A.13.7.11-733

# DESCRIPTION

# Western Islands

SCOTLAND.

#### CONTAINING

A Full Account of their Situation, Extent, Soils, Product, Harbours, Bays, Tides, Anchoring

Places, and Fisheries.

The Ancient and Modern Government, Religion and Customs of the Inhabitants, particularly of their Druids, Heathen Temples, Monasteries, Churches, Chappels, Antiquities, Monuments, Forts, Caves, and other Curiofities of Art and Nature. Of their Admirable and Expeditious way of Curing most Difeases by Simples of their own Product.

A Particular Account of the Second Sight, or Faculty of foreseeing things to come, by way of Vision,

so common among them.

A Brief Hint of Methods to Improve Trade in that

Country, both by Sea and Land.
With a New MAP of the whole, describing the Harbours, Anchoring Places, and dangerous Rocks, for the benefit of Sailers.

To which is added a Brief Description of the Isles of

Orkney, and Schetland.

### By M. MARTIN, Gent.

LONDON, Printed for Andrew Bell, at the Crofs-Keys and Bible, in Cornkil, near Stocks-Market, 1703.

1008

To His Royal Highness Prince GEORGE of Denmark, Lord High Admiral of England, and Ireland, and of all Her Majesties Plantations, and Generalissimo of all Her Majesties Forces, &c.

May it please Your Royal Highness,

Mongst the Numerous Croud
of Congratulating Address
fers, the Islanders described in the following Sheets presume
to approach Your Royal Person;
they can now without suspicion of
Insidelity to the Queen of England,
pay their Duty to a Danish Prince
to whose Predecessors all of them
a 2 former-

## The Dedication.

formerly belonged. They can boast that they are honoured with the Sepulchres of Eight Kings of Norway, who at this day, with forty eight Kings of Scotland, and four of Ireland, lie Entomb'd in the Island of Jona; a Place Fam'd then for some peculiar Sanctity. They presume that it is owing to their great distance from the Imperial Seat, rather than their want of Native Worth, that their Islands have been so little regarded, which by Improvement might render a considerable accession of Strength and Riches to the Crown, as appears by a Scheme annexed to the following Treatise. They have suffer'd hitherto under the want of a powerful and affectionate Patron, Prowidence

## The Dedication.

vidence seems to have given them a Natural Claim to Your Royal Highness; and tho' it be almost presumption for so Sinful a Nation to hope for so great a Blessing, they do humbly join with their Prayers to God, that the Prote-Etion which they hope for from two Princes of so much Native Worth and Goodness, might be continu'd in Your Royal Posterity to all Generations; so Prays

May it please your Royal Highness,

Your Highnesses most Humble

and most Obedient Servant,

M. Martin.

### THE

# PREFACE

HE Western Islands of Scotland, which make the Subject of the following Book, were called by the Ancient Geographers Æbuda, and Hebrides, but they knew so little of them that they neither agreed in their Name nor Number. Perhaps it is peculiar to those Isles, that they have never been describ'd till now by any Manthat was a Native of the Country, or had travelled them. They were indeed touch'd by Boethius, Bishop Lesty, Buchannan, and Johnston, in their Histories of Scotland, but none of those Authors were ever there in Person; so that what they wrote concerning 'em was upon trust from others. Buchannan it is true, had his Information from Donald Monro, who had been in many of em, and therefore his account is the best that has hitherto appear'd, but it must be own'd

own'd that it is very imperfect; that Great Man design'd the History and not the Geography of his Country, and therefore in him it was pardonable. Besides, since his time, there's a great Change in the Humour of the World, and by consequence in the way of Writing. Natural and Experimental Philosophy has been much improv'd since his days, and therefore Descriptions of Countries without the Natural History of 'em, are now justly reckon'd to be desective.

This I had a particular regard to in the following Description, and have every where taken notice of the Nature of the Climate and Soil, of the Produce of the Places by Sea and Land, and of the Remarkable Cures perform'd by the Natives meerly by the use of Simples, and that in such variety as I hope will make amends for what Desects may be found in my Stile and way of Writing; for there's a Wantonness in Language as well as in other things, to which my Countrymen of the Isles are as much strangers, as to other Excesses which are

2 4

we study Things there more than Words, tho' those that understand our Native Language must own that we have enough of the latter to inform the Judgment, and work upon the Affections in as pathetick a manner as any other Languages whatever. But I go on to my Subject;

The Isles here describ'd are but little known, or considered, not only by Strangers, but even by those under the

fame Government and Climate.

The Modern Itch after the Know-ledge of Foreign Places is so prevalent, that the generality of Mankind bestow little thought or time upon the Place of their Nativity; it is become Customary in those of Quality to Travel young into Foreign Countries, whilst they are absolute Strangers at home; and many of them when they return, are only loaded with superficial Knowledge, as the bare Names of Famous Libraries, Stately Edifices, Fine Statues, Curious Paintings, late Fashions, new Dishes,

new Tunes, new Dances, Painted

Beauties, and the like.

The Places here mentioned afford no fuch Entertainment, the Inhabitants in general prefer Conveniency to Ornament, both in their Houses and Apparel, and they rather satisfie than oppress Nature, in their way of Eating and Drinking; and not a few among them have a Natural Beauty, which excels any that has been drawn by the finest Apelles.

The Land and the Sea that encompasses it, produces many things Useful and Curious in their kind, several of which have not hitherto been mention'd by the Learned; this may afford the Theorist subject of Contemplation, fince every Plant of the Field, every Fiber of each Plant, and the least Particle of the smallest Insect carries with it the impress of its Maker; and if rightly consider'd, may read us Lectures of Divinity and Morals.

The Inhabitants of these Islands do for the most part labour under the want

of knowledge of Letters, and other useful Arts and Sciences; notwithstanding which defect, they seem to be better vers'd in the Book of Nature, than many that have greater opportunities of improvement; this will appear plain and evident to the judicious Reader, upon a view of the successful Practice of the Islanders in the preservation of their Health, above what the generality of Mankind enjoys, and this is perform'd meerly by Temperance, and the prudent use of Simples, which, as we are affur'd by repeated Experiments, fail not to remove the most stubborn Distempers, where the best prepar'd Medicines have frequently no success. This I relate not only from the Authority of many of the Inhabitants, who are Persons of great integrity, but likewise from my own particular Observation; and thus with Celsus they first make Experiments, and afterwards proceed to reason upon the Effects.

Humane Industry has of late advanc'd useful and experimental Philosophy

very much, Women and illiterate Perfons have in some measure contributed to it by the discovery of some useful Cures; the Field of Nature is large, and much of it wants still to be cultivated by an ingenious and discreet application; and the Curious by their Observations might daily make further advances in the History of Nature.

Self preservation is natural to every living Creature, and thus we see the several Animals of the Sea and the Land so careful of themselves, as to observe nicely what is agreeable, and what is hurtful to them, and accordingly they chuse the one, and reject the other.

The Husbandman and the Fisher could expect but little success without observation in their several Employments, and it is by observation that the Physician commonly judges of the Condition of his Patient. A Man of Observation proves often a Physician to himself, for it was by this that our Ancestors preserved their Health till a good old Age, and that Mankind laid up

that stock of Natural Knowlege of

which they are now possess'd.

The Wife Selemon did not think it beneath him to write of the meanest Plant, as well as of the taleft Cedar. Hypocrates was at the Pains and Charge to Travel Foreign Countries with a defign to learn the Vertues of Plants, Roots, &c. I have in my little Travels endeavour'd among other things in some measure to imitate so great a Pattern, and if I have been so happy as to oblige the Republick of Learning with any thing that is uleful, I have my Delign. I hold it enough for me to furnish my Observations, without accounting for the Reason and Way that those Simples produce them; this I leave to the Learned in that Faculty, and if they would oblige the World with such Theorems from these and the like Experiments, as might serve for Rules upon Occasions of this Nature, it would be of great advantage to the Publick.

As for the Improvement of the Isles in general, it depends upon the Government

ment of Scotland, to give Eucouragement for it to such Publick Spirited Perfons or Societies as are willing to lay out their Endeavours that way; and how large a Field they have to work upon, will appear, by taking a Survey of each, and of the Method of Improvement that I have hereunto subjoin'd.

There is such an Account given here of the Second Sight as the Nature of the thing will bear. This has always been reckon'd sufficient among the unbiass'd part of Mankind; but for those that will not be so satisfied, they ought to oblige us with a New Scheme, by which we may judge of Matters of

Fact.

There are several Instances of Heathenism and Pagan Superstition among the Inhabitants of the Islands related here, but I would not have the Reader to think those Practices are chargeable upon the generality of the present Inhabitants; fince only a few of the Object and most Ignorant of the Vulgar are guilty of

## The Preface, &c.

'em. These Practices are only to be found, where the Reform'd Religion has not prevail'd; for 'tis to the Progress of that alone that the Banishment of Evil Spirits, as well as of Evil Customs is owing, when all other Methods prov'd inessectual. And for the Islanders in general, I may truly say, that in Religion and Vertue they excel many thousands of others, who have greater Advantages of daily Improvement.

# DESCRIPTION

OF THE

# Western Islands

OF

SCOTLAND, &c.

Leog, which in the Irish Language signises Water, lying on the surface of the Ground; which is very proper to this Island, because of the great number of Fresh-water Lakes that abound in it. The Isle of Lewis is by all Strangers and Seasaring-men, accounted the outmost Tract of Islands lying to the Northwest of Scotland. It is divided by several narrow Channels, and distinguished by several Proprietors as well as by several Names: by the Islanders it is commonly called The Long Island, being from South to North 100 Miles in length, and from East to West from 3 to 14 in breadth. It lyes in the Shire of Ross, and made part of the Diocess of the Isles.

13

THE

THE Isle of Lewis, properly and strictly so call'd, is 36 Miles in length; viz. from the North-point of Bowling-head to the South-point of Hullings in Harries: and in some places it is 10, and in others 12 Miles in breadth. The Air is temperately cold and moist, and for a corrective the Natives use a Dose of Trestarig or Usquebaugh. This Island is for the most part healthy, especially in the middle from South to North. It is arable on the West side, for about fixteen Miles on the Coast, it is likewife plain and arable in feveral places on the East: The Soil is generally sandy, excepting the Heaths, which in some places are black, and in others a fine red Clay; as appears by the many Vessels made of it by their Women; fome for boiling Meat, and others for pre-ferving their Ale, for which they are much better than Barrels of Wood.

THIS Island was reputed very fruitful in Corn, until the lateYears of scarcity and bad Seasons. The Corn sown here is Barley, Oats and Rye: and they have also Flax and Hemp. The best increase is commonly from the Ground manur'd with Sea ware: They fatten it also with Soot; but it is observed that the Bread made of Corn growing in the Ground so fatten'd, occasions the Jaundice to those that eat it. They observe likewise that Corn produced in Ground which was never tilled before, occasions several Disorders in those who eat the Bread

Western Islands of Scotland, &c. 3
Bread, or drink the Ale made of that Corn, such as the Head-ach and Vomiting.

THE Natives are very industrious, and undergo a great fatigue by digging the Ground with Spades, and in most places they turn the Ground so digged upside down, and cover it with Seaware; and in this manner there are about 500 People imploy'd daily for some Months. This way of labouring is by them call'd Timiy; and certainly produces a greater Increase than Digging or Plowing otherwise. They have little Harrows with wooden teeth in the first and second rows, which breaks the Ground, and in the third row they have rough Heath, which smoothes it: This light Harrow is drawn by a Man having a strong rope of Horse-hair across his breast.

THEIR plenty of Corn was such, as dispos'd the Natives to brew several sorts of Liquors, as common Usquebaugh, another call'd Trestaria, idest Aquavitæ, three times distill'd, which is strong and hot; a third sort is sour times distill'd, and this by the Natives is call'd Usquebaugh baul, id est Usquebaugh, which at sirst taste affects all the Members of the Body: two spoonfuls of this last Liquor is a sufficient Dose; and if any Man exceed this, it would presently stop his Breath, and endanger his Lise. The Trestaria and Usquebaugh-baul, are both made of Oats.

THERE

THERE are several convenient Bays and Harbours in this Island. Loch Grace and Loch-tuo, lying Norwest, are not to be reckon'd such: tho' Vessels are forc'd in there sometimes by storm. Loch-Stornbay lyes on the East side in the middle of the Island, and is 18 Miles directly South from the Norther-most Point of the same. It is a Harbour well known by There are feveral places for anchor-Scamen. ing about half a League on the South of this Coast: About 7 Miles Southward, there is a good Harbour, call'd the Birkin Isles; within the Bay call'd Loch Colmkill, 3 Miles further South lies Loch-Erifort, which hath an Anchoring place on the South and North; about 5 Miles South lyes Lock-fea-fort, having two visible Rocks in the Entry, the best Harbour is on the South fide.

A B O U T 24 Miles South-west, lyes Lock-Carlbay, a very capacious, tho, unknown Harbour, being never frequented by any Vessels: Tho' the Natives assure me that it is in all respects a convenient Harbour for Ships of the First rate. The best entrance looks North and North-west, but there is another from the West. On the South side of the Island Betserate, there are small Islands without the entrance, which contribute much to the security of the Harbour, by breaking the Winds and Seas that come from the great Ocean. Four Miles to the South on this Coast, is Lock-Rogue, which runs in among the Mountains. All the

Western Islands of Scotland, &. 5 Coasts and Bays above mention'd, do in fair weather abound with Cod, Ling, Herring, and all other sorts of Fishes taken in the Western-Islands.

COD and Ling are of a very large fize, and very plentiful near Loch-Carlvay; but the Whales very much interrupt the Fishing in this place. There is one fort of Whale remarkable for its Greatness, which the Fishermen distinguish from all others by the Name of the Gallan-Whale; because they never see it but at the Promontory of that Name: I was told by the Natives, that about 15 years ago, this great Whale overturn'd a Fishers-boat, and devour'd three of the Crew; the fourth Man was fav'd by another Boat which happen'd to be near, and faw this accident. There are many Whales of different fizes, that frequent the Herring Bays on the East side; the Natives imploy many Boats together in pursuit of the Whales, chasing them up into the Bays, till they wound one of them mortally, and then it runs ashore, and they say that all the rest commonly follow the tract of its Blood. and run themselves also on shore in like manner; by which means many of them are kill'd: about five years ago there were fifty young Whales kill'd in this manner, and most of them eaten by the common People, who by experience find them to be very nourishing Food; this I have been affur'd of by several Persons, but

particularly by some poor meagre people, who became plump and lusty by this Food in the space of a Week; they call it Sea-Pork, for so it signifies in their Language: the bigger Whales are more purgative than these lesser ones, but the latter are better for Nourishment.

THE Bays afford plenty of Shell-fish, as Clams, Oysters, Cockles, Musles, Lympits, Wilks, Spout-fish; of which last there is such a prodigious quantity cast up out of the Sand of Loch-tua, that their noisome Smell insects the Air, and makes it very unhealthful to the Inhabitants, who are not able to consume them, by eating or fatning their Ground with them; and this they say happens most commonly once in seven years.

THE Bays and Coasts of this Islands afford great quantity of small Corral, not exceeding 6 Inches in length, and about the bigness of a Goose's Quill: This abounds most in Lock-Sea-fort, and there is Corraline likewise on this Coast.

THERE are a great many Fresh water Lakes in this Island, which abound with Trouts and Eels: The common Bait us'd for catching them is Earthworms, but a handful of parboil'd Musles thrown into the Water, attracts the Trouts and Eels to the place; the fittest

Western Islands of **Scotland**, &c. 7 time for catching them, is, when the Wind blows from the South-west: there are several Rivers on each side this Island which affords Salmons, as also black Musles, in which many times Pearl is found.

THE Natives in the Village Barbas retain an ancient Custom of sending a Man very early to cross Barvas River, every first day of May, to prevent any Females crossing it first; for that they say would hinder the Salmon from coming into the River all the year round: they pretend to have learn'd this from a foreign Sailer, who was shipwreck'd upon that Coast, a long time ago. This observation they maintain to be true from Experience.

THERE are several Springs and Fountains of curious Effects; fuch as that at Loch-Carlvay, that never whitens Linnen, which hath often been try'd by the Inhabitants. The Well at St. Cowsten's Church, never boils any kind of Meat, tho' it be kept on fire a whole day. St. Andrew's Well in the Village Shadar, is by the vulgar Natives made a Test to know if a fick Person will die of the Distemper he labours under: they fend one with a wooden Dish to bring some of the water to the Patient, and if the Dish which is then laid foftly upon the furface of the water turn round Sun-ways, they conclude that the Patient will recover of that Distemper; but if otherwise, that he will THERE die.

THERE are many Caves on the Coast of this Island, in which great numbers of Otters and Seals do lye; there be also many Land and Sea Fowls that build and harch in them. The Gave in Lech-Grace hath several pieces of a hard substance in the bottom, which distil from the top of it. There are several natural and artificial Forts in the Coast of this Island. which are call'd Dun, from the Irish word Dain, which fignifies a Fort: The natural Forts here are Dun-owle, Dun-coradil, Dun-eisten.

THE Castle at Stormbay Village was destroy'd by the English Garrison, kept there by Oliver Cremwell. Some few Miles to the North of Brago, there is a Fort compos'd of large Stones, it is of a round form, made taperwise towards the top, and is three stories high: the Wall is double, and hath several Doors and Stairs, fo that one may go round within the Wall. There are some Cairnes or Heaps of Stones gather'd together on Heaths, and fome of them at a great distance from any Ground that affords Stones: such as Cairnwarp near Mournagh Hill, O.c. These artificial Forts are likewise built upon Heaths at a confiderable distance also from stony Ground. The Thrushel Stone in the Parish of Barbas, is above 20 foot high, and almost as much in breadth. There are three erected Stones upon the North fide of Lock Carlbay about 12 foot high each: several other Stones are to be seen

here in remote places, and some of them standing on one end; some of the ignorant Vulgar say, they were Men by Inchantment turn'd into Stones; and others say, they are Monuments of Persons of Note kill'd in Battle.

THE most remarkable Stones for Number. Bigness, and Order, that fell under my Observation, were at the Village of Classernis: where there are 39 Stones let up 6 or 7 foot high and two foot in breadth each; they are plac'd in form of an Avenue, the breadth of which is 8 foot, and the distance between each Stone six: and there is a Stone set up in the entrance of this Avenue; at the South end there is join'd to this range of Stone a Circle of 12 Stones of equal distance and height with the other 39. There is one set up in the center of this Circle, which is 13 foot high, and shap'd like the Rudder of a ship: without this Circle there are 4 Stones standing to the West, at the same distance with the Stones in the Circle; and there are 4 Stones fet up in the same manner at the South and East sides. enquir'd of the Inhabitants what Tradition they had from their Ancestors concerning these Stones? and they told me, it was a place appointed for Worship in the the time of Heathenism, and that the Chief Druid or Pricst stood near the big Stone in the center, from whence he address'd himself to the People that furrounded him.

UPON the same Coast also there is a Circle of high Stones standing on one end, about a quarter of a Mile's distance from those abovemention'd.

THE Shore in Egginess abounds with many little smooth Stones prettily variegated with all forts of Colours; they are of a round Form, which is probably occasion'd by the tossing of the Sea, which in those parts is very violent.

THE Cattle produc'd here are Cows, Horfes, Sheep, Goats, Hogs: these Cows are little, but very fruitful, and their Beef very fweet and tender: the Horses are considerably less here, than in the opposite continent, yet they plow and harrow as well as bigger Horfes, tho' in the spring time they have nothing to feed upon but Sea ware. There are abundance of Deer in the Chase of Oservaul, which is 15 Miles in compass, consisting in Mountains, and Valleys between them: this affords good pasturage for the Deer, black Cattle, and Sheep. This Forrest, for so they call it, is furrounded with the Sea, except about one Mile upon the West side; the Deer are forc'd to feed on Sea-ware, when the Snow and Frost continue long, having no Wood to shelter in, and so are expos'd to the rigor of the Season.

I saw big Roots of Trees at the head of Lock-Erisport, and there is about a hundred young

western Islands of **Scotland**, &c. 11 young Birch and Hazle Trees on the Southwest side of Loch-Stornvay, but there is no more Wood in the Island. There's great variety of Land and Sea Fowls to be seen in this and the lesser adjacent Islands.

THE Amphibia here are Seals, and Otters; the former are eaten by the Vulgar, who find them to be as nourishing as Beef and Mutton.

THE Inhabitants of this Island are well proportion'd, free from any bodily imperfections, and of a good Stature; the colour of their Hair is commonly a light-brown, or red, but few of them are black. They are a healthful and strong bodied People, several arrive to a great Age; Mr. Daniel Morison, late Minister of Barvas, one of my Acquaintance, died lately in his 86th. year.

THEY are generally of a sanguine Constitution; this place hath not been troubl'd with Epidemical Diseases, except the Small Pox, which comes but seldom, and then it sweeps away many young People. The Chin-cough afflicts Children too: the Fever, Diarhea, Dysenteria, and the falling down of the Uvula, Fevers, Jaundies and Stiches, and the ordinary Coughs proceeding from Cold, are the Diseases most prevalent here. The common Cure us'd for removing Fevers and Plurisies, is to let Blood plentifully. For curing the Diarhea

Diarhea and Dysenteria, they take small quantities of the Kernel of the black Molocca Beans. call'd by them Crospunk; and this being ground into powder, and drunk in boil'd Milk, is by daily experience found to be very effectual. They likewise use a little Dose of Trestarig water with good success. When the Cough affects them, they drink Brochan plentifully, which is Oat meal and Water boil'd together; to which they fometimes add Butter: This Drink us'd at going to Bed, disposeth one to fleep and sweat, and is very Diuretick, if it hath no Salt in it. They use also the Roots of Nettles, and the Roots of Reeds boil'd in Water, and add Yeast to it, which provokes it to ferment, and this they find also beneficial for the Cough- When the Uvula falls down, they ordinarily cut it, in this manner : They take a long Quill, and putting a Horse-hair double into it, make a noose at the end of the Quill, and putting it about the lower end of the Uvula, they cut off from the Uvula all that's below the Hair with a pair of Sciffers, and then the Patient (wallows a little Bread and Cheese, which cures him: This Operation is not attended with the least inconvenience, and cures the Distemper so that it never returns. They cure Green-wounds with Oyntment made of Golden-rod, All-heal, and fresh Butter. The Jaundies they cure two ways; the first is by laying the Patient on his Face, and pretending to look upon his Back-bones, they presently

Western Islands of Scotland, &c. presently pour a Pail-full of cold Water on his bare Back; and this proves successful: the second Cure they perform by taking the Tongs, and making them red-hot in the Fire, then pulling off the Clothes from the Patient's Back, he who holds the Tongs, and gently touches the Patient on the Vertebræ upwards of the Back, which makes him furioufly run out of doors, still supposing the hot Iron is on his Back. till the Pain be abated, which happens very speedily, and the Patient recovers soon after. Donald: Chuan, in a Village near Bragir, in the Parish of Barvas, had by accident cut his Toe at the change of the Moon, and it bleeds a fresh drop at every change of the Moon ever fince.

ANNA, Daughter to George, in the Village of Melbost, in the Parish of Ey, having been with Child, and the ordinary time of her Delivery being expir'd, the Child made its passage by the Fundament for some years, coming away Bone after Bone. She liv'd several years after this, but never had any more Children: Some of the Natives both of the Island of Lewis and Harries, who convers'd with her at the time, when this extraordinary thing happen'd, gave me this Account.

THE Natives are generally ingenious and quick of Apprehension; they have a Mechanical Genius, and several of both Sexes have a

Gift of Poefy, and are able to form a Satyr of Panegyrick ex tempore, without the affiftance of any stronger Liquor than Water to raise their Fancy. They are great lovers of Musick; and when I was there they gave an account of 18 Men who could play on the Violin pretty well, without being taught: they are still very hospitable, but the late years of Scarcity brought them very low, and many of the poor People have died by Famine. The Inhabitants are very dextrous in the Exercises of Swiming, Archery, Vaulting or Leaping, and are very stout and able Seamen; they will tug at the Oar all day long upon Bread and Water, and a snush of Tobacco.

## Of the Inferiour adjacent Islands.

lyes the small Island Barbe; it is a high Rock about half a Mile in compass and fit only for Pasturage. Not far from this lyes the Island Berintap, which is a quarter of a Mile in compass, naturally a strong Fort, and formerly us'd as such, being almost inaccessible.

THE Island #18008, which is of small compass, lyes between Berinsay and the main Land.

Within

Western Islands of Scotland, &c. to Within these lyes the Island call'd Bernera Minor, two Miles in length and fruitful in Corn and Grass; within this Island, in the middle of Loch Carlvay, lyes the Island Bernera Major, being 4 Miles in length, and as much in breadth; it is fruitful also in Corn and Grass. and hath 4 Villages. Alexander Mack-Lenan, who lives in Bernera Major, told me, that fome years ago, a very extraordinary Ebb happen'd there, exceeding any that had been feen before or fince; it happen'd about the Vernal Equinox, the Sea retir'd so far as to discover a Stone-wall, the length of it being about 40 yards, and in some parts about 5,6 or 7 foot high; they suppose much more of it to be under Water : it lyes opposite to the west side of Lewis, to which it adjoins. He says that it is regularly built, and without all doubt the effect of Human Industry; the Natives had no Tradition about this piece of Work, fo that I can form no other Conjecture about it, but that it has probably been erected for a defence against the Sea, or for the use of Fishermen, but came in time to be overflow'd. Near both Berneras lyes the small Island of Bialifay, Cavay, Carbay, and Grenim.

NEAR to the North-west Promontory of Carlvay Bay, call'd Galan-head, are the little Islands of Babbay, Shirem. Maray, Bupa, the Great and Lesser. To the Northwest of Gallan-head, and within 6 Leagues of

it, lyes the Flannan-Islands, which the Seamen call North-hunters; they are but small Islands, and six in number, and maintain about 70 Sheep yearly: The Inhabitants of the adjacent Lands of the Lewis, having a right to these Islands, and visit them once every Summer. and there make a great purchase of Fowls, Eggs, Down, Feathers, and Quills: when they go to Sea, they have their Boat well mann'd, and make towards the Islands with an East Wind; but if before, or at the Landing, the Wind turn Westerly, they hoist up Sail, and steer directly home again. If any of their Crew is a Novice, and not vers'd in the Customs of the place, he must be instructed perfectly in all the Punctilio's observ'd here, before Landing; and to prevent Inconveniences that they think. may ensue upon the transgression of the least Nicety observ'd here, every Novice is always join'd with another that can instruct him, all the time of their Fowling; foall the Boat's Crew are match'd in this manner: after their Landing they fasten the Boat to the sides of a Rock, and then fix a wooden Ladder, by laying a Stone at the foot of it, to prevent its falling into the Sea; and when they are got up into the Island, all of them uncover their Heads, and make a turn Sun-ways round, thanking God for their Safety. The first In-junction giv'n after Landing, is, not to ease Nature in that place where the Boat lyes, for that they reckon a Crime of the highest nature. and

Western Islands of Scotland, &c. 17 and of dangerous Consequence to all their Crew; for they have a great regard to that very piece of the Rock upon which they first set their Feet, after escaping the danger of the Ocean.

The biggest of these Islands is call'd Juand Doze, it has the ruins of a Chappel dedicated to St. Flannan, from whom the Island derives its Name; when they are come within about 20 paces of the Altar, they all strip themselves of their upper Garments at once, and their upper Clothes being laid upon a Stone, which stands there on purpose for that use, all the Crew pray three times before they begin Fowling: the first day they say the first Prayer, advancing towards the Chappel upon their Knees; the Second Prayer is said as they go round the Chappel; the Third is said hard-by or at the Chappel, and this is their Morning Service. Their Vespers are persorm'd with the like number of Prayers. Another Rule is, That it is absolutely unlawful to kill a Fowl with a Stone, for that they reckon a great Barbarity, and directly contrary to ancient Custom.

It is also unlawful to kill a Fowl before they ascend by the Ladder. It is absolutely unlawful to call the Island of St. Kilda (which lyes thirty Leagues Southward) by its proper Irish Name Ditt, but only the High Country. They must not so much as once name the B Islands

Islands in which they are Fowling, by the ordinary Name Flannan, but only the Country. There are several other things that must not be call'd by their common Names : E. g. Wish, which in the Language of the Natives fignifies Water, they call burn: a Rock, which in their Language is Creg, must here be call'd Cruey, i. e. hard: Shore in their Language exprest by Claddach, must here be call'd Wah, i. e. a Cave : Sower, in their Language is exprest Gozt, but must here be call'd Baire, i. e. Sharp: Slippery, which is exprest 280g, must be call'd Soft: and several other things to this purpole. They account it also unlawful to kill a Fowl after Evening Prayers. There is an ancient Custom, by which the Crew is oblig'd not to carry home any Sheep sluet, let them kill never so many Sheep in these Islands. One of their principal Gustoms is not to steal or eat any thing unknown to their Partner, else the Transgressor (they fay) will certainly vomit it up, which they reckon as a just Judgment. When they have loaded their Boat sufficiently with Sheep, Fowls, Eggs, Down, Fish, &c. they make the best of their way homeward. It's observed of the Sheep of these Islands that they are exceeding fat, and have long Horns.

I had this superstitious Account not only from several of the Natives of the Lewis, but likewise from two who had been in the Flan-

Dig und & Google

Western Islands of Scotland, &c. 19

nan Islands the preceding Year. I ask'd one of them if he pray'd at home as often, and as fervently as he did when in the Flannan Islands; and he plainly confess'd to me that he did not: adding further, that these remote Islands were places of inherent Sanctity; and that there was none ever yet landed in them but found himself more dispos'd to Devotion there, than any where else. The Island of Pigmies, or as the Natives call it, The Island of Little Men, is but of small Extent. There has been many small Bones dug out of the Ground here, refembling those of Human kind more than any other. This gave ground to a Tradition which the Natives have of a very Low-statur'd People living once here, call'd Lusbirdan, i. e. Pizmies.

Leagues from the North-east Point of Ness in Lewis, and counted but a Mile in length and about half a Mile in breadth; it hath a Hill in the West part, and is only visible from the Lewis in a fair Summers-day. I had an Account of this little Island, and the Custom of it from several Natives of Lewis, who had been upon the place; but more particularly from Mr. Daniel Morison, Minister of Barvas, after his return from Rona Island, which then belong'd to him, as part of his Gleib. Upon my Landing (says he) the Natives receiv'd me very affectionately; and adares'd

dress'd me with their usual Salutation to a Stranger, God save you, Pilgrim, you are heartily welcome here ? for we have had repeated Apparitions of your Person among us, after the manner of the second Sight, And we heartily congratulate your Arrival in this our remote Country. One of the Natives would needs express his high esteem for my Person, by making a turn round about me Sun-ways, and at the same time Blessing me, and wishing me all happiness; but I bid him let alone that piece of Homage, telling him I was sensible of his good meaning towards me: but this poor Man was not a lirtle disappointed, as were also his Neighbours; for they doubted not but this ancient Ceremony would have been very acceptable to me; and one of them told me, That this was a thing due to my Character from them, as to their Chief and Patron, and could not, nor wou'd not fail to perform it. They conducted me to the Little Village, where they dwell, and in the way thither there were three Inclosures; and as I entred each of these, the Inhabitants severally saluted me, taking me by the Hand, and faying, Traveller, you are welcome here. They went along with me to the House that they had assign'd for my Lodging; where there was a bundle of Straw laid on the Floor, for a Seat to me to fit upon; After a little time was spent in general Discourse, the Inhabitants retir'd to their respective dwelling Houses; and in this interval, they Western Islands of Scotland, &c. 21

they kill'd each Man a Sheep, being in all Five, answerable to the number of their Families. The Skins of the Sheep were entire, and flea'd off so, from the Neck to the Tail, that they were in form like aSack: TheleSkins being flea'd off after this manner, were by the Inhabitants instantly fill'd with Barley-mcal; and this they gave me by way of a Present, one of their number acted as Speaker for the rest, saying, Traveller we are very senfible of the Favour you have done us in coming so far with a Design to instruct us in our way to Happiness, and at the same time to venture your self on the great Ocean: Pray, be pleased to accept of this small Present, which we humbly offer as an expression of our sincere Love to you. This I accepted tho in a very coarse dress, but it was given with such an Air of Hospitality and Good-will, as deserv'd Thanks: they presented my Man also with fome pecks of Meal, as being likewise a Tra-veller; the Boats-Crew having been in Rona before, were not reckon'd Strangers, and therefore there was no Present given them, but their daily Maintenance.

THE RE is a Chappel here dedicated to St.

Rottatt, fenc'd with a Stone Wall round it;
and they take care to keep it neat and clean,
and sweep it every day. There is an Altar in
it on which there lies a big Plank of Wood
about ten foot in length, every foot has a hole
in it, and in every hole a Stone, to which the
B 3

Natives ascribe several Virtues; one of them is singular, as they say, for promoting speedy delivery to a Woman in Travel.

THEY repeat the Lord's Prayer, Creed and Ten Commandments in the Chappel every Sunday Morning. They have Cows, Sheep, Barley and Oats, and live a harmless Life, being perfectly ignorant of most of those Vices that abound in the World. They know nothing of Money or Gold, having no occasion for either: They neither sell nor buy, but only barter for such little things as they want : they covet no Wealth, being fully content and fatisfy'd with Food and Raiment; tho'at the same time they are very precise in the matter of Property among themselves; for none of them will by any means allow his Neighbour to fish within his Property; and every one must exactly observe not to make any incroachment on his Neighbour. They have an agreeable and hospitable Temper for all Strangers: they concern not themselves about the rest of Mankind, except the inhabitants in the North part of Lewis. They take their Sirname from the colour of the Sky, Rain-bow, and Clouds. There are only five Families in this small island, and every Tennant hath his Dwelling-house, a Barn, a House where their best Essects are preserv'd, a House for their Cattle, and a Porch on each fide of the Door to keep off the Rain or Snow. Their Houses

Western Islands of Scotland, &c. 23 wilt with Stone, and thatched with Straw,

are built with Stone, and thatched with Straw, which is kept down with Ropes of the same, pois'd with Stones. They wear the same Habit with those in Lewis, and speak only Irish. When any of them comes to the Lewis, which is seldom, they are astonished to see so many People. They much admire Grey-hounds, and love to have them in their company. They are mightily pleas'd at the sight of Horses, and one of them observing a Horse to neigh, ask'd if that Horse laugh'd at him: a Boy from Rona perceiving a Colt run towards him, was so much frighted at it that he jump'd into a bush of Nettles, where his whole Skin became full of Blisters.

ANOTHER of the Natives of Rona, having had the opportunity of travelling as far as Coul, in the Shire of Ross, which is the Seat of Sr. Alexander Mac-kenzie, every thing he saw there was surprizing to him, and when he heard the noise of those who walk'd in the Rooms above him, he presently fell to the Ground, thinking thereby to lave his Life, for he supposed that the House was coming down over his head. When Mr. Morison the Minister was in Rona, two of the Natives Courted a Maid with intention to marry her, and being married to one of them afterwards. the other was not a little disappointed because there was no other match for him in this Island. The Wind blowing tair. Mr. B 4 h crifon Morison sailed directly for Lewis, but after 3 hours sailing was forced back to Rona by a contrary Wind, and at his Landing the poor Man that had soft his Sweet-heart was overjoy'd, and expressed himself in these words; I bless God and Ronan that you are return'd again, for I hope you will now make me happy, and give me a right to enjoy the Woman every other Year by turns, that so we both may have Issue by her; Mr. Morison could not retrain from smiling at this unexpected request, chid the poor Man for his unreasonable demand, and desir'd him to have patience for a Year longer, and he would send him a Wise from Lewis; but this did not ease the poor Man who was tormented with the thoughts of dying without Issue.

ANOTHER who wanted a Wife, and having got a Shilling from a Seaman that happen'd to land there, went and gave this Shilling to Mr. Morifen to purchase him a Wife in the Lewis, and send her to him, for he was told that this piece of Money was a thing of extraordinary Value, and his desire was gratified the ensuing Year.

ABOUT 14 Years ago a swarm of Rats, but none knows how, came into Rona, and in a short time eat up all the Corn in the Island. In a few Months after some Seamen Landed there, who Robbed the poor People of

The Google

Western Islands of Scotland, &c. 25

of their Bull. These missortunes and the want of supply from Lewis for the space of a Year, occasion'd the death of all that Ancient Race of People. The Steward of St. Kilda being by a Storm driven in there, told me that he found a Woman with her Child on her Breast, both lying dead at the side of a Rock: Some Years after, the Minister (to whom the Island belongeth) fent a new Colony to this Island, with suitable Supplies. The following Year a Boat was sent to them with some more supplies and Orders to receive the Rents, but the Boat being lost as it is supposed, I can give no further account of this late Plantation.

THE Inhabitants of this little Island say that the Cuckow is never seen or heard here; but after the Death of the Earl of Seaforth, or the Minister.

The Rock Soulisher, lyeth 4 Leagues to the East of Rona, it is a quarter of a Mile in Circumference, and abounds with great numbers of Sea-Fowl, such as, Solan Geese, Guillamote, Coulter-Neb, Puffin, and several other sorts. The Fowl called the Colk is found here, it is less then a Goose, all covered with Down, and when it hatches it casts its Feathers, which are of divers Colours; It has a Tusse on it's head resembling that of a Peacock, and a Train longer than that of a House-

House-Cock; but the Hen has not so much Ornament and Beauty.

THE Island Stant, Or, as the Natives call it Island-More, lyes to the Bast of Ushiness, in Lewis about a League. There are Three fmall Islands here, the Two Southern Islands are seperated only by Spring-tides, and are Two Miles in Circumference. Illand-More hath a Chappel in it Dedicated to the Virgin Mary, and is fruitful in Corn and Grass; The Island joyning to it on the West is only for Pasturage, I saw a couple of Eagles here. The Natives told me that these Eagles would never fuffer any of their kind to live there but themfelves, and that they drove away their Youngones as foon as they were able to fly, and they told me likewise that those Eagles are so careful of the place of their abode, that they never yet killed any Sheep or Lamb in the Island, tho' the Bones of Lambs, of Fawns, and Wild-Fowls are frequently found in and about their Nests, so that they make their Purchase in the opposite Islands; the nearest of which is a League distant. This Island is very strong and inaccessible, save on one side where the Ascent is narrow, and somewhat refembling a Stair, but a great deal more high and steep, notwithstanding which the Cows pass and repass by it safely, tho' one would think it uncase for a Man to climb. About a Musket shot further North lies the biggest of the

Western Islands of Scotland, &. 27

the Islands called More, being two Miles in Circumference: It is fruitful in Corn and Pasturage, the Cows here are much fatter than any I saw in the Island of Lewis. There is a blew Stone in the surface of the Ground here, moist while it lies there, but when dry, it becomes very hard, it is capable of any Impression, and I have seen a Sett of Table-Men made of this Stone prettily Carved with different Figures. There is a Promontory in the North-end of the Island of Lewis called Eoropy-Point, which is supposed to be the furthest to North-west of any part in Europe.

THESE Islands are divided into Two Parishes, one called Barvas, and the other Ey or T, both which are Parsonages, and each of them having a Minister. The Names of the Churches in Lewis Isles, and the Saints to whom they were Dedicated are St. Columkil, in the Island of that name : St. Phoraer in Baerness; St. Lennan in Sternbay, St. Collum in Ey, ; St. Cutchou in Barbolt ; St. Aula in Breate; St. Michael in Collotta; St. Collum in Barieu; St. Ronan in Corobie; St. Thomas in Pabott ; St. Peter in Shanabott ; St. Clement in Dell; Hely-Cross Church in Balan ; St. Brigit in Barobe ; St. Peter in Shiadir; St. Mary in Barbas; St. John-Baptist in Bragar : St. Kiaran in Lianis Shadir: St. Michael in Kirbig; St. Macrel in Birkiboft; St. Dondan in Little Berneray; St.

St. Michael in the same Island; St. Peter in Babbay Island; St. Christophers Chappel in Inge; and Stoambay Church, all these Churches and Chappels were before the Resormation Sanctuaries; and if a Man had committed Murder, he was then secure and safe when once within their Precincts.

THEY were in greater Veneration in those days than now: it was the constant Practice of the Natives to kneel at first fight of the Church, tho' at a great distance from 'em. and then they said their Pater noster. John Morison of Bragit, told me that when he was a Boy, and going to the Church of St. Mulvay, he observ'd the Natives to kneel and repeat the Pater noster at four Miles distant from the Church. habitants of this !fland had an ancient Custom to facrifice to aSea God call'd Shony at Hallowtide, in the manner following: The Inhabitants round the Island came to the Church of St. Mulvay, having each Man his Provision along with him; every Family furnish'd a Peck of Malt, and this was brew'd into Ale; one of their number was pickt out to wade into the Sea up to the middle, and carrying a Cup of Ale in his Hand, standing still in that posture, cry'd out with a loud Voice saying. Shorry, I give you this Cup of Ale, hoping that you'll be fo kind as to send us plenty of Sea-ware, for inriching our Ground the ensuing Tear; and so threw the Cup of Alc into the Sea. This was perform'd form'd in the Night-time; at his return to Land, they all went to Church, where there was a Candle burning upon the Altar; and then standing silent for a little time, one of them gave a Signal, at which the Candle was put out, and immediately all of them went to the Fields, where they fell a drinking their Ale, and spent the remainder of the Night in Dancing, and Singing, &c.

THE next Morning they all return'd home, being well satisfy'd that they had punctually observ'd this Solemn Anniversary, which they believ'd to be a powerful means to procure a plentiful Crop. Mr. Daniel, and Mr. Kenneth Morifon, Ministers in Lewis, told me they spent several Years, before they could persuade the vulgar Natives to abandon this ridiculous piece of Superstition, which is quite abolish'd for these 32 Years past.

THE Inhabitants are all Protestants, except one Family, who are Roman Catholicks. I was told, that about 14 Years ago, three or four Fishermen, who then for sook the Protestant Communion, and imbrac'd the Romish Faith, having the opportunity of a Popish Priest on the place, they apply'd themselves to him for some of the Holy-water; it being usual for the Priests to sprinkleit into the Bays, as an infallible means to procure plenty of Herring, as also to bring them into those Nets that are besprinkled with

with it: These Fishers accordingly having got the Water, poured it upon their Nets before they drop'd them into the Sea: They likewise turn'd the inside of their Coats outwards, after which they set their Nets in the Evening at the usual hour. The Protestant Fishers who us'd no other means than throwing their Nets into the Sea, at the same time were very unconcern'd; but the Papists being impatient and full of expectation, got next Morning be times to draw their Nets, and being come to the place, they soon perceiv'd that all their Nets were lost, but the Protestants found their Nets safe, and full of Herring; which was no small mortification to the Priest and his Proselytes, and expos'd them to the derision of their Neighbours.

THE Protestant Natives observe the Festivals of Christmas, Good-Friday, Easter, and Michaelmas; upon this last they have an Anniversary Cavalcade, and then both Sexes ride on Horse-back.

THERE is a Village call'd Storn-Bay, at the head of the Bay of that Name; it confifts of about fixty Families: there are some Houses of entertainment in it; as also a Church, and a School, in which Latin and English are taught. The Steward of the Lewis hath his Residence in this Village. The Lewis which was posses'd by Mack-Leod of Lewis, for several Centuries, is since the Reign of King James the Sixth, become the Property of the Earl of Seasort, who still enjoys it.

## The Isle of HARRIES.

HE Harries being seperated from Lewis is 18 Miles, from the Hushiness on the West Ocean, to Loch-Seasort in the East, from this bounding to the Point of Strond in the South of Harries, it is 24 Miles, and in some places, 4, 5, and 6 Miles in breadth: The Soil is almost the same with that of Lewis, and it produces the same sorts of Corn, but a greater increase.

THE Air is temperately Cold, and the Natives endeavour to qualify it by taking a Dose of Aquavitæ, or Brandy, for they brew no such Liquours as Trestaria, or Usquebaugh-baul. The Eastern Coast of Harries is generally Rocky, and Mountainous, covered with Grass, and Heath. The West-side is for the most part Arable on the Sea-Coast; some parts of the Hills on the East side, are naked without Earth, The Soil being dry and Sandy, is Fruitful when Manur'd with Sea-ware. The Grass on the West side is most Clover and Dasse, which in the Summer yields a most fragrant smell. Next to Loch-Seafort, which for some Miles divides the Lewis from Harries, is the notable Harbour within the Island, by

Sea faring Men call'd Glass, and by the Natives scalpa; it is a Mile and an half long from South to North, and a Mile in breadth. There is an Entrance on the South and North ends of the Isle, and several good Harbours in each, well known to the generality of Seamen. Within the Isle is Loch Tarbat, running 4 Miles West; it hath several small Isles, and is sometimes frequented by Herring. Without the Loch there is plenty of Cod, Ling, and large Eels.

ABOUT half a League further on the same Coast, lies Loch-Stokness, which is about a Mile in length; there is a fresh-water Lake at the entrance of the Island, which affords Oysters, and several sorts of Fish, the Sea having access to it at Spring-tides.

ABOUT a League and a half farther South, is Loch-Finishay, an excellent tho' unknown Harbour; the Land lies low, and hides it from the fight of the Sea-faring Men, till they come very near the Coast. There are besides this Harbour, many Creeks on this side, for Barks and lesser Boats.

FRESH-Water Lakes abound in this Island, and are well stor'd with Trout, Eels, and Salmon; each Lake has a River running from it to the Sea, from whence the Salmon comes, about the beginning of May, and sooner if the Season be

Western Islands of Scotland, &c.

be warm. The best time for Angling for Salmon and Trout is when a warm South-west Wind blows. They use Earth-Worms commonly for Bait, but Cockles attract the Salmon better than any other.

THERE is variety of excellent Springs issuing from all the Mountains of this Island, but the Wells on the Plains near the Sea are not good. There is one remarkable Fountain lately discovered near Marvag houses, on the Eastern Coast, and has a large Stone by it, which is sufficient to direct a Stranger to it. The Natives find by experience that it is very effectual for restoring lost Appetite, all that drink of it become very soon hungry, though they have eat plentifully but an Hour before; the truth of this was confirmed to me by those that were perfectly well, and also by those that were Insign, for it had the same effect on both.

THERE is a Well in the Heath, a Mile to the East from the Village 25020c, the Natives say that they find it Efficacious against Collicks, Stiches, and Gravel.

THERE are several Caves in the Mountains, and on each side the Coast; the largest and best fortify'd by Nature, is that in the Hill Ulweal, in the middle of a high Rock, the Passage leading to it is so narrow, that one only

only can enter at a time: This advantage renders it secure from any attempt, for one single Man is able to keep off a Thousand, if he have but a Staff in his Hand, since with the least touch of it he may throw the strongest Man down the Rock. The Cave is capacious enough for 50 Men to lodge in; it hath two Wells in it, one of which is excluded from Dogs; for they say that if a Dog do but tast of the Water, the Well presently dryeth up; and for this reason, all such as have occasion to Lodge there, take care to tye their Dogs that they may not have access to the Water; the other Well is called the Dogs Well, and is only drunk by them.

THERE are several ancient Forts erected here, which the Natives say, were built by the Danes; they are of a round form, and have very thick Walls, and a passage in 'em by which one can go round the Fort. Some of the Stones that compose 'em are very large, these Forts are named after the Villages in which they are built, as that in Borve is call'd Down-Borve, &c. They are built at convenient distances on each side the Coast, and there is a Fort built in every one of the lesser slies.

THERE are several Stones here erected on one end, one of which is in the Village of Borve, about 7 Foot high. There is another Stone of the same hight to be seen in the opposite

posite Isle of farantay. There are several Heaps of Stones, commonly called Karnes, on the tops of Hills, and rifing Grounds on the the Coast upon which they us'd to burn Heath, as a Signal of an approaching Enemy. There was always a Sentinel at each Karne to observe the Seascoast; the Steward of the Isle made frequent Rounds to take notice of the Sentinels, and if he found any of them a fleep, he strip'd them of their Cloths, and deferred their Personal Punishments to the Proprietor of the Place. This is produceth the same kind of Cattle, Sheep, and Goats that are in the Lewis; the Natives gave me; an account that a couple of Goats did grow wild on the Hills; and after they had increased, they were observ'd to bring forth their Young twice a Year.

THERE are abundance of Deer in the Hills and Mountains here, commonly called the Forrest which is 18 Miles in length from East to West; the number of Deer computed to be in this place, is at least 2000; and there is none permitted to Hunt there without a Licence from the Steward to the Forrester. There is a particular Mountain, and above a Mile of Ground surrounding it, to which no Man hath access to Hunt, this place being referved for Mack-lead himself who when he is disposed to Hunt, is sure to find Game enough there.

BOTH

BOTH Hills and Valleys in the Forrest are well provided with plenty of good Grass mix'd with Heath, which is all the shelter these Deer have during the Winter and Spring; there is not a shrub of Wood to be seen in all the Forrest, and when a Storm comes, the Deer betake themselves to the Sea-Coast, where they seed upon the Alga Marina, or Sea-ware.

THE Mertrick, a four-footed Creature, about the fize of a big Car, is pretty numerous in this life; they have a fine Skin, which is smooth as any Fur, and of a brown Colour; they say that the Ding of this Animal yields a scent like Musk.

THE Amphibia, here are Otters and Seals, the latter are eat by the meaner fort of People, who say they are very nourishing. The Natives take them with Nets, whose ends are tyed by a Rope to the strong Alga, or Sea-ware, growing on the Rocks.

THIS Island abounds with variety of Land and Sea Fowl, and particularly with very good Hawks.

THERE are Bagles here of two forts, the one is of a large fize, and gray colour, and these are very destructive to the Fawns, Sheep, and Lambs.

THE

THE other is considerably less, and black, and shap'd like a Hawk, and more distructive to the Deer, &c. than the bigger fort.

THERE is no Venemous Creatures of any kind here, except a little Viper, which was not thought Venemous till of late, that a Woman dyed of a Wound she received from one of them.

I have seen a great many Rats in the Village Rowdil, which became very troublesome to the Natives, and destroy'd all their Corn, Milk, Butter, Cheese, &c. They could not extirpate these Vermin for some time by all their endeavours. A considerable number of Cats was employed for this end, but were still worsted, and became persectly faint, because overpower'd by the Rats, who were twenty to one; at length one of the Natives of more sagacity than his Neighbours, sound an expedient to renew his Cats Strength and Courage, which was by giving it warm Milk after every Encounter with the Rats, and the like being given to all the other Cats after every Battle, succeeded so well, that they lest not one Rat alive, notwithstanding it great number of them in the Place.

ON the East-side the Village Rowdil, there is a Circle of Stone, within 8 Yards of the C 3 Shore,

Shore, it's about 3 Fathom under Water, and about two stories high; it is in form, broader above than below, like to the lower story of a Kiln: I saw it perfectly on one side, but the season being then Windy, hinder'd me from a full view of it. The Natives say that there is such another Circle of less compass, in the Pool Borodil, on the other side the Bay.

THE Shore on the West Coast of this Island, affords variety of curious Shells, and Walks; as Telling, and Turlines, of various kinds; thin Patelle, Streaked-blue, various colour'd; Pestenes, some blue, and some of Orange colours.

THE Os Sepie is found on the Sand in great quantities. The Natives pulverize it, and take a Dose of it in boiled Milk, which is found by experience to be an effectual Remedy against the Diarhea, and Dysenteria. They rub this Powder likewise, to take off the Film on the Eyes of Sheep.

THERE is variety of Nuts, called Molluka, Beans, some of which are used as Amulets against Witch-crast, or an Evil Eye, particularly the white one, and upon this account they are wore about Childrens Necks, and if any Evil is intended to them, they say, the Nut changes into a black colour: That they did change colour, I found true by my own observation

Western Islands of Scotland, &c. 39 servation, but cannot be positive as to the Cause of it.

MALCOM CAMPBELL, Steward of Harries, told me that some Weeks before my arrival there, all his Cows gave Blood instead of Milk, for several days together, one of the Neighbours told his Wise that this must be Witcherast, and it would be easie to remove it, if she would but take the White Nut, called the Virgin Maries Nut, and lay it in the Pale into which she was to milk the Cows; this advice she presently follow'd, and having milked one Cow into the Pale with the Nut in it, the Milk was all Blood, and the Nut changed its colour into dark brown, she used the Nut again, and all the Cows gave pure good Milk, which they ascribe to the virtue of the Nut. This very Nut Mr. Campbel presented me with, and I keep it still by me.

SOME small quantity of Ambergreese hath been found on the Coast of the Island Barnera. I was told that a Weaver in this Island had burnt a lump of it, to show him a Light for the most part of the Night, but the strong scent of it made his Head ake exceedingly, by which it was discover'd.

AN Ancient Woman, about 60 Years of age, here lost her Hearing, and having no Physitian to give her advice, she would needs C 4

fine took a Quill with which the ordinarily shuffled her Tobacco, and filling it with the Powder of Tobacco, pour'd it into her Ear, which had the desired effect, for she could hear persectly well next day. Another Neighbour about the same Age, having lost her Hearing sometime after, recover'd it by the same Experiment, as I was told by the Natives.

THE Sheep which feed here on Sandy Ground, become blind fometimes, and are cur'd by rubbing Chalk in their Eyes.

A Servant of Sr. Normond Mackeleods, living in the Island of Berneta, had a Mare that brought forth a Fole with both the hinder Feet Cloven, which dyed about a Year after; the Natives concluded that it was a bad Omen to the Owner, and his death which follow'd in a few Years after, confirmed them in their Opinion.

THE Natives make use of the Seeds of a White wild Carrot, instead of Hops for brewing their Beer, and they say that it answers the end sufficiently well, and gives the Drink a good relish besides.

JOHN CAMPBELL Forrester of Barries, makes whe of this singular Remedy for the Western Islands of Scotland, &c.

the Cold, he walks into the Sea up to the middle with his Cloths on, and immediatly after goes to bed in his wet Cloths, and then laying the Bed-cloths over him, procures a Sweat, which removes the Distemper, and this he told me is his only Remedy for all manner of Colds. One of the said John Campbel's Servants having his Cheek swell'd, and there being no Physitian near, he asked his Masters advice; he knew nothing proper for him but however, bid him apply a Plaister of warm Barley Dough to the place affected, this asswaged the swelling, and drew out of the Flesh a little Worm, about half an Inch in length, and about the bigness of a Goose-quill, having a pointed Head, and many little Feet on each fide, this Worm they call Fillan, and it hath been found in the Head and Neck of several Persons that I have seen in the Isle of Stie.

ALLIUMLatifolium, a kind of WildGarlick, is much used by some of the Natives, as a Remedy against the Stone; they boil it in Water, and Drink the infusion, and it expels Sand powerfully with great ease.

THE Natives told me that the Rock on the East-side of Barries, in the found of Island Glass, hath a Vacuity near the front, on the North-west side of the sound, in which they say there is a Stone that they call the Lunar-Stone, which advances and retires according to the increase and decrease of the Moon. A A poor Man Born in the Village **Roundil**, commonly called St. Clements-blind, lost his fight at every Change of the Moon, which obliged him to keep his Bed for a Day or two, and then he recover'd his fight.

THE inferiour Islands belonging to Har-ties, are as follow. The Island Bernera, is Five Miles in Circumference, and lies about Two Leagues to the South of Barries. The Soil is Sandy for the most part, and yields a great Product of Barly and Rye in a plentiful Year, especially if the Ground be enriched by Sea-ware, and that there be Rain enough to satisfie the dry Soil. I had the opportunity to travel this Island several times, and upon a strict enquiry, I found the Product of Barley to be sometimes 20 fold and upwards, and at that time all the East-side of the Island produced 30 fold; this hath been confirmed to me by the Natives, particularly, by Sr. Normond-Mackleod, who possesses the Island, he likewise confirmed to me the account given by all the Natives of **Parries** and **South** Will, viz. that one Barley Grain produceth in some places 7, 10, 12, and 14 Ears of Barley, of which he himself being diffident for sometime, he was at the principle forms. he was at the pains to fearch nicely the Root of one Grain after some Weeks growth, and found that from this One Grain many Ears had been grown up. But this happens not except

Western Islands of Scotiano, &c. 43 cept when the Season is very savourable, or in Grounds that have not been cultivated some Years before, which if Manur'd with Sea ware, seldom fails to produce an extraordinary Crop. It is observed in this Island, as elsewhere, that when the Ground is dug up with Spades, and the Turfs turn'd upside down, and cover'd with Sea-ware, it yields a better product than when it is plow'd.

THERE is a Fresh-water Lake in this Island called Loch-Bruist, in which there are small Islands abounding with Land and Sea Fowl, which build there in the Summer. There is likewise plenty of Eels in this Lake, which are easiest caught in September, and then the Natives carry Lights with them in the Night time to the Rivulet running from the Lake, in which the Eels fall down to the Sea in heaps together.

This Island in the Summer is covered all over with Clover, and Dasie, except in the Corn-fields: There is to be seen about the Houses of Bernera, for the space of a Mile a soft Substance in shew and colour, exactly resembling the Sea-plant, called Slake, and grows very thick among the Grass. The Natives say that it is the Product of a stry hor Soil, it grows likewise in the tops of several Hills in the Island of Barries.

IT'S proper to add here an account of several strange irregularities in the Tides, on Ber, neva Coast, by Sr. Robert Murray, mention'd in the Phil. Transactions.

THE Tides increase and decrease gradually according to the Moons Age so as about the third day after the New and sull Moon, in the Western Isles and Continent they are commonly at the highest, and about the quarter Moons, at the lowest. (The former called Spring-Tide, the other Neap Tides) the Tides from the quarter to the highest Spring Tide increase in a certain proportion, and from the Spring Tide to the Quarter Tide in like proportion; and the Ebbs rise and fall always, after the same manner.

IT's suppos'd that the increase of Tides is made in the proportion of sines; the first increase exceeds the lowest in a small proportion, the next in a greater, the third greater than that, and so on to the middle-most, whereof the excess is the greatest, diminishing again from that to the highest Spring-Tide, so as the proportions before and after the middle, do answer one another. And likewise from the highest Spring-Tide, to the lowest Neap-Tide, the decreases seem to keep the like proportions. And this commonly falls out when no Wind, or other Accident causes an alteration. At the begining

Western Islands of Scotland, &c. 45

beginning of each Flood on the Coast, the Tide moves faster, but in a small degree, increasing its swiftness till towards the middle of the Flood, and then decreasing in swiftness again from the middle to the top of the High-water, it's supposed that the inequal spaces of time, the increase and decrease of swiftness, and confequently the degrees of the Rifings and Fallings of the fame inequal spaces of time, are performed according to the proportion of Sines. The proportion cannot hold precifely and exactly in regard of the inequalities that fall out in the Periods, of the Tides, which are believed to follow certain pofitions of the Moon in regard of the Equinox, which are known not to keep a precise con-stant Course, so that there not being equal Portions of Time between one New Moon and another, the Moons return to the same Meridian cannot be always performed in the fame time. And the Tides from New-Moon. being not always the same in Number, or fometimes but 57, fometimes 58, fometimes 59, (without any certain order or succession) is another evidence of the difficulty of reduceing this to any great exactness.

AT the East end of this Isle, there is a strange reciprocation of the flux and ressux of the Sea. There is another no less remarkable upon the West side of the Long Island, the Tides which come from the South-west, run along

along the Coast Northward; so that during the ordinary course of the Tides, the Flood runs East in the Frith, where Berneray lies. and the Ebb West, and thus the Sea Ebbs and Flows orderly, some Four days before the Full and Change; and as long after, (the ordinary Spring-Tides rifing some 14 or 15 foot upright, and all the rest proportionably, as in other places) but afterwards, for Four Days before the Quarter Moons, and as long after, there is constantly a great and fingular Variation. For then (a Southerly Moon making there the full Sea) the Courseof the Tide being Eastward : When it begins to flow, which is about 91 of the Clock, it not only continues for bout 31 in the Afternoon, that it be highwater, but after it begins to Ebb, the Current runs on still Eastward, during the Whole Ebb, fo that it runs Eastward 12 hours together, that is, all day long, from about 91 in the Morning, till about 9 at Night. But then when the Night-Tide begins to Flow, the Current turns, and runs Westward all Night, during both Flood and Ebb for some 12 hours more, as it did Eastward the day before, and thus the Reciprocations continue, one Flood and Ebb and running 12 hours Eastward, and another 12 hours Westward, till 4 days before the Full and New Moon; and then they refume their ordinary regular Course as before, running East during the Six hours of Flood, and West during the Six of Ebb.

THERE

## Western Islands of Scotland, &c.

THERE is another extraordinary Irregularity in the Tides, which never fail: That whereas between the Vernal and Autumnal Equinox, that is for fix Months together, the Course of irregular Tides about the Quarter Moons, is to run all day, 12 hours, as from about 9½ to 9½ to 10 exact Eastward all night, that is, 12 hours more Westward, during the other fix Months, from the Autumnal to the Vernal Equinox, the Current runs all Day Westward, and all Night Eastward. I have observed the Tides as above, for the space of some Days both in April, May, July, and August. The Natives have frequent opportunities to see this both Day and Night, and they all agree that the Tides run as mention'd above.

which beat away all Ravenous Fowls, and when their Young are able to fly abroad, they pool beat them also out of the Island, but not with our many blows, and a great Noise.

THERE are two Chappels in this Isle, to wit, St. Asaphs, and St. Columbus's Chappel. There is a Stone erected near the former, which is 8 Foot high, and 2 Foot thick.

ABOUT half a League from Betnera, to the Westward, lies the Island Pathap, 3 Miles in Circumference, and having a Mountain in the middle; the Soil is Sandy, and fruit-

[11]

fruitful in Corn and Grass, and the Natives have lately discovered here a white Marle. The West end of this Island which looks to St Kilda, is called the Wooden Harbour, because the Sands at Low-water, discover several Trees that have formerly grown there. Sir Normand Mackleod told me that he had seen a Tree cut there, which was afterwards made into a Harrow.

THERE are two Chappels in this Island, one of which is Dedicated to the Virgin Mary,

the other to St. Muluag.

THE Steward of Bilds, who lives in 198bbay, is accustomed in time of a Storm, to tie
a bundle of Puddings made of the Fat of SeaFowl to the end of his Cable, and lets it fall
into the Sea, behind the Rudder, this he says
hinders the Waves from breaking, and calms
the Sea; but the scent of the Grease attracts the Whales, which put the Vessel in
danger.

ABOUT half a League to the North of pathay, lies the Isle sellay, a Mile in Circumference, that yields extraordinary Pasturage for Sheep, so that they become fat very soon; they have the biggest Horns that ever I saw on Sheep.

About a League farther to the North, lies the Isle Tarantay, very fruitful in Corn and Grass,

Western Islands of Scotland, &c. 49
Grass, and yeilds much yellow Talk. It is
3 Miles in Circumference, and has two Chappels, one dedicated to St. Tarran, the other to St. Keith.

THERE is an ancient Tradition among the Natives here, that a Man must not be Buried in St. Tarrans, nor a Woman in St. Kieth's, because otherwise the Corps would be found above Ground the day after it is Interred. I told them this was a most ridiculous fancy, which they might foon perceive by experience, if they would but put it to a tryal. Roderick Campbel, who resides there, being of my opinion, resolved to embrace the first opportunity that offer'd, in order to undeceive the Credulous Vulgar, and accords ingly a poor Man in this Island who dyed a Year after, was buried in St. Tarrans Chappel, contrary to the ancient Custom and Tradition of this place, but his Corps are still in the Grave, from whence it is not like to rife until the general Resurrection. This instance has delivered the credulous Natives from this unreasonable fancy. This Island is a Mile distant from the main Land of Barries, and when the Inhabitants go from this Island to parries with a defign to flay for any time, they agree with those that carry them over, on a particular motion of walking upon a certain peice of Ground, unknown to every body but themselves as a signal to bring em back. THREE

THREE Leagues to the Westward of this Island, lies Basker, about half a Mile in circumference, it excels any other plot of its extent, for fruitfulness in Grass and Product of Milk, it maintains 8 or 10 Cows; the Natives kill Seals here which are very big.

ABOUT two Leagues farther North lies the Island Scarp, 2 Miles in Circumference, and is a high Land covered with Heath and Grass.

BETWEEN Bernera and the Main Land of Barries lies the Island Enfay, which is above 2 Miles in Circumference, and for the most part Arable Ground, which is fruitful in Corn and Grass; there is an old Chappel here for the use of the Natives, and there was lately discovered a Grave in the West end of the Island, in which was found a pair of Scales made of Brass, and a little Hammer, both which were finely polished.

BETWEEN Entay and the main Land of Barries, lies several small Islands, fitter for Pasturage then Gultivation.

THE little Island Duedam, hath a Vein of Adamant Stone, in the front of the Rock; the Natives say that Mice don't live in this Island, and when they chance to be carried thither among

Western Islands of Scotland, &c. 51 aomng Corn, they die quickly after, without these small Islands, there is a Tract of small Isles in the same Line with the Eastside of the Barries, and Posthibits, They are in all respects of the same Nature with those two Islands, so that the sight of them is apt to dispose one to think that they have been once united together.

THE most Southerly of these Islands, and the nearest to **Poith-bist** is **Permetra**, two miles in Circumference, it is a Moorish Soil, covered all over almost with Heath, except here and there a sew Piles of Grass, and the Plant Milk-wort, yet notwithstanding this disadvantage, it is certainly the best spot of its extent for Pasturage, among these Isles, and affords great plenty of Milk in January and February beyond what can be seen in the other Islands.

I saw here the soundation of aHouse built by the English, in K. Charles the First's time, for one of their Magazines to lay up the Cask, Salt, &c. for carrying on the Fishery, which was then begun in the Western Islands, but this design miscarried because of the Civil Wars, which then broke out.

THE Channel between Parries and Porth bill, is above three Leagues in breadth, and abounds with Rocks, as well under as above Water, Tho' at the same time, Vessels of D 2 300

West, having the advantage of one of the Natives for a Pilot, some 16 years ago, one Captain Frost was safely conducted in this manner. The Parties belongs in property to the Laird of Mack Leod, he and all the Inhabitants are Protestants, and observe the Festivals of Christmass, Goodfriday, and St. Michaels day, upon the latter, they Rendezvous on Horse back, and make their Cavalcade on the Sands at low water.

THE Island of **Mosth bist** lyes about three Leagues to the South of the Island of **Barries**, being in form of a Semi-circle, the Diameter of which looks to the East and is Mountainous and full of Heath, and fitter for Pasturage then Cultivation. The West side is of a quite different Soil, Arable and Plain, the whole is in length from South to North Nine Miles, and about Thirty in Circumference.

THERE are Four Mountains in the middle, Two he within less then a Mile of each other, and are called south and Roth, Lee; all the Hills and Heath afford good Pasturage, tho it consists as much of Heath as Grass. The Arable Ground hath a mixture of Clay in some places, and it is covered all over in Summertime, and Harvest with Clover, Dasie, and Variety of other Plants, pleasant to the sight, and of a fragrant smell, and abounds with

Western Islands of Scotland, &c. 53

with black Cattle, and Sheep. The Soil is very grateful to the Husband-man, yielding a Produce of Barley, from Ten to Thirty fold in a plentiful Year; provided the Ground be manur'd with Sea-ware, and that it have Rain proportionable to the Soil. I have upon several occasions enquired concerning the produce of Barley, in this and the Neighbouring stlands; the same being much doubted in the South of Scotland, as well as in England; and upon the whole, I have been assured by the most Antient and Industrious of the Natives, that the increase is the same as mentioned before in **Barries**.

THEY told me likewise, that a Plot of Ground which hath lain unmanur'd for some Years, would in a Plentiful feafon produce Fourteen Ears of Barley from One Grain; and feveral Ridges were then shewed me of this extraordinary Growth in different places. The Grain fow'n here is Barley, Oats, Rye; and it's not to be doubted, but the Soil would also produce Wheat. The way of Tillage here is commonly by Ploughing, and fome by Digging; the ordinary Plough is drawn by four Hories, and they have a little Plough also call'd Ristle, i. e. a thing that cleaves, the Culter of, which is in Form of a Sickle, and it is drawn fometimes by One, and fometimes by Two Horses, according as the Ground is; the design of this little Plow is to draw a deep D 3 Line

Line in the Ground, to make it the more easie for the big Piow to follow, which otherwise would be much retarded by the strong Roots of Bent lying deep in the Ground, that are cut by the little Plow. When they dig with Spades, it produceth more increase; the little Plow is likewise used to facilitate Digging as well as Plowing; they continue to Manure the Ground until the 10th of June, if they have plenty of Brazgir, i.e. the broad Leaves growing on the top of the Alga-Marina.

ABOUT a League and a half to the South of the Island Hermetra in Harries, lies Loch Maddy, to called from the three Rocks without the Entry on the South fide: They are called Midlies, from the great quantity of big Muscles call'd Maddies that grows upon them. This Harbour is Capacious enough for some hundreds of Vessels of any Burthen; it hath feveral Isles within it, and they contribute to the security of the Harbour, for a Ves-fel may safely come close to the Key; the Sea-men divide the Harbour in two parts, calling the South-side Loch-Maddy, and the North-side Loch-Partan. There is one Island in the South Lock which for its Commodiousness is by the English call'd Ronsuch; this Loch hath been famous for the great quantity of Herrings yearly taken in it within these 50 Years last past: The Natives told me that in the Memory of some yet alive, there had been

been 400 Sail Loaded in it with Herrings at one Season; but it is not now frequented for Fishing, tho' the Herrings do still abound in it, and on this Coast every Summer and Harvest, the Natives sit Angling on the Rocks, and as they pul! up their Hooks, do many times bring up Herrings; That they are always on the Coast, appears from the Birds, Whales, and other Fishes, that are their forerunners every where, and yet it is strange that in all this Island there is not one Herring Net to be had; but if the Natives saw any Encouragement, they could soon provide 'em. Cod, Ling, and all sorts of Fish taken in these Islands abound in and about this Lake.

IN this Harbour there is a small Island called Maching, in which there is still to be seen the Foundation of a House, built by the English, for a Magazine to keep their Cask, Salt, &c. for carrying on a great Fishery which was then begun there. The Natives told me that King Charles the 1st. had a share in it: This Lake with the convenience of its Fishings and Islands is certainly capable of great improvement; much of the Ground about the Bay is capable of Cultivation, and affords a great deal of Fuel, as Turst, Peats, and plenty of Fresh-Water. It also affords a good quantity of Oysters, and Clam-shell-sish, the former grows on Rocks, and are so big that they are cut in four peices before they are eat.

D 4

ALOUT

ABOUT half a Mile further South is Loth. Epott, having a Rock without the Mouth of the Entry, which is narrow; the Lake penetrates some Miles towards the West, and is a good Harbour, having several small Isles withinit. The Seals are very numerous here. In the Month of July the Spring-Tides carry in a great quantity of Macrel, and at the return of the Water, they are sound many times lying on the Rocks. The Vulgar Natives make use of the Ashes of burnt Sea-ware, which preserves them for some time instead of Salt.

ABOUT two Miles to the South of Loch: Epost lies the Bay, called the Byle of Rona; having the Island of that Name (which is a little Hill) within the Bay; there is a Harbour on each fide of it, this Place hath been found of great convenience for the Fishing of Cod, and Ling, which abounds on this Coast; there is a little Chappel in the Island Rona, called the Law-landers Chappel, because Seamen who dye in time of Fishing, are buried in that place.

THERE is a Harbour on the South fide the Island Borers, the Entry seems to be narrower then really it is; the Island and the opposite Point of Land appear like two little Promontories off at Sea. Some Vessels have been forced in there by Storm, as was Captain Peters.

ters a Dutch Man, and after him an English Ship, who both approved of this Harbour; the former built a Cock-boat there on a Sunday, at which the Natives were much offended. The latter having Landed in the Island, happened to come into a House where he found only Ten Women, and they were imploy'd (as he suppos'd) in a strange manner, viz. their Arms and Legs were bare, being Five on a side, and between them lay a Board, upon which they had laid a piece of Cloth, and were thickning of it with their Hands and Feet, and Singing all the while, the English Man, presently concluded it to be a little Bedlam, which hedid not expect in so remote a Corner, and this he told to Mr. John Macklean, who possesses the Island; Mr. Macklean answer'd he never saw any Mad People in those Islands, but this would not fatisfie him, till they both went to the place where the Women were at work, and then Mr. Macklean having told him, that it was their common way of thickning Cloth, he was convinced, the surprized at the manner of it

THERE is such a number of Fresh-water Lakes here, as can hardly be believed, I my self and several others indeavour'd to number them, but in vain, for they are so dispos'd into turnings, that it is impracticable. They are generally well stock'd with Trouts and Eels, and some of em with Salmon, and which is yet

yet more strange, Cod, Ling, Macrel &c. are taken in these Lakes into which they are brought by the Spring Tides.

THESE Lakes have many smallsslands which in Summer abound with variety of Land and Sea Fowls, that build and hatch there. There be also several Rivers here, which afford Salmon, one fort of them is very singular, that is called Marled Salmon, or as the Natives call it iesk-draimin, being lesser then the ordinary Salmon, and full of strong Large Scales, no bait can alsure it, and a shadow frights it away, being the wildest of sishes, it leaps high above water, and delights to be in the surface of it.

THERE's great plenty of Shell-fish round this Island, more particularly Cockles, the Islands do also afford many small Fish called Eels of a whitish colour, they are picked out of the Sand with a small crooked Iron made on purpose. There is plenty of Lobsters on the west side of this Island, and one fort bigger then the rest, having the Toe shorter and broader.

THERE are several antient Forts in this Island, built upon Eminences, or in the middle of fresh water Lakes.

HERE are likewise several Kairns or Heaps of Stones, the biggest I observed was on a hill near to Loch-Eport. There are three Stones erected Western Islands of Scottant, &c. 59 erected about five foot high, at the distance of a quarter of a mile from one another, on Eminences about a mile from Loch-Maddy, to amuse Invaders, for which reason they are still called salse sentinels.

\* THERE is a Stone of 24 foot long and 4 in breadth in the hill Criniveal, the Natives say a Giant of a month old was buried under it. There is a very conspicuous Stone in the sace of the Hill above St. Peters, village, aboue 8 foot high.

THERE is another about 8 foot high at Down-rossel which the natives call a Cross. There are two broad Sones about 8 foot high on the hill two miles to the South of Uslay.

THERE is another at the Key opposite to Birkiball 12 soot high, the Natives say that delinquents were tyed to this Stone in time of Divine Service.

THERE is a Stone in form of a Cross in the Row, opposite to St. Maries Church about 5 foot high, the Natives call it the water Cross, for the antientlnhabitants had a Custom of erecting this fort of Cross to procure rain, and when they had got enough they laid it flat on the ground, but this custom is now disused. The inferior Island is the Island of Weightt which lyes near three

threeLeagues westward of Routh Wift is three miles in Circumference of a fandy foil, and very fruitful in Corn and Grass. Black Cattle and the Inhabitants labour under want of Fuel of all forts, which obliges them to burn Cows Dung, Barley straw, and dry'd Sea-ware: the Natives toldme that bread baked by the Fuel of Sea-ware, relishes better than that done otherwise. They are accustomed to Salt their Cheese with the Ashes of Barley Straw, which they suffer not to ly on it above 12 hours time, because otherwise it would spoil it. There was a Stone Chest lately discovered here, having an earthen Pitcher in it which was full of Bones, and afloon as touched they to Duft.

THERE are two small Islands separated by narrow Channels from the Northwest

this Island, and are of the same Mold with the big Island. The Natives say that there is a Couple of Ravens there, which fuffer no other of their kind to approach this Island, and if any fuch Chance to come, this Couple immediately drive them away, with such a noise as is heard by all the Inhabitants: They are observed likewife to beat away their young as foon as they be able topurchase for themselves; the Natives told me that when one of this Couple happened

to be Wounded by Gun-shot, it lay still in the Corner of a Rock for a week or two, duing which time its Mate brought Provision to

.. it

Western Islands of Scotland, &c. 61

it daily, until it recovered perfectly: the Natives add further that one of these two Ravens having dyed some time after, the surviving one abandoned the Island for a few days, and then was feen to return with about ten or 12 more of its kind and having chosen a Mate out of this number all the rest went quite off, leaving these two in Possession of their little Kingdom, they do by a certain fagacity discover to the Inhabitants any Carcase, on the Shoar or in the fields (whereof I have feen feveral instances:) The inhabitants pretend to know by their noise, whether it be Flesh or Fish, I told them, this was fuch a Nicety that I could scarcely give it credit, but they answered me that they came to the knowledge of it by observation, and that they make their loudest noise for Flesh. There is a narrow Channel between the Island of Beight'r and one of the lesser Islands in which the Natives formerly killed many Seals, in this manner, they twisted together several small Ropes of Horse Hair in form of a Net contracted at one end like a Purse, and so by opening and shutting this Hair Net, these Seals were catched in the narrow Channel. On the South Side of Northvist are the Islands of Illeray which are accessible at low Water, each of them being 3 miles in compass and are very fertile in Corn and Cattle.

ON the western Coast, of this Island lyes the Rock Cousmil, about a quarter of amile

in circumference, and it is still famous for the yearly fishing of Seals there, in the end of October, this Rock belongs to the Farmers of the next adjacent Lands, there is one who furnisheth a Boat, to whom there is a particular share due on that account, besides his proportion as Tenant, the Parish Minister hath his choice of all the Young Seals, and that which he takes is called by the Natives, Cullen Mory, that is, the Virgin Marys Seal. The Steward of the Island hath one paid to him, his Officer hath another, and this by vertue of their Offices. These Farmers man their Boat with a competent number fit for the business, and they always imbarque with a contrary wind, for their fecurity against being driven away by the Ocean, and likewise to prevent them from being discovered, by the Seals, who are apt to smell the scent of them, and presently run to sea.

WHEN this Crew is quietly landed, they furround the Passes, and then the signal for the general attacque is given from the Boat, and so they beat them down with bigstaves. The Seals at this On-set make towards the Sea with all speed, and often force their passage over the necks of the stoutest assailants, who aim always at the Forehead of the Seals, giving many blows before they be killed, and if they be not hit exactly on the front they contract a Lump on their Forehead which makes them look very sierce, and if they get hold of the Staff with their

Western Islands of Scotland, &c. 63 their Teeth, they carry it along to Sea with them. Those that are in the Boat shoot at them as they run to Sea, but sew are catch'd that way. The Natives told me that several of the biggest Seals lose their Lives by endeavouring to Save their Young ones, whom they tumble before them, towards the Sea. I was told also that 320 Seals Young and Old have been killed at one time in this Place. The reason of attacking 'em in October, is, because in the beginning of this month the Seals bring forth their Young on the Ocean Side, but these on the East Side who are of the lesser stature bring forth their Young in the middle of June.

THE Seals eat no Fish till they first take off the Skin, they hold the Head of the Fish between their Teeth, and pluck the Skin off each Side with their sharp pointed Nails, this I ob-ferved several times. The Natives told me, that the Seals are regularly coupled, and refent an Encroachment on their Mates at an extraordinary rate, the Natives have observed that when a Male had invaded a Female, already coupled to another the injured Male upon its return to its Mate would by a strange Sagacity find it out and resent it against the aggressor by a bloody conflict, which gives a red Tincture to the Sea in that part where they Fight; this piece of revenge has been often oblerved by Seal Hunters, and many others of unquestionable

ble Integrity, whose occasions obliged them to be much on this Caast, I was assured by good Hands that the Seals make their addresses to each other by kisses, this hath been observed often by Men and Women as Fishing on the Coast in a clear Day: the Female puts away its Young from sucking, as soon as it is able to provide for it self, and this is not done without many severe blows.

THERE is a Hole in the Skin of the Female, within which the Teats are secured from being hurt, as it creeps along the Rocks and Stones, for which cause nature hath formed the point of the Tongue of the Young one cloven without which it could not suck.

THE Natives Salt the Seals with the ashes of burnt Sea-ware, and say they are good Food, the vulgar eat them commonly in the Spring time with a long pointed Stick instead of a Fork, to prevent the strong smell which their hands would otherwise have for several Hours after. The Flesh and Broth of sresh Young Seals, is by experience known to be Pectoral; the Meat is Astringent, and used as an effectual remedy against the Diarrhea and Dysentes ria; the Liver of a Seal being dry'd and pulveriz'd, and afterwards a little of it drunk with Milk, Aquavita or Red-Wine, is also good against Fluxes.

SOME

SOME of the Natives wear a Girdle of the Seals-skin about their middle for removing the Sciatica, as those of the Shire of Aberdeen wear it to remove the Chin-cough. This four-footed Creature is reckon'd one of the swiftest in the Sea; they say likewise that it leaps in Cold Weather the height of a Pike above Water, and that the Skin of it is white in Summer and darker in Winter, and that their Hair stands on end with the Flood, and falls again at the Ebb: The Skin is by the Natives cut in long pieces, and then made use of instead of Ropes to six the Plow to their Horses when they Till the Ground.

THE Seal, tho' esteemed fit only for the Vulgar, is also eaten by Persons of Distinction, tho' under a different Name, to wit, Hamm; this I have been assured of by good hands, and thus we see that the generality of Men are as much led by fancy as judgment in their Palates as well as in other things. The Popish Vulgar in the Islands Southward from this, eat these Seals in Lent instead of Fish, this occasion'd a debate between a Protestant Gentleman and a Papist of my Acquaintance, the former alledged that the other had transgressed the Rules of his Church, by eating Flesh in Lent, the latter answer'd, that he did not, for says he I have eat a Sea Creature, which only lives and feeds upon Fish, the Protestant reply'd, that this

Creature is Amphibious, lies, creeps, eats, fleeps, and so spends much of its time on Land, which no Fish can do and live. It hath also another faculty that no Fish has, that is, it breaks Wind backward so loudly, that one may hear it at a great distance; but the Papist still maintain'd that he must believe it to be Fish till such time as the Pope and his Priests decide the question.

ABOUT Three Leagues and an half to the West, lies the small Islands called Bawsker. Rocks, and Hawsher Eggath, and Haw-Sker-Pimannich, id, est, Monks-Rock, which hath an Altar in it, the first called so from the Ocean as being near to it, for Haw or Thau in the Ancient Language signifies the Ocean, the more Southerly Rocks are 6 or 7 big ones nicked or indented, for Eggath signifies so much the largest island which is Northward, is near half a Mile in Circumference, and it is covered with long Grafs, only small Vessels can pass between this and the Southern Rocks, being nearest to St. Kilda of all the West Islands; both of 'em abound with Fowls as much as any lses of their extent in St. Kilda. Coulterneb Guillemot, and Scarts are most numerous here, the Seals likewise abound very much in and about these Rocks.

THE Island of Walay lies on the West near the main Land of Routh with, it is about 4 Miles Western Islands of Scotland, &c. 67 Miles in Circumference, arable and a dry Sandy Soil, very fruitful in Corn and Grass, Clover and Dasse. It hath Three Chappels, One Dedicated to St. Ulton, and another to the Virgin Mary. There are Two Crosses of Stone, each of them about 7 Foot high, and a Foot and a half broad.

THERE is a little Font on an Altar, being a big Stone, round in like of a Cannon Ball, and having in the upper end a little Vacuity capable of two Spoonfuls of water; below the Chappels there is a flat thin Stone, called Brownies Stone, upon which the ancient Inhabitants offered a Cows Milk every Sunday, but this Custom is now quite abolish'd. Some Thirty Paces on this side is to be seen a little Stone House under Ground, it is very low and long, having an entry on the Sea side; I saw an entry in the middle of it, which was discover'd by the falling of the Stones and Earth.

ABOUT a League to the North-east of water is the Island of Boters, about 4 Miles in Circumference, the Mold in some places is Sandy, and in others black Earth, it is very fruitful in Cattle and Grass; I saw a Mare here, which I was told brought forth a Fole in her Second Year.

THERE is a Cowhere that brought forth two Female Calves at once, in all things so very E 2 like like one another that they could not be distinguished by any outward mark, and had such a simpathy, that they were never separate, except in time of fucking, and then they kep'd ftill their own side of their Dam, which was not observed until a distinguishing Mark was put about one of their Necks by the Milk-maid. in the middle of this Island, there's a Freshwater Lake, well stock'd with very big Eels, fome of them as long as Cod, or Ling-Fish; there is a passage under the Stony Ground, which is between the Sea and the Lake, through which it's the suppos'd Eels come in with the Spring Tides; one of the Inhabitants called Mick-vanish, i. e. Monks-Son, had the curiofity to creep naked through this Passage.

THIS Island affords the largest and best Dulse for eating, it requires less Butter than any other of this sort, and has a mellowish Tasse.

THE Burial place near the Houses, is called the Monks-Field, for all the Monks that dyed in the Islands that lye Northward from Egg, were buried in this little Plot, each Grave hath a Stone at both ends, some of which are 3 and others 4 Foothigh. There are big Stones without the Burial place even with the Ground, several of them have little Vacuities in them as it made by Art; the Tradition is that these Vacuities were dug for receiving the Monks Knees when they prayed upon em. THE

THE Island Lingay, lyes half a League South on the side of Bozeray, it is singular in respect of all the Lands of Will and the other Islands that surround it, for they are all composed of Sand, and this on the contrary, is altogether Moss covered with Heath, affording sive Peats in depth, and is very servicable and useful, surnishing the Island Bozeray. &c. with Plenty of good Fuel: This Island was held as Consecrated for several Ages, in so much that the Natives would not then presume to cut any Fuel in it.

THE Cattle produced here, are Horles, Cows, Sheep and Hogs, generally of a low stature; the Horses are very strong and fit for Pads, tho exposed to the rigour of the weather all the Winter and Spring in the open Fields. Their Cows are also in the Fields all the Spring, and their Beef is sweet and tender as any can be; they live upon Sea-mare in the Winter and Spring, and are satured by it, nor are they slaughtered before they eat plentifully of it in December. The Natives are accustomed to salt their Beef in a Cows Hide, which keeps it close from Air, and preserves it as well, if not better, then Barrels, and tasts they say best when this way used: This Beef is transported to Blasgow, a City in the West of Scoiland, and from thence (being put into Barrels there) exported to the Indies in good Condition. The Hills

afford some hundreds of Deer, who eat Sea-ware also in Winter and Spring-time.

THE Amphibia produced here are Seals, and Otters. There is no Fox or venemous Creature in this Island. The great Eagles here fasten their Tallons in the back of Fish, and commonly of Salmon, which is often above Water and in the surface. The Natives who in the Summer time live on the Coast, do sometimes rob the Eagle of its Prey after its Landing.

HERE are Hawks, Eagles, Pheasants, Moor-Fowls, Tarmogan, Plover, Pigeons, Crows, Swans, and all the ordinary Sea-Fowls in the West Islands. The Eagles are very destructive to the Fawns and Lambs, especially the black Eagle, which is of a lesser fize then the other. The Natives observe that it fixes its Tallons between the Deers Horns, and beats its Wings constantly about its Eyes, which puts the Deer to run continually till it fall into a Ditch, or over a Precipice, where it dies, and so becomes a Prey to this cunning Hunter. areat the same time several other Eagles of this kind which flye on both sides of the Deet, which frights it extreamly, and contributes much to its more sudden destruction.

THE Forester and several of the Natives assured me, that they had seen both forts of Eagles

Western Islands of Scotland, &...

Eagles kill Deer in this manner. The Swans come hither in great Numbers in the Month of October, with North East Winds, and live in the fresh Lakes, where they feed upon Trout and Water Plants till March, at which time they fly away again with a South-east Wind. When the Natives kill a Swan it is common for the Eaters of it to make a Negative-vow (i. e. they swear never to do something that is in it self impracticable.) before they taste of the Fowl.

THE Bird Corn-Craker, is about the bigness of a Pigeon, having a longer Neck, and being of a brown Colour, but blacker in harvest then in Summer; the Natives say it lives by the Water, and under the Ice in Winter and Spring.

THE Colk is a Fowl somewhat less than a Goose, hath Feathers of divers colours, as White, Gray, Green and Black, and is beautiful to the Eye; it hath a Tust on the Crown of its Head like that of a Peacock, and a Train longer then that of House-Cock. This Fowl looseth its Feathers in time of Hatching, and lives mostly in the remotest Islands, as Deisher and Bons.

THE Gawlin, is a Fowl less than a Duck, it is reckon'd a true Prognosticator of fair weather, for when it sings fair and good weather always follows, as the Natives commonly E 4 observe;

observe; the Piper of St. Kilda plays the Notes which it sings, and hath composed a Tune of em, which the Natives judge to be very fine Musick.

THE Rain-goofe bigger then a Duck, makes a doleful Noise before a great Rain, it builds its Nest always upon the brink of fresh water Lakes, so as it may reach the water.

THE Bonnivochil, so called by the Natives, and by the Scamen, Bishop, and Carara, as big as a Goose, having a white spot on the Breast, and the rest party coloured, it seldom slies, but is exceeding quick in diving; the Minister of Motth weighed Sixteen Pound and an Ounce; there is about an Inch deep of Fat upon the Skin of it, which the Natives apply to the Hip Bone, and by experience find it a successful Remedy for removing the Sciatica.

THE Bird Goylir, about the bigness of a Swallow, is observed never to Land but in the Month of January, at which time it is supposed to hatch, it dives with a violent swiftness; when any number of these Fowls are seen together, its concluded to be an undoubted sign of an approaching storm, and when the storm ceases they disappear under the Water, the Seamen call them Malifizies, from Malisessizes, which they often find to be true.

THE

## Western Islands of Scotland, &c. 73

THE Bird Sereachan-aittin, is about the bigness of a large Mall but having a longer Body, and a blewish Colour, The Bill is of a Carnation Colour, This Bird shreiks most hideously, and is observed to have a greater affection for its Mate, than any Fowl whatsoever, for when the Cock or Hen is killed, the surviving one doth for 8 or 10 Days afterward make a Lamentable Noise about the place.

THE Bird Faskidar, about the bigness of a Sea-maw of the middle fize is observed to fly with greater swistness than any other fowl in those parts, and pursues lesser sowls, and forces them in their flight to let fall the Food which they have got, and by its nimbleness catches it, before it touch the Ground.

THE Natives observe that an extraordinary heat without Rain at the usual time the Seafouls lay their Eggs, hinders them from laying any Eggs, for about 8 or ten Days, whereas warm Weather accompanied with Rain disposes them to lay much sooner.

THE Wild Geese are plential here and very destructive to the Barley, notwithstanding the many methods used for driving them away both by Traps and Gun-shot. There are some slocks of barren Fowls of all kinds, which are distinguished by their not joyning with the

the rest of their kind, and they are seen commonly upon the bare Rocks, without any Nests.

THE Air here is moist and moderately Cold, the Natives qualify it sometimes by drinking a Glass of Usquebaugh, the moisture of this Place is such that a Loaf of Sugar is in Danger to be dissolved, if it be not preserved by being near the Fire, or laying it among Oat Meal, in some close place; sron here becomes quickly rusty, and Iron which is on the Sea side of a House grows sooner rusty than that which is on the Land side.

THE greatest Snow falls here with the South-west Winds, and seldom continues above three or sour Days. The ordinary Snow falls with the North and Northwest Winds, and dos not lye so deep on the Ground near the Sea, as on the tops of Mountains.

THE Frost continues till the Spring is pretty far advanced, the severity of which occasions Great numbers of Trouts and Eles to Dye, but the Winter Frosts have not this effect, for which the Inhabitants give this reason viz. That the rains being more frequent in October, do in their opinion carry the Juice and Quintessence of the Plants into the Lakes, whereby they think the Fish are nourished during the winter and there being no such nourishment in the Spring,

Spring, in regard of the uninterrupted running of the Water which carries the Juice with it to the Sea, it deprives the Fish of this nourishment. and consequently of Life, and they add further, that the Fish have no access to the Supperficies of the Water, or to the brink of it, where the Juice might be had. The Natives are the more confirmed in their opinion, that the Fishes in Lakes and Marishes are observed to out-Live both Winter and Spring Frosts. The East North East Winds always procure fair weather here as they do in all the North West Mands, and the rains are more frequent in this place in October and February, than at any other time of the Year.

FOUNTAIN Water drunk in Winter, is reckoned by the Natives to be much more wholesome than in the Spring, for in the latter it causeth the Diarrhea and Disenteria.

THE diseases that prevail here are, Fevers, Diarhea and Disenteria, stitch Coughs, Sciatica, Megrim, the small Pox which commonly come once in 17 Years time, the ordinary cure for feavers is letting Blood plentifully. The Diarhea is cured by drinking Aqua vitæ and the Stronger the better: the Flesh and Liver of Seals are used as above mentioned both for the Diarhea and Disenteria, milk wherein hectick Stone has been quehed, being frequently drunk is likewise a good remedie for the two Diseases last mentioned.

THE Kernel of the black Nut found on the Shore, being beat to powder and drunk in milk or Aqua Vitæ, is reckoned a good remedy for the said two diseases, Stitches are cured sometimes by Letting blood.

THEIR common cure for Coughs is Bro-chan formerly mentioned: The case of the Carrara foul with the fat being powdered a little, and applyed to the Hip-bone is an approved remedy for the Sciatica. Since the great Change of the Seasons, which of late Years is become more piercing and cold, by which the growth of the Corn, both in the Spring and Summer Seasons are retarded; there are some diseases discovered, which were not known here before, viz. a spoted Fever, which is commonly cured by drinking a glass of Brandy or Aqua Vitæ liberally when the disease seizes them, and using it till the Spots appear outwardly. This Fever was brought hither by a Stranger from the Island of April, who infected these other Islands; when the Fever is violent the Spots appear the 2d Day, but commonly on the 4th Day, and then the Discase comes to a Crisis the 7th Day, but if the Spots don't appear the 4th. Day, the Difease is reckoned mortal, yet it hath not prov'd so here, tho' it has carried off several in the other adjacent Southern Islands. The vulgar accustomed to apply flamula fovis, for evacuating Noxious Humours fuch as Cause the Headach

Western Islands of Scotland, &c. 77 ach, and pains in the Arms or Leggs, and they find great Advantage by it, the way of using it is thus, they take a quantity of it, bruised small and put into a Patella and apply it so to the Skin a little below the place affected, in a small time it raises a Blister about the bigness of an Egg, which when broke, voids all the matter that is in it, then the Skin fills and swells twice again and as often voids this matter; they use the Sea-plant Linarich to cure the Wound, and it proves effectual for this purpose, and also for the Me-

grim and Burning.

THE Broth of a Lamb in which the Plants Shunnish and Alexander have been boiled is found by Experience to be good against Consumptions. The green Sea-plant Linarich is by them applyed to the Temples and Forehead to dry up Defluctions, and also for drawing up the Tonsels. Neil Mackdonald in the Island Deiskit is subject to the falling of the Tonsels at every change of the Moon, and they continue only for the first Quarter, this infirmity hath continued with him all his days, yet he is now 72 Years of Age.

JOHN FAKE who lives in pathle in the Parish of Kilmoor, alias St. Maries is constantly troubled with a great Sneezing a day or two before Rain, and if the Sneezing be more than usual, the Rain is said to be the greater; Therefore he is called the Rain Almanack. He has had this faculty, these 9 Years past.

THERE

THERE is a House in the Village called Arth Dimbothin in the Parish of St. Maries, and the house Cock there never crows from the tenth of September till the middle of March. This was told me two Years ago, and since consistend to me by the Natives, and the present Minister of the Parish.

THE Inhabitants of this Island are generally well Proportioned, of an ordinary Stature and a good Complection, healthful, and some of 'em come to a great Age, several of my Acquaintance arrived at the Age of 90, and upwards, John Mackdonald of Brinings was of this Number, ad died lately in the 93d Year of his Age. Donald Roy who lived in the Isle of Sano, and died lately in the hundreth Year of his Age, was able to travel and manage his Affairs till about two Years before his Death. They are a very Charitable and Hospitable People as is any where to be found. There was never an Inn here till of late, and now there is but one, which is not at all frequented for eating, but only for drinking, for the Natives by their hospitality render this new invented House in a manner useless, the great Produce of Barley draws many Strangers to this Island, with a defign to procure as much of this Grain as they can, which they get of the Inhabitants gratis only for asking, as they do Horses, Cows, Sheep, Wool, &c. I was told some Months

Months before my Last arrival there, that there had been two Men in that Place at one time to ask Corn gratis, and every one of these had some one, some two, and others three Attendants, and during their abode there, were all entertained gratis, no one returning empty.

THIS a great, yet voluntary Tax, which has continued for many Ages, but the late general scarcity, has given them an occasion to alter this Custom, by making Acts against liberality, except to Poor Natives, and Objects of Charity.

THE Natives are much addicted to riding, the plainness of the Country disposing both Men and Horses to it. They observe an Anniversary Cavalcade on Michaelmas Day, and then all ranks of both Sexes appear on Horseback: The place for this Randezvous is a large Piece of firm sandy Ground on the Seasshore, and there they have Horse racing for small prizes, for which they contend eagerly. There is an Antient Custom, by which it is lawful for any of the Inhabitants to steal his Neighbours Horse the Night before the race, and ride him, all next Day, provided he deliver him safe and sound to the Owner after the race; the manner of running is, by a few Young Men, who use neither Sadles, nor Bridles, except two small Ropes made

of Bent instead of a Bridle nor any fort of Spurs, but their bare heels, and when they begin the race they throw these Ropes on their Horses Necks, and drive them on vigorously with a piece of long Sea-ware in each hand, instead of a Whip, and this is dry'd, in the Sun several Months before for that purpose. This is a happy opportunity for the Vulgar, who have few occasions for meeting, except on Sundays, the Men have their Sweet-hearts behind them on Horse-back, and give and receiving mutual Presents, the Men present the Women with Knives and Purses, the Women present the Men with a pair of fine Garters of divers Colours, they give them likewife a quantity of Wild Carrots. This life belongs in Property to Sir. Donald-Mack-Donald of Steat; he and all the Inhabitants are Protestants, one only excepted, they ob-ferve Christmass, Goodfriday, and St. Michaels Day.

The Isle Benbecula, it's Distance, Length, Bay, Mold, Grain, Pish, Cattle, Fresh Lakes, Forts, a Stone Vault, Numery, Proprietors

directly to the South of Porthvill from which, it is two Miles distant, the Ground being all plain and sandy between them, having two little Rivers or Channels no higher than ones Knee at a Tide of Ebb, this Passage is overslow'd by the Sea every Tide of Flood, nor is it Navigable except by Boats. There are several small Islands on the East-side of this Channel. This Island is three Miles in length from South to North, and three from East to West, and ten Miles in Compass. The East-side is covered with Heath, it hath a Bay called Unishway, in which small Vessels do sometimes harbour, and now and then Herrings are taken in it.

THE Mountain Benbecula, from which the Isle hath its Name, lies in the middle of it; the Eastern part of this Island is all arable, but the Soil sandy, the Mold is the same with that of Porthbist, and affords the same Corn, Fish, Cattle, Amphibia, &c. There is no Venemous Creature here. It hath several

ral Fresh-water Lakes well stock'd with Fish, and Fowl. There are some ruines of old Forts to be seen in the small Islands, in the Lakes and on the Plain.

THERE are also some small Chapels here, one of them at Bael-nin-Killach, id est, Nuns Town, for there were Nunnerys here in time of Popery; the Natives have lately discovered a Stone Vault on the Eastfide the Town, in which there are abundance of small Bones which have occasioned many uncertain Conjectures, some said they were the Bones of Birds, others judged them rather to be the Bones of Pigmies, the Proprietor of the Town enquiring Sir. Normand Mackleods Opinion concerning them, he told him that the matter was plain as he supposed, and that they must be the Bones of Infants born by the Nuns there. This was very difagreeable to the Roman Catholick Inhabitants who laugh'd it over. But in the mean time the Natives out of Zeal took care to shut up the Vault, that no access can be had to it fince, so that it would seem they believe what Sir Normand said or else fear'd that it might gain Ctedit by fuch as afterward had Occasion to see them. This Island belongs properly to Ranal Mackdonald of Benbecula, who, with all the Inhabitants are Roman Catholicks, and I remember I have feen an old Lay Capuchin here, called in the Language Brabir bocht\_

Western Islands of Scotland, &c. 83

bocht, that is, Poor Brother, which is litterally true, for he answers this Character, having nothing but whar is given him, he holds himfelf fully satisfied with Food and Rayment, and lives in as great simplicity as any of his Order, his Diet is very mean, and he drinks only Fair Water; his habit is no less Mortifying than that of his Brethren elsewhere, he wears a short Coat which comes no further than his Middle, with narrow Sleeves like a Wastcoat, he wears a Plad above it girt about the Middle which reaches to his Knee; the Plade is fastened on his Breast with a Wooden Pin, his Neck bare, and his feet often so to, he wears a Hat for Ornament, and the string about it is a bit of a Fishers Line made of Horses Hair, this Plad he wears instead of a Gown worn by those of his Order in other Countrys, I told him he wanted the Flaxen Girdle that Men of his Order usually wear, he answered me that he wore a Leather one, which was the same thing upon the matter, if he is spoke to when at Meat, he answers again, which is contrary to the Custom of his Order; this Poor Man frequently diverts himself with Angling of Trouts, he lyes upon Straw, and had no Bell (as others have) to call him to his Devotion, but only his Conscience, as he told me.

THE speckled Salmons, described in 12 wift are very plentiful on the West side of this island.

THE Island of South-uist lyes directly two Miles to the South of Benbecula, being in length one and twenty Miles, and three in breadth, and in some places four, the Eastfide is Mountainous on the Coast, and heathy for the most part, the West-side is plain arable Ground, the Soil is generally sandy, yielding a good produce of Barley, Oats, and Rye, in proportion to that of N. Wift: And has the same sort of Cattle; both East and Westfides of this Island abound in Fresh-water Lakes, which afford Trouts and Eels, besides variety of Land and Sea-fowls, the arable Land is much damnified by the overflowing of theseLakes in divers Places which they have not hitherto been able to drain, tho the thing be practicable. Several Lakes have old Forts built upon the small Islands in the middle of them. About four Miles on the South-east end of this Island, is Loch: eyno20, it reaches several Miles Westward, having a narrow Entry which makes a violent. Current, and within this entry there's a Rock, upon which there was staved to pieces a Frigat of Cromwels, which he fent there to subdue the Natives. greafe hath been found by several of the Inhabitants on the West Coast of this Island, and they fold it at Blasgow at a very low rate, not knowing the value of it at first, but when they knew it, they raised the price to the o-ther extream. Upon a Thaw after a long Frost. Western Islands of scotland, &c. 85
Frost, the South-east Winds cast many dead
Fishes on the shoar. The Inhabitants are generally of the same Nature and Complection
with those of the next adjacent Northern
Islands, they wear the same Habit, and use the
same Diet; one of the Natives is very Famous
for his great Age, being as it's said, an hundred and thirty years old, and retains his Appetite and Understanding; he can walk
abroad, and did Labour with his hands as
usually, 'till within these three years, and for
any thing I know, is yet living.

THERE are several big Kairnes of Stone on the East side this Island, and the Vulgar retain the ancient Custom of making a Religious Tour round them on Sundays, and Holidays.

THERE is a Valley between two Mountains on the east side, called Glenslyte, which affords good Pasturage. The Natives who Farm it, come thither with their Cattle in the Summer time, and are possessed with a firm belief that this Valley is haunted by Spirits, who by the Inhabitants are called the great Men; and that whatsoever Man or Woman enters the Valley without making first an entire resignation of themselves to the Conduct of the great Men, will infallibly grow Mad. The words by which he or she gives up himself to these Mens Conduct, are comprehensed.

ded in three Sentences, wherein the Glen is twice named; to which they add, that it is Inhabited by these great Men, and that such as enter depend on their protection. I told the Natives that this was a piece of filly Credulity as ever was imposed upon the most ignorant Ages, and that their imaginary Protectors deserved no such Invocation. They answer'd, That there had hapened a late instance of a Woman who went into that Glen without resigning her self to the Conduct of these Men and immediately after she became Mad, which confirmed them in their unreasonable sancy.

THE People residing here in Summer say, they sometimes hear a loud noise in the Air. like Men speaking: I enquired if their Priest had Preach'd or Argu'd against this superstitious Custom? They told me he knew better things, and would not be guilty of disswading Men from doing their Duty, which they doubted not he judged this to be, and that they resolv'd to persist in the belief of it, until they found better Motives to the contrary, than hath been shewed them hitherto. The Protestant Minister hath often endeavour'd to undeceive them, but in vain, because of an Implicit Faith they have in their Priest; and when the Topicks of Perswasion, tho' never so urgent, comes from one they believe to be an Heretick, there is little hope of success.

THE Island Erisca, about a Mile in length, and three in Circumference, is partly heathy, and partly arable, and yields a good produce. The innerfide hath a wide Anchorage, there is excellent Cod and Ling in it, the Natives begin to manage it better, but not to that advantage it is capable of. The small Island near it was overgrown with Heath, and about three years ago the ground threw up all that Heath from the very root, so that there is not now one shrub of it in all this Island. Such as have occasion to Travel by Land between Southuist, and Benbecula, or Benbecula and Northuilt, had need of a Guide to direct them, and to observe the Tide when low, and also for croffing the Channel at the right Fords, else they cannot pass without danger.

THERE are some houses under ground in this Island, and they are in all points like those described in Northuist; one of them is in the South Ferry-Town, opposite to Barray. The Cattle produced here, be like those of Northuist, and there are above three hundred Deer in this Island; it was believ'd generally, that no Venomous Creature was here, yet of late some little Vipers have been seen in the South end of the Island.

THE Natives speak the Irish Tongue more perfectly here, than in most of the other Mands: F 4

Islands; partly because of the remoteness, and the small number of those that speak English, and partly because some of 'em are Scholars, and versed in the Irish Language. They wear the same habit with the Neighbouring Islanders.

THE more Ancient People continue to wear the old Dress, especially Women; they are a hospitable well-meaning People, but the missortune of their education disposes them to Uncharitableness, and rigid thoughts of their Protestant Neighbours; tho' at the same time they find it convenient to make Alliances with them. The Churches here are St. Columba, and St. Maries in Hogh-more, the most Centrical place in the Island. St. Jeremy's Chappels, St. Peter's, St. Bannan, St. Michael, St. Don-nan.

THERE is a Stone set up near a Mile to the S. of Columbus's Church, about eight soot high, and two soot broad, it is called by the Natives the Bowing-Stone; for when the Inhabitants had the first sight of the Church, they set up this Stone, and there bowed and said the Lord's Prayer. There was a Buckle of Gold sound in Einort ground some twenty years ago, which was about the value of seven Guineas.

AS I came from Southuist, I perceived about fixty Horsemen riding along the Sands, directions

ing their Course for the East-sea, and being between me and the Sun, they made a great figure on the plain Sands; we discover'd them to be Natives of Southnist, for they alighted from their Horses, and went to gather Cockles in the sands, which are exceeding plentiful there. This Island is the Property of Allan Macdonald of Moydart, head of the Tribe of Mackdonald called Clanronalds, one of the Chief Families descended of Mackdonald, who was Lord and King of the Islands. He, and all the Inhabitants are Papists, except sixty, who are Protestants; the Papists observe all the Festivals of their Church, they have a general Cavalcade on All Saints Day, and then they bake St. Michael's Cake at Night, and the Family and Strangers eat it at Supper.

FERGUS BEATON hath the following Ancient Irish Manuscripts in the Irish Character; to wit, A.Vicenna, A.Verroes, Joannes de Vigo, Bernardus Gordonus, and several Volumes of Hypocrates.

THE Island of Barray lies about two Leagues and a half to the South West of the Island Southwist, it is five Miles in length, and three in breadth, being in all respects like the Islands lying directly North from it. The East side is Rocky, and the West Arable Ground, and yields a good produce of the same Graine that both Uists do: They use likewise the same

same way for enriching their Land with Sea-Ware. There is plenty of Cod and Ling got on the East and South sides of this Island; several small Ships from Orkney come hither in Summer, and afterwarward return Loaden with Cod, and Ling.

THERE is a safe Harbour on the North East side of Barray, where there is great plenty of Fish.

THE Rivers on the East side afford Salmons fome of which are speckled like these mentioned in Northuist, but they are more successful here in Catching them. The Natives go with with three feveral Herring-Nets, and lay them cross-ways in the River where the Salmon are most numerous, and betwixt them and the Sea. These Salmon at the fight or shadow of the People make towards the Sea, and feeling the Net from the surface to the ground, jump over the first, then the second, but being weakned, cannot get over the third Net, and so are catched. They delight to leap above Water, and swim on the surface; one of the Natives told me that he killed a Salmon with a Gun, as jumping above Water.

THEY inform'd me also that many Barrels of them might be taken in the River above-mention'd, if there was any encouragement for cureing

## Western Islands of Scottand, &c. 91

cureing and transporting them. There are several old Forts to be seen here, in form like those in the other Islands. In the South end of this Island there is an Orchard which produces Trees, but sew of them bear Fruit, in regard of their nearness to the Sea; all sorts of Roots and Plants grow plentifully in it; some years ago Tobacco did grow here, being of all Plants the mest grateful to the Natives, for the Islanders love it mightily.

THE little Island Bismul, lies about a quarter of a Mile from the fouth of this Isle, it is the Seat of Mackneil of Barra, there is a stone Wall round it two stories high, reaching the Sea, and within the Wall there is an old Tower and an Hall, with other Houses about it. There is a little Magazine in the Tower, to which no Stranger has access. I saw the Officer call'd the Cockman, and an old Cock he is, when I bid him Ferry me over the Water to the Island, he told me that he was but an inferior Officer, his business being to attend in the Tower; but if (fays he) the Constable, who then stood on the Wall will give you access. I'll Ferry you over. I desir'd him to procure me the Constables permission, and I would reward him; but having waited some hours for the Constable's Answer, and not receiving any, I was oblig'd to return without seeing this famous Fort. Mackneill and his Lady being ablent was the cause of this difficulty, and of

my not seeing the Place: I was told some weeks after that the Constable was very apprehensive of some Design I might have in viewing the Fort, and thereby to expose it to the Conquest of a Foreign Power, of which I supposed there was no great cause of sear. The Natives told me there is a Well in the Village Tangstill, the Water of which being boiled, grows thick like puddle. There is another Well not far from Tangstill, which the Inhabitants fay in a fertile year throws up many grains of Barley in July, and August. And they say that the Well of Kilbar throws up embrioes of Cockles, but I could not discern any in the Rivulet, the Air being at that time The Church in this Island is called Kilbarr, i.e. St. Barr's Church. There is a little Chappel by it, in which Mackneil, and those descended of his Family are usually interred. The Natives have St. Barr's Wooden Image standing on the Altar covered with Linen in form of a shirt, all their greatest Asseverations are by this Saint. I came very early in the Morning with an intention to see this Image, but was disappointed, for the Natives prevented me, by carrying it away, lest I might take occasion to ridicule their superstition, as some Protestants have done formerly, and when I was gone, it was again exposed on the Altar. They have several Traditions concerning this great Saint. There is a Chappel about half a mile on the fouth fide of the Hill

Western Islands of Scotland, &c. 93 Hill near St. Barr's Church) where I had occasion to get an account of a Tradition concerning this Saint, which was thus. The In-habitants having begun to build the Church; which they dedicated to him, they laid this Wooden Image within it, but it was invisibly transported (as they say) to the Place where the Church now stands, and found there every morning. This Miraculous Conveyance is the Reason they give for desisting to Work where they first began. I told my Informer that this extraordinary Motive was sufficient to determine the Case, if true, but ask'd his Pardon to diffent from him, for I had not Faith enough to believe this Miracle; at which he was furpriz'd, telling me in the mean time, That this Tradition hath been faithfully conveyed by the Priests and Natives successively to this day. The southern Islands are, (1) **Millionist**, about a Mile in Circumserence, it is high in the middle, cover'd over with Heath and Grass, and is the only Forrest here for maintaining the Deer, being commonly about seventy or eighty in number.
(2) The Island Sandreray, lies southerly of Barra, from which it is separated by a narrow Channel, and is three Miles in Circumference, having a Mountain in the mid-dle, it is design'd for Pasturage and Cultiva-tion. On the south side there is an Harbour convenient for small Vessels, that come yearly here to Fish for Cod, and Ling, which

abound'

94 Western Islands of Scotland, &c. abound on the Coast of this Island. (3) The Island Sandreray, two Miles in Circumserence, is Fruitful in Corn and Grass, and separated by a narrow Channel from Vatter-say.

(4) TO the fouth of these lies the Island Bernera, about two Miles in Circumference; it excels other Islands of the same extent for Cultivation, and Fishing. The Natives never go a Fishing while Mackneil or his Steward is in the Island, lest seeing their plenty of Fish, perhaps they might take occafion to raise their Rents. There is an old Fort in this Island, having a vacuity round the Walls, divided in little Apartments; the Natives endure a great fatigue in Manuring their Ground with Sea-ware, which they carry in Ropes upon their backs over high Rocks; they likewise fasten a Cow to a Stake, and spread a quantity of Sand on the ground, upon which the Cows dung falls, and this they mingle together, and lay it on the atable Land. They take great numbers of Sea-Fowls from the adjacent Rocks, and falt them with the ashes of burnt seasware in Cows hides, which preferves them from putrefaction.

THERE is a fort of Stone in this Island, with which the Natives frequently rub their Breasts by way of prevention, and say it is a good

good preservative for Health, this is all the Medicine they use, Providence is very favourable to them, in granting them a good State of Health, since they have no Physician among them.

THE Inhabitants are very Hospitable, and have a Custom, that when any Strangers from the Northern Islands refort thither, the Natives immediately after their landing oblige them to eat, even tho' they should have liberally eat and drunk but an Hour before their landing there. And this Meal they call Bieyta'v, id est Ocean Meat, for they presume that the sharp Air of the Ocean, which indeed furrounds them must needs give them a good Appetite: And whatever number of Strangers come there, or of whatsoever Quality or Sex, they are regularly lodged according to Antient Custom, that is, one only in a Family, by which Custom a Man cannot lodge with his own Wife, while in this Island, Mr. John Campbell the present Minister of Parries, told me that his Father being then Parson of Barries and Minister of Barray (for the Natives at that time were Protestants) carried his Wife along with him, and resided in this Island for some time, and they disposed of him, is Wife and Servants in manner above mentioned, and suppose Mackneil of Barra and his Lady should go thither, he would be obliged to comply with this Ancient Custom.

THERE is a Large Root grows among the Rocks of this Island lately discovered, the Natives call it *Curran-Petris*, of a whitish colour, and upwards of two foot in Length where the Ground is deep, and in shape and size like a large Carret, where the Ground is not so deep, it grows much thicker, but shorter, the top of it is like that of a Carret.

THE Rock Linmull about half a Mile in Circumference, is indifferently high, and almost Inaccessible, except in on Place, and that is by climbing which is very Difficult, this Rock abounds with Sea-sowls that build and hatch here in Summer, such as the Gillemot, Coulter-neb, Puffin, &c. The chief Climber is commonly called Gingich, and this Name imports, a Big Man having Strength and Courage proportionable, when they approach the Rock with the Boat Mr. Gingich jumps our first upon a Stone on the Rock-side, and then by the assistance of a Rope of Horse hair, he draws his Fellows out of the Boat upon this high Rock, and draws the rest up after him with the Rope, till they all arive at the Top, where they purchase a Considerable Quantity of Fowls and Eggs; upon their return to the Boat, this *Gringich* runs a great hazzard by jumping first into the Boat again, where the violent Sea continually rages, having but a few Fowls more than his Fellows, besides Western Islands of Scotland, &c. 97

a greater esteem to compensate his Courage-When a Tenants Wise in this or the adjacent Islands Dies, he then addresses himself to Mackneill of Batta, representing his Loss, and at the same time desires that he would be pleased to recommend a Wise to him, without which he cannot manage his Affairs, nor beget followers to Mackneill which would prove a publick Loss to him; upon this Representation Mackneill sinds out a suitable Match for him, and the Womans Name being told him, immediately he goes to her carrying with him a Bottle of Strong-waters for their Entertainment at Marriage which is then Consummated.

WHEN a Tennant Dyes, the Widdow addresseth her self to Mackneill in the same manner, who likewise provides her with a Husband, and they are married without any surther Courtship. There is in this Island an Altar dedicated to St. Christopher at which the Natives perform their Devotion. There is a Stone set up here, about seven foot high, and when the Inhabitants come near it, they take a Religious turn round it.

IF a Tenant chance to lose his Milk Cows by the Severity of the Scason, or any other Missortune. In this Case Mackneill of Barra, supplies him with the like Number that he lost. WHEN any of these Tenants are so far advanced in Years as they are uncapable to till the Ground, Mackneill takes such Old Men into his own Family and Maintains them all their Life after. The Natives observe that if sixsheep are put a grasing in the little ssland pathbay, sive of them still appear Fat, but the sixth a Poor Skeleton, but any Number in this ssland not exceeding sive are always very Fat. There is a little ssland not far from this called spicified of the same extent as pathbay, and hath the same way of feeding of Sheep. These little sslands afford excellent Hawks.

THE Isles above mentioned lying near to the South of Barray are commonly called the Bishops Isles because they held of the Bishop, some Isles, ly on the East and North of Barray, as, starty, Apellicay, Buya, Major and Minor, Lingay, Juda, they after Pasturage and are Commodions for Fishing, and the latter being above two Miles in Circumference, is fertile in Corn and Grass. There is a good anchoring Place next to the Isle on the North-East side.

THE Steward of the Lesser and Southern Illands is reckoned a Great Man here, in regard of the Perquisits due to him such as a particular Share of all the Lands, Corn, Butter, Cheese, Fish &c. which these Islands produce

Western Islands of **Scotland**, &c. 99 duce, the Measure of Barley paid him by cach Family yearly is an Omer as they call it containing about two Pecks.

THERE is an inferiour Officer who also hath a right to a share of all the same Products. Next to these comes in course those of the lowest Posts, such as the Cockman and Porter, each of whom hath his respective due which is punctually paid.

Mackneil of Barra and all his Followers are Roman Catholick, one only excepted, viz: Murdock Mackneil, and it may perhaps be thought no small Vertue in him to adhere to the Protestant Communion considering the disadvantages he labours under by the want of his Chief's Favour, which is much lessened, for being a Heretick, as they call him. All the Inhabitants observe the Anniversary of St. Barr being the 27th of September, it is performed riding on Horse-back, and the solemnity is concluded by three turns round St. Barrs Church: This brings into my Mind a Story which was told me concerning a Foreign Priest and the entertainment he met with after his arrival there some Years ago, as sollows. This Priest hapned to land here upon the very Day and at the particular Hour of this folemnity, which was the more acceptable to the Inhabitants, who then desired him to preach a Commemoration Sermon to the G 2 Honout

Honour of their Patron St. Barr, according to the Antient Custom of the Place; at this the Priest was surprised, he never having heard of St. Barr before that Day, and therefore knowing nothing of his Vertues could say nothing concerning him, but told them that if a Sermon to the honour of St. Paul or St. Peter could please them, they might have it instantly, this Answer of his was so disagreeable to them, that they plainly told him he could be no true Priest, if he had no heard of St. Barr; for the Pope himself had heard of him, but this would not persuade the Priest so that they parted much dislatisfied with one another. They have likewife a general Cavalcade on St. Michaels Day in Bilbar Village, and do then also take a turn round their Church : Every Family as foon as the folemnity is ended, is accustomed to bake St. Michaels Cake as above describ'd, and all Strangers together with those of the Family must eat the Bread that Night.

THIS Island and the adjacent lesser Islands belong in property to Mackneil being the 34 of that Name by Lineal descent, that has possessed this Island if the present Genealogers may be credited: He holds his Lands in vassallage of Sr. Donald Mc. Donald of Slate to whom he pays 40 l. per Innum and a Hawk if required, and is oblig'd to furnish him a certain Number of Men upon extraordinary Occasions.

Darties by Google

The Ancient and Modern Customs of the Inhabitants of the Western Islands of Scotland.

Tribe, was oblig'd in Honour to give a Publick Specimen of his Valour, before he was owned and declared Governour or Leader of his People, who obey'd and follow'd him upon all Occasions.

THIS Chieftain was usually attended with a Retinue of Young Men of Quality, who had not before hand given any proof of their Valour, and were ambitious of such an opportunity to fignalize themselves.

IT was usual for the Captain to lead them, to make a desperate Incursion upon some Neighbour or other that they were in sewd with, and they were obliged to bring by open sorce the Cattle they sound in the Lands they attacked, or to die in the attempt.

AFTER the performance of this Atchievement, the young Chieftain was ever after reputed Valiant, and worthy of Government; and such as were of his Retinue acquired the like reputation. This Custom being reciprocally used among them, was not irequired Robbery:

Robbery; for the Damage which one Tribe sustained by this Essay of the Chiestain of another, was repaired when their Chiestain came in his turn to make his Specimen; but I have not heard an instance of this practife for these fixty years past.

THE Formalities observed at the entrance of these Chiestains upon the Government of their Clans, were as follow:

A heap of stones was erected in form of a Pyramid, on the top of which the young Chieftain was placed, his Friends and Followers standing in a Circle round about him, his elevation fignifying his Authority over them, and their standing below, their subjection to him. One of his principal Friends deliver'd into his hands the Sword wore by his Father, and there was a white Rod delivered to him likewise at the same time.

IMMEDIATELY after the Chief Druid (or Orator) stood close to the Pyramid, and pronounc'd a Rhetorical Panegyrick, fetting forth the ancient Pedigree, Valour, and Liberality of the Family, as Incentives to the young Chieftain, and fit for his imitation

IT was their Custom, when any Chiestain marched upon a Military Expedition, to draw

Western Islands of Scotland, &c.

fome blood from the first Animal that chanced to meet them upon the Enemies ground, and thereafter to sprinkle some of it upon their Colours; this they reckon'd as a good Omen of success.

THEY had their fixed Officers who were ready to attend them upon all occasions, whither Military or Civil; some Families continue them from Father to Son, particularly Sir Donald Macdonald has his principal Standard Bearer, and Quartermaster. The latter has a right to all the hides of Cows killed upon any of the occasions mention'd above, and this I have seen exacted punctually, tho the Officer had no Charter for the same, but only Custom.

THEY had a constant Sentinel on the top of their Houses called Gockmin, or in the English Tongue Cockman, who was obliged to Watch Day and Night, and at the approach of any body, to ask Who comes there? This Officer is continu'd in Barra still, and has the Perquisites due to his Place paid him duly at two Terms in the year.

THERE was a competent number of young Gentlemen called Luchktach, or Guard de Corps, who always attended the Chieftain at home, and abroad; they were well Train'd in managing the Sword, and Target, in Wrest-G 4 ling.

ling, Swimming, Jumping, Dancing, Shooting with Bows and Arrows, and were four Seamen.

EVERY Chieftain had a bold Armour-Bearer, whose Business was always to attend the Person of his Master Night and Day to prevent any surprize, and this Man was called Galloglach; he had likewise a double portion of Meat assigned him at every Meal. The measure of Meat usually given him, is called to this day Bieysir, that is, a Man's portion, meaning thereby an extraordinary Man, whose Strength and Courage distinguished him from the common fort.

BEFORE they engaged the Enemy in Battle, the Chief Druid harangu'd the Army to excite their Courage; he was placed on an Eminence, from whence he Addressed himself to all of em standing about him, putting them in mind of what great things were perform'd by the Valour of their Ancestors, rais'd their hopes with the Noble Rewards of Honour and Victory, and dispell'd their sears by all the Topicks that Natural Courage could suggest. After this Harangue, the Army gave a general shout, and then charged the Enemy stoutly. This in the ancient Language was called Brosnichiy Kah, i. e. an Incentive to War. This Custom of shouting aloud, is believed to have taken its rise from

Western Islands of Scotland, &c. 105 an instinct of Nature, it being attributed to most Nations that have been of a Martial Genius. As by Homer to the Trojans, by Tacitus to the Germans, by Livy to the Gauls. Every great Family in the Isles had a Chief Druid who foretold suture Events, and decided all Causes Civil and Ecclesiastical. It is reported of them that they wrought in the Night time, and rested all Day. Casar says they Worshipped a Deity under the Name of Taramis, or Taran, which in Welsh signifies Thunder, and in the ancient Language of the Highlanders, Torin signifies Thunder also.

ANOTHER God of the Britains was Belus, or Belinus, which seems to have been the Assyrian God Bel, or Belus; and probably from this Pagan Deity comes the Scots term of Beltin, the Day of May, having its sirst rise from the Custom practised by the Druids in the Isles, of extinguishing all the Fires in the Parish until the Tithes were paid; and upon payment of them, the Fires were kindled in each Family, and never till then. In those Days Malesactors were burnt between two Fires; hence when they would express a Man to be in a great strait, they say, he is between two Fires of Bel, which in their Language they express thus. Edir da hin Veaul or Bel. Some object that the Druids could not be in the slees, because no Oaks grow there. To which I answer, That in those

Days Oaks did grow there, and to this day there be Oaks growing in some of them, particularly in Sleat, the most Southern part of the Isle of Skie. The Houses Named after those Druids, shall be described elsewhere.

The manner of Drinking used by the Chief Men of the Isles, is called in their Language Streah, i. e. a round, for the Company sate in a Circle, the Cup-bearer filled the Drink round to them, and all was drank out, whatever the Liquor was, whether strong, or weak; they continued drinking sometimes twenty sour, sometimes forty eight hours. It was reckon'd a piece of Manhood to drink until they became drunk, and there were two Men with a Barrow attending punctually on such Occasions. They stood at the door until some became drunk, and they carried them upon the Barrow to Bed, and returned again to their Post as long as any continued fresh, and so carried off the whole Company one by one as they became drunk. Several of my Acquaintance have been Witnesses to this Custom of drinking, but it is now abolish'd.

AMONG Persons of distinction it was reckon'd an affront put upon any Company, to broach a piece of Wine, Ale, or Aqua Vitæ, and not to see it all drank out at one Meeting. If any Man chance to go out from the Company, tho' but for a sew Minutes, he is obliged

Western Islands of Scotland, &c. 107 ged upon his return, and before he take his Seat, to make an Apology for his absence in Rhyme, which if he cannot perform, he is liable to such a share of the Reckoning as the Company thinks sit to impose; which Custom obtains in many Places still, and is called Beauchiy Bard, which in their Language signifies the Poets congratulating the Company.

IT hath been an ancient Custom in these Isles, and still continues, when any number of Men retire into an House, either to Discourse of serious Business, or to pass some time in drinking; upon these occasions the door of the House stands open, and a Rod is put cross the same, which is understood to be a sign to all Persons without distinction nor to approach; and if any should be so rude as to take up this Rod, and come in uncalled, he is sure to be no welcome Guest; for this is accounted such an affront to the Company, that they are bound in honour to resent it; and the Person offending, may come to have his Head broken, if he do not meet with a harsher reception.

THE Chieftain is usually attended with a numerous Retinue when he goes a Hunting the Deer, this being his first Specimen of Manly Exercise: all his Cloaths, Arms, and Hunting equipage is upon his return from the Hills,

Hills, given to the Forrester, according to Custom.

EVERY Family had commonly two Stewards, which in their Language were called Marischall Taeh; the first of these serv'd always at home, and was oblig'd to be well versed in the Pedigree of all the Tribes in the Isles, and in the Highlands of Scotland; for it was his Province to assign every Man at Table his Seat according to his Quality, and this was done without one word speaking, only by drawing a Score with a white Rod which this Marischall had in his hand, before the Person he was bid to sit down, and this was necessary to prevent disorder and contention; and the Marischall might sometimes be mistaken, the Master of the Family incurr'd no censure by such an escape; but this Custom has been laid aside of late. They had also Cup-bearers, who always filled and carried the Cup round the Company, and he himself drank off the first draught. They had likewise Purse-masters, who kept their Money; both these Officers had an hereditary right to their Office in Writing, and each of them had a Town and Land for his Service; some of those Rights I have seen fairly written on good Parchment.

BESIDES the ordinary Rent paid by the Tenant to his Master, if a Cow brought forth

Western Islands of Scotland, &c. 109 forth two Calves at a time, which indeed is extraordinary, or an Ewe two Lambs, which is frequent, the Tenant paid to the Master one of the Calves, or Lambs; and the Master on his part was obliged, if any of his Tenants Wives bore Twins, to take one of them, and breed him in his own Family. I have known a Gentleman who had sixteen of these Twins in his Family at a time.

THEIR ancient Leagues of Friendship were ratisted, by drinking a drop of each others Blood, which was commonly drawn out of the little Finger. This was Religiously observed as a sacred Bond; and it any Person after such an Alliance happened to violate the same, he was from that time reputed unworthy of all honest Mens Conversation. Before Money became current, the Chiestains in the Isles bestowed the Cows head, seet, and all the intrails upon their Dependants; such as the Physician, Orator, Poet, Bard, Musicians, &c. and the same was divided thus: The Smith had the head, the Piper had the, &c.

IT was an ancient Custom among the Islanders to being a He Goat to the Boats Mast, hoping thereby to procure a favourable Wind, but this is not practifed at present; tho' I am told it hath been done once by some of the Vulgar within these 13 years last past.

THEY

THEY had an Universal Custom, of pow-ring a Cows Milk upon a little Hill, or big Stone where the Spirit call'd Browny was be-lieved to lodge, this Spirit always appeared in the shape of a Tall Man having very long brown Hair: There was scarce any the least Village in which this Superstitious Custom did not prevail, I enquired the reason of it from feveral well meaning Women, who, until of late had practifed it, and they told me that it had been transmitted to them by their Anceftors fuccesfully, who believed it was attended with good Fortune, but the most Credulous of the Vulgar had now laid it aside. It was an ordinary thing among the over-curious to consult an invisible Oracle, concerning the fare of Families, and Battles &c, This was performed three different Ways, the first was by a Company of Men, one of whom being detached by Lot, was afterwards carried to a River, which was the Boundary between two Villages, four of the Company laid hold on him, and having thut his Eyes, they took him by the Legs and Arms, and then tossing him to and again, struck his Hipps with force against the Bank, one of them cry'd out what is it you have got here, another anfwers a Log of Birch-wood, the other crys again, let his invisible Friends appear from all quarters and let them relieve him by giving an Answer to our present demands; and in a few Minures

Minutes after, a Number of little Creatures came from the Sea who answered the Question, and disappeared suddenly, the Man was then set at liberty, and they all returned home, to take their Measures according to the prediction of their false Prophets, but the poor deluded Fools were abused for the Answer was still Ambiguous. This was always practised in the Night, and may litterally be called the Works of Darkness.

I had an account from the most Intelligent and Judicious Men in the I e of this, that about 62 Years ago, the Oracle was thus consulted only once, and that was in the Parish of Kilmartin, on the East side, by a Wicked and Mischievous race of People, who are now extinguish'd, both Root and Branch.

THE second way of consulting the Oracle was, by a Party of Men, who first retired to Solitary Places, remote from any House, and there they singled out one of their Number, and wrap'd him in a big Cows Hide which they solded about him, his whole Body was covered with it except his Head, and so lest in this Posture all night until his invisible Friends reliev'd him, by giving a proper Answer to the Question in hand, which he received, as he sancied, from several Persons that he sound about him all that time, his conforts return'd to him

him at break of Day, and then he communicated his News to them, which often proved fatal to those concerned in such unwarrantable enquiries.

THERE was a third way of consulting, which was a Confirmation of the second abovementioned. The same Company who put the Man into the Hide, took a live Cat and put him on a Spit, one of the Number was imployed to turn the Spit, and one of his Consorts enquired at him, what are you doing He answered, I roast this Cat, until his Friends answer the Question, which must be the same that was proposed by the Man shut up in the Hide, and afterwards a very big Cat comes attended by a Number of lesser Cats, desiring to relieve the Cat turned upon the Spit, and then answers the Question: If this Answer prove the same that was given to the Man in the Hide, then it was taken as a Consistantion of the other which in this case was believed Infallible,

Mr. Alexander Cooper present Minister of North-viest told me that one John Erach in the Isle of Lewis assured him it was his fare to have been led by his Curiosity with some who consulted this Oracle, and that he was a Night within the Hide as above mentioned, during which time he felt and heard such terrible things that he could not express them,

Western Mands of Scotland, &c. 113 the Impression it made on him was such as could never go off, and he faid that for a thousand Worlds he would never again be concern'd in the like performance, for this had disordered him to a high degree; he confessed it ingenuously and with an Air of great Remorse, and seem'd to be very Penitent under a just sense of so great a Crime, he declared this about five Years fince, and is still living in the Lewis for any thing I know. The Inhabitants here did also make use of a Fire called Tin-Egin, (i. e.) a forced Fire, or Fire of necessity, which they used as an Antidote against the Plague or Murrain in Cattle; and it was performed thus, all the Fires in the Parish were extinguished, and then eighty one married Men being thought the necessary number for effecting this design, took two great Planks of Wood, and nine of em were imploy'd by turns vvho by their repeated Efforts rubb'd one of the Planks against the other until the heat thereof produced Fire, and from this forced Fire, each Family is supplyed withne wFire, which is no fooner kindled, than a Potfull of Water is quickly fet on it, and afterwards sprinkled upon the People infected with the Plague, or upon the Cat-tle that have the Murrain, and this they all fay they find successful by Experience, it was practis'd in the main Land opposite to the South of Stie, within these thirty Years.

THEY preserve their Boundaries from being lyable to any debates by their Successors, thus, they lay a quantity of the Ashes of burnt wood in the Ground, and put big Stones above the fame: And for conveying the knowledge of this to Posterity, they carry some Boys from both Villages next the Boundary, and there whip 'em foundly, which they will be fure to remember and tell it to their Children. debate having risen betwixt the Village of Die and Groban in Shie, they found Ashes as above mentioned under a Stone which decided the Controversy. It was an Ancient Cufrom in the Islands, that a Man should take a Maid to his Wife and keep her the space of Year without marrying her, and if she pleased him all the while, he married her at the end of the Year, and legitimated these Children, but if he did not love Her, he return'd her to her Parents and her Portion also, and if there happened to be any Children, they were kept by the Father, but this unreasonable Custom was long ago brought in disuse.

IT is common in these Islands, when a Tenant Dies, for the Master to have his choice of all the Horses which belonged to the Deceas'd, and this was called the Eachfuin Horizeilda, (i. e.) a Lord's Gist, for the first use of it was from a Gist of a Horse granted by all the Subjects in Scotland for relieving King

from

Western Islands of Scotland, &c. 115 from his Imprisonment in England. There was another Duty payable by all the Tenants, to their Chief, tho' they did not live upon his Lands and this is called Calpich, there was a standing Law for it also, called Calpich Law, and I am informed that this is exacted by some in the main Land to this Day.

WOMEN were anciently denyed the use of Writing in the Islands to prevent Love intrigues, their Parents believ'd, that Nature was too skilful in that matter, and needed not the help of Education, and by Consequence that Writing would be of Dangerous Consequence to the weaker Sex.

THE Orators, in their Language call'd If-Dane, were in high esteem both in these Islands, and the Continent, until within these forty Years, they sate always among the Nobles and Chiess of Families in the Streak or Circle: Their Houses and little Villages were Sanctuaries, as well as Churches, and they took place before Doctors of Physick. The Orators after the Druids were extinct, were brought in to preserve the Geneaogly of Families, and to repeat the same at every succession of a Chief, and upon the occasion of Marriages and Births they made Epithalamiums and Penegyricks, which the Poet or Bard pronounc'd. The Orators by the force of their Eloquence, had a powerful Ascendant over the greatest Men in their time,

time, for if any Orator did but ask the Habit, Arms, Horse, or any other being belonging to the greatest Man in these Islands, it was readily granted them, sometimes out of respect, and sometimes for fear of being exclaimed against by a Satyr, which in those days was reckoned a great dishonour, but these Gentlemen becoming insolent, lost ever since both the Profit, and Esteem which was formerly due to their Character; for neither their Panegyricks nor Satyrs are regarded to what they have been, and they are now allowed but a small Sallary. I must not omit to relate their way of Study, which is very fingular, they flut their Doors and Windows for a days time, and lie on their Backs, with a Stone upon their Belly, and Plaids about their Heads, and their Eyes being covered, they pump their Brains Rhetorical Encomium or Panegerick, and indeed they furnish such a Stile from this dark Cell, as is understood by very sew, and if they purchase a couple of Horses as the Reward of their Meditation, they think they have done a great matter. The Poet, or Bard, had a Title to the Bridegrooms upper Garb, that is, the Plade and Bonner, but now he is satisfied with what the Bridegroom pleases to give him on fuch occasions.

THERE was an ancient Custom in the Island of Lewis, to make a fiery Circle about the Houses, Corn, Cattle, &c. belonging

ing to each particular Family; a Man carried fire in his right hand and went round, and it was called Defil, from the right hand, which in the ancient Language is called Defs; an inflance of this Round was performed in the Village Shadir in Lewis, about fixteen years ago (as I was told) but it proved fatal to the Practifer, called Mac-Callum; for after he had carefully performed this Round, that very Night following he and his Family were fadly surprized, and all his Houses, Corn, Cattle, &c. were consumed with fire. This superstitious Custom is quite abolished now, for there has not been above this one instance of it in forty years past.

. THERE is another way of the Defil, or carrying Fire round about Women before they are Churched, after Child-bearing, and it is us'd likewise about Children until they be Christened; both which are performed in the Morning, and at Night. This is only practifed now by some of the ancient Midwives; I enquired their Reasons for this Custom, which I told them was altogether unlawful; this disobliged them mightily, insomuch that they would give me no satisfaction. others that were of a more agreeable temper, told me the fire-round was an effectual means to preserve both the Mother and the Infant from the power of evil Spirits, who are ready at such times to do mischief, and sometimes H 2 carry

carry away the Infant; and when they get them once in their possession, return them poor meager Skeletons; and these Infants are laid to have voracious Appetites, constantly craving for meat. In this case it was usual with those who believed that their Children were thus taken away, to dig a Grave in the Fields upon Quarter Day, and there to lay the Fairy Skeleton till next Morning; which time the Parents went to the Place, where they doubted not to find their own Child instead of this Skeleton. Some of the poorer fort of People in these Islands retain the Custom of performing these Rounds Sunways, about the Persons of their Benefactors three times, when they bless them, and wish good fuccess to all their Enterprizes. Some are very careful when they fer out to Sea, that the Boar be first rowed about Sun-ways, and if this be neglected, they are afraid their Voyage may prove unfortunate. I had this Ceremony paid me (when in the Island of Ila) by a poor Woman after I had given her an Alms: I defired her to let alone that Complement, for I did not care for it, but the infifted to make these three ordinary turns, and then Pray'd that God and Mac Charmig, the Patron Saint of that Island, might bless and prosper me in all my designs and affairs.

I attempted twice to go from Ila to Collonfay, and at both times they row'd about the Boat Sunways, tho' I forbid them to do it, and by a contrary Wind, the Boat and those in it were forc'd back. I took Boat again a third time from Jura to Collonsay, and at the same time forbid them to row about their Boat, which they obeyed, and then we Landed fafely at Collonfay without any ill adventure, which some of the Crew did not believe possible, for want of the Round; but this one Instance hath convinced them of the vanity of this Superstitious Ceremony. Another ancient Custom obs ferv'd on the second of February, which the Papists there yet retain, is this. The Mistris and Servants of each Family take a Sheaf of Oats, and dress it up in Womens Apparel, put it in a large Basket, and lay a Wooden Club by it, and this they call Briidsbed, and then the Mistriss and Servants cry three times Briid is come, Briid is welcome. This they do just before going to Bed, and when they rise in the Morning, they look among the ashes, expecting to see the impression of Briids Club there, which if they do, they reckon it a true presage of a good Crop, and prosperous Year, and the contrary they take as an ill Omen.

IT has been an ancient Custom amongst the Natives, and now only used by some old H 4 People, WHEN a Debate arises between two Perfons, if one of them assert the Matter by your Fathers hand, they reckon it a great indignity; but if they go a degree higher, and out of spite say, by your Father and Grandsather's hand, the next word is commonly accompanied with a blow.

IT is a receiv'd Opinion in these Islands, as well as in the neighbouring part of the main Land, That Women by a Charm, or some other secret way, are able to convey the increase of their Neighbours Cows Milk to their own use, and that the Milk so charmed, doth not produce the ordinary quantity of Butter; and the Curds made of that Milk are so tough, that it cannot be made so firm as other Cheese. and is also much lighter in weighr. Butter so taken away, and joyned to the Charmer's Butter, is evidently discernable by a Mark of separation, viz. The diversity of colours, that which is charmed being still paler than that part of the Butter which hath not been charmed; and if Butter having these Marks be found with a suspected Woman, she is presently said to be guilty. Their usual way of recovering this Loss, is to take a little of the Rennet from all the suspected Persons, and to put it in an egg-shell full of Milk, and

Western Islands of Scotland, Qc. 121 when that from the Charmer is mingled with it, it presently curdles, and not before.

THIS was afferted to me by the generality of the most Judicious People in these Islands; some of them having, as they told me, come to the knowledge of it to their cost. Some Women make use of the root of Groundsel as an Amulet against such Charms, by putting it among their Cream.

BOTH Men and Women in those Islands, and in the Neibouring Main Land, affirm that the increase of Milk is likewise taken away by Trouts, if it happen that the Dishes or Pales wherein the Milk is kept, be washed in the Rivulets where Trouts are. And the way to recover this damage, is by taking a live Trout, and pouring Milk into its mouth, which they say dorh presently curdle, if it was taken away by Trouts, but otherwise they say it is not.

THEY affirm likewise, that some Women have an Art to take away the Milk of Nurses.

C 10 12

I saw four Women whose Milk were tried, that one might be chosen for a Nurse; and the Woman pitch'd upon, was after three days Suckling, deprived of her Milk, whereupon she was sent away, and another put in her Place:

Place; and on the third day after, she that was first chosen recover'd her Milk again. This was concluded to be the effects of Witchcraft by some of her Neighbours.

THEY also say that some have an Art of taking away the increase of Malt, and that the Drink made of this Malt, hath neither life nor good taste in it; and on the contrary, the Charmer hath very good Ale all this time. A Gentleman of my acquaintance, for the space of a year, could not have a drop of good Ale in his House; and having complained of it to all that conversed with complained of it to all that conversed with him, he was at last advised to get some Yest from every Alehouse in the Parish; and having got a little from one particular Man, he put it among his Wort, which became as good Ale as could be drank, and so deseated the Charm. After which the Gentleman in whose Land this Man lived, Banished him thirty six Miles from thence.

THEY fay there be Women who have an Art of taking a Moat out of ones Eye, tho at some Miles distance from the Party griev'd, and this is the only Charm these Women will avouch themselves to understand, as some of them told me, and several of these Men out of whose Eyes Moats were then taken consum'd the truth of it to me.

The state of the s

ALL these Islanders, and several thousands on the neighbouring Continent are of Opinion that some particular Persons have an evil Eye, which affects Children and Cattle, this they fay occasions frequent Mischances, and sometimes Death, I could name some who are believed to have this unhappy faculty, tho' at the same time void of any ill design: This hath been an ancient opinion as appears from that of the Poet.

Nescio quis teneros Oculus mihi fassinat Agnos.

COURTS

## COURTS of Judicatory.

A T the first Plantatation of these Isles, all Matters were Managed by the sole Authority of the Heads of Tribes, called in the Irish Thiarma, which was the same with Tyrannus, and now it signifies Lord or Chief; there being no Standard of Equity or Justice but what flowed from them. And when their Numbers increased, they erected Courts called Mode, and in the English Baron-Courts.

THE Proprietor has the Nomination of the Members of this Court, he himself is President of it, and in his absence, his Bayliss; the Minister of the Parish is always a Member of it. There are no Attorneys to plead the Cause of either Party, for both Men and Women represent their respective Causes, and there is always a speedy decision, if the Parties have their Witnesses present, &c.

THERE is a peremptory Sentence passes in Court for ready Payment, and if the Party against whom Judgment is given prove restactory, the other may send the common Officer, who has power to Distrain, and at the same time to exact a Fine of 20 L Scots, for the use of the Proprietor, and about two Marks for himself.

Dhesalby Google

THE Heads of Tribes had their Offensive and Defensive Leagues, called Bonds of Mandrate, and Manrent in the Lowlands, by which each Party was oblig'd to assist one another upon all extraordinary emergencies. And tho' the differences between those Ghiestains involved several Consederates in a Civil War, yet they oblig'd themselves by the Bond mention'd above, to continue stedsast in their Duty to their Sovereign.

WHEN the Proprietor gives a Farm to his Tenant, whether for one or more Years, it is customary to give the Tenant a Stick of Wood, and some Straw in his hand; this is immediately return'd by the Tenant again to his Master, and then both Parties are as much oblig'd to perform their respective Conditions, as if they had Sign'd a Lease, or any other Deed any other Deed.

CHURCH

## CHURCH Discipline.

Church Judicature, called the Confistory, or Kirk-Session, where the Minister presides, and a competent number of Laymen call'd Elders meet with him they take cognifiance of Scandals, censure faulty Persons, and with that strictness, as to give an Oath to those who are suspected of Adultery, or Fornication, for which they are to be proceeded against according to the Custom of the Country. They meet after Divine Service, the Chief Heretor of the Parish is present, to concurr with them, and enforce their Acts by his Authority, which is irresistable within the bounds of his Jurisdiction.

A Form of Prayer us'd by many of the Islanders at Sea, after the Sails are hoisted.

This Form is contain'd in the Irish Liturgy Compos'd by Mr. John Kerswell, afterwards Bishop of Argile, Printed in the Year 1566, and Dedicated to the Earl of Argile; I have set down the Original for the satisfaction of such Readers as understand it.

What are you afraid of fince God the Holy Ghost is with you?

Answer.

We do not fear any thing.

Steers-

## Steerf-Man.

God the Father Almighty, for the love of Jesus Christ his Son, by the comfort of the Holy Ghost, the One God, who miraculously brought the Children of Israel through the Red-Sea, and brought Jonas to Land out of the Belly of the Whale, and the Apostle St. Paul, and his Ship to safety, from the troubled raging Sea, and from the violence of a tempestuous Storm, deliver, sanctifie, bless and conduct us peaceably, calmly, and comfortably through the Sea to our Harbour, according to his Divine Will; which we beg, saying, Our Father, &c.

A Descrip-

## A Description of the Isle of SKIE.

SkiE (in the ancient Language Skianach i.e. wing'd;) is so called because the two opposite Northern Promontories Vaternis lying Northwest and Troternis North-east, resemble two Wings. This Isle lies for the most part half way in Western-Sea between the main Land on the East, the Shire of Rosse, and the Western Isle of Lewis &c.

THE Isle is very high Land, as well on the Coast, as higher up in the Country, and there are seven high Mountains near one another, almost in the center of the Isle.

THIS Island is forty Miles in length from South to North, and in some Places twenty and in others thirty in breadth, the whole may amount to a hundred Miles in Circumference.

THE Channel between the South of Skie and opposite main Land (which is part of the Shire of Inderness) is not above three Leagues in breadth, and were the Ferry-boat crosseth to Glenelg, it's so narrow, that one may call for the Ferry-boat and be easily heard on the other side, this like is a part of the Sherissdom Innerness, and sormerly of the Diocess of the Isles, which was united to that of Argyle; a. S. E. Moon causeth a Spring Tide here.

Downer by Google

THE Mold is generally Black, especially in the Mountains, but there is some of a red Colour, in which Iron is sound,

THE arable Land is for the most part Black, yet affords Clay, of different Colours, as White, Red, and Blue; the Rivulet at Dunvegan Church, and that of Nishost hath Fullers-earth.

THE Village Borve, and Glenmore afford two very fine forts of Earth, the one Red, the other White, and they both feel, and cut like melted Tallow. There are other Places that afford plenty of very fine white Marle which cuts like Butter, it abounds most in Corchattachan, where an Experiment has been made of its Vertue; a quantity of it being spread on a sloping Hill, covered with Heath, soon after all the Heath fell to the Ground, as if it had been cut with a Knife, they afterwards fowed Barley on the Ground, which tho' it grew but unequally, some places producing no Grain, because perhaps it was unequally laid on, yet the produce was thirty five fold, and many stalks carried five Ears of Barley. This account was given me by the present possessor of the Ground Lachlin- Mac-Kinon.

THERE are Marcasites black and White refembling Silver-Ore near the Village Sartle; there likewise in the same place several Stones which in bigness, shape, &c. resemble Nutmegs, and many Rivulets here afford variegated Stones of all Colours. The Apples-glen near Loch-fallart has Aggat growing in it of different Sizes and Colours, some are Green on the out-side, some are of a pale Skie colour, and they all strike sire as well as Flint, I have one of them by me which for shape and bigness is proper for a Sword Handle, Stones of a Purple Colour flow down the Rivulets here after great Rains.

THERE is Chrystal in several Places of this Island as at Portry, Quillin, and Mingnis, its of different Sizes and Colours, some is sexangular, as that of Quilling, and Mingnis, and there is some in Minriness, of a Purple Colour, the Village Torrin in Strath, affords a great deal of good White and Black Marble, I have seen Cups made of the White which is very fine. There are large Quarries of Free-stone in several parts of this Isle, as at Snisness in Strath, in the South of Borrie, and Isle of Rosay. There is abundance of Lime-stone in Strath and Trotterness, some Banks of Clay on the East Coast are overslow'd by the Tide, and in these grow the Lapis Ceranius, or Cernna Amonis of different Shapes. Some of the breadth of a Crown-piece bearing an Impressi-

on resembling the Sun. Some are as big as a Man's Finger in form of a Semicircle, and furrowed on the Inner side, others are less and have furrows of a Yellow Colour on both sides. These Stones are by the Natives called Cramp-stones, because as they say they cure the Cramp in Cows, by washing the part affected with Water in which this Stone has been steep'd for some Hours. The Velumnites, grows likewise in these Banks of Clay, some of 'em are twelve Inches long, and tapering towards one end, the Natives call them Bat Stones, because they believe them to cure the Horses of the Worms which occasion that Distemper, by giving them Water to drink in which this Stone has been Steept for some Hours.

THIS Stone grows likewise in the middle of a very hard grey Stone on the shore. There is a Black Stone in the surface of the Rock on Riz shore, which resembles Goats Horns.

THE Lapis Hecticus, or white Hectic Stone abounds here both in the Land and Water, the Natives use this Stone as a remedy against the Disenteria and Diarrhea; they make them red-hot in the Fire, and then quenche them in Milk, and some in Water, which they drink with good success. They use this Stone after the same manner for Consumptions, and they likewise quench these Stones in Water, with which they bathe their seet and hands

THE Stones on which the Scurf called Corkir grows, are to be had in many Places on the Coast and in the Hills, this Scurf dyes a pretty Crimson Colour; first well dryed and then ground to Powder, after which it's steep'd in Urine, the Vessel being well secured from Air, and in three Weeks its ready to boyl with the Yarn that is to be Dyed. The Natives observe the decrease of the Moon for scraping this Scurf from the Stone, and say its ripest in August.

THERE are many White Scurfs on Stone, fomewhat like these on which the Corkir grovs, but the Corkir is White and thinner than any other that resembles it.

THERE is another coarser Scurf called Crostil, its of a dark colour, and only dyes a Philamot.

THE Rocks in the Village Ord, have much Talk growing on them like the Venice-talk.

THIS Isle is naturally vvell provided vvith variety of excellent Bays and Harbours. In the South of it lies the Peninsula called Oronsa, alias Island Dierman, it has an excellent Place for Anchorage on the East side, and is generally known by most Scots-Sea-men. About a

Leage more Easterly on the same Coast there is a small Rock visible only at half Low-water, but may be avoided by steering through the middle of the Channel. About a League more Easterly on the same Coast, there is an Anchorage pretty near the Shore, within less than a Mile further is the narrow Sound called the Kyle, in order to pass which its absolutely necessary to have the Tide of Flood, for such as are Northward bound, else they will be obliged to retire in disorder, because of the violence of the Current; for no Wind is able to carry a Vessel against it. The quite contrary Course is to be observed by Vessels coming from the North. A Mile due East from the Kyle there is a big Rock on the South fide, the point of Land on Skie side called Kaillach, which is overflow'd by the Tide of Flood, a Vessel may go near its outfide; above a Mile further due North, there are two Rocks in the paffage through the Kyle they are on the Castle side, and may be avoided by keeping the middle of the Channel, about eight Miles more to the Northward of the East of Skie, there is secure anchorage between the !sle Scalpa and Skie in the middle of the Cannel, but one must not come to it by the South Entry of Scalpa, and in coming between Rasay and this Isle, there are Rocks without the Entry, which may be avoided best, by having a Pilot of the Country, more to the North is Lockfligichan, on the Coast of Skie, where is good anchorage the Western Islands of **Scotland**, &c. 137 the Entry is not deep enough for Vessels of any burden except at high Water, but three Miles surther North lyes Loch-port ry a capacious and convenient Harbour of above a Mile in length.

THE Island Tulm which is within half a Mile of the Northermost point of Skie, has an Harbour on the inside. The entrance between the Isle, and Duntulm Castle is the best.

ON the West of the same Wing of Skie, and about five Miles more Southerly, lies Lochuge, about a Mile in Length, and a very good Harbour for Vessels of the greatest burden, about two Miles on this Coast further South is Loch-sniffert, it's three Miles in length, and half a Mile in breadth, it is free from Rocks, and has convenient Anchorage.

ON the West-side the Promontory at the Mouth of Loch snijfort, lies Loch-arnifort, being about two Miles in length, and half a Mile in breadth; there are two small tiles in the mouth of the Entry, and a Rock near the West-side, a little within the Entry.

SOME five Miles to the West of Arnisort lies Loch-fallart, the Entry is between Vaternishead on the East side, and Duntegon-head on the West-side, the Loch issix Miles in length, and about a League in breadth for some Miles. It hath

hath the Island Ila about the middle, on the East-fide. There is a Rock between the Northend and the Land and there Vessels may anchor between the N. E. side of the Isle and the Land, there is also good anchorage near Duntegon Castle, two Miles surther to the Southward.

LOCH-BRAKADIL, lies two Miles South of Loch-fallart, it is seven Miles in length, and has several good anchoring Places, on the Northfide the Entry lies two Rocks called Mack-lleods Maidens. About three Miles South-west is Loch-einard a Mile in length, it has a Rock in the Entry, and is not visible but at an Ebb.

ABOUT two Miles to the Eastward, there is an anchoring place for Barks between Skie and the Ifle \$08.

ABOUT a League further East lies Loch-slapan, and Loch-effort, the first reaches about four Miles to the North, and the second about six Miles to the East.

THERE are several Mountains in the sse of considerable height and extent, as Quillin, Scornifiey, Bein-store, Bein-vore-scowe, Bein-chro, Beinin, Kaillach, some of them are covered with Snow on the top in Summer, others are almost quite covered with Sand in the top, which is much wash'd down with the great Rains: All these Mountains abound with Heath, and Grafs, which serve as good Pastorage for black attle and Sheep.

THE Quillin which exceeds any of those Hills in height, is said to be the cause of much Rain, by breaking the Clouds that hover about it, which quickly after pour down in Rain upon the quarter on which the Wind then blows. There is a high ridge of one continued Mountain of considerable height, and sisteen Miles in length, running along the middle of the Eastwing of Skie called Troterness, and that part above the Sea is faced with a steep Rock.

THE arable Ground is generally along the Coast, and in the Valleys between the Mountains having always a River running in the middle; the soil is very grateful to the Husband-man: I have been shew'd several Places that had not been till'd for seven Years before, which yielded a good product of Oats by Diging, the the Ground was not dung'd, particularly near the Village Kilmartin, which the Natives told me had not been dung'd these forty Years last. Several pieces of Ground yield twenty, and some thirty sold when dung'd with Sea-ware. I had an account that a small tract of Ground in the Village Skerybreck, yielded an hundred fold of Barley.

THE Isle of Altig, which is generally covered with Heath, being manur'd with Seaware, the Owner sow'd Barley in the Ground, and it yielded a very good Product, many Stalks

Stalks had five Ears growing upon them. In plentiful Years Skie furnishes the opposite continent with Oats and Barley. The way of tillage here is after the same manner that is already describ'd in the Isles of Lewis, &c: And diging doth always produce a better Increase here than plowing.

ALL the Mountains in this Isle are plentifully furnished with Varietie of excellentSprings and Fountains, some of them have Rivulets with Water-mills upon them. The most celebrated Well in Skie, is Loch fiant Well, it is much frequented by Strangers, as well as by the Inhabitants of the lsle, who generally believe it to be a Specifick for several Diseases, such as Stitches, Head-aches, Stone, Consumptions, Megrim. Several of the common People oblige themselves by a Vow to come to this Well, and make the ordinary Touer about it, call'd Dessil, which is performed thus; they move thrice round the Well proceeding Sunways from East to West and so on, this is done after drinking of the Water, and when one goes away from the Well, it's a never failing custom, to leave some small offering on the Stone which covers the Well, there are nine Springs issuing out of the Hill above the Well, and all of them pay the tribute of their Water to a Rivulet that falls from the Well. There is a little Fresh water Lake within ten Yards of the faid Well, it abounds with Trouts, but neither

western Islands of Scotland, &c. 141 neither the Natives nor Strangers will ever presume to destroy any of them, such is the essemthey have for the Water.

THERE is a small Coppice near to the Well, and there is none of the Natives dare venture to cut the least Branch of it, for sear of some signal Judgment to sollow upon it.

THERE are many Wells here esteemed esfectual to remove several Distempers, the Light-est and wholesomest Water in all the lise is that of Tonbir Tellibreck in Uge, the Natives say that the Water of this Well, and the Sea-plant call'd Dulse would serve instead of Food for a considerable time, and own that they have experienc'd it in time of War. I saw a little Well in Kilbride in the South of Sky, with one Trout only in it, the Natives are very tender it, and tho' they often chance to catch it in their wooden Pales, they are very careful to preserve it from being destroy'd, it has been seen there for many Years, there is a Rivulet, not far distant from the Well, to which it hath probably had access through some narrow Passage.

THERE are many Rivers on all quarters of the Isle, about thirty of them afford Salmon, and some of 'em black Musles, in which Pearl do breed particularly the River of Kilmartin, and the River Ord. The Proprietor told methat some Years ago a Pearl had been taken out of the former

former valued at 20 l. Sterling. There are several Cataracts as that in Sker-horen, Holm, Rig and Tont. When a River makes a great noise in time of fair Weather, it's a sure Prognostick here of Rain to ensue.

THERE are many Fresh-water Lakes in Skie, and generally wellstockt with Trout and Eels, the Common Flie, and the Earth-worms are ordinarily us'd for angling Trout, the best Season for it is a Calm, or a South-west Wind.

THE largest of the Fresh-water Lakes is that nam'd after St. Columbus, on the account of the Chappel dedicated to that Saint, it stands in the Isle, about the middle of the Lake.

THERE is a little Fresh-water Lake near the South-side of Lech-einordstard, in which Musces grow that breed Pearl.

THIS Isle hath anciently been covered all over with Woods, as appears from the great Trunks of Fir-trees, &c. dug out of the Bogs, frequently, &c. there are several Coppices of Wood, scattered up and down the lsle, the largest called Lettir-burr, exceeds not three Miles in length.

HERRINGS are often taken in most or all the Bays mention'd above, Loch-essort, Slapan, Loch-fallort, Western Islands of Scotland, &c. 143
Loch-fallort, Loch-scowsar, and the Kyle of Scalpa, are generally known to Strangers, for the great quantities of Herring taken in them. This fort of Fish is commonly seen without the Bays, and on the Coast all the Summer. All other Fish follow the Herring and their Fry, from the Whale to the least Fish that swims, the biggest still destroying the lesser.

THE Fishers and others told me that there is big Herring almost double the size of any of its kind, which leads all that are in a Bay, and the Shoal follows it wherever it goes. This Leader is by the Fishers called the King of Herring, and when they chance to catch it alive, they drop it carefully into the Sea, for they judge it Petty Treason to destroy a Fish of that Name.

THE Fishers say, that all sorts of Fish from the greatest to the least, have a Leader, who is follow'd by all of its kind.

over, that if a Quarrel happen on the Coast where Herring is caught, and that Blood be drawn violently, then the Herring go away from the Coast without returning, during that Season. This they say has been observed in all past Ages, as well as at present; but this I relate only as a common Tradition, and submit it to the Judgment of the Learned.

THE

THE Natives preserve and dry their Herring without Salt, for the space of eight Months, provided they be taken after the tenth of September; they use no other Art in it, but take out their Guts, and then tying a rush about their Necks, hang them by Pairs upon a Rope made of Heath, cross a House, and they ear well, and free from Putresaction, after eight Months, keeping in this manner. Cod, Ling, Herring, Mackrel, Haddock, Whiting, Turbat, together with all other Fish that are in the Scots Seas, abound on the Coasts of this Island.

THE best time of taking Fish with an Angle is in warm weather, which disposes them to come near the surface of the Water, whenas in cold weather, or rain, they go to the bottom. The best Bait for Cod and Ling is a piece of Herring, Whiting, Thornback, Haddock, or Eel. The Grey-Lord, alias Black-mouth, a Fish of the size and shape of a Salmon, takes the Limpet for Bait. There is another way of Angling for this Fish, by sast-ning a short white Down of aGoose behind the Hook, and the Boat being continually row'd, the Fish run greedily after the Down, and are easily caught. The Gray-Lord swims in the surface of the Water, and then is caught with a Spear, a Rope being tied to the surther end of it, and secur'd in the Fishermans hand.

ALL the Bays and Places of Anchorage here, abound with most kinds of shell-fish; The Kyle of Scalpa affords Oysters in such Plenty, that commonly a Spring-Tide of Ebb leaves sisteen, sometimes twenty Horse Load of them on the sands.

THE Sands on the Coast of Bernstill Village at the Spring Tides afford daily such plenty of Muscles, as is sufficient to maintain sixty Persons per day; and this was a great support to many poor Families of the Neighbourhood in the late years of scarcity. The Natives observe that all shell fish are plumper at the increase than decrease of the Moon; they observe likewise that all shell-fish are plumper during a south west wind, than when it blows from the north, or north east quarters.

THE Limpet being parboil'd with a very little quantity of water, the Broth is drank to increase Milk in Nurses, and likewise when the Milk proves astringent to the Infants. The Broth of the black Periwinkle is us'd in the same Cases. It's observ'd that Limpets being frequently eat in June, are apt to occasion the Jaundice; the outside of the Fish is colour'd like the skin of a Person that has the Jaundice; the tender yellow part of the Limpet which is next to the shell, is reckon'd good nourishment, and very easie of digestion.

K I had

571.

Egrandy Google

I had an Account of a poor Woman who was a Native of the Isle of Jura, and by the Troubles in King Charles the First's Reign was almost reduc'd to a starving Condition, so that she lost her Milk quite, by which her Insant had nothing proper for its sustenance; upon this she boyl'd some of the tender Fat of the Limpets, and gave it to her Insant, to whom it became so agreeable, that it had no other Food for several Months together; and yet there was not a Child in Jura, or any of the adjacent Isles wholsomer than this poor Insant, which was expos'd to so great a strait.

THE Limpet creeps on the Stone and Rock in the night time, and in a warm day, but if any thing touch the shell, it instantly clings to the stone, and then no hand is able to pluck it off without some Instrument; and therefore such as take em, have little Hammers, call'd Limpet-hammers, with which they beat it from the Rock; but if they watch its motion, and surprize it, the least touch of the hand pulls it away; and this that is taken creeping, they say is larger and better than that which is pull'd off by sorce. The motion, fixation, taste and seeding, &c. of this little Animal being very curious, I have here exhibited its Figure, for the satisfaction of the inquisitive Reader.

Ihave

## Western Islands of Scotland, &c. 147

I have likewise here exhibited the Figure of the Balanes, growing on Stone, and Shells, in which, very small Wilks are found to lodge, and grow.

THE pale Wilk, which in length and smalness exceeds the black Periwinkle, and by the Natives call'd Gil-siúnt, is by them beat in pieces, and both Shell and Fish boyl'd; the Broth being strain'd and drunk for some days together, is accounted a good Remedy against the Stone; it is call'd a Dead Mans Eye at Dover. It is observed of Cockles, and Spout-Fish, that they go deeper in the Sands with North Winds, than any other; and on the contrary, they are easier reach'd with South Winds, which are still warmest.

IT is a General Observation of all such as live on the Sea Coast, that they are more prolifick than any other People whatsoever.

The

## The Sea-Plants here, are as follows.

INARICH, a very thin small green Plant, about eight, ten, or twelve inches in length, it grows on Stone, on Shells, and on the bare Sand; this Plant is applied Plaisterwise to the Forehead and Temples to procure Sleep, for such as have a Fever, and they say it is effectual for this purpose.

The Linarich is likewise applied to the Crown of the Head, and Temples, for removing the Megrim, and also to heal the Skin after a Blister Plaister, of Flammula Jovis.

Slake, a very thin Plant, almost round, about ten or twelve inches in circumference, grows on the Rocks, and Sands; the Natives eat it boil'd, and it dissolves into Oil; they say that if a little Butter be added to it, one might live many years on this alone, without Bread, or any other Food, and at the same time, undergo any laborious exercise: This Plant boil'd with some Butter, is given to Cows in the Spring, to remove Costiveness.

Dulse is of a reddish brown Colour, about ten or twelve inches long, and above half an inch in breadth, it is eat raw, and then reckon'd to be loosning, and very good for the fight; But if boil'd it proves more loosning, it the juice be drank with it. This Plant applied Plaister wise to the Temples, is reckon'd effectual against the Megrim; the Plant boil'd, and eat with its insusion, is us'd against the Cholick, and Stone, and dried without washing it in water, pulveriz'd and given in any convenient Vehicle Fasting, it kills Worms: the Natives eat it boil'd with Butter, and reckon it very wholsom. The Dulse recommended here, is that which grows on Stone, and not that which grows on the Alga Marina, or Sea Tangle; for tho' that be likewise eaten, it will not serve in any of the Cases above mention'd.

THE Alga Marina, or Sea-Tangle, or as some call it Sea-ware, is a Rod about sour, six, eight or ten Foot long, having at the end a Blade commonly slit into seven or eight picces, and about a foot and half in length; it grows on Stone, the Blade is eat by the Vulgar Natives. I had an Account of a young Man who had lost his Appetite, and taken Pills to no purpose, and being advised to boil the Blade of the Alga, and drink the insusion boil'd with a little Butter, was restor'd to his some state of health.

K 3 THERE

THERE is abundance of White and Red Coral growing on the S. and W. Coast of this Isle, it grows on the Rocks, and is frequently interwoven with the roots of the Alga; the Red seems to be a good fresh Colour when first taken out of the Sea, but in a few hours after it becomes pale. Some of the Natives take a quantity of the red Coral, adding the yolk of an Egg roasted to it, for the Diarrhea: Both the Red and White Corral here is not above five inches long, and about the bigness of a Gooses Quill.

THERE are many Caves to be seen on each quarter of this Isle, some of them are believ'd to be several Miles in length; there is a big Cave in the Village Bornskittag, which is suppos'd to exceed a Mile in length. The Natives told me that a Piper who was over curious, went into the Cave with a design to find out the length of it, and after he entred, began to play on his Pipe, but never resturn'd to give an account of his Progress.

THERE is a Cave in the Village Kigg, wherein drops of water that iffue from the roof, petrifie into a white Limy substance, and hang down from the roof and sides of the Cave.

THERE

THERE is a Cave in the Village Holm, having many petrified Twigs hanging from the top, they are hollow from one end to the other, and from five to ten inches in length.

THERE is a big Cave in the Rock on the east side Portrie, large enough for eighty Persons; there is a Well within it, which together with its Scituation and narrow Entry, renders it an inaccessible Fort, one Man only can enter it at a time, by the side of a Rock, so that with a Staff in in his hand, he is able by the least touch to cast over the Rock as many as shall attempt to come into the Cave.

ON the South fide Loch Portry, there is a large Cave in which many Sea Cormorants do Build; the Natives carry a bundle of straw to the door of the Cave in the Night time, and there setting it on fire, the Fowls fly with all speed to the Light, and so are caught in Baskets laid for that purpose. The Golden Cave in Sleat is said to be seven Miles in length, from the West to East.

THERE are many Cairns, or heaps of Stones, in this Island. Some of the Natives say they, were erected in the times of Heathenism, and that the ancient Inhabitants Worshipped about them. In Popish Countries the People still retain K 4

retain the ancient Custom of making a Tour round them.

others fay, these Cairns were erected where Persons of Distinction, killed in Battle, had been Buried, and that their Urns were laid in the ground under the Cairns. I had an account of a Cairn in Knapdale in the Shire of Argyle, underneath which an Urn was found. There are little Cairns to be seen in some places on the common Road, which were made only where Corpses happen'd to rest for some minutes; but they have laid aside the making such Cairns now.

THERE is an creected Stone in Kilbride in Strath, which is ten Foot high, and one and a half broad.

THERE is another of five Foot high plac'd in the middle of the Cairn, on the South fide Loch Uge, and is call'd the high Stone of Uge.

THERE are three such Stones on the Sea Coast, opposite to Skeriness, each of them three Foot high; the Natives have a Tradition, that upon these Stones a big Caldron was set for Boyling Fin Mack Coul's Meat. This Gigantick Man is reported to have been General of a Militia that came from Spain, to Ireland, and from thence to those sfles; all his

Western Islands of Scotland, &c. 153 his Soldiers are called Fienty from Fiun, he is believed to have arrived in the Isles, in the reign of King Evan, the Natives have many Stories of this General and his Army with which I will not trouble the Reader. He is mentioned in Bishop Lessly's History.

THERE are many Forts erected on the Coast of this Isle, and supposed to have been built by the Danes; they are called by the Name of Dun from Dain, which in the ancient Language signify'd a Fort; they are round in form, and they have a Passage all round within the Wall, the Door of em is low, and many of the Stones are of such bulk that no number of the present Inhabitants could raise them without an Engine.

ALL these Forts stand upon eminences, and are so disposed, that there is not one of them, which is not in view of some other; and by this means when a Fire is made upon a Beacon, in any one Fort, it's in a sew Moments after communicated to all the rest, and this hath been always observed upon sight of any number of foreign Vessels, or Boats approaching the Coast.

THE Forts are commonly named after the Place where they are, or the Person that built them, as Dun-Skudborg, Dun-Derig, Dun-Skeriness, Dun-David, &c.

THERE

THERE are several little Stone-houses, built under Ground, called Earth-houses, which served to hide a few People and their Goods in time of War, the Entry to them was on the Sea, or River side; there is one of them in the Village Lachsay, and another in Camstinuag.

THERE are several little Stone-houses built above ground, capable only of one Person, and round in form, one of em is to be seen in Portry, another at Lincro, and at Culuknock; they are called Tey-nin-druinich (i. e.) Druids-house, Druinich signifies a retired Person, much devoted to Contemplation.

THE Fewel us'd here is Peats dug out of the Heaths, there are Cakes of Iron found in the Ashes of some of 'em, and at Flodgery Village, there are Peats from which Salt-peter sparkles. There is a Coal lately discovered at Holm in Portry, some of which I have seen, there are pieces of Coal dug out likewise of the Sca-sand in Heldersta of Vaternis, and some found in the Village Mogstat.

THE Cattle produced here are Horses, Cows, Sheep, Goats and Hogs: The common workhorses are exposed to the rigour of the Season during the Winter and Spring, and tho they have neither Corn, Hay, or but seldom Straw, yet they undergo all the Labour that other Horses better treated are liable to. THE

THE Cows are likewise expos'd to the rigour of the coldest Seasons, and become meer Skeletons in the Spring, many of them not being able to rife from the Ground without help, but they recover as the Scason becomes more favourable, and the Grass grows up, then they acquire New-beef, which is both sweet and tender; the Fat and Lean is not so much separated in them as in other Cows, but as it were larded, which renders it very agreeable to the Taste, a Cow in this Isle, may be twelve Years old, when at the same time, its Beef, is not above four, five, or fix Months Old. When a Calf is flain its an usual Custom to cover another Calf with its Skin to fuck the Cow whose Calf hath been flain, or else she gives no Milk, nor suffers her self to be approach'd by any body, and if she discover the Chear, then The grows enraged for some days, and the last remedy us'd to pacific her is to use the sweetest Voice, and sing all the time of milking her. When any Man is troubled with his Neighbours Cows, by breaking into his Inclosures, he brings all to the utmost boundary of his Ground, and there, drawing a quantity of Blood from each Cow, he leaves them upon the spot, from whence they go away, without ever returning again to trouble him, during all that Season. The Cows often feed upon the Alga Marina or Sea-ware; and they can exactly distinguish the Tide of Ebb from the Tide Tide of Flood, tho' at the same time they are not within view of the Sea, and if one meet them running to the shore at the Tide of Ebb, and offer to turn them again to the Hills to graze they will not return, when the Tide has Ebb'd about two hours, so as to uncover the Sea-ware, then they steer their course directly to the nearest Coast, in their usual order, one after another, whatever their number be, there are as many Instances of this, as there are Tides of Ebb on the shore. I had occasion to make this Observation thirteen times in one Week, for tho' the Natives gave me repeated affurances of the truth of it, I did not fully believe it, till I saw many Instances of it in my Travels along the Coast. The Natives have a remark that when the Cows belonging to one Person do of a sudden become very irregular and run up and down the Fields, and make a lowdnoise, without any visible cause, that it is a presage of the Master or Mistress's Death, of which there were several lateInstances given me, James Mack-Donald of Capstil, having been killed at the Battle of Kelicrankie, it was Observed that night, that his Cows gave Blood instead of Milk, his Family and other Neighbours concluded this a bad Omen, The Minifter of the Place, and the Mistriss of the Cows, together with feveral Neighbours affured me of the truth of this.

Dhilland by Google

THERE was a Calf brought forth in Vaternis without Legs, it leaped very far, bellowed louder than any other Calf, and drank much more Milk, at last the Owner killed it. Kenneth the Carpenter, who lives there told me that he had seen the Calf. I was also informed that a Cow in Vaternis, brought forth five Calves at a time, of which, three died.

THERE was a Calf at Skeriness, having all its Legs double, but the Bones had but one Skin to cover both, the Owner fancying it to be Ominous killed it, after having lived nine Months. Several of the Natives there abouts told me that they had seen it.

THERE are several Calves that have a slit in the top of their Ears, and these the Natives fancy to be the Issue of a Wild-bull, that comes from the Sea or fresh Lakes, and this Calf is by them call'd Corky-fyre.

THERE's Plenty of Land and Water Fowl in this Isle as Hawks, Eagles of two kinds, the one Gray and of a larger size, the other much less and Black, but more destructive to young Cattle. Black-cock, Heath-hen, Plovers, Pigeons, Wild-Geese, Tarmagan, and Cranes, of this latter sort, I have seen sixty on the shore in a flock together. The Sea Fowls are Malls of all kinds. Coulterneb, Guillamet, Sea-

Cormorant,

Cormorant, &c. The Natives observe that the latter if persectly Black, make no good Broth, nor is its Flesh worth eating, but that a Cormorant, which has any white Feathers or Down, makes good Broth, and the Flesh of it is good Food, and the Broth is usually drunk by Nurses to encrease their Milk.

THE Natives observe that this Fowl flutters with its Wings towards the quarter from which the Wind is soon after to blow.

THE Sea-fowl Bunivochil, or as some Seamen call it Carara, and others Bishop, is as big as a Goose, of a brown Colour, and the infide of the Wings white, the Bill is long and broad,& it is footed like a Goose,it dives quicker than any other Fowl whatever, its very Fat. The Case of this Fowl being flea'd off with the Fat, and a little Salt laid on to preserve it, and then applied to the Thigh-bone, where it must lie for some Weeks together, is an effectual remedy tagainst the Sciatica, of which I saw two Instances. It is observed of Fire-arms that are rubb'd over (as the custom is here) with the Oyl or Fat of Sea-Fowls, that they contract rust much sooner, than when done with the Fat of Land-Fowl; the Fulmar Oyl from St. Kilda only exceptd, for it preserves Iron from contracting rust much longer than any other Oyl or Grease whatsoever, the Natives observe, that when the Sea-Pye, warbles it Notes incessantly.

Western Islands of Scotland, &c. 159 incessantly, it is a sure presage of Fair Weather to sollow in a few hours after.

THE Amphibia to be feen in this sfle, are Seals, Otters, Vipers, Frogs, Toads and Asks, the Otter shuts its Eyes when it eats, and this is a considerable disadvantage to it, for then several ravenous Fowls lay hold on this opportunity, and rob it of its Fish.

THE Hunters say there is a big Otter above the ordinary fize with a White Spot on its Breast, and this they call the King of Otters, it is rarely seen and very hard to be killed, Seamen ascribe great Vertues to the skin; for they fay that it is fortunate in Battle, and that Victory is always on its fide. Serpents abound in several parts of this Isle, there are three kinds of them, the first Black and White spotted, which is the most Poysonous, and if a speedy remedy be not made use of after the Wound given, the Party is in danger. I had an Account that a Man at Glenmore, a Boy at Pordie of Wounds given by this fort of Serpents; fome believe that the Serpents wound with the Sting only, and not with their Teeth, but this Opinion is founded upon a bare Conjecture because the Sting is exposed to view, but the Teeth very rarely seen, they are secured within a Hole of Flesh, which prevents their being broke, the end of them being hook'd and exceeding

ceeding small, would soon be destroy'd, if it had not been for this Fence, that Nature has given them. The longest of the black Serpents mention'd above, is from two to three, or at most four soot long.

THE yellow Serpent with brown spots, is not so poysonous, nor so long as the black and white one.

THE brown Serpent is of all three the least poysonous, and smallest and shortest in size.

of Serpents are various. The Rump of a House Gock strip'd of its Feathers, and applied to the Wound, doth powerfully extract the poyson, if timely applied. The Cock is observ'd after this to swell to a great bulk, far above its former size, and being thrown out into the Fields, no Ravenous Bird, or Beast, will ever offer to taste of it.

THE Fork'd Sting taken out of an Adder's Tongue, is by the Natives steep'd in water, with which they wash and cure the wound.

THE Serpent's Head that gives the wound, being applied, is found to be a good Remedy.

NEW Cheese applied timely, extracts the Poyson well.

THERE

Western Islands of Scotland, &c. 161
THERE are two sorts of Weasles in the lise, one of which exceeds that of the common size in bigness; the Natives say that the breath of it kills Calves, and Lambs, and that the lesser fort is apt to occasion a decay in such as frequently have them tame about them; especially such as suffer them to suck and lick about their mouths.

## The Inferiour Isles about SKIE.

COA-BRETTIL lies within a quarter of a Mile to the South of the Mountain Quillin, it's five Miles in Circumference, and full of Bogs, and fitter for Pasturage than Cultivation. About a Mile on the West side it is cover'd with Wood, and the rest consists of Heath, and Grass, having a mixture of the Mertillo all over. The Red Garden Currants grow in this Isle, and are suppos'd to have been carried thither by Birds. There has been no Venomous Creature ever seen in this little Isle, until within these two years last, that a black and white big Serpent was seen by one of the Inhabitants who kill'd it; they believe it came from the opposite Coast of Skie, where there are many big Scrpents. There is abundance of Cod and Ling round this Isle.

ON the South of Sleat lies I land Oronfa, which is a Peninsula at low water; it's a Mile

in Circumserence, and very Fruitful in Corn, and Grass. As for the latter, it's said to excell any piece of ground of its extent in those parts

IN the North entry to Kyle-Akin, lie several small Isles; the biggest and next to Skie is Ilan Nin Gillin, about half a Mile in Circumference, cover'd all over with long Heath, and the Erica Baccifera, there is abundance of Seals, and Sea Fowls about it.

A League further North lies the Isle Pabbay, about two Miles in Circumference, it excells in Pasturage, the Cows in it assord near double the Milk that they yield in Skie. In the Dog Days there is a big Flye in this Isle, which insests the Cows, makes them run up and down, discomposes them exceedingly, and hinders their Feeding, insomuch that they must be brought out of the Isle, to the Isle of Skie; this Isle assords abundance of Lobsters, Limpets, Wilks, Crabs, and ordinary Sea Plants.

ABOUT half a League further North lies the small Isle Gilliman, being a quarter of a Mile in Circumference; the whole is cover'd with long Heath, and the Erica Baccifera. Within a call further North lies the Isle Scalpa, very near to Skie, five Miles in Circumference, it is Mountanous from the South end, almost to the North end, it has Wood in seve-

Dhazaday Google

Western Islands of Scotland, &c. 163 ral parts of it; the South end is most arable, and is Fruitful in Corn and Grass.

ABOUT a Mile further North is the Isle Rasay, being seven Miles in length, and three in breadth, floaping on the West and East sides; it has some Wood on all the Quarters of it, the whole is fitter for Pasturage than Cultivation, the Ground being generally very unequal, but very well watered with Rivulets and Springs. There's a Spring running down the face of a high Rock on the East side of the Isle, it petrifies into a white substance, of-which very fine Lime is made, and there's a great quantity of it. There's a Quarry of good Stone one the same side of the ssle; there is abundance of Caves on the West side, which serve to lodge several Families; who for their convenience in Grazing, Fishing, &c. resort thither in the Summmer. On the West side, particulary near to the Village Clachan, the Shoar abounds with smooth Stones of different sizes, variegated all over. The same Cattle, Fowl and Fish are produc'd here, that are found in the ssle of Skie. There is a Law observed by the Natives, that all their Fishing-Lines must be of equal length, for the longest is always suppos'd to have best access to the Fish, which would prove a disadvantage to such as might have shorter ones.

THERE are some Forts in this Isle, the highest is in the South end, it is a Natural strength, and in form like the Crown of a Hat; it's called Dun-Cann, which the Natives will needs have to be from one Canne Cousen to the King of Denmark. The other lies on side, is an Artificial Fort, three Stories high, and is called Castle Vreokle.

THE Proprietor of the Isle is Mr. Mack Led, a Cadet of the Family of that Name; his Seat is in the Village Clachan, the Inhabitants have as great a veneration for him, as any Subjects can have for their King. They preserve the Memory of the deceased Ladies of the Place, by erecting a little Pyramid of Stone for each of them, with the Ladies Name. These Pyramids are by them called Crosses; several of them are built of Stone and Lime, and have three steps of gradual ascent to em. There are eight such Crosses about the Village, which is adorn'd with a little Tower, and lesser Houses, and an Orchard with several forts of Berries, Pot-herbs, &c. The Inhabitants are all Protestants, and use the same Language, Habit, and Diet, with the Natives of Skie.

ABOUT a quarter of a Mile further North lies the Isle Rona, which is three Miles in length, Vessels pass through the narrow Channel

Western Islands of cottant, &c. 165 Channel between Rosay, and Rosa, this little Isle is the most unequal rocky piece of Ground to be seen any where; there's but very sew Acres sit for digging, the whole is covered with long Heath, Erica-baccifera, Mertillus, and some mixture of Grass, it is reckoned very fruitful in Pasturage, most of the Rocks consist of the Hestic Stone, and a considerable

THERE is a Bay on the South-west end of the Isle, with two Entries, the one is on the West-side, the other on the South, but the latter is only accessible, it has a Rock within the Entry, and a good Fishing.

part of 'em is of a Red Colour.

ABOUT three Leagues to the North west of Rona, is the Isle Fladda being almost joyn'd to Skie, it is all plain arable Ground, and about a Mile in Circumference.

ABOUT a Mile to the North, lies the Isle Altrig, it has a high Rock facing the East, is near two Miles in Circumference, and is reputed fruitful in Corn and Grass, there is a little old Chappel in it, dedicated to St. Turos. There is a Rock of about forty Yards in length at the North-end of the Isle distinguished for its commodiousness in Fishing. Herrings are seen about this Rock in great Numbers all Summer, insomuch that the Fisher-boats are sometimes as it were entangled among the shoals of them.

THE

THE Isle Troda, lies within half a League to the Northermost point of Skie, called Hunish, it is two Miles in Circumference, fruitful in Corn, and Grass, and had a Chappel dedicated to St. Columbus. The Natives told me that, there is a couple of Ravens in the Isle, which suffer none other of their kind to come thither, and when their own Young are able to sie; they beat them also away from the Isle.

FLADDA-Chuan(i.e.)Fladda of the Ocean, lies about two Leagues distant from the West-side of Hunish-point, it is two Miles in Compass, the Ground is boggy, and but indifferent for Corn or Grass; the lsle is much frequented for the plenty of Fish of all kinds, on each quarter of it. There are very big Whales which pur-fue the Fish on the Coast, the Natives distinguish one Whale for its bigness above all others, and told me that it had many big Limpets growing upon its Back, and that the Eyes of it were of fuch a prodigious bigness, as struck no smallTerror into the Beholders. There is a Chappel in the Isle dedicated to St. Columbus, it has an Altar in the East-end, and there is a blue Stone of a round Form on it, which is always moist; It is an ordinary Custom, when any of the Fishermen are detain'd in the Isle, by contrary Winds, to wash the blue Stone with Water all round, expecting thereby to procure a favourable Wind, which the Credulous Tenant living Western Islands of Scotland, &c. 167 living in the Isle says never fails, especially if a Stranger wash the Stone; The Stone is likewise applied to the sides of People troubled with Stitches, and they say it is essectual for that purpose. And so great is the regard they have for this Stone, that they swear decisive Oaths on it.

THE Monk O Gorgon is buried near to this Chappel, and there is a Stone five foot high at each end of his Grave. There's abundance of Sea-fowl that come to hatch their Young in the Isle; the Coulter-nebs are very numerous here, it comes in the middle of March, and goes away in the middle of August, it makes a Tour round the Isle Sunways, before it settles on the Ground, and another at going away in August; which Ceremony is much approved by the Tenant of the Isle, and is one of the chief Arguments, he made use for making the like round, as he sets out to Sea with his Boat.

THERE is a great Flock of Plovers, that come to this lsle frome Skie, in the beginning of September, they return again in April, and are said to be neer two thousand in all; I told the Tenant he might have a Couple of these at every meal during the Winter and Spring, but my motion seem'd very disagreeable to him: For he declared that he had never once attempted to take any of them, tho he might if he would,

and at the same time told me, he wondred how I could imagine, that he would be so Barbarous as to take the lives of such innocent Creatures as came to him only for Self-preservation.

THERE are fix or seven Rocks within distance of a Musket-shot, on the South-east side the Isle, the Sea running between each of them; that lying more Easterly is the Fort called bord Cruin, (i. e.) a round Table, from its round Form, it is about three hundred Paces in Circumference, flat in the toep, has a deep Well within it, the whole is furrounded with asteep Rock, and has only one Place that is accessible by climbing, and that only by one Man at a time, there is a violent current of a Tide on each side of it, which contributes to render it an Impregnable Fort, it belongs to Sr. Donald Mac Donald, one single Man above the Entry, without being expos'd to shot, is able with a Staff in his hand, to keep off five hundred Attaquers, for one only can climb the Rock at a time, and that not without difficulty.

THERE is a high Rock on the West side the Fort, which may be secured also by a few hands.

ABOUT half a League on the South-fide the round Table, lies the Rock called Jeskar (i. e.) Fisher, because many Fishing-boats resort to it,

Western Islands of Scotland, &c. 169 it is not higher than a small Vessel under Sail. This Rock affords a great quantity of Scurvy-grass, of an extraordinary size, and very thick, the Natives eat it frequently, as well Boyl'd as Raw, two of them told me that they happen'd to be consin'd there, for the space of thirty hours by a contrary Wind; and being without Victuals, sell to eating this Scurvy-grass, and finding it of a sweet Taste, far different from the Land Scurvy grass, they cat a large Basket sull of it, which did abundantly satisfie their Appetites untill their return home; they told me also that it was not in the least windy, or any other way troublesome to them.

ISLAND Tulm on the West of the wing of Skie, called Troterness, lies within Musquet-shot of the Castle of the Name, it is a hard Rock, and cloathed with Grass, there are two Caves on the West-side, in which abundance of Sea Cormorants build and hatch.

ABOUT 5 Leagues to the South-west from Tulm, lies the Island Ascrib, which is divided into several parts by the Sea, it is about two Miles in Compass, and affords very good Pasturage, all kind of Fish abound in the neighbouring Sea, on the South-west side of the Isle Ascrib, at the distance of two Leagues, lies the two small isles of Timan, directly in the mouth of Loch-arnisort, they are only sit for Pasturage.

ON the West-side of Vaternis Promontory, within the mouth of Loeh-fallart, lies Isa, two Miles in Compass, being fruitful in Corn and Grass, and is Commodious for fishing of Cod and Ling.

THERE are two small Isles, called Mingoy, on the North-east side this Isle which afford good Pasturage.

THERE is a red short kind of Dulse, growing in the South-end of the Isle, which occasions a pain in the Head when eaten, a property not known in any other Dulse whatever.

THE two Isles Bnia and Harlas, lies in the mouth of Loch-Brakadil, they are both pretty high Rocks, each of them about a Mile in Circumference, they afford good Pasturage & there are red Currants in these small Isles, supposed to have been carried thither at first by Birds.

THE Southern parts of Skie, as Sleat, and Strath, are a Month earlier with their Grass than the Northern parts, and this is the reason that the Cattle and Sheep, &c. bring forth their Young sooner than in the North-side.

THE days in Summer are much longer here than in the South of England, or Scotland, and the Nights shorter, which about the Summer Solfice

Western Islands of **Scotland**, &c. 171 slice is not above an hour and an half in length, and the further we come South, the contrary is is to be observed in Proportion.

THE Air here is commonly moist and Cold, this disposes the Inhabitants to take a larger Dose of Brandy, or other strong Liquors, than in the South of Scotland, by which they fancy that they qualify the Moisture of the Air; this is the Opinion of all Strangers, as well as of the Natives, since the one as well as the other, drinks at least treble the quantity of Brandy in Skie and the adjacent Isles, that they do in the more Southern Climate.

THE height of the Mountains contributes much to the moisture of the Place, but more especially the Mountain Quillin, which is the Husbandmans Almanack, for it is commonly observed that if the Heavens above that Mountain be clear and without Clouds in the Morning, then it is not doubted but the Weather will, prove fair; & contra. The height of that Hill reaching to the Clouds breaks them, and and then they presently after fall down in great Rains according as the Wind blows; thus when the Wind blows from the South, then all the Ground lying to the North of Quillin Hills is wet with Rains, whereas all the other three Quarters are dry.

THE South-west Winds, are observed to carry more Rain with them than any other, and blow much higher in the most Northern point of Skie, than they do two Miles surther South, for which I could perceive no visible cause, unless it be the height of the Hill; about two Miles South from that point, for after we come to the South-side of it, the Wind is not perceived to be so high as on the North-side by half.

IT'S observed of the East-wind, that tho it blow but very gently in the Isle of Skie, and on the West-side of it, for the space of about three or four Leagues towards the West, yet as we advance more Westerly, it is sensibly higher, and when we come near to the Coast of the more Western Isles of Uist, Harries, &c. It is observed to blow very fresh, tho at the same time it is almost Calm on the West-side the Isle of Skie, the Wind is attended with fair Weather, both in this and other Western Isles.

THE Sea in time of a Calm, is observed to have a rising motion, before the North-wind blows, which it has not before the approaching of any other Wind.

THE North-wind is still colder, and more destructive to Corn, Cattle, &c. than any other.

WOMEN

Digizado, Google

## Western Islands of Scotland, &c. 173

WOMEN observe that their Breasts contract to a lesser bulk when the Wind blows from the North, and that then they yield less Milk, than when it blows from any other Quarter; and they make the like observation in other Creatures that give Milk.

THEY observe that when the Sea yields a kind of Pleasant and sweet scent, it is a sure presage of fair Weather to ensue.

THE Wind in Summer blows stronger by Land, than by Sea, and the contrary in Winter.

IN the Summer, the Wind is sometimes observed to blow from different Quarters at the same time, I have seen two Boats sail quite contrary ways, until they came within less than a League of each other, and then one of them was becalm d, and the other continu'd to sail forward.

THE Tide of Ebb, here runs Southerly, and the Tide of Flood Northerly, where no Head Lands or Promontories are in the way to interpose, for in such cases the Tides are observed to hold a course quite contrary to the ordinary motion in these Isles, and the opposite main Land: This is observed between the East-side of Skie and the opposite continent, where the

Tide of Ebb runs Northerly, and the Tide of Flood Southerly, as far as Killach-stone, on the South-east of Skie, both Tides running directly contrary to what is to be seen in all the Western Isles, and opposite Continent; The Natives at Kylakin, told me that they had seen three different ebbings successively on that part of Skie.

THE Tide of Ebb is always greater with North-winds, than when it blows from any other Quarter, and the Tide of Flood is always higher with South-winds, than any other.

THE two chief Spring-tides are on the tenth of September, and on the tenth or twentieth of March,

THE Natives are very much dispos'd to obferve the influence of the Moon on humane Bodies, and for that cause they never dig their Peats but in the decrease, for they observe that if they are cut in the increase, they continue still moist, and never burn clear, nor are they without Smoak, but the contrary is dayly observed of Peats cut in the increase.

THEY make up their earthen Dykes, in the decrease only, for such as are made at the Increase are still observed to fall.

The eddy Google

THEY fell their Timber, and cut their Rushes in time of the decrease.

The Diseases, known and not known in SKIE, and the adjacent Isles.

HE Gout, Corns in the Feet, Convulsions, Madnels, Fits of the Mother, Vapours, Pally, Lethargy, Rheumatisms, Wens, Ganglions, Kings-evil, Ague Surfeits and Consumptions are not frequent, and Barenness, and Abortion very rare.

THE Diseases that prevail here are Feavers, Stitches, Collick, Head-ach, Megrim, Jaundise, Sciatica, Stone, Small-pox, Measles, Rickets, Scurvy, Worms, Fluxes, Tooth-ach, Cough and Squinance.

THE ordinary Remedies us'd by the Natives, are taken from Plants, Roots, Stones, Animals, &c.

TO cure a Pleurifie, the letting of Blood plentifully, is anordinary Remedy.

WHEY in which Violets have been boyl'd, is us'd as a cooling and refreshing Drink for such as are ill of Fevers. When the Patient has not a sweat duly, their Shirt is boyl'd in Water,

Water, and afterwards put on them, which causes a speedy sweat. When the Patient is very Costive, and without passage by Stool or Urine, or passes the ordinary time of sweating in Fevers, two or three handfulls of the Sea plant call'd Dulse, boyl'd in a little Water, and some fresh Butter with it, and the Insusion drunk, procures Passage both ways, and sweat shortly after: The Dulse, growing on Stone, not that on the Seaware is only proper in this case.

TO procure Sleep after a Feaver, the Feet, Knees, and Ancles of the Patient are washed in warm Water, into which a good quantity of Chick-weed is put, and afterwards some of the Plant is applied warm to the Neck, and between the Shoulders, as the Patient goes to Bed.

THE tops of Nettles, chop'd small, and mix'd with a few whites of raw Eggs, applied to the Fore-head, and Temples, by way of a Frontell, is us'd to procure Sleep.

FOXGLOVE, applied warm plaster wise to the part affected; removes pains that follow after Fevers.

THE Sea-plant Linarich, is us'd to procure Sleep as is mentioned among its Vertues.

ERICA-BACCIFERA,

ERICA-BACCIFERA boyl'd a little in Water, and applied warm to the Crown of the Head and Temples, is us'd likewise as a Remedy to procure Sleep.

TO remove Stitches, when letting Blood does not prevail, the part affected is rubb'd with an Oyntment made of Camomile and fresh Butter: Or of Brandy with fresh Butter, and others apply a quantity of raw Scurvy-grass chop'd small.

THE Scarlet fever, which appeared in this Isle, only within these two Years last, is ordinarily Cur'd by drinking now and then a glass of Brandy. If an Infant happen to be taken with it, the Nurse drinks some Brandy, which qualifies the Milk, and proves a successful Remedy.

THE Sea-plant Dulse, is us'd as is said above, to remove Collicks, and to remove that distemper and Costiveness, a little quantity of Fresh-butter, and some Scurvy-grass boyl'd, and eaten with its Insusson, is an usual and and essectual Remedy.

A large handful of the Sea-plant Dulse, growing upon Stone, being applied outwardly, as is mentioned above, against the Iliaca Passio, takes away the Aster-birth, with great ease and M safety;

safety; this Remedy is to be repeated until it produce the desired effect, tho some hours may be intermitted; the fresher the Dulse is, the operation is the stronger, for if it is above two or three days old, little is to be expected from it in this case. This Plant seldom or never fails of success, tho the Patient had been delivered several days before; and of this I have lately seen an extraordinary instance at Edinburgh in Scotland, when the Patient was given over as dead.

DULSE, being eaten raw or boyl'd, is by dayly experience found to be an excellent Antifeerbutick, it is better raw in this case, and must be first wash'd in cold Water.

THE Common Alga, or Sea-Ware, is yearly us'd with success, to Manure the Fruit Trees in Sr. Donald Mock Donalds Orchard at Armidill; several affirm that if a quantity of Sea-ware be us'd about the roots of Fruit-trees, whose growth is hindred by the Sea-air, this will make them grow and produce Fruit.

HEAD-ACH, is removed by taking raw Dulje, and Linarich applied cold by way of a Plaister to the Temples. This likewise is us'd as a Remedy to remove the Megrim.

Digitized by Google

THE Jaundise is cured by the Vulgar, as follows; the Patient being stript naked behind to the middle of the Back, he who acts the Surgeons part, marks the 11th Bone from the Rump on the Back, with a black stroak, in order to touch it, with his Tongs as mention'd already.

SCIATICA is cured by applying the Case with the sat of the Carara-sowl, to the Thighbone, and it must not be removed from thence, till the Cure is perform'd.

FLAMULA JOVIS or Spire-wort, being cut small, and a Limpet-shell filled with it, and applied to the Thigh-bone, causes a Blister to rise about the bigness of an Egg, which being cut, a quantity of watry matter issues from it, the Blister rises three times, and being emptied as often, the Cure is performed; the Sea-plant Linarich, is applied to the Place to Cure and dry the Wound.

CROW-FOOT of the Moor, is more effectual for raising a Blister, and Curing the Sciatica; than Flammula Jovis, for that sometimes fails of breaking, or raising the skin, but the Crowfoot seldom fails.

M 2 SEVERAL

SEVERAL of the common People have the boldness to venture upon the Flammula Jovis; instead of a Purge, they take a little of the infusion and drink it in melted fresh Butter, as the properest Vehicle, and this preserves the Throat from being excoriated.

FOR the Stone they drink Water-gruel without Salt: They likewife eat Allium, or wild Garlick, and drink the Infusion of it boyl'd in Water, which they find effectual both ways. The Insusion of the Sea plant Dulse boyl'd, is also good against the Stone, as is likewise the Broth of Wilks and Limpets, and against the Collick, Costiveness, and Stitches, a quantity of Scurvy-grass boyl'd in Water with some fresh Butter added and eaten for some days, is an effectual Remedy.

TO kill Worms, the Infusion of Tansy in Whey, or Aqua vita, taken fasting, is an ordinary Medicine with the Islanders.

CARIOPHILATA Alpina Chamedress fol. It grows on Marble in divers Parts, about Christ-Church in Strath: Never observed before in Britain, and but once in Ireland, by Mr. Histon. Morisons Hist. Ray Synopsis 137.

Carmel, alias Knaphard, by Mr. James Sutherland, call'd Argatilis Sylvaticus, it has a blew Flower Western Islands of Scotland, &c. 181

Flower in July, the Plant it felf is not us'c, but the Root is eaten to expel Wind, and they fay it prevents Drunkenness, by frequent chewing of it, and being so us'd gives a good relish to all Liquors, Milk only excepted; it is Aromatick, and the Natives prefer it to Spice, for brewing aqua vita, the Root will keep for many Years; some say that it is Cordial, and allays Hunger.

SHUNNIS is a Plant highly valued by the Natives who eat it raw, and also boyl'd with Fish, Flesh, and Milk, it is us'd as a Sovereign Remedy to cure the Sheep of the Cough, the Root eaten fasting expels Wind, it was not known in Britain, except in the North-west Isles, and some parts of the opposite Continent, Mr. James Sutherland fent it to France some Years ago.

A quantity of wild Sage chewed between ones Teeth, and put into the Ears of Gows or Sheep that become Blind, they are thereby Cured, and their Sight perfectly restored; of which there are many fresh Instances both in Skie and Harries, by Persons of great Integrity.

A quantity of wild Sage chop'd small and eaten by Horses mixed with their Corn kills Worms, the Horse must not drink for 10 hours after eating it.

THE

THE Infusion of wild Sage after the same manner produces the like effect.

WILD Sage cut small, and mix'd among Oats given to a Horse sasting, and kept without Drink for seven or eight hours after, kills Worms.

FLUXES are Cur'd by taking now and then a spoonful of the Syrup of blew Berries that grow on the Mertillus.

PLANTAIN boyl'd in Water, and the Hestic stone heated Red-hot quenched in the same, is successfully us'd for Fluxes.

Some cure the Tooth-ach, by applying a little of the Flammula Jovis in a Limper shell, to the Temples.

A Green Turf heated among Embers, as hot as can be endured and by the Patient applied to the lide of the Head affected, is likewise us'd for the Tooth-ach.

FOR Coughs and Colds, Water-gruel with a little Butter is the ordinary Cure.

FOR Coughs and Hoarsness, they wie to bath the Feet in warm Water, for the space of a quarter of an hour at least; and then rub a little quantity western Islands of Scotland, &c. 183 quantity of Deers grease (the older the better) to the soles of their Feet by the Fire, the Deers grease alone is sufficient in the Morning, and this method must be continued until the Cure is perform'd, and it may be us'd by Young or Old, except Women with Child, for the first four Months, and such as are troubled with Vapours.

HARTS-TONGUE and Maiden-hair, boyl'd in Wort, and the Ale drunk, is us'd for Coughs and Consumptions.

MILK or Water wherein the Hectic-stone hath been boyl'd or quench'd Red-hot, and being taken for ordinary Drink, is also efficacious against a Consumption.

THE Hands and Feet often washed in Water, in which the Hellic-stone has been boys'd is esteemed Restorative.

TARROW with the Hectic-stone boyl'd in Milk, and frequently drunk, is us'd for Confumptions.

WATER-GRUEL is also found by experience to be good for Consumptions, it purifies the Blood and procures Appetite, when Drunk without Salt.

M 4 THERE

THERE is a Smith in the Parish of Kilmartin, who is reckoned a Doctor for Curing faintness of the Spirits. This he performs in the following manner.

THE Patient being laid on the Anvil with his Face uppermost, the Smith takes a big Hammer in both his hands, and making his Face all Grimace, he approaches his Patient, and then drawing his Hammer from the Ground, as if he design'd to hit him with his full Strength on the Forehead, he ends in a Faint, else he would be sure to Cure the Patient of all Diseases; but the Smith being accustomed with the performance has a dexterity of Managing his Hammer with Descretion; tho at the same time he must do it so as to strike Terror in the Patient, and this they say has always the design'd effect.

THE Smith is Famous for his Pedegree, for it has been observed of a long time, that there has been but one only Child born in the Family, and that always a Son, and when he arrived to Man's estate, the Father died presently after; the present Smith makes up the thirteenth Generation of that Race of People who are bred to be Smiths, and all of them pretend to this Cure.

ILICA PASSIO, or Twisting of the Guts, has been several times Cured by drinking a draught of cold Water, with a little Oatmeal in it, and then hanging the Patient by the heels for some time. The last Instance in Skie was by John Morison, in the Village of Talisker, who by this Remedy alone Cur'd a Boy of sourteen years of age. Dr. Pitcairn told me that the like Cure had been perform'd in the Shire of Fife for the same Disease. A Cataplasm of hot Dulse, with its juice, applied several times to the lower part of the Belly, Cured the Illiag Passion. Cured the Illiac Passion.

FOR a Fracture, the first thing they apply to a broken Bone, is the white of an Egg, and fome Barley Meal; and then they tie Splinters round it, and keep it so tied for some days. When the Splinters are untied, they make use of the following Ointment, viz. a like quantity of Betonica Pauli, St. John's Wort, Golden-Rod, all cut and bruis'd in Sheeps-greafe, or Fresh Butter, to a consistence, some of this they spread on a Cloath, and lay on the Wound, which continues untied for a few days.

GIBEN of St. Kilda, i. e. the Fat of Sea Fowls made into a Pudding in the Stomach of the Fowl, is also an approved Vulnerary for Man or Beaft.

THE

THE Vulgar make Purges of the Infusion of Scurvygrafs, and some Fresh Butter; and this they continue to take for the space of a Week or two, because it is mild in its operation.

THEY use the Insusion of the Sca-plant Dulse after the same manner, instead of a

Purge.

EYES that are Blood-shot, or become blind for some days, are Cur'd here by applying some blades of the Plant Fern, and the yellow is by them reckon'd best; this they mix with the white of an Egg, and lay it on some coarse Flax—and the Egg next to the Face and Brows, and the Patient is order'd to lie on his back.

TO Ripen a Tumor, or Boil, they cut Female Jacobea small, mix it with some fresh Butter on a hot stone, and apply it warm, and this ripens and draws the Tumor quickly, and without pain; the same Remedy is us'd for Womens Breasts that are hard, or swell'd.

FOR taking the Syroms out of the hands, they use ashes of burnt Sea-ware, mix'd with Salt water, and washing their hands in it, without drying them, it kills the Worms.

BURNT Ashes of Sea-ware preserves Cheese instead of Salt, which is frequently practis'd

Western Islands of Scotland, &c. 187 in this Isle. Ashes of burnt Sea-ware scowers Flaxen Thread better, and makes it whiter than any thing else.

WHEN their Feet are swell'd and benum'd with Cold, they scarrific their Heels with a Lancet.

THEY make Glisters of the Plant Mercury, and some of the Vulgar use it as a Purge, for which it serves both ways.

THEY make Glifters also of the Roots of Flags, Water, and salt Butter.

THEY have found out a strange Remedy for such as could never ease Nature at Sea by Stool, or Urine; there were three such Men in the Parish of St. Maries in Trotterness, two of them I knew, to wit, John Mack Phade, and Finlay Mack Phade, they liv'd on the Coast, and went often a Fishing, and after they had spent some nine or ten hours at Sea, their Bellies would swell; for after all their endeavours to get passage either ways, it was impracticable untill they came to Land, and then they found no difficulty in the thing. This was a great inconvenience to any Boats-Crew in which either of these three Men had been Fishing, for it oblig'd them often to sorbear when the Fishing was most plentiful, and to Row to the shoar with any of these Men that happened to become

become Sick, for Landing was the only Remedy. At length one of their Companions thought of an Experiment to remove this inconvenience; he consider'd that when any of these Men had got their feet on dry ground, they could then case Nature with as much freedom as any other Person; and therefore he carried a large green Turss of Earth to the Boat, and placed the green side uppermost, without telling the reason. One of these Men who was subject to the Infirmity above-mention'd, perceiving an Earthen Turff in the Boat, was surpriz'd at the fight of it, and enquir'd for what purpose it was brought thither? He that laid it there answer'd, that he had done it to serve him, and that when he was dispos'd to case Nature, he might find himself on Land, tho' he was at Sea. The other took this as an Affront. fo that from words, they came to blows; their fellows with much ado did separate them, and blam'd him that brought the Turff into the Boat, fince such a Fancy could produce no other effect than a Quarrel. All of them employ'd their time eagerly in Fishing, untill some hours after, that the angry Man who before was so much affronted at the Turff, was so ill of the Swelling of his Belly as usual, that he begg'd of the Crew to row to the Shoar, but this was very disobliging to them all; he that intended to try the Experiment with the Turff, bid the Sick Man stand on it, and he might expect to have success by it; but

Western Islands of Stotland, &c. 189 but he resus'd, and still resented the affront which he thought was intended upon him; but at last all the Boats Crew urg'd him to try what the Turst might produce, since it could not make him worse than he was. The Man being in great pain, was by their repeated Importunities prevail'd upon to stand with his Feet on the Turst, and it had the wished essect, for Nature became obedient both ways, and then the angry Man changed his note, for he thanked his Doctor, whom he had some hours before beat; and from that time none of these three Men ever went to Sea without a green Turst in their Boat, which prov'd essectual. This is matter of Fact sufficiently known and attested by the better part of the Parishioners still living upon the Place.

THE ancient way the Islanders us'd to procure Sweat was thus; a part of an Earthen Floor was cover'd with Fire, and when it was sufficiently heated, the Fire was taken away, and the ground cover'd with a heap of Straw, upon this Straw a quantity of Water was poured, and the Patient lying on the Straw, the heat of it put his whole Body into a sweat.

TO cause any particular part of the Body to Sweat, they dig an hole in an Earthen Floor, and fill it with Hazel Sticks, and dry Rushes; above these they put a Hectick Stone red hor, and pouring some water into the hole, the Patient A Description of the

190

tient holds the part affected over it, and this procures a speedy Sweat.

THEIR common way of procuring Sweat, is by drinking a large draught of Water-gruel, with some Butter, as they go to Bed.

Of the various effects of Fishes on several Constitutions in these Islands.

ONGAL-MACK-EWAN became Feverish always after eating Fish of any kind, except Thornback, and Dog-Fish.

A Ling-Fish having brown spots on the Skin, causes such as eat of its Liver, to cast their Skin from head to foot. This happened to three Children in the Hamlet Taliskir, after eating the Liver of a brown spotted Ling.

FINLAY ROSS, and his Family, in the Parish of Uge, having ear a fresh Ling-Fish, with brown spots on its Skin, he and they became indisposed and Feverish for some sew days, and in a little time after they were blister'd all over. #### Western Islands of Stotland, &c. 191

THERE was a Horse in the Village Bretill, which had the Erection backward, contrary to all other of its kind.

A Weaver in *Portrie* has a Faculty of erecting and letting fall his Ears at pleasure, and opens and shuts his mouth on such occasions,

A Boy in the Castle of Duntulm, called Mister to a By-Name, hath a Pain and Swelling in his-great Toe at every Change of the Moon, and it continues only for the space of one day, or two at most.

ALLEN-MAC-LEOD being about ten years of age, was taken ill of a Pain which moved from one part of his Body to another, and where it was felt the Skin appeared blue; it came to his Toe, Thigh, Testicles, Arms and Head, when the Boy was bath'd in warm water he found most ease; the hinder part of his Head which was last affected, had a little swelling, and a Woman endeavouring to squeeze the Humour out of it, by bruising it on each side with her Nails, she forc'd out at the same time a little Animal near an inch in length, having a white Head sharp pointed, the rest of its Body of a red colour, and full of small seet on each side; Animals of this sort have been seen in the Head and Legs of several

## Yest how preserv'd by the Natives.

A ROD of Oak of four, five, fix or eight inches about, twisted round like a Wyth, boil'd in Wort, well dried and kept in a little bundle of Barley Straw, and being steep'd again in Wort, causeth it to serment, and procures Test; the Rod is cut before the middle of May, and is frequently us'd to surnish Test, and being preserved and us'd in this manner, it serves for many years together. I have seen the Experiment tried, and was shew'd a piece of a thick Wyth which hath been preserved for making Ale with, for above twenty or thirty years.

· The

### The Effects of eating Hemlock-Root.

FERGUS KAIRD an Emperick, living in the Village Talisker, having by a mistake eaten a Hemlock-Root, instead of the White Wild Carrot; his Eyes did presently roll about, his Countenance became very pale, his Sight had almost fail'd him, the Frame of his Body was all in a strange Convulsion, and his Pudenda retir'd so inwardly, that there was no discerning whether he had then been Male, or Female. All the Remedy given him in this State was a draught of hot Milk, and a little Aqua-Viva added to it, which he no sooner drank, but he Vomited presently after, yet the Root still remain'd in his Stomach. They continu'd to administer the same Remedy for the space of sour or sive hours together, but in vain, and about an hour after they ceas'd to give him any thing, he voided the Root by Stool, and then was restor'd to his former state of health; he is still living, for any thing I know, and is of a strong healthful Constitution.

SOME few years ago, all the Flax in the Barrony of Troterness was over-run with a great quantity of Green Worms, which in a few days would have destroy'd it, had not a Flock of Ravens made a Tour round the ground N

ground where the Flax grew, for the space of fourteen Miles, and eat up the Worms in a very short time.

THE Inhabitants of this life are generally well proportion'd, and their Complection is for the most part black. They are not oblig'd to Art in forming their Bodies, for Nature never fails to act her part bountifully to them; and perhaps there is no part of the habitable Globe where so few Bodily Imperfections are to be seen, nor any Children that go more early. I have observ'd several of them walk alone before they were ten Months old; they are bath'd all over every Morning and Evening, some in cold, some in warm water; but the latter is most commonly us'd, and they wear nothing strait about them. The Mother generally suckles the Child, failing of which, a Nurse is provided, for they seldom bring up any by hand; they give New-born Infants fresh Butter to take away the Miconium, and this they do for several days; they taste neithis they do for several days; they taste neither Sugar, nor Cinamon, nor have they any daily allowance of Sack bestowed on them, as the Custom is elsewhere, nor is the Nurse allowed to taste Ale.

THE Generality wear neither Shooes or Stockings b.fore they are seven, eight or ten years old, and many among them wear no Night-Caps before they are sixteen years old, and

Western Islands of Scotland, &c. 195 and upwards; some use none all their life time, and these are not so liable to Headaches; as others who keep their Heads warm.

THEY use nothing by way of prevention of Sickness, observing it as a Rule to do little or nothing of that nature. The abstractional ness of the Mothers is no small advantage to the Children; they are a very prolifick People, so that many of their numerous liste must seek their Fortune on the Continent, and not a sew in Foreign Countries, for want of Imployment at home. When they are any way Fatigu'd by Travel, or otherways, they fail not to bath their Feet in warm water, wherein red Moss has been boil'd, and rub them with it going to bed:

by a warm hand opposite to the fire, is now laid aside, except from the lower part of the Thigh, downwards to the Ankle; this they rub before and behind, in cold weather; and at going to bed. Their simple Diet contributes much to their Sate of Health, and long Life; several among them of my Acquaintance arriv'd at the Age of Eighty, Ninety, and upwards; but the Lady Mack Lead it'd to the Age of one hundred and three years; she had then a comely head of hair, and a case of good teeth, and always enjoy'd the free use of her understanding, untill the Week in which she died.

THE Inhabitants of this and all the Wesslern Mes, do wear their Shooes after Mr. Lock's mode, in his Book of Education; and among other great advantages by it, they reckon these two: That they are never troubled with the Gout, or Corns in their Feet.

THEY lie for the most part on Beds of Straw, and some on Beds of Heath; which latter being made after their way, with the tops uppermost, are almost as soft as a Feather-bed, it yields a pleasant scent after lying on it once. The Natives by experience have found it to be effectual for drying superfluous Humours, and strengthning the Nerves. It is very resreshing after a Fatigue of any kind. The Picts are said to have had an Art of Brewing curious Ale with the tops of Heath, but they resus do communicate it to the Scots, and so its quite lost.

A Native of this Isle requires treble the Dose of Physick that will serve one living in the South of Scotland for a Purge; yet an Islander is easier Purged in the South, than at home. Those of the best Rank are easier wrought on by Purging Medicines, than the Vulgar.

THE Inhabitants are of all People easiest Cured of green Wounds; they are not so liable

Digitized by Google

Western Islands of Scotland, &c. 197 to Fevers as others on such Occasions; and therefore they never cut off Arm, or Leg. tho never so ill broke, and take the freedom to venture on all kind of Meat and Drink, contrary to all Rule in such cases, and yet commonly recover of their Wounds.

MANY of the Natives upon occasion of sickness, are disposed to try Experiments, in which they succeed so well, that I could not hear of the least inconvenience attending their Practice. I shall only bring one Instance more of this, and that is of the illiterate Emperick Neil Beaton in Skie; who of late is so well known in the Isles and Continent, for his great fuccess in curing several dangerous Distempers, tho he never appeared in the quality of a Physician until he arrived at the age of Forty Years, and then also without the advantage of Education: He pretends to judge of the various qualities of Plants, and Roots, by their different Tastes, he has likewise a Nice Observation of the Colours of their Flowers, from which he learns their Astingent and Loofening qualities; he extracts the Juice of Plants and Roots, after a Chymical way, peculiar to himself, and with little or no charge.

HE considers his Patients constitution before any Medicine is administred to them; and he has form'd such a System for curing Diseases, as serves for a Rule to him upon all Occasions of this Nature. N 3 HE HE treats Riverius's, Lilium Medicina, and some other Practical Pieces that he has heard of with Contempt, since in several Instances it appears that their Method of Curing has faild, where his had good Success.

SOME of the Diseases Cured by him are as follows. Running Sores in Legs and Arms, grievous Head-aches; he had the boldness to cut a piece out of a Womans Skull broader than half a Crown, and by this restored her to persect Health. A Gentlewoman of my Acquaintance having contracted a dangerous Pain in her Belly, some days after her being delivered of a Child, and several Medicines were us'd she was thought past recovery, if she continued in that Condition a few hours longer; at last this Doctor happen'd to come there, and being imploy'd, apply'd a Simple Plant to the past affected, and restored the Patient in a quarter of an hour after the Application.

One of his Patients told me that he sent him a Cap interlined with some Seeds. &c to wear for the Cough, which it removed in a little time, and it had the like effect upon his Brother.

THE Success attending this Mans Cures were so extraordinary, that several People thought his Personmances to have proceeded rather

Western Islands of Scotland, &c. 199 rather from a Compact will the Devil, than from the Vertue of Simples, To obviate this Mr. Beaton pretends to have had some Education from his Father, tho he died when he himself was but a Boy. I have discours'd him seriously at different times, and am sully satisfied, that he uses no unlawful means for obtaining his end.

HIS discourse of the several Constitutions, the qualities of Plants, &c. were more solid than could be expected from one of his Education. Several Sick People from remote Isles came to him, and some from the Shire of Ross, at 70 Miles distance, sent for his Advice, I lest him very successful, but can give no further Account of him since that time.

THEY are generally a very Saga ious People, quick of Apprehension, and even the Vulgar exceed all those of their Rank, and Education, I ever yet saw in any other Country. They have a great Genius for Musick and Mechanicks. I have observed several of their Children, that before they could speak, were capable to distinguish and make choice of one Tune before another upon the Violin, for they appear'd always uneasie until the Tune which they fancied best was play'd, and then they express'd their satisfaction by the motions of their Head and Hands.

THERE

THERE are several of 'em, who Invent Tunes very taking in the South of Scotland, and elsewhere; some Musitians have endeavoured to pass for first Inventers of them by changing their Name, but this has been Impracticable, for whatever Language gives the Modern Name, the Tune still continues to speak its true Original, and of this I have been shew'd several Instances.

some of the Natives are very dextrous in engraving Trees, Birds, Deer, Dogs, &c. upon Bone, and Horn, or Wood, without any other Tool than a sharp pointed Knife.

SEVERAL of both Sexes have a quick Vein of Posie, and in their Language (which is very Emphatick) they compose Rhyme and Verse, both which powerfuly affect the Fancy. And in my Judgment (which is not singular in this matter) with as great force as that of any Ancient or Modern Poet I ever yet read. They have generally very retentive Memories, they see things at a great distance. The unhappiness of their Education, and their want of Converse with Foreign Nations, deprives them of the opportunity to Cultivate and Beautisy their Ganius, which seems to have been form'd by Nature for great Attainments. And on the other hand, their Retireness may be rather thought an advantage, at least to their better part; according to that of the Historian.

Plus

Plus valuit apud hos Ignorantia Vitiorum, quam apud Grecos omnia precepta in Philosophorum. The Ignorance of Vices is more powerful among those, than all the Precepts of Philosophy are among the Greeks.

FOR they are to this day happily Ignorant of many Vices, that are practifed in the Learn'd and Polite World: I could mention several, for which they have not as yet got a Name, or so much, as a Notion of them.

THE Diet generally us'd by the Natives, consists of fresh Food, for they seldom tast any that is falted, except Butter; the generality eat but little Flesh, and only Persons of distinction eat it every day, and make three Meals, for all the rest eat only two, and they eat more Boyl'dethan Roasted. Their ordinary Diet is Butter, Cheese, Milk, Potatoes, Colworts, Bruchan i. e. Oatmeal and Water boyl'd; the latter taken with some Bread is the constant Food of several Thousands of both Sexes in this and other Isles, during the Winter, and Spring; yet they undergo many Fatigues both by Sea and Land, and are very healthful. This verifies what the Poet faith. Populis fat eft Lymphaque Ceresque. Nature is satisfied with Bread and Water.

THERE

THERE is no Place so well stored with such great quantity of good Beef and Mutton, where so little of both is consum'd by eating. They generally use no sine Sawces to entice a salse Appetite, nor Brandy, or Tea for Digestion, the purest Water serves them in such Cases; this together with their ordinary Exercise, and the free Air, preserves their Bodies and Minds in a regular Frame, free from the various Convulsions that ordinarily attend Luxury. There is not one of them too Corpulent, nor too Meagre.

THE Men-servants have always double the quantity of Bread, &c. that is given to Women-Servants, at which the latter are no ways offended, in regard of the many Fatigues by Sea and Land, which the former undergo.

OON, which in English signify's Froath, is a Dish us'd by several of the Islanders, and some on the opposite Main land, in time of scarcity, when they want Bread, it is made in the following manner. A quantity of Milk, or Whey is boyl'd in a Pot, and then it is wrought up to the mouth of the Pot with a long Stick of Wood, having a Cross at the lower-end; it is turn'd about like the Stick for making Chocolat, and being thus made it is supp'd with Spoons; it is made up five or six times, in the same manner, and the last is always reckon'd best,

western Islands of Scotland, &c. 203 and the first two or three froathings the worst; the Milk or Whey that is in the bottom of the Pot is reckon'd much better in all respects than simple Milk. It may be thought that such as feed after this rate, are not sit for action of any kind, but I have seen several that liv'd upon this sort of Food, made of Whey only, for some Months together, and yet they were able to undergo the ordinary Fatigue of their Imployments, whether by Sea or Land, and I have seen them travel to the tops of high Muntains, as briskly as any I ever saw.

SOME who live plentifully, make this Dish as above said of Goats Milk, which is said to be nourishing; the Milk is thickned and taste much better after so much working; some add a little Butter and Nutmeg to it. I was treated with this Dish in several Places, and being ask'd whether this said Dish or Chocolat was best, I told them that if we judged by the Essects, this Dish was preferable to Chocolat, for such as drink often of the sormer, enjoy a better state of Health, than those who use the latter.

Graddan

# Graddan.

HE ancient way of dreffing Corn, which is yet us'd in several is, is call'd Graddan, from the Irish word Grad; which fignifies quick. A Woman fitting down, takes a handful of Corn, holding it by the Stalks in her left hand, and then fets fire to the Ears, which are presently in a flame; she has a Stick in her right hand, which she manages very dextrously, beating off the Grain at the very Instant, when the Husk is quite burnt, for if the miss of that, she must use the Kiln, but Experience has taught them this Art to perfection. The Corn may be so dressed, winowed ground, and backed, within an Hour after reaping from the Ground. The Oat-bread dressed as above is lootening, and that dress'd in the Kiln, Altringent, and of greater strength for Labourers: But they love the Graddan, as being more agreeable to their taste. This barbarous Custom is much laid aside, since the Number of their Mills encreas'd : Captain Fairweather, Master of an English Vessel, having dropt Anchor at Bernera of Glenelg over against Skie, saw two Women at this Imployment, and wondring to see so much Flame and Smoak, he came near, and finding that it was Corn they burnt, he run away in great hast, telling the Natives that he

Western Islands of Scotland, &c. 205 he had seen two Mad-women very busie burning Corn; the People came to see what the matter was, and laugh'd at the Captain's Mistake, tho' he was not a little surprized at the strangeness of a Custom that he had never seen or heard of before.

THERE are two Fairs of late held yearly at Portry on the East side of Skie: the Convenience of the Harbour which is in the middle of the Isle, made 'em chuse this for the sittest Place. The first holds about the middle of June, the second about the beginning of September. The various Products of this and the adjacent Isles, and Continent, are Sold here: viz: Horses, Cows, Sheep, Goats, Hides, Skins, Butter, Cheese, Fish, Wooll, &c.

ALL the Horses and Cows Sold at the Fair, swim to the Main Land over one of the Ferries or Sounds called Kyles, one of which is on the East, the other on the South side of Skie. That on the East is about a Mile broad, and the other on the South is half a Mile: They begin when it is near Low Water, and sasten as twisted Wyth about the lower Jaw of each Cow, the other end of the Wyth is fastned to another Cows Tail, and the number so tied together is commonly sive. A Boat with sour Oars rows off, and a Man sitting in the Stern, holds the Wyth in his hand to keep up the foremost Cows head, and thus all the sive

five Cows swim as fast as the Boat rows; and in this manner above an hundred may be Ferried over in one day. These Cows are sometimes drove above 400 Miles further South; they soon grow Fat, and prove sweet and tender Bees.

#### Their Habit.

It inction in the Islands, was the Leniflinction in the Islands, was the Leni-Creich, from the Irish word Leni, which signisses a Shirt, and Croch Sasson, because their Shirt was died with that Herb: the ordinary number of Ells us'd to make this Robe was twenty four; it was the upper Garb, reaching below the knees, and was tied with a Belt round the middle; but the Islanders have laid it aside about a hundred years ago.

THEY now generally use Coat, Wastcoat, and Breeches, as elsewhere, and on their Heads wear Bonnets made of thick Cloth, some blew, some black, and some gray.\*

MANY of the People wear Trowis, some have them very fine Woven like Stockings of those made of Cloath; some are colour d, and

Western Islands of Scotland, &c. 207 and others striped; the latter are as well shap'd as the former, lying close to the Body from the middle downwards, and tied round with a Belt above the Haunches. There is a square piece of Cloth which hangs down before. The measure for shaping the Trowis is a Stick of Wood whose length is a Cubit, and that divided into the length of a singer, and half a singer; so that it requires more skill to make it, than the ordinary Habit.

THE Shooes anciently wore, was a piece of the Hide of a Deer, Cow, or Horse, with the Hair on, being tied behind and before with a Point of Leather. The Generality now wear Shooes having one thin Sole only, and shaped after the right and left Foot; so that what is for one Foot, will not serve the other.

BUT Persons of Distinction wear the Garb in Fashion in the South of Scotland.

THE Plad wore only by the Men, is made of fine Wool, the Thread as fine as can be made of that kind; it consists of divers Colours, and there is a great deal of ingenuity requir'd in sorting the Colours, so as to be agreeable to the nicest Fancy. For this reason the Women are at great pains, first to give an exact Pattern of the Plade upon a piece of Wood, having the number of every thread of the

the stripe on it. The length of it is commonly feven double Ells; the one end hangs by the middle over the left Arm, the other going round the Body, hangs by the end over the left Arm also. The right hand above it is to be at liberty to do any thing upon occasion. Every I'e differs from each other in their Fancy of making Plaids, as to the Stripes in Breadth, and Colours. This Humour is as different thro' the main Land of the Highlands. insofar that they who have seen those Places, is able at the first view of a Man's Plaid, to guess the place of his Residence.

WHEN they Travel on Foot, the Plaid is tied on the breast with a Bodkin of Bone or Wood, (just as the Spina Wore by the Germans, according to the description of C. Tacitus;) the Plaid is tied round the middle with a Leather Belt; it is pleated from the Belt to the Knee very nicely; this Dress for Footmen is found much easier and lighter than Breeches, or Trowis.

THE ancient Dress wore by the Women, and which is yet wore by some of the Vulgar, called Arisid, is a white Plade, having a few small Stripes of black, blew, and red; it reached from the Neck to the Heels, and was tied before on the Breaft with a Buckle of Silver, or Brass, according to the Quality of the Person. I have seen some of the former

Western Islands of Scotland, &c. 209 of an hundred Marks value; it was broad as any ordinary Pewter Plate, the whole curiously engraven with various Animals, &c. There was a lesser Buckle which was wore in the middle of the larger, and above two Ounces weight; it had in the Center a large piece of Chrystal, or some finer Stone, and this was set all round with several finer Stones of a lesser size.

THE Plad being pleated all round, was tied with a Belt below the Breast; the Belt was of Leather, and several pieces of Silver intermix'd with the Leather like a Chain. The lower end of the Belt has a piece of Plate about eight inches long, and three in breadth, curiously engraven; the end of which was adorned with fine Stones, or pieces of Red Corral. They wore Sleeves of Scarlet Cloth, clos'd at the end as Mens Vests, with gold Lace round'em, having Plate Buttons set with sine Stones. The Head dress was a fine Kerchief of Linen strait about the Head, hanging down the back taper-wise; a large Lock of Hair hangs down their Cheeks above their Breast, the lower end tied with a knot of Ribbands.

THE Islanders have a great respect for their Chief and Head of Tribes, and they conclude Grace after every Meal, with a Petition to God for their Welfare and Prosperity. Neither

ther will they, as far as in them lies, suffer them to sink under any Missortune: But in case of a decay of Estate, make a voluntary Contribution on their behalf, as a common Duty, to support the Credit of their Families.

## Way of Fighting.

HE Ancient way of Fighting was by fet Battles, and for Arms some had broad two handed Swords, and Head-pieces, and others Bows and Arrows. When all their Arrows were spent, they attack'd one another with Sword in hand. Since the Invention of Guns, they aere very early accustomed to use them, and carry their Pieces with them wherever they go: They likewise learn to handle the broad Sword, and Target. Chief of each Tribe advances with his Followers within shot of the Enemy, having first laid aside their upper Garments; and after one General discharge, they attack them with Sword in hand, having their Target on their lest hand, (as they did at Kelicranky) which foon brings the Matter to an Issue, and verifies the Observation made of 'em by our Historians.

Aut mors cito, aut victoria leta.

THIS

THIS Isle is divided into three Parts, which are posses'd by different Proprietors. The Southern part call'd Slait, is the Property and Title of Sir Donald Mack Donald, Knight and Baronet; his Family is always diftinguish'd from all the Tribes of his Name, by the Irish as well as English, and call'd Mack Donald absolutely, and by way of Excellence; he being reckoned by Genealogists, and all others, the first for Antiquity among all the Ancient Tribes, both in the Isles and Continent. He is Lineally descended from Sommerled, who according to Buchannan, was Thane of Argyle; he got the Isles into his Possession by Vertue of his Wifes Right; his Son was called Donald, and from him all the Families of the Name Mack Donald are descended. He was the first of that Name, who had the Title of King of the Isles. One of that Name Subscribing a Charter granted by the King of Scots to the Family of Roxburgh, writes as follows: Donald King of the Isles Witness. He would not pay Homage to the King for the Isles, but only for the Lands which he held of him on the Continent.

ONE of Donald's Successors Married a Daughter of King Robert the 2d, the first of the Name of Stuart, by whom he acquired several Lands in the Highlands. The Earldom of Ross came to this Family, by Marrying 0 2 the

the Heiress of the House of Lesly. One of the Earls of Ross called John, being of an easse Temper, and too liberal to the Church, and to his Vassals and Friends, his Son Æneas, (by Buchannan called Donald) was so opposite to his Father's Conduct, that he gather'd together an Army to oblige him from giving away any more of his Estate. The Father rais'd an Army against his Son, and Fought him at Sea, on the Coast of Mull, the Place is fince call'd the Bloody-Bay; the Son however had the Victory. This disposed the Father to go straight to the King, and make over the Right of all his Estate to him. The Son kept Possession some time after; however this occasion'd the fall of that great Family, tho' there are yet extant several ancient Tribes of the Name, both in the Isles and Continent. Thus far the Genealogist Mack Uurich, and Hugh Mack Donald in their Manuscripts.

THE next adjacent Part to Slait, and joyning it on the North side, is Strath; it is the Property of the Eaird of Mack Kinnon, Head of an ancient Tribe.

ON the North West side of Strath lies that part of Skie called Mackleod's Countrey, Posses'd by Mackleod. Genealogists say he is Lineally descended from Leod, Son to the Western Islands of Scotland, &c. 213 the Black Prince of Man; he is Head of an ancient Tribe.

THE Baronny of Troterness on the North fide Skie, belongs to Sir Donald Mack Donald; the Proprietors and all the Inhabitants are Protestants, except twelve, who are Roman-Catholicks. The former observe the Festivals of Christmass, Easter, Good-Friday, and that of St. Michael's. Upon the latter they have a Cavalcade in each Parish, and several Families bake the Cake called St. Michael's Bannock.

0 3

BOOT

#### B 0 0 T.

HE Isle of Boot being ten Miles in length, lies on the West-side of Cowal, from which it is separated by a narrow Channel; in several parts not a Mile broad, the North end of this Isle is Mountanous and Heathy, being more design'd for Pasturage, than Cultivation; the Mold is brown. black, and in some parts Clayie, the Ground yields a good produce of Oats, Barley, and Pease: There is but little Wood growing there, yet there is a Coppice at the side of Loch-fad. The Ground is arable from the middle to the Southward, the Hectic-stone is to be had in many parts of this Isle; and there is a Quarry of red stone near the Town of Rosa, by which the Fort there, and the Chappel on its Northfide have been built. Rothfay, the head Town of the Shire of Boot and Aran, lies on the East Coast of Boot, and is one of the Titles of the Prince of Scotland; King Robert the Third created his Son Duke of Rothfay, and Steward of Scotland; and afterwards Queen Mary created the Lord Darnley Duke of Rothsay, before her Marriage with him: This Town is a very ancient Royal Burrough, but thinly Peopled, there not being above a hundred Families in it, and they have no forreign Trade: On the North-fide of Rothfay, there is a very ancient Ruinous Fort

Western Islands of Scotland, &c. 215
Fort, round in Form, having a thick Wall, and about three Stories high, and Passages round within the Wall; it is surrounded with a wet Ditch; it has a Gate on the South, and a double Gate on the East, and a Bastion on each side the Gate, and without these there's a Draw-Bridge, and the Sea slows within 40 Yards of it. The Fort is large enough for exercising a Battallion of Men, it has a Chappel and several little Houses within; and a large House of sour Stories high, fronting the Eastern-Gate. The People here have a Tradition thar this Fort was built by King Rosa, who is said to have come to this Isle before King Fergus the First. The other Forts are Down-Owle, and Down-Allin, both on the West side.

The Churches here are as follow, Kilmichel, Kil-Blain, and Kil-Chattan, in the South Parish; and Lady Kirk in Rothfay is the most Northerly Parish, all the Inhabitants are Protestants.

THE Natives here are not troubled with any Epedemical Disease, the Small pox visits them commonly once every fixth, or seventh Year; the oldest Man now living in this like is one Fleming a Weaver in Rothfay, his Neighbours told me that he could never ease Nature at Sea, who is 90 Years of Age. The inhabitants generally speak the English and Irish Tongue, and wear the same Habit with those of the other Islands; they are very Industrious O 4

Fishers especially for Herring, for which use they are furnished with about 80 large Boats, the Tenants pay their Rents with the profit of Herrings, they are to be had any where on the Weitern Coast.

THE Principal Heretors here are Stuart of Boot, who is Hereditary Sheriff of this Shire, and hath his Seat in Rofa Ballantine of Keams, whose Seat is at the Head of the Bay of that Name, and has an Orchard by it. Stuart of Escick, whose Seat has a Park and Orchard, and about a Mile to the South of Rothsay, next lies two Isles called Cumbray the greater, and the lesser, the former is within a League of Boot, this Island has a Chappel, and a Well, which the Natives esteem a Catholicon for all Diseases; this lse is a Mile in length, but the other Isle is much less in Compass, both Isles are the property of Montgommery of Skelmorly.

#### ARRAN.

"HE Name of this Isle is by some derived from Arran, which in the Irish Language fignifies Bread: Others think it comes more probably from Arjn, or Arfyn, which in their Lan-guage is as much, as the Place of the Giant Fin-Mac-Couls Slaughter or Execution; for Aar fignifies Slaughter, and so they will have Arin only the Contraction of Arrin or Fin; the received Tradition of the great Giant Fin-Mac-Cowls Military Valour, which he exercifed upon the Ancient Natives here, feems to favour this Conjecture; this they lay is evident from the many Stones fet up in divers Places of the Isle, as Monuments upon the Graves of Persons of Note that were kill'd in Battle. This Isle is twenty four Miles from South to North, and feven Miles from East to West. It lies between the ifle of Boot, and Kyntyre, in the opposite Main-land. The Isle is high and Mountainous, but flopes on each fide round the Coast, and the Glen is only made use of for Tillage. The Mountains near Brodick Bay, are of a confiderable height, all the Hills generally afford a Good Pasturage, tho a great part of tem be covered only with Heath. THE Mold here is of divers Colours, being black and brown near the Hills, and Clayie and Sandy upon the Coast.

THE Natives told me that fome Places of the Isle, affords Fullers-earth. The Coast on the East side is Rockie near the Shoar; the Stones on the Coast for some Miles beneath Brodick, are all of a red Colour, and of these the Castle of Brodick is built. The Natives fay that the Mountains near the Castle of Brodick affords Chrystal, and that the Dutchess of Hamilton put so great a Value on it, as to be at the Charge of cutting a Necklace of it, which the Inhabitants take as a great Honour done them, because they have a great Veneration for her Grace. There is no considerable Woods here, but a few Coppices, yet that in the Glen towards the West is above a Mile in length. There are Capacious Fields of Arable Ground on each fide Brodick Bay, asalfo on the opposite western Coast. The largest and best Field for Pasturage is the t on the South-west side.

SEVERAL Rivers on each fide this Isle affords Salmon, particularly the two Rivers on the West called Mackir side, and the two in Kirkmichel and Brodich Bay.

THE Air here is temperately Cold and moift, which is in some measure qualified by the fresh Breezes that blow from the Hills, but the Natives think a dram of Strong-waters is a good Corrective.

THERE

THERE are several Caves on the Coast of this life, those on the West are pretty large, particularly that in Druim-cruey, a hundred Men may sit or lie in it, it is contracted gradually from the Floor upwards to the Roof, in the upperend there is a large piece of a Rock form'd like a Pillar, there's engaven on it a Deer, and underneath it a two-handed Sword; there is a void space on each side this Pillar.

THE Southfide of the Cave has a Horse-shoe engraven on it. On each side the Door, there's a hole cut out, and that they say was for holding big Trees, on which the Caldrons hang for boyling their Beef and Venison. The Natives say that this was the Cave in which Fin-Mac-Cowl lodged during the time of his residence in this Isle, and that his Guards lay in the lesser Caves, which are near this big one; there is a little Cave joyning to the largest, and this they call the Cellar.

THERE is a Cave some Miles more Southerly on the same Coast, and they told me that the Minister Preached in it sometimes, in regard of its being more Centrical than the Parish-Church.

SEVERAL crefted Stones are to be seen on each side this Isle; sour of these are near Brodich-Bay, about the distance of 70 Yards from

from the River, and are seven foot high each. The highest of these Stones that fell under my observation was on the South-side of Kirkmichel River, and is above fifteen foot high; there is a Stone Coffin near it which has been fill'd with Humane Bones, until of late that the River washed away the Earth, and the Bones that were in the Coffin; Mac-Loui, who had seen them, says they were of no larger size than those of our own time. On the Westfide there are three Stones erected in Baellimiawich, and a fourth at some distance from these, about fix Foothigh each. In the Moor on the Eastfide Druin-cruey, there is a Circle of Stones, the Area is about thirty Paces; there is a Stone of fame shape and kind about fortyPaces to theWest of the Circle, the Natives say that this Circle was made by the Giant Fin-Mac-Cowl, and that to the single Stone Bran-Fins-Mac-Cowls Hunting-dog was usually tied. About half a Mile to the North-side Baelliminich there are twoStones erected each of them eight Foot high.

THERE is a Circle of Big-stones a little to the South of Druin Cruey, the Area of which is about twelve Paces; there is a broad thin Stone in the middle of this Circle, supported by three lesser Stones, the Ancient Inhabitants are reported to have burnt their Sacrifices on the broad Stone, in time of Heathenism.

THERE

Western Islands of Scotland, &c. 221

THER E is a thin broad Stone tapering towards the top, erected within a quarter of a Mile of the Sea, near Machir River, and is nine Foot high, and at some little distance from the River, there is a large Cavern of Stones.

THERE is an Eminence of about a thousand Paces in Compass on the Sea Coast in Druim-cruney Village, and it is fenced about with a Stone-Wall Of old it was a Sanctuary, and whatever number of Men or Cattle could get within, it was secured from the assaults of their Enemies, the Place being privileged by Universal Consent.

THE only good Harbour in this Isle is Lamlash, which is in South-east end of the Isle of that Name.

THERE is a great fishing of Cod, and Whiting, in and about this Bay.

THE whole Isle is design'd by Nature more for Pasturage, than Cultivation; the Hills are generally covered all over with Heath, and produce a mixture of the Erica-Baccifera, Cats-tail and Juniper, all which are very agreeable to the Eye in the Summer. The highest Hills of this Island are seen at a considerable distance from several parts of the Continent and Northwest Isles, and they serve instead of a Forrest to maintain the Deer, which are about four hundred

dred in number, and they are carefully kept by a Forrester, to give sport to the Duke of Hamilton, or any of his Family that go a Hunting there. For if any of the Natives happen to kill a Deer without License, which is not often granted, he is liable to a Fine of 201. Scots for each Deer. And when they grow too numerous, the Forrester grants Licenses for killing a certain number of them, on condition they bring the Skins to himself.

THE Cattle here are Horses and Cows of a middle size, and they have also Sheep and Goats. This Isle affords the common Sea and Land Fowls that are to be had in the Western Isles. The black Cock is not allow'd to be killed here without a License, the Transgressors are liable to a Fine.

THE Castle of Brodich on the North side of the Bay of that Name, stands on a Plain, from which there is about 400 Paces of a gradual descent towards the Sea.

THIS Castle is built in a long Form, from South to North there is a Wall of two Stories high that encompasses the Castle and Tower; the space within the Wall on the South side the Castle, is capable of mustring a Battalion of Men.

THE

THE Castle is four Stories high, and has a Tower of greater height joined to the North fide, and that has a Bastion close to it, to which a lower Bastion is added. The South and West sides are surrounded with a broad wet Ditch. but the East and North sides have a descent which will not admit of a wet Ditch. The Gate looks to the East. This Castle is the Duke of Hamiltons Seat, when is Grace or any of the Family make their Summer Visit to this Island. The Bayliff or Steward has his Residence in this Castle, and he has a Deputa-tion to act with full power to Levy the Rents, give Leases of the Lands, and hold Courts of Justice.

THERE is another Castle belonging to the Duke in the North fide the Isle, at the head of Loch Kenistil, in which there is an Harbour for Barks and Boats. The Isle of Arran is the Duke of Hamiltons Property (a very small part excepted) it lies in the Sheriffdom of Boot, and made part of the Diocess of Argyle.

THE Inhabitants of this Island are composed of several Tribes. The most ancient Family among them, is by the Natives reckon'd to be Mack Louis, which in the ancient Language fignifies the Son of Lewis; they own themselves to be descended of French Parentage, their Sirname in English is Fullerton, and their Title

Title Kirk Michell, the Place of their Residence If Tradition be true, this little Family is faid to be of 700 years standing. The pretent Possesfor oblig'd me with the fight of his old and new Charters, by which he is one of the Kings Coroners within this Island, and as such, he hath a Halbert peculiar to his Office; he has his right of late from the Family of Hamilton, wherein his Title and Perquifites of Coroner are confirm'd to him and his Heirs. He is oblig'd to have three Men to attend him upon all Publick Emergencies, and he is bound by his Office to pursue all Malesactors, and to deliver them to the Steward, or in his absence to the next Judge. And if any of the Inhabitants refule to pay their Rents at the usual term, the Coroner is bound to take him Personally, or to seize his Goods. And if it should happen that the Coroner with his retinue of three Men is not sufficient to put his Office in execution, then he Summons all the Inhabitants to concurr with him, and immediately they rendezvous to the place, where he fixes his Corners Staff. The Perquifites due to the Coroner are a Firlet or Bushel of Oats, and a Lamb from every Village in the Isle, both which are pun-Equally paid him at the ordinary Terms.

THE Inhabitants of this Isle are well proportion'd, generally Brown, and some of a Black Complection; they enjoy a good state of health, and have a genius for all Callings or Imploy-

Western Islands of Scotland, &c. 225 Imployments, they they have but sew Mechanicks; they wear the same Habit with those of the nearest Isles, and are very Civil; they all speak the Irish Language, yet the English Tongue prevails on the East side, and ordinarily the Ministers Preach in it, and in Irish on the West side. Their ordinary asseveration is by Nale, for I did not hear any Oath in the Island.

#### The Churches in this Isle are,

ILBRIDE in the South East, Kilmore in the South, Cabel Uual a Chapel, Kilmichel in the Village of that name, St. James's Church at the North end.

THE Natives are all Protestants, they observe the Festivals of Christmass, Good-Friday, and Easter. I had like to have forgot a valuable Curiosity in this lise, which they call Baul Muluy. i. e. Molingus his Stone Globe; this Saint was Chaplain to Mack Donald of the Isles; his Name is Celebrated here on the account of this Globe, so much esteem'd by the Inhabitants. This Stone for its intrinsick value has been carefully transmitted to Posterity for several

several Ages. It is a green Stone much like a Globe in Figure, about the bigness of a Goose Egg.

THE Vertues of it is to remove Stiches from the sides of Sick Persons, by laying it close to the Place affected, and if the Patient does not out-live the Distemper, they say the Stone removes out of the Bed of its own accord, and e contra. The Natives use this Stone for Swearing decisive Oaths upon it.

THEY ascribe another extraordinary Vertue to it, and 'tis this; the credulous Vulgar firmly believe that if this Stone is cast among rhe Front of an Enemy, they will all run away, and that as often as the Enemy rallies, if this Stone is cast among them, they still lose Courage, and retire. They say that Mackdonald of the Isles carried this Stone about him, and that Victory was always on his fide when he threw it among the Enemy. The Custody of this Globe is the peculiar Privilege of a little Family called Clan-Chattens, alias Mack Intofh, they were ancient Followers of Mack Donald of the Ides. This Stone is now in the Custody of Margaret Millar, alias Mack Intosh, she lives in Baellmianich, and preserves the Globe with abundance of care; it is wrapped up in fair Linen Cloath, and about that there is a piece of Wootlen Cloath, and the keeps it still lock'd up in her Chest, when it is not given out to exert its qualities. ISLESAT.

### ISLESAY.

South West of Arran, it rises in form of a Sugar-Loas, but the top is plain, and large enough for drawing up a thousand Men in Ranks; there is a Fresh Water Lake in the middle of the Plain, the whole lise is covered with long Grass, and is inaccessible, except on the South West side, by a stair cut out in the Rock; in the middle of it there is a small Tower of three Stories high with the top. There is a Fresh Water Spring issuing out of the side of this great Rock; below the Entry there is a place where the Fishers take up their Residence during their stay about this Rock in quest of Cod, and Ling; and there is a good Anchorage for their Vessels, very near their Tents.

THIS Rock in the Summer time abounds with variety of Sea Fowl that build and hatch in it. The Solan Geele and Culturneb are most numerous here; the latter are by the Fishers called Albanich, which in the ancient Irish Language signifies Scots Men.

THE Isle hath a Chappel on the top called Fiunnay, and an ancient Pavement, or Cause; way.

ISLESAT

ISELESAI is the Earl of Cossi's Property, the Tenant who Farms it pays him one hundred Merks Scots yearly; the product of the Isle is Hogs, Fowl, Down, and Fish. The Isle Avon above a Mile in Circumference, lies to the S. of Kintyre Mule, it hath a Harbour for Barks on the North.

## The Isle GIGAY.

HE Isle Gigay, lies about a League from Lergie on the West-side of Kyntyre, it is four Miles in length, and one in breadth, was formerly in the Diocess, and is still part of the Sheriffdom of Argyle. This Isle is for the most part Arable, but Rockie in other parts; the Mold is brown, and Clayie inclining to red; it is good for Pasturage and Cultivation. Corn growing here is Oats and Barley. Cattle bred here are Cows, Horses, and Sheep. There is a Church in this Island called Kil-chattan, it has an Altar in the East end, and upon it a Font of Stone which is very large, and hath a small hole in the middle which goes quite through it. There are several Tombstones in and about this Church; the Family of the Mack Neils, the principal Possessors of this Isle are buried under the Tomb-stones on the East side the Church, where there is a Plat of ground fet apart for them. Most of all Western Islands of Scotland, &. 229 all the Tombs have a two-handed Sword engraven on them, and there is one that has the representation of a Man upon it.

NEAR the West side the Church there is a Stone of about 16 Foot high, and 4 broad, erected upon the Eminence. About 60 yards distance from the Chappel there is a square Stone creeted about ten Foot high: at this the ancient Inhabitants bowed, because it was there where they had the first view of the Church.

THERE is a Cross 4 Foot high at a little distance, and a Cavern of Stone on each side of it.

THIS Isle affords no Wood of any kind, but a few Bushes of Juniper on the little Hills. The stones upon which the scurss Corkir, which dies a Crimson colour, grows here, as also those that produce the Crettil, which dies a Philamot colour. Some of the Natives told me that they us'd to chew Nettles, and hold them to their Nostrils to stanch bleeding at the Nose, and that Nettle being applied to the place, would also stop bleeding at a Vein, or otherwise.

THERE is a Well in the North end of this Ine called Toubir-more, i.e. a great Well, because of its effects, for which it is Famous P 3 among

among the Islanders; who together with the Inhabitants use it as a Catholicon for Diseases. It's cover'd with Stone and Clay, because the Natives fancy that the stream that flows from ir might overflow the Isle; and it is always opened by a Diroch, i. e. an Inmate, else they think it would not exert its Vertues. They ascribe one very extraordinary effect to it, and cis this; That when any Foreign Boats are Wind-bound here (which often happens) the Master of the Boat ordinarily gives the Native that lets the Water run a piece of Money, and they fay that immediately afterwards the Wind changes in favour of those that are thus de-tain'd by contrary Winds. Every Stranger that goes to drink of the water of this Well, is accustomed to leave on its stone Cover a piece of Money, a Needle, Pin, or one of the prettiest varieated Stones they can find.

THE Inhabitants are all Protestants, and speak the Irish Tongue generally, there being but few that speak English; they are grave and reserved in their Conversation, they are accustomed not to bury on Friday; they are Fair or Brown in Complection, and use the same Habit, Diet, Sc. that is made use of in the adjacent Continent and Isles. There is only one Inn in this Isle.

THE Isle Caray lies a quarter of a Mile South from Gigay, it is about a Mile in compass,

Western Islands of Scotland, &c. 231 pass, affords good Pasturage, and abounds with Connies. There is an Harbour for Barks on the North East end of it. This Island is the Property of Mack Alister of Lergy, a Family of the Mackdonalds.

### JURAH.

HE Isle of Furab is by a narrow Channel of about half a Mile broad, separated from Ila. The Natives say that Jurah is so call'd from Dib and Rab, two Brethren who are believ'd to have been Danes; the Names Dib and Rab fignifying as much as without Grace or Prosperity. Tradition says that these two Brethren fought and killed one another in the Village Knock Cronm, where there are two stones erected of 7 Foot high each, and under them they fay there are Urns with the ashes of the two Brothers; the distance between them is about fixty yards. The Isle is Mountainous along the middle, where there are four Hills of a confiderable heighth; the two highest are well known to Sea-faring Men, by the Name of the Paps of Jurah; they are very conspicuous from all quarters of Sea and Land in those Parts.

THIS

THIS Isle is twenty four Miles long, and in some places six or seven Miles in breadth; it is the Dake of Argyle's Property, and part of the Sherissdom of Argyle.

THE Mold is brown and grayish on the Coast, and black in the Hills, which are cover'd with Heath, and some Grass, that proves good Pasturage for their Cattle, which are Horses, Cows, Sheep, and Goars. There's variety of Land and Water Fowl here. The Hills ordinarily have about three hundred Deer grazing on them, which are not to be hunted by any without the Steward's License. This Isle is perhaps the wholsomest Plat of ground either in the Isles or Continent of Scotland, as appears from the long life of the Natives, and their state of health, to which the heighth of the hills is believ'd to contribute in a large measure, by the fresh breezes of wind that comes from 'em to purifie the Air; whereas Ila and Gigay on each fide this Isle, are much lower, and are not so wholsome by far, being liable to several Diseases that are not here. The Inhabitants observe that the Air of this Place is perfectly pure from the middle of March, 'till the end or middle of September. There is no Epidemical Disease that prevails here; Fevers are but seldom observ'd by the Natives, and any kind of Flux is rare; the Gour and Agues are not so much as known by thear, Western Islands of Scotland, &c. 233
them, neither are they liable to Sciatica, Convulsions, Vapours, Palsies, Surfeits, Lethargies, Megrims, Consumptions, Rickets, Pains of the Stomach, or Coughs, are not frequent here, and none of them are at any time observed to become Mad. I was told by several of the Natives, that there was not one Woman died of Child bearing there these 34 years past. Blood-letting and Purging are not us'd here.

IF any contract a Cough, they use Brochan only to remove it. If after a Fever one chance to be taken ill of a Stitch, they take a quantity of Lady-wrack, and half as much of Red-Fog, and boil them in water; the Patients sit upon the Vessel, and receive the Fume, which by experience they find essectual against this Distemper. Fevers and the Diarhæa's are found here only when the Air is Foggy and warm in Winter or Summer.

THE Inhabitants for their Diet make use of Beef and Mutton in the Winter and Spring, as also of Fish, Butter, Cheese, and Milk. The Vulgar take Brochan frequently for their Diet during the Winter and Spring; and Brochan and Bread us'd for the space of two days, restores lost Apetite.

THE Women of all Ranks eat a lesser quantity of Food than the Men; this and their not wearing any thing strait about them, is believ'd believ'd to contribute much to the health both of the Mothers and Children.

There are several Fountains of excellent Water in this Isle, the most Clebrated of them is that of the Mountain Beinbrek in the Tarbat, called Toubir ni Lechkin, that is, the Well in a ftony descent; it runs Easterly, and they commonly reckon it to be lighter by one half than any other Water in this Isle; for tho' one drink a great quantity of it at a time, the Belly is not swelled or any ways burthened by it. Natives and Strangers find it efficacious against Nauseousness of the Stomach, and the Stone. The River Nissa receives all the water that iffues from this Well, and this is the reafon they give why Salmons here are in goodness and taste far above those of any other River whatever. The River of Crokbreck affords Salmon also, but they are not esteem'd so good as those of the River Nissa.

SEVERAL of the Natives have lived to a great Age, I was told that one of them called Gillouir Mack Crain lived to have kept one hundred and eighty Christmasses in his own house; he died about fifty years ago, and there are several of his acquaintance living to this day, from whom I had this account.

BAILIF

BAILIF Campbell lived to the Age of one hundred and fix years, he died three years ago, he passed the thirty three last years before his death in this Isle. Donald Mac N' Mill, who lives in the Village of Killearne at present, is arrived at the age of ninety years.

A Woman of the Isle of Scorba near the North end of this Isle, lived sevenscore years, and enjoy'd the free use of her Senses and Understanding all her days; it is now two years since she died.

THERE is a large Cave called King's-Cave, on the West side the Tarbat, near the Sea; there is a Well at the entry, which renders it the more convenient for such as may have occasion to Lodge in it.

ABOUT two Miles further from the Tarbat, there is a Cave at Corpich which hath an Altar in it; there are many small pieces of pettrified substance hanging from the Roof of this Cave.

THERE is a Place where Vessels use to Anchor on the West side this Island, called Whitfarlan, about 100 yards North from the Porter's House.

ABOUT

ABOUT Four Leagues South from the North end of this Isle, lies the Bay Da'l Taul, which is about half a Mile in length; there is a Rock on the North side the entry, which they say is five Fathom deep, and but three Fathom within.

ABOUT a League further to the South on the same Coast, lies the small Isles of Jura, within which there is a good Anchoring Place, the South entry is the best; Island Nin Gowir must be kept on the lest hand; it is easily distinguished by its bigness from the rest of the Isles. Conney Isle lies to the North of this Island. There are black and white spotted Serpents in this Isle; their head being applied to the Wound, is by the Natives used as the best Remedy for their Poison. Within a Mile of the Tarbat there is a Stone erected about eight Foot high. Loch Tarbat on the West side, runs Easterly for about five Miles, but is not an harbour for Vessels, or lesser Boats, for it is altogether Rocky.

THE Shoar on the West side affords Corral, and Corraline; there is a fort of Dalse growing on this Coast, of a white Colour.

BETWEEN the North end of Jura, and the Isle Scarba, lies the Famous and Dangerous Gulph Call'd Cory Vrekan, about a Mile in breadth,

Western Islands of Scotland, &c. 237 breadth, it yields an impetuous Current, not to be matched any where about the Isle of Britain. The Sea begins to boil and ferment with the Tide of Flood, and resembles the boiling of a Pot, and then increases gradually. until it appear in many Whirlpools, which form themselves in sort of Pyramids, and immediately after spout up as high as the Mast of a little Vessel, and at the same time makes a loud report. These white Waves run two Leagues with the wind before they break; the Sea continues to repeat these various motions from the beginning of the Tide of Flood, until it is more than half Flood, and then it decreases gradually until it hath ebb'd about half an hour, and continues to boil 'till it is within an hour of low water. This boiling of the Sea is not above a Pistol shot distant from the Coast of Scarba Isle, where the white Waves meet and spout up; they call it the Kaillach, i. e. an old Hag; and they fay that when the puts on her Kerchief, i. e. the whitest Waves, it is then reckon'd fatal to approach her. Notwithstanding of this great Ferment of the Sea, which brings up the least shell from the ground, the smallest Fisher-Boat may venture to crossthis Gulph at the last hour of the Tide of Flood, and at the last hour of the Tide of Ebb.

THIS Gulph hath its Name from Brekan, faid to be Son to the King of Denmark, who was

was drowned here, cast a shoar in the North of Jura, and buried in a Cave, as appears from the stone Tomb and Altar there.

THE Natives told me that about three years ago an English Vessel happen'd inadvertently to pass through this Gulph at the time when the Sea began to boil; the whiteness of the Waves, and their sprouting up, was like the breaking of a Sea upon a Rock; they sound themselves attracted irresistably to the white Rock, as they then supposed it to be; this quickly oblig'd them to consult their safety, and so they betook themselves to the fmall Boat with all speed, and thought it no small happiness to Land safe in Jura, committing the Vessel under all her Sails to the uncertain Conduct of Tide and Wind; she was driven to the opposite Continent of Knapdale, where she no sooner arriv'd, than the Tide and Wind became contrary to one another, and fo the Vessel was cast into a Creek where she was fafe; and then the Master and Crew were by the Natives of this Isle conducted to her, where they found her as fafe as they left her, tho' all her Sails were still hoisted.

THE Natives gave me an account that some years ago a Vessel had brought some Rats hither, which increased so much, that they became very uneasie to the People, but on a suddain

Western Islands of Scotland, &c. 239 suddain they all vanish'd, and now there is not one of them in the Isle.

THERE is a Church here called Killearn, the Inhabitants are all Protestants, and observe the Festivals of Christmas, Easter, and Michaelmass; they do not open a Grave on Friday, and bury none on that day, except the Grave has been opened before.

THE Natives here are very well proportioned, being generally black of Complection, and free from bodily imperfections. They speak the *Irish* Language, and wear the Plade, Bonnet, &c. as other Islanders.

THE Isle of Ila lies to the West of Jura, from which it is separated by a narrow Channel, it is twenty four Miles in length from South to North, and eighteen from East to West; there are some little Mountains about the middle on the East side; the Coast is for the most part heathy, and uneven, and by consequence not proper for Tillage; the North end is also full of Heaths and Hills; the South West and West is pretty well Cultivated, and there is six Miles between Kilrow on the West, and Port Escock in the East, which is arable, and well Inhabited. There's about one thousand with Lime-stone, among which there is lately discovered a Lead-Mine in three different pla-

ces, but it has not turn'd to any account as yer. The Corn growing here is Barley, and Oats.

THERE is only one Harbour in this Isle, called Loch-Dale, it lies near the North end, and is of a great length and breadth; but the depth being in the middle, few Vessels come within half a League of the Land side.

THERE are several Rivers in this Isle affording Salmon. The Fresh water Lakes are well stock'd with Trouts, Eels, and some with Salmons, as Loch Guirm, which is four Miles in Circumference, and hath several Forts built on an Island that lies in it.

LOCH FINLAGAN about three Miles in Circumference, affords Salmon, Trouts, and Eels; this Lake lies in the Centre of the Isle. The Isle Finlagan, from which this Lake hath its Name is in it. It's Famous for being once the Court in which the great Mac Donald King of the Isles had his Residence, his Houses, Chappel, &c. are now ruinous. His Guards de Corps called Lucht-taeh, kept Guard on the Lake side nearest to the Isle; the Walls of their Houses are still to be seen there.

THE High Court of Judicature confifting of Fourteen, Sat always here; and there was an Appeal to them from all the Courts in the Iffes : Western Islands of Scotland, &c. 241
Isles; the eleventh share of the Sum in Debate was due to the principal Judge. There was a big Stone of seven Foot square, in which there was a deep impression made to receive the Feet of Mack Donald, for he was Crown'd Kings of the Isles standing in this Stone; and Swore that he would continue his Vassals in the possession of their Lands, and do exact Justice to all his Subjects; and then his Father's Sword was put into his hand. The Bishop of Argyle and 7 Priests Anointed him King in presence of all the heads of the Tribes in the Isles and Continent, and were his Vassals; at which time the Orator rehears'd a Catalogue of his Ancestors, &c.

THERE are several Forts built in the Isles that are in fresh water Lakes, as in Ilan Lochguirn, and Ilan Viceain; there is a Fort called Dunnivag in the South West side of the sse, and there are several Caves in different places of it? The largest that I saw was in the North end, and is called Uah Vearnag, it will contain 200 Men to stand or sit in it. There is a Kiln for drying Corn made on the East side of it; and on the other fide there's a Wall built close to the fide of the Cave, which was us'd for a Bed-Chamber; it had a fire on the floor, and some Chairs about it, and the Bed stood close to the Wall. There is a stone without the Cave door, about which the Common People make a Tour Sunways.

A Mile on the South West side of the Cave, is the Celebrated Well call'd Tonbir in Knahar, which in the ancient Language is as much as to say, as the Well that sallied from one Place to another. For it is a receiv'd Tradition among the Vulgar Inhabitants of this lste, and the opposite Isle of Collonsay, that this Well was first in Collonsay, until an imprudent Woman happen'd to wash her hands in it, and that immediately after, the Well being thus abus'd, came in an instant to Isla, where it is like to continue, and is ever since esteem'd a Catholicon for Diseases by the Natives and adjacent Islanders, and the great resort to it is commonly every quarter day.

Vow to come to the Well, and after drinking, they make a Tour Sunways round it, and then leave an Offering of some small Token, such as a Pm, Needle, Farthing, or the like, on the stone Cover which is above the Well. But if the Patient is not like to recover, they send a Proxy to the Well, who acts as above-mention'd, and carries home some of the Water to be drank by the Sick Person.

THERE is a little Chappel beside this Well, to which such as had found the benefit of the Water, came back and return'd thanks to God for their Recovery.

THERE

Western Islands of Scotland, &c. 243

THERE are several Rivers on each side this Isle that afford Salmon; I was told by the Natives that the Brion of Isla a Famous Judge, is according to his own desire, buried standing on the brink of the River Laggan, having in his right hand a Spear such as they use to dart at the Salmon.

THERE are some Isles on the Coast of this Island, as Island Texa on the South West about a Mile in Circumserence; and Island Ouirsa a Mile likewise in Circumserence, with the small Isle called Nave.

The Names of the CHURCHES in this Isle are as follows.

Church near Port Escock, Kil Chovan in the Rins on the West side the Isle. Kil Chieran in Rins, on the West side Nerbols in the Rins, St. Columbus his Church in Laggan, a Chappel in Island Nave, and Killhan Alen North West of Kidrow. There is a Cross standing near St. Columbas's or Portescock side, which is ten foot high. There are two Stones set up at the East side of Loch Finlagan, and they are six soot high; all the Inhabitants are Protessants, some among them observe the Festivals of Christmass, and Goodfryday. They are well

proportion'd, and indifferently healthful; the Air here is not near to good as that of Jura, from which it is but a floor Mile distant, but Ila is lower and more Marshy, which makes it liable to several Diseases that do not trouble those of fura. They generally speak the Irish Tongue, all those of the best Rank speak English; they use the same Habit and Diet with those of Jura. This life is annexed to the Crown of Scotland, Sir Hugh Campbel of Caddel is the King's Steward there, and has one half of the Island. This life is reckon'd the furthest West of all the Island; there is a Village on the West Coast of it called Cul, i. e. the back part, and the Natives fay it was to called, because the Ancients thought it the back of the World, as being the remotest part on that side of it. The Natives of Ila, Collinsay, and Jura, say that there is an Island lying to the South West of these lifes, about the distance of a Days Sailing, for which they have only a bare Tradition.

Mr. Mack Swen, present Minister in the Isle Jura, gave me the following account of it, which lie had from the Master of an English Vessel asian happen of to Anchor at that little the, and came afterwards to Jura, which is thus out of the state of the st

AS I was Sailing forme 30 Leagues to the South West of Ist, I was Becalin'd near a little life, where I dropt Anchor, and went ashoar.

I found

I found it covered all over with long Grass; there were abundance of Seals lying on the Rocks and on the Shore; there is likewise a Rocks and on the Shore; there is likewise a multitude of Sea-sowls in it; there is a River in the middle, and on each side of it, I found great heaps of Fish-bones of many sorts; there are many Planks and Boards, cast up upon the Coast of the Isle, and it being all plain, and almost level with the Sea, I caus'd my Men (being then Idle) to erect a heap of the Wood about two Stories high; and that with a design to make the Island more Conspicuous to Seafaring Men. This Isle is sour English Miles in length, and one in breadth: I was about thirteen Hours sailing between this Isle, and Jura. length, and one in breadth: I was about thirteen Hours sailing between this lsse, and Jura. Mr. John Mack Swen above mentioned, having gone to the Isle of Collonsay. Some sew Days after, was told by the Inhabitants that from an Eminence near the Monastry, in a fair Day, they saw as it were the top of a little Mountain in the South-west Sea, and that they doubted not but it was Land, the they never observed it before, Mr. Mackswen was Consirmed in this Opinion. By the account above mentioned. Opinion, by the account above mentioned; but when the Summer was over, they never faw this little Hill as they call'd it any more. The reason of which is supposed to be this, that the high Winds in all probabily, had cast down the pile of Wood, that forty Seamen had erected the preceeding Year, in that Island; which by reason of the description above recited, we may aptly enough call the Green Island.

# The Isle of Collonsay.

A Bout two Leagues to the North of Ila, lies the Isle Oronsay, it is separated from Collonsay, only at the Tide of Flood, this Peninsula is sour Miles in Circumserence, being for the most part a plain Arable dry Sandy Soil, and is fruitful in Corn and Grass; it is likewise adorn'd with a Church, Chappel, and Monastry; they were Built by the famous St. Columbus, to whom the Church is Dedicated. There is an Altar in this Church, and there has been a modern Crucifix on it, in which several precious Stones were fixed, the most valuable of these, is now in the Custody of Mack. Duffie, in black Raimused Village, and it is us'd as a Catholicon for Diseases; There are several burying Places here & the Tomb-stones for the most part have a two handed Sword engraven on On the South-fide of the Church, within, lies the Tombs of Mack Duffi: and of the Cadets of his Family, there is a Ship under fail and a two-handed Sword engraven on the principal Tomb-stone, and this Inscription, hic jacit Malcolumbus Mac-Duffie de Colonsay; his Coat of Arms, and colour Staff is fixed in a Stone, through which a hole is made to holdit. There is a Cross at the East and West sides of this Church, which are now broken, their height was about twelve Foot each, there is a large Cross on the West-side of the Church, of an entireStone very hard, there is a Pedestal of three Steps by which

Western Islands of scotland, &c. 247 they ascend to it, it is 16 Foot high, and a Foot and an half broad; there is a large Crucifix on the West-side of this Cross, it has an Inscription underneath, but not legible, being almost wore off by the injury of time; the other side has a Tree engraven on it.

ABOUT a quarter of a Mile on the South-fide the Church, there is a Carne, in which there is a Stone Cross fixed, called Mac-Duffies Cross, for when any of the Heads of this Family werer to be Interr'd their Corps was laid on this Cross for some Moments, in their Way toward the Church.

ON the North-side of the Church, there is a square Stone-wall, about two Story high, the Area of it is about sourscore Paces, and it is joined to the Church Wall; within this Square, there is a lesser Square of one Story high, and about 60 Paces wide, three sides of it are built of small Pillars, consisting of two thin Stones each, and each Pillar Vaulted above with two thin Stones tapering upwards, There are Inscriptions on two of the Pillars, but sew of the Letters are perfect. There are several Houses without the Square, which the Monks liv'd in. There is a Garden at twenty Yards distance on the North-side the Houses.

after their arrival in Oronfay lsle, to make a Q 4 Tour

Tour Sunways about the Church, before they enter upon any kind of Business. My Landlord having one of his Family sick of a Fever, asked my Book as a singular Favour for a few Moments; I was not a little surprized at the honest Mans request, he being illiterate, and when he told me the reason of it, I was no less amazed, for it was to fan the Patients Face with the Leaves of the Book; and this he did at Night: He sought the Book next Morning, and again in the Evening, and then thankd me for so great a favour; and told me, the sick Person was much better by it and thus lunderstood that they had an ancient Custom of sanning the Face of the Sick, with the Leaves of the Bible.

THE Isle Collonsay is sour Miles in length, from East to West; and above a Mile in breadth: The Mold is brown and sandy on the Coast, and affords but a very small Product, tho they Plow their Ground three times; the middle is Rockie, and Heathy, which in most Places is prettily mingled with thick evergreens of Erica-Baccifera, Juniper, and Cats-Tail.

THE Cattle bred here, are Cows, Horses, and Sheep, all of a low size. The Inhabitants are generally well Proportion'd, and of a Black Complection, they speak only the Irish Tongue, and use the Habit, Diet, &c. that is us'd in the Western

Western Islands of Scotland, &c. 249 Western Isles, they are all Protestants, and observe the Festivals of Christmas, Easter, and Good-friday; but the Women only observe the Festival of the Nativity of the Blessed Virgin. Kil-ouran is the principal Church in this Isle, and the Village in which this Church is, hath its Name from it. There are two Ruinous Chappels, in the South-fide of this life. There were two Stone Chests found lately in Kilouran Sands, were composed of five Stones each, and had Humane Bones in them. There are some Fresh-water Lakes abounding with Trouts in this Me. There are likewise several Forts here. one of which is called Duncoll it is near the middle of the Isle, it hath large Stones in it, and the Wall is seven Foot broad.

THE other Fort is called Dun-Evan, the Natives have a Tradition among them, of a very little Generation of People, that lived once here, called Lusbirdan, the same with Pigmies; this Isle is the Duke of Argyle's Property:

MULL,

Single of the second in force

Single of the second in force

When it is a second of the condition of the welftern they and a condition they are a condition they and a condition they are a conditional they are a

#### MULL.

THE Isle of Mull, lies on the West Coast opposite to Lochaber, Swoonard, and Moy-dort. It is divided from these by a narrow Channel, not exceeding half a League in breadth; the Isle is twenty four Miles long, from South to North, and as many in breadth from East to West. A South-east Moon causes high Tide here. This Isle is in the Sherissdom of Argyle; the Air here is temperately Cold and moist; the fresh Breezes that blow from the Mountains, do in some measure qualifie it; the Natives are accustomed to take a large Dose of Aqua Vita, as a Corrective when the Season is very moist, and then they are very careful to chew a piece of Charmel Root, finding it to be Aromatick; especially, when they intend to have a drinking bout, for they fay this in some measure prevents Drunkenness.

THE Mold is generally black, and brown, both in the Hills and Valleys, and in some parts a Clay of different Colours. The Heaths afford abundance of Turff, and Peats, which serve the Natives for good Fewel. There is a great ridge of Mountains about the middle of the Isle, one of them very high, and therefore called Bein Vore, i. e. a great Mountain. It is to be seen from all the western Isles, and a considerable

Western Islands of Scotland, &c. 251 considerable part of the Continent. Both Mountains and Valleys afford good Pasturage for all forts of Cattle, as Sheep, Goats, and Deer, which herd among the Hills and Bushes. The Horses are but of a low size, yet very sprightly; their black Cattle are likewise low in fize, but their flesh is very delicious and fine. There's abundance of Wild Fowl in the Hills and Valleys; and among 'em the black Cock, heath Hen, Tarmagan, and very fine Hawks. The Sea Coast affords all such Fowl as are to be had in the Western Isles. The Corn growing here is only Barley and Oats. There's great variety of Plants in the Hills and Valleys, but there is no Wood here, except a few Coppices on the Coast. There are some Bays, and Places for Anchorage about the Isle. The Bay of Duart on the East side. and to the North of the Castle of that Name. is reckoned a safe Anchoring place, and tre-quented by Strangers. Lochbuy on the oppo-site West side, is but an indifferent Harbour, yet Vessels go into it for Herring.

THE Coast on the West abounds with Rocks for two Leagues West and South West. The Bloody Bay is overagainst the North end of Island Columkil, and only fit for Vessels of about an hundred Tun.

SOME few Miles further to the North East is Loch Levin, the entry lies to the Westward, and

and goes twelve Miles Easterly, there are Herrings to be had in it sometimes, and it abounds with Oysters, Cockles, Muscles, Olams, &c.

Loch-LAI lies on the South fide of Loch Levin, it is proper only for small Vessels, Herring are to be had in it sometimes, and it abounds with variety of Shell-Fish; the small Isles called the white Isle, and Isle of Kids are within this Bay. To the North of Loch Levin, lies Loch Scafford, it enters South West, and runs North East; within it lies the Isles Eorsa, and Inchkenneth, both which are reputed very Fruitful in Cattle, and Corn.

THERE is a little Chappel in this lse, in which many of the Inhabitants of all Ranks are buried. Upon the North side of Loch Scafford lies the Isle of Vevay, it's three Miles in Occumference, and encompassed with Rocks and Shelves, but Fruitful in Corn, Grass, &c.

TO the West of Ulva, lies the Isle Gometra, a Mile in Circumference, and Fruitful, in proportion to the other Isles.

About four Miles further lie the small Isles call'd Kairnburg-More; and Kernbug-Beg, they are naturally very strong, sac'd all round with a Rock, having a narrow entry, wand a violent Current of a Tide on each side, so that they

Western Islands of Scotland, &c. 253 are almost impregnable. A very few Men are able to defend these two Forts against a thousand. There is a small Garrison of the Standing Forces in them at present.

TO the South of these Forts lie the small Isles of Fl. dday, Lungay, Back, and the Call of the Back; Cod and Ling are to be had plentifully about all these Islands.

NEAR to the North East end of Mull, lies the Isle Calve, it is above two Miles in compass, has a Coppice, and affords good Pasturage for all kind of Cattle. Between this Isle, and the Isle of Mull, there is a capacious and excellent Bay, called Tonbir Mory, i.e. the Virgin Maries Well, because the water of a Well of that Name, which is said to be Medicinal, runs into the Bay.

ONE of the Ships of the Spanish Armada, called the Florida, perished in this Bay, having been blown up by one Smallet of Dunbarton, in the year 1688. There was a great Sum of Gold and Money on board the Ship, which disposed the Earl of Argyle, and some Englishmen to attempt the recovery of it; but how far the latter succeeded in this Enterprize, is not generally well known; only that some pieces of Gold, and Money, and a golden Chain was taken out of her. I have seen some fine brass Cannon, some Pieces of Eight, Teeth, Beads

Beads and Pins that had been taken out of that Ship. Several of the Inhabitants of Mull told me that they had converfed with their Relations that were living at the Harbour when this Ship was blown up, and they gave an account of an admirable Providence that appear'd in the prefervation of one Doctor Beaton, (the Famous Physician of Mull,) who was on board the Ship when she blew up, and was then sitting on the upper Deck, which was blown up entire, and thrown a good way off, yet the Doctor was saved, and liv'd several years after.

THE black and white Indian Nuts are found on the West side of this Isle; the Natives pulverize the black Kernel or the black Nut, and drink it in boyl'd Milk for Curing the Diarhea.

THERE are several Rivers in the Isle that afford Salmon, and some Rivers abound with the black Muscle that breeds Pearl. There are also some Fresh water Lakes that have Trouts, and Eels. The whole Isle is very well water'd with many Springs and Fountains. They told me of a Spring in the south side of the Mountain Bein Vore, that has a yellow colour'd stone in the bottom, which doth not burn, or become hot, tho' it should be kept in the Fire for a whole day together.

THE Amphibia in this Isle are Seals, Otters, Vipers, of the same kind as those described in the Isle of Skie, and the Natives use the same Cures for the biting of Vipers. Foxes abound in this Isle, and do much hurt among the Lambs, and Kids.

THERE are three Castles in the Isle; to wit, the Castle of Duart, scituated on the East, built upon a Rock, the East side is surrounded by the Sea. This was the Seat of Sir John Mack Lean, Head of the Ancient Family of the Mack Leans; and is now together with the Estate, which was the major part of the Island, become the Duke of Argile's Property by the Forseiture of Sir John.

SOME Miles further on the West Coast, stands the Castle of Moy, at the head of Lochbuy, and is the Seat of Mack Lean of Lochbuy.

THERE is an old Castle at Aros in the middle of the Island, now in ruines. There are some old Forts here called Dunns, supposed to have been built by the Danes. There are two Parish Churches in the Isle, viz. Killinchen-Benorth, Loch-Levin, and a little Chappel, call'd Kilwichk-Ewin at the Lake above Loch-Lay, each Parish hath a Minister. The Inhabitants are all Protestants, except two or three, who are Roman Catholicks; they observe the Festivals

Festivals of Christmas, Easter, Good-Friday, and St. Michael's. They speak the Irish Language generally, but those of the best Rank speak Engliso; they wear the same Habit as the rest of the Islanders.

# JONA.

HIS Isle in the Irish Language is called I. Colmkil, i. e. the Isthmus of Columbus the Clergy-Man. Colum was his proper Name, and the addition of Kil, which fignifies a Church, was added by the Islanders by way of excellence: for there were few Churches then in the remote and lesser Islers 1902

THE Natives have a Tradition among them, that one of the Clergy-Men who accompanied Columbus in his Voyage thither, having at a good distance espied the Iste, and cry'd joyfully to Columbus in the Irish Language, Chi mi i, i. e. I fee her; meaning thereby, the Countrey of which they had been in quest That Columbus then answer'd, It shall be from henceforth called T.

THE Is is two Miles long from South to North, and one in breadth, from East to West. The

Western Islands of Scotland, &c. 257 The East side is all arable and plain, Fruitful in Corn and Grass; the West side is high and Rocky.

THIS Isle was anciently a Seminary of Learning, Famous for the severe Discipline and Sanctity of Columbus. He built two Churches, and two Monasteries in it, one for Men, the other for Women; which were Endowed by the Kings of Scotland, and of the Isles; so that the Revenues of the Church then amounted to 4000 Merks per Ann. Jona was the Bishop of the Isle's Cathedral, after the Scots lost the Isle of Man, in which King Cratilinth erected a Church to the honour of our Saviour, called Fanum Sodorense. Hence it was that the Bishop of the Isles was filed Episcopus Sodorenfis. The Vicar of Jona was Parlon of Soroby in Tyre-iy, and Dean of the Isles. St. Maries Church here is built in form of a Cross, the Choir 20 yards long, the Cupulo 21 Foot square, the body of the Church of equal length with the Choir, and the two cross less half that length. There are two Chappels on each fide of the Choir. the entry to them opens with large Pillars neatly Carv'd in Basso Relievo; the Steeple is pretty large, the Doors, Windows, &c. are curiously Carv'd; the Altar is large, and of as fine Marble as any I ever saw. There are several Abbots buried within the Church; Mack Ilikenich his Statue is done in black Marble, as big as the Life, in an Episcopal Habit, with a R Mitre.

Mitre, Crosser, Ring, and Stones along the Breast, &c. The rest of the Abbots are done after the same manner; the Inscription of one Tomb is as follows,

Hic Jacet Joannes Mack Fingone, Abbas de Oui, qui Obijt Anno Domini Milesimo Quingentesimo.

BISHOP Knox, and several Persons of distinction, as Mack Leod of Harries, have also been buried here.

THERE'S the Ruines of a Cloyster behind the Church, as also of a Library, and under it a large Room; the Natives say it was a Place for Publick Disputations.

THERE is a heap of Stones without the Church, under which Mackean. of Ardminurchin lies buried. There is an empty piece of ground between the Church and the Gardens, in which Murderers, and Children that died before Baptism were buried. Near to the West end of the Church in a little Cell lies Columbus his Tomb, but without Inscription; this gave me occasion to cite the Distich, asserting that Columbus was buried in Ireland; at which the Natives of Jona seem'd very much displeased, and affirm'd that the Irish who said so were impudent Liars; that Columbus was once buried in this Place, and that none ever

Western Islands of Scotland, &c. 259 came from Ireland since to carry away his Corps, which had they attempted, would have prov'd equally vain and presumptuous.

NEAR St. Columbus's Tomb, is St. Martin's Cross, an entire Stone of eight foot high; it is a very hard and red stone, with a mixture of grey in it. On the West side of the Cross is engraven a large Crucifix, and on the East a Tree; it stands on a Pedestal of the same kind of stone. At a little surther distance is Dun Ni Manich, i. e. Monks Fort, built of Stone and Lime, in form of a Bastion, pretty high. From this Eminence the Monks had a view of all the Families in the Isle, and at the same time enjoy'd the free Air. A little surther to the West lie the Black stones, which are so call'd, not from their Colour, for that is gray; but from the effects that Tradition say ensued upon Perjury, if any one became guilty of it after swearing on these Stones in the usual manner, for an Oath made on them was decisive in all Controversies.

MACK DONALD King of the Isles deliver'd the Rights of their Lands to his Vassals in the Isles and Continent, with up-lifted hands, and bended knees on the black Stones; and in this posture, before many Witnesses, he solemnly Swore that he would never recall those Rights which he then granted, and this was instead of his great Seal. Hence it is that

when one was certain of what he affirm'd, he faid possitively, I have freedom to Swear this Matter upon the black stones.

ON the South side the Gate without the Church is the Taylors House, for they only wrought in it. The Natives say that in the time of a Plague, the outer Gate was quite shut up, and that all Provisions was thrown in through a hole in the Gate for that purpose.

AT some distance South from St. Maries, is St. Ouran's Church, commonly call'd Reliqui Ouran, the Saint of that Name is buried within it.

THE Laird of Mack Kinnon has a Tomb within this Church, which is the stateliest Tomb in the Isle. On the wall above the Tomb there is a Crucifix engraven, having the Arms of the Family underneath; viz. a Boars Head, with a couple of Sheeps bones in its jaws. The Tomb-stone has a Statue as big as the Life, all in Armour, and upon it a Ship under Sail, a Lion at the Head, and another at the Feet. The Inscription on the Tomb is thus: Hic est Ahas Lachlani, Mack Fingone, ejus Filius Abbatis de I. Ætatis in Dno Maccece Ann.

THERE are other Persons of Distinction in the Church, all done in Armour.

ON

Western Islands of Scottand, &c. 261

ON the South side of the Church mention'd above, is the Burial Place in which the Kings and Chiefs of Tribes are Buried, and over them a Shrine; there was an Inscription giving an account of each particular Tomb, but Time has worn them off. The middlemost had written on it, The Tombs of the Kings of Scotland; of which forty eight lie there.

UPON that on the right hand, was written The Tombs of the Kings of Ireland, of which four were buried here.

AND upon that on the left hand was written The Kings of Norway, of which eight were buried here.

ON the right hand within the entry to the Church-yard, there is a Tomb-stone now overgrown with Earth, and upon it there's written, Hic Jacet Joannes Turnbull, quondam Episcopus Canterburiensis. This I deliver upon the Authority of Mr. Jo. Mack Swen, Minister of Jura, who says he read it.

NEXT to the King's, is the Tomb-stone of Mack Donald of Ila, the Arms a Ship with hoisted Sails, a Standard, four Lions, and a Tree; the Inscription, Hie Jacet Corpus Angusti Mack Donnill de Ile.

IN

IN the West end is the Tombs of Gilbrid, and Paul Sporran, Ancient Tribes of the Mack Donalds.

THE Families of Mack-Lean of Duart, Lochbuy, and Coll, lie next all in Armour, as big as the Life.

MACK ALISTER, a Tribe of the Mack Donalds, Mack Ouery of Ulvay, are both done as above.

THERE is a heap of Stones on which they used to lay the Corps while they dug the Grave. There is a Stone likewise erected here, concerning which the credulous Natives say, That whosoever reaches out his Arm along the Stone three times, in the Name of the Father, Son, and Holy Ghost, will never err in Steering the Helm of a Vessel.

ONE Tombhath a Clergy-Man, with this Inscription upon it: Sancta, Sc.

ABOUT a quarter of a Mile further South is the Church Ronad, in which several Prioreffes are buried; one of the Inscriptions is, Hic jacet Dna. Anna Terleti, Filia quandam Priorissa de Jona, quæ obijt Anno Mo Christi, Animam Abrahamo Commendamus.

THE

Another Inscription is; Bebag Nijn Sirle vic Il wrid Priorissa; i.e. Bathia Daughter to Somerled, Son of Gilbert, Prioress.

WITHOUT the Nunnery there is such another Square as that beside the Monastery for Men. The two Pavements which are of a hard red Stone are yet entire; in the middle of the longest Pavement there is a large Cross, like to that mention'd above, and is called Mack-Leans Cross. There are 9 Places on the East side the Isle, called Ports for Landing.

THE Dock which was dug out of Port Churich, is on the shoar, to preserve Columbus's Boat called Curich, which was made of ribs of Wood, and the out side cover'd with Hides; the Boat was long, and sharp pointed at both ends; Columbus is said to have transported 18 Church-men in this Boat to Jona.

THERE are many pretty variegated Stones in the shoar below the Dock, they ripen to a green colour, and are then proper for Carving. The Natives say these stones are Fortunate, but only for some particular thing, which the Person thinks sit to name, in exclusion of every thing else.

There was a Tribe here call'd Clanvic n'efter, from Oftiarii, for they are said to have been R 4 Porters.

Porters. The Tradition of these is, that before Columbus died, thirty of this Family lived then in Jona, and that upon some provocation, Columbus entail'd a Curse upon them; which was, That they might all perish to the Number of five, and that they might never exceed that Number, to which they were accordingly reduc'd; and ever fince, when any Woman of the Family was in Labour, both she, and the other four were afraid of death; for if the Child that was to be then born, did not die, they say one of the five was sure to die; and this they affirm to have been verified on every such occasion successively to this day. I found one only of this Tribe living in the Isle, and both he and the Natives of this and of all the Western Isles, unanimously declare, that this observation never fail'd, and all this little Family is now extinct, except this one poor Man.

THE Life of Columbus written in the Irish Character, is in the Custody of John Mack Neil, in the life of Barray; another Copy of it is kept by Mack-Donald of Benbecula.

THE Inhabitants have a Tradition, that Columbus suffer'd no Women to stay in the Isle except the Nuns; and that all the Tradesmen who wrought in it, were oblig'd to keep their Wives and Daughters in the opposite little Isle, called on that account Womens-Ille. They fay likewife. Western Islands of Scotland, &c. 265 likewise, that it was to keep Women out of the isle, that he would not suffer Cows, Sheep or Goats to be brought to it.

BEDA in his Ecclesiastical History, Lib. 3. Cap. 4. gives this account of him. In the year of our Lord, 565. (at the time that Justin the younger succeeded Justinian in the Government of the Roman Empire) the Famous Columba a Presbyter and Abbot, but in Habit and Life a Monk; came from Ireland to Britain to Preach the word of God to the Northern Provinces of the Picts, that is, to those who by high and rugged Mountains are separated from the southern Provinces. For the southern Picts who have their habitation on this fide the fame hills, had as they affirm themselves, renounc'd Idolatry, and receiv'd the Faith a long time before, by the Preaching of Ninian the Bishop, a most Reverend and Holy Man, of the Countrey of the Brittons, who was regularly Educated at Rome, in the Mysteries of Truth. 

IN the ninth year of Meilochen Son to Pridius King of Picts, a most powerful King, Columbus by his Preaching and Example, Converted that Nation to the Faith of Christ. Upon this account they gave him the Isle above-mention'd, (which he calls Hii, Book 3. Cap. 3.) to erect a Monastery in which his Successors possess to this day, and where

he himself was buried, in the seventy seventy year of his Age, and the thirty second after his going to Britain to preach the Gospel. He built a Noble Monastery in Ireland, before his coming to Britain, from both which Monasteries he and his Disciples Founded several other Monasteries in Britain and Ireland; among all which, the Monastery of the Island in which his Body is interr'd, has the prehemi-nence. The Isle has a Rector, who is always a Presbyter Abbot, to whose Jurisdiction the whole Province, and the Bishops themselves ought to be subject, tho' the thing be unusual, according to the Example of that first Doctor, who was not a Bishop, but a Presbyter and Monk; and of whole Life and Doctrine some things are said to be wrote by his Disciples. But whatever he was, this is certain, that he lest Successors eminent for their great Chastity, Divine Love, and regular Institution.

THIS Monastery furnished Bishops to several Diocesses of England and Scotland; and amongst others, Aidanus, who was sent from thence, and was Bishop of Lindisfairn, now Holy Island.

Sister a partial is a line

The

The Isle of Tire-iy, is so call'd, from Tire a Country, and iy an Islbmus; the Rocks in the Narrow Channel seem to favour the Etymology.

West of Jona, or I. Colm-Kil, the Land is low and Moorish, but there are two little Hills on the South West side; the Mold is generally brown, and for the most part Sandy. The Western side is Rocky for about three Leagues; the life affords no convenient Harbour for Ships, but has been always valued for its extraordinary Fruitfulness in Corn, being Till'd every year, it is become less Fruitful than formerly. There is a plain piece of ground about six Miles in compass on the East Coast, called the Rive, the Grass is seldom suffer'd to grow the length of half an inch, being only kept as a Common, yet is believ'd to excell any parcel of Land of its extent in the Isles, or opposite Continent; there are small Channels in it, through which the Tide of Flood comes in, and it sometimes overflows the whole.

THE Isle is sour Miles in length from the South East, to the North West; the Natives for the most part live on Barley-Bread, Butter, Milk, Cheese, Fish, and some eat the Roots

of Silver-weed; there are but few that eat any Flesh, and the Servants use Water-Gruel often with their bread. In plentiful years the Natives drink Ale generally. There are three Alehouses in the Isle, the Brewers preserve their Ale in large Earthen Vessels, and say they are much better for this purpose than those of Wood: some of them contain twelve English Gallons. Their Measure for Drink is a third part larger than any I could observe in any other part of Scotland. The Ale that I had in the Inn being too Weak, I told my Host of it, who promis'd to make it better; for this end he took a *Heck, i k Stone*, and having made it red hot in the fire, he quench'd it in the Ale. The Company and I were fatisfied that the drink was a little more brisk, and I told him that if he could add some more life to our Ale, he would extreamly oblige the Company. This he frankly undertook, and to effect it, toasted a Barley Cake, and having broke it in pieces he put it into the dish with the Ale; and this Experiment we found as effectual as the first. I enquir'd of him if he had any more Art to revive our Ale, and then he would make it pretty good; he answer'd, that he knew of nothing else but a Malt-Cake, which he had not then ready, and so we were oblig'd to content our selves with what pains had been already us'd to revive our drink. The Natives preserve their Yest by an Oaken Wyth which they twist and put into it, and for future use, kcep

Western Islands of Scotland, &c. 269
keep it in Barley-Straw. The Cows and Horses are of a very low size in this Isle, being in
the Winter and Spring time often reduc'd to
eat Sea-Ware. The Cows give plenty of Milk,
when they have enough of fresh Sea-Ware to
seed on it sattens them; the Horses pace naturally, and are very sprightly tho' little. The
ground abounds with Fiint-stone; the Natives
tell me they find pieces of Sulphur in several
places. The West Winds drive the ordinary
Indian Nuts to the shoar of this Isle, and the
Natives use them as above, for removing the
Diarrhæa; and the water of the Well called
Tonbir, in Donich, is by the Natives drunk as a
Catholicon for Diseases.

SOME Years ago, about one hundred and fixty little Whales, the biggest not exceeding twenty foot long, run themselves ashoar in this life, very seasonably, in time of scarcity, for the Natives did eat them all; and told me that the Sea-Pork, i. e. the Whale, is both wholsom, and very nourishing Meat. There is a Fresh-water Lake in the middle of the lse, on the East side of which there is an old Castle now in Ruines. The lse being low and Moorish, is unwholsome, and makes the Natives subject to the Ague. The Inhabitants living in the South East parts, are for the most part Bald, and have but very thin hair on their heads. There is a Cave in the South West, which the Natives are accustom'd to watch in

the Night, and then take many Cormorants in it. There are several Forts in the Isle, one in the middle of it, and Dun Taelk in Baelly Petris, they are in form the same with those in the Northern Isles. There are several great and small Circles of Stone in this Isle. The Inhabitants are all Protestants, they observe the Festivals of Christmas, Good-Friday, Easter, and St. Michael's Day. Upon the latter there is a general Cavalcade, at which all the Inhabitants Rendezvous. They speak the Irish Tongue, and wear the Highland Dress. This Isle is the Duke of Argyle's Property, it being one of the Isles lately posses'd by the Laird of Mack-Lean; the Parish Church in the Isle is called Soroby, and is a Parsonage.

The

## The Isle of COLL.

East and North East of Tyr-iy, from which it hath been severed by the Sea. It is ten Miles in length, and three in breadth; it is generally compos'd of little Rocky Hills, cover'd with Heath. The Northside is much plainer, and arable ground, affording Barley and Oats; the Inhabitants always feed on the latter, and those of Tyr-iy on the former. The Isle of Coll produces more Boys than Girls, and the Isle of Tyr-iy more Girls than Boys; as if Nature intended both these Isles for mutual Alliances, without being at the trouble of going to the adjacent Isles or Continent to be matched. The Parish Book in which the number of the Baptized is to be seen, consirms this observation.

THERE are several Rivers in this Isle that assord Salmon. There is a Fresh-water Lake in the South East side, which hath Trouts, and Eels. Within a quarter of a Mile lies a little Castle, the Seat of Mack-Lean of Coll, the Proprietor of the Isle, he and all the Inhabitants are Protestants; they observe the Festivals of Christmass, Good-Friday, Easter, and St. Michael, at the latter they have a general Cavalcade. all the Inhabitants speak the Irish Tongue,

Tongue, (a few excepted) and wear the Habit us'd by the rest of the Islanders. This Isle is much wholsomer than that of Tiriy. I saw a Gentleman of Mack-Lean of Coll's Family here, Aged eighty five, who walked up and down the Fields daily.

COD and Ling abound on the Coast of this Isle, and are of a larger size here, than in the adjacent Isles or Continent.

ON the South East Coast of this Isle, lie the train of Rocks, call'd the Carn of Coll; they reach about half a League from the Shoar, and are remarkable for their Fatality to Sea faring Men, of which there are several late instances. There is no Venomous Creature in this Island, or that of Tyr-iy.

#### RUM.

HIS Isle lies about four Leagues South from Skie, it is Mountaneous and heathy, but the Coast is Arable and Fruitful. The Isle is five Miles long from S. to N. and three from E. to W. the North end produces some Wood. The Rivers on each side afford Salmon. There is plenty of Land and Sea-Fowl, some of the latter, especially the Puffin build in the Hills as much as in the Rocks on the Coast, in which there are abundance of Caves: the Rock facing the West side is Red, and that on the East side Grey. The Mountains have fome hundred of Deer grazing in them. The Natives gave me an account of a strange Observation which they say proves Fatal to the Posterity of Lachlin, a Cadet of Mack-Lean of Coll's Family; That if any of them shoot at a Deer on the Mountain Finchra, he dies suddainly, or contracts some violent Distemper, which soon puts a period to his Life. They told me some instances to this purpose; whatever may be in it, there is none of the Tribe above named, will ever offer to shoot the Deer in that Mountain.

THE Bay Loch-Scresord on the East side is not fit for Anchoring, except without the Entry.

S. THERE

THERE is a Chappel in this Isle, the Natives are Protestants, Mack Lean of Coll is proprietor, and the Language and Habit the same with the Northern Isles.

## Iste MUCK.

IT lies a little to the South-west of Rum, being 4 miles in Circumference, all sorrounded with a Rock, it is fruitful in Corn and Grass: the Hawks in the Rocks here are reputed to be very good. The Cattle, Fowls, and Amphibia of this Island, are the same as in other lises, the Natives speak the Irish Tongue only, and use the Habit wore by their Neighbours.

## Ise CANNAY.

I HIS Isle lies about half a mile off Rum, it is a miles from South to North, and one from East to West. It is for the most part surrounded with a high Rock, and the whole fruitful in Corn and Grass: The South end hath plenty of Cod and Ling.

There is a hill in the North end which disorders the Needle in the Compass, I laid the Compass on the stony ground near it, and the Needle went often round with great swiftness, and instead of settling towards the North, as usual, it settled here due East. The Stones in the surface of the Earth are black, and the Rock below facing the Sea is red; some affirm that the Needle of a Ships Compass Sailing by the Hill is disordered by the force of the Magnet in this Rock, but of this I have no certainty.

THE Natives call this Isle by the name Tarfin at Sea, the Rock Heisker, on the South end abounds with wild Geese in August, and then they cast their quills. The Church in this Isle is dedicated to St. Columbus. All the Natives are Roman Catholicks, they use the Language and Habit, of the other Isles. Allan Mac donald is Proprietor. There is good Anchorage on the N. E. of this Isle.

S 2

## A Description of the Iste of EGG.

HIS life lies to the South of Skie about four Leagues, it is three miles in Length a mile and a half in breadth, and about Nine in Circumserencer It is all Rockie and Mountanous from the middle towards the West; the East side is plainer, and more arable; the whole is indifferent good for pasturage and Cultivation; there is a Mountain in the South end, and on the top of it there is a high Rock called Skur Ess; about an hundred and sisty paces in Circumserence and has a fresh water Lake in the Middle of it; there is no access to this Rock but by one ressared which makes in this Rock but by one passage, which makes it a natural Fort. There is a Harbour on the a natural Fort. There is a riarbour on the South East side this lse, which may be enterd into by either side the small side without it. There is a very big Cave on the South West side of this side, capable of containing several hundreds of People. The Coast guarding the North West is a soft Quarry of white Stone, having some Caves in it. There is a Well in the Villago called Fivepennies, reputed efficacious against several Distempers; the Natives told me that it never fails to Cure any Person of their sirst Disease, only by drinking a quantity of it for the space of two or three days; and that if a Stranger lie at this Well in the Night cime, Western Islands of Scotland, &. 277 time, it will procure a deformity in some part of his Body, but has no such effect on a Native; and this they say hath been frequently experimented.

THERE is a heap of Stones here, called Martin Dessil, i.e. a Place Consecrated to the Saint of that Name, about which the Natives oblige themselves to make a Tour round Sunways.

THERE is another heap of Stones, which they say was Consecrated to the Virgin Mary.

Is the Village on the South Coast of this life there is a Well, call'd St. Kathrine's Well, the Natives have it in great esteem, and believe it to be a Catholicon for Diseases. They told me that it had been such ever since it was Confectated by one Father Hugh, a Popish Priest, in the following manner. He obliged all the Inhabitants to come to this Well, and then imploy'd them to bring together a great heap of Stones at the head of the Spring, by way of Pennance; this being done, he said Mass at the Well, and then Consecrated it; he gave each of the Inhabitants a piece of wax Candle, which they lighted, and all of them made the Dessel, of going round the Well Sunways, the Priest leading them; and from that time it was accounted

accounted unlawful to boil any Meat with the Water of this Well.

THE Natives observe St. Kathrine's Anniversary, all of them come to the Well, and having drank a draught of it, they make the Destil round it Sunways; this is always perform'd on the 15th day of April. The Inhabitants of this life are well proportion'd, they speak the Irish Tongue only, and wearthe Habit of the Islanders; they are all Roman Catholicks, except one Woman, that is a Protestant.

THERE is a Church here on the East side the Isle, Dedicated to St. Donnan, whose Anniversary they observe.

ABOUT thirty yards from the Church there is a Sepulchral Urn under ground; it is a big Stone hewn to the bottom, about four four deep, and the Diameter of it is about the fame breadth; I caus'd 'em to dig the ground above it, and we found a flat thin Stone covering the Urn; it was almost full of flumane Bones, but no Head among them, and they were fair and dry. I enquired of the Natives what was become of the fleads, and they could not tell; but one of them said, perhaps their Heads had been cut off with a two-handed Sword, and taken away by the Enemy. Some sew paces to the North of the Urn there

Western Islands of Scotland, &c. 279 is a narrow stone passage under ground, but how far it reaches, they could give me no account.

THE Natives dare not call this Isle by its ordinary Name of Egg, when they are at Sea, but Island Nim-Ban-More, i. e. the Isle of big Women. St. Donnan's Well, which is in the South West end, is in great esteem by the Natives, for St. Donnan is the Celebrated Tutelar of this Isle. The Natives do not allow Protestants to come to their Burial.

THE Proprietors of the Isle are Allan Mack-Donald of Moydart, and Allan Mack-Donald of Moron.

5 4

Saint

#### Saint KILDA, or HIRT.

HE first of these Names is taken from one Kilder, who lived here, and from him the large Well Tonbir-Kilda has also its Name. Hirta is taken from the Irish ler, which in that Language fignifies West; this Isle lies directly opposite to the Isles of N. Uist, Harries, &c. It is reckoned 18 Leagues from the former, and 20 from Harries. This Isle is by Peter Goas in a Map he made of it at Roterdam, called St. Kilder; it is the remotest of all the Scots North-west Isles: It is about two Miles in length, and one in breadth; it is faced all round with a steep Rock, except the Bay on the South-east, which is not a Harbour fit for any Vessel, tho' in the time of a Calm one may Land upon the Rock, and get up into the Island with a little climbing. The Land rises pretty high in the middle, and there is one Mountain higher than any other part of the Island. There are several Fountains of good Water on each fide this Isle. The Corn produced here is Oats and Barley, the latter is the largest in the western Isles.

THE Horses and Cows here, are of a lower size than in the adjacent Isles, but the Sheep differ only in the bigness of their Horns, which are very long.

THERE

THERE is an ancient Fort, on the South-end of the Bay, called Dun fir Volg, i. e. the Fort of the Volscij, this is the sense put upon the word by the Antiquaries of the opposite Isles of List.

THE Isle Soa, is near half a Mile distant from the West-side of St. Kilda, it is a Mile in circumserence very high and steep all round Borera lies above two Leagues N. of St. Kilda, it is near a Mile in circumference, the most of it surrounded with a high Rock, the largest and the two lesser Isles are good for Pasturage, and abound with a Prodigious number of Sea-sowl, from March, till September, the Solan Geese are very numerous here, in so much that the Inhabitants commonly keep yearly above twenty thousand Young and Old in their little Stone Houses, of which there are some hundreds for prescrying their Fowls, Eggs, &c. They use no Salt for preserving their Fowl, the Eggs of the Sea Wild-fowl, are preserved some Months in the Ashes of Peats, and are astringent to such as be not accustomed to ear them.

THE Solan Goose, is in size somewhat less than a Land Goose; and of a white Colour except the tips of the Wings, which are Black, and the top of their Head, which is Yellow; their Bill is long, small pointed, and very hard, and pierces an Inch deep into Wood, in their descent

fcent after a Fish laid on a Board, as some use to catch em. When they sleep, they put their Head under their Wings, but one of them keeps Warch, and if that be surprized by the Fowler, (which often happens,) all the rest are then easily caught, by the Neck, one after another; but if the Sentinel gives warning by crying loud, then all the Flock make their escape. When this Fowl sishes for Herring, it slies about sixty Yards high, and then descends perpendicularly into the Sea, but after all other Fish it descends a squint, the reason for this manner of pursuing the Herring, is because they are in greater Shoals than any other Fish whatsoever.

THERE is a barren Tribe of Solan Geele, that keep always together, and never mix among the rest that build and hatch. The Solan Geele come to those Islands in March, taking the advantage of a South-west Wind, before their coming, they send a sew of their Number, as Harbingers before them, and when they have made a Tour round the Isles, they return immediately to their Company, and in a sew days after the whole Flock comes together, and stays till September; the Natives make a Pudding of the sat of this Fowl, in the Stomack of it, and boys it in their Water-gruel, which they call Brochan, they drink it likewise for removing the Cough: It is by daily Experience found to be an excellent valuerary.

THE

THE Inhabitants eat the Solan Goose Egg raw, and by Experience find it to be a good Pectoral. The Solan Geese are daily making up their Nests from March till September, they make em in the Shelves of high Rocks, they Fish, Hatch, and make their Nests by turns, and they amass for this end a great heap of Grass, and such other things as they catch floating on the Water; the Steward of St. Kilda, told me that they had found a Red Coat in a Nest, a Brass Sun-dial, and an Arrow, and some Molucca Beans in another Nest. This Solan Goose is believed to be the sharpest sighted of all Seafowls, it preserves five or fix Herrings in its Gorget entire, and carries them to the Nest, where it spews them out to serve as Food to the Young ones; they are observed to go a fishing to several ssles that he about thirty Leagues distant, and carry the Fish in their Gorget all that way, and this is confirm'd by the English Hooks, which are found sticking to the Fish-Bones in their Ness, for the Natives have no fuch Hooks among them.

THEY have another Bird here call'd Fulmar, it is a Grey Fowl, about the fize of a Moor Hen, it has a strong Bill with wide Nostrils, as often as it goes to Sea, it is a certain figne of a Western Wind, for it sits always on the Rock, when the Wind is to blow from any other Quarter. This Fowl the Natives say, picks its Food out of

of live Whales, and that it eats Sorrel, for both those sorts of Food are found in its Nest. When any one approaches the Fulmar, it spouts out at its Bill, about a Quart of pure Oyl, the Natives surprize the Fowl, and preserve the Oyl, and burn it in their Lamps, it is good against Rheumatick Pains and Aches in the Bones, the Inhabitants of the adjacent Isles, value it as a Catholicon for Diseases; some take it for a Vomit, others for a Purge. It has been successfully used against RheumatickPains in Edinburgh, and London; in the latter it has been lately used to asswed the swelling of a strained Foot, a Cheek swell'd with the Tooth-ach, and for discussing a hard Boil, and proved successful in all the three cases.

THERE is plenty of Cod, and Ling, of a great fize, round this Isle, the Improvement of which might be of great Advantage.

THE Inhabitants are about two hundred in Number, and are well proportioned, they fpeak the Irish Language only; their Habit is much like that us'd in the adjacent lifes, but coarser: They are not subject to many Diseases; they contract a Cough, as often as any Strangers land and stay for any time among them, and it continues for some eight or ten days; they say the very Insants on the Breast are insected by it. The Men are stronger than the Inhabitants of the opposite western Isles; they

Western Islands of Scotians, &c. 285 they feed much on Fowl, especially the Solan Geele, Puffin, and Fulmar, eating no Salt with them. This is believed to be the cause of a Leprofie, that is broke out among them of late : one of them that was become Corpulent, and had his throat almost shut up, being advis'd by me to take Salt with his Meat, to exercise himfelf more in the Fields than he had done of late. to forbear eating of fat Fowl, and the fat Pudding call'd Giben, and to eat Sorrel, was very much concern'd, because all this was very disagreeable; and my advising him to eat sorrel, was perfectly a surprize to him: But when I bid him consider how the fat Fulmar eat this Plant, he was at last disposed to take my Advice; and by this means alone in few days after, his Voice was much clearer, his Appetite recovered, and he was in a fair way of recovery. Twelve of these Lepers died the Year after of this Distemper, and were in the same Condition with this Man.

BOTH Sexes have a Genius for Poesie, and compose entertaining Verses and Songs, in their own Language which is very Emphatical. Some Years ago, about twenty of their Number happened to be confined in the Rock Stack N'armin for several days together, without any kind of Foods; the Season then not favouring their Endeavours, to return some; one of their Number plucked all their Knives out of the Hasts, wrought a Hook out of each, and then beat them

them out to their former length; he had a Stone for an Anvil, and a Dagger for a Hammer and File : and with these rude Hooks, and a few forry Fishing-lines, they purchased Fish for their Maintenance, during their confinement for feveral Days in the Rock. All the Men in the Isle. having gone to the Isle Boreray for purchase, the Rope that fastened their Boat, happened to break, and by this unlucky accident, the Boat was quite loft, and the Poor People confined in the life, from the middle of Murch, till the latter end of May; without fo much as a crust of Bread, but they had Sheep, Fowl and Fish in abundance. They were at a loss, how to acquaint their Wives and Friends, that all of them were alive; but to effect this, they kindled as many Fires on the top of an Eminence, as there was Men in Number: this was no sooner seen, and the Fires counted than the Women understood the fignal, and were so overjoyed at this unexpected News, that they fell to labour the Ground with the Foot-spade, a fatigue they had never been accultomed to: and that Years product of Corn, was the most plentiful that they had for many Years before. After the Stewards arrival in the Isle, about the end of May, he lent his Galley to bring home all the Men confined in the life, to their so much longed for St. Kilda; where the mucual Joy between them and their Wives, and other Relations was extraordinary.

THE Inhabitants are of the reformed Religion, they affemble in the Church-yard, on the Lord's day, and in the Morning they fay the Lord's Prayer, Creed, and ten Commandments: They work at no Imployment till Monday, neither will they allow a Stranger to work sooner. The Officer, or Stewards Deputy Commonly, and sometimes any of their Neighbours baptize their Children soon after they are born; and in the following form; A. I. I baptize you to your Father and Mother, in the Name of the Father, Son, and Holy Ghost. They marry early and publickly, all the Natives of both Sexes being present, the Officer who performs the Marriage tenders a Crucifix to the married Couple, who lay their right hands on it, and then the Marriage is ratified.

THEY observe the Festivals of Christmas, Easter, Good-friday, and that of All-Saints, upon the latter they bake a large Cake, in form of a Triangle, surrowed round, and it must be all eaten that Night. They are Hospitable, and Charitable to Strangers, as well as the Poor belonging to themselves, for whom all the Families contribute a Proportion monthly, and at every Festival, each Family sends them a piece of Mutton or Beef.

THEY

THEY swear decisive Oaths by the Crucisix, and this puts an end to any Controversie, for there is not one Instance, or the least suspicion of Perjury among them. The Crucisix is of Brass, and about nine inches in length, it lies upon the Altar, but they pay no Religious Worship to it. One of the Inhabitants was so sincere, that (rather than for swear himself on the Crucisix) he confess da Capital Crime before the Minister, and my self. They never Swear, or Steal, neither do they take Gods Name in vain at any time; they are free from Whoredom and Adultery, and of those other Immoralities that abound so much every where else.

Fellow that could not Read, obtruded a false Religion upon the credulous People, which he pretended to have received from St. John the Baptist. It is Remarkable, that in his Rapsodies, which he called Prayers, he had the word Eli, and to this purpose, Eli is our Preserver. There is a little Hill, upon which he says John the Baptist deliver'd Sermons and Prayers to him; this he call'd John's-Bush, and made the People believe it was so Sacred, that if either Cow or Sheep did taste of its grass, they were to be killed immediately after, and the Owners were to eat them, but never without the Company of the Impostor. He made them likewise believe

Western Islands of Scotland, &c. 289 believe that each of them had a Tutelar Saint in Heaven to intercede for them, and the Anniversary of every one of those was to be necessarily observ'd, by having a splendid Treat, at which the Impostor was always the principal Person. He taught the Women a Devout Hymn, which he said he had from the Virgin Mary; he made them believe that it secur'd any Woman from Miscarriage that could repeat it by heart, and each of them paid the Impostor a Sheep for it.

UPON Mr. Campbel's Arrival and mine in St. Kilda, Roderick made a Publick Recantation of his Imposture; and being then by us brought to the lsle of Harries, and afterwards to the Isle of Skie, he has made Publick Confession in feveral Churches of his Converse with the Devil, and not John the Baptist, as he pretended, and seems to be very penitent. He is now in Skie Isle, from whence he is never to return to his Native Country. His Neighbours are heartily glad to be rid of such a Villain, and are now happily deliver'd from the Errors he imposed upon them. The lise is the Laird of Mack-Leod's Property, he is Head of one of the most arriver. the most ancient Tribes in the Isles; he bestows the Isle upon a Cadet of his Name, whose Fortune is low, to maintain his Family, and he is called Steward of it; he visits the Isle once every Summer, to demand the Rents, viz. Down, Wooll, Butter, Cheese, Cows, Horfes.

fes, Fowl, Oil, and Barley. The Stewards Deputy is one of the Natives, and stays al-ways upon the place; he has free Lands, and an Omer of Barley from each Family; and has the honour of being the first and last in their Boat, as they go and come to the lesser Isles or Rocks. The ancient measure of Omer and Cubit continues to be us'd in this Isle. They have neither Gold nor Silver, but Barrer among themfelves and the Stewards Men for what they want. Some years ago the Steward determin'd to exact a Sheep from every Family in the Isle, the number amounting to twenty seven; and for this he put them in mind of a late Precedent, of their having given the like number to his But they answer'd, that what they gave then, was voluntary, and upon an extraordinary occasion of his being Wind-bound in the Isle, and that this was not to be a Custom afterwards. However the Steward sent his Brother, and with him a compétent number of Men to take the Sheep from them by force, but the Natives arming themselves with their Daggers, and Fishing-Rods, attack'd the Stewards Brother, giving him some blows on the head, and forc'd him and his Party to retire, and told him that they would pay no new Taxes; and by this stout resistance, they preferv'd their Freedom from fuch imposition.

THE Inhabitants live contentedly together in a little Village on the East side St. Kilda, which

Western Islands of Scotland, &c. 291 which they commonly call the Country; and the Me Boreray, which is little more than two Leagues distant from them, they call the Northern Country. The distance between their Houses is by them called the High-street; their Houses are low built of Stone, and a cement of dry Earth; they have Gouples and Ribs of Wood cover'd with thin earthen Turff, thatch'd over these with Straw, and the Roof secur'd on each fide with double ropes of Straw or Heath, pois'd at the end with many Stones; their Beds are commonly made in the Wall of their Houfes, and they lie on Straw, but never on Feathers or Down, tho' they have them in greater plenty than all the Western Isles besides. The Reason for making their Bed-room in the Walls of their Houses, is to make room for their Cows, which they take in during the Winter and Spring.

THEY are very exact in their Properties; and divide both the Fishing as well as Fowling Rocks with as great niceness as they do their Corn and Grass; one will not allow his Neighbour to sit and Fish on his Seat, for this being a part of his Possession, he will take care that no encroachment be made upon the least part of it, and this with a particular regard to their Successors, that they may lose no Privilege depending upon any parcel of their Farm. They have but one Boat in the Isle, and every Man hath a share in it, proportionably to the Acres

of Ground for which they pay Rent. They are stout Rowers, and will tug at the Oar for a long time, without any intermission. When they Sail they use no Compass, but take their measures from the Sun, Moon, or Stars; and they rely much on the course of the various Flocks of Sea-Fowl, and this last is their surest Directory. When they go to the lesser surest and Rocks to bring home Sheep, or any other Purchase, they carry an iron Pot with them, and each Family surnisses one by turns, and the Owner on such Occasions, has a small Tax paid him by all the Families in the Isle, which is by them call'd the Pot-penny.

THERE was another Tax payed by each Family to one of the Natives, as often as they kindled a Fire in any of the lesser Isles or Rocks, and that for the use of his Steel and Flint; and this was by them call'd the Fire-penny.

THIS Tax was very advantageous to the Proprietor, but very uneasie to the Commonwealth, who could not be furnish'd with Fire on these Occasions any other way. But I told them that the Chrystal growing in the Rock on the shoar would yield Fire if struck with the back of a Knife, and of this I shew'd them an Experiment; which when they saw, was a very surprizing, and to them a profitable Discovery in their esteem, being such as could be had by every Man in the Isle; and at the

Western Islands of Scotland, &c. 293 the same time deliver'd them from an endless Charge; but it was very disobliging to the poor Man who lost his Tax by it.

THE Inhabitants of St. Kilda excel all those I ever saw in climbing Rocks; they told me that some years ago their Boat was split to pieces upon the West side of Boreray sile, and they were forc'd to lay hold on a bare Rock, which was steep, and above twenty Fathom high; notwithstanding this difficulty, some of them climb'd up to the top, and from thence let down a Rope, and Plads, and so drew up all the Boats Crew, tho' the climbing this Rock would seem impossible to any other except themselves.

THIS little Commonwealth hath two Ropes of about twenty four Fathoms length each, for climbing the Rocks, which they do by turns; the Ropes are secur'd all round with Cows Hides salted for the use, and which preserves them from being cut by the edge of the Rocks. By the assistance of these Ropes they purchase a great number of Eggs and Fowl; I have seen them bring home in a Morning twenty nine large Baskets all full of Eggs; the least of the Baskets contain'd four hundred big Eggs, and the rest eight hundred and above of lesser Eggs. They had with them at the same time about two thousand Sea-Fowl, and some Fish, together with some Limpets, call'd Parella,

The biggest I ever saw. They catch many Fowls likewise, by laying their Gins which are made of Horse-hair, having a Noose at the distance of two Foot each; the ends of the Rope at which the Noose hangs are secur'd by a Stone.

THE Natives gave me an account of a very extraordinary Risque which one of them ran as laying his Gins, which was thus. As he was walking baresoot along the Rock where he had fixed his Gin, he happen'd to put his Toe in a Noose, and immediately fell down the Rock, but hung by the Toe, the Gin being strong enough to hold him, and the Stones that secur'd it on each end being heavy, the poor Man continu'd hanging thus for the space of a Night on a Rock twenty Fathom height above the Sea, until one of his Neighbours hearing him cry, came to his rescue, drew him up by the Feet, and so say'd him.

THESE Poor People do sometimes fall down as they climb the Rocks, and perish: Their Wives on such occasions make doleful Songs, which they call Lamentations. The chief Topicks are their Courage, their Dexterity in Climbing, and their great affection which they shewed to their Wives and Children.

IT is ordinary with a Fowler after he has got his Purchase of Fowls, to pluck the Fatest, and carry it home to his Wife as a mark of his Affection, and this is called the Rock-Fowl.

THE Batchellors do in like manner carry this Rock-Fowl to their Sweet-hearts, and it is the greatest Present they can make, considering the danger they run in acquiring it.

THE Richest Man in the Isle has not above eight Cows, eighty Sheep, and two or three Horses. If a Native here have but a few Cattle, he will Marry a Woman tho' she have no other Portion from her Friends but a Pound of Horse-hair, to make a Gin to catch Fowls.

THE Horses here are very low of stature, and employ'd only to carry home their Peats and Turss, which is their Fuel. The Inhabitants ride their Horses (which were but eighteen in all) at the Anniversary Cavalcade of All Saints; this they never fail to observe. They begin at the shoar, and ride as far as the Houses; they use no Saddles of any kind, nor Bridle, except a Rope of Straw which manages the Horses head; and when they have all taken the Horses by turns, the Show is over for that time.

T 4 THIS

THIS Isle produces the finest Hawks in the Western Isles, for they go many Leagues for their Prey, there being no Land-Fowl in St. Kilda proper for them to eat, except Pigeons, and Ployers.

ONE of the Inhabitants of St. Rilda being fome time ago Wind bound in the life of Harries, was prevailed on by some of them that Traded to Glasgow to go thither with them. He was assonished at the length of the Voyage, and of the great Kingdoms as he thought 'em, that is lifes by which they Sailed; the largest in his way did not exceed twenty four Miles in length, but he considered how much they exceeded his own little Native Country.

UPON his Arrival at Glascow, he was like one that had dropt from the Clouds into a new World; whose Language, Habit, &c. were in all respects new to him; he never imagin'd that such big Houses of Stone were made with hands; and for the Pavements of the Streets, he thought it must needs be altogether Natural; for he could not believe that Men would be at the pains to beat stones into the ground to walk upon. He stood dumb at the door of his Lodging with the greatest admiration; and when he saw a Coach and two Horses, he thought it to be a little House they were drawing at their Tail, with Men in it; but he condemn'd

western Islands of **Scotland**, &c. 297 condemn'd the Coach-man for a Fool to sit so uneasie, for he thought it safer to sit on the horses back. The Mechanism of the Coach-Wheel, and its running about, was the greatest of all his Wonders.

WHEN he went through the Streets, he defired to have one to lead him by the hand. Thomas Ross a Merchant, and others, that took the diversion to carry him through the Town, ask'd his Opinion of the high Church? He answer'd, that it was a large Rock, yet there were some in St. Kilda much higher, but that these were the best Caves he ever saw; for that was the Idea which he conceived of the Pillars and Arches upon which the Church stands. When they carried him into the Church, he was yet more surprized, and held up his hands with admiration, wondring how it was possible for Men to build such a prodigious Fabrick, which he suppos'd to be the largest in the Universe. He could not imagine what the Pews were defign'd for, and he fancied the People that wore Masks (not knowing whether they were Men or Women,) had been guilty of some ill thing, for which they dar'd not shew their faces. He was amazed at Womens wearing Patches, and fancied them to have been Blifters. 'Pendants feem'd to him the most ridiculous of all things; he condemn'd Perriwigs mightily, and much more the Pow-der us'd in them; in fine, he condemn'd all things

things as superfluous, he saw not in his own Country. He look'd with amazement on every thing that was new to him. When he heard the Church Bells ring he was under a mighty consternation, as if the Fabrick of the World had been in great disorder. He did not think there had been so many People in the World, as in the City of Glascow; and it was a great Mystery to him to think what they could all design by living so many in one place. He wondred how they could all be furnish'd with Provision, and when he saw big Loaves, he could not tell whether they were Bread, Stone, or Wood. He was amaz'd to think how they could be provided with Ale, for he never faw any there that drank Water. He wondred how they made them fine Cloaths, and to fee Stockings made without being first cut, and afterwards sewn, was no small wonder to He thought it foolish in Women to wear thin Silks, as being a very improper habit for such as pretended to any fort of Employ-When he faw the Womens Feet, he judged them to be of another shape than those of the Men, because of the different shape of their Shooes. He did not approve of the heels of Shooes worn by Men or Women; and when he observ'd Horses with shooes on their feet, and fastned with Iron Nails, he could not forbear laughing, and thought it the most ridicu-lous thing that ever fell under his observation. He long d to see his Native Country again, Western Islands of **Scotland**, &c. 299 and passionately wish'd it were blessed with Ale, Brandy, Tobacco and Iron, as Glascow was.

THERE's a Couple of Large Eagles who have their Nest on the North end of the Isle; the Inhabitants told me that they commonly make their Purchase in the adjacent Isles and Continent, and never take so much as a Lamb or Hen from the Place of their Abode, where they propagate their kind. I forgot to give an account of a singular Providence that happen'd to a Native of the Isle of Skie, called Neil, who when an Infant was left by his Mother in the Field, not far from the Houses on the North fide Loch Portrie; an Eagle came in the mean time, and carried him away in its Tallons as far as the fouth fide of the Loch, and there laying him on the ground, some People that were herding Sheep there perceiv'd it, and hearing the Infant cry, ran immediately to its rescue; and by good Providence found him untouch'd by the Eagle, and carried him home to his Mother. He is still living in that Parish, and by reason of this Accident, is distinguish'd among his Neighbours by the Sirname of Eagle.

An Account of the Second Sight, in Irish call'd Taish.

HE Second Sight is a singular Faculty of Seeing, an otherwise invisible Object, without any previous Means us'd by the Person that sees it for that end; the Vision makes such a lively impression upon the Seer, that they neither see nor think of any thing else, except the Vision, as long as it continues; and then they appear Pensive, or Jovial, according to the Object which was represented to them.

AT the fight of a Vision the Eye-lids of the Person are erected, and the Eyes continue staring until the Object vanish. This is obvious to others who are by, when the Persons happen to see a Vision, and occur'd more than once to my own Observation, and to others that were with me.

THERE is one in Skie, of whom his Acquaintance observed, that when he sees a Vision, the inner part of his Eye-lids turn so far upwards, that after the Object disappears, he must draw them down with his Fingers, and sometimes employs others to draw them down, which he finds to be the much easier way.

THIS

## Western Islands of Scotland, &c. 301

THIS Faculty of the Second Sight does not Lineally descend in a Family, as some imagine, for I know several Parents who are endowed with it, but their Children not, wice versa: Neither is it acquir'd by any previous Compact. And after a strict Enquiry, I could never learn from any among them, that this Faculty was communicable any way whatsoever.

THE Seer knows neither the Object, time nor place of a Vision before it appears, and the same Object is often seen by different Persons, living at a considerable distance from one another. The true way of judging as to the time and circumstance of an Object, is by observation; for several Persons of Judgment without this Faculty, are more capable to judge of the design of a Vision, than a Novice that is a Seer. If an Object appear in the Day or Night, it will come to pass sooner or later accordingly.

IF an Object is seen early in a Morning (which is not frequent) it will be accomplished in a sew hours afterwards. If at Noon, it will commonly be accomplished that very day. If in the Evening, perhaps that Night, if after Candles be lighted, it will be accomplished that Night; the latter always in accomplishment, by Weeks, Months, and sometimes Years, according

302 A Description of the cording to the time of Night the Vision is seen.

WHEN a Shroud is perceiv'd about one, it is a fure Prognostick of Death, the time is judged according to the height of it about the Person; for if it is not seen above the middle, death is not to be expected for the space of a year, and perhaps some Months longer; and as it is frequently seen to ascend higher towards the head, Death is concluded to be at hand within a few days, if not hours, as daily experience confirms. Examples of this kind were shewn me, when the Persons of whom the observations then made enjoy'd persect health.

ONE Instance was lately foretold by a Seer that was a Novice, concerning the death of one of my Acquaintance; this was communicated to a few only, and with great confidence, I being one of the number, did not in the least regard it, until the death of the Person about the time foretold, did confirm me of the certainty of the Prediction. The Novice mention'd above, is now a skilful Seer, as appears from many late instances; he lives in the Parish of St. Maries, the most Northern in Skie.

IF a Woman is seen standing at a Man's lest hand, it is a presage that she will be his Wife, whether they be Married to others, or unmarried at the time of the Apparition.

IRetwo or three Women are seen at once standing near a Mans left hand, she that is next him will undoubtedly be his Wife first, and so on, whether all three, or the Man be fingle or married at the time of the Vision or not, of which there are several late Instances among those of my Acquaintance. It is an ordinary thing for them to see a Man that is to come to the House shortly after; and if he is not of the Seers Acquaintance, yet he gives fuch a lively description of his Stature, Complection, Habit, &c. that upon his Arrival he answers the Character given him in all respects.

IF the Person so appearing be one of the Seer's Acquaintance, he will tell his Name, as well as other Particulars; and he can tell by his Countenance whether he comes in a good or had humour.

I have been seen thus my self by Seers of both Sexes at some hundred miles distance; fome that saw me in this manner, had never seen me Personally, and it happened according to their Visions, without any previous design of mine to go to those Places, my coming there being purely accidental.

IT is ordinary with them to see Houses, Gardens and Trees, in Places void of all three; and

and this in process of time uses to be accomplished, as at Mogstot in the Isle of Skie, where there were but a sew forry Cow-houses that ched with Straw, yet in a sew years after, the Vision which appear'd often was accomplish'd, by the building of several good Houses on the very spot represented to the Scers, and by the Planting of Orchards there.

TO see a spark of fire fall upon ones Arm or Breast, is a forerunner of a dead Child to be seen in the arms of those Persons, of which there are several fresh Instances.

TO see a Seat empty at the time of ones sitting in it, is a presage of that Persons death quickly after.

WHEN a Novice, or one that has lately obtain'd the Second Sight, sees a Vision in the Night time without doors, and comes near a fire, he presently falls into a swoon.

SOME find themselves as it were in a croud of People, having a Corpse which they carry along with them, and after such Visions the Seers come in sweating, and describe the People that appear'd; if there be any of their Acquaintance among em, they give an account of their Names, as also of the Bearers, but they know nothing concerning the Corps.

ALL those who have the Second Sight do not always see these Visions at once, tho' they be together at the time. But if one who has this Faculty, designedly touch his Fellow Seer at the instant of a Visions appearing, then the second sees it as well as the first, and this is sometimes discern'd by those that are near them on such occasions.

THERE is a way of foretelling Death by a Cry that they call Taisk, which fome call a Wrath in the Low-land.

THEY hear a loud Cry without doors, exactly refembling the voice of some particular Person, whose death is foretold by it. The last instance given me of this kind was in the Village Rigg, in Skie Isle.

FIVE Women were sitting together in the same Room, and all of them heard a loud Cry passing by the Window; they thought it plainly to be the voice of a Maid who was one of the Number, she blushed at the time, tho not sensible of her so doing, contracted a Feaver next day, and died that Week.

THINGS also are foretold by Smelling, fometimes as follows. Fish or Flesh is frequently smelled in a fire, when at the same time neither of the two are in the House, or in

in any probability like to be had in it for some Weeks or Months, for they seldom eat Flesh, and tho' the Sea be near them, yet they catch Fish but seldom, in the Winter and Spring. This Smell several, Persons have who are not endued with the Second Sight, and it is always accomplished soon after.

Children, Horses and Cows see the Second Sight, as well as Men and Women advanced in years.

THAT Children see it is plain, from their crying aloud at the very instant that a Corpse or any other Vision appears to an ordinary Seer. I was present in a House where a Child cried out of a suddain, and being ask'd the reason of it, he answer'd that he had seen a great white thing lying on the Board which was in the Corner; but he was not believ'd, until a Seer who was present told them that the Child was in the right; for, said he, I saw a Corpse and the shroud about it, and the Board will be us'd as part of a Cossin, or some way imployed about a Corpse; and accordingly, it was made into a Cossin, for one who was in perfect health at the time of the Vision.

THAT Horses see it is likewise plain, from their violent and sudden starting, when the Rider or Seer in Company with him sees a Vision of any kind, Night, or Day. It is observable

Western Islands of scotland, &c. 307 servable of the Horse, that he will not go forward that way, until he be lead about at some distance from the common Road, and then he is in a sweat.

A Horse sastned by the common Road on the side of Loch-Sketines in Skie, did break his Rope at Noon day, and run up and down without the least visible cause. But two of the Neighbourhood that happen'd to be at a little distance, and in view of the Horse, did at the same time see a considerable number of Men about a Corpse, directing their course to the Church of Snisort; and this was accomplished within a sew days after, by the Death of a Gentlewoman who lived thirteen Miles from that Church, and came from another Parish, from whence very sew come to Snisort to be Buried.

THAT Cows see the Second Sight, appears from this; that when a Woman is Milking a Cow, and then happens to see the Second Sight, the Cow runs away in a great fright at the same time, and will not be pacified for some time after.

BEFORE I mention more particulars discover'd by the Second Sight, it may not be amiss to answer the Objections that have larely been made against the reality of it.

Object. 1. These Seers are Visionary and Melancholy People, and fancy they see things that do not appear to them, or any body else.

Answer. The People of these Isles, and particularly the Seers, are very temperate, and their Diet is simple, and moderate, in quantity and quality, so that their Brains are not in all probability disordered by undigested Fumes of Meat or Drink. Both Sexes are free from Hysterick Fits, Convulsions, and several other Distempers of that fort; there's no Madmen among them, nor any instance of self-murther. It is observed among 'em, that a Man Drunk never sees the Second Sight; and he that is a Visionary would discover himself in other things as well as in that, and such as see it, are not judged to be Visionarys by any of their Friends or Acquaintance.

Object. 2. There is none among the Learn'd able to oblige the World with a latisfying account of those Visions, therefore it is not to be believed.

Answer. If every thing for which the Learned are not able to give a satisfying account be condemn'd as impossible, we may find many other things generally believed, that must be rejected as salse by this Rule. For instance, Yawning.

Western Islands of Scotland, &c.

Wawning, & its influence; & that the Load-stone attracts Iron, and yet these are true as well as harmless, tho we can give no satisfying account of their Causes. And if we know so little of Natural Causes, how much less can we pretend to things that are supernatural.

Object. 3. The Seers are Impostors, and the People who believe them, are credulous, and casily imposed upon.

Answer. The Seers are generally illiterate, and well-meaning People, and altogether void of design, nor could I ever learn that any of them made the least gain by it, neither is it reputable among 'em to have that Faculty; be-fides the People of the Isles are not so credulous as to believe implicitely, before the thing foretold is accomplished, but when it actually comes to pass afterwards, it is not in their power to deny it, without offering violence to their Senses and Reason. Besides, if the Seers were deceivers, can it be reasonable to imagine, that all the Islanders who have not the Second Sight, should combine together, and offer violence to their Understandings and Senses, to force themselves to believe a Lye from Age to Age. There are several Persons among them, whose Birth and Education raise them above the suspicion of concurring with an Imposture, meerly to gratifie an illiterate and contemptible fort of Persons; nor can a reasonable Man believe

that Children, Horses and Cows could be preingaged in a Combination to perswade the World of the reality of the Second Sight.

SUCH as deny those Visions, give their assent to several strange passages in History, upon the Authority of Historians that lived several Centuries before our time, and yet they deny the People of this Generation the liberty to believe their intimate Friends and Acquaintance, Men of probity and unquestionable Reputation, and of whose veracity they have greater certainty, than we can have of any ancient Historian.

EVERY Vision that is seen comes exactly to pass, according to the true Rules of Observation, the Novices and heedless Persons do not always judge by those Rules. I remember the Seers return'd me this Answer to my Objection, and gave several Instances to that purpose, whereof the following is one.

A Boy of my acquaintance was often surprized at the sight of a Cossin close by his shoulder, which put him into a fright, and made him to believe it was a forerunner of his own Death, and this his Neighbours also judged to be the meaning of that Vision; but a Seer that lived in the Village Knockow, where the Boy was then a Servant, told them that they were

were under a great mistake, and desired the Boy to lay hold of the first opportunity that offered; and when he went to a Burial, to remember to act as a Bearer for some moments, and this he did accordingly, within a sew days after, when one of his Acquaintance died; and from that time sorward he was never troubled with seeing a Cossin at his shoulder, tho he has seen many at a distance that concerned others. He is now reckoned one of the exactest Seers in the Parish of St. Maries in Skie, where he lives.

THERE is another instance of a Woman in Skie, who frequently saw a Vision representing a Woman having a Shroud about her up to the middle, but always appear'd with her back towards her, and the Habit in which it seem'd to be dress'd resembled her own; this was a Mystery for some time, until the Woman try'd an Experiment to satisfie her Curiofity, which was to dress her self contrary to the usual way, that is, she put that part of her Cloaths behind, which was always before, fancying that the Vision at the next appearing would be the easier distinguished, and it fell out accordingly, for the Vision soon after presented its self with its face and dress looking towards the Woman, and it prov'd to resemble her self in in all points, and she died in a little time after.

THERE

THERE are Visions seen by several Persons, in whose days they are not accomplished, and this is one of the reasons, why some things have been seen that are said never to come to pass, and there are also several Visions seen which are not understood until they be accomplished.

THE fecond Sight is not a late discovery seen by one or two in a Corner, or a remote lsse, but it is seen by many Persons of both Sexes in several lsses, seperated above forty or sifty Leagues from one another, the Inhabitants of many of these Isles, never had the least converse by Word or Writing; and this faculty of seeing Visions, having continued as we are informed by Tradition, ever since the Plantation of these Isles, without being disproved by the nicest Sceptick, after the strictest enquiry seems to be a clear proof of its reality.

IT is observable, that it was much more common twenty Years ago than at present, for one in ten do not see it now, that saw it then.

THE fecond fight is not confined to the western lises alone, for I have an account that it is likewise seen in several parts of Holland, but particularly in Bommel, by a Woman, for which she is courted by some, and dreaded by others. She sees a Smoak about ones Face, which is a forerunner of the death of a Person

Western Islands of Scotland, &c. 313 fo seen, and she did actually foretel the death of several that lived there; she was living in that Town this last Winter.

THE Corps-candles, or Dead-mens Lights in Wales, which are certain Prognosticks of Death are well known and attested.

THE fecond fight is likewise seen in the Isle of Man, as appears by this Instance; Captain Leaths the Chief Magistrate of Belfast, in his Voyage 1690, lost thirteen Men by a violent Storm, and upon his landing in the Isle of Man, an ancient Man Clerk to a Parish there, told him immediately that he had lost thirteen Men, the Captain enquiring how he came to the knowledge of that, he answered, that it was by thirteen Lights which he had seen come into the Church-Yard, as Mr. Sacheverel tells us, in his late Description of the Isle of Man.

on between the People of the western lsles of Scotland, Holland, Wales, and the lsle of Man, since they are separated by long Seas, and are People of different Languages, Governments, and Interests: They have no Correspondence between them, and it is probable, that those inhabiting the North West Isles have never yet heard that any such Visions are seen in Holland, Wales, or he lsle of Man.

FOUR

FOUR Men of the Village Flodgery in Skie, being at Supper, one of them did suddenly let fall his Knise on the Table, and looked with an angry Countenance, the Company observing it, enquired his Reason, but he return'd them no answer until they had supp'd, and then he told them that when he let fall his Knise, he saw a Corps with the Shroud about it laid on the Table, which surprized him, and that a little time would accomplish the Vision. It fell out accordingly, for in a few days after one of the Family died, and happen'd to be laid on that very Table, this was told me by the Master of the Family.

Daniel Stewart an Inhabitant of Hole in the North Parish of St. Maries in the Isle of Skie, faw at Noon-day five Men on Horse-back riding Northward, he ran to meet them, and when he came to the Road, he could see none of them, which was very surprizing to him, & he told it his Neighbours, the very next day he faw the same number of Men and Horse, coming along the Road, but was not so ready to meet them as before, until he heard them speak, and then he found them to be those that he had feen the day before in a Vision, this was the only Vision of the kind he had ever seen in his The Company he faw was Sir Donald Mac Donald and his retinue, who at the time of the Vision was at Armidil, near forty Miles South from the place where the Man lived.

A Woman of Stornbay in Lewis, had a Maid who saw Visions, and often fell into a Swoon; her

Western Islands of Scotland, &c. 315

her Mistris was very much concern'd about her. but could not find out any means to prevent her. feeing those things at last she resolved to pour some of the Water us'd in Baptism on her Maids Face, believing this would prevent her feeing any more Sights of this kind, and accordingly the carried her Maid with her, next Lord's Day, and both of 'em sat near the Basin in which the Water stood, and after Baptism before the Minister had concluded the last Prayer, she put her hand in the Basin, took up as much Water as she could, and threw it on the Maids Face. at which strange action the Minister and the Congregation were equally surprized; after Prayer the Minister enquired of the Woman the meaning of such an unbecoming and distracted action, she told him it was to prevent her Maids seeing Visions; and it fell out accordingly, for from that time she never once more saw a Vision of any kind. This account was given me by Mr. Morison, Minister of the Place, before feveral of his Parishioners who knew the truth of it. I submit the matter of fact to the censure of the Learned, but for my own part, think it to have been one of Satans Devices, to make credulous People have an esteem for Holy Water.

John Morison of Bragir in Lewis, a Person of unquestionable Sincerity and Reputation, told me, that within a Mile of his House a Girl of twelve Years Old, was troubled at the frequent sight of a Vision resembling her self, in Stature, Com-

Complexion, Dress, &c. and seem'd to stand or fit and to be always Imployed as the Girl was; this prov'd a great trouble to her, her Parents being much concern'd about it, confulted the said John Morison, who enquired if the Girl was instructed in the Principles of her Religion, and finding she was not, he bid them teach her the Creed, ten Commandments, and the Lord's Prayer, and that she should say the latter daily after her Prayers. Mr. Morison and his Family joyn'd in Prayer in the Girls behalf. begging that God of his goodness would be pleas'd to deliver her from the trouble of fuch a Vision, after which and the Girl's complying with the advice as above. The never faw it any more.

A Man living three Miles to the North of the said John Morison, is much haunted by a Spirit, appearing in all Points like to himself; and he asks many impertinent Questions of the Man when in the Fields, but speaks not a word to him at home, tho' he seldom misses to appear to him every night in the House, but to no other Person. He told this to one of his Neighbours, who advis'd him to cast a live Coal at the sace of the Vision the next time he appear'd; the Man did so next night, and all the Family saw the action; but the following day the same Spirit appeared to him in the Fields, and beat him severely, so as to oblige him to keep his Bed for the space of sourceen days

Western Islands of Scotland, &c. 317 days after. Mr. Morison Minister of the Parish, and several of his Friends came to see the Man, and join'd in Prayer that he might be freed from this trouble, but he was still haunted by that Spirit a year after I lest Lewis.

A Man in Knockow, in the Parish of Sr. Maries, the Northermost in Skie, being in persect health, and sitting with his Fellow Servants at Night, was on a suddain taken ill, dropt from his Seat backward, and then fell a Vomiting, at which all the Family were much concern'd, he having never been subject to the like before, but he came to himself soon after, and had no fort of pain about him. One of the Family who was accustomed to see the Second Sight. told them that the Mans ilness proceeded from a very strange Cause, which was thus. An ill natur'd Woman (naming her by her Name) who lives in the next adjacent Village of Bornskittag, came before him in a very furious, and angry manner, her Countenance full of Passion. and her Mouth full of Reproaches, and threatned him with her head and hands, until he fell over as you have feen him. This Woman had a fancy for the Man, but was like to meet with a disappointment as to his Marrying her. This Instance was told me by the Master of the Family, and others who were present when it happen'd.

ONE that liv'd in St. Maries on the West side of the Isle of Skie, told Mr. Mack Pherson the Minister, and others, that he saw a Vision of a Corpse coming towards the Church, not by the common Road, but by a more rugged Way, which rendred the thing incredible, and occasion'd his Neighbours to call him a Fool; but he bid them have patience, and they would see the truth of what he afferted in a short time, and it sell out accordingly; for one of the Neighbourhood died, and his Corpse was earried along the same unaccustomed Way, the common Road being at that time filled with a deep Snow. This Account was given me by the Minister, and others living there.

Mr. Mack Pherson's Servant soretold that a Kiln should take fire, and being some time after reprov'd by his Master for talking so soolishly of the Second Sight, he answer'd that he could not help his seeing such things as presented themselves to his view in a very lively manner, adding surther, I have just now seen that Boy sitting by the fire, with his face red, as if the blood had been running down his forehead, and I could not avoid seeing this, and as for the accomplishment of it within forty eight shours there is no doubt, says he, it having appear'd in the day time. The Minister became very angry at his Man, and charg'd him never to speak one word more of the Second Sight,

United by Google

Western Islands of Scotland, &c. 319 or if he could not hold his tongue, to provide himself another Master; telling him he was an unhappy Fellow who studied to abuse Credulous People with false Predictions. There was no more said on this Subject until the next day, that the Boy of whom the Seer spoke came in, having his sace all cover'd with blood, which happen'd by his falling on a heap of Stones. This Account was given me by the Minister, and others of his Family.

DANIEL DOW, alias Black, an Inhabitant of Bornskittag, was frequently troubled at the fight of a Man threatning to give him a Blow; he knew no Man resembling this Vision; but the Stature, Complection and Habit were fo impress'd on his Mind, that he said he could distinguish him from any other, if he should happen to see him. About a year after the Vifion appear'd first to him, his Master sent him to Kyle Raes, above thirty Miles surther South East, where he was no sooner arriv'd, than he distinguished the Man who had so often appear'd to him at home, and within a few hours after, they happen'd to quarrel, and came to blows, so as one of them (I forgot which) was wounded in the head. This was told me by the Seers Master, and others who live in the place; The Man himself has his Residence there, and is one of the precisest Seers in the Isles.

Sir Normand Mack Leod, and some others playing at Tables, at a Game called in Irish Falmer-more, wherein there are three of a fide. and each of them throw the Dice by turns, there happen'd to be one difficult Point in the disposing of one of the Table men; this oblig'd the Gamester to deliberate before he was to change his Man, fince upon the disposing of it, the winning or losing of the Game depended; at last the Butler who stood behind advised the Player where to place his Man, with which he complied, and won the Game; this being thought extraordinary, and Sir Normand hearing one whisper him in the ear, ask'd who advis'd him so skilfully? he answer'd it was the Butler, but this seem'd more strange, for he could not play at Tables. Upon this, Sir Normand ask'd him how long it was fince he had learnt to Play? and the Fellow own'd that he never play'd in his life, but that he saw the Spirit Browny reaching his arm over the Players head, and touched the Part with his finger, on the Point where the Table man was to This was told me by Sir Normand and others who happen'd to be present at the time.

DANIEL DOW above-named, foretold the death of a young Woman in Minginis, within less than twenty four hours before the time, and accordingly she died suddenly in the Fields, tho

Western Islands of Scotland, &c. 321 tho' at the time of the Prediction she was in perfect health; but the Shroud appearing close about her head, was the ground of his considence, that her death was at hand.

THE same Daniel Dow soretold the death of a Child in his Masters arms, by seeing a spark of fire sall on his lest arm; and this was like-wise accomplish'd soon after the Prediction.

round the life of Skie, with a design to go to the opposite main Land, were strangely surprized with an Apparition of two Men hanging down by the Ropes that secured the Mast, but could not conjecture what it meant. They pursued their Voyage, but the Wind turned contrary, and so forced them into Broadford in the life of Skie, where they found Sir Donald Mack Donald keeping a Sherists Court, and two Criminals receiving Sentence of death there, the Ropes and Mast of that very Boat were made use of to hang those Criminals. This was told me by several, who had this Instance from the Boats Crew.

SEVERAL Persons living in a certain Family, told me that they had frequently seen two Men standing at a young Gentlewomans left hand, who was their Masters Daughter; they told the Mens Names, and being her Equals, it was not doubted but she would be Married

Married to one of them; and perhaps to the other, after the death of the first. Some time after a third Man appear'd, and he seem'd always to stand nearest to her of the three, but the Seers did not know him, tho' they could describe him exactly. And within some Months after, this Man who was seen last, did actually come to the House, and fulfilled the Description given of him by those who never saw him but in a Vision, and he married the Woman shortly after. They live in the Isle of Skie, both they and others confirmed the truth of this Instance when I saw them.

MACK LEODS Porter passing by a Galley that lay in the Dock, faw her filled with Men, having a Corps, and near to it he saw several of Mick Lead's Relations; this did in a manner perswade him that his Master was to die from after, and that he was to be the Corps which was to be transported in the Galley. Some Months after the Vision was seen, Mack Lead with several of his Relations and others went to the Isle of Mull, where some days after Mack Lean of Torlosk happen'd to die, and his Corps was transported in the Galley to his Burial Place, and Mack Leod's Relations were on board to attend the Funeral, while M.ck Leod staid ashore, and went along with the Corps, after their Landing.

2011

Mr.

Mr. Dougal Mack Pherson, Minister of Saint Maries on the West side of Skie, having his Servants in the Kiln drying Corn, the Kiln happen'd to take fire, but was foon extinguish'd. And within a few Months after, one of the Ministers Servants told him that the Kiln would be on fire again fhortly; at which he grew very angry with his Man, threatning to beat him if he should presume to Prophesie mischief by that lying way of the Second Sight. Notwithstanding this, the Man asserted positively and with great assurance that the Kiln would certainly take fire, let them use all the precautions they could. Upon this, Mr. Mack Pherson had the Curiosity to enquire of his Man if he could guess within what space of time the Kiln would take fire? he told him before Hallowtides Upon which, Mr. Mack Pherson call'd for the Key of the Kiln, and told his Man that he would take care of the Kiln until the limited day was expir'd, for none shall enter it sooner, and by this Means I shall make the Devil if he is the Author of such Lies, and you both Liars. For this end he kept the key of the Kiln in his Press until the time was over, and then deliver'd the key to the Servants, concluding his Man to be a Fool and a Cheat. Then the Servants went to dry Corn in the Kiln, and were charg'd to have a special care of the fire, yet in a little time after the Kiln took fire, and it was all in a flame, X 2 accordaccording to the Prediction, tho' the Man mistook the time. He told his Master, that within a few moments after the fire of the Kiln had been first extinguished, he saw it all in a stame again; and this appearing to him in the day time, it would come to pass the sooner.

John Mack Normand, and Daniel Mack Ewin, Travelling along the Road, two Miles to the North of Snifort Church, saw a body of Men coming from the North, as if they had a Corps with 'em to be buried in Snifort; this determin'd them to advance towards the River, which was then a little before them, and having waited at the Ford, thinking to meet those that they expected with the Funeral, were altogether disappointed; for after taking a view of the ground all round them, they discover'd that it was only a Vision. This was very surprizing to them both, for they never faw any thing by way of the Second Sight before or after that time. This they told their Neighbours when they came home, and it happen'd that about two or three Weeks after a Corps came along that Road, from another Parish, from which few or none are brought to Snifort, except Persons of distinction; so that this Vision was exactly accomplished.

## Western Islands of Scotland, &c.

A Gentleman who is a Native of Skie, did when a Boy, disoblige a Seer in the Isle of Rasay, and upbraid him for his ugliness, as being black by Name, and Nature. At last the Seer told him very angrily, my Child, if I am Black, vou'll be Red e're long. The Master of the Family chid him for this, and bid him give over his Foolish Predictions, since no body believ'd them; but next Morning the Boy being at Play near the Houses, fell on a stone, and wounded himself in the Forehead, so deep, that to this day there's a hollow Scar in that part of it.

JAMES BEATON Surgeon, in the Isle of North Vist, told me that being in the Isle of Mull, a Seer told him considently that he was shortly to have a bloody Forehead, but he disregarded it, and call'd the Seer a Fool. However this James being called by some of the Mackleans to go along with them to attack a Vessel belonging to the Earl of Argyle, who was then coming to possess Mull by sorce, they attak'd the Vessel, and one of the Mackleans being Wounded, the said James while dressing the Wound, happen'd to rub his Forehead, and then some of his Patients blood stuck to his sace, which accomplish'd the Vission.

MY Lord Viscount Tarbat, one of Her Majesties Secretaries of State in Scotland, Travelling in the Shire of Ross, in the North of Scotland, came X 3

3.25

into a House and sat down in an Arm'd Chair, one of his Retinue who had the faculty of feeing the Second Sight, spoke to some of my Lord's Company, desiring them to perswade him to leave the House, for said he, there is a great missertune will attend some body in it, and that within a few Hours. This was told my Lord, but he did not regard it; the Seer did foon after renew his Intreaty, with much eagerness, begging that my Lord might remove our of that unhappy Chair, but had no other answer than to be exposed for a Fool. Some Hours after my Lord remov'd, and pursued his Journey, but was not gone many Hours vvhen a Trooper riding upon Ice, near the House vvhence my Lord remov'd, fell and broke his Thigh, and being afterwards brought into that House, vvas laid in the Armed Chair, where his Wound vvas dress'd, vvhich accomplished the Vision. I heard this Instance from several Hands, and had it fince confirmed by my Lord himself.

A Man in the Parish of St. Maries, in the Barrony of Troterness in Skie, called Lachlin, lay sick for the space of some Months, decaying daily, in so much that all his Relations and acquaintance despaired of his recovery: One of the Parishioners called Archibald Mack Donald, being reputed samous for his Skill in sorteelling things to come, by the Second Sight, afferted possitively that the Sick Man would never die

Western Islands of Scotland, &c. 327

in the House where he then lay; this being thought very improbable, all the Neighbours condemn'd Archibald as a foolish Prophet, upon which, he passionately affirmed, that if ever that Sick Man dies in the House where he now lies, I shall from henceforth renounce my part of Heaven: Adding withal the Sick Man was to be carried alive out of the Housein which he then lay, but that he would never return to it a live, and then he nam'd the Hersons that should carry out the Sick Man alive. The Man having lived some Weeks longer than his Friends imagin'd, and proving uneasie, and troublesome to all the Family, they considered that Archibald had reason for his peremptory affertion, and therefore they resolved to carry him to a House joyning to that in which he then lay, but the Poor Man would by no means give his consent to be removed from a Place where he believed he should never die; so much did he rely on the words of Archibald, of whose Skill he had feen many demonstrations. But at last his Friends being fatigu'd day and night with the Sick Man's uneafiness, they carried him against his Inclination, to another little House, which was only seperated by an Entry from that in which he lay, and their Feet were scarce within the Threshold, when the sick Man gave up the Ghost; and it was remarkable that the two Neighbours, which Archibald named would carry him out, were actually the Persons that did so, At the time of the Prediction, Archibald faw him carried out as above, and when he was within the Door of the other House, he saw him all white, and the Shroud being about him, occasioned his considence as above mention'd; this is matter of fact, which Mr. Daniel Nicolson Minister of the Parish, and a considerable Number of the Parishioners, are able to vouch for, and ready to attest, if occasion requires,

THE same "Archibald Macdonald, happen'd to be in the Village Knockow one Night, and before Supper, told the Family that he had just then feen the strangest thing he ever saw in his Life; to wit, a Man with an ugly long Cap, always shaking his Head, but that the strangest of all, was a little kind of a Harp which he had, with four Strings only, and that it had two Harts Horns fixed in the Front of it; all that heard this odd Vision fell a laughing at Archibald, telling him that he was dreaming, or had not his Wits about him, fince he pretended to see a thing that had no being, and was not so much as heard of in any part of the World. All this could not alter Archibalds Opinion, who told them that they must excuse him, if he laugh'd at them after the accomplishment of the Vision. Archibald return'd to his own House, and within three or four days after, a Man with the Cap, Harp, &c. came to the House, and the Harp, String, Horns, and Cap, answered the Description of them at first view, he shook his Head

Western Islands of **Scotland**, &c. 329
Head when he plai'd, for he had two Bells fixed to his Cap; this Harper was a Poor Man, and made himself a Bussoon for his Bread, and was never before seen in those parts, for at the time of the Prediction, he was in the Isle of Barray; which is above twenty Leagues distant from that part of Skie. This Story is vouched by Mr. Daniel Martin, and all his Family, and such as were then present, and live in the Village where this happen'd.

Mr. Daniel Nicolfon Minister of St. Maries in Skie the Parish in which Archibald Macdonald liv'd, rold me that one Sunday after Sermon at the Chappel Uze, he took occasion to enquire of Archibald, if he still retain'd that unhappy faculty of seeing the Second Sight, and he wished him to lay it aside, if possible, for said he, it is no true Character of a Good Man. Archibald was highly displeas'd, and answered, That he hop'd he was no more unhappy than his Neighbours, for seeing what they could not perceive; adding, I had, says he, as ferious Thoughts as my Neighbours, in time of hearing a Sermon to day, and even then I faw a Corps laid on the Ground close to the Pulpit, and I assure you it will be accomplished shortly, for it was in the day time. Mr. Nicolfon and feveral Parishioners then present, endeavoured to diswade Archibald from this Discourse; but he still afferted that it would quickly come to pais, and that all his other Predictions of this kind had ever been accomplished. There

There was none in the Parish then Sick, and sew are buried at that little Chappel, nay sometimes not one in a Year is buried there. Yet when Mr. Nicolson return'd to preach in the said Chappel, two or three Weeks after, he found one buried in the very spot, nam'd by Archibald; this Story is wouched by Mr. Nicolson, and several of the Parishioners still living.

Mr. Daniel Nicolfon above mentioned, being a Widower at the age of 44, this Archibald faw in a Vision, a Young Gentlewoman, in a good Dress, frequently standing at Mr. Nicol-fen's right hand, and this he often rold the Parishioners positively; and gave an account of her Complection, Stature, Habit, and that she would in time be Mr. Nacolson's Wife; this being told the Minister by several of em, he defired them to have no regard to what that foohish Dreamer had faid, for faid he, it is twenty to one if ever I marry again. Archibald happened to see Mr. Nicolfon soon after this slighting Expression, however he persisted still in his Opinion, and faid confidently that Mr. Nicolfon would certainly marry, and that the Woman would in all points make up the Character he gave of her, for he faw her as often as he faw Mr. Nicolson. This Story was told me above a Year before the accomplishment of it, and Mr. Nicolfon some two or three Years after Archihald's Prediction, went to a Synod in Boot, where he had the first opportunity of seeing one

Western Islands of Scotland, &c. 331 one Mrs. Morison, and from that Moment fancied her, and afterwards married her; she was no sooner seen in the Isle of Skie, than the Natives who had never seen her before, were satisfied that she did compleatly answer the Character given of her, &c. by Archibald.

ONE who had been accustomed to see the Second Sight, in the Isle of Egg, which lies about three or four Leagues to the South West part of the Isle of Skie, told his Neighbours that he had frequently feen, an Apparition of a Manin a Red Coat lin'd withBlue, and having on his Head a strange fort of Blue Cap, with a very high Cock on the fore part of it, and that the Man who there appeared, was killing a comely Maid, in the Village where the Seer dwelt; and therefore declar'd that a Manin fuch a dress would certainly debauch or marryfuch a Young Woman; this unusual Vision did much expose the Seer, for all the Inhabitants treated him as a Fool, tho' he had on several other occasions forecold things that afterwards were accomplished. this they thought one of the most unlikeliest things to be accomplished, that could have entred into any Mans Head; this Story was then discours'd of in the Isle of Skre, and all that heard at laugh'd at it, it being a rarity to fee any Forreigner in Egg, and the Young Woman had no Thoughts of going any where else; this Story was told me at Edinburgh, by Normand Mac Leod of Graban, in September 1688, he he being just then come from the Isle of Skie; and there were present the Laird of Mac Leod, and Mr. Alexander Mac Leod Advocate, and others.

ABOUT a Year and a half after the late Revolution, Major Ferguson, now Colonel of one of her Majelties Regiments of Foot, was then sent by the Government with fix hundred Men, and some Friggots to reduce the Islanders that had appeared for K. J. and perhaps the fmall life of Egg, had never been regarded tho some of the Inhabitants had been at the Battle of Kelicranky, but by a meer Accident, which determin'd Major Ferguson to go to the Isle of Egg, which was this. A Boats Crew of the Isle of Egg, happen'd to be in the Isle of Skie, and kill'd one of Major Fergusons Soldiers there; upon Notice of which, the Major directed his Course to the Isle of Egg, where he was sufficiently reveng'd of the Natives; and at the same time, the Maid above mentioned being very handsome, was then forcibly carried on Board one of the Vessels. by some of the Soldiers where she was kept above twenty four Hours, and ravish'd, and bruitishly rob'd at the same time of her fine Head of Hair; the is since married in the Isle, and in Good Repuration; her Misfortune being pitied and not rekon'd her Crime.

Sr. Normand Mack Lead, who has his residence in the ssee of Bernera, which lyes between the ssle of N. Uist and Harries, went to the

Western Islands of Scotland, &c. 333 the Isle of Skie about Business, without appointing any time for his return; his Servants in his absence, being all together in the large Hall at Night, one of them who had been accustomed to see the Second Sight, told the rest they must remove, for they would have abundance of other Company in the Hall that Night. One of his Fellow Servants answer'd that there was very little appearance of that, and if he had seen any Vision of Company, it was not like to be accomplished this Night: But the Seer insisted upon it that it was: they continued to argue the improbability of it, be-cause of the darkness of the Night, and the danger of coming through the Rocks that lie round the Isse; but within an hour after, one of Sir Normands Men came to the House, bidding them provide Lights, &c. for his Master had newly Landed, and thus the Prediction was immediately accomplished.

Sir Normand hearing of it, call'd for the Seer, and examin'd him about it; he answer'd, that he had seen the Spirit call'd Browny in Humane Shape, come several times, and make a shew of carrying an old Woman that sat by the fire to the door, and at last seem'd to carry her out by neck and heels, which made him laugh heartily, and gave occasion to the rest to conclude he was mad to laugh so without any reason. This Instance was told me by Sir Normand himself.

FOUR

FOUR Men from the Isle of Skie and Harries, having gone to Barbadoes, stay'd there for fourteen years; and tho' they had wont to see the Second Sight in their Native Countrey, they never saw it in Barbadoes, but upon their return to England, the first Night after their Landing they saw the Second Sight, as was told me by several of their Acquaintance.

JOHN MORISON who lives in Bernera of Harries, wears the Plant call'd Fuga Demonum sew'd in the neck of his Coat, to prevent his seeing of Visions, and says he never saw any since he first carried that Plant about him. He suffer'd me to seel the Plant in the neck of his Coat, but would by no means let me open the Seam, tho' I offer'd him a Reward to let me do it.

A Spirit by the Countrey People call'd Browny, was frequently feen in all the most Considerable Families in the isses and North of Scotland, in the shape of a tall Man, but within these twenty or thirty years past, he is seen but rarely.

THERE were Spirits also that appear'd in the Shape of Women, Horses, Swine, Cats, and some like siery Balls, which would follow Men in the Fields; but there has been but sew Instances of these for forty years past.

THESE

Digities by Google

THESE Spirits us'd also to form Sounds in the Air, resembling those of a Harp, Pipe, Crowing of a Cock, and of the grinding of Querns; and sometimes they have heard Voices in the Air by Night, singing Irish Songs; the words of which Songs some of my Acquaintance still retain. One of em resembled the Voice of a Woman who had died some time before, and the Song related to her State in the other World. These Accounts I had from Persons of as great Integrity as any are in the World.

A Brief

A Brief Account of the Advantages the Isles afford by Sea and Land, and particularly for a Fishing Trade.

HE North West Isles are of all other most capable of Improvement by Sea and Land; yet by reason of their distance from Trading Towns, and because of their Language which is Irish, the Inhabitants have never had any opportunity to Trade at Home or Abroad, or to acquire Mechanical Arts, and other Sciences, so that they are still left to act by the force of their Natural Genius, and what they could learn by observation. They have not yet arriv'd to a competent knowledge in Agriculture, for which cause many Tracts of rich Ground lie neglected, or at least but meanly improv'd, in proportion to what they might be. This is the more to be regreetd, because the People are as capable to acquire Arts or Sciences as any other in Europe. If two or more Persons skill'd in Agriculture were sent from the Low-lands, to each Parish in the Isles, they would soon enable the Natives to furnish themselves with such plenty of Corn, as would maintain all their Poor and Idle People; many of which, for want of Subfiltence at home, are forc'd to feek their Livelihood in Foreign Countries, to the great loss as well as dishonout western Islands of Scotland, &c. 337 nour of the Nation. This would enable them also to Furnish the opposite barren Parts of the Continent with Bread; and so much the more that in plentiful years they afford them good quantities of Corn in this Infant State of their Agriculture. They have many large parcels of Ground never yet Manur'd, which if Cultivated, would maintain double the number of the present Inhabitants, and increase and preserve their Cattle; many of which for want of Hay or Straw, die in the Winter, and Spring; so that I have known particular Persons lose above one hundred Cows at a time, meerly by want of Fodder.

THIS is so much the more inexcusable, because the ground in the Western Isles is naturally richer in several respects than in many other parts of the Continent, as appears from several Instances, particularly in Skie, and the opposite Western Isles, in which there are many Valleys, &c. capable of good improvement, and of which divers Experiments have been already made; and besides most of those Places have the convenience of Fresh-Water Lakes and Rivers, as well as of the Sea near at hand, to furnish the Inhabitants with Fish of many sorts, and Alga Marina for Manuring the Ground.

IN many Places the Soil is proper for Wheat, and that their Grass is good, is evident from the great product of their Cattle; so that if

the Natives were taught and encouraged to take pains to improve their Corn and Hay, to Plant, Inclose and Manure their Ground, drain Lakes, Sow Wheat and Pease, and Plant Orchards, and Kitchin-Gardens, &c. they might have as great plenty of all things for the sustenance of Mankind, as any other People in Europe.

I have known a hundred Families of four or five Persons apiece at least maintain'd there upon little Farms, for which they paid not above five shillings Sterl. one Sheep, and some Pecks of Corn per Ann. each; which is enough to shew that by a better Improvement that Country would maintain many more Inhabitants than live now in the Isles.

IF any Man be dispos'd to live a solitary retir'd Life, and so withdraw from the noise of the World, he may have a Place of retreat there in a small Island, or in the corner of a large one, where he may enjoy himself, and live at a very cheap rate.

IF any Family reduc'd to low Circumstances, had a mind to retire to any of these Isles, there is no part of the known World where they may have the products of Sea and Land cheaper, live more securely, or among a more tractable and mild People. And that the Countrey in general

Western Islands of Scotland, &c. 339 general is Healthful, appears from the good state of health enjoy d by the Inhabitants.

I shall not offer to assert that there are Mines of Gold or Silver in the Western Isles, from any resemblance they may bear to other Parts that afford Mines, but the Natives affirm that Gold Dust has been found at Griminis on the Western Coast of the Isle of North Uist, and at Copveaul in Harries; in which, as well as in other parts of the Isles, the Teeth of the Sheep which feed there, are died yellow.

THERE is a good Lead Mine, having a mixture of Silver in it, on the West end of the Isle of Isla, near Port Escock; and Buchanan and others say, that the Isle Lismore affords Lead, and Stait, and Strath, on the South West of Skie, are in Stone, Ground, Grass, &c. exactly the same with that part of Isla, where there's a Lead Mine. And if search were made in the Isles and Hills of the opposite Main, it is not improbable that some good Mines might be discover'd in some of them.

I was told by a Gentleman of Lochaber, that an English Man had found some Gold Dust in a Mountain near the River Lochy, but could never find out the Place again after his return from England. That there have been Gold Mines in Scotland, is clear, from the Manuscripts

nuscripts mention'd by Dr. Nicholson, now Bishop of Carlifle, in his late Scots Hist. Library.

THE Situation of these Isles for promoting Trade in general, appears advantageous enough, but more particularly for a Trade with Denmark, Sweden, Hamburg, Holland, Britain, and Ireland. France and Spain seem remote, yet they don't exceed a Weeks Sailing, with a favourable Wind.

THE General Opinion of the advantage that might be reap'd from the Improvement of the Fish Trade in those Isles, prevail'd among considering People in sormer times to attempt it.

THE first that I know of, was by King Charles the First, in Conjunction with a Company of Merchants, but it miscarried, because of the Civil Wars, which unhappily broke out at that time.

THE next Attempt was by King Charles the Second, who also join'd with some Merchants, and this succeeded well for a time. I am assured by such as saw the Fish catch'd by that Company, that they were reputed the best in Europe of their kind, and accordingly, gave a greater Price; but this Design was ruin'd thus. The King having occasion for Money, was advis'd to withdraw that which

Western Islands of **Scotland**, &c. 341 which was imploy'd in the Fishery; at which the Merchants being displeas'd, and disagreeing likewise among themselves, they also withdrew their Money, and the Attempt has never been renew'd since that time.

THE Setling a Fishery in those Parts, would prove of great advantage to the Government, and be an effectual Means to advance the Revenue, by the Customs on Export, and Import, &c.

IT would also be a Nursery of Stout and Able Seamen in a very short time, to serve the Government on all Occasions. The Inhabitants of the Isles and opposite Main Land being very prolifick already, the Country would beyond all peradventure become very Populous in a little time, if a Fishery were once setled among them. The Inhabitants are not contemptible for their Number at present, nor are they to learn the use of the Oar, for all of them are generally very dextrous at it; so that those Places need not to be Planted with a New Colony, but only Furnish'd with proper Materials, and a few Expert Hands to join with the Natives, to set on foot and advance a Fishery.

THE People Inhabiting the Western Isles of Scotland, may be about forty thousand, and many of em want Imployment; this is a great

encouragement both for seting up other Manufactories, and the sishing Trade among 'em; besides a greater Number of People may be expected, from the opposite Continent of the High-Lands, and North; which from a late Computation, by one who had an estimate of their Number, from several Ministers in the Country, are reckon'd to exceed the Number of Islanders, above Ten to One; and tis too well known, that many of 'em also want Imployment. The Objection, that they speak only Irish is nothing, many of 'em understand English; in all the Considerable Islands, which are sufficient to direct the rest in catching and cureing Fish and in a little time the Youth would learn English.

THE Commodiousness and safety, of the numerous Bays and Harbours in those Isles, seem as if Nature had design'd them for promoting Trade, they are likewise furnished with plenty of Good Water, and Stones for building. The opposite Main Land affords Wood of divers forts, for that use. They have abundance of Turss and Peat for Fewel, and of this latter, there is such plenty in many parts, as might surnish Salt Pans with Fire all the Year round. The Sea forces its passage in several small Channels, through the Land, so as it renders the design, more easie and practicable.

THE Coast of each Isle affords many thoufand load of Sea-ware, which if preserved, might he Western Islands of Scotland, &c. 343 be successfully us'd for making Glass, and likewise Kelp for Soap.

THE generality of the Bays afford all forts of Shel-fish in great plenty, as Oysters, Clams, Muscles, Lobsters, Cockles, &c. which might be pickled, and exported in great Quantities. There are great and small Whales of divers kinds to be had round the Isles, and on the Shore of the opposite Continent; and are frequently seen in Narrow Bays, where they may be easily caught. The great Number of Rivers, both in the Isles and opposite Main Land, afford abundance of Salmon, which if rightly managed, might turn to a Good Account.

THE Isles afford likewise Great Quantities of Black Cattle, which might serve the Traders, both for Consumption, and Export.

STRATH in Skie, abounds with Good Marble, which may be had at an easie rate, and near the Sea.

THERE is good Wooll, in most of the Isles, and very cheap; some are at the charge of carrying it on Horse-back, about seventy or eighty Miles, to the Shires of Murray, and Aberdeen.

THERE are several of the Isles, that afford a great deal of very fine Clay; which it improved, Y 4 might

might turn to a Good Account, for making Earthen Ware of all forts.

THE most Centrical and Convenient Places for keeping Magazins of Cask, Salt, &c. are those mentioned in the respective Isles; as one at Loch Maddy Isles, in the Isle of North Usst. A second the Isle Hermetra, on the Coast of the Isle Harries; a third in Island Glass, on the Coast of Harries; and a fourth in Stormvay, in the Isle of Lewis.

BUT for setling a Magazin or Colony for Trade in general, and Fishing in particular, the Isle of Skie is absolutely the most Centrical, both with regard to the Isles and opposite Main Land; and the most proper Places in this Isle, are Island Isla, in Lochfallart, and Lochuge, both on the West side of Skie; Loch-Portrie, and Scowfar on the East side; and Island Dierman on the South side; these Places abound with all sorts of Fish, that are caught in those Seas; and they are proper Places for a considerable Number of Men to dwell in, and Convenient for setling Magazins in 'em.

THERE are many Bays and Harbours that are Convenient for building Towns in feveral of the other lifes if Trade were fettled among them; and Cod and Ling, as well as Fish of lesser size, are to be had generally, on the Coast

Coast of the Lesser as well as of the larger lises. I am not ignorant that Foreigners, sailing through the Western Isles, have been tempted from the Sight of so many Wild Hills, that seem to be covered all over with Heath, and fac'd with High Rocks, to imagine that the Inhabitants, as well as the Places of their residence are barbarous, and to this Opinion, their Habit, as well as their Language have contributed. The like is supposed by many that live in the South of Scotland, who know no more of the Western Isles, than the Natives of Italy; but the Lion is not so fierce as he is painted, neither are the People describ'd here, so barbarous as the World Imagines: It is not the Habit that makes a Monk, nor doth the Garb in Fashion qualifie him that wears it to be vertuous; the Inhabitants have Humanity, and use Strangers Hospitalts have Humanity, and use Strangers Hospitally, and Charitally. I could bring several Instances of Barbarity and Thest committed by Stranger Seamen in the Isles, but there is not one Instance of any injury offered by the Islanders, to any Seamen or Strangers. I had a particular Account of Seamen, who not many Years ago, stole Cattle and Sheep in several of the Islanders and Sheep in several of the Islanders. and Sheep in several of the Isles; and when they were found on board their Vessels, the Inhabitants were satisfied to take their Value in Money or Goods, without any further Resentment; tho' many Seamen whose Lives were preserv'd by the Natives, have made 'em very ungrateful returns. For the Humanity and Hospitable

Hospitable Temper of the Islanders to Sailers: I shall only give two Instances. Captain Jackson of White Haven, about sixteen Years ago, was oblig'd to leave his Ship, being Leacky in the Bay, within Island Glass, alias Scalpa, in the Isle of Harries, with two Men only to take care of her, tho' loaded with Goods; the Ship was not within three Miles of a House, and separated from the dwelling Places by Mountains, yet when the Captain return'd about ten or twelve Months after; he sound his Men and the Vessel safe.

CAPTAIN LOTCH lost the Dromedary of London of fix hundred Tun burden, with all her Rich Cargo from the Indies, of which he might have faved a great deal, had he embrae'd the assistance which the Natives offered him to unlade her; but the Captain's shiness, and feat of being thought rude, hindred a Gentleman on the Place to employ about seventy Hands, which he had ready, to unlade her, and so the Cargo was lost. The Captain and his Men were kindly entertain'd there, by Sir. Normand Mac Leod, and tho' among other ValuableGoods, they had fix Boxes of Gold dust, there was not the least thing taken from them, by the Inhabitants. There are some Pedlars, from the Shire of Murray, and other parts, who of late have fixed their residence in the Ise of Skie, and travel through the remotest Isles without any Molestation; tho? some of those Pedlars speak no Irifh.

Western Islands of Scotland, &c. 347

Irish. Several Barks come yearly from Orkney to the Western Isles, to Fish for Cod and Ling; and many from Enstruther in the Shire of Fise, came formerly to Barray and other Isles to fish, before the Battle of Kilfyth, where most of rhem being cut off, that Trade was afterwards neglected.

THE Magazines and fishing Boats, lest by Foreigners in the Isles above mentioned, were reckon'd fecure enough, when one of the Natives only was left in charge with them till the next Season, and so they might be still. So that if a Company of Strangers from any part should settle to Fish or Trade in these Isles, there is no Place of greater security in any part of Europe, for the Proprietors are always ready to affift and support all Strangers within their respective Jurisdictions. A few Dutch Families settled in Storway, in the Isle of Lewis, after K. Charles the Second's Restoration, but some cunning Merchants, found means by the Secretaries to prevail with the King to fend them away, tho' they brought the Islanders a great deal of Money for the Products of their Sea and Land Fowl; and taught them something of Art of Fishing. Had they stayed the, Islanders must certainly have made considerable Progress in Trade by this time, for the small Idea of Fishing they had from the Dutch, has had so much effect, as to make the People of the little Village of Stornway, to excell all those of the Neighbouring Neighbouring Isles and Continent in the Fishing Trade, ever since that time.

FOR the better Government of those Isles in case of setting up a Fishing Trade there, it may perhaps be found necessary to erect the Isle of Skie, Lewis, Harries, South and North Wist, &c. into a Sherivalty, and to build a Royal Borough in Skie as the Center, because of the Peoples great distance in remote Isles, from the head Borough of the Shire of Inverness. This would seem much more necessary here than those of Boot, and Arran, that lie much nearer to Dunbarton; tho' they be necessary enough in themselves.

IT may likewise deserve the Consideration of the Government, Whether they should not make the Isle of Skie a Free Port, because of the great Incouragement such Immunities give to Trade, which always issues in the welfare of the Publick, and adds Strength and Reputation to the Government. Since these Isles are capable of the Improvements above-mention'd, it is a great loss to the Nation they should be thus neglected. This is the general Opinion of Foreigners, as well as of our own Countrymen, who know them; but I leave the further Enquiry to such as shall be disposed to attempt a Trade there, with the Concurrence of the Government. Scotland has Men and Money enough to set up a Fishery,

Western Islands of Scotland, &c. 349 so that there seems to be nothing wanting towards it but the Encouragement of those in Power, to excite the Inclination and Industry of the People.

IF the Dutch in their Publick Edicts call their Fishery a Golden Mine, and at the same time affirm that it yields them more prosit than the Indies do to Spain, we have very great reason to begin to Work upon those Rich Mines, not only in the Isles, but on all our Coast in general. We have multitudes of Hands to be employ'd at a very easie rate; we have a healthful Climate, and our Fish, especially the Herring, come to our Coast in April, or May, and into the Bays in prodigious Shoals in July, or August. I have seen Complaints from Loch Essort in Skie, that all the Ships there were loaded, and that the Barrel of Herring might be had there for Four Pence, but there were no Buyers.

I have known the Herring Fishing to continue in some Bays from September, 'till the end of January; and wherever they are, all other Fish follow 'em, and Whales and Seals in particular; for the larger Fish of all kinds feed upon Herring.

A Brief Description of the Isles of Orkney, and Schetland, &c.

THE Isles of Orkney lie to the North of Scotland, having the Main Caledonian Ocean, which contains the Hebrides on the West, and the German Ocean on the East; and the Sea towards the North, separates'em from the Isles of Schetland. Pictland Firth on the South, which is twelve Miles broad, reaches to Dungishie-Head, the most Northern Point of the Main Land of Scotland.

AUTHORS differ as to the Origine of the Name, the English call it Orkney, from Erick, one of the first Pictish Princes that posses'd 'em; and it is observed, that Pill or Pight in the Teutonik Language signisses a Fighter. Irish call'em Arkive, from the first Planter, and Latine Authors call 'em Oreades. lie in the Northern Temperate Zone, and 13th Climate; the Longitude is between 22 Degrees, and eleven Minutes, and Latitude 59 Degrees, 2 Minutes; the Compass varies here eight Degrees; the longest Day is about 18 The Air is temperately cold, and the Night fo clear, that in the middle of June one may see to read all Night long; and the Days in Winter are by consequence very short. Their Winters

Western Islands of Scotland, &c. 351 Winters here, are commonly more subject to Rain, than Snow, for the Sea-air dissolves the latter; the Winds are often very boistrous in this Country.

THE Sea Ebbs and Flows here as in other parts, except in a few Sounds, and about some Promontories, which alter the Course of the Tides, and make 'em very impetuous.

THE Isles of Orkney are reckon'd twenty six in Number; the lesser Isles called Holms, are not Inhabited, but fit for Pasturage; most of their Names end in a or ey, that in the Teutonick Language signifies Water, with which they are all surrounded.

THE Main Land called by the Ancients Pomona, is about twenty four Miles long, and in the middle of it on the South fide lies the only Town in Orkney, called Kirkwall, which is about three quarters of a Mile in length, the Danes called it Cracoviaca. There has been two fine Edifices in it, one of 'em called the King's Palace, which is suppos'd to have been built by one of the Bishops of Orkney, because in the Wall there's a Bishop's Mitre, and Arms engraven, and the Bishops anciently had their Residence in it.

THE Palace now called the Bishops, was Built by Patrick Stewart, Earl of Orkney, Anno 1606.

THERE is a Stately Church in this Town, having a Steeple erected on four large Pillars in the middle of it; there are fourteen Pillars on each fide the Church, it is called by the Name of St. Magnus his Church, being Founded as the Inhabitants fay, by Magnus King of Norway, whom they believe to be Interr'd there. The Seat of Justice for these Isles is kept here; the Steward, Sheriff, and Commissary, do each of them keep their respective Courts in this Place. It hath a Publick School for Teaching of Grammar Learning, Endow'd with a Competent Sallary.

THIS Town was Erected into a Royal Borough when the Danes possess it, and their Charter was afterwards confirmed to them by King James the Third, Anno 1486. They have from that Charter a Power to hold Borough-Courts, to Imprison, to Arrest, to make By-Laws, to choose their own Magistrates yearly, to have two Weekly Markets, and they have also Power of Life and Death, and of sending Commissioners to Parliament, and all other Privileges Granted to Royal Boroughs. This Charter was Dated at Edinburgh the last Day of March, 1486, and it was since Ratissed by King James the Fifth, and King Charles the Second. The Town is Govern'd by a Provost, sour Bayliss, and a Common-Council.

ON the West end of the Main is the King's Palace, formerly mention'd, Built by Robert Stewart Earl of Orkney, about the year 1574. Several Rooms in it have been curioufly Painted with Scripture Stories, as the Flood of Noah, Christ's Riding to Jerusalem, &c. and each Figure has the Scripture by it, that it referrs to. Above the Arms within there is this lofty Inscription, Sic fuit, est, & erit. This Island is Fruitful in Corn and Grass, and has several good Harbours; one of 'em at Kirk-Wall, a second at the Bay of Kairston Village, near the West end of the Isle, well secur'd against Wind and Weather; the third is at Deer-Sound, and reckon'd a very good Harbour; the fourth is at Grahamshall, towards the East side of the Isle, but in Sailing to it from the East side, Seamen would do well to Sail betwixt Lambholm, and the Main Land, and not between Lambholm and Burray, which is shallow.

ON the East of the Main Land lies the small Isle Copinsha, Fruitful in Corn and Grass; it is distinguish'd by Sea-faring-Men for its Conspicuousness at a great distance. To the North end of it lies the Holm, called the Horse of Copinsha. Over against Kerston Bay, lie the Isles of Hoy and Waes, which make but one Isle, about twelve Miles in length, and Moun-7 tainous: tainous. In this Island is the Hill of Hoy, which is reckoned the highest in Orkney.

THE Isle of South Konalshaw lies to the East of Waes, it is five Miles in length, and Fruitful in Corn; Burray in the fouth end, is the Ferry to Duncansbay in Kathness. A little further to the fouth lies Swinna Isle, Remarkable only for a part of Pightland-Firth lying to the West of it, called the Wells of Swinna. They are two Whirl-pools in the Sea, which run about with such violence, that any Vessel or Boat coming within their reach, go always round until they sink. These Wells are dangerous only when there is a dead Calm, for if a Boat be under fail with any Wind, it is easie to go over them. If any Boat be forced into these Wells by the violence of the Tide, the Boat-Men cast a Barrel or an Oar into the Wells. and while it is swallowing it up, the Sea continues calm, and gives the Boat an opportunity to pals over.

TO the North of the Main lies the Isle of Shapinsha, five Miles in length, and has a Harbour at Elwick on the South. Further to the North lie the Isles of Stronsa, five Miles in length, and Eda which is four Miles; Ronsa lies to the North West, and is six Miles long. The Isle Sanda lies North, twelve Miles in length, and is reck on'd the most Fruitful and Beautiful of all the Occades.

THE

THE Isles of Orkney in general are Fruitful in Corn and Cattle, and abound with store of Rabbets.

THE Sheep are very Fruitful here, many of them have two, some three, and others four Lambs at a time; they often die with a Disease called the Sheep-dead, which is occasion'd by little Animals about half an inch long, that are engendred in their Liver.

THE Horses are of a very small size, but hardy, and expos'd to the rigour of the Season, during the Winter, and Spring; the Grass being then scarce, they are sed with Sea-ware.

THE fields every where abound with variety of Plants and Roots, and the latter are generally very large, the Common people dress their Leather with the Roots of Tormentil instead of bark.

THE main Land is Furnished with abundance of good Marl, which is us'd successfully by the Husband Man for Mannuring the Ground.

THE Inhabitants say there are Mines of Silver, Tinn and Lead in the Main Land, South Ronalsha, Stronsa, Sanda and Hoy. Some Veins of Marble are to be seen at Buckquoy,

and Swinna. There are no Trees in these Isles. except in Gardens, and those bear no Fruit. Their common Fuel is Peat and Turff, of which there is such Plenty, as to furnish a Salt-pan with Fuel. A South-East and North-West Moon cause High Water here.

THE Fin-Land Fisher-men have been frequently seen on the Coast of this Isle, particularly in the year 1682. The People on the Coast, saw one of them in his little Boat, and endeayour'd to take him, but could not come at him, he retir'd so speedily. They say the Fish retire from the Coast, when they see these Men come to it.

ONE of their Boats sent from Orkney to Edinburgh, is to be seen in the Physicians-Hall, with the Oar he makes use of, and the Darr with which he kills his Fish.

THERE is no Venomous Creature in this Country. The Inhabitants say there is a Snail there, which has a bright Stone growing in it. There is abundance of Shel-Fish here, as Oysters, Muscles, Crabs, Cockles, &c. of this latter they make much fine Lime; the Rocks. on the shoar afford plenty of Sea ware, as Alga-Marina, &c.

THE Sea abounds with variety of Fish, but especially Herring, which are much neglected, fince

Western Islands of **Scotland**, &c. 357 since the Battle of Kilsyth, at which time, the Fishermen from Fife, were almost all killed there.

THERE are many small Whales round the Coast of this Isle, and the Amphibia here are Otters and Seals.

THE chief Product of Orkney that is yearly exported from thence; is Corn, Fish, Hides, Tallow, Butter, Skins of Seals, Otter skins, Lamb skins, Rabbet-skins, Stuffs, white Salt, Wooll, Pens, Down, Feathers, Hams, &c.

- SOME Sperma Ceti, and Ambergreese, as also the Os Serpier are found on the shoar of several of those Isles.

THIS Country affords plenty of Sca and Land Fowl, as Geese, Duks, Solan Geese, Swans, Lyres, and Eagles, which are so strong as to carry away Children. There is also the Cleck Goose, the shels in which this Fowl is said to be produced, are found in several Isles sticking to Trees by the Bill; of this kind I have seen many, the Fowl was covered by a Shell, and the Head stuck to the Tree by the Bill, but never saw any of them with life in them upon the Tree, but the Natives rold me that they had observed em to move with the heat of the Sun.

THE Piets are believ'd to have been the first Inhabitants of these Isles, and there are Houses of a round form in several parts of the Country, called by the name of Pids Houses; and for the same Reason the Firth is called Pightland, or Pentland Firth. Our Historians call these Isles the ancient Kingdom of the Picts; Buchannan gives an account of one Belus King of Orkney, who being defeated by King Ewen the second of Scotland, became desperate, and killed himself. The Effigies of this Belus is engraven on a stone in the Church of Birla on the Main Land. Boethius makes mention of another of their Kings called Bannus, and by others Gethus, who being Vanquished by Claudius Cefar, was by him afterwards, together with his Wife and Family carried Captive to Rome, and there led in Triumph, Anno Christi, 43.

of Kenneth the second of Scotland, who subdued the Country, and annexed it to his Crown; from that time Orkney was peaceably possessed by the Scots, until about the year 1099, that Donald Bane intending to secure the Kingdom to himself, promised both those and the Western Isles to Magnus King of Norway, upon condition that he should support him with a competent Force, which he perform'd; and by this means became Master of these Isles, until the

Western Islands of Scotland, &c. 359 the Reign of Alexander the Third, who by his Valour expelled the Danes. The Kings of Denmark did afterwards resign their Title for a sum of Money, and this Resignation was Ratisfied under the Great Seal of Denmark, at the Marriage of King James the sixth of Scotland, with Anne Princess of Denmark.

ORKNET has been from time to time a Titic of Honour to several Persons of great Quality; Henry and William Sinclairs were called Princes of Orkney, and Rothuel Hepburn was made Duke of Orkney; Lord George Hamilton (Brother to the present Duke of Hamilton) was by the late King William Created Earl of Orkney. The Earl of Mortun had a Mortgage of Orkney and Zetland from King Charles the First, which was since reduc'd by a Decree of the Lords of Session, obtain'd at the instance of the King's Advocate against the Earl; and this Decret was afterward ratified by Act of Parliament, and the Earldom of Orkney, and Lord-ship of Zetland, have since that time been erected into a Stewartiy. The reason on which the Decret was founded, is faid to have been, that the Earls Deputy leiz'd upon some Chests of Gold found in the Rich Amsterdam Ship called the Carlmelan, that was lost in Zetland. 1664.

in Orkney, but the Queen is the Principal Pro-

prietor, and one half of the whole belonging to the Crown, besides the late accession of the Bishop's Rents, which is about 9000 Merks Scots per Ann. There is a yearly Roup of Orkney Rents, and he that offers highest is preferr'd to be the King's Steward for the time, and as such, he is Principal Judge of the Country. But this precarious Lease is a Publick loss to the Inhabitants, especially the Poorer fort, who complain that they would be allowed to pay Money for their Corn and Meal in time of scarcity, but that the Stewards carried it off to other Parts, and neglected the interest of the Country. The interest of the Crown suffers likewise by this means, for much of the Crown Lands lie waste, whereas if there were a constant Steward, it might be much better managed, both for the Crown, and the Inhabitants.

THERE's a Tenure of Land in Orkney, differing from any other in the Kingdom, and this they call Udal Right, from Ulaus King of Norway, who after taking possession of those Islands, gave a Right to the Inhabitants, on condition of paying the third to himself; and this Right the Inhabitants had successively, without any Charter. All the Lands of Orkney are Udal Lands, Kings Lands, or Fewed Lands.

THEY

THEY differ in their Measures from other parts of Scotland, for they do not use the Peck or Firlet, but weigh their Corns in Pismores, or Pundlers; the least quantity they call a Merk, which is eighteen Ounces, and twenty four make a Leispound, or Setten, which is the same with the Danes, that a stone weight is with us.

## The Ancient State of the Church of Orkney.

"HE Churches of Orkney and Zetland Isles were formerly under the Government of a Bishop; the Cathedral Church was St. Magnus in Kirkwall; there are thirty one Churches, and about one hundred Chappels in the Countrey, and the whole make up about seventeen Parishes.

THIS Diocess had several great Dignitics and Privileges for a long time, but by the Succession and Change of many Masters they were lessened. Dr. Robert Keid their Bishop, made an crection of seven Dignities, viz. a Provost, to whom under the Bishop the government of the Canons, &c. did belong; he had alotted to him the Prebendary of Hely Trinity, and the Vicarage

Vicarage of South Kanalshaw. 2. An Arch-Deacon. 3. A Precentor, who had the Pre-bendary of Ophir, and Vicaridge of Stennis. 4. A Chancellor, who was to be learn'd in both Laws, to him was given the Prebendary of St. Mary in Sanda, and the Vicaridge of Sanda. 5. A Treasurer who was to keep the Treasure of the Church, and Sacred Vestments. &c. he was Rector of St. Nicholas in Stronfa. 6. A Sub-Dean, who was Parson of Hoy, &c. 7. A Sub-Chanter, who was bound to play on the Organs each Lords Day, and Festivals; he was Prebendary of St. Colme. He erected seven other Canonries, and Prebends, to which Dignities he affign'd, besides their Churches, the Rents of the Parsonages of St. Colme in Waes, and Holy-Cross in Westra, as also the Vicaridges of the Parish Churches of Sand, Wick, and Stromness. He erected befides these, thirteen Chaplains, every one of which was to have 24 Meils of Corn, and ten Merks of Money for their yearly Sallary, befides their daily distributions, which were to be rais'd from the Rents of the Vicaridge of the Cathedral Church, and from the Foundation of Thomas Bishop of Orkney, and the 12 Pounds mortified by K. James the 3d, and James the 4th of Scotland. To these he added a Sacrist, and six Boys to bear Tapers. The Charter of this Erection is dated at Kirkwall, Octob. 28, Anno 1544.

THIS was the State of the Church under Popery. Some time after the Reformation, Bishop Law being made Bishop of Orkney, and the Earldom united to the Crown (by the Forfeiture and Death of Patrick Stewart Earl of Orkney) he with the consent of his Chapter, made a Contract with King James the Sixth, in which they resign all their Ecclesiastical Lands to the Crown, and the King gives back to the Bishop several Lands in Orkney, as in Hom, Orphir, &c. and his Majesty gave also the Comissariot of Orkney to the Bishop and his Successors, and then a competent number of Persons for a Chapter were agreed on. This Contract was made Anno, 1614.

The

The Ancient Monuments and Curiosities in these Islands are as follow.

N the Isle of Hoy, there's the Dwarsie-stone between two Hills, it is about thirty four Foot long, and above 16 Foot broad; it is made hollow by Humane Industry; it has a small square Entry looking to the East, about two Foot high, and has a Stone proportionable at two Foot distance before the Entry; at one of the ends within this Stone there is cut out a Bed and Pillow, capable of two Persons to lie in: At the other opposite end, there is a void space cut out resembling a Bed, and above both these there is a large Hole, which is supposed was a vent for Smoak. The Common Tradition is, that a Giant and his Wise made this their Place of retreat.

ABOUT a Mile to the West of the Main Land at Skeal-house, there is in the top of high Rocks, many Stones disposed like a Street, about a quarter of a Mile in length, and between twenty and thirty Foot broad. They differ in Figure and Magnitude, are of a Red Colour, some resemble a Heart, some a Crown, Leg, Shoe, Last, Weavers Sickle, &c.

ON the West and East side of Loch Stennis, on the Main Land, there is two Circles of large Stone erected in a Ditch; the larger which is round on the N.West side, is a hundred Paces Diameter, and some of the Stones are twenty foot high, and above sour in breadth; they are not all of a height, nor placed at an equal distance, and many of them are fallen down on the Ground.

ABOUT a little distance further, there is a Semicircle of larger Stones than those mentioned above. There are two Green Mounts, at the East and West side of the Circle, which are supposed to be Artificial, and Fibuler of Silver were found in 'em some time ago, which one side resembled a Horse-shoe, more than any thing else.

THE Hills and Circles are believed to have been Places design'd to offer Sacrifice in time of Pagan Idolatry; and for this reason the People called them the Ancient Temples of the Gods, as we may find by Boetheus in the Life of Manisus. Several of the Inhabitants have a Tradition, that the Sun was worshiped in the larger, and the Moon in the lesser Circle.

IN the Chappel of Clet, in the Isle of Sanda, there is a Grave of nineteen Foot in length; some who had the Curiosity to open it, sound only

only a piece of a Man's Back-bone in it, bigger than that of a Horse. The Minister of the Place, had the Curiosity to keep the Bone by him for some time. The Inhabitants have a Tradition of a Giant there, whose Statue was such, that he could reach his Hand as high as the top of the Chappel. There have been large Bones found lately in Westra, and one of the Natives who died not long ago, was for his Stature distinguished by the Title of the Micle or Great Man of Waes.

THERE are erected Stones in divers parts, both of the Main, and lesser listes, which are believed to have been erected as Monuments of such as distinguished themselves in Battle.

THERE have been several strange Instances of the effects of Thunder here, as that of burning Kirkwel Steeple by Lightning, in the the Year 1670. Atstromness a Gentleman, had twelve Kine, six of which in a Stall, was suddenly killed by Thunder, and the other six left alive; and it was remarkable that the Thunder did not kill them all as they stood, but kill'd one, and mist'd another; this happen'd in 1680, and is attested by the Minister, and others of the Parish.

THERE is a ruinous Chappel in Papa Westra, called St. Tredwels, at the Door, of which there's a heap of Stones; which was the superstition of the Common People, who have such

Western Islands of **Ecotiand**, &:. 367 a Veneration for this Chappel above any other, that they never fail at their coming to it, to throw a Stone as an offering before the Door; and this they reckon an indispensible Duty enjoin'd by their Ancestors.

LADT KIRK in South Ronal-feaw, the ruinous, and without a Roof, is so much reverenc'd by the Natives, that they choose rather to repair this Old One, than to build a new Church in a more Convenient Place, and at a Cheaper rate: Such is the Power of Education, that these Men cannot be assured of these superstudes, transmitted to them by their ignorant Ancestors.

WITHIN the Ancient Fabrick of Lady-Church, there is a Stone of four Foot in length, and two in breadth, tapering at both ends; this Stone has engraven on it the print of two Feet, concerning which the Inhabitants have the following Tradition; that St. Magnus wanting a Boat to carry him over Pickland Frith to the opposite Main Land of Cathness, made use of this Stone instead of a Boat, and afterwards carried it to this Church, where it continues ever since. But others have this more reasonable Opinion, that it has been us'd in time of Popery; for Delinquents who were obliged to stand bare foot upon it by way of Pennance. Several of the Vulgar Inhabiting the lesser saints: There is

one day in Harvest on which the Vulgar abstain from Work, because of an Ancient and foolish Tradition, that if they do their Work, the ridges will bleed.

THEY have a Charm for stoping excessive bleeding, either in Man or Beast, whether the Cause be Internal or External; which is perform'd by sending the Name of the Patient to the Charmer, he adds some more Words to it, and after repeating those Words the Cure is perform'd, tho' the Charmer be several Miles distant from the Patient. They have likewise other Charms which they use frequently at a distance, and that also with success.

THE Inhabitants are well proportioned, and feem to be more Sanguine than they are; the Poorer fort live much upon Fish of various kinds, and sometimes without any Bread. The Inhabitants in general are subject to the Scurvy, imputed to the Fish and Salt Meat, which is their daily Food; yet several of the Inhabitants arrive at a great Age; a Woman in Evie brought forth a Child in the 63 Year of her Age.

ONE living in Kerston lately, was one hundred and twelve Years Old, and went to Sea at one hundred and ten. A Gentleman at Stronsa, about four Years ago, had a Son at 110 Years Old. One William Muir in Westra lived 140 Years, and died about eighteen Years ago.

Western Islands of Scotland, &c. 369 ago. The Inhabitants speak the English Tongue, several of the Vulgar speak the Danish or Norse Language; and many among them retain the Ancient Danish Names:

THOSE of Destruction are Hospitable and in Obliging, the Vulgar are generally Civil and Effable. Both of 'em wear the Habit in Fashion in the Low Lands, and some wear a Sealskin for Shoes, which they do not sow, but only tie them about their Feet with Strings, and sometimes Thongs of Leather, they are generally able and stout Seamen.

THE Common People are very Laborious, and undergo great Fatigues, and no small hazard in Fishing. The Isles of Orkney were formerly liable to frequent Incursions by the Norwegians, and those inhabiting the western Isles of Scotland. To prevent which each Village was obliged to surnish a large Boat well Man'd to oppose the Enemy, and upon their landing all the Inhabitants were to appear arm'd, and Beacons set on the top of the highest Hills and Rocks, to give a general warning on the sight of an approaching Enemy.

ABOUT the Year 1634, Dr. Graham being then Bishop of Orkney, a Young Boy called William Garioch, had some Acres of Land, and A a some

some Cattle, &c. lest him by his Father deceas'd, he being Young was kept by his Uncle, who had a great defire to obtain the Lands. &c. belonging to his Nephew, who being kept fhort stole a setten of Barley, which is about twenty eight Pound Weight, from his Uncle; for which he pursued the Youth, who was then eighteen Years of Age, before the Sheriff; the Theft being prov'd, the Young Man received Sentence of Death, but going up the Ladder to be hang'd, he prayed earnestly that God would inflict some visible Judgment on his Uncle, who out of Covetousness had procur'd his Death. The Uncle happen'd after this to be walking in the Church-Yard of Kirkwall, and as he stood upon the Young Man's Grave, the Bishop's Dog run at him all of a sudden, and tore out his Throat, and so he became a Monument of God's Wrath against such Covetous Wretches: This Account was given to Mr. Wallace Minister there, by several that were Witnesses of the Fact.

ZETLAND.

## ZETLAND:

ETLAND lies North East from Orkney, between the 60 and 61 Degree of Latitude: the distance between the Head of Sanda, which is the most Northerly part of Orkney, and Swinburgh-head the most Southerly Point of Zetland is commonly reckon'd to be twenty or twenty one Leagues, the Tides running betwixt are always Impetuous, and Swelling as well in a Calm as when a fresh Gale blows, and the greatest Danger is near the fair Isle, which lies nearer to Zetland than Orkney by four Leagues.

THE largest Isle of Zetland, by the Natives called the main Land is fixty Miles in length from South West to the North East, and from fixteen, to one Mile in breadth. Some call these Isles Hethland, others Hoghland, which in the Norse Tongue signifies Highland, Zetland in the same Language signifies Sealand.

THIS Isle is for the most part Mossie and more Cultivated on the shore than in any other part, it is Mountainous and covered with Heath, which renders it fitter for Pasturage than Tillage. The Inhabitants depend upon A 2 2 the

the Orkney Isles for their Corn. The Ground is generally so Boggy that it makes riding Impracticable, and travelling on Foot not very Pleasant, there being several parts into which People sunk to the Endangering their Lives, of which there have been several late Instances. About the Summer Solflice, they have so much light all Night that they can fee to read by it: The Sunfets between ten and eleven, and rifes between one and two in the Morning, but then the Day is so much the shorter, and the Night longer in the Winter: This together with the Violence of the Tides and Tempestuous Seas, deprives the Inhabitants of all foreign Correspondence from October till April, and often till May, during which space they are altogether Strangers to the rest of Mankind, of whom they hear not the least News, a remarkable Instance of this happen'd after the late Revolution, they had no account of the Prince of Orange's late landing in England, Coronation, &c. until a Fisherman happen'd to land in these lifes in May following, and he was not believed, but indited for High Treason, for spreading such News.

THE Air of this Isle is cold and piercing, notwithstanding which, many of the Inhabitants arrive at a great Age. Of which there are several remarkable Instances, Buchannon in his Hist. lib. 1. gives an Account of one Laurence who lived

Western Islands of Scotland, &c: 373
lived in his time, some of whose Offspring do still live in the Parish of Waes, this Man after he arrived at one hundred Years of Age Married Wise, went out a Fishing when he was one hundred and forty Years Old, and upon his return, died rather of Old Age, than of any

Distemper.

THE Inhabitants give an Account of one Tairville, who arrived at the Age of one hundred and eighty, and never drank any Malt Drink, distilled Waters, nor Wine. They say that his Son liv'd longer than him, and that his Grandchildren liv'd to a Good Age, and seldom or never drank any stronger Liquors than Milk, Water or Bland.

THE Disease that Afflicts the Inhabitants here most is the Scurvy, which they suppose is occasion'd by their eating too much Salt Fish: There is a Distemper here call'd Bastard Scurvy, which discovers its self, by the falling of the Hair from the Peoples Eyebrows, and the falling in of their Noses, Sc. and as soon as the Symptoms appear, the Persons are remov'd to the Fields where little Houses are built for them on purpose, to prevent Insection. The Principal cause of this Distemper is believed to be want of Bread, and feeding on Fish, alone particularly the Liver, many poor Families are sometimes without Bread, for three, four,

or five Months together. They say likewise that their drinking of Bland which is their Universal Liquor, and preserved for the Winter as part of their Provisions, is another cause of this Distemper. This Drink is made of Buttermilk mix'd with Water, there be many of 'em who never taste Ale or Beer, for their scarcity of Bread is such, that they can spare no Corn for Drink, so that they have no other than Bland, but what they get from Foreign Vessels that resort thither every Summer to Fish.

THE Isles in general afford a great quantity of Scurvy grass, which us'd discretely is found to be a good Remedy against this Disease. The Jaundice is commonly cured by drinking the Powder of Shell-snails among their Drink, in in the space of three or four days. They first dry, then Pulverize the Snails, and it is observable that the' this Dust should be kept all the Year round, and grow into Vermine, that it may be dry'd again, and Pulveriz'd for that use.

THE Isles afford abundance of Sea-fowl, which serve the Inhabitants for part of their Food, during Summer and Harvest, and the Down and Feathers bring 'em Great Gain.

THE several Tribes of Fowl here build and hatch apart, and every Tribe keeps close together, as if it were by consent. Some of the lesser

Western Islands of Scotland, &c. 375 lesser Islands are so crowded with variety of Seafowl, that they darken the Air when the slie in great Numbers, after their coming, which is commonly in February, they sit very close together for some time, till they recover the fatigue of their long slight from their remote Quarters; and after they have hatched their Young, and find they are able to slie, they go away together to some other unknown Place.

THE People Inhabiting the lesser Isles, have abundance of Eggs and Fowl, which contribute to maintain their Families during the Summer.

THE Common People are generally very dextrous in climing the Rocks, in quest of those Eggs and Fowl, but this exercise is attended with very great danger, and sometimes proves fatal to those that venture too far.

THE most remarkable Experiment of this sort, is at the Isle called the Noss of Brassah, and is as sollows. The Noss being about sixteen Fathom distant from the side of the opposite Main. The higher and lower Rocks have two Stakes sasten'd in each of them, and to these there are Ropes tied, upon the Ropes there is an Engine hung which they called a Cradle, and in this a Man makes his Way over from the greater to the lesser Rocks, where he makes a considerable purchase or Fggs and A a 4 Fowl,

Fowl, but his return being by an ascent, makes it the more dangerous, tho' those on the great Rock have a Rope tied to the Cradle, by which they draw it and the Man save over for the most part.

THERE are some Rocks here, computed to be about three hundred Fathom high, and the way of climbing them, is to tie a Rope about a Mans middle, and let him down with a Basket, in which he brings up his Eggs, and Fowl. The Isle of Fonla is the most dangerous and fatal to the Climbers, for many of them perish in the attempt.

THE Crows are very numerous in Schetland, and differ in their colour from those on the main Land, for the head wings and tail of those in Schetland are only black, and their back breast and tail of a grey colour. When black Crows are seen there at any time, the Inhabitants say it is a presage of approaching Famine.

THERE are fine Hawks in these Isles, and particularly those of Fair Isle are reputed among the best that are to be had any where; they are observed to go far for their Prey, and particularly for Moor-Fowl, as far as the Isles of Orkney, which is about sixteen Leagues from them.

THERE

THERE are likewise many Eagles in and about these Isles, which are very destructive to the Sheep and Lambs.

THIS Country produces little Horses, commonly called Shelties, and they are very sprightly, tho' the least of their kind to be seen any where; they are lower in stature than those of Orkney, and it is common for a Man of ordinary strength to list a Sheltie from the ground, yet this little Creature is able to carry double. The Black are esteem'd to be the most hardy, but the Pied ones seldom prove so good; they live many times 'till thirty years of age, and are fit for service all the while. These Horses are never brought into a House, but expos'd to the rigour of the Season all the year round, and when they have no Grass, feed upon Sea-ware, which is only to be had at the Tide of Ebb.

THE Isles of Zetland produce many Sheep, which have two and three Lambs at a time; they would be much more numerous, did not the Eagles destroy them; they are likewise reduc'd to feed on Sea-ware, during the Frost and Snow.

The Leffer Isles of SCHETLAND are as follow.

THE Isle Trondra, which lies opposite to Scalloway Town, on the West 3 Miles long, and two broad.

FURTHER to the North East lies the Isle of Whalsey, about three Miles in length, and as many in breadth, the Rats are very numerous here, and do abundance of mischief by destroying the Corn.

AT some further distance lie the small Isles called Skerries, there is a Church in one of them. These Isles and Rocks prove often Fatal to Seamen, but advantageous to the Inhabitants, by the Wrecks and Goods that the Wind and Tides drive ashoar, which often supplies them with Fuel, of which they are altogether destitute. It was here that the Carmelan of Amsterdam was cast away, as bound for the East-Indies, Ann. 1664. among the Rich Cargo she had several Chests of Coin'd Gold, the whole was valued at 3000000 Guilders, of all the Crew sour only were saved. The Inhabitants of the small Isles, among other advantages they had by this Wreck, had the pleasure

Western Islands of Scotland, &c. 379 pleasure of drinking liberally of the strong drink which was driven ashore in large Casks, for the space of three Weeks.

BETWEEN Brassa Sound, and the opposite Main, lies the Unicorn, a dangerous Rock, visible only at low Water; it is so called, ever since a Vessel of that Name perished upon it, Commanded by William Kirkaldy of Gronge, who was in eager pursuit of the Earl of Bothwell, and very near him when his Ship struck.

ON the East lies the Isle call'd Fisholm; to the North East lies little Rue, and on the West mickle Rue; the latter is eight Miles in length, and two in breadth, and has a good Harbour.

NEAR to Esting lie the Isles of Vemantry, which has several Harbours, Orney, little Papa, Helisha, &c.

TO the North West of the Ness lies St. Ninian's Isle, it has a Chappel and an Altar in it, upon which, some of the Inhabitants retain the ancient superstitious Custom of burning Candle.

PAPA-STOUR is two Miles in length, it excells any Isle of its extent for all the Conveniences of humane Life; it has four good Harbours

bours, one of which looks to the South, another to the West, and two to the North.

of that Name that abound in them, lie near this Isla.

ABOUT fix Leagues West of the Main, lies the Isle Foula, about three Miles in length, it has a Rock remarkable for its heighth, which is seen from Orkney when the Weather is fair, it hath an Harbour on one side.

THE Isle of Brassa lies to the East of Tingwal, it is five miles in length, and two in breadth; some parts of the Coast are arable ground, and there are two Churches in it.

FURTHER to the East lies the small Isle called the Noss of Brassa.

THE Isle of Burray is three Miles long, has good Pasturage, and abundance of Fish on its Coast; it has a large Church and Steeple in it. The Inhabitants say that Mice do not live in this Isle when brought to it; and that the Earth of it being brought to any other part where the Mice are, they will quickly abandon it.

HAVE-

HAVEROT-ISLE, which is a Mile and a half in length, lies to the South East of Burray.

THE Isle of Tell is sixteen Miles long; and from eight to one in breadth; it lies North East from the Main, there are three Churches and several small Chappels in it.

THE Isle of Hakashie is two Miles long, Samphrey Isle one Mile long, Biggai Isle is a Mile and a half in length, all three lie round Round-Tell, and are reputed among the best of the lesser Isles.

THE Isle of Fetlor lies to the North East of Tell, and is five Miles in length, and four in breadth, it hath a Church, and some of the Picts Houses in it.

THE Isle Unst is eight Miles long, and is the pleasantest of the Schetland Isles; it has three Churches, and as many Harbours; it is reckoned the most Northern of all the British Dominions. The Inhabitants of the Isle Vaila say, that no Cat will live in it, and if any Cat be brought to it, they will rather venture to Sea, than stay in the Isle. They say, that a Cat was seen upon the Isle about sifty years ago, but how it came there was unknown. They observed

observ'd about the same time, how the Proprietor was in great Torment, and as they suppose by Witchcrast, of which they say he then died. There is no account of any Cat to have been seen in the Isse ever since that Gentlemans death, except when they were carried to it, for making the above-mentioned Experiment.

THE Inhabitants say, that if a Compass be placed at the House of Udsta, on the West side of the Isle Fetlor, the Needle will be in perpetual disorder, without fixing to any one Pole; and that being tried asterwards in the top of that House, it had the same effect. They add further, that when a Vessel Sails near that House, the Needle of the Compass is disorder'd in the same manner.

THERE is a yellow fort of Mettle lately discover'd in the Hie of Uzia, but the Inhabitants had not found a way to melt it, so that it is not yet turn'd to any account.

The

## The Ancient Court of Justice.

N these Islands was held in a Holm in the Parish of Tingwall, in the middle of the Main Land. This Holm is an Island in the middle of a Fresh water-Lake; it is to this day called the Law Ting, and the Parish in all probability hath its Name from it. The Entrance to this Holm is by some Stones laid in the water, and in the Holm there are four great Stones, upon which fate the Judge, Clerk, and other Officers of the Court. The Inhabitants that had Law Suits, attended at some distance from the Holm on the other side the Lake, and when any of them was called by the Officer, he entred by the stepping Stones, and being dismissed, he return'd the same way. This was the practice of the Danes. The Inhabitants have a Tradition among 'em, that after one had receiv'd Sentence of Death upon the Holm, he obtain'd a Remission, provided he made his escape through the crowd of People on the Lake fide, and touch'd Tingwall Steeple before any could lay hold on him. This Steeple in those days was an Asylum for Malefactors and Debtors to flee into. The Inhabitants of this Isle are all Protestants, they generally speak the English Tongue, and many among them retain the ancient

ancient Danish Language, especially in the more Northern Isles. There are several who speak English, Norse and Dutch, the last of which is acquired by their Converse with the Hollanders, that Fish yearly in those Isles.

THE People are generally reputed discreet, and Charitable to Strangers, and those of the best Rank are fashionable in their Apparel.

ZETLAND is much more populous now, than it was thirty years ago, which is owing to the Trade, and particularly that of their Fishery, so much followed every year by the Hollanders, Hamburgers, and others. The increase of People at Lerwick is considerable; for it had but three or four Families about thirty years ago, and is since increased to about three hundred Families; and it is observable that sew of their Fathers were Natives of Zetland, but came from several Parts of Scotland, and especially from the Northern and Eastern Coasts.

THE Fishery in Zetland is the Foundation both of their Trade and Wealth, and tho' it be of late become less than before, yet the Inhabitants by their industry and application make a greater profit of it than formerly, when they had them nearer the Coast, both of the larger and lesser listes; but now the Grey Fish of the largest

Western Islands of Scotland, &c. 385 est size are not to be had in any quantity without going further into the Ocean, the Fish commonly brought by Strangers here, is Cod and Ling; the Inhabitants themselves make only use of the smaller Fish and Herrings, which abound on the Coast of this Isle in vast Shoals.

THE Fish call'd Tusk abounds on the Coast of Brassa, the time for Fishing is at the end of May. This Fish is as big as a Ling, of a Brown and Yellow Colour, has a broad Tail, it is better fresh than salted. They are commonly sold at sisteen or sixteen Shillings the hundred.

THE Inhabitants observe that the further they go to the Northward, the Fish are of a larger size, and in greater Quantities. They make great store of Oyl, particularly of the large Gray Fish by them called Seths, and the Younger sort Sillucks, they say that the Liver of one Seth affords a Pint of Scots Measure, being about four of English Measure: The way of making the Oyl, is first by boyling the Liver in a Pot half sull of Water, and when it boils the Oyl goes to the top and is skim'd off, and put in Vessels for use. The Fishers observe of late that the Livers of Fish are less in size than they have been formerly.

THE Hamburgers, Bremers, and others, come to this Country about the middle of May, set B b up

up Shops in feveral parts, and fell divers Commodities, as Linnen, Muslin, and such things as are most proper for the Inbabitants, but more especially, Beer, Brandy and Bread, all which they barter for Fish, Stockings, Mutton, Hens, &c. and when the Inhabitants ask Money for their Goods, they receive it immediately.

IN the Month of June, the Hollanders come with their Fishing Busses in great Numbers, upon the Coast for Herring; and when they come into the sound of Brassa, where the Herring are commonly most plentiful and very near the Shoar; they dispose their Nets, &c. in order, but never begin till the twenty sourth of June, for this is the time limited among themselves, which is observed as a Law, that none will venture to Transgress. This Fishing Trade is very Beneficial to the Inhabitants, who have Provisions and Necessaries imported to their Doors; and Imployment for all their People, who by their Fishing, and selling the various Products of the Country, bring in a considerable sum of Money yearly. The Proprietors of the Ground are considerable Gainers also by letting their Houses, which serve as Shops to the Seamen, during their residence here.

THERE have been two thousand Bushes and upwards Fishing in this Sound in one Summer, but they are not always so Numerous; they generally go away in August or September.

THERE

## Western Islands of Scotland, &c. 387

THERE are two little Towns in the largest of the Shetland Isles, the most Ancient of these is Scalloway, it lies on the West side of the Isle. which is the most Beautiful and Pleasant part of It hath no Trade, and but few Inhabitants, the whole being about ninety in Number. On the South East end of the Town, stands the Castle of Scalloway, which is four Stories high, it hath feveral Conveniences and useful Houses about it, and tis well furnished with Water. Several Rooms have been curiously Painted, tho' the better part be now worn off. This Ancient House is almost ruinous, there being no care taken to repair it. It ferved as a Garison for the English Souldiers that were sent hither by Cromwel. This House was Built by Patrick Stewart Earl of Ockney, Anno 1600. The Gate hath the following Inscription on it. Patricius Orchadia & Zelandia Comes. And underneath the inscription. Cujus fundamen soxum est Domus illa manebit; Labilis è contra si sit arena perit. That House whose Foundation is on a Rock shall stand; but if on the Sand it shall fall.

THE Inhabitants say, that this House was Built upon the sandy Foundation of Oppression, in which they say the Earl exceeded; and for that and other Crimes was executed.

THERE is a high Stone creded between Tingwal and Scalloway, the Inhabitants have a Bb 2 Tradition

Tradition that it was set up as a Monument of a Danish General, who was killed there by the Ancient Inhabitants, in a Battle against the Danes and Norvegians.

THE second and latest built Town is Lerwick, it stands on that side of the Sound where the Fishing is; the Ground on which it is built is a hard Rock, one side lies towards the Sea, and the other is surrounded with a Moss without any Arable Ground.

ON the North the Cittadel of Lerwick, which was built in the Year 1665, in time of the War with Holland; but never compleated. There is little more of it now left than the Walls. The Inhabitants about thirty Years ago, fished up three Iron Cannons out of a Ship that had been cast away near eighty Years before, and being all over rust, they made a great Fire of Peats round them to get off the rust, and the fire having heated the Cannon, all the three went off, to the great surprize of the Inhabitants, who say, they saw the Ball sall in the middle of Brassa Sound, but none of 'em had any damage by them.

THERE are many Pills Houses in this Country, and several of them entire to this day, the highest exceeds not twenty or thirty Foot in height, and are about twelve Foot broad in the middle

Western Islands of Scotland, &c. 389 middle, they taper towards both ends, the Entry is lower than the Doors of Houses commonly are now, the Windows are long and very narrow, and the Stairs goes up between the Walls. The Houses were built for Watch Towers, to give notice of an approaching Enemy, there is not one of them but what is in view of some other, so that a Fire being made in the top of any one House, the Signal was communicated to all the rest, in a few Moments.

THE Inhabitants say, that these Houses were called Burghs, which in the Saxon Language signifies a Town or Castle senc'd all round. The Names of fortified Places in the western Isles, are in several parts called Borg, and the Villages in which the Forts stand, are always with Borg.

THE Inhabitants of Orkney say, that several Burying Places among them are called Burghs, from the Saxon word Burying.

IT is generally acknowledged that the Pights were Originally Germans, and particularly from that part of it bordering upon the Baltick Sea. They were called Phightian, that is Fighters. The Remans called them Picli, some Writers call them Piclavi, either from that Name of Phightian, which they took to themselves, or from their Beauty, and accordingly Boethius in his Character of them, joins both these together.

A Description of the

390

ther. Quod erant corporibus robustissimis candidisq; and Verstegan says the same of them.

THE Romans called them Pidi, because they had their Shields painted of divers Colours. Some think the Name came from Pichk, which in the Ancient Scots Language fignifies Pitch, that they colour'd their Faces with, to make them terrible to their Enemies in Battle, and other think the Name was taken from their painted Habit.

THIS Isle makes part of the Shire of Orkney, there are twelve Parishes in it, and a greater Number of Churches and Chappels. Shetland pays not above one third to the Crown of what Orkney does.

THE Ground being for the most part Boggy and Moorish, is not so productive of Grain as the other Isles and main I and of Scotland, and if it were not for the Sea-ware by which the Ground is enriched, it would yield but a very small product.

THERE is lately discovered in divers parts, abundance of Lime stone, but the Inhabitants are not sufficiently Instructed in the use of it, for their Corn Land.

THERE is plenty of Good Peats, which ferves as fewel for the Inhabitants, especially on the Main.

THE

THE Amphibia of these Isles, are Seals and Otters in abundance; some of the latter are train'd to go a Fishing, and setch several sorts of Fish home to their Masters.

THERE are no Trees in any of these Isless neither is there any Venomous Creature to be found here.

THERE have been several strange Fish seen by the Inhabitants at Sea, some of the shape of Men as far as the middle, they are both troublesome and very terrible to the Fishers, who call them Sea Devils.

considerable Substance in those Islands were haunted by a Spirit they called Browny, which did several forts of Work, and this was the reasons Products of the Place, thus some when they churn'd their Milk, or brewed, poured some Milk and Wort through the Hole of a Stone called Brownies Stone.

A Minister in this Country, had an Account from one of the Ancient Inhabitants who formerly Brewed Ale; and sometimes read his Bible, that an Old Woman in the Family told him that Browny was much displeas'd at his reading in that

A Description of the

that Book, and if he did not cease to read in it any more, Browny would not serve him as formerly. But the Man continued his reading notwithstanding, and when he brewed resus d to give any Sacrifice to Browny; and so his first and second Brewing miscarried without any visible Cause in the Malt, but the third Brewing proved Good, and Browny got no more Sacrifice from him after that.

THERE was another Instance of a Lady in Unst, who refused to give Sacrifice to Browny, and lost two Brewings, but the third proved good, and so Browny vanished quite, and troubled them no more.

I shall add no more, but that the great number of Foreign Ships, which repair hither yearly upon the account of Fishing; ought to excite the People of Scotland, to a speedy Improvement of that profitable Trade, which they may carry on with more Ease and Profit in their own Seas, than any Foreigners whatever.

## FINIS.
