scots. The annual value of real property, as assessed in 1815, was £361,241; as assessed in 1849, £617,345. The assessment in 1853-4 per £100 Scots of real valued rent, was 3s. for rogue-money, 2s. 8d. for bride-money, 11s. for police-money, and 2s. 6d. for prisons. Population of the county in 1801, 99,053; in 1811, 107,187; in 1821, 113,355; in 1831, 139,606; in 1841, 170,453; in 1861, 204,425. Males in 1861, 92,223; females 112,202. Inhabited houses in 1861, 23,460; uninhabited, 807; building, 196.

Forfarshire, according to present ecclesiastical reckoning, comprehends 49 quoad civilia parishes, part of 6 other quoad civilia parishes, 1 quoad sacra parish, and 13 chapels of ease. But one of the quoad civilia parishes comprises the greater part of the burgh of Dundee, with no fewer than 5 parochial churches; and 6 other of the quoad civilia parishes are united parishes, each of them capable of being reckoned as two. One of the quoad civilia parishes which belong but partly to Forfarshire, belongs partly to Kincardineshire; and the other five belong partly to Perthshire. All these parishes and parts of parishes are within the bounds of the synod of Angus and Mearns; and, together with 7 which belong wholly to Perthshire, they constitute the presbyteries of Meigle, Forfar, Dundee, Brechin, and Arbroath; and these five presbyteries together with the presbytery of Fordoun, which belongs wholly to Kincardineshire, constitute the entire synod of Angus and Mearns. In 1851, the number of places of public worship within the county was 187; of which 67 belonged to the Established church, 51 to the Free church, 23 to the United Presbyterian church, 6 to the Original Secession, 8 to the Episcopalians, 10 to the Independents, 4 to the Baptists, 4 to the Original Connexion Methodists, 1 to the Independent Methodists, 1 to the Glasites, 3 to the Evangelical Union, 3 to isolated congregations, 5 to the Roman Catholics, and 1 to the Mormons. The number of sittings in 47 of the Established places of worship was 32,031; in 49 of the Free church places of worship, 31,543; in 22 of the United Presbyterian places of worship, 13,083; in 4 of the Original Secession places of worship, 1,450; in the 8 Episcopalian chapels, 2,924; in the 10 Independent chapels

5,824; in 3 of the Baptist chapels, 580; in the 4 Original Connexion Methodist chapels, 1,330; in the Independent Methodist chapel, 600; in the 3 Evangelical Union chapels, 806; in the chapels of the 3 isolated congregations, 440; and the 5 Roman Catholic chapels, 2,290. The maximum attendance, on the Census Sabbath, at 53 of the Established places of worship was 20,744; at 49 of the Free church places of worship, 19,197; at the 23 United Presbyterian places of worship, 8,114; at 5 of the Original Seession places of worship, 765; at the 8 Episcopalian chapels, 1,590; at the 10 Independent chapels, 2,578; at 3 of the Baptist chapels, 225; at the 4 Original Connexion Methodist chapels, 745; at the Independent Methodist chapel, 190; at the Glassite chapel, 35; at the 3 Evangelical Union chapels, 440; at the chapels of the 3 isolated congregations, 230; at 4 of the Roman Catholic chapels, 1,246; and at the Mormonite place of worship, 100. There were in 1851, in Forfarshire, 181 public day schools, attended by 9,263 males and 6,698 females,—122 private day schools, attended by 3,049 males and 3,110 females,—35 evening schools for adults, attended by 673 males and 657 females,—and 230 Sabbath schools, attended by 8,128 males and 10,030 females.

Remains of vitrified forts are distinctly visible on the hill of Finhaven, in the parish of Oathlaw; on Drumsturdy moor, in the parish of Monifieth; and on Dundee law, in the vicinity of Dundee. Hill-forts are traceable in what are called the White Caterthun and the Brown Caterthun, in the parish of Menmuir; in Denoon castle, 2 miles south-west of Glamis; and on Dunnichen hill, Dumbarrow hill, Carbuddo hill, Lower hill, and several other eminences; but, in various instances, are indicated only by heaps of loose stones. Roman camps exist at Harefauld, in the Moor of Lower, at a place in the Moor of Forfar, a mile north of the town, and at War-dikes or Black-dikes, 2½ miles north of Brechin. The castles of Forfar and Dundee have long been razed. Ruined castles of considerable interest are Broughty castle, in the parish of Monifieth; Red castle, at the head of Lunan bay; Airlie castle, in the parish of Airlie; Finhaven castle, in the parish of Oathlaw; Invermark castle and Edzell castle, in Glen Esk; Kelly castle, near Arbroath; and Affleck castle, in the parish of Monikie. But owing to the lands connected with them having passed into the possession of new proprietors, most of these ruined baronial strengths have fallen greatly into decay. The only Druidical circle in the county is at Pits-eanlie, about 2 miles north-east of Forfar. Interesting remains of ancient ecclesiastical edifices occur in the cathedral of Brechin, the monastery of Arbroath, the tower of Dundee, and the priory of Restenet near Forfar. Smaller monastic edifices in Dundee, Montrose, Brechin, and other places, have, in most instances, wholly disappeared.

Christianity was introduced to Angus by the Culdees. But the congregations which they organized, and the edifices which they constructed, were soon seized and remodelled by the emissaries and priests of Rome. A considerable part of the county was annexed to the diocese of St. Andrews, and a part of it to that of Dunkeld. But Brechin was the seat of a bishop, who, though intrusted with only a small diocese, seems to have been provided with opulent revenues. His property, at the epoch of the Reformation, is said to have yielded, in money and kind, £700 a year,—a sum which was then equal to £7,000 at the present day. A very large proportion of the lands of the county, besides property beyond its bounds, belonged to the monks of Arbroath. Most of the parish churches of modern date are neat, com-

modious, and even elegant. But even Dissenting places of worship, built by voluntary subscription, far excel the old parish churches, and in several instances in the towns, are architecturally adorned.

The civil history of Forfarshire possesses hardly a distinctive feature, and, excepting a few facts which properly belong to the history of its towns, is blended in the general history of the counties north of Forth. At the period of the Anglo-Saxon colonization, when the feudal or baronial system was introduced, the strangers whose descendants continue to figure most conspicuously in the county were the Lyons, the Maules, and the Carnegies. Sir John Lyon, a gentleman of Norman extraction, having married a daughter of King Robert II., obtained, among other grants, the castle and lands of Glamis, “propter laudabili et fidelia servitio, et continuis laboribus;” and was the founder of the noble family of Lords of Glamis and Earls of Strathmore. Guarin de Maule came from Normandy with William the Conqueror. Robert, one of two sons who survived him, followed Earl David, afterwards King, into Scotland. Roger, the second son of this Robert, married the heiress of William de Valoniis, Lord of Pannure, and chamberlain of Scotland under Alexander II. From this marriage sprang the Maules, who were afterwards Earls of Pannure.

FORGAN, a parish, containing the post-office village of Newport, also the villages of Marytown and Woodhaven, on the northern border of Fifeshire. It lies on the Tay, opposite Dundee; and is bounded on the inland sides, by Ferry-Port-on-Craig, Leuchars, Logie, Kilmarny, and Balmerino. Its greatest length, eastward, is nearly 6 miles; its length on the coast is about 3½ miles; and its greatest breadth is a little upwards of 2 miles. Its surface presents a succession of heights and intervening hollows which give it a pleasing aspect; and in several places, such as St. Fort and Tayfield, where it is ornamented with a great deal of fine wood, it is exceedingly beautiful and picturesque. At St. Fort, and at Newton, are the highest hills in the parish, which rise about 300 feet above the Tay. In general, the coast is bold and rocky, rising from 30 to 50 feet above the beach; and along the brow of these rocks, for some way both east and west of Newport, a number of elegant marine villas, with their gardens and shrubberies, add greatly to the interest of the landscape. The villas have been erected chiefly by merchants and others belonging to Dundee, for the benefit of sea-bathing during the summer. From this rocky coast, and from the summit of the ridge of hills which descend from the south towards the Tay, are fine views of Dundee, and of the southern sea-board of Forfarshire. The soil is generally fertile. The greater part is black loam and clayey earth; but other portions are light and gravelly. The parish altogether contains about 5,000 acres; of which nearly 4,000 are under regular cultivation, 370 acres are in grass, 360 under wood, and 250 unarable. The rent of land is from £1 to £3 per acre, but some parts near the Tay rent as high as £4 per acre. The total valued rental is £5,145 6s. 8d. Scots. The real rent, in 1794, was £2,873 sterling. The principal landowners are Stewart of St. Fort, Berry of Tayfield, and four others. The mansion of St. Fort is a large, handsome, modern structure, in the Elizabethan style; and the mansion of Tayfield, though but partly a modern building, has an entirely modern appearance, and stands delightfully on the Tay. There are in the parish some whinstone quarries and some salmon fishings. The total yearly value of raw produce was estimated in 1838 at £16,490. Assessed property in 1866, £12,705 0s.

1d. Population in 1831, 1,090; in 1861, 1,326 Houses, 291.

This parish is in the presbytery of St. Andrews, and synod of Fife. Patron, the Crown. Stipend, £230 19s. 8d.; glebe, £25. Schoolmaster's salary, £35. The parish school is centrally situated at Nether-Friarton. A school for girls is supported by Mrs. Stewart. The parish was anciently called St. Phillans. Its church, in the times before the Reformation, belonged to the priory of St. Andrews; and the building, though of unascertained antiquity, and though situated at the south-eastern extremity of the parish, away from the great bulk of the population, continued to be used unreservedly till the year 1837, when the heritors resolved to erect a better. There are in the parish a Free church, with an attendance of 320, and an Independent chapel, with an attendance of 80. Sum raised by the Free church in 1865, £367 0s. 5d.

FORGANDENNY, a parish partly in Kinross-shire, but chiefly in Perthshire. It contains the village of Forgandenny and the hamlet of Path of Condie. Its post-town is Bridge-of-Earn, a short distance east of its north-eastern extremity. Its form is nearly that of a slender parallelogram, stretching north and south, but sending off a considerable stripe south-westward from its south-west angle. It is bounded on the north by the Earn, which divides it on Aberdalgie and a detached part of Forteviot; on the east by Dunbarny, Dron, and Arngask; on the south by a second detached part of Forteviot and by Orwell; and on the west by Dunning and the main body of Forteviot. Its greatest length is about 8 miles, and its greatest breadth 3 or 3½; but apart from its south-westward stripe, it is only about 5 miles long. The northern division is part of the fertile beautiful valley of Strathearn; and though it rises gradually as it recedes southward, it is on the whole level. The southern division runs up among the Ochils, and is hilly and upland, and occasionally bare; yet it cannot be regarded as a rocky or sterile region, most of its hills being, with some small exceptions, either good pasture or remunerating corn-field. The Earn, along the northern boundary, describes some of those graceful curves, and forms some of those beautiful peninsulas, for which it has been so much admired; and produces salmon, different sorts of trout, pike, perch, eel, and flounders. May water comes down upon the extremity of the south-western stripe, forms for 2 miles its north-west boundary-line, runs across it to the village of Path-of-Condie, forms for ¾ of a mile its south-east boundary, receives from the east a rill which had flowed 2½ miles along the boundary of the parallelogram, and now intersects the parish for 2½ miles in a direction west of north, and leaves it on the west side at Torrance. Besides containing eels, smelt, and some flounders, it plentifully produces a very finely flavoured trout about the size of a herring. Both the Earn and the May sometimes overflow their banks on the strath; but they amply compensate any damage they inflict, by their richly manurial deposits. Whinstone for building, and ironstone, abound. A species of limestone occurs on the banks of the May. In the wood of Condie among the Ochils, copper, lead, and silver ores have been found. In the southern or upland division, the soil consists of reddish clay, black earth, and sand; and is, for the most part, light and better adapted to produce oats than any other sort of grain. In the northern division, much of the surface is carse-ground, and this is continued along Strathearn, through the north-eastward parishes of Perthshire to the carse of Gowrie,—that carse and the carse of Strathearn being interrupted in their

continuity only by the channel of the Tay. The grounds immediately on the Earn are sandy meadow land; but those beyond them have a soil of rich black earth and clay, and carry luxuriant crops of every sort of agricultural produce. Only about 1,000 acres in the parish have never been cultivated; and another 1,000 have lately been profitably reclaimed. The rent of land varies from 3s. to £3. The principal landowners are Lady Ruthven, Oliphant of Condie, Oliphant of Rossie, and Fehney of Ardargic. The mansions are Freeland, Rossie, and Condie. On the estate of Lady Ruthven, not far from the mineral springs of Pitcaithlie, is a medicinal fountain similar to these springs in its properties. The waters are moderately cathartic, and give relief chiefly in cases of rheumatism and scurvy. On the estate of Mr. Oliphant of Rossie, is another medicinal spring,—a chalybeate. In the west border of the low part of the parish are traces of a fortification which may have been an outpost of the Romans while they were in Strathearn. On a height above the May, at Ardargic, is a square 270 feet in extent on each side, naturally defended on one side by a deep hollow traversed by a brook, artificially defended on the other sides by trenches 14 feet deep and about 30 feet wide, and called, from time immemorial, 'the Roman Camp.' Upwards of a mile south of the village of Forgandenny, on the summit of a lofty conical hill, called Castlelaw, are extensive remains of what is supposed to have been a Danish fortification. Vestiges of a circular stone-wall describe a circumference of about 1,500 feet; and they enclose remains of buildings, and appear to have been defended by several outworks. The site of the fortification commands a view of all Strathearn and the carse of Gowrie to the Grampian mountains on the west, all the country to the south of the Tay or the German ocean on the east, a great part of Forfarshire and Perthshire on the north-east and north, and the tops of the Lomond hills on the south. The parish is traversed by the Scottish central railway, and has a station on it 4 miles south-west of Perth. The village of Forgandenny is situated between the houses of Freeland and Rossie, about a mile from the Earn; and is divided into two parts by the intersecting course of a brook. It is the site of the parish church and the Free church, and is inhabited by artisans and labourers. Population of the village, 84. Houses, 25. Population of the parish in 1831, 917; in 1861, 739. Houses, 165. Assessed property in 1866, £7,754 5s. Population of the Kinross-shire section in 1831, 32; in 1861, 12. Houses, 2.

This parish is in the presbytery of Perth, and synod of Perth and Stirling. Patron, the Crown. Stipend, £199 11s. 11d.; glebe, £15. Schoolmaster's salary, £45, with £10 fees, and £2 10s. other emoluments. The parish church is a very old building, repaired not many years ago, and containing 410 sittings. The Free church has about 350 sittings: attendance, 240; receipts in 1865, £133 1s. 9d. There is an United Presbyterian church at Path of Condie, built in 1758, and containing 380 sittings. There is an endowed school at Path of Condie.

FORGIE. See ARNGASK.

FORGLEN, a parish, containing a post-office station of its own name, on the north-eastern border of Banffshire. It is bounded by Aberdeenshire, and by the parishes of Marnoch and Alvah. Its length south-eastward is 5½ miles; and its breadth is 3½ miles. The river Deveron traces all the boundary with Aberdeenshire, making a run upon it of about 6 miles first north-eastward and next north-north-westward, changing its direction at the most easterly

neck of the parish about a mile from Turriff. Forgiven was at one time a district of Alvah; but, in the first half of the 17th century, it was erected into a separate parish; and an annexation, *quoad civilia et sacra*, was made to it from Marnoch. It is sometimes called St. Eunan's or Teunan's parish, from a saint of that name, to whom a chapel, the remains of which still exist, is said to have been dedicated. The surface is beautifully varied with gently rising grounds; and has a gradual slope towards the Deveron. The soil is light and fertile, and the greater part is under a state of high agricultural improvement. It is well-sheltered by woods and hills, which, with the genial nature of the soil, render the climate decidedly mild. Clay-slate is quarried in several places; and there are two mills. Forgiven house, a superb castellated edifice erected in 1842, stands near the Deveron, in a most beautiful situation. Carnousie-house is a fine mansion. The landowners are Sir G. Abercromby, Bart., Harvey of Carnousie, and Morrison of Mountblairy. In 1836 the rent of land averaged 18s. per acre, and the parochial area comprised 3,617 acres in a state of cultivation, 1,055 of waste or pasture land, 1,129 capable of profitable reclamation, and 1,433 under wood. The value of property as assessed in 1860 was £4,470. Population in 1831, 820; in 1861, 783. Houses, 150.

This parish is in the presbytery of Turriff, and synod of Aberdeen. Patron, Sir G. Abercromby, Bart. Stipend, £175 5s. 10d.; glebe, £14. Schoolmaster's salary, £50, with £22 15s. fees and other emoluments, besides a share of the Diek bequest. The parish church was built in 1806, and contains about 450 sittings. There is a Free church: attendance 100; sum raised in 1865, £54 15s. There are two non-parochial schools, and an excellent parochial library.

FORGUE, a parish, containing a post-office station of its own name, on the north-western border of Aberdeenshire. It is bounded by Banffshire, and by the parishes of Auchterless, Culsamond, Insh, Drumblade, and Huntly. Its length, south-eastward, is about 9 miles; and its greatest breadth is about 6 miles. The Deveron traces part of the north-western boundary; the Ury traces part of the south-eastern boundary; the Ythan rises in the interior, and runs away into Auchterless; and two burns, called the Forgue and the Frenndraught, drain the greater part of the interior, become confluent, and fall into the Deveron. These two burns have many romantic windings; and the former of them is beautifully skirted with wood. The general surface of the parish is a fine, undulating, pleasant alternation of vales and hillocks, holms and knolls. The north-western extremity is occupied by the hill of FOREMAN: which see. The other tracts near the Deveron, together with the central districts, display much amenity of both feature and decoration. The south-eastern tracts, contiguous to the Ury, are mainly a series of bleak, cold, moorish heights, called the hills of Foudland. The soil, in the lower districts, is generally a deep rich loam on a clay bottom, producing heavy crops. Towards the south, the ground is still partly in a state of nature, and covered with heath; but the proprietors have been sparing neither trouble nor expense in improving their several estates, in which they have been aided by the exertions of industrious and spirited farmers. Much of the waste grounds, incapable of being turned to any better account, have been covered with plantation. The most extensive landowners are Morison of Bognie, and Simpson of Cobairdy; and there are twelve others. The mansions are Frenndraught, Cobairdy, Haddo, Auchaber, Corse,

Drumblair, Boyne's-mill, and Templeland. The situation, grounds, and historical associations of Frenndraught—or, as it is popularly called, Frennet—possess much interest. There are still some remains of the old castle of Frenndraught, the ancient seat of the Crichton family, between whom and the Gordons of Rothiemay arose in the early part of the 17th century, a feud which figures prominently in both song and story. The tower of the castle, at a moment when Viscount Aboynay, the laird of Rothiemay, and two or three of their followers were in it, was destroyed by a conflagration, so sudden and great as to prevent their escape; and a popular ballad alleges that they had been treacherously enticed to it by its lady with a view to their destruction.

"When Frennet castle's ivied walls
Through yellow leaves were seen;
When birds forsook the sapless boughs,
And bees the faded green;
Then Lady Frennet, vengeful dame,
Did wander frae the ha'
To the wild forest's dowie gloom
Among the leaves that fa'."

there to find her victims, and entice them to the castle for their ruin. There are in the parish several Druidical temples and the vestiges of an ancient encampment. The parish has an average distance of only about 7 miles from Huntly; and is traversed by the roads thence to Banff and to Aberdeen. There is a large distillery at Gleudronach. There are in various parts six corn-mills. Fairs are held at Hawkhall on the third Tuesday of April, the last Thursday of May, and the third Tuesday of September, all old style. Population in 1831, 2,286; in 1861, 2,686. Houses, 536. Assessed property in 1860, £11,006.

This parish is in the presbytery of Turriff, and synod of Aberdeen. Patron, Morison of Bognie. Stipend, £191 6s. 5d.; glebe, £18. Unappropriated tithes, £406 13s. 8d. There are two parochial schools with salaries of £45 and £35, together with other emoluments. The parish church was built in 1819, and contains 814 sittings. There is a Free church: attendance, 650; sum raised in 1865, £244 12s. There is an Episcopalian chapel, which was built in 1795, and contains 230 sittings. There was formerly a small Secession church at Bogfouton. There are 5 or 6 non-parochial schools and a savings' bank. The ancient name of the parish was Forrig.

FORHAILLON. See DUNKELD (LITTLE).

FORMAL (KNOCK OF), a hill, rising to an altitude of about 1,500 feet, at the west end of the Loch of Lintrathen, on the western border of Forfarshire. It is covered with wood to the top.

FORMAN. See FOREMAN.

FORMARTINE, an ancient middle district of Aberdeenshire, which gives the title of Viscount to the Earls of Aberdeen. It is bounded by Buchan on the north-east; by a ridge of low hills near Old Meldrum, by which it is separated from Garioch, on the south-west; and by Strathgogie on the north-west. It includes all the lands along the coast for 10 miles between the Don and the Ythan; then crosses the Ythan, and extends to the banks of the Deveron, by Turriff. It consists partly of a stony soil intersected by bogs, and partly of an excellent clay capable of a high degree of improvement. It comprises 16 parishes, and has an area of 280 square miles.

FORNETH, a post-office station and an estate, in the parish of Clunie, Perthshire. See CLUNIE.

FORRES, a parish, containing a royal burgh of its own name, in the north-west of Morayshire. It is bounded by the estuary of the Findhorn, and by the parishes of Kinloss, Rafford, Edenkille, and

Dyke and Moy. Its form is irregular, approaching to a triangle, with a strip of moorish and hill ground about 3 miles in length, stretching from one corner. It is 4 miles in length, and $2\frac{1}{2}$ in breadth, and contains about 9 square miles. The river Findhorn flows on the western boundary. The burn of Forres, coming in from Rafford, winds through the interior, past the west end of the burgh, on to the estuary of the Findhorn. The north-western district of the parish, to the extent of more than half of the entire area, is a low alluvial plain, in a state of high cultivation. The central district is diversified by small round hills and gentle acclivities, cultivated on the sides and crowned with wood. The southern district rises to a considerable elevation, and is naturally moor or moss, but has been extensively reclaimed, and is in some parts covered with plantation. About 33 parts in 52 of the whole parochial area are cultivated, 7 uncultivated, and 12 under wood. The arable lands yield crops equal to any in Scotland. "In point of situation and climate," says the Old Statistical Account, "this parish is inferior to no part of Scotland. The air is dry, serene, and healthy. Less rain falls here than in most other parts in the kingdom; the showers being attracted by the Moray frith on the north, and on the south by the hills which divide Moray from Strathspey." There is a limestone quarry on the farm of Mundole. The fishing in the river and estuary of the Findhorn is of considerable importance. There are flour-mills, meal-mills, a saw-mill, a woollen manufactory, and extensive nurseries. The total yearly value of raw produce was estimated in 1842 at £18,300. Assessed property in 1860, £10,343. The valued rental is £2,954 6s. 6d. Scots; the real rental about £6,000 sterling. The most extensive landowners are Tytler of Burdyards and Peterkin of Invererne. The principal mansions are Sanquhar-house, Invererne-house, Forres-house, and Drumduan. The great road from Aberdeen to Inverness traverses the parish; and an elegant suspension-bridge takes it across the Findhorn, erected in 1832 at the cost of nearly £7,000. Population in 1831, 3,896; in 1861, 4,112. Houses, 821.

This parish is the seat of a presbytery in the synod of Moray. Patron, the Earl of Moray. Stipend, £274 3s. 2d.; glebe, £22. The parish church was built in 1775, and repaired and enlarged in 1839, and contains about 1,000 sittings. The Free church contains 783 sittings; and the sum raised in connexion with it in 1865 was £448 0s. 2d. The United Presbyterian church was built in 1812, and contains 712 sittings. The Independent chapel was built in 1802, and contains 500 sittings. There are also an Episcopalian chapel, with 280 sittings, and a small Evangelical Union chapel or New Independent. Attendance on the Census Sabbath in 1851 at the parish church, 630; at the Free church, 775; at the United Presbyterian church, 650; at the Episcopalian chapel, 66; at the two Independent chapels, 240. Four public schools are associated in the academy, which is also called Anderson's Institution. The teachers of three of these, being the parochial schoolmasters, receive salaries from the funds of the burgh; and the fourth, a charity school for the parishes of Forres, Rafford, and Kinloss, is endowed with funds left by the late Jonathan Anderson, Esq. of Glasgow. The branches taught at the academy are English, French, Latin, Greek, writing, arithmetic, mathematics, geography, history, and drawing. The sum of about £1,000 sterling was recently bequeathed for educational purposes in Forres by Mr. Peter Fraser, a native of the town, who spent most of his life in North America.

There are in the town a ladies' boarding school, dancing schools, private boys' schools, and girls' schools. Mr. James Dick, who bequeathed the noble sum of £140,000 for the benefit of the parochial schoolmasters of the counties of Moray, Banff, and Aberdeen, was a native of Forres.

On the south-eastern side of the burgh is a small glen, between the Cluny hills and the straggling houses on the Rafford road, which is known by the extraordinary soubriquet of Hell's-hole-valley. The Cluny hills, observe the commissioners on municipal burghs, "have been judiciously planted by the burgh, and walks formed through them by private subscription, open to all the inhabitants; an appropriation of burgh property which might with advantage be more generally imitated." On one of these eminences is a lofty Pharos, commemorative of Nelson and the battle of Trafalgar. To the site of it an excellent winding road conducts the traveller from the town. The tower is an octagonal fabric, on a diameter of 24 feet including the walls at the base, raised to the height of 70 feet, and completed by a battlement and a flagstaff. "The view from the top of this tower," says Mr. Rhind, "embraces the richly wooded and fertile plains to the west, through which winds the Findhorn, the undulating hills to the south, a large open country to the east, and the blue waters of the ocean flowing upon the north, bounded, in the distance, by the Sutherland and Ross-shire hills, and the two Sutors, which guard the entrance to the bay of Cromarty, forming a combination of rich and varied scenery which few situations can rival." Skrine, approaching Forres from Elgin, thus describes the landscape, after fording the Lossie, and traversing the heath on which Macbeth is supposed to have encountered the weird sisters: "Forres, when we could find room to view it, presented a neat town, pleasantly situated between two little hills, and at a small distance from the great ridge of moors which forms the outwork of the Highlands towards this coast. A country well-wooded, and admirably cultivated, lay between them and the forest of Darnaway, with the noble towers of its ancient castle, the seat of the Earl of Moray, stood forward in the landscape, presenting a great contrast to the barren and unornamented districts we had passed. Towards the sea the change was not less observable, the grand display of the northern bay of Scotland became confessed to view, the objects which form the outline of it being scarcely to be matched in any country. The high point called the Pap of Cathness, with the Ord and its adjoining ridge of hills, forms the extreme horn of this bay toward the north, the indented points of the hills of Sutherland follow next, and the entrance of the great frith of Dornoch is visible between them and the low projecting promontory of Tarbat-Ness, which seems to lose itself in the sea. Throughout the interior parts of the country innumerable ridges of hills extend themselves over the horizon between the hollow of this aperture, and forming themselves into a bold amphitheatre round it, close in again at length with the coast, terminating abruptly in the two lofty rocks called the Sutors of Cromarty. Through these noble portals enters a narrow channel, which expands itself in sight into the beautiful inland bay of the frith of Cromarty, capable of containing all the navies of Europe within its sweetly wooded shores, studded with a variety of towns and villages, decked with every possible beauty of cultivation, and ornamented with a profusion of gentlemen's seats. Immediately beneath the rocks which enclose this basin the frith of Moray expands itself to the left till it becomes lost amidst the great moun-

tains of Ross-shire and Inverness towering into the clouds, and rising in an infinite variety of pointed summits."

FORRES, a post and market town, a royal burgh, the second town of Morayshire, stands 3 miles south by west of Findhorn, 12 west by south of Elgin, 21 west of Fochabers, 27 north-east of Inverness, 75 north-west of Aherdeen, and 157 north-north-west of Edinburgh. Its site is a fine dry terraced bank, sloping gently towards the south and the north. The town, as seen at a distance, closely resembles Elgin; and though it contains only about half the population, yet at first sight it appears nearly as large as Elgin. The green elevation which nature presented at its western end as an admirable situation for a castle, and the excellent land extending every way around it, may, as in the case of Elgin, have determined the situation, long before even the idea of commerce or of its advantages had been formed. The Forres burn, a considerable stream, embraces half the circumference of the base of the castle-hill, and winds close behind the town on its northern side, adorned at either end by a neat stone-bridge. The town consists principally of one long High street, extending for nearly 800 yards along the great road to Inverness, which leads hence through Elgin on the east, and Nairn on the west. There are lanes or closes running off on each side; the northern terminating in a crooked back-street, and two or three of the southern meeting by scattered houses in the Rafford road, leading out to the Cluny hills and Hell's-hole valley. Several villas have been erected in the vicinity. The streets are neat and clean, and supplied from Rafford with water. The houses in general are modern and well-built, mostly of three stories, though several of the lower habitations of a preceding age yet remain, with their gable ends to the street. There are here, however, none of the fine old piazzaded edifices still to be seen in Elgin; and indeed there are fewer remains of antiquity either domestic or ecclesiastical. The parish church is a plain edifice, on the north side of the High street, near the west end. The Episcopalian chapel has a very elegant interior. Anderson's institution, situated in the south-eastern part of the town, is a handsome Grecian building, with a spire and public clock. The town-house, in the centre of the town, is a very beautiful Gothic edifice, built in 1839 on the site of a tollbooth which had stood there from the beginning of the 18th century. It has on one side a square tower with a bartizan, on which is raised another of octagonal shape, surmounted by a cupola and vane. It contains a spacious court-house, offices for the county authorities, a council chamber, a record-room, the post-office, and business apartments for the town-clerk. St. Lawrence mason lodge is another fine public building, containing ball-room, supper-room, and other apartments.

Two chief antiquities of Forres are the celebrated Sveno's stone or the Forres pillar, and the witches' stone; and these are not in the town itself, but in its eastern environs. The Forres pillar is not even within the parish, yet stands inseparably related to the town in both name and history. It is a magnificent Runic obelisk, of dark grey stone, on the west side of the Findhorn road, about half-a-mile to the east of the burgh. The stone steps around the base were placed as supports to the pillar by a Countess of Moray, Lady Ann Campbell, upwards of a century ago. The stone itself is a hard grey sandstone, 23 feet in height above ground, and at least three feet, but said to be 14 feet, additional, in depth, under ground; the breadth, at the base, is 4

feet; the thickness, about 15 inches. On the northern side, as represented in the careful and interesting drawings of it presented by Mr. Alexander, in the 'Sketches of Moray,' there is carved a long cross; the branches at the top being within a circle. The cross, and the entire lateral spaces, are most ingeniously and elaborately carved, in intricate and endless convolutions representing the Runic knot. Below are two figures with human heads but grotesque forms, bending over something intermediate, as if in prayer, while a smaller human figure stands behind each. All these figures have broad caps or bonnets on their heads. On the south side are five divisions, each filled up with numerous figures in relief, some of them apparently processional, or representing troops on foot and mounted, with captives, male and female, bound together. The edges are richly carved in Runic knots, and, at the base, on one side, are human forms, some of which appear to be females, grouped in couples. This obelisk is decidedly one of the most remarkable of ancient date in Britain; and it bears every appearance of having owed its origin to a period of remote antiquity. There are various traditions regarding it; but it is supposed either to commemorate a pacification, here concluded between Malcolm II. and Sweno, the Danish invader, about the beginning of the 11th century, or the murder of King Duffus, in the castle of Forres, and the execution of the murderers. The character of the figure seems to favour the latter tradition,—the traditional name of the obelisk, the former.—The 'Witches' stane' was that on which the unfortunate beings accused of witchcraft were wont to suffer. It also is situated on the roadside to the east of the burgh. "Some years ago, when the turnpike-road was in progress," says Mr. Rhind, "the workmen proceeded to break down this mass of stone, when the townspeople, discovering the deprecation, and attached to a relic of bygone times, immediately caused it to be clasped with iron, in which state it still remains."

Forres must have been a place of some note at a very early period. It is in all probability the Varris of Ptolemy's chart. Boethius, too, so early as the year 535, makes mention of it as a burgh having merchants, who, for some trifling cause, were put to death, and their goods confiscated to the King's use. *Far-ius*, 'near the water,' is probably the Gaelic derivation of the name. During the ninth and tenth centuries, it was frequently visited by the Scottish kings. Donald, the son of Constantine, was slain at Forres. Malcolm frequently resided in the vicinity, and was killed in 959, at Ullern, which Sshaw supposes was Auldearn. King Duffus, as already noticed, was murdered in the castle of Forres by Donevald the governor, about the year 966; his body, according to Boethius and Buchanan, being interred under the bridge of Kinloss. This murder is a memorable incident; and the spot on which it was committed is an object of no little interest and curiosity from the certainty that Shakspeare made noble use of it in his dramatic version of the murder of King Duncan by Macbeth. The genius of Shakspeare, indeed, has immortalized the town of Forres. It is the scene of a great part of the tragedy of Macbeth; and it was on a "blasted" heath in the vicinity that that singular hero, along with Banquo—according to all the old historians, whom Shakspeare copied—met the weird sisters who gave him so many fatal "words of promise to the ear." See article *DYKE* and *MOR*. In consequence of the atrocious murder of Duffus, Forres castle, which had long been a royal fortress, was demolished; but, at a period

much later—that of the civil war—another was founded on the same site; of which second erection the sub-basement still exists to evince the bold and stately aspect of the ancient structure. In 1346, Randolph, Earl of Moray, dates his charters from this castle. During some subsequent period, the Urquharts of Cromarty were appointed heritable keepers of it. In still later times it became the property of the Dumbars of Westfield; and it is now in the possession of the Earl of Seafield. Like the castle on Lady hill at Elgin, it was, in all probability, a strong square tower, with battlements, and a moat surrounding it, and served as a place of defence and safety. After the establishment of the bishopric of Elgin, Forres does not appear to have kept up its ancient consequence so much as Elgin, which then became the centre of the ecclesiastical establishments of the province, and the resort of the country gentry. See ELGIN. It was the seat of the archdeacon, however, and had a parsonage dedicated to St. Lawrence. There was a chapel also, a mile south of the town, and one at Logie.

It is not known when Forres was erected into a royal burgh, as the more ancient charters were lost, or destroyed before the end of the 15th century. There is evidence, however, from various sources, that it had obtained the privileges of a royal burgh as early as the reign of William the Lion or Alexander II. Robert I. granted a charter to his nephew, Thomas Ranulph, of the earldom of Moray; but this burgh, and likewise Elgin and Invernaim, though they were to hold of the Earl, were ordained, in other respects, to enjoy their old liberties. In the reign of James IV., Forres obtained a new infeftment, granting to the community the privileges of a free burgh, the exclusive jurisdiction of a sheriffship, and power to hold a weekly market and yearly fair, with right to dues and customs. A ratification by parliament, in 1607, of the charters of the earldom of Moray, in favour of James, Earl of Moray, particularly excepts the burgh-mails of Elgin and Forres, which had previously been claimed by the Earls, thenceforth to remain with the Crown. The boundary of the royalty—a circuit of about 15 miles—was perambulated in 1840. The town-council is composed of 17 members,—a provost, three bailies, a dean-of-guild, a treasurer, and 11 councillors. Previous to the burgh reform act, there was no provision against the re-appointment of the council and magistrates; and, in practice, they were frequently continued in office for many years. The burgh is still possessed of considerable property, although it had alienated, at an early period, and for trifling feu-duties, property in land and fishings which has of late become of very great value. The corporation revenue in 1832 was £619 19s. 9d.,—in 1839, £592,—in 1854, £706 10s. 10d; and is derived principally from lands, feu-duties, and petty customs. It is not known that the exclusive jurisdiction of sheriffship was at any time exercised. The ordinary jurisdiction of the magistrates, which extends over the royalty, including the whole town, is in practice confined, in civil matters, to actions for debt ranging from £5 to £30, interdicts, poidings, &c. The principal patronage consists of the corporation offices and the schools. There have been no incorporations of trades in this burgh. The guildry was disconnected from the body of the burghesses. The magistrates and town council for the time being are commissioners of police. Sheriff small debt circuit courts are held on the second Monday of February, April, June, August, October, and December; and justice of peace courts on the first Monday of every month. Forres unites with Nairn, Fortrose, and

Inverness in sending a member to parliament. Municipal constituency in 1862, 159; parliamentary constituency, 171.

Forres is not a place of manufacturing importance. It used to export great quantities of linen yarn; but it lost that trade after the rise of the cotton manufacture. Its chief employment now consists in the ordinary handicrafts, and in miscellaneous marketing. Its retail trade, in the supply of surrounding rural districts, is considerable. It likewise conducts some export and import trade through Findhorn. In its immediate neighbourhood also are a brewery and a distillery. The markets for butcher-meat and fish are held daily; for butter, eggs, and poultry, twice a-week; and for grain every Wednesday. Fairs are held on the first Wednesday of January, on the third Wednesday of February, April, and May, on the first Wednesday of July, on the fourth Wednesday of August and September, and on the third Wednesday of November. Fecing markets also are held on the Saturday before Whitsunday and the Saturday before Martinmas. The town has a gas company, a water company, a national security savings' bank, branches of the Caledonian bank, the National bank, and the British Linen Company's bank, twenty-one insurance agencies, a mechanics' institute, a building association, three public connexions with fine arts' institutions, three mason lodges, four friendly societies, a servants' register office, a clothing society, a total abstinence society, a temperance convention, an auxiliary Edinburgh society for the suppression of drunkenness, an auxiliary Edinburgh Morayshire society, an auxiliary Edinburgh Morayshire mechanics' society, five mortifications and bequests for benevolent purposes, amounting aggregately to £5,708, a bible society, and a religious tract society. A newspaper, called the Forres Gazette, is published every Wednesday. Communication is maintained by the Great North of Scotland railway, with Inverness and the east, and by steamer at Findhorn with all the principal eastern ports from Wick on the north to Leith on the south. The principal hotel is Fraser's. Population of the municipal burgh in 1831, 3,424; in 1861, 3,148. Houses, 642. Population of the parliamentary burgh in 1861, 4,112. Houses, 821.

FORREST-MILL. See FOREST-MILL.

FORRIG. See FORGUE.

FORSA (THE), a rivulet of the parish of Torosay and island of Mull, Argyshire. It rises at the base of Bentalluidh, and runs 4 miles to the Sound of Mull at Pennygown. It is 22 yards broad at the mouth. The glen which it traverses bears the name of Glenforsa, and has an average width of about $\frac{3}{4}$ of a mile. The bottom of the glen has an average elevation of about 160 feet above sea-level; and the hills which flank it are covered variously with grass and heath, and have an acclivity of about 30 degrees.

FORSE (THE), a small river of Caithness-shire. It rises in the south-west of the parish of Halkirk, and runs about 16 miles northward, partly within Halkirk, partly within Reay, partly on the boundary between Reay and Halkirk, and finally on the boundary between Reay and Thurso, to a small bay below the House of Forse, 5 miles west-south-west of Holborn-head. It is subject to great sudden freshets which do much injury to the lands near its banks. It contains trout and salmon.

FORT (ST.). See FIFESHIRE.

FORT (THE). See EYEMOUTH.

FORT-AUGUSTUS. See AUGUSTUS (FORT).

FORT-CHARLOTTE. See CHARLOTTE (FORT).

FORTEVIOT, a parish, containing a village of

its own name, in the south-east of Perthshire. Its post-town is Bridge of Earn. It comprises the ancient parishes of Forteviot and Muckersie, and consists of three separate sections, lying at a considerable distance from one another. The smallest section lies $2\frac{3}{4}$ miles east of the northern part of the largest section or main body; measures $1\frac{1}{2}$ mile from west to east, and $1\frac{1}{4}$ mile from north to south; and is bounded by the parishes of Perth, Duncarn, Forgandenny, and Aberdalgie. The Earn is the southern boundary-line, and is here profuse in fishy produce, sinuous beauty of movement, and valuable alluvial deposit. The district may be described in two clauses; it is part of the fine earse of Strathearn, and part of the environs of "the fair city" of Perth. The section of the parish second in extent, lies $1\frac{1}{2}$ mile south-east of the southern extremity of the main body; has an ellipsoidal form of 2 miles by $1\frac{1}{2}$; and is bounded on the north-west and north by Forgandenny, and on all other sides by Kinross-shire. May water traces its boundary $\frac{2}{3}$ of a mile on the north-west, and a rilly tributary of that stream $1\frac{1}{4}$ mile on the north. The district lies wholly among the Oehil hills, and possesses, in general, their distinctive features. The largest section or main body of the parish has on the north the form of a square $1\frac{1}{2}$ mile deep, attached, over one-half of its southern side, to one-half of the base of an isoseeles triangle, the other half projecting eastward; and the triangle measures nearly 2 miles at its base, and $3\frac{1}{2}$ miles on its south-eastern and south-western sides, and points its apex to the south. The square part is bounded on the west by Gask, on the north by Tippermuir, and on the east by Aberdalgie; and the triangular part is bounded on the south-east by Forgandenny, and on the south-west by Dunning. The line of separation between the square and the triangle is the river Earn. That stream here intersects the district eastward, distributing favours the same in kind as in the eastern section of the parish, but probably less in degree. The river May comes down upon the district from the south, forms for half-a-mile the eastern boundary-line, then, making a sudden bend, runs $1\frac{1}{2}$ mile into the interior, and then, making another debouch, runs $1\frac{1}{2}$ mile northward to the Earn, splitting its waters and forming an islet at its point of influx. This little river, gathering its waters among the Oehils, and now rioting at will, and in beautiful meanderings in the rich level of Strathearn, frequently swells to a great size, and comes down in devastating floods. North of the Earn are some fine plantations; and on the left bank of the May is situated the mansion of Invermay, one of the most pleasant and romantic seats in Strathearn. Among the extensive plantations and natural woods which surround it, the birch holds a conspicuous place, and perpetuates the remembrance of the scenery described in the ballad to which it gave rise.—"The Birks of Invermay." In the vicinity, on the banks and in the water-course of the stream, are natural curiosities and glittering cascades which challenge the attention and delight of strangers. See MAY. The roads from Dunning to Perth, and to the Bridge of Earn, and from Auchterarder to Perth, traverse the main body of the parish; and one of them is here carried over the Earn on a stone bridge of 6 arches. The Scottish Central railway also traverses this district, and has a station here $2\frac{1}{2}$ miles from Dunning, 3 from Forgandenny, and 7 from Perth. Here likewise is the village of Forteviot, now a place of small moment, but figuring in history, or rather supposed to figure, as an ancient capital of Pietavia and of Scotland. The real Forteviot of history,

however, is a small eminence, now called the Halyhill, at the west end of Forteviot, overhanging the May. The ruins of a royal palace on this eminence, which had been a favourite residence of Malcolm Canmore, as well as the residence of several of his predecessors, and the death-place of Kenneth II., were visited as curiosities so late as the reign of Charles I.; but have all, long ago, been swept away, partly by human dilapidation, and partly by the undermining of the river. A meadow a little east of the place still retains the name of the King's Haugh. The mill of Forteviot and the Coblehaugh, mentioned by Wyntoun, still remain. On the Miller's Aere, near the Halyhill, Edward Baliol encamped his army in 1332, immediately previous to the battle of Duplin. The principal landowners of Forteviot are Belshes of Invermay, Lord Ruthven, and the Earl of Kinnoul; but there are ten others. Assessed property in 1843, £6,301 2s. 1d. Population in 1831, 624; in 1861, 595. Houses, 115.

This parish is in the presbytery of Perth, and synod of Perth and Stirling. Patrons, the University of St. Andrews, and the Belshes of Invermay. Stipend, £244 9s. 9d.; glebe, £6 15s. Unappropriated tithes, £45 18s. Schoolmaster's salary, £34 4s. 4d., with about £16 fees. The parish church was built about the year 1778. The church or chapel of Muekersey, used for that parish previous to its union with Forteviot, stands on the banks of the May, about a mile above the house of Invermay, and is now used as the burying-place of the Belshes family.

FORT-GEORGE. See GEORGE (FORT).

FORTH, a village in the parish of Carnwath, Lanarkshire. Population, 357.

FORTH (THE), a large and beautiful river, traversing two-thirds of the breadth of Scotland, and flowing eastward from Benlomond to the German sea. Its head-waters are gathered into two main parent-streams, which rise respectively in Stirlingshire and Perthshire, from points mutually distant, north-eastward and south-westward, about 3 miles. The southern stream wells up on the northern side of Benlomond, in the parish of Buehanan, $1\frac{1}{2}$ mile east of Scotland's most boasted lake, Lochlomond; and, bearing the name of Duehray water, it bounds away 5 miles south-eastward to the eastern verge of the parish of its nativity, wearing the rough cold dress of a mountain-rill. At this point it is less than a mile distant from the kindred rill with which it is destined to unite; but now it begins for some distance to recede from it, and, for still a greater distance, to run coquetishly between Stirlingshire and Perthshire, before briefly entering the latter county, where the union of the streams takes place. Flowing a mile southward from the point where it first touches Perthshire, it receives from the west the tiny tribute of a stream of $3\frac{1}{4}$ miles in length, which flows direct eastward to its embrace from the southern side of Benlomond. A mile and three quarters farther on, after a serpentine course south-eastward, it is joined from the south-west by Corrinnon burn, a stream of $4\frac{1}{2}$ miles in length. It now ceases to touch Buehanan parish, and during $3\frac{1}{2}$ miles eastward, divides Drymen on the south from Aberfoyle on the north,—the former in Stirlingshire and the latter in Perthshire. A little beyond Duehray castle on its right bank, it runs off from Drymen a mile north-eastward into Aberfoyle, and there, after an entire course of $11\frac{1}{4}$ miles from its origin, forms a confluence with the northern main head-water of the Forth.

The latter stream, though magnificent in the land of its origin, picturesque in the landscape of its

banks, romantic and frolicsome in its course, and altogether much more interesting than the Duehray, and abundantly entitled to the honour of being called the aboriginal Forth, expands the laky mantle of its waters, and leaps along the declivity of its mountain glens, in the strange predicament of an incognito; for—odd though the circumstance may appear—it seems to want a name, or, at all events, is known or denominated, not in its proper character and its entire extent, but only in the localities of its hoarding up its waters, and spreading out their golden and glittering beauties in the form of fascinating lakes. The stream rises in two head-waters near the western verge of the parish of Aberfoyle, at spots half-a-mile and $1\frac{1}{2}$ mile south of the joyously arrayed and joyously celebrated Loch Katrine; and both head-waters, without making a previous confluence, and after the brief courses respectively of $1\frac{1}{4}$ and $1\frac{3}{4}$ mile, become lost in the beautiful expanse of Loch Con. This lake—overshadowed on one side with uplands of stern aspect, protected and adorned on the other by a broad array of plantation, variegated near the efflux of its waters with an islet which figures like a brooch on its glassy bosom, and everywhere rife with eels and pike and trout—extends south-eastward 2 miles with an average breadth of 3 or $3\frac{1}{2}$ furlongs. Scarcely has the stream of its surplus waters issued from its lower extremity, when it expands in a lochlet, called Dow Loch, which seems playfully imitative of the profuse beauty and fine gracefulness of Loch Con; and issuing thence, the stream runs $1\frac{1}{2}$ mile south-eastward, and then suddenly plunges its diminutive flood into the ample and beautiful waters, richly encinctured with grove and variegated upland, of Loch Ard, extending $2\frac{1}{2}$ miles westward, with an average breadth of $\frac{2}{3}$ of a mile, and rich, like Loch Con, in the multitude of its finny inhabitants. After its repose in the bosom of Loch Ard, the stream comes impetuously forth, and makes a magnificent leap over a rock nearly 30 feet high, tossing up the spray, and at times reflecting the gorgeous tints of at least a second-rate mountain cascade; and less than a mile onward, after an entire though somewhat sinuous course of about $8\frac{1}{2}$ miles, unites with the waters of the Duehray.

The united stream, even in the energy of its combined resources and those of its numerous little tributaries, is not yet honoured enough to assume the name of the queenly Forth; and during 5 miles of its course, when it begins to divide from each other the counties of its respective head-waters, it is known simply as the Avendow or Black river. All the way down to the point where the Avendow is formed, its confluent waters are strictly mountain brooks, moving garrulously along amongst the solitudes and the occasional romance of Highland scenery; and at the point of formation, as well as $2\frac{1}{2}$ miles onwards, where it leaves the parish of Aberfoyle, the Avendow flows softly along a beautiful fertile valley, called the Laggan, flanked on both sides by a fine amphitheatre of hills, with a narrow opening toward the south-east; and through this opening the river, after having passed some woody heights and a beautiful round hill entirely covered with oak, glides away to commence its remarkable, characteristic, serpentine evolutions in the champaign country which it henceforth traverses. After leaving Aberfoyle, it flows $2\frac{1}{2}$ miles south-eastward, through the parish of Port-of-Monteath; and there, struck by Kelly water, coming down upon it from the west, it takes a persevering direction, with the exception of its constant, involving, and often spacious sinuosities, almost due east, and here assumes its proper and proud name of the Forth.

In the peninsula between the Avendow and the Kelly, $1\frac{1}{2}$ mile above their point of confluence where they form what popular usage calls the Forth, stands the mansion of Gartmore, commanding a view of the magnificent plain below, 20 or 30 miles in extent, along which the noble river majestically proceeds. The river, after leaving the grounds of Gartmore, divides, for 3 miles, the parishes of Drymen and Balfron in Stirlingshire from that of Port-of-Monteath in Perthshire; and then enters a southward projection of the latter county, and, over a distance of $2\frac{1}{2}$ miles geographically, or nearly 4 miles along the channel, divides the parishes of Port-of-Monteath and Kippen. In this part of its course, the scenery of the river and the far-off landscape within view, are particularly fine. Its basin or valley is a luxuriant earth, richly cultivated, and picturesquely embellished with neat farmsteads, and with smiling or stately proprietorial mansions. Dusky spots which here and there streak the general verdure, delight by contrast, and serve as a fine foil to the exulting loveliness of the scene. The braes of Monteath rise on the northern side like an amphitheatre; and a rugged range of the Grampians, stretching from Benlomond to the Oebils, curtains the wide landscape, and casts down upon it from the horizon along the north a shading of sublimity. Stirling castle, too, and the rocks of Craigforth and Abbeystraig appear away in the east, like islands lifting their heads from a sea of verdure, and often brilliantly encompassed with the richest forms of cloudy drapery, leading on the thoughts of the tasteful and travelled observer to the bright blue inland sea, and the magnificent panorama of Fifeshire and the Lothians which he knows to lie beyond.

Leaving Kippen, or at least the main section of it belonging to Perthshire, the Forth, over a distance of 9 miles geographically, but probably over double that distance along the curves of its continual evolutions, divides the parishes of Balfron, Gargunnoch, and St. Ninians in Stirlingshire, from those of Kilmadoek and Kineardine in Perthshire, receiving, just at the point of its leaving Kilmadoek, a tributary from the north-west of about 8 miles length of water-course, and, at the point of leaving Kineardine, the opulent tribute of the beautiful Teith; which see. So capriciously, though gracefully, does the river move, that when about to receive the Teith, or about $1\frac{1}{2}$ mile above their confluence, it departs from its usual easterly direction, sends its windings away northward, and eventually—as if eager to embrace the sister-stream of beauty which is approaching—turns to the west of north; and, no sooner has it become united with the Teith than, quite characteristically of its style of movement, it suddenly debouches and resumes its prevailing course toward the east. About 300 yards below the confluence the river bounds over ledges of rock, called the Cruives of Craigforth, which stretch across its channel; and from this point downward, it is stemmed by the tide, and begins to bear aloft on its bosom the small craft of the inland navigator. For $1\frac{1}{2}$ mile onward it intersects a very small wing of Stirlingshire; then receives from the north the important tribute of ALLAN WATER, [which see;] and then proceeds $1\frac{1}{2}$ mile geographically, but about $2\frac{1}{2}$ measuring along its channel, dividing Stirling parish on the south from the Stirlingshire part of Logie on the north, to the point where it is spanned by the bridge on the great north-road from Glasgow, and where it passes, a few hundred yards from its right bank, the romantic town and castle of Stirling. Over the latter part of its course, or from a brief way after it enters the

champaign country, and especially after passing the Cruives of Craigforth, it affords indications, in the flatness and composition of its immediate banks, of having, at a former period, expanded into an estuary and opened a path for the ingress of the sea much higher up than at present; and along this space it is dark-coloured in its waters, and sluggish in its current, bearing—but for the picturesqueness of its back-ground scenery, and the remarkable sinuosities of its channel—a somewhat close resemblance to the half-stagnant rivers of the level districts of England. Up to Stirling bridge, known as a celebrated pass, the river is navigated by sailing vessels of small burden, and by steam-boats plying between this point and Granton,—one of the ports of Edinburgh.

From Stirling to Alloa, the Forth divides the parishes of Stirling and St. Ninians in Stirlingshire from the parish of Logie in Perthshire, and that of Alloa in Clackmannanshire. The distance along the channel is 18 miles, but in a direct line is only 6. Along this distance it flows through the lovely plain called the carse of Stirling and Falkirk, carpeted with the most fertile soil, and dressed in the most luxuriant vegetable garb in Scotland; and, while soft and warm in the rich tints of its own nicely-featured picture, so placed in a frame-work of low hills on the south, and Stirling castle in the west, and the majestic Ochils on the north, as to draw down the prolonged and delighted gaze of even a clownish observer. The sinuosities of the river—or ‘links,’ as they are here called—almost bewilder by their union of excessive capriciousness and uniform beauty; forming sweeps, curves, crescents, large parts of circles, and graceful departures of every sort from the stern angle and the lank straight line, which forcibly remind spectators, who have read Burke on the Sublime and Beautiful, of that philosopher’s theory as to the elements of beauty. Many peninsulas are embosomed in the watery foldings, vying in their form and adornments with the loveliness of the stream; and on one of them, immediately opposite Stirling, stands the tower of CAMBUSKENETH, the only remnant of a very venerable pile. Fertile fields, elegant mansions, tastefully ornamented parks, almost insulated by the turns of the river, the ruinous abbey, the white sails of vessels, on the right hand and the left, in front and in the rear, seeming to glide among lawns and groves,—these, and the brilliant features of the background scenery, particularly with the sublime forms of Duumyat and the other frontier Ochils soaring suddenly up on the north, lull ennui to sleep, and lure the powers of taste into sprightly activity while a stranger ascends or descends the stream. Nor is he less delighted with the amusing puzzle in which he finds himself constantly involved to keep a just or even a proximate reckoning of the relative positions of the objects which chiefly challenge his attention; for now he is sailing direct away from Stirling castle, or any other commanding feature of the landscape, and now he is bearing down upon it right in front—he has it now on his right hand and now on his left—again he recedes from it and again advances—and at length, in utter though charming perplexity, he relinquishes all effort to recognise the points of the compass. “In this sinuous navigation,” says Mr. Gilpin, “were the mariner to trust entirely to the sails, he would have to wait for the benefit of every wind round the compass several times over.” And what Drayton says respecting the Ouse may be said much more respecting the links of Forth:—

“Ouse, in measured gyres, doth whirl herself about,
That, this way, here and there, back, forward, in and out;

And like a sportive nymph, oft doubling in her gait,
In labyrinth-like turns and twinnings intricate,
Through these rich fields doth run.”

Half-a-mile above Tullibody house, or $2\frac{1}{2}$ miles in a direct line above Alloa, the Forth has become $\frac{3}{4}$ of a mile broad, and receives from the north the large tribute of Devon water [see article DEVON]; and, between that point and Alloa, it forms the islands, each about half-a-mile in length, called Tullibody and Alloa inches. At Alloa, situated on its left bank, it relinquishes both its sinuosity of movement and its fresh water character; and, from this point, which is the extremity of its proper or productive navigation, whither vessels come up of 300 tons burden, it partakes the expansion and the other properties of a gradually widening and far-stretching estuary. From Alloa to a point on the same shore opposite the embouchure of the Avon, at the boundary between Stirlingshire and West Lothian, it flows south-east, over a distance of 7 miles, and somewhat uniformly for a while, though more suddenly on the lower part of the distance, increases from $\frac{1}{2}$ a mile to $2\frac{3}{4}$ miles in breadth, dividing the parishes of Airth, Bothkennar, and Polmont in Stirlingshire, from those of Alloa and Clackmannan in Clackmannanshire, and Tulliallan and Culross in Perthshire. On its northern shore it passes, $2\frac{1}{2}$ miles below Alloa, the village of Kennet-Pans, and $1\frac{1}{2}$ mile farther on, the small town of Kincardine; and, on its southern shore, it receives, opposite Kincardine, a considerable tributary, and $2\frac{3}{4}$ miles farther down, at the village of Grangemouth, receives the important waters of the Carron, and sends off inland, away to the west coast of Scotland, the Forth and Clyde canal, and again, at 2 miles further distance, receives the tribute of the beautiful Avon. See articles AVON and CARRON. At the latter point, though $2\frac{3}{4}$ miles wide at high-water, it is only 1 mile at low water; and at the mouth of the Carron and commencement of the canal, it varies every 12 hours from $1\frac{1}{2}$ mile to $\frac{1}{2}$ a mile; and all the way down from Alloa to a point several miles below the influx of the Avon, it presents now the appearance of a brilliant lake encompassed to the margin by a gardenesque landscape, and now that of a lank snaky river crawling dismally through a wet wilderness of sands and sleetches.

Nine miles onward from the mouth of the Avon the Forth slightly contracts rather than expands, and has an average breadth of $2\frac{1}{2}$ miles; on its northern shore, consisting for 2 miles of Perthshire, and for the rest of the distance of Fifeshire, it is studded at intervals with the villages of Culross, Newmill, Torryburn, Charlestown, and Limekilns, and has a beautiful and verdant back-ground; on its southern shore, consisting all the way of Linlithgowshire, it is overlooked by the dingy town of Borrowstonness, and the village of Blackness, and is rich in the sylvan beauties and lovely slopes and undulations of its receding landscape. The Forth now suddenly contracts to the breadth of 1 mile and 3 furlongs, but is compressed to this breadth entirely by the protrusion, on its north side, of a peninsula less than half-a-mile wide at the point; and having embosomed the islet of Beemer, half-a-mile higher up, the estuary, at the narrowest part of its contraction, is overlooked by the Linlithgowshire town of South-Queensferry and the Fifeshire village of North-Queensferry, both pressing close upon its beach; and, in its centre, or at equal distances between them, it embosoms the fortified islet of Inchgarvie. It now suddenly expands to the breadth of 3 miles, sends off, behind North-Queensferry, a small bay, at the head of which stands the town of Inverkeithing, and henceforth to the sea, a distance

of 36 miles, divides Fifeshire on the north from the three Lothians, West, Mid, and East, on the south. Four miles below Inchgarvie are Cramond Isle, $\frac{2}{3}$ of a mile from the southern shore; Inchcolm, with its attendant islets, Haystack and Careraig, $\frac{2}{3}$ of a mile from the northern shore; and the little islet, Stone Mickery, in the middle of the channel; the first overlooked from the coast by the picturesque demesnes of Cramond house and Barnboulge castle, and the second by the church and village of Aberdour. The Forth is here 5 miles broad, and altogether gorgeous in the magnificence of its encircling landscape.

Six and a half miles farther on, it runs abreast of Inchkeith, which stretches nearly a mile across the centre of its channel. The Forth has here hung around it a panorama so exquisitely blending the attractions of natural, hurchial, agricultural, and marine landscape, as to exult in the powerlessness of an artist's quill or pencil to attempt a copy. On the north, pressing upon the beach, and so briefly asunder as almost to be a continuous town, are the villages of Burntisland, Pettycur, and Kinghorn, 'the lang toon o' Kirkcaldy,' and the villages of Path-head, Dysart, and Wemyss, the first somewhat west of Inchkeith, and all within a range of $7\frac{1}{2}$ miles; forming a hurchial array, so soft and cheerful in the aspect and grouping of its houses, and interspersed in such fine proportions with fields and trees and rural adornings, as to make a truly picturesque edging to the magnificent expanse of waters; and behind this singular foreground Fifeshire recedes in various ascents, chiefly slow and reluctant, looking down in wooded slopes and undulations upon the frith below, and seeming to reciprocate all the gladness of the scene, till it shoots finally up in three conspicuous elevations near the centre of the county. On the south the large village of Newhaven, the towns of North and South-Leith, the beautiful town of Portobello, the village of Joppa, and the towns of Fisherrow and Musselburgh,—the first 2 miles west of Inchkeith, and all within a range of $6\frac{1}{2}$ miles,—press upon the shore, and send out their yawls or ships or steam-vessels to hound on the bosom of the waters, and enliven its landscape by their forms and movements; and behind this long phalanx of picturesque building are seen, on the foreground, the magnificent queen city of Scotland spreading out her ascending tiers of streets like the foldings of her robes, hearing aloft edifices on her Castle-rock and Calton-hill which look like regalia, and wearing an aspect of surpassing urban grandeur, and even sublimity, amidst the hold elevations and the remarkable outlines of the hills in her environs; while away in the distance, over a various, undulating landscape, except where the hills of Edinburgh intercept the view, the heathy yet verdant and sylvan heights of the Pentlands, and the dark range of the Lammermoor hills bound the horizon. And while all this magnificence is hung out immediately opposite Inchkeith, the whole coast-line of the far-stretching frith, winds, on both shores, inland and seaward, in front of scenery rich in its loveliness, and exquisitely in keeping with the more powerful attractions of the immediate landscape; and the frith itself—dotted over with the white sails of sailing-craft or streaked with the foam and the smoke of steam-vessels, and overlooked from the far east by the huge loaf-like form of the Bass lying on the surface of its own waters, and by the beautiful cone of North Berwick law standing close upon its southern shore—stretches onward to the sea, glittering in the tints and reflections of the sunbeams playing upon its waters, and, in general, gorgeously shaded with an aerial drapery of clouds.

At Leith the Forth is 6 miles broad; and, at the

Bass, opposite the Anstruthers, and somewhat west of Fifeness, or the point where it fairly becomes lost in the ocean, it is 11 miles broad. Four miles east of Wemyss, on the north shore, it receives Leven water; and on the south shore it receives Almond water at Cramond, Leith water at Leith, Esk water at Musselburgh, and Tyne water 4 miles west of Dunhar. Four and a half miles from the Fife coast, a little west of Fifeness, it emhosoms May island; and, near the coast of East Lothian, it has, at various intervals, the islets of Eyehroughy, Fiddray, Lamh, Craig-Leith, Scarr, and the Bass. At intervals, on its northern shore, east of West Wemyss, are the villages of East Wemyss, Buckhaven, Methill, Inverleven, Leven, Largo, Elie, St. Monace, Pittenweem, Anstruther, and Crail; and, on its southern shore, in East Lothian, are Prestonpans, Cockenzie, Port-Seaton, Aherlady, North Berwick, and Dunbar.

The frith of Forth is of vast importance to navigation and commerce. Above Queensferry it is, in every part, one of the safest roadsteads in Britain. Inverkeithing bay, Burntisland roads, Leith roads, Elie roads, and various other localities, are places of safe anchorage. On the south side, the harbours are Grangemouth, Grafton, Leith, Fisherrow, and Dunbar,—Granton being the best on the frith, and Leith the most frequented, and the only one of much commercial importance. "The frith of Forth," said Mr. James Anderson, civil engineer, in evidence before the House of Commons in 1835, "is infinitely the best inlet of the sea on the whole eastern coast of Great Britain, where ships at all times of tide, and almost under every circumstance of wind or weather, are able to obtain shelter. But in the whole of this frith, extending 60 miles inland, there is not a sufficient harbour; the want of which is most severely felt along the whole range of coast from the one extremity of the island to the other. Ships, for instance, overtaken by gales from the north, south, or east, can run with perfect safety into this frith, when they dare not attempt the shore in any other quarter; and consequently every facility which can be afforded to the navigation of this important estuary, either by affording the necessary accommodation to the shipping which frequents it, or shelter to the North sea fleets which often congregate in the frith, and to his Majesty's navy in the event of war, becomes in reality an object of the first national importance." On the north side, at most of the multitudinous towns and villages which sit upon the coast, are harbours superior, in general, to those on the south side, but less frequented; the one at Burntisland being the best on the frith except that of Granton. In early times the frith was regarded as of dangerous navigation; but, though shoally in various localities, and heaved up by sandbanks, it is now—with the appliances of light-houses on Inchkeith and May island, and of accurately drawn and minute charts—so signally safe as to be hardly ever the scene of a shipwreck. The amount of trade on its waters was materially increased by the opening of the Forth and Clyde canal, and has been not a little augmented by the introduction and the progressively improving application of the propelling power of steam.

On both shores, from Borrowstonness downwards, are numerous industrial works; and along the coasts, as well as inland near the banks of the river, are vast repositories of coal, limestone, and ironstone; and these, along with extensive and multitudinous fisheries, attract a very numerous resort of vessels. The frith abounds with white fish of all kinds, and is ploughed by fleets of fishing-boats from Newhaven, Fisherrow, and other fishing-villages, pro-

curing supplies for the daily markets of Edinburgh, and for the markets of other towns. At Stirling, Alloa, Kinneardine, and numerous other places, are valuable fisheries of salmon. An annual shoal of herrings generally visits the frith, and, in some years, has yielded a prodigious produce; but its fish are esteemed decidedly inferior in quality to those of the western coasts of Scotland. At Cramond and Inchmickery were formerly vast beds of oysters; but, from over-fishing, they have been much exhausted; and they also yield a mollusc which, in quality and size, is generally inferior to that obtained in many places on the British coasts.

The Forth, it has been calculated, drains a superficies of 574 square miles. Its entire length of course, in a direct line, is upwards of 90 miles; but, including all the sinuosities for which it is so remarkable, it cannot be estimated at less than 170 miles. "The tides in the Forth," says Mr. Anderson, "run variously, both in respect of time and velocity. This is caused partly by the formation of its shores, and partly by the obstruction of islands and shallows, and the meeting of currents. For instance, over the sands of Leith there is an apparent receding tide two hours before it is high water, because the pressure of the current on the outside of the Black rocks, which runs very strong, causes an eddy to exist in the space between Newhaven pier and Leith pier, and running eastwards at $1\frac{1}{2}$ knots an hour, while the actual tide after high water runs at the rate of $2\frac{1}{2}$ miles an hour; therefore, the flowing tide, which runs $1\frac{1}{2}$ knots an hour, appears to flow only for four hours, while the ebbing tide continues for eight hours. On the north shore, and in mid-channel, the tides run equal in respect of duration, and at the rate of from 3 to $3\frac{1}{2}$ knots an hour. The current or flowing tide strikes hard, and runs very close upon the north shore from Kinghornness to the promontory west of Aberdour at $3\frac{1}{2}$ knots an hour. It again flows through the cut at Queensferry at the rate of five knots an hour; about 6 miles above Queensferry it flows at the rate of about 2 miles to $2\frac{1}{2}$ miles an hour, and the ebb tide at the same rate. The ebb tide again runs through the strait at Queensferry at six knots an hour; this violent current causes the ebb tide again in the bay on the north shore, which is found by the north headland to flow to the west for two hours after the turn of the tide, and at the rate of $1\frac{1}{2}$ knots an hour." The frith of Forth is often mentioned in history in connection with invasions, with the landing of troops or warlike muniments from foreign friendly powers, and with the voyages, on errands of state or of matrimony, of the princes and princesses of Scotland. Both the river and the frith also figure often and variously in poetry,—sometimes as to their general character, and very frequently as to particular scenes or stretches. Several of the Scottish poets, as well as multitudes of the common people, speak of the Forth as though it was the princeliest of all the waters of Scotland; and Drummond of Hawthornden, in his panegyric on James VI., on occasion of that monarch's visit to his ancient kingdom after his accession to the throne of England, represents the Forth as saying, —

"And you, my nymphs, rise from your moist repair,
Strew all your springs and grots with lilies fair;
Some swiftest-footed, get them hence and pray
Our floods and lakes come keep this holiday.
What e'er beneath Albania's hills do run,
Which see the rising or the setting sun,
Which drink stern Grampius' mists, or Ochill's snows,
Stone-rolling Tay, Tyne tortoise-like that flows,
The pearly Don, the Dees, the fertile Spey,
Wild Nevar which doth see our longest day,
Ness smoking sulphur, Spean with mountains crown'd,
Strange Lomond for his floating isles renowned,

The Irish Ryan, Ken, the silver Ayr,
The snaky Doon, the Ore with rushy hair,
The chrysal-streaming Nith, loud-bellowing Clyde,
Tweed which no more our kingdoms shall divide,
Rank-swelling Annan, Lid with curled streams,
The Esks, the Solway where they lose their names:
To every one proclaim our joys and feasts,
Our triumphs; bid all come to be our guests;
And as they meet in Neptune's azure hall,
Bid them bid sea-gods keep this festival."

FORTH AND CLYDE CANAL, an artificial navigable communication between the frith of Forth and the frith of Clyde. The very deep indentation of the eastern and the western sides of Scotland by these friths, at points not far from the same line of latitude, and the strictly lowland character of the territory between their terminations, combined with the danger and the tediousness of the natural navigation from side to side of the country along the rough marine high-way round the Pentland frith, suggested, at a very early period of modern civilization, the desirableness of a Forth and Clyde canal. In the reign of Charles II., a project was conceived of cutting out so deep and broad a communication as should admit the transit of even transports and small ships of war; but it probably shared the odium of the unpopular government which conceived it, and would, if attempted to be put in execution, have starved upon the wretched fragments of a prodigal and ill-directed public expenditure. In 1723, a second and similar project led to the making of a survey by Mr. Gordon, the well-known author of the 'Itinerarium Septentrionale;' but produced no further result. In 1761, Lord Napier, somewhat varying the previous abortive projects, sustained, at his private cost, a survey and financial estimate, by Mr. Robert M'Kell, for a canal from the mouth of Carron water, in Stirlingshire, to the mouth of Yoker burn, 5 miles below Glasgow; and so deeply did the result excite the interest of the Board of Trustees for the Encouragement of Fisheries and Manufactures of Scotland, that they obtained from the celebrated engineer, Mr. Smeaton, a new survey and estimate, valuing the cost of the projected work at £80,000. The mercantile community of Glasgow and its neighbourhood, either faithless of practical results, or indignant at what they conceived to be a proposed uselessness and utter prodigality of expenditure, and, at the same time, tantalized by delays in the commencement of a work of vast importance to their interests, walked now rather abruptly into the arena, resolved to cut a canal 4 feet deep at the cost of £30,000, subscribed in the course of two days the whole amount of the estimated cost, and authorized a formal application to be made for parliamentary sanction. Aristocracy, national pride, metropolitan vanity, and perhaps a considerable degree of perspicacious insight into the true interests of the country, were shocked at what was thought the mean project of a long ditch in lieu of an artificial river; and they poured down upon it the invasions of a paper war, and enlisted their forces in parliament to give it a vigorous opposition. The nobility and gentry of the country, whether right or wrong in the opinions they entertained, succeeded in getting an ascendancy so as to tie up the hands of the merchants; and, in 1767, they began a subscription in London for cutting a canal seven feet deep at the estimated expense of £150,000. The subscribers obtained the sanction of parliament, and were incorporated by the name of 'The Company of Proprietors of the Forth and Clyde Navigation;' their joint stock to consist of 1,500 shares of £100, with liberty to borrow £50,000.

In 1768 the work was begun at the east end, under the direction of Mr. Smeaton. On the 10th of July, Sir Lawrence Dundas of Kerse performed the

ceremony of making the first incision of the ground. In July 1775, the canal was fit for navigation to Stockingfield, the point whence a side-branch was designed to lead off to Glasgow; and, in 1777, the side-branch was completed to Hamilton hill, still nearer that city, and accommodated at its terminus with a basin for the reception of vessels, and granaries for the storage of goods. But difficulties had occurred on which the inexperience of the age in canal-making had not calculated, and had occasioned so great a surplus expenditure above the estimated cost, that the finances of the company seemed to be menaced with confusion and ruin. All the original stock, all the amount of a subsequent loan, and all the proceeds of toll-dues hitherto received, were expended; and, at the same time, the annual revenue did not much exceed £4,000. Shares now sold at 50 per cent. discount; prospects were gloomy and disastrous; and doubts arose whether the canal would ever be carried to the Clyde. But, in 1784, Government, out of the rents of the forfeited estates in Scotland, granted £50,000 towards the completion of the work, reserving a power of drawing proportional dividends with the proprietors, and allowing them, on the other hand, to add their arrears of interest to their principal sums. In July 1786, the cutting of the canal was resumed under the superintendance of the engineer, Mr. Robert Whitworth; and in July 1790, it was completed from sea to sea. The basin at Hamilton-hill having been found incompetent, 8 acres of ground were now purchased close on the vicinity of Glasgow, and disposed in commodious basins and suitable building-grounds for granaries and a village. This locality was called **PORT-DUNDAS**: which see. From Port-Dundas, the canal—chiefly for the sake of obtaining supplies from the largely superfluent waters of the sister-work—was afterwards carried eastward to a junction with the Monkland canal. See **MONKLAND CANAL**. There has recently been a vast improvement on the part of the canal which unites the Forth and Clyde with the Monkland. This improvement comprises a substantial wall and breast work suited for the loading or the unloading of the largest canal-going vessels, along the south side, almost continuously from Port-Dundas to St. Rollox bridge. It comprises also a considerable aggregate of the same kind of accommodation on the north side; likewise, at intervals along the line, spacious docks for float-timber; and all this part of the canal has been greatly widened. The total cost of these works has been upwards of £50,000.

Though the canal was planned to be no more than seven feet deep, yet, by subsequent additions to the height of its banks, it has become in effect ten feet. The length of the work, in all its parts, is $38\frac{3}{4}$ miles; of the navigation direct from the Forth to the Clyde, 35 miles; of the side-branch to Port-Dundas $2\frac{3}{4}$ miles; and of the continuation to the Monkland canal, 1 mile. The number of locks on the eastern side of the island is 20, and on the western 19; the difference being occasioned by the higher level of water in the Clyde at Bowling-bay, than in Grange-burn or the Carron at Grangemouth. Each lock is 74 feet long and 20 feet broad, and procures a rise of 8 feet. The greatest height of the canal is 156 feet; its medium breadth at the surface, 56 feet; and its medium breadth at the bottom, 27 feet. Its locks admit vessels of 19 feet beam, 68 feet keel, and $8\frac{1}{2}$ feet draft of water. It is crossed by 33 draw-bridges, and passes over 10 considerable aqueducts, and upwards of 30 smaller ones or tunnels. The greatest aqueduct is a very magnificent one across the Kelvin at Maryhill, begun in June 1787, and finished in April 1791. It consists of four

grand arches, is 83 feet high, runs across a dell or valley 400 feet wide, and was completed at a cost of £8,500. The canal has 6 reservoirs, covering about 700 acres, and containing upwards of 12,000 lockfuls of water.

The navigation into the canal from the Forth runs about a mile up the river Carron, between two embankments, from low water-mark in the frith to the first lock at Grangemouth; and here are extensive harbour accommodations, which, together with the embankments, have been completed within the last ten years, at the cost of about £170,000. See **GRANGEMOUTH**. The canal, lifted up from the tide at Grangemouth, is carried $2\frac{1}{2}$ miles south-westward on a straight line to Grahamston. Here, and for some way previous, its banks are the scene of bustling enterprise and industry; and at Brainsford, on the opposite bank from Grahamston, it opens laterally into a basin for the accommodation of the extensive neighbouring Carron ironworks. Thence it proceeds, still in a south-westerly direction, to Camelon, where it is crossed by the Edinburgh and Glasgow road by way of Falkirk, and begins to make a bend of $\frac{3}{4}$ of a mile toward a westerly direction at Lock 16. Up to this point—as the name of the locality implies—it had been passing locks at frequent intervals, and climbing the face of an inclined plane; and now it has attained an elevation of 128 feet above the level of tide-mark at Grangemouth. Over the latter part, or, in fact, the whole of its progress hither, it commands views of the carses, water-scenes, and magnificent northern back-grounds of the Forth, which are quite exultant in beauty. At Lock 16, the canal sends off on its east side the Union canal navigation to Edinburgh. See **UNION CANAL**. For $2\frac{1}{2}$ miles it proceeds in nearly a straight line due west; and for $2\frac{3}{4}$ miles farther, it runs up south-westward along the right bank of Bonny water to Castlecary. About a mile from Lock 16 it passes over the Scottish Central railway; and at Castlecary it is crossed by the great northern road from Glasgow. At Windford lock, near Castlecary, it attains its highest elevation; and this it continues to preserve away past Port-Dundas, on the one hand, to the junction of the Monkland canal, and onward, on the other, till near the aqueduct across Kelvin water. A quarter of a mile beyond Castlecary it is carried over the principal head-stream of Bonny water, and takes leave of Stirlingshire which it had hitherto traversed, and enters Dumbartonshire; yet, for 8 miles farther, it never recedes more than half-a-mile from the flanking continuation of Stirlingshire, and over one-half or more of that distance does not recede a furlong, and even when considerably past Kelvin aqueduct, and within 6 miles of Bowling-bay, has not at any point receded more than $1\frac{1}{2}$ mile. For $9\frac{3}{4}$ miles of its line in Dumbartonshire, it proceeds, with few and unimportant deviations, from a direct course south-westward along the borders of the parishes of Cumbernauld and Kirkintilloch, coming in upon the tract of the incipient Kelvin, following that stream along its left bank, passing the village of Kilsyth $\frac{3}{4}$ of a mile to the north, and making a bend and passing along an aqueduct over a considerable tributary of the Kelvin just before terminating the distance at the town of Kirkintilloch. The canal now passes that town immediately to the north, but lying in a hollow, and nearly all invisible; and half-a-mile thence—in consequence of Dumbartonshire being dissevered by an intersecting tongue of Lanarkshire—it enters the latter county. For $1\frac{3}{4}$ mile it proceeds westward, and then resumes its south-westward direction, and passing Cadder kirk, attains, in 4 miles, the point whence its side-branch goes off to Port-Dundas.

Over nearly the whole distance from Lock 16, the level or course of the canal is overlooked or flanked with confined views. In some places it carries the eye a short way over cheerless morass and moorland; in others it discloses limited but not uninteresting hill-scenery on the north; and in a few it ploughs its way between steep and wooded, though not high, banks, which all but cheat a stranger into the conviction that he is sailing along a natural river. The side-branch to Port-Dundas somewhat abounds in sinuosities, and has several rapid and inconvenient turns, but on the whole has a direction due south-east; and at last coming along the face of a soft hill, and making two rapid bends respectively as it approaches and as it enters the basin, displays a little forest of masts high above the general level of Glasgow, in a position commanding nearly as good a view of the city of spires and tall chimney-stalks, regular streets and lumpish edifices, as clouds of smoke and great unfavourableness of site for scenic effect will permit. From the point whence the side-branch diverges, the canal adopts a considerable change of course, and proceeds for $1\frac{1}{4}$ mile in a direction north of west, and with a pleasing landscape on its south side to Maryhill. Here there is a crowding of interesting objects into a limited space, and a successful struggle of art to combine with nature in producing picturesque and almost romantic effects. The canal is carried along a short but high aqueduct across the Garscube tumpike from Glasgow,—immediately beyond, a neat village, with its *quoad sacra* parish-church, stretches away on high ground; in the distance northward, knolls and wooded eminences, and the grounds of Killermont undulate downward to the narrow and curving vale of the Kelvin; in view of the landscape, and close on the street-line of the village, the canal, in a bending course, walks down the brow of a descent by a succession of locks which somewhat resemble the section of a prodigious stair; and, a few yards onward, in a deep seclusion, stretches the superb aqueduct across the Kelvin, overlooking a thickly-wooded and soft-featured but romantic gorge upwards of 80 feet in depth, steep in its acclivities, and almost noiselessly traversed by the limpid river. At this point, the canal re-enters Dumbartonshire at the south-east corner of its parish of East Kilpatrick; and thence it proceeds $2\frac{3}{4}$ miles north-westward, $\frac{3}{4}$ of a mile south-westward, and $1\frac{1}{2}$ mile westward to a point a little within the limits of West Kilpatrick. Here it is joined by a brief junction canal, which was formed in 1839, for the benefit of Paisley, to the Clyde at the mouth of the Cart,—but formed by a separate company now extinct; and hence onward, for $3\frac{3}{4}$ miles, it follows the course of the Clyde in an undeviating direction to the north of west; and then, amid beautiful scenery, is let down into the Clyde at Bowling-bay, where a tidal harbour, with convenient wharves, was recently constructed at a cost of £35,000.

“Through Carron’s channel, now with Kelvin joined,
The wondering barks a ready passage find:
The ships, on swelling billows wont to rise,
On solid mountains climb to scale the skies;
Old ocean sees the fleets forsake his floods,
Sai! the firm land, the mountains and the woods;
And safely thus conveyed, they dread no more
Rough northern seas which round the Orkneys roar.”

Not thus the wave of Forth was joined to Clyde,
When Rome’s broad rampart stretched from tide to tide,
With bulwarks strong, with towers sublimely crowned,
While winding tubes conveyed each martial sound.
To guard the legions from their painted foes,
By vast unwearyed toil the rampire rose;
When, fierce in arms, the Scot, by Carron’s shore,
Resigned, for war, the chace and mountain boar
As the chafed lion, on his homeward way,
Returns for vengeance, and forgets the prey.”

The original cost of the canal, including all expenditure up to the January succeeding the date of its completion was £330,000. The tonnage dues imposed were, from sea to sea, 5s. 10d.; from Grangemouth to Port-Dundas, 3s. 10d.; from Bowling-bay to Port-Dundas, 2s.; and over partial distances, except in favour of lime and some other cargoes, 3d. per mile. When the whole work got its appliances into operation, the gloom which formerly darkened its prospects began speedily to disappear; and in 1800 the first dividend was declared. While the work was in progress, two general meetings, one at London, and one at Edinburgh, governed its affairs; that at London appointing annually the committee of management. Collisions of opinion and conflicting decisions having resulted, a new constitution was sanctioned by act of parliament in 1787, investing the direction in a governor and council at London, and a committee of management in Glasgow; both to be annually elected by a general meeting held in London. This also was found inconvenient; and since 1852, the management has been wholly concentrated in Glasgow. Though experiencing some fluctuations, the affairs have, on the whole, steadily prospered; and, notwithstanding a great reduction in the tonnage-dues, making the amount not more than 1d. a ton per mile, they continue to be remunerating, and to embrace a steadily extending traffic. The revenue for 1839 rose to the comparatively great height of £95,475. In 1846 the Forth and Clyde canal was incorporated with the Monkland canal; and four years later, the revenue of the two canals was £115,621, and the total cost of them from the commencement was £1,090,380.

So early as November, 1789, the Forth and Clyde canal was the proud scene of experiment for the first steam-boat which was ever constructed above the size of a model; and some years later, it was the arena of experiments in steam-boat navigation, from which Fulton learned the lesson which he afterwards successfully practised in America. At various subsequent dates, particularly about 1828, strenuous exertions were made to adapt propulsion by steam to the fragile structure and precarious embankments of the canal; but all were attended by some degree of failure; and, even had they been successful, they would have achieved a rate of speed far below what the flighty and swift-winged spirit of the age has come to demand. A totally new set of experiments, tending to a great revolution in canal navigation, was commenced some years later, and, in September, 1839, were brought to a favourable termination. A light railway having been formed alongside of the towing-path of a part of the canal, near Lock 16, a locomotive engine of moderate power was set on it, and applied, as a substitute for horses, in towing, at various rates of speed, vessels of all the different classes which then frequented the canal. By experiments conducted with scrupulous accuracy, and often repeated, it was ascertained that, even with the imperfect preparations which had been made, the passage-boats might, without injury to the banks, be towed at rates varying from 19.1 to 19.25 miles per hour, and that heavy sea-going vessels might, with great ease, be conveyed at the utmost speed consistent with the conservation of the slopes. On the 11th September, 1839, grand final experiments were made under the eye of the governor, the manager and part of the committee of the canal company, and several professional and scientific gentlemen. The locomotive engine was attached successively to passenger-boats, lightly and heavily laden,—to sloops, single and in pairs,—and to a string of nine miscellaneous sailing-vessels. The passenger-boats al-

most instantly shot along at the rate of 16 and 17 miles per hour, and were maintained at that velocity with a very small expenditure of steam. The waves which they produced—very unlike what had been produced by other modes or applications of power, or what theory and mistaken investigation had predicted—did not undulate, or rush along the banks, but proceeded direct to the shore, quite or nearly at right angles with the sides of the boats, and so far from being increased in volume proportionately to the increase of velocity, were at all times smaller than those which the boats plough up when they are drawn by horses. The sloops, dragged singly, and two on a line, varied from 70 to 90 tons, and were so laden as to have 8 feet draught of water; and they were carried along at the maximum allowed velocity of $3\frac{1}{2}$ miles per hour; and but for prudential reasons imposing restrictions, they could easily have been made to feel a much higher speed. The chain of 9 vessels consisted of 7 sea-going schooners and sloops, and 2 heavy-laden scows; and they were borne steadily along at the rate of $2\frac{1}{2}$ miles per hour. While the expense of towing them separately from the sea-lock to Port-Dundas, would be about £27, that of dragging them with the locomotive engine, exclusive of allowance for the use of the railway, would not exceed 25 shillings. In every case, the results of the experiments seemed perfectly satisfactory. They left no doubt that velocities suitable to all vessels were attainable,—that these might range from $2\frac{1}{2}$ to 20 miles per hour,—and that, after some experience, the velocity might probably reach 25 or even 30 miles per hour. The experiment, however, was very costly; and had the steam system been applied to the whole canal, it would have entailed vast expence, without any adequate advantage. That system, therefore, was not adopted.

FORTH AND CLYDE RAILWAY, a railway opened on the 20th May, 1856, from a junction with the Scottish Central railway at Stirling to a junction with the Dumhartonshire railway near Balloch. It connects the east and the west coasts of Scotland, in the basins of the Forth and the Clyde, by the shortest and most direct route; and at the same time it opened up, for ready communication with great markets, a considerable agricultural district which had hitherto been very secluded. The scheme for it was originally organized in 1845, and, after being carried some way through parliament, was relinquished; but was eventually resumed by the same promoters as at first, and carried to a consummation on the 4th of August, 1853. The first sod for the railway was cut on the 12th of January, 1854. The parliamentary estimate for it was £150,000.

FORTH IRON-WORKS, a large recently erected establishment, on the western verge of the parish of Carnock and of Fifeshire, 4 miles west of Dunfermline. The ironstone wrought in it is comparatively rich. A large school-house was built by the company, for the education of the children of the work-people, with infant and sewing departments.

FORTHAR. See FIFESHIRE.

FORTHRIE. See FIFESHIRE.

FORTHY WATER, a rivulet of Kincardineshire. It rises on the western border of the parish of Dumnotar, runs across a wing of Glenbervie, and traces the boundary between Arbutnot on its left bank and Glenbervie on its right bank, to a confluence with Bervie Water about a mile south of Drumlichie.

FORTINGAL, a very large and important parish, containing the post-office stations of Fortingal and Rannoch, and occupying the chief part of the north-western division of Perthshire. Quoad sacra, the

parish is of moderate dimensions; but quoad civilia, it measures, in extreme length, about 40 miles,—in extreme breadth, upwards of 30 miles,—in circumference, along the sinuosities of its boundary-line, probably 130 miles or upwards,—and in superficial area, nearly 450,000 imperial acres. It is bounded on the north by the district of Badenoch in Inverness-shire; on the north-east by the parish of Blair-Athole; on the east by the parish of Dull; on the south by the parishes of Kenmore and Killin, and a detached portion of the parish of Weem; and on the west by the parishes of Glenorchy and Appin in Argyleshire, and the district of Lochaber in Inverness-shire. The parish is in every respect compact, with two remarkable exceptions; it embosoms, nearly in its centre, a detached part of Logierait, $4\frac{1}{2}$ miles by 4; and it, at the same time, has a detached part of its own, called Boffracks, $4\frac{1}{2}$ miles by 2, lying $3\frac{1}{2}$ miles east of the south-eastern extremity of the main body. The whole parish lies among the Grampians, and is exceedingly mountainous; and, in general, broadly marked with the characteristic features of the Highlands,—savage grandeur relieved by varying scenes of romance and beauty,—towering elevations cleft into ridges by torrents and ravines,—bleak alpine wastes of heath alternated with sylvan braes and far-stretching lakes,—scenes now sublime and now subsiding into softness, enlivened by bounding streams and roaring cataracts. The extensive district, however, which constitutes the main body of the parish, is naturally and comprehensively divided into three portions, Rannoch, Glenlyon, and Fortingal proper. RANNOCH and GLENLYON will be described in separate articles; and need not be further noticed here than to say, that the former constitutes the northern part of the parish, and the latter, jointly with Fortingal proper, a considerable portion of the southern part. But these districts are separated or surrounded by very broad or high mountain-belts. Both on the north and on the south large portions of the parish, from the boundaries inwards, are entirely mountainous. Another belt, about 7 miles broad, stretches along the whole length of the parish from east to west, separating it into two great divisions, with Rannoch on the north, and Glenlyon and Fortingal on the south, and lifting many of its summits 3,000 feet or upwards above the level of the sea. Minor ridges, isolated mountains, and divergent spurs also lift their heads almost everywhere in other localities, rendering the entire parish eminently Highland. The most remarkable of the isolated heights is SCHICHALLION, on the southern boundary: which see.

The parish has, at its centre, along the base of the intersecting broad belt of mountains, one magnificent lake, 12 miles long, and upwards of 1 mile in average breadth, overlooked by grand and magnificent scenery. See LOCH RANNOCH. It has also, at its northern limit, 7 miles of a lake which stretches away into Inverness-shire, and is in all 16 miles long, the scenery of which has gems of beauty, but is, in general, savage and wild. See LOCH ERICHT. It possesses parts likewise of a beautiful and romantic lake, 3 miles in length, on the south-west,—an islet-studded and sylvan mountain-lake, 6 miles long, on the west,—and a lake, 4 miles long and half-a-mile broad, on the north-east. See LOCH LYON, LOCH LYDOCH, and LOCH GARRY. There are also in the parish numerous smaller lakes, or lochlets, all of which, with one exception, as well as the larger lakes, are well-stored with fish. In Loch Rannoch trouts are caught from 1 lb. to 24 lb. in weight. Nor is the district less rich in rivers, brooks, and rills. One

roaring and impetuous stream, bounding along in rapids and cataracts, and sometimes sending its hoary voice for several miles among the mountains, runs eastward from Loch Lydoch to Loch Rannoch. See the GAUER. Another river, at first smooth and gentle, but afterwards impetuous, runs from Loch Rannoch to the eastern boundary. See the TUMMEL. These streams, with the lakes whence they issue, form a belt of waters, along the base of the central belt of mountains, from end to end of the parish. Another river, sluggish and mustering for the onset for a short distance, but afterwards furious and wild in its career, comes down southward from Loch Erich, to near the western extremity of Loch Rannoch. See the ERICHT. Another river of great variety of aspect, but generally overlooked by scenes of romance or picturesqueness or beauty, issues from Loch Lyon, and thence intersects the parish, through Glenlyon and Fortingal proper, on the eastern boundary. See the LYON. Numerous other streams, for the most part of inconsiderable length of course, and possessing the character of mountain-torrents, run along ravines, or leap over precipitous rocks, or spread out in little dells and minie glens, gay in the adornings of Highland loveliness, and pour their waters into either the lakes or the rivers. Among the most noticeable are the Mirran, Auld Madrumbeagh, and the Moulin, tributaries of the Lyon and Black water; Auld Bagh, Auld Killyhounan, and the Sassen, tributaries of the central stripe of waters.

Fortingal proper occupies the lower part of the course of the Lyon. It is a sublimely yet softly picturesque vale, about 6 miles in length, and upwards of half-a-mile in breadth, adorned with groves and gentlemen's seats, with mountains coming slowly down upon its gentle beauties, yet sending away their summits to such a height, and environing it in such alpine phalanx that, gazing round from its centre, a stranger might conclude ingress or egress to be impracticable. The village or kirk-town of Fortingal—a few huts clustered around the parish-church—presents a fine foil to the numerous beauties of the vale. The celebrated yew-tree in the churchyard, described by Pennant, and noticed by various tourists and topographers, as probably the largest in the kingdom, still lifts its venerable branches to the breeze; but though somewhat increased in its enormous circumference—so often recorded—of 52 feet, has lost much of its stateliness, and now appears as two distinct trees. "At the commencement of my incumbency, 32 years ago," says the Rev. Robert Macdonald, the minister of the parish, in his report in the New Statistical Account, "there lived in the village of Kirkton, a man of the name of Donald Robertson, then upwards of 80 years of age, who declared that when a boy going to school, he could hardly enter between the two parts; now a coach-and-four might pass between them." This tree is probably the only remnant of those little groves of yew-trees which a very ancient act of parliament ordered to be planted in the burying-grounds of the kingdom, to furnish material for bows.

Caverns and deep recesses beneath the overhanging cliffs or between the projecting shelves of rocks, are numerous, and, in some instances, remarkable; and are, for the most part, associated either with tales of ancient feuds and warfare, or with the gross legends of credulity and superstition. The Grampien bed of limestone, ranging from Dumbartonshire to Aberdeenshire, passes along the east end of the parish. Veins of marble of various hues, and variously clouded, occur in several localities. A very rich vein of lead ore in Glenlyon was wrought

for several years toward the close of last century; but, owing to some unexplained reason, it did not compensate the working, and was abandoned. Brilliant pebbles, spars, and rock-crystals, are occasionally found among the mountains. In the very small area of the parish which is arable—yet small only as compared with the vast aggregate of impracticable surface—agricultural improvement has been singularly rapid, and achieved surprising results. Neat, snug farm-steads, well-enclosed fields, and the luxuriant results of skilful and assiduous husbandry, cheer and surprise the Lowland tourist who penetrates among the Highland wastes and wilds. The soil, in the level stripes of the valleys, is, in general, gravelly and dry; and up the sides, though seldom toward the summits, of the mountains, it affords excellent pasturage for black cattle and sheep. A considerable forest of native fir, and an extensive one of birch, range along the district of Rannoch, and appear to be remnants of that great Caledonian forest which anciently covered northern Perthshire and the county of Inverness, over mountain, glen, and morass, to the extent of more than 2,000 square miles. Plantations of the various sorts of hardwood, and of spruce and larch, though not aggregately extensive, are so disposed through the parish as to impart a feature to very many of its landscapes.

At the west end of the vale of Fortingal are remains of what has been currently called a Roman camp. Far inland though the position be, and lying beyond mountain-barriers, narrow defiles, and very difficult passes, several writers have thought that Agricola penetrated hither, and fought here a battle with the Caledonians. Some persons trace to this epoch the etymology of the name Fortingal, and suppose that it was originally *Feart-nan-Gael*, 'the stronghold of the Gael' or Caledonian; while others connect that etymology in a general way with the fortification, and suppose the name to have originally been *Feart-ningal*, 'the Works or exploits of strangers.' The spot where Agricola's tent is supposed to have stood is surrounded by a deep fosse. The rampart of the camp is, in many places, broken down and the ditch filled up by the plough; but the pretorium is still complete; and the camp comprehends an area of about 80 acres. A search, upwards of half a century ago, for antiquities on the spot, produced only three urns. Roman coins, however, have been found in various adjacent localities. Numerous circular forts appear in the parish from 30 to 50 feet in diameter, built of vast blocks of stone which one cannot easily conceive to have been moved without machines, but of inconsiderable height of wall; and as they are in many instances within view of one another, they may probably have been part of a chain of watch towers which extended from Dunkeld through Fortingal into Argyleshire. Two of the forts are much more extensive than the others, and had out-works. At the east end of the parish are vestiges of a castle, impregnable before the invention of gunpowder, built on a precipitous rocky promontory cut off by converging deep chasms with brawling brooks, and anciently defended on the accessible side by a ditch and drawbridge. This castle was the residence of "the fierce wolf," the brother of the Earl of Buchan, and the ancestor of very many of the Stewarts of Athole. At the foot of Glenlyon, on a high declivitous bank, and anciently defended by a drawbridge, are the ruins of a castle, the last occupant of which was Duncan Campbell of Glenlyon, usually called the hospitable Red Duncan.

Fortingal was anciently the scene of many feuds,

and even of some considerable onslaughts and battles. During the wars of the succession, a party of Edward of England's followers came down to the district along an opening, which still bears the name of Glen Sassen, "the Englishman's glen;" and, according to tradition, were confronted by a force led on by Robert Bruce in person. The ground where the collision of the antagonist little armies took place is called Innerhadden, 'the point where the battle began,' and the spot where Robert achieved victory is called Dalchoisnie, 'the field of victory.' On another occasion, as tradition reports, Robert was less successful; and having sustained defeat near the boundary with Argyleshire, he concealed himself in a romantic spot—still called the King's house—in a wood two miles east of the field of his former and victorious contest. His retreat being near the Tummel, there was but one ford by which it could be reached, and this still bears the name of the King's ford; while an eminence overlooking his hiding-place continues to be called the King's watch-tower. During, or soon after, the reign of Robert, M'Dougal of Lorn and his followers penetrated as far as the Errochd, in subordination, it is said, to the operations of the English. But confronted by Domnacha or Duncan Reuar, the ancestor of the Robertsons of Strowan, they suffered defeat and carnage, and the chief of Lorn himself was captured, and for a time confined on the artificial islet of Loch Rannoch. In the 13th century, a clan called Clan Eoin Bhuidhe, 'the descendants of John of the yellow hair,' who, at that period, possessed the upper part of Rannoch, and who by some act of rapine had incurred the wrath of the Stewarts of Appin, were sought out, on their own territory, by the chief of Appin and his clan, and drawing up in battle array to confront the invaders near the side of the river Gauer, were nearly all hewn down on the spot; while a few fugitives with difficulty escaped by swimming the river, and fled in dispersion to their districts. A little rill, occasionally called to the present day 'the rill of blood,' commemorates the fearful slaughter, and indicates the scene. A feud of several centuries in duration between the clan Cameron and the Macintoshes occasioned Fortingal to become repeatedly the arena of skirmishes and vengeful conflicts.

Fortingal has, in a very striking degree, undergone the ameliorating changes which have been generally experienced in the Highlands. Up to the year 1745, it was in an utterly barbarous condition, under no legal restraint, and signalized, even among the lawless regions around it, for its foul dishonesty and its deeds of violence. One of the chief proprietors was then the Rob Roy of his day, but without the amenities of Rob's character; and while his property was a nest of thieves, he laid the whole country, from Stirling on the one hand and Cupar Angus on the other, under contribution for "black mail." Fortingal, in fact, was the centre of this sort of traffic. "In the months of September and October," says the reporter in the Old Statistical Account, "they gathered to the number of about 300, built temporary huts, drank whisky all the time, settled accounts for stolen cattle, and received balances. Every man then bore arms. It would have required a regiment to have brought a thief from the country. But government having sent a party of soldiers to reside among them, and a thief having been hung at their doors, they soon felt the necessity of reformation, and they are now as honest, and as strict a set of people in these matters, as any in the kingdom. In the year 1754, the country was almost impassable. There were no roads nor bridges. Now, by the statute-

labour, we have got excellent roads and 12 bridges. In a few years we shall have other two, which is all that could be desired. The people contribute cheerfully and liberally to build them, and this preserves many lives. At the above period, the bulk of the tenants in Rannoch had no such thing as beds. They lay on the ground, with a little heather or fern under them; one single blanket was all their bed-clothes, excepting their body-clothes. Now they have standing-up beds, and abundance of blankets. At that time the houses in Rannoch were huts of, what they called, 'Stake and Rise.' One could not enter but on all fours; and after entering, it was impossible to stand upright. Now there are comfortable houses built of stone. Then the people were miserably dirty, and foul-skinned. Now they are cleanly, and are clothed as well as their circumstances will admit of. The rents of the parish, at that period, were not much above £1,500, and the people were starving. Now they pay £4,660 per annum, and upwards, and the people have fulness of bread." Nor are the changes much less striking which have taken place since the year 1794, when this report was written. The improvements in agriculture, in particular, and in farm-buildings, enclosures, social usages, and intellectual condition, have been remarkably great. The principal landowners are the Marquis of Breadalbane, Sir Robert Menzies, Bart., of Foss-house and Rannoch-lodge, John Menzies, Esq. of Chesthill, F. G. Campbell, Esq. of Troup and Glenlyon, and seven others. Three fairs are held annually at the hamlet of Fortingal; one chiefly for seeds, about the end of April; one for lambs, in August; and one of several days, for sheep, goats, and cattle, in the beginning of December. Three fairs are held also at Kinloch-Rannoch; one in April, and one in October, for cattle; and one in August for lambs. A fair is held likewise at Inverwick in Glenlyon. Assessed property in 1866, £17,651 14s. 1d. Population in 1831, 3,067; in 1861, 2,181. Houses, 456.

This parish is in the presbytery of Weem, and synod of Perth and Stirling. Patrons, the Duke of Athole and Sir R. Menzies. Stipend, £255 8s.; glebe, £10. The parish quoad civilia consists of the united parishes of Fortingal and Killachonan. But two large districts were in 1845 erected into quoad sacra parishes. See GLENLYON and RANNOCH. The quoad sacra parish of Fortingal is only about 8 miles long, and about 8 broad; and consists of the vale of Fortingal, a small part of Glenlyon, and the detached district of Bolfracks. The parish church is of unknown date, but was repaired in 1851. Sittings, 376. There is a Free church in Glenlyon; and the sum raised in connexion with it in 1865 was £143 12s. 8d. There are in the quoad civilia parish one parochial school, two Assembly's schools, two Society's schools, and seven other schools.

FORT MATILDA, a battery, with fortified enclosure, on the shore at the point in Greenock parish, midway between Greenock and Gourcock. It commands the curve of the Clyde immediately below the Greenock roadsteads.

FORTNIGHTY. See ARDLACH.

FORTROSE, a royal burgh and post-town, in the parish of Rosemarkie, Ross-shire. It stands $8\frac{1}{2}$ miles south of Invergordon ferry, $10\frac{1}{2}$ south-south-west of Cromarty, and $10\frac{1}{2}$ north-north-east of Inverness. Its site is at the eastern extremity of the Black Isle road, on the north side of the Moray frith, and nearly opposite Fort-George, from which it is distant $2\frac{1}{2}$ miles. It is composed of two towns, Rosemarkie and Chanonry, which are about half-a-mile distant from each other, but have been politically

united in one burgh. The former of these is of considerable antiquity, having been erected into a royal burgh by Alexander II. Chanoury is so called from its having been the canony of Ross, where the bishop had his residence. It is finely situated on an elevated plain commanding an extensive prospect of the Moray frith; and a tongue of land, called Chanoury-ness or Fortrose point, runs out between it and Rosemarkie into the frith. The two towns were united by a charter granted by James II. in 1444, under the common name of Fortross—that is, 'the Fort of the Peninsula,'—now softened into Fortrose; and that charter was ratified by another by James VI. in 1592, and confirmed, with greater immunities, by the same monarch in 1612. These charters all bear, that the burgh is to be "entitled to the privileges, liberties, and immunities heretofore granted to the town of Inverness." Fortrose was, at that time, spoken of as a town flourishing in the arts and sciences, the seat of divinity, law, and physic, in this corner of the kingdom. And for generations previously, as well as for some time after, under the fostering influence of the bishops of Ross, till their palace was destroyed and their cathedral dilapidated by Oliver Cromwell, it enjoyed a large amount of general prosperity. "The situation of the town," remark the Messrs. Anderson, "is romantic and sunny, and the grounds about it, which have long been under cultivation, are rich and in high order; and when the cathedral green was surrounded by large old trees, before Cromwell's axe was laid to their roots, and the houses of the town were removed to a distance from the cathedral—save that the canons and presbyters of the see had each, near it, his manse, with gardens and court-yards, entered by Gothic arched gateways—the whole place must have had a very beautiful and imposing appearance, more like an English ecclesiastical town than a Scotch one."

Two small parts of the cathedral are still standing. Cromwell sent the stones of the rest of it, together with those of the bishop's palace, by sea to Inverness, for the erection of a fort there, called Cromwell's fort, which now no longer exists. "The cathedral," says Mr. Neale, in his Ecclesiological Notes of 1848, "formerly consisted of choir and nave, with aisles to each, eastern lady chapel, western tower, and chapter-house at the north-east end. What remains consists merely of the south aisle to chancel and nave, and the detached chapter-house. The style is the purest and most elaborate middle pointed; the material, red sandstone, gave depth and freedom to the chisel; and the whole church, though probably not 120 feet long from east to west, must have been an architectural gem of the very first description. The exquisite beauty of the mouldings, after so many years of exposure to the air, is wonderful, and shows that, in whatever other respect these remote parts of Scotland were barbarous, in ecclesiology, at least, they were on a par with any other branch of the mediæval church. The east window, fragments of the tracery of which hang from the archivolt, must have been magnificent, and consisted of five lights; it is wide in proportion to its height, and must have afforded great scope for throwing up the altar beneath. On the outside, in the gable, there are two lancets, the lower one much longer than the other. The whole effect is extremely satisfactory. I know not, indeed, where one could look for a better model for a small collegiate church, and such as might suit the needs of our communion at this moment. There are two windows on the south side, of the same elaborate and beautiful description, but con-

sisting of four lights. The piscina remains, and the mouldings are truly the work of a master. The south aisle was separated from the chancel by two middle pointed arches, now walled up, but not so much injured as to destroy their extreme loveliness. In the first of these arches is a canopied tomb for the foundress, a Countess of Ross, the date of which is probably 1330. Very possibly her lord might be interred in a similar position in the north side of the choir. This must have been one of the most beautiful monuments I ever saw. Between the foot and the easternmost pier, a credence is inserted, sloping up with a stone lean-to against the passage wall. In the second arch is a poor third pointed high tomb and canopy, with the effigy of a bishop, by tradition, the second bishop of the see; a thing manifestly impossible, unless the monument were erected long after the decease of the person commemorated. The chancel arch is modern. The nave consists of four bays, and much resembles the chancel in its details; the fourth is, however, blocked off for the burying-place of the Maekenzies of Seaforth. In the second arch is another third-pointed monument. On the south side the first window is injured; the second resembles those in the chancel arch; the third is high up and mutilated; the fourth is a plain lancet. The west front is remarkably simple, and contains nothing but a small two-light middle pointed window, without foliage. The rood turret still exists, and is a very elegant, though somewhat singular composition. It stands at the junction of the south aisle of nave and chancel, and acts as a buttress. Square at the base, it is bevelled into a semi-hexagonal superstructure, and has elegant two light windows on alternate sides. The top is modern. The chapter-house, as at Glasgow, consisted of two stages, a crypt and the chapter-house properly speaking. The crypt still remains, and is used as a coal-hole; the upper part, which has been rebuilt, is now a school and court-room." In 1854 and 1855 the Commissioners of Woods and Forests expended a considerable sum in restoring and strengthening the whole of the decayed fabric.

The parish church and the manse are beautiful buildings, in beautiful situations, in the neighbourhood of Rosemarkie. A chapel of ease, called the church of Fortrose, stands at Chanoury; and is in the presentation of the male communicants. There are likewise a Free church and an Episcopalian chapel, both in the Gothic style, but tasteless and unsymmetrical. There is also a Baptist place of worship. The Fortrose academy is an institution for a good English education, mathematics, and languages, conducted by a rector and two other teachers; and there are a parochial school, a Free church school, and a young ladies' seminary. The burgh has a good inn, called the Royal hotel, and good private lodgings for sea-bathers. The town-council comprises a provost, three bailies, a treasurer, a dean of guild, and eight councillors. The real property of the burgh, exclusive of charity funds, amounted in 1864 to £5,385 Os. 0d. The corporation revenue in 1860, was about £175. Fortrose unites with Inverness, Forres, and Nairn in sending a member to parliament. Its constituency in 1861 was 64. A sheriff's small-debt court is held quarterly; and justice of peace small-debt courts are held at stated periods. A weekly market is held on Friday; and fairs are held on the first Wednesday of April, the third Wednesday of June, and the first Wednesday of November. There is a good harbour at Fortrose, which was formed by the parliamentary commissioners on the Highland roads in 1817, at an expense of about £4,000. The

inside of the harbour is about 30 yards square, and three sides of it form an extensive wharf. Spring-tides rise 14 feet within it. There is a regular ferry to Fort-George from Chanoiry-ness; but it is not much frequented. It is usually known as Ardersier ferry; taking its name from the Inverness side. Dr. George Mackenzie, the laborious compiler of the 'Lives of the most eminent Writers of the Scots nation,' is said to have been born in Fortrose. It is certain he resided here, in an old castle belonging to the Earl of Seaforth; and he lies interred in the cathedral. The brave and wise Sir Andrew Murray, regent of Scotland, was hurried at Rosemarkie, in 1338. Population of Fortrose in 1841, 1,082; in 1861, 928. Houses, 187.

FORTUNE. See EAST FORTUNE.

FORT-WILLIAM. See WILLIAM (FORT).

FORVIE, an ancient parish on the east coast of Aberdeenshire. It was long ago incorporated with SLAINS: which see. The greater part of it, to the extent of about 1,700 acres, has for centuries been a desert of sand, rolled into knolls and little peaks, and scantily covered with bent. Tradition assigns the origin of these sands to some sudden convulsion, so long ago as the eleventh century. The vestiges of the parish church are still visible; and they now furnish the only local evidence that the district was ever inhabited.

FORVIE BURN, a stream of about 5 or 6 miles length of course, running southward to the Ythan, chiefly on the boundary between the parish of Slains and the parish of Logie-Buchan in Aberdeenshire.

FOSS, a district in the quoad civilia parish of Dull in Perthshire. It was constituted a quoad sacra parish by the Court of Teinds in June 1845. It is situated on the south side of the river Tummel, toward the western extremity of Loch Tummel. See DULL. Its post town is Pitlochrie. Its church is a government one, with the usual appointments of that class of churches, and under the patronage of the crown. A fair is held at the kirktown on the first Tuesday of March, old style. Population in 1831, 573.

FOSSAWAY AND TULLIEBOLE, an united parish, chiefly in Perthshire, but partly in Kinross-shire, compact in form, and lying respectively at the south-eastern and at the western verge of the counties. It contains the post-office station of Fossaway, the post-office village of Blairingone, and the villages of Crook-of-Devon and Gartwhinean. It is bounded on the north by Dunning; on the east by Orwell and Kinross; on the south by Cleish and Saline; on the west by Clackmannanshire; and on the north-west by Muckhart. Its greatest length is about 11 miles; its greatest breadth about 10 miles; but, its outline being very irregular, its superficial area is not more than about 50 square miles. The united parish consists of three districts of Fossaway in Perthshire,—one $6\frac{1}{4}$ miles by $2\frac{1}{2}$ on the south,—one $3\frac{3}{4}$ by $1\frac{3}{4}$, lying $1\frac{1}{2}$ mile north of the former,—and one a narrow stripe of half-a-mile by $2\frac{3}{4}$, lying a mile eastward of the second, and running parallel to it, all consolidated by the insertion amongst them of Tulliehole belonging to Kinross-shire. The northern parts of Fossaway, and the part of Tulliehole which connects them, constituting jointly the entire northern section of the united parish, are a continued congeries of hills running up to the centre of the Ochil range, and lifting their tops from 600 to 1,100 feet above the level of the sea. Some of the hills are covered or patched with moss or heath; but most are verdant to their very summits, and afford prime pasture for both sheep and black cattle. The central

and the southern sections, consisting of the main body of Tulliehole and the southern part of Fossaway, though they are considerably upland from sea-level, and have some little hills, are, over most of their area, arable, and carpeted with a various and very improveable soil of gravel, clay, till, and loam. Tulliehole, while appearing between the Ochil hills on the one side and the Cleish hills on the other, to be a champaign country, sends up the highest ground or water-shedding line in the plain which stretches between Stirling and Kinross, and despatches its indigenous rills in the opposite directions of west and east. Owing to the attraction of the hills on either side, the district has more cloudy weather, later seasons, and more frequent falls of rain than the districts in its vicinity. Dark and pregnant clouds are sometimes seen advancing simultaneously along the Ochil hills and the Cleish hills; and when they come opposite to Tulliehole, they have been observed to send off detachments which form a *mélée* above the district, and discharge upon it their united waters. The river Devon comes down upon Upper Fossaway from the west, and runs south-eastward $3\frac{3}{4}$ miles, tracing the boundary-line between that district and Tulliehole on its left bank, and the parish of Muckhart on its right bank; and making a sudden bend or crook at the place appropriately called the Crook-of-Devon, flows $4\frac{1}{2}$ miles south-eastward along the boundary between Tulliehole and lower Fossaway on the one side, and the parish of Muckhart on the other; and during its long course of contact with the united parishes, it attracts both the angler by its store of the finny tribes, and especially the tasteful tourist by a profusion of remarkable natural curiosities. See the DEVON. Lower Queigh water rises on the northern limit of the northward stripe of Tulliehole, forms for a mile south-westward from its source the boundary with Dunning in Perthshire, and debouching to the south-east, so intersects for $3\frac{1}{2}$ miles the united parish, as to trace the boundary between the Perthshire and the Kinross-shire sections. Two rivulets, both called Gairney, but distinguished by the prefixes East and West, which designate the direction of their course, both rise in the parish, and meander among copsewood banks. Some plantations in upper Fossaway, others in Tulliehole, and still more extensive ones in lower Fossaway, arranged in stripes or in mimic forests, shelter the country, and enrich its landscape. The principal minerals are limestone, coal, sandstone, and ironstone,—the last of which has, in recent years, been somewhat extensively worked. The principal mansions are Tulliehole and Devonshaw. The principal landowners are Baroness Keith of Aldie, the Rev. Sir Henry Wellwood Moncrieff, Bart., Moncrieff of Fossaway, Graham of Devonshaw, and upwards of thirty others. The real rental is about £9,700. Assessed property in 1866, £7,659. Population in 1831, 1,576; in 1861, 1,584. Houses, 344. Population of the Perthshire section in 1831, 962; in 1861, 933. Houses, 186.

There are, in this parish, two fortalices or strengths with gun-holes and turrets,—the castle of Tulliehole, built in the year 1608, and now belonging to Sir H. W. Moncrieff of Tulliehole,—and the castle of Aldie, built in the 16th century, and belonging to the Baroness Keith. The Murrays of Tullihardine, the ancestors of the Duke of Athole, were the ancient proprietors of the parish, and of many lands in its vicinity; and they had at Blairingone a mansion, the site of which is still called Palace-brae. On the summit of a rising ground, called Carleith, on the lands of Aldie, are the ruins of an old building, perfectly circular, and nearly 24

feet in diameter, from the area of which were dug up, 65 years ago, two stone-coffins containing human bones. On the barony of Coldrain is an oblong square mound, 3 rods and 36 falls, Scottish measure, of area, and surrounded by a ditch of from 15 to 20 feet in width; it is traditionally reported to have been the site of a strength belonging to the Earls of Athole, and bears the name of the Hall-yard. A spot, lying between the lands of Gart-whinean and those of Pitvar, and called the Monk's grave, commemorates the sanguinary miscarriage of one of those tricks of priestcraft, those finesses of monkery, which, for centuries, enthralled all honesty in Scotland. A dispute existing concerning the proprietorship of the lands, a monk from Culross appeared upon them, made oath, in behalf of his monastery—who really possessed no claim—that the land on which he stood was theirs, and was instantly run through the body by an indignant member of the Tullibardine family, the real proprietors. But he proved, on an examination of his boots, to have literally stood on some ounces of soil which he had brought with him from Culross; and he was buried on the scene of his equivocation and its bloody award, conferring on posterity a lesson of vastly deeper import than is legible on most objects of antiquarian curiosity. A small rising ground at the east end of the village of Crook-of-Devon, called the Gallow-know, was the scene of a capital punishment judicially inflicted in the 17th century, by the proprietor of Tulliebole, on one of his vassals for the crime of murder, and reminds posterity of the high jurisdiction formerly exercised by the Scottish barons. In ancient times, when the kings of Scotland passed between their palaces of Stirling and Falkland, and when one of the Jameses, on his way, dined and caroused at Tulliebole, a trial of Bacchanalian strength was got up between one of the king's troopers and one of the laird of Tulliebole's vassals, of the name of Keltie. The trooper having swilled and drank till he became prostrate, Keltie quaffed another draught to proclaim his revolting victory, and fell headlong beside the vanquished; but when he awoke he found that both he and the trooper had been struggling with Death, and that the latter had been overcome by the grim foe. His additional draught, after the other's fall, is commemorated in the current phrase of 'Keltie's Mends,' applied by drunkards to a rejected or hurtful intoxicating draught; and the death of his Bacchanalian antagonist, with its deeply solemn lessons, is commemorated in the name of a little pool, 'the Trooper's Dubb,' near which he was buried. Some persons, 60 or 70 years ago, were so scared with the superstitious fear of seeing the trooper's apparition, that they would rather have gone a mile out of their way than pass near his grave. But probably the present generation of the parishioners have taken the wiser course of moralizing on the warnings given them by the commemoration of his folly.

This parish is in the presbytery of Auchterarder, and synod of Perth and Stirling. Patron, Sir Graham Montgomery, Bart. Stipend, £164 0s. 3d.; glebe, £8 13s. 4d. Schoolmaster's salary, £40, with £27 fees. The parish church was built in 1806, and contains 525 sittings. There is a chapel of ease at Blairingone, built in 1838, and partially endowed from a bequest by the late Major Montgomery of Aberdeen. There is a Free church of Fossaway: attendance, 250; sum raised in 1865, £152 10s. There are three non-parochial schools. Both Fossaway and Tulliebole were anciently in the diocese of Dunblane; and they seem to have been consolidated into one parish about the

year 1614. For a considerable period after they were united, the churches of both were used, the minister officiating two Sabbaths in that of Fossaway, and one Sabbath in that of Tulliebole. But in 1729, both were thrown down, and a new church built for the united parish.

FOTHRICK. See FIFESHIRE.

FOTHRINGHAM, a post-office station, and an estate, in the parish of Invercrarity, 4 miles south by east of Forfar, Forfarshire. See INVERARITY.

FOUDLAND HILLS, a tract of uplands, round the basin of the Urie, in the parishes of Forgue, Insch, and Culsalmond, Aberdeenshire. It stretches east and west, rises about 1,500 feet above sea-level, and has extensively a bleak moorish surface. In the Insch part of it are excellent slate quarries, which for a long time produced nearly a million of slates a-year, chiefly for the market of Aberdeen, and were reduced in request principally by the greater cheapness of sea-borne carriage from the Argyleshire quarries of Easdale. The slates are of a clear light blue colour, and excellent quality.

FOULA. See FOWLA.

FOULDEN, a parish in the eastern part of the district of Merse, Berwickshire. It is of nearly a square form, 2½ miles each way; and is bounded by the parishes of Ayton, Mordington, Hutton, and Chirnside. Its church is nearly equally distant from the towns of Ayton, Chirnside, and Berwick; and the last of these is its post-town. The surface rises in a gently inclined plane from south to north, and terminates in a ridge of heights. The soil, in the south, is a strong clay; towards the middle of the parish it becomes more loamy; and in the north is light and moorish. Excepting about 260 acres, chiefly in the centre of the district, which are under plantation, and about 330 in the northern division, which are under natural pasture, all the area, comprising about 3,000 acres, has been turned up by the plough, and is in prime cultivation. The heights in the north command a magnificent prospect to the south and west. Along the whole southern boundary runs Whitadder water, between remarkably acclivitous banks, which climb from 120 to 150 feet above the level of the stream, and which, on the Foulden side, are repeatedly cloyen by ravines, bringing down rills and drainings from the central or northern districts. Near the upper end of two of these ravines or 'dens,' which deepen as they approach the Whitadder, stands the parish-church. The nature of this site may probably have originated the name Foulden, which was anciently written *Fulden*, and means, in the Saxon language, 'the dirty hollow.' An old ruin, bearing the name of the parish, appears to have been a stronghold in the period of the Border contests. On the property of Nun-lands was anciently an establishment of nuns. The village of Foulden was formerly of considerable size, and a burgh-of-barony; but has gone utterly to decay. Four-fifths of the parish belong to Wilkie of Foulden; and the other fifth is divided between two proprietors. The yearly value of raw produce was estimated in 1834 at £10,517. Assessed property in 1865, £5,563 2s. 10d. Population in 1831, 424; in 1861, 431. Houses, 80.

This parish is in the presbytery of Chirnside, and synod of Merse and Teviotdale. Patron, Wilkie of Foulden. Stipend, £152 18s. 1d.; glebe, £24. Schoolmaster's salary, £50, with £10 fees, and £10 other emoluments. The parish church was built in 1786, and is sufficient for the population. Foulden was anciently a rectory in the deanery of the Merse. On the 25th of March, 1557, its church was the meeting-place of commissioners sent from Elizabeth to vindicate her treatment and execution of Mary of

Scotland, and of commissioners sent by James VI. to hear their tale, his own mind revolting—as was pretended—from the terrible communication to be made, and averse to let the bearers of it pass much within the limit of the Scottish boundary.

FOUNTAINBLEAU. See DUMFRIES.

FOUNTAINBRIDGE. See EDINBURGH.

FOUNTAINHALL, a post-office hamlet in the parish of Stow, 4 miles north-north-west of the village of Stow, Edinburghshire. It has a station on the Edinburgh and Hawick railway.

FOUNTAINHALL-HOUSE. See PENCAITLANN.

FOURMILEHILL, a hamlet in the parish of Corstorphine, Edinburghshire. Population, 60.

FOURTOWNS (THE), four contiguous villages, and circumjacent lands, in the southern part of the parish of Lochmaben, in the district of Annandale, Dumfries-shire. The villages are Hightae, Greenhill, Heck, and Smallholm. Population collectively, 644. Houses, 156. The lands are a large and remarkably fertile tract of hold, stretching along the west side of the river Annan, from the vicinity of Lochmaben castle, the original seat of the royal family of Bruce, to the southern extremity of the parish. The inhabitants of the villages are proprietors of the lands, and hold them by a species of tenure, nowhere else known in Scotland except in the Orkney islands; and they have, from time immemorial, been called "the King's kindly tenants," and occasionally the "rentallers" of the Crown. The lands originally belonged to the kings of Scotland, or formed part of their proper patrimony, and were granted, as is generally believed, by Bruce, the Lord of Annandale, on his inheriting the throne, to his domestic servants, or to the garrison of the castle. The rentalers were bound to provision the royal fortress, and probably to carry arms in its defence. They have no charter or seisin, but hold their title by mere possession, yet can alienate their property by a deed of conveyance, and procuring for the purchaser enrolment in the rental-book of the Earl of Mansfield. The new possessor pays no fee, takes up his succession without service, and in his turn is proprietor simply by actual possession. The tenants were, in former times, so annoyed by the constables of the castle, that they twice made appeals to the Crown; and on both occasions—in the reigns respectively of James VI. and Charles II.—they obtained orders, under the royal sign-manual, to be allowed undisturbed and full possession of their singular rights. In more recent times, at three several dates, these rights were formally recognised by the Scottish court of session and the British house of peers. A chief part of the lands existed till the latter half of last century, in the form of a commonty; but, it was then, by mutual agreement, divided; and being provided, in its several parcels, with neat substantial farm-houses, and brought fully into cultivation, it soon became more valuable than the original allotments immediately adjacent to the villages. More than a moiety of the lands, however, has been purchased piecemeal by the proprietor of Rammerscales, whose mansion-house is in the vicinity, within the limits of the parish of Dalton. But such portions as remain unalienated exhibit, in the persons of their owners, a specimen of rustic and Lilliputian aristocracy unparalleled in the kingdom. If the possession of landed property in a regular line of ancestry for several generations is what confers the dignity of gentlemen, that title may be justly claimed by a community whose fathers owned and occupied their ridges and acres from the 13th century. Their names run so in clusters, that soubriquets are very generally in use. * Richardson is the most frequent,

and Rae, Kennedy, Nicholson, and Wright are prominent. These names and others were borne by some companions of Wallace and Bruce, in their patriotic struggles against the usurping Edward.

FOVERAN, a parish, containing the post-town of Newburgh, on the east coast of Aberdeenshire. It is bounded by the German ocean, and by the parishes of Belhelvie, Udney, Logie-Buchan, and Slains. Its length westward is about 7 miles; and its breadth is about 3 miles. The river Ythan, just before entering the ocean, forms the north-east boundary; a small tributary of that river forms the northern boundary; and two other small streams run respectively through the interior and along the southern boundary to the ocean. The general appearance of the parish is level; but the ground rises by a gradual ascent from the sea, though not to any considerable height. The soil varies from a sandy loam to a rich loam and a strong clay; and is all arable, fertile, and quickly promotive of vegetation. Grass crops are generally early and luxuriant. There are now several fine plantations. The Ythan is navigable for small craft for nearly 3 miles, and for vessels of 100 or 150 tons about a mile. Salmon trout and flounders abound in it; and there are numerous beds of mussels, which are gathered in large quantities, and sold for food and bait at Aberdeen. Pearls are found in the bed of the river, and have been pretty successfully searched for 3 or 4 miles up. Near Newburgh are the ruins of an old chapel called the Red chapel of Buchan. About half-a-mile from the village are the ruins of the old castle of Knockhall, one of the seats of the family of Udney. The name Foveran signifies 'a spring,' and alludes to a very fine fountain, adjacent to the site of a very ancient castle, called the castle of Foveran, which probably defended the first nucleus of the local population, but is now quite extinct. The mansions are Foveran-house, Tillery-house, and Ythan-lodge. There are five principal landowners. Assessed property in 1860, £9,099. Population in 1831, 1,609; in 1861, 1,891. Houses, 332.

This parish is in the presbytery of Ellon, and synod of Aberdeen. Patron, the Crown. Stipend, £192 14s. 7d.; glebe, £11 5s. Unappropriated tithes, £56 5s. Schoolmaster's salary, £50, with £33 19s. 4d. fees and other emoluments. The parish church is a plain edifice, built in 1794, and contains about 700 sittings. There is a Free church: attendance, 200; sum raised in 1865, £116 4s. 6d. There are three non-parochial schools in the parish; one of them, with a small endowment, at Cultercullen. There are a savings' bank and a friendly society in Newburgh.

FOWLA, or FOULA, an island belonging to the parish of Walls in Shetland. It lies 16 miles west-south-west of the nearest part of the Shetland mainland, and 35 north-north-east of the nearest part of Orkney. It measures about 3 miles in length and $1\frac{1}{2}$ mile in breadth. It is supposed to be the Ultima Thule of the ancients, not only from the analogy of the name, but also from more undoubted testimony; for Tacitus, speaking of the Roman general, Agricola's victories, and the distance to which he penetrated northward, thus expresses himself: "Invenit domitique insulas quas vocant Orcades, despectaque Thule." Now Fowla, which is high ground, is easily seen in a clear day from the northern parts of the Orkneys. It is very bold and steep towards the west; its cliffs, according to Edmonstone, literally losing themselves in the clouds, or appearing to pierce the belt of clouds which frequently hangs around them. The only landing-place, called Ham, is on the east side, and is much resorted to as a fishing-station. The east side, which is much lower

than the west, is composed of granite, micaceous schist, and quartz; the south, west, and north sides are composed of sandstone and sandstone-flag. The whole island, as seen at a little distance from the sea, appears to consist of five conical hills, rising steeply from the water to the clouds. The highest peak, called the Kaim, has an altitude of about 1,300 feet; and part of the sea-faces of the hills, are almost sheer cliffs, sublime and terrible, from their summit to their base. "The low lands remote from the sea," says Dr. Hibbert, "are frequented by parasitic gulls, which build among the heather. The surface of the hills swarms also with plovers, Roy-ston crows, scapies, and curlews. On reaching the highest ridges of the rocks, the prospect presented on every side is of the sublimest description. The spectator looks down from a perpendicular height of 1,100 or 1,200 feet, and sees below, the wide Atlantic roll its tide. Dense columns of birds hover through the air, consisting of maws, kittiwakes, lyres, sea-parrots or guillemots. The cormorants occupy the lowest portions of the cliffs, the kittiwakes whiten the ledges of one distant cliff, gulls are found on another, and lyres on a third. The welkin is darkened with their flight; nor is the sea less covered with them, as they search the water in quest of food. But when the winter appears, the colony is fled, and the rude harmony produced by their various serenas is succeeded by a desert stillness. From the brink of this awful precipice, the adventurous fowler is, by means of a rope tied round his body, let down many fathoms; he then lands on the ledges where the various sea-birds nestle, being still as regardless as his ancestors of the destruction that awaits the falling of some loose stones from a crag, or the untwisting of a cord." The skua gull, called by the Shetlanders the bonxie, occupies one of the highest cliffs, and reigns there supreme over all the feathered world around him, striking such awe even into the eagle as to deter even that mightiest of predatory-birds from attacking a lamb in his presence; and hence is the skua gull a great favourite of the natives. Fowla affords excellent pasturage for sheep, and supports a remarkably hardy population, who have few wants, and feel strong attachment to their rugged home. The minister of Walls visits the place only once a-year; but a schoolmaster, acting in some degree also as a missionary, is constantly resident. Population in 1841, 215; in 1861, 233. Houses, 42.

FOWLIS, a post-office village in the parish of Fowlis-Wester, Perthshire. It stands on the old road from Stirling to Perth, 5 miles north-east of Crieff. It is a place of considerable antiquity; and, about twenty years ago, with the exception of a new inn, a neat school-house, and two or three slated cottages, it continued to wear the mean, poor, semi-barbarous appearance which it had presented for centuries. In the village is an ancient and curiously sculptured cross. On one side are figures of hunters and a hound chasing a wolf, which carries in its mouth a human head; and on the other side are some nearly obliterated sculpturing, and gyves for the chaining of offenders, and fixing them up to popular derision. A fair for black cattle and for the hiring of servants is held on the 6th of November. In the vicinity are the lands of Laeock, which exult in the dignity of being a burgh-of-barony, and legal seat of a weekly market and two annual fairs, but, owing probably to the necessity of the case, have modestly allowed their baronial and marketing importance to become visible only on paper. On a hill to the north is a double concentric Druidical circle, the exterior range comprising 40 stones, and measuring 54 feet in circumference; and on the west

are a crumlech and three other large Druidical stones. Population, 187. Houses, 48.

FOWLIS, a village in the parish of Fowlis-Easter, Perthshire. It stands on the eastern verge of the county, about 6 miles north-west of Dundee. Population, 46. Houses, 9.

FOWLIS-EASTER, a parish, containing the village of Fowlis, on the eastern border of Perthshire. It commences at the summit of the braes of the Carse of Gowrie, and terminates in the level of the carse at a part about $4\frac{1}{2}$ miles west-north-west of Dundee. It has a triangular form, and measures $3\frac{3}{4}$ miles on its north side, $2\frac{1}{4}$ on its east side, and $4\frac{1}{4}$ on its south-west side. Its area is 1,944 acres. It is bounded on the north by Lundie and Auchterhouse; on the east by Liff; and on the south-west by Liff and Longforgan. Black-law, in the north-west corner, is the only hill. The general surface of the parish slopes gently to the south, and is fully enclosed, and beautifully cultivated. A lake called the Piper-dam, and covering 55 acres, was drained for the sake of its marl and its peat. Two-thirds of the parish are in tillage, and the remaining third is disposed chiefly in woodland and pasturage. Fowlis was the first district in an extensive tract of the contemninous counties in which a regular rotation of crops was attempted. The church of Fowlis, according to an inscription still partly legible on a large oak-beam which supported the organ-loft, was built in the year 1142, in fulfilment of a lady's vow, wrung from her by solicitude for her husband's safe return from the wars of the crusade. Sir Andrew Grey, the ancestor of Earl Grey, made it collegiate with suitable endowments in the reign of James II., and placed in it a provost and several prebends. The edifice is 89 feet long, and $27\frac{3}{4}$ wide, and is all built of hewn stone. A cross surmounts the east gable; another 8 feet high is in the burying ground; and a third 14 or 15 feet high formerly stood $\frac{1}{4}$ mile to the north. Remains of fonts exist at the west end of the church, and on the exterior and in the interior of its door. Beside it is the burying vault of Lord Grey. This parish is united to LUNDIE: which see.

FOWLIS-WESTER, a parish, containing the post-office villages of Fowlis and Gilmerton, and the hamlet of Buchanty, near the centre of Perthshire. It consists of two very slenderly united divisions. The southern division is nearly a rectangle, stretching east and west on the south side of Almond water, and connected near its north-east angle, with the northern division, over a distance of only half-a-mile. It is $5\frac{1}{2}$ miles of average length from east to west, and $3\frac{3}{4}$ miles of average breadth from north to south; and is bounded by Monzie, Methven, Madderty, and Crieff. The northern division suddenly swells out from its narrow breadth of half-a-mile at the connecting line with the southern division, to an average breadth of $1\frac{1}{4}$ mile, and stretches away $5\frac{3}{4}$ miles to the north. It is bounded by little Dunkeld, by a detached part of Monzie, by the main body of Monzie, and by Dull. The river Almond, coming down from the north-west, and bending eastward at the point of its touching the parish, forms, for 3 miles, the northern boundary of the southern division, and, in the lower part of its course, runs along the line of connection between the two divisions. This stream here abounds in a small kind of trout; and a few yards above the bridge of Buchanty, forms a curious and attractive cascade. Running beneath a wall of rock 6 feet high, it tumbles over a rocky breast-work 7 feet in height, into a very deep tumultuous pool; and, in dry weather, when its volume is diminished, it sheds its waters round a rocky projection, from which a basket was often, at one period, suspended by a chain, and received numerous salmon-trout in their

attempt to overleap the cascade. Breaking away from the pool, it runs in a profound rocky canal, amid rocky fragments and clusters of stones, overhung by trees and copsewood, and canopied with mimic clouds of many-coloured spray, and passes below the single arch of Buchanty bridge, 15 feet in span, and rising on a level with the adjacent ground, —the surface of the water 32 feet below the summit of the arch. The Pow, or Powaffray water, a mossy and sluggish stream, rises on the western limit of the southern division of the parish, and, over a course of $7\frac{1}{4}$ miles, uniformly traces its western and its southern boundary, except for a brief way before leaving it, during which it runs slightly into the interior. This stream, having formerly covered with its waters much of the ground in its vicinity, flows in an artificial channel, cut for it by authority of an act of the Scottish parliament,—remarkable for being the last act passed before the Union. Braan water, celebrated for its scenery and cascades, comes down from the west, and forms the northern boundary with Little Dunkeld. Milton burn, coming down from the north-east, and falling into the Almond, traces the boundary with the detached part of Monzie. Shellegan burn, a beautiful limpid stream, flowing parallel with the former, forms the boundary with the main body of Monzie. The ravines and romantic dells through which these streams flow are graced with numerous tiny cascades and little cataracts, which please by the frequency of their recurrence and the variety of their aspect.

The northern division of the parish consists of ragged spurs of the Grampians, divides Logiealmond from Strathbraan, and is nearly all wild or pastoral. Its surface rises gradually, for a brief way, from Braan water on the north, and consists of mountainous elevations till very near the Almond, when it descends with a rapid declivity and terminates in a stripe of arable land. The southern division is remarkably varied, and, in general, exceedingly unequal in surface. On the banks of the Almond it sends down hills dotted and freckled with trees and copse-wood. On the north-east is the estate of Keiller, undulating and hilly, but beautified with the trees of an ancient lawn, and containing much fertile soil, well-cultivated and enclosed. Along the banks of the Pow, over the whole extent of the southern boundary, is an opulent and finely-sheltered valley. All the rest of the southern division consists of dells and hilly ranges, remarkably various in form. The hills are so distinctively featured and naturally classified, as to be arranged under the different names of the braes of Fowlis, the braes of Dury, the braes of Gorthy, and the braes of Keiller; and they have all a southern exposure, and are so adorned with stripes and clumps of plantation, with little masses of copsewood, with rich enclosures, with winding and romantic ravines, and with rills, now purling and limpid, now noisy and foaming, as to wear a very imposing appearance. In the south-west angle are the numerous fenced-fields, gardens, and plantations around the superb Gothic modern house of Abercainey. The approach to that mansion passes, for 500 yards, through forest, along the side of a deep, sinuous, rocky dell, densely crowded with shrubs and trees, and traversed by a brawling and often invisible stream; and, then, retiring obliquely 300 yards farther through the forest, presents, in succession to the view, a profusion of scenic beauties,—wide sloping lawns, rich meadows, gay garden-grounds, pleasing acclivities, tiny cascades, and artificial lakes and islands.—Nearly two miles north-west, and on the western limit, around the house of Cultoquay, is a luxuriant wood, straggling in clumps and detachments over

gravelly hillocks, so various and strange in form, and thrown together in so remarkable a congeries, as to attract the notice and occasionally excite the wonder of the tourist. From the site of the manse, on the declivity of the high rising grounds east of Cultoquay, a magnificent prospect is obtained of Strathearn and Strathmore, terminated by the grand and distant outline of the Ochil and the Lomond hills.

The soil, in the valley of the Pow, consists of alluvial deposit; and, in other arable parts of the parish, is very various—gravelly, sandy, clayey, and loamy; and, where it rests on rock, is, in general, fertile, but where it has a clayey subsoil, is cold and wet and unproductive. Slate is found in the hills of the northern division; a species of limestone occurs at Buchanty; and sandstone is, in general, plentiful. On the farm of Castleton, in the estate of Fowlis, on the east side of a den or ravine, is a grassy mound, comprising the last ruins of the castle and seat of the Earls of Strathearn. Malise, the 1st Earl, acted a distinguished part, in 1138, at the battle of the standard. Gilbert, his grandson, founded, in 1200, the monastery of Inchaffray, near the Scottish border. Malise, the 7th Earl, acted an energetic part in the wars of the succession, signed the celebrated letter to the Pope, and during the minority of David Bruce, made strenuous opposition to Edward Baliol; but, proving to be on the losing side of the contest, he suffered a forfeiture of his earldom, and left no issue to claim a resumption of his rights. Mary, his only sister, however, having been married to Sir John Moray of Drumsergard, the lineal heir of Sir Andrew Moray of Bothwell, the earldom was afterwards restored by King David to her son, Sir Maurice Moray; and, he being killed, in 1346, at the battle of Durham, and leaving no issue, it reverted to the crown. The family of Abercainey, descended from Maurice, the last Earl's brother, are now the lineal representatives of both the Earls of Strathearn and the Lords of Bothwell. The Maxtones of Cultoquay also are an ancient family descended from the same remote common ancestor as the Maxwells. There are nine principal landowners. The total present rent-value of the arable land is about £11,600. About 7 parts in 25 of the entire area are arable, 16 pastoral, and 2 woodland. The yearly value of raw produce was estimated in 1837 at £28,000. Assessed property in 1866, £14,092. The constructing of sieves is a species of manufacture nearly peculiar to the parish; and, while of some antiquity, continues to yield ample support to a limited population. The weaving of cotton cloth for manufacturers in Glasgow likewise employs some persons. Population in 1831, 1,680; in 1861, 1,433. Houses, 295.

This parish is in the presbytery of Auchterarder, and synod of Perth and Stirling. Patron, Moray of Abercainey. Stipend, £224 17s. 3d.; glebe, £20. Unappropriated tithes, £142 5s. Schoolmaster's salary, £50, with £30 fees. The parish church is an old building, at present undergoing repairs, and containing about 800 sittings. Small sections of the parish belong quoad sacra to the parochial church of Monzie and the government church of Amulree. There are four non-parochial schools.

FOWLSHEUGH. See DUNNOTAR.

FOWLSHIELDS. See SELKIRK.

FOXLEY, a village in the parish of Old Monkland, Lanarkshire.

FOYERS, or FEACHLIN, a stream of the central part of the mainland of Inverness-shire. It rises among the lofty mountains south-west of the sources of the Findhorn, and runs about 14 miles north-north-westward, along a high glen, and through a

wild country, to a sudden precipitation of its waters over the south-eastern screen of Loch Ness, and into the waters of that lake, at a point about a mile above the General's hut, and 11 miles from Fort Augustus. It is famous for its romantic character, and still more for two stupendous falls which it makes between the glen and the lake. "From its form," says Stoddart, "there can be little doubt that the glen was once floated by a lake, until the waters forcing their way through the mountain-side, formed the awful fall which soon presented itself to our view." The falls are situated nearly 2 miles from the shore of Loch Ness, and may be approached either by the road from Fort-Augustus to Inverness on that side, or by landing from the steam-boat, which waits regularly that passengers may have an opportunity of visiting them, or by rowing specially across from the opposite shore; and excellent footpaths lead to them through the grounds of Fraser of Foyers. The lower fall—which is first approached in this way—is by much the higher and more striking of the two. After ascending the hills to a considerable height, the tourist descends towards the bank of the river, and at length finds himself on a narrow but lofty ridge of rock covered with green turf, which rises from the bed of the river, and is nearly surrounded by its waters. Here the fall meets his astonished view immediately in front of where he stands. He is surrounded with rocks of enormous height, fringed with tangled masses of shrubs, which are nourished by the constant spray ascending from the boiling waters. Oak and pine trees of fantastic shape grow from every rent and crevice of the rocky walls,—adding a wild grace to what would otherwise be a scene of horror. Clouds of vapour for ever ascend; and the roar of the falling waters is never hushed. "Through the 'shapeless breach' bursts a torrent, which, confined by the narrow channel above," says Stoddart, "shoots in one unbroken column, white as snow, into a deep caldron formed by the black rocks below. By the vast height and the large body of the water, a quantity of spray is created, which forms a perpetual shower, glittering like dew on the verdure around, casting a transparent mist over the gloomy caverned rocks, and rising like the smoke of a furnace into the air. This appearance, seen at a considerable distance, has occasioned the country people to give it the picturesque name of *Eass na Smudh*, by which they also characterize the falls above Kinloch-Leven. No spot, however, which I have seen, is at all comparable to this, in the strong and sudden impression which it produces. The falls of Clyde are, indeed, more beautiful, more varied, and have a larger quantity of water; but the openness of the view renders them much less sublime. There is something in the darkness and imprisonment of wild overhanging crags, inexpressibly awful; and in this instance their grandeur is heightened by the kindred impulses around, by the ceaseless toil of the struggling river, by the thundering sound of a thousand echoes, and, where the jutting barriers do not exclude the view, by the mighty summit of Mealfourvounie rising beyond the lake." Altogether the lower fall of the Foyers is a scene of the utmost sublimity; and even the boldest observer cannot stand on the ledge of rock we have mentioned, and behold the mass of waters tumbling from above into the dark chasm beneath, without his feelings being excited in the highest degree. Dr. E. D. Clarke has pronounced it to be a finer cascade than that of Tivoli, and inferior only to the falls of Terui. Many varied opinions as to the height of this fall have been given; but we believe

we are correct when we say, that it is about 90 feet.

The upper fall is about a quarter of a mile from the lower. The height of it is only about 40 feet; but it also exhibits great grandeur, and, were it not for the neighbourhood of the other, would be more admired than it is. Here the river sweeps its dark brown waters through a smooth meadow, until, reaching the edge of the rock over which they are precipitated, they break into white foam, and disappear in the abyss. Lofty rocks and varied wood lend their aid also to this scene; and a picturesque bridge, which here spans the ravine, immediately below the fall, at a height of about 200 feet above the surface of the stream, renders it more pleasing to the eye, and better adapted for the pencil of the artist, than the lower fall. Before the erection of the bridge, about the year 1786, two or three rough planks carelessly thrown across the chasm formed the only means of passage from the one bank to the other. But the best view of this fall and its surrounding scenery is to be obtained from the channel of the stream below the bridge. A narrow path descends the rock on the eastern side of the channel, yet of such a character that it is not every visitor who has nerve sufficient to descend. The grandeur of the scenery, however, cannot be fully enjoyed, without making this descent. The rapid between the two falls has a declivity of 30 feet, through a channel fretted in rock; so that the total height, from the top of the upper to the bottom of the lower fall, is 160 feet.

"The fall of Foyers," says Professor Wilson, "is the most magnificent cataract, out of all sight and hearing, in Britain. The din is quite loud enough in ordinary weather—and it is only in ordinary weather that you can approach the place, from which you have a full view of all its grandeur. When the fall is in flood—to say nothing of being drenched to the skin—you are so blinded by the sharp spray smoke, and so deafened by the dashing and clashing and tumbling and rumbling thunder, that your condition is far from enviable, as you cling, 'lonely lover of nature,' to a shelf by no means eminent for safety, above the horrid gulf. Nor in former times was there any likelihood of your being comforted by the accommodations of the General's hut. In ordinary Highland weather—meaning thereby weather neither very wet nor very dry—it is worth walking a thousand miles for one hour to behold the fall of Foyers. The spacious cavity is enclosed by 'complicated cliffs and perpendicular precipices' of immense height; and though for a while it wears to the eye a savage aspect, yet beauty fears not to dwell even there, and the horror is softened by what appear to be masses of tall shrubs or single shrubs almost like trees. And they are trees, which on the level plain would look even stately; but as they ascend, ledge above ledge, the walls of that awful chasm, it takes the eye time to see them as they really are, while on our first discernment of their character, serenely standing among the tumult, they are felt on such sites to be sublime. 'Between the falls and the strath of Stratherrick,' say the Messrs. Anderson, 'a space of three or four miles, the river Foyers flows through a series of low rocky hills clothed with birch. They present various quiet glades and open spaces, where little patches of cultivated ground are encircled by wooded hillocks, whose surface is pleasingly diversified by nodding trees, bare rocks, empurpled heath, and bracken bearing herbage.' It was the excessive loveliness of some of the scenery there that suggested to us the thought of going to look what kind of a stream the Foyers

was above the fall. We went, and in the quiet of a summer evening, found it

"Was even the gentlest of all gentle things."

FRASIGILL. See TONGUE.

FRANKFIELD LOCH, a small lake in the Barony parish of Glasgow, serving as a feeder to the Glasgow town mills.

FRAOCH ISLAND, a small island in Loch Awe, near Kilchurn castle, Argyshire. It was at one time the Hesperides of the surrounding country; and is the subject of a boldly romantic local legend. It was granted in the 13th century, by Alexander III. to Gilbert Macnaughton; and it contains the ruins of a strong fortalice in which the descendants of Macnaughton resided.

FRAOCHY (Loch), a lake in Glenquoich, in the parishes of Dull and Kenmore, Perthshire. It is about $2\frac{1}{2}$ miles long and $\frac{1}{2}$ a mile broad. In its south-west corner is a small wooded island, which is the scene of an interesting legend, told in the beautiful poem of "Dun Fraoich," published in Gillies' collection of Gaelic songs. On the south bank of the lake is a shooting-lodge of the Marquis of Breadalbane.

FRASERBURGH, a parish, containing the post-town of Fraserburgh and the village of Broadsea, in the north-eastern extremity of Aberdeenshire. It is bounded by the German ocean, and by the parishes of Rathen, Strichen, Aberdour, Tyrie, and Pitsligo. But a considerable district of it on the south-west is detached from the main body, to the distance of $1\frac{1}{2}$ mile, by the intervention of Rathen. The length of the whole parish south-westward, including the interjected tract of Rathen, is 8 miles; and its breadth is about $3\frac{1}{2}$ miles. The coast extends about 4 miles, and is partly sandy and partly rocky. Kinnaird-head, in N. lat. $57^{\circ} 42'$, and W. long. $2^{\circ} 1'$, is a high promontory, projecting into the sea. It is generally believed to be the Promontorium Taixalium of Ptolemy, being the turning-point into the *Æstuarium Vararise* or Moray frith. There is an old tower on this promontory called the Wine tower, with a cave under it, and at one time probably connected with the adjoining house, now the lighthouse. On the south-east of Kinnaird-head is the beautiful bay of Fraserburgh, 3 miles in length. Along the shore the soil is in general good; but the interior parts are gravelly. Except the hill of Mormond, situated on the south-west boundary, and elevated 800 feet above sea-level, the whole surface is nearly flat, gradually rising, however, from the coast to its most distant and elevated district. The sea has receded from the land in some places, and encroached on it in others. The land, except about 80 acres of moss, is all arable. The parish, at one time, abounded with wood, and there are some fine old trees at Philorth house, the seat of Lord Saltoun, to which several beautiful and extensive plantations have been added. Granite, limestone, and ironstone abound; and there are ealybeate springs in different places. The principal antiquities are an old tower, at the west end of the town, afterwards to be noticed, the ruin of a chapel, called the college, at which some of the monks of Deer resided, and where probably they held a seminary, the ruins of another chapel, and some ruins of Danish or Pictish houses. Lord Saltoun is much the most extensive landowner, and there are two others. The valued rental is £3,000 Scots. Assessed property in 1860, £13,876. Population in 1831, 2,954; in 1861, 4,511. Houses, 696

This parish is in the presbytery of Deer, and synod of Aberdeen. Patron, Lord Saltoun. Sit-

pend, £261 19s. 3d.; glebe, £9. Unappropriated tithes, £14 11s. 5d. The parish church is a plain structure, built in 1802, situated about the middle of the town, with a spire and bell, and contains about 1,000 sittings. There is a Free church, with an attendance of about 500; and the sum raised in connexion with it in 1865 was £320 16s. 9d. There is an Episcopalian chapel, built in 1793, with 288 sittings, and an attendance of nearly 200. There is also a Congregational chapel, which was built in 1853, and has 550 sittings, and an attendance of 300. The parochial school, situated in the town, is a very superior establishment, with a range of education equal to that of many of the Scottish burgh academies. Schoolmaster's salary, £50, with £56 fees, a share of the Dick bequest, and other emoluments. There are nine other schools. The parish was originally called Philorth; and that name is still retained by its principal estate.

FRASERBURGH, a post-town, a seaport, and a burgh of regality, stands on the north-west side of the bay of Fraserburgh, and south side of Kinnaird-head, $17\frac{1}{2}$ miles north-north-west of Peterhead, 22 east of Banff, and 42 north of Aberdeen. It was founded early in the 16th century, on the estate of Fraser of Philorth; and was constituted a burgh of regality in 1613. It no doubt took the name of Fraserburgh from Fraser of Philorth, either originally as lord of the soil or subsequently as the procurer of its charter; and it seems to have very soon communicated its name to the parish. It is neatly built, of a square form, with most of the streets, which are spacious, crossing each other at right angles. Numerous improvements have been made in recent times. Elegant and comfortable houses have been erected, and new streets laid out on a symmetrical plan. The cross, erected by Sir Alexander Fraser, was a fine structure, of a hexagonal figure, with three equidistant hexagonal abutments, a ground area of about 500 feet, and a surmounting stone pillar 12 feet high, bearing the British arms and the arms of Fraser; but it has been greatly curtailed and altered. At the west end of the town are vestiges of a quadrangular tower of three stories, which was a small part of a large edifice intended to have been erected as a college, by Sir Alexander Fraser, who obtained a charter, in 1592, for the institution of an university here; but the design was never carried into effect. The places of worship and the parochial schoolhouse are creditable structures. The town house is a handsome building, erected in 1855, with a dome. The harbour commissioners' hall is an elegant and commodious edifice.

"Fraserburgh," said the New Statistical Account in 1840, "is one of the old burghs of regality, having its government vested in Lord Saltoun, the superior, two bailies, a dean of guild, a treasurer, and a council. His lordship has the right and authority of provost, with power to nominate and appoint yearly the new magistrates and council, with the advice and consent of the old. By the charter, the feuars and incorporated brethren of the guild have liberty to exercise all kinds of trade and merchandise. Those who are not freemen, may be debarred this privilege; but, for a long period this exclusion has not been insisted on. The feuars are obliged to uphold the public works of the town; but for doing so the market customs were granted them; and in lieu of some privileges which they possessed over commonable lands, they have obtained others from Lord Saltoun, which now rent at £58 sterling per annum. These funds have been hitherto applied to repairing the streets, and opening new ones, but chiefly to bringing water into the town for domestic use, of which its inhabitants

stood in great need, and of which there is now an ample supply. It is not improbable, however, that this burgh will soon undergo such a change in its constitution, as has been lately effected in others." Sheriff small debt courts are held four times a-year.

Fraserburgh is in a thriving condition at once as a seaport, as a centre of the herring fishery, and as the seat of a considerable provincial trade. It began, during the last war, to experience a great, progressive and permanent increase to all its previous worth as a port, by the founding of a spacious artificial harbour at it as a place of retreat for British trading ships, suffering from stress of weather in the North sea,—this being the nearest point of land which can be reached. The works cost about £50,000, and include commodious piers and jetties on an area of 6 Scotch acres. A new harbour to the north of this is at present in course of construction, and will shortly be finished, to comprise an area of about 17½ acres, and to be sheltered by a breakwater extending from the end of the pier. The present harbour also, which does not admit vessels of greater draft than 14 feet, is in the course of being deepened. These works render Fraserburgh one of the best retreats for shipping on the north-east coast. Yet the situation of the town, with the sea stretching in three directions round the land, thus left to occupy only the remaining quadrant of the circle, may preclude the prospect of its ever becoming a great port. Contiguous to the harbour is a tolerable road for shipping, with good anchorage in Fraserburgh bay. There are numerous vessels belonging to Fraserburgh. All sorts of grain, peas, beans, potatoes, and dried and pickled cod, besides herrings, are exported; and coals, timber, lime, tiles, bricks, salt, and general merchandise are imported. The shore dues rose from £35 in 1808 to £2,000 in 1840. In the year 1853, the number of barrels of herrings caught and cured at the Fraserburgh fisheries was 53,755; the number of persons employed in these fisheries was 3,187; and the total value of boats, nets, and lines employed was £18,503. Shipbuilding is carried on to a limited extent; and ropes, sails, and linen yarn are manufactured. The town has a branch of the Bank of Scotland, a branch of the Union bank, a branch of the North of Scotland bank, a savings' bank, a mechanics' institution, a public library, and two societies for the diffusion of religious knowledge. The chief hotel is the Saltoun. Public coaches run regularly to Peterhead and Aberdeen. Population in 1861, 3,101. Houses, 425.

FREEBURN, a locality, with an inn, near the north-east verge of Inverness-shire. It is situated in Strathdearn, on the left bank of the Findhorn, and on the great road from Inverness to Perth, 15¼ miles south-east of Inverness. Fairs are held here on the Saturday after the 19th of May, on the Friday in August before Campbellton, on the Monday in August after Beaully, on the third Tuesday of September, and on the second day in October after Beaully.

FREELAND. See FORGANDENNY.

FRENDRAUGHT. See FORGUE.

FRESGO-HEAD, a small headland in the parish of Freary, near the north-west extremity of Caithness-shire.

FRESWICK, a village on the east coast of the parish of Canisbay, 3 miles south of John o' Groat's house, in Caithness-shire. A fair for horses, cattle, and swine is held here on the first Tuesday of February, old style. Population, 414. In the vicinity are a bay, a headland, and a mansion of the name of Freswick. See CANISBAY. A stream, called Freswick

burn, about 3 or 4 miles in length of course, runs eastward into the bay.

FREUCHIE, a post-office village on the eastern border of the parish of Falkland, 2 miles east by south of the town of Falkland, Fifeshire. It stands at the north-east base of East Lomond hill, on the road from Falkland to Kettle. It is an irregularly built place, in an ill-kept condition; and is inhabited principally by feuars engaged in hand-loom weaving. Here is an United Presbyterian church, with 450 sittings. Population, in 1861, 961.

FREUCHIE (LOCH). See FRAOCUY (LOCH).

FRIARS. See ROXBURGH.

FRIAR'S CARSE. See DUNSCORE.

FRIAR'S GLEN. See FORDOUN.

FRIARTON, a village in the East church parish of Perth. Population, 62. Houses, 8.

FRIARTON (NETHER). See FORGAN.

FRIOCKHEIM, a post-office village in the parish of Kirrkden, Forfarshire. It stands nearly in the centre of the maritime division of the county, at the junction of the Aberdeen railway with the Arbroath and Forfar railway, 6½ miles north-west by west of Arbroath, and 8½ east of Forfar. It rose suddenly into bulk about 25 years ago, by operatives in connection with the textile manufactures being induced to feu houses at a cheap rate on the estate of Middleton; and it acquired material increase of importance first by the construction of the Arbroath and Forfar railway placing it on a grand thoroughfare between these towns, and next by the formation of the Aberdeen railway making it a centre of transit for all places north of the Tay. The railway centre here is envied by three acute curves of rails. The village has a chapel of ease, a Free church, and a Congregational chapel; and it is a station of the county constabulary. Population, in 1861, 1,239.

FRISKY-HALL. See BOWLING BAY.

FROGDEN. See LINTON.

FROON. See FRUIN.

FROSTLY WATER, a rivulet of the parish of Teviothead, Roxburghshire. It rises at Linhope-grains on the south-western verge of the county, and runs about 5 miles northward, along a glen, to a confluence with the Teviot.

FRUID (THE), a tributary of the Tweed, in the parish of Tweedsmuir, Peebles-shire. It rises between Saddle-erag and Falcon-erag on the boundary-line with Dumfries-shire; flows northward ¾ of a mile; next flows in a direction west of north 3¼ miles, receiving on its left Carterhope-burn; and then flows northward 2 miles, and falls into the Tweed 1½ mile above Tweedsmuir-church. The narrow vale which forms its basin, hemmed in by ridges of grassy hills, partakes of the beautiful and romantic character for which Peebles-shire is so remarkable.

FRUIN (THE), a rivulet of the western part of Dunbartonshire. It rises on the mountains in the north-west of the parish of Row, within 2½ miles of Loch-Long, and runs first about 7 miles south-eastward to the vicinity of the point where the parishes of Row, Cardross, and Luss meet, and then about 2¼ miles across the south end of Luss to an influx into Loch-Lomond, nearly opposite the lower end of Inch-Murren. The greater part of its course is along a glen to which it gives the name of GLEN-FRUIN; see that article. It is a good trouting stream.

FUDIA, a small fertile island of the Hebrides, 2½ miles north of Barra. It exhibits a number of granite veins, some of which contain oxidulous iron. Population, 5.

FULDEN. See FOULDEN.

FULGAE SKERRY. See SNETLAND.

FULLARTON, a burgh of barony, within the parliamentary boundaries of the burgh of Irvine,

out situated on the opposite bank of Irvine water, and belonging to the parish of Dundonald, Ayrshire. It is connected with Irvine by a handsome bridge; and is sufficiently large and well-edified to be rather a rival of that town, or a component part of it, than a mere suburb. It was supposed, from the year 1690 to the year 1823, to belong to the parish of Irvine, having in the former of those years been technically united to that parish, but, an appeal having been made to the Court of Session in 1823 on a question of pauper-money, it was found to have legally belonged all along to Dundonald. It has a chapel of ease and a Free church; and shares generally in the institutions and the trade of Irvine. Population, 3,103. Houses, 712. See DUNDONALD and IRVINE.

FULTON, a quondam village, of some little consequence in the times of the Border feuds, but now recognisable only by the vestiges of its castle or peel-house, in the parish of Bedrule, 4 miles south-west of Jedburgh, Roxburghshire.

FUNGARTH, a village in the vicinity of Dundeld, on a tract which belongs politically to Caputh, Perthshire. Population, 76. Houses, 17. See DUNDKELD.

FUNTACK (THE), a stream, issuing from Loch-Moy, and running 3 or 4 miles south-eastward, along an inhabited gleu, to a confluence with the Findhorn, a little below Freeburn, in the parish of Moy and Dalarsie, Invernessshire.

FUNZIE BAY. See FETLAR.

FURNACE, a village with a post-office, in the parish of Inverary, Argyleshire. Population, 75.

FUSHIE-BRIDGE, a locality, with an inn and a post-office, in the parish of Borthwick, Edinburghshire. It is situated near the South Esk, on the road from Edinburgh to Galashiels, 11 miles south-east of Edinburgh by road, but 13 by railway; and it has a station on the Hawick branch of the North British railway.

FUTTIE. See ABERDEEN.

FYNE (LOCH), an extensive sea-loch, formed by ramification of the frith of Clyde, in Argyleshire. It deflects from the main body of the frith, at the head of Kilbranan sound, and in continuation of the broad belt of waters which divides Bute and Arran; and it penetrates Argyleshire in the direction of north-north-west, forming the boundary between the district of Cowal on the east, and the districts of Kintyre, Knapdale, and Argyle-proper on the west. Its length is about 32 miles; and its breadth varies from 12 to 3, but its average breadth is about 4 or 5 miles. Half-way up on the west side, it sends out a small arm called Loch-Gilp, whence is cut the Crinan canal to the sound of Jura: see article CRINAN CANAL. Its depth is from 60 to 70 fathoms. It receives numerous small streams on both shores, and the Aray near its northern extremity. Within 5 miles of its head, it spreads out into a noble bay before Inverary, forming an irregular circle of about 12 or 14 miles in circumference, beautifully indented with a variety of peninsulas, and surrounded by mountains. See INVERARY. Gilpin says, "Its screens are every where equal to the expanse of its waters. They are indeed chiefly naked, and want some such magnificent hand as we had just left at Inverary to spread a little sylvan drapery upon their bare, enormous sides. But what they lose in beauty they gain in grandeur. Their situation also upon the lake operated as another cause, to impress the idea of grandeur. Nothing exalts the dignity of a mountain so much as its rising from the water's edge. In measuring it, as it appears connected with the ground, the eye knows not where to begin, but continues creeping up in quest of a base, till half the mountain

is lost. But a water-line prevents this ambiguity; and to the height of the mountain even adds the edging at the bottom, which naturally belongs not to it. Thus the mountain of Duniquoich, seen from the new inn at Inverary, appears as if it rose from the water's edge, though in fact the Duke of Argyle's lawn intervenes, all which the mountain appropriates; and though it measures only 835 feet, it has a more respectable appearance than many mountains of twice its height unconnected with water. But these screens, though the grand idea is principally impressed upon them, are not totally devoid of beauty. Two circumstances in a lake-screen produce this quality; the line, which its summits form, and the water-line, which is formed by projections into the lake. Of these modes of beauty we had great profusion; and might have filled volumes with sketches. But unless there is something in a scene besides these beautiful lines, something which is striking and characteristic, it has little effect in artificial landscape. Uncharacterized scenery is still less adapted to uncoloured drawing, the beauty of which depends chiefly on composition and the distribution of light. In painting, indeed, colouring may give it some value; but in this kind of simple drawing, something more interesting is required to fix the eye; some consequential part, to which the other parts of the composition are appendages. In our whole ride round this extensive bay of Loch-Fyne, we met only one object of any consequence to mark the scenery. It was a ruined castle upon a low peninsula. The lake spread in a bay before it, and behind it hung a grand curtain of distant mountains; one of which is marked with a peculiar feature—that of a vast ridge sloping towards the eye. We now approach the end of the lake, where, in the seaman's phrase, we raked a long reach of it. When we view in this direction, and conceive ourselves at the head of a bay of salt water, sixty or seventy fathoms deep, four miles in breadth, and at least fifty from the sea, we have a grand idea of the immense cavern, which is scooped out between these ranges of mountains as the receptacle of this bed of waters. If we could have seen it immediately after the diluvian crash, or whatever convulsion of nature occasioned it, before the waters gushed in, what a horrid chasm, must it have appeared!

So high as heaved the tumid hills, so low
Down sank a hollow bottom, broad, and deep
Capacious bed of waters"

The ruined castle noticed by Gilpin, in the above extract, is that of Dunderawe, a very ancient fortress of the Ardkinlas family. The present building bears the date 1596. Loch Fyne has been, from time immemorial, noted for its herrings, which are of a superior quality to any found in the Western seas. The fishery commonly begins in July or August, and continues till the 1st of January, during which time the lake is frequented by vast shoals. At one period there were annually caught and cured in this arm of the sea upwards of 20,000 barrels of herrings, valued at 25s. per barrel.

FYVIE, a parish, containing a post-office station of its own name, in the Turriff district of Aberdeenshire. It is bounded by Turriff, Montquhitter, Methlick, Tarves, Old Meldrum, Daviot, Rayne, and Auchterless. Its church is distant 9 miles from the town of Turriff, and $7\frac{1}{2}$ from the town of Old Meldrum. The greatest length of the parish, south-westward, is 13 miles; its greatest breadth is 8 miles; and its area is about 42 square miles. The small river Ythan runs from west to east, in a very devious course, first southward and then northward, through the parish, dividing it into nearly two equal parts. The surface of the parish is uneven.

with a pleasing variety; but the hills are of small elevation. Eastertown hill, in the southern extremity, is the principal elevation. There is a small ridge, termed the Windy hills. The soil is various, but, in general, fertile, especially along the banks of the Ythan, in the Howe of Fyvie, where are situated the church and Fyvie castle, the eminences surrounding which are covered with wood. An extensive and valuable plantation, chiefly of firs, also runs in the Den of Rothie, west from the Howe of Fyvie, for nearly three miles. There are, in all, between 1,700 and 1,800 acres of wood in the parish. In the northern district, there are large tracts of moss, and a poor soil; but much of the land has been improved by draining. The heath and moss may be estimated at nearly 7,000 acres. The remainder, exclusive of that which is covered with wood, is chiefly arable; but there are about 2,500 acres of pasture land. The total yearly value of produce has been estimated at £43,784. Whinstone is the chief mineral: it is of excellent quality, and may be obtained in immense slabs. Fyvie castle is the principal mansion: it is an extensive and venerable Gothic edifice,—one of the first, even in the county. It stands on the north-eastern bank of the Ythan, in a beautiful park, within which there is an extensive lake, well-stocked with fish. Rothie, about 3 miles west of the church, is a pleasant modern mansion, adorned with tasteful plantations; so also is Kinbroom, about a mile west from Rothie. Gight castle is a fine old ruin, on the north bank of the river, in the near vicinity of natural and planted woods, amid a combination of very beautiful scenery. There are also ruins of a priory of the Tyronenses, said to have been founded by Fergus, Earl of Buchan, about

the year 1179; and afterwards dependent on the abbey of Aberbrothock. A hugh of Fyvie is said to be alluded to in certain charters preserved in Fyvie castle; and there is still a hamlet called Lewes-of-Fyvie. The parish contains seven corn mills, and is traversed by the road from Aberdeen to Banff. A coach passes through from Turriff in connexion with the Inverury station of the Great North of Scotland railway. Fairs are held on the estate of Fyvie at Fastern's E'en, and on the day in July before Strichen. The principal landowners are the Earl of Aberdeen, Gordon of Fyvie, and Leslie of Rothie; but there are several others. The real rental is about £6,200. Assessed property in 1860, £13,663. Population in 1831, 3,252; in 1861, 4,344. Houses, 791.

This parish is in the presbytery of Turriff, and synod of Aberdeen. Patron, Gordon of Fyvie. Stipend, £223 19s. 11d.; glebe, £17 10s. Unappropriated teinds, £122 14s. 2d. The bounds of the parish, quoad sacra and quoad civilia, are not now the same. A district in the southern part of the parish, containing a population of about 75, is annexed quoad sacra to Daviot; and another on the west, containing a population of 25, is annexed to Rayne. The parish church was built in 1808, and contains 1,114 sittings. There is a chapel of ease at Millbrex, containing about 500 sittings, and aided from the royal bounty. There is a Free church of Fyvie: attendance, 375; sum raised in 1865, £196 17s. 8d. There are two Episcopalian chapels, at respectively Woodhead and Meiklefolla,—the latter with an attendance of 250. The parochial schoolmaster has a salary of £45, with about £37 fees, and a share of the Dick bequest. There are 5 non-parochial schools and a savings' bank.

G

GAASKEIR, a small island of the Outer Hebrides, about 12 miles north-west of Taransay. It is frequented by prodigious flocks of wild geese.

GADGIRTH. See COYLTON and STAIR.

GADGIRTHHOLM. See BANKFOOT.

GADIE (THE), a rivulet of Aberdeenshire. It rises in the parish of Clatt, on the borders of the Garioch district, and runs about 12 miles eastward, through Leslie, Premnay, Oyne, and Chapel of Garioch, to a confluence with the Ury, a short distance above the latter's junction with the Don. The Gadie was the native stream of the poet, Arthur Johnstone of Caskieben, who has celebrated its beauties in several of his Latin poems. It is also the subject of a beautiful old ballad, now very scarce, but formerly very popular, and known to have powerfully affected a Scotch regiment in India,—beginning:

"O an I were where Gadie rins,
Mang fragrant heath and yellow whins,
Or brawlin down the bosky lins,
At the back o' Bennochie."

GAICK FOREST, a wild alpine tract, abounding in deer, and presenting pieces of grandly romantic scenery, but containing no wood, except some scat-

tered birch copse, in the parish of Kingussie, district of Badenoch, Inverness-shire.

GAIRDEN, or GAIRN (THE), a rivulet of the Highlands of Aberdeenshire. It rises on the east end of the alpine Benaven, in the parish of Braemar, adjacent to the houndary with Banffshire; and runs about 20 miles sinuously eastward and south-eastward, along the northern border of Braemar, and through the Glengairden district, to a confluence with the Dee, at a point about 1½ mile above the bridge of Ballater. Its mean breadth is about 10 yards; its mean depth, about 18 inches; and its mean velocity somewhat greater than that of the Dee. The road from Aberdeen to Castleton of Braemar, is carried over it, near its mouth, by the bridge of Gairden.

GAIRIE (THE), a rivulet of Forfarshire. It rises about a furlong north-west of the town of Kirriemuir; flows round the town, at that distance, on three sides; and, after a serpentine course of 2 miles from its origin, assumes a southerly direction. Two miles farther on, it receives a small tributary on its left bank; then runs half-a-mile due east; then resumes its southerly direction, receives $\frac{3}{4}$ of a mile onward a considerable tributary from the west, and, at the point of confluence, passes into the parish of

Glammis; and finally, after a further run of about a mile, falls into Dean water, on the boundary of the parish of Kinnettles.

GAIRLOCH, a parish, containing the post-office station of Gairloch, and the post-office village of Poolewe, on the west coast of Ross-shire. It is bounded, on the north, by the river Greinord, which separates it from the parish of Lochbroom; on the east, by the summit-line of mountains which divides the waters flowing to the eastern sea from those flowing to the west; on the south, by Loch Torridon, which separates it from the parish of Applecross; and on the west, by the Minch or that part of the Deucalidonian sea which divides the Scottish mainland from the Outer Hebrides. Its extreme length is 40 miles; its extreme breadth is 30 miles; and its area is about 600 square miles. Its coast-line is so indented by bays and sea-lochs as to have an aggregate extent of from 80 to 100 miles; and, excepting in the interior parts of the sea-lochs, is all of a bold rocky character. The chief marine indentations are Loch Greinord on the northern boundary, Loch Ewe 5 miles farther south, Gairloch still farther south, and Loch Torridon on the southern boundary. See the articles GREINORD, EWE, GAIRLOCH, and TORRIDON. There are numerous small fresh water lakes, together with streams feeding them or flowing from them; and there is one large magnificent fresh water lake, highly admired by all tourists and considerably known to fame, called Loch Maree, whence flows the river Ewe. See MAREE (LOCH). The scenery of both the seaboard and the interior, variously beautiful, wild, savage, romantic, and sublime, is not excelled in aggregate picturesqueness by that of many parts of the Scottish Highlands. Several summits and ranges have a great height, one of them not less than 3,000 feet above sea-level; and besides forming grand features in general pictures as seen from the low grounds, they in several instances command superb extensive views over a mixture of sea and land. The surface, in an economical respect, resembles generally the other parts of the sequestered Highlands, abounding with hills which afford a scanty pasture for sheep, and interspersed with glens and vales which are tolerably fertile in favourable seasons. About 5,000 acres are under wood. A very fine embellishment is the park of Flowerdale, the seat of Sir Kenneth Smith Mackenzie, Bart., of Gairloch, comprising a beautiful lawn, extensive plantations, and a very steep frontlet of rock softly ringleted with young wood, the mansion itself being an old-fashioned chateau, built about a hundred years ago. Quartz rock and old red sandstone abound, but gneiss and the metamorphic rocks akin to it are predominant. There are various fisheries of salmon, cod, and herrings. The landowners are Mackenzie, Bart., of Gairloch, Mackenzie, Bart., of Coul, Mackenzie of Seaforth, Mackenzie of Letterwee, and Davison of Tulloch. Assessed property in 1860, £6,849. Population in 1831, 4,445; in 1861, 5,449. Houses, 1,042.

This parish, formerly a vicarage, is in the presbytery of Lochcarron, and synod of Glenelg. Patron, the Crown. Stipend, £240; glebe, £30. Unappropriated teinds, £52 5s. 7d. Parochial schoolmaster's salary, £40, with about £4 fees. The parish church was built in 1791, and repaired in 1834, and contains 500 sittings. There is a government church at Poolewe, which was made quoad sacra parochial by the Court of Teinds in December, 1851, and has assigned to it a district containing about one half of the entire population. There is a Free church of Gairloch: attendance, 750; sum raised in 1865, £203 8s. 4d. There is also a Free church at

Poolewe: attendance, 1,000; sum raised in 1865, £121 9s. 11d. There are eight non-parochial schools,—all supported by religious communities or societies.

GAIRLOCH (THE), an indentation of the sea, in the parish of Gairloch, on the west coast of Ross-shire. It projects due eastward, or at right angles with the general coast-line, and has a length of only about 4 miles, with an average breadth of about 2; so that it is not a loch in the ordinary sense of that word, but a bay. Its name is supposed to be derived from the Gaelic *Gearr*, 'short,' and *loch*; and to signify 'the Short loch.' It gives name to the parish in which it is situated. Near its head is a small island of the same name; and at its mouth is a larger island called Longa.

GAIRLOCH, or GARELOCH (THE), a picturesque branch of the frith of Clyde, extending between the parishes of Roseneath and Row, in Dumbartonshire. The frith coming down from the east, and expanding its waters to the breadth of $3\frac{3}{4}$ miles, is cloven, 2 miles below the longitude of Greenock, by the peninsula of Roseneath, and sends away the Gareloch north-westward, over a distance of $7\frac{1}{2}$ miles. The loch commences between the richly wooded Castle-point of Roseneath on the south, and the smiling village of Helensburgh stretching along the beach of Row parish on the north; and is there $1\frac{3}{4}$ mile broad. A mile up, it is overlooked, on its south side, by the tower of Roseneath eastle, peering out from an expanse of forest. On its north-east side, nearly opposite, but a little higher, it is beautified by the turrets and plantation of Ardincaple. Here, having been gradually narrowed to less than $\frac{3}{4}$ of a mile, it suddenly expands to a breadth of more than $1\frac{1}{2}$ mile. Three-fourths of a mile onward, it is indented on the north side, over nearly half its breadth, by a point, or, in Gaelic, a *Rhuc*, which gives name to the parish along its north shore. Here, 100 yards or so respectively from its beach, stand on the one side the church of Roseneath, and on the other the church of Row, both nestled, but especially the former, in spots of luscious beauty, and alluring tourists either to their sites or to vantage-ground in their immediate vicinity, for the beholding of scenery rich and brilliant in the combined attractions of highland and lowland landscape. Near the Row, or indenting point, a long established ferry maintains easy and frequent communication across the loch; and hither, during summer, the steamers—five or six in number—which ply between Glasgow, Helensburgh, Row, and Gairloch-head, career their way, curling the blue water with their rough motion, and streaking the canopy of usually fine-tinted clouds with their dusky smoke. Upward, from this point till within a mile of its termination, the loch has a nearly uniform breadth of about $\frac{3}{4}$ of a mile; and then it contracts to three furlongs, and ends in a slightly rounded angle. Though it receives altogether the flux of about twenty rills, it has on the south side so inconsiderable a breadth of land, and, on the north side, is overlooked so closely upon its beach by mountainous elevations, and, at its termination, makes so close an approach to Loch-Long, that the streams do not average more than 1 mile in length of course—the longest being $2\frac{1}{2}$ miles, and about a moiety of them from $\frac{1}{2}$ a mile to $\frac{3}{4}$. At its termination it is geographically distant from Loch-Long only $1\frac{1}{4}$ mile; and both there and two-thirds way down its north side, it is pent up by elevations dressed, during the winter months, in snowy white, and, during the rest of the year, in heathy brown. But the hills, as they approach Helensburgh, sink in their loftiness, and, coming more slopingly

toward the shore, admit a freer space for the adornings of culture and plantation. On both sides of the loch, the picture is, all the way, an enchanting one of mingled beauty and romance; and both sides are studded with a succession of cottages, ornees, villas, and mansions, which on the north or Row side are thickly strewn almost to the head of the loch. Eastward, too, or looking out from the loch, from many commanding points of observation on its beach, the sylvan headland of Ardmore, and the lovely forms of the Renfrewshire hills, with the watery expanse of the frith of Clyde glittering between, add luxuriantly to the attractions of the landscape. For a better appreciation of the scenery of the loch, see the articles *ROSENEATH* and *ROW*. The water is generally clear, varies in depth along the centre from 10 to 30 fathoms, and is little affected in its saltness by the influx of rills, or the mixation of the river-waters of the Clyde. The current of the tide is strong, running from 3 to 4 miles in the hour; and, owing to the projection of Row point, and of some minor horns or headlands, is various in its direction.

GAIRLOCHHEAD, a post-office village in the parish of Row, Dumbartonshire. It stands at the head of the Gairloch, adjacent to the boundary-line with *Roseneath*, on the road from Dumbarton to Inverary, 2 miles south-south-east of Portineapple ferry on Loch Long, and $7\frac{1}{2}$ miles north-west of Helensburgh. It is a pleasant place, with neat houses standing among garden-plots and shrubbery; it melts off, on the south-east end, into the dispersed array of ornate dwellings which lines all the Row side of the loch; it has there a good inn and a convenient wharf for steamers; and it vies with many larger places on the Clyde as a loved resort of summer sea-bathers from Glasgow. A neat chapel of ease was built here a number of years ago, and is in the presentation of the beads of families. Population, 217. Houses, 32.

GAIRLOCHY. See *CALEDONIAN CANAL*.

GAIRN (THE). See *GAIRDEN (THE)*.

GAIRNEY (THE), a small stream of the south-west border of Aberdeenshire. It rises contiguous to the Grampian water-shed with Forfarshire, and runs about 5 miles north-eastward, through the forest of Glentanner, to a confluence with the Tanner.

GAIRNEY (THE), a stream of Kinross-shire. It rises in two small tarns amongst the Cleish hills; one of them about a mile north-west of the ruins of the old castle of Cleish; the other in a moss called the Crook of Devon moss. These two rivulets unite at Thratemoor, and then run in an eastern direction by the foot of the Cleish hills, and crossing the great northern road at the Bridge of Gairney, fall into Loch-Leven, at a point about 2 miles distant from Kinross, after a beautiful meandering course through the rich meadow-grounds on the south-western shore of that lake. Its total length of course is about 9 miles.

GAIRNEY (THE WEST), a small stream of the mutual border of Kinross-shire and Perthshire. It rises in the Saline hills, and runs a few miles through the parish of Fossaway, to a confluence with the Devon, immediately below the Caldron linn.

GAIRNEY-BRIDGE, a hamlet in the parish of Cleish, Kinross-shire. It stands on Gairney water, and on the great road from Edinburgh to Perth, $2\frac{1}{4}$ miles south-south-east of Kinross. Here one of the earliest presbytery meetings of the Fathers of the Secession church was held; and here the young poet Michael Bruce taught a small school.

GAIRNSIDE. See *GLENMUCK*.

GAIRSAY, an island belonging to the parish of

Evie and Rendall in Orkney. It lies about $1\frac{1}{4}$ mile east of the nearest part of the Orkney mainland, and $1\frac{1}{2}$ mile north-west of Shapinsay. It is about 2 miles long, and one broad. The greater part of it consists of a conical hill of considerable altitude. The whole of its west side is steep; but towards the east, it is both plain and fertile; and in that quarter, as well as on the south, the lands are well cultivated. Close by the south shore stand the remains of an old house which seems formerly to have possessed some degree of elegance and strength, and was the residence of Sir William Craigie. Here is a small harbour, called the Mill-burn, perfectly secured on all sides by the island itself, and by a small holm, which covers the entrance to the south, leaving a passage on each side of it to the anchoring-ground. Population in 1841, 71; in 1851, 41. Houses, 7.

GAIT (LOCH). See *GALSTON*.

GALA (THE), a river of Edinburghshire, Selkirkshire, and Roxburghshire. It rises among the Moorfoot hills, between Rutherlaw and Huntlaw on the northern boundary of the parish of Heriot, and, after flowing 2 miles due east, receives from the north a tributary equal in importance to itself, and suddenly bends round to the south. This direction it maintains, with the exception of constant sinuosities, till it reaches the limits of Edinburghshire; and then it begins to run toward the south-east. The country around it, at the place of its assuming the southerly direction, and for $1\frac{1}{2}$ mile further, is moorish upland, considerably reclaimed and cultivated, but bleak and cheerless in aspect. But now Heriot water is coming down from the west, making so coquetish an approach as to run $\frac{2}{3}$ of a mile nearly alongside of the Gala before consenting to a union; and it opens so distant a view among the hills, and comes flaunting onward in so pleasing a valley-dress, as very delightfully to diversify the scenery. The Gala, having already for about a mile touched or bounded Stow parish, now enters it and begins to traverse its whole length over a distance of 11 miles. Throughout this long part of its course, it is pastoral, romantic, and by turns, wild, enchanting, and picturesque. Hills of considerable height, and endlessly diversified in appearance,—now stony and menacing, now heathy and sad, now verdant and joyous,—occasionally bold and precipitous, but generally sloping and of soft outline,—close in its vale on both sides, seldom allowing haughs broader than $\frac{1}{4}$ of a mile for the deposit of its alluvial wealth and the indulgence of its meandering frolics, and in one or two places forcing it into detours within nearly the narrow limits of a gorge. On leaving Stow parish or Edinburghshire, the river altogether relaxes its severer features; and thenceforth, but especially above and around Galashiels, wears dresses of much natural beauty and considerable variety, combined with a large amount of tasteful decoration. It falls into the Tweed a few hundred yards below Abbotsford, and about $2\frac{1}{2}$ miles above Melrose. From the point of its leaving Edinburghshire all downward, with one trivial exception, it divides Roxburghshire on its left bank from Selkirkshire on its right; and from its source to its embouchure, it traverses altogether a distance of about 21 miles. While passing along the parish of Stow, it receives from the west the important tribute of Luggate water, and from the east the considerable tributes of Armet water, Cockum water, and Stow burn.

The vale of the Gala is the only practicable route, except with enormous circuitousness, from Edinburgh to Selkirkshire, central and western Roxburghshire, and the north-west of England; and

though narrow in almost every part of its bottom, with immediate steep ascents of its flanking hills, it is ploughed so very sinuously by the river as to offer only a serpentine route for any tolerably level road, except such as should multitudes of times cross it by embankments and bridges. Accordingly, the great road from Edinburgh to Jedburgh and Carlisle traverses it nearly from head to foot in continual windings, following closely all the more remarkable sinuosities of the river; while the Hawick branch of the North British railway goes along it in such a series of viaducts and other works as looks wonderful to the eye, both as an achievement of engineering and as an artificial adjunct of romantic scenery. Two ballads, the one ancient and the other modern, celebrate "the lads o' Gala water;" and the former holds language, not suitable for us to quote, in allusion to the sinuousness of the river.

GALACHLAW. See **LIBERTON.**

GALASHIELS, a parish, containing part of a post-town of its own name, in Selkirkshire and Roxburghshire. It comprehends the ancient parishes of Bowside and Lindean, the former in Selkirkshire, the latter in Roxburghshire. Bowside is nearly pentagonal; having one side formed by the Gala, two by the Tweed, one by the Tweed and Cadon water, and the fifth, except for $1\frac{1}{2}$ furlong in the middle, by two small lakes and two rills which they send off respectively to the Gala and the Cadon. It is thus very nearly an island; and is bounded on the north-east by Melrose, on the south-east by Melrose and Lindean, on the south by Selkirk, on the west by Selkirk and Stow, and on the north-west by Stow. Measured in any direction from side to side, it extends about 3 miles, and from angle to angle about $3\frac{3}{4}$. Lindean, or the Roxburghshire part of the modern parish, marches over one-half of its north-west boundary with the Selkirkshire part, and is there divided from it by the Tweed; and over the other half of that boundary it stretches along, and at one brief point overlaps Ettrick water, and is contemporaneous with Ettrick parish. On other sides it is bounded by Selkirk, Bowden, and Melrose. In general form, it is a parallelogram $2\frac{3}{4}$ miles by $1\frac{1}{2}$, stretching north-westward and south-eastward; but it sends off south-westward from its south-west angle a stripe $1\frac{1}{2}$ mile long, and 3 furlongs broad.

The whole parish of Galashiels is hilly, and may even be called mountainous; one of its heights, called Meikle, which overlooks the town, rising 1,480 feet above the level of the sea, or 1,200 feet above the level of the Tweed, at its junction with the Gala. But the hills expand on wide bases, and have in general rounded tops and a soft outline, and are separated from one another by winding, narrow, and beautiful vales; and altogether present, both to the eye of taste and to the hand of culture, gentle and pleasing properties. Though patches of heath and spots of rock occasionally variegates the surface, the hills are green, and to a considerable extent arable; and even in one or two instances in which their forms are conical, plantation and verdure adorn them up to the very summit. The vale of the Gala, which forms the north-east side of the pentagon of Bowside, is in itself a mere ribbon stripe; but it has a beautiful and very broad edging of gentle acclivity up the side of Meikle and other hills, and besides being itself adorned with rows and tufts of plantation, is confronted behind Galashiels with a phalanx of trees $1\frac{1}{2}$ mile long, and upwards of $\frac{3}{4}$ of a mile deep. The vale of the Tweed, which forms half of the western side, and the whole of the southern and south-eastern sides of the pentagon of Bowside, is all the way along richly wooded and brilliantly beautiful. Nothing more needs be said to

hint how fascinating its landscape is than to state that its Galashiels side, and the sylvan and variegated slopes which come gracefully down upon it from the heights behind, were the scene chosen as the view from the front of his temple of taste by the most graphic of all Scotland's poets or literary painters,—Sir Walter Scott. Abbotsford house, indeed, is not within the limits even of Lindean, but it looks across the Tweed to the south-eastern slopes of Bowside, from a delightfully picturesque site $\frac{3}{4}$ of a mile above the confluence of the Gala and the Tweed; and, with its rich and very broad encircling of plantation—part of which stretches into Lindean—flings over the landscape of the parish enchanting influences of no common power. The rivers abound in salmon, in trout of very large size, and in sea-trout, bull-trout, par, and cels. At the northern verge of Lindean is a small lake named Cauldshiels, about $1\frac{1}{2}$ mile in circumference, opulently planted on one side, and bleak and wild on the other, and deep, bedded with marl, and abounding in pike and perch.

The soil, while very various throughout the parish, is, in the aggregate, surprisingly different on the two sides of the Tweed. In Bowside it is in general deep, heavy, cold, and wet, on a bottom of clay or of rock; in some places it is perfectly red, and occasionally interrupted with ironstone; in other places it is very porous, yet not sandy or superincumbent on gravel; and, in various instances, it gives place to morasses and lochlets which are productive of peat and marl. In Lindean the soil is, in general, dry and shallow, lying partly on gravel, extensively on till, and occasionally on rock; and it is almost everywhere mixed with a remarkably large proportion of small stones; and is believed to derive, in some degree, from their power of reflecting heat and aiding it to retain moisture, a fertility in excellent and luxuriant crops, which, considering its small depth, is truly astonishing. Nearly one-third of the entire area of the parish is arable; nearly two-thirds are unsuited to the plough, and chiefly covered with pasturage; and about 500 acres are under plantation. The chief mansions are Gala house, overlooking the Gala from a bower of groves, and Faldonside delightfully situated on the right bank of the Tweed, a little above Abbotsford. Traces of two ancient camps and a stretch of Roman road are visible. The parish enjoys great facilities of communication, both by the public roads from the south converging toward Edinburgh, and by the Hawick and Kelso branch of the North British railway. There are four principal landowners. The yearly value of raw produce was estimated in 1833 at £10,869 10s. 6d. Assessed property in 1865, £14,605. Population in 1831, 1,534; in 1861, 3,379. Houses, 429. Population of the Selkirkshire section in 1861, 3,181. Houses, 395.

This parish is in the presbytery of Selkirk, and synod of Merse and Teviotdale. Patron, Scott of Gala. Stipend, £270 10s. 6d.; glebe, £28. Unappropriated tithes, £273 1s. 2d. The parish church is a semi-gothic structure, with a square tower, was erected in 1813, and contains about 850 sittings. The Free church is a recent commodious erection; and the sum raised in connexion with it in 1865 was £455 19s. 1d. The United Presbyterian church was built in 1844, and contains 700 sittings; and it superseded one which was nearly as old as the modern town. There are in the part of the town which belongs to the parish of Melrose a chapel of ease, a Free church, and an United Presbyterian church. There are likewise in the town five other places of worship for respectively Episcopalians, Morrisonians, Baptists, Glassites, and

Roman Catholics. The salary of the Galashiels parochial schoolmaster is £50, with £40 fees, and £10 other emoluments. There are several non-parochial schools; and two of them, at Lindean and Fernilee, have small endowments. The name Galashiels means simply 'the shepherds' huts on the Gala,'—the word Gala or Gwala itself signifying 'a full stream.' The terms 'shiels' and 'shielings' were very commonly used by the Northumbrian Saxons to denote the temporary shelters of shepherds; and are still currently employed by the peasantry in pastoral districts, besides forming part of the compound names of many localities. The two ancient parishes comprehended in Galashiels were for a long period perfectly distinct. The church of Bowside anciently stood in a hamlet of that name, about half-a-mile below the junction of the Ettrick and the Tweed. Lindean derived its name from the British *Lynn*, signifying, secondarily, 'a river pool,' and the Anglo-Saxon *Dene*, 'a valley;' and seems to have been a very ancient parish. The body of William Douglas, the Knight of Liddesdale, lay in Lindean church the first night after his assassination in 1353. The monks of Dryburgh probably obtained possession of this church, and had it served by a vicar; and, in Bagimont's roll, it figures as the vicarage of Lindean, in the deanery of Teviotdale, and diocese of Glasgow. But before the year 1640 it had ceased to be the parish-church, and become supplanted by that of Galashiels.

GALASHIELS, a post-town, a centre of traffic, and a seat of manufacture, partly in the parish of Galashiels, and partly in that of Melrose, partly in Selkirkshire, and partly in Roxburghshire. It stands on the river Gala, 4 miles west-north-west of Melrose, 6 north of Selkirk, 18 east-south-east of Peebles, and 28 south-south-east of Edinburgh by road, but 33½ by railway. The original of it was a village on the adjacent brae on the south side of the Gala, and was simply an appendage of the baronial seat of Gala; but, though still partially standing, and even slightly renovated with new buildings, this has, for a considerable period, been sinking gradually into decay. The present town originated about 75 years ago, when the spirit of manufactures alighted on the villagers, and brought them down to the margin of the stream to avail themselves of its water-power; and it stands in not very unequal parts in Selkirkshire and Roxburghshire,—the former part being the more ancient, the latter the more modern. The town, on the south side of the river, comprising all Galashiels Proper, and a considerable portion of the Roxburghshire section, consists chiefly of one long bent street, and two shorter and newer streets, the whole dotted round with detached buildings, winged with drying and bleaching grounds, and stretching along a narrow stripe of plain between the river and the neighbouring heights. On the north side the town is both more irregular in form and less advantageous in site, ascending in clusters or lines of building, from the margin of the river to the transit of the Edinburgh and Jedburgh road, a little distance up the face of the acclivity; and this division has of late years undergone great extension, so that it now constitutes the larger part of the entire town, and presents an appearance of much spruceness and prosperity. The opening of the Edinburgh and Hawick railway, also, with a conspicuous station-house here, has added new features, and given a new impetus to extension and improvement. The branch railway from Galashiels to Selkirk, which was opened in 1856, was likewise an important accession; and the railway from Galashiels to Peebles, which was authorised in 1861, will also be of much value.

The two divisions of the town were early united by a stone bridge, an iron suspension bridge, and an ingeniously constructed timber bridge,—the first for vehicles and the other two for foot passengers. But toward the end of 1853, the stone bridge was found to be already becoming inadequate for the traffic brought to it by the railway; and a resolution was then taken to adopt measures for constructing another, of much wider capacity and with better levels. All the houses of the town are built of blue whinstone and slated. Though quite a manufacturing-place, Galashiels partakes not a jot of the dinginess, and the confusion, and the concentration of character upon mere labour and gain, which so generally belong to places of its class; but is lively and mirthful in its appearance, heedful of the adornings of taste and beauty, and seems to reciprocate smiles of gladness with the charming scenery amid which it is embosomed. The spirit of manufacture is no doubt here, and walks abroad in an energy which contrasts strongly with the sickliness of its nature and the feebleness of its movements in many other localities; but it breathes a mountain air, and has the dress and the habits far more of rural than of city life. The factories being worked for the most part by water-power,—the grounds attached to them being painted over with the many coloured fabrics which are hung out to complete the process for the market,—the dispersedness of the seats of stir and activity at considerable intervals along the banks of a pastoral stream,—the beauty and lightness of the materials with which the town is constructed,—and the picturesqueness and pastoral tone of the landscape which sweeps around,—all contribute to protect Galashiels from being defiled with the sootiness, or wasted down into the cadaverousness, of most other seats of manufacture. In 1832 there were here ten large cloth factories, some of them of considerable date, and two of them quite new; and at present there are twelve factories,—all propelled by water, except two, which employ steam as an auxiliary power.

Galashiels has a brewery and establishments for the tanning of leather, the dressing of skins, and the construction of machinery for woollen manufacture. It also conducts considerable trade in the production and sale of hosiery. But its grand staple is the manufacture of woollen cloth. Though inferior in population or in amount of produce to Hawick, it is second to no town in Scotland in the excellence of its woollen fabrics, or in the ingenuity and success of effort to improve the quality and extend the range of its staple. For a considerable series of years, it was known for the production of woollen cloths of only the coarser kinds, fabricated from home-grown woollen; but, for a number of years past, it has run an increasingly successful course of effort to produce, from foreign wool, cloth of the finer qualities, and has even commenced a rivalry with the choice broad-cloth manufactories of England. By the mixation of home and foreign wool, it also produces flannels which the board of Trustees, a number of years ago, pronounced finer than any made elsewhere in Scotland, and equal if not superior to the best made in Wales. A large proportion of the home-grown wool is smeared, in order to be fabricated into an improved coarse cloth. Yarns, blankets, shawls, plaids, narrow cloths, grey or mixed coloured crumb-cloths, and blanket-shawls of many hues and changeful patterns, are the forms into which home-grown wool alone, or in mixture more or less with foreign wool, is made to assume. In 1833, according to the statement in the New Statistical Account, the annual consumption of wool amounted to 21,500 stones at 24 lbs. imperial to the

stone; of which 21,000 were home grown, and 500 were foreign. But since that period, not only has the aggregate consumption greatly increased, but, in consequence chiefly of the success of the broad-cloth manufacture, the proportion between foreign and home wool is exceedingly changed in favour of the foreign. We need come no farther down than 1833, however, in order to see the prosperous condition of the manufacture of the town; for instead of the 21,500 stones of wool which were then consumed, there were in 1792—when the old Statistical Account was published—only 2,916 stones; and in 1744, the still more paltry amount of 722 stones. Yet in 1792, the Rev. Mr. Douglas, the minister of the town and parish, reported, "The manufacture of coarse woollen cloth is here carried on to great extent. It has rapidly increased within these few years, and is now brought to great perfection." All the weaving, with trivial exceptions, was formerly done in factories, but is now performed chiefly in shops built in their immediate vicinity. The spinning of the yarn is done in the factories. The total number of looms in 1828, was 175; and in 1838, it was 265. At the great exhibition of the industrial products of nations in 1851, Galashiels took four prize medals for the excellence of its woollen manufactures.

Excepting its churches and its factories, Galashiels makes no remarkable display of public buildings or indication of industrial skill. Even its shops are few and tiny compared with either its population, its relative position in the country, or its manufacturing importance. Its streets, in fact—during the hours of labour in the factories—have the silence and timidity and wealthless aspect almost of a village in the Highlands. Its markets also are defunct, and its fairs—held on 8th July and 8th October—feverish and wasted. Manufacture, in its most athletic form, alike heedless of the luxuries and unhurt by the malign influences of what passes for refinement, is almost the sole tenant of the place. The town has branch offices of the National Bank of Scotland, the Bank of Scotland, and the Royal Bank of Scotland, a savings' bank, several insurance agencies, friendly societies, two public libraries, a mechanics' institute, a weekly newspaper, and a total abstinence society.

Galashiels, for some period after its erection, was subject to such fearful inundations of the Gala, that occasionally a boat was brought from 2 miles distant on the Tweed for the rescue of its people; and even yet, it at times is exposed to considerable risk, or even sustains actual damage. The Gala sweeps past it with a rapidity of current and an amount of descent which render its power of vast worth in driving the machinery of the factories, but which, if due means of resistance were not provided, would occasion, in a flood, the sapping and possibly the total destruction of the town. But the bed of the stream has of late been quarried and excavated for building materials, and has, in consequence, received greatly enlarged capacity for conveying along a swollen volume of water. Strong bulwarks, called 'puts,' have also been constructed along the banks of the stream, and serve to repress its riotousness when in a surfited and turbulent mood. Yet strong as the bulwarks are, the river is in hazard of becoming energetic enough to toss them from its path; and whenever it makes an impression on them, it so violently menaces the mills and other buildings on its margin, that all hands are at work to prevent if possible its eruption. But if all efforts be unsuccessful and the work of destruction have begun, the persevering and hardy townsmen are ready to brave the invading and impetuous foe on its own territo-

ries, and in groups or bands of several scores strong, to drag branching full-grown fir-trees into the more quiescent waters on the exterior of the flooded ground, to make fast the trunks at points where the stream is comparatively gentle, and to toss the branches upon the margin of the central and careering current. By a sufficiently frequent repetition of this process so as to form a bushy wall or rampart of tree upon tree, they can effectually succeed in averting danger even though the regular bulwarks should be broken down; but in 1829—the year so memorable for Scotland's asserting its character as 'the land of the mountain and the flood,' when Morayshire, in particular, was so fearfully devastated by inundations,—Galashiels might have been all but utterly destroyed had not an astute spectator, amid general looks of despair, suggested for the first time, the trial, which was immediately effective, of encountering the torrent with an array of felled trees.

Though Galashiels, both topographically and industrially, is strictly one town, yet, politically considered, it consists of three distinct portions. The first is the town of Galashiels Proper, situated in Selkirkshire, the tenure of which is leasehold, in leases of 99 years, renewable *in perpetuum*. The second, situated in Roxburghshire, but on the south side of the Gala, and compact or contiguous with the former, is called Darlingshaugh, and consists of feus, holding, with few exceptions, of the same superior as Galashiels Proper. The third, also situated in Roxburghshire, but on the north side of the Gala, is called Buckholmside, and consists of feus which are held of a different superior, Mr. Pringle of Torwoodlee. A burgh-of-barony, which includes part of the town of Galashiels and a considerable agricultural district, was erected by a charter, dated 9th June, 1630. There is no property, revenue, expenditure, debt, or taxation. The jurisdiction within the barony is of the ordinary kind, the bailie holding his commission during the pleasure of the superior. No courts have been held for upwards of a century; and there is neither court-house nor gaol. Those parts of the town which are not within the barony, are subject only to the jurisdiction of the county. The weavers were incorporated by a seal of cause from the superior, but enjoy no exclusive privileges. The manufacturers also are called a corporation; but they do not possess a seal of cause. Trade and manufactures are in all respects free. Circuit sheriff small debt courts for the Selkirkshire district are held on the first Tuesday of February, April, June, August, October, and December. Population of the whole town in 1831, 2,100; in 1861, 6,433. Houses, 680. Population of the parts in Selkirkshire in 1861, 2,802. Houses, 335.

The earliest notice of Galashiels—which like every other, till a very modern date, refers, of course, not to the present town but to the extinct aboriginal village—occurs in Lord Hales' Annals, and is wholly confirmed and partly amplified by tradition. In 1337, during the reign of David II., a party of English invaders halted at Galashiels in the course of a retreat from a vain effort to raise the siege of Edinburgh. The season being autumn, and the little army not thinking itself pressed to make a hurried passage across the Tweed, the soldiers began to straggle about the neighbourhood in search of wild plums with which it then abounded. A party of Scotch now came up, and learning the position of the foe, rushed down upon them in contemptuous feeling for their employment, took them by surprise, drove them headlong to a spot on the Tweed, still called "the Englishmen's syke," nearly opposite Abbotsford, and there hewed them down with the

sword almost to a man. The people of the village, in self-gratulation of an exploit which had been a sourer fruit to the invaders than any they went in search of, called themselves the "Sour Plums of Galashiels," and transferred the soubriquet to their successors, and are celebrated by it in a Scottish song of high antiquity, and even bequeathed it as the quaint and sarcastic motto of the armorial bearings of the burgh. So early as 1622, the old village must have been a place of considerable note; for the report by the Lords of Commission for the Plantation of Kirks, dated in that year, says, "that there lived about 1,400 people in Galashiels." A tradition prevails in the district that the village was anciently a royal hunting-station. An old rudely-built square tower, two stories high, called the Peel, and supposed to have been the lodge in which Royalty found an occasional temporary abode, was pulled down only about forty years ago, to make way for the enlargement of the parish school-house.

GALDRY, a village in the parish of Balmerino, $3\frac{3}{4}$ miles south-west of Newport, in Fifeshire. It stands on a tableau, on the centre of a ridge of hill, about $1\frac{1}{2}$ mile from the Tay. It is a station of the county police. Population 335. Houses, 71.

GALLANGAD. See KILMARONOCK.

GALLAN-HEAD. See Uig.

GALLATON, a large village in the parish of Dysart, Fifeshire. It commences at the north end of Sinclairtown, and extends thence along the road from Kirkealdy to Cupar, adjacent to the transit of the Edinburgh, Perth, and Dundee railway. It is divided into Easter and Wester Gallaton; and it has schools of its own, and partakes generally in the industry, institutions, and resources of Sinclairtown and Dumnikier. Its name was originally Gallows-town; and seems to have arisen either from the stated execution of criminals here in the feudal times, or from the special execution of a noted robber 200 or 300 years ago. The village was long famous for the making of nails. A fair is held on the first Wednesday of August. Population in 1831, 1,053; in 1861, 1,198.

GALLOWAY, an extensive district, forming the south-western corner of Scotland. Originally, and for a considerable period, it included parts of Ayrshire and Dumfries-shire; but, during many ages past, it has been identified simply and strictly with the shire of Wigton and the stewardry of Kirkeudbright. The name, though thoroughly interwoven with history, and inextricably familiar to literary and oral usage, designates no political jurisdiction, and is unsanctioned by the strict or civil nomenclature of the country. The district is bounded on the north by Ayrshire and Dumfries-shire; on the east by Dumfries-shire; on the south by the Solway frith and the Irish sea; and on the west by the Irish channel and the frith of Clyde. Its greatest length from east to west is $63\frac{3}{4}$ miles, and its greatest breadth from north to south is 43 miles. Its two civil divisions, Wigtonshire and Kirkeudbrightshire, are separated, from north-west to south-east, by the river Cree and Wigton-bay. Its geographical distribution is into three parts.—Upper Galloway, which includes the northern or mountainous sections of Wigtonshire and Kirkeudbrightshire,—Lower Galloway, which includes the southern or more champaign sections of both civil divisions, east of Luce-bay,—and the Rhinns of Galloway, consisting of the peninsula south-west of Luce-bay and Loch Ryan. Galloway has long been distinguished as an excellent pastoral district; and celebrated for the superiority of its wool, and especially for its breeds of horses and of polled black cattle. For further particulars, and for topographical and other details,

see the articles KIRKCUDBRIGHTSHIRE and WIGTONSHIRE.

During the 5th century, the district afterwards called Galloway was inhabited by the immediate posterity of the British tribes, the Selgovæ, the Novantes, and the Dannii, a feeble and a divided people. The Anglo-Saxons rather overran than colonized the territory; yet, during the 6th and 7th centuries, they sufficiently mixed with the British tribes to maintain a rude ascendancy. When the Northumbrian dynasty became extinct at the close of the 8th century, the Saxon settlers, while they retained their possessions, were denuded of their power. Colonists from the Irish coast could, in such circumstances, make an easy descent upon the country, and effectually overawe its inhabitants. Whatever may have been the defeats of earlier adventurers, the Irish Cruithne, at the end of the 8th century, made a successful settlement within the Rhinns. Fresh swarms followed from the Irish hive, during the 9th and 10th centuries; and were strengthened by settlements of the kindred Scots of Kintyre, who passed the frith of Clyde in their eur-rags to the Rhinns and Carriek and Kyle; while the Scandinavian sea-kings domineered over the seas and shores of the neighbouring regions. These Gaelic settlers, in their progress of colonization and promptitude of contest, acquired, in the low Latinity of the times, the appellation of Galli, which was thought to be a fair representative of their proper name Gael. Hence as we may learn from Malmsbury, "*Galli veteribus Gallwallia, non Franci dicti.*" As Scotland and England took their names respectively from the Scots and the Angles, so the territory of the Gael or Galli, came speedily to be called, by chroniclers, Gallwallia, Gallawidia, Gallowagia, Gallwadia, Gallwegia, Gallway, Galloway. In the effluxion of three centuries, the name came to be applied loosely to the entire peninsula between the Solway and the Clyde, including Annandale in the south-east, and most of Ayrshire in the north-west. The Gael, or Galli, or Irish settlers, in the meanwhile, completely occupied the ample extent of the country; mingling everywhere with the enfeebled Britons, whose speech they understood, and amalgamating with the still fewer and feebler Saxons, whose language, as it was unknown to them, they eoustantly rejected; and they hence imposed upon the district a topographical nomenclature which corresponds much more closely with that of Ireland, than with that of other districts of Scotland. Notwithstanding the naval enterprises of the northmen, the incursions of the Northumbrian Danes, and not a few internal distractions among conflicting tribes, the settlers retained, in their new possessions, the various rights of a distinct people, and preserved the agreeable independence of their own customs and laws.

During the earlier parts of the obscure history of the district, we hear seldom and in uncertain terms, of the rulers or "lords of Galloway," who claimed and exercised power within the invidious limits of a contested jurisdiction. But, in 973, Jacob, lord of Galloway, was one of the eight *reguli* who met Edgar at Chester. Fergus, another lord of Galloway, and the most potent feudatory subject of the Scottish crown in the 12th century, was a frequent witness to the charters of David I., and, supposing Malcolm IV. to be a pusillanimous character, denied his authority and appropriated his revenues. Malcolm, enraged by Fergus' infidelity and daring, marched into his territory, and, though twice repulsed and discomfited by him, eventually, in 1160, overpowered him, obliging him to resign his lordship and possessions to his sons and to retire to the

abbey of Holyrood, far gone in the disease of corroding humiliation and a broken heart. Fergus was son-in-law to Henry I., and dying next year, left behind him a family who afterwards ranked high among the nobles of Scotland and of England.

His two sons, Uchtred and Gilbert, who, like the lords of other Gaelic districts, owed obedience to the Scottish kings, followed William the Lion, in 1174, into England; but they no sooner saw him taken captive, than, at the head of their naked, nimble, impatient, and rapacious clans, they returned to their native wilds, broke out into insurrection, attacked and demolished the royal castles, and murdered the Anglo-Normans who had settled among their mountains. No sooner had they established their independence of the Scottish government, than they began to dispute about pre-eminence and possessions. Gilbert, on the 22d of September, 1174, attacked Uchtred, while residing in his father's house in Loch-Fergus, and, having overpowered him, ordered the infliction upon him of a barbarous death. William the Lion, having, in 1175, made submission to the English king, and regained his liberty, invaded Galloway, subdued Gilbert, and purchased his subsequent peacefulness of conduct by giving him full possession of Carrick in Ayrshire. From this Gilbert sprang, in the third generation, Marjory, Countess of Carrick, in her own right, the wife, in 1271, of Robert de Bruce, and the mother, in 1274, of the royal Bruce, the restorer of the Scottish monarchy. Gilbert dying the 1st of January, 1184-5, Roland, the son of the murdered Uchtred, seized the favourable moment of his uncle's death, to attack and disperse his faction, and to claim possession of all Galloway as his own inheritance; and he, at the same time, overcame Gilcolm, a potent freebooter who had settled in the district, and carried his depredations into Lothian. Making successful resistance to Henry II. of England, who claimed to be superior of Scotland, he was at last, on the condition of surrendering Carrick to his nephew Duncan, the son of Gilbert, confirmed in the lordship of all Galloway. On the restoration of the national independence, Roland obtained the office of constable of Scotland, and was witness of many royal charters.

In December, 1200, Alan, the eldest son of Roland, succeeded him in his lordship, and afterward excelled him in power and fame; but, in 1234, he died without a legitimate male heir, and left his prerogatives and possessions to become objects of division and feud. Alexander II. wishing to invest Elena, the eldest daughter of Alan, with the lordship, the Gallowegians tumultuously demanded it to be conferred on Thomas, his illegitimate son; but, though they writhed under the chains imposed on them, and twice became insurgent, they were compelled to receive as their superior, Roger de Quincey, the husband of Elena. Alexander II.'s enforcing the rights of Alan's daughters, and, at the head of an army, breaking down the spirit of insurrection, was the introduction to the epoch of granting charters for the holding of lands, and of landholders giving leases to tenants, and of the security of property and the cultivation of the arts of husbandry. In 1254, Alexander Comyn, Earl of Buchan, in right of his wife, succeeded de Quincey, and laid the foundation of his family's extensive connexion with Galloway, till they were overthrown and expatriated by Bruce, and of their introducing to the district the important office of justiciary, which in some measure changed the very nature of its jurisprudence.

The Gallowegians, during the wars of the succession, naturally sided with the Comyns and the Baliols, and speedily shared in their disasters. When John Baliol was obliged to resign his dependent

crown, Edward I. considered Galloway as his own; and he immediately appointed over it a governor and a justiciary, disposed of its ecclesiastical benefices, and obliged the sheriffs and bailiffs to account for the rents and profits of their bailiwicks in his exchequer at Berwick. In 1298, Wallace is said to have marched into the west "to chastise the men of Galloway, who had espoused the party of the Comyns, and supported the pretensions of the English;" and a field in the farm of Borland, above the village of Minigaff, still bears the name of Wallace's camp. During his campaign of 1300, Edward I. marched from Carlisle through Dumfries-shire into Galloway; and though opposed first by the remonstrances, and next by the warlike demonstrations of the people, he overran the whole of the low country from the Nith to the Cree, pushed forward a detachment to Wigton, and compelled the inhabitants to submit to his yoke. In 1306, Sir Christopher Seton, the brother-in-law of Bruce, being captured in the castle of Loch Urr, was carried to Dumfries, and put to death on the gallows-hill of that town. In 1307, Robert I. marched into Galloway, and wasted the country, the people having refused to repair to his standard; but he was obliged speedily to retire. In the following year, Edward Bruce, the King's brother, invaded the district, defeated the chiefs in a pitched battle near the Dee, overpowered the English commander, reduced the several forlets, and at length subdued the entire territory. Galloway was immediately conferred on him by the King, as a reward of his gallantry; and when he was slain in the battle of Dandalk, in 1318, it reverted to the Crown.

When Edward Baliol entered Scotland to renew the pretensions of his father, Galloway became again the wretched theatre of domestic war. In 1334, assisted and accompanied by Edward III., he made his way through this district into the territories north of it, and laid them waste as far as to Glasgow. In 1346, in consequence of the defeat and capture of David II. at the battle of Durham, he regained possession of his patrimonial estates, and resided in Buittle castle, the ancient seat of his family. In 1347, heading a levy of Gallowegians, and aided by an English force, he invaded Lanarkshire and Lothian, and made Scotland feel that the power which had become enthroned in Galloway was a scourge and a curse, rather than an instrument of protection. In 1353, Sir William Douglas overran Baliol's territories, and compelled M'Dowal, the hereditary enemy of the Bruces, to change sides in politics.

After the restoration of David II. and the expulsion of Baliol, Archibald Douglas, the Grim, obtained, in 1369, Eastern and Middle Galloway, or Kirkcudbrightshire, in a grant from the Crown, and, less than two years after, Western Galloway, or Wigtonshire, by negotiation from Thomas Fleming, Earl of Wigton. This illegitimate but most ambitious son of the celebrated Sir James Douglas obtained, at the death of his father, in 1388, on the field of Otterburn, the high honours and the original estates of the house of Douglas; and now, while holding in addition the superiority of all Galloway, became the most powerful as well as the most oppressive subject of Scotland. On an islet in the Dee, surmounting the site of an ancient forlet, the residence of former Lords of Galloway, rose at his bidding a castle called the Thrieve, whence the radiations of his own and his successors' tyranny shot, with a blighting and a withering influence, athwart the surface of the whole country. His usurpation seems to have struck with indignation all who contemplated its magnitude and effects. The power of the Douglases was so enormous, and so exorbitantly applied, as to grind into powder the

resistance and the influence of the subordinate chiefs. About the middle of the 15th century, William, one of the line of Earls, upon some occasion of pique with Sir Patrick McLellan of Bombie, the shoriff of Galloway, besieged and captured him in his stronghold of Raeberry, carried him off to Thrieve castle, and there ignominiously banged him as though he had been a common felon. The Douglasses experienced some reverses, and were more than once sharply chastised in their own persons, yet seemed unable to learn, no matter how thoroughly inculcated, a single lesson of moderation; and they continued to oppress the Gallowegians, to disturb the whole country, and even to overawe and defy the Crown, till their turbulence and treasons ended in their forfeiture. James the ninth and last Earl, and all his numerous relations, ran, in 1453, into rebellion; and, two years afterwards, were adjudged by parliament, and stripped of their immense possessions.

Galloway now awoke from the haggard dreams of a nightmare, and found itself in a state of annexation to the Crown. James II. immediately marched into the district, and was everywhere received with acclamations of welcome; and he garrisoned the castle of Thrieve with his own troops, and, from a seat of insufferable oppression, converted it into a source of energizing influence upon the law. In 1461, Margaret, the strenuous queen of Henry VI., came with four vessels to Kirkcudbright, and was honourably received. For some time after the fall of the Douglasses, Galloway was occasionally distracted by the feuds of petty chiefs, familiarly known by the odd name of "Neighbour Weir." Early in the 16th century, a deadly feud between Gordon of Lochinvar and Dunbar of Moehrum, led to the slaughter of Sir John Dunbar, who was then steward of Kirkcudbright. During the minority of James IV., Patrick Lord Hailes, created Earl of Bothwell, ruled both the stewartry of Kirkcudbright and the shire of Wigton. During the turbulent minority of James V., another feud between Gordon of Lochinvar and Maelellan of Bombie, led to the slaughter of the latter at the door of St. Giles' church in Edinburgh. In 1547, under the reign of Mary, the English arms overran Eastern Galloway, and compelled the submission of the principal inhabitants to the English government. After the defeat of Langside, Mary sought shelter in Duddrennan abbey, near Kirkcudbright, previous to her flight into England across the Solway. The regent Moray immediately, in June, 1568, traced her steps into the district to punish her friends; and he enforced the submission of some, and demolished the houses of others. In 1570, when Elizabeth wished to overawe and punish the friends of Mary, her troops, under the Earl of Moray and Lord Scrope, overran and wasted Annandale and part of Galloway. As the men of Annandale, for the most part, stood between the Gallowegians and harm, they expected to receive compensation from their western neighbours for their service; and when they were refused it, they repaid themselves by plundering the district. In a happier age, the bay of Kirkcudbright sheltered William III.'s fleet on his voyage to Ireland.

Galloway gives the title of Earl, in the peerage of Scotland, to the families of Stewart and Garlies. In 1607, Sir Alexander Stewart of Garlies was created Lord Garlies; and, in 1623, he was raised to the dignity of Earl of Galloway. In 1796, John, the 7th Earl, was created Baron Stewart of Garlies in the peerage of Great Britain. The Earls of Galloway have very extensive possessions in the district.

GALLOWAY-HOUSE, the family-seat of the Earls of Galloway on the coast of Sorbie parish, in

Wigtonshire. It was built about 95 years ago; and though not remarkable for architectural magnificence, "forms part of a landscape truly beautiful and grand. Garlieston bay is on the north; and Rigg or Hunter's bay is on the south of it. From its windows are seen the richest fields, an indented coast, adorned with growing improvements, a cluster of isles, and the lofty mountains of Cumberland and Man, appearing at a proper distance. The principal rooms are spacious, and the library is stored with many thousand valuable volumes."

GALLOWAY (MULL OF), a remarkable and well-known promontory, forming the southern point of the Rhinns of Galloway, in the parish of Kirkmaiden, Wigtonshire. It is an exceedingly bold rocky headland, $1\frac{1}{2}$ mile long, and $\frac{1}{2}$ of a mile broad, stretching from west to east nearly at right angles with the eastern coast of the mainland, and connected with the country behind it by a long isthmus, the sides of which are indented with small bays called respectively East and West Tarbet. The south and southwest fronts of the promontory break down almost precipitously into the sea, and are perforated with caverns in which the billows, during a southerly wind and a flowing tide, roll and tumultuate with a reverberating sound resembling thunder. On the promontory, in North lat. $54^{\circ} 38'$, and West long $4^{\circ} 52'$ from Greenwich, a lighthouse, erected in 1830, displays an intermittent light, which alternately blazes on the view during $2\frac{1}{2}$ minutes, and suffers eclipse during $\frac{1}{2}$ a minute, and is seen at the distance of 21 nautical miles. It is 21 miles north-north-west from Point-of-Ayre lighthouse in the Isle of Man, and the same distance, south-east by east, from Copland lighthouse on the Irish coast. From the balcony of the lighthouse are seen the alpine summits of the Southern Highlands of Scotland, the towering Paps of Jura, a far expanse of the Irish sea, 90 miles of the coast of Ireland, the whole of the Isle of Man, and the shrouded far-away mountain-peaks of Cumberland,—forming altogether one of the most magnificent scenes which Scotland, rich and prodigal in the brilliance and variety of her landscapes, spreads out for tutoring the taste, sublimating the feelings, and inciting or aiding the heavenward aspirings of her children.

GALLOWAY (NEW), a post-town, a royal burgh, and the capital of the district of Glenkens, in the parish of Kells, Kirkcudbrightshire. It stands on the right bank of the Ken, at the intersection of the road from Kirkcudbright to Ayrshire with that from Newtown-Stewart to Dumfries, $17\frac{1}{2}$ miles north-east by east of Newtown-Stewart, 19 north of Kirkcudbright, 25 west of Dumfries, and 38 south-east of Ayr. It stands at the foot of an irregular ridge of ground, in the vicinity of Kenmure castle, surrounded by as charming scenery as fancy can conceive to exist in a wild country. But, though a place of municipal dignity and relative importance, it is of very inconsiderable size; and, strictly viewed, is nothing more than a mere village. Its entire bulk consists of a cross street running 70 yards from east to west, a main street running 150 yards from north to south, and a scanty sprinkling of detached houses, partly in a line with these streets, and partly on their wings. At the centre or cross of the burgh, is a building which serves as a court-house, surmounted by a spire. Half-a-mile north, but not within the royalty, the parish church of Kells, built in 1822, lifts a neat stone front and tower into view. Across the river, half-a-mile east, a stone bridge, erected in the same year as the church, spans out in elegant arches. The houses of the town are, in general, low, ill-built, thatched with straw, and uncomfortable in the interior; but a few slated houses.

2½ or 2 stories high, are interspersed with the humbler edifices. The main street is decently paved, and kept tolerably clean. Little gardens stretch out behind the houses, and are divided by hedges, dotted occasionally with trees. Most of the inhabitants possess also a small croft on which a cow or two are fed, and a few bolls of potatoes and corn are raised. A sort of suburb of the burgh, in the form of detached cottages, called the Mains of Kenmure, lies scattered to the east between the town and the bridge.

New Galloway, say the commissioners on municipal corporations, "is very inconsiderable in its extent and population, and has no funds or property of any description. It was erected into a royal burgh by a charter from King Charles I., dated 15th January, 1629. By the charter it was declared that the inhabitants should have power to elect a council, consisting of one provost, four bailies, one dean-of-guild, one treasurer, and twelve ordinary councillors. But by the sett, as reported to, and sanctioned by, the convention of royal burghs, on 15th July, 1708, the council was then declared to consist of one provost, two bailies, one treasurer, and fifteen councillors. From the records of the council, for twenty years prior to 1831, it appears that only 18 members of council have been chosen, including the provost and two bailies. The whole parliamentary constituency, as enrolled in 1832, consisted of 14 electors; and, consequently, it is impossible to supply from them a council of the present number. The whole revenue of the burgh, derived from customs and small dues, consists of £3 8s. 2d., and the average expenditure appears to be £1 13s. 1d." When Charles I., in the course of a conciliatory visit to Scotland, lavished upon his principal Scottish subjects such honours and bounties as he could bestow, he attached Sir John Gordon of Lochinvar to him, by giving him a peerage with the title of Viscount of Kenmure, and by creating the royal burgh on his estate. But no houses had then been built, and no population settled down, on the site of New Galloway. The spot, exulting in burgh-privileges, and specially favoured by its lords, seems to have soon attracted a few inhabitants; but it never could acquire any trade or manufactures, so that it probably was almost or altogether as populous a short time after it was founded as it is at the present day. Fairs are held on the first Wednesday of April and August, old style. The town has a branch-office of the Clydesdale Bank. Justice of peace courts are held on the second Monday of every month, and steward's circuit small-debt courts, on the 6th of February, the 12th of April, and the 25th of September. The burgh unites with Wigton, Stranraer, and Whithorn, in sending a member to parliament. Parliamentary constituency in 1862, 17. Population in 1841, 403; in 1861, 452. Houses, 91.

GALLOWHILL, any locality which was used as a place of capital punishment in the feudal times. No fewer than at least thirty localities in Scotland continue to the present day to bear the name of Gallowhill; and a good many more, seemingly for the same reason, bear the name of Gallowhank, Gallowcainr, Gallowgreen, or Gallowknoe.

GALLOW-LANE. See DOON (THE).

GALLOWLAW, a village in the parish of Panbride, Forfarshire. Population, 79. Houses, 22.

GALSTON, a parish, containing the post-town of Galston and the village of Old Bridgend, in the north-east corner of Kyle, Ayrshire. It is bounded on the north by Irvine water, which divides it from the parishes of Kilmarnock and Loudon in Cunningham; on the east by Avon water, which divides it from the parish of Avondale in Lanarkshire; on the

south by the parishes of Sorn and Mauchline; and on the west by Cessnock water, which divides it from the parishes of Riccarton and Craigie. In extreme length, from east to west, it measures from 12 to 13 miles, and in extreme breadth, from north to south, 4½ miles; but it is extremely irregular in outline, and contains scarcely 23 square miles of superficial area. The surface differs widely in the several districts; but, on the whole, is a level variegated with considerable hills. The most upland portion is the eastern and south-eastern; and there it is, for the most part, carpeted with heath and moss. Along the banks of the Irvine, over nearly the whole length of the parish, is a stripe of plain, covered with rich alluvium, and delightfully fertile and well-cultivated. South of this plain, over a distance of 2½ miles, a very wide belt of forest stretches east and west, and along with lesser belts and clusters in other localities, occupies about 1,000 acres. About two-thirds of the whole parish are arable, and about four-tenths are pastoral or mossy. There are few places in the county in which improvement has made such rapid progress as Galston moor. About 45 years ago, the whole presented a bleak and sterile appearance; but by the judicious and enterprising spirit of the late Nicol Brown, Esq. of Lanfine, the aspect of the whole is changed. Well-constructed farm steadings, regular hedges, rows, and healthful plantations now give beauty and life to the scene; and the ground that was once unproductive is now bringing forth abundantly. Bruntwood-loch, in the south-west extremity, formerly the resort of wild ducks and swans, has been rifled of its ornithological wealth by agricultural improvement, and made to contribute its bed for the growth of the fruits of the earth. Loch Gait, at the eastern extremity, once a sheet of deep water, abounding in trouts and very large eels, and the chief source of the Water of Avon, has become transmuted into a marsh. A considerable proportion of the hills and rising grounds of the parish terminate in whinstone summits. The highest elevations are Distinct-Horn and Molmont-hill, both in the eastern division, which rise respectively 1,100 and 1,000 feet above the level of the sea. Molmont-hill is arable to the top, and commands an extensive and delightful prospect. A spectator, standing on its summit, looks immediately down on the windings of the Irvine, the town of Galston, and the ancient seats of Cessnock tower and Loudon castle, with their extensive woods; he surveys all Cunningham, most of Kyle, and a great part of Carrick; he sees, right before him, across the frith of Clyde, the huge barometer of Ayrshire, the mystic-looking island of Arran, shrouded at times, and at times gorgeous and brilliant in its cloudy drapery; and he even obtains, on a clear day, a filmy view of the apparently sinking coast of Ireland. The climate of the parish, though moist, is not unhealthy; a frequent prevalence of high winds, operating, it is believed, to prevent insalubrious effects from very frequent falls of rain. About a century ago all the fuel used in the parish was peats from Galston moor, excepting a few coals, brought in sacks on horses' backs, along almost impassable roads, from Caprington near Kilmarnock. But now coal-mines are extensively worked in the parish's own western district, the dip of whose strata here is north-west. Limestone and sandstone also have been worked,—the latter of a kind suitable for paving and roofing flag. Agate and chalcidony frequently occur on Molmont-hill, though seldom of a character to be cut into gems; and, in the channel of Burn-Anne, at the west base of that hill, is found the beautiful stone called the Galston pebble. On the summit of the same hill were remains of a Druid-

ical circle, the whole of which has been destroyed, originally about 60 feet in diameter. At Claymire, half-a-century ago, an urn was dug up containing several ancient coins; at Waterhaughs twenty-two silver coins were discovered; and, in 1831, in the eastern part of the parish, a coin was found of Cæsar Augustus. At a place called Beg above Allanton are rude traces of an extensive Roman camp, where the patriot Wallace, with only fifty followers, obtained a complete victory over an English officer of the name of Fenwick at the head of 200 men. Wallace had several places of retirement in the uplands on the eastern verge of the parish, and in those of the conterminous parish of Loudon; and has bequeathed to a hill in the former, and a hollow glen in the latter, the names respectively of Wallace-hill and Wallace-gill. The western part of Galston is traversed by the great road from Kilmarnock to Nithsdale; and the northern parts enjoy ample facilities of communication by means of the Newmilns branch of the Glasgow and Southwestern railway. The yearly value of the raw produce of the parish was estimated in 1837 at £38,736. Assessed property in 1860, £16,475. Population in 1831, 3,655; in 1861, 5,254. Houses, 572.

This parish is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, the Duke of Portland. Stipend, £178 16s.; glebe, £15. Schoolmaster's salary, £50, with £40 other emoluments. The parish church was built in 1808, and has a spire and clock, and contains 1,028 sittings. There is a Free church: attendance 300; sum raised in 1865, £133 6s. 8d. There is an United Presbyterian church, which was built in 1797, and contains 547 sittings. There is also a Morrisonian place of worship. Blair's free school, for clothing and educating 103 children, is an elegant massive structure, with a dwelling-house for the teacher on the ground flat, and yielding him a salary of £50. There are likewise in the parish two subscription schools at Woodhead and Allanton, and an adventure school. The church of Galston was anciently dedicated to St. Peter; and, in 1252, it was granted to the convent of Red friars at Fail, and continued in their possession till the Reformation. Before 1471, a chapel was founded in Galston, and dedicated to the Virgin Mary; and it was upheld by an endowment for the support of a chaplain. In 1578, the property of the chapel belonged, in right of its patronage, to Campbell of Cessnock.

The TOWN of GALSTON stands on the left bank of the Irvine, at the point where it receives the waters of Burn-Anne, 5 miles from Kilmarnock, 14 from Cumnock, 14 from Ayr, and 39 by railway from Glasgow. It occupies a low site, surrounded by gentle rising grounds, and overlung on the north by the woods and braes of Loudon. It has altogether a very pleasing appearance; and it exerts a considerable local influence in the midst of an opulent productive district. A fine stone-bridge of three arches communicates between it and the northern bank of the Irvine. Loudon castle lifts its magnificent castellated pile into view, from amidst a rich embowering of woods, about a mile to the north. In the town or its vicinity are four corn-mills, a lint-mill, a paper-mill, and two saw-mills. But the chief occupation of the inhabitants is cotton-weaving. The principal manufacture, during the years of the hamlet-history of the place, was shoes for the merchants of Kilmarnock or for exportation. But when, in dependency on Paisley and Glasgow, the weaving of lawn and gauze was introduced, it somewhat suddenly expanded the bulk of the hamlet, gradually swelled it into a small town, and, for a long period, gave it a healthy and athletic aspect.

The first loom for light work was set up in 1787; but so early as 1792 the number of looms was about 40, and in 1828 it had increased to 460; but then it received a check, so as to decrease in the next ten years to 423. The town has a branch of the Union bank, three insurance offices, and a total abstinence society. There is a station for Galston on the Newmilns branch of the Glasgow and Southwestern railway. Fairs are held on the third Thursday of April, the first Thursday of June, and the last Wednesday of November. Near the town is the "Patie's mill" of song. Population in 1831, 1,891; in 1861, 3,228. Houses, 311.

GALT-HEAD, a headland, forming the north-western extremity of Shapinshay, $\frac{1}{2}$ mile east of Gairsay in Orkney.

GALTWAY, an ancient parish, now incorporated with the parish of Kirkcubright, and forming the central part of that parish. Its church-yard, surrounded by a thriving plantation, is still in use. The church and lands of Galtway belonged till the Reformation to the prior and canons of St. Mary's-Isle. See KIRKCUDBRIGHT.

GALVAL-CASTLE. See BOMARN.

GAMESCLEUCH. See ETRICK.

GAMESHOPE LOCH, a lake, about 600 feet in diameter, on the southern border of the parish of Tweedsmuir, Peebles-shire. It lies in the centre of the southern Highlands, within $\frac{3}{4}$ of a mile of the boundary-line with Dumfries-shire, and is probably the most loftily situated loch in the south of Scotland. It abounds in excellent dark-coloured trout. A streamlet, called Gameshope burn, carries off its superfluous waters 6 miles northward to the nascent Tweed.

GAMHAIR (THE). See GAUR (THE).

GAMRIE, a parish, containing the post-town and seaport of Macduff and the fishing villages of Gardenston and Crovie, on the coast of Banffshire. It lies in the district of Buchan, and is connected only for a brief space, opposite the town of Banff, with the main body of Banffshire. It is bounded on the north by the Moray frith; on the east by Aberdour; on the south by King-Edward; and on the west by King-Edward, Alvah, and Banff. Its length east-north-eastward is about 10 miles; and its breadth is from 3 to 4 miles. The burn of Nethermill forms the boundary with Aberdour; the burn of Logie forms, for several miles, the boundary with King-Edward; and the river Deveron, just before its influx to the sea, forms the boundary with Banff. The interior is all drained by burns, some of which run to the sea, and others to the Deveron, and most through finely romantic dells or vales. Not a drop of water runs into Gamrie from any other parish; but all its burns either rise within itself or merely touch its boundary; and several of them are eminently interesting either for the fitfulness of their course, the beauty of their falls, or the utility of their water power. A saw-mill and several grain-mills are situated on these burns; and one of them at Meirose has two water-wheels on different stories driven by a natural cascade. Near Macduff is a mineral spring, called the well of Tarlair, which is resorted to by invalids. On the hill of Troup, at nearly the highest part of the parish, in a hollow surrounded by hillocks, is a tarn called the Standard loch, which is a nightly resort of wild geese in spring. "Not far from the house of Troup," says the author of the Old Statistical Account of Gamrie, "are three great natural curiosities. 1. A perpendicular rock of very great extent, full of shelves, and possessed by thousands of birds called kittywakes. 2. A cave, or rather den, about 50 feet deep, 60 long, and 40 broad, from which there is a subterraneous

passage to the sea, about 80 yards long, through which the waves are driven with great violence in a northerly storm, and occasion a smoke to ascend from the den. Hence it has got the name of Hell's lum. 3. Another subterraneous passage, through a peninsula of about 150 yards long from sea to sea, through which a man can with difficulty creep. At the north end of this narrow passage is a cave about 20 feet high, 30 broad, and 150 long, containing not less than 90,000 cubic feet. The whole is supported by immense columns of rock, is exceedingly grand, and has a wonderfully fine effect, after a person has crept through the narrow passage. This place has got the name of the Needle's eye. There are in the parish several tumuli." On the farm of Pitgair is a very old ruin, with very thick walls, called Wallace castle, but unknown to either history or tradition.

The coast of Gamrie is one of the grandest and most picturesque stretches of sea-board in Scotland. A rocky rampart, in some places perpendicular, and in all precipitous, rises sternly up from the sea, to the height of about 400 feet, and presents everywhere such features of strength and terror as make it a fit monument of the tremendous convulsions which in old times shook the world. Parts of it are inaccessible to the foot of man; and other parts bend just enough from the perpendicular to admit a carpeting of sward, and are here and there traversed by a winding footpath like a staircase, which few strangers have sufficient daring of heart or steadiness of head and limb to ascend. The summits of the rampart are a few furlongs broad, and variously ascend or decline to the south, and then terminate in sudden declivities into glens and dells, which run parallel with the shore; and they command a sublime view of the ever-changeful ocean to the north, and of a far-spreading expanse of plains and woods, of tumulated surfaces and mountain-tops to the south and west. Several great chasms cleave the rampart from top to bottom, and look like stupendous rents made by a stupendous earthquake; they yawn widely at the sea, and take the form of dells toward the interior; and they have zigzag projections, with protuberances on one face corresponding to depressions or hollows on the other. All these ravines are beautifully romantic; and the largest of them, called the Den of Afforsk, is both a gem of scenery, and a haunt of historical tradition. Here stands the old church of Gamrie, alleged to have been built on occasion of a fierce fight with the invading Danes in the year 1004; and the following account of the place, and of the tradition respecting it, is from the pen of the parochial schoolmaster, Mr. Alexander Whyte, and appeared first in the *Aberdeen Magazine* in 1832, and afterwards in the *New Statistical Account of Scotland*:—

"It is not alone by the natural beauties of the place that this scenery becomes a field peculiarly adapted for the fancy to sport in. These green hillocks, grotesque knolls, rugged rocks, and deep gulleys—these vales which have rested for centuries in peace, were once the scene of deadly conflict; for it was here that our far-off ancestors had to stem the torrent of invading Danes; and this brook, now meandering peacefully over the smooth pebbles, once flowed red with the blood of the slain. That green conical mound that tops the east bank of the den, is the castle hill of Finden. It was garrisoned with a part of the Scottish army stationed here to watch the landing of the Danes; a party of whom effected a lodgment on the opposite bank, in the place where the old church now stands. The alarm was immediately given, and communicated by means of fires on the mounds, which communi-

cated the intelligence rapidly through the kingdom, and quickly brought up reinforcements. Still the Scottish chief, the Thane of Buchan, considered the issue of an attack rather dubious, and, in order to add the enthusiasm of religion to that of patriotism among his followers, made a solemn vow to St. John, in presence of the whole army, to build a church to him on the spot where the invaders were encamped, on condition that the saint would lend his assistance in dislodging them. The superstitious soldiers, thinking this too good an offer for any saint to reject, made themselves sure of St. John's co-operation, and entered with alacrity into the plans of their leader; who being now sufficiently reinforced, sent a detachment round by the head of the den,—and these, fetching a compass by the south-west, succeeded in gaining possession of the top of the hill, directly over the Danish main camp, and by rolling down large stones upon the invaders, obliged them to abandon it, and to make their escape by the north-east brow of the hill which overhangs the sea, where many were killed in the flight; whence the place obtained the name of Ghaemrie or the running battle,—modernized into Gamrie. After being dislodged from the east, the Danes formed a new camp, (where the entrenchments are still to be seen,) which still preserved their communication with the sea, and also with an extensive barren plain on the top of the hill. Meantime the whole Scottish army, in fulfilment of their leader's vow, set to work and built the church on the spot where the Danes first settled, while both parties were waiting additional reinforcements. The Danes having been joined by a party of their countrymen who had landed at Old Haven of Cul-len, about four miles westward, made a successful attack on the Scotch, and drove them back to the castle-hill; and, in spite of St. John for assisting their enemies, they polluted his sanctuary by making it a stable for their horses. By this time, however, the alarm had spread far and wide, and the Scotch, pouring in from all quarters, not only forced back the Danes to their old position on the brow of the hill, but, getting possession of the whole heights, and enclosing them on all sides except that overhanging the sea, they again commenced their murderous work of rolling down stones, while the helpless Danes could neither oppose nor escape, and then rushing down upon them, sword in hand, the Scotch cut them to pieces to a man. The Bleedy pots (Bloody pits) is still the name of the place, which, being incapable of cultivation from its steepness and exposure to the north blast, remains to this day in *statu quo*. Besides the round, the crescent, and variously angled figures in the ground, the graves of the Danes are yet to be seen, sunk and hollow, among the rank brown heather, green at the bottom, and surrounded at the borders with harehells and whortle-berries, with fragments of rock and large detached stones lying around, and covered with moss."

The general surface of the parish is exceedingly diversified by bills, dells, and precipices. About 1,000 acres are under wood; a vast extent of land has been reclaimed during the last ten years; and now little ground lies waste except such as is too steep or rocky to be ploughed. The soil varies from a fertile loam to a barren henty heath. The rocks have been the subject of very interesting papers by several eminent geologists; and the principal one has been regarded by some as belonging to the greywacke group, by others as belonging to the primary slates. The principal landowners are the Earl of Fife and Campbell of Troup. Near the eastern extremity of the parish is Troup house.

built about 80 years ago, a very fine baronial edifice, now and for years past uninhabited. The real rental of the parish at present is nearly £18,500. Assessed property in 1843, £12,120 0s. 0d. The value of the fisheries last season (1856) was £25,490. There are three saw-mills and two bone-mills. Population in 1831, 4,094; in 1861, 6,086. Houses, 1,104.

This parish is in the presbytery of Turriff, and synod of Aberdeen. Patron, the Crown. Stipend, £248 4s. 3d.; glebe, £12. Unappropriated teinds, £441 6s. 8d. The parish church stands in the Gamrie or eastern district of the parish, is a very neat structure, built in 1830, and contains about 1,000 sittings. A chapel of ease at Macduff was built in 1805 by the then Earl of Fife, who allowed a small salary for the minister; and it is a very neat building, with 858 sittings. There is a Free church preaching station in the Gamrie district; and the sum raised in connexion with it in 1865 was £172 1s. 5d. There is a Free church at Macduff, with an attendance of 400; and the sum raised in connexion with it in 1865 was £288 9s. 10d. There is an United Presbyterian church at Gardenston, with an attendance of 250. There are two parochial schools, respectively at Gamrie and at Macduff. Salary of the Gamrie schoolmaster, £35, with a share of the Dick bequest, £16 other emoluments, and £25 fees. Salary of the Macduff schoolmaster, £35, with a share of the Dick bequest and £35 fees. There are four subscription schools and several other non-parochial schools. There are likewise a good public library and a savings' bank. The parish enjoys great facilities of trade through Macduff and Banff.

GANNACHY BRIDGE. See FETTERCAIRN.

GARACHARY (THE). See DEE (THE).

GARAN, or GARANHILL, the name originally and for some years given to the village of Muirkirk in Ayrshire, and borrowed from the rising ground or eminence on the face of which it stands, but long since entirely discontinued in popular usage. See **MUIRKIRK**.

GARAN, or GARVELLAN, an islet 4 miles east of Cape Wrath, and 1 mile from the shore, on the north coast of Sutherlandshire. It is about 60 feet high, and about 100 yards in diameter; and is a crowded resort of sea-fowl.

GARAWALT (THE), a small tributary of the Aberdeenshire Dee, entering it from the south about 2 miles below the bridge of Invercauld. It is an impetuous stream, with frequent cataracts and falls, and displays some romantic scenery.

GARBET-HILL, a village in the parish of Cumbernauld, 3 miles east of the town of Cumbernauld, Dumhartonshire. It has a school.

GARBHMEAL, a mountain, of 3,280 feet of altitude above sea-level, in the parish of Fortingal, Perthshire.

GARBHREISA, the largest of five islets, stretching in a line south-westward from the southern extremity of the peninsula of Craignish in Argyleshire.

GARDENSTON, a fishing village in the parish of Gamrie, Banffshire. It stands at the head of Gamrie bay, on a site where the prevailing cliffs of the coast make a slight recess from the water's edge, 8 miles east-north-east of Banff. It was built in 1720, and has ever remained nearly stationary in amount of population. It has a tolerable harbour for the accommodation of fishing-boats and small vessels. About 15 boats are employed in haddock-fishing, and about 34 in herring-fishing. The total yearly value of its fish is about £4,500. Here is an United Presbyterian church. Population, in 1861, 507.

GARDERHOUSE, a post-office station subordinate to Lerwick in Shetland.

GARDYNE. See KIRKDEB.

GARELOCH. See GARLOCH.

GARELOCHHEAD. See GARLOCHHEAD.

GARGUNNOCK, a parish, containing a post-office village of its own name, in the north of Stirlingshire. It is bounded by Perthshire, and by the parishes of St. Ninians, Fintry, Balfon, and Kippen. Its length north-north-eastward is 6 miles; and its breadth is 4 miles. The Forth, flowing in remarkable sinuosities, and generally about 60 feet broad and 12 feet deep, traces all the northern boundary. The parochial surface is naturally distributed into compact districts of moorland, dryfield, and carse. The moorland, comprising rather more than one-third of the entire area, is part of the hilly range which extends from Stirling to Dumbarton, and down to about half-a-century ago, was esteemed of no value except for its turf. But it was almost suddenly discovered to be improveable as a prime sheep-walk, and has passed through a series of georgic operations which have wholly changed its aspect and made it a moor only in name. From its various uplands and northern slopes, magnificent views are obtained of the luxuriant carse-lands below studded with mansions and fretted over with pleasure-grounds, of the singular scenes spread over the moss of Kincardine by the noted improvements of Mr. Drummond, of the foldings and windings of the Forth as far as the eye can reach along its level but luxurious bed, and of the range of varied and blue mountain land which winds round the distant horizon. Several rills, flowing from different parts of the moor, and concentrating their waters into brooks, fall over craggy precipices, and form cascades which, after heavy rains, are seen and heard at a great distance. A fine view of the slope of the uplands, gemmed with the tinted froth and spray of the cascades, is obtained at the west end of the village of Gargunnoch. The dryfield district slopes gently from the moorland to the carse, and is carpeted with a light sandy soil which quickly absorbs rain. Till toward the end of last century, the dry-fields, for the most part, lay waste and wild, overrun with furze and broom, with scarcely a tree to break the dull uniformity of their surface. But headed by the proprietor of the estate of Boquhan, and stimulated by his energetic and skilful example, all the heritors united or rather vied in such efforts of draining, ditching, hedging, planting, and other improving operations, as speedily achieved a complete change of both their aspect and their character. About a mile to the eastward of Leckie, where the road from Stirling to Dumbarton passes over a rising ground, the dryfields spread out before the spectator in a shade of rich green beauty. The tufted hill-slopes on the back-ground,—the glens coming down in dresses of copsewood and of regular plantation,—the village, the church and manse,—the chimney-tops of Gargunnoch-house, just discerned above the wood,—the well-dressed fields, some for pasture, and others for various sorts of cropping, and all enclosed with dikes and hedges in excellent repair,—form altogether a very fine landscape. The carse-lands form a level stripe along the Forth, and are believed to have all been formed under water; and they have exhibited, in various places, beds of shells such as those which are now in the frith of Forth. In later times they seem to have been covered with part of what has been called the Caledonian forest; and, at all events, they afforded refuge, when the Romans were in the neighbourhood, to the fugitive natives, and occasioned the invaders no little trouble in denuding

them of large trees. After the forest was cut down, part of them—like the whole of those of Blair-Drummond on which the celebrated improvements were made—seem to have become moss; and toward the close of last century, about two acres on the property of Boquhan remained in the mossy condition. They long lay almost in a state of nature, unprofitable to the landlord, and repulsive to the agricultural operator; bad roads, the want of enclosures, the stiffness of the soil, and ignorance of that species of farming which was suitable to the district, seeming to place insurmountable obstacles in the way of improvement. But long before the 18th century closed, the lands assumed an appearance quite surprising to any one imperfectly acquainted with the results of skillful experiments in husbandry; and now they everywhere bear aloft those luxuriant crops of prime grain for which the carses of Scotland, particularly those of the Forth and the Tay, are famous. The principal landowners are Moir of Leckie, Campbell of Boquhan, Stirling of Gargunnoch, and Graham of Meiklewood. The real rental is upwards of £6,500. The entire extent of land under wood is about 580 acres.

The glen of Boquhan, as seen from a road along its east side, exhibits, on a limited scale, a most romantic view; and as seen from the bottom, at and near the field of Oldhall, displays "a scene perfectly wild, as though nature were in ruins." Gargunnoch-house mingles the ornamental architecture of modern times with the massive masonry of the age of intestine feuds; presenting a fine front of recent construction in combination with an east wing of considerable antiquity, in which there is a sort of tower, originally fortified by a high wall and strong gate. Leckie-house is a recently erected pile of much elegance, in the old English baronial style, commanding a superb view of the strath of Mont-teath. Meiklewood-house is also a handsome new mansion, among fine old trees. On a spot still pointed out, near the north-east boundary of the parish, about 50 yards from the Forth, stood 'the Peel of Gargunnoch,' or Gargunnoch, which Sir William Wallace, with a few followers, took by stratagem from an English party stationed there to watch the passage of the Frew in its vicinity; and about $\frac{1}{2}$ of a mile westward are the remains of the bridge of Offers by which Wallace crossed the Forth, on his way to the moss of Kincardine. A little south of the village of Gargunnoch is an artificial conical mound called the Kier-hill, around which are traces of a circular ditch and rampart, and which, whatever was the date of its origin, seems to have been the camp or post of Wallace on the night of his exploit at the peel. A great quantity of human bones, and some pieces of brass armour and points of spears, were dug up 50 or 60 years ago on the lands of Boquhan,—the relics probably of the battle of Ballochlean, which was fought on the adjacent fields. The Forth and Clyde railway, at present in course of construction, will open up Gargunnoch parish to the markets, and create a transit traffic. Both the old road and the new one from Stirling to Dumbarton pass through the northern district of the parish. The village of Gargunnoch stands on the old road, about a mile from the Forth, and $3\frac{1}{2}$ miles east of Kippen. It is a neat place, with little gardens, pleasantly situated on the side of a rising-ground, whose summit surveys nearly the whole parish, together with large contiguous expanses of the gorgeous basin of the Forth. It stands on the estate of Gargunnoch; and so does a distillery. A 'Gargunnoch Farmer's club' was instituted by General F. Campbell in 1796, and enriched, in 1807, by a bequest from him

of £500; and it extends its benefits to 11 parishes, including those of Stirling and St. Ninians, and three in Perthshire. Population of Gargunnoch parish in 1831, 1,006; in 1861, 728. Houses, 145. Assessed property in 1860, £7,724.

This parish is in the presbytery of Stirling, and synod of Perth and Stirling. Patron, H. F. Campbell, Esq. of Boquhan. Stipend, £155 1s. 9d.; glebe, £16. Schoolmaster's salary, £35, with £11 fees, and £2 2s. other emoluments. The parish church was built in 1774, and contains 500 sittings. There is a Free church for Gargunnoch and Kincardine: attendance, 118; sum raised in 1865, £49 19s. 10d. There are a private school and a parochial library.

GARIE (THE), a streamlet of the western part of Forfarshire. It issues from the Loch of Kinnordy in the parish of Kirriemuir, and runs southward to the river Dean, a little east of Glammis castle. It formerly possessed considerable volume; but has been reduced to comparative insignificance by the draining of the Loch of Kinnordy.

GARIOCH, an inland district of Aberdeenshire; bounded on the north-east and east by Formartin, on the south and west by Marr, and on the west, and north-west by Strathbogie. It contains 150 square miles and 15 parishes. On account of its fertility it used to be called the granary of Aberdeenshire. The surface is rather mountainous and cold—the district being at all events bounded on every side by a range of hills, beginning near Old Meldrum, and extending westward about 20 miles; but the valleys are warm and well-sheltered, and from the salubrity of the air, they have long been famed as a summer-resort for the valetudinarian. This district gives name to the presbytery holding its seat at Chapel-of-Garioch. Its resources were greatly developed by the Inverury canal, and are now likely to be developed still better by the Great North of Scotland railway. Population in 1831, 15,787; in 1851, 18,147. Houses, 3,327.

GARIOCH (CHAPEL OF). See CHAPEL-OF-GARIOCH.

GARION-GILL, a mineral district in the eastern part of the parish of Bothwell, connected by railway with the Glasgow and Garnkirk railway, and with the Monkland canal.

GARLETON HILLS, a ridge of hills of considerable height, but somewhat conspicuous appearance, in East Lothian. They commence in the western extremity of the parish of Haddington, between the town of Haddington and the frith of Forth, and continue their elevation for a few miles eastward. To a spectator from Edinburgh, they close up the view of the delightful vale of Haddingtonshire. Down their southern declivity run a few belts of regular plantation. On one of their principal summits stands a monument to the memory of John, Earl of Hopetoun. The Garleton hills are of the porphyry series. The stone, as it occurs here, has in general a basis of a largely foliated clinkstone, enclosing crystals of felspar. In the line of the ridge, at the abbey toll, about a mile to the eastward of Haddington, there occurs a large bed of felspar tufa.

GARLIESTON, a small post-town and sea-port in the parish of Sorbie, Wigtonshire. It stands at the head of a bay of its own name, 5 miles north-north-east of Whithorn, and 7 south-south-east of Wigton. The main body of it bends in the form of a crescent round the head of the bay. The houses are built of whinstone, and have a neat, substantial, and cheerful appearance. The town was founded by John, 7th Earl of Galloway, when Lord Garlies, and in ten years had an accession of 34 houses.

Skirting it on the south are the fine plantations of the Galloway demesne, overlooked at $\frac{3}{4}$ of a mile's distance by the fine form of GALLOWAY HOUSE: which see. From nearly the date of its origin, the town has had a rope and sail manufactory. It likewise carries on shipbuilding to a small extent. Fishing also has been a busy but somewhat doubtful employment. But the chief trade of the town has connexion with its harbour. From the headland of Eagerness, Garlieston bay runs westward into the land about $1\frac{1}{2}$ mile; but from the opposite headland, which is very near the town, it extends not much more than half-a-mile; and it is about half-a-mile of average length. A considerable stripe at the head is dry at low water. The small streams, Broughton burn and Pontin burn, empty themselves into the bay; and just before doing so, are spanned by convenient bridges. The bed of the bay is a deep soft clay, on which vessels lie in the greatest safety, and have the best anchorage. The shore is sandy and flat; but at Eagerness point it is rocky though not high, and on the north is overlooked by some rising grounds. The bay opens out on the Irish sea in the same direction as the gulf called Wigton bay, pointing right forward to the centre of the channel between the Isle of Man and the coast of England; but it forms in reality a small wing or indentation of Wigton bay, and, along with Fleet bay on the opposite shore, serves to expand Wigton bay from an average width of $4\frac{1}{2}$ miles, to a subsequent average width of 9 or 10. The water is of a bright green colour, remarkably pellucid; and is from twenty to thirty feet deep. The tide flows direct out from Wigton bay six hours, and takes the same time to return; but in Garlieston bay it flows five hours from the south and ebbs seven. Vessels, in a fair wind, go hence to Whitehaven in four hours, to the Isle of Man in three, to Liverpool in twenty-four, to Dublin in twenty-four, and to Greenock in thirty. The bay is admirably adapted to accommodate, in particular, the trade between Dublin and Whitehaven, to which one tide is of great consequence, and, in general, all the trade of the West of England from Carlisle to Liverpool, of the east coast of Ireland and the Isle of Man, and of the west coast of Scotland to England and Wales. The harbour, naturally good, is now undergoing a great enlargement, which will render it one of the best in the south of Scotland. Regular communication is maintained by steam with Glasgow and Liverpool. About 16 vessels, most of them less than 100 tons burden, belong to the port. Nearly the whole exports consist of fish and agricultural produce; and the chief import is coal from Cumberland. The town has an Independent chapel and three schools. Population, in 1861, 685.

GARLPOOL BURN. See EVAN (TNE).

GARMOND, a village in the parish of Monquhiter, Aberdeenshire. It was built in the latter part of last century. Population, 226. Houses, 66.

GARMOUTH, a small post-town and sea-port in the parish of Urquhart, Moraysire. It is situated on the left bank of the Spey, immediately above that river's influx to the sea, 4 miles north of Fochabers. It is chiefly of modern growth, and is neatly laid out in regular streets, though some of the houses are by no means of a first-rate character. It is a burgh-of-barony, under the Duke of Richmond. Its harbour is naturally good, but was severely damaged by the great flood of 1829, and is always subject to new shiftings and obstructions of ground from heavy freshets of the Spey. The native timber trade of the port was at one time remarkably great, from the floating hither of cut trees from the forests of Glenmore, Abernethy, Rothiemureus, and Glen-

fesbie; and it is still considerable, both for the export of the wood, and for the local building of vessels. The export trade in agricultural produce also is considerable. The chief article of import is coal. The number of vessels entering the harbour in the year has in recent years ranged from 154 to about 260. A fair is held on the 13th of June. The town has a Free church, a subscription library, and a branch-office of the Caledonian bank. The sum raised in 1865 by the Garmouth Free church was £228 9s. 8d. Contiguous to the town, in the mouth of the Spey, is a valuable salmon fishery. Population, in 1861, 802.

GARNKIRK, an estate and a seat of manufacture, in the parish of Cadder, Lanarkshire. The estate lies in the south-easterly part of the parish, and comprises 1,457 acres. Its surface has a tame appearance, yet contains 150 acres of wood. Vast fields of fire-clay occur here, from 4 to 19 feet in thickness, and equal if not superior to Stourbridge clay. It resembles light-coloured sandstone in tint, and has been found to stand a much stronger heat than any other fire-clay known in this country. Its composition is 53.4 per cent. of silica, 43.6 of alumina, 0.6 of lime, 1.8 of peroxide of iron, and 0.6 of protoxide of manganese; while that of the Stourbridge clay is 72.516 of silica, 20.264 of alumina, 0.891 of lime, 3.308 of peroxide of iron, 1.488 of protoxide of manganese, and 1.533 of phosphate of lime. Extensive works, with large neatly constructed buildings, are in operation for the manufacture of this fire-clay into vases, flower-pots, cans, crucibles, water pipes, and other articles of remarkable elegance and durability. The seat of the manufacture closely adjoins the Glasgow and Garnkirk railway, now the north fork of the Caledonian railway, at the Garnkirk station, $6\frac{1}{2}$ miles north-east of Glasgow. Another manufacture of similar character, but of smaller extent, and with clay of less prime character, is adjacent to Heathfield on the estate of Bando. Limestone also has been much worked on the estate of Garnkirk.

GARNKIRK AND GLASGOW RAILWAY. See GLASGOW AND GARNKIRK RAILWAY.

GARNOCK (THE), a small river in the district of Cunningham, Ayrshire. It rises at the foot of a very high hill in the moor called the Misty-law, at the boundary between Cunningham, or the parish of Kilbirnie, and Renfrewshire. During 5 miles it flows south-eastward; and then, during $2\frac{1}{2}$ miles it flows due south; intersecting over nearly the whole distance, the parish of Kilbirnie, and, at the middle point of its southerly course, sweeping past Kilbirnie village. Having now entered the parish of Dalry, it flows $3\frac{1}{2}$ miles, including two considerable sinuosities, in a south-westerly direction; and it then resumes its southerly course, and flows 8 or 9 miles through the parish of Kilwinning and between the parishes of Irvine on the east and Stevenston on the west, to the sea at Irvine harbour, contributing with Irvine water to form the small estuary above Irvine mouth, and performing some remarkably serpentine evolutions before debouching from the plain. Immediately after its origin, it runs clear, dimpling, and beautiful down the hills; and, before reaching Kilbirnie village, tumbles noisily over a rocky declivitous bed of porphyry, forming a wild and lonely cataract, known as 'the Spout of Garnock.' In Dalry parish, it moves slowly, with an average breadth of 60 feet, through a fertile plain, upon a gravelly bed; and receives on its right bank the important tributaries of the Rye and the Gaaf. Further on, it is joined on the left by Dusk water; and thence to the sea, it flows through a level and richly wooded country, sweeping past the town of Kilwin-

ning, and making a confluence with the opulent stream of Lugton water. During all the lower part of its course, it, on the one hand, enriches the district with an abundant supply of salmon and various kinds of trouts, and, on the other, menaces it with an occasional devastating freshet. On the 19th of September, 1790, this river—though always subject to overflows—rose four feet higher than it was known ever to have done before; and prostrated and destroyed the standing corn in many fields, and careered away to the sea with heavy freights of crops which had been cut. Its entire length of course is about 20 miles.

GARPEL. See **LOCHWINNOCH.**

GARPEL WATER, a streamlet of the parish of Muirkirk, Ayrshire. It rises in the uplands near the boundary with Lanarkshire, and runs about 4 or 5 miles north-westward to the nascent river Ayr.

GARPEL WATER, a streamlet of the Glenkens district of Kirkeudbrightshire. It rises in the parish of Dalry, and runs 5 or 6 miles southward, through that parish and on the boundary with Balmaclellan, to a confluence with the Ken about a mile above New Galloway. It runs, in some parts, along a narrow rugged channel, overhung by lofty wooded precipices; and it makes a few fine waterfalls, the most picturesque of which is one associated with events in the times of the persecuted Covenanters, and called the Holy linn.

GARPEL WATER, a streamlet of the upper part of Annaudale, Dumfries-shire. It rises among the mountains on the western border of the parish of Moffat, near the boundary with Lanarkshire, and runs about 5 or 6 miles south-eastward, through the parishes of Moffat and Kirkpatrick-Juxta, to a confluence with the Evau. It forms a cascade near the old castle of Aelmeass. A very strong chalybeate, known as Garpel spa, occurs near it; not, however, in the manner of a spring, but formed in pools by solution in warm weather, when the rain water imbibes and dissolves the mineral constituents from the ferruginous-aluminous soil.

GARRALLAN. See **CUMNOCK (OLD).**

GARRAWAULT. See **GARAWALT.**

GARREL. See **GARVALD.**

GARR GLEN, a pass through the hills on the mutual border of the parishes of Auchtergaven and Little Dunkeld, Perthshire. The streamlet Garry, a tributary of the Oridie, rises in boggy ground at the head of it.

GARRION-GILL. See **GARRION-GILL.**

GARROCH-HEAD, a headland at the southern extremity of the Island of Bute, $2\frac{3}{4}$ miles west of the Little Crumbrae, Buteshire. It consists of a collection of steep and narrow ridges, running parallel to each other, and separated by deep and solitary valleys; the whole being divided from the main land by a low, marshy, sandy flat.

GARROCHORY (THE). See **DEF (THE).**

GARRON-HEAD, the headland flanking the north side of Stonelaven bay, in the parish of Fetteresso, Kincardineshire. It consists of a light green coloured rock, of intermediate character between trap and serpentine, and passing into chlorite slate.

GARRY (Loen), a wild mountain lake, about 4 miles long and $\frac{1}{2}$ a mile broad, extending north-eastward on the mutual border of the parishes of Fortingal and Blair-Athole, in Perthshire. It reaches to within $2\frac{1}{4}$ miles of the boundary with Badenoch, and lies nearly midway between the inn of Dalnacardoch and the lonely Loch-Ericht. A number of small mountain-streams flow into it, among which a rivulet that issues from the base of Benvoirlich and the Shallain water are the largest.

It discharges its waters, at its north-eastern extremity, by the river Garry. Surrounded on all sides by lofty, rugged mountains, with scarce an opening outward, but what has been worn by the course of some mountain-torrent, few more lonely or deserted scenes can be conceived than Loch-Garry. No signs of life are here to be met with, excepting sometimes a flock of sheep, or a herd of cattle, or, at rare intervals, a solitary shepherd and his dog. No trees wave their graceful branches around this wild lake; nor is there much appearance of vegetation on the mountains, for their huge slopes bared of soil by the winter's storms present little else to the view than great masses of naked rock. In a few places, a small portion of level ground may be described on its shores; but for the greater part of its extent the mountains descend sheer down to the water, with scarcely a perceptible footing at their base. On the banks of the Shallain, near its entrance into the lake, a number of little knolls are seen, which have much the appearance of artificial tumuli erected over the remains of long-forgotten warriors.

GARRY (Loch), a picturesque mountain lake, formed by expansion of the river Garry, about 7 miles in length, and terminating about 3 miles above the influx of the river to Loch Oich, in Inverness-shire. It extends along a magnificent glen with lofty receding mountains; and its immediate banks are a beautiful series of low swelling birch-clad eminences. Its whole extent is suddenly revealed to a traveller at a point near its eastern extremity.

GARRY (THE), a river giving name to Glen-garry, in the district of Athole, Perthshire. Like most of the Perthshire streams it has a lake bearing its own name, and is popularly said to have thence its origin. Its real headwater, however, rises on the side of Manbaue mountain on the northern boundary-line of the parish of Fortingal, and flows through the parish, first $3\frac{3}{4}$ miles southward, next $2\frac{1}{2}$ miles eastward, and next $\frac{3}{4}$ of a mile northward, receiving on both banks considerable tributary torrents from the ravines and gorges of the wild mountain-region through which it has its course. On the boundary between Fortingal and Blair-Athole it expands into Loch-Garry, and is identified for 4 miles north-north-eastward with that lake. At the point of its efflux from the farther end it receives from the north-west the tribute of Auld-Corry-Roan, which had flowed 5 miles from the north-west extremity of Blair-Athole, and, making a sudden bend, directs its course toward the south-east. Nearly 5 miles lower down it receives, on its left bank, the large tribute of Edendon water, which had flowed $9\frac{1}{2}$ miles from the northern boundary of Perthshire. A little way farther on it sweeps past the inn of Dalnacardoch; and $2\frac{3}{4}$ miles below the influx of Edendon water it receives from the north the tribute of Ender water, a stream of 7 miles in length of course. Two miles onward, while still flowing in a mountainous region, it begins to be adorned with wooded banks, to riot in a profusion of cataracts and cascades, and to wear an aspect of mingled wildness and beauty. Four miles below its confluence with the Ender it is joined, on its right bank, by the Fechorry; and a mile farther on it receives, on its left bank, the tribute of the romantic Bruar. Over the last mile it had flowed nearly due east; and it maintains this direction over a farther distance of $2\frac{3}{4}$ miles, till, sweeping past Blair castle and the hamlet of Blair-Athole, it is joined by the hulky and playful waters of the Tilt. It now, slowly resuming its south-easterly direction, traces for $1\frac{3}{4}$ mile the boundary-line between Blair-Athole and Dull, traverses for 2 miles a corner of the parish of Moulin.

bends southward, and, for one mile, divides Moulin from Dull, and then loses its name and its waters in the river Tummel. Its entire length of course is 30 miles. From the point of its leaving Loch-Garry, onward to its termination, it brings down, close on its left bank, the great Highland road from Inverness to Edinburgh. The Garry is probably one of the most impetuous or rather furious rivers of Scotland; and, when flooded by falls of rain or the melting of snow among the mountains, it comes down with a roaring tumultuousness and a terrific burst of accumulated waters which only the banks of solid rock which resist it can confine within harmless limits. But even on its rocky or gravelly bed, it tears up heavy fragments, and carries them lightly along in the energy of its Highland prowess; and, in various parts of its course, it forms cascades which, in its gentle moods, are romantic, and in its seasons of swollen wrath, inspire a Lowland spectator with awe.

GARRY (Tue), a river giving name to Glengarry, in the north-west of Inverness-shire. Its headwaters rise in Knoydart, at points not farther than 13 miles in a straight line from the Isle of Skye, and flow 5 or 6 miles to Loch Quoich; and the river, issuing from the foot of that lake, runs sinuously through a brilliant, wooded, mountain amphitheatre, about 13 miles north-eastward, not reckoning sinuosities, but including its expansion of Loch Garry, to an inoculation with Loch Oich, at the inn of Invergarry, $7\frac{1}{2}$ miles from Fort-Augustus. The road connecting Skye and Glenelg with the centre of the Great glen passes down the Garry all the way from Loch Quoich.

GARRY (Tue), a streamlet of the parish of Auchtergaven, Perthshire. It descends from the head of Glen-Garr, runs past the manse of Auchtergaven, receives the Corral burn, and unites at Leak with the Orie.

GARSUCBE, an estate in the parish of New Kilpatrick, Dumbartonshire. It is situated on the banks of the river Kelvin, and of the Forth and Clyde canal, 5 miles north-west of Glasgow. It belongs, together with other contiguous lands, to Sir Archibald Islay Campbell, Bart., of Succoth. Garseube house, the seat of that baronet, is a very elegant building, in the old English manorial style, erected in 1827, after designs by Mr. Burn of Edinburgh. The banks of the Kelvin here are exquisitely picturesque. Coal is extensively worked at Garsucbe, and very fine buff-coloured sandstone at Nether-ton of Garsucbe.

GARTCOSH, a station on the Glasgow and Garnkirk portion of the Caledonian railway. It is situated in the parish of Cadder, $2\frac{1}{2}$ miles south-west of Coatbridge, and $7\frac{1}{2}$ north-east of Glasgow.

GARTH. See DELTING.

GARTHLAND. See LOCHWINNOCH AND STONY-KIRK.

GARTLOCH. See CADDER.

GARTLY, a parish in the district of Strathbogie, and partly in Aberdeenshire, partly in Banffshire. Its post-town is Huntly, 4 miles distant from the parish-church, but only 1 mile from the nearest part of the boundary. It is bounded on the north by Huntly and Drumblade; on the east by Insh and Kinnethmont; on the south by Rhynie; and on the west by Huntly and Cabraich. It is divided nearly into two equal parts by the water of Bogie. The Banffshire moiety is named the Barony; and the Aberdeenshire, the Braes. The outline of the parish is an irregular oval, extending about 12 miles in length from east to west, and 6 in breadth from south to north. The hills on the border are mostly covered with heath, and afford plenty of

grouse and other game, as well as a supply of moss for fuel to the neighbouring parishes, and to the town of Huntly. From these hills several brooks run into the Bogie; and the valleys watered by them as well as the lands on the banks of the Bogie, are exceedingly fertile. Agriculture is in an advanced state upon upwards of 4,300 acres under cultivation. The remaining 10,300 acres are in pasture, moor, or moss and wood; but there is rather a defect of the last. The Corskie slate quarries, on the property of the Duke of Richmond, are very extensive and valuable, producing on an average 340,000 slates per annum, of three qualities,—first and second blue, and green. Several of the glens are exceedingly picturesque,—especially Tillyminnet, a favourite resort of the tourist. The castle of Gartly is an ancient ruin here, in which Queen Mary spent a night on her return from Inverness. The rent of the arable land is about £1 per Scotch acre. The yearly value of crop produce was estimated in 1836 at £13,793. Assessed property in 1860, £5,165. Population in 1831, 1,127; in 1861, 1,029. Houses, 184. Population of the Aberdeenshire section in 1831, 584; in 1861, 562. Houses, 96.

This parish is in the presbytery of Strathbogie and synod of Moray. Patron, the Duke of Richmond. Stipend, £211 17s. 4d., glebe, £16. Unappropriated tithes, £68 7s. 6d. Schoolmaster's salary, £50, with £5 fees, and a share in the Dick bequest. The parish church was built in 1621, but has undergone so much renovation that little of the original edifice of that date now remains except the steeple; and it contains about 550 sittings. There is a Free church, with an attendance of 200; and its receipts in 1865 were £86 19s. 11½d. There is a parochial library.

GARTMORE, a post-office village in the parish of Port-of-Monteith, and on the south-western verge of Perthshire. It stands on the peninsula between the rivers Avendow and Keltly, $1\frac{1}{2}$ mile above the point where they unite to form the Forth, and on the road from Aberfoyle to Dumbarton, $2\frac{1}{2}$ miles south-south-east of Aberfoyle, and 10 west by north of Kippen. Fairs are held here on the 8th of January, the 7th of July, the 19th of October, and the first Tuesday of October. A chapel of ease was built here in 1790, at the cost of £400, and contains 415 sittings; and it is in the presentation of the communicants. Here also is a Free church, whose receipts in 1865 amounted to £125 18s. 9d. In the vicinity is the fine mansion of Gartmore; and the surrounding country is wild though picturesque. Population of the village, about 270.

GARTMORE, Stirlingshire. See DRYMEN.

GARTMORN. See ALLOA.

GARTNESS, an extensive iron-work, in the Monkland mineral field, 2 miles from Airdrie, and 12 from Glasgow, Lanarkshire. It is capable of turning out about 100 tons of malleable iron per week.

GARTNESS, Stirlingshire. See DRYMEN.

GARTNEY. See STRATHGARTNEY.

GARTSHERRIE, a seat of coal-mining and of iron-working in the parish of Old Monkland, Lanarkshire. It adjoins the north-west side of Coatbridge, and has a station on the Caledonian railway, 9 miles from Glasgow. Its iron-works comprise a long double range of sixteen smelting furnaces. Its lines and groups of dwelling-houses are comprehended within the last census limits of Coatbridge. It has a very elegant place of worship connected with the Established Church, surmounting a small hill a little south-east of the furnaces, and figuring in the general landscape as a grand feature of the Coatbridge assemblage of town. This building was erected about

15 years ago, chiefly by the munificence of the proprietors of the iron-works, and cost about £3,300. It contains 1,050 sittings, and has a steeple 136 feet high. Here also is an academy, conducted by a number of teachers and assistants, and supplying a liberal range of instruction. A quoad sacra parish was for some time attached to Gartsherrie, and contained in 1841 a population of 5,905.

GARTWHINEAN, two villages, Easter and Wester, in the parish of Fossaway, Perthshire. Population of Easter G., 96. Houses, 27. Population of Wester G., 49. Houses, 15.

GARVALD, or GARREL, an ancient parish, now incorporated with Kirkmichael in Dumfriesshire. The church was originally a mensal church of the see of Glasgow. But in 1506, Robert Blackadder, the archbishop, assigned it to Glasgow college. At the Reformation, the patronage appears to have belonged to the convent of Red Friars at Fail in Ayrshire; and, afterwards, it was vested in the Crown. The subsequent annexation of the parish to Kirkmichael, was vigorously resisted by the parishioners. The church was rebuilt in 1617, but soon after was abandoned. Its ruins, surrounded by its cemetery, may still be seen on a rising ground on the bank of a small stream of its own name. After Kirkmichael church was appointed as the Sabbath resort of the parishioners, nothing short of the authority of the court-of-session was found competent to enforce such an enlargement of it as afforded them accommodation. Garvald had its name from a brook which, in common with various other streams running along a rocky channel, was designated from the Scots-Irish language, *Garv-ald*, or *Garw-ald*, 'a rough rivulet.' The name of the parish is commemorated also in that of two farms called Upper and Nether Garrel, and in that of the principal elevation of the district, called Garrel-craig. From the base of Garrel-craig, situated on the north-eastern verge of the present parish of Kirkmichael, the brook Garrel or Garvald flows southward $5\frac{1}{2}$ miles to the Ae, nearly opposite Traillflat, intersecting over its whole length the quondam parish. Though small in its volume of waters, it contributes largely to beautify the landscape, forming several tiny cascades and cataracts, and in one place falling over a perpendicular rock 18 feet in depth.

GARVALD, or GARREL (THE), a small, rough, impetuous stream, in the parish of Kilsyth, Stirlingshire. It rises on Garrel hill, one of the Campsie range, whose altitude above sea-level is about 1,300 feet; and it runs about 3 miles, first through narrow chasms, and afterwards over an open tract, to the Kelvin. Within the first half of its course it makes an aggregate descent of about 1,000 feet; so that it necessarily forms many cataracts and falls,—no one of which, however, is deeper than 50 feet. But in the lower part of its course, below Garrel-mill, it is so drawn off to a lake as to be generally dry except during a freshet.

GARVALD, or GARVAL (THE), a small but interesting stream in the parish of Eskdalemuir, Dumfriesshire. It rises on the boundary-line of the county, between Ettrick-pen and Windieff, pursues a south-easterly course of $5\frac{1}{2}$ miles, including windings, and then flows, for nearly a mile, to the north of east, and falls into the White Esk, half-a-mile above Johnstone. From third to half way on its course, it receives, on its right bank, two tributaries, each of nearly equal bulk to its own volume. Ascending the stream from its mouth, a tourist's attention is arrested by a view of the rockiness of its channel and the romantic character of its banks; but these appearances soon subsiding, he looks abroad on the general landscape, or converses listlessly with

his own thoughts. In this mood, he is suddenly aroused to admiration by a foaming cataract of the stream, called Garvald linns, which comes impetuously down, clothed in foam and glittering in spray, over a declivitous, and at intervals, a precipitous channel, pent up between banks of enormous rock which, generally chill and naked, are at intervals covered with the mountain-ash and the wild honeysuckle. In the long course of the cataract, the stream, even when most tumultuous and wayward, constantly surprises and delights by the beautiful variety of its capricious frolics; now forming a crystal and arched cascade over a perpendicular breastwork 8 feet deep,—and now sweeping out of view among huge masses of stone,—and then, as if glad to be emancipated from its rocky imprisonment, careering away, in the riotousness of new-found liberty, over the rough slopes of its declivitous path.

GARVALD AND BARA, an united parish, containing the post-office village of Garvald, in Haddingtonshire. It is bounded by Berwickshire, and by the parishes of Gifford, Morham, and Whittingham. Its length southward is $7\frac{3}{4}$ miles; and its greatest breadth is 4 miles. The northern division, comprising about one-fourth of the whole area, is arable, well-cultivated, delightfully shaded with plantation, and rich in the agricultural capacities and beauties of the great plain of East Lothian; but the other divisions climb away up the Lammermoor hills, till they gain the highest ridge, and over their whole progress wear the heathy garb, variegated with occasional patches of verdure, which distinguishes that pastoral region. The soil in these two districts of so very opposite character, corresponds with the respective appearances of the surface; being, in the one, a deep rich clayey loam, and, in the other, a thin gravel or a swampish and marshy moss. Three streams come down from the southern heights, and on reaching the plain, debouch westward into Gifford, making a confluence at the point of their exit. A fourth, also rising in the southern uplands, intersects the parish over a great part of its length, and flows past the village of Garvald: and this stream, as to both its nature and its name, is "the rough rivulet," whence the parish has its designation. Its course is over a very stony or rocky bed. Yet should we not deem,

— "because it wants the cowslipped knolls,
The white swans grazing the flower-bordered flood,
The lily beds which scent the naked soles
Of pilgrims, with the scallop-shell and rood,
That it is desolate utterly and rude:
The brackeney dells, the music of the rills,
The skipping lambs—e'en the wild softude—
The crystal tarn where herons droop their bills,
The mute unchanging glory of the eternal hills,—

Mute, save for music of the many bees,
And dead, save for the plover and the snipe,"

belong eminently to this small stream. Yet, true to its genealogy in "the land of the mountain and the flood," it sometimes comes down with such a volume and impetuosity of inundation, as to deposit on fields adjoining its channel stones of a great weight and size. In 1755, it rose to so great a height that some of the houses in the village of Garvald had 3 feet depth of water; and the stream rioting over the adjacent country with the expansion of a small estuary, and careering along the central space with the speed of a race-horse, would have certainly swept away the village, had not its impetuosity ploughed up a new channel for the discharging of its superabundant waters. In the vicinity of the village are some quarries of excellent freestone. The mansion of Hopes is pleasantly situated near the bottom of a glen, overlooked by a finely wooded

spur of the Lammernoor hills. Nunraw, on the eastern verge of the northern division, was anciently, as its name implies, a nunnery, and though modernized into the form of a mansion, bears traces of its original character. A mile and-a-half south of Nunraw, and close on the eastern boundary, is a circular camp or fortification, crowning the summit of a rising ground. A mile south of this, and also on the eastern verge, and among the Lammernoods, are vestiges of White castle,—a strength of considerable importance during the age of violence and hostility, as it guarded a pass between the Merse and the Lothians. On a peninsula formed by the confluence of the brooks at the western boundary, stands the ancient castle of Yester. Sir David Dalrymple relates, in his annals, that “Hugh Gifford de Yester died in 1267, and that in his castle there was a spacious cavern formed by magical art, and called in the country *Bo’hall*, *i. e.*, *Hobgoblin hall*.” This apartment, which is very spacious, and has an arched roof, is reached by a descent of 24 steps; and though it has stood for so many centuries, and been exposed to the external air for about 120 years, it is still in a state of good preservation. From the floor, another stair of 36 steps leads down to a pit, which communicates with one of the neighbouring rivalets. A great part of the walls superincumbent on the cavernous apartment are still standing. Tradition reports that the castle of Yester was the last fortification in this country which surrendered to General Gray, sent into Scotland by Protector Somerset. The landowners of the parish are the Marquis of Tweeddale, the Earl of Wemyss, Balfour of Whittingham, Hay of Hopes, and Hay of Linplum and Nauraw. The valued rental is £4,229 4s. Scotch. Assessed property in 1860, £9,444. The village of Garvald stands near the northern verge of the parish, $5\frac{1}{2}$ miles south-east of Haddington, and $8\frac{1}{2}$ south-west of Dunbar. Population of the village, about 280. Population of the parish in 1831, 914; in 1861, 891. Houses, 171.

This parish is in the presbytery of Haddington, and synod of Lothian and Tweeddale. Patrons, the Crown and the Marquis of Tweeddale. Stipend, £189 6s. 3d.; glebe, £25. Schoolmaster's salary, £50, with £40 fees. The parish church is an old building, enlarged in 1829, and containing 400 sittings. There is a Free church, with an attendance of 250; and its receipts in 1865 amounted to £161 2s. 6d. There are an industrial school and a friendly society. A convent of Cistercian nuns, established near Haddington during the reign of Malcolm IV., obtained possession of the church of Garvald, with its pertinents, and a carrucate of adjacent land; and they formed a branch community near it, and built a village, which, as well as the protecting convent, was called Nunraw. They acquired also the lands of Slade and Snowdon, comprising jointly almost all the parish; and they kept possession of the whole till the Reformation. But so exposed were the inmates of the Garvald convent to spoliation and oppression, that they obtained leave to protect themselves by a fortalice. The suppressed parish of Bara was rated in the ancient Taxatio at 25 marks, while the original parish of Garvald was rated at only 15; and it seems, therefore, to have been the more populous of the two. From the beginning of the 14th century till the Reformation, the church, with its pertinents, belonging to the monks of Holyrood; in 1633, it was attached to the newly erected bishopric of Edinburgh; and afterwards it passed to the Hays of Yester and Tweeddale. The two parishes were united in 1702.

GARVALD-POINT, a low rocky headland, tufted with wood, on the south side of the frith of Clyds, between Port Glasgow and Greenock, Renfrewshire.

GARVE, a river, a lake, and a post-office station in the central part of Ross-shire. The river rises on the Diriemore mountains, near the confines of the district of Lochbroom, and runs about 18 miles south-eastward, along a glen to which it gives the name of Strathgarve, through a wildly pastoral country, and past the south-west side of Benwyvis, to a confluence with the Conon, near Contin inn, at a point about 7 miles above Dingwall. The lake is formed by expansion of the river about 4 miles above its mouth; and, though of no great extent, is a fine open sheet of water, with a large amount of green meadows and plantations at its north-west end. The post-office station is situated here, on the road from Inverness to Lochbroom, $26\frac{1}{2}$ miles north-west of Inverness. Here is a small but comfortable inn. A fair is held here on the third Tuesday of August.

GARVEILAN. See SHIANT ISLES.

GARVELLOCH ISLES, a group of pastoral islets in the parish of Jura, Argyleshire. They yield a rental of £150. They were a residence of the monks of Iona, and therefore are often called the Holy Islands. Some vestiges of a chapel and a cemetery are still observable. A marble quarry was once wrought on one of them.

GARVIEMORE, a stage on the road from Fort-Augustus to Perth. It is situated on the nascent Spey, near the south-western extremity of the Monadhleagh mountains, 4 miles north-east of the head of Loch Laggan, 13 north-west of Dalwhinnie, and 18 south-east of Fort-Augustus.

GARVOCK, a parish in the south of Kincardineshire. It is bounded by Arbutnot, Benholme, St. Cyrus, Marykirk, and Laurencekirk. Its post-town is Laurencekirk, about $2\frac{1}{2}$ miles west-north-west of its own centre. Its length south-westward is fully 7 miles; and its greatest breadth is about 4 miles. The central district consists of a large basin, or how, of from 3,000 to 4,000 imperial acres, surrounded by hills or rising grounds on every side, except a narrow pass to the south-east, through the romantic ravine of Fennelden. The rest of the parish is gently undulated; and beautiful views are commanded from the eminences, especially from the hill of Garvoek, which rises for more than a mile, in a pretty steep ascent from the Howe of the Mearns. Bervie water, forming the north-eastern boundary, is the principal stream. According to tradition, Garvoek was once a hunting-park, belonging to Earl Marischal; and the remains of a dyke which surrounded the parish, and was called the Deer dyke, seem to countenance the tradition. The present wood is of small extent, and consists entirely of plantations. About two-thirds of the parish are cultivated or capable of improvement, and the peat-mosses, and other high grounds formerly covered with heath, whins, and broom, have been gradually reclaimed, so that the mosses are now nearly exhausted; and the work of invasion and advancement is still in progress. There are eight landowners. The real rental in 1822 was upwards of £3,000. The yearly value of raw produce was estimated in 1836 at £12,804 19s. 4d. Assessed property in 1866, £5,962 2s. 3d. The Aberdeen railway passes near the western boundary, and is accessible at Laurencekirk. On the summit of Garvoek hill there are two large Druidical cairns or high places, where the fires of the Druidical god were lighted. At a place called Brownie's-leys, about the year 1420, an impatient, and probably unmeaning, ejaculating aspiration was uttered

by King James I.,—"Sorrow gin that sheriff were soddan and supped in hrie!" and was literally and jesuitically fulfilled on the body of Melville, laird of Glenbervie, and sheriff of the Mearns, by five savage Highland lairds, with whom the unfortunate man was at enmity, and who actually boiled him in a great cauldron in the forest of Garvock, whither they decoyed him to a deer hunt. Population in 1831, 473; in 1861, 458. Houses, 77.

This parish is in the presbytery of Fordoun, and synod of Angus and Mearns. Patron, the Crown. Stipend, £177 11s. 9d.; glebe, £12. Schoolmaster's salary, £45, with £22 fees. The parish church was built in 1778, and contains about 300 sittings. There are a private school and a parochial library. A cattle and feeing fair of four days in continuance, called St. James' fair, and commencing on the third Tuesday of July, old style, used to be held on the hill of Garvock, about half a mile from the church, and was for some time one of the most important in the county, but has fallen greatly off and been transferred to Laurencekirk.

GARVOCK, Fifeshire. See DUNFERMLINE.

GARVOCK, Perthshire. See DUNNING.

GARVOCK-HILL. See DUCHALL (THE), and GARVOCK.

GASK, or FINDOGASK, a parish, containing the post-office station of Gask and the village of Clathy, in the centre of the south-eastern half of Perthshire. It is bounded by Methven, Tippermuir, Forteviot, Dunning, Auchterarder, Trinity-Gask, and Mad-derty. Except for its having the north-west corner cut away, it is nearly a parallelogram, measuring $3\frac{3}{4}$ miles from north to south, and $2\frac{1}{2}$ miles from east to west. Along its southern boundary, in a serpentine course of 3 miles or upwards, runs the Earn. Except on the north side—where a considerable patch of moss has resisted the reclaiming efforts of the farmers, and continues to supply the parishioners with peat—the parish spreads away in corn fields and pastures, sheltered and beautified with extensive plantations from the Earn, till, by a gentle rise, it attains about the middle of its area a slight ridgy elevation, and thence it slopes softly down toward the northern boundary, richly ornamented by considerable groves. Upwards of 1,200 acres are under plantation; and, with the exception of the moss in the north-west corner, all the rest of the parish is enclosed and under culture. The soil is partly clayey, and partly a fine loam. Marl occurs in various localities; and freestone and grey slate abound. The only mansion is Gask, the residence of the chief proprietor, situated on the southern slope. Along the summit of the ridge or highest ground of the parish, runs a Roman causeway, cutting it into two equal parts. The causeway is 20 feet broad, consists of compactly-placed rough stones, and forms a communication between Roman camps in the parishes respectively of Scone and Muthil. Along its side are traceable small Roman stations, fortified with ditches, and each containing a sufficient area for from 12 to 18 or 19 men. One of these stations has from time immemorial been designated the Witch-knowe, and is traditionally reported to have been the scene of the burning of unhappy individuals for the imputed crime of sorcery. Four roads run through the parish from east to west, and one intersects it from north to south. The Scottish Central railway is accessible at stations not far from the south-eastern boundary. Population in 1831, 428; in 1861, 399. Houses, 77. Assessed property in 1866, £4,910 17s. 2d.

This parish is in the presbytery of Auchterarder, and Synod of Perth and Stirling. Patron, the Crown. Stipend, £155 4s. 7d.; glebe, £15. School-

master's salary, £50 0s. 0d., with fees. The parish church was built in 1800, and contains nearly 400 sittings. There is a parochial library. Dr. Stewart of Newburgh and Principal Taylor of Glasgow college, were natives of Gask.

GASK, Inverness-shire. See DAVIOT.

GASKIER. See GAASKIER.

GASSTOWN, a village in the parish of Dumfries.

GATEHEAD. See KILMAURS.

GATEHOUSE-OR-FLEET, a post-town, and small sea-port, and seat of manufacture, chiefly in the parish of Girthou, and partly in the parish of Anwoth, Kirkcudbrightshire. It stands on the river Fleet, $1\frac{1}{2}$ mile above the head of Fleet-bay, 8 miles from Kirkcudbright, 50 from Port-Patrick, 33 from Dumfries, and 105 from Edinburgh. The scenery around it is magnificent. Spread out from the river is a beautiful, luxuriant, romantic vale; rising up on three sides, are congeries of hills, variously clad with heath and verdure, or cinctured and crowned with plantation, and climbing away in the distance till they raise bald summits to the sky, and look down upon the lowlands with the savage aspect of defiance to cultivation; and, on the south-west through a broad cleft in the mountain-screen, the pellucid bosom of Fleet-bay glitters in the reflected rays of the sun, or exults beneath a gorgeous drapery of clouds. Nor does the situation contribute less to health, and to the purposes of traffic and manufacture, than to the soothing of the imagination and the tutoring of taste. Yet, though lying on a navigable river near its influx to the sea,—though traversed by every thing passing along the great thoroughfare between Dumfries and Port-Patrick,—and though exerting a command as to facilities of intercommunication over an extensive range of country, it possessed, about a century ago, only a single house, or, as a town, was still to be called into existence. Gatehouse was then nothing more than "a house" at "the gate" of the avenue leading up to the mansion of Mr. Murray of Broughton, the proprietor of the soil. But when, in consequence of that gentleman offering very advantageous terms of feu, and exhibiting well-digested plans for drawing an influx of prosperity, the town was fairly commenced, it made, for a series of years, very rapid progress toward importance, and even gave promise of becoming an influential seat of manufacture. So early as about the beginning of the present century, it had four cotton factories, a fair proportion of hand-looms for cotton weaving, a brass-foundry, a wine company, a brewery, a tannery, and workshops for nearly every class of artisans; and, though possessing a population of only about 1,200, it had so diffused the spirit of manufacture and enterprise among the rural inhabitants of an extensive circumjacent region, as to hold many of them in a state of subserviency to its aims of social achievement. Improvements were made to facilitate the navigation of the Fleet to the sea; a canal or aqueduct was cut from a lake several miles distant to bring down a sufficient water-power for the driving of the factories; a public library, a mason-lodge, an academy, an Episcopalian chapel, and various other institutions indicated transition to something resembling burghal life; and appearances, in general, seemed to menace the Glasgow of the west with the energetic rivalry of a Glasgow of the south. But Gatehouse—like many a dashing upstart in trade—was unable, at the day of reckoning, to withdraw all the bills of promise it had endorsed; it lost, somewhat suddenly, several of its appliances of prosperity; and though still a place of importance, and likely to continue so, it has egregiously failed to fulfil the expectation which had been formed of it, and cau-

scarcely be said to have made material progress during the last forty years.

Gatehouse, as to the aspect of its streets, the neatness of its buildings, and the entire grouping of its burghal landscape, is decidedly the most handsome town in Galloway, and is equalled by very few in Scotland. The larger part of it on the left bank of the Fleet, has, as to its main body, the form of a regular parallelogram, a sort of miniature imitation of the original New town of Edinburgh. The street which stands on the highway between Dumfries and Port-Patriek, and forms the principal thoroughfare, is particularly neat and uniform. Most of the houses of the town are two stories high, and covered with slates. A handsome stone-bridge spans the Fleet, and connects the Girthon district with its Anwoth suburb. A neat parish church, built in 1817, and containing 714 sittings, adorns the parallelogram. There are also in the town a Free church and an United Presbyterian church; and only about a mile from it is the Anwoth parish church; but the Episcopalian chapel, though under a deed of endowment which renders it capable of being revived, has been taken down. Two cotton factories, employing upwards of 200 persons, are still in operation; and one of these is a re-dedification, with improvements, of a factory which was destroyed by fire in 1840. There are likewise in the town or its near vicinity a brewery, a brick manufactory, and an extensive nursery. A canal, cut in a straight line along the river, at an expenditure of £3,000, by Mr. Murray, supersedes some defects in the natural navigable capacities of the Fleet. But the river itself is stemmed by the tide up to the town, and brings up on its bosom vessels of 60 tons burden. The exports are principally grain, and the imports coals and lime. The aggregate yearly tonnage probably does not exceed 1,200 outwards, and 2,200 inwards. The town has offices of the Union Bank, of the Bank of Scotland, a savings' bank, a news-room, several friendly societies, a variety of schools, and a telegraphic station. A weekly town market is held on Saturday; a weekly cattle market, in November and December, on Friday; and a fair on the first Monday of June, old style.

Gatehouse was erected into a burgh-of-barony by a royal charter, dated 30th June, 1795. Its magistracy and council consist of a provost, two bailies, and four counsellors, annually elected by the resident feuars or proprietors of houses within the burgh. There is also a town-clerk, who is annually elected in like manner. There are no other office-bearers. The jurisdiction exercised by the magistrates is chiefly confined to civil causes; and the average number of cases does not exceed 20 per annum. The magistrates also take cognizance of the smaller police offences, and punish offenders by fines, which are wholly appropriated towards remunerating the officer for his trouble. The burgh has no property, debts, or revenue, and, of course, no accounts, annual or otherwise. The police act was adopted in 1852, with good effects; and the assessment under it is the only local tax. A justice of peace small debt court is held on the first Saturday of every month. Population in 1841, 1,832; in 1851, 1,750; in 1861, 1,635. Population of the Girthon section in 1841, 1,413; in 1851, 1,325; in 1861, 1,245.

GATESHAW HILL. See **MOREBATTLE.**

GATESIDE, a village in the parish of Beith, upwards of a mile east of the town of Beith, Ayrshire. Population 270.

GATESIDE, a village, with a post-office, in the parish of Strathmiglo, Fifeshire. It is otherwise called **EDENSHEAD**: which see.

GATESIDE, a village in the parish of Neilston, Renfrewshire. It stands on the left bank of the Levern, 4 miles south-east of Paisley; and forms part of the swarm of industry extending from Barrhead to Crofthead. A cotton factory was erected here so early as 1786. Population, in 1861, 455.

GATESIDE, a village in the parish of Kirkcubrighton, Kirkcubrightshire. Population, 23. Houses, 6.

GATESIDE, a village in the parish of Wamphray, Dumfries-shire. It stands near the left bank of the river Annan, on the road from Glasgow and Carlisle. Here is an United Presbyterian meeting-house, built about the year 1790. Population, about 90.

GATTONSIDE, a post-office village in the parish of Melrose, Roxburghshire. It stands on the left bank of the Tweed, on the road from Drygrange to Galashiels, about a mile north of Melrose. Seen from a distance, it seems a little town luxuriating in an isolated grove, in the centre of one of the most brilliant landscapes in Scotland. But when entered, it is an aspersation of trees, detached houses, and patches of luxuriant orchard-ground, sprinkled in such capricious confusion on the plain, that the idea of a village—in the modern and methodical sense of the word—cannot easily be associated with the spot. In all respects, the place is incomparably more attractive as seen from without, than as seen from within. Gattonside is celebrated for its orchards, and sends more fruit to market than any other place in the vale of Tweed, or perhaps any place of its size in Scotland. A large beautiful church once stood here, but can be traced now only by a few small vestiges. An elegant iron bridge spans the Tweed on the road hither to Melrose. Population, 252. Houses, 61.

GATTONSIDE HILLS, a range of heights, of uniform appearance and smooth surface, extending from the Leader to the Gala, in the parish of Melrose, Roxburghshire.

GAUHSNESS. See **FITFUL-HEAD.**

GAUIR (THE), or **GAUER,** or **GAMHAIR,** a river of Argyleshire and Perthshire. It rises in the deer forest of the Marquis of Breadalbane, some miles east of Loch-Etive in Argyleshire, and in general pursues an easterly direction. Receiving in the early part of its course, numerous tributary torrents from among the mountains, it soon becomes a considerable stream, and spreads itself out at intervals into romantic lochs, lochs, or lakes,—among others, the isleted and sylvan-studded Loch-Batha. After a course of about 12 miles, it expands into the large and beautiful lake, Loch-Lydoch, and, while lost in it, is carried out of Argyleshire into Perthshire. Issuing from the east side of that lake, $\frac{2}{3}$ of a mile from its north-eastern termination, it flows $5\frac{1}{2}$ miles due east to Loch-Rannoch, enters it by two channels enclosing a fine verdant islet, and there loses its waters and its name. Near the central part of its course, between Loch-Lydoch and its embouchure, it expands during a season of rain, into a temporary lake of several miles in circumference, called Loch-Eathach; but, when its waters become diminished, it retires within river-limits, and lets the bed of the lake wear the character of a meadow. Like most of the streams in the region to which it belongs, it has cascades and cataracts; and when tumbling over these in the swollen waters of several days' rain, it sends away boarse sounds through the mountain-wilderness, which are heard at some miles' distance.

GAULDRY. See **GALDRY.**

GAVIN'S KIRK. See **DORARY.**

GAVINTON, a village in the eastern division of the parish of Langton, Perthshire. It stands on the road between Dunse and Greenlaw, $1\frac{1}{2}$ mile from the former, and $5\frac{1}{2}$ miles from the latter. Its prede-

cessor, the ancient village of Laughton, standing in the way of some improvements projected by Mr. Gavin the proprietor, Gavinton was built in 1760, and on terms advantageous to the inhabitants, offered to them as a substitute. At its west end stands the parish-church. The village of Langton stood $\frac{3}{4}$ of a mile to the west. Population of Gavinton, 206. Houses, 58.

GAWREER BURN, a streamlet of Cunningham, Ayrshire. It has a course of about $4\frac{1}{2}$ miles southward to the Irvine, and runs on the boundary between the parish of Kilmaurs and the parish of Dregburn.

GAYLET-POT, or **GEARY-POT**, a remarkable natural curiosity, within a great cavern, about a mile south of the fishing-village of Auchmithie, in a rocky part of the coast of the parish of St. Vigean's, Forfarshire. The cavern opens from the sea in a grand rude archway, about 70 feet high, 40 feet wide, and 130 feet below the top of the rock, as imposing and magnificent as it is spacious; and it extends direct into the interior, over a distance of 300 feet, gradually contracting in spaciousness till it attains a minimum width and height, each 10 or 12 feet. At the extremity of this vast subterraneous corridor is the pot,—a capacious cavity going precipitously down to it from the midst of an arable field. The pot is proximately circular, has an outline resembling that of an inverted urn, and measures 150 feet in diameter and 120 feet in depth from its immediate lips. The sea enters the cavern, and brings up to the pot the fluctuations of the tide; and when it is urged by an easterly wind, it bursts in at high water with amazing impetuosity, and roars, boils, and froths, with a noise which only the great depth and the contractedness of the pot prevent from being heard at a considerable distance, and then recedes with proportionate violence, and makes a bellowing exit from the cavern to the main.

GEANACH (MOUNT), a mountain, having an altitude of between 2,000 and 3,000 feet above sea-level, in the parish of Birse, Aberdeenshire.

GEANIES. See **TARBAT**.

GEARY-POT. See **GAYLET-POT**.

GEAULY (THE). See **DEE (THE)**.

GEDDES-HILL. See **NAIRN**.

GEDDESTON, a village in the parish of Avoch, Ross-shire.

GEDDES-WELL. See **TWEEDSMUIR**.

GELAH, a hamlet in the parish of Dunrossness, Shetland.

GELLET. See **DUNFERMLINE**.

GELLY (LOCH). See **LOCHGELLY**.

GELSTON, a post-office village in the parish of Kelton, $2\frac{1}{2}$ miles south-south-east of Castle Douglas, Kirkcudbrightshire. Population, 146. Houses, 32. In the vicinity is Gelston castle, a mansion built by the late Sir William Douglas, Bart. There was an ancient parish of Gelston, comprehending the tract which now forms the south-eastern district of the parish of Kelton. Its church belonged to the prior and canons of Whithorn, and was given in 1606 to the bishop of Galloway. Some vestiges of it still exist.

GELT WATER, a head-stream of the Lugar, rising near the confines of Dumfries-shire, and flowing 4 or 5 miles north-westward to a confluence with Glenmore Water, in the parish of Auchinleck, Ayrshire.

GEMETRA. See **GOMETRA**.

GENERAL'S HUT. See **FOYERS (THE)**.

GENERAL'S WATCH. See **CURRIE**.

GENTLEMAN'S CAVE. See **WESTRAY**.

GEORGE (FORT), a strong regular fortress, in the parish of Ardersier, Inverness-shire. It stands on a peninsula running into the Moray frith, 1 mile

north-west of Campbelton, 8 miles west of Nairn, and 12 north-east of Inverness. It completely commands the entrance to the inner Moray frith and Loch-Beaul, and appears from a distance as if united to the opposite point of Chanoury in Ross-shire. It was built soon after the rebellion of 1745, for the purpose of overawing the Highlanders. Government proposed to build a fort at Inverness, at a place called the Citadel or Cromwell's fort; but the magistrates of Inverness demanded such a price for the ground, that the Duke of Cumberland was offended, and having ordered an inspection of the ground upon which Fort-George now stands, the engineers reported that it would answer equally well with that of Inverness. Accordingly, Government purchased the ground, and a large farm in the neighbourhood of it, from Campbell of Calder; and the works were commenced in 1747, under the direction of General Skinner. The estimate given in was £120,000; but the work is said to have cost upwards of £160,000. It is a regular fortification, and covers 10 Scots acres. It commands a fine view of the Moray frith, which expands beyond the fort, and is bounded by lofty hills; and this prospect is terminated by the picturesque town of Inverness, with huge mountains rising on both sides of it. "The fort is an irregular polygon, with six bastions mounting 18 twenty-four, 25 eighteen, 22 twelve, and 4 six-pounders, and 4 thirteen-inch mortars. The land front is defended by a ditch, covert way, and glacis, two lunettes, and a ravelin, mounting 8 twelve pounders. The north and south curtains are casemated, each containing 27 bomb-proof apartments, fifty-two feet long, by twelve feet wide. The grand magazine is bomb-proof, and will hold 2,474 barrels of gunpowder. The staff buildings lie towards the land front, and are occupied by the governor's, lieutenant-governor's, and officers' quarters; the artillery barracks are also in these buildings. At the eastern extremity of the garrison there are two small casemated magazines, 50 feet long, by 34 feet broad, with ammunition made up for immediate use. The barracks are constructed for a governor, lieutenant-governor, fort-major, chaplain, 8 field-officers, 22 captains, 56 subalterns, and 2,090 non-commissioned officers and privates. The fort is also provided with a chapel, brewhouse, bakehouse, and inn, and is supplied with water from eight pumpwells."

GEORGETOWN, a village in the St. Michael's division of the parish of Dumfries. Population, 154. Houses, 32.

GEORGETOWN, a locality at the west end of Loch Rannoch, in the parish of Fortingal, Perthshire, where formerly there were military barracks.

GERSTON, a hamlet, now nearly extinct, in the parish of Halkirk, Caithness-shire.

GETT BAY. See **TREE**.

GEYZEN BRIGGS. See **DORNÖCH FRITH**.

GIANT'S CHAIR. See **MORTLACH**.

GIEN RIG. See **KEITH**.

GIFFEN. See **BEITH**.

GIFFERTON, or **GIFFORDTON**, a village in the parish of Collesie, Fifeshire. It is of modern erection, and consists of neat comfortable houses. Population, 71. Houses, 17.

GIFFORD, a post-office village in the northern part of the parish of Yester, Haddingtonshire; also the name by which that parish is popularly, though not legally, known. See **YESTER**. The village is delightfully situated on the right bank of Gifford burn, in the centre of a well-wooded strath, 360 feet above the level of the sea, and environed, at a mile-and-a-half distance, by an amphitheatre of ridgy,

arable, well-cultivated heights. Its distance from Haddington is 4 miles, from Tranent 9, and from Edinburgh 19. It consists principally of two streets of unequal length, composed of well-built houses, generally two stories high, and of neat appearance. One of the streets commences within the long beautiful avenue leading up to Yester-house, and runs north-westward till it is closed up by the parish school-house and its surmounting spire. The second street runs transverse to the former, and is terminated by the parish church. In the vicinity are brick-works and a saw-mill; and there was formerly a woollen factory. Most of the inhabitants hold in feu or fief of the Marquis of Tweeddale; and they meet biennially to choose 2 bailies and 5 councillors to manage the public affairs of the village. Besides the parochial school, there are two unendowed schools. Fairs are held on the last Tuesday of March, the third Tuesday of June, and the first Tuesday of October; and they are of considerable importance, and draw purchasers from a distance. A weekly living-market is held on Monday mornings during harvest for bringing shearers within the range of employment.

The village, though of later date than the close of Charles I.'s reign, derives its name from the ancient family of Gifford, whose ancestors came from England and obtained extensive estates in Mid-Lothian during the reign of David I. Hugh de Gifford, the younger, rose to distinction under William the Lion, and was rewarded by him with the lands of Yester. In the 15th century, through a failure of male heirs, a daughter of the family carried the property of the Giffords, by matrimonial alliance, into the family of Hay of Borthwick. In 1488, the proprietors obtained the title of Lords Hay of Yester; in 1646, they were created Earls of Tweeddale; and, in 1694, they were raised to the dignity of Marquises of Tweeddale.—Gifford contests with Gifford-gate, a small street in the Nungate, one of the suburbs of Haddington, the honour of having been the birth-place of John Knox. Modern writers and private debaters have expended much labour in advocating the conflicting claims of the two localities. Dr. McCrie, the distinguished biographer of Knox, will probably be regarded as a judge of the question quite as cool and as competent as most; and he says, "I am inclined to prefer the opinion of the oldest and most credible writers that he—John Knox—was born in the village of Gifford." Dr. John Witherspoon, president of the college of New Jersey, in America, was another eminent native of this village. Population, in 1861, 458.

GIFFORD BURN—called also the Hope, the Bolton, and the Coalston—a beautiful rivulet in Haddingtonshire. It rises immediately beneath the highest ridge of the Lammernoor hills, at the southern boundary of the parish of Garvaid; and, under the name of the Hope, runs first north-eastward, and then northward, $5\frac{1}{2}$ miles near the western verge of Garvaid parish. It now receives two considerable tributaries, one on each bank, and for 2 miles north-westward intersects the parish of Yester, passing, in its course, the village of Gifford. For nearly half-a-mile further it divides Yester from Haddington, and then receives a considerable tributary from the south, assumes the name of the Bolton, flows past the village of that name, and for $1\frac{1}{4}$ mile north-westward, $1\frac{1}{2}$ mile northward, and $\frac{1}{2}$ mile westward, divides Haddington from Bolton. About a furlong farther on, it falls into the Tyne $1\frac{1}{2}$ mile above the town of Haddington. Its entire course is about 12 miles. Over the greater part of its course, it flows between delightfully sylvan banks; and, in various stages of its progress, it meanders and luxuriates

among the pleasure-grounds of six mansions,—Yester, Eaglescarmie, Hopes, Bolton, Coalston, and Lennoxlove. Its waters abound in trout.

GIFFORDTON. See GIFFERTON.

GIGHA, a small pastoral island, belonging to the Hebridean parish of Barra in Inverness-shire. It lies two miles south-west of Eriskay, and 3 north-east of the nearest part of Barra.

GIGHA, an island constituting the main part of the parish of Gigha and Cara, Argyleshire. It is separated from the west side of Kintyre by a channel $3\frac{1}{2}$ miles broad, and lies 13 miles east of the Mull of Islay, and 7 south-west of the entrance of West Loch Tarbert. It is of a regular oblong figure, extending from north to south; 7 miles in length, $2\frac{1}{2}$ in greatest breadth, and containing about 5,000 Scots acres. The coast on the west side is bold and rocky; on the east side there are several points jutting out, and a few sunk rocks, which render the navigation dangerous to strangers. Between these points are several bays or creeks, where small vessels can be safely moored. One of the bays, called Ardmish, near the church, has good anchorage in 6 or 7 fathom water; and another, called Drimyeonbeg, affords good holding ground. The island of CARA [see that article] lies about a mile distant on the south; and in the middle of the sound between them is the small uninhabited island of Gigungum, near which is good anchoring ground for the largest vessels. The general appearance of Gigha is low and flat; except towards the west side, where the ground rises into hills of about 300 or 400 feet in elevation. Except in this quarter the whole island is arable, and the soil a light loam, with a mixture in some places of sand, moss, or clay. Trap veins traverse the island in different directions. In Gigha are the ruins of an old chapel. Martin, who visited it in the beginning of the last century, says: "It has an altar in the east end, and upon it a font of stone which is very large, and hath a small hole in the middle which goes quite through it. There are several tombstones in and about this church. The family of the Mac-neils, the principal possessors of this isle, are buried under the tomb-stones on the east side of the church, where there is a plat of ground set apart for them. Most of all the tombs have a two-handed sword engraven on them, and there is one that has the representation of a man upon it." The island is well-supplied with springs, which afford water sufficient to turn two corn-mills. The sandbanks abound with excellent fish; and much sea-weed is thrown ashore. The principal occupations of the inhabitants are agriculture and fishing. Between Gigha and the opposite coast of Kintyre there is a regular ferry. The post-office village of Tayinloan stands near the Kintyre side of the ferry, 18 miles from Tarbert; and the Tarbert and Islay steamer calls regularly at the north end of Gigha, to communicate with it by boat.

GIGHA AND CARA, a parish comprising the islands of Gigha, Cara, and Gigungum, in Argyleshire. Its post-town is Tayinloan. The parish belongs, in the proportion of 25 and 6, to two proprietors, and contains two mansions,—which, however, are occupied by tenants. A good deal of agricultural produce, of dairy produce, and of live stock, and about 50 tons yearly of cured white fish are exported. Assessed property in 1860, £2,133. Population in 1831, 534; in 1861, 467. Houses, 78.—This parish is in the presbytery of Kintyre, and synod of Argyle. Patron, the Duke of Argyle, Stipend, £266 9s. 3d.; glebe, £10. Schoolmaster's salary, £35, with about £12 fees. The parish church was built upwards of seventy years ago, and contains 260 sittings. There is a Free church

preaching station; and the sum raised in connexion with it in 1865 was £12 6s. 11½d.

GIGHT WATER. See **FVIE.**

GIGHT WATER, a rivulet of the north of Aberdeenshire. It rises a little to the south-east of Newbyth, and runs about 8 miles southward, chiefly on parochial boundaries, with Monquhitter and Fyvie on its right, and New Deer and Methlick on its left, to a confluence with Kelly water, an affluent of the Ythan.

GIGHTY BURN, an affluent of Lunan water in Forfarshire, flowing on the boundary between Kinnell and Inverkeilor, and driving several mills.

GIGLUM. See **GIGHA, ARGYLSHIRE.**

GILBERTFIELD. See **CAMBUSLANG.**

GILCOMSTON. See **ABERDEEN.**

GILGAL, a hamlet in the parish of Wamphray, Dumfriesshire.

GILL BAY, or **PORT-GILL,** a small bay at the boundary between the parish of Stonykirik and the parish of Kirkmaiden, indenting the land from the North Channel, 8½ miles south-east by south of Portpatrick, Wigtonshire.

GILL BURN, a streamlet running in a beautiful ravine, in the middle part of the parish of Borrowstoness, Linlithgowshire.

GILL BURN, a streamlet running north-westward, on the boundary between the parish of Wals-ton and the parish of Libberton, to the Medwin, Lanarkshire.

GILL OF CREE. See **CREE (THE).**

GILLS, a village in the parish of Causbay, 4 miles west by south of John o' Groat's house, Caithness-shire. It stands at the head of Gills bay, which is an open triangular indentation of the land, with a beach of flat rocks and shingles, south-south-west of the island of Stroma. Population, 164.

GILLYBURN, a post-office station, subordinate to Dunkeld, Perthshire.

GILMANSCLEUGH. See **ETTRICK (THE).**

GILMERTON, a post-office village in the parish of Fowls-Wester, Perthshire. It stands on the road from Glasgow to Perth, amidst beautiful scenery, and is neat, well-built, and of modern erection. Extending from the village on the east, is a congeries or ridge of gravelly mounds, some of them covered with thriving plantation, and almost all so curiously formed and grotesquely grouped as to form an interesting and remarkable variety of natural scenery. There is a private school in the village. Population, 203. Houses, 63.

GILMERTON, a village in the parish of Liberton, Edinburghshire. It stands on the brow of a rising ground, 4 miles south-south-east of Edinburgh, on the road to Roxburghshire. Its main body is a rectangle, resting the back of one of its shorter sides on the west margin of the public road, and running westward up the gentle slope of the rising ground. The village is a station of the county police, and has a chapel of ease and a Free church. The chapel of ease was built in 1837, and contains about 300 sittings; and it is in the presentation of such male heads of families as are communicants. The sum raised in connexion with the Free church in 1865 was £75 15s. 6d. A district around the village was temporarily, before 1843, a quoad sacra parish, and had, in 1841, a population of 942. Population of the village in 1861, 596.

Gilmerton was long characterized as simply a village of colliers, and as a place whence Edinburgh was largely supplied with fuel. Its coal—which is of prime quality—was vigorously worked in 1627, and possibly was known and carried to market a century earlier. Persons employed about its coal-pits, and carters who conveyed the produce to Edin-

burgh, were long the only inhabitants, and latterly amounted to 800 in number. But, owing partly to the successful competition of the sources of supply along the Dalkeith railway, the mines—though not exhausted, and though likely to come again into requisition—have been abandoned. A lime-work of vast extent in the vicinity, and presenting appearances highly interesting to the curious, was probably the oldest in Scotland, at all events was worked from time immemorial. At first, it was worked from the surface, and afterwards it was mined; and the produce was brought up respectively, in successive epochs, by women, by asses, and by a steam-engine. Even the aid of machinery not preventing it from being unremunerating, it was abandoned, again worked during the years 1825, 1826, and 1827, and again abandoned. The mine or quarry is nearly a mile in length, and everywhere open to the light of day. The stratum of limestone dips at an angle of about 45°. On descending, a spectator finds himself on a shelving declivity, and, walking along, is encaverned beneath a roof of solid rocks, which is supported by a vast series of rocky pillars, left as props in the process of mining. As the enormous piazza is very spacious, the roof being high, and the opening along the extended entrance large, the light is, for a considerable way, abundant; but, as the spectator explores onward, and descends the declivity toward a stripe of water at the extremity, it gradually so far fails him as to let a sepulchral obscurity hang its veil of mystery over the objects of his vision. The vast colonnaded cavern, instead of proceeding far inwards, where the rapid dip of the stratum carried the miner at every yard increasingly downward from the surface, advances obliquely up the side of a long ridge or hill, and affords the curious visitant an opportunity of making a lengthened excursion under ground, without losing the light of day.

At Gilmerton is a remarkable eave, cut, at the expense of five years' labour, out of the solid rock, by a blacksmith of the name of George Paterson, and finished in 1724. Several apartments, several beds, a large table bearing aloft a punch-bowl, are all nicely chiselled from the rock, and render the eave at once dwelling-house and furniture. Several apertures on the roof were designed as windows to let in the light from above. The constructor of this extraordinary subterranean abode had it fitted up with a well, a washing-house, and a forge, and lived in it with his family, prosecuting his avocation, till his death about the year 1735. His eave was, for many years, esteemed an object of great curiosity, and even yet is the resort of not a few inquisitive visitors. Penneueik, in his works, has left the following inscription for the eave:

"Upon the earth thrives villany and woe;
But happiness and I do dwell below.
My hand hewed out this rock into a cell,
Wherein from din of life I safely dwell.
On Jacob's pillow nightly lies my head;
My house when living, and my grave when dead.
Inscribe upon it when I'm dead and gone,
'I lived and died within my mother's womb.'"

GILMERTON, Haddingtonshire. See **ATHEL-STANEFORD.**

GILNOCKIE, a small promontory, washed on the three sides by the river Esk, in the parish of Canoby, Dumfriesshire; supposed to have been the spot whence the famous freebooter, 'Johnie Armstrong, Laird of Gilnockie,' had his title. Being steep and rocky, it is scarcely accessible except on the land side; and there it was protected by a deep ditch. Holehouse or Hollows, the residence of Armstrong, is still a considerable ruin. The building is oblong, 60 feet long, 46 wide, and about 70 high;

and at the angles it has round loop-holed turrets. Armstrong flourished during the reign of James V.; and, having levied 'black mail' from Cumberland, Westmoreland, and a great part of Northumberland, he was the terror of the west marches of England. His power becoming, at last, so great as to hazard a defiance of the Crown, the King raised an army for the express purpose of overpowering him, and marched, at its head, to the parish of Ewes. Armstrong was summoned to attend the King there on a promise of security; and, yielding a ready obedience, he, along with those of his followers who accompanied him, was, in violation of the royal pledge, hanged at Caerlanrig.

GILP (Loch), a bay, about $1\frac{1}{2}$ mile long, between the parish of North Knappdale and the parish of Glassary, Argyleshire. It is a branch of Loch-Fyne, but projects north-westward, so as to be strictly in line with the main body of that loch coming up from the north end of Arran, while the proper continuation of the loch, going off toward Inverary, projects to the north-east. Loch Gilp is so shallow as not to be navigable for boats of any considerable burden during low water; yet it is the place whence the Crinan canal goes off to join the Atlantic at Crinan bay. See CRINAN CANAL and ARDRISHAIG.

GILSTON, Kirkeudbrightshire. See GELSTON.

GILSTON, or **BACKMOOR** of GILSTON, a village on the northern border of the parish of Largo, $2\frac{1}{2}$ miles south-east of Ceres, Fifeshire. Population, 229. Houses, 51.

GIOULY. See DEE (THE).

GIRDLENESS, a promontory on the coast of Kincairdineshire, being the southern screen of the mouth of the river Dee in Nigg parish, and remarkable as the eastern extremity of the Grampian mountains. It lies 2 miles south from Aberdeen, and 15 north-north-east of Stonehaven; in N. lat. $57^{\circ} 8'$, and W. long. $2^{\circ} 3'$. Here is a lighthouse, erected in 1833, with two fixed lights, one above the other, seen at a distance of 16 and 19 nautical miles, in clear weather. See ABERDEEN.

GIRNIGOE CASTLE. See WICK.

GIRTHGATE. See FALA.

GIRTHON, a parish, containing the greater part of the post-town of Gatehouse-of-Fleet, in Kirkeudbrightshire. It stretches southward in a long stripe of territory, from the latitude of the centre of the stewartry, to the coast of Wigton bay. Its greatest length is 18 miles, and its greatest breadth 7; though, over 8 miles from its southern extremity, it is nowhere more than $2\frac{1}{2}$ miles broad; and its superficial area is about 24 square miles. It is bounded on the north by Kells; on the east by Balmaghie and Twynholm; on the south-east by Borgue; and on the west by Fleet bay and Fleet water, which divide it from Anwoth, and by Kirknabreck and Minigaff. All the northern and broader division, 9 or 10 miles in length from the northern boundary, and also a stripe along the whole of its eastern verge, are bleak, hilly, and clothed in heath. But a slope toward the Fleet, and a stripe of plain along the banks of the stream, in the southern division of the parish, are arable, finely cultivated, and softly beautiful in aspect. Around Cully, immediately south of Gatehouse, and at Castramont, $3\frac{1}{2}$ miles above the town, are delightful and somewhat extensive plantations, imbosoming, in the former case, the domestic mansion, and, in the latter case, a hunting-seat of Mr. Murray, the baronial superior of the town of Gatehouse, and the proprietor of the whole district. The air and climate are in the uplands cold and unpleasant, but in the plain mild and agreeable. In the northern division are three lakes; --Loch Fleet, 5 furlongs long and 3 furlongs broad,

abounding in trouts, and disgoring one of the two parent-streams of the Fleet; Loch Skerrow, $\frac{2}{3}$ of a mile long and half-a-mile broad, abounding in pike; and Loch Gramnoch, about 3 miles long and half-a-mile broad, remarkable for its char, a species of fish rare in Scotland. On the eastern boundary, 3 miles north-east of Gatehouse, is another lake, Loch Whiannan, of a circular form, and $\frac{2}{3}$ of a mile in diameter, whence the cotton mills of Gatehouse are supplied, along an artificial canal, with a copious propelling stream of water. The mansion of Cully overlooking the Fleet, on one of the most beautiful parts of its joyous progress, is a large modern edifice, among the most princely in the south of Scotland. Four-fifths of the population of the parish, and nearly all its trade, manufacture, and importance, are concentrated in Gatehouse. The southern division is amply supplied with facilities of communication, — a canal and the navigable river to Fleet bay, and the Dumfries and Portpatrick mail-road, besides divergent roads in every direction; but the northern division is left almost alone in its mountain-solitude, with scarcely a path to allow intrusion on its pastoral seclusion. The real rental of the parish is about £5,000. Assessed property in 1860, £7,328. Population in 1831, 1,751; in 1861, 1,702. Houses, 283.

This parish is in the presbytery of Kirkeudbright, and synod of Galloway. Patron, the Crown. Stipend, £158 6s. 8d.; glebe, £20. Schoolmaster's salary, £60, with £80 fees and £16 other emoluments. The parish church was built in 1817, and contains 714 sittings. There is a Free church in Gatehouse for Girthon and Anwoth; attendance, 260; sum raised in 1865, £475 0s. 6d. There is an United Presbyterian church in Gatehouse; but it stands on the Anwoth side. There are in Girthon four non-parochial schools. The old church of Girthon belonged to the bishops of Galloway till the Reformation, was restored to them during the brief period of protestant prelacy, and was afterwards annexed to the Crown. At the passage of the Fleet, there were in early times a village and probably a sanctuary. Hence the name *Girth-avon*, of which Girthon is an abbreviation, signifying, 'the Sanctuary on the river.' Edward I. resided here several days during his Galloway campaign in 1300.

GIRVAN (THE), a river of Carrick, Ayrshire. It rises in the small lakes, Breckowie and Breelon, in the parish of Straiton, $3\frac{1}{2}$ miles west of Loch-Doon. After issuing from the latter of the two lochlets, it flows two miles northward, and $2\frac{1}{2}$ miles westward, receiving in its progress, the tributaries of Tairlour-burn from the south, nearly equal in volume to itself, and a smaller brook from the north. Resuming its northerly course, it receives two tributaries from the west, and flows 2 miles onward to Straiton, making a graceful bend opposite the village. Hitherto, its collateral scenery is wild and cheerless; but now it careers away toward wooded, undulating, and delightfully varied banks, and all the way onward to the sea, smiles and exults amidst the beauties of landscape. Leaving Straiton, it pursues a sinuous course 3 miles north-westward to the village of Kirkmichael, frolicking along the fine demesne of Blairquhan, the seat of Sir David Hunter Blair, and at one place wheeling round upon its path so as to form a considerable islet. From Kirkmichael to a point opposite the farm-stead of Barklaye, it achieves a distance of $1\frac{1}{2}$ mile westward, over a south-westward, westward, north-eastward and north-westward course of picturesqueness and loveliness of scenery. From this point to the sea at the town of Gir

van, over a sinuous course of 13 miles, it runs, in general, toward the south-west, performing many a beautiful evolution, seeming to run mirthfully round peninsulas and rising grounds, to enjoy the richest adornings of bank, and nowhere receiving larger tributes than the waters of little brooks. A mile below Barklaye, it flows past the village of Crosshill; and while passing along the fine vale of Dailly parish, it enlivens the aspect of the mansions and parks of Drumbuel, Dalquharran, Balgany, and Kellochan. Dalquharran castle, in particular, receives from it much enrichment of landscape, and repays with interest all it receives. This elegant pile, castellated at the angles, buttressed all the way up, and finally surmounted by a capacious circular tower, was built about the year 1790, and is one of the handsomest mansions in the west of Scotland. The Girvan's entire length of course, including windings, is about 25 miles.

GIRVAN, a parish, containing a post-town of its own name, on the coast of Carrick, Ayrshire. It is bounded on the north by Kirkoswald; on the east by Dailly and Barr; on the south by Colmonell; and on the west by the frith of Clyde. It measures in extreme length, from north to south, 9 miles; in extreme breadth, 6 miles; in minimum breadth, 2 miles; and in superficial area, 19,000 acres. A ridge of almost mountainous hills runs, from the sea not far from the southern extremity, north-eastward through the parish, and sends off spurs, or has parallel elevations, on its south-east side. The southern district is, in consequence, chiefly pastoral; yet its hills are for the most part covered with verdure, and, even in instances where they are beathy, they have patches and intermixtures of grass. The diagonal hill-range, as seen from the town of Girvan, presents an imposing aspect, and sends up its summits seldom less than 900 feet above the level of the sea, and, in one instance, 1,200 feet. The northern division has a considerable proportion of flat ground, but is beautified with elevations, and, on the whole, wears a tumulated appearance; yet it is finely cultivated, and rich in the properties of agricultural worth. The soil, though very various, is, in general, a dry light mould, on a sandy or gravelly bottom. The coast-line, upwards of 8 miles in length, is over one-third of the distance bold and rocky, and over two-thirds of it flat; and in the latter and larger part, the beach is strewn with large whinstones, and, at the recess of the tide, is extensively carpeted with sea-weed. Several brooks rise in the central and southern uplands, and flow respectively to Girvan water and the sea. The most considerable is Lendal-burn, which joins the sea at Carlton-bay; and another, called the Assel, flows along the eastern margin, to fall into Stinchar water in Colmonell. The climate of the parish is much more moist than that of the inland or eastern parts of Scotland, and moister still in the upland division of it than in the plain. Coal, though abundant in the neighbouring parish of Dailly, does not seem to stretch within the limits of Girvan. Limestone is plentiful in the eastern division, and has long been somewhat extensively worked. Excellent copper-ore has been found, and is supposed to exist in considerable quantity. Puddingstone is the most plentiful rock, and stretches for a considerable distance along the beach. Whinstone, both grey and blue, occurs with sufficient frequency to furnish materials for all the local buildings. Gypsum, shell marl, and tile clay have been found; and the last is employed in a vigorous tile-work. Only a small number of acres is under plantation; and nowhere, excepting a few patches of brushwood, is there any natural forest. Nearly

one half of the parish belongs to the Due de Coigny, and the rest is distributed among nine landowners. The real rental is at least £12,000. The yearly value of raw agricultural produce was estimated in 1837 at £23,302. Assessed property in 1860, £18,675. Vestiges of five camps are traceable, all near the sea, and one of them distinguished by an encincturing of two parallel ditches. The parish is traversed, along the shore, by the road between Glasgow and Portpatrick, and, along its eastern verge, by a road between Old Dailly and Ballantrae. Population in 1831, 6,430; in 1861, 7,053. Houses, 1,122.

This parish is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, the Crown. Stipend, £280 18s. 8d.; glebe, £20. Unappropriated teinds, £153 9s. 1d. The parish church was built about the year 1770, and enlarged by the addition of an aisle about 30 years later, and contains 850 sittings. There is a Free church congregation; and the sum raised in connexion with it in 1865 was £181 17s. 3d. The United Presbyterian church was built in 1814, and contains 549 sittings. The other places of worship are a Reformed Presbyterian, a Reforming Protestant, an Episcopalian, and a Roman Catholic. The parochial school yields its master £40 of salary, with about £80 fees, and £28 10s. other emoluments; and is attended by a large number of scholars, 40 of whom are poor children taught free. There are also a Free church school, a young ladies' boarding school, a charity school, an infant school, and several other schools.—The church of Girvan, like several other churches in Ayrshire, was dedicated to St. Cuthbert, —peculiarly a Saxon saint; and seems therefore not to have been older than the end of the 11th century, when Ayrshire, after the change of the Scottish government, was brought completely under the influence of the Anglo-Saxon settlers. The church was granted to the monks of Crossraguel, and remained in their possession till the Reformation; and it was served by a vicar, under the surveillance of the bishop of Glasgow. In the ancient parish of Girvan—which was much larger than the present—were several chapels. In the south of it, on an eminence overlooking the Stinchar, about 2 miles west-south-west from the present church of Barr, stood the chapel of Kirkdomine, dedicated to the Holy Trinity. The ruins still remain, and commemorate the name; and they serve also to give a rallying-point and a designation to a great annual fair, called Kirkdomine fair, held on the last Saturday of May. In the north of the parish, on the lands of Cragach, near the coast, upward of 1½ mile north-north-east of the town of Girvan, stood Chapel-Donan, dedicated to a Scottish saint, called Donan, of the 9th century. Both this chapel and the former one were, like the parish-church, in the hands of the Crossraguel monks. In 1617, the patronage of Girvan, with other property of Crossraguel, was annexed to the see of Dunblane; but, on the abolition of episcopacy in 1689, it was vested in the Crown. In 1653, the south-east part of the ancient parish, lying on the river Stinchar, was detached and made a part of the new parish of Barr; but, at the same date, Girvan received some accessions of territory, both on the north and on the south.

The TOWN of GIRVAN stands at the mouth of Girvan water, 12 miles south-south-west of Maybole, 13 north-north-east of Ballantrae, and 21 south by west of Ayr. It was originally called Invergarvan, in allusion to Girvan water, which was formerly called the Garvan. The town extends along the sea-side, southward from the river, directly opposite

Ailsa Craig, and commands a magnificent view of the frith of Clyde, and its gorgeous encircling scenery. But as to its interior landscape, or the appearance and grouping of its streets, it is utterly unworthy of its splendid site. Heron, in the narrative of his Scottish tour, in 1793, though sufficiently prompt and liberal in his praises whenever an object not positively displeasing met his eye, describes the town as then in so miserable a plight that he was obliged to move onward to Kirkoswald to find a night's lodging; and he says respecting Girvan: "The houses are huts more miserable than those of Ballantrae. They are so low as to seem, at the south end of the village, rather caves dug in the earth, than houses built upon it. On the north-west side, and close upon the banks of the river, are, indeed, some more decent and commodious houses." The place is exceedingly improved since the period when Heron wrote. Still it is far inferior in neatness and dignity to many Scottish towns of its size; and, with a small aggregate proportion of exceptions, consists of cottages one story high, distributed into a workshop and a dwelling-room,—the latter, in many instances, being occupied by two or even three families. Even the recently built erections are, in a large proportion of instances, small houses, occupied by the lowest order of immigrated Irish, who come hither in search of employment in cotton-weaving. The whole population, with inconsiderable exceptions, are cotton-weavers and their families. The number of hand-loom, including a few in the vicinity, was, in 1838, no fewer than 1,800. The fabrics woven are almost all coarse cottons for the manufacturers of Glasgow.

Girvan harbour, till very recently, with from 9 to 11 feet of water at the mouth of the river, admitted only vessels of small burden; but it is now so far improved as to admit of a steamer of from 90 to 100 feet keel, and to afford some facility for the exportation of coals and agricultural produce. The small bay at the embouchure of the river is an excellent fishing station; but though capable of yielding an abundant produce, of great variety and of prime quality, it has not been well-plied. Steamers sail regularly to Stranraer, Ayr, and Glasgow; coaches run to Stranraer and Wigton; and a railway connects Girvan, through Maybole, with the Glasgow and South-western system. The town has an office of the Union Bank, the National Bank, the Commercial Bank, the Royal Bank, and the City of Glasgow Bank, eight insurance agencies, a mechanics' institute, and several friendly societies. A market is held weekly; and fairs are held on the last Monday of April and of October. Girvan is a burgh-of-barony under the proprietor of Bargaoy. It received its first charter in 1696, but did not begin to enjoy burgh privileges till 1785; and now it enjoys these in the same manner as other burghs-of-barony. It has public sources of income, yielding an yearly revenue of about £150. Its council comprises two bailies and twelve other members. Courts under the small debt act are held in it three times a-year, in March, July, and November. Population in 1836, 5,300; in 1861, 5,921. Houses, 923.

GIZZEN BRIGS. See DORNOCB FRITH.

GLADHOUSE WATER. See TEMPLE.

GLADNEY, a village in the southern extremity of the parish of Cupar, Fifeshire. Population, 195. Houses, 45.

GLADSMUIR, a parish, containing the post-office villages of Gladsmuir, Longniddry, and Sannelston, also the village of Penston, in Haddingtonshire. It is bounded by the frith of Forth, and by the parishes of Aberlady, Haddington, Salton, Pen-

caitland, and Tranent. Its length southward is fully five miles; its breadth is 4 miles; and its area is about 10 square miles. From the frith of Forth on the north-west, and from the boundary-line on the south-east, the surface gently rises to a central ridge of inconsiderable height. The top of this ridge, originally an open moor, was for ages incessantly pared of its turf by the neighbouring inhabitants. The soil, in this central part, is, in consequence, clayey and shallow, yet has recently been so improved as to be brought into a state of good cultivation; and, in other districts, especially a stripe running eastward about $1\frac{1}{2}$ mile from the coast, it is very fertile, and, at an early period, produced rich crops, and bore a high value. A fir-plantation of nearly 160 acres occurs in the south; and belts or patches of oak, beech, elm, ash, birch, chestnut, and other species, adorn and shelter, at intervals, nearly the whole surface. The coast—only about a mile in length—is rocky, and sends into the sea terminating strata which vex the waters in a breeze, and look out from their surface at the eflux of the tide. The Tyne, which forms the southern boundary-line for about $1\frac{1}{2}$ mile, is here a pleasing stream of inconsiderable volume, but of value in giving water-power to grain-mills. Marshes—though formerly such as to give almost a distinctive feature to the district—have quite disappeared, and left in their stead luxuriant fields. The air is pure, dry, and very healthy. Coal is very abundant, and, in the vicinity of the village of Penston, in the southern division, seems to have been worked for five centuries. The seam, in some places, is from four to five feet thick, and of prime quality. Limestone occurs in various parts, and, in two places, is worked. Freestone, suitable for building, is everywhere abundant. The working of iron was at one time carried on for a short while, and relinquished; and now it is about to be resumed on a very extensive scale at Macmerry, on the western border, $1\frac{1}{2}$ mile from Tranent; where works have just been built on a plain to employ no fewer than about a thousand hands. Fire clay is abundant. The landowners are the Earl of Wemyss, the Earl of Haddington, the Earl of Hopetoun, Baillie of Lamington, and four others. A circular mound a few feet high, in the vicinity of the recently obliterated Laird's dyke and the Laird's garden, indicates the site of the residence of the Douglasses of Longniddry, who acted so distinguished a part in the Reformation, and invited John Knox to their mansion when he was driven away from St. Andrews. The modern mansions are Redcoll, Elvingston, and Southfield. The village of Gladsmuir, or Kirktown, stands on the eastern verge of the parish, on the highest point of the ridge between Tranent and Haddington, 4 miles west by south of the latter. The culmination of the ground here, about 350 feet above sea-level, commands a superb panoramic view of the Forth, Fifeshire, and the Lothians, and is remarkable for thunder storms, one of which in 1789, hurst upon the schoolhouse, and killed two of the children. The great road from Edinburgh to Berwick traverses this ridge; and the North British railway passes midway between this and the frith, has a station at Longniddry, and sends off here its branch to Haddington. George Heriot, the celebrated founder of the hospital which bears his name in Edinburgh, is thought by some to have been a native of Gladsmuir, and, at all events, was the descendant of a family of some antiquity who resided at Trahorn within its limits. Dr. Robertson, the historian, commenced his ministry in Gladsmuir, and, while incumbent of the parish, wrote the greater part of his History of Scotland. The average yearly value of the raw agricultural produce of

the parish was estimated in 1836 at about £30,000. Assessed property in 1860, £4,845. Population in 1831, 1,658; in 1861, 1,945. Houses, 391.

This parish is in the presbytery of Haddington, and synod of Lothian and Tweeddale. Patrons, the Crown and the Earl of Hopetoun. Stipend, £313 3s. 5d.; glebe, £9. Unappropriated teinds, £22 16s. Schoolmaster's salary, £60, with £32 fees, and £30 other emoluments. The parish church was recently rebuilt in a very handsome style, and contains 750 sittings. There are four private schools, an itinerating library, and two friendly societies. Gladsmuir parish was formed, in 1695, by abstractions from the neighbouring parishes of Haddington, Aberlady, and Tranent. A church built, in 1650, at Thrieplaw near the southern verge of the parish, was abandoned on the erection of the parish, and has entirely disappeared. Another church, the predecessor of the present, was built in 1695 at the village of Gladsmuir. The ruins of an old chapel, called John Knox's kirk, because the great reformer occasionally preached in it, stand a little east of the village of Longiddy.

GLAIDNEY. See GLADNEY.

GLAISSEAN (LOCH), a lake in the moors of Glassary, whence flows the stream which enters the sea at Crinan, in Argyleshire.

GLAMAIG, a mountain on the south side of Loch Sligichan, in the island of Skye. It is nearly as high as the famous Cuchullin mountains in its vicinity; and at its top is a green plot of considerable extent, refreshed by a copious perennial spring.

GLAMMIS, a parish in the south-western parts of the Strathmore and Sidlaw districts of Forfarshire. It contains the post-town of Glammis, and the villages of Charleston, Newton, Milton, Thornton, Grasshouses of Thornton, Drumgley, and Arnifoul. It is bounded by the parishes of Kirriemuir, Forfar, Kinnettles, Inverarity, Tealing, Auchterhouse, Newtyle, Eassie, Nevay, and Airlie. Its form is, in general, ellipsoidal, the greater diameter extending south and north; but it makes projections on the south and south-west, and sends off a considerable stripe north-eastward from its northern extremity. Its greatest length is $7\frac{1}{2}$ miles; its greatest breadth is $5\frac{1}{2}$ miles; and its area is something less than 15,000 imperial acres. The northern division, consisting mainly of the eastward projecting stripe, and measuring $4\frac{1}{4}$ miles east and west by an average of one mile north and south, is a gentle undulated surface, all whose little softly featured summits are of nearly equal elevation. From this division, which is marked off along its southern limit by the river Dean, the surface, commencing at the bank of that stream, rises by a smooth and gentle ascent southward till, near the middle of the parish, it heaves up in the lower or flanking ridge of the Sidlaws, running south-westward and north-eastward over a length of 4 miles, having an average breadth of one mile, and lifting its summits from 500 to 700 feet above the level of the sea. South of this softly hilly ridge, three parallel ranges of hill stretch away to the boundary enclosing two plains called Denoon glen and Glen Ogilvie, and terminating in the highest summits of the Sidlaws, from 1,000 to 1,500 feet above sea-level. In the northern division the soil is, in general, light sandy or gravelly loam, occasionally interspersed with clay and moss, but is somewhat unfertile; along the Dean southward, it is a deep alluvial brown loam, of very productive quality; toward the central ridge, it is a brown and a black loam upon an unretentive subsoil, partly fertile and partly not very productive; in the glens of Denoon and Ogilvie, it is somewhat extensively a good, sharp, gravelly loam; but, on the hills, it

generally gives place to moorland clothed in heath. More than one-half of the entire parish is arable; more than one-fourth is in pasture; and about 1,600 acres are under plantation.

The western end of the Loch of Forfar, which here is now an inconsiderable stripe of water, extends, for a brief space, along the southern limit of the northern projection; and previous to its being drained, it covered twice the extent of its present bed. Issuing from this loch, Dean water, for 2 miles, continues the boundary, and then for two miles more intersects the body of the parish; and all the way is a deep and sluggish brook. Glammis burn rises in the hill of Auchterhouse at the extreme southern boundary, traverses the whole length of Glen-Ogilvie, cuts its way through the central hilly ridge, and joins the Dean on the demesne of Glammis castle, thus intersecting the parish over nearly 6 miles of its length, and cutting it lengthways into two not very unequal parts. Kerbet or Eassie burn rises on the west side of the hill of Auchterhouse, within the parish of the same name, enters Glammis $\frac{3}{4}$ of a mile from its source, traverses Denoon glen, forms, for about a mile, the boundary-line with Eassie, and then passes into that parish to pay its tiny tribute to the Dean. Both this brook and the Glammis abound with fine red trout. The climate, formerly moist and not very healthy, is now, in consequence of extensive draining in the course of agricultural improvement, dry and salubrious. Sandstone of close granulation and in thin and easily separable strata, producing the slabs which are locally used as a succedaneum for slates, and also the admired paving-stone known under the name of the Arbroath stone, is very abundant, and extensively quarried. About sixty years ago a small lead mine on the banks of a rivulet near Glammis was discovered, but the quantity of ore obtained did not repay the expense of working. Shell marl, of great value in agriculture, has been taken up in large quantities from some mosses in the northern division, and especially from the Loch of Forfar. The greater part of the parish belongs to the Earl of Strathmore and Lord Douglas; and the rest is divided between two proprietors. The value of assessed property in 1866 was £14,995. The parish is traversed by the Scottish Midland Junction railway, and has a station on it; and is traversed also by the road from Perth to Aberdeen, and by that from Kirriemuir to Duudec. Population in 1831, 1,999; in 1851, 2,152. Houses, 412.

Within a few yards of the manse stands an obelisk, of rude design, erected, as is generally supposed, in memory of the murder of Malcolm II., king of Scotland. On one side of it are figures of two men, who, by their attitude, seem to be forming the bloody conspiracy. A lion and a centaur, on the upper part, represent the barbarity of the crime. On the reverse, fishes of several sorts appear; a symbol of Loch Forfar, in which, by missing their way, the assassins were drowned. In a neighbouring field is another small obelisk or stone on which are delineated various symbolical characters similar to those of the larger obelisk, and supposed to be intended as representations of the same facts. At a mile's distance from the village of Glammis, near a place called Cossans, is a third obelisk, vulgarly styled St. Orland's stone, still more curious than the others, and possibly akin to them in object. On one side is a cross rudely flowered and chequered; on the other, four men on horseback appear to be pursuing their way with the utmost possible speed, while the horse of one of them is trampling under foot a wild boar; and on the lower part of the stone is the figure of an animal somewhat like

SPRINGBURN

CITY OF GLASGOW

Scale 0 500 1000 2000 3000 Feet
1/2 Mile

a dragon. Though no probable decipherment has been made of these symbols, they have been conjectured to represent the officers of justice in pursuit of Malcolm's murderers. Two miles south-west from Glammis, in Denoon glen, on the summit of a solitary basaltic hill, overlooking the extensive vale of Strathmore, is a fortification, called Denoon castle, supposed to have been designed as a place of retreat in seasons of danger. A circular wall, believed to have been 27 feet high and 30 broad, and perforated with two entries, one on the south-east and the other on the north-west, is carried round a circumference of about 340 English yards, and encloses faint though evident traces of interior buildings.

But the chief work of antiquity in the parish is the venerable and majestic pile, called Glammis castle, the property of the Earl of Strathmore, and his principal seat in Scotland. The edifice is very ancient, but has at various periods undergone important alterations. The central part of it is a tower, upwards of 100 feet high. At one of its angles is another tower, with a spiral staircase; and on its top are numerous small turrets with conical roofs. The wings are either altogether or chiefly of modern erection. They are four in number, and project toward different points of the compass. The principal avenue stretches from the castle to the village, a distance of more than a mile, and was anciently conducted under three several gateways. It must have been a noble specimen of our ancient architecture, before the wings were taken down, with the view of rebuilding them in another form. Pennant—who has given a drawing of it as it formerly stood—says: "The whole consisted of two long courts, divided by buildings. In each was a square tower, and gateway beneath; and in the third, another tower, which constitutes the present house, the rest being totally destroyed." It is commonly related, that the son of James VII., when he visited Scotland, A.D. 1715, to reclaim the throne which his father had thrown away "for a mass," having lodged here, declared that he had seen no castle on the continent which might be compared with it. This castle seems to have been the residence of Malcolm II. Here, at least, our chroniclers say he was slain, about the year 1031. Pinkerton contends that he died a natural death; but both Boece and Fordun assert that he was murdered; and tradition still pretends to point out a passage in the castle where the bloody act was perpetrated; nor is it less positive in affirming that his murderers, as the ground was covered with frost and snow, having unconsciously, in their flight, entered on the Loch of Forfar, all perished in it. That good antiquary, Sir James Dalrymple, evidently viewed this as one of the palaces of our kings; for, speaking of the pretended laws of this same Malcolm, he says: "Albeit it be said that the king gave all away, yet it is not to be thought but that he retained, with his royal dignity, his castles and other places of residence, as at Fort-toviot, Glames, and Kincardin." Glammis, we need hardly remark, is famous for Shakspeare's histrionic notice of it as the thanedom of the usurper Macbeth.

This parish is in the presbytery of Forfar, and synod of Angus and Mearns. Patron, the Earl of Strathmore. Stipend, £307 18s. 1d.; glebe, £16 10s. Unappropriated tithes, £20 17s. 4d. Schoolmaster's salary, £60, with £25 fees, and £10 other emoluments. The parish church is an elegant edifice, built about 20 years ago, and containing 850 sittings. There are three non-parochial schools, two friendly societies, and a subscription library.

The VILLAGE OF GLAMMIS stands at the intersec-

tion of the road from Perth to Aberdeen with the road from Dundee to Kirriemuir, $\frac{1}{2}$ a mile south of Dean Water, 12 miles north by west of Dundee, and 28 by railway north-east of Perth. Glammis burn, in a deep, romantic, rocky gorge, in the vicinity of the village, first makes a fall and then rushes rapidly along, emitting an obstructed sound; and this, Dr. Lyon, the new statist of the parish, suggests as the origin of the name Glammis, which he represents as meaning a noise caused by obstruction. The village consists of two sections, an old and a new, which stand a little way apart from each other. There is a flax factory on Glammis burn. Many of the inhabitants of the village, and of the tract of country around it, are employed in the manufacture of brown linen. The village is adorned with the handsome parish church, and has also a neat public edifice, containing the halls of the masons' and the gardeners' societies. It is a station of the county constabulary; and it has an inn, and is a small centre of traffic for part of Strathmore. It gives the title of Baron Glammis to the Earl of Strathmore's eldest son. Population, about 650.

GLANAMER. See SANDA.

GLASCHOIREN, a mountain, of 1,920 feet of altitude, in the parish of Ardnamurchan, Argyle shire.

GLASFORD. See GLASSFORD.

GLASGOW,

The commercial and manufacturing capital of Scotland, and in point of wealth and population, probably the second or third city of the empire, is situated in the lower ward or division of the county of Lanark, on both banks of the Clyde, but chiefly on the north side of that river; in latitude $55^{\circ} 51' 32''$ North; and in longitude $4^{\circ} 17'$ West of Greenwich. By the old mail turnpike road, it is 43 miles west of Edinburgh, 23 east of Greenock, 34 north-north-east of Ayr, 79 north-north-west of Dumfries, by way of Kilmarnock, New Cumnock, and Sanquhar, and 396 miles north-west by north of London. By railway it is $47\frac{1}{2}$ miles from Edinburgh, $22\frac{1}{2}$ from Greenock, 40 from Ayr, 92 from Dumfries, and 405 from London. Many dissertations have been written as to the origin of a name which is now a familiar word over the civilized world; but as the most learned and plausible of these still leave the question in doubt, it would be idle here to enter into the controversy regarding these early and misty derivations. It is enough to say that Glasgow, unlike many of the populous and enterprising towns of the present day, has a history to boast of, which proves it to have been a place of consideration and importance even in those remote times when trade and commerce may be said to have been unknown.

History.

Early History.—The Romans had a station on the river Clyde at this spot; and the remains of a camp may still be traced on the lands of "Camphill," near the battle ground of Langside, about two miles to the south of the city. The wall of Antoninus, extending between the friths of Forth and Clyde, and nearly parallel to which the line of the Edinburgh and Glasgow railway runs for several miles, embraced the province of Valentia, in which Glasgow is situated. Though often harassed by the inroads of the Caledonians, the Romans did not abandon this station till sometime about the year 426, when they took their final leave of this island to defend the

Eternal City,' which was then assailed by the barbarous tribes by whom the Roman empire was eventually overthrown. The city undoubtedly owes its origin to the religious establishment which was planted on this spot in very remote times. According to a tradition which was believed even in the twelfth century, the ground on which the cathedral stands, was hallowed, so early as the beginning of the fifth century, for Christian burial, by St. Ninian of Galloway; but it is presumed that the partially converted tribes had relapsed into heathenism, and that the cemetery became neglected or forgotten. Almost all historians concur in stating, however, that an establishment or see was established here not later than the year 580, by St. Kentigern, a holy man of princely birth. He was the son (by an illicit intercourse) of Ewan Efurien, King of Cumbria, and of Thenaw, daughter of Loth, King of Lothian. Many miraculous circumstances are said to have attended his birth and prefigured his future renown. His mother, on the discovery of her dishonour, was put into a frail skiff on the Lothian shore, which was drifted to Culross, on the northern bank of the frith of Forth. Here St. Serf, or Servan, a disciple of St. Palladius, had established a little monastery, and here the infant, to whom the erring Thenaw gave birth, received his nurture, and was taught the rudiments of the faith. He received the name of Kentigern, but was known also and better, especially in later times, by that of Mungo, though the reasons on account of which he received this second appellation have not been accurately ascertained. According to Spottiswoode and others, the generally received opinion is that being a great favourite with his preceptor, Servan, the youth was designated by him by the endearing and familiar name of Mongah, which, in the Celtic tongue, signifies 'dear friend'—whence the 'Mungo' by which he and the see he founded, are most generally known. When he came to the years of maturity he departed secretly from Culross, and guided by a miraculous portent, took up his abode on the spot where the Cathedral church of Glasgow is now built. Here he planted an infant church, which was honoured by a visit from St. Columba, the apostle of the Highlands. The interview between him and St. Kentigern took place on the banks of the Molendinar; and many circumstances which attended it are still preserved, together with a barbarous hymn in Latin, which the abbot of Iona is said to have written in honour of the founder of the see of Cumbria or Strathclyde.

St. Kentigern, in his early career, endured a life of much vicissitude, and was driven from his infant establishment by the hostility of the heathen chief of Cumbria. He took refuge in Wales, where he sojourned some years, and founded the bishopric which still bears the name of his disciple St. Asaph. Under the rule of King Redruth, however, he was recalled to Glasgow, and as the returning prophet approached his old residence he was met by a mighty concourse of chiefs and people. He began to preach the word of God to them, but as the throng was so great, only those in the immediate vicinity could catch the sound of his voice; when, lo, by a signal miracle, the earth on which he stood was instantly upheaved into a little knoll or hillock, when he was seen and heard with ease by the assembled thousands. This legend, it has been supposed, gave rise to the well-known motto of the city—'Let Glasgow flourish by the preaching of the Word.' In Roman Catholic times this spot was commemorated by a church called 'Little St. Mungo's Kirk,' the site of which might have been traced until recently on the Dowhill, on the

north side of the Gallowgate. From this time St. Kentigern passed his days in peace. He died at Glasgow about the year 601, in extreme old age, and was buried in the church which he founded, and which was hallowed by the belief in his many miracles. The life of St. Kentigern has been written by more than one of the eminent fathers of the Roman Catholic church. So much was his piety held in esteem that many churches and chapels were dedicated to him in various parts of the kingdom; and the affectionate credulity of a simple people, and a rude age, ascribed to him a thousand miracles. One of the most memorable may be told in the following words:—The Queen of Cadyow chanced, once on a time, to lose a ring which had been presented to her by her husband, as a token of his affection. The resentment or jealousy of her lord was about to put her to death, when, in her great distress, the lady applied to the holy man, imploring his interposition for the recovery of the ring. Shortly afterwards, St. Kentigern, while walking on the banks of the Clyde, as was his custom, after his devotions, desired that the first fish which was taken from the river should be brought to him; this was done, and in the mouth of the salmon was found the identical ring which had caused the lady's disquietude, and was now the means of its removal. This legend is still commemorated in the arms of the city of Glasgow, along with some others of his more notable miracles.*

The patron saint is said to have been succeeded by St. Baldred; but subsequent to his death, the records of the see wholly disappear, and for a period of 500 years, we have neither historical nor credible traditional data regarding it. Little doubt may exist that the sanctity pertaining to the resting place of the bones of so holy a man would for a time keep the establishment together, and draw around it the village which became the nucleus of the future city. The small community is believed to have suffered from the incursions of the Danes, and also from reivers nearer home upon whom the mantle of Christianity was as yet very loosely adjusted. In the terse terms of M'Ure (the quaint and earliest historian of Glasgow)—"After St. Mungo, for many ages, the Episcopal see was over-run with heathenism and barbarity till the reign of Alexander I.†"

* The arms of the city of Glasgow show a tree with a bird perched in its boughs; on one side a salmon with a ring in its mouth; and on the other, a bell.

The salmon and the ring are the emblems of the miraculous recovery of the love-pledge of the frail Queen of Cadyow.

The tree is a token of a miracle which St. Kentigern wrought at Culross, when the lamps of the monastery having been extinguished, he tore a frozen bough from a neighbouring hazel, and, making the sign of the cross over it, instantly kindled it into flame.

The bird represents a tame robin, a favourite of St. Serf, which, having been accidentally killed, and torn to pieces by his disciples at Culross, was miraculously brought to life again by St. Kentigern.

The bell commemorates a famous bell which was brought from Rome by St. Kentigern, and was preserved in Glasgow until the Reformation, if not, indeed, to a more recent period. It was called St. Mungo's bell, and was tolled through the city to warn the inhabitants to pray for the soul's repose of the departed. All these tokens, as has been shown by recent researches, appear first in the seals of the bishops of Glasgow, in the twelfth and thirteenth centuries, from which they were transferred to the common seal of the city, in the beginning of the fourteenth century.—See the preface to the 'Liber Collegii Nostre Domine Glasgvensis,' edited by Mr. Joseph Robertson, and presented to the Maitland Club by the late Marquis of Bute.—See also the 'Missa S. Kentigerni,' in the Maitland Club Miscellany, vol. iv., part 1st, edited by Mr. Robertson.

† The late Mr. McLellan, in his able and ingenious 'Essay on the Cathedral church of Glasgow,' appends the following interesting note:—"There is, with this total eclipse of our own see, a singular coincidence in that of Lichfield, of which from the year 700—coinciding with the episcopacy of Bishop Hledda—there is no record till we find it revived, under the presidency of Roger de Clinton, in

The undoubted light of history again breaks in in the early part of the twelfth century, when in 1116, David, Prince of Cambria, and brother of Alexander I. of Scotland, re-founded the see, and promoted his preceptor and Chancellor John (commonly called Achaius), to the bishopric. This prelate was a man of learning and ability, who had travelled in foreign parts, and had been specially noticed by Pope Paschal II., to whom his merits were well known. He reconstructed or rather rebuilt, partly with stone, the then existing edifice, which had become an ignoble building; and after having been personally consecrated in Italy, he himself consecrated the new Cathedral on the 7th July, 1136, in the presence of his royal pupil, who was now David King of Scots. In addition to former gifts, the prince, upon his accession to the throne, made large additional donations to the establishment, and at its consecration, he further conferred upon it the lands of Perdeye, [Partick] which still form part of the episcopal revenue—though now in the hands of the University—and where subsequent prelates erected a rural retreat, near the mouth of the Kelvin, the ruins of which existed in the memory of persons still living. According to the 'Registrum Episcopatus Glasguensis,' edited by Mr. Cosmo Innes, "the King, David I., gave to the church the land of Perdeye [Partick], which was soon afterwards erected, along with the church of Guvan [Govan] into a prebend of the Cathedral. In addition to the long list of possessions restored to Glasgow upon the verdict of the assize of inquest, this saintly King granted to the bishop the church of Renfrew; Guvan with its church; the church of Cadihou [Cadzow]; the title of his cane orduties paid in cattle and swine throughout Strathgrif, Cuninghame, Kyle, and Carrick; and the eighth penny of all pleas of court throughout Cambria (which included the greater part of Scotland south of the Forth and Clyde, as well as the English county of Cumberland). The bishop also acquired the church of Lochowort, near Borthwick, in Lothian, from the bishop of St. Andrews—the king and prince present and consenting." David, the sainted son of St. Margaret, was doubtless the greatest benefactor known to the annals of the see of Glasgow; but his pious zeal gifted away so many of the royal possessions, that one of his successors said with some bitterness that he had been "ane sair sanct for the croon." Bishop John died in May 1147, at an advanced age, after having held the see for the long period of 32 years, although only for eleven years after the building and consecration of the new Cathedral.

Subsequent to the death of John, Bishops Herbert and Ingleram filled the see. The latter was succeeded by Joceline, abbot of the Cistercian monastery of Melrose, and was consecrated at Clairvaux in France, on 1st June 1175, by Esceline the Pope's legate. He is reputed on all hands to have been a worthy and liberal-minded prelate, and the works which he has left behind him amply prove it. The church built by Bishop John was destroyed by fire within a period of 40 years after its consecration, and Joceline set himself zealously to build upon a new and extended plan the Cathedral church of Glasgow. He invoked aid from the pious all over Europe, and his appeal was so generously answered that the present beautiful crypt was consecrated in 1197, on the octave of St. Peter and St. Paul—three bishops taking part in the rite. The merit has also been assigned to Joceline of having built the superincumbent choir and Lady chapel; but recent re-

searches show that these were only commenced by him, and were completed by his successors. Still the honour belongs to him of being the founder of the existing magnificent and venerable structure; for it has now been accurately ascertained that no part of the church built by Bishop John remains above the ground. Joceline is also held in happy remembrance, from his having obtained from King William the Lion, about 1180, a charter, constituting the town or village of Glasgow, into a burgh-of-barony, holding of the bishop, and granting them many privileges, such as that of holding a weekly Thursday's market, with all "the liberties and customs of one of the King's burghs." The same king also granted to the bishop, for the inhabitants, a right of fair in Glasgow annually, for eight days following the octaves of St. Peter and St. Paul, (6th July) and gave his "firm peace" to all attending it. This fair is still kept up with unfailing regularity—the only difference from the olden time being that instead of being held for business purposes, it is characterized by the total want of it—Glasgow fair being now the annual holidays, when labour is suspended, and the industrious thousands enjoy a few days' recreation. It was not, however, till 1242, that by a special edict from the Crown, "the burghesses and men of the bishop were entitled to trade in Lennox and Argyle as freely as the men of Dumbarton." To conclude this part of the subject, it may be here stated (on the excellent authority of '*Origines Parochiales Scotiæ*,' edited by Mr. Cosmo Innes), that in 1450, the bishop's city and territory were erected into a regality, and the burgh, hitherto a burgh of barony, thus rose one step in dignity and privilege. The bishop was permitted to appoint a sergeant for making arrestments and executing the edicts of his court, who was to bear a silver staff, having the royal arms blazoned on the upper end, and the arms of the bishop on the other. The increased consequence of the magistrates is immediately apparent. An indenture between them and the Friars Preachers, dated in 1454, runs in the name of "an honorabyll mane, Johne Steuart, the first provest that was in the cite of Glasgu." Whether as a burgh of barony or a burgh of regality, the appointment of magistrates was in the bishop; and one instance is recorded, in the year 1553, on the Tuesday next after the feast of St. Michael the archangel, when the new bailies were wont to be elected, an honourable man, Andrew Hamyltoun of Cochnoch, provost, and the whole council, in the inner flower garden beside the palace, when the bishop was engaged in conversation with several of the canons of the chapter, presented to his lordship a schedule of paper with the names of certain of the most worthy and substantial men of the city, from whom the archbishop selected the bailies for the following year. In 1561, the council, first protesting that search had been made in vain for the archbishop, (who had withdrawn on the breaking out of the Reformation) proceeded to elect their magistrates themselves. Glasgow sent representatives to parliament in 1546; but it was only in 1636 that a charter of Charles I. ratified in parliament, declared the burgh duties payable directly to the Crown. The protestant archbishops, from time to time, and also the family of Lennox, as heritable bailies of the regality, long claimed the right of nominating the magistrates, and even in 1655, Esme, Duke of Lennox, was served heir to his father in "the title of nomination and election of the provest, bailies, and uther magistrates and officers of the burgh and city of Glasgow." In 1690, parliament ratified a charter of William and Mary, giving the city of Glasgow and town council, power and privilege to

1128, leaving a blank of 428 years, in precisely the same era as our own."

choose their own magistrates, as freely as Edinburgh or any other royal burgh.

After this digression—proving the firm grasp with which the church, whether Roman Catholic or Protestant, and its heritable bailies, long held the municipal patronage of Glasgow,—it remains to be stated that the worthy Joceline, by whose means the inhabitants were first brought within the pale of citizenship, died at his old abbey of Melrose, on the 17th March, 1199, after a lengthened and honoured episcopate.

About the year 1246, a convent or monastery of preaching friars of the order of St. Dominic (called also, from the colour of their habits, Black Friars) was established in the city by the influence of Bishop William of Bondington, a munificent prelate, who held the office of chancellor to King Alexander II. during the latter half of his reign, and who made considerable additions to the rising cathedral church. Their church was dedicated to the blessed Virgin and St. John the Evangelist, and when the building commenced Pope Innocent IV. issued a bull of forty days' indulgence to all the faithful who should contribute to its completion. The church stood on the east side of High street, and the building survived until it was taken down about the year 1670, to be replaced by the present college or Blackfriars Kirk.

The adjoining "place," or convent of the friars was largely and richly endowed.—When King Edward I. of England (then engaged in his attempt to subjugate Scotland) remained at Glasgow for a fortnight in the autumn of 1301, he was lodged at the monastery of the Friars Preachers; from which it may be inferred that it was the only building in the town capable of accommodating the monarch and his train. Although his residence was with the Friars, however, Edward, as became one desirous of being reputed a pious King, was constant in his offerings at the high altar, and the shrine of St. Mungo. The accounts of Edward's wardrobe show that he requited the hospitality of the brethren with a payment of six shillings. The "place" stood on part of the ground now occupied by the University, but no vestiges of it now remain.

The next prelate worthy of notice was Robert Wishard, archdeacon of Lothian, who, in 1278, was consecrated bishop of Glasgow at Aberdeen by the bishops of Aberdeen, Moray and Dumblane. He was a man of eminence in the country, and a member of the council of Alexander III. Upon the death of the King he was appointed one of the lords of the regency; and in these perilous times no man exerted himself with more ardour, or a purer patriotism, towards the preservation of the independence of his country, which was then assailed by Edward I. "The affectionate sympathy expressed by the King (Robert the Bruce) for the bishop would serve to give us some insight into his character, even if the history of Robert Wishard were not so well known. It was a time when strong oppression on the one side, made the other almost forget the laws of good faith and humanity. Our bishop did homage to the Suzerain, and transgressed it; he swore fidelity over and over again to the King of England, and as often broke his oath. He kept no faith with Edward. He preached against him; and when the occasion offered, he buckled on his armour like a Scotch baron, and fought against him. But let it not be said that he changed sides as fortune changed. When the weak Baliol renounced his allegiance to his overlord, the bishop, who knew both, must have divined to which side victory would incline; and yet he opposed Edward. When Wallace, almost single-handed, set up the standard of revolt against the all-powerful Edward, the bishop of Glasgow

immediately joined him. When Robert Bruce, friendless and a fugitive, raised the old war-cry of Scotland, the bishop supported him. Bruce was prescribed by Edward, and under the anathema of the church. The bishop assuaged him for the sacrilegious slaughter of Comyn, (in the Greyfriars church at Dumfries) and prepared the robes and royal banner for his coronation. Wishard was taken prisoner in the castle of Cupar, which he had held against the English, in 1306, and was not liberated till after Bannockburn. It was in the midst of that long confinement that we find Robert commiserating his tedious imprisonment, his chains and persecutions, so patiently endured for the rights of the church and the kingdom of Scotland. The bishop had grown blind in prison. One charge of Edward against Bishop Wishard was that he had used timber which he had allowed him for building a steeple to his cathedral, in constructing engines of war against the King's castles, and especially the castle of Kirkintilloch."—[Registrum Episcopatus Glasguensis.] Indeed, there is every reason to believe that Edward would have put the patriotic bishop to death; but the fear of exciting the ire and resentment of the Pope restrained the hand of the usurper. Wishard was exchanged, along with the Queen and Princess, for the Earl of Hereford, taken in Bothwell castle, by Edward Bruce, immediately after the battle of Bannockburn. The venerable bishop thus lived to see Robert the Bruce firmly seated on the Scottish throne, and dying in November, 1316, was buried in the cathedral church betwixt the altars of St. Peter and St. Andrew.

According to several old historians, Glasgow was the scene, in 1300, of a desperate conflict between the English and Scots. Edward, it is stated, had appointed one of his creatures, named Anthony Beck, or Beik, bishop of Glasgow, during the captivity of Robert Wishard, and a large English force, under Earl Percy, was stationed in the neighbourhood of the cathedral, both for the purpose of supporting the bishop in his new dignity, and of overawing the discontented inhabitants of the Western shires. Wallace gathered a force at Ayr, whence he marched to Glasgow, and defeated the English, whose chief was killed in the action. The action took place on that part of High Street, between the spot where the college now stands, and the "Bell of the Brae." We are afraid, however, that the narrative of this victory, so creditable to Wallace and the oppressed Scots, must be discarded from the sober page of history. The only authority for it is found in the metrical romance of Wallace, written by Blind Harry, in the fifteenth century; and the circumstances which he describes are altogether irreconcilable with existing records of unquestionable authority. The silence of all authentic history on the event, therefore, compels us to reject the narrative as a fable, like nine-tenths of the same minstrel's work.

It is matter of tradition that Stoekwell bridge, the first stone structure which spanned the Clyde, (and which was only removed in 1850, as will be afterwards noticed,) was built by Bishop William Rae, or Ra, about 1345, assisted by the pious Lady Loehow, who defrayed the cost of one of the arches. Of the execution of this magnificent work on the part of the prelate and the lady, there is no authentic record in existence, and it is difficult to believe that an undertaking of such magnitude and expense could be successfully carried out in a time of such great national depression. Rae filled the see from 1337 till 1367, during the unfortunate reign of David II., when the kingdom suffered from the disasters of Edward Baliol's wars—from the battles of Duplin

Halidon Hill, and Neville's Cross. No other era, however, has been given for the erection of the bridge, and as no one else has claimed the honour, we see no good cause to deprive the prelate of the credit which tradition has uninterruptedly assigned to him.

About the year 1392, in the time of the Earl of Carriek, afterwards Robert III., a mint was erected in Drygate Street, at which coins were struck. On one side was represented the King's crest crowned, but without a sceptre, with the motto *Robertus Dei Gratia Rex Scotorum*; and on the other, on an inner circle, *Villa de Glasgow*; and on the outer circle, *Dominus Protector*.

About the year 1410, Bishop Lauder, archdeacon of Lothian, was presented to the bishopric by Pope Benedict XIII., of his own authority, without the election of the chapter, but nevertheless the appointment was not disputed. He was appointed a commissioner to the court of England, to negotiate the terms of ransom of James I., then a prisoner there, and after his return to Scotland, on the successful completion of this mission, he spent much of his time and means in extending and beautifying the cathedral. The steeple of the church, which had been constructed of wood, covered with lead, having been destroyed by fire in the time of his predecessor (Bishop Glendinning), Bishop Lauder supplied its place, as far as the first battlement, by a magnificent spire of stone, which still remains a fitting monument to his liberality and taste. He also laid the foundation of the vestry.

Lauder died in 1425, and was succeeded in the following year by Dr. John Cameron, (supposed to be of the family of Lochiel,) then provost of Lincluden, and secretary of state. He was also promoted to the chancellorship, which he held till 1440. He had the character of being a magnificent prelate, and seems to have deserved it. He resumed the building of the chapter house, and either extended or completed various other portions of the cathedral, as may be seen by the carvings of his arms still existing on several portions of the structure. Cameron also built the "great tower" of the Bishop's palace in Glasgow, immediately adjoining the cathedral, and on which his arms were to be seen before its demolition at the close of the last century. During the incumbency of this prelate, the episcopal see was at the zenith of its temporal glory and power. The prebendaries had now extended to thirty-two, and the revenues had become augmented to a mighty aggregate. With the view of adding dignity to the episcopal court, he ordained that the prebend should reside in the neighbourhood of the cathedral church; and in consequence that portion of the city was extended and adorned with their comfortable mansions, and orchards or parterres. Not a few of these dwellings remained in good habitable condition till the close of the last century, and two or three of them exist even yet, although in rather a dingy and dilapidated condition. By contemporary writers, the court of this prelate is spoken of as being scarcely second to that of the monarch himself, from the great number of dignified ecclesiastics and noblemen of the first consideration whom he drew around him. "He was fond of celebrating the great festivals of the church, and on these occasions he entered the choir, through the nave, by the great Western door, (recently opened up) preceded by many high officials, one of whom bore his silver crozier or pastoral staff, and the others carried costly maces and other emblems. These were followed by the members of the chapter, and the procession moved on amidst the ringing of bells, the pealing of the great organ, and the vocal swell of the choristers, who were gorgous-

ly arrayed in vestments of high price; the Te Deum was then sung and high mass celebrated. On certain highly solemn occasions, it pleased the prelate to cause the holy relics belonging to the church to be exhibited for the edification of the faithful. These, according to the chartulary, principally consisted of the following objects of veneration: 1st, The image of our Saviour in gold; 2d, The images of the twelve apostles in silver; 3d, A silver cross, adorned with precious stones, and a small piece of the wood of the cross of our Saviour; 4th, Another cross of smaller dimensions, adorned with precious stones; 5th, One silver casket, gilt, containing some of the hairs of the Blessed Virgin; 6th, In a square silver casket, part of the scourges of St. Kentigern, and St. Thomas of Canterbury, and part of the hair garment made use of by St. Kentigern our patron; 7th, In another silver casket, gilded, part of St. Bartholomew, the apostle; 8th, In a silver casket, gilded, a bone of St. Ninian; 9th, In another silver casket, gilded, part of the girdle of the blessed Virgin Mary; 10th, In a crystal case, a bone of some unknown saint and of saint Magdalene; 11th, In a small phial of crystal, part of the milk of the blessed Virgin Mary, and part of the manger of our Lord; 12th, In a small phial, a liquor of the colour of saffron, which flowed of old from the tomb of St. Kentigern; 13th, One other silver phial, with some bones of St. Eugene and St. Blaze; 14th, In another silver phial, part of the tomb of St. Catherine, the Virgin; 15th, One small hide with a part of St. Martin's cloak; 16th, One precious hide, with a part of the bones of St. Kentigern and St. Thomas of Canterbury; 17th, Four other hides, with bones of saints and other relics; 18th, A wooden chest with many small relics; 19th, Two linen bags, with the bones of St. Kentigern and St. Thenaw, and other deceased saints. Indeed the paraphernalia of the see had about this time extended so greatly, that a new officer was appointed as keeper of the church vestments and furniture treasured within the "Gemma doors" entering the choir."—[Pagan's History of the Cathedral and See of Glasgow.] Cameron, who was remembered by the title of the "magnificent prelate," died on Christmas eve, 1447, at Lockwood, a rural retreat belonging to the bishops, in the parish of Old Monkland, about six miles eastward of Glasgow.

William Turnbull, of the family of Minto in Roxburghshire, archdeacon of Lothian, and keeper of the privy seal, was appointed Cameron's successor. His name will ever be held in honoured remembrance as the founder of the University of Glasgow. By his intervention it was constituted by a bull of Pope Nicholas V., dated on the 7th of the Ides of January, 1450; and King James II. also granted a charter of privileges and exemptions, dated under the great seal at Stirling, on 20th April, 1453. Such was the origin of that splendid educational establishment which has long reflected, and still reflects, so much honour on the city of Glasgow. During the episcopate of Robert Blackader, who had formerly been bishop of Aberdeen, and who was elevated to the mitre in 1484, a bull was obtained from Pope Alexander VI., erecting the see of Glasgow into an archbishopric, and the erection was confirmed by act of parliament. Its suffragans were the bishops of Dunkeld, Dumblane, Galloway, and Argyle. James IV., whose piety in early youth took an enthusiastic turn, had become a canon of the chapter of Glasgow, and loved to show favour to the cathedral of which he was a member. In the first year of his reign, it was "concludit and ordainit be our soverane lord and his three estatis, that for the honour and public gud of the realme, the sege of Glasgow be erect in ane Archbishoprick, with sic privilegiiis

as accordis of law, and sieliek as the Archbischop-riek of York has in all dignities, emunities, and privilegiiis." "The King renewed and extended the privileges and exemptions, and much valued civil jurisdiction of the bishop, with expressions that show both his attachment to Glasgow, and the commencement of that high character of its chapter, which afterwards drew to the Archbishop's court of Glasgow a great proportion of civil business." [Registrum Episcopatus Glasguensis.] Blaekader, it may be added, stood high in the confidence and favour of King James IV., and was one of those who negotiated the marriage between that prince and the lady Margaret of England, daughter of Henry VII., which connexion eventually resulted in the succession of a Scottish King to the throne of England. Blaekader was the last of the prelates, who lent a kindly hand to the extension and adornment of the cathedral, which had now been more than 370 years in existence since its foundation by Bishop John. In addition to founding several altaraiges, he built the southern transept, which still goes by his name; and, though never completed, enough has been done to show the rudiments of a beautiful design. According to Leslie, the archbishop undertook a pilgrimage to the Holy Sepulchre, in his advanced age, and died on the 28th July, 1508, when almost in sight of the Arabian shore.

Gavin Dunbar, of the family of Moehrum in Wigtonshire, and tutor to the young King James V., was elevated to the archbishopric, and consecrated at Edinburgh on the 5th February, 1525. His reign is specially memorable as being that in which the infallibility of the church, the purity of the Romish faith, and the morals and precepts of the clergy, began to be freely and boldly questioned. There is no doubt that the progress of the Reformation in the West of Scotland was vastly aided by those very means which were intended to crush it, namely, the martyrdom of Russell and Kennedy. For the purpose of suppressing those doctrines which caused the Established clergy to tremble in their strongholds, many pious persons suffered death at St. Andrews and Edinburgh; but it was deemed necessary to make an example in Glasgow to intimidate the heretics of the West. Dunbar, however, was a man not only possessed of the milk of human kindness, but had sufficient good sense to know that the spirit of inquiry was not to be stilled, nor conscientious belief to be perverted, by lacerating the flesh; and accordingly he recommended moderate measures; but the high powers of the church thought otherwise; and accordingly a deputation, consisting of John Lawder, Andrew Oliphant, and Friar Maltman, was sent from Edinburgh to Glasgow, to stimulate the archbishop, and assist in crushing the advancing Reformation by the agency of the pile and faggot. The men devoted to destruction were Jeremiah Russell, one of the Grey friars in Glasgow, a man well learned for the age in which he lived, and John Kennedy, a youth from Ayrshire, not more than 18 years of age. After what would now be considered a mock trial, they were handed over—much against the will of Archbishop Dunbar—to the secular power for execution, and suffered martyrdom at a stake which had been erected at the east end of the cathedral. These were the only persons who suffered at Glasgow during the troubles attending the progress of the Reformation; and though their death intimidated the people for the moment, it soon raised a spirit which nothing could allay but the tearing up by the roots of the whole establishment of the Papacy. Dunbar, however, though gentle in spirit, appears to have been deeply tinctured by the bigotry of his order; for upon Lord

Maxwell bringing in a bill into the Scottish Parliament to encourage the reading of the Bible in the vulgar tongue, this prelate is found protesting most vehemently against it, both for himself and in name of all the prelates in the kingdom. To the credit of the legislature, the bill passed notwithstanding. He died in 1547, and was buried in the chancel of the cathedral, in a stately tomb which he had caused to be built for himself; but it was entirely swept away, when the Reformers obtained the mastery, and when the cathedral itself so narrowly escaped the fate of the other beautiful ecclesiastical structures which for ages had adorned the kingdom.

James Beaton, nephew of the celebrated Cardinal, was constituted archbishop of Glasgow at Rome in 1552. With this prelate came the crisis and the close. He was the last of the long line of spiritual princes who had held sway in Glasgow for so many centuries. The Reformation had now acquired an irresistible momentum, of which the archbishop speedily became perfectly conscious. He accordingly removed into the castle or palace all the portable valuables which the church contained, and summoned around him the gentlemen of the neighbourhood still attached to the old doctrines, who, by means of their adherents and servants, guarded the church and palace from any sudden onslaught on the part of the Reformers. Eventually finding that the cause of the papacy was hopeless, Beaton quietly retired from the court, and passed into France in 1560, escorted by some troops of that nation, who happened at the time to be at Glasgow. At the same time, the Reformation was established by law in Scotland. The archbishop carried with him the whole treasures and costly ornaments, chalices, and images of gold and silver belonging to the cathedral, and also the valuable archives of the see from the earliest period to his own times. These were deposited by Beaton partly in the archives of the Scots College, and partly in the Chartreuse at Paris.* When the archbishop settled in France, he was constituted ambassador to that court from his sovereign, the unfortunate Mary, whom he served with unshaken fidelity throughout her chequered career, and until her death at Fotheringay. James VI., her son, respected his fidelity, employed him, and obtained for him, by special act of Parliament, in 1593, the restoration of the temporalities of the see which he had abandoned, "notwithstanding (as the act says) that he has never made confession of his faith, and has never acknowledged the religion professed within this realm." The closing days of this last prelate of the long line of St. Kentigern were consequently affluent and easy, and he died on 24th April, 1605, aged 86 years. By his will he ordained that the archives and relics of the cathedral which he had carried away, should be restored to Glasgow, so soon as the inhabitants should return to the communion of the church of Rome—"Which, I hope in God, (says old M'Ure the local historian) shall never be, but that his church is so established here, that neither the gates of Rome or hell shall ever be able to prevail against it."

* At the time of the French Revolution, the Ancient Chartulary, together with other valuable MSS. were saved by the patriotic exertions of Abbe Macpherson, one of the members of the College, and transmitted to Scotland. About ten years ago, they were arranged and printed, under the superintendance of Mr. Cosmo Innes, for the Maitland club, at the expense of the late Mr. Ewing of Strathleven. Long previous to this date, however, authentic and notarial transcripts of the Chartulary and other documents had been procured by the University of Glasgow (in 1739 and subsequent years); and the Magistrates of Glasgow, in 1739 obtained authentic copies of the writs which were considered of most importance to the city. The original Register or Chartulary, is in two volumes, on vellum, and much of it is written in the hand of a scribe of the twelfth century.

In its prime, the see of Glasgow was endowed with magnificent temporal possessions, which fully warranted its title of the "Spiritual Dukedom;" and at its final overthrow, it may be fairly assumed that the anticipated scramble for the fair domains of the ancient church quickened the conversion of many of the Scottish nobles to the doctrines of the Reformation. The archbishops were lords of the lordships of the royalty and baronies of Glasgow; and besides there were eighteen baronies of lands which belonged to them, within the sheriffdoms of Lanark, Dumbarton, Ayr, Renfrew, Peebles, Selkirk, Roxburgh, Dumfries, and the stewardry of Kirkcubright. Mr. Cosmo Innes beautifully remarks in his preface to the 'Registrum Episcopatus Glasguensis':—"It is impossible for a student of ecclesiastical antiquities not to look back with fond regret to the lordly and ruined church which we have traced from its cradle to its grave, not stopping to question its doctrines, and throwing into a friendly shade its errors of practice. And yet, if we consider it more deeply, we may be satisfied that the gorgeous fabric fell not till it had completed its work, and was no longer useful. Institutions, like mortal bodies, die and are re-produced. Nations pass away, and the worthy live again in their colonies. Our own proud and free England may be destined to sink, and to leave only a memory, and those offshoots of her vigorous youth which have spread civilization over half the world. In this view, it was not unworthy of that splendid hierarchy which arose out of the humble family of St. Kentigern, to have given life and vigour to such a city as Glasgow, and a school of learning like her University."

"A line of fifteen Protestant archbishops held the see at intervals, during the alternate rule of Episcopacy and Presbyterianism. We do not think it necessary to notice them individually or at length. They were no longer the princes of the church in the sense which distinguished their Roman Catholic predecessors; compared with *them*, they filled an insignificant place in the public estimation; and the form of doctrine they professed was hateful to the great body of the people. Some, such as the admirable Leighton, were able and excellent men; others were the mere nominees of noble lay patrons, with whom, by a Simoniacal arrangement, they divided the temporalities of the see. None of them did anything to extend or beautify the Cathedral, which had so happily and miraculously survived the storms of the Reformation. Possibly little blame is attachable to the Protestant prelates for this seeming remissness. Their means were limited, and they might foresee that the decorations put up during an Episcopalian reign, would be shorn off when the Presbyterians came to rule the house. We learn from the Session records that the reforming ardour had not abated so late as the year 1641, when the Kirk Session effaced from the walls of the Cathedral the last lingering inscription of *Sancte Quinte gerne Ora pro Nobis*. Only two of the prelates put their hands to the fabric of the Cathedral. Archbishop Spottiswood, the eminent church historian, commenced to renew the roof, which had been stripped of its lead during the Reformation troubles, and had only been imperfectly repaired afterwards; and this work was completed by Archbishop Law, after Spottiswood's translation to the primacy of St. Andrews in 1615." [Pagan's History of Glasgow Cathedral.]

During the fifteenth and part at least also of the sixteenth century, Glasgow contained no more than one principal street and five or six small ones. From the Cathedral, the High Street stretched in an irregular line downwards to the Cross, from whence

it was continued, though not without interruptions, towards the bridge—this lower portion of its line being known by the names of the Waulker or Fuller's Gate (now called the Saltmarket), and the Bridgegate, which still retains its old appellation. At the point where the Waulker Gate joined the High Street, was the Market Cross, from which two streets extended themselves—that which led eastward across the Molendinar burn to the town's common moor, being called the Gallowgate, while that which stretched westward was called St. Thenaw's Gate. On the north side of the Gallowgate stood the church or chapel of St. Mungo's-in-the-Fields, built and endowed about 1500, by David Cunningham, provost of the Collegiate church of Hamilton. It was surrounded by a cemetery—all traces of which have long vanished, although the site is still known—and close by it stood certain trees bearing the name of St. Mungo. We learn from the 'Liber Collegii Nostre Domine,' ably edited by Mr. Joseph Robertson, now of the Register House, Edinburgh, that the Collegiate church of St. Mary and St. Ann, founded about 1528, by James Houston, sub-dean of Glasgow, was situated on the south side of the Tron gate, then more commonly known by its ancient and original name of St. Thenaw's Gate. No memorial of the ancient building (upon the site of which the Tron church now stands), has been preserved; but it is undoubted that it was surrounded by a burying-ground, long since built over, and that on the west side of it stood the Song School. In the same street stood two other chapels, one called our Lady chapel, on the north side of the street, not far from the Cross, founded as early as the year 1293; the other dedicated to St. Thomas a Beckett, and which would seem to have been endowed in the year 1320, by Sir Walter Fitz Gilbert, the progenitor of the Hamiltons. The name of the "Tron Gate," as we learn from the work already noticed, is not to be met with before the middle of the sixteenth century; that is, about 60 years after King James IV. granted to the bishop of Glasgow and his successors the privilege of having a free tron or public weight in the city, and which was here situated. In a deed of seisin of 30th May, 1545, a tenement is described as being in "le Troyne Gait." The older name of it, St. Thenaw's Gate, by which it was known familiarly at least as early as 1426, was derived from a chapel situated near its western extremity, dedicated to St. Thenaw, the mother of St. Kentigern or St. Mungo. St. Thenaw is believed to have been buried here, and in October 1475, James III. by a charter, bequeathed to the Cathedral church of Glasgow half a stone of wax from the lands of "Odinstoune," in the lordship of Bothwell, for lights to be burned at the tomb of "St. Tenew," in the chapel where her bones are buried. St. Thenaw's chapel was in existence in 1597, and some traces of it were even to be found so late as the beginning of the last century. Woodrow says, it was then called St. Tennoch's, "a name (says Mr. Robertson), which in the mouths of a people more familiar with the prophets of the antediluvian world than with the saints of the dark ages, was in no long time changed to that of 'St. Enoch,' now given to a church and square not far from the site of the edifice, which marked the resting place of the royal matron who gave birth to the apostle of Cumbria." The Collegiate church, already alluded to, lay waste for a long period after the Reformation; but about 1592, it began to be resorted to as a place of Presbyterian worship, and was continued to be used as such, in the status of one of the parish churches, till 1793, when it was destroyed by fire. The present Tron or St. Mary's church is

built on the same site. The well known Tron steeple escaped the conflagration, but it was not erected till about 1637. In the neighbourhood of St. Thenaw's Gate, there was another street, of old called the Fishergate, afterwards the Stockwell Gate, now Stockwell Street, in a line with the modern Victoria bridge; and from the High Street and most of the other streets, there were narrow lanes or wynds stretching backwards towards the open country, or the banks of the river. From the upper end of the High Street, the Ratten Raw diverged towards the west, and the shorter street, called the Drygate, led towards the east—both these streets, but especially the former, being occupied with the houses of the prebendaries, and other officers of the Cathedral. On the south side of the Clyde, at the end of the bridge, stood a leper hospital; but until after the Reformation, there is no good reason to think that there were any other houses on that bank of the river. From all this, it will be seen that Glasgow was still a very insignificant place when under the rule of "the church;" and indeed, we find that at the taxation of the royal burghs, in the reign of Queen Mary, it rated only as the eleventh. It must be remembered, however, that the community, tiny as it was, had been often severely tried and afflicted by famine, pestilence, and other grievous calamities. The inhabitants, who supported themselves principally by ministering to the wants of the princely churchmen, were sad losers for a time by the Reformation; but gradually they turned their industry into new, permanent, and profitable channels. It is somewhat remarkable, however, to find that even thus early, and while the place was still so poor and so limited, Glasgow began to possess the germs of commercial eminence, in so far as it was not destitute of shipping; for there is an order of the privy council to the effect that vessels belonging to Glasgow should not annoy those belonging to Henry VIII., the Queen's grand-uncle.

The Cathedral after the Reformation.—Soon after it had been vacated by its ancient masters, the cathedral was purged of all its altars, chantries, and all the idolatrous appendages which might remind the people of the Romish form of worship. So zealous, or rather furious, were the Reformers in this work of purification or demolition, that they swept away all the monuments which had been erected, not only to patriotic prelates, but to eminent and amiable laymen, with the single exception of the tomb of the Stewarts of Minto, a family which had supplied provosts and magistrates to the city through several generations. This was not entirely the work of a rabble which glories in mischief and destruction under any pretext; for the insane gutting of the beautiful cathedral church at Glasgow was carried on with method and deliberation, incited by a mistaken sentiment of pious zeal, and sanctioned by the chief civil authority in the kingdom. It is only fair to state that the government, in issuing an order for the destruction of all "monuments of idolatry," strongly enjoined the preservation of the buildings which they degraded. The mandate is expressed in the following terms:—

"TO THE MAGISTRATES OF BURGHS,

"Our traist freindis, after maist hearty commendacion, we pray ye full not to pass incontinent to the kirk [of Glasgow, or such other edifice as might require purification] and tak down the hail images thereof, and bring furth to the kirkyard, and burn them openly. And sicklyke cast down the alteris, and purge the kirk of all kynd of monuments of idolatry. And this ze fail not to do, as ze will do

us singular emplesur; and so committis you to the protection of God.

(Signed) AR. ARGYLE.
JAMES STUART.
RUTIVEN.

"From Edinburgh the xii of August, 1560.

"Fail not, bot ze tak guid heyd that neither the dasks, windocks, nor durris be *ony ways hurt or broken*, either glassin work or iron work."

It was evidently the desire of the Lords of the Congregation at this time that the work of demolition should go a certain length, and no farther; but they had raised a spirit which they could not lay again, and the harangues of any furious preacher, who cursed the temples of the Papists from the copestone to the foundation, were received as much more orthodox and acceptable than the comparatively moderate injunctions of their civil rulers. The more ardent amongst the Reformers were not content with a partial demolition, and they resolved that every trace of the Romish superstition should be swept away at the expense of those magnificent structures which had been long the pride and glory of the land. An act was accordingly passed in 1574 by the Estates, at the instigation of the Presbyterian Assembly, authorising a still further purification or dismantling of those churches which had hitherto escaped. But when men are blinded by passion, or when spoliating work of this kind is intrusted to the rabble, do we ever find that they know where to draw the line between that which should be destroyed and that which should be preserved? The result of this unfortunate decree of the Estates is thus narrated by Spottiswood:—"Thereupon ensued a pitiful devastation of churches and church buildings throughout all parts of the realm; for every one made bold to put to their hands—the meaner sort imitating the ensample of the greater, and those who were in authority. No difference was made, but all the churches either defaced or pulled to the ground. The holy vessels, and whatsoever else men could make gain of, as timber, lead, and bells, were put up to sale. The very sepulchres of the dead were not spared. The registers of the church and bibliothèques cast into the fire. In a word, all was ruined; and what had escaped in the time of the first tumult, did now undergo the common calamity; which was so much the worse that the violences committed at this time were coloured with the warrant of publick authority. Some ill-advised preachers did likewise animate people in these their barbarous proceedings, crying out, 'That the places where idols had been worshipped, ought, by the law of God, to be destroyed, and that the sparing of them was the reserving of things execrable.'" The execution of the above-mentioned act for the West was committed to the Earls of Arran, Argyle, and Glencairn, and they, at the intercession of the inhabitants of Glasgow, had spared the Cathedral; but about this time, it is said, Mr. Melvil, principal of the college, having for a long while solicited the magistrates to have it pulled down, and build *three* churches with the materials, they at last acceded to his desires. This narrow escape of the ancient minster is thus narrated by the same historian (Spottiswood) who, however, it should be stated, has shown himself much prejudiced against Melvil: "In Glasgow, the next spring, there happened a little disturbance by this occasion. The magistrats of the city, by the earnest dealing of Mr. Andrew Melvil and other ministers, had condescended to demolish the Cathedral, and build with the materials thereof some little churches in other parts for the ease of the citi-

zens. Divers reasons were given for it; such as the resort of superstitious people to do their devotion in that place; the huge vastness of the church, and that the voice of a preacher could not be heard by the multitudes that convened to sermon; the more commodious service of the people; and the removing of that idolatrous monument (so they called it) which was of all the cathedrals of the country, only left unruined, and in a possibility to be repaired. To do this work, a number of quarriers, masons, and other workmen was conduced, and the day assigned when it should take beginning. Intimation being given thereof, and the workmen, by sound of drum, warned to go unto their work, the crafts of the city in a tumult took arms, swearing with many oaths, that he who did cast down the first stone, should be buried under it. Neither could they be pacified till the workmen were discharged by the magistrates. A complaint was hereupon made, and the principals cited before the council for insurrection, when the king, not as then thirteen years of age, taking the protection of the crafts, did allow the opposition they had made, and inhibited the ministers (for they were the complainers) to meddle any more in that businesse, saying, "That too many churches had been already destroyed, and that he would not tolerate more abuses of that kind." The truth of this statement has been questioned, because no entry regarding the intended destruction of the Cathedral stands in the council minutes of the day, and because no other historian mentions the affair. It may be presumed, however, that there were good reasons why no notice of the destructive resolution of the magistrates, and of the events which followed, should be placed on the record; and, further, it is not to be forgotten that Spottiswood is a trustworthy chronicler, and the tradition has been one of almost universal acceptance in Glasgow for nearly three centuries. There may be inaccuracy in detail, but the main fact of the great peril of the Cathedral, and of its rescue by the crafts, seems to be worthy of all credit. There is reason to believe, that Captain Crawford of Jordanhill, then provost of Glasgow, and the other magistrates, yielded with considerable reluctance to Melvil's sollicitations for the "dinging down" of the Cathedral, and it is likely they only consented that they might clear themselves from any imputation of having an undue tenderness, or a "sneaking kindness" for the memorials of popery. Honour, therefore, to the craftsmen of Glasgow who arrested this threatened deed of barbarism, and thereby handed down to us the only intaet survivor of the magnificent religious edifices which were reared in Scotland during the Romish supremaey. In these times, indeed, the destructive spirit seems to have been long in expending itself; for it appears that after the "Raid of Ruthven," one of the grievances presented to the King was a charge against the bailies for invading the university or college with a mob, and shedding the blood of several of the students who successfully resisted their attempts to set the building on fire. The furious bailies, who acted the part of ringleaders on the occasion, were named Colin Campbell, William Heygate, and Archibald Heygate. As a set-off to the above rather discreditable proceedings, it is pleasing to record, that not long after the magistrates, deacons of crafts, and "divers other men of repute in the town," voluntarily assessed themselves to help to keep the Cathedral in repair, and especially for the "hallyng of it watterfast" [keeping it water-tight]. It may also be placed to the credit of the then civic rulers of Glasgow, that they granted to the Colledge the share of

the property, or plunder, which fell to them on the downfall of the Romish church; and this act was confirmed by act of the Scottish parliament.

The successful result of the Reformation, like all other revolutions, however just and desirable, brought with it loss and suffering to many in Glasgow, especially of the middling and common orders. The inhabitants, who then numbered little more than 4,500 souls, had found subsistence, in great measure, by supplying the wants of the wealthy churehmen; but when this line of employment and emolument was cut off, the people were reduced to much distress. They accordingly presented a humble supplication to the King and parliament in 1576. The petition purports to come from the freemen and other indwellers of the city of Glasgow, above the Greyfriars Wynd thereof, and makes mention, that "whereas, that part of the said city that afore the Reformation of the religiou, was entertained and upholden by the resort of the bishops, pastors, viars, and others of the elergy, for the time, is now becoming ruinous, and for the maist part altogether decayit, and the beritors and possessors thereof greatly depauperit, wanting the means not only to uphold the same, but for the entertainment of themselves, their wyffs, bairnies, and families:"—"And seeing that part of the said city above the Greyfriars Wynd is the only ornament and decoration thereof, by reason of the great and sumptuous buildings of great antiquity, very proper and meet for the receipt of his Highness and nobility, at such times as they shall repair thereto," &c. They also complained of "ane great confusion and multitude of markets togidder in ane place about the croce," and generally they elaim some amelioration of their unhappy condition. Commissioners were accordingly appointed to "take order for relief of said necessitie;" and they ordered the markets to be further removed up the street for the benefit of the petitioners. There is no reason to believe that the shifting of the markets compensated the banishment of the Roman Catholic churchmen. The inhabitants (as already stated) eventually recovered their prosperity by relying on themselves, and directing their industry into new channels.

"Battle of the Butts"—Battle of Langside, &c.—Glasgow was, from time to time, the scene of some of those bloody contests which distinguished the turbulent days of the Stuarts; and her citizens occasionally suffered severely for mixing themselves up in the turmoil of the times. During the minority of Queen Mary, James Hamilton, Earl of Arran, the then heir to the throne, and the ancestor of the dual house of Hamilton, was appointed Regent of the kingdom. His appointment was highly repugnant to the Earl of Lennox and the Queen Dowager; and finally the hostile feeling became so potent that both parties resorted to arms. Lennox garrisoned the bishop's palae in Glasgow, and retired himself to the stronghold of Dumbarton; and the Regent having gathered together a numerous army at Stirling, marched to Glasgow, and besieged the palace or castle with brass guns. After the siege had been maintained for ten days, the garrison agreed to surrender on condition of receiving quarter; but no sooner had they laid down their arms than all were massacred, with the exception of two only, who escaped. Lennox determined to revenge this treachery and loss, by striking a desperate blow, and having associated with himself the Earl of Glencairn, their first intention was to march into Clydesdale, and there desolate the lands of the Hamiltons by fire and sword. The Regent, however, was timeously apprised of the scheme, and resolved to counteract it by taking possession of

Glasgow. But Glencairn was beforehand with him, and when Arran approached, the other had his forces already drawn out, amounting to 800 men, partly composed of his own vassals, and partly of the citizens of Glasgow; and at a place called "the Butts," where the "wappon-shaw" exercises used to be held, and now the site of the Infantry Barracks, he boldly attacked the Regent. The onset of Glencairn was so furious that he beat back the first rank upon the second, and took the brass ordnance which his enemy had opposed to him; but in the heat of the battle, and while victory yet wavered, Robert Boyd, of the Kilmarnock family, suddenly arrived with a small party of horse, and joining battle, turned the scale in favour of the Regent. Glencairn's band, conceiving that a new army had come against them, fled with great precipitation. Considering the comparatively small numbers engaged on both sides, the conflict must have been unusually sanguinary, for it is recorded by the chroniclers of the times that 300 men were wounded or slain on both sides, including amongst the latter two gallant sons of Glencairn. The Regent immediately entered the town, and being deeply incensed against the inhabitants for the aid they had given to his enemy, he gave up the place to plunder; and so completely was it harried, that, in addition to valuable moveable goods, the very doors and windows of many of the dwelling-houses were carried away; in fact, they only spared the city, in so far as that they did not commit it to the flames.

The circumstances connected with the murder of Lord Darnley, the marriage of the Queen with Bothwell, her discomfiture by the confederated lords, and subsequent imprisonment in Lochleven castle, are matters of too much historical prominence to need any recapitulation here, even were they not touched upon in other articles: see **CARBERRY**, **CROOKSTON**, and **LOCH-LEVEN**. Mary escaped from Loch-Leven, and being received on the shores of the lake by the Lord Seaton, and a party of horsemen, proceeded to Niddry castle, in West-Lothian, where she spent the night. Next day she was conveyed to Hamilton, where, as if summoned by the "fiery cross," her standard was joined in a very few days by a large proportion of the Scottish nobility, including the Earls of Argyre, Cassils, Eglington, and Rothes; Lords Elphinston, Sommerville, Ycster, Borthwick, Livingstone, Maxwell, Herries, Sanquhar, and Ross, with many gentlemen of note—constituting with their adherents an army of 6,000 men. The Regent Murray was holding a court of justice at Glasgow, when the startling intelligence of the Queen's escape, and of the assembling of her friends in arms reached him. "The news whereof," says an old historian, "being brought to Glasgow (which is only eight miles distant) it was scarce at first believed; but, within two hours or less, being assured, a strong alteration might have been observed in the minds of most who were attending. The report of the Queen's forces made divers slide away; others sent quietly to beg pardon for what they had done, resolving not to enter in the cause further, but to govern themselves as the event should lead and direct them; and there were not a few who made open desertion, and not of the meaner sort, amongst whom my Lord Boyd was specially noted, and in the mouths of all men; for that, being very inward with the Regent, and admitted to his most secret counsels, when he saw matters like to turn, he withdrew himself and went to the Queen." Murray, though surprised by the rapid and unexpected course of events, which had not only rescued Mary from a prison, but placed her at the head of an army, was not dismayed, and having gained a

breathing time, by listening to overtures of accommodation from the Queen's party, he in the meantime sent advices to his own friends, and those of the young King, and was joined by the Earls of Glencairn, Montrose, Mar, and Monteith, the Lords Semple, Home, and Lindsay, by Kirkaldy of Grange (a captain of great courage and ability) and many other gentlemen, in addition to a large body of the citizens of Glasgow, which placed him at the head of an army of upwards of 4,000 men. With this force he encamped on the Burgh Muir (that portion of the eastern suburbs now known as the Barrowfield lands) and there awaited the approach of the Queen's party, who it was believed intended to place her majesty in safety in the strong fortress of Dumbarton, which was then held by one of her friends. Murray, in this favourable position, must have intercepted the Queen's troops, had they proceeded towards Dumbarton by the north bank of the Clyde, on which it lies; but while drawn up upon the Burgh Muir, intelligence reached him that Mary's party was marching west by the south bank of the river, with the view of crossing it at Renfrew, and thence reaching the castle. It thus became to be of the last consequence to anticipate the Queen's forces in the possession of Langside hill, a considerable eminence about one and a-half mile south of Glasgow, and which lay on the line of her majesty's march from Rutherglen. The Regent, breaking up his encampment, ordered his cavalry to pass the Clyde by a ford, each horseman carrying a foot soldier, while the bridge at Glasgow was left open to his infantry, and by this prompt movement he succeeded in gaining possession of the commanding position afforded by the hill. The Queen's party was quite alive to the importance of anticipating the Regent in reaching Langside hill, but they were delayed for a time by a sudden fit of illness which assailed the Earl of Argyre, upon whom the command had been conferred. The Hamiltons, who formed the Queen's vanguard, pressed up the hill, and the battle soon began, and was continued for more than an hour with great fury and determined bravery on both sides; there were many hand-to-hand encounters with sword and pike, and so eager were they that each party threw their broken spears and daggers, and even stones, in the faces of their adversaries. The Queen's party suffered severely from some culverins which the laird of Grange had placed at the head of a straight lane, flanked by some cottages and garden grounds, which enabled his soldiers to annoy the opposing force with great advantage. At a critical moment the Regent's second battalion joined the first, and this decided the fate of the day. In the battle and pursuit 300 of the Queen's adherents were killed, and 400 taken prisoners, while the loss of the Regent's party was comparatively light. A large party of the citizens of Glasgow were engaged, and from their position on the Regent's left wing, did cruel execution on the Queen's right. The battle of Langside was fought on the 13th May, 1568. Mary surveyed the engagement from a hill about a mile and a-half in the rear, near Cathcart house—the position occupied by her being still marked by a thorn. On witnessing the rout of her army, the unhappy Queen took horse, and being joined by Lord Herries and a few followers, fled from the field in the deepest dejection, and scarcely drew bridle till the forlorn party reached Dundrennan abbey, in the stewartry of Kirkcubright, a distance of nearly sixty miles from the field of battle. The passage into England; the long weary and hopeless imprisonment; and the bloody scene in the hall of Fotheringay, wind up the sad story of Mary Stuart.

The Regent having returned to Glasgow, and offered up public thanks for his victory, was sumptuously entertained by the magistrates. He expressed his deep obligations to the citizens, and especially to the heads of the corporation, for the timely aid they had afforded him, and inquired if in any way he could be serviceable to them. Matthew Faside, the deacon of the incorporation of bakers, then took occasion to say, that as the mills at Partick, which were formerly the property of the Archbishop, now belonged to the crown, and the tacksman exacted such exorbitant multures, that it raised the price of bread to the community, a grant of these mills to the corporation would be regarded as a public benefit; and, moreover, the bakers were not altogether undeserving of favour in another respect, as they had liberally supplied the army with bread while it remained in the neighbourhood of Glasgow. Faside's well-timed address had the desired effect, and the fine flour-mills at Partick, about two miles below the city, on the banks of the Kelvin, are possessed by the incorporation of bakers till this day. The citizens, however, have never been able to discover that, in virtue of this gift, bread is to be had cheaper in Glasgow than elsewhere.

In 1570, the castle, or bishop's palace of Glasgow, was again besieged by the Hamiltons and other partizans of the exiled Queen—the fortress being held as formerly for the Earl of Lennox, who had been nominated Regent upon the murder of the Earl of Murray, at Linlithgow, by Hamilton of Bothwellhaugh. An effort was made to batter down the walls by cannon, and carry the place by storm; but though the garrison numbered only twenty-four men, they defended the castle with the most heroic bravery, and finally succeeded in driving off the besiegers with considerable loss. It may be presumed, however, that as the poor Queen's was now decidedly the losing cause, her adherents may have been deficient in that confidence, self-reliance, and perseverance necessary to success. Within two or three days after they retired, a party of English soldiers, commanded by Sir William Drury, arrived in Glasgow, whence they marched to Hamilton castle, which they took and dismantled, in retaliation for the assault made on the castle at Glasgow, and the injury which had been sustained by the inhabitants. In these days the citizens looked upon the castigation of the Hamiltons with no small complacency, for they had not forgotten the grievous ills which the town had suffered at their hands at the "Battle of the Butts;" and the remembrance of their slaughtered kinsmen and plundered homes, nerved many a stout arm against the Hamiltons and the Queen at the battle of Langside.

Ecclesiastical and Municipal Records.—The minutes of presbytery, kirk-session, and town-council present us with a very curious, but fresh and truthful picture of the social and moral condition of the people at and subsequent to the great revolution effected by the Reformation. The people of Glasgow embraced the pure doctrines of the Reformation with cordiality and undoubted sincerity, as is evidenced by the fact already shown, that they suffered thereby much in their worldly means. In 1581, the negative Confession of Faith, with a National Covenant annexed, in maintenance of the reformed doctrine, was signed in Glasgow by 2,250 persons, men as well as women—a total which must have included every one above the condition of childhood. In the same year the King appointed Mr. Robert Montgomery, minister at Stirling, to be Protestant archbishop of Glasgow, with a well-known Simoniacal understanding, however, that the largest portion of the temporalities was to be paid

to the Lennox family, from which his majesty was descended on the father's side. In other words, Montgomery was to act the part of one of the "Tulehans"—a term in vogue in those days, which signified that archbishops or bishops were set up as calves, while the favourites of royalty, or the great men of the state, *milked* the benefices. The appointment of Montgomery was in the highest degree distasteful to the people, and it was resolved to oppose his induction by sending Mr. Howie, one of the Presbyterian preachers, to take prior occupation of the pulpit of the Cathedral, or High Church, by which name it was afterwards known. Sir Matthew Stewart of Minto, the provost of the city, was determined, however, to enforce the royal warrant, and while Howie was engaged with the ordinary service on the day set apart for the prelate's induction, he pulled him out of the pulpit, and in the course of the struggle, a handful of hair was torn from the minister's beard, some of his teeth were knocked out, and his blood was shed. This assault was regarded by the citizens of Glasgow as a most sacrilegious one; and as Mr. Howie denounced the judgment of God upon Sir Matthew and his family, it was remarked, that in seventy years this once potent race had been reduced to impoverished circumstances in the city in which for many generations they had been lords. Whether or not Mr. Howie's curse did all this damage, we do not stop to inquire, but certain it is, that the people believed it; and the above incident is the more deserving of notice, as being the first indication of that spirit of resistance to Episcopacy which the people of Glasgow, and of the western shires, afterwards so determinedly exhibited. This Montgomery was forced to resign the benefice, and he afterwards became the minister of the parish of Stewarton, where he died; but his retirement did not prevent the appointment of other Episcopal prelates in due season. The power of the Presbyterian clergy having been meantime fairly established, they proceeded to exercise a system of discipline which now-a-days would be considered of rather a stringent and oppressive character; but considering the superstition and looseness which marked the former papal rule, there is no doubt that it was necessary for the regeneration of the people, especially those of the "meaner sort." In perusing these injunctions and sentences, the large amount of the pains and penalties, usually belonging to the civil power, which was now exercised by the Church courts, is not a little remarkable. In 1582 it was ordered that "the booth doors of merehants and traffickers were to be steaked [shut] on Wednesdays and Fridays in the hour of sermon, and the masters of booths were enjoined to keep the hour of preaching under the penalty of twenty pounds Scots, without a lawful cause admitted by the Session." On 26th December, five persons were appointed to make repentance, because they kept the superstitious day called Yuil [Christmas]. "The baxters [bakers] are to be inquired at, to whom they baked Yuil bread." In 1587, the Session laid down the following tariff in Scots money to meet cases of immorality:—"Servant women, for a single breach of elasticity twenty pounds for her relief from cross and steeple. Men servants, thirty pounds, or else to be put in prison eight days, and fed on bread and water, thereafter to be put in the jugs [stocks]. As for the richer sort of servants, the fines were to be exacted at the arbitrement of the kirk. This act not to extend to honest men's sons and daughters, but they to be punished as the kirk shall prescribe." The kirk, however, could afford to be tender when it had to deal with a transgressor whose rank was above the common sort;

for in 1608, the laird of Minto, a late provost, was in trouble by reason of a breach of chastity; but it was resolved to pass him over with a reprimand, "on account of his age and the station he held in the town." Harlots were to be carted through the town, ducked in the Clyde, and put in the jugs at the cross on a market day. The punishment for adultery was to "satisfy six Sabbaths on the cuck-stool at the pillar, barefooted and barelegged, in sackcloth, then to be carted through the town, and ducked in the Clyde from a pulley fixed in the bridge." The presbytery enjoined the ministers to be serious in their department, and modest in their apparel, "not vain with long ruffles and gaudy toys in their clothes." The Session directed that the drum should go through the town to intimate that there must be no bickerings or plays on Sundays, either by young or old. Games, golfs, alley-bowls, &c. were forbidden on Sundays; and it was enjoined that no person should go to Ruglen [Rutherglen] to see the plays on Sunday. Parents who had bairns to baptize were to repeat the commandments distinctly, articles of Faith, and the Lord's Prayer, or to be declared ignorant; and some other godly person present their bairn, with further punishment, as the church shall see fit. On the 9th August 1589, Walter, prior of Blantyre, tacksman of the teinds of the parsonage of Glasgow, provided the elements for the communion; he was spoken to, to provide a hogshhead of good wine. The time of assembling on the Sabbaths of the communion was four o'clock in the morning. The collectors assembled on these occasions in the High Kirk at three o'clock in the morning. On 3d March 1608, the Session enacted that there should be no meetings of women on the Sabbath, in time of sermon, and that no hostler should sell spirits, wine, or ale, in time of sermon, under pain of twenty pounds, and that there should be no buying of timber on the Sabbath, at the Water of Clyde from sun-rising to sun-setting. In 1588 the Kirk Session ordered a number of ash trees in the High kirk-yard to be cut down, to make forms for the folk to sit on in the kirk. Women were not permitted to sit upon these forms, but were directed to bring stools with them. It was also intimated that "no woman, married or unmarried, should come within the kirk door, to preachings or prayers, with their plaids about their heads, neither to lie down in the kirk on their faces, in time of prayer; with certification that their plaids be drawn down, or they be raised by the beadle. The beadies were to have staffs for keeping quietness in the kirk, and comely order; for each marriage they were to get 4d., and 2d. for each baptism." On 9th March 1640, intimation was made by the Session, that all masters of families should give an account of those in their families who have not the ten commandments, the Lord's prayer, Creed, &c., and that every family should have prayers and psalms morning and evening; some of the fittest men were appointed to assist the elders in promoting this work. On 13th July 1643, the Kirk Session appointed some of their number to go through the town on the market day, to take order with banners, swearers, &c., (till the magistrates provide one for that office;) swearers were to pay twelve pence. Intimation was given that swearers, blasphemers, and mockers of piety, should be rebuked at the form (pew or bench) before the pulpit, for the second fault; and for the third, at the pillar, over and above the fine. On 5th August, the Session enacted that adulterers should be imprisoned, and then drawn through the town in a cart, with a paper on their face; thereafter to stand three hours in the jugs and be whipped. From various entries

it appears that this punishment was not rarely inflicted. During this year, two hair gowns were bought for the use of the Kirk—probably for the investiture of delinquents.

The magistrates and town councillors were no less zealous in the good work of encouraging piety and purity of morals, in promoting order and cleanliness in the town, (which, from the records, would seem to have been much in need of amendment,) in practising charity and hospitality now and then, and in keeping up a martial spirit amongst the people by means of the "wappon-shaw" or periodical training to the use of arms. Some of their decisions are also of a very curious description, and would now be considered tremendously *ultra vires*. One of the most remarkable illustrations of the extent of their authority is a composition for the slaughter of one of the burghesses, which is entered on the books of the burgh as having the "strength of ane decret of the provest and baillies." It would appear that about the year 1575, Ninian Syare murdered Ninian M'Litster, and the composition in question is a contract between the widow and representatives of the murdered man, and David Syare, the son of the murderer, as taking burden for his father, by which the first party agrees, upon the performance of certain conditions, to pass from "any action, criminal or otherwise, that they may have against him for the crime." The contract goes on to mention these conditions in manner following: "For the quhillkis premiss to be done, and done in manner foirsaid respective, the said David takand the burden on him for his father, shall cause the said Ninian, his father, to comper in the Hie Kirk of Glasgow, the xi. daye of December nixt to cum, and thair mak the homage and repentance for the said slauchter, with sick circumstances and cerymonies as sall be ordanit and devysit be Colinc Campbell and Robert Stewart, burghessis of Glasgow, chosin and admittit be bairth the parties for that effect. And further the said David, &c. (we omit a tedious list of names) oblist them, their airis, executoris, and assignayis, to content and paye to the said Margaret and William M'Litster, for themselves and in the name of the said unquhile Niniane M'Litster's bairnes, the sowme of three hundredth merkis money, in name of kynbute," (or reparation,) &c. In 1547, the baillies and council ordained "everilk buythhalder to have in reddlines within the buytht anc halbert, jak, and steelbonnet, for eschewing of sick inconveniencis as may happen." And again in 1577-8, we find the following: "Quhilk day it is condescendit be the provest, baillies, counsall and dekyntes, that the act maid anent the hagbuttis be renewit, that every ane substantiall and hahill man sall have ane hagbutt, with graicht, halder and bullet effeiring thairto, and that every utheris nocht beand hahill thairfoir, sall have ane lang speir, by (besides) jakkis, steilbonetis, sword, and bukler," &c. On 28th October, 1588, it is "statut and ordanit be the baillies and counsall, in consideration of the pest now in Paislay, that no person, indweller within the town, because of the markets of Paisley and Kilmacolm approaching, shall pass furth of the town thereto, under the pain of five pounds, to be taken of every person repairing thereto, and banished furth of the said town for a year and a day, without leif askit and gevin be the baillies." On 1st June, 1589, the council met to consider the King's letter, charging this burgh and all others to arm men and go to the north on his Majesty's service. The council, considering that his Majesty is at present at Hamilton, direct the three baillies, the treasurer, and a deputation of the citizens to proceed thither, and speak to

the King and the chancellor, with the view that they may "get ane lieent of his grace to abyrd fra this present raid," i. e. to be absolved from forming part of the King's host then mustering against the Popish earls in the north country. The appeal was unsuccessful, however, for at a subsequent meeting of council, it is resolved that "three score lagbut-teris" (musketeers,) be equipped for the King's service at Aberdeen at the expense of the town. In the same year, 1589, it is ordained that "na middingis (dunghills) be laid upoun the hiegait, nor in the meill or fesehe mereattis. And that na fleschowris teme uschavis (deposit offal) in the saidis places under the pane of xvj s. unforgevin." It is also ordained that "na breiding of fesehe nor blaving of muttoun be under the pane of xvj s." The magistrates of these times appear to have regulated the price of commodities, and enactments are made fixing the price of ale, candles, and viands and vivers generally. Candle-makers are enjoined to sell either pounds or half-pounds, and they shall sell penny or two penny candles. On 26th July 1612, "Mathew Thomesson, lielandman fiddler," is apprehended on suspicion of assaulting "ane young damesell, named Jonet M'Quhirrie." It appears that the charge was "denyt be him, and hard to be verefeit;" but the bailies did not give the fiddler the benefit of the insufficiency of evidenee; for "finding him ane idill vagahound," they ordain him to be laid in the stocks until the evening, and thereafter put out of the town at the West port, and banished the same for ever; and should he ever be found in the town hereafter of his own consent he is to be "hangit lut ane asseyze," (hanged without any trial). In the treasurer's accounts for 1609, in addition to the ordinary burgh expenditure, various queer items are given under the heads of charity, entertainments, &c. Some of these entries we sub-join, leaving out the amount paid, which is in Scotch money. Sums are paid to sundry persons of the town "for vyne, desart, sukar, and frutis, and other expensses maid and waitt (expended) upon the Duik of Wirtinbrig, and James, Master of Blautyre, for his weleum furth of Ingland." "To two puire Inglistmen at command of the baillies."—"Pulder (powder) and lead" are paid for, which were supplied to the "men of weir," who were sent to the Isles, as the particular account with the men's names bears. Doles are given to "schip-brokin Inglistmen, puire Polians (Poles) Inland-men," and "ane pure erippill man that come out of Paslay." Charity is given to "ane pure man that geid on his kneis." In 1643, a sum is given for James Bogle, a burghess's son, to help to pay his ransom, "being taken with the Turks." A gift is made "Johne Lyoun's wyf in Greenoek to help to eut ane bairne of the stone." On 21st March 1661, the council agrees to pay yearly to Evir M'Neil, "that cuts the stone," one hundred merks Scots, and he to "cut all the poor for that frielic." [This painful affliction must have been more prevalent in those days than now. It is occasionally alluded to in the council records, and the appointment of a regular operator, at an annual salary, has an ominous aspect.] Various presents of wine and herrings are given to the town's friends; and so late as 20th April 1695, the council "appoints the treasurer to have allowanee in his hands of two hundreth merks, payed out he him as the price of ane hogshaid of wyne given to a friend of this town, whom it is not fitt to name."

There are various entries regarding the meeting of the celebrated General Assembly at Glasgow in 1638; and during the civil troubles in the reign of Charles I. and subsequently "wappon shaws" are

ordered for the training of the people in arms, and munitions of war are purchased, for the price of which the inhabitants are assessed, and 150 men are ordered to the border, "for the common defence;" George Porterfield is to be the captain, and the Glasgow men are to march in Lord Montgomery's regiment. On 25th April, 1646, the Treasurer is ordered to "pay to Daniel Brown, surgeon, twelve pounds money, for helping and curing certain poor soldiers hurt at Kilsyth, at command of the late magistrates." (These men had no doubt been engaged in the battle of Kilsyth, gained by Montrose.) On 18th June 1660, "ane congratulationne" is kept for the second time on account of the happy return (restoration) of our dread sovereign, the King's Majestie. Bale-fires are lighted up; and it is ordered that two hogsheds of wine be provided for the use of the soldiers then in the town. In 1663, the Dean of Guild and convener are ordered to appoint some of their number, as they think convenient, "to taist the seek now celleder be Mr. Campsie." (This was preparatory to the "toun's dennar," then about to take place.) On 20th June 1674, it was represented to the council that Mistress Cumming, Mistress of Manners, was about to leave the town on account of the small employment which she had found within it, "quhilk they fund to be prejudiciall to this place, and in particular to theis who hes young women to heid therin;" therefore, for the further encouragement of Mrs. Cumming, if she will stay within the burgh, "she is to be paid one hundred merks yearly, to pay her house maill" (rent) so long as she keeps a school and teaches children as formerly. On 1st February 1690, the council ordains "ane proclamation to be sent throw the toun, prohibiting and discharging the haill inhabitants and others residing within this burgh, that they, nor nane of them, drink in any tavern after ten o'clock at night on the week days, under the paine of fourtie shillings Scots to be payed be the furnisher of the drink, and twentie shillings Scots be the drinker, for each failzie *toties quoties*, whereof the one half to the informer, and the other to be applied to the use of the poor." Stringent regulations are also made for Sabbath observance.

The town appears in early times to have been sadly afflicted with a class of diseased unfortunates, called "lepers," and so early as 1350, Lady Loehow, daughter of Robert Duke of Albany, and mother of Colin, first Earl of Argyle, erected and endowed a leprosy hospital on the south side of the river, near the bridge. It is recorded that on 7th October, 1589, there were six lepers in the leper's house at the Gorbals end of the bridge, viz., Andrew Lawson, merchant; Steven Gilmour, eordiner; Robert Bogle, son of Patriek Bogle; Patriek Brittal, tailor; John Thomson, tailor; and David Cunningham, tinkler. In 1610, the council ordained that the lepers of the hospital (those in reduced circumstances we presume) should only go up the causewayside, near the gutter, and should have "elapperis" in their hands to warn the people to keep away, and a cloth upon their mouth and face, and should stand afar off while they received alms, under the penalty of being banished from the town and hospital. In 1635, the magistrates purchased from the Earl of Glencairn, the manse of the prebendary of Cambuslang—which had been gifted to him after the Reformation—which they fitted up as a house of correction for dissolute women, and the authority and vigilance of the kirk session proceeded so far as to order them to be "whipped every day during pleasure."

The General Assembly of 1638.—Glasgow is ecle-

brated as having been the place of meeting of the memorable General Assembly of the Church of Scotland in the year 1638—a gathering to which was justly attached the very highest national interest and importance, and which throughout its proceedings exhibited a degree of independence and determination, not exceeded by the “Long Parliament” of England in the most vigorous period of its existence. Externally, the Church of Scotland was at this period regulated by the Episcopal form of government; but the mass of the people, and a great majority of the nobility and gentry, were devoutly attached to the Presbyterian principles which had been introduced amongst them by Knox and the early Reformers. The country tolerated Episcopacy, but neither acquiesced in it nor loved it. When the King, Charles I., therefore, ordered a new service-book to be read in the Scottish churches in 1637, which book was reputed to be tinctured by the mass, the people exclaimed that this was neither more nor less than an attempt to insinuate Popery amongst them, under the shallow disguise of a Protestant ritual; and the long-smothered dislike to “Black Prelacy” (as the Episcopal form of church government was afterwards called), hurst forth into a storm of opposition, which eventually became destructive to the whole system, and fatal to the King. The innovation of Laud’s liturgy was followed by a closer and more hearty bond of union amongst the Scottish Presbyterians, who exerted themselves towards the calling together of another General Assembly to consider the state of the church; and the King’s reluctant consent having been obtained, the Assembly was finally summoned to meet at Glasgow on 21st November 1638. The magistrates looked forward to this great convocation with some anxiety, and, amongst other wholesome regulations, they ordained that “no inhabitant expect more rent for their houses, chambers, beds, and stables, than shall be appointed by the provost, bailies, and council, and ordains the same to be intimated through the town by sound of drum, that no person may plead ignorance.” They also purchased muskets, with “stalfis and handeleris,” pikes, powder, and match, with which to arm a body of men, who were to mount guard day and night. The Assembly accordingly met on the day appointed, in the nave of the cathedral, which had been fitted up for the occasion, the “vaults,” or narrow galleries above being appropriated to the ladies. It constituted altogether one of the most imposing gatherings that had ever taken place in the kingdom. The majority of the aristocracy of the country were present, either in the capacity of officers of the crown, or elders and assessors from the burghs; three commissioners were present from each of the 63 presbyteries, and a like number from each of the four universities. The great mass, however, consisted of the trains, or “following” of the nobles, which came forth in great strength, on the pretext that, as there might be an inroad of Highland robbers, a strong guard of armed men was therefore necessary.* Externally, the assemblage appears to have

partaken more of the character of an armed conference than of an ecclesiastical convocation. The Marquis of Hamilton (who subsequently perished in the cause of the King), appeared as Lord High Commissioner from his majesty. He is described as a man of sharp and steady, sober, and clear wit, and of a brave and masterly expression. The venerable Mr. John Bell, the senior minister of the Laigh kirk, Glasgow, preached the opening sermon, and on the following day Mr. Alexander Henderson was elected moderator almost unanimously. Several days were taken up in keen discussion as to the constitution of, and powers vested in the Assembly; and it soon became pretty evident that the court was determined to remodel the whole government of the church. The commissioner did all he could to arrest what he deemed a high-handed and unauthorized proceeding on the part of the Assembly; and at length, on Wednesday, the 28th November, during the seventh sederunt, when the members were about to vote upon the question affirming that they were competent to judge the bishops, the Marquis produced the King’s instructions and warrant to dissolve the Assembly, which he accordingly did, and left the cathedral, accompanied by his counsellors, and a few of the members of the Assembly. The loss of the King’s representative was considered to be compensated to a great extent by the adherence and encouragement of the potent Earl of Argyle; and the presbyterians thus left to themselves, proceeded with earnestness and devoted courage to do the work for which they had assembled. Amongst other bold and uncompromising resolutions, they decreed the abjuration of Episcopacy, and the Articles of Perth; they abolished the service-books and the high commission; the proceedings of the six preceding assemblies under the reign of Episcopacy were declared null and of force; the bishops and sundry ministers were tried, deposed, and some of them excommunicated, for professing the doctrines of Arminianism, Popery, and Atheism—for urging the use of the liturgy, howing to the altar, and wearing the cope and retchet—for declining the Assembly, and for being guilty of simony, avarice, profanity, adultery, drunkenness, and other crimes. The bishop of St. Andrews, for instance, was found guilty of “carding and dicing in time of divine service, riding through the country the whole day, tipping and drinking in taverns till midnight, falsifying with his own hand the acts of the Aberdeen Assembly.” &c. The charges upon which Mr. Thomas Foster, the minister at Melross, was deposed, were “that he used to sit at preaching and prayer, baptise in his own house; that he made a way through the church for his kine and sheep; that he made a waggon of the old communion table, to lead his peats in; that he took in his corn, and said it was lawful to work on the Sabbath; and that he affirmed the Reformers had brought more damage to the church in one age, than the Pope and his faction had done in a thousand years.” One of the counts against the bishop of Orkney was, “that he was a curler on the ice on the Sabbath-day.” Amongst those deposed were the bishops of Galloway, St. Andrews, Brechin, Edinburgh, Aberdeen, Ross, Glasgow, Argyle, and Dunblane, who were almost all at the same time excommunicated. However guilty the poor bishops may have been, it is only fair to state that they were condemned in absence. The Covenant being approved of, was ordered to be signed by all classes of the people under pain of excommunication; and churchmen were incapacitated from holding any place in parliament. “Thus,” to use the words of the historian Hume, “Episcopacy, the high commission, the Articles of

* Robert Baillie, who was a member of this Assembly, and subsequently Principal of the university of Glasgow, describes the great confusion, pressure, and unseemly scenes, which were the consequence of the immense crowd of retainers in attendance. He says: “Our rascals, without shame, in great numbers make such din and clamour in the house of the true God, that if they ‘minted’ to use the like behaviour in my chamber, I would not be contented till they were down the stairs.” Burnet, in his ‘Memoirs of the Dukes of Hamilton,’ says: “At Glasgow, the Marquis (of Hamilton) found the greatest confluence of people that perhaps ever met in these parts at an assembly. On the 21st November they sat down; and the Marquis judged it was a sad sight to see such an assembly, for not a gown was among them all, but many had swords and daggers about them.”

Perth, the canons, and the liturgy were abolished and declared unlawful; and the whole fabric which James and Charles in a long course of years had been rearing with so much care and policy, fell at once to the ground." The Assembly continued its sittings till the 26th December inclusive, having in all twenty-six sessions, or eighteen after the commissioner's departure. The last day of the Assembly is stated to have been a "blithe day to all."

Civil Wars, Persecution, &c.—Glasgow had its full share of those trials and calamities, commencing in the time of Charles I., and which were only terminated by the advent of William, prince of Orange, in 1688. As these events, however, occupy a prominent page in Scottish history, it is unnecessary to enter into them in detail here. Soon after the meeting of the General Assembly, already noticed, the civil wars between Charles and his subjects, which eventually consigned the unhappy monarch to a scaffold, broke out in all their sad reality. The chivalrous James Graham, Earl, and afterwards Marquis, of Montrose, having abandoned the covenanting party and attached himself to the cause of the King, raised an army in the north, and after defeating the troops of the Covenant at Tippermuir, Aberdeen, Fyvie, Alford, and Aldearn, marched southwards to Kilsyth, within a few miles of Glasgow, where, on the 15th August 1645, he gained his great victory over General Baillie, at the head of 7,000 Covenanters. The defeat of the Covenanters was perfectly overwhelming; and of those who escaped the edge of the sword, an immense number were suffocated in the mines of Dullater bog, while they were making an attempt to flee from the field. The authorities in Glasgow heard of the triumph of Montrose with no small uneasiness; and although disinclined to the cause for which he had fought and conquered, they made a virtue of necessity by congratulating him on his victory. Sir Robert Douglas of Blackerston, and Mr. Archibald Fleming, the commissary of the sheriffdom, or diocese, were accordingly despatched in the name of Provost Bell and the other magistrates, to Kilsyth, where the Marquis still remained, to invite him to honour the city by his presence, and to partake of its hospitality. Montrose accepted the invitation, and marched to Glasgow, where he and his army were welcomed with much solemnity and outward respect—his lordship and his officers being sumptuously entertained by the magistrates and higher classes of the inhabitants at a banquet, during which the apologies for their lukewarmness in the cause of the king were taken in good part. A "pest" then prevailed in the city, however, and Montrose left it on the second day, and moved to Botwell—not, however, until he had borrowed from, or rather squeezed out of, the principal inhabitants, money and supplies for the promotion of his royal master's cause, to the amount, it is recorded, of £50,000 Scots. Within the short space of a single month, Montrose himself was surprised and defeated at Philliphaugh, near Selkirk, by General Leslie, who had been detached from the army in England; the rout was most complete, and the "great Marquis" himself had much difficulty in making his escape, in company with only a few horsemen. Leslie, the Covenanting general, visited Glasgow in his turn, and treated the citizens with great external civility; but at the same time borrowed from them the sum of £20,000, which he sarcastically said was to balance the entertainment given, and the money lent, to Montrose. Either way, the poor inhabitants were laid under heavy contributions. Previous to the disaster at Philliphaugh, Montrose, as his majesty's lieutenant, had summoned a parliament, to meet at Glasgow on

the 20th October, which was to have been opened by Digby and Langdale; but these commissioners found it their safest course to forego their parliamentary functions, and keep out of Leslie's way. Instead of the pageant of a parliament, however, the citizens had the spectacle of an execution; for three of the prisoners taken at Philliphaugh, viz., Sir William Rollock, Sir Philip Nisbet, and Alexander Ogilvy of Inverquharney, were put to death within the city—Rollock on the 28th, and his two unhappy companions on the 29th of October. That the spectacle of the execution of these royalists was a pleasing one to a large number of the citizens, there is no reason to doubt; Mr. David Dickson, professor of divinity in Glasgow college, was particularly elated as the gibbet did its work upon each, and repeatedly exclaimed, "the wark gangs bonnily on"—a saying which became proverbial, and was long significantly used in Glasgow. Montrose, with the wreck of his force which he had gathered together, made a "demonstration" on Glasgow at this time, in the hope of mitigating the fate of his unhappy friends; but he had no strength to act in the field; and after hovering in the vicinity of the city for a few days, he retreated to Atholl, and was never again in a position to render effectual aid to the cause of King Charles.

Disaster and misfortune thickened over the head of the unhappy monarch, and in an evil hour, as is well known, he threw himself upon the protection of the Scots Covenanting army, by whom he was, nine months afterwards, basely sold to the English parliament, for the sum of £200,000 sterling. Scotland, after having given the King's cause the first severe blow, began at length to reflect that Presbytery would be in danger from the overthrow of royalty, and the consequent triumph of the ambitious and uncompromising Independent party in England. Levies were accordingly ordered by the Scottish parliament, through the various districts of the kingdom; but the clergy opposed them in many instances, from their dislike to the restoration of the royal power being greater than to that of the ascendancy of the Independents. Glasgow, thus influenced by the clergy, was found to be amongst the number of those contumacious burghs which declined to furnish its quota. Provost Stewart, with the other magistrates and members of council, were in consequence summoned before parliament, imprisoned for several days, and deprived of their offices. But a heavier infliction still awaited them, in so far as four regiments of horse and foot were sent to the town, with orders that they should be quartered exclusively on the magistrates, members of Council, the ministers, Kirk session and their friends. Some of these gentlemen were burdened with 10, 20, and 30 soldiers each, who not only lived on the best the place could afford in the way of meat, brandy, and wine, but exacted from their compulsory entertainers their daily pay into the bargain. During the short period these four regiments "sorned" upon the citizens the latter sustained a loss of £40,000 Scots. Principal Baillie pathetically remarks that "our loss and danger were not so great by James Graham." The army was completed notwithstanding the lukewarmness of many of the burghs, and the efforts of Argyle and the clergy to cripple the expedition; but although it was perhaps the most numerous host that had ever left Scotland for the invasion of England,—amounting to nearly 30,000 horse and foot—it was at the same time one of the most inglorious and unsuccessful. A division under the command of the Marquis of Hamilton (who had officiated as the representative of the King at the General Assembly of 1638,) was attacked by Crom-

well at Preston in Lancashire, and completely routed. The Marquis himself was taken prisoner, and suffered decapitation in Old Palace Yard, on 9th of March 1649, being only a few weeks after the execution of the master whom he had so unsuccessfully served. It is recorded that several thousands of Hamilton's troops were sold to the plantations at two shillings a-head. On the 3d September, 1650, Cromwell defeated the Scotch army at Dunbar—a battle which was sacrificed to the ill-timed though well-meant exhortations of the clergymen in Leslie's camp, who induced their countrymen to leave an massailable position, where they fell an easy prey to the military genius and the troops of Cromwell. See article DUNBAR. Shortly thereafter the Protector took possession of Edinburgh, and thence marched to Glasgow, by way of Kilsyth. Oliver took up his residence in Silvercraig's house, situated on the south side of the Saltmarket, nearly opposite to the Bridgegate,* and as he was no less skilled in spiritual than in carnal warfare, he sent for Mr. Patrick Gillespie, a man of influence in the town, then minister of the Outer High church and subsequently principal of the University. Gillespie was hospitably entertained; and Cromwell having ended the conference by a lengthened and fervent prayer, the minister gave out amongst the town's folks, that "surely he must be one of the Elect." Subsequently Cromwell made a formal procession to the High church or Cathedral to hear sermon. The greater part of the influential Presbyterians had fled the city by this time; but Mr. Zachary Boyd, minister of the Barony church, the well known paraphrast, had the courage to remain; and in preaching on that occasion during the forenoon, he boldly and severely inveighed against Cromwell and his Independents. "Shall I pistol the scoundrel?" whispered Thurloc, the Secretary, to his master. "No, no," said the General, "We will manage him in another way;" and having asked the minister to sup with him, he concluded the entertainment with a prayer of some hours' duration, which is said by contemporary chroniclers to have lasted till three o'clock in the morning. Cromwell's conduct in Glasgow was distinguished by a most commendable degree of moderation, and testimony is borne as to this by those not otherwise inclined to speak of him favourably. Indeed his stay in Scotland was in the main extremely beneficial to the country, and to Glasgow in particular. Great part of his troops consisted of tradesmen who had been spirited away from their peaceful callings by the frenzy and enthusiasm of the times. Some of these settled ultimately in Glasgow, and contributed to foster the spirit of trade, and bring certain of the useful arts to a degree of perfection to which our rude forefathers had been formerly strangers. English judges were appointed to determine causes in the Scottish courts; justice was strictly administered,† and the whole country was finally set at peace, and brought under perfect subordination by General Monk.

In its previous history Glasgow had more than once suffered by fire, privation and pestilence; but about this time, on 17th June, 1652, a conflagration broke out which exceeded all former visitations of

the kind in its extent, and in its painful effects upon the citizens. The flames ravaged the city for 18 hours, during which the greatest part of Saltmarket, Trongate, and High-street, was destroyed. One thousand families were burned out, and many persons previously in comfortable circumstances, were cast destitute upon the world. The wretched inhabitants were for many days and nights compelled to encamp in the open fields, and altogether this calamity was regarded as the most severe which had afflicted Glasgow since the foundation of the Cathedral. The loss was estimated at £100,000—no inconsiderable sum in these days. Contributions were made for the sufferers from all parts of the country. But like London, under a similar affliction, Glasgow rose purified and beautified from her ashes. The majority of the houses had been built or faced with wood, and these in due time gave way to substantial stone edifices, which were constructed in a more open and commodious manner than the buildings they replaced. Again in 1677, another great conflagration took place in Glasgow, when 130 houses were consumed. It originated at the head of the Saltmarket, near the cross; and was kindled by a smith's apprentice, who had been beaten by his master, and who, in revenge, set fire to his smithy during the night. Law, in his 'Memorials,' says, "The heat was so great that it fyled the horledge of the tolbooth (the present Cross steeple), there being some prisoners in it at the time, amongst whom was the laird of Caraldone. The people broke open the tolbooth doors, and set them free."

The restoration of Charles II., in 1660, was celebrated in Glasgow with a good deal of outward respect and enthusiasm. They rejoiced that the King had come to his own again, simply because it was fashionable to do so, and because the absence of health-drinking and bon-fires might give a character of disaffection to the place; but there is little reason to doubt that, having a full remembrance of the troubles and desolations of the time of the first Charles, the citizens were well contented with the order and security which the Protector had established amongst them, and would not have been disinclined to a continuance of the government upon similar principles. The Presbyterians, therefore, had no high expectations from the new order of things, and they were ere long confirmed in their misgivings. It soon became apparent that the policy of Charles II. would be similar to that of his father in his efforts to force episcopacy upon a reclaiming people; and as Glasgow was the headquarters of the Presbyterians of the west, where they were most numerous, and where the people were ready to "suffer unto the death for conscience' sake," the city shared in all the pains and persecutions of that iron time. The King having appointed Mr. James Sharp, minister of Crail, to be archbishop of St. Andrews, and Mr. Andrew Fairfoul, minister of Dunse, to be archbishop of Glasgow, they arrived in Edinburgh, in April 1662, having been previously ordained in London. Despite the efforts of the new archbishops, and the strong civil power with which they were armed, the existing clergy, and the laity of Glasgow, with trifling exceptions, refused to conform to the new order of things; and the Earl of Middleton, with a committee of the Scotch privy council, came to Glasgow, on the 26th September, 1662, to enforce compliance with the royal system of church government. They were waited on by Provost Campbell, the bailies, and almost every person of mark and likelihood in the town or its vicinity. The new archbishop (Fairfoul), complained that none of the ministers had acknowledged

* The house was removed a few years ago. The hall in which Cromwell held his levees, had been latterly used as a saleroom for old furniture.

† It is a matter of traditionary fact that the decisions of the English judges were more agreeable to the spirit and principles of the law of Scotland, than the previous decisions of the judges of the country. A young lawyer having made an observation to this effect to a Scottish judge who died in the early part of the 18th century—"Deil mean (hinder) them," replied the judge. "They had neither kith nor kin in this country. Take that out of the way, and I think I could make as good a judge myself."

his authority as prelate, and moved the council to issue and enforce an act and proclamation, banishing all those clergymen from their houses, parishes, and presbyteries, who should not, against a certain date, appear and receive collation from him as their bishop. The desire of the archbishop was formally laid before a meeting of the privy council, held in the fore-hall of the college, and approved of by all the members, excepting Sir James Lockhart of Lee, one of the senators of the College of Justice, who prophetically declared that the act would desolate the land, and excite to fever-height the dislike and indignation with which the prelates had already begun to be regarded. But Lord Lee's warning and prophetic voice was unheeded—a circumstance not at all surprising, when the unscrupulous character of the men is considered, and when it is known, as recorded by contemporary chroniclers, that the members of council were usually flustered with liquor—noon-day as well as night—with the exception of the senator of Lee himself. The scenes of gross dissipation which marked this memorable assembly of council were long spoken of in the West of Scotland with peculiar abhorrence; and it was specially noted through after time as “the drunken meeting of Glasgow.” The council having completed their work in Glasgow, visited afterwards almost all the considerable towns in the west country, for a similar purpose, but without evincing any relaxation in the character of their public acts, or any amendment in their personal manners or morals.* The consequence of this violent act and proclamation was that no fewer than 400 presbyterian ministers were ejected from their parishes, and took leave of their flocks in a single day. Wodrow says—“It was a day not only of weeping, but howling, like the weeping of Jazer, as when a besieged city is taken.” Amongst those who were ejected, we find Principal Gillespie, Messrs. Robert M'Ward, John Carstairs, and Ralph Rogers of the city, and Donald Cargill of the Barony parish of Glasgow, besides nine others all in the presbytery of Glasgow. They commenced the wild work of persecution, and the resistance of the Covenanters,—lasting over many dismal years—which has made their deeds and cause famous in connection with heroic endurance, and suffering for principle against oppression. Early in 1678, the committee of council returned to Glasgow, and had a sedecrunt of ten days. They sat on Sunday, during divine service, for the purpose of administering a bond to be subscribed by heritors and the better classes of the community, binding themselves, that they, their wives, families, and servants, with their tenants, cottars, &c., would not be present at any of the field preachings, or hold any communication with the “outed” ministers. This in effect made men in prominent stations responsible for the doings of hundreds of people—men and women—over whom they had no actual control; but so great was the terror inspired by the proceedings of council, that the bond was subscribed by James Campbell, the provost, John Johnston, John Campbell, and James Colquhoun, bailies; the members of town council, and a number of merchants and tradesmen, amounting in all to 153. The better to enforce this most stringent bond, and to terrify the presbyterians of the West of Scotland, the

chieftains of the north were summoned to the aid of the privy council, and they speedily poured into the lowlands, in the time of peace, nearly 5,000 of their naked and barbarous followers, who acquired the name of the “Highland Host,” and who spread themselves like locusts over the land—desolating the estates and property of all who declined to grant a bond which no living man could fulfil. In fact, there is now no doubt that Lauderdale and those at the head of affairs in Scotland, desired, for their own base object of ultimate aggrandisement, to drive the country into open rebellion by these most grinding and oppressive proceedings. After remaining for some time in Glasgow, the host departed loaded with plunder. It then marched into Ayrshire, and in a short time committed such havoc on farm stock and other property, that the total loss in that county was estimated at £137,499 6s. Scots. The people of the west, however, would neither rise in arms to give colour to a rebellion, nor would they sign the bond, except in insignificant numbers, and accordingly it was deemed expedient to dismiss the clansmen.† A large body of them, amounting to nearly 2,000, returned by way of Glasgow; but when they arrived on the south or Gorbals side, it happened that the Clyde had risen so high as to be unfordable. Thus favoured by chance, the students of the college, and many of the inhabitants, who, either by themselves or friends, had suffered from their former ravages, took the opportunity of resisting their passage at the bridge. In this way they only permitted 40 of the Celts to pass at a time, whom they conducted out of the city by the West port, and lightened them of their plunder at the same time.

After the victory of the Covenanters at Drumclog, a party of them marched to Glasgow, and attempted to take it from Graham of Claverhouse, and the King's troops, who had retreated thither; but though they fought with determined bravery on the streets, they were repulsed, and the dead bodies of the slain left exposed for more than one day to be devoured by the butchers' dogs. The battle of Bothwell brig followed in which 400 of the Covenanters were killed, and 1,200 taken prisoners, and this was followed by oppressions, pains, and penalties, of the most merciless character, in which many of the citizens of Glasgow were involved; these were torturing of the person, and alienation of the property of those who either did favour or were suspected of favouring doctrines in opposition to those of “Black Prelacy.” But it is not intended here to follow this subject into detail, deeply and painfully interesting though it may be. Suffice it to say that altogether apart from fines, tortures, prosecutions, and banishments, many of the devoted “hill folk” were hanged at Glasgow, their heads stuck on pikes on the east side of the jail, and their bodies buried on the north side of the Cathedral church. Over their graves in more tolerant times was erected a memorial-stone and inscription, which still remains in nearly its original position, although the tablet has been renewed. The death of Charles the Second brought little or no mitigation of the sufferings of the Scottish people; for the “Indulgence” was generally rejected when it was known that it was

* This ambulatory commission, for curbing the spirit of the non conformists, must either have been composed of very gross materials, or the members must have drunk deeply to blunt their feeling of the vile work in which they were engaged. It is affirmed by the historians of the time, that those who entertained the commissioners best, had besides their dining-room, drinking, and vomiting-room, sleeping rooms for the company who had lost their senses. In one of their debauches at Ayr, the devil's health, it is said, was drunk at the cross about midnight.

† When the Highlanders went back to their hills, which was in February 1678, they appeared as if returning from the sack of some besieged town. They carried with them plate, merchant goods, webs of linen and of cloth, quantities of wearing apparel and household furniture, and a good number of horses to bear their plunder. It is remarkable, however, and to the credit of this people, that they are not charged with any cruelty during three months' residence at free quarters, although they were greedy of spoil, and rapacious in extorting money. Indeed, it seems probable that, after all, the wild Highlanders had proved gentler than was expected or wished by those who employed them.—*Sir Walter Scott's Tales of a Grandfather*

intended to pave the way not for episcopacy, but for popery. Vast numbers of the better class of people had emigrated to Holland, and amongst all a change from the present corrupt and cruel government was "a consummation most devoutly to be wished for." It is true that during his vice-royalty in Scotland, James II., when Duke of York, had occasionally visited Glasgow in considerable pomp, and had resided in the house of Provost Bell in the Saltmarket; but the measures of persecution of which he had been long the active agent, his own despotic rule as a King, and the horror entertained by the people generally against the institution of either episcopacy or popery, caused the landing of the Prince of Orange in Torbay, on November 5, 1688, to be regarded as a national blessing; and by no class in the kingdom was this great political event hailed with more heartfelt joy and sincerity than by the citizens of Glasgow. As a proof of it, the city levied and armed in the following year a battalion of men who were placed under the command of the Earl of Argyle and Lord Newbottle. These were immediately marched to Edinburgh to assist in guarding the convention of Estates, then deliberating upon the settlement of the crown in favour of William and Mary. It is still matter of unquestioned tradition in Glasgow that this regiment was raised in the course of a single day.*

The Darien Disaster.—When internal tranquillity had been restored by the abdication of James II., the Scots, stimulated by the commercial example of their southern neighbours, and anxious to become a trading nation, entered with enthusiasm into the scheme of colonising the isthmus of Darien, which had been projected by William Paterson, a native of the parish of Tinwald in Dumfriesshire, and whose memory is still held in respect as the founder of the bank of England. The settlement of Darien was represented as the future El Dorado of commerce; all the produce of China, India, and the spice islands, would find its way into the bay of Panama, in the Pacific ocean, and would thence be transferred by an

* Before leaving this part of the narrative, and with the view of instructing as to the form of procedure in the persecuting times, it may not be amiss to give a summary of the sufferings and captivity of a citizen of Glasgow, who was one of the many subjected to the atrocious discipline of the Scottish Privy Council. We select the case of Mr. John Spreull, apothecary. His father, who had been a merchant in Paisley, was fined by Middleton and obliged to flee; and the son was apprehended because he would not discover where his father was. After many trials he was released and left the country, though he returned about the time of the battle of Bothwell brig, on account of which he had again to leave the kingdom. During his absence, his wife and family were turned out of house and shop, and all his moveables secured. He returned to Scotland about the end of the year 1680, intending to carry his wife and family to Rotterdam. He was apprehended at Edinburgh, November 12th, and next day carried before the Duke and council, when the usual ensnaring questions were put to him:—"Was the killing of Archbishop Sharp murder? Were the risings at Drumclog and Bothwell rebellions? Having denied all connection with the affairs of Drumclog and Bothwell, and declined to pronounce them rebellions, or give any opinion with regard to the killing of the Archbishop, his foot was put into the instrument called the *boot*. The following queries were proposed to him, and at every query the hangman gave five strokes upon the wedges:—"Whether he knew anything of a plot to blow up the abbey and the Duke of York? Who was in the plot? Where Mr. Cargill was? And whether he would subscribe his confession?" Having answered these queries in a manner unsatisfactory to the council, they ordered the *old boot* to be brought, alleging that the new one which had been used was not so good. Mr. Spreull accordingly underwent the torture a second time, and was then carried to the prison upon a soldier's back, and refused the benefit of a surgeon to attend to his mangled limbs. After being several times before the council, he was found guilty, though without the slightest particle of genuine proof. Indeed, he had previously been found not guilty by a jury. Mr. Spreull was fined in the sum of £500 sterling, and sent to imprisonment on the Bass Rock. Here he remained for nearly six years, and the length of his confinement afterwards required for him, amongst his fellow citizens, the name of *Dass Iahn*.

easy route across the isthmus to the settlement, and exchanged for the manufactures of Europe. Glasgow, which had already experienced to some small extent the advantages of commerce, entered into the speculation with great alacrity. The citizens subscribed largely of their means—many of them their all; and not a few embarked personally in the several expeditions. The last of these sailed from Rothesay bay on the 14th September, 1699, consisting of four frigates, with 1,200 emigrants; and it is recorded that amongst them went away the last of the once potent Stewarts of Minto, the municipal chiefs of St. Mungo; but so much had the means of this great family now become crippled, that he did not possess even the humble dignity of a shareholder in the company. The unhappy fate of this great national undertaking of the Scottish people is well known. It fell a sacrifice to the unworthy jealousies of the English, and the faithlessness of the King, William III., by whose obstructive influence the colonists suffered from pestilence and starvation on the one hand, and the open hostility of the Spaniards on the other. In short, the destruction was complete, and out of the vast numbers of hopeful and energetic emigrants who had gone out, little more than a score or two of beggared and broken-down men ever again saw their native land. Hundreds of families at home, who had been in affluent circumstances, were ruined. So severely did Glasgow suffer from the shock, that it was not till many years subsequently, viz. in 1716, that her merchants possessed ships of their own. This treatment of the first attempt of the Scots to plant a colony, coupled with the massacre of Glencoe, were doubtless circumstances which, for long afterwards, gave the inhabitants of the northern portion of the kingdom, reason to look upon the government of the Prince of Orange with feelings of abhorrence scarcely less intense than those with which they had previously regarded the rulers who planned, and the agents and soldiery who conducted, the persecution of the Presbyterians.

The Union—Rebellions of 1715 and 1745—Shawfield Riots, &c.—The proposal to unite England and Scotland by legislative enactment was regarded as the deathblow to the independence of our ancient kingdom, and was opposed with great bitterness by the inhabitants of Glasgow, especially those of the lower orders. The populace became so much excited that the magistrates deemed it necessary to issue a proclamation, commanding that not more than three persons should assemble together after sunset. A most injudicious and inflammatory sermon, preached by the Rev. James Clark, the minister of the Tron church, and which was regarded as a direct encouragement and injunction to insurrection, caused the murmurs of discontent, to which the opposition had been hitherto confined, to rise into open violence. The mob-drum was beat through the streets, when the people gathered together in immense numbers, and fairly overturned the authority of the ordinary magistrates. The mob disarmed the regular town-guard, stormed the toll-booth, and seized the town's arms; which consisted of two hundred and fifty halberds. With these they marched about the streets, forcing their way into the houses of the citizens in search of arms, and plundering them at the same time. The house of the Provost, Mr. Aird, was rifled, and he himself only escaped with his life by timely concealment, and subsequent flight to Edinburgh. The rioters then adopted the bold resolution of marching to the capital, and dispersing the Parliament, and they actually did set out under the leadership of a fellow named Finlay. The insurrectionary host, however,

which was never a very numerous one, gradually melted away, and when they reached Kilsyth, Finlay and his associates thought it their wisest course to sneak back again to Glasgow, lay down their stolen arms, and separate. This man and some others were afterwards apprehended and carried to Edinburgh, but some time after the Union act had passed into law they were liberated—a proof at once of the strength and lenient character of the government of Queen Ann. Considering the discontented and highly excited state of the people, this insurrection, under other circumstances, might have proved a very formidable one; but it fortunately failed to become so, because there was an entire absence of competent leaders, and no man of mark and likelihood in the west of Scotland put a hand to it. A very short period only elapsed before the citizens became fully alive to the advantages conferred upon them by the Union, in the opening of the American trade, &c., which they entered into with great ardour, but with becoming caution and prudence. We are justified, therefore, in regarding this as the epoch in which originated that successful career of industry and enterprise which in due course rendered Glasgow the chief seat of the commerce and manufactures of Scotland.

The rebellion of 1715 did not much affect Glasgow, excepting in so far as it gave the city an opportunity of displaying its liberality and loyalty, and its sincere attachment to the principles of the revolution of 1688. The citizens raised a regiment of 600 men, which they drilled and maintained at their own expense—paying the common men at the rate of 8d. per diem. This regiment was placed at the disposal of government, and it rendered good service by performing the important duty of guarding Stirling castle, town, and bridge, while the Duke of Argyle marched northward to meet the Highlanders under the Earl of Mar, at Sheriff Muir. In the meantime, the inhabitants had zealously provided for the safety of the city by improving its fortifications, and by digging around it a trench twelve feet in breadth and six feet in depth. The town's accounts at this period are burdened with numerous entries of payments to artificers and labourers who were employed in the operations of forming the trenches and barricades—of planting the guns which they already possessed, and of the freight of eight great guns from Port Glasgow, &c. On the 5th December the Duke of Argyle came to Glasgow, and took up his lodgings with Mr. Campbell of Shawfield; on the following day, accompanied by the magistrates and several of the nobility and gentry, he reviewed the troops then lying in the town, and inspected the defensive preparations made by the inhabitants. Although the war did not come to their own doors, the rebellion was nevertheless a costly affair to the citizens, and amongst other grievances, we find the magistrates complaining to the Duke of Argyle that they had to maintain and guard 353 rebel prisoners, "who are lying in the town's hand, and in custody in the castle prison," (the old bishop's palace). Notwithstanding all the heavy charges to which it was subjected, the city could afford to be grateful to those who had assisted it in time of trial. In 1716, on the suppression of the rebellion, they ordered "a silver tankard, weighting forty-eight ounce, thirteen drop, at 7s. sterling per ounce; and a sett of sugar boxes, weighting nineteen ounce, fourteen drop, at 8s. per ounce; and a server wing, weighting thirty-one ounce and twelve drop, at 6s. 4d. per ounce," to be presented to Colonel William Maxwell of Cardonnell, "as a mark of the town's favour and respect towards him for his good service in taking upon him the regulation and management of all the guards that were kept in the city

during the rebellion and confusions in the neighbourhood."

Within a few years after the rebellion, viz., in 1725, a riot broke out in the city, which was so painful and fatal in its consequences, that for half-a-century after its occurrence, it could not be named in the presence of any son of St. Mungo, without calling up reminiscences of the most bitter and exciting kind. Daniel Campbell, Esq. of Shawfield, who was at that time member for the Glasgow district of burghs, had rendered himself obnoxious to a large body of the citizens, including all the lower orders, by voting in parliament for the extension of the malt tax to Scotland. On the 23d June, the day on which the operation of the tax began, the mob arose, obstructed the excisemen, and assumed such a threatening attitude, that on the evening of the next day, Captain Bushel entered the town with two companies of Lord Delorain's regiment of foot. This did not, however, prevent the mob assailing Mr. Campbell's house, which was then by far the finest in the city; and they did not leave it until the interior was completely dismantled, and the furniture destroyed. The magistrates, not dreading that the mob would proceed to such acts of violence, had retired to a tavern to spend the evening, and about eleven p. m., tidings were brought them of the work of havoc and demolition then in progress. At the same time Bushel despatched a sergeant to inquire if he would beat to arms, but the provost—who appears to have been either a timid man, or one averse to proceed to extremities—declined the proffered military aid. Next day the mob was still in a very excited state, and having irritated Bushel's sentinels by throwing stones at them, he ordered out all his men, and formed a hollow square in the vicinity of the guard-house, which was then situated at the south-west corner of Candleriggs street. This movement was followed by another shower of stones upon the bodies of the soldiers, upon which Captain Bushel—without any authority from the civil power—ordered his men to fire, when two persons in the crowd were killed on the spot and others wounded. The inhabitants, now thirsting for revenge and vengeance, assailed the town-house magazine, carried forth the arms, and rang the fire-bell to arouse the city. The provost being alarmed at the probable results of a further collision between the military and the people, craved Bushel to remove his soldiers, which he accordingly did in the direction of Dumbarton castle. This did not avert the catastrophe, however, for the citizens or mob, still excited and enflamed, followed on the line of retreat, and coming up in great force, began to act upon the offensive, when the captain again ordered his men to fire, and several persons fell. In all there were nine persons killed, and seventeen wounded in this unfortunate affair; and as usually happens in such cases, it was not merely the assailants or rabble who suffered, but many respectable persons were shot down, who happened to be in the crowd or its neighbourhood, either accidentally or from motives of curiosity. The military reached the castle in safety, with the exception of two of the soldiers who were captured by the mob upon the march, and only one of whom suffered ill-treatment. While these bloody proceedings were in progress, Mr. Campbell and his family were at his country house at Woodhall, about eight miles distant from the city. He had himself removed thither on Tuesday, the 22d of June (before the malt tax came into operation), and next day he was followed by his lady. Some local chroniclers aver that private threats or hints had reached him that his house was to be assailed; and had he given this information in sufficient time to the magistrates,

all the unhappy mischief might have been prevented. The matter being represented at head quarters, General Wade forthwith took possession of the city, with a large body of troops, consisting of horse, foot, and artillery. He was accompanied by the Lord Advocate, Duncan Forbes, who proceeded to make an investigation into the case, the result of which was that 19 persons were apprehended, and delivered over bound with ropes to Captain Bushel—who had come up from Dumbarton Castle—and by him conducted to Edinburgh and lodged in the castle. At the same time, (16th July,) the whole of the magistrates from the provost down to the deacon-conventer (including even those who had been absent from Glasgow during the riots), were apprehended at the instance of the Lord Advocate, and imprisoned first in their own tolbooth, and afterwards they were conducted by a force of horse and foot to the prison of Edinburgh. The charge against them was that they had favoured the riots and winked at the destruction of Campbell's house; but it is now plain that the utmost that can be laid to their charge was want of due preparation and energy in repressing the disturbance. After a day's detention application was made to the Lords of Justiciary for liberation upon bail, which was at once granted. They accordingly set out for Glasgow; and were met, six miles from the city, by a large body of the inhabitants, who escorted them home with every demonstration of respect, the ringing of bells, &c. The magistrates were afterwards freely absolved; but it fared otherwise with the 19 inferior persons sent to Edinburgh, some of whom were whipped through the streets of Glasgow, two banished for life, and the major portion liberated, after a long detention. An attempt was made by the magistrates of Glasgow to bring Bushel to trial for the murder of nine of the citizens; but he was screened by "the powers that be," for he not only got out of the difficulty but was promoted in the service. To aggravate this already sufficiently distressing case, Campbell, upon his application to parliament, was granted indemnity for his loss, for which the community were ultimately mulcted in the then large sum of £9,000. The inhabitants long regarded this Shawfield affair with a burning sense of injustice suffered by them, and the compensation granted to Campbell was universally considered excessive. The magnificent Shawfield mansion stood, surrounded by a garden, across the bottom of the present Glassford Street. Mr. Campbell sold the house two years after the outrage to Colonel McDowall of Castle-Semple; it afterwards passed into the hands of Mr. Glassford of Dugaldston, and finally it was sold to William Horn, builder, in 1792, when it was removed to open up the street which still goes by Mr. Glassford's name. With the compensation money received from Glasgow, Mr. Campbell purchased the fine estate and island of Islay, which only passed from his representative—a most amiable and accomplished gentleman—within the last half-dozen years.

The recollection of the Shawfield slaughter and its heavy fines did not prevent the citizens of Glasgow from coming forward with alacrity in defence of the reigning family, in the rebellion of 1745. On this occasion they raised two battalions of 600 men each for the service of Government. Charles Edward wrote to the magistrates, demanding from them, as the representatives of the corporation, that the sum of £15,000 sterling, all the arms in the city, and the arrears of taxes due to the government, should be forwarded to him for the use of his army. The magistrates did not comply at the time, as they had hopes of relief from the army of Sir John Cope; upon

which the demand of the prince was enforced by Mr. John Hay, formerly a writer to the Signet, and now quarter-master in the Highland army, who came to Glasgow, with a party of horse, accompanied by Glengyle, the chief of the Macgregors. The magistrates, with much difficulty, induced Mr. Hay to accept a composition of £5,000 in money, and £500 in goods, with which he departed on the 30th of September, after having been quartered four days in the city. After the romantic and unfortunate expedition into England, Charles, during the northward retreat from Derby moved towards the West, and entered Glasgow with the main body of his forces on Christmas day. The necessities of the mountaineers were at this time extreme. The great majority of them were bareheaded and barefooted; their skin was tanned quite red with the weather; such garments as they had were in rags; and these, with their matted hair, long beards, and keen and famished aspect, imparted to them an appearance peculiarly savage and ferocious. At this time, the volunteers, equipped at the expense of the city, were posted at Edinburgh, for the defence of the capital. Alike to punish the city for appearing in arms against him, and to clothe his naked host, the Chevalier ordered the magistrates forthwith to provide 6,000 short cloth coats, 12,000 linen shirts, 6,000 pairs of shoes, 6,000 pairs of hose, 6,000 waistcoats, and 6,000 blue bonnets. By very great exertions the greater portion of these articles were supplied in a few days. He also exacted large contributions in bestial, corn, hay, and straw. The Pretender evacuated the city on 3d January 1746, after a sojourn of ten days, and took with him hostages for the supply of the remaining portion of the clothing still unfurnished. These goods were afterwards duly forwarded to the rebel camp at Bannockburn.

While in Glasgow the Chevalier lodged in the house of Mr. Glassford of Dugaldston, which had formerly belonged to Mr. Campbell of Shawfield, and which, notwithstanding its former "gutting," was still the most elegant in the city. He sat down at table twice a-day, accompanied by some of his officers, and a few devoted Jacobite ladies, whose sympathies he was often more successful in enlisting than those of their male relatives. After his men had been got into better condition by being fed and clothed, Charles treated the inhabitants to a grand review on the Green; but they looked coldly on; and indeed so odious was his cause that many of the principal inhabitants suspended business by closing their shops and counting houses during his stay. He remarked with bitterness that nowhere had he made so few friends as in Glasgow; for he only procured 60 adherents during his sojourn, and these were the very scum of the place. It is matter of tradition in Glasgow, that but for the manly and generous resistance of Cameron of Lochiel, the city would have been sacked, and afterwards laid in ashes by the Highlanders. The Glasgow volunteers stood on the royal side at the battle of Falkirk, fought on 17th January. Without imputing to them any acts of heroism, it is undoubted that they behaved creditably, and in a manner which put the courage of many of the regulars to the blush. Finally, they were thrown into confusion, not by the enemy, but by being ridden over by the craven regiment of dragoons, which had been commanded by the lamented Gardiner, and which behaved so ignobly at the battle of Preston. While thus thrown into disorder, they were severely handled by the Highlanders, who always regarded those who *voluntarily* took up arms against them with much stronger feelings of hostility than they evinc-

ed towards the regular troops whose proper trade was fighting. Of the Glasgow regiment 22 were killed, 11 wounded, and 14 taken prisoners. Dugald Graham, the accurate metrical chronicler of the rebellion of 1745, and who subsequently became the city bellman, details the sad plight to which the Glasgow militia was reduced. After narrating the defeat of Hawley's horse by the Highlanders, he proceeds:—

"The south side being fairly won,
They faced north as had been done;
Where next stood, to bide the crash,
The volunteers, who zealous,
Kept firing close, till near surrounded,
And by the flying horse confounded:
They suffered sair into this place,
No Highlander pitied their case,
'You cursed militia,' they did swear,
'What a devil did bring you here!'"

In 1749 Parliament granted £10,000 to the city as part indemnification for the losses sustained from the rebels.

The next important affair in which we find the citizens of Glasgow engaged, is the cordial effort which they made to assist government at the outbreak of the American war of independence, or, the "Revolt of the Colonists," as it was then termed. Now-a-days, however, these exertions are attributed more to a feeling of self-interest than a sentiment of pure patriotism; for Glasgow had long enjoyed a lion's share in the tobacco trade, by which her citizens were enriched; and the very existence of this lucrative traffic was threatened by the war which had broken out. Upon the news of the first determined stand made by the Americans at Lexington and Bunker's Hill, in 1775, reaching Glasgow, the magistrates convened a meeting of the inhabitants, when it was resolved to give all support to government in its efforts to break the spirit of the colonists. Accordingly a body of 1,000 was raised at an expense of more than £10,000, and placed at the disposal of His Majesty. It is curious to know that the determination to subdue the Americans took so strong a hold of the mind of the Glasgow people, that many of the principal citizens formed themselves into a recruiting corps for the purpose of completing the numbers of the Glasgow regiment. Mr. James Finlay, father of the late Mr. Kirkman Finlay, of Castle-Toward, played the bagpipe in the recruiting band; Mr. John Wardrop, a Virginia merchant, beat a drum; and other "citizens of credit and renown" officiated as fifers, standard-bearers, and broad-swordmen. Mr. Spiers of Elderslie, Mr. Cunningham of Lainshaw, and other merchants hired their ships as transports; but Mr. Glassford of Dugaldston, who was the most extensive foreign merchant then in Glasgow—having 25 ships of his own with their cargoes,—did not approve of the coercive measures then in progress, and laid up the most of his vessels in the harbour of Port-Glasgow.

In 1780, during the "No Popery" mania, Glasgow imitated the London Lord George Gordon riots on a small scale, by destroying the shop and manufactory of a respectable man, Mr. Bagnall, a potter, because he was a Roman Catholic. For a time the city was in the entire possession of the mob, and much damage was done; but as usual the community had afterwards to pay for the havoc which these thoughtless men committed. In 1787, the manufacturers proposed a reduced scale of wages to their workmen, in consequence of which the weavers "went out on strike," and many acts of violence were perpetrated against the persons and property of those other workmen who had acceded

to the terms of the masters. Eventually, the magistrates were obliged to call in the 39th regiment of foot, under Colonel Kellit; but as the soldiers were assailed in the Drygate with brick-bats, &c., the riot act was read, when the soldiers fired on the mob, and three persons were killed, and several wounded. The riotous spirit was fairly subdued by this painful measure; and it is a curious fact, that afterwards many of the weavers enlisted into the very regiment which had inflicted this punishment upon their brethren.

During the Radical ferment of 1819-20, the citizens of Glasgow were kept in a most painful state of excitement and suspense. The working classes were in great distress and strongly imbued with a revolutionary spirit, incited, it is now well-known, to a great extent, by vile spies, who of course carried their dupes to a certain point, and then left them in the lurch. Several of the Glasgow workmen were present at the rising at Bonnymuir, and those who escaped the lash of the law were glad to escape to America. On 20th August, 1820, a silly creature named James Wilson, was hanged and beheaded in Glasgow for his share in the Radical insurrection, which was no less than the fanatical project of marching from the village of Strathaven, at the head of a few weavers, with the intention of capturing the city. It was considered that a less rigorous punishment might have met the demerits of a half-crazed old man like Wilson; but at all events it is to be hoped this is the last occasion on which we will hear of the axe and block being used in Glasgow, or anywhere else in the kingdom. There have been many other disturbances in the city, principally caused by workmen's strikes; but with the exception of a most formidable outbreak, which disgraced our own day, none of these have been attended with loss of life.

The Riots of 1848.—These were perhaps the most serious riots which ever occurred in Glasgow,—not so much on account of the events which actually took place, as from the disaster and catastrophe which were threatened and prevented; and from the circumstance also that they excited for a day or two a feeling of the greatest insecurity and alarm over the whole kingdom, and were spoken of in some of the continental journals as the commencement of a political revolution in Great Britain. It must be remembered that at the period in question, the public mind was in a state of extraordinary excitement. The French revolution of February, 1848, which had expelled Louis Philippe, inaugurated the Republic and finally established the Second Empire, had just then taken place, and the character of the extraordinary proceedings in France was the subject of conversation in every circle. At the same time trade was greatly dislocated in this country; vast numbers of workpeople were unemployed and suffering, and not a few were discontented in a political sense. In the first days of the month of March, so much distress existed amongst the lower orders in Glasgow from lack of employment, that the authorities set many of the unemployed to the work of stone-breaking; and, until labour on a more extensive scale could be organised, meal was given by way of immediate relief at the City Hall, to almost all who chose to apply for it, on the afternoon and evening of Saturday the 4th March. Meanwhile, large meetings (ostensibly of the unemployed) were daily held on the Green; and on the following day, (Sunday,) at one of these great gatherings, political harangues of a very inflammatory description were spoken by designing demagogues, who urged the people to demand food or money as a right, irre-

spective of any equivalent for them in the shape of labour. On Monday the 6th, another great meeting was held on the Green, swelled by this time by all the thieves and desperadoes in the city, who, from their usual dens in the wynds, vennels, and closes had scented the mischief which was brewing, and came into the light of day to originate or augment confusion and disorder that they might profit by the consequences. At this meeting very wild sentiments were uttered, and more than once the multitude was encouraged to assert its rights, and to "do a deed worthy of the name of France." After spending some hours in making speeches, it was resolved that the people on the Green should proceed to the City Hall, and ascertain what measures the magistrates and relief committee were taking for the relief of the unemployed. The treasurer of the Relief fund, with his assistants, had in fact been employed all day in distributing schedules and tickets, and in making arrangements for a general supply of meal and soup to the really necessitous, until, as has been said, work could be provided. It was, of course, impossible to hold conference with such a large body of clamorous people, as that which presented itself before and behind the City Hall, in Candleriggs and Albion Street. In short, it was not relief in the shape of either meal, soup, or labour, that was now wanted; for the fellows who directed the movement, after overturning some of the Green Market stalls in the bazaar, again moved off with their followers cheering and shouting towards the Green and eastern parts of the city. On the Green, they armed themselves with the iron railings opposite Monteith row, which they tore from their sockets, in addition to such stobs and bludgeons as they could pick up, and brandishing these in their hands, and shouting and yelling, they again entered the city, a little before four o'clock. They sacked the hakers' and provision shops in London Street as they passed along, and reaching Trongate, they assailed and gutted the shop of Mrs. Musgrove, gunmaker, taking possession of the guns, pistols, and ammunition. Hardware shops shared the same fate, and indeed it may be said that the plunder of every open door was indiscriminate. The mob, being now partially armed, dispersed themselves in various directions; but the main body, rifling the shops as they went along, found its way by various avenues into Ingram Street, and marched along, as if with the intention of taking possession of the Exchange, but as timely warning had been given the doors were closed. The banks also had been apprised in time to take similar precautions. In Exchange Square the mob invaded the shop of Mr. Martin, gunmaker, where they got a vast accession to their stock of guns, pistols, and powder, and as they now began to discharge their fire-arms in the streets, the peaceable inhabitants, taken by surprise, fled before them in all directions. Turning from Exchange Square into Buchanan Street, the rioters made a halt at the shop of Messrs. Finlay and Field, watchmakers and jewellers, which in five minutes they rifled of property to the amount of £1,648. The main body then proceeded down Buchanan Street, and passing along Glasgow Bridge, fell upon, amongst others, the shops of ship-chandlers and watchmakers, in Clyde Place and neighbourhood, from which they abstracted much valuable property. Dividing into minor sections, they plundered the shops in the cross streets, smashing the windows as they went along, and committed great havoc in the premises of the provision merchants, in Main Street. A party which had left the main body carried on the work of

plunder in the Gallowgate, and others careering down Saltmarket Street, crossed Hutchison's Bridge, and robbed some of the shops in Crown Street of property to a considerable amount. As the various detachments of the rioters rolled along they received accessions every now and then in the persons of thievishly-inclined boys and lads, and loose and dishonest women. It was evident that starvation had little to do with the rising; for in many cases tea, sugar, and provisions were scattered on the street, and in passing under the railway arches in Gorbals, the ruffians tossed up the loaves they had stolen from the provision shops, and fired at them with their muskets.

It is unnecessary to follow this outbreak through all its ramifications. Suffice it to say that for fully an hour and a half the city was as completely at the mercy of these two or three bands of blackguards as if they had taken it by storm. It was a thieving-raid, on a most daring and majestic scale, perpetrated in the light of open day. The more experienced thieves and desperadoes, who evidently headed the riot, confined themselves to gold watches, jewellery, and other valuables, and sneaked off when their pockets were full; but the scum of whatever neighbourhood the rioters approached always turned out to take advantage of the general license which had been created, and men, women, and children were seen running through the streets to their own houses with cheeses, chests of tea, firkins of butter, new boots and shoes, or in short any thing which came most ready to hand. Having no apprehensions of such an event, and magnifying the strength of the rioters, the citizens were completely panic-stricken. Shopkeepers closed their premises before the advancing disorderly bands and fled, and for a time all looked in vain for the appearance of the police or the military. In two or three cases, shops were successfully defended by determined men against the thieves, who, although armed and formidable enough in appearance, seemed to have had no notion of fighting; in other cases, the inhabitants were so utterly "cowed" that a greater number looked on than the band was composed of, which was committing robbery before their eyes. It is not now disputed, that, had a body of from 50 to 100 of the officers of police been led against the rioters at the outset, the mob would have been scattered to the winds; but on this occasion the police were singularly wanting in their duty. In fact they were seen no where, except in the way of flight, although had there been any one to lead them, as they had been led before, or as they have been led since, it is not at all likely that we would have been called on to devote a chapter to the Glasgow riots of 1848. Only a few months previously the police force of the city and suburbs had been amalgamated under one management, and a gentleman who came with high recommendations from the Irish Constabulary was appointed to the command of the whole. It is enough to say that pending the investigation which immediately followed, he resigned the situation.

Glasgow was rescued from the horde of plundering miscreants by the military, although the latter were considered long enough in coming. On Monday afternoon, at three o'clock, and immediately after the ordinary sitting of the police committee, the whole of the magistrates assembled in the police buildings, and proceeded to devise measures for giving work to the unemployed. On receiving accounts of the first appearance of outbreak, they despatched a messenger to the then cavalry barracks, in Eglinton Street, Gorbals; but he was obstructed for a time by the disorderly state of the streets, and

meanwhile accounts were brought in of the alarming progress of the mob. Bailie Stewart, (subsequently Lord Provost,) the acting chief magistrate in the absence of the Lord Provost, who was attending his parliamentary duties in London—immediately proceeded in a carriage accompanied by Mr. Sheriff Bell, to the cavalry barracks; but as the troopers had just come in from parade; as they were in undress, and the horses in the stables,—as they had as little expected to be called on for active duty, as the citizens had expected to be assailed—much valuable time was lost in preparation. So soon as one troop was ready, Bailie Stewart rode at the head of it into the city, leaving Sheriff Bell to come up with another troop, which ere long joined the first. So soon as they appeared, the miscreants who had been engaged in plunder fled in all directions. They threw the guns and other articles, they had stolen, along the streets and over the bridges. About the same time, Bailie Orr (now—1855—Lord Provost) came up with the 1st Royals from the infantry barracks. Although the work of plunder was at an end, the aspect of the city was extremely alarming; for thousands of that loose class which every great town contains, assembled in the Saltmarket, High Street, Gallowgate, and Trongate, in the neighbourhood of the Cross, and seemed determined to continue and take part in any disorder or mischief. The riot act was read, and the cavalry cleared the streets by making various charges. In the course of their work they destroyed three barricades, consisting of sundry carts which had been overturned in King Street, Gallowgate, and High Street, and which were the first erections of the kind which had been seen in Glasgow. The infantry also took possession of the streets already named, and closed up all the thoroughfares leading from or into them. The citizens also hurried by hundreds to the Exchange, which had been appropriated as a sort of head quarters, where they were sworn in as special constables, and supplied with batons. They then patrolled the streets in strong parties, dispersing the rioters in all directions, and while engaged in this duty, they were often assailed with showers of stones. Meanwhile, the mob had broken 600 gas globes, in Gallowgate, High Street, &c., and extinguished the lights in the most of them; but from the position taken up by the military in the heart of the district which principally supplied the canaille, and from the continued perambulation of the street by the special constables in strong bodies, the evil-disposed were never able to gather in force at any one point, and a repetition of the disgraceful scenes of the afternoon, or perhaps something worse, was averted. By and by the infantry were withdrawn from the streets, and they bivouacked during the night, partly in the Royal Exchange, and partly in the Tontine Reading Room. In the Exchange, the newspapers were cleared away, and the room wore a singular appearance, with the soldiers' guns and bayonets piled round the pillars, and the soldiers themselves occupying the ordinary places of the merchants who congregated on 'exchange. In the course of the night two companies of the 71st light Infantry, who had been sent for by telegraph, arrived by special train from Edinburgh.

The following morning (Tuesday) opened very uneasily in Glasgow. The inhabitants were bewildered at the sudden and daring disruption of settled order which had taken place, and naturally feared that the rioters might again assemble, and repeat the work of plunder. The insurrection (so to speak) had now brought into the light of day from their dingy retreats immense hordes of raga-

muffins, who desired nothing better than that the game should be played over again. Their numbers were swelled by thousands of thoughtless boys, and lads, as well as by the full proportion of that silly class of people who always join in a crowd to see what is going on, from motives of curiosity alone. A number of shops were opened in the first instance, but when tidings spread of the disturbed state of Bridgeton in the eastern district of the city, these were soon closed again, and business was entirely suspended. Military were stationed at the various prominent points of the city, and the streets were patrolled by bodies of constables, some of them between 200 and 300 strong. The forenoon, however, was not to pass over without bloodshed. About half-past twelve, information was brought to the Calton or Eastern Police Office, that it had been resolved by a large meeting of *sans culottes*, held on the Green, to stop the public mills, and dismantle the gas works, with the intention of again dislocating the industrial and social order of the city. A small body of the veteran battalion, amounting only to 17, along with some special constables, and a small body of the ordinary police, proceeded, headed by Mr. Smart, the assistant superintendent of the Calton district of police (now the superintendent of the whole police of the municipality), to oppose rioters. They found the latter already commencing an attack on the silk mill of Messrs. Campbell in John Street, and drove them into the Green. The mob, however, returned in mighty force, and after the veteran battalion and police had made several charges, they found it was quite impossible permanently to drive back several thousands of disorderly and apparently furious people, and they accordingly deemed it prudent to retreat. They had been previously assailed by showers of stones, and as the force moved up John Street, Mr. Smart seized one of the fellows, who had just delivered a missile, and handed him over to his party. This only rendered the mob more furious, and stones now flew in all directions wounding the constables and pensioners of whom the small party of the veteran battalion was composed. Arrived at the head of John Street, the force under Mr. Smart was now in a most critical situation; for they were in a centre exposed to the opening of four streets, all of which were occupied by the mob, who by this time had rescued the prisoner. Stones and brickbats still mercilessly assailed the small party, and cries of "murder every one of them" were heard from the mob. As they were now evidently on the point of being overwhelmed, the pensioners brought their muskets to the rest, and fired into the mob. For a moment, the rioters believed that this was nothing but a mere powder or blank cartridge demonstration, and were still about to close in upon the pensioners; but it was soon discovered that one man had been shot right through the brain, and was already dead, and that several others lay bleeding on the street. The courage of the rioters evaporated the moment they found that the armed force was in earnest. Much regret was excited by the case of Mr. Alexander, a respectable provision merchant, who had previously assisted as a special constable and who was shot through the body almost at his own door. He died on the following day. A weaver lad, one of the crowd, was shot through the breast, and also died on the following day. In all about a dozen individuals suffered from the fire-arms, from the effects of which three additional persons died—making six killed in all—and others were maimed for life. An attempt was made to get up a cry for revenge by carrying through the streets the dead body of the man who had been shot; but all at-

tempts at further outrage were repressed. A good deal of maudlin sentimentalism was expended in denouncing the pensioners for firing, without any legal order, and without the presence of a magistrate. The citizens generally, however, judged rightly that the men fired in self-defence; and there is no doubt that this firing was efficacious, for it at once stopped the riots. In fact, from circumstances that have since come to light, it is undoubted that the fusillade at this time and place averted the destruction of an immense mass of property, as well as a much more serious loss of life. The outrages of the two days elicited a perfect burst of loyalty. Ten thousand special constables were sworn in during the week, the better class of citizens, and immense numbers of sober and well-conditioned working men offering themselves for the protection of life and property with the greatest enthusiasm. At the same time a proposal was made to form a volunteer rifle corps of 1,500 men; but as order was so rapidly restored this was not carried into effect. The riots, however, gave rise to the formation of a volunteer cavalry force, called the Queen's own Glasgow regiment.

An exaggerated and erroneous account of this riot was transmitted to London, giving the rising a political and revolutionary complexion, which created a panic for a moment over the whole kingdom, and even affected the public funds. The tidings also gave rise to attempts at similar disturbance in London, Edinburgh, Manchester, and other towns; but these were put down without much difficulty. Retribution followed in due course. A large number of individuals, charged with minor offences in connection with the riots, were tried before the local magistrates, and on conviction were sentenced to periods of imprisonment varying from 60 days downwards. Those against whom the more aggravated charges were made were tried at the spring circuit before Lords Mackenzie and Medwyn, when 35 were convicted. Of these, two were sentenced to 18 years' transportation; nine to 10 years' transportation; three to 7 years' transportation; eighteen to 2 years' imprisonment; and three to imprisonment for one year. The convicts, almost without exception, belonged to the very lees of the people. The value of property destroyed and carried away and the expences connected with the riots amounted to £7,111 9s. 5d., which sum was raised by public assessment on the inhabitants.

Her Majesty's Visit to Glasgow.—Glasgow was honoured with the first royal visit since the days of the Stuarts on 14th August, 1849. The Royal Squadron arrived in the Clyde on the preceding day, and lay all night in the Gareloch. On the 14th Her Majesty with Prince Albert, the Prince of Wales, the Princess Royal, Princess Alice, and Prince Alfred, and accompanied by Sir George Grey, Secretary of State for the Home department, and the other members of the royal suite, sailed up the Clyde in the steam yacht "Fairy," and arrived at a beautiful mooring platform which had been erected at the foot of West Street, on the South side of the river. Here the Lord Provost and Magistrates of Glasgow, and various public bodies connected with the city, and with the West of Scotland, were received on board the yacht and presented to the Queen. On this occasion Her Majesty was pleased to confer the honour of Knighthood on James Anderson, Esq. the Lord Provost. A line of procession in carriages was then formed, and Her Majesty proceeded along Clyde Place, Glasgow Bridge, (at the north end of which a beautiful and costly triumphal arch had been erected), Jamaica Street, Argyle Street (to Buchanan Street), Buchanan

Street, West George Street, north side of George Square, George Street, upper High Street, and Castle Street, to the Cathedral. The Royal party was conducted over the whole of the interior, including the Chapter house, the Lady Chapel, and the Crypts; and Her Majesty and Prince Albert expressed great admiration of the architectural proportions of the magnificent structure. On leaving the Cathedral Her Majesty proceeded to the University, where she was received by the Principal and Professors; after which the procession passed along High Street, Trongate, Argyle Street, and thence turned up Queen Street to the station of the Edinburgh and Glasgow railway, whence Her Majesty and suite set out for Perth, on the route to Balmoral. Her Majesty's reception was enthusiastic in the extreme. The whole line of street, extending to nearly three miles, was railed off by a strong palisading on both sides, so that not only was the route for the royal procession kept entirely clear, but ample security was thus given against the occurrence of accidents, by preventing the pressure of the crowd at any one point. In fact not a finger was hurt during the day, although it was calculated that nearly 400,000 people (including masses from all the surrounding districts) were upon the streets. The Sheriff of the county Mr. (now Sir) Archibald Alison rode along side of the royal carriage, and explained to her majesty the principal public or prominent buildings along the route. In the evening the magistrates gave a sumptuous banquet, in the Old Town Hall at the Cross.—Sir James Anderson, the newly made knight, (afterwards M.P. for the Stirling district of burghs,) in the chair.

Trade.

Commercial History.—According to the testimony of M'Ure, the first "promoter and propagator" of trade in Glasgow, was William Elphinstone, a cadet of the noble family of Elphinstone, who settled in the city in the reign of King James I. of Scotland, about 1420, and became a merchant. He is mentioned as a curer of salmon and herrings for the French market, for which brandy and salt were brought back in return. The person mentioned as the second "promoter" of trade is Archibald Lyon, son of the Lord Glamis, who came to Glasgow, with Archbishop Dunbar, became a merchant, and "undertook great adventures and voyages in trading to Poland, France and Holland." At this time, however, the foreign trade must have been of a very limited character; but from the occasional mention in the council records of merchants proceeding to the English markets, it is evident that the inhabitants conducted a fair amount of inland traffic. In 1651, Commissioner Tucker having been directed by the government to report on the revenue of the excise and customs of Scotland, speaks of Glasgow as follows: "With the exception (says he) of the coligners, all the inhabitants are traders: some to Ireland, with small smiddy coals, in open boats from four to ten tons, from whence they bring hoops, rungs, barrel staves, meal, oats, and butter; some to France, with plaiding, coals, and herrings, from which the return is salt, pepper, raisins, and prunes; some to Norway for timber. There have likewise been some who have ventured as far as Barbadoes, but the loss which they sustained, by being obliged to come home late in the year, has made them discontinue going thither any more. The mercantile genius of the people is strong, if they were not checked and kept under by the shallowness of their river, every day more and more increasing and filling up, so that no vessel of any burden can come up nearer the town than 14 miles,

where they must unload and send up their timber on rafts, and all other commodities by three or four tons of goods at a time, in small cobbles or boats, of three, four, or five, and none above six tons a boat. There is in this place a collector, a cheque, and four writers. There are 12 vessels belonging to the merchants of the port, viz. three of 150 tons each, one of 140, two of 100, one of 50, three of 30, one of 15, and one of 12; none of which come up to the town—total, 957 tons." In 1665, during the war with the Dutch, the merchants of Glasgow procured a letter of marque from the Duke of Lennox and Richmond, heritable Lord High Admiral of Scotland, in favour of Captain Robert Allan, commander of the *George* of Glasgow. This vessel, which though little more than 60 tons burthen, was dignified with the name of a "frigate," carried five pieces of ordnance, 32 muskets, 12 half-pikes, 18 pole axes, 30 swords, 3 barrels of powder, and provisions for six months. She had 60 of a crew. The exploits of the *George*, if any, are not mentioned; but other privateers belonging to the port did really levy black-mail upon the Dutch; and notice, for instance, is given in the *London Gazette* of November 8, 1666, that a "privateer of Glasgow, one Chambers, has lately brought in a Dutch caper of 8 guns, with a prize ship, laden with salt." In 1674 a company for carrying on the whale fishery and soap-making was formed in Glasgow. The company employed 5 ships, and had extensive premises at Greenock for boiling blubber, and curing fish, known by the name of the Royal close. An advertisement from the company appeared in the *Glasgow Courant*, on 11th November 1715, being the first advertisement in the first newspaper published in the west of Scotland, intimating that "any one who wants good black or speckled soap, may be served by Robert Luke, manager of the soaperie at Glasgow, on reasonable terms." The soaperie then stood at the head of Candleriggs. In relating the progress of the "sea adventurers" of Glasgow, subsequent to 1668, M'Ure instances the case of Walter Gibson, son of John Gibson of Overnewton, who in one year packed and cured 300 lasts of herrings, at 6 pounds sterling per last, containing 12 barrels each last; and having freighted a Dutch ship, called the *St. Agatha*, of 450 tons, he despatched the ship, with the great cargo, to St. Martius in France, where he got for each barrel of herring a barrel of brandy and a crown; and the ship, at her return, was loaded with salt and brandy. The produce came to a prodigious sum, in consequence of which he bought this vessel, and other two large ships, and traded to France, Spain, Norway, Sweden, and Virginia. This enterprising merchant was the first who brought iron to Glasgow; the shopkeepers before that period having been supplied from the ports on the east coast. About this time, Messrs. Anderson of Dowhill and others, the owners of the ship *Providence*, first imported "cherry sack" to Glasgow, the beverage having been previously obtained from the merchants at Leith.

The commerce of Glasgow, however, received its first great stimulus from the measure which had been regarded as one that would ruin the country, viz. the Union. This opened up to them the trade with the colonies, and soon thereafter we find the Glasgow merchants sending out their "adventures" to Virginia and Maryland and bringing back tobacco leaf in return. They did not at this time possess any suitable ships of their own, and were accordingly obliged to charter them, which they did principally from the port of Whitehaven. They conducted their early enterprises according to a

very safe and "canny" rule—sending out a supercargo with each vessel, who disposed of the goods with the one hand and acquired the tobacco with the other, and as credit was neither asked nor given, the merchants were enabled to strike a final balance at the end of every voyage. This primitive mode of managing business prospered, and the Glasgow merchants, instead of hiring from their neighbours, began to build ships of their own; and in 1718, the first vessel which belonged to Glasgow owners crossed the Atlantic. She was built at Greenock, and only registered 60 tons. The infant commerce of the Clyde, however, had to pass through some fiery ordeal; not the least of which was that caused by the combination formed against it by the merchants of London, Liverpool, Bristol, Whitehaven, &c. Whether from superior intelligence and acuteness in buying and selling, or from prudence and economy in managing their business, and being contented with moderate profits, the Glasgow tobacco houses, ere long, not only secured the lion's share of the foreign export trade, such as supplying the farmers-general of France, but they even undersold the English merchants in their own home markets. This was a galling state of matters to the merchants of South Britain, and accordingly they complained to the government, that the Glasgow traders conducted their business upon, and reaped their advantages from, a system of fraud and spoliation of the public revenue. A searching investigation followed in 1721, which resulted in the Lords of the Treasury finding,—“That the complaints of the merchants of London, Bristol, Liverpool, Whitehaven, &c., are groundless, and proceed from a spirit of envy, and not from a regard to the interests of trade, or the King's revenue.” The English merchants, however, were far from being satisfied with this finding and reproof; and in the following year, they made another formal complaint to Parliament against Glasgow, in consequence of which commissioners were sent down to the Clyde, who imposed so many vexatious regulations on the trade, that it languished and struggled for its very life. Expensive and harassing lawsuits followed, and it was not till 1735 that the Glasgow merchants were enabled fairly to beat off the annoyance of the English ports. From this time the trade was conducted on more liberal principles; the old supercargo system was abandoned; partners or resident agents were established throughout the tobacco-producing colonies; the trade increased prodigiously, and princely fortunes were realised. Soon after this period the number of ships, brigantines, and sloops belonging to Glasgow amounted to 67, and these traded to Virginia, Jamaica, Antigua, St. Kitts, Barbadoes, Gibraltar, Holland, Stockholm, and Ireland, besides maintaining a considerable coasting trade. The halcyon era of the tobacco trade is reckoned from 1740 till the declaration of American Independence. During this period by far the greater portion of the entire disposable capital of the city was embarked in it. In Denholm's History of Glasgow, it is stated that "in the year 1772, out of 90,000 hhd's. of tobacco imported into Great Britain, Glasgow alone imported 49,000 of these." The year before the American war of independence, which was the last of this golden era, the imports into the Clyde were 57,143 hhd's, the property of 42 merchants, and of this not more than 1,600 hhd's. were retained for local consumption. The importance of this traffic, therefore, to the commercial capital of the West, will explain more readily than any thing else, the alacrity and seeming loyalty displayed by the Glasgow merchants in raising troops to assist the Government in putting down what was

then termed the "revolt of the colonists,"—a revolt which was destined to result in the foundation of the United States of America.

Although the giant tobacco trade or monopoly was thus knocked on the head for ever, the Glasgow merchants were not the men to sit down and weep. Seeing that the "revolt" was an overpowering affair, they sought for "fresh fields and pastures new," and transferred their enterprise and capital into other channels. From 1732, they had had some little intercourse with the West India islands, by supplying the planters with necessaries, and receiving part of their crops in return, but generally speaking, the traffic was of a very limited character. This trade was now vastly extended, while at the same time the merchants opened up commercial relations with other parts of the world, the produce of which they had heretofore received at second hand. The West India traffic, in effect, took, to a great extent, the place of the lost tobacco trade, and in a short time those who had been regarded as Virginian magnates became equally well known as West Indian lords.

In 1816, James Finlay and Co. despatched a ship of 600 tons burden to Calcutta, being the first vessel which had cleared out of a Scottish port direct for the East Indies. Other merchants followed the example of this enterprising firm, of which the late able Kirkman Finlay was then the head, and the trade soon became a valuable and extensive one. The trade to China and a new trade with France have since been added; and the intercourse with Canada, South America, Australia, New Zealand, and other parts, has become vastly extended. The trade with the United States also has latterly grown to such magnitude as to be exceeded only by that of Liverpool and London. Glasgow has likewise, since about 1842, been very prominent as an emigration port for British America, the United States, and Australia. A company was established, about 1850, to extend the trade between Glasgow and New York by means of iron screw-steamers, designed to carry passengers and goods at a moderate charge, and to perform the voyage eastward and westward with speed and in a limited number of days. The company started with only one vessel, a noble one of 2,000 tons burden; and she answered expectation so well that a second and larger one was added in 1854. Another company, to occupy the same ground, was formed soon after the first; and they also had two fine iron screw-steamers on the Glasgow and New York station prior to 1855. Splendid iron screw-steamers likewise now ply regularly to Portland, the St. Lawrence, and the Mediterranean; while steamers of various size and structure, to suit their various stations and traffic, ply to all parts of the west coast of Scotland, both mainland and islands, and to Liverpool, Cork, Dublin, Belfast, Londonderry, and Sligo.

The commerce of Glasgow with foreign countries and the British colonies is as comprehensive and ramified as any profitable commerce with them can well be made; while her coasting trade, both by steamers and by sailing vessels, is both minute and enormous. The value of British produce and manufactures exported from the harbour, during the year 1861, was £5,257,060; and this included merely the goods entered at Glasgow, to the exclusion of large quantities shipped at Greenock in vessels too large to receive their whole cargo at Glasgow,—to the exclusion also of light articles, such as tissues, threads, yarns, and chemicals, sent by railway for shipment at Leith and the English ports. The chief articles of export and of import

have connexion mainly with the local manufactures, the iron trade, and the coal trade, which we shall afterwards notice. The largest timber-importing establishment in the world, also, that of Messrs. Pollok, Gilmour and Co., which has agencies or branches in various parts of British America, and sends timber to every part of the United Kingdom, has its head-quarters in Glasgow. The new export trade to France, which sprang up only in 1860, is computed to have amounted in value during 1861 to at least £367,000.

The rapid rise and the present comparative condition of the entire foreign commerce of the port will be best understood from a statement of its customs' duties in various years from 1812 till 1861. This will appear the more striking, for the last of these years, by remembering how great a shock a large department of the commerce then sustained from the effects of the American war. Another striking thing, in contrast to the experience of most other parts of the United Kingdom, is that Glasgow commerce possesses an elasticity which has always exhibited a progressive increase of customs' revenue, in spite of the large and frequent remission of duties which has occurred since the free-trade era of 1844. The amount of customs' duties collected at Glasgow in 1812 was £3,124; in 1815, £8,300; in 1820, £11,000; in 1825, £41,154; in 1830, £59,014; in 1835, £270,667; in 1840, £468,975; in 1845, £551,851; in 1850, £640,571; in 1853, £653,283; in 1856, £718,800; in 1858, £801,894; in 1860, £880,621; in 1861, £924,505. The amount, including Port Glasgow and Greenock, much of the commerce of which is dependent on Glasgow, was, in 1854, £1,220,066; in 1860, £1,740,435; in 1861, £1,867,181. The entire customs of the United Kingdom, in 1861, amounted to £23,740,000; so that those of the Clyde ports were nearly a twelfth of the whole.

Manufacturing History.—Until a period subsequent to the Union, the manufactures of Glasgow, like its commerce, were very trifling; but still they deserved the name, as the weavers of the city are frequently mentioned as an important body. Towards the close of the 17th century, Glasgow plaids had attained some celebrity in Edinburgh, which was then the aristocratic centre of the kingdom. The inhabitants were proud of their handiwork, though it might be on a limited scale; for we find that in 1715, the magistrates presented to the Princess of Wales, afterwards the Queen of George II., "a swatch of plaids as the manufactory peculiar only to this place, for keeping the place in her highness' remembrance, and which might contribute to the advantage thereof, and to the advancement of the credit of that manufactory"—a gift which her royal highness graciously received, and returned thanks to the magistrates accordingly. There is little doubt, however, that the commerce with America first suggested and encouraged the introduction of manufactures into the city on a more extended plan than the home trade which had previously existed; and that they were established on a small scale about 1725, is not matter of doubt. Their progress at the outset was slow indeed, and it was not until the legislature had granted great encouragement to the making of linen in Scotland, that Glasgow began to assume some degree of importance as a manufacturing town. The act of parliament in 1748, prohibiting the importing or wearing of French cambrics, under severe penalties; and the act of 1751, allowing weavers in flax or hemp to settle and exercise their trades in any part of Scotland, free from all corporation dues, conjoined with the bounty of 1½d. per yard on all linens ex-

ported at and under 18d. per yard, contributed largely at the outset to the success of the linen manufacture. Success in one branch encouraged trial in others; and accordingly we find that, between 1725 and 1750, various additional manufactures were introduced into, and obtained a firm footing in the city. Glasgow was the first place in Great Britain in which inkle wares were manufactured. In 1732, Mr. Alexander Harvey, a citizen, brought away from Haerlem, at the risk of his life, two inkle looms and a workman, and by this means fairly succeeded in establishing the manufacture in Glasgow, where he was enabled successfully to compete with the Dutch, who had previously held a monopoly of the manufacture. The Dutchman, after remaining some years in Glasgow, left his employers, on account of some real or imaginary slight, and proceeded to Manchester, the manufacturers of which he soon made as wise as their competitors on the north side of the Tweed.

The vast improvements which were effected in the production of cotton yarn by the inventions of Wyatt, Hargrave, and Sir Richard Arkwright, gave, however, the first grand impulse to manufactures in the West of Scotland; and in a short time, Glasgow capital was invested in the cotton trade to a very great amount, both in the neighbourhood of the city, and at a distance. Originally the spinning mills were erected in the vicinity of powerful falls of water, such as the Catrine Mills, in Ayrshire, and the New Lanark Mills, below the Upper Falls of Clyde; but by the great invention of James Watt, it was no longer necessary to go to a distance for the motive power, for it was raised up amongst the workmen in the midst of an inexhaustible coal field, and alongside of a port and navigable river.* The first steam engine used in Glasgow for spinning cotton was erected in January, 1792. It was put up at Springfield, on the south side of the Clyde, opposite what is now used as the lower steam-boat quay. This work, which latterly belonged to Messrs. Todd and Higginbotham, was removed at immense expense in virtue of the Clyde Trustees Act of 1840, to afford space for the extension of the harbour. The power loom was introduced to Glasgow in 1793 by Mr. James Louis Robertson, of Dunblane, who set up two of them in Argyle Street which he had brought from the hulks on the Thames, and which were set in motion by a large Newfoundland dog performing the part of a *giu horse*. In the following year 40 looms were fitted up at Milton; and in 1801, Mr. John Monteith had 200 looms at work at Pollockshaws, near Glasgow. Steam began now to be applied, and the extension of power loom factories, and of the cotton trade generally, became so rapid as almost to exceed belief. The progress of spinning and weaving, in steam factories, was, for a time, scarcely less steady than rapid, encountering checks and obstructions only to resist or surmount them; but now, at least in the department of cotton, has not improbably reached its limit.

In 1854, the number of cotton-spinning factories was 39,—of cotton-weaving factories, 37,—of cotton-spinning and weaving factories, 16,—of wool and worsted spinning and weaving factories, 7,—of silk winding and throwing factories, 5,—of flax-

spinning and rope-making factories, 3; the number of spindles in the cotton factories was 1,014,972,—in the wool and worsted factories, 14,392,—in the silk factories, 30,705,—in the flax and rope factories, 34,000; the number of power-looms in the cotton factories was 22,335,—in the wool factories, 120; the number of horses' power in the cotton factories was 6,972—in the wool and worsted factories, 225,—in the silk factories, 193,—in the flax and rope factories, 296; and the number of persons employed in the cotton factories was 24,414,—in the wool and worsted factories, 800,—in the silk factories, 750,—in the flax and rope factories, 1,300. In 1861, the number of spindles in the cotton factories was 1,048,500—in the wool factories, 11,748,—in the silk factories, 23,072,—in the flax and jute factories, 21,152; the number of power-looms in the cotton factories was 22,567,—in the wool factories, 15,—in the silk factories, 60,—in the flax and jute factories, 171; the number of horses' power in the cotton factories was 11,837,—in the wool factories, 398,—in the silk factories, 213,—in the flax and jute factories, 766; and the number of persons employed in the cotton factories was 24,861,—in the wool factories, 1,422,—in the silk factories, 894,—in the flax and jute factories, 1,312. About one-eighth of the population of Glasgow between the ages of 10 and 40 is thus employed in these factories; and several thousands, in addition, are employed in hand-loom weaving, between 3,000 and 4,000 in print-works, and numbers more in bleaching, dyeing, and other departments connected with textile manufacture. So many as 14,784 males, and 22,391 females were returned by the census of 1851, as then engaged in the cotton manufacture alone. The factories are a prominent architectural feature of the city,—or at least of its suburbs and outskirts; and, not only by their number, but by their great size and their prevailing symmetry and neatness, they often strike strangers from agricultural districts with amazement.

The first muslin web warped in Scotland was the work of Mr. James Monteith, grandfather of Mr. Robert Monteith of Carstairs; and the operation was then considered such a triumphant one that he caused a dress of it to be embroidered with gold and presented to Queen Charlotte. Messrs. Henry Monteith, Bogle and Co., established a manufactory for bandana handkerchiefs in 1802; and the superior manufacture of the article itself, and the successful application of the Turkey-red dye, have given to the Glasgow bandanas a fame and a preference in almost every commercial mart in the world. This manufacture is now worthily shared in by other companies in Glasgow; and is carried on upon a scale of great magnitude. Independently of the manufacturing operations conducted in the city and immediate neighbourhood, the manufactories of various other parts in Scotland are kept in motion by Glasgow capital; and even in the north of Ireland vast numbers of the muslin weavers are in the direct and constant employment of Glasgow houses. A richly ornamental block of building, in the Italian style, situated on the west side of South Hanover street, was erected in 1856, for muslin warehouses; and some other fine structures are connected with the manufacture.

The soft goods trade is carried on to an immense extent in Glasgow; where the merchant often joins the retail to the wholesale trade, imports goods largely from England and foreign parts, and in turn sends them out wholesale to smaller traders situated in almost every village and town in Scotland and not a few in Ireland; and notwithstanding the magnitude of such establishments in the city, the

* The tiny model on which Watt experimented is still preserved as an object of rare interest, in the museum of the University of Glasgow. It was exhibited at the Philosophical Society's exhibition in the City Hall, during the Christmas and New Year's holidays of 1846-7. Of itself it is a contemptible-looking object, with a boiler no bigger than a tea-kettle; but one cannot look upon it without feelings of almost reverence, as being the progenitor of those magnificent engines, which are daily the means of enriching, and it may be truly said, civilizing mankind.

poorest customer is supplied in them as readily and courteously with a yard of tape as the richest with an order of £100 in amount. One of the two gentlemen, brothers, who originated this mixed wholesale and retail soft goods trade, filled the office of chief magistrate of the city, and was knighted. The firm necessarily occupied premises of great extent; and eventually in 1858, they erected, in Ingram street, a vast picturesque block of building in the old Scottish style. Another firm, in beginning the same line of business, about 1850, originally occupied premises at a yearly rental of £1,300, and ultimately purchased them.

In 1786, the late Mr. Charles Macintosh, who was distinguished for discoveries in applied chemistry, introduced to Glasgow from Holland the manufacture of sugar of lead. This article had previously been imported from that country; but in a very short period the tables were turned by Mr. Macintosh exporting considerable quantities of the article to Rotterdam. About the same time, the firm to which Mr. Macintosh belonged established the manufacture of cudbear, an article of great importance in the process of dyeing. In 1799, this gentleman made the first preparation of chloride of lime in the dry state, which has since been so extensively used and prized as a bleaching powder. Mr. M. also established the well-known manufacture of waterproof cloths, though it was latterly transferred to Manchester. In 1800, Messrs. Tennant, Knox, and Co., established a chemical work at St. Rollox, in the northern suburbs of Glasgow, for the manufacture of sulphuric acid, chloride of lime, soda, soap, &c. This is the most extensive chemical work in the world, covering upwards of ten acres, containing upwards of 100 furnaces, and the firm having connections and agencies in every considerable mart both at home and abroad. In 1843, the company erected a "monster chimney," for the purpose of carrying off any noxious gases which might arise in the process of their manufacture; and this is 40 feet in diameter at the base, and 436 feet high, and cost about £12,000.

The manufacture of bottles was commenced in Glasgow in 1730, the first bottle-house being erected on the site of the present Jamaica Street; and it is still carried on upon a most extensive scale, in the districts of Anderston and Port Dundas. The manufacture of flint glass was begun in 1777 by Messrs. Cookson and Co. of Newcastle, and under new firms, is carried on with great vigour. The number of workmen employed in these manufactures is upwards of 500, and the quantity of coals consumed 28,600 tons annually. The earthenware manufacture was commenced at Delftfield near the Broomielaw in 1748; but, for a long period, the quality was decidedly inferior to the English make, and the consumpt was consequently principally local. Since about 1829, but especially since about 1842, the manufacture has been greatly increased and improved; new establishments have been erected; and the article has attained a beauty of design and a delicacy of finish which has enabled it to compete successfully with the famed Staffordshire ware in the various markets both at home and abroad. The manufactures include every kind of product, from the coarsest earthenware to the finest porcelain. The number of workmen employed is about 2,100; the quantity of coals annually consumed is about 40,000 tons; the import of chalk, flint, Cornish stone, and clay, in the year 1854, was nearly 12,000 tons; and the export of wares, including glass, in the same year, was 4,133 tons coastwise, and 3,181 tons to foreign parts. A copartnery for the manufacture of ropes was entered into

in 1696. The tanning of leather commenced soon after the Union. The boot and shoe trade has of late largely extended beyond the home supply. The brewing business is an ancient and an increasing one; and while Messrs. J. and R. Tennant and Co., Wellpark, for instance, are amongst the largest exporters of porter and bitterale in the kingdom, their produce bears the highest character in the foreign markets. The first distillery was begun in 1786, by Mr. William Menzies, in Kirk Street, Gorbals, his licence being the fourth granted in Scotland. At that period the duty little exceeded one penny per gallon, and the best malt spirits were sold at 3s. per gallon. The trade is now an extensive one. In fine, Glasgow may be considered the workshop of Scotland; and with the exception of cutlery and gun barrels, and a few other manufactures, it would be difficult to point out any article useful to man which is not fabricated in the city of St. Mungo.

The Iron Trade.—All the iron trade of Scotland, with small exception, belongs directly or indirectly to Glasgow, concentrating here its business, commercially and financially; and drawing hence almost all the articles of consumpt connected with its works and workers. The trade, till so late as about 1839, was of comparatively small amount; but it received then a great impetus from the invention of the hot-air blast, by Mr. James Beaumont Neilson, manager of the Glasgow gas-works; it experienced, at the same time and afterwards, strong stimulus from the railway demand; and it thenceforth was rapidly developed. The number of pig iron furnaces at work in Scotland in 1788, was only 8; and the amount of their produce, under the methods then practised, was little more than one-sixth of what it would have been under the methods practised now. The numbers, together with their yearly produce, in various years since the beginning of the present century, are as follows:—in 1806, 18 furnaces, producing 22,840 tons; in 1823, 22 furnaces, 30,500 tons; in 1833, 31 furnaces, 44,000 tons; in 1843, 62 furnaces, 248,000 tons; in 1851, 114 furnaces, 740,000 tons; in 1861, 122 furnaces, 1,040,000 tons. Six of the furnaces adjoin the suburbs, in the vicinity of the southern terminus of the Caledonian railway; and they form a curious feature of the city, and sometimes throw a weird-like aspect over it at night, in certain states of the atmosphere; but most are in the Monklands and Ayrshire, and a few in other places.

The manufacture of malleable iron in Scotland can scarcely be said to have commenced till 1839; and the yearly produce of it rose from 45,000 tons in 1845 to 90,000 tons in 1848; but did not rise higher till 1852. The shipments of iron coastwise amounted to 257,851 tons in 1846, fluctuated between 190,083 and 305,650 tons in the next eight years, and was highest in 1853; and the shipments to foreign ports amounted to 119,100 tons in 1846, fluctuated between 134,576 and 314,270 tons in the next eight years, and was highest also in 1853. The quantity of iron ore raised in Scotland, in 1856, was 2,201,250 tons; in 1859, 2,225,000 tons. Dr. Strang, writing in 1862, says,—“In 1854, we found that the men employed in mining iron amounted in Lanarkshire to 3,645, and in Ayrshire to 1,943, making in all 5,588; while the number employed in managing and working the furnaces amounted to 1,344. With respect to the manufacture of malleable iron, we found that in 1854 it amounted to 122,400 tons, and the number of men then employed in this branch was about 4,000. According to the calculations then made, the value of the whole of these industries to the West of Scotland in 1854 amounted to £4,872,856, of which no less than

£1,975,917 was paid in wages to workmen employed. What the approximate value of these now much increased industries may be at the present moment to Glasgow and its neighbourhood, we are unable to say. Since the year 1854 we are perfectly aware that the price of the manufactured article has been very materially reduced, and also that the wages paid has been considerably lowered; still, when we look at the greatly increased quantities made, we are confident that the monies now involved in the manufacture cannot be much less, though the profit to the makers may not be so great. That the civil war in America has been very hurtful to this trade must appear evident from the fact that, while during the year 1860 we shipped to the United States of Scotch pig iron nearly 78,000 tons, we last year sent scarcely 35,000 tons. On the other hand, France took from us last year about 64,000 tons, instead of 50,000 in 1860; while Spain and Italy also increased the quantity taken from about 25,000 to 39,000 tons."

The Coal Trade.—The abundance of coal in the rock-strata around Glasgow, and in the neighbouring counties, is a main source of the city's prosperity, affording fuel to the iron-works, the factories, and the steam-vessels, and at the same time forming in itself an important article of export. The Rev. Dr. Anderson of Newburgh, writing in 1854, says,—“The quantity of coals brought to Glasgow in 1836, from 37 pits in the vicinity, amounted to 561,049 tons, of which 124,000 were exported to the Highlands, and adjacent places on the Clyde; thus leaving for the use of families and public works in the city and suburbs, 437,047 tons of coal. The population since that time has nearly doubled, and the public works, perhaps, have increased in a still higher ratio. Hence the present consumption will amount to 874,098 tons. But as exhibited by the books of the River Trust there were exported for the year ending the 30th June, 1852, from Glasgow, 200,560 tons of coal, which added to the quantity consumed in the city and suburbs, shows that the coal fields surrounding the western metropolis of Scotland yield an annual product of 1,074,558 tons of coal over and above all that is consumed at the pits, the blast furnaces, and the numerous towns and populous villages embraced within their area, or situated on their confines.” And Dr. Strang, writing in 1862, says,—“In 1855, when we made an anxious inquiry into this matter, we found that, of the 367 collieries in Scotland, 237 belonged to the west country, 141 being in Lanarkshire, 78 in Ayrshire, 11 in Dumbartonshire, and 7 in Renfrewshire. It also then appeared, that during the year 1854, of the 7,448,000 tons of coal raised in Scotland, 6,448,000 were drawn from pits situated in the four western counties above alluded to; and taking into account all kinds of coal raised, such as splint, soft, and gas, the average price being then 7s. 6d. per ton, the value derived from the coal mines of the West of Scotland in 1854 could not be less than £2,418,000 sterling. Of the 6,448,000 tons of coal so produced, no less than 2,152,800 were consumed in the manufacture of pig iron, and 367,200 in the conversion of pig into malleable iron; while during that period the number of persons employed in the collieries was as follows:—in Lanarkshire, 15,580, in Ayrshire, 6,061, in Renfrewshire, 790, and in Dumbartonshire, 549; or in all, 22,980. That the number of new collieries opened up, and that the number of workers connected therewith, particularly in Ayrshire and Renfrewshire, have greatly increased even since that late period is certain, and, consequently, the amount of coal brought to the surface must have been also greatly increas-

ed, while a large additional quantity must have been used in the smelting of iron ore and in the conversion of pig into malleable iron, seeing that the smelting furnaces have produced a greater quantity and the malleable iron-works have increased.” The number of collieries, in 1860, in what the parliamentary returns call the western district, which includes Dumfries-shire, Ayrshire, Dumbartonshire, Renfrewshire, West Stirlingshire, the lower ward of Lanarkshire, and the parish of Old Monkland, but excludes the rest of Lanarkshire, was 194, and the quantity of coals raised from them was 6,049,424 tons; while the number of collieries in all Scotland was 413, and the quantity of coals raised from them was 11,149,424 tons. The quantity of coals, cinders, and culm exported from Glasgow in 1858, was 76,744 tons coastwise and 56,696 tons abroad; and the quantity exported in 1860 was 104,931 tons coastwise and 55,058 tons abroad.

Iron Ship-Building and Marine Engine-Making.—Glasgow, with the towns below it on the Clyde, was the cradle of steam navigation, and has, for years, been a great theatre for building iron ships, making steam-vessel engines, and doing a vast amount of kindred work. Henry Bell, who died at Helensburgh in 1830, and to whose memory an obelisk stands at Dunglass on the Clyde, was the first person who successfully applied steam to the propulsion of vessels against wind and tide. In 1811, the Comet was built, according to Mr. Bell's directions, by Messrs. John Wood and Co., Port-Glasgow; and on the 18th January, 1812, she performed her first trip from Glasgow to Greenock, making 5 miles an hour against a head-wind. She was a boat of only 30 tons burden, and had an engine of only 3 horse-power; yet she demonstrated a grand new principle, which was speedily carried into extensive application. She was lost in a wild strait of the West Highlands; and her engine, after having lain long in the sea, was recovered from its watery bed, brought to Glasgow as an interesting curiosity, and publicly exhibited at the meeting of the British Association in 1840. Mr. Bell's invention was not patented, and it was promptly seized by able, enterprising, monied men, to be copied and improved. The new navigation was, at first, supposed to be suitable only for smooth inland waters; and it did not extend for two or three years beyond the waters of the frith of Clyde. But a steam-vessel, of better build, the Rob Roy, was put on trial, by Mr. David Napier, to carry goods and passengers, in the coasting trade, in the open channel; and the trial proved so successful that its results are now apparent in every sea which has been navigated by civilized men.

The building of sailing vessels on the Clyde went on increasing with the increase of commerce; and now the building of steam-vessels was in demand. This, during the eighteen years following the Comet's first voyage, did not exceed an aggregate of 5,000 tons; but afterwards it rapidly and enormously augmented. All the vessels, for a time, were small and of timber; but many large ones began to be required; and both small and large came eventually to be constructed of iron. About 1838, Messrs. Tod and Maegregor made the trial of building two iron steamers, the Royal Sovereign and the Royal George, for the trade between Glasgow and Liverpool. These ships were confidently anticipated by numerous eminent sea-faring men to prove a failure; yet they were found to combine all the advantages of timber ships with others peculiar to themselves, particularly cheapness, durability, rapidity of construction, and light draft of water. The constructing of steam-engines proceeded and improved con-

temporarily with the constructing of the steamers themselves, and soon reached a pitch, particularly in the establishments of Mr. Robert Napier and Messrs. Tod and Macgregor, which gave Glasgow a pre-eminence for them over all other parts of the world. Mr. Napier, prior to the summer of 1855, supplied the engines for the Cunard steam ships, for some of the finest ships of the West India Company, and for various heavy frigates, belonging to the British government, executed from time to time large orders for foreign governments, and built the Simoom steam screw frigate and the hitherto unprecedentedly large mercantile steamer, the Persia. Twenty-nine establishments, besides his, were at work, and all were so busy that almost every one of them was obliged to refuse orders of great magnitude. A vidimus of the trade, in the years 1846-52, was presented by Dr. Strang to the meeting of the British Association at Belfast; and this, though already somewhat antiquated, is so instructive that we must give it entire:—

"Number of Steam Vessels and Power of Marine Engines built or made at all the Ports on the Clyde, from 1846 to 1852.

Years.	No. of Vessels					Wood.—Tonnage.	Iron.—Tonnage.	Engines' Horse Power	Wood Hull.	Engines' Horse Power	Iron Hull.	Engines' H. Power for Vessels not built on Clyde.
	Wood.—No.	Iron.—No.	Paddle.—No.	Screw.—No.	Wood.—No.							
1846	17	..	17	14	3	...	7,125	...	2,490	300		
1847	26	3	23	21	5	5,485	11,514	...	3,770	410		
1848	34	2	32	23	11	2,117	10,292	2,810	2,721	934		
1849	23	1	22	17	6	285	11,513	...	2,906	380		
1850	32	3	29	14	18	4,813	13,791	1,725	3,482	620		
1851	42	1	41	22	20	2,402	25,322	...	6,169	940		
1852	78	4	69	30	43	3,229	49,716	2,204	10,055	5,850		
	247	14	233	141	106	18,331	129,273	6,739	31,593	9,434		

"On examining the foregoing table, it will be found that, during the last seven years, the steam vessels built and the marine engines made, including those at present constructing, have been as follows:—Number of steam vessels built—wood hulls, 14; iron hulls, 233; in all, 247; of these 141 were paddles and 106 screws. The tonnage of the wooden steamers amounts to 18,331, of the iron to 129,273. The engines' horse power in wood hulls was 6,739, the engines' horse power in iron hulls was 31,593; while there was of engines' horse power, constructed for vessels not built on the Clyde, 9,434; making a grand total of 247 steamers, amounting to 147,604 tons, and of engines 47,766 horses' power. From these tables also may be gathered the fact, that wooden hulls for steamers are giving place to those of iron, and that the screw is more patronised than the paddle. Of the whole vessels constructed during 1852, or in progress of construction, at the various building-yards on the Clyde, amounting to 73, only four were of wood, while the proportion of screws to paddles is as 43 to 30. Before leaving the present extent of the branch of industry under consideration, it may perhaps be as well to state that, in addition to the steamboats and marine engines constructed in the Clyde, there has been and is at present a large business carried on in steam dredgers and iron punts, not only for maintaining and extending the Clyde navigation itself, but also for improving other rivers and harbours.

"Having now given some idea of the extent of steamboat building, &c., on the Clyde, let me next attempt to arrive at some probable idea of its value and importance as a branch of the business and industry of the district in which it is located. This,

however, is a more difficult task than it would appear at first sight to be, arising from the great variety of circumstances which affect the price of different sizes and kinds of steamers, and particularly from the great difference occurring in what may be designated their general and cabin furnishings. As a proof of this I may mention that, of the 14 ocean steamers for the British and American Royal Mail Service, which were all built and fitted out in the Clyde, and which commenced at a cost for each ship of about £50,000, the last, from increased size and power, reaches upwards of £110,000, an increase of price far greater than the increase of power and tonnage. From all I can gather from those best conversant with the subject, I am inclined to assume as an approximation to the truth the following prices:—Wooden hulls of all sizes, irrespective of the cost of engines, boilers, and machinery, and exclusive of all furnishings, £14 per ton; iron hulls as above, £12 do. The general and cabin furnishings, as I have already stated, are so various according to the employment intended for, and style of finish, that no price per ton can be named as a general rule. It may be said to range from £6 to even as high as £15, but I shall assume the average of all kinds to be £8. The cost of engines also varies greatly according to size, description of engine, and style of finish. Contracts will be taken at from £25 to £50 per horse power. I shall assume £35 as a fair average. Proceeding then upon this hypothesis, the value for the whole seven years will be as follows:—

Wooden hulls, tonnage.	18,331 @ £14, ...	£256,634
Iron, do., do.,	129,273 ,, 12, ...	1,551,276
General furnishings, &c.,	197,604 ,, 8, ...	1,180,832
Marine Engines, . . .	47,766 ,, 35, ...	1,661,810
		£4,650,552

Showing an annual average of £664,864.

"If, however, we take only the two last years' completed work, and include in it what is now constructing, the annual average for these two years will be £1,253,636. While this certainly looks a large sum, it by no means fully exhibits the value of this branch of industry; for the above sum only represents new vessels and new machinery, and has no reference whatever either to the enlargement of vessels or to the ordinary and extraordinary repairs made on the old. To show that the amount of steamboat repairs in the Clyde must be very considerable, I may state that, in the course of five years, one steam-ship which originally cost £29,000, paid £12,500 for repairs, or upwards of 10 per cent. yearly of its value; and that another steam-ship during seven years, originally costing £37,000, paid £12,700 for repairs. Of these repairs the carpenter got £9,526; the engineer, £12,405; and sundry other parties, £3,269.

"If, from the want of data, we only approximate the value of this industry, we can at least state the number of persons employed in the various building-yards and engine-shops connected with the construction and repair of steam-vessels on the Clyde. At present the number employed is as follows:—Glasgow, &c., 6,210; Greenock and Port-Glasgow, 3,250; Dumbarton, 1,360; in all, 10,820. Here, then, we have the fact that this branch of industry gives work and support to no less than 10,820 individuals; and when we consider the high wages given to many of the engineers, and the respectable rate of remuneration paid to even the lowest person engaged in this business, it is perhaps not too much to assume, that the average of the wages paid to all classes of men and boys will amount to at least 16s.

por week, and consequently the trade circulates £8,656 weekly, or £450,112 annually, of wages."

The trade, immediately after these statistics were drawn up, underwent great increase. A review of it in 1855, for a precurrent period of 18 or 24 months, showed that the number of vessels built, being built, or ordered, was 266, with a tonnage of 167,770; that 88 were sailing-vessels, with a tonnage of 31,266,—126 were screw steamers, with a tonnage of 108,804, and a horse-power of 16,491,—and 52 were paddle-steamers, with a tonnage of 27,700, and a horse-power of 10,344; that many of the ships ranged from 2,000 to 3,000 tons, and one of the steamers was of 3,600 tons, and 1,000 horse-power; and that almost all were of iron. There were built or completed in 1861, 5 iron sailing-ships, of aggregately 3,060 tons, at a cost of £50,560, and 81 iron steamers, of aggregately 60,135 tons, and 12,493 horse-power, at a cost of £1,709,100. There were also on the stocks, in the early part of 1862, 12 iron sailing-ships, of aggregately 3,660 tons, to cost £60,600, and 27 iron steamers, of aggregately 28,362 tons, and 6,140 horse-power, to cost £914,000. Two of the steamers, completed in 1861, were the large famous ones, the Black Prince and the Scotia; and, among those on the stocks, in 1862, were another great steamer to be called the Hector, and three large paddle-steamers for France. The ship-building yards, with their rising hulls, their swarms of workmen, and their thundering noise, strongly arrest the attention of strangers passing down the river; an immense crane for hoisting engines at Lancefield dock also looks wonderful; and the interiors of the chief yards and engine foundries present objects of high interest, but require for admission an order from the proprietors. A handsome, large, lofty, glazed shed, for sheltering the men at work in wet weather, was erected in one of the building yards, at the Kelvin, in 1852, at a cost of £12,000; but, about four years afterwards, was overthrown by a storm.

The Harbour.—The Clyde may be truly considered the right arm of the prosperity of Glasgow; but it has only been made such by unparalleled efforts of industry, ingenuity, and perseverance; and the results of these have been so successful that it may almost be said a river has been created where one did not exist before. In the early part of the 16th century the channel was so much obstructed by fords, shallows, and sinuosities, that the smallest sail boat could not always reckon upon an uninterrupted navigation; but about 1566, detachments of the inhabitants of Glasgow, Renfrew, and Dumbarton, made a bold effort to deepen the course of the stream; and they laboured for several weeks at this praiseworthy undertaking, residing in the meanwhile in huts which had been built for their temporary accommodation at Dumbuck; for it was to the opening of the sand bank at this spot that their efforts were mainly directed. After this period small flat-bottomed boats made their way up to Glasgow, acting principally in the capacity of lighters to the larger vessels which lay at the mouth of the river. Glasgow presented only a bare landing shore; and fully one hundred years elapsed before the Broomielaw was elevated into a harbour, by the formation of a small and rude quay or wharf.

About 1653, the citizens had their principal shipping port at the bailliary of Cunningham in Ayrshire; but as the place was distant and inconvenient, they made an overture to the magistrates of Dumbarton with the view of obtaining ground and permission to build a harbour there. This, however, was rejected on the plea that the influx of seamen would raise the price of provisions to the

inhabitants. At length, in 1662, the town council of Glasgow succeeded in purchasing 13 acres of land from Sir Robert Maxwell of Newark, about 18 miles below the city, and 3 above Greenock, on which they eventually laid out the harbour of Port-Glasgow, built quays and harbours, and constructed the first dry or graving dock in Scotland. Shortly after 1688, they built a quay at the Broomielaw, at an expense of £1,666 13s. 4d. The channel between Port-Glasgow and the Broomielaw, however, was still only navigable for the merest shallows; and it was not till 1755 that the magistrates set about improving the river in earnest, by inviting Mr. Smeaton, the celebrated engineer, to survey and make a report upon it. On 13th September of that year, he reported that the river at the Point-house ford, about 2 miles below Glasgow, was only 1 foot 3 inches deep at low water, and 3 feet 8 inches at high water; and he recommended that a weir and lock should be constructed, 4 miles below the city, in order to secure a depth of 4½ feet in the harbour. This suggestion was approved of; and in consequence the first act of parliament for improving the river was obtained in 1758.

Fortunately it was not acted upon, and the magistrates seem to have remained passive till about 1768, when they called in the aid of Mr. John Golborne of Chester, who reported that the river was still almost in a state of nature, there being upon some shallows not more than 2 feet of water. His survey was fully corroborated by one subsequently made by James Watt, afterwards the great improver of the steam engine. The principle upon which Golborne proposed to act was to narrow the channel for several miles below Glasgow by means of jetties, and by thus confining the water to enable it to act with greater effect upon the bottom, and thus to scour out for itself a deeper channel. In January 1775, Golborne had erected 117 jetties upon the sides of the river, and improved it so effectually that vessels drawing more than 6 feet water came up to the Broomielaw. The town council, however, for a long period, seem to have limited their ambition to the bringing up of coasters, light schooners, and small foreign brigs.

The grand start, in the improving of the harbour and the navigation, was consequent upon the launch of the Comet in 1811; and the progress thence, in building quays, enlarging berths, deepening the channel, and widening, straightening, and embanking the river, went on with accumulating vigour till it achieved enormous results. Much high-priced ground was excavated, and several costly tenements were removed, for the extension of the harbour; fine substantial masonry was formed for the quays, and solid sloping stone-work for the embankments; and 5 powerful steam dredging-machines, one of them double and of 40 horse-power, were employed, along with diving-bells and other appliances, for dredging the channel. The area of the harbour, which had been only 4 acres, was increased to 7 in 1814, 11 in 1827, 21 in 1838, 42 in 1849, 52 in 1854, 57 in 1858, and 70 in 1861; the length of the quays, which had been only 382 yards, was increased to 697 in 1814, 1,114 in 1827, 1,847 in 1838, 3,019 in 1849, 3,496 in 1854, 3,860 in 1858, and 4,376 in 1861; and the depth of water, which had increased after Golborne's improvement to little more than 5 feet, was increased to 9 feet at neap tides in 1820, and to 19 at neaps, and 21 at top-springs in 1861.

These improvements have been effected, by what is called the Clyde Trust, under authority of a series of acts of parliament. The trust consisted originally of the town council; but, after 1824, included also five merchants chosen by the council; was rendered

still more open by bills of 1840 and 1846; and now comprises the lord provost, nine town councillors, two representatives of the chamber of commerce, two of the Merchants' house, two of the Trades' house, and nine of ship-owners and rate-payers. The total sum expended, in improvements and management till 30th June 1861, was upwards of £2,430,000; and the amount of debt due at that date was £1,203,525. The revenue, however, has always been such as perfectly to justify the enormous expenditure, and regularly yields a large surplus which, though applied in the meantime to the carrying on of the improvements, will, after their completion, be all applied to the liquidation of the debt. The amount of the revenue, in 1781, was £1,721 5s. 8d.; in 1791, £3,175 14s. 1d.; in 1801, £3,400 10s. 9d.; in 1811, £4,755 3s. 8d.; in 1821, £3,070 2s. 2d.; in 1831, £18,932 0s. 7d.; in 1841, £49,665 15s. 7d.; in 1851, £68,875 4s. 9d.; in 1861, £105,768 11s. The ordinary expenditure in the last of these years was £86,256 9s. 10d.,—leaving a surplus of £19,512 1s. 2d.; but there was also an expenditure on improvements and new works of £47,683 16s. 3d.

There is another harbour, for the Forth and Clyde and the Monkland canals, in the suburb of Port-Dundas, on a tabular ridge of hill, exhibiting the curious feature of lines of shipping and lofty warehouses on the face of a steep, some 60 or 80 feet above the adjacent levels; but this will be sufficiently understood by reference to our article **FORTH AND CLYDE CANAL**.

Shipping.—The shipping registered at Glasgow, in 1810, comprised a tonnage of 1,956 in 24 vessels; in 1820, a tonnage of 6,131 in 77 vessels; in 1830, a tonnage of 39,432 in 217 vessels; in 1840, a tonnage of 185,707 in 403 vessels; in 1851, a tonnage of 145,634 in 508 vessels; in 1861, a tonnage of 218,804 in 679 vessels. The tonnage of 1861 consisted of 173,146 in 508 sailing vessels, and 45,658 in 171 steam-vessels. The arrivals at the harbour, in 1831, comprised 4,005 sailing-vessels of aggregate 186,576 tons, and 7,537 steam-vessels of aggregate 545,751 tons; in 1841, 5,785 sailing-vessels of 314,262 tons, and 9,421 steam-vessels of 823,111 tons; in 1851, 6,212 sailing-vessels of 424,785 tons, and 11,062 steam-vessels of 1,021,821 tons; in 1861, 4,804 sailing-vessels of 474,740 tons, and 11,281 steam-vessels of 1,029,480 tons. The largest arrivals, in 1831, were three of from 250 to 300 tons; in 1841, were three of from 600 to 700 tons; in 1851, were four of 1,000 tons and upwards; while in 1861, there were eighty of from 700 to 1,000 tons, and twenty-nine of 1,000 tons and upwards. The steam-vessel arrivals, in 1861, comprised 9,764 vessels of 591,308 tons in trade with Scottish ports, 301 vessels of 110,004 tons in trade with English ports, 274 vessels of 258,019 tons in trade with Irish ports, 73 vessels of 25,144 tons in trade with foreign ports, and 169 vessels of 45,005 tons either newly launched or not engaged in a regular trade. The sailing-vessel arrivals, in that year, comprised 2,794 vessels of 178,431 tons loaded coastwise, 1,479 vessels of 117,840 tons in ballast coastwise, 521 vessels of 175,444 tons loaded from foreign parts, and 10 vessels of 3,025 tons in ballast from foreign parts; and the departures comprised 3,793 vessels of 190,004 tons loaded coastwise, 269 vessels of 27,229 tons in ballast coastwise, 716 vessels of 252,680 tons loaded for foreign parts, and 12 vessels of 4,833 tons in ballast for foreign parts. The arrivals at Port-Dundas, in 1861, comprised 532 vessels of 29,299 tons coastwise, and 30 vessels of 1,442 tons from foreign parts; and the departures comprised 554

vessels of 42,371 tons coastwise, and 27 vessels of 1,758 tons for foreign parts.

The Quays.—Two wide, well-paved thoroughfares line the margins of the river, and have on one side the quays, on the other side, ranges of houses, so that they are practically spacious terraces; and they present a scene of mixed bustle and picturesqueness, more varied and striking than anywhere else exists in the kingdom. Wharfage for small craft, to the extent of about 166 yards, is above the first bridge; and the rest of the wharfage, to the extent of nearly 4,100 yards, is immediately below the bridge, along both sides of the river. The berthage for the small, the middle-sized, and the large steamers, is on successively the upper, the central, and the lower parts of the north side; the Napier dock and the Lancefield quay, for fitting out new steamers, are far down on the same side; the berthage of the sailing-vessels, ranging from small to large, and often lying four or five abreast, is along the south side; and an extensive dock, a railway terminus, connecting the harbour with all the neighbouring railways, and steam-worked loading cranes, are in the lower part of that side. The quays have excellent sheds over most of their length, and are under the constant surveillance of a vigilant police. The house-ranges, downward from the bridge, display little architectural attraction, yet are well relieved at one point by the fine campanile tower of the Sailors' Home. The custom-house, on the north line above the bridge, is modern and ornamental, but has neither size nor elegance proportionate to the greatness of the port.

General Traffic.—The quantity of raw sugar which passed the custom-houses on the Clyde, in 1857, was 38,336 tons,—in 1861, was 88,694 tons. Much of it is sent into the country; and about one-tenth of it, latterly, has been beet-root sugar. Refined sugar is prepared in 18 establishments; has, of late years, come rapidly into increasing demand; and is sent largely to Ireland and the north of England. The quantity of tea entered, in 1857, was 3,886,350 lbs; in 1861, was 4,077,774 lbs. The number of cheeses which passed the public weigh-house, in 1854, was 71,731, weighing 1,101 tons; in 1861, was 46,709, weighing 827½ tons. The quantity of onions brought into the bazaar, in 1861, was 16,274 bags and hampers, weighing 813½ tons, and averagely worth £7 10s. per ton. The quantity of oranges imported into Glasgow in 1859, was 1,451 chests, 19,936 half-chests, and 1,878 Sicilian boxes; in 1861, was 911 chests, 25,833 half-chests, and 17,709 Sicilian boxes; besides about 4,000 or 5,000 boxes brought from Liverpool and London. The quantity of fruit, chiefly apples, which is sold direct at the harbour, out of sloops from St. Malo and Jersey. The live stock exposed to sale in the cattle-market, in 1854, besides horses and cows, was 36,009 oxen, 114,780 sheep, 59,739 lambs, and 9,500 pigs; in 1861, was 5,501 horses, 4,905 cows, 47,890 oxen, 151,552 sheep, 71,357 lambs, 17,787 pigs, and 25 goats. The animals slaughtered in the abattoirs, in 1861, were 31,243 oxen, 2,774 calves, 103,044 sheep, 42,637 lambs, 7,877 pigs, and 30 goats.

The bazaar, to which we have alluded, is a spacious, edified, glass-roofed, well-arranged area, in Candlerigg-street, for the sale chiefly of vegetables and dairy produce. The cattle-market is a judiciously-arranged area of 30,000 square yards, in the eastern part of Duke-street. The principal abattoir is adjacent to the Clyde, behind the court-

houses; and two others are in Milton-street and Moore-street. The flesh and fish markets were in King-street, and must have been long regarded as both handsome and spacious; but were gradually forsaken by the migration of the wealthier classes to the west, and underwent conversion to other purposes; and they have not been succeeded by any new markets, the butchers and the fishmongers having followed their customers in all directions, by taking shops wherever the demand is briskest and the payment surest.

The Publishing Trade.—Letter-press printing was introduced into Glasgow in 1638 by George Anderson from Edinburgh; and one of the first works printed by him was an account of the celebrated Assembly of the Church of Scotland which met in that year. The printing trade, however, appears for long to have been conducted on a very insignificant scale; and in 1713 we find the College authorities making proposals for the establishment of a printing press within the university; and one of their reasons is that they were "obliged to go to Edinburgh, in order to get one sheet right printed." The typographic art at length attained high celebrity in Glasgow by the exertions of Messrs. Robert and Andrew Foulis, the former of whom commenced business in 1741; and during a series of years, many editions of the classics issued from their press printed in a style of accuracy and beauty which had never before been equalled in Great Britain. Glasgow has never attained any distinction in the publishing of original works: yet it has issued many large and excellent ones, in the number trade; it also boasts the production of an edition of the Bible, in 19 volumes, for the use of the blind; and it carries on printing to a great extent, and in a style of high beauty. Periodicals of various kinds have, from time to time, been started in it, but generally have not had much success. The first newspaper published in it appeared in 1715; four others followed before the close of the century; and two of these, the *Courier* and the *Herald*, still survive. Those published in 1861, were, daily, the *Glasgow Herald*, the *Glasgow Morning Journal*, and the *North British Daily Mail*; weekly, the *Glasgow Courier*, the *Glasgow Advertiser*, the *General Advertiser for Scotland*, the *Glasgow Mercantile Advertiser*, the *Glasgow Citizen*, the *Glasgow Examiner*, the *Glasgow Free Press*, the *Glasgow Gazette*, the *Glasgow Sentinel*, the *Glasgow Times*, the *Penny Post*, the *Property Circular*, the *Saturday Post*, the *Scottish Banner*, the *Scottish Sentinel*, the *Christian News*, the *Protestant Layman*, and the *Weekly Journal of the Scottish Temperance League*; fortnightly, *Forsyth's Advertiser*; and monthly, the *British Friend*.

Communications.—The railways from Glasgow are the Caledonian, the Glasgow and Paisley, the Glasgow and South-western, the Edinburgh and Glasgow, and the Dumbartonshire and Helensburgh. The Caledonian has two termini, northern and southern, and the Glasgow and Paisley is a joint line common to the Glasgow and South-western and the Glasgow and Greenock branch of the Caledonian. The northern terminus of the Caledonian is situated on Port-Dundas road, opposite Cowcaddens; and was designed to be a splendid structure, but as yet is little more than a vast temporary shed. The southern terminus stands at the middle of the southern outskirts of the city; is a very plain pile, with good accommodations; and sends off lines to Neilston, Hamilton, and Motherwell, the last going into junction there with the northern line. The Glasgow and Paisley terminus, or joint terminus of the Glasgow and South-western and the Glasgow

and Greenock, stands in Bridge-street, near the head of the south side of the harbour, and presents to the street only a small façade of heavy Doric character, yet has extensive, well-contrived accommodations. The Edinburgh and Glasgow terminus serves also for the Dumbartonshire and Helensburgh; has its entrance from Dundas-street, its exit to the head of Queen-street, its main front to George-street; comprises structures of different dates, inclusive of an elegant edifice in Roman Doric, built in 1818 for the congregation of Dr. Wardlaw, and purchased in 1852 for the uses of the railway; and contains large accommodation. Several contiguous works on the railways, particularly a tunnel near the north terminus of the Caledonian and a tunnel immediately adjacent to the terminus of the Edinburgh and Glasgow, were stupendous undertakings; and these two tunnels, together with the Monklands railway, intersect a point contiguous to Pultney-street, the Edinburgh tunnel lewmost, the Caledonian tunnel in the middle, the canal above. The number of passengers who arrived, in 1861, by the Caledonian, was 1,106,105,—by the Glasgow and Paisley, 256,321,—by the Glasgow and South-western, 194,579,—by the Edinburgh and Glasgow, 452,108,—by the Dumbartonshire and Helensburgh, 317,537; and the number who departed, by the Caledonian, was 977,274,—by the Glasgow and Paisley, 246,498,—by the Glasgow and South-western, 191,594,—by the Edinburgh and Glasgow, 469,329,—by the Dumbartonshire and Helensburgh, 215,255. Loop-lines, serving for goods, connect the northern Caledonian line with the Edinburgh and Glasgow, and the southern Caledonian line with the Glasgow and Paisley; while connections or ramifications of the main lines, for both passengers and goods, give communication to all parts of the kingdom.

The Monkland canal and the Forth and Clyde canal, as already noted, have their harbour at Port-Dundas; and another canal, going to Paisley and Johnstone, has its harbour at Port-Eglington, southward from the head of Bridge-street. All these were formerly rife with passenger traffic; but, since the era of railways, have been used only for goods. The passenger traffic on the Clyde, especially for places on the frith from Dumbarton down to Arran, is immense. River-steamers, of beautiful construction, leave the harbour every hour, and sometimes every half and quarter of an hour from morning till night; and some of them possess such power of steam, coupled with such adaptation of structure to swift sailing, that they career through the water at the rate of 14 to 18 miles an hour. Public coaches or omnibuses run regularly to all towns in the surrounding country, not touched by the railways or the river; omnibuses ply also between distant points within the city, and its suburbs; and public cabs are constantly on hire at central stands and at numerous offices. The number of public coaches, in 1861, was 64; of omnibuses, 53; of public cabs, 248. Twenty-three of the omnibuses ran, within the city, aggregately 1,150 miles a-day; the other thirty ran, between the city and suburban places, aggregately 1,200 miles a-day; and the whole were worked by about 550 horses, and carried daily about 12,500 passengers.

The Post-Office.—The mail to Edinburgh, prior to 1709, was carried on foot; and the letters for London, prior to 1788, passed through Edinburgh, and were detained there twelve hours. The post-office was, at one time, in a small shop in Prince's-street, then called Gibson's wynd; at another, in St. Andrew's street; at another, after 1803, in a court off Trongate; at another, in Nelson-street; at another,

after 1840, in Glassford-street; and is now in George-square. The present edifice was erected in 1856, and is in the Florentine style, with rusticated basement and inscribed balustrade, but appears to most of the merchants to be far deficient in both largeness and elegance. There were, in 1861, within the city and the suburbs, 19 receiving-offices, 25 public letter-boxes, 10 pillar-boxes, and 4 branch money-order offices. The deliveries, in 1861, comprised 12,348,960 letters, 728,300 books, and 623,207 newspapers. The amount of money-orders, in 1860, was £171,774 issued, and £239,097 paid. The revenue, in 1781, was £4,340; in 1810, £27,598; in 1839, £47,527; in 1843, after the introduction of the penny postage, £26,709; in 1853, £54,254; in 1860, £74,449. The letter-carriers have worn a uniform since 1855.

The Electric Telegraph.—Offices of the Electric Telegraph company are at the Royal Exchange and St. Vincent-street; and offices of the British and Magnetic company are at Exchange-square and the Glasgow and Paisley railway terminus. The number of messages through these offices, during 1861, exclusive of those for the railways and for the newspapers, was 60,740 despatched, and 95,893 received. Wires were erected, in 1861, to convey intelligence from each quarter of the city to another; and have also been prolonged into the neighbourhood, for maintaining communication between counting-houses and factories.

Banks.—The Bank of Scotland made two unsuccessful attempts in 1696 and 1731 and following years, to establish branches in Glasgow. The Ship bank, now merged in the Union, was established in 1749. The banking-offices at present in the city are the office of the North British bank, the head offices of the City of Glasgow and the Clydesdale banks, a head office of the Union bank, great branch offices of the Bank of Scotland, the Royal, the British Linen, the Commercial, and the National banks, and eight sub-offices of the City of Glasgow, two of the Clydesdale, four of the Union, one of the Bank of Scotland, four of the Royal, and one of the Commercial. The statistics of all the banks, except the North British, are given in our General Introduction. The North British bank's office is in West Regent-street. The City of Glasgow bank's chief office is a fine modern edifice, after a design by Mr. Robert Black, in Virginia-street. The Clydesdale bank's chief office was formerly an elegant structure of 1854, in Queen-street; but is now an edifice with lofty façade and elaborately-carved frieze in Millar-street, formerly occupied by the Western bank, which failed in 1857. The Union bank's chief office stands in Ingram-street, across the end of Virginia-street, and is an elegant edifice, modelled after the temple of Jupiter Stator at Rome, with a lofty hexastyle Doric portico resting on a curtain basement, and surmounted by six colossal emblematic statues. The Bank of Scotland's chief office stands also in Ingram-street, confronting Glassford-street, and has, over its principal entrance, a sculpture of two figures supporting a shield with the city arms. The Royal bank's chief office stands on the west side of Exchange-square, confronting the rear of the Exchange, and is a tasteful structure with Ionic portico. The British Linen bank's chief office stands at the corner of Queen-street and Ingram-street, opposite the Exchange, and is a large edifice in the ornate Venetian style, with boldly-relieved portions. The Commercial bank's chief office stands in Gordon-street, a few paces from Buchanan-street, and is a large, lofty, elaborately-adorned edifice of 1857, on the model of the Farnese palace at Rome. The National bank's chief office

stands in Queen-street, in the centre of a hollow oblong connected with the Stock exchange, and is a richly-ornamented building in the mixed Italian style.

The national security savings' bank was instituted in 1836; receives deposits, from individual depositors, to the amount of not more than £30 in one year and £150 in all, in sums of not less than one shilling at a time, but receives larger sums from societies. The number of depositors in 1842 was 13,792,—in 1851, 28,266,—in 1861, 42,122; and the sum accumulated in 1842, was £176,130 0s. 5d.,—in 1851, £492,238 4s. 11d.,—in 1861, £927,427 16s. 3d. The depositors, with the accumulated deposits, in 1861, comprised 41,516 individuals, with £895,310 18s. 8d., 581 charitable societies, with £22,484 17s. 8d., and 25 friendly societies, with £9,631 19s. 11d. The office was originally in John-street, afterwards in Hutcheson-street, and is now in an edifice of 1853, built at a cost of £3,440, at the corner of Wilson-street and Virginia-street. Penny savings' banks were instituted subsequent to 1831; and there were 59 of them within the city and the suburbs in 1861, having aggregately 15,160 depositors and £3,654 10s. 11d. of accumulated deposits.

Exchanges.—A public room for the perusal of newspapers and other periodicals, was opened in Glasgow about 1770; but conferred its benefits upon only a few. A coffee-room or exchange reading-room, with a hotel, on the Tontine plan, was founded, in 1781, near the Cross; and formed, for half a century, the great resort of the merchants; but, on the movement of wealth and business to the west, became mainly superseded by the Royal Exchange in Queen-street. The reading-room and the hotel are still carried on; and the former has ample supplies of newspapers and periodicals, and is accessible to ordinary subscribers for 20s. a-year, to young men in situations for 10s., to farmers for 5s., and to strangers for four weeks free. The buildings exhibit a fine range of Ionic pilasters, resting on a rusticated arcade; and the latter has grotesque sculptures of human faces on its keystones, and retires into a spacious piazza.—The Royal Exchange occupies the east centre of an open square area, confronting Ingram-street; was built in 1829, after designs by David Hamilton, at a cost of £60,000; was partly a reconstruction of the town-mansion of Cunninghame of Lainshaw, but mainly a suite of new erections; and is a splendid edifice, in the Corinthian style, adorned on its main front with a double-rowed octostyle portico, and surmounted, behind the pediment, by a cyclostyle lantern tower. Its reading-room is 130 feet long, 60 feet wide, and 30 feet high; has an ornamental roof, supported by Corinthian pillars; and is well supplied with all kinds of newspapers and business periodicals. The subscribers to it pay each £2 10s. a-year, and are upwards of 2,000 in number; and strangers introduced by subscribers, have free access for four weeks. Spacious paved areas extend along the flanks of the Exchange; ornamental ranges of building, chiefly occupied as warehouses, edifice the north and south sides of the square; and two triumphal Doric arches give pedestrian communication on the west to Buchanan-street.—The Stock exchange, as already noted, stands conjoined with the National bank.—The Corn exchange stands at the corner of Hope-street and Waterloo-street, is an edifice of 1842 in the Italian style, and contains a hall 80 feet by 57.

Public Houses and Hotels.—The proportion of public houses to the inhabitants was 1 to 74 in 1816, and 1 to 232 in 1861; but, judging by the cases of drunkenness, which pass through the police-office,

and which are proportionally about as numerous as ever, an increase in the size or business of the public houses seems to have kept pace with the decrease of their number. Temperance hotels have happily come much into demand; and sixteen of them, the Waverley, the Caledonian, the Victoria, Steel's, M'Arthur's, Graham's, Whyte's, Taylor's, Drummond's, Murdoch's, Angus's, Buchanan's, Dodd's, Haddow's, Hamilton's, and Dunn's, are in the most crowded parts of the city. The chief commercial hotels are the Albion, the Albert, Allan's, the Ayrshire, two Commercials, the Crow, the Globe, His Lordship's Larder, the London Commercial, the Rainbow, the Southwestern, the Thistle and Solo, the Tontine, and the Victoria. The first-class hotels are the Buck's Head in Argyle-street, the Bedford in St. George's-place, the Imperial in North Queen-street, and the George, the Queen's, and the Royal in George-square. The Buck's Head was one of the earliest edifices in Argyle-street, took rank at once and has ever kept it as a first-class hotel, and presented, till of late, a quaint front, with ascent to the entrance by outside flights of steps. The three George-square first-class hotels are very extensive establishments. Two clubs, the Western and the Union, on the plan of the London clubs, were established in respectively 1824 and 1837. The Western club has upwards of 500 ordinary members, and possesses a large handsome edifice, with Corinthian decorations, in the Italian palatial style, at the corner of Buchanan-street and St. Vincent-street. The Union club was dissolved in 1855, and had then about 215 ordinary members.

Structure.

Site.—Glasgow stands partly on the left bank of the Clyde, but chiefly on the right bank. Its site, over all the left and over half of the right, is level ground, lying in some parts below the elevation of freshets in the river, and rising nowhere more than a few feet above the elevation of spring tides; while the site, over the upper or northern half of the right, is ridgy ground, with much variety of contour, sloping, undulating, tabular, or hilly, in some parts almost level, in others steeply acclivitous, at elevations of from 50 to 180 feet above the level of the river. All the low ground is believed to have formed part of a shallow estuary so recently as 3,000 years ago or less; and there have been found ancient rude canoes in some spots of it, beneath the modern streets. The Molindinar burn sweeps round the north-east in a deep ravine, but passes on to the Clyde across the low ground. The river Kelvin approaches and partly skirts the north-west in a fine dell, and does not altogether lose overhanging high banks till near the Clyde. The views within most of the city, even including the environs, are confined, mainly architectural, and largely characterized by the smoke and turmoil of a great seat of manufactures; but those from a few of the higher spots, particularly the Necropolis, Sighthill cemetery, and the upper part of the West-End park, combine picturesque foregrounds of the city with rich rural perspectives, away to distant hills or mountains.

Growth.—The germ of the city grew on high ground adjoining the western side of the Molindinar burn's ravine, nearly a mile north of the Clyde. Any extension immediately eastward was not practicable, in consequence of the opposite side of the ravine being flanked by steep or precipitous hill. The earliest extensions travelled over the high ground, chiefly in rapid slopes south-eastward and south-westward, to the plain. A grand series of extensions, which constituted the main bulk of the city

till the latter part of last century, went southward thence to an ancient bridge across the Clyde, on the site of the present Victoria bridge. The central line of thoroughfare through these extensions was the Bell o' the Brae to the plain, and successively High-street, Saltmarket, and Bridgegate to the bridge; and this was intersected at the Cross, by a transverse main line of thoroughfare, consisting of Gallowgate going east and Trongate going west. The principal extensions of the latter part of last century and the early part of the present, went westward along the plain, over all the breadth between the high ground and the river; and had, for their main thoroughfares, George-street along the base of the high ground, Trongate, continued by Argyle-street along the centre, and a number of transverse streets going parallel or nearly so with High-street and Saltmarket. Other extensions of contemporary growths went eastward, partly on the wings of Gallowgate, and thence eastward and south-eastward into suburbs, while still others germinated on a small old suburb at the south end of the bridge across the Clyde, and spread thence to the south, to the east, and to the west. More recent extensions, the greatest in bulk and the grandest in character, have gone partly northward but chiefly westward, from the end of George-street and the middle of Argyle-street, away to the Kelvin, and in one part beyond it; but from causes, variously physical and economical, they have, over the latter part of their growth, been incompact or straggling, leaving great spaces either to lie in a waste condition or to be partly occupied by unsightly tenements. These extensions appear to a stranger as if evidently planned on too ambitious a scale, and seem, from the vast proportion of unoccupied houses, which we shall afterwards notice, to have been in no small degree uncompensating as yet to the builders; but, at least, should they happen not to realize a fond general expectation of the citizens, that Glasgow will yet and soon be compact all to the Kelvin, and far to the west of it, they afford fine breathing room to the inhabitants, and are much more promotive of health and comfort than if they had been constructed with slower caution and steadier method.

Extent.—The royalty of the city lies all on the right side of the Clyde, comprises 988½ acres, and is divided into the parishes of Blackfriars, Inner High, Outer High, St. Andrew, St. David, St. Enoch, St. George, St. James, St. John, St. Mary, and small parts of Maryhill and Springburn. The parliamentary burgh includes also the parishes of Barony, Calton, and Gorbals, and parts of Govan, Maryhill, and Springburn; and a suburban tract returned with the population of the city, includes the parish of Shettleston and the rest of the parishes of Govan, Maryhill, and Springburn. The entire area is 21,336¾ acres. The edificed area, exclusive of detached parts and straggling outskirts, is about 4 miles from east to west, and about 2 from north to south; and the strictly compact portion of this, around the centre, is about 2½ miles by 1½. The aggregate of edificed roadway, within the parliamentary burgh, is 86½ miles; of unedificed roadway, 30 miles; of railway, 11 miles; of canal, 3¾ miles.

Alignment.—The oldest parts of the royalty contain alleys, curved thoroughfares, and narrow irregular streets. The comparatively modern parts of the city, both within the royalty and beyond it, comprising most of the northern, central, and southern districts, consist chiefly of straight airy streets, crossing one another at right angles. The part along the right bank of the Clyde, for nearly a mile downward from the south-eastern suburbs,

with a mean breadth of fully 3 furlongs, consists of the public park of Glasgow Green. The thoroughfares thence, along both banks of the river, have the character, which we formerly noticed as belonging to the quays, of spacious street-terraces, edified only on one side. The area of the college gardens, at the back of High-street, and two squares, George's and St. Enoch's, near the middle of the central district, break the prevailing density of the street-masses. The newest parts of the city, in the west, display a splendid assemblage of handsome streets, symmetrical terraces, elegant crescents, one elevated square, and the richly-built places at the West-End park, intermixed with open grounds and ornamental shrubberies. The suburban tracts are partly town and partly country, partly contiguous to the great street-masses and partly at a distance; and they present every variety of character, from the dense street or the dingy village, to strings of villas and the open fields.

Most of the compact districts of the city exterior to the royalty, and of the continuous suburbs on the outskirts, have separate names, and either were originally separate villages, or took their designations from separate estates. The chief, on the north, are Cowcaddens, Port-Dundas, and St. Rollox; on the east, Calton, Camlachie, Mile-end, and Bridgeton; on the south, Hutchesontown, Gorbals-proper, Lauriston, Tradeston, and Kingston, often aggregately called Gorbals; and on the west, Blythswood Holm, Anderston, Finnieston, Sandyford, and Kelvinhaugh. Some of the detached edificed suburbs are almost connected with the street-masses by intermediate chains of houses; while others stand a mile or more distant by open road. The chief are, on the north-west, the town of Maryhill, and the village of Kippoch-hill; on the north, the village of Springburn; on the east, the villages of Shettleston, Eastmuir, Hogganfield, Provenhall, Tollcross, Parkhead, and part of Barrochnie; on the south, the village of Strathbungo; on the south-west the villa-street of Pollockshields; on the west-south-west, the town of Govan, and the villages of Govan-Hill, Colliery and Whiteinch; and on the west, the town of Partick and the fine new aristocratic quarter of Hillhead. Most of the rural portions of the suburbs, too, are rural in only a comparative sense, and present such a stir of passing traffic, such a smokiness of atmosphere, and such thick sprinklings of mine-shafts, workshops, factories, or dwelling-houses, as render them truly suburban.

Appearance.—The stranger, entering Glasgow by any of its openings, is not impressed with any very dignified notion of its grandeur or importance. By the Edinburgh and Glasgow railway and the northern line of the Caledonian, he enters through tunnels; by the southern line of the Caledonian, he approaches through murky mineral fields, and under the blaze of iron works; by the Glasgow and Paisley railway, or joint line of the Glasgow and Southwestern and the Glasgow and Greenock, he enters along an ugly viaduct over or among inferior houses; by most of the coach roads, he approaches through clouds of smoke, and enters amid the din of spindles, the roar of machinery, or the brattling of hammers; and even by the Clyde, whose rich and varied beauty delighted him as he came along, he has left all that beauty behind him, and enters amid motley arrays of slip-building yards, engineering establishments, roperies, dye-works, and the clearances of the harbour. But no sooner does he leave the railway terminus or the steamboat quay, or move into the centre of the city, than he is struck with the spaciousness and splendor of the streets, the numerousness and brilliance of the public buildings, and the seeming

earnestness or intelligence of not a small proportion of the passing throngs. He saw, or may have surmised, as he entered, that much of the city is poor and miserable; he knows, or may have inferred, that ail of it is a hive of industry; and now he wonders to find it, at the same time, making a large display of calm wealth, fine taste, and high beauty. Glasgow boasts none of the thrilling picturesqueness of Edinburgh or Bath; yet it goes some way to rival them in their own style, possesses considerable attractions of its own, and is far superior, as a town, to most of the great seats of trade in either Scotland or England.

Street-Architecture.—The city, in general, is remarkably well-built. The building material is a fine light-coloured sandstone; the masonry is substantial; the house-ranges, for the most part, are well amassed; and the street-frontages are generally polished and lofty. The ancient districts have much haggardness, few recent renovations, and little of the old Scottish style which gives so quaint and romantic an aspect to some of the old parts of Edinburgh. The less ancient districts are chiefly in the simple common style which prevails in most stone-built British towns. The newer districts also are in the same style, but with much ornamentation, at first light and graceful, but afterwards increasingly heavy, excessive, and in questionable taste. The newest districts are ambitious and showy; some parts in very tasteful Italian; others abounding in pillared porches, projecting or divided windows, balconies, and balustrades; and the grand front range on the crown of the West-End-Park in the French style. A strong fondness is shown for the pillar decoration, even up to the Corinthian and the composite, but sometimes on a poor type. The reconstructions of the last ten or fifteen years, in the chief business-streets, also display a passion for variety of style and profusion of ornament, with effects more striking than classical, producing edifices of Saxon, Norman, Roman, Flenish, and mixed characters, in near neighbourhood to one another, and in juxtaposition with old or plain buildings. Even a strong, lofty, ornate, iron shell, is not wanting in lieu of a stone-house; and paint itself, in the absence of solid decoration, has occasionally been laid on in gaudy colours. These features, however, are exceptional; and, while no doubt pleasing to the eyes of many observers, they do not, to even a severe taste, materially mar the effect of the prevailing elegance.

Drygate, Rotten Row, and Bell o' the Brae, in the vicinity of the cathedral, retain some vestiges of ancient grandeur. Ladywell-street, in the same vicinity, contains a restored small structure over a famous well, anciently dedicated to the Virgin Mary. Duke's-place, adjacent to Drygate, contained, till 1853, an ancient castle which entertained Queen Mary, belonged afterwards to the Duke of Montrose, and gave name to the modern neighbouring Duke-street, which leads, on a line with George-street, to the eastern suburbs. High-street retains some very old edifices, and is ribbed with closes, densely peopled by the poor. Saltmarket was once the chief residence of the magistrates of the city, the Bailie Nicol Jarvie of their time, and gave lodging to James, Duke of York, afterwards King James VII.; and it contained, till about 1822, some curious ancient houses; but it now is the centre of the rag-fair of Glasgow, and presents no feature of interest. Bridgegate also was once a place of high note, containing the house in which Oliver Cromwell lodged, town-mansions of several noble families, and afterwards the only banks of the city, the Merchants' hall, and the Assembly-rooms, in which the Duchess

of Douglas led off the Glasgow civic balls about the commencement of last century; and it still possesses some fine old features, but is akin in present character to Saltmarket. King-street, going from Bridge-gate to Tron-gate parallel with Saltmarket, was a less ancient aristocratic quarter, but also has been relinquished to the poor. St. Andrew's square, 120 yards east of Saltmarket, and connected with it by St. Andrew-street, was built in the latter part of last century as an aristocratic quarter; and it shows a symmetry and an ornate worthy of its design; but it soon went into disrepute. London-street, going eastward from the head of Saltmarket, with acute divergence from the line of Tron-gate, is a straight, neat, modern outlet to the south-eastern suburbs, and leads to them by a fine terrace-line, called Monteith-row, along the upper verge of Glasgow Green. Gallowgate and most of the eastern parts and suburbs are irregularly edified and dingy.

Tron-gate, already noticed on page 735, was the seat of all the main business of the city so late as the time of the tobacco trade; and it has everywhere a width of fully 60 feet, and is all lined with stately edifices, a few of them somewhat old, but others new and ornate. A block of buildings, on its north side, at the corner of Nelson-street, is an imposing structure of 1857, in the old Scottish baronial style, after designs by Mr. Rothead, and occupies the site of a house in which Sir John Moore was born. Candlerigg-street, going northward on a line with King-street, is a comparatively ancient thoroughfare, entirely modernized. Three wynds going southward on the west of King-street, but screened from Tron-gate by handsome buildings, are packed with most miserable abodes, and have a similar character to the Cowgate and worst closes of Edinburgh. Hutcheson-street and Glassford-street, going northward from Tron-gate, parallel to Candlerigg-street, are spacious, pleasant, and comparatively modern; and the former took its name from Hutcheson's hospital confronting its head,—the latter from a distinguished merchant of the times of the tobacco trade, mentioned by Smollett in his "Humphrey Clinker." Stockwell-street, going southward on a line with Glassford-street to Victoria bridge, is older, and was long the south-western verge of the city.

Argyle-street, going on a line with Tron-gate fully three quarters of a mile westward to Anderston, is all as stately and spacious as Tron-gate, but has a larger proportion of recent houses, and a larger number of the variously ornate. Virginia-street and Miller-street, going northward parallel to Glassford-street, were originally edified with the mansions of the rich merchants in the times of the tobacco trade; and the former took its name from their traffic with Virginia; but both have been completely altered or re-edified. Queen-street, in the same alignment further west, was long the line of road by which the citizens' cattle went to the common pastures; and it continued to be called Cow-loan within the memory of persons still alive; but it underwent entire change, followed by entire reconstruction, and is now one of the most handsome business streets in the city. Buchanan-street, also in the same alignment still further west, was, so late as 1816 or later, a place of villas, so secluded that grass grew plentifully on its carriage-way; but is now lined with lofty, elegant, business tenements, contains many grand shops, and several public halls, and has long been one of the most crowded and fashionable of all the thoroughfares. Argyle arcade, going from Argyle-street to Buchanan-street, first northward, then westward, is a long, glass-covered

alley, lined with fine shops, and sometimes called by the citizens their Crystal Palace. St. Enoch's-square, entered from Argyle-street by a brief thoroughfare opposite the foot of Buchanan-street, was originally a villa-built aristocratic quarter, with enclosed lawn and shrubbery; but, without much reconstruction of its buildings, has been all given up to business and shorn of its enclosure. Jamaica-street, going southward from Argyle-street to Glasgow-bridge, is the main thoroughfare to the harbour and the southern railways; and it presents a strange and striking variety in its house-architecture. Anderston, at the western extremity of Argyle-street, was originally a weavers' village, founded in 1725; rose to be a considerable town, at the distance of half-a-mile from the outskirts of Glasgow; became eventually the chief seat of the marine steam-engine establishments, as well as a seat of other factories; and retains a crowded, sooty, malodorous character, with multitudes of very inferior houses, engirt by the recent extensions of the city.

The many other parts and thoroughfares, excepting in a few peculiar or illustrative instances, need not be specified. Most consist of either the newer or newest extensions, and are either pleasingly neat or grandly ornate. George-square, at the top of Queen-street, was originally all a place of wealthy private residences, around a spacious garden enclosure; but, while retaining the enclosure, it has been considerably re-built, and is now entirely occupied by large hotels and by houses of business. A large aggregate of street adjacent to this square and westward, was also originally edified for the residence of wealthy families; and, without much alteration on its buildings, has been converted to business uses. A large sprinkling of new or recent warehouses occurs in the same neighbourhood, and exhibits much variety of architectural style. Cowcaddens, north-west of the head of Buchanan-street, was originally a poor village, built on the common pastures of the city's cattle; and, though now continuous with the new streets, and itself all re-built or modern, it retains its poor character, and spreads densely over a large area, entirely occupied by the working-classes. Sauchiehall-street, deflecting from Buchanan-street, near its head, and going more than a mile westward to the vicinity of the West-End park, was chiefly, till about 1830, a rural "loaning," but is now a splendid street 60 feet in width,—the eastern part of mixed appearance,—the central part lined on one side with stately shops and dwellings, and overlooked on the other by a chain of villas,—the western part disposed in brilliant terraces and crescents, with fronting lawns and shrubberies. A series of arcades, going from the lower part of Sauchiehall-street to Cowcaddens, is of similar character to the Argyle arcade. Blythswood-square, on the crown of a broad-based tabular eminence $1\frac{1}{2}$ furlong south of the central part of Sauchiehall-street, is a spacious, elegant, symmetrically-edified place of private dwellings, with central garden-enclosure, and commands fine views down radiating streets and over the western suburbs. Garnet-hill, a steep ridge flanking the north side of the central part of Sauchiehall-street, is well covered with genteel streets, and commands better and wider views than Blythswood-square. A district round the western part of Sauchiehall-street, called collectively the Crescents, and containing numerous terraces, the Park circus, and the Elmbank, the Woodside, the Lyndoch, the Claremont, the Royal, and the St. Vincent crescents, abounds in garden plots and shrubberies, and presents, like the New Town of Edinburgh, many a range of elegant houses, constructed on some plan of a single façade, combining

uniformity with diversity, as in the façade of a single building.

The Gorbals districts, on the south side of the Clyde, occupying a similar relative position in Glasgow to what Southwark does in London, contain about 80,000 inhabitants, and would, if they stood alone, be a great town of themselves. Their streets, in general, have a close resemblance to those of the west-central parts of the city; and at least two of them, Abbotsford-place and Apsley-place, together with some outskirts, are highly genteel; but most, especially in the east, are connected with factories and occupied by the working-classes; few present any features of much interest; and the one which goes southward from Victoria bridge is chiefly an old narrow thoroughfare, winged with wretched closes, and popularly called "Little Ireland."

Public Buildings.—The public buildings of Glasgow are very numerous, and make a great aggregate display, but do not present so much variety as might be expected. Most of the many steeples are spiral, and very similar to one another; and, as seen from some vantage grounds, they and the chimney-stalks of the factories appear intermixed like an assemblage of obelisks. Most of the many modern churches, also, are on one type, a coarsely ambitious Gothic; and, as looked at one after another, they appear a good deal like a continual repetition of the same structure. Most of even the Grecian or the Roman edifices, likewise, so far resemble one another as to exhibit the common character of one porticoed front and plain flanks and rear. Variety indeed exists, and is even plentiful, but not in a pleasant way, for it revels in debasing the Gothic, modifying the Grecian, or blending or confounding different styles. Yet some of the buildings are faultless and magnificent; while others, in spite of all their faults, are either pleasing in themselves or form striking features in the general picture. All those connected with public institutions and all the ecclesiastical ones will be noticed in subsequent divisions of our article, and some were noticed in the previous division, so that only a few fall to be noticed in the immediately following paragraphs.

Bridges.—An elegant one-arched bridge, fancifully called the Bridge of Sighs, spans the ravine of the Molindrun burn in the vicinity of the cathedral, has an ornate Tudor portal, and forms the entrance to the Necropolis. Two good modern bridges cross the Kelvin, communicating with Hillhead; and an old one, repaired in 1862, crosses the same stream, communicating with Partick. An old unsightly stone bridge crosses the Clyde at the south-eastern suburbs, leading out to Rutherglen; a light, handsome, pedestrian suspension bridge, erected in 1855, crosses it from Glasgow Green, a little above Nelson's monument; and three spacious stone bridges, called the Hutchesontown, the Victoria, and the Glasgow, and a pedestrian suspension bridge, cross it on the lines of communication with Gorbals. A bridge on the site of the Hutchesontown one, on a line with Saltmarket, was founded in 1794, but was swept away by a flood, next year, when very nearly completed. A timber bridge succeeded it, but was not strong, and served only for foot passengers. The present bridge was erected in 1833, after designs by Robert Stevenson; and is a heavy structure, 406 feet long and 36 feet wide, with five arches. A weir and lock are above it, to accommodate the hypothetical shipping at Rutherglen, and maintain the level of the water for public works. A bridge on the site of the Victoria bridge, on the line of Stockwell-street, was erected about 1345; formed, for upwards of four centuries, the only direct means of communication between Glasgow and the south;

underwent great improvements in 1776 and 1821; and was taken down in 1850. The present bridge was completed in 1856, after designs by James Walker, at a cost of £40,000; consists of sandstone, faced with granite; and is an elegant structure, 445 feet long and 60 feet wide, with five arches of from 67 to 80 feet in span. The suspension bridge stands $1\frac{1}{2}$ furlong further down the river, was erected in 1853, and is a very handsome structure. A bridge, on the site of the Glasgow bridge, on a line with Jamaica-street, was founded in 1768, had seven arches, and was 500 feet long, but had neither sufficient width of roadway to suit the rapidly-increasing traffic nor sufficient depth of foundation to snit the deepening of the harbour, and required to be taken down. The present bridge was completed in 1835, after designs by Telford, at a cost of £37,000; consists of sandstone, faced with granite; is 560 feet long and 60 feet wide; has seven spacious arches; and shows handsome features of spandril and parapet. These bridges are under the management of a Trust, consisting of the town-council and twelve gentlemen of the neighbouring counties. A pontage for foot-passengers is charged only on the suspension-bridge, but for carriages, carts, and cattle is charged on all the three stone bridges. The revenue, in 1861, was £8,127 3s. 8d.; the ordinary expenditure, £1,689 4s. 7d.; the debt, £28,387 4s. 1d. And as the extraordinary expenditure was only £335 1s. 8d., there was a clear hope that the debt would be extinguished in the course of four or at most five years.

Municipal Rooms.—The council-chamber and municipal offices were long in a building at the Cross, were afterwards in the South Prison quadrangle, at the foot of Saltmarket, and are now in an edifice with main front to Wilson-street and flank-fronts to Hutcheson-street and Brunswick-street. This edifice was erected in 1844, after designs by Messrs. Clark and Bell, at a cost of £62,000; exhibits, on its main front, a grand hexastyle Ionic portico, with sculptured basement-wall; and besides the council chamber and the city offices, contains the county fiscal's chambers, the county sheriff court-room, and other apartments. A fine full-length portrait of the Queen, by Daniel M'Nee, is in the council-chamber.—The old town-hall, in the Tontine buildings at the Cross, is 55 feet long, 34 feet wide, and 25 feet high, and contains portraits of the third Duke of Argyle and several of the Scottish kings; formerly contained also a marble statue of Pitt by Flaxman, which has been removed to the Gallery of Art in Sauchiehall-street.—The baronial hall and police offices in South Portland-street, formerly used for the separate municipal government of the Gorbals districts, are a handsome and commodious suite of buildings.

Merchants' and Trades' Halls.—The old Merchants' hall was at Guildry court in Bridgegate; and a steeple connected with it, a fine symmetrical structure, 164 feet high, built in 1661-9, after designs by Sir William Bruce, is still standing. The present Merchants' hall stands in Hutcheson-street, contiguous to the municipal buildings; was erected in 1843, at a cost of £10,300; is an elegant edifice with Corinthian decorations; and contains a statue of the late Kirkman Finlay by Gibson. The Trades' hall stands in Glassford-street, confronting Garthland-street; was built in 1791, after designs by Robert Adam; shows a pleasing façade, with Doric columns, sculptures, and Venetian windows; is surmounted by a fine dome; and contains an apartment 70 feet long and 35 feet wide, adorned with armorial bearings of the trades, and with civic portraits.

Police Buildings.—The police-office, in its early periods, was a small affair, and was located from time to time in various parts of the city. A suite of buildings for it was erected, in the angle of Bell-street and Albion-street, midway between High-street and Candlerigg-street, in 1825, at a cost of £15,000; and an addition to this was erected, in 1851, at a cost of £8,000. The buildings contain a hall for the sittings of the police-court, another for the meetings of the police-committee of the town-council, accommodations for the superintendent of streets, the surveyors, the treasurer, and other officials, and ranges of cells and ward-rooms for prisoners. An adjoining building consists of barracks and other accommodation for the unmarried members of the force; and buildings in College-street, at a short distance, erected in 1851, accommodate the fire brigade. These offices collectively serve for what is called the central police division; and other offices, in respectively Calton, Gorbals, Anderston, and Cowcaddens, serve for what are called the eastern, the southern, the western, and the northern police divisions.

Prisons.—The old tolbooth stood at the corner of High-street and Trongate; was erected in 1626-7; contained 32 cells for prisoners; contained also, as already noticed, the council-chamber; and figures in Sir Walter Scott's novel of Rob Roy. All of it was latterly found to be singularly defective and inconvenient; and it gave place to a modern building, disposed in shops and warehouses, and heavily adorned with projecting turrets. But a steeple which was connected with the Tolbooth still stands, obstructing the foot-pavement of High-street, and latterly pierced there with a narrow way for passengers; and is a square ungraduated tower of six stories, surmounted by flying buttresses and a spirelet in the form of an imperial crown, rising to the height of 126 feet, and containing a chime of 28 bells.—The South prison, at the foot of Salt-market, with main front toward Glasgow Green and south flank toward the Clyde, is a great quadrangular pile, erected in 1814, after designs by William Stark, at a cost of £34,800; displays, on its main front, a lofty double-rowed hexastyle portico; and was disposed originally in 122 cells for prisoners, chambers, and offices for the town-council, and court-room and apartments for the assizes. But only 39 of its cells were suitable for the separate system of present discipline; while its other portions proved incompetent for their respective uses; and now most of its interior is disposed in two spacious assize court-rooms, and in other departments connected with the administration of justice.—The North prison, on the north side of Duke-street, 300 yards from High-street, sprang from a Bridewell of 1798; is an assemblage of strong buildings, of different dates till 1854; and contains 26 rooms or cells for debtors, 386 cells for male criminals, 200 cells for female criminals, a chapel, baths, store-rooms, and all other requisite prison appliances. The statistics will be given under a subsequent head.

Barracks.—The infantry-barracks, on the north side of Gallowgate, 600 yards from the Cross, were erected in 1795, and have accommodation for upwards of 1,000 men, and a spacious enclosed parade-ground. A square of buildings on the southern outskirts of Gorbals, 3 furlongs south of Port-Eglington, was erected, at a later period, for cavalry-barracks, and was, for some time, occupied as such, but proved to be unsuitable, and was sold in 1850 to the Govan parochial board, and fitted up as a poor's house.

Assembly Halls.—The City hall, in Candlerigg-

street, contiguous to the bazaar, is a large building of plain exterior; contains an elegant apartment, resting on massive stone pillars and strong arches, capable of seating about 4,000 persons, used for concerts, soirees, and great public meetings, and provided with an orchestra and a very powerful organ; contains also a small hall, committee-rooms, and a well-constructed kitchen. Saturday-evening concerts, for the amusement of the working-classes, have been held in the large hall during eight months from September to April every year since 1853, and attended, on the average, by about 2,800 persons.—The Corporation halls and gallery of art, on the north side of Sauchiehall-street, between Cambridge-street and Rose-street, are a superb suite of buildings in the Italian style, erected in 1854 by Mr. Archibald Macellan for the reception of a rich collection of first-class paintings, which he purposed to bequeath to the public as the commencement of a Glasgow gallery of art. The buildings were scarcely completed when he died; and they and the paintings proved in risk of being alienated, and were purchased by the city corporation. Other paintings were added by Mr. William Ewing and others; and the whole have been carefully classified according to their respective schools, and have latterly been accessible to the public free of charge. Assemblies, balls, and other great social displays are now held in these halls, in place of the old assembly-rooms and the old town-hall. The number of persons who visited the halls in the Christmas holidays, from 25 December 1860 to 5 January 1861, was 4,348; and on the Fair holidays, from 12 to 17 July 1861, was 1,882.—The Queen's Rooms, in La Belle Place, adjacent to the main entrance of the West-End park, are a large, recent, splendid edifice, in the Roman style, with emblematic sculptures, filling a broad frieze; and contain an elegant spacious hall, provided with a fine organ, and used for public assemblies.—The Exhibition-rooms, in Bath-street, were originally a large dwelling-house, and were fitted up, a few years ago, by the Architectural Institute of Scotland, as a museum of art and manufacture.—The Merchants' hall and the Trades' hall also are used for public meetings. The old assembly-rooms have been changed in object, and will be noticed when we come to speak of the Athenæum.

Theatres.—The first theatre in Glasgow was a temporary booth fitted up, in 1752, in the vicinity of the wall of the Archbishop's palace. A regular theatre was built, in 1764, in the Grahamstown suburb; suffered much damage by fire, on the first night of performance; was re-fitted, but had very indifferent success; and was burned to the ground in 1782. A theatre was built in Dunlop-street, off Argyle-street, in 1785, and opened by Mrs. Siddons, Mrs. Jordan, and other distinguished performers. Another theatre, one of the largest and most elegant in the United Kingdom, was built a few years afterwards, in the upper part of Queen-street, at a cost of £18,500; and was burnt to the ground in January 1829. The Dunlop-street theatre was rebuilt in 1839-40; and is a showy but tasteless edifice, with exterior statues of Shakspeare, Garrick, and Mr. Alexander. A neat theatre was fitted up in 1848, in West Nile-street; but came to be under the same management as the Dunlop-street theatre, and began then to be used chiefly in the summer months. A most appalling catastrophe took place in the Dunlop-street theatre on the night of 17th February, 1849. When the play was in progress, an unfounded alarm of fire in the upper gallery excited a panic, when the people in this part of the house made a rush to escape by the stair leading to the street. Some of them tripped and fell at the

lowest landing from the bottom, and one of the leaves of the door at this spot got jammed. As others followed in frantic alarm, they fell over or upon those who had fallen before them, and the crowd behind still pressed on from the gallery. The consequence was that the staircase was in a few minutes in the state of the black hole of Calcutta; and although many were rescued in an insensible state, no fewer than 65 men, women, and children, were trampled to death or suffocated. Another catastrophe, affecting chiefly the building itself, but very disastrous to it, came upon this theatre in the latter part of January 1863. The building was rendered temporarily useless; a portion of its walls suffered such severe damage as to require to be taken down; and a large portion of its paraphernalia, including dresses and musical instruments, was destroyed.

Professional Halls.—The Procurators' hall, behind St. George's church, with fronts to St. George's-place and West-Nile-street, is an elegant Venetian edifice of 1856; contains the hall and library-room of the faculty of procurators of Glasgow; and is the place for public sales of heritable property. The faculty was chartered in 1796, and had 194 members in 1861.—The Surgeons' hall, on the east side of St. Enoch's square, is a two-story structure, with rusticated basement, pillars, and halustrade; and belongs to the faculty of physicians and surgeons of Glasgow. This faculty was founded in 1599; was recognized by the medical practitioners act of 1858; and had 68 resident and 36 non-resident members in 1861.

Monuments.—A bronze equestrian statue of William III. stands on the pavement in front of the Tontine, and was erected in 1735, at the expense of James Macrae, a citizen of Glasgow, who had been governor of Madras. A sandstone obelisk, 144 feet high, to the memory of Lord Nelson, stands on a swell in the lower part of Glasgow Green; and was erected in 1806, at a cost of £2,075. A monument to Sir Walter Scott, consisting of pedestal and fluted-Doric column, 80 feet high, after a design by David Rhind, surmounted by a colossal standing statue from the chisel of A. H. Ritchie, is in the centre of the enclosed area in George-square, and was erected in 1837. A standing bronze statue of Sir John Moore, by Flaxman, is within the railings at the middle of the south side of George-square, and was erected in 1819. A sitting bronze statue of James Watt, by Chantrey, is within the railings at the south-west corner of George-square, and was erected in 1832. A standing bronze statue of Sir Robert Peel, by Mossman, is within the railings at the north-west corner of George-square, and was erected in 1858. A bronze equestrian statue of the Duke of Wellington, on a granite pedestal, with bronze-sculptured panels, stands on the pavement in front of the Royal exchange; and was executed by Baron Marochetti, at a cost of £10,000, and set up in 1844. A bronze equestrian statue of Queen Victoria, also by Baron Marochetti, stands in St. Vincent-place, off the east side of Buchanan-street, and was erected in 1854. A standing bronze statue of James Oswald, long a member of parliament for Glasgow, is at Charing-Cross, on the north side of Sauchichall-street, and was erected in 1856. A bronze statue of James Lumsden, three years lord-provost of Glasgow, and nineteen years honorary treasurer of the Royal Infirmary,—the statue by Mossman, and 8½ feet high—is in Royal Infirmary-square, and was set up in the early part of 1863. A neat suite of dwelling-houses, at the corner of Buchanan-street and Sauchichall-street, was built by subscription, at a cost of £4,600, as a gift to the

late Dr. Cleland, author of "Annals of Glasgow," and bears the name of the Cleland testimonial. Monuments of William Pitt and Kirkman Finlay, as already noticed, are in respectively the Corporation halls and the Merchants' hall; and a number of fine monuments are in the Necropolis and other cemeteries.

Public Parks.—An ancient public park of Glasgow was latterly known as the Merchants' or the Fir park, and is now the Necropolis. Another, called the Old Green, lay along the Clyde westward from Stockwell-street, and was at one time the fashionable promenade of the citizens, but became all built upon, or appropriated to some industrial use, before the commencement of the present century. A third, known as Glasgow Green, lying along all the north side of the Clyde above Hutchesontown bridge, was originally of small extent, and formed part of the grant made by James II., in 1450, to Bishop Turnbull, for the benefit of the community; but by successive purchases made by the wise town councillors of other years, it has been enlarged to its present noble dimensions of fully 140 acres. For generations the Green was allowed to remain almost in a state of nature, being cut up with springs, holes, and marshes; but latterly it has been drained, improved, and most handsomely laid out, and a ride or carriage drive of about 2½ miles in length formed around. Previous to these modern days, when wealth and fashion moved westwards, this used to be the summer rendezvous of the pride and beauty of the city; it was the scene, as it is partly still, of all the manly sports; and it was the field of all grand military exercises, especially in the stirring times "when George the Third was King," and when every shopkeeper was a soldier. It cannot at all times, however, be depended on for the purity of its atmosphere; for a forest of factory and smithy chimneys is situated north and south, and as the science of smoke-burning is as yet either unknown or unappreciated in these parts, the consequence is, that in certain states of the wind, the black volumes of coal vapour are rolled over upon the Green in bitter abundance. A valuable seam of coal exists under the Green; but nothing short of the bankruptcy of the city would permit the ground to be opened for its mineral resources. Some copious springs of excellent water also are in the Green; and these, in the times preceding the formation of the city water-works and the migration of the wealthier classes to the west, occasioned this park to be the scene of almost all the washing and bleaching operations of the entire city. Hence, says Wilson, in his poem of "The Clyde,"—

"Here barefoot beauties lightly trip along;
Their snowy labours all the verdure through,
The linen some with rosy fingers rub,
And the white foam o'erflows the smoking tub.
Their bright approach impurity refines;
At every touch the linen brighter shines,
Whether they bathe it in the crystal wave,
Or on the stream the whitening surges lave;
Or from the painted can the fountains pour,
Softly descending in a shudding shower;
Till as it lies, its fair transparent hue
Shows like a lily dipt in morning dew."

The West-End park, or Kelvingrove, lying along the left bank of the Kelvin between Woodside and Sandyford, was formed out of lands purchased by the town council in 1853. These cost £99,569; but a portion of them was set aside for feus, in so wise and judicious a way as to afford fair promise of re-imbursing all the cost. The entire lands comprise a tabular hill on the east, rapid slopes northward, westward, and southward to the skirts, and a plain from the skirts to the Kelvin. The portion set

aside for feus includes the higher ground, and is now superbly edified in Park-circus and Park-street on the tabeau, and in symmetrical curving terraces on the crest of the slopes. The portion reserved for the public amounts to 45 acres, includes the middle and lower slopes and the plain, and is grandly laid out in walks, drives, and shrubberies, after designs by Sir Joseph Paxton. Noble flights of granite steps go up the eastern part of the slopes; high iron railings and gates form the eastern and southern enclosures; some of the walks and drives curve round the crest; two guns and a mortar taken from the Russians in the Crimean war, stand on the highest point within the railing; and brilliant views, down the Clyde and over Renfrewshire, are obtained from the higher walks and the terraces. Another large public park of ornate character, called the Queen's park, was formed at the Southern outskirts of Gorbals in 1862.

—A large wooded area, hilly and tumulated, lying along the right bank of the Kelvin, opposite the West-End park, and known as the Gilmourhill gardens, has latterly become practically a public park, the scene of attractive public fetes in the summer months, drawing great crowds of visitors, and open at little more than nominal prices of admission.

Cemeteries.—Some ancient cemeteries in the city have been converted into building-ground or market-places, while others, at the cathedral, at Blackfriars' church, at St. David's, at St. Mary's, at Gorbals, at Calton, and at Bridgeton, are still in use; but these are now generally regarded as "plagne-spots" to the public health, and are fast going into desuetude. The interments in the cathedral cemetery were 2,956 in 1848, and only 413 in 1861. The interments in Blackfriars' and St. David's were 100 in 1851, and 51 in 1861; in St. Mary's 1,860 in 1851, and 134 in 1861; in Gorbals, 678 in 1851, and 589 in 1861; in Calton, 509 in 1851, and 328 in 1861; in Bridgeton, 187 in 1851, and 111 in 1861. The cathedral cemetery is the oldest; includes an aboriginal extensive space almost completely covered with gravestones and monuments; includes also newer extensive spaces laid out in modern taste; and contains a monument to a number of the martyrs of the covenant, and many other interesting mementoes. The other old cemeteries show no features but such as are common to places of their kind. A desire is felt, on the part of the authorities, to keep them and the cathedral cemetery all intact as future lungs to the city, to plant their surface with trees and shrubs, and to preserve their monuments as indicators of the past.

The Necropolis is an ornamental cemetery, formed since 1828, after the model of the Père-la-Chaise of Paris. The site is a steep hill, formerly the Merchants' or Fir park, much diversified in surface, rising to the height of 250 feet above the level of the sea, and separated from the cathedral and its olden cemetery only by the Molindinar burn. The view from the summit is picturesque, interesting, and beautiful. To the south-west the city extends in all its mighty proportions, with its many spires rising far above the roofs of the dwellings; while to the east the eye is refreshed by a long vista of hill and dale, with agricultural and woodland scenery. The ground affords scope for every variety of resting-place—the turf-covered grave, the vault, and the rocky sepulchre. The whole is most beautifully laid out and kept; the rank grass is completely eschewed; and the visitor moves through a long line of walks, cut on the hill-side and summit, surrounded on every side by shrubbery and flower beds—memorials of affection which are sweet, comely, and abiding, and which call back, with a chastened glow of pleasing sadness, the memory of the friends

we have loved and lost. The Necropolis abounds in tombs and monuments, many of them artistic and architectural gems of rare beauty, and not a few consecrated to genius and worth which the world has already recognised. The earliest and most conspicuous monument is a lofty Doric column, rising from a square base, and surmounted by a colossal statue, in honour of John Knox. Another conspicuous monument is a Tudor structure on a quadrangular base, with a colossal statue to the memory of William McGavin, author of "The Protestant." Other interesting monuments are a beautiful Ionic structure to the memory of the Rev. Dr. Dick, a large florid mausoleum to the memory of Major Menteith, an elegant architectural façade at the tomb of the Jews, and statues or other structures to the memory of Charles Tennant, Colin Dunlop, Colonel Patterson, William Motherwell, Dr. Macnish, the Rev. Dr. Heugh, the Rev. Dr. Wardlaw, and the Very Rev. Principal Macfarlane.

Sighthill cemetery, in the north-eastern outskirts, 600 yards north of St. Rollox, was begun to be formed in 1840, belongs to a joint stock company, occupies a rising-ground nearly 400 feet high, commands a magnificent view from Tinto to the Grampians, comprises 12 acres of highly ornamental burying ground, includes also 34 acres available for extension, has a splendid gateway and an elegant chapel, and contains an obelisk to the memory of Hardie and Baird, who were executed for treason in 1820, and some beautiful tombstones and other monuments. The Southern Necropolis, on the lands of Little Govan, 500 yards north-east of the Govan iron works, is a parallelogram of 11 acres, with entirely flat surface, ornamentally arranged, and containing many neat monuments—There are two other recent, well-kept, suburban, rural cemeteries in the eastern outskirts and at Dalbeth.—The parent Necropolis sprang principally from the exertions of the late Dr. Ewing of Levenside and Dr. Strang the city chamberlain; and is the parent, not only of the other ultramaral cemeteries of Glasgow, but of all the numerous garden-cemeteries throughout Scotland. A taste for cryptal burial, not only under certain old churches but under several new ones, competed for a time with the Necropolis scheme, but has happily been exploded.

Water-Supply.—About the beginning of the present century, Glasgow depended for its supply of water chiefly on 27 public and a few private pump wells. An attempt was made by the magistrates, about 1774, to bring water into the city from Whitehill in pipes, but proved abortive. Another public attempt of a similar kind was made in 1794, but also failed. At length, in 1804, Mr. William Harley, who had feued the lands of Willowbank, constructed a reservoir in upper Nile-street, which he supplied with spring water by pipes from the lands he had feued, and dispensed it to the inhabitants by means of huge cisterns placed on carriages, and which were moved from street to street. The enterprise of a single individual induced a number of the inhabitants to form themselves into a company for supplying the city with filtered water from the Clyde. In 1806, they procured an act of parliament erecting them into an incorporation by the name of the Glasgow Water Company; and shortly thereafter their works were established at Dalnarnock, upon the Clyde, two miles above the city. In 1808, another company was formed under the name of the Cranstonhill Water Company, and similar parliamentary powers were also granted to them. For a number of years these companies went on independently; but they were subsequently amalgamated; and the united company went on from time

to time, extending their works to meet the increasing demands of the city. The sum expended on the works, till 1st June 1854, was £446,907; the revenue of the company for that year was £41,862; and the daily supply of water to the city was about 12,000,000 gallons. This quantity, however, was insufficient, especially for the higher levels; while the quality took irremediable damage from the soluble impurities in the river, and had become increasingly disagreeable to the public mind as a knowledge of the laws of health had increased.

A company, under the name of the Gorbals Gravitation Water-Works Company, obtained an act of parliament in 1845, for bringing water to Gorbals from a range of hills situated about 7 miles to the south. The contributing surface is about 2,800 acres; the storage has capacity for upwards of 150,000,000 cubic feet; the water, after being filtered, is delivered in Gorbals on the principle of gravitation, at a pressure of about 200 feet; and the daily supply amounts to about 3,300,000 gallons. The Glasgow water company, in 1853, took a bill into parliament for bringing water by gravitation from Loch Lubnaig; but this was defeated by the town council on various grounds which it would be tedious to specify. A bill was introduced next year, by the town council, for acquiring the works of the Glasgow and the Gorbals Gravitation companies, and for bringing water by gravitation from Loch Katrine; and this, though strongly opposed in various quarters, with the effect of being defeated in 1854, was re-introduced in the following year, and then passed. The works were so great as to require considerable time for execution, but were opened, with grand ceremony, in October 1859, by Queen Victoria. They draw from a water surface of about 4,000 acres, with a drainage-area of about 45,800 acres; and they yield at present about 17,000,000 gallons a-day, but are capable of yielding a much larger quantity. The commencing orifice is 8 feet beneath the lake's surface, at a point of $2\frac{1}{2}$ miles east of Stronachlachlan; a tunnel 8 feet high, 8 feet wide, and 6,975 feet long, goes through the mountain to Loch Chon; and a series of works, comprising numerous aqueducts, in some instances from 60 to 80 feet high, 69 tunnels, aggregately 13 miles long, and lines of syphons of well-protected iron pipes, 4 feet in diameter, and aggregately also 13 miles long, goes from Loch Chon, past Loch Ard, and across the valley of the Endrick, to a collecting reservoir at Mugdock in the vicinity of Strathblane. This reservoir lies 311 feet above the level of the sea; occupies 70 acres, with capacity for 500,000,000 gallons; and has an ingenious combination of embankments and sluices for retention and emission. Two lines of pipes, each 3 feet in diameter, and respectively 7 and 8 miles long, go thence to Glasgow; and about 46 miles of new pipes were laid, for ramified distribution, throughout the city. The cost of the works of the Loch Katrine scheme till 28th May 1861, was £906,888; and that of the entire water-works, including those of the two absorbed water-companies, was £1,572,161.

Lighting.—Glasgow, like all other places, was formerly dependent for night light on oil and candle. Its first gas-light company was instituted in 1817; and another followed in 1843. Lighting with gas commenced in the streets on 15th September 1818, and began immediately after to be introduced to shops, dwelling-houses, and factories. The quantity of gas consumed was 173,000,000 cubic feet during 1840,—363,098,850 during 1851,—and 639,163,350 during 1861. The number of street-lamps lit with gas was 3,301 in 1840,—7,353 in 1850,—and 8,383 in 1861. The number in the last of these years

comprised 2,247 public lamps and 612 private ones in the Central police district, 1,207 public and 112 private in the Eastern district, 1,245 public and 148 private in the Southern district, 1,448 public and 145 private in the Western district, and 1,089 public and 130 private in the Northern district. The cost of lighting, during 1861, was £10,238.

Paving and Sewerage.—The carriage-way of all the principal thoroughfares is paved with granite or greenstone cubes,—in many thoroughfares with the cubes well squared and dressed; and the footpaths in some parts are formed of gravel, dressed stone cubes, or artificial asphalt, but, in most parts, including all the principal streets, are formed of fine, broad, sandstone flag. A sum of about £90,000 was spent between 1856 and the close of 1861 in paving the carriage-ways with square-dressed granite. The cost of the footpaths is defrayed by the proprietors of tenements, and may amount in the aggregate to about £60,000 a-year. Sewers run beneath nearly all the streets of both the compact parts and the well-edified outskirts of the city; and the main sewers within the municipal boundary have an aggregate length of 60 miles. No sewers exist in the districts of Springburn, Westmuir, Parkhead, Camlachie, and Woodside, the only drainage there being by surface water-courses; nor, in consequence of the difficulty of obtaining an outfall to the Clyde without increasing the nuisance above the weir, do any sewers exist in the districts of Bridgeton and Mile-end. Measures, however, were in progress in 1861 to improve the drainage of these districts; and in the meanwhile, excessive nuisance there was prevented by the absence of the modern water-closet system. Yet, from the enormous amount of the city's drainage generally, from the prodigious aggregate in it of the vilest feculence, from the comparative smallness of the river's volume of water to receive it, from the damming up of that volume by the tides, and from the depth of the harbour and the navigable channel serving as a long vast pool to retain the sediments, a constant nuisance exists in the Clyde, for miles downward from Hutchesontown bridge, so great as to make the river itself, in a considerable degree, one vast open common sewer. Much discussion has occurred of late years as to the practicability of some contrivance for removing or abating this monster nuisance, but as yet without any promising result.

Government.

City Corporation.—Glasgow, as has been already stated, was erected by charter into a burgh of regality, holding of the bishop, by William the Lion; and for centuries the town remained in the position of a mere appanage of the ecclesiastical establishment. By a charter from King James in 1450, upon some new concessions being made, it was declared that the bishop and his successors should hold the city as a burgh of regality, by paying yearly, upon St. John's day, a red rose, if it should be asked. Until 1604, frequent contentions occurred in this, as in almost all the other towns of Scotland, between the merchants' and traders' ranks, upon the point of precedence; but the matters in dispute, as regards Glasgow, having been referred to the arbitration of Sir George Elphinston of Blythswood, he pronounced a decision which was termed the "Letter of Guildry," and was afterwards confirmed by act of parliament, denying the right of precedence as being vested in either, and assigning to both a share in the magistracy. In 1691, William and Mary, by charter, confirmed the privileges of the citizens, and conferred on the magistrates and council the power of electing their provost, and all

other officers, "as fully and freely as the city of Edinburgh, or any other royal burgh." The courtesy title of "my lord" and "the honourable" has been assigned to the office of provost, or chief magistrate, since the revolution of 1688; and, up till 1801, the executive of the town council consisted of the lord provost, three bailies, the dean of guild, the deacon-convener, and the treasurer. At that period, two bailies were added,—one from the merchants' and the other from the trades' ranks, making in all 5 bailies. Until the passing of the municipal reform bill, the council was composed exclusively of members from the merchants' and trades' houses, and they were self-elected here as elsewhere; but on that measure becoming law, the royalty was divided into 5 wards, which returned thirty members by election; and to these two ex-officio members were added, viz., the dean of guild by the merchants' house, and the deacon-convener by the trades' house. An act was passed, in 1846, abolishing the burgh jurisdictions of Gorbals, Calton, and Anderston, annexing these suburbs and others to the municipal burgh of Glasgow, and providing that the council should consist of 50 members, of whom 48 should be elected by the £10 voters, in 16 wards; and 2 should be returned as before by the merchants' house and trades' house. The elected councillors retain office for 3 years; the dean of guild and deacon-convener are elected annually, but they are generally re-elected for the second year. The council chooses, out of its own members, the lord provost, eight bailies, and two river magistrates; and two of the bailies administer justice daily in the police courts, while the river magistrates adjudicate on all matters connected with the police of the harbour and the Clyde. The patronage of the council is very extensive; presents to nine of the city churches, nominates all the masters of the High school, appoints the city registrars, disposes of many bursaries, and appoints the town-clerks, the city chamberlain, the burgh fiscal, and many other officers having a yearly income of from £200 to £1,200.

Revenues.—The income of the corporation, at one period, was very small; but even in the worst of the self-election times, it was managed with economy, and generally exceeded the expenditure; and, in the course of the city's increase in population and wealth, it became great. It is derived chiefly from feu duties and ground annuals, from bazaar dues and rents, from the seat rents of the parish churches, from assessments in lieu of petty customs abolished, and from the rents of miscellaneous property. The amount of it, in the year 1861, was £18,480 7s. 8d; while the amount of ordinary expenditure in that year was £15,457 17s. 0½d., of extraordinary expenditure, £3,046 7s. 2d., and of debt, £64,098 19s. 7d. The corporation manage also the finances of the parks and galleries, the market-trust, the upper suspension-bridge, the registration of births, marriages, and deaths, the burgh voters' act, the lands valuation act, and the prisons' assessment; they manage likewise, by a special committee, the affairs of the water-trust; and either all or some of them, along with other persons, manage also the finances of the police establishment, the statute labour, the bridge trust, the court-house commission, the county prisons, the house of refuge, Hutcheson's hospital, the Clyde navigation, Port Glasgow harbour, and the Cumbrae lights. The entire revenue, including all these, in 1861, was £398,938 12s. 0½d.; the ordinary expenditure, £370,146 19s. 9½d.; the extraordinary expenditure, £60,547 5s. 5d.; the debt, £3,246,981 19s. 11d. Either the corporation as a whole, or certain members of it, control also

the financial affairs of numerous charities, bequests, bursaries, and schools, and of several road-trusts.

Extinct Jurisdictions.—The three districts of Gorbals, Calton, and Anderston, prior to 1846, had burgh jurisdictions of their own, but were then annexed to the municipal burgh of Glasgow, and have from that time returned their proportion of members to the city council.—Gorbals was originally subject to the archbishop, but became subject, in 1647, to the town-council of Glasgow; and its magistrates, thence till 1832, were appointed by the council, but from 1832 to 1846 were elected by the inhabitants under provision of being afterwards approved by the council. The original burgh of Gorbals comprised only 13 acres, and still continues distinct in some particulars, such as in the assessment for the poor; but a large territory was annexed to it from the circumjacent parish of Govan.—Calton was constituted a burgh of barony by crown charter in 1817; and had a town-council consisting of a provost, three bailies, a treasurer, and eleven councillors, elected by burgesses, who became such on payment of a fee of £2 2s.—Anderston was constituted a burgh of barony by crown charter in 1824; and had a town-council of the same constitution as that of Calton,—elected by proprietors or life-renters of heritable subjects, and by tenants paying £20 or upwards of annual rent.

Parliamentary Representation.—At the period of the Union, in 1707, Glasgow was a place of such small consideration, that only the fourth part of a member of parliament was allotted to it; and it shared this for 125 years with Rutherglen, Renfrew, and Dumbarton. The reform-bill of 1832 enlarged its boundaries for parliamentary representation so far as to include the suburbs, and gave it a right to send two members to parliament. The number of parliamentary electors, or rather of enrolments of electors, in 1856-7, was 18,118; in 1861-2, was 20,260. But a recent decision had been given by the appeal sheriff-court, that each elector's name should be placed only once on the register; and this would cause a large deduction from the total number in 1862-3, by striking off double enrolments.

Merchants' and Trades' Houses.—The merchants' house, which returns a member to the council, has long been, and is, a most influential body in the city. It is entirely an open corporation; any gentleman paying £10 of entry money being admissible to the membership and privileges. The number of members is fully 1,000; and their funds, which amount to about £3,500 per annum, and are chiefly expended in charity, are managed by a large board of directors. The trades' house, which also returns a member to the town-council, is a still more important body, so far as wealth and numbers are concerned. It includes the corporations of hammermen, tailors, cordiners, maltmen, weavers, bakers, skippers, wrights, coopers, fleshers, masons, gardeners, barbers, and dyers; and has, in the aggregate, fully 3,000 members. Its governing body has an annual income of upwards of £2,500; and the 14 incorporations have separate funds of their own, estimated aggregately at about £200,000, and yielding an annual revenue of nearly £8,500. Most of the revenue is expended in charitable allowances to decayed members or their families, and in maintaining an excellent educational institution. The sum of £31,000 was bequeathed to the merchants' house, and the sum of £500 to the trades' house, by James Ewing, Esq., of Strathleven, who died in 1853; and the former sum, after deducting from it £1,000 toward the ordinary fund of the house, was placed at interest for behoof of decayed Glasgow merchants, and their widows,

daughters, and sons. The merchants' and trades' houses, in their corporate capacity, take a prominent part in almost every measure affecting the city; and jointly they return the members of the important tribunal called the dean of guild court.

Police.—Glasgow was protected, till the commencement of the present century, by only the "watch and ward" system. This was conducted by what was called the civic guard, a force of 30 or more householders, patrolling the streets at night; and it was necessarily inefficient. Efforts were made, at several times, to establish a regular police; but, not proposing to give the rate-payers any voice in the management of the funds, they were distasteful to the inhabitants, and did not succeed. A bill at length passed parliament, in 1800, creating an organised police establishment, and vesting the management of it in popularly-elected commissioners. A master of police was appointed at a salary of £200, a clerk at £85, a treasurer at £80, three sergeants at £40 each, nine officers at £30 each, and 63 watchmen at 10s. per week each. The income, for the first year, from assessment, street-manure, fines, and a contribution of £800 by the corporation, was about £5,000; and this enabled the commissioners, besides maintaining the force, to give large attention to lighting and cleaning. Several acts of parliament subsequent to 1800 improved the establishment; the act of 1846, amalgamating all the municipal and police jurisdictions in the city and suburbs, gave it concentration and great increase of strength; and an act passed in 1862, thought by some to be too cumbersome and intricate to admit of easy working, very largely augmented its powers. The protective and detective force, in 1861, amounted to 703 for the municipal burgh, and 47 for the harbour and river; and was governed by a superintendent for the whole, and six assistant superintendents for the six divisions. The costs of the harbour and river department are defrayed by the Clyde Trust. The costs of the other departments, in the year 1860–1, amounted to £36,961 2s. 8d.; but were less £8,750 13s. 6d. received from Government, and £4,471 18s. 5d. received from fines; so that they amounted nett to £23,738 10s. 9d. The salary of the superintendent was £500; the salaries of the chief officers, including that of the superintendent, amounted to £2,889 19s. 10d.; the wages of the day and night constables, to £29,851 12s. 2d.; the expenses of clothing for them, to £2,681 7s. 1d.; and the expenses of the detective department, to £1,538 3s. 7d. The police commissioners consist of the lord provost, the bailies, the dean of guild, and the deacon-convenor, ex-officio, and eighteen councillors chosen by the corporation; and they manage all affairs of police, as well the lighting and the cleaning as the protective and the detective, and also the affairs of the statute labour. The entire revenue, exclusive of the statute labour, in 1861, was £84,333 17s. 10d.; the ordinary expenditure, £82,961 0s. 3s.; the extraordinary expenditure, £1,672 17s. 7d.; the debt, £3,697 13s. 8d. The revenue of the statute labour was £24,197 8s.; the expenditure, £40,897 5s. 2d.; the debt, £106,534 17s. 2d.

Courts.—The police-courts, as already noted, are held daily, and presided over by the bailies. Nothing more needs to be said respecting them, except to give a summary of the offences yearly on which they have adjudicated; and this will be given afterwards, under the head of Statistics.—The baillie court, under the original burgh jurisdiction, as distinguished from the police jurisdiction, formerly tried important civil causes, and also tried similar cases of graver kinds than are competent to

the police courts; but now it tries chiefly such civil matters as the awarding of aliment to debtor prisoners, questions under the fishery act, and questions under the statute relative to weights and measures, and rarely if ever tries any of the graver criminal cases. It adjudicated, in 1861, on 37 cases under the fishery act, and on 122 applications for the benefit of the act of grace.—The dean of guild court controls matters relative to buildings within the city, and matters under the smoke act. The number of cases before it, in 1861, was 284.—Justice of peace courts are held weekly, on Tuesday and Friday for small debt claims, and on Monday and Thursday for police offences and other offences under special statutes. About 92 acting justices of peace for the county reside in Glasgow or its neighbourhood; and two of them in rotation, for one week, preside in the courts. The number of small debt claims before these courts, in 1861, was 13,298; of prosecutions for assault and other offences, 317; of applications for public-house certificates, granted or renewed, 265; of other cases, 264.—Courts of quarter sessions, for hearing and determining appeals, are held on the first Tuesday of March, May, and August, and the last Tuesday of October, and on any other days to which there may be adjournments. The appeals before them, relative to public-house certificates, in 1861, were 17 from the justices and 65 from the bailies.—Three ordinary sheriff civil courts, two appeal sheriff civil courts, and three sheriff small debt courts are held every week; and sheriff criminal courts with jury are held very frequently. These courts are conducted by a sheriff principal, and four sheriff substitutes; and they manage most of the cases which would formerly have gone into the baillie lurg court. The number of ordinary and summary actions before them, in 1861, was 1,514; of criminal cases tried with a jury, 263; of criminal cases summarily tried, 61; of cases of sequestration, 182; of cases of trusteeship, 51; of small debt actions, 23,788; and of miscellaneous cases, relating to pauperism, lunacy, and other matters, very many.—Circuit courts, by the judges, are held thrice a year.

Assessments.—The local assessments are rated on the rental, and fall variously on the occupant and the landlord. The rental of the extended municipality, in 1850, was £1,017,362; in 1854, £1,167,842; in 1861, exclusive of railways and canals, £1,629,964. The police rate, in 1861, was 6½d. per £1 on rentals under £10, and 1s. 1d. on rentals above £10, all payable by the occupant; the street paving rate, 3d., by the occupant; the public parks and gallery of art, 2d., by the occupant; the court-houses and public offices for the lower ward of Lanarkshire, ½d. by the occupant, and ¾d. by the landlord; prisons, valuation of lands, registration of voters, and registration of births, deaths, and marriages, aggregately 1d. by the occupant and 1d. by the landlord; public water rate, 1d. by the landlord; houses of refuge, 1d., by the occupant; and poor-rates, in the city parish, on four-fifths of the rental, 1s. 6d.,—in Barony parish, 1s. 1½d.,—in Govan parish, on seven-eighths of the rental, 8½d.,—in Gorbals parish, on nine-tenths of the rental, 2s. 4½d.,—one-half by the occupant, the other half by the landlord. The total of the assessments on houses about £10 of annual rent, in the city parish, was 2s. 5½d. to the occupant and 11½d. to the landlord; in the Barony parish, 2s. 3½d. to the occupant and 9½d. to the landlord; in Govan parish, 2s. 7d. to the occupant and 6½d. to the landlord; in Gorbals parish, 2s. 10½d. to the occupant and 1s. 4½d. to the land-

Institutions.

The University.—The university of Glasgow was instituted in 1450, and opened in 1451. It sprung from a bull of Pope Nicholas V., obtained by Bishop William Turnbull, at the request of James II. It had a broad margin as a general school in arts, in theology, and in canon and civil law, with power of granting degrees; it was constituted, as nearly as possible, on the model of the university of Bologna; and it received exemption, by royal charter, from taxation, the duty of "watch and ward," and other civil burdens. Yet, for a time, it was both poor and small. It had no property except some fees on confirming degrees, and the patronage of a few chaplainries; nor had it any buildings for its lectures and other business, but conducted these partly in a house of Rotten-row, long known as the Old Pedagogy, partly in the neighbouring monastery of Blackfriars, and partly in the chapter-house and crypt of the Cathedral. In 1460, however, the first Lord Hamilton, ancestor of the present ducal house of that name, gave to its faculty of arts a tenement in High-street, on the ground occupied by the present college buildings, together with four acres of land in the Dowhill, adjoining the Molindinar burn, which long afterwards bore the designation of the land of Pedagogy. In the body of the conveyance, the noble donor exacted certain oaths and obligations to be taken by the principal and regents, on their first admission, and ordained that he himself, and Lady Euphemia, his spouse, should be commemorated as the founders of the college. This gift soon received many additions. The faculties of theology and civil and canon law were not in possession of property, like the faculty of arts; but this was compensated by rich livings held by the regents in every part of the kingdom.

From the members of the University being of the Roman Catholic persuasion, and the institution receiving its chief support from the church, it met with an almost fatal blow by the Reformation. The chancellor, James Beaton, fled to the continent, and carried with him the plate of the Cathedral, with the bulls, charter, and deeds, both of the see and the University. It is true that the college of arts survived the shock, but in such a shattered state, that in a charter of Queen Mary, it is stated that "it appearit rather to be the decay of ane university, nor any ways to be reckonit ane established foundation." By this charter, 5 bursaries were founded for poor youths, and the manse and church of the friars predicators, 13 acres of land adjoining, and several rents and annuities which had belonged to the friars, were granted to the masters of the University for their sustentation. The institution, however, rather languished than lived for many subsequent years, till in 1577, James VI., when in his minority, by advice of the regent Morton, framed a new constitution, and made a very considerable grant to the revenues, consisting of the rectory and vicarage of the parish of Govan. Private individuals also increased the emoluments of the University; and it continued to prosper till the period of the Restoration, at which time it had a principal, eight professors, a librarian, a good library, many bursaries, and a vast increase in the number of its students. The buildings, which had become ruinous, were in progress of being rebuilt, when the University received a second severe shock by the forcible establishment of Episcopacy subsequent to the restoration of Charles II., which at once deprived it of the fairest portion of its revenue—the bishopric of Galloway. From this reverse a large debt was contracted, and it was found necessary to

reduce three out of the eight professorships, and considerably abridge the emoluments of those who remained. The University, indeed, continued to receive considerable benefactions; but these were principally confined to the foundation of new bursaries or grants for carrying on the buildings; and it was not till 1693, when all the Scottish universities received a grant of £300 per annum out of the bishop's rents, that it began to revive from the depression in which it had so long remained. In 1702, the students in theology, Greek, and philosophy had increased to 402; and from that period till the present day the University has not sustained a single reverse. Many liberal donations, both from the Crown and from private individuals, have been received; eighteen new professorships have been founded; and various beneficial new regulations, introduced by royal commissions or visitations, have, from time to time, been made. The last and greatest of the changes has resulted from the commission under the Universities act of 1858; and this alone, besides materially improving the University's constitution, has increased its revenues to the amount of £1,661 a-year, and given it three new professorships and seven assistantships.

The recent change on the University's constitution will be understood from what we have said on the universities collectively in our General Introduction. The ruling bodies now are the general council, the university court, and the senatus academicus; and the chief officers are a chancellor, chosen by the general council, a lord rector, chosen by the matriculated students, a principal, appointed by the Crown, a dean of faculties, appointed by the senatus academicus, and four assessors, chosen by respectively the chancellor, the lord rector, the general council, and the senatus academicus. The general council meets twice a-year, on the Wednesdays immediately prior to the opening and the closing of the session. The university court consists of the lord rector, the principal, the dean of faculties, and the four assessors. The senatus academicus consists of the principal and the professors. The chancellor was formerly elected by the senatus academicus; and he began in 1692, and will still continue, to be elected for life. The office is more one of dignity and honour than one of any actual service; and it has long been held by the Dukes of Montrose. The lord rector was formerly elected for only one year, though usually re-elected for the second year, but he and his assessor now remain in office three years; and the other assessors remain four. He is elected by a majority of four votes of the students, divided into four sections; or if the vote should be equal, two against two, he is appointed by the casting vote of the previous rector. The sections of the students are called nations, and are,—*Natio Glottiani sive Clydesdale*, which comprehends the natives of Lanarkshire, Renfrew, and Dumbarton, from Erriekstane, the source of the Clyde, to Dumbarton;—*Natio Albania, sive Transforthana*, containing all the country north of the Forth, and all foreigners;—*Natio Loudoniana sive Thevidale*, including the Lothians, Stirling, the towns east of the water of Urr, and the members from England and the British Colonies; and *Natio Rothseiana*, including Ayrshire, Galloway, Argyle, the Western Isles, Lennox, and Ireland. The lord rector may be regarded as the chief magistrate of the University; he originally had such large jurisdiction as, in one instance so late as 1670, to try a case on a charge of murder; and he still possesses considerable powers. He and the dean of faculties were formerly superintending visitors of the college, but ceased to be so under the recent act. His

election occasions much excitement, and is generally the result of a political struggle. The office has been filled, since 1820, by Lord Jeffrey, Sir James Macintosh, Lord Brougham, Thomas Campbell, the Marquis of Lansdowne, Lord Cockburn, the Earl of Derby, Sir Robert Peel, Sir James Graham, the Marquis of Breadalbane, the Earl of Dalhousie, Lord Rutherford, Earl Russell, William Muir, Esq. of Caldwell, Lord Macaulay, Sir Archibald Alison, Bart., the Earl of Eglinton, the Duke of Argyll, Sir E. B. Lytton, Bart., the Earl of Elgin, and Viscount Palmerston. The dean of faculties was formerly, as now, elected by the senatus academicus. His duties, as originally constituted, were to give directions respecting the course of study, and to judge, with the other principal officers, of the qualifications of the applicants for degrees. The principal formerly required to be a minister of the Church of Scotland, and was nominally the primarius professor of divinity; but, under the new act, he may be a layman, and is not regarded as occupying a theological chair.

The professorships of the university are classified into the four faculties of arts, divinity, law, and medicine. The professors of the arts were formerly called regents, while the rest were non-regents; and those occupying the eight chairs, instituted before the commencement of the present century, were called college professors, while the others were called regius professors; and the former had larger powers than the latter; but, under the new act, these distinctions have ceased. The number of professorships at present is twenty-five; the latest law one is in the patronage of the faculty of procurator of Glasgow, the eight oldest in that of the university court, the others in that of the Crown; and the emoluments of all, including estimated amounts of fees, were re-adjusted by ordinance of the University commissioners in November 1861. The chairs, with their respective dates and emoluments, are,—logic and rhetoric, 1577, £738 4s. 5d.; moral philosophy, 1577, £618 4s. 5d.; natural philosophy, 1577, £608 4s. 5d.; Greek, 1581, £969 8s. 10d.; humanity, 1637, £969 8s. 10d.; mathematics, 1691, £662; practical astronomy, 1760, £270; civil engineering and mechanics, 1840, £325; English language and literature, 1861, £400; divinity, 1630, £600; Oriental languages, 1709, £430; ecclesiastical history, 1720, £402 15s. 6d.; divinity and biblical criticism, 1861, £436; Roman law and law of Scotland, 1713, £540; conveyancing, 1861, £150, together with fees; practice of medicine, 1713, £410; anatomy, 1718, £750; natural history, 1807, £300; surgery, 1815, £320; midwifery, 1815, £230; chemistry, 1817, £620; botany, 1818, £400; materia medica, 1831, £270; institutes of medicine, 1839, £310; forensic medicine, 1839, £210. The principal's salary is £700. Assistants to the natural philosophy, the Greek, the humanity, the mathematics, and the chemistry chairs were appointed under the new act, each at a salary of £100; and an assistant to the chair of materia medica, at a salary of £50. The session opens on the first Monday of November, and closes on the last day of April. The number of matriculated students, in 1861, was 1,133; of members of the general council, 854; of persons who graduated, 114.

The students are divided into togati and non-togati; and the former wear a scarlet gown, and belong to the logic, moral philosophy, natural philosophy, Greek, and humanity classes. There are 29 foundation bursaries, for 65 students, held from 4 to 6 years. One of them amounts to £50 a-year; but most range from £5 10s. to £41. There are also some valuable exhibitions. In 1688, Mr. John Snell, with a view to support episcopacy in Scot-

land, devised to trustees the estate of Uffton, near Leamington, in Warwickshire, for educating Scotch students, from the University of Glasgow, at Baliol college, Oxford. This fund now affords £132 per annum to each of ten exhibitions. Another foundation by Warner, bishop of Rochester, of £15 annually to each of four students, from the same college, is generally given to the Snell exhibitioners, so that four of them have nearly £150 per annum each. Both of the exhibitions are held for ten years; but are vacated by marriage, or upon receiving a certain degree of preferment. The principal and professors of the college are the patrons of Snell's exhibition; and the archbishop of Canterbury and the bishop of Rochester, of Warner's. In addition to these bursaries and exhibitions, there are various valuable prizes granted annually or biennially from funds which have been mortgaged for the purpose. Among distinguished men who have studied or taught here have been Bishop Elphinstone, John Major, John Spottiswoode, Andrew Melville, James Melville, Robert Boyd, John Cameron, Zachary Boyd, Robert Baillie, James Dalrymple, first Viscount of Stair, Bishop Gilbert Burnet, Bishop John Douglas, Dr. Robert Simpson, Francis Hutchison, Dr. William Hunter, Dr. Thomas Reid, Dr. James Moor, Dr. Adam Smith, Dr. William Cullen, Dr. Joseph Black, Dr. Matthew Baillie, Professor John Millar, Professor Young, Professor Wilson, Lord Jeffrey, John Gibson Lockhart, Sir Daniel Sandford, and Sir William Hamilton.

The university library was founded in the 15th century, and now contains about 80,000 volumes. The Hunterian museum was founded by Dr. William Hunter, a native of East Kilbride, who died in 1783; and contains a small gallery of pictures by the old masters, a splendid collection of objects in natural history and anatomy, and an interesting collection of rare books, manuscripts, coins, medals, antiquities, and curiosities. Its entire contents are supposed to be worth upwards of £130,000; and so much of them as was valued at £65,000, together with a sum of £3,000 for the erection of a suitable building, was bequeathed by Dr. Hunter. The museum is open to any visitor for a shilling, but the coins and medals are shown only in the presence of two professors. The university library contains a manuscript paraphrase of the Bible by Zachary Boyd, and some other literary curiosities; and the Hunterian museum contains an illuminated manuscript Psalter, of the 12th century, a manuscript of Boethius, of the 14th century, and a breviary, ten books of Livy, and a French translation of Boccaccio of the 15th century.

The university buildings are situated on the east side of High-street. They belong to various periods; but the older portions were erected between the years 1632 and 1656, and are in the peculiar style of Scottish renaissance which then prevailed. The front is 305 feet in extent; presents a monastic appearance, with grand archway, stone balcony, and dormer windows; and has, over the great entrance, the royal arms of the time of Charles II. The interior, exclusive of the professors' buildings, is disposed in three successive quadrangles. The first quadrangle is all old, and has at one corner a massive stone staircase, leading up to a large panelled hall, used for business meetings, and containing a few portraits. The second quadrangle is entered by an archway beneath a steeple 148 feet high; and consists partly of old buildings, partly of modern ones, incongruously amassed. The steeple shows no elegance of structure, but possesses interest from a thunder rod erected on it, in 1772, under the auspices of Dr. Franklin. The third quadrangle is, in

considerable parts, unedificed,—being divided there from the college park only by railings; but it has, between the open parts, the edifice of the Hunterian museum, a handsome structure of 1804, adorned in front with a hexastyle Roman-Doric portico. Two quadrangles at the sides, with separate entrance from High-street, are edified with thirteen dwellings of professors. The college park spreads away to the east; has pleasant walks, shaded with trees; is used for the recreation of the students; and figures in Sir Walter Scott's novel of "Rob Roy," as the scene of the duel between Francis and Rashi-leigh Osbaldistone.

Anderson's University.—An institution for the promotion of scientific knowledge arose from a bequest of Dr. John Anderson, professor of natural philosophy in Glasgow university, who died in January 1796. The funds bequeathed by him were not sufficient for it; but contributions were added by many citizens of Glasgow, and other friends of science; and the chief objects he had in view were gained. The institution was incorporated in June 1796, by seal of cause from the magistrates and council of the city; and was set to work, on a small scale, in the same year. It long was located in confined premises in John-street, but eventually was removed to a commodious edifice, originally the Grammar-school, in George-street. In 1796, Dr. Garnett was elected to it as professor of natural philosophy; and he continued there till his removal to London. In 1798, a class was formed for instruction in mathematics and geography. In 1799, Dr. Birkbeck was appointed professor of natural philosophy. In February, 1800, under the auspices of Dr. Birkbeck, a class was instituted expressly for mechanics, being the first of the kind it is believed ever established, and the forerunner of Mechanics' Institutions in this country. Dr. Anderson himself had for many years given a separate course of experimental physics, to which he had been in the habit of inviting tradesmen and mechanics; and there can be little doubt that he intended that facilities for improvement should be afforded to these classes in the new seminary, having directed in his will that the system of instruction which he had begun should be continued. Dr. Birkbeck, however, is not the less entitled to the credit and honour of having called into existence the first class exclusively for mechanics, and of thus extending the advantages of scientific instruction to those who had no other opportunity of acquiring it. The class was taught the first season gratuitously, and afterwards at a very moderate rate of admission. In 1804, Dr. Andrew Ure succeeded Dr. Birkbeck, who removed to London. Dr. Ure continued the progressive improvement of the institution by the introduction of a valuable course of lectures on chemistry and pharmacy. In 1808, at the suggestion, and under the auspices of Dr. Ure, the institution received a most important addition to its usefulness by the establishment of a library for the use of the mechanics and evening classes. In 1828, on the removal of the institution to the premises in George-street, it assumed the title bestowed on it by the venerable founder, of "Anderson's University;" and to justify that appellation, there were then established a number of new professorships for instruction in science and the useful arts; and in particular, there was arranged a complete course of lectures and demonstrations in medical science, a branch of knowledge to which great attention has ever since been paid. In 1829, the resources of the institution were increased by a donation from the late James Yeats, Esquire, of a fifth part of the rents of the island of Shuna. In 1830, on the resignation of Dr. Ure,

Professor Thomas Graham, afterwards of University College, London, was appointed to the chair of chemistry, and introduced a new feature of great importance, in the shape of laboratory instructions. In 1837, on the removal of Mr. Graham to London, Dr. Gregory, afterwards professor of chemistry in the college of Edinburgh, was appointed to the chair of chemistry, and on his removal to Edinburgh, he was succeeded in the chair by D. Frederick Penny. An unbroken succession of very distinguished men has thus shed celebrity over the institution's departments of physics and chemistry; and some men of high mark have, at the same time, given eclat to its other departments.

The institution now offers to the public a complete course of education in three sets:—1. Day-classes, scientific and literary, for natural philosophy, chemistry, mathematics, algebra, arithmetic, geography, astronomy, commercial law, writing, book-keeping, drawing, painting, French, German, and English;—2. Medical classes, for surgery, anatomy, materia medica, institutes of medicine, practice of medicine, midwifery, medical jurisprudence and police, natural philosophy, chemistry, and botany;—3. Popular evening classes, for natural philosophy, chemistry, anatomy, physiology, mathematics, writing, French, and German. The average number of students is about 1,400; but a large proportion of this belongs to the evening classes. The institution has an extensive museum of natural history, antiquities and curiosities; and this is open to the public every day, from 11 till 3. Upwards of 3,000 persons visited the museum on the Fair holidays of 1861; and about the same number on the Christmas holidays.

Botanic Gardens.—A small piece of ground adjoining the university, east of High-street, was set apart, in the 18th century, as a botanic garden; but it soon became unsuitable, in consequence of the erection of manufactories in its neighbourhood. A new and more spacious garden was formed at Sauchiehall-road, then completely rural; but this was eventually overtaken and displaced by the extension of the city to the west. A grand and still larger garden was then, about 1842, formed on tumulated tabular ground, skirted by a steep declivity to the Kelvin, 800 yards west of the point at which that river is crossed by the Great Western road. This garden comprises $6\frac{1}{2}$ acres; is beautifully laid out in plots and walks; includes romantic foot-paths going down the declivity in transverses to the Kelvin; contains a class-room for the professor of botany, and good suites of conservatories and hot-houses; and gives to view, in scientific arrangement, or in scientific nomenclature, about 15,000 species of plants. Promenades are held in it on stated days in summer; and the operative classes are admitted to it for a penny on Saturdays, and without charge on the week of Glasgow fair, in virtue of a gift of £500 from Mr. Campbell of Tilliechewan. The number of persons who visited it in the "free week" of 1861 was 17,344.

Observatory.—An observatory formerly stood on Garnet hill, but, like the Sauchiehall-road botanic garden, was overtaken and displaced by the street-extensions to the west. A new and splendid observatory was erected on a commanding eminence, a short distance south-west of the present Botanic garden; and this has very valuable instruments, and includes a residence for the professor of astronomy. The late professor, Dr. Nichol, shed lustre over it by his writings.

Schools of Art.—The Government school of art, on the north side of the eastern part of Ingram-

street, is a most useful and flourishing institution; and has conferred great benefit on the manufactures of Glasgow. The session opens on the 1st of September, and continues till the 30th of June.—The Glasgow institution in union with the society of arts in London, is managed by a body of directors, affords systematic, scientific, literary, and practical instruction, on self-supporting principles, to operatives, persons in business, and their children, and has morning, day, and evening classes, and separate classes for females. The branches taught in it are chemistry, mathematics, astronomy, geography, navigation, practical mechanics, political economy, logic, elocution, phonography, drawing, music, Latin, Greek, Hebrew, French, German, Gaelic, English, writing, arithmetic, book-keeping, and needlework.

Mechanics' Institutions.—The Glasgow Mechanics' Institution was founded in 1823, and incorporated by seal of cause. A neat and commodious building for it, with a colossal statue of James Watt in front, was erected in North Hanover-street in 1831; and a new, larger, and very ornamental edifice in lieu of this, was erected in Bath-street in 1860. The institution is managed by a committee; has a reading-room, and a well-selected library of about 7,000 volumes; and maintains lectures and classes in natural philosophy, chemistry, physiology, mathematics, drawing, music, Latin, Greek, French, German, Spanish, geography, English composition, writing, arithmetic, and book-keeping.—The Cowcaddens mechanics' institution has a reading-room, a reference library, and a circulating library, of upwards of 3,000 volumes, and maintains courses of lectures on subjects of popular instruction.—There is also a mechanics' institution of Calton and Bridgeton.

High School and Academy.—The High school, formerly called the Grammar school, was founded in the 12th century, and is managed by a committee of the town council. The large edifice in George-street, between John-street and Montrose-street, now occupied by Anderson's university, was built for it; and its present edifice, situated on the ascent behind the former, with a spacious playground between, was erected in 1819, and is a plain structure 120 feet long and 28 feet wide. The masters, seven in number, are appointed by the town council, and have handsome incomes from fees, and a salary, rarely exceeding £50, from the corporation funds. The course of tuition embraces five classes in the classics, one in French and German, one in grammar, composition, elocution, and history, one in arithmetic, geography, mathematics, and natural philosophy, one in writing and book-keeping, and one in drawing and painting. The number of pupils is upwards of 500. The session begins on the 1st of October, and continues till the 31st of May.—Glasgow Academy was established in 1846, and is managed by a body of directors. The building for it is a large ornamental structure in Elmbank-place. The departments taught in it are classics by the rector, a master, and an assistant, French and German by a master, English by a master and two assistants, mathematics by a master and two assistants, writing and book-keeping by a master and an assistant, and drawing, gymnastics, vocal music, and dancing, each by a master.—Several large academies, generally formed on the English model, for supplementing the education of the children of the higher classes, are in the western districts; and large schools of various kinds, for the education of the children of the humbler classes, are in all parts of the city.

Normal Schools.—The Normal institution in con-

nexion with the Church of Scotland, for training teachers and giving rudimental education to children, was formed in 1827, and is the parent institution of its kind in the kingdom. The building for it stands at the east end of the New City road, adjacent to Cowcaddens; was erected in 1827, after designs by Messrs. Hamilton, at a cost of £15,000; has a central front 128 feet long, with two retiring wings, each 110 feet deep; and is surmounted, at the centre, by a tower rising 45 feet above the roof. The training department or students' hall, includes religious knowledge, principles of teaching, history, geography, mathematics, physical science, music, drawing, and needlework, and is conducted by six masters and a mistress; and the practising department, or children's school, comprises infant, initiatory, junior, and senior classes, music, drawing, and needlework, and is conducted also by six masters and a mistress.—The Normal seminary, in connexion with the Free church, was founded immediately after the Free church's formation; and is of similar character to the former institution, but includes instruction in classics, French, German, and gymnastics. The building for it stands in Cowcaddens, $1\frac{1}{2}$ furlong east of the other institution, and is a large edifice in a mixed style of Gothic and Tudor, built in 1846, at a cost of £8,000.

Hutcheson's Hospital.—The most magnificent charity established by private benevolence in Glasgow, and similar to Heriot's Hospital in Edinburgh, excepting that it does not make monks of the school boys, is that founded by two brothers, George and Thomas Hutcheson, in 1639–41. The original bequest was a tenement of land, barn, and yard, and ground whereon to build an hospital, with 68,700 merks, or £3,816 13s. 4d. sterling. The sum mortified was at first intended for the support of 12 old men and 12 boys; but by the judicious purchase of land, which has become exceedingly valuable as feuing ground, and by the addition of other mortifications, such as Scott's, Baxter's, and Hood's, the sum now at the disposal of the patrons amounts to nearly £5,000 per annum. This revenue is appropriated towards the support of old men and women, and the educating and clothing of the sons of decayed citizens. The affairs of the charity are managed by the town council and the parish ministers. The hospital stands at the corner of John-street and Ingram-street, confronting Hutcheson-street; was erected in 1803, after a design by D. Hamilton, at a cost of £5,201; is a fine edifice, with rusticated basement and Corinthian superstructure, surmounted by an octagonal spire 156 feet high; and has, in niches on its front, decently executed busts of the brothers Hutcheson. No part of it is occupied as either school or boarding-place. The principal apartment was formerly used for Stirling's library, and is now used as the clearing-room of the Glasgow banks; and the other apartments also are let for commercial purposes. The school-buildings stand in Crown-street, Hutchesontown; are neat and spacious; and were erected in 1841, at a cost of £4,236, exclusive of the value of the site, which was estimated at £1,057.

Millar's School.—An institution for educating and clothing girls was founded by Archibald Millar in 1790, and opened in 1806. The house stands in George-street, between Montrose-street and Portland-street, and is a plain but pleasing edifice. The charity is governed by the principal and divinity professor of the University, the ten city ministers, and ten elders from the ten kirk sessions. The girls must be of reputable parents, and under the care of reputable persons, are admitted only at an age between eight and nine, and remain for three years.

The number for some time was about 30, but now is 75.

Other Public Schools.—The Trades' school adjoins the Trades' hall, was founded in 1808, is maintained and managed by the Trades' house, and has a head-master and three assistant teachers.—Wilson's charity school, in George-street, is governed by the magistrates, the ministers, and a number of other gentlemen, and has an English master, and a music master.—The Highland Society's academy stands near the High school; was instituted for educating, clothing, and apprenticing sons of indigent Highlanders; includes also a sewing school for girls; is maintained from a revenue of about £1,300 a-year; and has a head-master, a junior master, and a music master.—The Buchanan institution sprang from a bequest of J. Buchanan, for the education and industrial training of destitute boys; affords them instruction in reading, writing, arithmetic, and the elements of navigation, gymnastics, tailoring, shoe-making, and carpentering; and while not providing them with lodging, gives them three substantial meals daily at the school.—The Maxwell school sprang from a bequest of several thousand pounds, by Mrs. Blackhurst of Preston, for giving an education to poor children; is under the trusteeship of the magistrates and two ministers; and excludes the use of the Shorter Catechism or the application of any religious test.—The Industrial schools, in a new edifice in the old Scottish style in Rotten-row, are of the kind popularly called ragged schools, and provide food, education, religious instruction, and industrial training for destitute and neglected children of both sexes, whether admitted on private application or sent under a magistrate's warrant, charged with begging and vagrancy. The number on the roll at the close of 1861 was 134 boys and 74 girls.

Athenæum.—The old Assembly rooms, now occupied by the Athenæum, on the north side of Ingram-street, between Hanover-street and Frederick-street, were erected in 1796 and 1807, partly after designs by Henry Holland. The edifice has a heavy Ionic centre, with two lighter wings; and contains a reading-room, well supplied with newspapers and periodicals, and a continually increasing library, with at present upwards of 9,000 volumes. The Athenæum was instituted in 1847; and is designed to furnish the fullest and most recent information on all subjects of general interest—to excite, especially among young men, a taste for intellectual pursuits—and to afford an agreeable place of resort in the intervals of business. Life members pay £15 15s.; subscribers pay 25s. a-year; and strangers have free access for a fortnight, on introduction by a member.

Public Libraries.—The Glasgow public library, formerly in George-street, now in Bath-street, contained a large and choice collection of books so long ago as 1828, or some years earlier, and has regularly continued to make additions to its treasures. Subscribers to it pay a small amount of entry money, and 12s. of yearly subscription.—Stirling's library, formerly in the hall of Hutcheson's hospital, now at 48 Millar-street, was founded in 1791 by Walter Stirling, a Glasgow merchant; has received many valuable accessions from various donors; and now contains about 20,000 volumes. The public have free access to it daily, for consulting the books; and individuals get loans from it, for a life subscription of £5 5s., or for a yearly subscription of 10s. 6d.

Scientific Societies.—The Philosophical Society was founded in 1802, for discussing subjects connected with the arts and the sciences, and for the exhibition of models and new inventions. It re-

ceives regularly upwards of 40 scientific periodicals, English, French, and German; and has a library, comprising upwards of 3,800 volumes, in the various departments of science. Its members amount, at present, to about 300, and they meet fortnightly in a hall of the Andersonian University, and publish fortnightly their proceedings.—The Natural History Society was instituted in 1851, for encouraging the pursuit of natural history and cognate sciences. It meets monthly in the library of the Andersonian university; cultivates the exhibition of specimens, and the reading of communications; and promotes excursions of its members for conjoint observation and mutual improvement.—The Glasgow Archaeological Society was instituted in 1856, for the objects indicated by its title; and meets monthly from November till March.—The Glasgow Architectural Society was instituted for the advancement of the art and science of architecture.—The Institution of Engineers in Scotland meets monthly or oftener, during winter, in the Mechanics' Institution for the reading and discussing of papers.

Literary Societies.—The Maitland Club was instituted in 1828, for printing manuscripts and rare works illustrative of the early history, antiquities, and literature of Scotland. It was originally limited to 50 members, but was afterwards extended to 100. Upwards of 100 volumes quarto were published by it prior to 1862.—The Literary and Commercial Society holds fortnightly meetings, from the middle of November till the end of April, for the reading of essays, by its members, on subjects connected with literature, philosophy, political economy, and commerce.—The Juridical Society was instituted in 1847; meets weekly, during session, in the Sheriff Court hall; and promotes discussion and inquiry on subjects chiefly legal but partly literary.—The Legal and Speculative Society was instituted in 1852; meets weekly, from October till May, in the Procurator's hall; and promotes conjointly legal knowledge, literary taste, and fluent elocution.

Asylum for the Blind.—This institution was founded by John Leitch, Esq., a citizen of Glasgow, who had suffered injury of sight, and who bequeathed £5,000 toward commencing and maintaining the institution. The buildings for it, however, were erected by voluntary subscription in 1827-8. They are situated near the Royal Infirmary; and they include, in addition to a school, a large manufactory for the making of baskets, cordage, sacking, and other articles. A warehouse, in connexion with the manufactory, for the sale of its produce, is in Glassford-street. The late John Alston, Esq., spent many years in watching over the institution with a father's care; many benevolent individuals have helped it with legacies and contributions; and a considerable portion of the public currently give it aid by the purchase of its manufactures. The blind are taught in it, by means of contrivances which were first brought in by Mr. Alston, the knowledge of reading, writing, arithmetic, geography, geometry, and astronomy; they are also trained, in departments, to perform the work of its manufactory; and they do that work so well as to make the institution self-supporting, or at least to render it independent of annual subscriptions.

Deaf and Dumb Institution.—This institution is situated in the same part of the city as the asylum for the blind. It was commenced under the same auspices, and on the same system, as the Deaf and Dumb Institution of Edinburgh; and it became early distinguished for great efficiency and success. Strangers are allowed to visit it only on Wednesday and at a given hour.

Royal Infirmary.—This institution was projected

in June 1787, and opened in December 1793. It now comprises three buildings. The earliest of these stands on the ground once occupied by the episcopal palace, in the western vicinity of the Cathedral; is a large edifice, in the Roman style, after a design by Adam; has four stories above ground and one below; presents, on its front, a tetrastyle Corinthian portico; is surmounted by a large, fine, ribbed cupola; and contains 15 wards and 283 beds. The second building, called the fever hospital, was erected in 1832; stands a little to the north of the former edifice; has a plainer character; and contains 11 wards and 267 beds. The third building was erected in 1861, at a cost of £12,200. The Infirmary is supported mainly by voluntary contributions, but has also a permanent stock-capital, which received in 1854 the splendid addition of £10,000 by legacy of James Ewing, Esq., of Strathleven. The contributions to it from the working-classes, in the manufacturing establishments of the city, and in the mining districts of the neighbourhood, are always large, and amounted in 1861 to £2,295. The total expenditure during that year, exclusive of the cost of the new building, was £9,143. The total number of in-patients treated during 1861, was 4,441; and of these 4,103 were treated to a conclusion, 414 died, and 3,689 were sent out cured, relieved, or otherwise no longer requiring treatment. The number of fever cases was 751, and the number of surgical cases 564. The number of out-patients treated, during the same year, from the dispensary, was 10,272; and of these 4,370 were surgical, and 5,902 medical. The number of children vaccinated during the year was 873; but the average yearly number in some previous years, was close on 1,000. The Infirmary has a staff of 4 physicians, 4 surgeons, 2 dispensary physicians, 2 dispensary surgeons, and all other requisite officers; and is regularly attended by a great number of the students at the medical schools of the Royal and the Andersonian universities.

Lunatic Asylum.—The original edifice of this institution was founded in 1810, and opened in 1814, on what was then a secluded site in the northern outskirts of the city, but what is now a portion of the north side of the busy thoroughfare of Parliamentary road, laid out in 1838; and having been rendered unfit for its purposes, first by the tunneling of the Edinburgh and Glasgow railway beneath it, and next by the encroachments of the public streets, it was sold in 1841 to the directors of the town's hospital. A new edifice was founded in 1842, and opened in the following year, on a plot of 66 acres, at Gartnavel, about a mile west of the Botanic garden. The ground and the edifice cost together £75,950. The edifice stands on an eminence, commanding a splendid view of the surrounding country; is a huge pile, in a mixed style of Saxon and Gothic; and contains accommodation for 680 patients. Its first class division consists of three sides of a quadrangle, the principal one 492 feet long, each of the others 186 feet. Its second class division also consists of three sides of a quadrangle, the principal one 285 feet long, each of the others 196 feet.

Eye Infirmary.—The Glasgow Eye Infirmary, in Charlotte-street, has 24 beds for operation cases, and treats annually upwards of 1,600 patients. Two surgeons, two consulting surgeons, an assistant-surgeon, and an apothecary are on its staff; and students are admitted to its practice on payment of £3 3s. for twelve months, or £2 2s. for six months.

Lying-In Hospitals.—The Glasgow Lying-In Hospital, formerly in St. Andrew's-square, now at the head of North Portland-street, was established in

1835, is supported by voluntary contribution, has 24 beds for in-door patients, gives attendance to indigent married females at their own houses, and treats annually upwards of 1,000 cases.—The Glasgow University Lying-In hospital has 2 physicians, and a matron, treats the diseases of women and children, and affords gratuitous advice on these daily at its dispensary in George-street.

Lock Hospital.—This institution was formed in 1805, for the cure of diseased females; and is supported by voluntary contributions. It is situated in Rotten-row; and has two acting surgeons. The average number of patients nightly in it during 1861 was 33; the average number of patients' night's sojourn was 31; and the average cost of regular patients was £1 5s. 9½d.

Houses of Refuge.—These are institutions for the reception of juvenile thieves, and of neglected children who seem liable to glide into crime, and for giving them a good education, and training them to support themselves by honest industry. There are two for respectively males and females. That for males stands in the eastern outskirts of the city, by the outlet of Duke-street; is an edifice in the Roman style, after a design by Bryce; and was built in 1836-8, at a cost of about £13,000, raised by subscription. The institution was dependent entirely, for a time, on voluntary contribution; but eventually acquired support from assessment, imposed by act of parliament. The number of boys in the house, at the commencement of 1861, was 320; the number admitted during that year was 101; and the number who went off the list during the year, 133. Of the 101 admitted, 12 had never been in jail, 68 had once been in jail, 16 had been twice, and 5 had been from three to five times; 71 were under sentence by the city magistrates, 18 were under sentence by the sheriff, and 12 were admitted under the house of refuge act. Of the 133 who went off the list during the year, 6 were admitted into the army or navy, 5 were sent to Canada, 104 were sent to situations provided by friends, 4 were sent to another institution, 13 went away irregularly, and 1 died in the house. The house of refuge for females was of later origin than the other, and is situated in Parliamentary road. The number of girls in it at the commencement of 1861 was 88; the number admitted during that year was 27; and the number who went off the list during the year was 26. Of the 27 admitted, 12 were under sentence by the city magistrates, 5 were under sentence by the sheriff, and 10 were admitted under the house of refuge act. Of the 26 who went off the list, 13 were discharged to relations, 10 were sent to service, 1 absconded, and 2 died in the house.

Magdalene Asylum.—This institution is partly self-supporting, and partly maintained by subscription. The income of it, during the year ending 31 October 1861, was £1,235; and the expenditure, £1,097. The number of its inmates at the commencement of that year was 46; the number admitted during the year was 230; the number who went off the list during the year was 232; and of the last, 46 were sent to service or to various employments, 24 were restored to their friends, 69 were sent to the house of refuge, 16 were sent to other institutions, 2 were sent out to Australia, 2 were married, 15 were discharged as intractable, 51 left of their own accord, and 7 left clandestinely.—There is a magdalene department also in the female house of refuge. And the number of its inmates, at the commencement of 1861, was 41; the number admitted during that year was 50; the number who went off the list during the year was 44; and of the last, 3 were sent to service, 9 were restored to their

relations, 2 were sent to other institutions, 4 left to seek work, 23 left wilfully, and 3 were expelled.

Industrial Asylums.—The House of Shelter, in Hill-street, was instituted in 1850, to provide a home and needle-work for females liberated from prison, and desirous of doing well. The number of its inmates, at the commencement of 1861, was 36; the number admitted during that year was 70; the number who went off the list during the year was 66; and of the last, 14 were restored to relatives, 21 went to service or employments, 4 went to the infirmary, 2 went to other institutions, another left in bad health, 2 absconded, 14 left of their own accord, 7 were dismissed, and 1 died in the house.—The House of Industry for indigent females is connected with the Night Asylum for the houseless in North Frederick-street. The number of its inmates at the commencement of the year ending 31 Aug. 1861 was 22; the number admitted during that year was 31; the number who went off the list during the year was 27; and of the last, 13 went to service, 6 were restored to friends, 2 were expelled, 3 absconded, 2 left of their own accord, and 1 died in the house.

Orphan Asylums.—The Glasgow Protestant Institution for orphan and destitute girls, at Slatefield House, Gallowgate, was founded in 1826, for girls of good character, and provides clothing, board, and education, at the yearly charge of £8 each.—St. Matthew's Home for orphan and destitute children, situated in Hill-street, is under a committee of management, and provides clothing, board, medical attendance, and other necessaries.

Night Asylum and Soup Kitchen.—The Night Asylum in North Frederick-street has always been open, during many years, for the houseless or the utterly destitute. The average nightly number in it, during the year ending 31 Aug. 1861, was 91; the total number of men during that year was 9,981, of boys 3,921, of women 15,705, of girls 3,749; the total number of breakfasts and suppers issued was 79,437, of bread and soup meals 24,417, of bread meals 14,602; and the average cost of the meals was rather less than 3d. for three. The issues from the soup-kitchen, during the period from 25th December 1860, to 7th September 1861, was 47,781 to the account of the City-magistrates, 18,223 to the account of the City and Barony parishes, 4,098 to the account of private parties, and 1,673 gratuitously.

Model Lodging Houses.—An establishment in Greendyke-street has accommodation for 134 inmates; includes lavatories, a large sitting-hall, and a library and reading-room; charges, for the most part, 3d. per night; and accommodated, during the year 1861, 45,749 persons.—Another establishment in Macalpine-street, consists of 4 flats, and has accommodation for 298 males; includes lavatories, a large sitting-room, a smoking-room, and a library and reading-room; charges 4d. and 6d. per night; and accommodated during the year 1861, 58,671 persons.—A third establishment in Carriek-street, has accommodation for 200 females; possesses a general resemblance to the establishment in Macalpine-street; charges, for the most part, 3d. per night; and accommodated, during the year 1861, 25,231 persons.

Poor-Houses.—The original Glasgow poor-house, or Town's hospital, stood in Clyde-street, and was built in 1733. The means for raising it, as also, during some time, the means for maintaining its inmates, was voluntary subscription; and even after assessment for the poor came into practice, the amount of this for the city, so late as 1803, was only £3,940. But the pressure of pauperism began, soon after that date, to be strong; and it has gone on in-

creasing with such rapidity that, in 1861, so many as 17,730 persons, or about 1 in 25·2 of the entire population, were dependent on poor-rates. These are levied in the proportions mentioned in section "Assessments," in the four quasi-parochial districts of the City, the Barony, Govan, and Gorbals. The City poor-house now is in Parliamentary-road, was originally the lunatic asylum, passed by sale to the parochial managers for £15,000, is a spacious octagonal edifice, with four radiating wings and a central dome; and contains accommodation for 1,500 persons. The number of its inmates on 1st July 1860 was 891; the number then at school, 72; the number of poor who received in-door relief during the previous half-year, 2,959; the number on the sick-list during that half-year, 1,677; the number of inmates who died during that half-year, 255; the number of lunatic inmates during that half-year, 183. The Barony poor-house is a spacious, oblong, modern edifice, at Barn-hill, in the north-eastern environs of the city; and contains accommodation for 1,243 persons. The number of its inmates on 1st July 1860 was 966; the number then at school, 170; the number of poor who received in-door relief during the previous half-year, 2,234; the number on the sick-list during that half-year, 773; the number of inmates who died during that half-year, 98; and the number of lunatic inmates during that half-year, 175. The Govan and Gorbals poor-house is a square of buildings, in the southern outskirts, on the line of Bridge-street, originally erected for cavalry barracks, occupied for some time as such, purchased from Government, and refitted by the parochial managers, and now containing accommodation for 750 persons. The number of inmates on 1st July 1860, was 374; the number then at school, 59; the number of poor who received in-door relief during the previous half-year, 740; the number on the sick-list during that half-year, 348; the number of inmates who died during that half-year, 68; and the number of lunatic inmates during that half-year, 37.

Charitable and Friendly Societies.—One of these was instituted in 1799, and affords relief to aged and destitute women, chiefly widows. Another was instituted in 1811, and affords relief to indigent women, above 60 years of age. Another was instituted in 1844, and affords comparatively large relief to natives, and to the widows and children of natives, who have fallen from competence into indigence. Another was instituted in 1808, and gives annuities of £10 or upwards, immediate or deferred, to persons of 30 years and upwards. Two others give visitation and alimony to the destitute sick. Another in the west, established in 1853, gives gratuitous advice and medicines to the sick-poor. Others are for the benefit of persons of given names, such as Brown, Buchanan, and Graham; others are for the benefit of specific classes, as commercial travellers, grocers, stationers, printers, seamen, Scottish Episcopalians, and the sons of ministers; others are for the benefit of persons from special districts,—Angus and Mearns, Ayrshire, Upper Clydesdale, Fife, Kinross, and Clackmannan, Galloway, Dumfriesshire and Galloway, Lothian, Perthshire, Renfrewshire, Moray and Banffshire, Merse and Teviotdale, Stirlingshire, Tweedside, and the West of Scotland.

Religious and Philanthropic Societies.—These, as distinguished from ecclesiastical institutions, are of the same kind as in other large towns of the empire, so numerous and so well understood, that we need do no more than name the chief ones:—The National Bible Society of Scotland; the West of Scotland Bible Society; the Glasgow sub-division

of the Evangelical Alliance; the Glasgow Auxiliary to the London Missionary Society; the Glasgow Auxiliary to the Moravian missions; the University Missionary Association; the Glasgow Continental Society; the Glasgow Auxiliary to the Colonial Missionary Society; the Ladies' Auxiliary to the Glasgow Missionary Society; the Glasgow branch of the Scottish Society for the Conversion of Israel; the Glasgow City Mission; the Ladies' Auxiliary to the Glasgow City Mission; the Glasgow Cabmen's Mission; the Glasgow Emancipation Society; the Glasgow Female Anti-Slavery Society; the Glasgow Ladies' Association for the advancement of female education in India; the Glasgow Ladies' Association for the Christian education of Jewish females; the Glasgow Religious Tract Society; the Glasgow Sabbath School Union; the Glasgow Sabbath School Association in connexion with the Church of Scotland; the Glasgow Young Men's Christian Association; and the Scottish Temperance League.

Ecclesiastical Affairs.

Established Church.—All Glasgow on the north side of the Clyde, and a considerable landward tract around it, long formed only one parish. The landward tract, or Barony, had a minister appointed to it in 1595; but was not then made a separate ecclesiastical territory. The presbytery, in 1599, applied to the town-council to divide the township or parish, on account of its having become unwieldy; and after due consideration had been given to the application by the corporate body, the following answer was returned:—"They thocht gud that the township should be divided into twa parishes, provyding that the town be not burdenit with seaten or bigging of kirks nor furnishing nac mae ministers nor they hae already." This was approved of by the incorporated trades; and the township was formally divided into two parishes in 1602. The portion of the original parish which remained under the charge of the minister of Glasgow, and is still sometimes called the parish of Glasgow, as it embraced the royalty of the city, fell under the management of the magistrates and town council, and was by them divided at successive intervals, as its population increased, into ten districts, which were erected into separate parishes, with the consent of the presbytery, and by authority of the court of teinds. These parishes, with their respective acreage, are Inner High, or St. Mungo's, 103·01; Outer High, or St. Paul's, 33·797; St. Andrew's, 28·179; St. David's, 83·136; St. Enoch's, 50·467; St. George's, 193·105; St. James', 197·758; St. John's, 169·825; St. Mary's or Tron, 14·37; and Blackfriars, or College, 32·236. The Barony parish, comprising 3,295·612 acres, remained till a recent period, a single parish, under the charge of one minister, aided by the erection from time to time of chapels of ease, with subordinate ministers; but much of it has been disjoined to form the new parishes of Calton, Bridgeton, Chalmers', Shettleston, Springburn, Maryhill, St. Matthew's, St. Peter's, and St. Stephen's; while the remaining part contains also the chapels of ease or non-parochial churches of Camlachie, St. Mark's, Martyr's, Milton, Anderston, Sandyford, West Park, and Kelvin-haugh, and the disjoined parts or new parishes contain those of Greenhead, St. Luke's, Millerston, St. Rollox, Well-Park, St. George's-in-the-fields, Bridgegate, and Brownfield. There is also, belonging jointly to the city and the Barony, but without any assigned territorial limits, the parochial Gaelic church of St. Columba. Gorbals parish, on the south side of the Clyde, was originally a small tract disjoined from Govan parish, afterwards enlarged by another disjunction from that parish;

afterwards modified by the receipt erection of the new parish of Laurieston; and it now comprises 28·489 acres, and contains the chapels of ease of Hutchesontown and Kingston. Laurieston parish comprises 43·795 acres. Govan parish, in so far as lying within the parliamentary boundary, comprises 789·278 acres, and contains the chapels of ease of Partick and Strathbungo. The three parishes of Gorbals, Laurieston, and Govan, include all parts of the city and suburbs lying south of the Clyde.

The parishes of the city and suburbs together with seven other parishes, constitute the presbytery of Glasgow; and the presbyteries of Glasgow, Dumbarton, Hamilton, Lanark, Paisley, Greenock, Ayr, and Irvine, constitute the synod of Glasgow and Ayr. The patron of Inner High, Barony, Calton, Shettleston, Springburn, and Maryhill, is the Crown; the patrons of all the city churches except the Inner High, are the Town-council; the patrons of Bridgeton, Chalmers', St. Matthew's, St. Peter's, St. Stephen's, and Laurieston, are the male communicants; the patron of St. Columba's is the Gaelic Society; the patrons of Gorbals are the heritors and kirk-session; and the patron of Govan is the University of Glasgow. The stipend of the Inner High and the Barony arises from the teinds of the original parish of Glasgow, and amounts to not less than £500 per annum each. The stipend of each of the city parishes, except the Inner High, is paid by the Corporation, and was increased from time to time as follows:—£58 16s. 11d. in 1623, £66 13s. 4d. in 1642, £78 16s. 8d. in 1643, £111 2s. 2d. in 1723, £138 17s. 8d. in 1762, £165 in 1778, £200 in 1796, £250 in 1801, £300 in 1808, £400 in 1814, £425 in 1830. The stipends of the other churches are various both in source and in amount.

The Cathedral.—The parent church of Glasgow stands contiguous to the ravine of the Molinduar burn, on nearly the highest ground within the limits of the city. This was the Cathedral before the Reformation, the High Church afterwards; and it now bears both names indifferently. The edifice was mainly built during 74 years of the 12th century, but it underwent additions and changes both before and after the Reformation, and it passed through a process of cleansing and restoration in the years 1835–1857, with a view to reinstate it in what good critics regard as its original or designed form. It was modelled on the Latin cruciform type, but has no north transept, and only a small incomplete south one; and it comprises nave, choir, lady-chapel, crypt, and chapter-house,—measures 319 feet in length, 63 feet in breadth, and 90 feet in height,—and has also a central tower and spire. The grand western entrance was long blocked by a consistory and a low steeple, which were an excrescence on the original edifice; but the entrance has been restored, and the excrescence taken away. The nave internally is 155 feet long; and the central compartment of it, or nave proper, is 30 feet wide. The columns supporting the main arches and walls, are on each side seven in number, exclusive of the piers of the great tower. The chief characteristics of the nave are simplicity and sublimity, arising from its vast extent and uniformity. In Roman Catholic times this outer court of the church was used for marshalling processions on high festivals, or great public solemnities, such as those Bishop Cameron delighted to exhibit, when the see was in the fulness of its temporal power and wealth. Subsequent to the Reformation a partition wall of rough masonry was run up, which cut the nave in two, and the western portion of it was fitted up as a church, and received the name of the Outer High. This insightfully appropriation continued till 1835, when the Town-

council built a new church for the parish of the Outer High, which was now named St. Paul's; and the wall dividing the nave, along with the seating of the church, was then removed. The tower forms a cube of 30 feet; rises about the same height above the lofty roof of the building; and is surmounted by a spire, attaining an elevation of 225 feet from the floor of the nave to the top of the weather-cock. The rood-screen or loft dividing the nave from the choir, appears to have been one of the most exquisitely carved portions of the building; but it was sadly mutilated by the Reformers; and nothing can restore those mystical figures, of which the ruins alone remain. The choir, in which the principal altars were erected, and high mass performed, is a fine specimen of the early English style, and happily it has been kept in a very creditable state of repair and preservation, from the fact that it was appropriated as a Protestant place of worship immediately after the ejection of the Roman Catholics. It is still the High or Inner High Church of Glasgow; and in 1855 it was chastely renovated by the removal of the galleries, and the reseating of the lower portions in the Cathedral form. In length, from the centre of the piers of the great tower to those which support its eastern gable and separate it from the lady chapel, it is 97 feet; and in width, exclusive of the side aisles, it is 30 feet. The main arches are, on each side, five in number, resting upon majestic columns, having rich and beautifully foliated capitals. On the vaulting are seen numerous coats of arms of the different bishops and prebends; and amongst these, on the left of the high altar space, is the royal arms of Scotland, placed there in the times of James IV., who was himself a canon and member of the chapter.

The lady chapel is approached from either of the aisles of the choir. It was long allowed to remain in a state of neglect; and its exquisite carvings were cloaked up by the rubbish, dust, and mildew of two centuries; but the recent renovations have brought them out in their pristine beauty. This chapel contains a solitary monument to the memory of the Protestant Archbishop Law. In Joceline's crypt, it is generally admitted that Glasgow Cathedral boasts of the most unique and magnificent structure of the kind in the kingdom; and the two lesser ones, viz., Blackadder's in the unfinished southern transept, and Lauder's under the chapter house, are also considered exquisite gems, especially the former. The Roman Catholic architects expended all the resources of their art in adorning the spot which was to receive the remains of the lordly prelates and benefactors of the see; and after the lapse of seven centuries, it stands alone in its dignity and beauty. The crypt extends in length beneath the choir and lady chapel 125 feet, by 62 in width. The principal piers are found here, as a matter of course, beneath those of the superstructure; they assume every possible form of triangular, round, and multangular; and they are embraced by attached columns, having capitals of all varieties, from the simple Norman to the most intricate foliage. A tomb at the eastern end, upon the raised platform of which is placed the recumbent effigy of a bishop in his robes, is consecrated by tradition as that of St. Kentigern. This is exceedingly apocryphal; and it is much more likely to be the tomb of one of the bishops subsequent to the reign of David I. The figure unfortunately is mutilated. In Romish times, the crypt was used as a place of sepulture; but all traces of the remains of the prelates and the benefactors of the see, who shared their resting-place, were cast forth at the troubles of the Reformation. The crypt was afterwards appropriated as the place

of worship of the Barony or landward parish, on this being disjoined from the city parish. A more unique place of worship than this underground chancel house—magnificent though it be—has rarely been known. Irregular clusters of pews were interspersed between the dense colonnade of short pillars which supported the low arches; and here the congregation assembled to worship in the "dim religious light" supplied by the slanting rays which struggled inwards from the bright world without. Tennant gives it as his opinion that the church was only fit for the singing of the "De Profundis Clamavi ad te Domine;" and Sir Walter Scott graphically describes it in his "Rob Roy." This extraordinary place of worship was retained by the Barony parishioners till 1801, when the present church was built. The Cathedral was not quit of the Barony heritors, however; for they had no sooner left the crypt as a church, than they took possession of it as a place of sepulture for their own kindred. It accordingly presented a most unseemly spectacle for many a day. The lower shafts of the columns were buried 5 feet in earth, while the walls were daubed over with disgusting emblems of grief. The rusty railings, however, and the foul compost, have now been removed, and the former repulsiveness of the crypt is forgotten in the feeling of admiration and pride inspired by its restored dignity and beauty.

A proposal was made, in 1856, to fill the windows of the Cathedral with stained glass; and this was readily taken up by a body of subscribers, including the Government, the Corporation, and a number of wealthy private parties. A committee was appointed to form a plan, and to carry it into execution. The plan included the great east window at a cost of about £606, to be supplied by Government; the great west window, at a cost of about £1,570, to be supplied by the Corporation; the great northern transept window and the great southern transept window, to be supplied by Sir Andrew Orr, ex-lord-provost, and by the Messrs. Baird of Gartsherrie; forty-four windows of the nave, the choir, and the lady-chapel, and between forty and fifty windows of the crypts, to be supplied by general subscription and by private parties. The design for the great east window was a replacement, in better style, of figures of the Four Evangelists, which had previously been in that window for fifty years; that for the great west window was a series of episodes from the history of the Jewish people; that for the great transept windows was full length figures of prophets and righteous kings of the Old Testament times; that for the choir windows was subjects from the Parables, alternating with angelic figures; that for the lady-chapel windows was subjects illustrative of the propagation of the gospel, as narrated in the Acts of the Apostles; that for the chapter-house windows was subjects illustrative of the history of the Cathedral, including a visit made to it in 1849 by Queen Victoria; and that for the crypt-windows was miscellaneous, affording scope for memorials and devices by private parties or individual families. Great part of these designs has been executed, chiefly from the royal factory of Munich, in a style at once brilliant, beautiful, and harmonious. The grand windows are a blaze of art; and many of the subordinate ones, as well in the crypts as elsewhere, have much attraction.

Parochial Churches.—St. Paul's Church, built for the congregation of the Outer High parish, formerly assembling in the nave of the Cathedral, is situated in John-street; presents a neat but comparatively plain appearance, with a belfry; and contains 1,195 sittings. St. Andrew's church stands in the centre of St. Andrew's square; was built in the

latter part of last century; presents a general resemblance to the church of St. Martin's-in-the-Fields in London; has a hexastyle composite portico, and a lofty steeple; and contains 1,213 sittings. St. David's church stands on the north side of Ingram-street, confronting Candlerigg-street; superseded a previous church, called the Ramshorn, on the same site; surmounted a burying crypt, with groined arches and cast-iron pillars; is a handsome cruciform structure, in florid Gothic, after designs by Rickman and Hutchinson of Birmingham; has a square pinnacled tower, 120 feet high; and contains 1,113 sittings. St. Enoch's church stands at the south end of St. Enoch's square; has a disproportionately small but beautiful steeple, which belonged to a previous edifice of 1782; is itself a handsome Roman structure of 1827, after a design by D. Hamilton; and contains 1,219 sittings. St. George's church stands in St. George's place, on the west side of Buchanan-street, confronting George-street; is an oblong Roman edifice of 1807, after a design by Stark; has a disproportionately small front, surmounted by a steeple 162 feet high, with four obelisk finials at the angles, and a loftier one in the centre; and contains 1,315 sittings. St. James' church stands in Great Hamilton-street; was originally a Methodist chapel; is a neat but plain structure, without tower or belfry; and contains 1,274 sittings. St. John's church confronts the head of Macfarlane-street; was built for Dr. Chalmers; is a fine Gothic edifice, with pinnacled square tower; and contains 1,633 sittings. St. Mary's or Tron church stands behind the house-line of the south side of Trongate, in the near vicinity of the Tron steeple; is a plain edifice of 1794, after a design by Adam; and contains 1,344 sittings. Blackfriars' or College church stands on the east side of High-street, adjacent to the University; is an unattractive edifice of 1699, on the site of a noble previous Gothic church, which was destroyed by lightning in 1688; and contains 1,162 sittings.

Barony church stands in the neighbourhood of the Cathedral; was built in 1801; is a large ungainly structure, without tower or any tasteful decoration; and forms one of the worst specimens of ecclesiastical architecture in the kingdom. St. Columba's church, on the east side of Hope-street, is a modern, pleasing Gothic edifice. West Park church, on a high site at the eastern extremity of the West End park, is a recent, massive Gothic edifice of nave and aisles, with a grand lofty tower, terminating in eight pinnacles. Anderston church, near the head of Main-street, Anderston, is a conspicuous, modern Gothic edifice, with a good steeple. Sandyford church, near the same line of thoroughfare, further west, is a recent, heavy Gothic pile, with three-gabled front. Milton church, on the south side of the new City-road, is a good modern structure, with a steeple. Gorbals church, on the south side of Norfolk-street, is a neat recent oblong edifice, with a spire terminating in an obelisk. Some of the other Established places of worship might challenge notice as at least pleasing buildings; but three of the most prominent stand at a distance from the city-proper, and belong to the separate suburban towns of Springburn, Maryhill, and Govan.

Free Church.—The non-intrusionists in the Established church who, in 1843, formed the Free church, were more vigorous in Glasgow, and carried out their church extension scheme more grandly here, than anywhere else in the kingdom; and they have continued, in their Free church capacity, to maintain corresponding energy. Their congregations, within the city and its suburbs, in 1862, together with the total contributions of each during the

twelve months ending on 31 March of that year, were, Anderston, £1,922 2s. 2d.; Argyle, £1,145 3s. 11½d.; Bridgegate, £741 9s. 9½d.; Bridgeton, £422 1s. 2½d.; Camlachie, £206 13s. 11½d.; Campbell-street, £462 18s. 5½d.; Chalmers', £259 3s. 4½d.; College, £6,319 9s. 1d.; Duke-street, £543 6s. 11½d.; Finnieston, £781 18s. 9d.; Gorbals, West, £407 5s. 5½d.; Gorbals, East, £1,375 10s. 7½d.; Hope-street, £975 4s. 5½d.; Hutchesontown, £810 17s. 8d.; John Knox's, £951 10s. 1d.; Kelvinside, £744 1s. 10½d.; Kingston, £178 5s. 3d.; Lyon-street, £383 1s. 0½d.; Martyrs', £172 2s. 5½d.; Maryhill, £398 4s. 11½d.; Millerston, £207 9s. 9½d.; Milton, £420 12s. 7½d.; Partick, £601 2s. 3d.; Renfield, £1,016 13s. 5d.; St. Andrew's, £754 0s. 1d.; St. David's, £611 10s. 1d.; St. Enoch's, £1,420 3s. 5½d.; St. George's, £1,718 6s. 10d.; St. James', £725 17s. 7d.; St. John's, £2,813 2s. 8½d.; St. Luke's, £399 13s. 7½d.; St. Mark's, £881 14s. 6½d.; St. Matthew's, £3,450 2s. 11d.; St. Paul's, £1,166 19s. 7d.; St. Peter's, £2,259 17s. 4½d.; St. Stephen's, £847 19s. 1½d.; Stockwell, £1,052 8s. 11½d.; Tron, £1,851 4s. 10½d.; Union, £1,301 15s. 11½d.; Wellpark, £957 10s. 1½d.; West, £669 12s. 11½d.; Wynd, £327 6s.; Young-street, £368 8s. 8½d.; Govan, £722 13s. 10½d.; East Millar-street mission, £10 10s.; East Gorbals mission, £2 10s. 8d.; Shettleston mission, £110 19s. 8½d.; Tolleross mission, £57 14s. 8½d. These congregations and nine others form the Free church presbytery of Glasgow; and the presbyteries of Glasgow, Dumbarton, Hamilton, Lanark, Greenock, Paisley, Ayr, and Irvine, form the Synod of Glasgow and Ayr.

The church of the College congregation and the buildings of the Glasgow Free Church College form one grand pile, situated on high ground a few paces east of the Established West Park church, and erected during a series of years ending in 1862. Their style is mainly Saxon, but includes Grecian features; their appearance is alike conspicuous and imposing; their fronts are, the college to the west, the church to the north; and the former has a massive, ungraduated, very lofty square tower, with a high projecting balustrade, while the latter shows an attached octostyle Corinthian portico, surmounted by two towers in miniature uniformity with the great western tower. The college was instituted to prepare students in the west of Scotland for the Free church ministry; it has several professors on subjects of theology, exegesis, and church history, and a lecturer on natural science; it requires that students, on entering, shall have attended four sessions at some royal university or kindred institution; and it holds them in attendance during four sessions of five months each, beginning always in November.

St. Matthew's church, confronting Newton-street, on the south side of the western extremity of Bath-street, is a handsome Gothic edifice, with a lofty, well-formed steeple. Renfield church, on the same side of Bath-street, a little further east, is an elegant florid Gothic building, with tall pierced octagonal turrets, erected in 1857, at a cost of £12,000. Kelvinside church, in the vicinity of the Botanic Garden, is a temporary wooden structure, to be superseded by a handsome stone edifice, founded in 1862. St. George's church, in West Regent-street, near Blythswood-square, is a neat but unpretending edifice. St. Peter's church, in Blythswood Holm, is an ornamental Gothic edifice, with a lofty spire. Tron church, near the intersection of Cathedral-street and North Hanover-street, is also an ornamental Gothic building with adjoining presbytery-house. St. John's church, on the south side of George-street, opposite the Ander-

souian university, was erected in 1843; has a lofty, much-carved, well-proportioned steeple; and is one of the finest specimens of modern Gothic architecture in the city. St. Andrew's church, on the south side of London-street, a short way from the Cross, is a Gothic structure with ornamental gable-front. Wellpark church, at the junction of Duke-street and Ladywell-street, is a heavy Gothic building with a steeple. Gorbals church, formerly Gorbals parish church, in Clyde terrace, figuring conspicuously in all the views along the river, around the bridges, was built in 1810, after a design by Thomas Hamilton, and is a large Roman edifice, with lofty, well-proportioned steeple. East Gorbals church, confronting a street a little to the south, has a handsome Gothic front. Hatchesontown church, in the vicinity of Port-Eglington, on the line of Bridge-street, is a large, heavy, Gothic edifice, with a steeple. Most of the other Free churches are substantial, and rise above a character of plainness; and even two mission ones, built in 1861, in Carrick-street and Maitland-street, are tolerable specimens of early Gothic.

United Presbyterian Church.—In 1851, the United Presbyterian places of worship returned in the Census as within the city were twenty-three, containing 22,484 sittings, attended at the forenoon service by 15,080 persons, at the afternoon service by 14,649, which exceeded the number returned by any other denomination. In 1862, the congregations on the list as within the city were thirty-five; but there were also within the suburbs the three additional congregations of Partick-east, Partick-west, and Govan; and these thirty-eight congregations, together with twenty-five others, constitute the presbytery of Glasgow. We shall notice the thirty-eight congregations, or their places of worship, in alphabetical order.

Anderston church is a neat Roman structure, built in 1839, and containing 1,250 sittings; and it superseded a previous edifice of 1769, erected by the first Relief congregation of the city. Berkeley-street church is a Gothic edifice of 1857, erected by members of the second Campbell-street congregation. Blackfriars' church had a missionary origin, and was opened in 1853. Caledonian-road church was built in 1856, and is a Græco-Egyptian edifice, with a lofty, square, campanile tower, surmounted by a large Latin cross. Calton church belonged originally to Reformed Presbyterians; passed by sale to members of the Relief; was built in 1821, and contains 1,394 sittings. Cambridge-street church is a plain Roman building, was erected in 1834, at a cost of £3,110, was afterwards enlarged; and contains about 1,200 sittings. A grand new church for the Cambridge-street congregation was founded in 1862, on the Great Western road, in the vicinity of the Kelvin. Campbell-street church, formerly called the second Campbell-street one, was built by the Relief in 1792, at a cost of £2,069; continued to be occupied by a congregation after the building of the Berkeley-street church; contains 1,372 sittings; and is speedily (1863) to be superseded by a new edifice. Canon-street church was acquired by a mission congregation in 1852, and belonged previously to another denomination. Cathedral-street church was built in 1844, by a Relief congregation, in lieu of a previous one of 1775 at Dovehill; and is a handsome Gothic structure, containing 1,100 sittings. Claremont-street church was built in 1855, by an extension congregation; is a spacious Gothic structure of nave and aisles; and was the subject of much discussion respecting the intended use of an organ. Duke-street church was built in 1801, by an Antiburgher congregation, at a

cost of £4,500; and is a plain but pleasing edifice, containing 1,224 sittings. Eglington-street church is an oblong Roman edifice; was built in 1825, by an extension congregation, at a cost of £4,104; and contains 1,218 sittings. Erskine church, in South Portland-street, was built in 1843, in lieu of an edifice in Nicholson-street; and is a handsome, pinnacled Gothic structure, with about 1,200 sittings. Gillespie church, in Great Hamilton-street, was erected in 1845, at a cost of £4,000, has a Gothic front, and contains 1,000 sittings. Gorbals church, in Main-street, had a missionary origin in 1854; and contains 600 sittings. Greenhead church, in Bridgeton, was erected in 1805, as a Relief church, at a cost of £1,592, and contains 1,292 sittings.

Greyfriars' church, in North Albion-street, was erected in 1821, at a cost of £8,300; is a handsome edifice, with Grecian portico, after a design by John Baird; contains 1,532 sittings; and superseded a previous church in Shuttle-street, built in 1740 by the first Secession congregation in Glasgow. Hatchesontown church was built, at a cost of £3,000, by a Relief congregation organized in 1799; and contains 1,609 sittings. John-street church, at the corner of Cochrane-street, is an oblong edifice of 1859, with two fronts, consisting of basement story and lofty Ionic colonnade, after designs by Rothead; and it superseded, on the same site, a previous church of 1798, built by a Relief congregation, at a cost of £4,442, and containing 1,522 sittings. Langside-road church originated with an extension congregation in 1858. London-road church was built in 1835, and contains 1,094 sittings. Maryhill church originated with a congregation formed in 1855. Mitchell church, in Cheapside-street, also originated with a congregation formed in the same year. Montrose-street church was founded in 1841, by a disjoined portion of Duke-street congregation, and contains about 800 sittings. New City-road church originated with a mission congregation formed in 1854. Partick churches, East and West, are neat, plain, medium-sized edifices of 1826, erected by respectively United Secession and Relief congregations. Pollok-street church is a large handsome edifice, and was built by an extension congregation, formed in 1855. Regent-place church was built in 1818, at a cost of £4,939, by a disjoined portion of Duke-street congregation; and contains about 1,400 sittings. Renfield-street church, adjacent to Sauchiehall-street, was built in 1848 by a main portion of Regent-place congregation; makes a brilliant display of Gothic pinnacles, but is flanked along the Sauchiehall-street basement with shops; cost, along with the shops, £12,695; and contains 1,236 sittings. St. Rollox church originated with a mission congregation, formed in 1855. St. Vincent-street church was built in 1858; stands on high ground; is a massive structure partly in Egyptian architecture, partly in Ionic, with lofty, Egyptian, cupola-capped tower; and superseded a previous plain edifice in Gordon-street, erected in 1823, by an extension congregation, at a cost of £4,460, and containing 1,576 sittings. Shamrock-street church was built in 1850, by an extension congregation, at a cost of £3,000; is a neat edifice, with Gothic front; and contains about 1,000 sittings. Sydney-place church, in the eastern part of Duke-street, is an ornate Grecian structure of 1858, erected in lieu of the first Campbell-street church, which was built by a Burgher congregation in 1788, and contained 1,631 sittings. Springburn church originated with a mission congregation in 1857. Tollcross church was built by a Relief congregation in 1806, at a cost of £2,650; and contains 1,269 sittings. Wellington-street church was built in 1828, at a cost of £9,000; su-

perseded an edifice in Anderston, which had been erected by an Antiburgher congregation in 1792; is an oblong edifice surmounting burial crypts, and adorned with a handsome Grecian portico; and contains 1,492 sittings.

Other Presbyterian Churches.—The Reformed Presbyterian church has four congregations in Glasgow; and these, with seven in other places, form its presbytery of Glasgow. The first of its Glasgow congregations was formed in 1756, in Calton, and removed to a large neat new edifice in Great Hamilton-street. The other three have good structures in respectively West Campbell-street, Salisbury-street, and Grant-street.—The United Original Secession church has a congregation in Main-street, and makes this and three others elsewhere constitute its presbytery of Glasgow.—Two isolated congregations, calling themselves Congregational Presbyterians, built neat spacious churches in Parliamentary-road and Barrack-street; and the former passed, in May 1863, into connexion with the United Presbyterian church. Another isolated congregation, called Church Presbyterian, meets in Low Green-street.

Congregational Churches.—Seven churches, in connexion with the Congregational Union of Scotland, are in Ewing-place, Elgin-place, Claremont-terrace, Nicolson-street, North Hanover-street, Great Hamilton-street, and Dovehill. The edifice in Ewing-place is a spacious, ornate, recent structure in the Italian style, built in lieu of a very large but plain edifice in West Nile-street; and that superseded the first Congregational place of worship in Glasgow, which stood in Jamaica-street, bore the name of the Circus, and was opened, in 1779, by the famous Rowland Hill of London. The edifice in Elgin-place is a structure in florid Ionic, built in 1856, in lieu of the edifice in George street, now incorporated with the Edinburgh and Glasgow railway terminus; and that edifice superseded a structure in North Albion-street, which was the second Congregational place of worship in Glasgow.—Two congregations, of similar principles to the seven, but not connected with the Congregational Union, assemble in a place of worship in Bath-street, and in another called Ebenezer chapel. The Bath-street edifice is a structure of 1853, in showy Gothic, with hagiological sculptures, and a tasteful, tapering, lofty spire.—An old Scotch Independent place of worship, a modern tasteful building, is in Oswald-street.—Six places of worship, in connexion with the Evangelical Union, are in Dundas-street, Blackfriars'-street, Calton, Bridgeton, Tradeston, and the North Quarter. The Dundas-street edifice is a Norman triple-gabled structure, with flanking entrance-tower, terminating in a truncated spire.—Baptist places of worship are in Hope-street, Brown-street, Blackfriars'-street, John-street, North Frederick-street, South Portland-street, Norfolk-street, and Dovehill.

Methodist Churches.—A hall in Stockwell-street was rented by the Methodists in 1779, and frequently preached in by John Wesley. A plain large church was afterwards built by them in John-street, and was recently reconstructed. Two better large churches were built by them also in Great Hamilton-street and Bridge-street; but the former was sold to the town-council to become the parish church of St. James, and the latter was sold to the Glasgow and Paisley railway company, and was taken down to give place to the terminus. The Wesleyan Methodist places of worship now in Glasgow, besides that in John-street, are one called St. Thomas' and one at the Govan iron-works. Two Primitive Methodist places of wor-

ship are in George-street and in Main-street, Gorbals.

Episcopal Churches.—Four Scottish Episcopalian places of worship are in Glasgow.—St. Andrew's at the foot of the Green, St. Mary's in Renfield-street, St. John's in Anderston, and Christ's church in Calton; and the clergymen of these, together with the clergymen of twenty-seven others in other places, are under the Bishop of Glasgow and Galloway, who resides in Ayr. St. Andrew's church is an edifice of 1750, and contains a fine-toned organ and some elegant decorations. St. Mary's church is a neat Gothic structure, after a design by R. Scott.—An English Episcopalian church, called St. Jude's, stands at the south-west corner of Blythwood-square; is a neat oblong edifice, in the Græco-Egyptian style; and was built for the poet Robert Montgomerie.

Roman Catholic Churches.—Eleven Roman Catholic places of worship are in Glasgow and its environs.—St. Andrew's in Great Clyde-street, St. Mary's in Abercromby-street, St. John's in Portugal-street, St. Mungo's in Stanhope-street, St. Patrick's in Anderston, St. Vincent's in Duke-street, St. Alphonsus' in Great Hamilton-street, St. Joseph's in North Woodside-road, St. Peter's in Partick, another in Springburn, and another in Maryhill; and the clergymen of these, together with the clergymen of forty-six others in other places, are under the Bishop of Castabala, or Vicar Apostolic of the Western Districts of Scotland, who resides in Glasgow. St. Andrew's church was built in 1817, and is a large brilliant edifice in florid Gothic, consisting of nave and aisles, and richly adorned with turrets and pinnacles. The earliest unclandestine Roman Catholic place of worship in Glasgow, subsequent to the Reformation, was an edifice of 1797 in Gallowgate, and this was superseded by St. Andrew's church.

Other Religious Denominations.—A congregation of Plymouth Brethren meets in West Campbell-street; one of Glassites, in George-street; one of Bereans, in the Trades' Hall; one of the Catholic Apostolic Church, in Catherine-street; one of the New Jerusalem Church, in Cathedral-street; one of the Society of Friends, in North Portland-street; one of Universalists, in the Trades' Hall; one of Unitarians, in St. Vincent-street; one of Christian Israelites, in George-street; and one of Jews, also in George-street.

Statistics.

Population.—At the comparatively recent date of 1560, the population of Glasgow does not appear to have exceeded 4,500. In 1581, the Confession of Faith was signed or assented to by 2,250 persons above 12 years of age. In 1610, Archbishop Spotswoode directed the population to be ascertained, when it was found to amount to 7,644. In 1660, at the Restoration of Charles II., the population had increased to 14,678; but it fell off immediately consequent upon the troubled era of the "Persecution;" and, at the Revolution of 1688, the city contained only 11,948 souls. Indeed, nearly half a century elapsed before Glasgow regained the amount of population which she possessed at the beginning of the reign of the second Charles. In 1708, immediately after the Union, a census was taken by order of the magistrates, and the result was 12,766. In 1712, when the Convention of Royal Burghs ordered a return from each burgh, the numbers in Glasgow were given as 13,832. In 1740, the population was ascertained by the magistrates to be 17,034. In 1763, Mr. John Woodburn, the city surveyor, enumerated the inhabitants and found

them to amount to 28,300. In 1780, when the suburban parishes of the Gorbals and Barony, then very insignificant, were, for the first time, included, the population was found to have increased to 42,832. In 1785, the magistrates again directed the population to be taken, when it amounted to 45,889. In 1791, the population was taken for Sir John Sinclair's National Statistical work, and the return gave 66,578. In 1801, according to the Government census, the population of the city and suburbs was 83,769; in 1811, it was 110,460; in 1821, it was 147,043; in 1831, it was 202,426; in 1841, it was 280,682; in 1851, it was 360,138; in 1861, it was 446,639. Scarcely one-half of the increase since 1801 has arisen from the excess of births over deaths; and the rest of the increase has arisen from immigration. The population within the royalty, in 1861, comprised 76,732 males, and 85,297 females, or 162,029 persons; and that within the parliamentary boundaries comprised 184,939 males and 209,925 females, or 394,864 persons. The population within the suburbs, therefore, was 51,254; and the line which defined the suburbs might easily have been so drawn as to include a much greater number.

House-Accommodation.—The word house is so variously understood, from a wide sense including everything between two gables to a narrow sense including only what is occupied by a single tenant, that the statistics relating to it, in consequence of being based on different senses of it, show exceedingly different figures. The census of 1861 tabulates, as within the royalty, 5,339 uninhabited houses, 45 uninhabited, and 42 building, and as within the parliamentary boundaries 13,866 inhabited, 144 uninhabited, and 176 building; while returns for 1861-2, made by the assessors under the Lands Valuation Act, tabulate, as within the parliamentary boundaries, 87,579 dwelling-houses of aggregate rental, £846,098, and 5,086 unoccupied dwelling-houses of aggregate rental, £50,839. These returns also show 34,503 of the dwelling-houses as each under £5 of rental, 33,120 as at £5 and under £10 of rental, and 19,956 as at £10 and upwards of rental. They likewise show 1,960 of the unoccupied houses as under £5 of rental, 1,708 as at £5 and under £10 of rental, and 1,418 as at £10 and upwards of rental.

The census of 1861 further shows that 51 single occupants or families of each one person, occupied rooms without windows, 2,008 one room with window, 642 two rooms, 153 three, 76 four, 28 five, 18 six, and 29 seven or more; that 68 families of each two persons occupied rooms without windows, 6,128 one room with window, 3,385 two rooms, 961 three, 410 four, 136 five, 88 six, 35 seven, 21 eight, 16 nine, 8 ten, and 18 eleven or more; that 43 families of each three persons occupied rooms without windows, 6,126 one room with window, 4,891 two rooms, 1,412 three, 696 four, 253 five, 214 six, 75 seven, 46 eight, 20 nine, 17 ten, and 41 eleven or more; that 44 families of each four persons occupied rooms without windows, 5,349 one room with window, 5,901 two rooms, 1,634 three, 848 four, 288 five, 205 six, 80 seven, 62 eight, 34 nine, 24 ten, and 66 eleven or more; that 18 families of each five persons occupied rooms without windows, 4,006 one room with window, 5,690 two rooms, 1,771 three, 831 four, 320 five, 237 six, 84 seven, 65 eight, 37 nine, 33 ten, and 49 eleven or more; that 10 families of each six persons occupied rooms without windows, 2,440 one room with window, 4,876 two rooms, 1,547 three, 741 four, 302 five, 200 six, 101 seven, 60 eight, 44 nine, 29 ten, and 79 eleven or more; that 7 still larger families occupied rooms

without windows; that 1,253 families of each seven persons occupied one room with window, 3,417 two rooms, 1,280 three, 644 four, 224 five, 187 six, 69 seven, 57 eight, 38 nine, 24 ten, and 82 eleven or more; that 596 families of each eight persons occupied one room with window, 2,028 two rooms, 776 three, 449 four, 179 five, 141 six, 62 seven, 36 eight, 27 nine, 23 ten, and 93 eleven or more; that 228 families of each nine persons occupied one room with window, 996 two rooms, 464 three, 292 four, 116 five, 110 six, 39 seven, 32 eight, 28 nine, 30 ten, and 69 eleven or more; that 84 families of each ten persons occupied one room, 414 two rooms, 250 three, 162 four, 73 five, 88 six, 25 seven, 24 eight, 17 nine, 15 ten, and 76 eleven or more; that 30 families of each eleven persons occupied one room, 194 two rooms, 94 three, 85 four, 45 five, 39 six, 13 seven, 23 eight, 15 nine, 12 ten, and 65 eleven or more; that 11 families of each twelve persons occupied one room, 76 two rooms, 38 three, 30 four, 16 five, 20 six, 13 seven, 15 eight, 8 nine, 10 ten, and 66 eleven or more; that 10 families of each thirteen or more persons occupied one room, 49 two rooms, 54 three, 42 four, 24 five, 11 six, 15 seven, 14 eight, 11 nine, 13 ten, and 145 eleven or more.

Births, Marriages, and Deaths.—During the year 1861, the births, within the parliamentary boundaries, were 8,532 males, 8,004 females, 15,101 legitimate, 1,435 illegitimate, or 16,536 infants; within the suburbs, 2,091 legitimate, 103 illegitimate, or 2,194 infants. The proportion of births to the population was, within the parliamentary boundaries, as 1 to 23·9, or 4·18 per cent.; within the suburbs, as 1 to 23·4, or 4·28 per cent. The proportion of illegitimate births to legitimate, within the parliamentary boundaries, was 8·6 per cent.; within the suburbs, 4·7 per cent. The marriages, within the parliamentary boundaries, were 3,480; within the suburbs, 316. The proportion of marriages to the population, within the parliamentary boundaries, was as 1 to 113·4, or 0·88 per cent.; within the suburbs as 1 to 162·2, or 0·61 per cent. The deaths, within the parliamentary boundaries, were 10,932, or at the rate of 2·76 per cent. of the population; within the suburbs, 1,360, or at the rate of 2·6 of the population. The deaths within the parliamentary boundaries, under 5 years of age, were 5,450; at 5 and under 20 years of age, 1,109; at 20 and under 60 years of age, 2,988; at 60 and upwards, 1,385. Of the 10,932 deaths within the parliamentary boundaries, 2,325 were caused by zymotic diseases, 2,225 by diseases of the respiratory organs, 2,213 by tubercular diseases, 825 by diseases of the digestive organs, 748 by brain and nerve diseases, 620 by debility of various kinds, 440 by old age, 332 by heart diseases, 332 by violence and privations, 302 by such diseases as dropsy and cancer, 264 by diseases or accidents not specified, 89 by diseases of the kidneys, 81 by diseases of the uterus, 73 by atrophy, 36 by diseases producing sudden death, 35 by diseases of the joints and bones, 24 by malformation, and 8 by diseases of the skin.

Sanitary Condition.—Glasgow, in a sanitary point of view, cannot be described as one place, but differs exceedingly in its different parts. The parliamentary city is divided, for registration purposes, into ten districts; and these show widely different death-rates. The proportion of deaths to the population, during the year 1861, was 16·3 per cent. in the High Church district, 15·3 in the Central district, 11 in the Bridgeton district, 10·5 in the Hutchesontown district, 10·1 in the Calton district, 8·8 in the Trades- ton district, 8·7 in the Clyde district, 8·1 in the Anderston district, 7·2 in the Milton district, and 4 in

the Blythswood district. The two worst districts, the High and the Central, are so far exceptional as containing respectively the Royal Infirmary and the City Poor-house; while the best districts, especially the Blythswood one, are so far exceptional, in the opposite way, as containing many wealthy families, who have a large proportion of servants, and who rusticate during several months of the year; but all the districts, with deductions for these qualifying circumstances in respectively the worst and the best, derive all their differences in death-rate from differences in sanitary condition. What the elements of that condition are need not be specified, as they present no other peculiarity in Glasgow than what arises from the modifying effect of the city's structure or the people's employments. One set of them have their centre in malaria, and stand broadly revealed in the death-rate under zymotic diseases; while another set have their centre in penury, and stand specially revealed in the death-rate of infants dying under one year of age.

During 1861, the central district, with a population of 49,598, had 46 deaths from typhus, and 268 from all zymotic diseases; the High Church district, with a population of 43,120, had 121 deaths from typhus, and 296 from all zymotics; the Bridgeton district, with a population of 45,485, had 57 from typhus, and 214 from all zymotics; the Calton district, with a population of 36,624, had 25 from typhus, and 160 from all zymotics; the Hutchesontown district, with a population of 44,018, had 43 from typhus, and 198 from all zymotics; the Tradeston district, with a population of 38,561, had 36 from typhus, and 180 from all zymotics; the Anderston district, with a population of 40,882, had 46 from typhus, and 174 from all zymotics; the Clyde district, with a population of 30,073, had 18 from typhus, and 168 from all zymotics; the Milton district, with a population of 33,327, had 35 from typhus, and 160 from all zymotics; and the Blythswood district, with a population of 28,697, had 24 from typhus, and 81 from all zymotics. During the same year, the Central district, with 2,317 births, had 100 deaths under one month of age and 329 under one year; the High Church district, with 2,136 births, had 94 deaths under one month and 332 under one year; the Bridgeton district, with 1,895 births, had 83 deaths under one month and 292 under one year; the Calton district, with 1,542 births, had 84 deaths under one month and 313 under one year; the Hutchesontown district, with 1,986 births, had 87 deaths under one month and 294 under one year; the Tradeston district, with 1,485 births, had 60 deaths under one month and 217 under one year; the Anderston district, with 1,670 births, had 55 deaths under one month and 205 under one year; the Clyde district, with 1,153 births, had 89 deaths under one month and 277 under one year; the Milton district, with 1,525 births, had 68 deaths under one month and 218 under one year; and the Blythswood district, with 827 births, had 33 deaths under one month and 103 under one year.

"With a view of giving even some more striking evidence of the diversity in the life and death statistics of different quarters of this large city," said Dr. Strang in 1862, "we have selected two of its most opposite portions in respect to their social and sanitary condition, the one being Blackfriar's parish, which is bounded on the east by the Molindinar burn, on the south by Gallowgate from the Molindinar to the Cross, on the west by the east side of High-street to Duke-street, and on the north by Duke-street to the Molindinar; a portion of the city which, with the exception of the college and its

gardens, is inhabited perhaps by the very lowest and degraded portions of our population, and containing an area of 32-236 imperial acres. The second portion, being that part of the Anderston registration district bounded on the east and north by St. George's road and Woodland's road to the Kelvin, on the west through the West End park to Kelvingrove-street, and on the south by Sauchiehall-street to St. George's road, which includes within it some of the best habitations in the city, and the whole being occupied by persons in the best circumstances, and containing an area of 87-686 imperial acres." Dr. Strang then gives two tables, and adds,—“By carefully examining these tables, it will at once be seen how much the vitality and mortality of our race depend on the social circumstances in which man is placed. Looking at the social peculiarities of Blackfriar's, we discover that its population, amounting to 10,577, occupy 1,427 dwellings under £4 of annual rent, 684 under £6, 273 under £10, 88 under £20, and only 19, with the exception of the 10 houses within the College gates, and two inns and one large tavern, at from £20 to £70 of rent. Turning then to the social peculiarities of the Crescent quarter, we find the population, amounting to 2,972, occupy only 4 dwellings under £10, 121 from £10 to £60, and the remaining 296 from £60 to £100 and upwards. In the former there is only 1 female domestic servant to 67-8 of the population, whereas in the latter there is 1 in 2-8; and as to male domestic servants, there is 1 in Blackfriar's none, and in the Crescents, &c., 1 to 60-6 of the inhabitants. These figures at once sufficiently explain the poverty and discomfort of the one district in comparison to the wealth and conveniences of the other, with all the degradation and wretchedness which attend on the one, and the physical blessings which are connected with the other.

“Now, what are the effects which these dissimilar circumstances have produced, especially on the death-figure applicable to each of these localities? The answer is simple. They have produced in Blackfriar's on the annual births a death-rate under 1 year of no less than 21-3 per cent., and on the living from 1 to 5 of 9-5 per cent., whereas in the Crescent quarter, the death-rate to the annual births is only 1-96 per cent., and from 1 to 5, only 1-4 per cent. The deaths from 5 and upwards are in the former 1-79 per cent., in the latter 0-44 per cent., while taking the deaths at all ages, we find that they are in the one 3-4 per cent., in the other only 0-53 per cent. These figures certainly proclaim a vast disparity between the mortality of these two quarters of our city; but when the elements that produce this are more narrowly looked into, a certain portion of it is easily explained. In the first place, in the Crescent district there are far fewer births in proportion to the population than in Blackfriars, on which the normal high death-figure ever presses most heavily. In the second place, more than one-third of the population consists of female domestic servants, of an age which, in all situations, and far more in theirs, produces the smallest figure of mortality; and thirdly, the annual habit of the generality of the inhabitants of the West-End quarter leaving the city for nearly six months in the year for the coast or country, must also tend to diminish the death-figure of this district. Allowing, however, for all these advantages which the Crescent quarter possesses over the Blackfriar's district, it is quite certain that the probabilities of obtaining a longer lease of life on the part of the inhabitants of the western over the eastern district, is manifest. And when we compare the Crescent quarter with the whole city, of which it forms a part, we find its

death ratios still exhibiting a marvellous disparity. Here are the figures :—

	Crescents, &c.	Whole City
Under 1,	1 in 56	1 in 5·25
From 1 to 5	1 " 72	1 " 14·49
" 5 to 20	1 " 2·8	1 " 108·49
" 20 to 60	1 " 2·68	1 " 67·34
" 60 and upwards,	1 " 41	1 " 13·50

Offences.—The cases brought before the magistrates during 1861, for offences against the person, were 53 males and 9 females; for offences against property, with violence, 187 males and 50 females; for offences against property, without violence, 1,979 males and 1,856 females; for malicious offences against property, 92 males and 7 females; for forgery and offences against the currency, 24 males and 20 females; for being drunk and disorderly, 1,970 males and 548 females; for being drunk and incapable, 3,871 males and 205 females. The number of criminal prisoners committed to Glasgow prison, during the year 1860-1, was 2,192 males and 1,684 females; and the average daily number in custody was 233 males and 215 females. Of the total of males committed, 149 were under 16 years of age, 96 were from 16 to 18 years of age, 1,358 were Scotch, 143 were English, 660 were Irish, and 31 were foreigners; and of the total of females committed, 38 were under 16 years of age, 69 were from 16 to 18 years of age, 1,139 were Scotch, 54 were English, 484 were Irish, and 7 were foreigners. The number of civil prisoners, or debtors, committed during the year 1860-1 was 178 males and 11 females.

Social Manners.—Up to the period of the Reformation, and, indeed, for long after it, the major part of the inhabitants may be said to have existed in a state of ignorance, poverty, and barbarism. Intestine feuds were frequent; the people went constantly armed; it was no unusual thing for the ministers of religion to ascend the pulpit with dagger, sword, or pistol on their persons; crimes which are now thought of with horror were of frequent occurrence; and such was the state of society that private revenge as frequently inflicted the punishment of aggression as the arm of the law. The Reformation undoubtedly laid the foundation of improvement; but the civil troubles and contests by which it was followed, sadly marred the civilizing effects which might otherwise have flowed from it. It would appear that even the better class of people were not free from the ignorance and superstition which oppressed their humbler fellow-citizens; for we find that, so late as 1698, "the magistrates of Glasgow granted an allowance to the jailer for keeping warlocks and witches imprisoned in the tolbooth, by order of the Lords commissioners of justice." In its ignorance, barbarity, poverty, and filth, it is not to be presumed that Glasgow was in a worse position than any other town of Scotland, with the exception of the capital, which, from being the seat of the legislature and the residence of the aristocracy, had pretensions to refinement which were wanting elsewhere. The Union, in 1707, which opened up the English colonies to the Scots, was the first event which materially contributed to an alteration for the better in the character and disposition of the inhabitants of Glasgow; and we find that shortly after this period they adopted manners only equalled in the intensity of their austerity by the latitude of their former dissoluteness.

Regarding the state of society at this early period Mr. Dugald Bannatyne has recorded:—"At the commencement of the 18th century, and during the

greater part of the first half of it, the habits and style of living of the citizens of Glasgow were of a moderate and frugal cast. The dwelling-houses of the highest class of citizens, in general contained only one public room,—a dining-room; and even that was used only when they had company,—the family at other times usually eating in a bed-room. The great-grandfathers and great-grandmothers of many of the present luxurious aristocracy of Glasgow—and who were themselves descendants of a preceding line of burgher patricians—lived in this simple manner. They had occasionally their relations dining with them, and gave them a few plain dishes all put on the table at once, holding in derision the attention which they said their neighbours the English bestowed on what they ate. After dinner, the husband went to his place of business, and in the evening to a club in a public house, where, with little expense, he enjoyed himself till nine o'clock, at which hour the party uniformly broke up, and the husbands went home to their families.

"The wealth introduced into their community after the Union, opening the British colonies to the Scotch, gradually led to a change of the habits and style of living of the citizens. About the year 1735, several individuals built houses to be occupied solely by themselves, in place of dwelling on a floor entering from a common stair as they hitherto had done. This change, however, proceeded very slowly; and up to the year 1755 to 1760, very few of these single houses had been built—the greater part of the most wealthy inhabitants continuing, to a much later period, to occupy floors in very many cases containing only one public room. After the year 1740, the intercourse of society was by evening parties never exceeding twelve or fourteen persons, invited to tea and supper. They met at four, and after tea played cards till nine, when they supped. Their games were whist and quadrille. The gentlemen attended these parties, and did not go away with the ladies after supper, but continued to sit with the landlord drinking punch to a very late hour. The gentlemen frequently had dinner parties in their own houses; but it was not till a much later period that the great business of visiting was attempted to be carried on by dinner parties. The dinner hour, about the year 1770, was two o'clock; immediately after that, it came to three o'clock; and gradually became later and later, till about 1818 it reached six o'clock.

"Influenced by a regard for the Sabbath, the magistrates employed persons termed 'compurgators' to perambulate the city on the Saturday nights; and when, at the approach of twelve o'clock, these inquisitors happened to hear any noisy conviviality going on, even in a private dwelling-house, they entered it and dismissed the company. Another office of these compurgators was to perambulate the streets and public walks during the time of divine service on Sunday, and to order every person they met abroad not on necessary duty, to go home, and if they refused to obey to take them into custody. The employment of these compurgators was continued till about the middle of the century, when, taking Mr. Peter Blackburn—father of Mr. Blackburn of Killearn—into custody for walking on Sunday in the Green, he prosecuted the magistrates for an unwarranted exercise of authority, and prevailing in his suit in the court of session, the attempt to compel this observance was abandoned."

Up till 1750 the severity of the ancient manners prevailed in full vigour. People, as has been stated, were prevented from walking on the Lord's day; no lamps were lighted on that evening, because it

was presumed that no man had any business to be out of his own house after sunset; the indulgences or innocent amusements of life were either unknown or little practised. But by this time commerce and manufactures had produced wealth; and the establishment of banks had increased the supply of money, and enlarged the ideas of the people both as regarded their manner of living and their schemes of improvement. A new and expensive style was now introduced into building, living, dress, and furniture; the conveniences and elegances of life began to be studied; wheel carriages were set up; places of entertainment were frequented; and, at once to get rid of the austerity and stern restrictions of former times, a theatre and assembly room were built by subscription. Not only Glasgow, but the west of Scotland generally, had been enriched by the colonial trade; and as a consequence of it, new streets were laid out in the city, the old wooden tenements with thatched roofs were displaced for commodious stone mansions, and the progress of refinement, and it may be said, of luxury, has advanced to the present time. In all the elements of good living and refinement, the better class of the citizens of Glasgow have improved mightily since the beginning of the present century; and it may be truly stated that the wealthy population of the localities in the west end lead a life in which "ne'er a want may be ungratified," and are in possession of luxuries which were unknown to the majority of the Scottish nobles even seventy years ago. The introduction of steam navigation has brought the fairy nooks, bays, and crooks of the western coast within a few hours' sail of the city, and there are few of the merchants, manufacturers, or professional gentlemen who have not summer villas or ornate cottages perched upon the water's edge at Gourrock, Helensburgh, Gareloch, Kilecraggan, Cove, Lochgoil, Strone, Kilmun, Dunoon, Inellan, Wemyss-bay, Skelmorlie, Rothesay, Largs, Millport, Ardrossan, Arran, or other places on the frith. These are laid out with every regard to taste, with blooming parterres without, and elegance within; and it is scarcely possible for a humble citizen to pass them either on foot or in steamers without aspiring,

"Oh that for me some home like this would smile"

While thus much has been stated of the sunny portion of Glasgow society, it is only fair to present the dark side of the picture. This city, like Dublin, embraces to a remarkable extent the very extremes of wealth and misery. Some places in the very heart of it, particularly the wynds to the south of Tron-gate, the closes of Bridgegate and Saltmarket, and the closes and vennels leading from High-street, contain an aggregate of disease, vice, and misery, which is not exceeded by that of any equally populous portions of any other city in the empire. A large proportion of the population of these places are Irish, or the children of Irish, who, from the facilities afforded by steam navigation, were induced to flee from wretchedness in their own country to a state of things little better in the land of the stranger; and other portions are low squalid outcasts from all parts of the United Kingdom, where they could not make shift to live, or were unable to maintain a creditable footing. This state of things, in these quarters, both physically and socially, for a long time was appalling; but, since about the year 1845, has been undergoing steady, progressive, general amelioration. Some wretched blocks of dwellings have given place to new buildings; sweeping sanitary improvements have been made; and strong influences on at once manners, education, and religion, have been brought to bear. Other

poor parts of the city also, which share largely in the degradation and misery of these localities, have participated equally in similar improvements. The operative classes, in most parts, are far the predominating element of population,—in some parts, almost the only element; and considered in a general view, they exhibit an amount of industriousness, intelligence, good manners, and moral worth, highly creditable to the city.

GLASGOW AND GARNKIRK RAILWAY, a work now forming the greater part of the portion of the Caledonian railway between Glasgow and Coatbridge. It was the first railway constructed in Scotland for the purpose of conveying both goods and passengers by locomotive engine power. It was fully opened for traffic in September, 1831; and the ceremony of opening it was done in the manner of a grand public spectacle, and excited much popular interest. The railway caused great changes in the country around its east end, acting as a powerful stimulus in the developing of resources; and it was soon put into communication with other railways which opened up to Glasgow the greater part of the large mineral field of Lanarkshire. It became vested in the Caledonian railway company in 1845. See **CALEDONIAN RAILWAY**.

GLASGOW AND SOUTH-WESTERN RAILWAY, a work comprising the Glasgow, Paisley, Kilmarnock, and Ayr railway, and the Glasgow, Dumfries, and Carlisle railway, together with their respective connexions. Each of the principal comprised works will be separately described under its own title. The conjoint railway was opened throughout as to its main line, and underwent legal amalgamation as to component parts, on the 28th October, 1850. It has a total length of 225 miles; it extends from Glasgow by way of Paisley, Kilmarnock, and Dumfries, to a junction with the Caledonian railway near Greta; it also sends off communications, either in branches of its own or in connected railways, to Ardrossan, Ayr, Troon, Dalmellington, Girvan, Newmilns, Mayfield, and Muirkirk; and it has junctions at Dumfries with the railway westward to Castle-Douglas and Port-Patrick, and with the railway eastward, to be opened in the summer of 1863, to the Caledonian at Lockerby.

GLASGOW, BARRHEAD, AND NEILSTON RAILWAY, a railway from the southern terminus of the Caledonian railway at Glasgow to the valley of the Levern in Renfrewshire. It was authorised in August, 1845, and afterwards incorporated with another project, called the Glasgow Southern terminal railway, which gave it a communication and a common terminus with the southern fork of the Caledonian railway. Its authorised form was a length of 6 miles and 5 furlongs, with double line of rails, and a gradient of 1 in 100 to Barrhead, and a farther length of 2 miles and 8 chains, with single line, and a gradient of 1 in 75 to Crofthead, near Neilston. It has stations at Pollockshaws, Kinnishead, Nittshead, Barrhead, and Crofthead. The worst curve, except at stations, has a radius of 14 chains. This railway is leased and worked by the Caledonian railway company.

GLASGOW, DUMFRIES, AND CARLISLE RAILWAY, the southern part of the Glasgow and South-western railway system, extending from Cumnock in Ayrshire to the junction with the main trunk of the Caledonian railway near Greta in Dumfries-shire. It was authorised by parliament in 1846, and opened for traffic in October, 1850. It is 65 miles in length. It goes down the valley of the Nith, from near its head in the vicinity of New Cumnock, all the way to a point past Dumfries, and then deflects across the foot of Nithsdale and of

Annandale, and along the sea-board of the Solway frith to the basin of the Sark. It has stations at New Cumnock, Kirkcunock, Sanquhar, Carronbridge, Thornhill, Closeburn, Auldgrith, Holywood, Dumfries, Ruthwell, Cummertrees, Annan, and Gretna-green. The viaduct across the Lugar at Cumnock is a remarkably magnificent work, but has been already noticed in our article on Cumnock. The railway first approaches the Nith in the vicinity of New Cumnock, takes there the left bank of the river, continues down that bank all the way to Dalswinton $7\frac{1}{2}$ miles above Dumfries, returns to it by a fine viaduct at Lincluden about a mile above Dumfries, and continues on it till the commencement of its deflection past Dumfries towards Annandale. Often and long, throughout the aggregate, does it keep close to the river; and rarely at any point between New Cumnock and Dumfries, is it farther from the channel than about a mile. Hence will both the scenery which it commands and the nature of the engineering difficulties which were overcome for it be well understood by reference to our article on the Nith. The close views from it between Kirkcunock and Carronbridge, and again about Auldgrith, are particularly fine; and a comparatively large view at and near Thornhill, comprising a wide expansion of the river's basin, with magnificent hill-screens, is remarkably brilliant. A tunnel 4,200 feet long, nearly 200 feet under ground, with an archway of 27 feet by 29, occurs a little north of the Carronbridge station. The tract from Dumfries to Gretna, though mainly a plain, comprises three miles across Lochar-moss, and commands elsewhere some good views, particularly about the Annan and the Kirtle. The authorised capital for this railway, by the original powers of 1846, was £433,333 by shares, and £433,300 by loans; and by an act of next year, £700,000 and £233,300. The Glasgow and South-western amalgamation act in 1847 was to raise £900,000 of this capital.

GLASGOW, KILMARNOCK, AND ARDROSSAN RAILWAY. In 1846, an act of incorporation was obtained, with authorised capital of £1,117,333, for forming a railway direct to Kilmarnock from the south-western terminus of the Glasgow, Barrhead, and Neilston railway, with one branch to the Ardrossan railway, and another branch to Irvine, and for the purchase of Ardrossan harbour; but, by an act passed in June, 1852, the project was abandoned.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY. This railway was authorised by act of parliament in July 1837, and opened to the public on the 30th of March, 1841. The original authorised capital for it was £400,000 in shares and £133,333 in loans; but this fell materially short of the cost of production, and was afterwards augmented. The work, after some years, was amalgamated with the Caledonian railway, at a reduced capital of £649,421; and the total expenditure upon it till the 31st of July, 1853, amounted to £856,458. This railway is now worked, in all respects, as an integral part of the Caledonian; and the part of it from Glasgow to Paisley is common to it with the Glasgow, Paisley, Kilmarnock, and Ayr railway, or Glasgow and South-western. The station-houses at Glasgow and at Paisley also are in common. The Glasgow station-house is a splendid, costly edifice, of white sandstone, with handsome portico and stately columns in front, and with very commodious interior arrangements, recently enlarged, within 80 yards of the south end of the lowest and most thronged of the Glasgow bridges. The Paisley station-house resembles in style the imposing county-buildings of Renfrewshire, in the centre of

Paisley, and is situated in the large open space in front of these buildings, as eccentrically and beautifully as any railway station for a great town could possibly be.

The railway, on leaving the Glasgow station, passes through Tradeston, by a curve, on a series of brick arches, sufficiently high and neat to present no obstruction to the street thoroughfares; but the curve is so sudden from a southerly to a westerly direction that, were it to occur anywhere but in the immediate vicinity of the station, where the trains are necessarily all at slow speed, it might prove both inconvenient and dangerous. It soon approaches the Glasgow, Paisley, and Johnstone canal, and is joined by a connecting branch of the Caledonian railway from the Clydesdale junction. It goes so close to the canal as to be separated only by the breadth of the latter's towing-path; and it continues nearly parallel with it for about a mile, but on a level of 8 or 10 feet lower. The railway then keeps a perfectly straight course of its own till within half-a-mile of Arkleston tunnel. It then curves gently to the south, and by means of the tunnel, which is 60 feet below the highest part of the surface, passes beneath Arkleston-hill. A gentle curve brings the railway to the Greenlaw policies, where an extensive view of the eastern parts of Paisley is opened up, and continues till the arrival at the station-house in Paisley. At Arkleston, the cutting extends to about three quarters of a mile, gradually diminishing from between 50 and 60 feet at the east end of the tunnel, towards each end. The only other cutting on this part of the line worth notice, is at Brox, where it extends to a rather greater length than that at Arkleston, but is not so deep. In the space between Glasgow and Paisley, the line is crossed by ten bridges, besides which, in addition to the arches and bridges at the terminus, four roadways are formed beneath it. The railway enters Paisley on a high level, and crosses all the streets on lofty bridges, till it reaches the river Cart in the centre of the town; and it there passes that river by a noble arch of 85 feet span, and has the platform of its station on a correspondingly high level. The run from Glasgow to Paisley, short though it is, being only 7 miles in length, is a very pleasing and attractive one. The Campsie and Kilpatrick hills are seen in the distance, with the "Braes o' Gloniffer," which Tanabill has wedded to song; and still nearer is observed the Stratford-upon-Avon-like steeple of Govan church, with all the charming alternations in the landscape, of wood, hill, dale, and streamlet. It is true that the traveller only gets a glimpse of these for a moment as he is whisked along; but the motion is not so rapid as to render him unconscious that he is passing through a most interesting and luxuriant district of country.

After crossing Moss-street in Paisley, the Glasgow and Greenock line curves away to the west. A handsome viaduct of 28 arches of 20 feet span, and a skew bridge over Underwood-street, carries the line clear of Paisley. The retaining walls are, however, continued for some distance; when the line proceeds on a light embankment past Blackstone-house, which it leaves on the left. The river Cart is here crossed by a wooden-bridge, the nature of the foundations rendering that material necessary. After passing the river Gryfe on a similar erection, the railway proceeds over a deep moss for the distance of a mile and a quarter; and going through two cuttings of the depth of 43 feet and 30 feet respectively, and over a heavy intervening embankment, enters the Bishopston ridge. This is the greatest work on the line, and is perhaps unparalleled

in the kingdom. The ridge is composed of solid whinstone rock; and the railway passes through it for a distance of 2,300 yards. In blasting this obdurate ridge of rock, 320 tons of gunpowder were expended, costing more than £12,000. Leaving this cutting, the river Clyde, with Dumbarton rock and castle, the classic Benlomond, and the entire range of the Argyleshire hills, burst on the view with panoramic effect; and from this point till it reaches Port-Glasgow the railway skirts the river. The beautiful scenery of the noble stream and estuary is seen to striking advantage from various portions of the line. Port-Glasgow is approached by a viaduct of 14 stone arches of 30 feet span, which crosses a small bay, now used as a timber-depot. The railway nearly divides the town. The station for Port-Glasgow is at the head of Prince's-street. The streets are spanned by arches as in Paisley. There is nothing worthy of particular notice, till the line approaches Greenock, where, passing through a heavy cutting of 44 feet deep, it enters the town. The railway divides a large engineering work at this point; and all the streets, except Bogle-street, are spanned by bridges. The Greenock station is in Cathcart-street, nearly facing East Quay lane, and at only a brief distance from the steam-boat quay. The station-house here has a neat front and elegant accommodations; and the places connected with it, all round the platform, backward for repairing shops, and divergently for the goods traffic, display a spaciousness, a tastefulness, and an adaptation eminently creditable to the designers.

The length of the line from Glasgow to Greenock is 22 $\frac{3}{4}$ miles. It passes through the parishes of Govan, Abbey-Paisley, North-Paisley, Kilbarchan, Inchinnan, Erskine, Kilmaccolm, Port-Glasgow, and East-Greenock. Its stations, exclusive of the termini, are Paisley, Houston, Bishopton, Langbank, and Port-Glasgow. The greatest amount of rock-cutting in one spot is 244,000 yards; and the heaviest embankment contains 146,508 yards of this debris. The gradients are favourable. Between Glasgow and Paisley the line is nearly level; and until it approaches Bishopton, on either side the inclinations are favourable. To gain the summit-level of this ridge, the road rises 1 in 330, and descends at the same rate. The quantity of masonry on the line is unusually great, owing to the circumstance of four towns being traversed in so short a distance. The retaining walls extend to several miles, and there are nearly 400 arches, exclusive of culverts. Many of the bridges are very elegant in their design, particularly the Cart bridge at Paisley, and the arch over the deep cutting at Carthus-hill near Greenock. The Underwood-street bridge and South Croft-street bridge in Paisley, the former in stone at an angle of 28°, and the latter in iron at an angle of 17°, are specimens of engineering skill and boldness rarely to be met with. The rails are heavy, being 75 pounds to the yard; and there is a four-foot bearing, which being less than many others by a foot, renders the road peculiarly firm. The line is laid on wooden sleepers, where there are high embankments; in all other parts—excepting the moss, where wood is also used—stone blocks are employed with very strong iron chains.

GLASGOW, PAISLEY, AND JOHNSTONE CANAL. The origin of this work has been narrated in our article on Ardrossan. The act of parliament for making the canal was obtained in 1805; the first general meeting of the canal company was held at Paisley in July 1806; the operations were commenced in May 1807; the navigation between Paisley and John-

stone was opened in November 1810; and the navigation between Glasgow and Paisley was opened in October 1811. The canal was intended to be cut to Ardrossan, but was never cut farther than to Johnstone. It commences at Port-Eglington, at the south-western extremity of the Gorbals suburb of Glasgow, and proceeds in a direction nearly due west, though with considerable curves, through the parishes of Govan, Abbey-Paisley, and Kilbarchan, and impinging at one point on the parish of Eastwood. Its total length from Port-Eglington to Johnstone is 11 miles. Its breadth at the top is 30 feet; its breadth at the bottom is 18 feet; and its depth is 4 $\frac{1}{2}$ feet. It passes through two tunnels at Paisley, the one under Causewayside-street, 240 feet long, the other at the west end of the town, 210 feet long. Its chief aqueduct is over the Cart at Paisley, 240 feet long, 27 feet broad, 30 feet high, with a fine arch of 84 feet in span. The whole work is on such level ground that it has not a single lock; though, had it been continued to Ardrossan, eight locks would have been required a little beyond Johnstone to raise it to the summit-level of the country at Killbarnie loch, and thirteen to let it down thence to the sea-level at Ardrossan harbour. Several brooks between Paisley and Johnstone supply the canal with water.

The cost of constructing the canal from Glasgow to Johnstone was not less than about £130,000, a sum actually greater than what had been estimated as the cost all the way to Ardrossan. The traffic in goods was from the first considerable. A passenger-traffic also sprang up at once in elegant heavy boats fitted up each for accommodating 100 persons; and this traffic was afterwards greatly increased by means of light gig-boats which achieved the distance from Glasgow to Paisley within an hour. The goods traffic rose from a tonnage of 48,191 in the year 1831 to a tonnage of 76,393 in the year 1840; and the passenger-traffic rose from 79,455 persons in 1831 to 423,186 persons in 1836. The canal company made an agreement, in June 1843, with the company of the Glasgow, Paisley, and Greenock railway, and the company of the Glasgow, Paisley, Kilmarnock, and Ayr railway, not to carry passengers at greater speed on the canal than 4 miles per hour, to pay to the railway companies 2d. per mile for every passenger carried on the canal, and to maintain certain other obstructions to the facility of the canal traffic, the railway companies binding themselves to pay to the canal company £1,358 a-year as compensation so long as the agreement should be maintained. But the Commissioners of railways, in 1847, reported that this agreement was injurious to the interests of Paisley; the law officers of the Crown gave an opinion that it was illegal; and the companies interested, on being threatened with proceedings for forcibly dissolving it, dissolved it of their own accord.

GLASGOW, PAISLEY, KILMARNOCK, AND Ayr RAILWAY, the northern and most ramified part of the Glasgow and South-western railway system. It extends from the general station on the south side of the Clyde at Glasgow bridge, by way of Paisley and Irvine, to Ayr, with junction to the Ardrossan railway, and with branches of its own to Troon and to Dalhousie; extends also, by fork of the main line, through Kilmarnock, to Cumnock, with branches to Newmilns and to Muirkirk; various parts of it, at the same time, communicating by brief side-lines or sub-branches, with great seats of the iron trade or other manufacture. The original main line was that to Ayr, and has a total length, from Glasgow, of 40 miles; but the entire system requires

the line to Ayr and the line to Cumnock to be regarded as co-ordinate forks, and measures 106½ miles. The original project was authorized by parliament in July, 1837; a portion of the line, from Irvine to Ayr, was opened for traffic in August, 1839; the whole of the original main line, from Glasgow to Ayr, was opened in August, 1840; and the other parts of the works were formed and opened at successive periods, till the completion of the entire Glasgow and South-western system in October, 1850.

The part of this railway from Glasgow to Paisley is the same as that of the Glasgow, Paisley, and Greenock railway. On leaving Paisley the line proceeds, by Ferguslie and Elderslie, to the Johnstone station, a distance of 3 miles, in which there are some very heavy embankments. From Johnstone the line proceeds by Howood, Kilbarchan, and Castle-semble to Lochwinnoch, a distance of 5 miles, in which there are considerable cuttings. Here the gradients are respectively 1 in 600 at Howood, 1 in 1,200 at Castle-semble, and level at Lochwinnoch. A peep of the beautiful loch, the property of Colonel Harvie, is obtained, and the adjacent country, which is the seat of a busy manufacturing hive, is rich in minerals. From Lochwinnoch to Beith, the distance is 4 miles, with an ascending gradient of 1 in 1,200 for a mile, and 1 in 2,000 for 3 miles. In this part of the line is situated the Muirburn meadow or "sinking bog," which long baffled all the efforts of the contractors and the company to find a solid foundation for the blocks. The soft or boggy part of the ground extended to a depth of 45 feet, and for a length of time the embankment subsided as rapidly as it was formed. The quantity of soil which it swallowed up is almost incredible; but at length the difficulty was overcome, and the blocks and rails laid upon a strong and firm foundation of piles. From the Beith station to Kilbirnie is one mile upon a level—the line running for a considerable space along the side of Kilbirnie loch, which, however, is rather a tame and uninteresting sheet of water; but at this point is situated the greatest rise upon the railroad, the ascent having been 70 feet in 20 miles; and from this centre station, the descent continues gradually to the terminus at Ayr. From Kilbirnie station to Dalry the distance is 3 miles, the gradient for 2 miles being 1 in 1,200, the other level; and the country is rich in mineral wealth, containing both coal and ironstone. From Dalry to Kilwinning the line extends six miles, at an average gradient of 1 in 440, passing through a very beautiful country, and crossing the Garnock water twice. The town of Kilwinning, with the ruins of its old abbey, is seen to the left; and near this is the junction of the Ardrossan railway, which defects to the south-west, through a tract of low sandy downs, to Stevenston, Saltcoats, and Ardrossan. The main line proceeds from this junction, straight forward, in a southerly direction, upon a level to Irvine; where harbour, ship-building yards, mineral traffic, and a considerable town trade form an important link in the general chain of communication. From Irvine onward to the terminus at Ayr, the line runs close upon the sea-shore, the gradients being frequently level, and never more than 1 in 1,000. The view is a very cheering one, embracing the eastern shores of the island of Arran, and the intervening course of the steam and sailing vessels from Liverpool and Ireland to Greenock and Glasgow. At the Troon station, which is 3 miles distant from Irvine, and 33 from Glasgow, a branch proceeds to the sea-port and wet-docks of Troon; while, in the opposite direction, the Kilmarnock and Troon railway goes off toward Kilmarnock, with intermediate stations at Barrassie, Drybridge, and Gatehead. From the Troon station,

the line proceeds by an easy descending gradation, past the stations of Monkton and Prestwick, and past the junction of the Smithstown and Dalnellington railway, to the terminus at Ayr. The station-house here resembles that of Glasgow by being close to the harbour, and to the principal bridge over the river, connecting the chief divisions of the town, and leading to the centre of business.

The fork toward Kilmarnock, Cumnock, and Dumfries, goes off at the Dalry junction, 23 miles from Glasgow. It proceeds along an embankment, with its rising hill-side on the one hand, and a steep retaining wall on the other; and thence it traverses a diversity of ground, past Stewarton station to Kilmarnock. This stretch is 10½ miles in length, and was opened for traffic in March, 1843. It rises 1 foot in 880 in the first 3 miles, and is level thence to Kilmarnock; and it has twelve viaducts over streams and roads, the largest of which is over the river Garnock. The line proceeds from Kilmarnock 2 miles to Hurlford, the seat of the Portland iron-works, begun in June, 1846; sends off a branch up Irvine water, to Galston and Newmilns, with sub-branch to Mayfield; and goes on 7½ miles from Hurlford to Mauchline,—2 miles beyond which, over the river Ayr, occurs its magnificent Ballochmyle viaduct, one of the most superb pieces of railway work in the kingdom. This is a single arch 100 feet wide, and 95 feet high, "thrown from bank to bank of the sheer sandstone cliffs, embowered like walls of solid masonry, or cyclopean relics, amidst the profuse beauty of trees luxuriantly nodding over the clear deep waters of the river." The railway, 2½ miles farther on, reaches the Auchinleck station, and still 2 miles farther, the Cumnock station, where it passes into the Glasgow, Dumfries, and Carlisle railway. But at Auchinleck, a branch of 10 miles in length goes off eastward, through Airmoss and the Kyle moors to Muirkirk, as desolate a region as ever has been opened up by any railway, but standing high in value for its mineral wealth.

GLASGOW SOUTHERN TERMINAL RAILWAY. See GLASGOW, BARRHEAD, AND NELSTON RAILWAY.

GLASLAW BURN, a small tributary of the Carron, in the parish of Dunnottar, Kincardineshire. A low height adjacent to it bears the name of Glaslaw hill.

GLASNOCK WATER, a rivulet of Kyle, in Ayrshire. It issues from a lake on the southern boundary of the parish of Old Cumnock, and runs northward to the town of Cumnock, which it intersects, and immediately afterwards falls into the Lugar.

GLASS, a parish partly in Aberdeenshire and partly in Banffshire. It has a post-office station of its own name, 6 miles west-south-west of Huntly. It is bounded on the north by Cairnie parish; on the east by Huntly and Gartly; on the south by Cabrach; and on the west by Botriphnie and Keith. Its extent, from north-east to south-west, is about 5 miles; and from north-west to south-east somewhat more than 4. The river Deveron traverses the whole extent of its interior north-eastward, with a rapid current, along a deep narrow vale. The general surface of the parish is a congeries of hills, partially moorish, but prevailing pastoral, with fine green sward; and is supposed to have derived its name from their verdant appearance, the word "Glass" signifying green. The height of the hills above sea-level probably ranges from 1,200 to 2,000 feet. They look from many points of view to occupy the whole parish; but there lie among them, especially along the Deveron, considerable stripes and patches of arable land. The entire area under cultivation is about 3,600 acres, and under wood about 150 acres. The

soil is in general a deep loam, tolerably early on the river-side; but in those parts which lie at a distance from it, the harvest is very precarious, especially in cold wet seasons. The Earl of Fife is the most extensive landowner. The yearly value of raw produce was estimated in 1842, at £8,400. Assessed property in 1860, £2,108. Population in 1831, 932; in 1861, 1,049. Houses, 194. Population of the Aberdeenshire section in 1831, 579; in 1861, 683. Houses, 122.

This parish is in the presbytery of Strathgogie, and synd of Moray. Patron, the Duke of Richmond. Stipend, £226 18s. 1d.; glebe, £10. Unappropriated tithes, £217 8s. 8d. Schoolmaster's salary, £60, with £7 fees, and a share in the Dick bequest. The parish church was built in 1782, and contains 550 sittings. There is a Free church: attendance, 250; sum raised in 1865, £86 14s. 8d. There is a private school. The original parish of Glass was small; but was enlarged by one annexation, in the 13th or 14th century, from the parish of Mortlach, and by another, about the end of the 17th century, from the then parish of Drumdelzie or Potterkirk, now incorporated with Cairnie.

GLASS (ISLAND). See GLASS-ELLAN.

GLASS (LOCH), a lake in the parish of Kiltearn, Ross-shire. It extends east-south-eastward about 5 miles, with an average breadth of about 1 mile, to a point 10 miles north-north-west of Dingwall, and there discharges itself toward the Cromarty frith by the river Aultgrande. It is seldom known to be covered with ice, and must therefore have a considerable depth. Near the lower end of it is a small island, where the lairds of Fowls had at one time a summer-house.

GLASS (THE), a river of the north-east of Inverness-shire. It issues from Loch Affrick, on the mutual boundary of the parishes of Kilmorack and Kiltarity, and runs about 16 miles north-eastward, with diversity of current, and some fine cataracts and falls, along a picturesque glen, to form the river Beauly by confluence with the Farrer. It often, in its upper stretches, hears the name of the Affrick; and yet it gives the name of Strathglass, not only to all the portion of the glen from Loch Affrick to the confluence with the Farrer, but also to the portion traversed by the Beauly. See AFFRICK (LOCH), BEAULY (THE), and STRATHGLASS.

GLASSARY, or KILMICHAEL-GLASSARY, a parish, containing the post-town of Lochgilphead, and the post-office station of Glassary, in the district of Argyle-proper, Argyleshire. It is bounded by Loch Fyne on the south and south-east, by Loch Awe and part of the parish of Kilmartin on the north-west and north, by the parishes of Inverary and Dalavich on the east and north-east, and by those of Kilmartin, North Knapdale, and South Knapdale on the west and south-west. It varies from 8 to 10 miles in breadth, and from 12 to 16 miles in length. It is said to consist of 150 square miles, or 75,000 Scotch acres; and it is divided into 225½ merk lands. It stretches along Loch Fyne for 16 miles, from the stream called Leachdau at the Furnace, which divides it from the parish of Inverary, to the stream south and close to the town of Lochgilphead, which separates it from South Knapdale on the one side; and on the other it extends along the banks of Loch Awe for 8 miles, from the stream on the east side of the farm of Brahhalaich to the Ford. On the west the valley of Glassary extends nearly from side to side of the parish. This valley varies in height from 200 to near 600 feet above the level of the sea; also in breadth and in fertility, having its acclivities on either side partially wooded, and a small lake called Lochan Leamhan, near its centre.

It also varies the character of the parish scenery, by terminating or interrupting the extensive tract of hill and moss which reaches from the shores of Loch Fyne to those of Loch Awe. There are very many fresh-water lakes; and from two of these in the moors issues the river Ad, which runs south-westward along the valley of Glassary to the sea at Crinan. On the banks of the Ad, the soil is a deep rich loam; and on the shore of Loch Fyne it is generally a black loam on limestone rock. There are remains of three watch-towers on the tops of the highest hills, and several cairns and upright stones which probably mark the places of interment of the heroes of former ages. There are ruins of four ancient churches or chapels,—Kilhrick in the west end of the parish, Kilmory near Lochgilphead, Killevin by the side of Loch Fyne, and Kilenair by the side of Loch Awe. The last of these exhibits much beauty of workmanship, and is the subject of interesting traditions, and was once surrounded by a village. There are fourteen landowners,—seven of these Campbells; and four of the fourteen are resident in commodious mansions, a very interesting one of which is Kilmory. There is an extensive herring fishery in Loch Fyne; there is also a powder-mill on the northern border, contiguous to Inverary; but the business connexions of the greater part of the parish are concentrated at Lochgilphead. The yearly value of real property as assessed in 1860 was £14,449. Population in 1831, 4,054; in 1861, 4,473. Houses, 650.

This parish is in the presbytery of Inverary, and synd of Argyle. Patrons, Misses Campbell of Auchinellan. Stipend, £284 13s. 10d.; glebe, £26. Unappropriated tithes, £72 4s. 11d. The district contiguous to Inverary is included in the parish of Cumlodden, erected in 1853; and a district at the opposite end constitutes the quoad sacra parish of Lochgilphead, erected in 1846. See CUMLODDEN and LOCHGILPHEAD. The parish church of Glassary was built in 1827,—much injured by lightning in 1830, but afterwards well repaired and improved, and contains 1,500 sittings. There are at Lochgilphead a Free church, a Reformed Presbyterian church, a Scottish Episcopal chapel, and a Baptist meeting-house. There are three parochial schoolmasters, with collectively salaries of £53 6s.; and there are several private schools in Lochgilphead, and an Assembly's school in Cumlodden. At Kirnan, in the valley of Glassary, about 1½ mile from the old manse of Kilmichael, resided the ancestors of Thomas Campbell the poet, landowners to the yearly value of about £37; and the poet mournfully sings that locality as follows, in his 'Lines on visiting a scene in Argyleshire,'—

"At the silence of twilight's contemplative hour,
I have mused in a sorrowful mood,
On the wind-shaken woods that embosom the bower,
Where the home of my forefathers stood,
All ruined and wild is their roofless abode,
And lonely the dark raven's sheltering tree;
And travelled by few is the grass-covered road,
Where the hunter of deer and the warrior trode,
To his hills that encircle the sea."

GLASSAUGH. See FORDYCE.

GLASS-ELLAN, or GREEN ISLAND, a low grassy islet, about 30 acres in extent, with flat sandy skirts, in the middle of Loch-Alsh, on the south-west border of Ross-shire.

GLASSERT (THE). See GLAZERT (THE).

GLASSERTON, a parish, containing the village of Monreith, and reaching to within ½ a mile of the post-town of Whithorn, in the south-east of Wigtonshire. It is bounded on the south-west by Loch hay, and on the other sides by the parishes of Mochrum, Kirkinner, Sorbie, and Whithorn. Its great-

est length south-eastward is $7\frac{3}{4}$ miles; and its greatest breadth is $3\frac{3}{4}$ miles. The coast, about $6\frac{1}{2}$ miles in extent, is a chain of hills, various in height, verdant towards the top, and rocky, bold, and beetling in their descent to the sea. Many of them, on their seaward side, are abrupt and precipitous; some projectingly overhang the waters; some descend gently into the tide, and afterwards look up from its surface; and all have a dark and weather-beaten aspect. The bases of several are perforated, but not deeply, by caverns. All the beach and the seabottom within watermark, are covered with loose fragments of rock, some of them rounded by the attrition of the waves, and others shapeless masses clothed with marine plants and shells. The coast line, with the exception of the small headland of Lag Point, and a tiny bay beside it, called Monreith bay, both in the north-west, is nearly quite straight. Though there are two or three places where small vessels may discharge or take in cargo in fine weather, there is no port and no place of safe anchorage. The surface of all the interior of the parish is unequal, rugged, and knolly, yet nowhere, except slightly in the north, rises into strictly lilly elevations. The eminences or knolls are rocky, and for the most part covered with furze or coarse grass. The intervening hollows are, in some instances, marshy, but, in general, are carpeted with fine arable soil or excellent pasture. The influence of spring is usually felt here—as in the adjacent districts—somewhat earlier than in the other parts of Scotland. Frost is seldom intense, or of long continuance; and snow rarely accumulates, or lies long upon the ground. There are no streams of any importance, and only one lake worthy of mention, Dowalton loch, about 3 miles in circumference, on the northern boundary. Agriculture has made great advances here in late years. The soil is well adapted for turnip husbandry, and on some of the farms not fewer than 100 cattle are yearly stall-fed for the Liverpool market, with which there is regular steam-communication from the neighbourhood. The mansions are Ravenstone or Castle-Stewart, a seat of the Earl of Stair; Craigdow, belonging to Dr. Pringle; and Glasserton and Physgill, two spacious and beautifully situated residences of Stewart of Physgill. The park of Glasserton, besides constituting of itself a beautiful landscape, contains the parish church, whose handsome tower, rising above the woods, forms an interesting feature. The landowners in addition to those already named, are Sir William Maxwell, Bart., and Guthrie of Appleby. The real rental is about £8,570. The proportion of land in a waste condition is about 6 in 21 of the whole area; and the extent under wood is between 200 and 300 acres. Assessed property in 1860, £10,333. Population in 1831, 1,194; in 1861, 1,472. Houses, 245.

This parish is in the presbytery of Wigton, and synod of Galloway. Patron, the Crown. Stipend, £201 12s. 5d.; glebe, £20. Schoolmaster's salary, £60, with from £12 to £14 fees. Another school has attached to it, besides the fees, £15 of salary, and a dwelling-house. The church was built in 1732, and repaired and enlarged in 1837, and contains 400 sittings. The ancient church belonged to the prior and canons of Whithorn, and was served by a vicar. In 1606, it was granted to the bishops of Galloway; in 1641, it was transferred to the university of Glasgow; and in 1661, it was restored to the bishops of Galloway, and it continued to be held by them till the abolition of Episcopacy in the year 1689. An ancient small parish, called Kirkmaiden, was incorporated with Glasserton, though at what date is not known; and its burying-ground, together with the ruins of its church, the former the

burying-place of the family of Maxwell of Monreith, still exist in a romantic spot near the shore, not far from Monreith.

GLASSFORD, or GLASFORD, a parish, containing the villages of Chapelton, Westquarter, and Heads, in the middle ward of Lanarkshire. Its south-eastern boundary reaches within $1\frac{1}{2}$ mile of Strathaven, and its north-western boundary within $3\frac{1}{4}$ miles of Hamilton. It is bounded by the parishes of Strathaven, East Kilbride, Blantyre, Hamilton, and Stonehouse. Its outline, as represented in the map, is not unlike that of a sand-glass. It extends from north-west to south-east, and is defined at the upper end by a headstream of the Rotten Calder, and at the lower end by the river Avon. It is about 8 miles in length, and varies in breadth from $\frac{3}{4}$ ths of a mile to 2 miles at the lower end, and about half-a-mile in the middle. It contains 11 square miles, or 5,598 Scots acres. The land consists of moor and dale; the former in many parts sufficiently bleak and barren, but now under a gradual process of reclamation; and the latter, which runs along the lower part of the parish, and is bounded on one side by the Avon, smiling and fertile. Much of the surface exhibits a gradual rise, or has a sufficient elevation to be constantly overlapped by a keen atmosphere; but none of it can be called mountainous. The soil is variously moss, clay, and light loam. Wheat has been grown; but the principal crops are oats and potatoes, which are successfully raised to great amount. Coal exists, but not abundantly; and there is only one mine of it going upon the estate of Crutherland, the produce of which is not extensive. There are four freestone quarries, three near the village of Westquarter, and one at a place called Flatt. A successful limework also is in operation. The proprietary of the parish is an extremely divided one, the number of owners of land amounting to about 50; but the chief are the Earl of Eglinton, Marshall of Chapelton, Alston of Muirburn, Jackson of Hallhill, and Semple of Heads. The principal mansions are those belonging to the last three of these proprietors, and Avonholm, Crutherland, Westquarter, and Craighornhill. There are two corn-mills on the Avon. The parish is traversed by the roads from Strathaven to Hamilton and East Kilbride. Assessed property in 1860, £9,900. Population in 1843, 1,730; in 1861, 1,933. Houses, 277.

This parish is in the presbytery of Hamilton, and synod of Glasgow and Ayr. Patron, the Earl of Eglinton. Stipend, £274 17s. 8d.; glebe, £12 10s. Unappropriated teinds, £745 16s. 6d. The parish church is situated in the village of Westquarter, at the lower extremity of the parish; and it was built in 1820, and contains 560 sittings. There is a chapel of ease for Chapelton, 3 miles from Westquarter; and the patronage of it is vested in the male communicants. There is also a Free church preaching station at Chapelton; and the sum raised in connexion with it in 1865 was £379 4s. 1d. There are three parochial schools in the parish. The salary of the first master is £45, with £35 fees, and £6 other emoluments; that of the second is £5 10s., with £25 fees; and that of the third is £2 15s., with £18 fees. There is likewise a private school; and there are several friendly societies. The remains of the old church and belfry, erected in 1633, are seen in the grave-yard; and the place is further hallowed by the tomb of a martyr, which bears the following inscription:—"To the memory of the very worthy pillar of the church, Mr. William Gordon of Earlston in Galloway, shot by a party of dragoons on his way to Bothwell bridge, 22d June, 1679, aged 65; inscribed by his great-grandson, Sir John Gor-

don, Bart., 11th June, 1772."—The well-known Mrs. Isabella Graham, so justly celebrated for the purity of her character, and the piety of her writings, was a native of Glassford. Her maiden name was Marshall, and she died in America in July, 1814.

GLASSETTER. See KINTAIL.

GLASSMILE, a summit of the Grampians, with an altitude of upwards of 3,000 feet above sea-level, situated at the point where the parishes of Glenisla, Kirkmichael, and Braemar, in respectively the counties of Forfar, Perth, and Aberdeen, meet.

GLASSMOUNT-HILL, an eminence in the parish of Kinghorn, Fifeshire. It is situated about 2½ miles from the shore, and is the highest ground in the parish, having an altitude of 601 feet above sea-level.

GLASSY (LOCH). See LOGIERAIT.

GLAZERT (THE), a rivulet of Stirlingshire. It is formed by the confluence of the Pow burn, the Finglen burn, and the Kirkton burn, near the lodge at the entrance to Lennox-castle, in the parish of Campsie; and it flows thence, in a south-south-easterly direction, but with a great curve, to a junction with the Kelvin opposite the town of Kirkintilloch. It receives the waters of no fewer than sixteen burns, and has a very large aggregate of water power, inasmuch as to have been a main cause, along with the plenteousness of coal, why manufactures have taken root and flourished in Campsie.

GLAZERT (THE), a rivulet of Ayrshire. It rises on the confines of Renfrewshire, cuts the parish of Dunlop into two nearly equal parts, passes thence into a run within the parish of Stewarton, and performs altogether a course of about 11 miles, in a southerly and south-westerly direction, to a confluence with the Annock at Water-meetings 4 miles below the town of Stewarton.

GLEN, a prefix in very many Celtic names of places. It signifies a vale or comparatively narrow valley,—generally such as has bold lofty acclivitous hill-screens; and it is most commonly prefixed to the name of a stream, so as to make the whole name compounded with it to signify a mountain vale traversed by a particular stream.

GLEN, Peebles-shire. See TRAQUAIR.

GLENÆ. See TINVALD.

GLENAFFRICK, the upper part of Strathglass, in Inverness-shire. See AFFRICK (LOCH), and GLASS (THE).

GLENAFTON. See AFTON (THE).

GLENAHENRICH, a fine pastoral glen, of no great extent, yet containing a considerable lake, in the district of Sunart, on the northern border of Argyleshire.

GLENALLADALE, a glen, about 2 miles long, extending from north to south, and opening upon Loch Shiel, in the district of Moidart, on the south-west border of Inverness-shire.

GLENALLA-FELL, the highest summit of the hills at the southern extremity of the parish of Kirkmichael, and around the sources of Girvan Water, Ayrshire. It has an altitude of 1,612 feet above sea-level.

GLENALMOND, a picturesque and romantic glen, watered by the river Almond in Perthshire. See ALMOND (THE). What the name designates is only a small part of the river's basin, and lies chiefly within the parish of Monzie. In a wider sense, it is sometimes, though loosely, made to comprehend an open and cultivated part of the basin stretching to the eastward. But, more usually understood, it is entered on the east, at the boundary of the parish of Monzie, by a cross-road from the bridge of Buchanty, and after luxuriating, for a brief way, in kindred beauties to those of a glen which opens into it from

the south-west, becomes suddenly pent up between ranges of treeless, rocky, lofty elevations, and is converted into a narrow mountain-pass. The hills lift most of their summits 1,100 or 1,200 feet above the level of the sea, and press so closely on the river as barely to leave space for its bed, and for the roadway of a new turnpike to the Highlands. An occasional famishing shrub, looking squalidly out among the fissures of the rocks, rather heightens than mollifies the wildness of their aspect. The Almond, while passing beneath their dark shadow, and suffering their complete usurpation of its banks, has a rough and stony pathway, and trots rapidly along toward the soft beauties of the open country below. Near the upper end of the pass is a large round mass of stone, 8 feet high, which, having been removed from its former bed in the vicinity of its present position, disclosed a tiny subterranean apartment, faced round with stone, and containing human bones, and which is alleged by some fond antiquaries to have marked the site of Ossian's grave. This narrow and romantic pass is upwards of 2 miles in length, and terminates at the bridge of Newton. There a vale, narrow yet picturesque, gradually opens, and extends several miles to the west.

A great recent institution, in connexion with the Scottish Episcopal church, is situated on the estate of Carnies in Glenalmond, 10 miles west-north-west of Perth. This is called Trinity College, and comprises two departments,—a public school department and a theological students' department. "The edifice is in the Elizabethan style, and includes a splendid Gothic chapel, consecrated on the 1st of May, 1851. The buildings, completed in 1851, in addition to the chapel, are the north and west sides of a quadrangle, 190 feet square, comprising the warden's residence, apartments for the subwarden and five assistants, and accommodation for 130 resident pupils, of whom 40 seniors have each a separate room, and the rest distinct and private compartments, in three large dormitories on the north and half of the west sides of the quadrangle, with rooms for theological students. The east side is the school room and hall, and the south side is a cloister connecting the chapel, which stands out from the quadrangle at the south-east corner, with the warden's residence. The grounds comprehend a space of twenty acres. The buildings, as completed in 1851, cost £42,000, of which £36,000 were obtained by subscriptions, the greater part in England, and the remaining £6,000 advanced on loan by members of the Council and supporters of the College. The chapel cost between £5,000 and £6,000, and the sum of £20,000 completes this grand educational structure, the design of which is that of John Henderson, Esq. of Edinburgh. The situation of Trinity College, at the base of the Grampians, cannot be surpassed for the beauty and grandeur of the surrounding scenery. A lofty spiral steeple immediately adjoins the chapel; and the other ornaments of the quadrangle, which is chiefly from two to three stories, consist of small spires, square towers, projecting windows, buttresses, and many very beautiful displays of architectural design."

GLENALOT, a small sequestered glen, between the rivers Brora and Shiu, 15 miles north-north-west of Dornoch, Sutherlandshire.

GLENAPP, a picturesque glen, traversed by the rivulet App, at the south-western extremity of Ayrshire. It is about 6 miles long, and extends south-westward from the middle of the parish of Ballantrae to Loch Ryan. It has a post-office station of its own name, also a chapel of ease and an endowed school. The chapel and the school arose recently

from a bequest of £4,500 and 15 acres of land by a lady of the name of Caddell; and the chapel bears the name of Butlers' chapel, and is in the presentation of the trustees and pewholders.

GLENARAY, the glen of the rivulet Aray in Argyleshire. See **ARAY** (TUE). Glenaray also designates the entire basin of the Aray, comprehending the rivulet's tributaries, or the entire north-east portion of the parish of Inverary, and even seems at one time to have designated the whole of that parish.

GLENARCHAIG, the glen occupied by Loch Archaig, in the south-west of Lochaber, Inverness-shire. See **ARCHAIG** (LOCH).

GLENARCLET, a mountain vale, extending westward across the north end of the parish of Buchanan, from Loch Arcelet to Inversnaid, in Stirlingshire. It is the tract for tourists from Loch Katrine to Loch Lomond. See **ARCLET** (LOCH).

GLENARTNEY, a highland vale along the southern confines of the parish of Comrie, Perthshire, traversed by Artnay and Ruchill waters. At its upper or west end, toward the point of its being closed up by Benvoirlieh, is a preserve of some hundreds of red deer belonging to Lord Willoughby de Eresby. In its lower or eastern part, as it approaches a convergence of glens at the village of Comrie, it gives to the view a succession of interesting landscapes. Along its north side anciently spread a royal forest,—the scene of that chastisement upon some McGregors, by the forester of James VI., which led to the clan making reprisals, and to their notable outlawry.

GLENNAVEN, the highland valley traversed by the Banfishie Aven. See **AVEN** (TUE). The name, however, is more particularly applied to the upper part of the glen, constituting the southern or alpine division of the parish of Kirkmichael. This tract comprises from 60,000 to 70,000 imperial acres, and was a few years ago set off by the Duke of Richmond, its proprietor, as a deer-forest.

GLENANCHOR, the glen of Calder water, in the parish of Kingussie, and district of Badenoch, Inverness-shire.

GLENBEG, a district opposite Skye, on the west coast of the mainland of Inverness-shire. It is part of the parish of Glenelg, and comprises the smaller of the two valleys to which the name Glenelg belongs in common.

GLENBEICH, a ravine in the north screen of Loch Earn, containing a beautiful cascade, in the parish of Comrie, Perthshire.

GLENBENNAN HILL, a ridge of about 1,500 feet of altitude above sea-level, on the south side of the Old water of Cluden, in the parish of Kirkpatrick-Irongray, Kirkcudbrightshire.

GLENBERVIE, a parish, containing the post-office village of Drumlithie, in Kincardineshire. It is bounded by Strachan, Durris, Fetteresso, Dunningtar, Kinneff, Arbuthnot, and Fordoun. Its length southward is 6½ miles, and its breadth is 5 miles. The surface is hilly and uneven, descending eastward and southward from the Grampians. The soil, in the upper districts, is a blue clay, and in the lower, a light dry loam, abundantly fertile. The western division, being considerably elevated, is bleak and little cultivated; but the eastern, though also high and exposed, is in an advanced, and still improving, state of cultivation; so also is the northern quarter along a low ridge of the Grampians. The rest of the parish is principally heath, pastureland, and copse, with a secluded glen. In all, there are not more than 5,000 imperial acres in a state of cultivation, though many more might be added. Nearly 200 acres are planted. Bervie water comes

down from the braes of Fordoun, and runs about 4½ miles south-eastward along the southern boundary of Glenbervie. The name Glenbervie, as applied to the parish, is therefore a misnomer; only the northern half of only a part of the Bervie's gler, belonging to it. The ancient name, which was Overbervie, was more correct. Carron water rises in the braes in the west, and flows eastward through the interior. Cowie water also, gathering some of its sources from Fordoun, flows eastward through the northern division of Glenbervie. The principal landowners are Nicolson of Glenbervie and Miller of Drumlithie. The real rental is about £4,300. Assessed property in 1866, £7,551 12s. The Aberdeen railway traverses the southern district, and has a station in it at Drumlithie. Population in 1831, 1,248; in 1861, 1,219. Houses, 255.

This parish is in the presbytery of Fordoun, and synod of Angus and Mearns. Patron, Nicolson of Glenbervie. Stipend, £231 3s. 3d.; glebe, £7 5s. Schoolmaster's salary, £50, with £20 fees and other emoluments. The parish church was built in 1826, and contains 700 sittings. There is a Free church, with an attendance of 160; and the sum raised in connexion with it in 1865 was £207 5s. 10d. There is an Episcopalian chapel at Drumlithie. There are three private schools. There were formerly two friendly societies, and a savings' bank. An annual cattle fair is held in October.

GLENBOULTACHAN. See **EARN** (LOCH).

GLENBRAN, a district in the Sidlaw hills, annexed quoad sacra to the parish of Abernethy, in the east of Perthshire.

GLENBRECKRY, a vale, traversed by a small stream, in the parish of Southend, Kintyre, Argyleshire.

GLENBRIARACHAN, a glen in the parish of Moulin, and watered by the Briarachan, in the north-east of Perthshire.

GLENBRIGHTY, a pastoral highland vale, watered by the Brighty, a headstream of the Isla, commencing near the point in the Grampians at which the counties of Forfar, Perth, and Aberdeen meet, and occupying the north-west corner of the parish of Glenisla in Forfarshire.

GLENBUCK, a village in the parish of Muirkirk, district of Kyle, Ayrshire. It stands in a wild and secluded situation among the mountains, near the road between Ayr and Edinburgh. Some iron-works in its vicinity, erected and for some time carried on by an English company, occasioned its being built for the housing of the miners. But the works having, a considerable period ago, been abandoned, the village has been falling into decay. Population, 237.

GLENBUCKET, a parish on the western border of Aberdeenshire. It lies at the head of Alford district, and has its postal communication through Mossat, several miles to the north-east. It is bounded by Banffshire, and by the parishes of Cabraach, Towie, and Strathdon. It commences at the watershed between the head streams of the Deveron, the Livet, and the Don, and extends east-south-eastward down both sides of the Bucket, a tributary of the Don; and, comprising both the entire length and the entire basin of the Bucket, it is very correctly designated Glenbucket. Its measurement, over only its arable portion, is about 6 miles by 1 mile; and, over its whole extent, about 10 miles by 2½ miles. It consists in a large degree of lofty mountains, through which a narrow pass leads into the centre, from the east, at the confluence of the Bucket with the Don, near the ruinous castle of Glenbucket, which thus stands in a commanding and romantic situation. Craigen score, the

highest land in the parish, rises about 2,000 feet above sea-level. See also **BENAW**. The soil is mostly a light loam, mixed, on some farms, with clay. There is great abundance of excellent limestone, which is much used by the tenants. The whole parish belongs to the Earl of Fife. The remains of a house are still to be seen, called **Badenyon**, which gives name to the song of 'John of Badenyon.' A porter's lodge was built, in 1840, by the Earl of Fife, on this celebrated spot. Among the wild animals which frequent the uplands, are the roe and the red deer: there is abundance of game of all kinds, with hawks, eagles, &c.; and salmon and trout are found in the Bucket and the Don. Population in 1831, 539; in 1861, 552. Houses, 108. Assessed property in 1860, £1,154.—This parish is in the presbytery of Alford, and synod of Aberdeen. Patron, the Crown. Stipend, £158 Gs. 8d.; glebe, £7. Schoolmaster's salary, £40; fees, &c. £6. There is a private school.

GLENBUCKIE, a glen and a mansion in the parish of Balguldher, Perthshire. The glen extends about 4 miles north-eastward to a convergence of glens at the foot of Loch Voil. The mansion was built about 30 years ago.

GLENCALNAIL, a glen of $\frac{3}{4}$ mile in length, and $\frac{3}{4}$ of a mile in breadth, on the south-east side of Benmore, and in the parish of Torosay, in the island of Mull, Argyleshire. In the lower part of it is a considerable lake.

GLENCAIRN, a parish, containing the post-town of Minnyhive and the villages of Duareggan and Kirkland, on the western border of Dumfries-shire. It is bounded by Kirkcudbrightshire, and by the parishes of Tynron, Keir, and Dunscore. Its greatest length south eastward is $12\frac{1}{2}$ miles; and its greatest breadth is $6\frac{1}{2}$ miles. All the western and the northern divisions are mountainous and pastoral. One lofty range runs along great part of the western boundary, and for a considerable way forms the water-line between the streams respectively of Dumfries-shire and of Galloway; another high range runs along two-thirds of the north-eastern boundary; a third lofty range, intermediate between the others, comes down from the northern angle, and runs along the centre of the parish through almost its entire length; and the last, both before and after the first range ceases to interpose between the Galloway and the Dumfries-shire waters, sends off spurs which run transversely from it to the eastern boundary. The higher summits rise from 1,000 to 1,500 feet above the level of the sea, and are, for the most part, covered with heath. Yet the hills, which are principally of the transition class of rocks, and wearing its characteristic exterior appearances, afford in general excellent pasturage. Three valleys coming down between the mountain-ranges,—one from the north, one from the west, and one from the south-west, each about 6 miles in length, and all well-cultivated, luxuriant, and sheltered with plantation,—meet at the village of Minnyhive, and thence send off south-eastward a broader and still richer valley, beautiful and brilliant in the attractions of landscape, to the extremity of the parish. The three valleys are traversed by the streams Dalwhat, Craigdarroch, and Castlephairn, which unite at Minnyhive, and form the Cairn; and the great valley is traversed through all its length by the united streams. The Craigdarroch rises in Auchenstrowan hill on the western boundary, and within three miles of the source receives several tributary mountain-rills. The Castlephairn—which figures on some maps as the Cairn, but is never called by that name by the inhabitants, though the Dalwhat sometimes is—comes in upon

the parish from Kirkcudbrightshire, after having run a course of 4 miles from Loch-Howie, in the parish of Balmaclellan, forms for $1\frac{1}{2}$ mile the boundary-line with Kirkcudbrightshire, and afterwards, in its meanderings along the valley, everywhere flows between wooded banks. The Dalwhat and the Cairn have been described in their own alphabetical places. Loch Urr, which also will be separately described, lies on the south west boundary. One-fifth of the whole area of the parish is arable; 800 acres are under plantation; and all the rest is pastoral or waste. A slate quarry was for some time energetically worked; but, eventually yielding produce of inferior quality, it was abandoned. About half-a-mile from the parish church is a tumulus or artificial mound, commonly called the Moat, very steep, of considerable height, and occupying about an acre of ground. It is of an oblong form, and has at each end an earthen turret cut off from the main body by a deep trench. One of the turrets, and one side of the base of the tumulus, have been much reduced in bulk by the aggressive movements of a passing rivulet. Of many traditions and conjectures respecting the original design of the Moat, the most probable is, that it was constructed either to be a watch-post, or to serve as an arena for the exercise of archery. The Rev. James Renwick, the last of the Scottish martyrs, and a conspicuous actor in some of the most hallowed, and also in some of the most tumultuous and daring proceedings of the Covenanters, was a native of Glencairn; and is commemorated by a monument of hewn stone and about 25 feet high, erected, in 1828, near the supposed spot of his nativity, on an eminence less than $\frac{1}{4}$ of a mile from Minnyhive. The principal mansions in the parish are Maxwellton, Craigdarroch, and Auelchain. There are four principal landowners, and about thirty smaller ones. The real rental is upwards of £11,000. Assessed property in 1843, £13,315. Population in 1831, 2,068; in 1861, 1,867. Houses, 389.

This parish is in the presbytery of Penpont, and synod of Dumfries. Patron, the Duke of Buccleuch. Stipend, £279 15s. 10d.; glebe, £18. There are three parochial schools, and two non-parochial. Salary of the first parochial schoolmaster, £45; of the second, £22 10s.; of the third, £12. The school-fees amount respectively to £20, £20, and £14. The parish church was built in 1836, and contains 1,050 sittings. There is a Free church, with an attendance of 700; and the sum raised in connection with it in 1865 was £306 16s. 8d. There is in Minnyhive an United Presbyterian church, with an attendance of 300. The ancient church of Glencairn belonged to the bishops or chapter of Glasgow. In the valley of the Castlephairn, at a place still called Kirkcudbright—a modernized orthography of "Kirk-Cuthbert"—there was an ancient church dedicated to St. Cuthbert. Glencairn gave the title of Earl to an ancient branch of the family of Cunningham. Alexander, the 1st Earl, was ennobled, first as Lord Kilmaurs, and next as Earl of Glencairn, by James II. Alexander, the 5th Earl, figures illustriously in the history of the Reformation. James, the 14th Earl, is familiar to a large class of Scotsmen as the patron of the poet Burns. John, the 15th Earl, and brother of James, died in 1796, and left his noble title to go a-begging for want of an inheritor.

GLENCANNICH. See **CANNICH** (The).

GLENCAPLE, a post-office village and small sea-port, in the parish of Caerlaverock, Dumfries-shire. It is delightfully situated on the left bank of the Nith, 5 miles below Dumfries. Its entire aspect is modern, tidy, and cheerful. A road, com-

binning the attractions of the avenue, and exhibitions of joyous scenery, leads down to it along the Nith from Dumfries, and brings many a vehicle and group of pedestrian tourists from the gay burgh to enjoy its balmy air, and luxuriate in the landscapes around it. Nearly opposite to it, on the Kirkcubrightshire side of the river, and accessible by fording at low water, are the beautiful ruins and circumjacent scenery of New-abbey. Six miles to the south-west rises the dark fine form of the monarch-mountain Criffel. Two-and-a-half miles to the south-east are the deeply-interesting ruins of Caerlaverock Castle. All around are objects, both in landscape and in antiquarian reminiscence, which make Gleneapple a seaward retreat from the cares and bustle of a town, which Dumfries may boast as equal to that enjoyed by the most favoured towns in Scotland. One attraction of no mean order occurs nowhere else in Scotland, or even in the world, except at kindred places on the Solway. The channel of the Nith is here $\frac{2}{3}$ of a mile wide, and exhibits in superlative fullness those wondrous features for which the tides of the Solway are famed. "During spring-tides," says Mr. M'Diarmid, "and particularly when impelled by a strong south-wester, the Solway rises with prodigious rapidity. A loud booming noise indicates its approach, and is distinguishable at the distance of several miles. At Caerlaverock and Gleneapple, where it enters the Nith, the scene is singularly grand and imposing; and it is beautiful to see a mighty volume of water advancing foam-crested, and with a degree of rapidity which, were the race a long one, would outmatch the speed of the swiftest horses. The tide-head, as it is called, is often from 4 to 6 feet high, chafed into spray, with a mighty trough of bluer water behind, swelling in some places into little hills, and in others scooped into tiny valleys which, when sun-lit, form a brilliant picture of themselves. From the tide-head proceed two huge jets of water which run roaring along, searching the banks on either side,—the antennæ, as it were, which the ocean puts forth, and by which it feels its way, when confined within narrow limits." Intimate knowledge of the peculiar navigation is requisite to guide vessels at the recess and influx of so unwonted a tide; and instances have occurred at Gleneapple and its vicinity of masters acquainted from their youth with the Solway having suffered their vessels to be wildly played with by the careering invader, and even tripped fairly over and laid on their beam-ends.—The trade of Gleneapple is strictly identified with that of Dumfries; the port being simply a place for such vessels discharging their cargoes as draw too much water, or are too unwieldy, to sail up to the burgh. Considerable stir, in consequence, occurs from the necessity of further transference by carriers. Shipbuilding is carried on to some extent. Population, 268. Houses, 51.

GLENCARREL, a small inland highland vale, near Glenalot, in Sutherlandshire.

GLENCARRICK LEAP, a fine cascade on the Duncew burn, in the parish of Kirkmahoc, Dumfrieshire.

GLENCARSE, an estate, a mansion, and a railway station, in the parish of Kinfauns, Perthshire. The station is on the Dundee and Perth railway, 4 miles west of Errol, and 6 east of Perth.

GLENCATACOL, a glen in the north-west of the island of Arran, opening on Kilbrannan sound.

GLENCHATT. See BIRSE.

GLENCLOVA, the mountain part of the basin of the South Esk, through the parishes of Clova and Cortachie, Forfarshire.

GLENCLOY, a beautiful, romantic, highland vale, descending 4 miles north-eastward from the watershed of the island of Arran, to a convergence of vales round the head of Brodick bay.

GLENCOE, a wild, gloomy, highland glen, extending nearly 9 miles north-westward, from the vicinity of the King's house to Loch Leven at Invercoe, in the north-east corner of Argyleshire. It is traversed by the road from Ballachulish and from Fort William by way of Tyndrum to Dumbar-ton. "The scenery of this valley," says a local authority quoted by Pennant, "is far the most picturesque of any in the Highlands, being so wild and uncommon that it never fails to attract the eye of every stranger of the least degree of taste or sensibility. The entrance to it is strongly marked by the craggy mountain of Buachal cive, a little west of the King's house. All the other mountains of Glencoe resemble it, and are evidently but naked and solid rocks, rising on each side perpendicularly to a great height from a flat narrow bottom, so that in many places they seem to hang over, and make approaches, as they aspire, toward each other. The tops of the ridge of hills on one side are irregularly serrated for three or four miles, and shot in places into spires, which form the most magnificent part of the scenery above Ceann-loch Leven." "There is no valley in Scotland," says another authority, "so absolutely wild and singular in its features as Glencoe. Entering the glen from the eastern extremity, the mountains rise in stupendous masses all around, forming an amphitheatre, vast in extent, and preserving a stillness and solemnity almost terrific, which is heightened by the desolate appearance of the vale; and, perchance, the hollow scream of a solitary eagle may excite a temporary feeling of horror. The bare rocks immediately in front shoot up perpendicularly, while those more distant appear in an innumerable variety of fantastic forms; and their singularity is increased with the deep furrows worn by the winter-torrents from the top of the mountains. Immense masses of rock are also seen near the path through the glen, which, in the course of ages, have been loosened from the side of the mountain, and hurled along with the currents of rain to the depth of the glen. In length, Glencoe is nearly 9 miles, without the least appearance of any human habitation, or even vegetation to support a few tame animals connected with the most humble household. Its general appearance has a strong tendency to excite a feeling, that the place has been proscribed by Heaven as the habitation either of man or beast."

Amid this vast, tremendous solitude,
Where nought is heard except the wild wind's sigh,
Or savage raven's deep and hollow cry,
With awful thought the spirit is imbued!
Around—around for many a weary mile,
The alpine masses stretch, the heavy cloud
Cleaves round their brows, concealing with its shroud
Bleak, barren rocks, unthawed by Summer's smile.
Nought but the desert mountains and lone sky
Are here—birds sing not, and the wandering bee
Searches for flowers in vain; nor shrub, nor tree,
Nor human habitation greets the eye
Of heart-struck pilgrim; while around him lie
Silence and desolation, what is he!

Glencoe figures mournfully in history, in connexion with the massacre of its inhabitants, of the clan Macdonald, in the winter of 1691-2. The causes of the massacre were of a political kind, variously animosity, intrigue, and mistake, partly flowing from the revolution of the Crown, and partly developed by that event. "Two companies of soldiers, one of which was commanded by Captain Campbell of Glenlyon, uncle to the wife of one of the chief's sons, entered the valley of Glencoe with peaceful profes-

sions, and were received as friends, Campbell being quartered in the house of his kinsman, and the soldiers in the huts of the clansmen. For a fortnight they enjoyed the hospitality of their unsuspecting entertainers, at the end of which they rose up at midnight and commenced the foul work of massacre. The old chief was shot in the act of rising from bed: his wife was stripped naked, and even the ring toin from her fingers by the teeth of a savage soldier, so that she died next morning from horror and distraction. No quarter was given by the military butchers: men, women, and children, were shot down or stabbed without distinction. In this way, thirty-eight perished; for the rest of the clan, alarmed by the fire of musketry, had escaped at midnight to the hills, under shelter of a storm: but the huts were destroyed, and those women and children who had escaped the sword, were exposed to perish among the snow."

Glencoe is supposed, by some, to have been the birth-place of Ossian. "In the middle of the vale runs 'the roaring stream of Cona;' the mountain of Malmor rises on the south; and the celebrated Con-Fion—'the hill of Fingal'—is situated on the north side of the vale. Garnett says: "Any poetical genius who had spent the early days of his life in this glen, must have had the same or similar ideas, and would have painted them in the same manner that Ossian has done; for he would here see nothing but grand and simple imagery—the blue mists hanging on the hills—the sun peeping through a cloud—the raging of the storm, or the fury of the torrent." Stoddart says, "If any district can, with peculiar propriety, boast of the birth of Ossian, it is this. The translator of his poems has so unjustifiably altered the original names, both of men and places, that it is not easy to trace them in those which now exist. Something like many of them is to be found all over the Highlands; but here they are most numerous; several of the names referring either to the heroes of the Fingalian race, or to their general occupation, hunting. Here is *Scur-no-Fion*, 'the mountain of the Fingalians;' *Coe*, the name of the river, is supposed to be the *Cona* of Ossian; *Griannan Dearduil*, 'the sunny place of Dearduil,' is supposed to refer to Ossian's *Darthula*, whom *Nathos* stole from her husband *Conquhan*. Here also are *Achnacon*, 'the field of the dog;' *Caolis-na-con*, 'the ferry of the dog;' *Bitanabeen*, 'the deerskin mountain,' &c. Add to this, that the neighbouring country bears similar traces; that *Morven* is the peculiar name of Fingal's domain; that an island in *Loch-Etive* is supposed to be named from *Ufnath*, the father of *Nathos*; and that *Etive* itself is so named from the deer of its mountains. It must not, however, be dissembled that the same names occur in other places. The stream of *Conan*, in *Ross-shire*, is supposed to be *Cona*, and is near *Knoek Farril-na-Fion*, which takes its name from *Fingal*; and *Daruil*, or *Jarduil*, is a name common to most of the rocks, which, like the one in *Glen-Coc*, are termed *Vitrified forts*."

Glencoe has now a post-office station of its own name. The mouth of the glen contains an extensive slate quarry, with a considerable population, and with appliances for secular and religious instruction; but these are popularly regarded as belonging to *BALLACHULISH*: which see. A school in the place has a parochial status, with a stent of £18, besides fees. The parts of the glen farther up contain several farm houses and a small inn. Yet is the general body of the glen sublimely desolate,—almost as much so as if it were part of the mountain wilderness of *Arabia Petraea*.

GLENCONRY, the glen of the Coury, a head-

stream of the *Don*, in the parish of *Strathdon*, *Aberdeenshire*. It contains a *chalybeate spring*.

GLENCOVETH, a glen in the parish of *Kiltarlity*, but belonging to the ancient incorporated parish of *Conveth*, *Inverness-shire*.

GLENCORSE. See GLENCROSS.

GLENCOTHO, a small lateral glen in the parish of *Glenholm*, *Peebles-shire*.

GLENCOUL, or GLENCUL, a highland glen descending about 9 miles west-north-westward to the head of *Kyle Seow*, on the mutual border of the parishes of *Assynt* and *Edderachills*, in *Sutherlandshire*. The lower half of it is occupied by a deep ramification of *Kyle Seow*, called *Loch Glencoul*, overhung by wild precipitous hills, and remarkable for the productiveness of its *herring-fishery*.

GLENCRERAN. See CRERAN (Loch).

GLENCRIEFF. See WANLOCKHEAD.

GLENCROE, a highland glen, near the northern extremity of the district of *Cowal*, *Argyleshire*. It commences near the water-shed between the head of *Loch-Fyne* and the head of *Loch-Long*, and descends east-south-eastward to the latter at a point nearly opposite *Arroquhar*. The road to *Inverary*, from *Dumbarton*, by the *Gair-loch* and *Loch-Long*, after winding round the head of the latter loch, passes under *Ben-Arthur* or the *Cobbler*, and, leaving *Ardgarden* house on the left, enters *Glencroe*. The scenery is here wild and sublime in the highest degree. On each side rise lofty mountains, with rocks of every shape hanging on their sides, many of which have fallen to the bottom of the glen, while others threaten the traveller with instant destruction. In the middle of the glen runs a considerable brook, near which the road is carried; and hundreds of rills that pour from the mountains form in their descent innumerable cascades. There are a few cottages on the sides of the road inhabited by shepherds. The rocks consist almost entirely of *micaceous schist*, shining like silver, beautifully undulated, and in many parts imbedded in *quartz*. In the bed of the rivulet are considerable numbers of *granitic pebbles*, with pebbles of *schist*, full of crystals of *schorl*. The length of *Glencroe* is between 5 and 6 miles. The road ascends gently through the whole of it, excepting the last mile, where it is very steep, and carried in a zig-zag form to the top of the hill. Here is a seat, 29 miles from *Dumbarton*, and a stone inscribed, 'Rest and be thankful,' placed by the 22d regiment, who made the road.

GLENCROSS, or GLENCORSE, a parish near the centre of *Edinburghshire*. Its post-town is *Penicuik*, about a mile beyond its southern boundary. It is bounded by the parishes of *Colinton*, *Lasswade*, and *Penicuik*. It has a somewhat circular outline, of about 3 miles in diameter. The north-western division, comprising about one-third of the whole area, runs up from the lower slopes to the highest summit-range of the *Pentlands*, and is altogether pastoral. The south-eastern and larger division consists of beautiful undulating land, part of the great plain of *Mid-Lothian*, finely cultivated, but adorned to excess and sheltered to undue closeness with plantation. The hills, like all the rest of the *Pentland range*, consist of different sorts of *eruptive rocks*; and the lower grounds contain *sandstone*, *limestone*, *coal*, and *shales*. *Glencross-burn*, after a course of 2½ miles in the *Pentland* section of *Penicuik*, and bearing hitherto the name of *Logan-house water*, comes in upon the parish from the south-west, runs along its boundary northward for nearly a mile,—now suddenly debouches, and flowing first eastward and next south-eastward, intersects it from side to side, dividing it into two nearly equal parts,—then, a few yards after leaving it and entering the

parish of Lasswade, falls into the North Esk. Another stream, a tiny brook, rises within the parish at Head-stone, flows for half-a-mile southward to the boundary, and then circulates along its margin over a distance of 3 or 3½ miles, when the North Esk receives its little tribute. Upwards of half-a-mile from where Glencross-burn comes inward from the boundary, it is dammed up by a stupendous artificial embankment, so as to form, from this point all the way back to the boundary and a brief distance along it, a narrow but capacious lake. Compensation-pond, as this lake is called, was formed at the expense of the water-company of Edinburgh, to compensate the millers on the North Esk, for the deprivation of some of their important feeders in order to send supplies to the citizens of the metropolis; and, in times of drought, when the Esk fails to bring along its channel a water-power sufficient for the mills, it sends off, by means of a regulating and watchfully kept machinery, such discharges as keep them working. The Crawley spring, whence the Edinburgh water-company draw a large portion of their supplies, wells up near a place called Flotterston. Much of the area of the parish, which was at one time sterile moorland, is now either cultivated or planted. There are five principal landowners, and several smaller ones. The valued rental is £1,579 Scots. The chief modern buildings are the mansions of Glencross, Loganbank, Bellwood, and Bush. But a more interesting place than any of these is Woodhouselee. This ought, in propriety, to bear the name of Fulford, and is not to be confounded with Old Woodhouselee, some 3 miles or more distant from it, near the southern extremity of the parish. The tower of Fulford, an edifice of great antiquity, and situated near the northern limit of Glencross, in the opposite extreme to that which marches with Lasswade, was repaired nearly two centuries ago, from the stones of Old Woodhouselee—the seat of Hamilton of Bothwell-haugh, whence the Regent Moray turned out the lady of Hamilton to the inclemency of the season—and, in consequence, took its name. Towards the end of last century, Woodhouselee—the property of the Tytler family—was illustrious as the residence of William Tytler, Esq., vice-president of the Scottish Antiquarian society, author of 'Enquiry into the Evidence against Mary Queen of Scots,' and a masterly dissertation on Scottish music, the restorer from oblivion of the 'King's Quair,' a poem written by James I. of Scotland, during his captivity in England,—and the perspicacious adjudicator to Allan Ramsay of the entire merit of the 'Gentle Shepherd,' and of the authorship of two fine Scots poems which hitherto had gone, like Captain Marryat's Japhet, in search of a father, 'the Eagle and Robin-Red-breast,' and 'the Vision.'

Glencross puts in a claim, though probably a frivolous one, to the honour of figuring throughout as the scene of the exquisite pastoral of the Gentle Shepherd. See HABBIE'S HOWE. Rullion green, at the base of Lawhead-hill, not far from the south-western boundary of the parish, figures in history as the scene of a memorable skirmish of the troops of the persecuting Stuarts, in 1666, with a resolute and daring body of the Covenanters. The western population of Scotland, driven to despair by the oppressions of the government, ran hastily to arms, and rashly dreamed of making themselves masters of the metropolis; and menaced near Edinburgh by the advance of a royal force under General Dalziel, they turned aside at the village of Colinton, to climb away among the Pentlands, but were overtaken on the little plain of Rullion green, and there—though twice repulsing their assailants—they were utterly

dispersed, leaving upwards of fifty of their number to fatten the spot with their carcases. Within a small enclosure is a monument, with a suitable inscription, commemorative of the Rev. Mr. Cruickshanks, Mr. McCormic, and other heroes who fell. The mansion of Greenlaw, on Glencross-burn, 8 miles from Edinburgh, and near the south-eastern limit of the parish, was used, previously to 1814, as a depot for prisoners-of-war, and had erected around it, on a Government purchase of 38 acres, wooden buildings for the accommodation of 6,000 prisoners, and a regiment of infantry. The barracks, raised at the conjectural cost of £100,000, are still occupied by small detachments from Edinburgh castle. At a former period the parish had a distillery; but now it rejoices in a strictly rural population. Through nearly its middle, from north-east to south-west, it is intersected by the road from Edinburgh to Biggar and Dumfries; and, in its southern or champaign division, it has several other roads. South-west of the House-of-Muir, and about 8½ miles from Edinburgh, is a great annual market for sheep on the first and second Mondays of April. At that place also there was formerly a weekly market, frequented by the Edinburgh butchers. The yearly value of real property as assessed in 1860 was £6,411. Population in 1831, 652; in 1861, 1,021. Houses, 165.

This parish is in the presbytery of Dalkeith, and synod of Lothian and Tweeddale. Patron, Tytler of Woodhouselee. Stipend, £156 17s. 7d.; glebe, £20. Schoolmaster's salary, £50, with £19 15s. fees, and £5 15s. other emoluments. The parish-church was built in 1665, and repaired but not enlarged in 1811. Sittings about 200. The parish of Glencross was formed, in 1616, from the ancient parishes of Pentland and Penicuik, the northern division being taken from the former and the southern division from the latter. In the vale of Glencross-burn, on the northern bank of that stream, in a locality now laid under water by Compensation loch, anciently stood a chapel dedicated to Saint Catherine the virgin, called Saint Catherine of the Hopes, in contradistinction to Saint Catherine of the Kaimes, in the parish of Liberton.

GLENCUL. See GLENGOUL.

GLENDALE, a vale about 2 miles long, stretching northward to the head of Loch Poltief, in the parish of Duirinish, in the island of Skye.

GLENDARUEL, a vale, an estate, and a mansion, in the parish of Kilmadan, district of Cowal, Argyleshire.

GLENDVAN. See FRAQUAIR.

GLENDVARG, a narrow vale, about 3½ miles in length, coming down southward from Eenderig, and overlapped on the west side by Benchat, and on the east side by Benvenoch, in the northern part of the parish of Blair-Athole, Perthshire.

GLENDERRY, a wild alpine glen, of small extent but gloomy character, among the Benmaedhu group of mountains, at the head of Braemar, in Aberdeenshire.

GLENDDEVON, a parish in the Ochil district of Perthshire. Its post-town is Muckhart, 3 miles south-south-east of its church. It is bounded by Blackford, Auchterarder, Fossaway, Muckhart, and Clackmannanshire. Its length south-westward is 5½ miles; and its greatest breadth is 4 miles. The whole parish lies among the Ochils, and is lifted up into green smooth hills, freckled at remote intervals with rocks, and embrowned on some spots with heath. Devon water comes in upon it from the west, 5 miles from its source, forms for 2½ miles the northern boundary-line, flows eastward for 2½ miles through the interior, receiving several tributary

rills in its course, and, bending south-eastward, traces for $1\frac{1}{2}$ mile the boundary with Fossaway. The river opens up in its progress a glen or narrow vale, and, in doing so, gives name to the parish. In scattered spots along this vale, where the soil is light and dry, inclining to gravel, are about 200 acres of arable land. All the rest of the parish is pastoral, and sustains about 8,000 sheep. Experiments in ploughing the lower parts of the hills proved that attempts at cropping arc, in this district, less remunerating than attention to pasture. At Burnfoot is a small mill for spinning wool. A house built in the 16th century, by the family of Crawford, for the protection of their vassals from any hostile attack, and which is more spacious than most buildings of its class, was restored from a ruinous condition, and still stands as an admonition to gratitude for the blessings of peaceful times. A turnpike runs through the parish $3\frac{1}{2}$ miles along the glen. There are five landowners. Assessed property in 1866, £2,370. Population in 1831, 192; in 1861, 138. Houses, 25.—This parish is in the presbytery of Auchterarder, and synod of Perth and Stirling. Patron, the Crown. Stipend, £158 6s. 7d.; glebe, £8 10s. Schoolmaster's salary, £45, with £7 fees, and £5 other emoluments.

GLENDHU. See GLENDOW.

GLENDINNING. See WESTERKIRK and DUMFRIES-SHIRE.

GLENDOCHART, the glen of the Dochart, down to the head of Loch Tay, in the parish of Killin, Perthshire. See DOCHART. Entering Glendochart from Glenogle, it presents a region of sterile magnificence, varied by the winding course of the river; and several hamlets, disposed on the eminences that just rise above the level which stretches far to the west in the bottom of the valley, give it some interest. Though the hills exhibit a lengthened chain of barren wildness, Benmore towers amid them in double cone, and excites in the mind of one who can relish rude grandeur, a sublimity of feeling not easily to be expressed by words. Proceeding by the banks of the Dochart to Killin, the hill called Stronchlachan, the craggy heights of Finlairg, and the lofty wilds of Benlawers, with Loch Tay stretching its ample breadth along the base of these mountains, are seen, as grand and simple parts of a magnificent whole.

GLENDOICH, an estate in the parishes of Kinfauns and Errol, Perthshire. The mansion, a modern edifice, is in Kinfauns; but a hamlet, of the same name as the estate, is in Errol.

GLENDOLL. See DOLL (THE).

GLENDORCH. See CRAWFORDJOHN.

GLENDUGLAS. See DOUGLAS BURN, Selkirkshire, Argyleshire, and Dumbartonshire.

GLENDOVAN. See GLENDEVON.

GLENDOW, a glen on the east side of the highland district of the parish of Buchanan, Stirlingshire. It is traversed by a head stream of the Forth.

GLENDOW, a glen in the south of the parish of Edderachillis, Sutherlandshire. It is flanked on the south side by Benlead, and descends 2 miles westward to the head of Loch Glendow. That loch is a marine inlet, ramified eastward from the head of Kyle Scow, about 3 miles long and $1\frac{1}{2}$ mile broad, romantically wild in its stern steep hill screen, very deep in its water, and famous for the productiveness of its herring-fishery,—no less than about £30,000's worth of herrings having been caught in it in one year.

GLENDOW, a glen, about 7 miles long, in the interior of the parish of Morvern, Argyleshire. It extends parallel to Loch Sunart, at the distance of about $3\frac{1}{2}$ miles from that sea-loch. Lead ore of con-

siderable richness occurs in it, and was wrought for some time in last century by a company called the Morvern Mining Company.

GLENDOW, or GLENTENDAL, a glen, nearly 3 miles long, extending from east to west, 7 miles distant from Glenure, partly well-wooded, and all overrun by fallow-deer, in the parish of Archhatten, Argyleshire.

GLENDRONACH. See FORGUE.

GLENDUBH. See GLENDOW.

GLENDUCKIE, a village and a hill in the parish of Flisk, Fifeshire. The hill is part of the range which flanks the frith of Tay. Population of the village, 53. Houses, 13.

GLENDUROR, the vale of the stream Duror, in Appin, Argyleshire. See DUROR.

GLENDYIE. See DYE (THE), Kincardineshire.

GLENEAGLES. See BLACKFORD.

GLENEARN. See DRON.

GLENEFFOCK. See GLENESS.

GLENELCHAIG, the northern district of the parish of Kintail, but particularly the immediate vale of the streamlet Elchaig, in the south-west of Ross-shire. It is an exceedingly sequestered district, separated from the rest of the parish by a range of lofty mountains. In the heights of it occurs the remarkable cascade of GLOMACH: which see.

GLENELG, a parish, containing a post-office village of its own name, also the village of Armsdale, on the west coast of Inverness-shire. It is bounded, on the north-east and east, by the water-shed of a ridge of hills, which divides it from Ross-shire; on the south-east and south, by the water-shed of the range of heights at the head of Glengarry and Glenariga in Lochaber; on the south-west, by Loch Morar, which divides it from Arasaig in the parish of Ardnamurchan; and on the north-west, by the navigable and much frequented Sound of Sleat, which separates the Scottish mainland from the island of Skye. Its length and breadth are each about 20 miles. It comprises three districts, all washed by the sound of Sleat, and each separated from the other by a long transverse inlet from that sound, in the form of a sea-loch. First is Glenelg proper, in the north-east; next is Knoydart, in the middle,—these two separated from each other by Loch-Hourn; and next is North-Morar, in the south-west,—this separated from Knoydart by Loch-Nevis. See KNOYDART, MORAR, HOURN (LOCH), and NEVIS (LOCH). The coast, except in the bay of Glenelg and within the sea-lochs, is generally high and rocky. The sea-lochs are remarkable for romantic beauty, and they contain good anchoring ground. Glenelg proper comprises two glens, called Glenmore and Glenbeg, each watered by its own little stream. The former is the site of the village of Glenelg, and takes down the roads from the interior of the mainland to the grand ferry into Skye. It is quite destitute of trees, except toward the foot, but is clothed to the very summit of its hill-screens with green pasture; and the entry to it at the upper end, with the hills of Skye in the distance, discloses a brilliantly impressive view. The inhabitants of Glenelg proper reside principally in hamlets at the sides of the streams, their arable land extending along the banks, and on the declivity of the hills. Some of them also dwell on Loch-Hourn-side. In this district the soil is good; part of a deep black loam, and part of a sandy gravel, yielding crops of potatoes and oats. The hills afford good pasture for cattle. In Knoydart the inhabitants dwell in villages bordering on the sea, and along the sides of Loch-Hourn and Loch-Nevis. Here the soil is in general light, yielding early

crops of barley, oats, and potatoes. The hills, though high, are mostly green to the top, and afford excellent pasture for all kinds of cattle. North-Morar is rocky and mountainous, and chiefly adapted for sheep. The valued rent of the parish is £3,565 Scots. Glenelg proper belongs to Mr. Baillie of Kingussie, Knoydart to M'Donell, and North Morar to Lord Lovat. The yearly value of raw produce was estimated in 1836 at £10,635. Assessed property in 1860, £7,268. The only mansion in the parish is that of Inverio on the banks of Loch-Nevis, in Knoydart. There have been many castles or round towers, two of which in Glenbeg are yet pretty entire. In 1722, shortly after the battle of Glenshiel, Government thought it necessary to erect a small fortification on the west coast, and pitched on a spot of ground in this parish as a proper situation, being in the direct line from Fort-Augustus to the Island of Skye. From that period till after 1745, there were commonly one or two companies of foot quartered here; but the barracks are now in ruin. The village of Glenelg stands picturesquely on the small bay of Glenelg at the ferry into Skye. The bay affords good anchorage in easterly winds; but a better harbour in all winds is on the Skye side, nearly opposite, about 1½ mile distant. The village has a principal street of slated houses, besides numerous thatched cottages, and is embellished with interspersed trees and adjacent plantation. It contains some well-stocked shops, the parish church, and the residence of the landowner's factor; and it gives name to a synod both of the Established church and of the Free church. Fairs are held here on the Friday after the last Tuesday of May, and the Friday after the last Tuesday of July. Population of the village, about 400. Population of the parish in 1831, 2,874; in 1861, 1,843. Houses, 348.

This parish is in the presbytery of Lochcarron, and synod of Glenelg. Patron, Baillie of Kingussie. Stipend, £237 7s. 9d.; glebe, £60. Parochial schoolmaster's salary, £25. The parish church was repaired in 1835, and contains 400 sittings. There is a mission station of the Royal bounty in Knoydart. There is a Free church preaching station in Glenelg; and the sum raised in connexion with it in 1865 was £243 17s. 10d. There are Roman Catholic chapels in Knoydart and Morar. There are in the parish three non-parochial schools. Glenelg gives the title of Baron in the peerage of the United Kingdom. Charles Grant, a well-known statesman, ennobled in 1835, the son of the late Charles Grant Esq., then proprietor of the district of Glenelg proper.

GLENENNICH, an alpine glen, of considerable extent, having several lakes in its bottom, and affording good sheep pasturage in its screens, in the parish of Rothiemurchus, Inverness-shire.

GLENENOCH. See **GLENESK**.

GLENERICKIE. See **ERICKIE** (THE).

GLENERICHT. See **ERICHT** (THE).

GLENESK—called also in its main body, Glenmark, and in its offshoots Gleneoch, Glenefoek, and Glentimount—the ramified valley of the northern part of the Grampian district of Forfarshire, watered by the North Esk and its mountain-tributaries. See articles **FORFARSHIRE**, **LOCHLEE**, **EDZELL**, and **NORTH ESK** (THE).

GLENESLAND (THE), a rivulet which rises near the water-line between Dumfries-shire and Galloway, at the western boundary of the parish of Dunscore, in the district of Nithsdale, and pursues a course 4½ miles eastward to the Cairn.

GLENESPIG, a wild sequestered glen on the west side of the watershed of the island of Arran. A few individuals of the red deer still linger among its upper heights.

GLENETIVE. See **ETIVE** (THE).

GLENEUCHAR, the glen of the rivulet Euchar, extending about 6 miles from east to west, in the parish of Kilninver, Argyleshire.

GLENFALLOCH, the glen of the rivulet Falloch, descending from Perthshire into Dumbartonshire, terminating at the head of Loch-Lomond, and bringing down hither the road from Strathfillan. See **FALLOCH** (THE).

GLENFARG, the romantic vale of the Farg, leading from Kinross-shire into Perthshire, and forming a splendid natural cut among the Ochils. See **FARG** (THE).

GLENFARNATE, a narrow vale forming, with the hills and mountains which flank it, the north-eastern part of the parish of Moulin, Perthshire. It comes down southward over a distance of about 6 miles, traversed throughout by the Arnate; and when that stream makes a confluence with the Briaradhan, and unites with it to form Airdle water, the glen becomes lost in the valley of Strathaidle. The hills of vivid green which form the side walls of Glenfarnate, contrast picturesquely with the grim and gloomy aspect of the circumjacent mountains.

GLENFARQUHAR, a small glen in the braes of the parish of Fordoun, Kincardineshire.

GLENFAS, a sequestered glen, still containing some red deer, on the west side of the watershed of the island of Arran.

GLENFENDER. See **FENDER** (THE).

GLENFERNISDALE, a glen opening laterally on Strathspey, a little above Kingussie, in Badenoch, Inverness-shire. The old military road, which is still the best for pedestrians, defects from Glen-truim at Ettridge Bridge, and goes down Glenfernisdale to the Spey.

GLENFESHIE, the glen of the Fesbie, in the east of Badenoch, Inverness-shire. It is traversed by a short mountain road, often preferable for pedestrians, from Inverness to Athole. See **FESHIE** (THE).

GLENFIDDICH, the fertile vale of the Fiddich in Banffshire. See **FIDDICH** (THE).

GLENFINART. See **DUNOON**.

GLENFINLASS, a narrow vale, about 5 miles in length, extending south-eastward to the valley of the Teith, in the parish of Callander, Perthshire. It is traversed by the streamlet Turk, and, though singularly wild in its scenery, is for the most part wooded, and possesses little of the naked and savage aspect which so generally distinguishes the Highland glens. The Turk, in passing through it, has a peaceful meandering course; but, at the point of emerging, it "suddenly sinks into a profound chasm, formed by some terrible convulsion of nature, and there it is heard far below, brawling along the secret fragments of rock, in its rapid course." Should the traveller, approaching from Callander, be inclined to visit this retired vale, he passes through a narrow ravine, where the mountain-stream has formed a way for its waters. Here a tumultuous cataract is seen pouring over a rock, beautifully fringed with copsewood;

"That huge cliff whose ample verge,
Tradition names the hero's target."

It was under this waterfall that Brian, the hermit monk, performed the "taghairn," or mysterious consultation with the oracle, in which the fate of Roderick Dhu was darkly foreshown. Sir Walter Scott relates that this wild place in former times afforded refuge to an outlaw. He was supplied with provisions by a woman, who lowered them down from the edge of the precipice above. His water he procured for himself by letting down a flagon tied to a string into the black pool beneath

the fall. On emerging from the narrow ravine, the traveller enters Glenfinlass, and is surprised to meet with a soft verdant plain of considerable extent, variegated with meadows and corn-fields. The mountains by which this beautiful valley is hemmed in are lofty, and their sides are marked by the course of many streams which flow down them. They are mostly free of heath, and covered with a fine green sward to their summits, forming pasture-ground of superior quality. Glenfinlass was anciently a deer forest belonging to the Kings of Scotland, and appears to have been covered with wood, the remains of aged trees being still everywhere visible. It is now inhabited by a people of the name of Stewart, clansmen of the Earl of Moray, the proprietor, who are all connected together by intermarriages. This race have long inhabited the district under the protection of their chief, and the same farms have been transmitted from father to son, through a lapse of ages.

GLENFINLASS, Dumbartonshire. See **FINLASS (THE)**.

GLENFINNAN, a glen, containing a post-office station of its own name, at the head of Loch-Shiel, in Inverness-shire. It is impassable except by travellers on foot. It is famous for being the place where Prince Charles first raised his standard in 1745. See **FINNAN (THE)**.

GLENFOOT, a village in the parish of Abernethy, Perthshire.

GLENFORSA. See **FORSA (THE)**.

GLENFRUIN, the vale of the rivulet Fruin in Dumbartonshire. See **FRUIN (THE)**. It widens gradually as it approaches Loch-Lomond, and attains the breadth of a mile in some parts. It has attained considerable historical notoriety from its having been the scene, in 1602, of a desperate conflict, between Sir Humphrey Colquhoun of Luss, the chief of that surname, and Alexander Macgregor, chief of the Clan Gregor. Colquhoun was the assailant, at the head of a somewhat promiscuous body of 500 foot and 300 horse; while Macgregor stood on the defensive with only about 200 of his clansmen. The contest was keen, and ended remarkably, in the total defeat of the Colquhouns, no fewer than about 200 of them being put hors de combat, while only two of the Macgregors were slain and but very few wounded. The laird of Luss and his friends sent early notice of their disaster to the King, and they succeeded so effectually by misrepresenting the whole affair to him, and exhibiting to his Majesty eleven score bloody shirts alleged to belong to those of their party who were slain, that the King grew exceedingly incensed at the Clan Gregor—who had no person about the court to plead their cause—proclaimed them rebels, and interdicted all the lieges from harbouring or having any communication with them.

GLENFYNE, a glen, commencing nearly at the point where the counties of Perth, Dumbarton, and Argyle meet, and descending 6 miles south-south-westward to the head of Loch-Fyne in Argyleshire.

GLENGABBER. See **LYNE** and **MEGGET**.

GLENGAIRN, or **GLENGAIRDEN**, an ancient parish in the district of Kincardine O'Neil, and shire of Aberdeen, now united to the parish of Glenmuick. The church, which is situated at the confluence of the water of Gairden with the Dec, is about 2 miles north from the church of Glenmuick, and appears to have been dedicated to St. Mungo, from an annual meeting of the parishioners on the 13th of January. It is 16 miles west of Kincardine O'Neil. The greater part of this district lies upon both banks of the Gairden, extending 6 miles north-west from the church, where the upper parts of Tulloch begin, and

separate it from the parish of Crathie. A small part of it lying on the south of the Dec is called Strath-Girnie. Near the Pass of Ballater is an ancient castle, which formerly belonged to the family of Forbes. See **GLENMUICK**.

GLENGAP. See **TWYNHOLM**.

GLENGARNOCK, a barony, of about 1,400 acres in area, on both sides of the upper course of the Garnock, in the parish of Kilbirnie, Ayrshire. About half of it, together with the superiority over the rest, belongs to the estate of Kilbirnie, the property of the Earl of Glasgow; and about 420 acres of it are distributed among nine different proprietors. An ancient fortified residence upon it, called Glengarnock castle, the venerable ruins of which still crown a precipitous knoll by the side of the Garnock, two miles north of the village of Kilbirnie, appears to have anciently been a place of much importance. See **CUNNINGHAM**. The Glengarnock iron-works are an extensive recent erection, employing nearly 400 men, near the line of the Glasgow and South-western railway, between Kilbirnie and Beith. The site of the works was admirably chosen; and much skill and taste were displayed in planning the grounds and the buildings.

GLENGARR. See **GARR GLEN**.

GLENGARREL, the glen of the Dumfries-shire Garvald. See **GARVALD**.

GLENGARRY, the glen of the Perthshire Garry. See **GARRY (THE)**.

GLENGARRY, a district in the west of Inverness-shire, extending from Knoydart to the Great Glen, and having for its centre the glen of the rivulet Garry. See **GARRY (THE)**. Glengarry was, till recently, the property of the chief of the clan of Macdonald, who here possessed an elegant seat in Invergarry castle on the north-west bank of Loch-Oich. In 1787, the estate of Glengarry produced only £800 a-year; its present rental is upwards of £7,000. It was purchased by the Marquis of Huntly from Macdonald, and was sold in 1840 to Lord Ward for £91,000. There are in Glengarry an Established church mission, connected with the Royal bount, a preaching station of the Free church, and a Roman Catholic chapel.

GLENGAW BURN. See **AYR**.

GLENGLOY, a deep mountain glen in Lochaber, Inverness-shire. It extends about 5 miles south-westward between Glen Roy and the Great Glen, parallel to both, and then deflects suddenly to a right angle with its former direction, and proceeds 2 miles to the Great Glen about the middle of Loch-Lochy. It exhibits a terrace, as if the margin of an ancient lake, at an elevation of 1,278 feet above sea-level, which is 12 feet higher than the highest of the "parallel roads" of Glen Roy.

GLENGOLIE, a sequestered glen, between the mountains of Strathbeg and Strathmore, in the south of the parish of Durness, Sutherlandshire. It is sung by the poet Dom, as a favourite hunting ground.

GLENGONAR, a vale in the moorland parish of Crawford, at the southern extremity of Lanarkshire, watered by the Gonar or Glengonar, a streamlet tributary to the Clyde. The village of Leadhills is situated near the source of this 'ore-stain'd stream.' The vale abounds in mineral wealth, principally lead; and, in a former age, very elevated and even romantic notions were formed of its vast resources, from small particles of gold having been found in the sands of the stream, and elsewhere in the vale. During the minority of James VI. a German mineralogist was commissioned by Queen Elizabeth to search the hills and valleys here for precious ores, and the place where he washed the dust, is still called Gold-scour. It was found, however, that the

cost of working was more expensive than could be defrayed by the precious metal which was recovered, and the gold-search was therefore abandoned. At a more recent period, the Earl of Hopetoun, who is the principal proprietor, resumed the search, but abandoned it from the same cause, yet not until a sufficient quantity of the metal had been procured to form a small piece of plate of native Scottish gold. It is still found in small particles, enough certainly to indicate the presence of the metal, but much too scanty to give any reasonable encouragement for working it.

GLENGUNNERY. See KNOCKANDO.

GLENHALMIDEL, a winding vale of about 3 miles in length, in the north of the island of Arran. It opens into the glen of the Ranza, a little above the head of Loch Ranza. Here is a slate quarry, containing beautiful crystals of pistacite.

GLENHALTIN, a glen, partly arable, and largely pastoral, in the parish of Snizort, island of Skye.

GLENHEAD, a village in the parish of Lochwinnoch, Renfrewshire. Population, about 60.

GLENHIGTON, a small lateral glen of the parish of Glenholm, Peebles-shire.

GLENHINISTIL, a glen in the parish of Snizort, island of Skye.

GLENHOLM, a section of the modern united parish of Broughton, Glenholm, and Kilbucho, in Peebles-shire. It consists of a vale 2 miles broad, and nearly 7 miles long, drained by Holms water. Along one-half of its eastern boundary, it is traced and enlivened by the brilliant Tweed; and, along its northern boundary, it is separated from the parish of Stobo by Biggar water. Nowhere does it touch Broughton except at its north-west angle; but, over two-thirds of its length, it marches with Kilbucho. It is beautiful and lovely in its features. Nearly all of it is a delightful pastoral vale, cut lengthways into two nearly equal parts by Holms water, which flows so gently, and lingers with such fondness amongst the charms of the overseeing landscape, that the northerly or the southerly direction of its motion is doubted by the tourist till he comes close upon its banks. Yet the stream, though placid, is not sluggish; and the valley, though soft and mild, is exultant in the gorgeous framework of one of the richest districts of the southern highlands. Collateral glens, too, come down upon the main valley, and seem like joyous and beautiful children pressing upon the sides of a happy and rejoicing mother. Glenhigton, Glencotho, Glenkirk, and Glenludo, all partake the beauty of the parent valley of Glenholm, and bring down upon its smiling stream their tributary rills. Glenholm was anciently a rectory in the deanery of Peebles. In the upper part of it, at a place called Chapelgill, there was formerly a chapel. The parish-church, though now abandoned for that of the united parish situated in Kilbucho, was rebuilt so late as 1775.

GLENHOWAN, a small village in the parish of Caerlaverock, Dumfriesshire.

GLENIFFER BRAES, part of a ridge of trap hills, on the southern border of the Abbey parish of Paisley, about 2 miles south of the town of Paisley, Renfrewshire. Their highest point has an elevation of about 760 feet above sea-level. They have a softly featured outline, and are partly cultivated, partly covered with wood, partly clothed in the grasses, broom, and heather of natural pasture. They are seamed by several pretty ravines, with each its brawling stream. On these braes the poet Tanuahill, who has wedded them to song, was wont to stray on week-day evenings, or on the Sabbath day, musing on the various objects of beauty scattered profusely around. Here it was he noted "the

breer wi' its saft fauldin blossom," "the craw flower's early bell," and "the birk wi' its mantle o' green;" and here he now listened to the warble of the mavis rising from "the shades of Stanley-shaw," and now gazed, with rapt delight, on the gorgeous scenery of the lower Clyde, with his native town in the foreground, and the frontier Grampians in the distance.

GLENIGAG, a sequestered glen, watered by the Meig, in the extreme west of the parish of Contin, Ross-shire.

GLENIORSA, the glen of the rivulet Iorsa, on the west side of the island of Arran. It commences near the watershed of the island, at a point about 3 miles west of the summit of Goatfell, and descends about 7 or 8 miles south-westward to the north side of Mauchray bay. The red deer is still found in its upper heights.

GLENISLA, a highland parish, containing a post-office station of its own name, in the north-western extremity of Forfarshire. It is bounded by the counties of Perth and Aberdeen, and by the parishes of Clova, Kirriemuir, Lintathren, and Alyth. Its length southward is $15\frac{3}{4}$ miles; and its greatest breadth is $5\frac{3}{4}$ miles. Over its whole length—except about a geographical furlong at the highest summit-range of the Grampians, forming the water-line and boundary with Aberdeenshire—it is traversed by the Isla. This stream rises in Cean-Lochan, formerly a deer-forest of the family of Airlie, and runs sinuously southward, cutting the parish into two nearly equal parts; lingering, in spite of the mountain impetuosity of its motion, to enliven, by its foldings and windings, the stern yet attractive highland scenery through which it flows; forming, for $2\frac{1}{2}$ miles toward the southern extremity, the boundary-line with Lintathren; and achieving an entire course, from its origin to the point where it leaves the parish, of 21 miles and 1 furlong. At brief intervals during its whole progress, it receives on both banks tributaries which vie with itself in importance,—which plough down the Grampians and form clefts or glens between parallel lines of the mountain-heights,—and two of which, though they become confluent a little before uniting with the Isla, flow at a proper distance nearly alongside of it over a distance respectively of about 6 and $7\frac{1}{2}$ miles. Below the mill of Craig, the Isla makes a magnificent leap over a breast of rock 70 or 80 feet perpendicular, and there forms a cascade called Reeky linn, which seems ashamedly modest of its own brilliant attractions, and sends floatingly over them a misty but sparkling veil of spray. The whole parish being squeezed up lengthways against the highest range of the tier-like descending Grampians, is mountainous and strictly highland in its scenery, and adapted principally for pasturage; yet the lower parts are carpeted with good strong loam, and produce excellent crops of corn and grass. In the upland districts limestone abounds, and in various localities is freely worked. The air is very pure, and not a little salubrious. During the summer months the climate is generally very sultry; and, during the winter months, it is generally very cold and frosty. The entire parish anciently belonged to the clan of the Ogilvies; and it still contains the ruins of two of their strongholds,—the castles of Forter and Newtown. The principal landowners are the Earl of Airlie, Rattray of Kirkhilllocks, Smyth of Balharry, and Sir James Ramsay, Bart. of Banff; and there is a considerable number of small landowners. The real rental is about £4,300. The yearly value of raw produce was estimated in 1842 at £18,440. Assessed property in 1860, £8,969 6s. 0d. The kirk-town of Glenisla, a mere hamlet, stands

on the left bank of the Isla, about 4 or 4½ miles from the southern extremity of the parish. Population of the parish in 1831, 1,129; in 1861, 1,008. Houses, 210.

This parish is in the presbytery of Meigle, and synod of Angus and Mearns. Patron, the Crown. Stipend, £159 12s. 3d.; glebe, £10. School-master's salary, £50, with £5 fees. The parish church was built in 1821, and contains 700 sittings. There is a Free church, with an attendance of 300; and the sum raised in connexion with it in 1865 was £160 0s. 10d. There are two non-parochial schools. Fairs are held on the first Wednesday of March and the first Wednesday of August, old style.

GLENKENS, the northern district of Kirkcudbrightshire, comprehending—with the exception of part of the parish of Parton at the southern extremity—all the territory drained by the river Ken, whence the district has its name, and the Ken's tributaries. On the north it is bounded by the summit-range or water-line between Galloway and Ayrshire; on the east, for two-thirds of the way, by a chief-summit range which forms the water-line between it and Dumfries-shire, and, for the remaining third, by the Cairn, a tributary of the Cairn, Loch-Urr, and the water of Urr, which divide it partly from Dumfries-shire, and partly from the parish of Kirkpatrick-Durham; on the south-east, by the parish of Parton; on the south-west, by the river Dee, which divides it from Balmaghie, Girthon, and Minnigaff; and on the west, by Gala-Lane and Loch-Doon, which divide it from Ayrshire. The district comprises the four parishes of Carsphairn, Dalry, Balmaclellan, and Kells; and is celebrated, as to a large part of its extent, both for its breeds of sheep and black cattle, and for the attractions of its mountain landscape. "Thousands, we believe," says M'Diarmid, in one of his editorial contributions to his Scrap Book, "have visited the Glenkens, a district which has been described as the Grampians of Galloway, and which is alike celebrated for the wild grandeur of its scenery, and the feudal power and exploits of the noble house of Kenmuir. In summer and autumn this interesting district presents a most inviting prospect, whether to the sportsman or more contemplative visitor, with its fine amphitheatre of hills, amidst which the Scottish eagle still fixes his eyrie, and boundless slopes of the loveliest heather, where even the patient sheep finds out a scanty meal, and of which the blackcock and moorfowl, the plover and curlew, appear to be the sole occupants. In the foreground the spectator has the broad and beautiful expanse of the Ken, here hurrying along with the rapidity of a mountain-stream, and there settling into the quiet tranquillity of an extensive lake; at one place washing the granite base of Laurin, and at another nourishing the luxuriant reeds near Kenmuir castle, where the teal and the wild duck, the coot and the heron, enjoy a little world of their own, and hardly seem to look upon man as an enemy. The time-worn towers of the castle, too, peering from an avenue of limes, or more veteran clump of oaks, every one of which might stand for a patriarch among trees, immediately carry the mind back to those unsettled yet romantic times when a mother frequently presented her son with his spurs to remind him that her larder was empty, and when the fosse and the donjon-keep, the drawbridge and the warder, supplied all the purposes of a modern police. Nor is it only in summer or autumn that the Glenkens afford a rich treat to the admirers of mountain scenery. In winter, too, when the new-fallen snow levels all the features of an ordinary landscape, it is delightful to

see the farmers and shepherds hurrying with their curling stones to the neighbouring loch or river, and forgetting all the evils of high rents and falling markets in an anxiety to distinguish themselves in this manly sport. And on Sundays, it is still more interesting to see the same individuals gathering round the porch of the parish-church, and kicking as they enter the frozen snowballs from their ponderous shoes; while the far-off shepherd, whose compass is the warning bell, is seen manfully climbing the trackless hill, and pausing at intervals to catch another sound of that tuneless instrument which might now plead the never-failing apology of better musicians, and appeal to the hooded belfry as a sufficient excuse for its increased hoarseness."

GLENKETLAND, a glen about 2 miles long, opening on Glenetive, about 3 miles above the head of Loch Etive, Argyleshire.

GLENKILLOCK, a picturesque glen in the parishes of Abbey-Paisley and Neilston, Renfrewshire. It intersects the Fernese hills east-south-eastward, and is traversed by the Killock burn, which falls into the Levern nearly opposite the village of Neilston. It abounds in wood, and in natural features of romance, and contains three waterfalls which have been pronounced perfect miniatures of the three falls of the Clyde,—Boninton, Corra, and Stonebyres. Both the glen and the burn have been sung by Tannahill and other poets; inasmuch that "Glenkillock's sunny brae" is a familiar phrase to the inhabitants of Levernside and of Paisley.

GLENKILN, a narrow vale stretching north and south along nearly the whole length of the parish of Kirkmichael, in the district of Annandale, Dumfries-shire, and giving name to a tributary of the Ae, by which it is traversed, and to a range of high hills by which it is overlooked. Glenkiln burn rises between Holchouse-hill and Deer-edge, near the northern extremity of the parish, and after a course of 5½ miles due south, it passes the manse and church of the parish, and, 3 furlongs farther down, falls into the Ae. The Glenkiln hills are a range, coming down from the central mountain-barrier of the Lowlands, confronting a parallel range between the Ae and the Glenkiln, and sending up Glenkiln-craig, Gray-hill, Kirkmichael-fell, and other summits from 1,100 to 1,400 feet above the level of the sea. See KIRKMICHAEL, Dumfries-shire.

GLENKINDY, a detached district of the parish of Strathdon, Aberdeenshire. It contains a post-office station of its own name. It lies from ¼ of a mile to 3 miles north-east of the main body of the parish, and is surrounded by Cabrach, Kildrummie, Towie, Migvy, and Glenbucket. It comprises a vale with hill-screens, and brings down the rivulet Kindy to fall into the Don a little above the kirk of Towie. Here are a mansion and a small wool-mill, the latter employing 6 persons. Fairs are held in Glenkindy on the Monday in April after Brechin tryst, on the 27th day of May, and on the Saturday in September after Banehory.

GLENKINLASS, a glen, near the northern extremity of Cowal, Argyleshire. It commences near the mountain watershed on the boundary with Dumbartonshire, and descends 6 miles west-south-westward to the east side of Loch Fyne, at a point about 2 miles from the head of the loch. The road from Dumbarton to Inverary wends from the head of Glenroe into Glenkinlass, and descends the latter to Loch Fyne. Glenkinlass is traversed by the rivulet Kinlass. It abounds with the same kind of scenery as Glenroe, but is less wild and romantic. At its foot are the house and pleasure-grounds of Ardkinlass.

GLENKINLASS, a lateral glen, about 9 miles

long, descending to the east side of Loch Etive, at Inverkinlass, about 6 miles above Bunawe. It has a curvature in its course, so that but small part of it can be seen from Loch Etive. Its north side is rocky and bleak; but its south side yields excellent pasture.

GLENKIRK, a lateral glen of the parish of Glenholm, Peebles-shire.

GLENLATTERACH, a glen traversed by the burn of Glenlatterach, which is the boundary-line between the parish of Birnie and the parish of Dal-las, in Morayshire. The burn, about 2 miles below its source, makes a steeper fall of about 50 feet into what the country people call the Kettle; and a little lower down it makes another fall into what they call the Pot. Lofty cliffs screen the falls, and want only the festooning of wood to make the scenery very grand. The burn is a tributary of the Lossie.

GLENLEAN. See **DUNOON**.

GLENLEDNOCK, a narrow vale forming, with the hills along its sides, the north-eastern part of the parish of Comrie, Perthshire. It stretches south-eastward over a distance of about 7 miles, is watered throughout by the Lednock, lies from 200 to 300 feet above the level of the sea, and makes a convergence with two other vales at the village of Comrie.

GLENLEE. See **KELLS**.

GLENLICH, a valley in the parish of Glen-shiel, in Ross-shire, running along the eastern base of Benmore, and opening at the lower end into Strathroe. See **GLENSHIEL**.

GLENLIVET, a district, containing a post-office station of its own name, in the parish of Inveraven, Banffshire. It comprises all the upper parts of the parish, from the source of the stream Livet down to the confluence of that stream with the Avon; and measures 9 miles in length by $6\frac{1}{2}$ in extreme breadth. The upper rim and the sides of it are entirely hilly and pastoral; and the parts nearest the stream are divided into two subdistricts by a central high hill called the Beehle. The upper subdistrict bears the name of the Braes of Glenlivet; and the lower subdistrict bears the name of Moranga. The population of Glenlivet is about 900; and about three-fifths of them are Roman Catholics. The district is an ancient barony, now belonging to the Duke of Richmond, but giving the title of Baron in the peerage of Scotland to the Marquis of Huntly. A large part of the estate has in recent times undergone great geological improvement. Limestone of superior quality, which is believed by geologists to be of the metamorphic class, like gneiss and mica slate, and not a secondary or untransformed rock, occurs under almost every field, and is extensively worked. Lead ore also exists in large quantities on the farm of Tomvonlin. Whisky of particularly fine flavour has long been made in Glenlivet, and is known throughout Scotland by its name. It was formerly made in smuggling houses, on almost every rill among the hills, but is now made in three extensive legal distilleries. There are in Glenlivet a mission on the Royal bounty, two Roman Catholic chapels, three Protestant schools, and two Roman Catholic schools.

A locality at the north-west extremity of Glenlivet, on the burn Alconlachan, was the battle-field, on which, in October 1594, the loyal Protestant army under the Earl of Argyle was defeated by the insurgent Roman Catholic army under the Earl of Huntly. Argyle disposed his army on the declivity of a hill, in two parallel divisions. The right wing, consisting of the Macleans and Mackintoshes, was commanded by Sir Lauchlin Maclean

and Mackintosh—the left, composed of the Grants, Macneills, and Macgregors, by Grant of Gartinbeg—and the centre, consisting of the Campbells, &c., was commanded by Campbell of Auchinbreck. This vanguard consisted of 4,000 men, one-half of whom carried muskets. The rear of the army, consisting of about 6,000 men, was commanded by Argyle himself. The Earl of Huntly's vanguard was composed of 300 gentlemen, led by the Earl of Errol, Sir Patrick Gordon of Auchindun, the laird of Gight, the laird of Bonnitoun, and Captain, afterwards Sir Thomas Carr. The Earl himself followed with the remainder of his forces, having the laird of Chny upon his right hand and the laird of Abergeldy upon his left. Three pieces of field-ordnance under the direction of Captain Andrew Gray, afterwards colonel of the English and Scots who served in Bohemia, were placed in front of the vanguard. The position which Argyle occupied on the declivity of the hill gave him a decided advantage over his assailants, who, from the nature of their force, were greatly hampered by the mossiness of the ground at the foot of the hill, which was interspersed by pits from which turf had been dug. But, notwithstanding these obstacles, Huntly advanced up the hill with a slow and steady pace. It had been arranged between him and Campbell of Lochnell, who had promised to go over to Huntly as soon as the battle had commenced, that, before charging Argyle with his cavalry, Huntly should fire his artillery at the yellow standard. Campbell bore a mortal enmity at Argyle, as he had murdered his brother, Campbell of Calder, in the year 1592; and as he was Argyle's nearest heir, he probably had directed the firing at the yellow standard in the hope of cutting off the Earl. Campbell himself, however, was shot dead at the first fire of the cannon, and upon his fall all his men fled from the field. Macneill of Barra was also slain at the same time. The Highlanders, who had never before seen field pieces, were thrown into disorder by the cannonade, which being perceived by Huntly he charged the enemy, and rushing in among them with his horsemen increased the confusion. The Earl of Errol was directed to attack the right wing of Argyle's army commanded by Maclean; but as it occupied a very steep part of the hill, and as Errol was greatly annoyed by thick volleys of shot from above, he was compelled to make a detour, leaving the enemy on his left. Gordon of Auchindun, disdainful of such a prudent course, galloped up the hill with a small party of his own followers, and charged Maclean with great impetuosity; but Auchindun's rashness cost him his life. The fall of Auchindun so exasperated his followers that they set no bounds to their fury; but Maclean received their repeated assaults with firmness, and manoeuvred his troops so well as to succeed in cutting off the Earl of Errol and placing him between his own body and that of Argyle, by whose joint forces he was completely surrounded. At this important crisis, when no hopes of retreat remained, and when Errol and his men were in danger of being cut to pieces, the Earl of Huntly came up to his assistance and relieved him from his embarrassment. The battle was now renewed, and continued for two hours, during which both parties fought with great bravery, the one, says Sir Robert Gordon, "for glorie, the other for necessitie." In the heat of the action the Earl of Huntly had a horse shot under him, and was in imminent danger of his life; but another horse was immediately procured for him. After a hard contest the main body of Argyle's army began to give way, and retreated towards the rivulet of Alconlachan; but Maclean still kept the field, and continued to support the falling fortune of

the day. At length, finding the contest hopeless, and after losing many of his men, he retired in good order with the small company that still remained about him. Huntly pursued the retiring foe beyond the water of Altconlachan, when he was prevented from following them farther by the steepness of the hills, so unfavourable to the operations of cavalry. The success of Huntly was mainly owing to the treachery of Lochnell and of John Grant of Gartnabeg, one of Huntly's vassals, who, in terms of a concerted plan, retreated with his men as soon as the action began, by which act the centre and the left wing of Argyle's army were completely broken. On the side of Argyle 500 men were killed besides Macneill of Barra, and Lochnell and Auchlinbreck, the two cousins of Argyle. The Earl of Huntly's loss was comparatively trifling. About fourteen gentlemen were slain, including Sir Patrick Gordon of Auchindun and the laird of Gight; and the Earl of Errol and a considerable number of persons were wounded. At the conclusion of the battle the conquerors returned thanks to God on the field for the victory they had achieved. This battle is called by some writers the battle of Glenlivet, and by others the battle of Altconlachan.

GLENLOCHER, a post-office station subordinate to Castle-Douglas, and 4 miles north-west of that town, Kirkeudbrightshire.

GLENLOCHY, a narrow vale along the course of the Lochy, in the district of Breadalbane, Perthshire. It extends in length about 12 miles; has the form of the arc of a circle, stretching from west to east, with its concave side to the north; and is distributed into detached portions of the parishes of Kenmore, Weem, and Killin. It is separated by a ridge of mountains from Glendochart and Strathfillan.

GLENLOCHY, a glen in the parish of Glenorchy, Argyleshire. It commences on the verge of the county, in the vicinity of Tyndrum, and descends about 7 miles westward to a convergence with the glen of the Orchy above Dalmally. It is traversed by the public road from Oban to Dumbarton.

GLENLOGY, a lateral glen, 3 miles long, opening on the north side of Glenprosen, in the upper division of the parish of Kirriemuir, Forfarshire.

GLENLOTH, the glen of the rivulet Loth, in the parish of Loth, on the east coast of Sutherlandshire.

GLENLUCE, a valley in Wigtonshire, stretching from the head of Luce bay northward to the extremity of the shire. Most of it is comprised in the modern parishes of Old Luce and New Luce. The valley had its name from being traversed over its whole length by the river Luce. In some ancient Latin documents, it is called Vallis Lucis, 'the valley of light'; a name which may have been derived, either from the valley being deep and broad, and laying its bosom fully open to the play of the day-beams, or more probably from its being the site of an ancient abbey whence, in the estimation doubtless of the ante-reformation inhabitants, emanated all the moral light enjoyed by the circumjacent district. But the really original name was *Glen-lus*, from the Scoto-Irish *glen*, 'a valley,' and *lus*, 'an hero;' and seems to have been descriptive of the fertility or horticultural capabilities of its soil. The appellation *Glenluce*—though, as applied to the valley, seldom used—is yet fully identified with its village and with the ruins and history of its abbey.

GLENLUCE, a post-office village in the parish of Old Luce, Wigtonshire. It stands on the road from Stranraer to Newton-Stewart, on the slope of a little valley, traversed by a small tributary of the river Luce, half-a-mile east of the confluence of the streams, and about $\frac{1}{2}$ mile from the most inland

point of Luce bay. The beautiful seat of Balcail, $\frac{1}{2}$ of a mile to the south-east, and the extension on all sides of its fine wooded policies, give the village an aspect of opulence and comfort. *Glenluce*, though a place of no trade, and deriving nearly all its importance from its relation to the circumjacent agricultural district, has risen from a population of between 200 and 300, in 1817, to a present population of about 1,013. It has an office of the City of Glasgow Bank. An annual hiring fair is held in May, and a cattle market on the first Friday of every month from April to December. Public vehicles run between *Glenluce* and *Stranraer*. In the village are a Free church and an United Presbyterian Church, and a little out of it, on the north-west side, stands the parish-church of Old Luce.

The ruins of the abbey of *Glenluce* stand $\frac{1}{2}$ mile north-west of the village, on the left bank of the river Luce. They cover an entire acre of surface, and present distinct indications of ancient vastness and magnificence. The chapter-house still stands entire, and continues to bear its appropriate name. It is a small apartment, on the east side of the square of ruin, sending up at its centre from floor to roof a strong pillar about 14 feet in height, from whose top 8 divergent arches span the intervening space to the surrounding walls. The arches are of white freestone, and are curiously sculptured at their highest elevation into various ornamental figures. So late as 1646, nearly a century after most other monasteries in Scotland had been destroyed, the abbey of *Glenluce* had sustained little injury. In 1684, Symson says, in his Account of Galloway, that the steeple and a part of the walls of the church, together with the chapter-house, the walls of the cloisters, the gatehouse, and the walls of the large precincts, were, for the most part, then standing. A field adjacent to it was anciently a cemetery, and is still the burying-place of the Hays of Park. A garden and orchard, 12 Scots acres in extent, formerly belonged to the convent, and now forms the glebe of the minister of Old Luce. The abbey was founded in 1190, by Roland, Lord of Galloway, and constable of Scotland; and was set apart for monks of the Cistercian order, brought from Melrose. In 1214, William was abbot; a man none otherwise known than as the author of an extant letter to the Prior of Melrose, giving an account of a remarkable phenomenon in the heavens, observed by two of his monks. In 1235, the monastery was plundered, during the judicial inroad upon the rebel Gallowegians, by the lawless soldiery of Alexander II. In the reign of James IV., Walter was abbot,—having been sent to *Glenluce* by John, Duke of Albany. In 1507, when James IV., with his Queen Margaret, was on his pilgrimage to Whithorn, he called at *Glenluce*, and gave the gardener a present of four shillings. In 1514, died the abbot, Cuthbert Baillie, who, for the two preceding years, was lord-treasurer of Scotland, and who, previous to his obtaining the abbacy, was first a canon in the chapter of Glasgow, and next rector of Cumnock. In 1560, a papal bull arrived from Rome, confirming the King's appointment of Thomas Hay, of the house of Park, to be commendator of the abbey; and is still preserved among the archives of his lineal descendant, Sir James D. Hay, Bart., the principal resident heir of Old Luce. In 1587, the whole property of the monastery was, by the general annexation act, vested in the King. In 1602, James VI. erected it into a temporal barony in favour of its commendator, Lawrence Gordon, second son of Alexander, bishop of Galloway, and titular archbishop of Athens. In 1610, at the death of Lawrence, his brother, John Gordon, dear

A. Donaldson

John Smith

Gurin Castle

of Salisbury—a person of high literary reputation as an author—received it by royal charter; and he immediately transferred it, as the dowry of his daughter, Louisa, to his son-in-law, Sir Robert Gordon of Gordonston. In 1613, it was purchased from the latter possessor by the King, and annexed to the bishopric of Galloway. In 1641, on the temporary abrogation of Episcopacy, it was transferred to the university of Glasgow; in 1681, it was restored to the re-erected see of Galloway; and after the final overthrow of Episcopacy in 1689, it was once more made a temporal barony, and bestowed on the family of Dalrymple, afterwards Earls of Stair.

GLENLUDE, a lateral glen of the parish of Glenholm, Peebles-shire.

GLENLUI, a glen in the upper part of Braemar, Aberdeenshire. It descends about 7 miles south-eastward from the declivities of Beamaedlu to the glen of the Dec, at a point about $3\frac{1}{2}$ miles below the linn of Dec. It contains some remarkable scenery, and is a chief avenue of communication between the Cairngorm mountains and Deeside.

GLENLYON, a long narrow vale in the district of Breadalbane, and parish of Fortingal, Perthshire. It extends from Loch Lyon on the west, away eastward, near the southern verge of Fortingal, a distance of about 28 miles, and is traversed throughout by the river Lyon, from which it receives its name. Its breadth is very inconsiderable,—seldom, in the level part, exceeding a furlong,—and in some places so squeezed in by the hills, as to contain a space of only 8 or 10 yards for the transit of the river. Its flanking eminences, on both sides, but especially on the southern, come down upon it with such speedy declivity as to ward off from it the sun-beams, and render it a valley of shadows during the entire day of the winter months, and during a large portion of every other day of the year. But the sides of the glen, up to the very summits of the hills, are, in general, green with herbage and dotted over with sheep, lying like pearls on plates of emerald; and streaked at intervals, with the foaming waters of brooks, careering over impediments, and forming cataracts and cascades on their impetuous way to the river, or cloven down with fairy dells which bring down their quiet and smiling rills from a distance of 3 or 4 miles inland, they present many a picture of mingled beauty and romantic grandeur. Nor are the general effects of the landscape less heightened, by the singular careerings and natural beauties of the river. See LYON (THE). “We drove 7 miles,” says Miss Sinclair in her ‘Northern Circuit,’ “through the narrow mountainous vale of Glenlyon, an exquisite specimen of Highland beauty, being enlivened by the sparkling river, and hemmed in by hills glowing with heather. It might have made a schoolboy tremble to see how the birches were waving over our heads; and here the mountains are so lofty, that villages lying at their base are three or four months every year without seeing the sun. The river Lyon, which now looked like a flood of light, once ran red with the blood of the slaughtered Macgregors [M’Ivers], when, after a fierce conflict, the conquerors washed their swords in the stream. Not a feature in this landscape could be altered without injury, and a painter might advantageously spend his whole life in taking views, every one of which would appear completely different. In some places you seem to have discovered an unknown world, never trod by human footstep, then comes an old ruin, hiding its decay in wreaths of ivy and roses, next appears a smiling village, afterwards a long colonnade of superb plane or ash trees, then a thriving farm, here and there a church; and the old burying-ground at

Fortingal is particularly interesting.” Much of the glen, especially toward its upper end, is distributed into very large sheep-farms, and, in consequence, has few human inhabitants. A battle is traditionally reported to have been fought in Glenlyon, between the M’Ivers, who claimed it as their territory, and Stewart of Garth, commonly called “the fierce wolf;” and it is said to have terminated in the utter defeat of the M’Ivers, and their expulsion from the district. Several of the localities appear to have acquired their names from the event or the circumstances of the battle.

Excepting a small part at its lower end, the whole of Glenlyon, with some parts of its flanking uplands, was erected into a quoad sacra parish by the ecclesiastical authorities in 1833, and by the Court of Teinds in June 1845. The parish measures 26 miles in extreme length, from 6 to 8 miles in breadth, and about 156 miles in superficial area, and was detached in a small degree from Weem, but chiefly from Fortingal. Patron, the Crown. Stipend, £120, paid by government; glebe from £2 to £3. The parish-church is situated at Innerwick, and was built in 1828 by the heritors of the new parish, at the cost of £673, and contains between 500 and 600 sittings. There is also a Free church; and the sum raised in connexion with it in 1865 was £143 12s. 6d. A small Baptist congregation was established about the year 1805 at Milton of Eonan. Two fine objects in Glenlyon are Miggernie castle and Glenlyon house. Glenlyon gives the title of Baron in the peerage of Great Britain to the Duke of Athole.

GLENMANNOW. See PENFONT.

GLENMARK. See GLENESK.

GLENMARKIE, a lateral glen of the parish of Glenisla, Forfarshire.

GLENMASSAN. See DUNOON.

GLENMEUBLE, a deep and dismal glen, about ten miles long, extending south-eastward from Loch-Morir toward Glenfinnan, through the central part of the district of Arisaig, on the west coast of Inverness-shire.

GLENMILL. See CAMPSIE.

GLENMORE, a narrow vale, chiefly in the parish of Fortingal, and partly in that of Dull, Perthshire. It lies immediately south of the remarkable mountain Schichallion, first stretching $2\frac{3}{4}$ miles along that mountain’s southern base, and next running $3\frac{1}{2}$ miles south-eastward and southward, to a convergence with the vale of Fortingal. Over its whole length, it is traversed by Glenmore water, a tributary of the river Lyon, rising a little westward of the head of the glen, and forming, for 2 miles above its embouchure, the boundary between Fortingal and Dull. In ancient times the glen was covered with the extinct forest of Schichallion. During a long period, the roots of fir-trees and the trunks of oaks, furnished a profitable produce to the natives. The fir-roots were not only excellent fuel, but, when in a state of combustion, emitted a light surpassing the brilliance of coal-gas. The oak-trunks, dug up from beneath the soil, were of a blackish colour, and though somewhat soft, became very hard on exposure to the air; and they were split up and manufactured into sharpening tools for scythes, and found in the neighbouring places of traffic a ready market.

GLENMORE, a vale or district, partly in Morayshire, and partly in Inverness-shire, abounding with fir-wood of excellent quality, on the property of Sir George Grant and the Duke of Richmond. This wood is considered the oldest and best in Scotland. It surrounds Loch-Morlieh, the source of the Abernethy or Drurie, and is upwards of 4 miles in length, and nearly 3 in breadth. In 1786, the late Duke of

Gordon sold his fir-woods in this district to Mr. Osbourne, a wood-merchant in Hull, for £10,000 sterling; and they were nearly all floated down the Spey to Garmouth. Sir Thomas Dick Lauder, in his edition of 'Gilpin's Forest Scenery,' says: "Numerous trading-vessels, and a frigate called the Glenmore, were built from the timber of the Duke of Gordon's forest of Glenmore. Many of the trees felled measured 18 and 20 feet in girth; and there is still preserved at Gordon-Castle, a plank nearly 6 feet in breadth, which was presented to the Duke by the company. The forests of Glenmore and Rothiemurchus, though belonging to different estates, were so united as to form in reality one continuous forest, and they are now equally denuded of all their finest timber. We remember this a region of such wildness, where its calm, silent lakes were for ever reflecting from their dark bosoms the endless forests of pine, which rose distance after distance over the broken sides of their minor hills and more lofty mountains, and where the scenes we wandered through were such as the florid imagination of a poet might fancy, but could not describe. Alas! the numerous lakes and the hills and the mountains are yet there, but the forests shall no more bewilder both the steps and the imagination of the stranger, till time shall give the same aged forms to those younglings which are everywhere springing up in the room of their ancestors. The Glenmore forest is fast replenishing itself. Nothing could be more savagely picturesque than that solitary scene when we visited it some years ago. At that time, many gigantic skeletons of trees above 20 feet in circumference, but which had been so far decayed at the time the forest was felled as to be unfit for timber, had been left standing, most of them in prominent situations, their bark in a great measure gone—many of them without leaves, and catching a pale unearthly-looking light upon their grey trunks and bare arms, which were stretched forth towards the sky like those of wizards, as if in the act of conjuring up the storm which was gathering in the bosom of the mountains, and which was about to burst forth at their call." See **ABERNETHY**.

GLENMORE, a narrow glen, almost a gorge, about 10 miles long, in the parish of Torosay, in the island of Mull, Argyleshire. It is the route by which the inhabitants of the south-west of Mull communicate with the other parts of that island, particularly with the sea-board of the Sound of Mull. It is winding as well as narrow, and is overhung in many places by stupendous mural precipices, or by wildly acclivitous mountains; and the highest part of its bottom has an altitude of about 300 feet above the level of the sea.

GLENMORE, a wild valley of 5 or 6 miles in length, bringing down a head-stream of the Lugar, in the upper part of the parish of Auchinleck, Ayrshire.

GLENMORE, the larger of the two valleys comprised in the district of Glenelg proper, in Invernesshire. See **GLENELG**.

GLENMORE, a vale in the island of Bute. See **ETTRICK BAY**.

GLENMORE, a small glen on the south side of the promontory of Ardnamurchan, in Argyleshire. A bay at the mouth of it, called Glenmore bay, about $\frac{1}{2}$ a mile west of the first narrows or group of islands in Loch Smart, affords excellent anchorage.

GLENMORE-NAN'ALBIN, or **GREAT GLEN OF SCOTLAND**, the grand valley which runs in a direction from north-east to south-west across the whole breadth of the kingdom, from the Moray frith at Inverness to the sound of Mull below Fort-William,

and the bottom of which is almost filled with a chain of extensive lakes. The distance in a direct line is little more than 50; miles and of this the navigable lakes, Loch Ness, Loch Oich, and Loch Lochy make nearly 40 miles. It is through this glen that the Great Caledonian canal runs. See **CALEDONIAN CANAL**.

GLENMORISTON, a glen, containing a post-office station of its own name, in the north of Inverness-shire. It comprises all the parts of the course of the rivulet Moriston within Inverness-shire, and gives name to a parish which is united to Urquhart. See **MORISTON (THE)**, and **URQUHART AND GLENMORISTON**. The glen is about 12 miles in length, and descends north-eastward from the boundary with Ross-shire, past the south-western skirts of Mealfourvounie, to the great glen, at Invermoriston on Loch Ness, 6 miles north-east of Fort-Augustus. Nearly the whole of it is brilliantly picturesque, and exhibits a remarkable mass of wood; and the mouth of it, opening on the great glen, is particularly fine. Glenmoriston House there, the residence of J. M. Grant, Esq., the proprietor of the glen, is a modernised old-fashioned pile, beautifully situated on wooded grounds, with an encincturement of pretty high abrupt hills. A road leads up the glen from Inverness to Lochalsh. Glenmoriston has a mission of the Royal bounty, and a Roman Catholic chapel. There is also a Free church for Glenmoriston and Fort-Augustus.

GLENMUICK, a parish containing the post-office village of Ballater, in the district of Marr, Aberdeenshire. It comprehends the three ancient parishes of Glenmuick, Glengairn, and Tulloch. It is bounded on the north by Strathdon and Logie-Coldstone, on the east by Aboyne and Glentanar, on the south by Forfarshire, and on the west by Crathie and Braemar. It is of an irregular figure, about 18 miles in length, and 15 in breadth. It is intersected by the river Dee from west to east; by the Gairn from north-west to south-east, till it joins the Dee; and by the Muick from south-west to north-east, till it also joins the Dee. These streams are all joined by numerous others of minor importance; the whole forming a series of the best trouting waters in this part of Scotland. Lying in the midst of the Grampians, this parish is mostly hilly and pastoral, with summits varying from 1,000 to 2,500 feet of altitude above sea-level. There are four continuous ranges, and several detached heights; and two of the latter are respectively 1,150 and 1,400 feet high. The valleys, comprising arable land, lie along the three rivers, and some considerable brooks; they vary in width from 2 furlongs to 2 miles; and they have taken their magnitude and windings from the action of the streams. Many of the hills are clothed with wood to the very summit; others are covered with heath and beautifully fringed along the base with natural wood and plantations. Abundance of moor-game is found on these hills, particularly on Morven, and other wild creatures also are more or less common, particularly hawks, eagles, polecats, otters, foxes, and red and roe-deer. The soil of the arable lands is in general shallow and sharp, producing good grain, but proportionably little fodder. Agriculture has been long in a state of comparatively high improvement. The total area under cultivation is 3,655 imperial acres; under wood, 3,185; and either pastoral or waste, 108,360. The principal landowners are the Marquis of Huntly, Farquharson of Invercauld, Gordon of Abergeldie, and the Prince of Wales. The real rental is about £5,200. The yearly value of raw produce was estimated, in 1842, at £41,379. Assessed property in

18°0, £8,015. The principal mansions are Monaltrie-house, Birkball, and Prince Albert's hunting-lodge—the last situated at the head of Glenmuick proper, on the verge of the county between Mount Keppel and Lochnagar. There are nine meal-mills, and a wool-carding-mill. The predominant rocks are gneiss, primitive limestone, trap, and boulder-granite. The principal minerals are fluor-spar, galena, serpentine, amianthus, common asbestos, and bog-iron.

Glengairn, the least and most compact of the three districts, lies chiefly to the north-west, on both banks of the rocky Gairn, extending 6 miles north-west of the church, where the upper parts of Tulloch begin, and separate it from the parish of Crathie. A small part of it, called Strathgairn, lies on the south side of the Dee. Near the pass to Ballater is the castle of Glengairn, in the vicinity of which a vein of lead has been long known, though never worked to advantage. Glenmuick proper extends south-westward, 15 miles in length, on the south side of the Dee, lying on both sides of the Muick, which originates in a large lake or loch of the same name, about 9 miles from Ballater. The Muick possesses a tolerably good fall, to which a good road leads along the south side of the Muick. The stream dashes over a rock about 40 feet in height into a basin below, and forms a beautiful cascade. In this district are the celebrated wells of PANNANICH, which see. There are two ruins in Glenmuick, namely, the tower of Knock, on the top of a hill, and Dee castle, built by the family of Gordon, in the eastern extremity of the parish. Tulloch is the most populous and extensive district, being 18 miles in length from east to west, and intersected, at the Craggs of Ballater, by Glengairn, which divides the lower parts of this district from the upper. The hill of Culblean is in Tulloch; and at the foot of that hill is a beautiful lake of about 3 miles in circumference, called Loch Canmor. There is a stone on the north bank of the lake with a great deal of carving upon it; but the figures are now unintelligible. It is supposed that it was put up in memory of some of the Cumings who fell in the chase or battle of Culblean, in 1335; and as the Earl of Athole fell that day, it may have been here. On the hill of Culblean, there is a remarkable hollow rock, which, from its shape, bears the name of the Vat, and through which a rivulet runs. In going up to visit this natural curiosity, a stranger is much struck with the narrowness of the entry to the Vat (being less than an ordinary door), and the large spacious area in which he immediately finds himself, enclosed by rocks from 50 to 60 feet high, and from the fissures of which tall and healthy birch trees are growing. There is one particular clift of the rock which the eagle generally occupies as a secure asylum for hatching and nourishing her young, and where her nest is always to be seen. The rivulet falls down at the upper end through broken shattered rocks, and when flooded adds greatly to the picturesque appearance of the whole. The Pass of Ballater, and surrounding scenery, has been already noticed in the article BALLATER. Population of the united parish in 1831, 2,279; in 1861, 1,668. Houses, 350.

This parish is in the presbytery of Kincardine O'Neil, and synod of Aberdeen. Patron, the Marquis of Huntly. Stipend, £237 1s. 1d.; glebe, £7 10s. Schoolmaster's salary, £52 10s. 0d., with about £22 fees and other emoluments, and a share in the Dick bequest. The parish church is situated in Ballater, was built in 1798, and contains about 800 sittings. There is a missionary chapel on the Royal bounty at Riuloan in Glengairn. There is a Free

church at Ballater; and the sum raised in connexion with it in 1865 was £202 4s. 3d. There is a Roman Catholic chapel on Gairnside. There are seven non-parochial schools in the united parish, and several beneficiary institutions in Ballater.

GLENMUIR, a wild moorish vale, between Wardlaw-hill and Cairntable, on the eastern verge of the district of Kyle, Ayrshire. It has been rendered interesting by the beautiful poem called 'the Cameronian's Dream,' beginning,—

"In Glenmuir's wild solitudes lengthened and deep
Were the whistling of plovers and bleating of sheep."

The author of this exquisite poem lived, when a boy, in the midst of this sequestered glen, at a place called Dalblair, where his fine poetic genius was stimulated and nurtured by the mingled scenes of soft beauty and wild grandeur with which he was surrounded. Glenmuir-shaw, near the head of the vale, is a pleasant spot; and must in former times have been a place of great consequence, as the ruins of its ancient baronial castle still indicate. Some lordly chieftain of the Saxon line seems to have selected it as the locality in which he chose to live in a state of rude splendour, and which must have been witnessed by the lonely sentinels that still guard the spot,—the stately trees, whose dotard boughs and scaly rind bespeak the age of several centuries. He who sighs after a sweet meditative seclusion will find that seclusion at Glenmuir-shaw.

GLENNEVIS, the glen of the rivulet Nevis, in the south-west of Lochaber, Inverness-shire. It commences at a point about 6 miles south-east of the summit of Bennevis, and curves round the south-eastern, southern, and south-western skirts of that mountain, to the Great Glen in the vicinity of Fort-William.

GLENNOE, a glen about 4 miles long, descending between Beneruachan and Bencochail to Loch Etive in Argyshire. The lower part of it is finely wooded.

GLENNY-LAW. See ABERNYTE.

GLENOGLVIE. See GLAMNIS.

GLENOGLE, a district and an estate in the parish of Tannadice, Forfarshire. It has a school and a small public library of its own.

GLENOGLE, a wild gloomy glen, little else than a prolonged alpine gorge, in the parishes of Killin and Balquhider, Perthshire. It extends south-south-eastward to the head of Loch Earn, is about $3\frac{1}{2}$ miles long, and brings down the road from Killin to Strathearn. The Queen traversed it on occasion of her journey from Taymouth to Drummond-castle. "This glen," says Campbell, in his 'Journey through Parts of North Britain,' "is narrow, and a mountain-stream, collected from a hundred more which in times of heavy rain run down the furrowed steeps of the glen, brawls along through a deep chasm till the lake receives it. The rugged sides of Glenogle exhibit terrible marks of former and recent convulsions of the earth. As we advance into this narrow wild, on either hand we behold rocks whose deep-elven summits, high over head, hang in sullen aspect, and seem ready to start into shivers and overwhelm the traveller, who sees no way of avoiding the threatened destruction. This illusion is heightened, in observing on our left huge piles, but lately rolled down the brow of that precipice, strewed in every direction, and of indefinite dimensions, from the smallest splinter to fragments of immense bulk, all tumbled together in the wildest disorder. We pass swiftly by this awful appearance, lest nature, in convulsive throes, similar to what produced the explosion of which the scene before us was the terrible effect, should again precipitate the impending ruin. On looking back through this rugged defile, we

have a glimpse of the lake, and the hills that rise from its margin; behind which, the cliffs of Ben-voirlieh and Stiuclactroin tower in lofty grandeur, and give a noble air to the gloomy wildness of this truly alpine scene."

GLENOIG, a lateral glen of the district of Glenprosen, Forfarshire.

GLENORCHY AND INNISHAIL, an united parish, containing the post-office villages of Bunawe and Dalmally, in the district of Lorn, Argyleshire. Glenorchy proper is on the east, and Innishail on the west. The united parish extends from the boundary with Perthshire near Tyndrum to the shores of Loch Etive at Bunawe, comprising eight miles of both sides of Loch Awe; and also extends from the boundary with Dumbartonshire across the head of Loch Long to the lofty line of watershed which divides Mid-Lorn from Appin. The parishes with which it marches are Fortingal, Killin, Arrochar, Inverary, Kilmorick, Kilchrean, Muckairn, Ardchattan, and Lismore. Its length westward is about 25 miles; its breadth varies from 5 miles to 20; its average breadth is about 12 miles; and its superficial extent is about 300 square miles. The greater part of it is either mountainous or moorish; and a large part shares the beauties of Loch Awe, or rather comprises the most picturesque portions of that lake. The northern district is mainly filled with the mighty masses of Bencruachan and its attendant alps. The eastern district is variously mountain, glen, and moorland. The southern district is chiefly hilly or moorish, possessing no lofty elevations, yet largely disposed in waste land and pasture. See BENCRACHAN, BENDORAN, DALMALLY, and AWE (LOCH). The principal vales are Glenstrae and Glenloch, which will be found separately noticed in their own alphabetical place, and Glenorchy proper, which first descends 15 miles south-south-westward from the confines of Rannoch and Appin, and then expands westward to Loch Awe, in a fine strath of 3 miles in length, and $\frac{1}{2}$ a mile in breadth. The principal streams are the Awe, the Orchy, the Strae, and the Lochy; but there are numerous rivulets which, in common with these streams, abound in trout. The principal lake, additional to Loch Awe, is Loch Tolla, a lovely sheet of water, 4 miles long and $\frac{1}{2}$ a mile broad, among the braes of Glenorchy.

The soil, on the sides of Orchy Water, is a mixture of light earth and sand; but on the banks of Loch Awe it is generally deep and fertile. The hills and moors—which formerly were covered with heath and coarse herbage—have, since the introduction of sheep into the country, become clothed with a richer sward of a greener hue, and afford excellent pasture. In former times it was supposed that no domestic animal could stand the severities of a winter here, in the more elevated grounds; but now the hills are covered with sheep through the whole year. There are still some tracts of natural wood in Glenorchy, chiefly of firs and oaks, intermixed with ash, birch, and alder. The banks of Loch Awe are covered with plantations of various kinds of wood, of which the horse-chestnut, the mountain-ash, the lime, and the plane, are the most conspicuous. The Marquis of Breadalbane is sole proprietor of the parish of Glenorchy; and the Duke of Argyll, Campbell of Lochnell, Campbell of Monzie, Norman of Ardvrecknish, Campbell of Inverawe, and Macalister of Inchdrynich are proprietors of Innishail. The mansions are Ardvrecknish, Inverawe, and Inchdrynich. The principal produce is in sheep and cattle, and must be of great value. The other departments of raw produce are computed to yield annually £2,350 for grain, £2,000 for pota-

toes and turnips, and £300 for salmon and trout fisheries. There is a pig iron manufactory at Bunawe. The road from Fort-William to Dumbarton, the road from Ohan to Dumbarton, and the connecting road between these down Glenorchy proper, traverse the parish; and part of the second, from the bridge of Awe to Dalmally, presents a fine succession of varied, sublime, and brilliant views, particularly a portion of it through a narrow defile, amid deep chasms and impending rocks. Cobalt, talc, abestine filaments, and a beautiful green jasper, have been found in the mountains, which are mostly of granite, with porphyry and a mixture of felspar. Limestone is quarried in several places. Population of the united parish in 1831, 1,806; in 1861, 1,307. Houses, 259. Assessed property in 1860, £9,184.

At the east end of Loch Awe, on a rocky point, stand the fine ruins of the castle of KILCHURN: which see. There is another ruinous castle at Achallader, in the upper part of the parish. Near this castle, a fatal conflict took place about two centuries ago, between two hostile clans; and several cairns, still visible on the heath, mark the place where the slain were interred. In the island of Innishail, in Loch Awe, the remains of a small monastery, with its chapel, are still to be seen. Glenorchy was at one time the property of the warlike clan Macgregor, who were gradually driven from the territory before the influence of the rival clan Campbell. The gallows-hill of Glenorchy, famed in Highland tradition as the place of expiation of many criminals obnoxious to the summary justice of Macgregor, is an eminence opposite the parish church. The well-known lines of Sir Walter Scott on the expulsion of the Macgregors from the several glens of the parish, are among the most effective he ever wrote. Not a Macgregor now exists in the district; and individuals of some other sept, who were once powerful here, particularly the Macnabs, the Fletchers, the Downies, and the Macnicols, have become very scarce. Even human society altogether has been enormously reduced in numbers here, as in other similar districts of the Highlands, by the introduction of the sheep husbandry. The ancestors of the late Angus Fletcher of Berenice, author of a well-known political work upon Scotland, were, according to the traditions of the country, the first who raised smoke or boiled water on the braes of Glenorchy.

This parish is in the presbytery of Lorn, and synod of Argyll. Patrons, the Duke of Argyll and the Marquis of Breadalbane. Stipend, £206 2s. 4d.; glebe, £18. There are two parish churches,—the one in Glenorchy, the other in Innishail; and the minister officiates in them on alternate Sabbaths. Glenorchy church stands on an islet in the Orchy, at Dalmally; it was built in 1811, after a design by James Elliot of Edinburgh; and it constitutes a very beautiful feature in one of the loveliest landscapes in the Highlands. Innishail church was built in 1773, enlarged in 1793, and repaired recently, but is so badly situated as to be cut off by Loch Awe from a considerable part of the population. The sittings in Glenorchy church are 570; in Innishail church, 191. A place of worship was built at the bridge of Orchy, 11 miles north-north-east of Dalmally, originally as a mission church in connexion with the Establishment, and afterwards endowed by the good Lady Glenorchy. There is a Free church at Dalmally; and the sum raised in connexion with it in 1865 was £99 2s. 6½d. There are two parish-schools in Innishail, the masters of which have each £30 per annum; and there is one parish-school in Glenorchy, the master

of which has a salary of £50. There are several other schools, which are either upheld by societies or endowed; and there is a parochial library. Two distinguished natives of Glenorchy were Dr. Smith, the translator of the Scriptures into Gaelic, and Duncan Macintyre, the Highland bard.

GLENPROSEN, the upper and middle parts of the basin of the rivulet Prosen, in Forfarshire. These comprehend all the Grampian portions of the basin, down to the point where the stream debouches into Strathmore; and they constitute the detached or upland district of the parish of Kirriemuir. See PROSEN (THE), and KIRRIEMUIR.

GLENQUAICH. See GLENQUEICH.

GLENQUILARGEN CRAIG, a romantic mountainous mass of rock, near the northern extremity of the parish of Penpont, in the district of Nithsdale, Dumfriesshire. Amidst remarkably varied Highland scenery, abounding in the wilder beauties of nature, it forms the most remarkable feature, presenting irregular and precipitous fronts to the south and south-west, and towering above the river Scarr at its base to the height of 1,000 feet above the level of the sea.

GLENQUHARY, a clench in the parish of Kirkconnel, above Kirkland, and a little to the west of the beautiful valley of Glenaylmer. Glenquhary heights command on the south an extensive view of the delightful vale of the Nith; on the north, they overlook one of the most perfect solitudes in nature, and of vast extent, reaching forward to Glenmuir water. The clench is a retired and deep recess among the mountains, and a locality extremely favourable to those who were under hiding, in the times of the Covenanters, on account of the facilities it afforded of escape to the hills, and to the dreary desert that lay beyond.

GLENQUICKEN MOOR, a moor in the parish of Kirkmabreck, on the south-west border of Kirkcudbrightshire. Tradition asserts that a battle was fought here in very early times,—probably between the Britons and the Romans; and there have been found in the place rude stone coffins, containing uncommonly large human skeletons.

GLENQUEICH, the glen of the rivulet Quiech and of Loch Quiech or Quoich, on the north-west border of Invernessshire. It commences on the confines of Ross-shire, and descends semicircularly, with the convexity south-westward, to the head of Glengarry,—and in fact is itself the upper part of that glen. Its entire length is about 7 miles. Dr. Robertson, in his Agricultural Survey of Invernessshire, says, "The Glenquiechs—of which several are in the Highlands—are oblate ellipses, narrow at both ends, and comparatively broad at the middle. The name is borrowed from the shape of the silver cup with which the Scotch used to drink their favourite liquor before the introduction of glasses."

GLENQUEICH, a small glen and an estate in the parish of Tamadice, Forfarshire.

GLENQUEICH, a glen in the parishes of Kenmore and Dull, Perthshire. It descends about 6 miles semicircularly eastward, with its convexity southward, to the head of Loch-Fraochy, through which its rivulet Quiech passes to form the Bran; so that Glenquiech is practically the upper part of Strathbran.

GLENQUEICH, the glen of the Coich or Quoich, in the parish of Crathie, Aberdeenshire.

GLENQUEICH (NORTH AND SOUTH), the glens of the North Quiech and the South Quiech rivulets, on the mutual border of Perthshire and Kinross-shire.

GLENQUOICH. See GLENQUEICH.

GLENRANZA, the glen of the Ranza rivulet, which runs about 4 miles north-north-westward to

the head of Loch Ranza, and forms the boundary-line between the parish of Kilbride and the parish of Kilmorie, in the island of Arran.

GLENRATHI, a lateral glen, 3 miles long, in the east side of the parish of Manor, Peebles-shire.

GLENRINNES. See ABERLOUR.

GLENRISKA, a lateral glen, traversed by one of the early affluents of the Tweed, in the parish of Tweedsmuir, Peebles-shire.

GLENROSA, a sublimely picturesque glen, in the middle of the east side of the island of Arran. It descends from the west shoulder of Goatfell, 3 miles southward to the east base of Ben Noosh, and in all that reach is grandly alpine; and then, with softening features, it deflects $2\frac{1}{2}$ miles east-south-eastward to the convergence of glens at the head of Brodieck bay.

GLENROY, a deep wild Highland vale, parallel to the Great Glen of Scotland, and at the average distance of about 4 or 5 miles from it, in the parish of Kilmanivaig, in Lochaber, Invernessshire. It is celebrated for its parallel roads, as they are called, on which many treatises have been written, and which have given rise to many conflicting theories. It may be regarded as a lateral branch of Glenspean. It is a long, narrow, winding, and steep ravin, nearly 14 miles in length, with a breadth of little more than half-a-mile, through the entire extent of which, a rapid stream called the Roy dashes down to join the Spean, on the right bank, at the Bridge of Roy. At its entrance, the scenery of the glen is comparatively tame and uninteresting. Except in the bottom, where the Roy runs betwixt a line of low dwarfish trees, there is no timber in the lower end of the glen. About a mile and a-half up, the road enters a fine oak coppice, and crosses the Roy by a high stone bridge. We now enter the inhabited portion of the glen. Four villages,—Upper and Lower Bahantin, Bahinnie, and Creanachan,—are here situated within a mile. They consist respectively of from 10 to 20 houses, and are inhabited chiefly by Macdonalds. Beyond Upper Bahantin, the road passes Brogich, and the commencement of the parallel roads is observed on the high hill of Benvanicaig on the left. A few yards farther forward, the three lines are seen distinctly, one over the other, on the hill of Creanachan, on the right. "Curiosity is excited by finding that the same description of lines are marked on both sides of the glen; and that not only do the lines on the same side run parallel to each other, but that the lines on both sides occupy the same horizontal levels. As you proceed into the glen, the lines become more marked; and upon ascending to them, the traveller finds that they are ample terraces or roads projecting from the sloping side of the mountain, and composed of a mixture of clay and gravel. These terraces are of varying breadth,—at some parts projecting only a few feet from the side of the hill, and at others swelling out into magnificent pathways 18 or 20 yards wide. Where the surface of the hill is composed of bare, sharp rock, the roads are entirely effaced; but these gaps are too insignificant to destroy the unbroken continuity of the lines when viewed along two or three miles of the glen. The first or lowest terrace is 972 feet above the level of the sea; the second is 1,184 feet; and the third or highest is 1,266 feet. One or two detached rocks tower up out of the centre of the valley, and on these, as well as on the lateral mountains, a line corresponding with the lowest terrace is discovered." The parallel roads are not confined to Glenroy. Similar appearances occur in Glenspean, Glenclay, and the adjoining valleys, as well as in the neighbourhood of Loch Laggan, Fort-William, and other

parts of the Highlands, and in various other quarters of Scotland.

GLENS (THE), a mission of the Committee of the General Assembly for managing the Royal bounty, in the parish of Ardehatten, Argyleshire.

GLENSALLOCH, a loftily situated glen, forming the line of communication between Loch-Etive and Loch-Creran, in Lorn, Argyleshire. The views from it, when in sight of either loch, are very fine.

GLENSANDA HILL, a hill on the coast of King-gerloch, in the parish of Lismore, Argyleshire. A cave in this hill, not far from its base, has been used as the school-house of the surrounding district. On a conical rock, adjacent to it, close to the shore, is the ruin of an ancient castle, pretty entire, called the castle of Glensanda or Castle Mearnaig. The rock is about 150 feet high, and no broader at the top than the base of the castle, which is 45 feet by 20. The ruin is 33 feet high, and has a beautiful echo.

GLENSANNOX, the glen of the South Sannox rivulet, in the island of Arran. It is about 4 miles in length, with north-easterly direction; and it winds close round the north skirt of Goatfèll to the sea, and is peculiarly noted for the romantic magnificence of its scenery. Macenloch was enraptured with it, and pronounced it "the sublime in magnitude, and simplicity, and obscurity, and silence." A manufactory for barytes was established here in 1839. See **SANNOX**. But the glen appears previously to have undergone that sweeping away of men by the introduction of the sheephusbandry which has depopulated so many other parts of the Highlands. Hence does John Ramsay say—

"Sannox glen
Which modern avarice has turned a field,
Once the dear home of happy Highlandmen.
Moulder the rent green walls—the hearths are cold,
Where stood the cradle is the fox's den;
And many of her sons have found a grave
In that far world beyond the Atlantic wave."

GLENSASSEN. See **FORTINGAL**.

GLENSAX BURN, a small tributary of the Tweed, belonging partly to Selkirkshire and partly to Peebles-shire. It rises in Blackhouse-height, at the commencement of a narrow but long northerly projection of the parish of Yarrow in Selkirkshire; runs $4\frac{1}{2}$ miles along that projection to nearly its extremity; forms, for 3 furlongs, the boundary-line between Selkirkshire and Peebles-shire; traverses the latter county first $1\frac{1}{4}$ mile northward, next 1 mile eastward, and then falls into the Tweed $1\frac{1}{2}$ mile below the town of Peebles. At its mouth, and a little way up, it is often, in consequence of there watering the demense of Haystone, called Haystone-burn. In the upper part of its course it flows through bleak scenery; but in the lower part it is a mirthful stream, dressed in keeping with the magnificent appearance of the Tweed in the vicinity of Peebles, and affording good trouting.

GLENSHEE, the glen of the rivulet Shee, on the east side of the parish of Kirkmichael, at the north-east extremity of Perthshire. It commences at a convergence of three smaller glens,—Glenbeg, Glentahich, and Glenlochy,— $5\frac{1}{2}$ miles south-west of the point in the Grampians where the counties of Perth, Forfar, and Aberdeen meet; and it descends about 7 miles south-eastward and southward, toward a convergence with Strathardle. A hill at the head of Glenshee, called Benghulbhuinn, is distinguished as the scene of a hunting-match which proved fatal to Diarmid one of the Fingalian heroes. Here are shown the den of the wild boar that was hunted, a lochlet called the Boar's loch, a spring called the Fountain of the Fingalians, and the spot where

Diarmid was buried by his comrades. At the Spittal of Glenshee, near the head of the glen, is a chapel built by the heritors of the parish about the year 1831. Sitings nearly 400. At the date of the Religious Instruction inquiry, the district for whose benefit it was erected enjoyed no other religious services than the ministrations once a-month of the parish-minister. The population at that time was stated at 400. The Spittal of Glenshee is a stage on the great military road to Fort-George, 22 miles north from Cupar-Angus, and 15 south of Castleton of Braemar. Queen Victoria made a halt here for refreshment on the earliest occasions of her journeying to and from Balmoral. Fairs are held at the Spittal on the third Tuesday of February, the first Tuesday of June, old style, and the third Tuesday of October, old style. There is a post-office station at Glenshee.

GLENSHEE, the glen of the rivulet Shochie, in the parishes of Auchtergaven and Monedie, Perthshire. Here is a slate quarry.

GLENSHEIL, a parish, containing the post-office station of Sheilhouse, on the south-west border of Ross-shire. It is bounded on the east by the parishes of Kiltarlity, Urquhart, and Kilmanivaig; on the south by Glenelg; on the west by the Kyle Rhea, and on the north by Loch-Duich, which separates it from Lochalsh and Kintail. Its greatest length, from east to west, is about 26 miles; and its breadth varies from 2 to 6 miles. The surface consists chiefly of two valleys, Glensheil and Glenlichid, and an elevated tract of land on the south bank of Loch-Duich, called Letterfearn. The mountain ridges abruptly rise to a very great height. In many places the mountains are rocky, and covered with heath to the summit; the interjacent valleys are pleasant, being clothed with grass and some natural wood; but the proportion of arable ground is very inconsiderable. The shores abound with fish, and Loch-Duich receives an annual visit from shoals of herring. The lower end of Glensheil is occupied by Loch-Shiel. See **LETTERFEARN**, **DUCH (LOCH)**, and **SHEIL (LOCH)**. The predominant rock is gneiss, occasionally alternating with mica-slate. A tract of coarse-grained granite, of a reddish hue, occurs in one place; and there are two large masses or beds of very impure primitive limestone. All this parish, as also the parishes of Kintail and Lochalsh, formerly belonged to the family of Seaforth; but it is now distributed among three proprietors. The real rental is about £2,600. The yearly value of raw property was estimated in 1836 at £6,062. Assessed property in 1860, £3,933. In the heights of this parish is the pass of Glensheil, famous for a battle fought in June 1719, between the English troops and the Highland adherents of King James, led by the Earl of Seaforth, in which the latter were defeated. The parish is traversed lengthwise by the military road from Lochalsh to Inverness. Population in 1831, 715; in 1861, 485. Houses, 111.

This parish is in the presbytery of Loch-Carron, and synod of Glenelg. Patron, the Crown. Stipend, £158 6s. 8d.; glebe, £16. The parish church is situated in the eastern part of Letterfearn. It was built in 1758, and contains about 300 sittings. The parish school also is in Letterfearn. Salary of the schoolmaster, £37 with about £2 fees. Glensheil parish was disjoined about the middle of last century from Kintail. Fairs for black cattle are held at Sheilhouse in May, July, and September.

GLENSHEILLIS. See **STRACUUR**.

GLENSHERRIG, a romantic glen, about 2 miles in length, descending east-north-eastward to the convergence of glens at the head of Brodick bay in the island of Arran.

GLENSHIRA, a glen in the parish of Laggan, in the western part of Badenoch, forming the basin of the Spey for the first part of its course. Its principal feature is the grandeur of the mountains which rise around, sending down numberless torrents, particularly from the northern side, to swell the waters of the Spey. Mr. Baillie of Kingussie has a shooting lodge here, which made some figure in the popular notices of Queen Victoria's sojourn at Ardvreck.

GLENSHIRA, a picturesque glen, about 8 miles long, in the parish of Inverary, Argyleshire. It lies intermediate between Glenary and Glenfync, somewhat parallel to both, and descends south-south-westward to the head of the bay or fork of Loch Fyne, a little north of the town of Inverary. It formerly contained a burying-place of its own, and a comparatively large population; but it has been swept and transmuted by the introduction of the sheep husbandry.

GLENSHISKIN, the vale of the Blackwater, in the south-west of the island of Arran. See **BLACKWATER (THE)**.

GLENSLIGACHAN, the glen of Loch Sligachan, and of the streamlet running into the head of it, in the island of Skye. It descends about 8 miles north-eastward from the centre of the district of Minginish to the coast opposite Rasay. Part of its screens are remarkably sublime,—more so than almost any thing else in Scotland. See **CUCHULLIN HILLS**.

GLENSPEAN, the glen of the river Spean in Inverness-shire. It commences at the foot of Loch Laggan, and descends nearly 20 miles through Lochaber, chiefly south-westward, to the great glen at the Lochy near Loch-Lochy. See **SPEAN (THE)**. The glen is all grandly Highland; but it presents much variety of character in its successive stages. The upper part of it is narrow and moorish; the parts farther down are finely diversified with wood and with arable plots; and the lower part, besides having a comparatively well peopled breadth of bottom, derives much sublimity from the immediate flanking of Bennevis.

GLENSTRAE, a glen, about 7 miles long, in the parish of Glenorchy, Argyleshire. It descends south-south-westward to the head of the north-east arm of Loch Awe, at the eastern base of Beneruachan. It has sublime screen scenery, with profusion of wild fastnesses; and was at one time the home of chief part of the clan Macgregor, who became so persecuted and proscribed.

GLENSTRATHFARRER, or **GLENFARRER**, the glen of the Farrer, on the northern border of Inverness-shire. See **FARRER (THE)**.

GLENTAGGART. See **DOUGLAS**.

GLENTANNER, an ancient parish in Aberdeenshire, now united to **ABOYNE**: which see.

GLENTARKIN. See **EARN (LOCH)**.

GLENTENDAL. See **GLENDOW**, Argyleshire.

GLENTILT, a narrow mountain vale, 13 miles in length, coming down from the northern extremity of the parish of Blair-Athole in Perthshire, south-westward and southward to its southern extremity at Blair-castle, and there opening at right angles into the valley of the Garry. At its lower end it is enriched for several miles by the groves and horticultural adornings of Blair-castle; and has there a bridge from which a magnificent landscape is spread out before the eye; but over most of its extent, especially as it recedes toward the north, it presents in the aspect of the Tilt, by which it is traversed, and of the huge mountains which form its screens, a prospect of mingled beauty and deeply impressive grandeur. On its east side, about mid-distance between its extremities, rises the vast Bengloe,

whose base is 35 miles in circumference, and whose summit towers far above the many aspiring eminences of the adjacent mountain-land. The kestrel has his nest in the glen, and the eagle builds his eyry on the overshadowing heights. Glentilt has provoked the geological inquiries, and tested the scientific acumen of Playfair, Macculloch, and other celebrated men. Marble of a pure white, of a light gray, and of a beautiful and much admired green, has been quarried in its recesses, and carried away to adorn the dwellings of luxury and taste. Glentilt has also become famous for a recent "right of way" contest; for, being the only practicable route from the district of Athole direct into Aberdeenshire, and lying at the same time through the Duke of Athole's deer forest, the public on the one hand claim an immemorial right to an open passage through it, while the Duke of Athole, on the other hand, claims a proprietary right to shut it up.

GLENTINMONT. See **GLENESK**.

GLENTATHEN. See **LINTRATHEN**.

GLENTRUIM, the glen of the rivulet Truim, about 14 miles long, in the district of Badenoch, Inverness-shire. It commences on the confines of Perthshire, near Loch Ericht, and goes almost right northward to the valley of the Spey. The great road from Perth to Inverness enters it a brief way below its head, and traverses it all thence downward to the Spey. A fine modern mansion was not very many years ago built in it by Macpherson, its proprietor.

GLENTURRET, a glen about 7 miles long, chiefly along the east side of the parish of Monivaird, in Perthshire. It commences on the confines of the southern screen of Glenalmond, and descends south-south-eastward to Strathearn, at a point about half-a-mile above Crieff. It is traversed by the rivulet Turret, flowing from a lochlet of the same name, and has been noted by men of taste, and celebrated in song for the romantic beauties of its scenery.

GLENTYAN. See **KILBARCHAN**.

GLENUIG, a glen about 2 miles long, descending northward to Lochnanua, in the district of Arisaig, Inverness-shire.

GLENURCHAY. See **GLENORCHY**.

GLENURE, a glen, about 3 miles long, descending westward to the river Creran, in the north of the parish of Archhatten, Argyleshire.

GLENURQUHART, a grandly picturesque glen, in the parish of Urquhart and Glenmoriston, Inverness-shire. It commences on the confines of the southern screens of the upper part of Stratglass, and descends about 9 miles eastward, past the northern skirts of Mealfourvounie, to the Great Glen at a point on Loch Ness about 14 miles south-west of Inverness. From its head at Corriemonic it gradually widens out to form a fine oval expanse, containing the small circular lake, Meikle, near the middle of the glen, with the mansions of Lakefield, Lochletter, and Sheughlie. It then contracts to a rocky gorge, and continues for some little distance rather narrow, but again expands with increasing breadth toward its mouth, contains there considerable tracts of cultivated land, both along its bottom and far up its sides, and is joined there, on the south side, at a sharp angle, by the glen of the Coiltie, its own vale being watered by the Ennerie. It possesses some fine amenities of art, as well as magnificent features of nature; but unhappily has of late been robbed, to a great extent, of luxuriant birch forests which were one of its finest and largest ornaments. It contains the parish church, a Free church, an Episcopalian chapel, and several schools. It contains also several labourers' hamlets, the large-

est of which, called Milntown, has about 150 inhabitants.

GLENURY, a glen about $2\frac{1}{2}$ miles long, descending south-south-eastward to Cowie Water, at a point about $1\frac{1}{4}$ mile above Stonehaven, parish of Fetteresso, Kineardineshire. At the mouth of it is the Glenury distillery. See **STONEHAVEN**.

GLENVALE, a deep romantic ravine, intersecting the Lomond hills, in the parishes of Strathmiglo and Falkland, Fifeshire. It has some resemblance to the glen of the Mouse at Cartland Crags, in Lanarkshire; and was a place of resort by the Covenanters in the times of the persecution.

GLENWHURRY. See **GLENQUHARY**.

GLESPIN WATER. See **DOUGLAS (THE)**.

GLESTERLAW, a locality on the estate of Bolshan, in the parish of Kinnell, Forfarshire, where cattle fairs are held on the last Wednesday of April, the fourth Wednesday of June, the third Wednesday of August, and the Wednesday following the 12th day of October.

GLIMSHOLM, an isle of the Orkneys. It lies at the west end of Holm Sound, contiguous to the north-west corner of Barray, and about a mile south-east of the nearest part of Pomona.

GLUTNESS, an isle off the east coast of the mainland of Shetland, 6 miles north by east of Lerwick.

GLOMACH (THE), a fine waterfall, formed by the Girsac, in a sequestered glen, in the parish of Kintail, about 7 miles from the inn of Sheilhouse, in Ross-shire. Its total height is 350 feet; but at a distance of about 50 feet from the surface of the pool into which it falls, it encounters a slight interruption from a projecting ledge of rock. The surrounding scenery is wild, harren and rocky.

GLOOM (CASTLE). See **CASTLE-CAMPBELL**.

GLOOMINGSIDE BURN. See **CLACKMANNANSHIRE** and **TILLCOUNTRY**.

GLOTTA, the ancient name of the Clyde.

GLOUR O'ER 'EM. See **BORROWSTOWNNESS**.

GLUPE (THE). See **DUNCANSBY**.

GLUSS, an isle and a small bay—the latter called *Gluss voe*—in the parish of Northmaven, in the north of the mainland of Shetland.

GOATFELL, a magnificent mountain, 2,865 feet high, on the north-east seaboard of the island of Arran. It contains many superb close scenes among its shoulders and skirts, forms a sublime feature in the scenery of the frith of Clyde, and commands from its summit perfectly thrilling views both of the rugged mountain-masses in its immediate vicinity, and of vast part of the west of Scotland, away to the further side of the Irish channel. See **ARRAN**.

GOATMILK HILL, a hill in the parish of Kinglassie, flanking the vale of the Leven, in Fifeshire. An ancient Danish fort on it was one of a chain of forts stretching from Fifeness to Stirling.

GOCKSTANE BURN. See **KIRKMAHOE**.

GOGAR (THE), a rivulet in the eastern part of Edinburghshire. It rises near the centre of the parish of Kirknewton, and flows along that parish first $2\frac{1}{2}$ miles northward, and next $2\frac{1}{4}$ miles to the north of east. It then, in an easterly direction, over a distance of $1\frac{1}{2}$ mile, flows right across the parish of Ratho; and now, over a course of 3 miles, most of it north-easterly, and the rest northerly, divides that parish on the west from the parish of Currie on the east. Flowing next $\frac{3}{4}$ of a mile westward, it divides Ratho on the south from Corstorphine on the north; then, for $1\frac{1}{2}$ mile, in a northerly or north-westerly direction, flows through Corstorphine; then, for $\frac{3}{4}$ of a mile in the latter direction, divides Corstorphine from Cramond; and finally, after a further course of $\frac{3}{4}$ of a mile northward

through Cramond, falls into Almond water. Anciently it gave name to a parish and two villages on its banks; and still—besides meandering through the extensive estate of Gogar—it is overlooked, in its progress, by Gogar bank, Gogar green, Gogar camp, Gogar mount, Gogar mains, and Gogar house.

GOGAR, an ancient but suppressed parish in the eastern part of Edinburghshire, incorporated chiefly with Corstorphine, and partly with Ratho and Kirkliston. A small part of the church still exists, and, soon after the Reformation, was set apart as a family burying-place by the lord of the manor. The church of Gogar is older than that of Corstorphine, but was of little value, and presided over a scanty population. Soon after the formation of their establishment it was acquired by the monks of Holyrood; but, against the reign of James V., it had been withdrawn from them, and constituted an independent rectory. In 1429 Sir John Forrester conferred its tithes on the collegiate church which he then formed at Corstorphine, and made it one of the prebends of his collegiate establishment. In 1599, after vain efforts had been made by its few parishioners to raise a sufficient provision for the maintenance of an incumbent, the parish was finally stripped of its independence. Of the two villages of Gogar-Stone and Nether-Gogar, which it formerly contained, the former has disappeared, and the latter has dwindled away from a population of 300 to a population of only about 32. The quondam parish is traversed by the Edinburgh and Glasgow railway, and has a station on it at a point $5\frac{1}{2}$ miles from Edinburgh.

In the year 1650, while the army of Oliver Cromwell and that of General Leslie confronted and watched each other in encampments about 3 miles south-west and west of Edinburgh, the former eagerly waiting for some opportunity of decided action, and the latter resolutely determined not to afford it, a circumstance occurred to draw them westward into a hot skirmish at Gogar. Cromwell's army lay at the base and among the spurs of the Pentlands, and could not without great disadvantage be attacked from the plain; and Leslie's army lay on the expanse of low ground south-east of Corstorphine, now a firm and beautiful series of meadows and cornfields traversed by the Edinburgh and Glasgow railway, but then a wild intricate, watery wilderness of bogs and quagmires. The latter army was therefore as strongly posted and as defiant of an enemy as Cromwell's, though in a different way; so that the two armies could only look at each other, or else practise some stratagem, or forego the advantages of ground. Cromwell at length marched down toward the west side of Leslie's position, with a view of cutting off his communication with Linlithgow and Stirling, and drawing him out to an engagement on the plain. But Leslie, anticipating the movement, manœvered his army westward about two miles, and entrenched them in a position at Gogar of similar character to his original one, and quite as strong; and there he stood, amid bogs and quagmires, holding Cromwell at bay. The two armies were now pretty close to each other; yet Cromwell tried in vain to force them into collision, either by wading across the swamps himself or by dislodging Leslie; and he was compelled to rest satisfied with opening a brisk fire of artillery, and provoking a contest at long shot. Leslie returned his cannonade with spirit; and on this occasion, brought into play for the first time several kinds of field-pieces, which had recently been invented by his general of artillery, Colonel Wemyss. The place of conflict is now occupied by

the villas of Hanley and Gogar burn; and is still known among the old inhabitants of the district by the name of the Flashes; and is said to have got that name in memory of the superior power and range of the new cannons. The conflict lasted about three hours; and though it does not seem to have caused on both sides more than about 100 deaths, it operated as such a severe check on Cromwell's designs, that he retreated immediately to Musselburgh, and four days after toward England. A number of stone coffins have, in recent years, been discovered on the field of conflict; and these may possibly have belonged in part to the sepulture after the battle, and in part to subsequent sepulture, on the same spot, converted into use as a cemetery, by the English who remained in the parish.

GOGO WATER. See **LARGS.**

GOIL (Loch), a ramifications of Loch-Long, in the district of Cowal, Argyshire. It deflects from Loch-Long, opposite Portincaple ferry, $8\frac{1}{2}$ miles north of Strone point, where Loch-Long commences; it goes off in the direction of north-north-west, while the part of Loch-Long above it has the direction of north-north-east; it extends exactly on a line, geographically, with the upper part of the Gairloch; and it has a length of about 5 miles, with a breadth varying from 2 miles to $\frac{2}{3}$ of a mile. On its east side, filling all the peninsula between it and Loch-Long, are the wildly rugged eruptive mountains called Argyle's Bowling-green. On its west shore, at a little distance from the opening into Loch-Long, is Carriek-castle, an ancient seat of the Campbells. It is situated on a high and nearly insulated rock, advancing into the water. At the head of Loch-Goil there is much wild and romantic beauty; and the road thence to Loch-Fyne passes through a deep rude valley called Hell's glen, which has been compared by some travellers to Glencroe, in point of wild gloomy majesty.

GOIL WATER, a streamlet, about 3 or 4 miles in length, running southward to the head of Loch-Goil in Cowal.

GOLDBERRY HEAD See **KILBRIDE (WEST).**

GOLDIELANDS, an ancient castellated tower or peel-house, on an eminence on the right bank of the Teviot, $1\frac{1}{2}$ mile above Hawick, Roxburghshire. It is one of the most entire on the Border,—square, massive, and of venerable aspect. It was anciently the mansion of a family of the surname of Goldie, whence it derived its present appellation. It is now the property of the Duke of Buccleuch. Its last inhabitant, a Scott, is said to have been hanged over its gate for the maraudings and treasons of a reiver's career.

GOLFDRUM. See **DUNFERMLINE.**

GOLLACHIE BURN, a burn, about 4 miles in length of course, running northward to the sea, between Buckie and Port-Gordon, in the western part of the parish of Rathven, Banffshire. Near its mouth is a chalybeate spring. There also was formerly a distillery.

GOLSPIE, a parish, containing a post-office village of its own name, also the village of Baches, on the east coast of Sutherlandshire. It is bounded by the sea, by the Little Ferry, by the Fleet, and by the parishes of Rogart and Clyne. The Little Ferry and the Fleet separate it from Dornoch. See **FLEET (THE).** The length of the parish south-westward is about 8 miles; and its greatest breadth is about 6 miles. "The hills near the coast are Ben a Bhraigdh, which is about 1,300 feet in height above the level of the sea, the Silver rock and the hill of Morrich, both much lower; and in the interior Ben Horn 1,712, and Ben Lundie 1,464 feet in height. In the middle of the parish there is a valley called the glen

of Dinnrobin. Through this glen runs a small stream called Golspie burn, whose banks, for the space of about a mile near the sea, present very beautiful and picturesque scenery. The range of hills, consisting of the Silver rock and the hill of Morrich, and others in their vicinity, are rounded at the top, with a southern, seaward aspect. The flat arable part of the parish lies chiefly between the coast-side hills and the sea, having the rude figure of a triangle, one of whose sides is formed by the base of the hills, another by the Little Ferry inlet, and the third by the sea-shore, with a considerable sinuosity." There are four small lakes. About 2,050 acres are in tillage, and about 800 under wood. The only land-owner is the Duke of Sutherland; and a grand feature of the parish is His Grace's princely residence of **DUNROBIN CASTLE:** which see. There is a salmon fishery in the Fleet. There are two quarries of very good red sandstone, and one of white sandstone. The native rocks are very various,—both primitive and secondary; and there are indications of coal. The yearly value of raw produce was estimated in 1833 at £10,030. The yearly value of real property, as assessed in 1860, was £4,841. There was a chapel built in Golspie in very early times, and dedicated to St. Andrew. Near the ground on which the chapel stood, amid the remains of other carved monuments, is an obelisk, a drawing of which is given by Cordier. There are also in the parish ruins of three Pictish towers, and remains of a Druidical temple. The parish is traversed by the great north road from Inverness to Thurso. Population in 1831, 1,149; in 1861, 1,615. Houses, 285.

This parish, formerly a vicarage, is in the presbytery of Dornoch, and synod of Sutherland and Caithness. Patron, the Duke of Sutherland. Stipend, £204 16s.; glebe, £6. Schoolmaster's salary, £70, with about £26 fees. The parish church was built in 1738, and enlarged in 1751, and contains 565 sittings. There is a Free church, with an attendance of from 450 to 500; and the sum raised in connexion with it in 1865 was £212 3s. There are a female school, a subscription library, and a reading club. The ancient name of the parish was Culmalie.

The **VILLAGE** of **GOLSPIE** stands on the great north road, at the mouth of the Golspie burn, 54 miles from Wick and 84½ from Inverness. It consisted for a long time of only a few mean fishermen's huts; but within the last forty years it has become a place of considerable local trade, and one of the neatest villages in the north of Scotland. It contains a large inn and posting establishment, an office of the British Linen Company's bank, an office of the Aberdeen Town and County bank, three insurance agencies, the churches, schools, and libraries of the parish, a meal mill, and a flour and barley mill. Fairs are held in May and October. Public conveyances pass through on the great north road, and run to Lairg and Scourie. Population in 1861, 878.

GOLYN. See **GULANE.**

GOMETRA, a basaltic island, in the parish of Ulva, incorporated with the parish of Kilhinian, in the Argyshire Hebrides. It lies between Mull and Staffa, so near the west end of Ulva as to be separated thence by only a strait which is dry except at spring tides. It has an area of about 1,800 statute acres. A large proportion of it is under cultivation, and has a good loamy soil, capable of producing all the usual variety of crops. It has two harbours, respectively on the north and on the south, and is an excellent fishing station. Population, in 1861, 23.

GONOCHAN, a hamlet and a burn, in the western part of the parish of Fintry, Stirlingshire. Population of the hamlet, 44. Houses, 12. The burn rises on the east side of Earl's Seat, and runs $3\frac{1}{2}$ miles north-eastward to the Endrick, at a point a short distance above the village of Fintry.

GOODIE (THE), a rivulet in the south of Perthshire. It issues from the south-eastern extremity of the Loch of Monteith, in the parish of Port-of-Monteith; and, after having intersected that parish over a distance of $3\frac{3}{4}$ miles eastward, flows, 4 miles south-eastward, through a detached part of the parish of Kincardine and the southern verge of the parish of Kilmadock, to the Forth at the fords of Frew. It anciently formed a marshy watery expanse, called the Lake of Goodie; and it was the scene of a serious disaster to the Argyle-men in the military events of 1646.

GOODWIFE'S CAVE. See SROXYKIRK.

GORBALS, the great suburb of Glasgow situated on the left side of the Clyde, bearing a similar relation to that city to that which Southwark bears to London. See GLASGOW.

GORDON, a parish, containing a post-office station of its own name, in the western part of the Merse, Berwickshire. It is bounded by Westruther, Greenlaw, Hume, Earlston, and Legerwood. Its length westward is nearly 5 miles; and its greatest breadth is 4 miles. The surface is uneven; has several rising-grounds, one of which is entitled to be called a hill; and, in general, lies higher than any district in the eastern part of the Merse. Till a recent date it had great tracts of moss and moorland, and wore a bleak sterile aspect; but it is now very extensively cultivated, and considerably sheltered with plantation; and it begins to wear a smiling and productive appearance. About two-thirds of the whole area is arable; about 500 acres are under wood; and the remainder is in pasture, or continues to be waste. Three head-streams of the Eden rise on or near its boundaries on the north, on the south-west, and on the south-east; in one case intersecting it southward nearly through the centre, and in the other cases forming its southern boundary-line, and all making a confluence at or near the point of leaving it. Two other rills rise respectively at its western and its eastern limit, and, after for a brief way tracing its boundary, flow the one westward to join the Leader, and the other eastward to join the Blackadder. The last stream—the Blackadder—also touches it for a short way along the north. The chief landowners are the lairds of Jarviswood, Greenknow, Ladykirk, Stow, Rumbletonlaw, and Shielfield. The yearly value of raw produce was estimated in 1834 at £15,345. Assessed property in 1865, £8,347 9s. 11d. Population in 1831, 882; in 1861, 931. Houses, 171.

Gordon parish is distinguished for giving title to the ducal family of Gordon, and for having contained their earliest seat and possessions in Scotland. They are supposed to have settled within its limits in the reign of Malcolm Canmore; and when they removed to the north, they not only transferred

some of its local names to the territories or objects of their new home, but afterwards recurred to it for their ducal title. Huntly—which, through the medium of the northern domain named after it, gave them their titles successively of Lord, Earl, and Marquis—was a village in the western extremity of Gordon parish; and, though commemorated only by a solitary tree which marks its site, survived till a recent date in the form of a small hamlet. Two farms within the parish are still called respectively Huntly and Huntly-wood. A little north of the village of West-Gordon is the reputed site of the Gordon family's early residence,—a rising ground still called the Castles, though now covered with plantation, presenting vestiges of fortification. The parish is intersected south-eastward by the road from Elinburgh to Kelso, and is traversed south-westward by a road from Dunse to Earlston. On the latter road stands the village of West-Gordon, 8 miles distant from Kelso. It is the site of the parish-church, and has a population of about 300. The parishioners of Gordon, till a recent period, were very primitive in their manners, and careless, through a descent of several generations, to make a removal of residence, or go a sight-seeing in the busier districts of the country; and, probably on account solely of their habits of seclusion and content, earned from maliceous wit the soubriquet of "the Gowks o' Gordon."

This parish is in the presbytery of Lauder, and synod of Merse and Teviotdale. Patron, the Crown. Stipend, £163 16s. 11d.; glebe, £30. Schoolmaster's salary, £50, with £32 fees, and £20 other emoluments. The parish church was built in 1763, and has been several times repaired; and it contains about 450 sittings. There is a Free church, with an attendance of about 90; and the sum raised in connexion with it in 1865 was £38 6s. 1½d. There is a parochial library. Gordon parish was formerly of very large extent. But part of it, called Durrington-laws, was annexed to Longformacus, 12 miles distant; and out of it, jointly with Bassen-dean, a parish formerly in the presbytery of Melrose, was also erected, about the year 1647, the parish of Westruther. The church was originally dedicated to St. Michael the archangel, and given to the monks of Coldingham. In 1171, according to the spiritual traffic of that age of priestcraft, the Coldingham monks exchanged it with the monks of Kelso for the chapel of Earlston and St. Laurence church of Berwick. In the ancient parish were several chapels. In 1309, Sir Adam Gordon, in consideration of relaxing to them some temporal claims, obtained from the monks of Kelso leave to possess a private chapel with all its oblations. At Huntly-wood was another chapel, dedicated to the Virgin Mary, the advowson of which appears to have passed, during the reign of James IV., into the possession of the family of Home. A third chapel, the ruins of which were at no remote period traceable, was built during the reign of David, by John de Spottiswoode, at his hamlet of Spottiswoode.

END OF VOLUME FIRST.
