Yes, she would go; she would brave the alternative, and so she proceeded to pack up and say good-bye. Then, with so true a nature, reaction of course set in, sure and swift. After a bitter struggle and a sore battle with herself, she yielded to much that was cruelly antagonistic to her lively spirit; and seeing plainly her misfortune, she accepted it, and consented to the darkening of her prospects and the closing-in of her bright social life.

Katie might be right, or she might be wrong, but she was disinterested. Her attached eager aunts, who would have encouraged any display of indignation on her part, and welcomed her to their houses, thought less of her from that day. They thought her time-serving and timid, not their poor sister's very daughter. Thus she became something of a heroine. "If I go away," she said to herself with a crimson face, "the world may say scandalous things of papa, and I won't have him abused; he has been a manly, righteous, refined gentleman, a benevolent Christian gentleman. He never crossed me, though he never petted me much; he bore with my laughter, sometimes he laughed with me. I was always sure he loved me, as sure of his love as of Davie's and Sandy's, when they were imperious and scolded me. I never doubted any one of them. He will keep his word. If I leave Whiteford I would never cross the door again, or sit by his pillow and kiss him when he came to die." "If I go away," she said again, "there will be no chance of Davie's and Sandy's coming back; the rupture will be complete, for I know the boys will never care about touching a farthing of papa's money; I believe they will not mind working for themselves, and he will not have one child left. If I go away, the whole neighbourhood will forsake papa; and if his own child desert him, that will be setting everybody an example to turn their backs upon him. They have no right to do that," exclaimed the girl, getting up and walking in magnanimous discomposure and vehemence to and fro in her room. "Papa is not about to commit a deadly sin; some of themselves have done more unwarrantable things. Even towards *her* it is unreasonable, unfair. What is she that they should shrink from her? What is she that she should defile me since papa chooses her to sit in mamma's place? Poor Beenie! who always met me first when I came home from school, to whom I gave the largest Christmas-box, who doctored my sprained ankle better than the doctor himself, and who was so proud when she helped to sew and to fit on my first ball-dress," and Katie ended with a burst of tears.

No; Beenie's undue exaltation was not Beenie's fault. By no immodest scheming, by no vaulting ambition, had she attained it. Katie was convinced of that. Why was Mr. Auchterlonie guilty of the glaring inconsistency? But he being guilty, Beenie could not be justly blamed unless for not refusing

the honour put upon her; and that was to expect a degree of wisdom, and self-control not more common in elderly housemaids than in the rest of the world. Katie was not certain—though the incongruity would not have been so great in that case—that she herself would have had the strength of mind to refuse a real English duke if he had solicited her to become a duchess and to be picked to death by all the other duchesses. “Besides”—Katie finished with a twist of her mouth, a comical idea shooting across her distress, as the sun’s rays will gleam athwart dank watery vapours—“Beenie dared not refuse papa, she has always stood in such wholesome awe of ‘the Master.’ Poor Beenie!”

CHAPTER II.

ON a fine August day the two brothers Davie and Sandy arrived at Whiteford. They had travelled almost night and day since receiving the intimation of their father’s set purpose—not with the hope of stopping its consummation, for that was impossible—but, as Sandy puffed out, to get rid of their steam, and to rescue Katie. They were travel-stained and dishevelled as they stood before the red-brick house, which was warm and cosy, hung round with white jasmine, yellow rose-Japonica, and a profusion of common China roses, and the great leaves of the Canadian vines. Within the policy were the hay-field, and patches of Indian corn, carrots, and beetroot (Mr. Auchterlonie being an amateur agriculturist); on the outskirts were shrubs, fancy laurels, acacias, araucarias, and sweet British lilacs and laburnums, as well as borders of daisies, and tufts of heather,—and the whole place was basking drowsily in the thick-moted beams of August sunshine.

But the place was very un-homelike to them this summer day. The one had not been here for nine months, and the other for three; yet in place of hastening in doors, they, by mutual instinct, stopped and rang the bell. Their two dogs, Punch and Judy, ran to them with much leaping and barking, but they knocked them off, sternly. They did not acknowledge the new servant, although they knew her as having been brought up in the parish; accordingly, they asked for Mr. Auchterlonie. “My father,” added Davie, as if he felt he was acting a part in a play. Was he at home, and could they see him?

Beenie’s successor was greatly excited, but she had the presence of mind to inform the applicants that Mr. Auchterlonie was not at home. He had driven over early in the morning to the train, she believed; and she added, in confidential accents (for which Davie and Sandy would have given the girl her dismissal on the spot had they been her masters), “he was gone for twa’ree days or the hale week to a grand meeting” (the Highland Society’s, or the Antiquarian, or the Social Science, thought the brothers); “at least, so she had heard said by the mistress.”

Sandy ground his teeth. This accident vexed him, for he might have to rejoin his ship before he

could have his difference out with his father. But he said aloud, “Never mind. Tell Miss Auchterlonie she is wanted to speak to her brothers for a few moments;” and, at the risk of encountering his father’s wife, he pushed past the girl and walked through the hall to the pretty drawing-room—faded since it had been fitted up for their own mother, but still pretty—with its old-fashioned blue-lined chintz draperies framing the bushes and cornfields without. Here and there lay Katie’s nicknacks—her drawings, her work-basket, her birdcage, her books. There was only one token of another’s company, and it was not very objectionable. It was a fine half-knitted worsted stocking on slim wires; and fastened to it was one of those little bunches of hens’ feathers which one sees along with pieces of knitting on kitchen and cottage tables. Sandy’s eye caught it, and he turned up his nose still higher as he and Davie sat down, in their dust and fume, on one of the finical chintz couches.

Davie and Sandy knew that room well. It was their resting-place on winter evenings, where they condescended to listen to Katie’s music occasionally, or read with a lion’s share of the lamp—where they had intended to recount their adventures to an impressed audience this autumn, but where they now sat still and stiff, as if death were in the house.

There was some fun in the proceeding, inasmuch as Sandy and Davie, who were in such wrath at their father’s slight to established rules, were in their own persons notorious despisers of forms, and were as unmannerly and bearish as two gentlemen, the sons of a gentleman, could contrive to be. With what grace, therefore, they could sit there and swell at their father’s indifference to public opinion and his assertion of primitive rights, the reader can easily guess.

After five minutes’ rest, which was a benefit to the young men’s exhausted bodies, but no sedative to their tempers, Katie came running in—a light, firm, well-made, comely-faced girl, with so clear a forehead, so reasonable an eye, so benevolent a mouth, that she was a beauty. And yet her features were nothing to speak of; her complexion was freckled, and her hair neither chesnut nor auburn nor tawny, but undeniably red—so red that a crimson rose in it would have been positively frightful. Still she was a beauty, one in a thousand, fair already, and to become always fairer, with her beautiful brow and her beautiful dimples. Katie came running in, in her blue muslin and her snow-white sun-bonnet, which she preferred to a hat.

“Oh! dear, dear boys, I cannot tell how glad I am to see you home again. When did you come?—and where have you been last?—and had you my letters?—and will you have something to eat and drink?” This after she had hugged them both closely.

“Where have you been, Katie, keeping us so long in this den?” grumbled both the brothers fractionally, kissing her at the same time, and allowing her to kiss them with a kind of gruff sufferance.

"Den!" exclaimed Katie, looking around her. "I think it is a very nice room; I see none like it. I was out, of course, this fine afternoon; we took an early dinner, and I was down at the bleaching-green with—with Mrs. Auchterlonie," Katie got out with an inevitable red face and a disposition of the name to stick in her throat.

"How dared you, Katie," raged Sandy, charging upon her at once; "what do you mean by keeping company with that woman?"

"How could I help it, Sandy?" Katie defended herself. "Why should I not keep company with her, now that she is papa's wife?" she went on more calmly.

"The very reason you should never speak to her, never let your eyes fall upon her."

"She never did me any ill," protested Katie; "and this was papa's will—am I not to respect my father?"

"Katie," interposed Davie decidedly, "how long will you take to get ready to go with us to Aunt Leyden's?"

"Oh! Davie, I can't," objected Katie, piteously. "It is very kind of you, Sandy; I know you mean it for kindness, but I can't leave the house when papa is away—to steal a march upon him as it were, and turn my back upon her after I have taken her up. Papa kissed me when he left, and asked what fine thing he should bring me from Edinburgh—papa, who is so absent and inattentive in general. Oh! Davie, Sandy, I can't do it."

"I never thought you were so childish, so greedy," Davie accused her.

"I never heard such idiocy," proclaimed Sandy. "What call have you to support the woman? Nobody—not even my father—could ask it of you. No; he has made his choice, leave him to it. You will be giving that woman a hand at the washing-tub next; I wonder at you, Katie."

"Katie," remonstrated Davie, "we cannot see you sacrificed. You do not understand. Nobody will look near you; the whole neighbourhood will shun you; you will be classed with him and her; you will lose caste, Katie; you will deteriorate by grubbing among her low ways, and her low relations."

"She has never brought a relation to the house," explained Katie; "she tries to accommodate herself to our ways, poor woman! See, she is knitting that pretty stocking for me. Surely, refinement is little worth if it cannot match with homeliness. Then, papa is cultivated enough to inoculate us all with cultivation. I am not frightened."

"No matter, Katie," contradicted her brother angrily; "the world wont judge so, and it will put you out of society as it will put them out."

"The more shame to them," said Katie, warmly; "what right have they to judge? Davie, you forget," said the generous girl, standing erect in womanly dignity, though her face was a deep red, "my father's wife is an honest woman. No, I will not forsake her."

"You pay a small compliment to your own mother," reflected Sandy, bitterly.

"No, I don't, Sandy—I don't," cried Katie sharply, as if he had struck her a blow. "And Sandy," continued the bated girl, with a quivering lip, "the last words mamma said to me were, 'Be a good girl, Katie, and do everything your father bids you.'"

"And so, I suppose you would cut your throat at his word?" sneered Davie.

"No; but you know well papa would never ask me to do anything that was really wrong. I did not think you two cared so much for the opinion of the world," added Katie, with innocent craftiness. "You went little into company when you were at home, and you were always angry at me when I went to a dance or a picnic. A set of stupid, silly folks you said the neighbours were, who did not really care about us, though you cared sufficiently for them to help them in serious trouble. They have not cut me completely; they have been a little shy, but the Lindesays and Andersons have been inviting me, and Patricia Lindesay came round to me at church yesterday, and told me she would come over as usual, if I would like it; and what do you think, Colonel Fordyce called to see papa on justice business, and brought his wife with him—she who had never leisure to notice us before, on account of her great circle of connections through the Elliot-Oswald family."

"Impertinent jay! come to spy our miserable relations and to laugh at them."

"No, no, Davie, she is not an unkind woman; and her own son married an actress, and she receives her at her house," commented Katie significantly.

"She may do what she likes. An actress is one thing, and a woman who scrubs floors another. Have you made up your mind finally, Katie?"

Before Katie could answer, the door opened and the second Mrs. Auchterlonie entered, with the peculiarly distracted gait of an untrained woman who has known no dancing-master and never moved in drawing-rooms except to serve in them. She was, as has been stated, not a handsome woman, and she had probably looked better as Beenie the housemaid than as Mrs. Auchterlonie of Whiteford. She was a square woman, on whose broad shoulders a strong silk gown was only strong, and neither rich nor splendid. Her arms were short and thick, and her hands, with the marriage-ring conspicuous on one fat finger, were dreadfully in her way. Her blonde head-dress had been charitably subdued by Katie since it came from the milliner's.

It is not easy to say how the young men had intended to conduct a personal interview with Mrs. Auchterlonie, or whether they had contemplated one at all. They had seen her before as often as there were hairs on their heads—had been accustomed to her going in and out of that room waiting upon them. Now, in instinctive manliness, they both rose and made surly bows, to which Mrs. Auchter-

lonie responded with a deep duck of a curtsey, which would have been laughable if it had not been so lowly. Her old feelings as Beenie Tosh the housemaid came back on Mrs. Auchterlonie, and she stood before them with apprehensive deference. "Master Davie and Master Sandy, what will you please to have for a refreshment, and where would you like the tray set?"

The young men looked at each other in a confused baffled way. At the moment Davie stood up he reeled with a sensation of sudden illness, which he had concealed by grasping the back of a chair. "The horse had better be baited, Sandy," he answered, indirectly addressing his brother. "He cannot carry us back to Corehead without a feed." Sandy, highly resenting the small concession, remained doggedly dumb.

Mrs. Auchterlonie, perspiring at every pore, finding she was to have no further reply, took this indifferent reception of her overture as a consent to a meal of some sort whose details were left to her discretion. She considered for a moment, standing awkwardly in the centre of her drawing-room, though Katie rose and placed a chair for her. She retreated hastily, turning at the door: "I'll send the cook to the dining-room. I'll let you know when it is done, and I'll come and help it if you want me; but I'll leave you the now to your cracks."

Down Mrs. Auchterlonie went to the lower regions, to beg the cook (who was not over-obedient or over-courteous to her) to have a tray of all that was best prepared at once for the young gentlemen. Then, shrinking from the inquisitive eyes—which scorned her with the ignorant scorn with which the lower orders overwhelm an equal who has risen to be a superior—Mrs. Auchterlonie retreated, by force of habit or by a feeling of pride, not to her handsome bedroom, but to the remote bare garret where her spare "kist" used to stand. And sitting down on the rickety chair, she rocked herself to and fro, and then put her scored thumb in her mouth, like a child. "What for do the lads gloom at me in that way, and me an honest woman? Oh! I cannot bear it, for all Miss Katie is condescending and tries to endure me. I did not ken what I would have to thole. I wish I could gang back and be a douce servant lass again. I think I would do it, were it not for the master. He would follow me and fetch me back, and that would be the worst disgrace ava." And Mrs. Auchterlonie sobbed heavily.

CHAPTER III.

KATIE was doing her best to calm and soothe her exasperated brothers, and to convince them of what she believed was her duty, though they would not see it. Sandy threatened to resign his berth, mortally offend his father, and ruin himself if she caused him to fail in his errand. Davie, too, was on the verge of gravely quarrelling with her. Both of them assured her solemnly that they would

never come near Whiteford again, and that she would see little more of their faces if she chose to remain under her father's and stepmother's roof. She was torn by conflicting emotions, and had no guide but the single-hearted resolution not to do evil that good might come—not to disobey her father to please her brothers.

She, in despair, left the young men for a moment, to compose herself, and gather fresh strength, and to think over this miserable home-coming of her brothers. When she returned, neither of them was in the drawing-room; and, in a little trepidation lest they should have gone off in their huff without the ceremony of leave-taking, she ran down to the dining-room, and was relieved by finding Davie sitting below his father's picture, to which his strong-marked dogmatic face bore so great a resemblance, with the luncheon-tray before him—not eating, however, but leaning his elbow on the table, and his head on his hand.

"Why aren't you eating, Davie?" asked Katie, softly; "and where is Sandy?"

"I cannot stay any longer here, Katie," he exclaimed, pettishly. "I don't know what has come over me; I'm as sick as a dog, and there is a pulse like a hammer beating in my head. Sandy, too, could not stay in the room with the food. We must be off."

But, to Katie's increasing alarm, Davie, in place of, going off, clutched at the table while he spoke. His face got first white and then scarlet, his eyes looked both hollow and glistening, and drops began to burst out on his forehead.

"Davie, dear, you are ill. What will you try? Brandy? You must not attempt to start again—I mean not for an hour or two. Come to your room and lie down, and sleep it off. I will not allow any one else to come near you; I will sit beside you till you are better. Oh! do be persuaded, Davie."

Katie had never seen Davie droop an eye or bend a leg or arm in her life before; but her proposal was the suggestion of common sense and sisterly regard.

Davie made another effort to be himself again, but felt dizzy than ever, and was forced, sorely against his will, to comply with Katie's entreaty. He was even under the necessity of holding by her slight arm, as he staggered to his room, and threw himself on the bed which he had occupied when a stout unruly boy.

It was really a distressing spectacle to see a powerful young man suddenly smitten and brought down by sickness, and Katie was as much frightened at it as a creature of a cheerful temperament could be. But there were most comical elements in Davie's sickness. He was so exasperated and cankered; he made such dour attempts to resist it and get the better of it. Katie even smiled as she endeavoured, with all her might, to pull off his boots, but was nearly knocked down by his starting up, and kicking off the troublesome auxiliaries. After she had shaken his pillow, and brought him a smelling-bottle, she was bidden

keep her smelling-bottle to herself and go about her business, and leave him to sickness and solitary majesty. Suiting the action to the word, Davie turned his back haughtily, and buried his face, in disgust and nausea and throbbing anguish, in the pillow.

All sense of the ludicrous disappeared when she left the room, and went, burdened by care and regret, to seek Sandy, to see if he could guess what was the matter with Davie, and advise her what to do. Her fears rose to something like terror when she found Sandy sitting, without his hat, on the seat beneath the weeping ash, bent down, half-blind and stupid with equal illness and helplessness. She coaxed and assisted him with still greater difficulty to his room, told Mrs. Auchterlonie of her brothers' strange simultaneous sickness, and sent for the doctor.

Dr. Sutherland arrived, and soon got at the mystery by a few plain questions, which cut to the root of the matter. Had there been any fever in Sandy's ship, or in any other locality where the young men had been? Of course there had. Had the brothers been exposed to it? Of course they had. They had, with iron constitutions and bulldog tendencies, considered that precautions were not in their sphere. They had done their best to develop and mature the seeds of disease, by affording no rest to the soles of their feet, or nourishment to their thirsty throats and craving stomachs; by coming on like madmen, by land and sea, boat and rail, without sleeping, or eating, or shifting their clothes; without giving their ill-used constitutions the shadow of a chance to throw off infection; and now they had broken down.

Without a doubt, that was the explanation. Thus Davie and Sandy were each in for what the doctor called (taking a pinch of snuff) a smart touch of Mediterranean fever; and they need no more think of moving from where their headstrong wills had brought them, for many weeks to come, than of flying in the air, or turning poets or courtiers.

The doctor at once prescribed for the patients, and curled up his shrewd lip at the bare idea of their defiance.

There were great demands on Katie's decision and endurance at this time; demands to make her a stronger and a more sedate woman ever afterwards. She had gathered from the doctor that there was no immediate danger for her brothers, and therefore she did not summon home her father by telegraph, in order to shift the responsibility from her shoulders to his. Indeed, Katie was in some apprehension that her father's coming would only complicate the trouble, and, if Davie and Sandy continued in their present state of mind, lead to more dire hostility, unless her father was so touched by their illness as to bear everything off their hand.

But in the meantime there were Davie and Sandy to nurse in a bad fever, and only one young girl to do it. It was an alarming prospect, even in

the most sanguine view of the case. Dr. Sutherland had thought it right to warn her, even while her lips parted with dismay—

"If there is any raving in either of the patients, Miss Auchterlonie, which is not unlikely, and they threaten to master you, get in the steward or a man-servant from the offices; but of course, don't use restraint till it is necessary, and don't be unduly alarmed. You know nurses are not to be had in a country place, but I may get you one from Edinburgh when you cannot do without her. Yes, I trust your brothers will go on favourably; they have everything but their own unjustifiable rashness in their favour."

That might be all very true, and the doctor might have known them all from their childhood, and—no mean judge as he was—might place confidence in Katie's discretion; but how was Katie to justify that confidence? The extremity of the case supplied some strength, and the fever was not so bad as the doctor apprehended. Davie and Sandy retained their reason, but they were as refractory as reasonable young tyrants dared to be. They were broken by the pangs of severe illness, but their original characters were not crushed out of them. They tossed and tumbled, and not only coveted, but demanded, the most improper solaces that crossed their wayward fancies. They refused to swallow medicine after the first trial, and pulled away leech and blister before they had produced the least result. It is a marvel how childish even wise men can be in pain and weakness. Davie and Sandy were not particularly wise, only vigorous-willed fellows, whose determination was a snare to them at this very moment, by its never suffering their minds to be brought down to a level with their present fortunes.

Katie had it lodged in that little red head of hers what true manliness consisted of. She was sometimes provoked to contradict the rebels, and tell them a good bit of her mind. She reminded them how much more resignedly she, a girl, had behaved under her bad influenza, and went the length of assuring them that the merest button of a child would conduct itself with more propriety than they did. But most frequently Katie bore with her brothers, and fought with them as a mother fights with her foolish bairns.

One afternoon Katie came out of Sandy's room, crying bitterly. "Oh! Mrs. Auchterlonie, Sandy will not swallow a drop of the draught, and the doctor said it was of great importance; and he wants to sit up without his dressing-gown, though he speaks rationally otherwise. I must telegraph for papa."

"Telegraph or not, Miss Katie, as you think fit, but the time has come for me to try my hand on Master Sandy; na, he mauna risk his precious life." And to Katie's amazement, with quiet but unflinching resolution, Mrs. Auchterlonie turned the handle of the door and walked in upon Sandy, with Katie trembling behind her.

"They both rose and made surly bows, to which Mrs. Aucierione responded."

Sandy groaned at the unwelcome apparition.

"Master Sandy, you must do what the doctor tells you, and I must see to it; so dinna risp your teeth at me, like a gude lad," said the despised woman, towering in her size and stoutness over Sandy, lying panting and quivering in his bed, as if she would be able to take him up like a puppy in her work-hardened, capable hands. "But eh! Miss Katie, you have not made the lad comfortable; no wonder he is camsteary. Siccan a bed! I dinna mean to reflect; you are a lady, and you are worn out, poor lamb, but it must be mended. Rax back, Master Sandy; heize your head on my arm. Are you not able? Then let a-be, and I'll manage mysel." And before the querulous revolting Sandy could repulse her, his head was easily and firmly elevated, his pillow was buffeted by the other arm into a state of submission, his very mattress was shaken up into evenness, and the draught was put to his lips, with no choice save to drink, if he would not enter into a contest, for which he felt in every nerve unfit. He was laid down again, with a sense of great relief and repose. A weary grunt was all Sandy's thanks for the benefit conferred. But an important precedent was established, and the foundation of a reign laid.

The fact was, Beenie (at whose exaltation the world, including herself, had wondered) had one special endowment—she had the qualities of a super-excellent nurse. However phlegmatic and stupid in other fields, she was quick and acute here; and the plodding application of her working days came out in unwearied devotion to the young men. Perhaps Mr. Auchterlonie had recognised this gift in his handmaid; perhaps he had looked forward to the time when loveable Katie—not without her lovers—would marry, and he would be alone, sinking into old age and infirmity. Whether Mr. Auchterlonie was foreseeing or no, Mrs. Auchterlonie was the best of nurses. "Admirable!" even dropped from Dr. Sutherland's close lips. And, now that she had undertaken her charge and entered on its offices, Sandy and Davie reluctantly, dumbly as it were, admitted her power. Katie was all very well—a good girl, and would learn; but if they wanted a second's ease, a half an hour's oblivion, Mrs. Auchterlonie must tend them, soothe them, sit guard over them. Tacitly the concession was granted, and sensible, large-hearted Katie showed no jealousy, but suffered herself to sink into a subordinate position, and be eclipsed in the sick-rooms.

Mr. Auchterlonie returned home, made no remark, and never so much as mentioned their step-mother to the lads. He looked in twice a day or so, put his hand to their pulses, commented on the drugs, and occasionally proposed to sit an hour or two with them. He was inwardly frightened—poor, learned, awkward gentleman!—that his offer might be accepted; and this although he was a true father, and would have sacrificed himself for his offspring. A pretty plight Davie and Sandy would have been in left to his care!

But Mrs. Auchterlonie never flinched. The disease assumed a malignant type in the one brother, and the doctor considered himself bound to cause her to keep the almost heart-broken Katie and every other unnecessary attendant out of the darkened dreary room. She was never absent one moment at the crisis. She breathed the tainted air, chafed the infected limbs, met the wistful eye and ear with homely mother smiles and words of cheer, speaking the more directly to the tried forlorn hearts that they were now so childlike.

No sooner had Davie breasted the danger than Sandy sank to the lowest ebb to which human strength can fall and yet rally. For days he lay as one dead, with fallen jaw and sunken lack-lustre eyes, and clammy unearthly cold skin; and still the blunt countrywoman stood at her desperate post, moistening the lips, sponging the skin, cherishing every spark of that incommunicable, irrecoverable life burning low in the socket.

It was not till Sandy had revived to sight and hearing and dim articulation, and was far back from the shores of death, that Katie was puzzled by finding Mrs. Auchterlonie resting on a lobby-chair and crying unrestrainedly, as Katie herself had done on a former occasion, but from a different cause.

"Oh! my dear, never mind me. It is just that your brother Sandy has been so weak I could not spare time and thocht to greet till he was set up again, but now I'll greet my fill while he's sleeping, and be licht and bricht and ready to take care of him again when he waukens. Oh! the fine young lad, who fished, and rode, and hunted, and walked at the plough when the fit was on him, and sailed the high seas—to be no better than an infant. And think of his uniform, that I hung in the press out of sight, and his sword and pistol! Oh! waly for the strong, proud, fiery young chap; but he'll never ken, you'll never, never tell him, Katie, that I fed him and lifted him and held him in my arms as if he had been a wee feckless wean."

CHAPTER IV.

SLOWLY and surely the lads recovered. Davie was able to move into Sandy's room, and Sandy was no longer in need of constant care.

It was a fine September day, and Mrs. Auchterlonie took occasion to impress the fact upon Katie, and recommended her to take "a run" over the fields. A walk for a young person was always "a run," if it were not "a halop" or "a ralyie," with primitive Mrs. Auchterlonie.

Katie was not aware that Sandy heard them till he spoke up, imperiously, in his weakened voice—

"No, Katie, you stay here. Send my mother to take the air among the stooks."

Katie started—Davie stared; Mrs. Auchterlonie raised her big body quickly, and sidled into the shadow of the curtain to feel for her pocket-handkerchief. It was the first time any one of them had styled her by her title of adoption. Davie never employed it, respectful and kind to her as he was

in his gruff way, after he rose from his sick-bed. Katie only applied it now and then, to express special feelings; but the blustering, outrageous sailor never named her by any other term, to her face or behind her back, in private or in public, from that moment.

Sandy had several relapses. When suffering from one of these, and feeling that his time in this world was to be short, he directed Katie where to find the key of his trunk, which had been forwarded to Whiteford, and in what quarter lay the gifts he had brought home for her, his aunts and cousins and general female friends; for Sandy, like many another despot, was munificent. Katie brought them all to him at his request, and spread on the chairs and sofa the treasures of yellow silk, scarlet shawls, fine woven stuffs, representing imperial gardens of plants, and Noah's arks of animals, until Mrs. Auchterlonie screamed in pure delight at the grandeur of the show. Sandy stretched out a bony hand, over which the wristband of his shirt dangled—"a world too wide for the shrunk shank"—and put it on the fleshy, comfortable, corresponding member of Mrs. Auchterlonie—

"Mother," he said, laconically, "choose."

It was difficult to say what Mrs. Auchterlonie could do with that extravagant bravery—the vision of herself in a yellow silk or a scarlet crape was something formidable. But only a callous heart could be unmoved by pride and gratitude, and the innocent design of gratifying Sandy. Therefore she made her broad, solid shoulders a block for sprawling tiger and luxuriantly tufted palm-tree, stepping to the right and left the better to display the drapery and its device. In truth, she would have appeared in the glaring costume before gentle and simple, comforted under her intuitive mis-

givings that it was Sandy's taste. It was Sandy's present, it would please Sandy; and what did it matter what she put on?—what did it signify for her? Katie, to be sure, should have the snowy muslin and the ivory-white, maiden-like, bridal-like silk. These things were far too fine for the like of her—a plain body, although now risen to be Mrs. Auchterlonie.

Sandy was so near entire convalescence, that there was talk of his rejoining his ship when Davie returned to his office.

"But first I am going to church on Sunday," Sandy announced abruptly.

"If you are able, that is right, that is very pretty of you, Sandy, my man," murmured Mrs. Auchterlonie, in fervent admiration; though she would have reckoned it quite scandalous in herself to abstain from a similar acknowledgment on a similar occasion.

There is some good left in this old world, which has seen so much evil and been so much abused in its day. When Sandy Auchterlonie reached the Kirk doors at Whiteford, and under the Kirk-yard trees, drew the dumpy arm of shy, happy Mrs. Auchterlonie within his gallantly, Davie walking before to hold open the pew-door, Katie and her father following after, many a proud heart melted, many a sharp eye glistened.

Many fine churchings one may miss, and suffer no less; but that churching, with its contrast of ruddy, homely, middle-aged health and virtue, and white bleached manhood—that commentary on many a text of simple, practical domestic love and charity, was a sight a Christian minister might well congratulate himself upon, a Christian congregation seek to witness.

SARAH TYTLER.

THE OLD TESTAMENT AND THE HEATHEN WORLD.

BY PROFESSOR AUBERLEN.

If we trace back the history of our race to its most dim and distant commencement, we shall find that it was even then divided into different peoples, each having its own special languages and religions, and that these peoples were not only mutually unintelligible, but even in a state of enmity and warfare. Now, this is no normal condition, but one arguing disorder and disruption. Its worst feature, however, was not the inimical separation of these peoples from each other, but their being separated from the living God, steeped in polygamy and idolatry; so that, according to the language of Scripture, the very word Gentiles signified heathens. For God is the source of all life and all true life-enjoyment; without him the nations, be their external existence ever so ornate and brilliant, are but as sheep without a shepherd, lost children without a home; and God is not only the source of

all creatures, but also their bond of union. It is because humanity severed itself from God that it lost this true point of union, and became itself internally divided. Thus we discover that there must have been some great original cause, some world-embracing catastrophe, in which humanity as such rebelled against God, and was therefore parcelled out into different languages, nations, and religions, so that enmity, opposition, and exclusiveness replaced that beautiful many-sided unity in which the different races were to constitute one great family of God. The people of Israel, who, possessing the true knowledge of God, possessed also the true knowledge of mankind, and retained a correct memory of their primeval state, in their sacred records refer this great historical fact to the building of the tower of Babel. For after the deluge we again find mankind in a state of universal

apostasy; and their disruption into heathen and inimical nations, is the great historical manifestation of their sinful condition.

But amidst all these nations one people stands out before us essentially different from the rest, the people, namely, of Israel. While all others worshipped several, and hence necessarily false gods, we find here the knowledge and the worship of the one true God. How are we to explain this singular fact? Can the Israelites have been by their natural constitution adapted to develop correct religious ideas, as the Greeks were to attain the highest place in art? But the parallel will scarcely hold, for all other nations had some artistic faculties or other, the Greeks only brought them to the greatest perfection; whereas the religion of the Jews differed essentially from heathen religion, in that it was true while they were false; and just as religion is a different thing altogether to art, so the difference in kind between truth and falsehood is quite other than the difference of degree between the imperfect and the perfect in art; and moreover we know that all error, religious error more particularly, is a consequence of sin, and that the Israelites were as little exempt from sin as the other nations of the earth. Therefore the people of Israel could no more have evolved the true religion by their own natural powers, than we can gather grapes from thorns, or figs from thistles.

And this the self-consciousness of the people themselves, as expressed in their sacred records, perfectly confirms. The Jews never claim the honour of having originated their own religion; on the contrary, the Old Testament Scriptures represent them as naturally rebellious to God, and prone to idolatry; as heathenish, in short, in their tendencies, as any other nation. Their knowledge of God, and their religion, both at the first and throughout all stages of its development, is invariably ascribed to Divine Revelation. The assertions in the Old Testament respecting the nature and the origin of the Divine Idea they held, are inextricably connected, and if we acknowledge the truth of the first we cannot without inconsistency reject the latter.

Another point in which the Jews differed from every other nation, was their expectation of a Messiah. As God was the origin of the Old Testament life, Israel having from the first recognised itself to be the people and the kingdom of Jehovah, so the Messiah was its end. While heathen nations and empires decayed and fell without hope of deliverance, in Israel, on the contrary, political decline was attended by an increasingly clear expectation of a high and God-sent Deliverer, who should restore the Divine kingdom to a new and far greater holiness and glory than it had ever known before. This idea, too, was always referred by its enunciators, the prophets, to Divine Revelation, and we have every reason to receive their testimony. For not only is it mere folly to suppose that the announcers of the highest truths of humanity could

be themselves mistaken as to whence these truths came, but it is contrary to the very nature of things that such golden fruit as this should grow on the barren thorn of the sinful human heart. Could this have been, surely the great and noble spirits of other nations, Socrates, Plato, Zoroaster, Confucius, would also have confidently expected salvation, whereas we only hear from their lips, a few dim and obscure yearnings of the kind. It was only as a powerless ideal, that in times of decadence, heathen philosophers and other earnest men, as for instance, Tacitus, held out a higher condition to the enervated race around them; it was only as a vanished epoch, a poetical dream or a political panegyric, that heathen poets ever sang of the golden age. The heathen were without hope, because they were without God in the world (Eph. ii. 12). Amongst the Israelites, on the contrary, this Messianic idea did not appear as a mere yearning or poetical idea; but from the first as a definite, and as centuries rolled on, ever more and more definite prophecy. Now such a prophecy transcends human power. The predictions of even so pious a man as Savonarola were not prophecies, for they remained unfulfilled: whereas we have a fulfilment of this prophecy, which is without a historical parallel: we have, centuries later, Jesus of Nazareth declaring himself to be the promised Messiah, and announcing the dawn of that kingdom of heaven which the prophets foretold.

This leads us to a third peculiarity which distinguishes the Jews from the heathen, I mean the relation of their religion to the Christian, which is represented in both divisions of the Scriptures as connected with the old Covenant (Jer. xxxi. 31; Luke xxii. 20; 2 Cor. iii. 6-14). Christianity recognises in the old dispensation its divinely-ordained preparatory stage; while in heathenism it sees the power and bondage of an alien principle (Acts xxvi. 18; 1 Cor. x. 20). This peculiar connection between the two Testaments, their different stages of revelation being fraught with one and the same spirit, and constituting a marvellous whole, is a witness to the Divine origin of the Jewish (as well as the Christian) religion. And when with conscientious thoroughness of research we examine into the books of the two Testaments, we find, both in their history and their doctrine, a connection extending through centuries, a gradual progress which points to one comprehensive plan, which could by no possibility have had its origin in the mind of short-lived man, but can only be reasonably explained by that Divine causation to which the Bible itself refers all things; and if we proceed further to test this conclusion, by comparing it with our knowledge of other kinds, we shall find, that not only do the Divine revelations intimately agree together, but with the condition and needs of our human nature, with the fundamental relations of the universe, and with the being of God. Incomparable wisdom, holiness, and love breathe on us from the Scripture pages, and perfectly satisfy the demands of con-

science and the search of the intellect after the highest truth. "Nothing has so convinced me," says a very exact and intelligent theological thinker, who has thoroughly studied the whole of Biblical History, I allude to the respected Hess of Zurich;—"nothing has so sincerely convinced me of the truth of Christianity, its revelation, history, and doctrine, as the having found in the sacred records, on one hand, what perfectly satisfies the needs of humanity, both for time and eternity; and, on the other hand, in the Divine provision towards this end, such a connected progress from small to great, from the particular to the universal, as would have been impossible to human invention."

Accordingly, we now find ourselves not only authorised but bound to contrast with the heathen the people of Israel as the people of God, in the undiluted, the Biblical sense of the word. The history of the Israelites is the history of Divine Revelation; that of the heathen the history of humanity left to itself. The former shows us the positive, the latter the negative preparation for Christianity; in other words, it affords us a practical illustration of what humanity without God becomes. To use the pregnant expression of the latest historical commentator on the Old Testament, J. H. Kurz, "In the former, we have salvation prepared for humanity; in the latter, humanity prepared for salvation." And the more closely we examine into both these processes, the more we shall discover in the universal history of the Old World a preparation, and so an argument for Christianity. Let us, then, in the first place, direct our attention to the development of the Divine Revelation to Israel, as we find it recorded in the Bible annals.

Over the whole world sits enthroned the eternal God, who is love. Because of his love he has from eternity determined to reveal and impart himself ever more and more completely to his intelligent creatures, that they, being filled with his own life and glory, may attain to the perfecting of their existence in him, and thus God be all in all. Nor did God relinquish this loving plan upon the entrance of sin into the world; on the contrary, he revealed his love all the more gloriously, as that grace which saves the lost, and brings about the perfecting of the world by the process of redemption; and because of his free and inconceivable mercy, he held fast his thoughts of peace respecting humanity against all heathenish apostasy, and determined to accomplish first the redemption, and finally the perfection, the glorification of the world by means of continuous revelations of himself.

But now what position is this divine revelation to occupy with regard to the false paths into which the nations have wandered? There is to be no fresh deluge to exterminate the ungodly race, this, God—having given, once for all, at the commencement of human history, that fearful example of his judgments—has expressly declared (Gen. viii. 21; ix. 15). Neither was the whole of humanity to be miraculously brought back to the living God, for that

would have been a violent and enforced deliverance, while God, on the contrary, most carefully respects the liberty of man. Thus, He could neither annihilate nor convert the human race as a whole; it only remained, therefore, that at certain points of greatest susceptibility to Divine manifestations, he should begin to work for the deliverance of all. God had to adopt individual expedients to accomplish general salvation; therefore, he set apart,—as formerly, Noah,—the Semitic Abraham, to be the especial recipient of his revelation. Abraham, during the early nomadic period, when national life was in process of formation, was chosen the ancestor of one particular family who were eventually to become a particular nation. While God suffered the heathen to walk in their own ways (Acts xiv. 16), he chose Israel for his own inheritance, and by the historical destiny of that one people, prepared the way for the final purpose of all revelation,—the redemption of the human race. This was done by three great successive stages.

In order to bring about redemption, it was first of all necessary that sin should be recognised in its essential nature of a contradiction to the holy will of God, and consequently to the ideal and the destiny of humanity as well. Now, this could never come to pass unless man felt himself inwardly bound to God, and knew it to be his duty to walk before him and to be perfect (Gen. xvii. 1). It was, therefore, necessary to take out and set apart from the heathen godlessness and worldliness around, a holy section of humanity, in which God might once more reunite the severed bond between himself and his creatures, and thus lead them back to faith. This was done in the patriarchal dispensation under which Abraham, Isaac, and Jacob lived. Upon the basis of this dispensation, it now became possible, the family having developed into the people, that, secondly, God's holy will should be revealed in the law, by which came the knowledge of sin (Rom. iii. 20). To this stage succeeded, thirdly, the foretelling of redemption by the prophets, who led from the law to the gospel, from Moses to Christ. The patriarchal dispensation, the law, and the prophets, are thus the three stages of revelation in the Old Testament, which now claim our more close consideration. But before we enter upon them, there are a few obstacles in our way which it were well to remove.

In the Old Testament, as in the Bible generally, we find numerous miracles, and to these the thinking of the present day is peculiarly averse. Now, the question of the possibility of miracles reduces itself to that other question of the existence of a God who created the world, and in whose power it must therefore be to introduce into it new creations. We all have abundant reason, nay, are even constrained by the laws of correct thinking, to believe in such a God; and therefore, the possibility and the existence of miracles may be looked upon as already thus briefly and inferentially proved. In fact that simple declaration by which Gabriel proved to the Virgin Mary the possibility of the

miraculous conception of the Saviour, "With God nothing shall be impossible" (Luke i. 37), is the best argument for the miraculous that severe and profound thought on God's relation to the world can discover. It is in this sense that the noted free-thinker, J. J. Rousseau, declares in his forcible way, that it is blasphemous to deny the possibility of miracles, and that he who does so deserves to be imprisoned. And one of the most acute of our modern thinkers, Richard Rothe, remarks in his *Studien und Kritiken*, "I will candidly confess, that up to this present time I have never been able to understand why the thought of miracles should be repugnant to my reason. This may proceed from my being originally of so thoroughly theistic a nature, which has never detected in itself the slightest tendency or doubt either of a Pantheistic or Atheistic kind." Miracles, indeed, belong to the very nature of divine revelation, and are its necessary phenomena; for revelation consists in God himself acting and speaking directly in humanity, so as to create in it something new which humanity could never have produced out of its own resources, and so to bring back the world to its original ideal of perfection in God. Neither should it any way surprise us, that the miracles recorded in the Old Testament are different in character and more marvellous than those in the New; for, from the sensuous, externally-directed spirit of that olden time, and of the still childish people (see Gal. iv. 1), it was necessary that startling and colossal miracles should be brought to bear, having the more exclusively external character of violent and unusual natural occurrences.

There are, however, other difficulties in the Old Testament which appear more formidable, because they not only threaten to offend our laws of thought, but our venal consciousness; as, for instance, the polygamy of the patriarchs, the command to exterminate the Canaanites, and so forth. Now, in dealing with questions of this kind, it behoves us to be candid and thoughtful enough to judge the past from the spirit of the whole. It is as unfair as it is unscientific to detach particular passages from their context, and to use them as weapons against the Old Testament. Before we venture to accuse it of defective morality, we should remember that those Ten Commandments lie at its very foundation, which have been transplanted into every Christian catechism, learnt by heart by all Christian people, and still form the basis of the morality of the whole civilised world. But though this proves how much of undying divine truth is contained in the Old Covenant, we are still to remember, on the other hand, that it is but the Old Covenant, not the New; only the preparation for, not the perfect revelation itself. Therefore, an unprejudiced and genuinely historical criticism measures the facts of the Old Testament by its own standard, not by that of the New Testament, nor of modern times. It takes up the idea expressed by Lessing, an idea founded on Scripture, that, namely, of a divine education of the

human race. Now, it is perfectly reconcilable with the divine educational wisdom, that certain conditions which, after the work of redemption had been accomplished, fell under moral condemnation, as, for instance, polygamy and slavery, should be still tolerated under the earlier dispensation, just as a judicious teacher or parent will only attempt to wean the children under his care gradually from their faulty ways, proceeding from requirements easily fulfilled to those which require greater efforts of self-control. As to the extermination of the Canaanites, it only exemplifies the universal historical sentence that new and vigorous nations have invariably been called to execute upon the worn out and degenerate; which, for example, the Babylonians and the Romans executed at a later period upon the Jews themselves, the Persians on the Babylonians, the Germans on the Romans. Only in Israel we read that "the Lord laid bare his arm;" in other words, this righteous judgment, which he usually accomplishes by his unseen guidance of the course of historical events, he expressly commanded to his chosen people, who found themselves in presence of a peculiarly degraded, ripe for destruction, and yet ensnaring heathenism. Naturally I cannot here clear up specifically all objections and difficulties that may be found in the Old Testament; it will be enough, in contradistinction to a widely-spread and superficial Rationalism, to lay down what is the truly scientific method of examination, and to indicate to all earnest seekers after truth, that here, too, faith and knowledge are easily reconcilable, nay, are much more than reconcilable merely.

To return. Abraham then is separated by God's command from all connection with his previous circumstances and surroundings, and their heathenish tendency; he is to leave his own family, his own country, and to go into a strange land, that of Canaan, which is henceforth to be the chief scene of the divine manifestations. And that it might be made evident that this emigration of Abraham's was not an isolated or accidental occurrence, but rather the ground and beginning of a series of further manifestations, God attaches a promise to the calling of the father of the faithful (Gen. xii. 1-3, 7); which, at a later period, to enforce its significance, he frequently repeated both to Isaac and Jacob. The nature of that promise is threefold: 1st, The childless Abraham is to become the ancestor of a mighty nation; 2dly, The land of Canaan is to belong to that nation; 3dly, Through Abraham and his seed all generations of the earth are to be blessed. Thus the promise from the very first embraces the whole of the Old and New Testament future, and while the appointed way is seen to begin with the choice of one individual man and one race, the universality of the aim, blessing and salvation for all humanity, is already revealed, and to Abraham personally rich recompense was made in this promise for all that he had sacrificed for God's sake. He was to leave his family indeed, but in return he was in his advanced age to have a family of his own,

may, to become the father of a great nation; he was to forsake his home, but to him and to his posterity a wide and beautiful land was to be given as inheritance. It is thus our God rewards. But this reward was not to be as yet actually possessed by Abraham, he had only the promise of it. Both external circumstances, and the calculations of reason and experience seemed to tend in a quite opposite direction. Abraham's wife is barren, both are old; how then can he expect posterity as the sands of the sea for number? And in Canaan he has only to wander as a stranger all his life long, and can call no portion of the land his but as much as serves for a grave. Thus Abraham was referred only to possessions to come, which had no present existence for him save in the words of the promise. He was not merely called upon to break through natural ties of heirship for God's sake, he had to do something harder still, to trust unconditionally in God and his word, for a compensation contrary to nature and apparently to reason. It was necessary, in order that Abraham should open a new historical period, that of redemption, that he should be entirely removed out of the soil of nature, and thoroughly rooted in God, in his merit and his grace. In other words, he must learn to believe. This requisite belief Abraham possessed, and throughout life, even under the severest tests, he ever rendered a believing obedience. This is that faith of our father Abraham, which the apostles of the New Testament, St. Paul above all, contemplate with the deepest reverence, and which God counted to him for righteousness. The whole narrative is so sublime and yet so full of holy simplicity, that it bears the unmistakable stamp of truth and historical actuality. No later Jew could possibly have invented the history of Abraham, for no other ever reached to his eminence of faith, and even the greatest saints of the Old Testament have only walked in the footsteps of the father of the faithful.

Thus then a living relationship was once more established between the true God and man; resting on God's side upon Promise, on man's upon Faith. God entered into a covenant with Abraham, that is, he solemnly instituted an especial fellowship with him above all other men and people, promising to be his God and the God of his seed in a special sense, even as they were on their side in a special sense to serve him. This covenant of grace is on God's side expressed in the words, "Fear not, Abraham, I am thy shield and thy exceeding great reward:" on the side of Abraham by the command, "I am the Almighty God; walk thou before me and be perfect;" these sentences being the introduction to the two solemn ratifications of the covenant recorded in Gen. xv. 11; xvii. 1. And as sign of this covenant, God enjoined upon Abraham and his descendants circumcision, which was the first initiation into legal rights. Since faith could not be inherited by natural generation, with the latter there was to be at least connected an external sign that should indicate that Abraham's seed was not to be merely his natural posterity, his children after the flesh; thus

pointing typically to the true and spiritually-begotten seed of Abraham, that is, to Christ. This is the higher and more sacred significance which the rite of circumcision,—used, no doubt, by other nations,—possessed among the people of God. The Old Testament has many forms and customs in common with the heathen, because it spoke to the people in a symbolic language, peculiarly appertaining to that olden time, just as we teach children by pictures; but all these forms will be found to be imbued in the Old Testament with a different and holier spirit and character than belongs to them in the natural religion of the heathen. Promise and faith, covenant and circumcision, are then, we see, the basis of the patriarchal dispensation of the Old Testament.

It was in Egypt that the patriarchal family grew into a people, and it was under Moses, one of the greatest and most gifted men the earth ever bore, that this people as such entered into the light of Revelation. God wooed Israel to be his own inheritance by wonders in Egypt, and in the Red Sea, and in the wilderness. Now in so great a multitude it was evidently impossible to reckon upon the faith and obedience of each individual. Yet all the people were to bear a divine impress; this then could only be done incompletely and externally by that legal method already introduced in circumcision, which would but bring more clearly to light inward deficiencies and offences. Now the life of a people shapes itself necessarily into a constitution and laws of some kind. Therefore by a new creative act of love, God condescends to conform to this groundwork of national existence, reveals himself as the King of Israel, and gives them a church and state constitution, a law whereby natural, social, political, moral, and religious life is so governed as in the very smallest detail to bear the impress of the divine election, and collectively to express the holy divine will. Upon the basis of this law, whose core, namely, the ten commandments, the Divine Being personally delivered in awful majesty, and to the obedience of which the people voluntarily pledged themselves, a covenant was entered into at Sinai between Jehovah and Israel, which we are accustomed in a restricted sense to call the Old Testament. The motto is, "Ye shall be holy, even as I am holy." But no inward sanctification, no holy and living renewal of the whole man, was conferred thereby. The law, although as being the will of God, it must needs be holy, nay spiritual, was yet itself no life-giving spirit; it stands as a mere letter in opposition to the flesh, chastening and restraining it without giving it a new birth, or having power to produce the true righteousness that avails before God. Thus the law does not itself bring salvation; it is only a school-master to bring us to Christ the Saviour.

More narrowly considered, the import of the law was, we shall find, threefold: 1st, It was a barrier whereby the people of God were separated from the wholly heathen nations around them, and kept under strict discipline in service to God. Thus a

consecrated national soil was set apart from the rest of humanity, like a garden enclosed from out the curse-laden ground, for salvation to grow up in. Hence the Old Testament joy of pious men in the law of the Lord, as the distinguishing and gracious gift of God to his people, the most costly possession of Israel, the way of life to the upright, which we find expressed in the Psalms, as, for instance, Ps. xix. and cxix. And since Israel was thereby distinguished from all other nations as a holy people, a theocracy and special inheritance to the Lord (Ex. xix. 5, 6), the law served, in the second place, to convince the people themselves in their own unholiness in contrast to the divine will. The law entered, as St. Paul says (Gal. iii. 19, compared with Rom. v. 20), between the patriarchal promises and their fulfilment in Christ, that the offences might abound, *i. e.*, partly that it should be more fully manifested (as we, for instance, sometimes *throw out* a disease in order to cure it), partly that a full consciousness, an undisguised and humiliating confession of it, should be brought about in the minds of men. Nor is this second purpose of the law inconsistent with the first, as it might at the first blush appear to be. To the great and carnal mass of the people the yoke of the law was often grievous, the barrier tempted to infringement, and the repeated falls into idolatry which marked the history of Israel for centuries, show in them an excess of sinfulness above that of the heathen, for the higher the revelation the greater the apostasy. And therefore the sins of Israel met with denunciation and rebuke, such as we find nowhere else; the calls to repentance, and the threats of judgment by the prophets, stand alone in ancient, nay, in universal literature; never was the truth spoken with such impressive and sacred earnestness to any people and its rulers. Thus the law bore fruit in the conscience of the prophets, and rendered them susceptible of the divine revelation for which they were appointed. Nor was the barrier of the law in vain for the people at large. It impressed upon them a peculiar religious character. We find Israel, after its apostasies and its judgments, again and again returning to its God; and after the Babylonish Captivity, the law was observed with such scrupulous conscientiousness, that the Messiah could grow up and develop in the observance of all Old Testament ordinances. But still more did the life of certain pious Israelites, who were the very essence, so to speak, of the people, prove that the institution of an external holiness, and the revelation of internal unholiness, by one and the same law, were perfectly reconcilable. The more pure these kept themselves from the abominations of the heathen, the more earnestly they endeavoured to keep the commandments of God, the more they discovered that their sanctification was but an external one, which might indeed satisfy the eyes of men, but was incapable of fulfilling the law in the inward parts that God beholds; nay, that the law rather wrought in them all manner of concupiscence (Rom. iv. 2, 11; iii. 28, 29; vii. 7, 8).

Accordingly in the Psalms, which reveal to us the influence of the law upon the spirits of pious Jews, we find a depth and clearness of the sense of sin, which we meet with in no other ancient record. The penitential Psalms are the fruit of the law in the conscience of Old Testament believers, who were thus prepared for the singing of "new songs," in the spirit. And those righteous men and women with whom we meet on the threshold of the New Testament, walking in all the commandments and ordinances of the law blameless, Zacharias and Elisabeth, Simeon and Anna, were no self-righteous Pharisees, but the very people who waited for the consolation of Israel, and for redemption at Jerusalem (Luke i. 6, 11, 25, 38); so that it was just in those who most conscientiously observed the law that it produced the deepest knowledge of sin, and the yearning for atonement and redemption. In this sense the law served as the necessary preparation and foundation for the further development of the promises in the prophecies.

But not only so, the law itself offered, if not actual redemption and atonement, at least an external atoning and purifying; and this is its third object, which is much more especially apparent in the priestly and sacrificial rites. These showed, in the external and symbolic manner peculiar to the Old Testament, that only by the expiation of sin by death, only by a free-will and unspotted sacrifice, can fellowship be restored between a holy God and sinful men. Under this aspect of the law, the emblematic presents itself as the prefiguring, the symbolic as the typical, the Old Testament, by its sensuous and visible representations, was the preparation for the spiritual and essential blessings of the New.

And now let us briefly review this threefold purpose of the law! It served to separate the people of Israel from the rest of the nations of the earth, to lead them to a knowledge of sin, and to afford them a type of redemption. The first of these purposes is connected more particularly with the law's political aspect, the second with its moral, the third with its ritualistic. In the first respect the Old Testament dispensation was the circumstantial way to that of the New; the second its necessary condition; the third its type and shadow. And it is in this intimate connection between the Old and the New Covenant, between the law and the gospel, that we discover a sublime plan which constrains every severe and rational thinker to refer it to the love and wisdom of a personal God. The fault of our sceptics is not too much, but too little thought.

We now pass to the third stage of revelation,—the prophetic. It needed a long course of time to establish the people in the condition aimed at by the law. This was only thoroughly done under David and Solomon, whose reigns mark the glorious culminating point of Jewish history, which was itself typical and prophetic, as the Messianic Psalms show, of a still more glorious future. But to that period succeeded one of declension. Even

under Solomon degeneration began and increased in the divided kingdom. The northern portion strengthened itself against the south by apostatizing from the pure worship at Jerusalem, and gave in its adherence to half or wholly idolatrous rites. The kingdom of Judah still indeed possessed the Holy City and the Temple, as well as the consecrated royal house of David, from which several pious monarchs sprung. The evil began therefore here, in the mere externality of religious observances and hypocritical lip service, with which gradually idolatrous tendencies associated themselves. These defections were met by the remonstrances of the prophets, who since the days of Samuel (compare Acts iii. 24) had stood beside the kings as messengers of the Divine King, and exponents of his will. These prophets were men taken out of various classes, whom God had called by special revelations, who were from time to time mightily inspired by his Spirit, and commanded by Him to appear before king and people as bold and incorruptible witnesses of divine truth.

It will be plain from the above, that these prophets had first to enter upon their public career in the apostate kingdom of Israel. It was here, at the time that, under Ahab and Jezebel, the worship of Baal most grossly prevailed, that Elijah and Elisha sought to bring about a reformation in favour of the true God and his law. The immense strength of the apostasy, which threatened to spread from the court through the whole people, required an extraordinary display of Jehovah in his omnipotence and majesty, and hence both these prophets were armed with the same miraculous power exercised by Moses in the presence of the Egyptians. On the other hand, while working thus by *deeds*, their *words* were not of such importance as to lead them to write down the revelations they had received. The written prophecies date from a later period, when Amos and Hosea arose in the north, and Joel, Isaiah, and Micah in the south, and from that time the prophets appear to have lost the power of miracles, while their prophetic insight, the results of which were to be preserved for races yet to come, was increased. But even these later prophets had for their immediate office the personally and verbally testifying before king and people, and calling backsliders to return to God. In Judah, where with much sinful practice a show of holiness was still observed, the prophetic office was more especially to insist upon true conversion and its genuine fruits. "To what purpose is the multitude of your offerings unto me?" cries the Lord, in the first chapter of Isaiah. "Bring no more vain oblations: incense is an abomination to me; the new moons and sabbaths, the calling of assemblies, I cannot away with; it is iniquity,—the solemn meeting. Wash you, make you clean; put away the evil of your doings from before mine eyes; cease to do evil; learn to do well; seek judgment, relieve the oppressed, judge the fatherless, plead for the widow." Thus it was that the prophets contended

with the people for a better and more spiritual righteousness, as later, Jesus did with the Pharisees (Matt. v. 20). While they recalled men to God's rule of order and duty, they became more and more penetrated not only with the external character, but the inward nature and spirit of the law.

Thus, while prophecy rests upon the basis of the law, it is itself a new, progressive, more and more heart and soul affecting stage of revelation. Thus it forms the transitional epoch between the law and the gospel, the bridge from the Old Testament to the New, and, as we plainly see, the prophets were enabled to get an insight into the new and better covenant and its spiritual character.

Thus we are led to that most prominent, but by no means only and exclusive aspect of prophetic activity—their prophecies properly so-called. These, again, have a twofold aspect of their own; they denounce judgment, and announce salvation. The calls to repentance had, to the great majority of the people, been sounded in vain; the awful words had even been spoken to Isaiah at the time of his calling: "Make the heart of this people fat, and make their ears heavy" (Isaiah vi. 10). There was consequently no thorough and enduring improvement of character and condition to be hoped for, and so the unrepented sin became liable to punishment. God, who has united the world's history with the history of redemption, had already prepared the rod of his anger for the rebellious people. The rise of the great Asiatic kingdoms of Assyria and Babylon, and their extension to the west, significantly synchronise with the apostasy of Israel. The more, therefore, the people of God strengthened itself in its idolatrous and ungodly position, the more definitely had the prophets to announce that it would become a prey to the heathen, to which it had assimilated itself, and would be carried away out of the holy land of its ancestors. We know how these threats of judgment were fulfilled in the Assyrian and Babylonian captivity.

But nevertheless the covenant of God with Israel still stood fast; the old promises made at the first to Abraham and renewed to David were not yet fulfilled, and could not possibly fail. God's people and kingdom could not be annihilated, and given over for ever as a prey to those heathen who so presumptuously abused the power lent to them. When, therefore, Israel had been chastened by the heathen, these last were to go themselves into judgment, and then when all flesh should have learned to humble themselves before the Lord of lords, he would establish his kingdom in new, loftier, and eternal glory. Like to the dawn of a brilliant day, the image of the perfected divine kingdom, the Messianic age rose before the prophetic sage from out the stormy night of judgment. That which, beginning even in paradise, had been the light of the whole pre-Christian revelation, although, so long as the Old Testament dispensation was itself advancing, it could only be the

accompanying element of its progressive stages, the Messianic prophecy, namely, now became more and more the principal feature. The old dispensation had now no other office than to point to the new, the no longer shadowy but substantial kingdom of God. The prophets foretold that the Messiah, that is, the anointed King of Israel, was, by an all-sufficient sacrifice, to make satisfaction for the sins of the people. Jehovah was to appear in his own person, and to be the Shepherd and King of humanity. The reign of peace, righteousness, and glory was to spread out of Zion over the whole inhabited world, and even the material creation was to have its share in the revival and redemption, the fulness of power, and blessedness of this truly divine kingdom.

With promises such as these, the Old Testament concludes, and must needs conclude; beyond this it had nothing more to give, for here we have the very ideal of the New verbally present. Our place is appointed us in that dispensation of fulfilment which has itself historical stages, as the preparatory dispensation had. But that which has been up to this present fulfilled in and by Jesus Christ, so eloquently witnesses to the divinity both of the prophecy and the accomplishment, of the Old and the New Testament, that, respecting the gospel as before respecting the law, we can confidently challenge each man only to open wide the eyes of his understanding, and bring to bear his utmost thinking powers, in order to convince himself that the cause of revelation is a good cause. He who thinks rationally must inevitably cease to think rationalistically.

On the part of God, then, as we have seen, everything had been done to prepare for the new dispensation by the old. We might, indeed, have expected that a people in possession of so many and glorious divine testimonies would have adorned itself as a bride for Messiah, the coming bridegroom. But such an expectation would contradict the tenor of all history.

"Many are called, few are chosen;" this is the almost universal axiom. Number and sizes go for nothing in the kingdom of God. Just as in the days of Elijah there were but seven thousand in Israel who had not bowed the knee to Baal, and as in our own time we are wont to distinguish between the visible and the invisible Church of true Christians, so was it amongst the Jews during the period of expectation that intervenes between the close of prophecy and the beginning of the fulfilment. The externally restored nationality that succeeded to the exile, was the husk in which grew the kernel, that little flock of the elect who were being educated by the law and the prophets for a secret life in the fear of God, and the confident waiting for the consolation of Israel. This little flock was the living fruit of the Old Testament dispensation. It is here that, foremost of all, we meet with Mary, the representative, as it were, of believing Israel, who, by her humility and simplicity

of faith, was fitted to become the mother of the Messiah. It is here we find Zacharias and Elisabeth, who were chosen to be the parents of the forerunner of Christ; here, too, were a number of fishermen and other Israelites without guile, whom the Lord afterwards chose to be the witnesses and apostles of his gospel. Such is ever the Divine method; with the least possible show an inward wealth, of which, in this case, it is especially true, that to him who hath shall be given; while, on the side of heathenism, we have the inverted human method, uniting with a high degree of external power and civilisation, inward emptiness and nothingness.

We must now contemplate those matured nations which God left to their own devices. These innumerable multitudes may be divided into three classes, the unhistorical, semi-historical, and historical peoples. The unhistorical are those who in a more or less degree are degraded almost below the level of humanity, and have hardly attained to the faintest beginnings of culture. Such in our day are the millions of Southern and Central Africa, the American Indians, the aborigines of Australia and of the South Sea Islands, and the countless hordes of the north and the interior of Asia. Although not without religious ideas and customs, these people are yet so thoroughly sensual, that, generally speaking, they appear, like the animals, to care only for the immediate wants of the present. They have no clear and connected consciousness of their own past, they know nothing of their own history; whereas it is just this unity of consciousness and memory, through which life is apprehended as a connected whole, that constitutes the nature of a reasonable being or a historical people. Hordes and tribes who possess no history of their own, can, of course, take no part in the history of the world. One can only say that they vegetate on, propagating themselves from century to century, till some mighty divine impulse shall restore in them the human dignity they have nearly lost. But it is a heavy mystery weighing upon our race, an awful thought, which is very seldom pondered deeply enough, that so large a portion of the human race should be given over for ages to such an existence as this.

Among the semi-historical nations should be classed the Hindus, Chinese, and Japanese, as well as the Mexicans and other ancient American civilized peoples. Here there is no want of culture or history. These people reached a rapid and important elevation in the early period of their existence; they possessed the art of writing, a literature, and many other elements of civilisation; they are acquainted with their own past, and more or less clearly conscious of its history. But the remarkable fact here is, that after reaching that first elevation they seem to have come to a perpetual stand-still. Those nations still carefully shut themselves from contact with others, as though retaining something of the old dread that

actuated the builders of Babel: "lest we be scattered abroad over the face of the earth." National egotism is, in its highest degree, stamped upon them all; there is an utter deficiency of that universal human sympathy which draws one nation towards another, and brings about historical events by friendly or inimical contact. Thus we have the wonderful spectacle of a history, begun indeed, but stationary, as it were arrested in its course; and this, too, is a mystery to which, taken up as we are with the great historical nations, we have not as yet given due importance, although these semi-historical nations constitute the largest section of the human race.

But these historical and semi-historical nations dwell far away from us in different quarters of the globe; we find the historical grouped round that specially historical people of Israel; in Northern Africa, Greece, and Italy. If we compare the unhistorical races to a mass of stones and fragments; the half-historical races, with some specimen of ancient elaborate architecture like a pagoda, that endures for centuries in stony repose; the historical people may remind us of a city full of life and movement. What the unhistorical nations could never attain to at all, and the semi-historical only imperfectly, is here brought to its highest perfection. We have here the three principal departments of the natural life of man, Art, Science, and Politics, developed on a grand scale. In the two first Greece, in the last Rome, completed the civilising process that had begun in the East. The remains of Grecian architecture and sculpture that we still possess, are ideals for all time. What Homer, Pindar, and Sophocles accomplished in poetry, Herodotus and Thucydides in history, is so classical in form that later centuries have ever returned to these sources, and ever will return. The Romans are pre-eminently the juridico-political nation. Within, they fixed their code with so much tact, circumspection, and equity, that even at the present day Roman law is of great importance to all civilised nations. Without, they conquered the whole east and west; it seems as if they had appropriated all the secrets of universal dominion from Assyria and Babylon, and Alexandria, in order to excel by far their teachers. In imperial Rome under Augustus, it may be said that we behold the heritage of the common attainments of all historical nations. All that the culture of East and West had during many centuries produced, centred and culminated in the capital of the world. Augustan Rome may be looked upon as the historical result of the collective development of heathen antiquity.

If, however, we contemplate the inward side of this brilliant world of power and civilisation, we shall find therein a profound void and discontent. There is a want of the very heart of human life, a want of faith. The great developing elements of Rome's history of politics and civilisation, necessarily exercised a destructive influence in this direction. The convulsions of disruption most deeply

shook the nations during the last centuries before Christ, and uprooted on many sides national consciousness, that foundation of ancient life, together with the religious element intimately connected with it. Still more influential was the progress of scientific thought, which set gradually extending philosophical and historical convictions in opposition to faith in the popular mythology. The rich world of culture in the period immediately preceding Christ was a goddess world; nevertheless man cannot long live without any religion, and accordingly even then the religious want of his nature showed itself in most varied and often in the strangest manner. Instead of the old lost faith, men sought to construct a new one of one kind or other. The secret teaching of the East was explored; the old mysteries of the Greeks revived; an attempt was made to gather truth out of all possible religions and philosophies; recourse was had to conjuration, astrology, fortune-telling, and secret arts of all kinds.

The most opposite streams, whether pure or impure, were to flow into one great river, from which the thirsting soul was to drink light and life. The world-empire seemed engaged in giving birth to a world-religion. But no new garment was to be woven out of these old heathen rags, and the internal bankruptcy of Paganism—its incapacity to satisfy the deepest needs of humanity, was more and more revealed. We know from the Acts of the Apostles, as well as from the Roman satirists, that there were in the Roman empire many, distinguished women more particularly, who earnestly sought after God, and joined themselves to the Jews, with whom they found a pure worship and a true Scripture. And when Christianity appeared, spite of all persecution, it found in the Roman empire a comparatively favourable reception and rapid extension. Now, then, the religion long pursued after had appeared!

Thus the ages of heathen development show us whereto humanity, left to itself, without God in the world, was able to attain. A great proportion sunk down to a nearly animal condition; another section made a promising start towards the unfolding of their natural energies, but in the midst of its career it stopped short, its strength was paralysed; the semi-historical people became prematurely old and weary, a notable result this of living without God in the world; and even that third portion of Pagan humanity which, by the strenuous exercise of all its powers, strove after and attained the highest development, when it had reached its goal felt itself unhappy. It was without that main life-spring of human wellbeing, *peace*; and it acknowledged that it could not procure itself that peace,—that salvation was of the Jews. Bethlehem, which signifies Bread-house, that least of all the cities of Judah, was the place where proud, yet in the midst of her abundance, hungry Rome, must consent to receive the bread of life.

We are tempted to draw a parallel between these

three stages of Jewish development, which we may designate as Patriarchism, Nationalism, and Universalism, and the three stages which we observe in the national life of Heathenism. The unhistorical people stand essentially on the patriarchal level. But while the family life of Abraham, Isaac, and Jacob, unfolding in covenant with God, and supported by his promise, joyously expanded and bore within itself the germ of a mighty national life, the corresponding stage of heathen existence either remained within the limitations of family and tribe, or, having lost all ideal standard whatever, sunk to the miserable condition of nomadic hordes. The semi-historical peoples, again, remind us of the Mosaic stage in Israelitish life, when the people of God began to have an independent and national culture of their own, which developed itself in strict separation from the rest of the nations. This union of internal civilisation and exclusion of external influence, is just what we have seen to be characteristic of the Chinese, &c. But these latter remain in this condition, decay in it; they lack the impulse to universalism which pervaded the people of Israel from the first, because they were the people of that God to whom the whole earth belonged (Exodus xix. 5); and knew themselves from their earliest origin appointed to be a blessing to the whole human race (Genesis xii. 3). This impulse towards universalism is the peculiarity of the heathen nations of the third class, namely, the historical. They realised it in the form of a great world-empire, or universal monarchy. But while the nations were in this manner brought out of isolation, they only in point of fact attained to a reciprocal destruction and deprival of national

existence. Thus, every great monarchy in its turn destroyed many smaller states, while, on the other hand, Cyrus overthrew the Babylonians, Alexander the Persians, Rome the Greeks. In the same way Israel, too, lost its national independence when drawn into the great currents of the empire of the world. But to a crushing political universalism it could oppose the new life-giving religious universalism of its prophecies. All the great historical peoples have sunk without a promise, and are buried in the ruins of their former glory; but from Israel, according to the promise, a new divine universal kingdom has arisen out of the ruins of its material political existence; a kingdom that, originally founded in the Spirit, shall hereafter be manifested in external glory. While the people of God lay, like the rest of the nations, as to outward condition, beneath the domination of the world-empire, its existence was not only preserved and spared for a better future, as was the case with no other, but in relation to the inmost and highest life of humanity, the law went forth to the rest of the world out of Zion, and Japhet still dwells in the tents of Shem.

At that period, when a meek and lowly maiden was dwelling at Nazareth, and at Rome a world-swaying Caesar, beneath whose sceptre heathen humanity had reached its fulness of power and civilisation, and at the same time revealed most completely its inward emptiness and poverty, then, on the side of the people of God, and on that of the people of the world, the period of preparation had alike run its course. It is thus we understand the Christmas message,—“In the fulness of time God sent forth his Son.”

THE FIRST BALLOON VOYAGE IN ENGLAND.

BY JAMES GLAISHER, F.R.S.

In the year 1784, on September 15th, the first aerial journey in England was performed. That is, just seventy-eight years ago the first of such experiences as those of myself and Mr. Coxwell were realised; and a young Italian, Vicenzo Lunardi, secretary to the Neapolitan Ambassador, distinguished himself as the first aerial traveller in the English atmosphere.

The history of his undertaking is contained in the pages of a correspondence he addresses to a friend. These letters, in which he unfolds his project, relates his difficulties, and confides his hopes, win for him an interest and sympathy beyond that which attaches to him as a lover of science and an experimentalist. He writes as a foreigner, and delivers his judgment of our national habits and prejudices with a naive precision and freshness which is amusing, and indelibly fixes in our mind the chronology of the time he belongs to.

He first conceives the design of interesting generosity and humanity in the patronage of an experi-

ment of some hazard, and determines to ascend from Chelsea Hospital, “as from the altar of humanity, to ascend the skies.” He writes therefore to Sir George Howard, governor of the Hospital, and wishes to be assured of a place for launching his balloon, to which none but subscribers shall be admitted. The gain over and above the expenses of the undertaking, he proposes shall be divided among the invalids of the Hospital; and the governor, with the approbation of his Majesty King George III., accedes to his request.

He confesses that, not being in affluence, he finds himself placed at some disadvantage.

“In Italy,” he writes, “I should have sought the patronage and generosity of my sovereign, or of some liberal and opulent nobleman, to enable me to sustain the expenses of my present undertaking; here wealth is more equally divided, and by any contrivance that can gratify the curiosity of the people, sums of money are immediately collected

without the anxiety and mortification of petitioning the great. Hence, the innumerable exhibitions always open in London, and which are means of circulation, convenience, information, and utility almost unknown in every other country."

He further writes: "You will not be offended that the Secretary of the Embassy exhibits his balloon, when you know the first artists in the nation, under the immediate patronage of the king, and incorporated with an academy, exhibit their pictures yearly, and that the price of admission is one shilling."

The advertisement appears, and announces the construction of a globe thirty-two feet in diameter. Its purpose is to ascend into the higher regions of the atmosphere, subject to various interesting experiments. It is to drift for miles before the wind, and to range not higher than a gunshot above the earth. His globe is made of the best oiled silk, and is filled with inflammable air (hydrogen gas); it is fitted with a gallery or car, oars, and wings. To guinea subscribers, Signor Lunardi promises admission to Chelsea Hospital gardens on the day of ascending, a chair near the globe, and admission, four different times, to view the construction. The half-guinea subscribers will be admitted likewise to the gardens, and will have seats on benches next the chairs, and will be admitted twice to see the construction of the machine.

To his sanguine expectation the advertisement put forward appears certain to be realised. In the fulness of this expectation he writes: "England is open to all the world, either in war or peace; and a man of talent, whether liberal or mechanic, cannot fail of support and encouragement in proportion to his merit. Here the prodigious resort of strangers has nearly destroyed that indiscriminate species of hospitality which prevails on the Continent. But when once a circumstance in the situation or character of a stranger has attracted the notice of an Englishman, and he has declared himself his protector and friend, it is worth a thousand of the civilities of general hospitality; a reliance may be had on its sincerity, and the friendship is permanent in duration as it is slow in growth."

Sir Joseph Banks lends his name to the subscription. He had at this time a reputation as a botanist collector, and was popularly known as the companion of Captain Cook in one of his voyages round the world. He was also President of the Royal Society.

The subscriptions, however, come in slowly, and Signor Lunardi confesses that his balloon, the largest and the best constructed as to materials and principle, does not excite the curiosity he expected. It is composed of 520 yards of oiled silk, disposed in alternate stripes of blue and red. Its form is spherical, and it is kept suspended and filled with common air, injected into it through tubes of oiled silk, which pass into the sides of the balloon. More than two-thirds are covered with a strong net,

from which depend cords, forming equal sections at its lower part, and uniting at the bottom. These are fastened to the car, or gallery, which, unlike the car of modern times, consists of a platform, surrounded by a railing breast high.

The balloon is furnished with wings and oars; the wings to excite a breeze when the globe is becalmed; the oars to lower it, by a vertical motion, and to save the necessity of parting with the inflammable air. Signor Lunardi aims at being the first not only to visit the English atmosphere, but to check the movement of the balloon, and descend at pleasure, by other means than the valve. In this only he aims at originality, and wishes to depart from the successful track of the French philosophers.

A little later all his anticipations are changed; and he writes in an embittered spirit: "The events of this extraordinary island are as variable as its climate. It was but lately, everything relating to my undertaking wore a favourable and pleasing appearance; but I am at this moment overwhelmed with anxiety, vexation, and despair." This trouble is caused by a ridiculous failure on the part of one Moret, a Frenchman, who had advertised an ascent in competition. To witness Moret's ascent a concourse of 50,000 or 60,000 people assembled in the gardens, and waited from one to four o'clock with patience for the filling and ascension of the balloon. But when it failed, and in spite of every attempt, sunk into the fire which expanded it, the people, imagining the whole affair an imposture, rushed in and tore it to pieces!" and, adds our disconsolate informant, "spread desolation and terror through the whole district."

In consequence of this ridiculous catastrophe, and the riots which ensued, Sir George Howard forbids the ascent from the gardens of Chelsea Hospital; and it appears likely the undertaking must be relinquished. Popular ridicule and sarcasm, aimed at the sincerity of his attempt, stigmatise Signor Lunardi as an impostor and colleague of the unfortunate Moret. Nowhere can he obtain leave to launch his balloon from private grounds; and, sunk in the utmost distress, he again confides in his friend.

"The national prejudice," he says, "of the English against France, is supposed to have its full effect on a subject from which the literati of England expect to derive but little honour. An unsuccessful attempt has been made by a Frenchman, and my name being that of a foreigner, a very excusable ignorance in the people may place me among the adventurers of that nation who are said to have sometimes distinguished themselves here by ingenious impositions."

In his next letter he writes: "I still have hopes, for what philosophers dare not attempt, the ladies easily accomplish. They can smile into acquiescence that uncouth monster, popular prejudice, and they regulate the opinions and manners of a nation at pleasure." He proceeds to intimate that his difficulties, his perseverance, and his unmerited persecu-

tion, have invested him, in the eyes of the fair sex, with an air of heroism, and flattered by their continued interest, in a burst of enthusiasm vows he will make the attempt, even if he ascends from the street.

By dint of exertion and private interest he at length gains permission to ascend from the ground of the Honourable Artillery Company, the Prince of Wales having promised to be present. The alloy to this burst of success is the stipulated payment of 100 guineas in aid of the subscriptions to the family of the late Sir Bernard Turner, on the strength of which he receives permission to ascend.

Signor Lunardi makes no difficulty in promising the subscription, and, as before, is more than satisfied to connect his hazardous adventure with some benevolent purpose. From the tenacity with which he maintains this point, we might imagine he sought the favour of Providence through the benevolent work, the interests of which he endeavours to promote. We will not stay to analyse whether religious or superstitious feeling guides him in this desire.

The morning of the ascent arrives. The Artillery corps have promised to appear under arms for the purpose of preserving order and regularity, and Signor Lunardi is at the climax of excitement. He retires frequently from the ground to record the passing impressions of the moment, and writes to his friend: "The auspicious morning has arrived. I have no apprehension but of the populace, which is here, as it is everywhere, an impetuous, impatient, and cruel tyrant."

At twelve o'clock an immense concourse has assembled, collected into one compressed and impenetrable mass. Our enthusiast retires for a moment into an upper room of the Artillery House. "The view," he writes, "would suggest to a tyrant the idea of a pavement of human heads; but I conceive the risk of going up in my balloon trifling, compared with that of attempting to walk on the living surface I now contemplate. One hundred and fifty thousand countenances all turned in one direction!"

By half-past one o'clock the Prince of Wales has arrived, and the time fixed for the departure of the balloon has become exceeded. The Prince of Wales remains near the apparatus to see it filling, in preference to joining the company in the house. He directs his questions with an intelligent curiosity, and occasionally expresses a wish for the safety of the aeronauts, as if not destitute of doubt. Signor Lunardi is not to ascend alone, but has accepted the offer of a young gentleman of fortune and enterprise to share with him the danger, if not the glory of the adventure.

The incidents of this day, so memorable to Lunardi, and itself an epoch in balloon history, are given with a genuine intensity of delight which places them before us with all the circumstances of time and place as vividly as our own experiences, cut from the pages of the "Times," and witnessed but yesterday by the crowd at Wolverton, or, more

recently still, by a greater crowd at Newcastle. His youth, his self-sacrifice, his embarrassments, so greatly to be increased by the gift of 100 guineas to purchase permission to ascend; the novelty of his enterprise, and the freshness and vigour of these his first impressions, all unite together to distinguish him as a man of new experiences, one of the first possessors, as it were, of a new faculty added to our being; but for the wild enthusiasm, which colours with something more than the egotism of a foreigner his view of the day's proceedings, he calls for our forbearance.

Beyond the desire to depress his balloon at will, and command its descent by an apparatus of his own invention, Signor Lunardi aims at no different construction to that which had been employed in France. He therefore, once launched, sails at ease, and notes, as ourselves have since done, the grandeur of the view, and the varying effects and beauties enclosed within a circular horizon of almost infinite extent. In him, as in later aeronauts, undulating masses of clouds, tinged with the colours of the rainbow, excite breathless admiration. But Mr. Coxwell and myself, bidding farewell to the members of the Committee of the British Association, approving friends, and an amused and admiring crowd, have no parallel experiences with the harassed foreigner, stigmatised as an adventurer and impostor; and who, in the event of failure, sees himself and his machine given over to the outrages and malevolence of the mob. With far less discernment than that possessed by the diplomatist of a foreign embassy, we can read the intellectual progress of three-quarters of a century: no further test is needed than the intelligent interest and sympathy now accorded to scientific enterprise, and the extinction of national jealousies. In Signor Lunardi's case the penalty of success is paid in a fit of sickness, which ensues on the successes of the day. Reaction and fatigue perform their work, and it is more than a week before he can again resume his pen. He lays it down only at the last moment, and among his latest impressions speaks of the prince, who sharing in the doubts and misgivings of others, yet lends, as prince and gentleman, all the support he can to the cause of scientific adventure and improvement. On his recovery, Signor Lunardi finds himself borne along on the current of popular applause, received everywhere with respect and friendship, caressed and rewarded by the prince, and commanded to an audience by the king, who professes a warm interest in his adventures and personal safety.

The narrative re-commences with a dilemma caused by the elaborately slow process of filling the balloon. It is therefore abruptly stopped before the impatience of the multitude is beyond control. But the requisite force intended is not attained, and the voyage must be performed without a companion. Signor Lunardi decides at once to ascend alone. In the confusion of ideas consequent on the incidents and hurry of departure, the instruments

of observation intended for the voyage are likewise left behind. At five minutes after two the last gun is fired, the cords are divided, and the balloon has risen, amid the most unfeigned acclamations and applause. The multitude are more than satisfied, and pass in a moment from incredulity and menace into the most extravagant expressions of approbation and joy.

The balloon ascends to the height of 200 yards, and Signor Lunardi is intent on exhibiting himself to 15,000 people, who had not witnessed his ascent from the ground. In his manœuvres an oar

becomes broken, and falls to the ground; and of his three companions, a pigeon, a dog, and a cat, the bird manages to escape. But the air is rent with acclamations and applause, and Signor Lunardi is triumphant.

The temperature falls from 68° to 61°, and the change is readily perceptible; the globe is rapidly advancing upwards, and the delighted aeronaut, released from apprehension, applies himself to his provision. He refreshes himself with a few glasses of wine and the leg of a chicken; but the bread, and some other edibles, he writes with amusing

Mr. Lunardi ascending from the Artillery Ground, September 15th, 1784.

precision to his friend, have become mixed with the sand, and spoiled.

With the thermometer at 50°, and no personal discomfort pressing upon his attention, he experiences a calm which he describes as inexpressible, and which no situation on earth could give. He writes: "The stillness, extent, and magnificence of the scene rendered it highly awful. My horizon seemed a perfect circle; the terminating line several hundred miles in circumference; this" (he continues) "I conjectured from the view of London, the extreme points of which formed an angle of only a few degrees. It was so reduced on the great scale before me that I can find no simile to convey an idea of it. I could distinguish St. Paul's and

other churches from the houses; I saw the streets as lines, all animated with beings whom I knew to be men and women, but which I should otherwise have had a difficulty in describing. It was an enormous beehive, but the industry of it was suspended. All the moving mass seemed to have no object but myself, and the transition from the suspicion, and perhaps contempt of the preceding hour to the affectionate transport, admiration, and glory of the present moment was not without its effect on my mind. It seemed as if I had left below all the cares and passions that molest mankind. I had not the slightest sense of motion in the machine. I knew not whether it went swiftly or slowly, whether it ascended or descended, whether it was

agitated or tranquil, but by the appearance or disappearance of objects on the earth. The height had not the effect which a much less degree of it has near the earth, that of producing giddiness." He concludes this range of experiences with the remark that there is no sense of effort, difficulty, and restraint during a voyage in the balloon.

Passing from the history of his sensations, he next turns his attention to the view, which he admits he cannot accurately describe. "The gradual diminution of objects, and the masses of light and shade," he observes, "are intelligible in

oblique and common prospects, but here everything wore a new appearance and had a new effect. The face of the country had a mild and permanent verdure to which Italy is a stranger. The variety of cultivation, and the accuracy with which property is divided, give the idea, ever present to the stranger in England, of good civil laws and an equitable administration. The rivulets meandering; the immense district beneath me, spotted with cities, towns, villages, and houses pouring out their inhabitants to hail my appearance! You will," he adds by apology, "allow me some merit in not

The Balloon entangled in a Meadow near Ware.

having been exceedingly intoxicated with my situation."

To prolong his enjoyment of the scene beneath him, he tries the effect of his remaining oar, and thinks he succeeds in keeping the same parallel with the earth for nearly half an hour; but the exercise is fatiguing, and, satisfied with his experiment, he sits down calmly and resumes his pen.

During his excursion he writes three letters, besides making some desultory observations. The first are committed successively to the winds, on the chance of their falling into the hands of his friends, and relieving their anxiety on his account.

While he writes the balloon has been ascending rapidly. Of this he is warned by the decreasing

temperature, which falls to 32°. The balloon, at first but partially inflated, acknowledges the difference of height, and assumes the form of an oblong spheroid, the shortest diameter of which is in a line with the aeronaut. On its first ascension it held the form of an inverted cone, wanting very nearly one-third of its full complement of gas. There is no valve, and he can only open the neck of the balloon, on the chance that the strong rarefaction might force out some of the inflammable air. The vapour around its neck is frozen. Reminded by this test of temperature that he is at his highest elevation, he looks again at the earth, which appears like a boundless plain, whose surface has variegated shades, but on which no object can be accurately distinguished.

At half-past three o'clock he descends in a cornfield on the common of South Mimms, where he lands the cat, the poor animal having suffered greatly from cold. His descent, he thinks, is effected by the action of his single oar working vertically. The people about come forward to assist at his disembarkation, but he wishes to obtain a second triumph; he throws out the remainder of his ballast and provisions, and bidding them stand clear, ascends again in their view. A second time he sits down to write, but his ascension is so rapid, that, before half a page is written, the thermometer has descended to 29°, and the balloon is fringed with icicles. This is the highest elevation he attains, and his letter finished, he fastens it with a corkscrew to his handkerchief and throws it down. He also (contrary to the modern usage of Mr. Coxwell, who is a strict disciplinarian), and forgetful of the impetus they would attain in falling, throws down the plates, knives and forks, the little sand that remained, and an empty bottle, which takes some time in disappearing. "The earth," he writes, "appears as before, like an extensive plain, but the same variegated surface; but the objects rather less distinguishable. The clouds to the eastward rolled beneath me in masses scarcely larger than the waves of the ocean. I therefore did not mistake them for the sea. Contrasted with the effects of the sun on the earth and water beneath, they gave a grandeur to the whole scene which fancy cannot describe."

At twenty minutes past four he descends in a capacious meadow, near Ware, in Hertfordshire. Some labourers are at work in the field, but they refused to come forward to his assistance. At length a young girl advances to take the cords which he has thrown out, and Signor Lunardi records with indignation, that on her calling to the men, they even denied to her request, what they had refused to his. A crowd presently assembles, and he recognises General Smith, who has followed him from town on horseback, and who assists him in securing the balloon. It is made captive, and the inflammable air is let out by an incision, but it nearly poisons the neighbourhood by emitting a most offensive stench. The apparatus is then confided to the care of a Mr. Hollingsworth, and is some time after exhibited at the great room of the Pantheon, one of the largest then in London, and now the Pantheon Bazaar. The party adjourned to the Bull Inn at Ware, and Signor Lunardi is introduced to William Baker, Esq., M.P. for Hertford. This gentleman conducts our hero to his seat at Bayford Bury, and wins his admiration, for the frank and generous hospitality with which he receives him. The first aerial voyage made in England, therefore, terminates as favourably as those of the last season, and contains throughout the germ of the same experiences which myself and Mr. Coxwell have further extended and improved.

On his recovery from the illness which ensues from over-wrought excitement, Signor Lunardi finds him-

self the lion of the season, and he records with naïve delight that his Majesty, in council with his ministers, broke up the conference to look at him in passing, and, attended by Mr. Pitt, viewed him through a telescope while he remained in sight. The eager populace are anxious to make him amends, and he is offered the houses and scaffolding near for his own use, if he chooses to exhibit again. "My fame," he writes, "has not been sparingly diffused by the newspapers (which in England are the barometers of public opinion; often erroneous, as other instruments are in their particular information, but yielding the best that can be obtained). You will imagine the importance of these vehicles of knowledge when you learn that in London alone there are printed no less than a hundred and sixty thousand papers weekly, which, by a stamp on each paper, and a duty on advertisements, bring into the treasury of the nation upwards of eighty thousand pounds a year. They are to the English Constitution what the Censors were to those of ancient Rome. Ministers of State are checked and kept in awe by them, and they freely, and often judiciously, expose the pretensions of those who would harass government merely to be taken into its service."

Signor Lunardi makes his appearance at Court, and is presented at the drawing-room, which is very crowded, it being the anniversary of the King's coronation. The Prince of Wales is there, and laughingly congratulates him on being still alive. He also sends his equerry to say that on the day of his ascension he observed him to borrow of M. Aubert a watch describing seconds of time, and that His Royal Highness has ordered his watchmaker to take from Signor Lunardi directions for such a one as shall be useful another time.

We should serve no purpose by following further his enthusiastic and incidental narrative of every minute detail, and we will take leave of him at the time when he is fully occupied with the exhibition of his balloon at the Pantheon. "It is difficult," he writes to his friend, "to imagine anything more pleasing than the solicitude which multitudes of beautiful women express concerning the dangers that are past, and the heroism of others who wish to accompany me in my second tour."

We should not omit to add that one of the letters is picked up by a gentleman, while out shooting, and conveyed to the author. The letter alludes briefly to that which is written more at length in the narrative from which we have copied.

Modern experiment has confirmed this almost obsolete account of an adventure, of which the remembrance obtains, in every child's history or diary of events, as the fact of a "first balloon ascent in England in the reign of George III." It is interesting to observe that its leading features are the same as those of later days, excepting in regard to the external circumstances under which it was undertaken; and here the main parallel is the interest it commanded from the Prince of Wales, afterwards

Prince Regent and George IV., and the interest which His Royal Highness the Prince of Wales lately evinced in Mr. Coxwell's balloon waiting to ascend from the gardens in the Crystal Palace. The intellectual spirit of the times can dispense with

His Royal Highness as guardian of the peace in the event of failure; but now, as seventy-eight years ago, scientific enterprise is equally honoured by any degree of interest or approbation that may be conferred.

REMINISCENCES OF A HIGHLAND PARISH.

BY THE EDITOR.

CHAPTER XVIII.—THE SCHOOLMASTER.

THE Parish Schoolmaster of the past belonged to a class of men and to an institution peculiar to Scotland. Between him and the Parish clergyman there was a close alliance formed by many links. The homes and incomes of both, though of very unequal value, were secured by Act of Parliament, and provided by the heritors of the Parish. Both held their appointments for life, and could be deprived of them only for heresy or immorality, and that by the same kind of formal "libel," and trial before the same ecclesiastical court. Both were members of the same church, and had to subscribe the same confession of faith; both might have attended the same university, nay, passed through the same curriculum of eight years of preparatory study.

The Schoolmaster was thus a sort of prebendary or minor canon in the Parish cathedral—a teaching presbyter and coadjutor to his preaching brother. In many cases "the master" was possessed of very considerable scholarship and culture, and was invariably required to be able to prepare young men for the Scotch universities, by instructing them in the elements of Greek, Latin, and Mathematics. He was by education more fitted than any of his own rank in the Parish to associate with the minister. Besides, he was mostly always an elder of the kirk, and the clerk of the kirk session; and, in addition to all these ties, the school was generally in close proximity to the church and manse. The master thus became the minister's right hand and confidential adviser, and the worthies often met. If the minister was a bachelor—a melancholy spectacle too often seen!—the Schoolmaster more than any other neighbour cheered him in his loneliness. He knew all the peculiarities of his diocesan, and knew especially when he might "step up to the Manse for a chat" without being thought intrusive. If, for example, it was Monday—the minister's Sunday of rest—and if the day was wet, the roads muddy, the trees dripping, and the hens miserable, seeking shelter under carts in the farmyard, he knew well that ere evening came, the minister would be glad to hear his rap break the stillness of the Manse. Then seated together in the small study before a cheerful fire, they would discuss many delicate questions affecting the manners or morals of the flock, and talk about the ongoings of the Parish, its births,

marriages, and deaths; its poor, sick, dying sufferers; the state of the crops, and the prospects of good or bad "Fiars prices," and the prospects of good or bad stipends, which they regulated; the chances of repairs or additions being obtained for Manse, church, or school; preachers and preachings; Church and State politics—both being out-and-out Tories; knotty theological points connected with Calvinism or Arminianism; with all the minor and more evanescent controversies of the hour. Or, if the evening was fine, they would walk in the garden to examine the flowers, or more probably the vegetables, and *dander* over the glebe to inspect the latest improvements, when the master was sure to hear bitter complaints of the laziness of "the minister's man" John, whom he had been threatening to turn off for years, but who accepted the threats with as great ease of mind as he did his work. Before parting, they partook, perhaps, of a humble supper of eggs and toasted cheese, soft as thick cream, washed down by one glass of Edinburgh ale, or, to be perfectly honest, one tumbler of whisky toddy, when old Jenny was told to be sure that the water was boiling.

A schoolmaster who had received licence to preach, and who consequently might be presented to a parish, if he could get one, belonged to the aristocracy of his profession. Not that he lived in a better house than his unlicensed and less educated brother, or received higher emoluments, or wore garments less glittering and japanned from polished old age. But the man in the pulpit was taller than the man in the school, addressed larger pupils, and had larger prospects.

Among those schoolmasters who were also preachers, it was possible, I dare say, to find a specimen of the Dominie Sampson class, with peculiarities and eccentricities which could easily account for his failure as a preacher, and his equally remarkable want of success as a teacher. There were also a few, perhaps, who had soured tempers, and were often crabbed and cross in school and out of it. But don't be too severe on the poor Dominie! He had missed a church from want of a patron, and, it must be acknowledged, from want of the gift of preaching, which he bitterly termed "the gift of the gab." In college he had taken the first rank in his classes: and no wonder, then, if he is a little mortified in seeing an old acquaintance who had been a no-

torious dunce obtain a good living through some of those subtle and influential agencies, and "pow'r o' speech i' the poopit," neither of which he could command, and who—oleaginous on the tiends—slowly jogged along the smooth road of life on a punchy, sleek horse, troubled chiefly about the great number of his children and the small number of his "chalders;" it is no wonder, I say, that he is mortified at this, compelled, poor fellow, to whip his way, tawse in hand, through the mud of A B C and Syntax, Shorter Catechism, and long division, on a pittance of some sixty pounds a year. Nay, as it often happened, the master had a sore at his heart which few knew about. For when he was a tutor long ago in the family of a small Laird, he fell in love with the Laird's daughter Mary, whose mind he had first wakened into thought, and first led into the land of poetry. She was to have married him, but not until he got a Parish, for the Laird would not permit his fair star to move in any orbit beneath that of the Manse circle. And long and often had the parish been expected, but just when the presentation seemed to be within his nervous grasp, it had vanished through some unexpected mishap, and with its departure hope became more deferred, and the heart more sick, until Mary at last married, and changed all things to her old lover. She had not the pluck to stand by the master when the Laird of Blackmoss was pressing for her hand. And then the black curly hairs of the master turned to grey as the dream of his life vanished, and he awoke to the reality of a heart that can never love another, and to a school with its A B C and Syntax. But somehow the dream comes back in its tenderness as he strokes the hair of some fair girl in the class and looks into her eyes; or it comes back in its bitterness, and a fire begins to burn at his heart, which very possibly passes off like a shock of electricity along his right arm, and down the black tawse, finally discharging itself with a flash and a roar into some lazy mass of agricultural flesh who happens to have a vulgar look like the Laird of Blackmoss, and an unprepared lesson!

It often happened that those who were uncommonly bad preachers, were, nevertheless, admirable teachers, especially if they had found suitable wives, and were softened by the amenities of domestic life; above all when they had boys of their own to "drill." The Parish school then became a school of no mean order. The glory of the old Scotch teacher of this stamp, was to *ground* his pupils thoroughly in the elements of Greek and Latin. He hated all shams, and placed little value on what was acquired without labour. To master details, to stamp grammar rules and prosody rules, thoroughly understood, upon the minds of his pupils as with a peu of iron; to move slowly, but accurately through a classic, this was his delight; not his work only, but his recreation, the outlet for his tastes and energies. He had no long-spun theories about edu-

cation, nor ever tried his hand at adjusting the fine mechanism of boys' motives. "Do your duty and learn thoroughly, or be well licked," "Obedience, work, and no humbug," were the axioms which expressed his views. When he found the boys honest at their work, he rejoiced in his own. And if he discovered one who seemed bitten with the love of Virgil or Homer; if he discovered in his voice or look, by question or answer, that he "promised to be a good classic," the Dominic had a tendency to make that boy a pet. On the annual examination by the Presbytery, with what a pleased smile did he contemplate his favourite in the hands of some competent and sympathising examiner! And once a year on such a day the Dominic might so far forget his stern and iron rule as to chuck the boy under the chin, or clap him fondly on the back.

I like to call those old teaching preachers to remembrance. Take them all in all they were a singular body of men; their humble homes, and poor salaries, and hard work, presenting a remarkable contrast to their manners, abilities, and literary culture. Scotland owes to them a debt of gratitude that never can be repaid; and many a successful minister, lawyer, and physician, is able to recall some one of those old teachers as his earliest and best friend, who first kindled in him the love of learning, and helped him in the pursuit of knowledge under difficulties.

In cities the Schoolmaster may be nobody, lost in the great crowd of professional and commercial life, unless that august personage the Government Inspector appears in the school, and links its master and pupil teachers to the august and mysterious Privy Council located in the official limbo of Downing Street. But in a country Parish, most of all in a Highland Parish, to which we must now return, the Schoolmaster or "Master" occupied a most important position.

The Schoolmaster of "the Parish" half a century ago was a strong built man, with such a face, crowned by such a head, that taking face and head together, one felt that he was an out-and-out *man*. A Celt he evidently was, full of emotion, that could be roused to vehemence, but mild, modest, subdued, and firm,—a granite boulder covered with green moss, and hanging with flower, heather, and graceful fern. He had been three years at Glasgow University, attending the Greek, Latin, and logic classes. How he, the son of a *very* small farmer, had supported himself is not easily explained. His fees, which probably amounted to 6*l.*, were the heaviest item in his outlay. The lodgings occupied by him were in the High Street, and he lived nearer the stars than men of greater ambition in Glasgow. His landlady, overlooking these peculiar privileges, charged but 4*s.* or 5*s.* a-week for everything, including coals, gas, cooking, and attendance. He had brought a supply of potatoes, salt herrings, sausages, and salt fish from the Highlands, and a ham which seemed immortal from the day it was

boiled. It was wonderful how the student with a few pounds eked out his fare, with the luxuries of weak coffee and wheaten bread for breakfast, and chop or mince-meat for dinner. And thus he managed, with a weekly sum which an unskilled labourer would consider wretched wages, to educate himself for three years at the University. He eventually became the schoolmaster, elder, session clerk, precentor, postmaster, and catechist of "the Parish," offices sufficient perhaps to stamp him as incompetent by the Privy Council Committee acting under "a Minute," but nevertheless capable of being all duly discharged by "the Master."

The school of course was his first duty, and there he diligently taught some fifty or sixty scholars in male and female petticoats for five days in the week, imparting knowledge of the "usual branches," and also instructing two or three pupils, including his own sons, in Greek, Latin, and Mathematics. I am obliged to confess that neither the teacher nor the children had the slightest knowledge of physiology, chemistry, or even household economy. It is difficult to know, in these days of light, how they got on without it: for the houses were all constructed on principles opposed in every respect to the laws of health as we at present understand them, and the cooking was confined chiefly to potatoes and porridge. But whether it was the Highland air which they breathed, or the rain which daily washed them, or the absence of doctors, the children who ought to have died by rule did not, but were singularly robust and remarkably happy. In spite of bare feet and uncovered heads they seldom had colds, or, if they had, as Charles Lamb says, "they took them kindly."

His most important work next to the school was catechising. By this is meant, teaching the "Shorter Catechism" of the church to the adult parishioners. The custom was at certain seasons of the year, when the people were not busy at farm-work, to assemble them in different hamlets throughout the Parish: if the weather was wet, in a barn; if fine, on the green hill side, and there by question and answer, with explanatory remarks, to indoctrinate them into the great truths of religion. Many of the people in the more distant valleys, where even the small "side schools" could not penetrate, were unable to read, but they had ears to hear, and hearts to feel, and through these channels they were instructed. These meetings were generally on Saturdays when the school was closed. But on all days of the week the sick, who were near enough to be visited,—that is, within ten miles or so,—had the benefit of the master's teaching and prayers.

The Schoolmaster, I have said, was also postmaster. But then the mail was but weekly, and by no means a heavy one. It contained only a few letters for the sheriff or the minister, and half-a-dozen to be delivered as opportunity offered to outlying districts in the Parish, and these, with three or

four newspapers a week old, did not occupy much of his time. The post, moreover, was never in a hurry. "Post haste" was unknown in those parts: the "Poste restante" being much more common. The "runner" was a sedate walker, and never lost sight of his feelings as a man in his ambition as a post. Nor was the master's situation as Precentor a position like that of organist in Westminster or St. Paul's. His music was select, and confined to three or four tunes. These he modulated to suit his voice and taste, which were peculiar and difficult to describe. But the people understood both, and followed him on Sundays as far as their own peculiar voices and tastes would permit: and thus his musical calling did not at all interfere with his week-day profession.

It is impossible to describe the many wants which he supplied and the blessings which he conferred. There were few marriages of any parochial importance at which he was not an honoured guest. In times of sickness, sorrow, or death, he was sure to be present with his subdued manner, tender sympathy, and Christian counsel. If any one wanted advice on a matter which did not seem of sufficient gravity to consult about at the Manse, "the Master" was called in. If a trustee was wanted, by a dying man, who would deal kindly and honestly with his widow and children, the master was sure to be nominated. He knew every one in the Parish, and all their belongings, as minutely as a man on the turf knows the horses and their pedigree. He was a true friend of the inmates of the Manse, and the minister trusted him as he did no other man. When the minister was dying the Schoolmaster watched him by night, and tended him as an old disciple would have done one of the prophets, and left him not until with prayer he closed his eyes.

His emoluments for all this labour were not extravagant. Let us calculate. He had £15 as schoolmaster; £5 in school fees; £7 as postmaster; £1 as session clerk; £1 as leader of church psalmody; £5 as catechist; £34 in all, with house and garden. He had indeed a small farm, or bit of ground with two or three cows, a few sheep, and a few acres for potatoes and oats or barley, but for all this he paid rent. So the emoluments were not large. The house was a thatched cottage with what the Scotch call a "butt and ben;" the "butt" being half kitchen, half bed-room, with a peat fire on the floor, the "ben" having also a bed, but being dignified by a grate. Between them was a small bed-closet separated from the passage by a wicker partition. All the floors were clay. Above was a garret or loft reached by a ladder, and containing amidst a dim light, a series of beds and shakes-down like a barrack. In this home father, mother, and a family of four sons and three daughters were accommodated. The girls learned at home,—in addition to "the three r's" learned at school,—to sew and spin, card wool, and sing songs; while the boys, after preparing their

Virgil or arithmetic sums for next day, went in the evening to fish, to work in the garden, or on the farm, to drive home the cattle, to cut peats for fuel or stack them, to reap ferns and hose them for bedding the cattle in winter, or make "composts" for the fields, and procure moss and other unmentionable etceteras.

When darkness came they gathered round the fire, while some made baskets, repaired the horses' harness or their own shoes, or made fishing lines and "busked" hooks; others would discourse sweet music from the trumpet, and all in their turn tell stories to pass the time pleasantly. The grinding of meal for porridge or *fuarag* was a common occupation. This *fuarag* was a mixture made up of meal freshly ground from corn that had been well toasted and dried before the fire, and then whipped up with thick cream,—a dainty dish to set before a king! The difficulty in making it good was the getting of corn freshly toasted and meal freshly ground. It was prepared by means of a quern which at that time was in almost every house. The quern consisted of two round flat stones, of about a foot in diameter, and an inch or so thick, corresponding to the grinding stones in a mill. The lower stone was fixed, and the upper being fitted into it by a circular groove, was made to revolve rapidly upon it, while the corn was poured through a hole in the upper stone to be ground between the two. It was worked thus. A clean white sheet was spread over the bed in the kitchen. The mill was placed in the centre. One end of a stick was then inserted into a hole in the upper stone to turn it round, while the other end of the stick, to give it a purchase and keep it steady, was fixed in the twist of a rope, stretched diagonally from one bedpost to another. The miller sat in the bed, with a leg on each side of the quern, and seizing the stick, rapidly turned the stone, while the parched corn was poured in. When ground it was taken away and cleaned of all husks. The dry new meal being whipped up with rich cream the *fuarag* was ready, and then—lucky the boy who got it! I cannot forget the mill or its product, having had the privilege of often sharing in the labours of the one, and enjoying the luxury of the other.

Our Schoolmaster could not indeed give entertainments worthy of a great educational institute, nor did he live in the indulgence of any delicacies greater than the one I have dwelt upon, if, indeed, there was any greater then in existence. There was for breakfast the never-failing porridge and milk—and such milk!—with oat cakes and barley scones for those who preferred them, or liked them as a top-dressing. On Sundays, there were tea and eggs. The dinner never wanted noble potatoes, with their white powdery waistcoats, revealing themselves under the brown jackets. At that time they had not fallen into the "sear and yellow leaf," but retained all their pristine youth and loveliness as when they rejoiced the heart of some Peruvian

Inca in the land of their nativity. With such dainties, whether served up "each like a star that dwelt apart," or mashed with milk, or a little fresh butter, into a homogeneous mass, what signified the accompaniments? Who will inquire anxiously about them? There may have been sometimes salt herring, sometimes other kinds of sea-fish—lythe, rock-cod, mackerel, or saithe, but oftener the unapproachable milk alone! At times a fat hen, and bit of pork, or blackfaced mutton, would mar the simplicity of the dinner. When these came, in Providence, they were appreciated. But whatever the food, all who partook of it ate it heartily, digested it with amazing rapidity, and never were the worse, but always the better for it. No one had headaches, or ever heard of medicine except in sermons; and all this is more than can be said of most feasts, from those of the excellent Lord Mayor of London downwards, in all of which the potatoes and milk are shamefully ignored, while salt herring and potatoes—the most savoury of dishes—and even *fuarag*, are utterly forgotten.

Handless people, who buy everything they require, can have no idea how the Schoolmaster and his family managed to get clothes; yet they always were clothed, and comfortably, too. There was wool afforded by their own few sheep, or cheaply obtained from their neighbours, and the mother and daughters employed themselves during the long winter nights in carding and spinning it. Then Callum the weaver took in hand to weave it into tartans, of any known Celtic pattern: and Peter the tailor undertook to shape it into comely garments for father or son; while the female tailors at home had no difficulty in arranging suitable garments out of their own portion of the wool. As for shoes, a hide or two of leather was purchased, and John the shoemaker, like Peter the tailor, would come to the house and live there, and tell his stories, and pour out the country news, and rejoice in the potatoes, and look balmy over the *fuarag*. Peter the tailor, when he went, left beautiful suits of clothes behind him; John the shoemaker completed the adornment by most substantial shoes—wanting polish probably, and graceful shapes, but nevertheless strong and victorious in every battle with mud and water, and possessing powerful thongs and shining tackets. And thus the family were clothed—if we except the kilts of the younger boys, which necessarily left Nature, with becoming confidence in her powers, to a large portion of the work about the limbs. The master's suit of black was also an exception. When that suit was purchased was a point not easily determined. It was generally understood to have been obtained when the Schoolmaster went on his first and last journey to see George IV. in Edinburgh. The suit was folded in his large green chest behind the door, and was only visible once a year at the communion, or when some great occasion, such as a marriage or a funeral, called it forth into sunlight. The tartan coat and home-made woollen trousers were at such times

exchanged for black broadcloth, and the black silk neckcloth for a white cravat; and then the Schoolmaster, with his grave countenance and grey whiskers, and bald head, might pass for a professor of theology or the bishop of a diocese.

The worthy Schoolmaster is long since dead. He died, as he had lived, in peace with God and man. The official residence has been changed to another part of the Parish, and when I last saw the once happy and contented home of the good man, with whom I had spent many happy days, the garden was obliterated, the footpaths covered with grass, and the desolation of many years was over it. Verily, the place that once knew him knew him no more.

CHAPTER XIX.—THE EMIGRANT SHIP.*

RETURNING from Iona on the loveliest summer evening which I ever beheld, we reached a safe and sheltered bay at the north end of the Island of Mull. I never saw a harbour so well defended from the violence of winds and waves. A long narrow island encircled it seawards, spreading its friendly wings over every vessel that comes to seek its covert from the storms of ocean, or to await under its shelter for favourable weather to double the great headland beyond. On the right hand where we entered, the land rises up steep and abrupt from the shore. We sailed so close to the rocks, that the branches of the trees were bending over us. The fragrance of the birch was wafted on the breeze of summer, and a thousand little birds, with their sweet notes, were singing to us from amid the branches, bidding us welcome as we glided smoothly and gently past them. A glorious view presented itself to me wherever I turned my eye. I saw the lofty mountains of Ardnamurchan clothed in green to their very summits; Suanard, with its beautifully outlined hills and knolls; the coast of Morven stretching away from us, rejoicing in the warmth of the summer evening.

When we neared the anchorage there was nothing to be seen but masts of ships, with their flags floating lazily in the gentle breeze—nor to be heard, except the sound of oars, and the murmur of brooks and streams, which, falling over many a rock, were pouring into the wide bay, now opening up before us. From side to side of the shore, on the one hand, there runs a street of white houses; and immediately behind them there rises up a steep and high bank, where the hazel, the rowan, and the ash grow luxuriantly, and so very close to the houses that the branches seem to bend over their tops. At the summit of this lofty bank the other portion of the small town is seen between you and the sky, presenting a view striking for its beauty and singularity.

The bay, however, presented the most interesting sight. There were in it scores of vessels of different sizes; many a small boat with its painted green

oars; the gay *birliam* with its snow-white sails, and the war-ship with its lofty masts and royal flag. But in the midst of them all I marked one ship which was to me of surpassing interest. Many little boats were pressing towards her, and I noticed that she was preparing to unmoor. There was one man in our boat who had joined us at the back of Mull, and who had not during the whole day once raised his head, but who now was scanning this great ship with the keenest anxiety.

“Do you know,” I asked, “what this ship is?”

“Alas!” said he, “’tis I who do know her. Grieved am I to say that there are too many of my acquaintances in her. In her are my brothers, and many of my dearest friends, departing on a long, mournful voyage for North America. And sad is it that I have not what would enable me to accompany them.”

We pulled towards the vessel; for I confess I felt strongly desirous of seeing these warm-hearted men who, on this very day, were to bid a last farewell to the Highlands, in search of a country where they might find a permanent home for themselves and their families. It is impossible to convey to any one who was not present, a true idea of the scene which presented itself on going on board. Never will it fade from my memory. They were here, young and old—from the infant to the patriarch. It was most overwhelming to witness the deep grief, the trouble of spirit, the anguish and brokenness of heart which deeply furrowed the countenances of the greater number of these men, here assembled from many an island and distant portion of the Hebrides.

I was, above all, struck with the appearance of one man, aged and blind, who was sitting apart, with three or four young boys clustered around him, each striving which could press most closely to his breast. His old arms were stretched over them; his head was bent towards them; his grey locks and their brown curly hair mingling, while his tears, in a heavy shower, were falling on them. Sitting at his feet was a respectably dressed woman, sobbing in the anguish of bitter grief; and I understood that a man who was walking backwards and forwards, with short steps and folded hands, was her husband. His eye was restless and unsettled, and his troubled countenance told that his mind was far from peace. I drew near to the old man, and in gentle language asked him if he, in the evening of his days, was about to leave his native land.

“Is it I, going over the ocean?” said he. “No! On no journey will I go, until the great journey begins which awaits us all; and when that comes, who will bear my head to the burial? You are gone; you are gone; to-day I am left alone, blind and aged, without brother, or son, or support. To-day is the day of my desolation, God forgive me! thou Mary, my only child, with my fair and lovely grandchildren, art about to leave me! I will return to-night to the old glen:

* From the Gaelic of the late Rev. Dr. Macleod, of St. Columba's, Glasgow.

but it is a strange hand that will lead me. You, my beloved children, will not come out to meet the old man. I will no more hear the prattle of your tongues by the river-side, and no more shall I cry, as I used to do, though I saw not the danger, 'Keep back from the stream!' When I hear the barking of the dogs, no more will my heart leap upwards, saying, 'My children are coming.' Who now will guide me to the shelter of the rock, or read to me the holy book? And to-morrow night, when the sun sinks in the west, where will you be, children of my love? or who will raise the evening hymn with me?"

"Oh, father," said his daughter, creeping close to him, "do not break my heart!"

"Art thou here, Mary?" said he. "Where is thy hand? Come nearer to me. My delight of all the women in the world. Sweet to me is thy voice. Thou art parting with me. I do not blame thee, neither do I complain. Thou hast my full sanction. Thou hast the blessing of thy God. As was thy mother before thee, be thou dutiful. As for me, I will not long stand. To-day I am stripped of my lovely branches, and light is the breeze which will lay low my old head. But while I live, God will uphold me! He was ever with me in every trial, and He will not now forsake me. Blind though I be, yet blessed be His name! He enables me to see at His own right hand my best Friend, and in His countenance I can see gentleness and love. At this very moment He gives me strength. His promises come home to my heart. Other trees may wither; but the 'Tree of Life' fades not. Are you all near me? Listen," said he, "we are now about to part. You are going to a land far away; and probably before you reach it I shall be in the lofty land where the sun ever shines, and where, I trust, we shall all meet again; and where there shall be no partings, nor removals. No. Remember the God of your fathers, and fall not away from any one good habit which you have learned. Evening and morning, bend the knee. Evening and morning, raise the hymn, as we were wont to do. And you, my little children, who were as eyes and as a staff unto me—you, who I thought would place the sod over me—must I part with you? God be my helper!"

I could not remain longer. The little boat which was to bear the old man to the shore had come to the side of the ship. Those who were waiting on him informed him of this. I fled; I could not witness the miserable separation.

In another part of the vessel there was a company of men, whom I understood from their dress and language to belong to the Northern Islands. They were keenly and anxiously watching a boat which was coming round the point, urged alike by sails and oars. Whenever they saw her making for the ship, they shouted out: "It is he himself! Blessings on his head!" There was one person among them who seemed more influential than the others. When he observed this boat, he went to the captain of the

ship, and I observed that the sailors who were aloft among the masts and spars were ordered to descend, and that the preparations for immediate sailing were suspended. The boat approached. An aged, noble-looking man who was sitting in the stern rose up, and, although his head was white as the snow, he ascended the side of the ship with a firm vigorous step, dispensing with any assistance. The captain saluted him with the utmost respect. He looked around him, and quickly noticing the beloved group who had been watching for him, he walked towards them. "God be with you!" he said to them, as they all rose up, bonnet in hand, to do him reverence. He sat down among them. For a while he leaned his head on the staff which was in his hand, and I observed that great tears were rolling down his face—one of the most pleasant faces I had ever looked on. They all grouped around him, and some of the children sat at his feet. There was something in the appearance of this patriarchal man which could not fail to draw one towards him. Such goodness and gentleness surrounded him that the most timid would be encouraged to approach him; and, at the same time, such lofty command in his eye and brow as would cause the boldest to quail before him.

"You have come," said they, "according to your promise; you never neglected us in the day of our need. To-night we are to become wanderers over the face of the ocean, and before the sun will rise over those hills we shall be for ever out of their sight. We are objects of pity to-day—day of our ruin!"

"Let me not hear such language," said the minister. "Be manly; this is not the time for you to yield. Place your confidence in God: for it is not without his knowledge that you go on this journey. It is through His providence that all things are brought to pass: but you speak as if you were to travel beyond the bounds of the kingdom of the Almighty, and to go whither His Fatherly care could not extend unto you. Alas! is this all your faith?"

"That is all true," answered they; "but the sea—the great wide ocean?"

"The sea!" said he "why should it cast down or disquiet you? Is not God present on the great ocean as on the land; under the guidance of His wisdom, and the protection of His power, are you not as safe on the wide ocean as you ever were in the most sheltered glen? Does not the God who made the ocean go forth on its proud waves? Not one of them will rise against you without His knowledge. It is He who stills the raging of the sea. He goeth forth over the ocean in the chariots of the wind as surely as He is in the heavens above. Oh, ye of little faith, wherefore do ye doubt?"

"We are leaving our native land," said they.

"You are indeed leaving the place of your birth," he replied, "the island where you were nourished and reared. You are certainly going on a long journey, and it need not be concealed that there are

hardships awaiting you, but these do not come unexpectedly on you: you may be prepared to meet them. And as to leaving our country, the children of men have no permanent hold of any country under the sun. We are all strangers and pilgrims, and it is not in this world that God gives any of us that home from which there is no departure."

"That is undoubtedly true," said they; "but we go as 'sheep without a shepherd.' Without a guide to consult in our perplexities. Oh, if you had been going with us!"

"Silence!" said he. "Let me not hear such language. Are you going farther from God than you were before? Is it not the same Lord that opened your eyelids to day and raised you from the slumber of the night, who rules on the other side of the world? Who stood by Abraham when he left his country and his kindred? Who showed himself to Jacob when he left his father's house, and slept in the open field? Be ashamed of yourselves for your want of trust. Did you say you were as 'sheep without a shepherd'? Is there any, even the youngest of your children, who cannot repeat these words: 'The Lord's my shepherd, I'll not want'? Has not the Great Shepherd of the sheep said: 'Fear not; for I am with thee. Be not dismayed: for I am thy God'? Has He not said: 'When thou passest through the waters I will be with thee; and through the rivers, they shall not overflow thee'? There are not, perhaps, houses of worship so accessible to you where you are going, as they were in your native land; nor are ministers of religion so numerous. But remember you the day of the Lord. Assemble yourselves under the shelter of the rock, or under the shade of the tree. Raise up together the songs of Zion, remembering that the gracious presence of God is not confined to any one place; that, by those who sincerely seek him in the name of Christ, He is to be found on the peak of the highest mountain, in the strath of the deepest glen, or in the innermost shade of the forest, as well as in the midst of the great city, or in the most costly temple ever reared by man's hands. You are all able to read the holy word. Had it been otherwise, heavy indeed would be my heart, and very sad the parting. I know you have some Bibles with you: but you will to-day accept from me, each a new Bible, one that is easily carried and handled; and you will not value them the less that your names are written in them by the hand which sprinkled the water of baptism on the most of you—which has often since been raised up to Heaven in prayers

for you, and which will continue to be raised for you with good hope through Christ until death shall disable it. And you, my little children, the precious lambs of my flock, now about to leave me, I have brought for you also some slight memorials of my great love to you. May God bless you!"

"Oh," said they, "how thankful are we that we have seen you once more, and that we have again heard your voice!"

The people of the ship were now generally gathering round this group, and even the sailors, though some of them did not understand his language, perceived that it was in matters pertaining to the Soul he was engaged. There was so much earnestness, warmth, and kindness in his appearance and voice, that they stood reverently still; and I saw several of them hiding the tears which rolled down those cheeks that had been hardened by many a storm.

The reverend man uncovered his head, and stood up. Every one perceived his purpose. Some knelt down, and those who stood cast their eyes downwards, when in a clear strong voice he said, "Let us pray for the blessing of God." Hard indeed would be the heart which would not melt, and little to be envied the spirit which would not become solemnised, while the earnest, warm-hearted prayer was being offered up by this good man, who was himself raised above the world. Many a poor faint-hearted one was encouraged. His words fell like the dew of the evening, and the weak, drooping branches were strengthened and refreshed.

While they were on their knees, I heard heavy sighings and sobbings, which they strove hard to smother. But when they rose up I saw through the mist of the bitter tears which they were now wiping off, the signs of fresh hope beaming from their eyes. He opened the Book of Psalms, and the most mournful, the most affecting in every way, yet at the same time the most joyful sacred song which I ever heard was raised by them all. The solemn sound reached every ship and boat in the harbour. Every oar rested. There was perfect silence; a holy calm as they sang a part of the 42nd Psalm.

"O! why art thou cast down, my soul?"

Why, thus with grief oppress'd?

Art thou disquieted in me?

In God still hope and rest:

For yet I know I shall him praise

Who graciously to me

The health is of my countenance,

Yea, mine own God is he."

REST: AN ODE.

"Give us, O, give us rest!"

BENEATH the hill
The lake lies still ;
A single cloudlet, sailing to the west,
Moves in the boundless blue,
Moves in that mirror too,
With motion most like rest.

Beside the stream
The blue flowers dream ;
On banks grass-muffled, mute
To tread of any foot,
The trees stand back, that so
Their murmurs may be low ;
Leaning together, by one whisper stirred,
To drown the voice of that audacious bird.

The great sea lies,
By tender skies
Embraced, till, lowering his foamy crest,
Up to the shore he slips,
A murmur on his lips,
As he too prayed for rest.
"Give us, O, give us rest !"

In vain,
Nature, upon her child,
With her fair face hath smiled !
She cannot ease his pain :
She has no balm
That throbbing heart to calm,
Or drive thought's hurrying crowd from that dis-
tracted brain :

The mournful mother rocks him on her breast,
She cannot give him rest.

For rest
Have all men laboured, all the centuries round :
O quest !
By all men followed and by none yet found :
The task-like spell, by wicked wizard bound,
Grows with the labour ; with the boon the need ;
The distance seems to lengthen with the speed ;
The goal still to recede.

The camel kneels,
With mute appeals
In her mild eyes, against the crushing load ;
At the sharp-pricking goad,
The ox, with mighty strain,
Lowers his broad front in menace vain,
His strong, fierce neck is tugging at the yoke ;
And quivering to the stroke,
Upon his mission speeds the fiery horse, [course.
Nor spares his generous life to close the headlong

Nature at length,
As fain that man should rest,
Gives up her deeper secrets to his prayer ;
To his behest
Her mighty forces shall obedience yield,

Her empire he shall share,
Yea ! he shall wield
All her resistless strength ;
Even that which heaved the mountains, and which
moves
The starry wheels in their unerring grooves.

With grind and groan,
With clank and moan,
Their task the prisoned forces ply ;—
The great wheels fly
As if they wove the web of fate ;
And to and fro, amid the roar,
Squalid creatures pace the floor ;
Slaves of those iron wheels are they,
Bound their impulse to obey,
And upon their bidding wait ;
While to their service dumb,
Not only men are given,
But childish troops are driven,
And women come,
Till every heart with weariness is numb.

Still nature grants
Fresh creatures of her power man's needs to serve.
Lo ! a fierce creature pants
To do his bidding and his burdens bear ;
And its keen nerve
Hath the tamed lightning in his service spent,
As laden with his message forth it went,
Nor moved the midnight air.

But faster beat
The hearts to whom that message comes.
"Haste ! make the task complete ;
Haste ! let the rousing drums
Gather strong men to do the work of war !"
And wide and far,
As speeds the message, hands their labour ply
Faster ; the forge upon the midnight sky
Sends up a steadier glare,
While instruments of death shriek bodings of despair.

Now he shall rest !
The mighty mother takes him to her breast.
O mockery ! this is not the rest he craves—
This dread, this utter stillness is the grave's.

What voice doth dare
Say "I will" to the Universal prayer?
Above the din,
The strife and sin,
Of toiling centuries, sounds the bidding blest !
"Come, I will give you rest."

(Not to lay down your burdens, but to bear !
'Tis but to learn the yoke of love to wear.)
And weariest of the weary, as was meet,
Walking those centuries with bleeding feet,
Obeyed, and found that Rest unutterably sweet.

THE CONSCRIPTION IN FRANCE.

BY AN ARMY CHAPLAIN.

THE French are emphatically a military nation. Their warlike tendencies crop up luxuriantly even in childhood; the very children in the streets play at soldiers, draw themselves up in opposing ranks, and repeat on the Boulevards of Paris the great battles of the Empire. They long for the time when they shall be able to lay aside their mimic muskets, and to take an active part in those wars in which France is almost always engaged: they look forward to the conscription without alarm: they submit to it with cheerful alacrity. Of course there are exceptions, and occasional attempts to evade it, but we are describing the feeling generally prevalent throughout the country.

The French army, including marines and colonial forces, amounts to about 650,000 men, or nearly three times the number of regular troops of all arms in the British service. Mere figures cannot give any conception of such a vast array of armed men. The English traveller who has witnessed a review of some twenty thousand men on the Champ de Mars, or at Châlons, is not likely ever to forget that magnificent spectacle; but what would his feelings be if he saw thirty times this number of men drawn up before him in warlike array, a vast multitude differing in origin, in dress, and in arms, the Cent Gardes glittering in gold, the Spahis in their white bernouses, the Turcos with their tawny skins, the Zouaves with their tiger-like step, the Foreign Legion composed of the outcasts of all nations, the Chasseurs d'Afrique baked by the sun, and borne on the horses of the desert, and the all but countless thousands of active little conscripts from almost every village in France! To describe such an army would require the pen of a poet or of the historian who tells us of the vast host which Xerxes collected for the conquest of Greece.

The question naturally suggests itself, how has this wonderful army been raised? Almost entirely by conscription, but not altogether. Those Spahis, Turcos, Zouaves, and Foreign Legionaries, have adopted the profession of arms of their own accord; influenced, doubtless, by those different motives which draw thousands of our British youths every year into the net of the recruiting sergeant. Many, also, tempted by the hope of a pension, or by the £92 which the wealthy conscript, unwilling to serve, is bound to pay for a substitute, have been induced to re-enlist, after completing the usual period of service. But, after all, voluntary enlistment has done but little in bringing this mighty armament together: it may have its thousands, but conscription has its tens of thousands. The present Emperor has done everything in his power to encourage re-enlistment, which before 1848 was almost unknown in the French army. Any civilian possessed of the requisite moral and

physical qualities was formerly accepted as a *remplaçant* or substitute for a conscript unwilling to serve; but by the recent regulations, no one is accepted unless he be an old soldier, who has nearly completed the regular period of service. Many of the latter class are ready to accept the large sum which the conscript has to pay, and to continue in the army for the full period of twenty-five years, when they are entitled to a pension of 16% a year. Few remain so long without attaining the rank of non-commissioned officers, and the period of service is generally shortened, as one year's campaigning is reckoned as equal to two years of actual service. Hence war is always popular among all ranks in the French army, as it confers certain advantages on the private as well as the officer. The latter is inspired with the hope of promotion; the former looks forward to the enjoyment of his pension after a comparatively brief period of service.

Every young man, not otherwise disqualified, who has completed his twenty-first year within the preceding twelve months, has his name enrolled in the *Liste du Tirage*, or conscription list of the canton to which he belongs. The contingent required for recruiting the ranks of the army is fixed annually by imperial decree. It varies according to the exigencies of the times and the prospects of peace or war, but it may be stated at an average that in peace the proportion is one soldier to every ninety-three of the population; in war one out of every fifty-nine. When the amount of the annual contingent has been fixed, the supply of conscripts from each canton is regulated by the number of names inscribed in the *Liste du Tirage*, and the burden of the conscription is thus borne by the whole community. Eugène, the son of *M. le Marquis*, is as liable to serve on completing his twenty-first year, as François, the son of his *laboureur*, on attaining the same age. And why should it not be so? Has not Eugène as much at stake as François? Is not the defence of fatherland a sacred duty equally incumbent on all? "Ah! but how shocking it would be to have my boy serving among those nasty low soldiers!" we hear some indignant British matron exclaim, alarmed at the idea of the conscription becoming one of our institutions. "Well, madam, you have your remedy as *Madame la Marquise* has hers: if our army should ever be organised after the model of the French, a consummation which we are sure you do not at all devoutly wish for, you may do as the mother of Eugène does,—you may send your darling boy to St. Cyr or to the *École Polytechnique*, and then he will take his rank in due time as an officer; or you may pay your 92*l.* into the *Caisse de la Dotation de l'Armée*, in which case he will be exempted from service." It is not to be

supposed, however, that all the conscripts whose names are inscribed in the *Liste du Tirage*, will be compelled to serve. More than half the number are always exempted on different grounds. We find, for example, that in one year the number of names inscribed amounted to upwards of 300,000, while the contingent was fixed at 140,000. The number mentioned in the contingent is always higher than that actually required, as a certain allowance has to be made for necessary deductions. In this particular year, the total number of new recruits available for actual service amounted only to 105,388, instead of 140,000. It is interesting to examine the different grounds on which more than 200,000 men, in the very prime and vigour of their manhood, obtained exemption from the toils of military duty. Napoleon III. has not the same passion for gigantic soldiers as Frederick William of Prussia. He knows that the soul of a hero may be encased in the body of a Zaccheus. He knows, moreover, that 600,000 tall men could not be collected from a race who have degenerated physically in consequence of the wars of the Empire. He has, therefore, wisely fixed the standard height for regiments of the line at five feet one inch. No less than 18,000 conscripts were rejected because they fell short of this height; and we can conceive the mortification of some, and the joy of others, on finding that their diminutive stature reduced them to the status of civilians. About 40,000 were exempted on account of family circumstances, by which we are to understand that they were the principal support of their parents or others, who, without them, would be dependent on the public for support. More than 60,000 were rejected as physically unfit for service; and it is somewhat singular that this number is almost identical with the proportion of rejections among British recruits at the primary inspections. It must be borne in mind, however, that the minimum height of a British recruit is five feet four inches, and that the active nimble fellows of five feet one inch who are deemed eligible for service in France, would be at once rejected in this country. We can conceive the smile of contempt which Sergeant Kite or Corporal Pike would bestow upon an aspirant after military honours who stood five feet one inch in his stockings; and yet some of our greatest heroes have been the most diminutive of men, as if Nature wished to compensate them in this way for her niggardly supply of matter. Be that as it may, it is clear that we islanders are physically a finer race than our neighbours across the Channel, who have never recovered from the fearful drain which the first Napoleon made on the life-blood of the nation. On the other hand, the French classification of those physically unfit for service, comprises many who would never dream of presenting themselves to the recruiting sergeant in this country. The French youth of twenty-one years of age may be lame or blind, deaf or dumb—nay, he may be labouring under all the infirmities

that flesh is heir to; notwithstanding all this, his name will assuredly be inserted in the *Liste du Tirage*, and he will have to pass a medical examination before he is finally rejected. Some insight into the difference of physical organization among the two nations may be obtained from the comparison of the number of rejections for the same diseases among the recruits. We find that the English have rather better teeth than the French,—perhaps, because in childhood they do not eat quite so many *bonbons*. In the French army, the rejections for loss of teeth amount to ten per 1000; in the English, to 9.52; but, to counterbalance this, we find that for one French recruit rejected for varicose veins, there are three English. As regards hernia, we have decidedly the advantage: the proportion is 19.23 among the French to 11.79 among the English. But we need not enter further into details which have more interest to the medical practitioner than the general reader.

It sometimes happens that certain cantons are not able to supply the number of conscripts assigned to them, and that there is thus a deficiency in the contingent fixed by the imperial decree. It occasionally happens, also, that Jeannot, whose name figures in the *Liste du Tirage*, is desperately in love with Jeannette, and more anxious to distinguish himself in the ranks of Hymen than of Mars. The law has anticipated such a state of affairs, and enacted that if Jeannot fail to appear when the lots are drawn, the mayor of his parish is to act for him, and if a bad number is produced from the urn, and he is still absent at the end of six months, he is pronounced refractory (*insoumis*). This is a serious matter for poor Jeannot. Sooner or later he is almost sure to be caught and tried by court-martial, when, unless he can prove extenuating circumstances, or a case of *force majeure*, i.e., of unavoidable necessity, he is liable to be imprisoned for two years, and has to complete the usual period of military service when he leaves the prison. Notwithstanding this severe penalty, there are usually about 2000 youths who absent themselves when the lots are drawn, and are therefore declared refractory.

The *Tirage* or drawing of the lots requires some little explanation. The mayor of each parish sends in a list of the names of the young men who will have attained their majority within twelve months before the contingent fixed by the state is required. The number of names entered on these lists is always greater than the number of soldiers required by the state. The contingent may be fixed at 100,000 men, and the names entered on the lists may amount to 150,000, in which case every third man has a chance of escape. A parish, for example, which has 150 names inscribed in the *Liste du Tirage* has to furnish 100 men, on a certain fixed day. It may be months or even a whole year before they are required for actual service. All the youths liable to serve have to appear in the presence of the Préfet and Sous-Préfet, and to decide their fate

with their own hands. A hundred and fifty lots are placed in an urn, and each youth has to draw one. The hundred who draw the highest numbers are enrolled for service; the fifty who draw the lowest have escaped from the ordeal, and return in peace to their vineyards and their fields. Certain classes are exempted from military service. The eldest sons of widows dependent on their children for support, priests, students for holy orders, and the members of monastic bodies, are entitled *dispensés* and rank as non-combatant. It occasionally happens that a youth who has drawn a good number is anxious to serve, while another who has drawn a bad one is equally anxious to remain at home. Such a state of feeling has been taken cognizance of by the state, which, of course, would rather have a willing than an unwilling conscript. The two conscripts, if they live in the same canton and belong to the same class, are permitted to exchange tickets: this arrangement is called "substitution," and a few hundreds profit by it every year. A conscript who has drawn a bad number may also be exempted from service if he can find one of his relations to take his place, but the *remplacant*, if a civilian, must be under thirty years of age, or under thirty-five if he has already served. If he has no relative or friend willing to act as his substitute, he has to pay £92 of smart money into the *Caisse de la Dotation de l'Armée*, and the state undertakes to find some one to supply his place. This fund is employed for the purpose of paying extra-bounties to soldiers who have already served, so as to induce them to re-enlist. The following classes are eligible as substitutes:—volunteers of four years' service; conscripts within a year of completing their time, and others under thirty-five years of age who have served seven years, and thus become entitled to their discharge. These substitutes have many advantages over the ordinary conscripts: they receive £40 on first joining, the same sum on completing their seven years' service, and 1*d.* a day of additional pay. The reader will not be surprised to learn that there are every year about 20,000 men who are persuaded by these inducements to re-enlist, and these old soldiers are unquestionably the best men in the French army.

The *Tirage* touches many a heart in the vine-clad cottages of France. It is the great event of the year. *M. le Curé* is always there, and Jeannette is seldom absent. You may know her by her blanched face and trembling lip as Jeannot approaches the fated urn. You may know, if she weeps, that seven years and a day must pass wearily away before she can welcome him back, if he ever return at all: you may know, if she dances round him like a Bacchante, and waves her arms wildly in the air with joy, that he has drawn a good number, and *M. le Curé* will soon do the rest. And that old lady with the high-peaked cap and the ruddy, wrinkled, good-humoured face is Jeannot's mother. She is a widow, and her eldest son, an idle good-for-nothing fellow, is in virtue of his seniority exempt

from service. Jeannot is her staff, her hope, her all, and her demonstrations of joy or sorrow, as the case may be, are as *prononcés* as those of poor Jeannette, for who will till her hereditary patch of land, and tend her tender vines, if Jeannot is taken away? And the good *curé* is standing by, ready to weep with those who weep, to rejoice with those who rejoice. Ah! there are more sad hearts than merry ones before all the numbers have been drawn from the urn of fate. You see that young mother with a baby in her arms: she speaks words of comfort and of hope to the young man at her side; she elbows her way through the crowd and approaches the urn. She coaxes her first-born to insert his hand and to draw out a number; when the hand reappears, no less than three are found sticking between the chubby fingers. With many a smile and fond caress, she prevails on him to drop two into their former place, and to hand the other to *M. le Maire*, who examines it with grave official dignity. Hurrah! it is the very lowest number: husband and wife embrace one another, and of course there are *mille baisers* and still more numerous benedictions for the lucky little rogue who has saved them. And look at that other young man who approaches the urn. He has no wife or child or *chère amie*, but he has an aged mother and an only sister to support. If he is drawn he knows that his profligate elder brother will do nothing for them; his mother must starve; and Lisette—what will become of poor little Lisette, the pet of the household, the light of her old mother's eyes? No wonder that he makes the sign of the cross and offers up a silent prayer as he advances from the crowd. A few foolish youths begin to titter at this display of piety, but the Préfet sternly reproves them for their levity, and tells them that no one need be ashamed to pray at this the most solemn crisis of his life. The young devotee escapes, and others, thinking there may be something in it after all, begin awkwardly to cross their fingers and to mutter scraps of the *Pater Noster*. Those who draw first are not always the most fortunate; we know of two cases where they got the very worst numbers in the urn. If we may judge by the following incident, scenes less pathetic are occasionally witnessed in the Federal States of America, where the drafting is done by a wheel instead of an urn. The other day, at Philadelphia, an Irishman was seen watching every revolution of the wheel with breathless interest. All at once he exclaimed: "Wherl it round! wherl it round! can't yer?"

"What is the matter?" said the Provost-Marshal.

"Oh, be jabers, turn it round a dozen of times, for that man you drawed last is my next door neighbour."

Irish bulls seem to thrive as well in America as in Erin.

In a previous paper we showed how the English recruit is demoralised, by remaining several weeks at the station where he is enlisted, before joining

the depot or headquarters of his regiment. They manage matters differently in France. The conscripts have to join their regiments at once, and are allowed a franc a day for travelling expenses. Bands of them are often to be met with in rural districts, marching merrily along to the garrison town, where Corporal Piou-piou is to initiate them into the mysteries of their new profession. Each conscript, on joining his regiment, has to pay his footing by expending a franc or two in treating the company to which he is assigned; but there is no debauchery or drunkenness as in the case of the English recruit. In truth, Jeannot has no money to spend, unless his friends have given him a few francs before leaving. He receives a free kit, but no bounty money; for though he is credited with a certain sum, he is not allowed to touch it at first. The Emperor says to him, in so many words, "I know, Jeannot, that you are a very foolish fellow; if I give you money, you will expend it on brandy and *vin ordinaire*. But I will do something better; I will put forty francs to your credit; the balance, after your under-clothing is paid for, shall be yours, and you shall have a free kit. A slight deduction will be made from your pay till this balance is raised to the primary amount of forty francs, at which figure it must remain as a reserve fund. When you have served seven years, this sum will be handed over to you; and, no doubt, it will be useful when you begin your *ménage* with Jeannette." Whether Jeannot likes this arrangement or otherwise matters little: he is never consulted, and has no choice but to submit. This reserve fund is known as "*la masse individuelle*," and its fixed amount is kept up by crediting Jeannot with a certain sum, which is called "*la prime journalière*;" and, in the line, is exactly two sous or 1*d.* a-day. There is a balancing of accounts at the end of every three months, when he receives whatever surplus there may be in his favour. That surplus is not usually very great, as certain deductions have to be made for keeping his kit and clothes in order during the quarter. Whatever the amount may be, he does not receive it all at once; it is spread over the ensuing quarter at a certain fixed rate, and rarely exceeds 1*d.* a day. Every recruit in our Foot Guards has 5½*d.* a day, which he may dispose of in any way he chooses; add another farthing to this sum, and it represents the daily pay of a French soldier of the line. If the British recruit had only 1*d.* a-day of pocket-money, like poor Jeannot, and the balance of 4¾*d.* were placed to his credit and allowed to accumulate till his ten years' service had expired, he would find himself the happy possessor of 67*l.*, or of even a still higher amount, if he received interest for his savings. As matters stand at present, his higher rate of pay does him more harm than good; and he has no *masse individuelle* to fall back upon when he leaves the army. The beer-house has been his bank, and a ruined constitution the result of his economy. We do not suppose that Jean Crapaud is at all a better fellow than John Bull; if he had

6*d.* a-day of pocket-money, he would spend it quite as readily; but, having only two little sous, he is obliged to be moderate in all his desires and indulgences. One son supplies his *brûle-gueule*, or cutty-pipe, with very indifferent tobacco; while the other, allowed to accumulate, procures him an occasional glass of still more indifferent wine. Though his pay is less by one-half than that of a British soldier, he is, on the whole, a cheerful, happy little fellow, ready to amuse and to be amused—a living representation of that careless philosophy which says—

"Why trouble ourselves about riches,
Or mind such vain passing joys?
A light heart and a thin pair of breeches
Go right merrily through the world, brave boys."

What though he has only two meals a-day, and rations inferior in quality and quantity to those of our men? He knows how to make the most of everything, and can extract from the stringy beef served out to him from the commissariat a *potage* so savoury that you or I, my friend, would be glad to have it at table. All have to cook by turns; and the greatest favourite in a company is the man who makes the best soup. Nor is cooking the only accomplishment of a French soldier. In addition to drill, he is taught to practise every kind of gymnastics: to run, to leap, to fence, to swim: in a word, to do all that can be done with the human body. If he aspires to promotion, he does not strive to ingratiate himself with his pay-sergeant, as an ambitious recruit would do in this country; he masters all the details of his profession, and when a vacancy occurs among the corporals of his company, he appears before his examiners, assured that the best man will carry the day. It is hard work for a soldier to attain this very humble rank in the French army; but, with his feet once on the ladder, there is no saying how high he may climb. It will be his own fault if the modest *galons de laine* be not soon exchanged for the *galons d'or*; and then come the glittering epaulettes, or *que sais-je?* the bâton of a field marshal. There may be many embryo Murats and Massenas in the French army, and every soldier may aspire to the highest rank. The British soldier, however highly educated or well-conducted he may be, knows that he must limit his ambition to the hope of becoming the sergeant-major or quartermaster of his battalion, while the French soldier learns from the history of his country that with his sword he can carve his way to fame and fortune. In this fact, and in the difference of its constitution, through all classes being fairly represented in it, may be found the secret of the superiority of the French army. It is the love of promotion that sustains the heart of the oft-reluctant conscript, as he turns away from the humble cottage of his birth and all that he holds dear; it reconciles him to all the hardships of the lot that has been forced upon him; it fires his soul with the not ignoble ambition of doing some deed which may call forth the approval of his general,

and procure for himself a name in history ; it leads him to look forward to the time when he shall return, with waving plume and glittering epaulettes, to claim Lisette as his bride. What though these hopes be never realised ? They are as much realised as the day-dreams which you and I indulged in our early youth—foolish dreams, perhaps, but sweet at the moment, and sweet in the remembrance. And thus France bears with the conscription, because the conscription is the only path to glory. The burden

may be a heavy one ; but it falls equally upon all. There is no injustice, and no ground for complaint. It may not be adapted to this country ; but it is not without its advantages. Our voluntary enlistment gives us soldiers who desert at the rate of eleven thousand every year : conscription draws into the ranks of the French army the very *élite* of the rural population, and reconciles them to their fate by inspiring them with the hope of promotion and future renown.

ON DIVINE EXPEDIENCY.

BY THE AUTHOR OF "MORNING CLOUDS."

WE are not so gracious to children when they question our wisdom and kindness, as our Father in heaven has been to us. It is true that our mode of action can seldom be so directly contrary to their expectations as the dealings of the Lord are to ours ; because, between creature and creature, there can be no such difference of thought as there must be between the mind of man and the divine mind. And it is true also that, because of our own short-sighted ignorance and imperfect wisdom, we cannot positively assure children that our conduct towards them is always right and for their good. Yet if they doubt it, we check their mistrust, either with gentle re-assuring smiles, or with the hasty rebuke of vexation ; we express surprise that they should fancy themselves in any degree able to judge.

But while thus silencing the misgivings of the young, how often do we speak of something that has occurred to ourselves as very unfortunate ; how often do we bitterly regret some supposed damage or certain privation ; as if we well knew what was evil, and what good for ourselves. And even when we say of any afflicting stroke of Providence, that the ways of the Most High are inscrutable, it is almost with the air of an apology for our own falling short of wisdom, which cannot quite explain these mysterious ways ; and it is clear that we have at first scrutinized them as if it was possible that we could explain them. This is not strange, seeing that in a multitude of cases some of the beneficent results of God's dealings with us are obvious, but it is nevertheless an absurd error, seeing that "as the heavens are higher than the earth, so are His ways higher than our ways, and His thoughts than our thoughts."

As reasonably might one little child say to another with a look of patient regret, "See, this ugly black bit of coal is the only thing I can reach because of the fireguard ; my father will not let me touch those beautiful pieces which glow so brightly in the grate, and now he takes this dull lump away only because it makes my hand dirty !"

The mournful complaints of many a sincere Christian are not much wiser than this. But

observe how tenderly they have been anticipated and answered by God ; how throughout Holy Writ the Almighty has addressed His words to man with entreaty for His confidence ; how He has from age to age besought man to believe that He is "merciful and gracious, long-suffering, and abundant in goodness and truth."

And man has believed this so long as he has felt unquestionable proofs of divine mercy, and enjoyed all the good things which it has provided for him ; now and then too he has been enabled to feel an unaltered assurance when these good things seemed for ever blasted : but for the most part the Lord has seen cause for the accusation, "Thou thinkest that I am such a one as thyself."

Human love can weary of patience,—can overlook need,—can despise an ungrateful heart, and spurn its cold and feeble attempts at reconciliation ; and this accounts for our readiness to cry out in times of distress, "My strength and my hope is perished from the living God." But we never so cry out, or so feel, without giving direct denial to the most solemn asseverations of our Creator.

"Is he a man that he should repent?" is the question asked, as if there was in heaven deep amazement at our incurable folly. "Is my arm waxed short?" "Is anything too hard for me?" "Am I a God at hand, and not afar off?"

As if He would again and again reiterate that His power comprehends every resource ; and when He makes mention of His love, has the human heart *any* chord which the expression of that love leaves untouched ? any need which His infinite compassion has not humbled itself to supply ? Nay, we know not any. The widow, the fatherless, the oppressed, the captives, those who mourn for a mother, and those who are bereaved of their children, or betrayed by treacherous friends,—all these for generations past have known and testified that He drew near in the day that they called upon Him, and said "Fear not ;"—that they trusted in Him, and were holpen ;—that He healed those who were broken in heart, and gave them medicine to heal their sickness.

And that it must be so is evident whenever we

consider from whence is derived the love of husband and father and mother, and every other stream of purest love that refreshes our earthly existence.

If we find ineffable sweetness in the little rill that wells out through a nature infected with the roots of bitterness, what must that be which is found in the parent-source of all? They only fully know, to whom the Lord has shown it by cutting them off from all indirect channels of delight, and bringing them into His sanctuary. Nevertheless, so great is our deadness to these truths, that even the expostulations of God Himself hardly avail to persuade us of His loving-kindness, when it has brought us into darkness and not into light. And though, so to speak, He appeals for His justification (do not the angels hear and wonder?) to a certain future when we are to see that He has not done without cause all that He has done in this present, as if sympathising with the mistrust of the blind—yet still do orphans and widows, and poor and afflicted people ask doubtfully when troubles come thick upon them, “Has God forgotten to be gracious?”

Let us then dwell for a little while on the full sense of that word expediency, and see what comfort it will afford. It is not seeking from reason a substitute, but a confirmation of faith.

With regard to human transactions, expediency has a bad name: shortsighted and often very selfish devices are attributed to the man who habitually puts motives of expediency foremost; and perhaps it stands in about the same relation to right as prudence does to wisdom.

But in the counsels of God omniscient expediency must mean perfect rightness and perfect wisdom. “It is expedient for you that I go away,” said our Lord to His sorrowful disciples, at a time when, to them, His absence must have appeared an incomprehensible loss.

“It is expedient for you.” That gracious Master in His divine gentleness would not only announce His will and His destination, but He gave His poor servants a reason for them. To every disciple now He still grants the same persuasive argument; telling us by His written Word for what purpose we are chastened, to what end we are being guided by sore afflictions and many a thwarting opposition; for what object we are to deny ourselves and bear the heavy cross.

But if, when smitten with sudden woe, we can say “It is expedient,” because the greatness of the burden laid upon us seems to be a pledge of some great future benefit, there are seasons of less manifest trial, when faith finds it hard to assent.

Can it be expedient that the soul should be daily exposed to the danger of contemptible sin, by the circumstances to which we are inevitably brought,—by the sour tempers that disturb our peace, or the undesired companionship of those who stimulate vanity, or increase our worst propensities? Can He whom we incessantly ask not to lead us into temptation be indeed the Physician of souls who prescribes for us such painful and humiliating exercise?

If our position be not self-chosen, there can be, in such a case, no manner of doubt that it is expedient: and He is near who is able to keep us from falling even there; who can with the temptation make also a way to escape; but who may not make this way easy, because it may be very needful for us to know the corruption of our own hearts; to learn by rueful experience that the righteousness to which they had apparently attained, was more the effect of security from temptation than of conquest over it.

And besides, unless we know something firsthand of the “contradiction of sinners” (or, yet more trying, the contradiction of saints, tending to excite ill-feeling against their principles, as well as against themselves), something of the bottomless evil of the imagination of the heart, and the fatal tendency of what is the natural plague of our own heart, how should we ever bear with the infirmities of fellow-Christians suffering acutely from the same plague?

For such humbling experience we may one day be giving God thanks, even in this world, for it is by the instrumentality of those who have been “sick of the same grief” that remedies are most likely to be sent.

“Is it expedient,” asks the almost despairing heart of one who has just lost the friend or relation that seemed a heaven-sent guide;—“Can it be well for me to lose my strongest incentive to holy effort, my best adviser in all spiritual difficulties; the one whose absence from earth leaves me to fall back, unhelped, to old neglects, and ever-new perplexities?”

Poor heart, address that piteous question to Christ our advocate: you will find that He has already given it answer. He has said, “Call no man your master on earth, for one is your master, even Christ,” and, “He that cometh unto me I will in no wise cast out,” and, “Learn of me, and ye shall find rest unto your souls.”

If now you go to Him with every difficulty and show Him all your trouble, surely you will find that your separation from a human counsellor was in very truth expedient for you.

It is when suffering keen disappointment that this is perhaps hardest to feel: such disappointment as is our lot when, after a long slow struggle—only supported by the strength of our hope—we are suddenly dashed to the bottom of its steep ascent, and find that all our endeavours have been wasted fruitlessly, and all the prophecies of the heart have been deceitful.

Those cruel words “in vain!” seem to belie every assertion of expediency. A mistake seems so necessarily unproductive of profit. We may for our *credo* say “It is all well,” but the tenor of our feelings usually is, “I fully believe in the wisdom and mercy of God, but surely He might have secured my eternal good by means less afflicting than this!”

Could we at such times enter into controversy

with God, might He not challenge our wisdom in so thinking, and say, "Bring forth your strong reasons; let them bring them forth, and show us what shall happen,—let them show the former things what they be, that we may consider them, or declare us things to come." (Isaiah, xli. 21, 22.) For until we know all the things to come, we cannot possibly imagine how necessary that discipline may be which now seems cruelly causeless. We may all remember the time when, as children, we passionately desired to be released from the obligation of learning those hard lessons, of which then we could never see the use. Had our parents yielded to the ignorant wishes of childhood, and consented to our own scheme of happiness, what chance should we have of it now?

At this present time, to us the hour is coming, but to Omniscience it now is, when we shall unspeakably desire other blessings than the blessing of earthly success,—other treasures, and quite a different sort of joy, from those for which we now toil and ask in vain. Love cannot grant the lesser good if it is to be at the expense of one infinitely greater.

No one by anticipation can conceive the feelings that will be produced by a hitherto unknown condition. God knows all; both what we now feel, and shall feel in every coming change; and in His mercy He deals with us according to all our future exigencies.

Never does this mercy appear less evident than in states of protracted disease either of mind or body, when such a confusion of wretchedness and wrong exists, that the bewildered mind is only sure of this, that it suffers. Then does the light of heaven seem as completely extinguished as the hopes and the happiness of earth; and faith is strong indeed if in that deadly gloom we do not think, "God has forgotten."

Alas! how many of the saints have groaned under this worst infliction;—from this God spared not His own Son. For a time (we know not how long that intensity of anguish may have seemed in sensation) Jesus felt deserted, and cried out that His God had forsaken Him. Dare we suspect the same in our seasons of spiritual destitution? Was there any time when we may be more sure that the Lord looked upon His affliction, than at that hour when He made His soul a sacrifice for sin, and poured out His soul to death?

Let His feeblest servants thankfully accept the inevitable deduction: when they are utterly unable to look up to their Father, blind and dumb, seemingly at the point of spiritual death, He hears most attentively the cry of the poor destitute soul, and in His own good time He will deliver.

Great is the long-suffering of the Lord. He hears all the lamentations of man, and knows how bitter are the woes from which they arise, and yet He will not nullify their saving influence by instant relief. Every feeling heart knows what we suffer when obliged to leave an animal in painful duration, and

to it we cannot explain our reasons: but shall we behave with the impatience of beasts? we, whose understanding the Lord has opened?

In a thousand utterances of divine pity He has certified His everlasting love, and entreated us to rely upon it: the God of gods petitions for our trust,—can we deny the request?

He urges us not to judge according to appearance; and this not only by Scripture, but by the wordless emphasis of fact. The luxuriant tree that must be pruned to insure its future productiveness; the ripe wheat that must be buried underground; the yearly destruction of every vegetable tissue by frost, or biting wind, or wet decay, all serve as arguments to patience under present affliction.

Between God and us there is this blessed covenant, that when we give up our will, He guarantees to us all the benefits of His omnipotence and perfect wisdom. When we have surrendered the one, we may confidently look for the other.

And resignation, however unconditional, does not require us to contradict experience, and to think that black is white, or an unwholesome state of things not unwholesome for present life. By no means; all that resignation says is, "For present good these circumstances may be poisonous and destructive, for eternal welfare they are supremely expedient." At the same time we are never taught to surrender our volition and choice before our Master calls for the sacrifice. The Turks and all other fatalists do this; and, with their will, give up the active exertion which ardent wishes prompt,—acting as if God was not a Father, pleased with the innocent efforts of His children, but only the arbitrary mover of a vast irresponsible machine.

"Trust in the Lord, and be doing good," is our happy rule: all the good we can, by wisdom, prudence, and skill, as well as by charity. But when this is being done, and still grievous sorrow has to be endured, let not our faith reel. It has been truly said, "Im Reiche der Poesie der Satz gilt, was der Dichter liebt, lässt er leiden" (In the realms of poetry the proposition holds good, that whatever the poet loves, he allows to suffer).

In the kingdom of heaven it is notoriously true that "Whom the Lord loveth he chasteneth." But let us thankfully accept every detail of His chastisement, for "God, who is the author of all our tragedies, hath written out for us, and appointed us all the parts we are to play."* He is also an attentive spectator of our performance in those tragedies, however obscure the arena on which they take place. Shall we not offer to Him, then, the noble spectacle of patience?

Far be it from us to entertain so stupid a thought as that He who enjoins love and mercy as essential to holy life, could in the least trifle fall short of the most tender mercy towards His children. Neglect and forsaking is to Him impossible, until Love is able to be loveless. To think otherwise is the

* Sir Walter Raleigh.

madness of a mind that uses reason to oppose reason's own verdict; and if reason had not been deranged in man's nature by sin, we should, in the deepest sorrows, find an immoveable consolation, and say from the heart, whatever grief befalls, "Even so, Father, for so it seemeth good in Thy sight."

Though knowing of the innumerable past deliverances He has wrought for us, and remembering our forgotten gratitude, He might say, "Ye are my witnesses;" we are too often anything but that, and are asking one another, anxiously, "Is the Lord among us in these troubles, or not?"

You who are tempted to question this,—who groan and sigh, being burdened,—be assured that when the purposes of God are answered, in the

detachment of your hearts from vain and hurtful things,—when you are at last aware that the beginnings of meekness, and patience, and true holiness are formed in you, and that thus your heaven is begun—you will be more thankful for disappointment, and loss, and denials of hope, with all their lingering pain, than you could be now for any sudden flush of joy; for you will then feel that the treasures so won, the things which are not seen, are eternal. Nor will you, millenniums hence, have ceased learning why that amazing anguish, which has proved a preparation for unutterable joy, was judged to be expedient for your blinded soul by Him who inhabiteth eternity. You will look back upon time, and at last confess that "He doeth all things well."

LITERARY WORK.

IN every literary work there are two elements—there is the thought, or the thing to be said, there is the expression, or the manner of saying the thing. This latter element, especially when it takes any characteristic shape, we are accustomed to denominate style. And in every work of art, the style is even of more importance than the thought. It is the artistic part, it is that through which the artist's personality becomes visible. The main body of the poem, or the novel, or the essay, consists necessarily of ideas which the writer did not originate, which he found ready made to his hand, which have in one shape or the other been used before, and his merit consists in the new forms into which he is able to work up the old material. He calls in the worn coin of thought, melts it down in secret crucibles, and re-issues it bearing a fresh superscription and a new value. Thought is mine, yours, everybody's, but the artist lays hold of our thoughts, and works with them as a sculptor works with his clays. The world does not need new thoughts so much as it needs that old thoughts be re-cast. The artist is not required to create his own materials. If a man makes bricks he is provided with clay; if a man paints a portrait, he is allowed sifter, canvas, and pigments. To make a fine modern statue, there is a great melting down of old bronzes. Absolute novelty of idea—in a poem, for instance—is felt as a disturbance, because it is devoid of the sweetness of acquaintanceship and association. Absolute novelty, even if it could be procured, the reader does not care about: what delights him is the setting of a familiar thought in a new light, the discovery of subtle links and relationships existing between things with which he is acquainted, but which he was in the habit of considering disconnected and remote. Approach from a new point a mountain with which you are familiar, and it has all the charm of strangeness, and this delight of strangeness is felt all the more keenly from its unexpectedness, and from the mixture in

it of the present and the past. The pleasure lives in the mingling of the old recognition and the new surprise. I live—I love—I am happy—I am wretched—I was once young—I must die, are extremely simple and commonplace ideas, which no one can claim as exclusive property, yet out of these have flowed all the poetry the world knows, and all that it ever will know. The "still sad music of humanity" is simple enough, and may be apprehended by any peasant, and all that poets have to do is to execute variations upon it, to unwind its subtle sweetnesses, to pursue and carry out its suggestions; and the important matter is with what amount of skill these variations, unwindings, and pursuings have been accomplished. The thought is only a part of the poem or the essay, and the commonest part. What in a work of art is really valuable is the art. The statue that is only worth the weight of its metal is a very poor statue indeed. Take an English classic—*The Castle of Indolence*, or *The Vicar of Wakefield*, for instance: strip it of music, colour, epigram, wit, analyse the residuum of naked ideas, and you will find nothing very important nor yet very original. The ideas which make up these works have been gathered from far and near, and were as much the property of a hundred contemporary persons, as they were the property of Goldsmith and Thomson. *Paradise Lost* proves nothing—except that Milton was one of the greatest poets the world ever saw. And all this does not in the least detract from the merit of the poet or the novelist. The matter does not so much lie in the idea, as in the use made of the idea. Music sleeps in the strings of the harp, no doubt, but the skilful harper's hand has to come before it can be awakened. The architect is nothing without the services of the quarryman, bricklayer, and plasterer; the general is nothing unless the recruiting sergeant be preliminary. Yet we admire the great musician more than the artificer who built the instrument. We do not place Sir Christopher Wren and a hodman on the

same level; the recruiting sergeant is gathered quietly to his fathers, whoever they may happen to be, while Wellington's war horse snorts in bronze in every one of the British cities, and his fame fills an ear in our history as the sound of the billow Fingal's cave in Staffa.

A literary work of art is neither a mathematical demonstration, nor a Pinnock's Guide to Knowledge, nor an argument. It is not designed to prove anything, nor yet to disseminate information useless or useful. If harshly questioned it frequently can give no very satisfactory reason for its existence. It is something above and beyond mere use, like the colour and breath of a flower, or the burning breast of a humming-bird. Incidentally it may subserve purposes tangible enough, but its primary office is to please; at all events, if it fail in *that*, it fails in everything. If it cannot delight, its existence is an impertinence for which no apology can be accepted, and the world gives it the cold shoulder. And here it is that the supreme importance of style becomes visible. We see at once the superlative value of conciseness, neat or cunning turns of sentence, colour, cadence, the glitter of fancy and epigram; we see at once what room there is for the play of all the weapons of rhetoric,—only in the using of the weapons we must take lessons from nature, and not from the rhetorician. For the lunge that rids you of your adversary is the inspiration of the moment, never the remembered lesson of the fencing-master. In literature, the *how* a thing is said is of more importance than the thing itself. A thought, no more than a human being, is independent of this. Thought, if left to itself, will dissipate and die. Style preserves it as balsams preserve Pharaoh. Fine phrases are, after all, the most valuable things. Epigrams are our most unquestionable antiques. 'Out of the *débris* of the early world we have raked a few poetical images, and they are as fresh now as on the day on which they were first uttered. The enamel of style is the only thing that can defy the work of time. In virtue of his style Homer lives just as Addison and Jeremy Taylor live in virtue of theirs.

To define the charm of style is as difficult as to define the charm of beauty or of fine manners. It is not one thing, it is the result of a hundred things. Every thing a man has is concerned in it. It is the amalgam and issue of all his faculties, and it bears the same relation to these that light bears to the sun, or the perfume to the flower. And apart from its value as an embalmer and preserver of thought, it has this other value, that it is a secret window through which we can look in on the writer. A man may work with ideas which he has not originated, which do not in any special way belong to himself; but his style—in which is included his way of approaching a subject, and his method of treating it—is always personal and characteristic. We decipher a man by his style, find out secrets about him, as if we overheard his soliloquies, and had the run of his diaries, just as in conversation, and in

the ordinary business of life, we draw our impressions, not so much from what a man says, as from the manner, and the tone of voice in which the thing is said. The cunning reader draws conclusions from emphasis, takes note of the half perceptible sneer, makes humour stand and deliver its secret, and estimates what bitterness it has taken to congeal into sharpness the icy spear of wit. After this fashion, in every book the writer's biography may more or less clearly be read. For a man needs not to speak directly about himself to be personally communicative. And in truth it is in the amount of this kind of personal revelation that the final value of a book resides. We read books, not so much for what they say, as for what they suggest. A great writer's characters are not nearly so interesting as the great writer himself, and we take to them on account of their paternity, as we take to the children of our friends. There are books we read over and over again, and all the while we are striving to catch a glimpse of the author between the lines. The characters of the great writer take us back constantly to the great writer, as the sunbeam constantly takes us back to the sun. And by this relationship to something greater than themselves they are dignified, as an ambassador, in whatever country he may be placed, wears the dignity of the sovereign of whom, for the time being, he is the representative. If you desire information respecting the sovereign, it is to the ambassador you must apply. Don Quixote is not so great as Cervantes; Hamlet is not so great as Shakespeare; Satan is not so great as Milton, but through the characters we have named we learn more about the writers than we do from their professed biographies. Biography frequently can show us little more than the table a man sat at, the bed he slept on. In mere biographical value and pertinence, Lockhart's *Life of Burns* is not comparable for a moment with the poems of Burns; and the reason why Mr. Carlyle's essay on that poet stands almost alone in our literature as a masterpiece of full and correct delineation, is the way in which he makes this line or the other a transparent window of insight, through which he obtains the closest glimpses of his subject. It is only the books which contain this unconscious personal reference—and this comes out not so much in what is said as in the manner of saying—that are worth much, or that can permanently interest.

Take up an essay of Montaigne's; you are startled by no remarkable breadth or weight of idea, but you are constantly encountering sentences through which you can look in on the author as through a stereoscopic slide. You take up an essay of Charles Lamb's, and in the quaint setting of his thoughts—like a piquant face in a Quaker bonnet—you are continually renewing and improving your acquaintance with the shiest, most delicate, and in some respects the noblest and purest of modern spirits. People never weary reading Montaigne and Lamb, for while the thoughts they express have sufficient

merit as thoughts, they are at the same time biographies in brief. They may have written finely or foolishly, seriously or with levity, but they have always written with a certain personal flavour. Take up, on the other hand, one or other of the novels which have recently acquired a prodigious popularity, and while you find the central secret hidden away in the cunningest manner under fold on fold of incident, you find nothing else in the least worthy of regard, and a single perusal disposes of all the interest which can arise from the unravelling of the plot. These—in their own way extremely clever and exciting works—possess no reflection, no landscape, no commentary on what is going on, and they are entirely innocent of the personal revelation of which we have been speaking. The characters themselves are the merest films and shadows, and the books in which we make their acquaintance seem written by people who have never been in love, who have never stood by a friend's death-bed, who have never seen the sun rise or set—who have no biography in short. Rising from them you have been enabled to form no idea of the writer's personality, you have been introduced to no experience with which you can compare your own. You have only had your curiosity piqued for an unconscionable length of time; and when at the close of the third volume the murder is out, you no more think of reading the book over again, than, reaching London by the night train from the north, you dream of returning for the mere purpose of undergoing your journey a second time. You have found out the secret, as you have come to London. The carriage has been the instrument in the one case, the three volumes in the other, and your purposes with both have been entirely served. It is by their styles that writers are recognised, just as it is by their gait, their bearing, their tones of voice, and their numberless individual peculiarities that you recognise men in the street or in the drawing-room. Every sentence of the great writer is like an autograph. There is no chance of mistaking Milton's large utterance, or Jeremy Taylor's images, or Sir Thomas Browne's quaintness, or Charles Lamb's cunning turns of sentence. These are as distinct and individual as the features of their faces or their signatures. If Milton had endorsed a bill with half-a-dozen blank verse lines it would be as good as his name, and would be accepted as good evidence in court. If Lamb had never gathered up his essays into those charming volumes, he could be tracked easily by the critical eye through all the magazines of his time. The identity of these men can never be mistaken. Every printed page of theirs is like a coat of arms, every trivial note on ordinary business like the impression of a signet ring.

As a whole, our literature, and especially our periodical literature, is not distinguished at this moment by style in any rich and characteristic way.

Such writing is commonplace, just as a man's countenance is commonplace which has no marked and prominent feature, which has no individuality of expression, and which does not differ in any material degree from the countenances of his fellows. There is a certain weekly Review which is much read, much admired, and much feared. The writing is extremely clever, but the odd thing is that the writing is of equal cleverness, and of the same kind of cleverness. Each number is level like a grassy lawn, yet each number must be the production of at least twenty able quills. Have these twenty writers identical tempers, identical brains, and identical experiences? Or is the editor a sort of grass roller, which keeps everything smooth and level? There is a certain weekly journal conducted by a master of fiction, which seems to be entirely written by the editor; certain portions when the editor is at his best, other portions when his eyes were weary. Methinks there be six Richmonds in the field—one Richmond* agile and an able swordsman; five, who have received fencing lessons from the master, who put continually in practice his method of carte and tierce, but who lack his stamina and dash. Such writing is comparatively valueless, because it lacks individuality, and does not spring from any peculiar personality. It is clever, of course; but the cleverness is acquired rather than native. All the defects of our present literature may be summed up in a word—want of style. And the reason is not far to seek. Literature has become a profession. Books are written too hastily, and to serve a purpose too immediate. In the days of the old masters of style, the writer adorned his thoughts for the mere love of adorning his thoughts: in the present state of things, it is hardly to be expected that he should put himself to any considerable trouble on that score. The market of the old writer was in posterity; the market of the present writer is in the next street. The Gothic cathedral—whose front from base to pinnacle is a floral burst and laughter of stone—was not built by estimate. The Gothic cathedral could wait a century or so for a congregation. Before our present churches are finished, the congregation is eager to enter and take their seats, to criticise the interior decorations, and to hear what the preacher has got to say. And yet in this world there is no such thing as entire and absolute loss. We cannot write so supremely now as did the old men, but this we can say for ourselves, that while they served ten we serve a thousand; that while they ornamented sandals for nobles we make boots and shoes for the multitude; and that it is better for every man to have his beer in the pot, than that in the midst of need there should be spread at intervals a royal feast with kings for guests and golden vessels on the table. There are no dishes of peacocks' brains now, but there are wholesome wheaten loaves for all.

ALEXANDER SMITH.

AUTUMN THOUGHTS.

AUTUMN THOUGHTS.

FROM THE GERMAN OF GEIBEL.

I SAW the forests fade,
The air was still and grey,
And o'er my soul dismayed
A heavy sadness lay.

Rough Autumn's hand now shed
Leaves o'er the silent way ;
The joy of Summer fled
Become the Winter's prey.

The sun's life-breathing glance
Forsakes this dying hour ;
The streams no longer dance,
Bound by the frost's chill power.

Sudden there sweetly rung,
To me a song so new !
The transit bird it sung,
As southward fast it flew.

Like strokes that cause a spring,
The song sunk in me deep ;
Each note lost joy to bring,
And cause my heart to leap.

It told of joy forgot,
Pointed to distant heaven ;
Sang, "Soul, forget it not,
To thee, too, wings are given."

ESSAYS FOR SUNDAY READING.

X.—NATURE A WITNESS AGAINST THE SINNER.

BY JOHN CAIRD, D.D.

It often seems to us as if Nature preserved a strange indifference to the evil of which she is the constant witness. Her smiles and frowns are distributed impartially on the righteous and the wicked. She lends the aid of her laws to the vilest crimes as readily as to the holiest deeds. Her most bounteous gifts are bestowed on sinner and saint alike. Her sweetest influences are shed not more frequently on the path of purity and goodness than on that of ungodliness and vice. When some great crime has been committed, or when, as sometimes happens in the history of nations, society has become deeply corrupted, the restraints of morality and religion have been thrown off, and all purity and reverence lost in shameless licentiousness and impiety, the thoughtful observer has been tempted to exclaim, "Why sleeps the avenging justice of God—why do the heavens thus look on in calmness and silence, and the tranquil earth smile in beauty—while such deeds are being done? Strange, if all this fair material order be the work of infinite goodness and righteousness, that no lightning-bolt leaps forth on the impious head, or that the solid earth does not yawn beneath their feet and engulf the perpetrator of such iniquity!" But Nature yields no response to such feelings. The outraged conscience looks in vain for any indication of sympathy from her moveless face, the cry for vengeance on oppression and wrong fails for one instant to disturb her awful apathy. She seems to take no note of what is done. The moment after crime the whole aspect and order of the visible world is just as it was before. The wronger of innocence retiring from the scene of his guilt, the murderer reeking with the blood of his

victim, finds the material world as if unconscious of the deed. The summer sun is smiling, and the birds are singing, and the flowers are blooming still upon his path. The earth covers the slain, and the soft grass creeps gently over him, as if Nature would fain obliterate every trace of crime. Where a moment ago the hapless vessel sank, and the shrieks of the pirate's victims rose wildly to heaven, the returning waters come again, and the spot soon retains not one ripple to mark and register the wickedness of men. And all over the world in which we live we are constantly treading on ground that has been desecrated by human vices and crimes. Generation after generation has come and gone, each with its innumerable untold moral histories wrought out amidst the very scenes which now surround us. Yet the earth betrays no consciousness of the past. The hills and plains, the woods and meadows and streams, retain no records of the strange and terrible deeds they have witnessed. No echo of the innumerable impurities and blasphemies with which it has been burdened is borne to our ears on the silent air. No reflection of the sins and crimes it has beheld is mirrored on the bright and calm expanse of heaven.

Yet notwithstanding this apparent insensibility of Nature to the evil deeds of which it has been the theatre, the Scriptures frequently speak of it as if it were indeed no unwitting witness of the moral history of man. In the prophetic writings especially the Divine Being is often represented as appealing to the material world for a testimony against His intelligent creation. The lower elements and orders of Nature are summoned into court, so to

speak, to bear witness to the sins and crimes of which they have been cognisant. "He shall call," it is said, "to the heaven from above, and to the earth, that he may judge his people." (Psalm 1. 4.) Again, in the opening words of the prophecy of Isaiah we read, "Hear, O heavens, and give ear, O earth; Thave nourished and brought up children, and they have rebelled against me!" And we have the same idea in many such passages as these: "Hear ye, O mountains, the Lord's controversy, and ye strong foundations of the earth; for the Lord hath a controversy with his people, and he will plead with Israel." (Micah vi. 1.) "Gather unto me all the elders of your tribes, that I may speak these words in their ears, and call heaven and earth to record against them." (*Deut.* xxxi. 28.)

What then, let us ask, is the import of this appeal? How shall we understand this conception? In what way may we conceive of Nature as endowed with a power of moral testimony, and the very inanimate world as rendered capable of bearing witness against erring and sinful man? The idea, of course, is a highly poetical one; but the profoundest truths, lessons of most sober practical wisdom, are often couched in an imaginative form. What then is the meaning of this personifying of Nature, this invocation of the heavens and earth, as if possessed of the power of moral observation? How can we conceive of the material world as becoming a witness against man? I shall endeavour to suggest one or two of many considerations on which we might conceive such an appeal to be grounded.

I. The material world may be summoned to bear witness against man, *as containing the scenes of his crimes*. Nature keeps a silent record of the sins of men in the associations connected with the places where those sins were committed. The silent power of witness-bearing that lurks in the very scenes and objects of material Nature, is one the force of which has not seldom been felt by guilty man. Bring the sinner to the scene of his past misdeeds, and he will sometimes feel as if the very inanimate objects around him were endowed with a voice of reproachful reminiscence. For moral feelings and actions have, as we know, a strange power to fasten themselves to the scenes in which they have been called forth. A sanctity gathers, to the eye of every thoughtful observer, around the great or good man's home. The spot where some noble or heroic deed has been done is thenceforth sacred ground to all who can appreciate or sympathise with it; and, on the other hand, a horror broods over the scene of great crimes, and the spectator has felt his flesh creep and his blood run cold as he stood in the chamber or on the very spot where some horrid act of ruthlessness and infamy has been committed. And, if such be the power of local association over the mere spectator, much more potent must its influence be over the actors themselves. We all, perhaps, feel that there are places in this world which, hallowed by this invisible charm, are capable of rousing in us

emotions which nowhere else we feel. It is no mere sentimentality, when we revisit the old home, the scene of many a happy hour in days bygone, when we enter the room or tread the garden walk or woodland path where, with dear friends now passed away from us, we often and often took sweet counsel, and where there comes upon us with a rush of tender recollections the irrepressible wish,

"O for the touch of a vanished hand
And the sound of a voice that is still!"

It is no mere sentimentality that compels us to feel how impossible it is to repair to such spots as these without a throbbing pulse and a moistened eye. And, on the other hand, there may be places in this world on which some of us never wish to look again, because we could not revisit them without feeling as if the very walls of the room, or the silent hills and woods around us were looking on us with a stern, watchful eye of reproach, or as if an accusing voice were there summoning up before us, with humiliation and remorse, the shameful or guilty deed to which these scenes were once witness. On this principle, too, there is a certain grim propriety in the sentence that sometimes condemns the malefactor to be executed on the very spot where his crime was committed, that so he may face death with all the horror of recollection adding poignancy to his doom. Thus, from the operation of this principle, we may conceive the whole visible earth and heavens to become by degrees fraught with reminiscences, stamped with associations of blessing or cursing to mortal men, because of the holy or sinful deeds which they have witnessed. Nay, more than this, Nature is not only a treasure-house of moral associations, it has been maintained as beyond question that in consequence of a certain physical law, Nature becomes a receptacle of indelible material impressions from human actions, good or bad, and therefore, that these impressions will constitute, so long as Nature lasts, an imperishable register of goodness or of guilt. "The mechanical philosophy," it has been said, "assures us that, on the principle of the equality of action and reaction, no motion impressed by human agency on Nature is ever obliterated, no sound which has once been uttered is or can be lost. The vibrations of the air which that utterance set in motion, continue in their effect to operate still, so that every sound or sentiment may be recoverable in the most distant ages. No deed has ever been performed without leaving behind, in some part of the material universe, an indestructible witness of its perpetration. Had any one of all these words never been spoken, had any one of all these deeds never been done, certain impressions would have been wanting, which the material elements now contain. So that they constitute at this moment, to an eye capable of reading them, a minute and faithful record of all the eventful past." They present to the eye of Omniscience a vast book of remembrance,

from whose unerring pages He can read forth the moral history of the human race and of each individual man who has ever lived. And surely it is no fanciful or extravagant conception to suppose that a day may come when all this vast repository of moral impressions shall be unsealed. On the great day of account, when before the eye of Infinite Justice the guilty soul shall stand trembling and aghast, may it not well be that there and then not only Conscience within, but Nature without, shall be called to bear witness against man, and that the very material elements shall at last render up that record which they contain of his moral history? Might we not conceive the silent air around the sinner becoming vocal, and ringing in his horrified ears the echo of all the vain, or impure, or blasphemous words he has spoken; and the light of heaven reproducing, as in a mirror on the very face of the sky before him, the reflection of this or the other deed of iniquity and wrong which he would fain blot out from his sight and his memory for ever; and all Nature, from her every region, in heaven above and earth beneath, rendering up again as it were the buried spectres of his sins? If any such process of material resurrection of the traces of bygone guilt be possible, would there not be contained in it a terrible explanation of that witness-bearing of Nature against sinful man of which the Scriptures speak?

II. Another way in which we may conceive of Nature as bearing witness against man is, by its *fulfilling, in contrast with man, the end of its existence.* The heavens and earth, by showing forth the glory of their Creator, bear a silent but impressive testimony against those of God's intelligent creatures who glorify Him not.

It is a very simple and obvious principle, that the worth of a thing is to be measured by the degree in which it answers the end of its existence. To possess many admirable qualities, to be useful in promoting many other and inferior ends, does not save from condemnation that which, for the special end for which it was made, has proved a failure. A watch, to take a simple illustration, is constructed to indicate time. That end answered, you may desire that the watch you purchase should be elegant in form, of tasteful design and workmanship; but the first consideration is that it keep time accurately, and no elegance of shape or structure can compensate for inaccuracy or defective workmanship. And, suppose the watch you have bought be ever so beautiful in form and structure, yet if you discover that it is continually going wrong, and cannot be trusted, would you be content to retain it? No; it might satisfy a child, whose eye is caught by the mere glitter of the bauble; but pretty though it be—good, in other words, as a toy—you condemn it, you throw it aside as worthless, you pronounce it a failure, because it answers not *the* end for which it was made. So, again, to take another case, you plant fruit-trees in your garden, or rear vines in your

conservatory, with much care and cost, in order that you may gather from them the fruit in due season. Would you be satisfied, when the time for fruit-bearing came, if the vine only bore leaves, or the tree, at best, beautifully tinted blossoms? What would it matter that the plant pleased the eye, that it hung in festoons of exquisite gracefulness, that it filled the air with fragrance? All *that* would be well enough in plants or flowers which you cultivate only for their beauty; but the sole end you had in view in all the pains and expense you have been at with *this* plant is, not that it should look fine or smell sweet, but that it should bear fruit; and if fruit you do not get, you regard all your labour as thrown away, and you condemn the tree as a failure, because it answers not the purpose of its existence.

And now consider how it stands between God and the creatures of His hand. The one great end for which all creatures exist is, as both reason and Scripture assure us, to serve and glorify God. Each creature, according to its nature, is intended to fulfil this end—matter and material organisations in a lower way, spirits, and spiritual, intelligent beings, in a higher and nobler way. By their admirable structure and arrangements, by their infinite variety and harmony, by the perfect adaptation of means to ends, by the constant and undeviating regularity and order which they exhibit in all their movements and processes and phenomena, the heavens and earth, and all orders of being in God's lower creation, yield an unconscious tribute of glory to their Creator. But man is capable of yielding to God a higher homage. The great Father of all desired, if we may so speak, a nobler obedience than that which is given unconsciously and involuntarily. He longed for minds that could know Him, and hearts that could love Him, for beings who could yield to Him, not blind submission, but free and filial obedience. The glory of service rendered, not in mindless, passionless subjection to material force, but in intelligent recognition of the wisdom and justice of the law, and in loving devotion to Him who enacts it. This was, with reverence be it said, a glory which Nature could not yield to Him, and yet which God sought to gain; and so He created man, a rational, loving, active, responsible being, endowed with a nature made in His own image, and capable of communion with His own infinite Mind. He gave to man powers capable of rising above all that is finite and temporal. A subtle mind, a restless heart, thoughts that wander through eternity, affections that nothing earthly can satisfy, aspirations that soar above the range of earthly ambition, a spirit capable of finding satisfaction and rest only in God Himself. In one word, the great, the supreme end of man's being, that for which he was called into existence, and which gives to his existence its chief meaning and worth is, that he might "love the Lord his God with all his heart, and soul, and strength, and mind."

Taking this, then, as the criterion of man's worth

or worthlessness, let us ask whether in all cases we find him answering the end of his being. The question is not whether we are living fair and reputable lives, whether we are possessed of many qualities that attract admiration and esteem, whether we are clever, amiable, accomplished, whether no exception can be taken to us in our earthly and social relations. All this may be, all these inferior uses we may subserve, and yet the great and all-important end be left unanswered. The touchstone of our being is, Are we living for God? Do we feel that it is our daily thought how to please Him, our chief desire and delight to win His approval? Do we desire His favour more than all earthly good, and dread His frown more than all earthly ill? Can we declare that there is nothing that lies nearer to our hearts than to do the will of the All-Good, and that if put to the test, there is nothing we hold dear which we would not sacrifice—money, honour, ease, power, the very ties of love and home—at the call of duty to God? Alas! what answer can many of us make to such questions as these? With all our good qualities, our talents, attainments, social virtues, with much in us that is capable of winning the esteem and admiration of our fellow men, is it not so that multitudes—perhaps the great majority—are living without the shadow or semblance of devotion to God? How many minds busy with a thousand studies, enquiries, contemplations, are never visited by one thought of Him for whom alone the power of thought exists! How many hearts, soft and gentle and loving, glowing with tender feelings or burning with impassioned desires, the seat of a thousand eager, restless, ardent emotions and affections, are blank of all love to Him for whom the very capacity to love was given! How many lives, blameless perhaps to human observation, are spent so that it would cause no real diminution of enjoyment if there existed no God at all! And if this be so, what is it but to pronounce that, measured by the true standard of human excellence, such lives are a failure? What matter that they escape the censure of the world, that they possess even all that can win the world's admiration. Outward grace and beauty, intellectual ability, social attractiveness, integrity, natural amiability—these are all qualities that adorn and ennoble man's life, but they are not the quality for which life was given, and they cannot atone for the lack of it. Let an earthly father behold his child adorned with all such excellences, would he be satisfied if yet he knew that that child's heart was cold and hard to him? And can it be otherwise with the Father of spirits. He constructed with exquisite skill the mechanism of man's being, that it might ever go true to him—keep time and harmony with the movements of the sun of Truth and Love: of what avail the external grace and symmetry of the machine, if as to this its main use and purpose it is made in vain? He created man's nature as a "noble vine, wholly a right seed," that it might

bring forth the fruit of holy love and purity, and devotion to His will; what matter that it puts forth the clustering leaves and fair blossoms of a mere social virtue, if year after year as the vintage time returns He comes, the great Lord of the Vineyard, and finds upon it no fruit? Surely all such surface excellences will not save it from condemnation as a failure, inasmuch as it has not answered the great end of its existence.

Now it is this thought which the Scriptures suggest when they represent the Almighty Creator as summoning the lower orders of being to bear witness against man. For His glory were both Nature and man created. Nature answers that end; man, alas! but too often does not. To show forth the glory of His power and wisdom and goodness, the heavens and earth were made; and there is not one star that shines, nor one flower that blooms, that is not rendering up its unconscious tribute of glory to Him who made it. Earth and sea and skies, mountain and forest and stream, the round ocean and the living air, the stormy wind and the swelling tide, nay, every ray of light, every whisper of the vagrant breeze, every rippling wave upon the measureless surface of the sea—all material agents, from the mightiest to the most minute—blend with unconscious utterance in the universal anthem of creation—Glory! glory in the highest to Him who made us all! And when amidst a world thus resonant with His praise, God looks down on the cold, unloving heart and godless life of man, need we wonder that He appeals to these His lower creatures, for a witness against him? "O can it be"—may we not almost hear the great Father exclaim?—"can it be that thou, my child, art silent whilst even inanimate Nature is vocal with my praise? I look to the heavens for glory, and they give it, for 'the heavens declare the glory of God and the firmament showeth his handiwork.' I look to the earth for glory, and it gives it, for 'the whole earth is full of my glory.' I look to man, the child of my love, made in mine image, redeemed by the blood of my dear Son, for glory, and he gives it not. 'Hear, O heavens, and give ear, O earth; I have nourished and brought up children, and they have rebelled against me!'"

III. The heavens and earth may be appealed to by the Divine Judge as *affording proof of the unerring certainty and strictness of His laws*. The order of God's government in the natural world is a type of the order of His moral government. As there is no arbitrariness, no uncertainty, no deviation, by one slightest exception, from the fixed and uniform operation of law in the material world, so, we are taught, there will be no exception to the uniformity and exactitude of those higher laws to which all moral beings are subjected. Against all, therefore, who transgress or are disposed to tamper with the strictness of moral laws—an appeal lies to those natural laws the strictness and uniformity of which no man can dispute, and which all men know it to be madness to tamper with.

In so far as their operation is known, the laws of material nature regulate the conduct of men. All men believe, and act as if they believed, that the sun will continue to rise and set, and the seasons in regular sequence to return; that the seed sown in the earth will produce fruit after its kind, that the tides will continue to ebb and flow, that water will drown, and fire burn, and food sustain, and poison destroy life, according to laws which admit of no infringement, of no alteration, of no exception. To act as if the laws of vegetation, of light, heat, electricity, mechanical and chemical combination and solution might perhaps in one case not be so strict as usual, would be the act of a madman. A revolt against the law of gravitation is not conceivable within the bounds of sanity. No man ever imagines that if he built a house with walls off the plumb, gravitation might for once make an exception to its uniformity, and the fabric be preserved from ruin. No engineer constructs his steam-boiler of slighter thickness than his calculations tell him will be necessary to resist a given pressure, in the insane hope that possibly in this instance the thin plates may not burst, and the dreadful catastrophe may be averted. In short, wherever Nature's laws are known, we act, all of us, on the belief in their constancy and invariableness. No temptation ever shakes our conviction that, down to the minutest shade of exactitude, they will infallibly in given circumstances work out fixed results.

But do all men believe, or act as if they believed, that the moral laws by which the universe is regulated are characterised by the same unvarying certainty? Do all men act on the conviction that it is as likely that a stone should fall *upwards*, as that a sin should go unpunished, that the sun should to-morrow or on some future day rise in the West, as that the favour of God should ever shine upon a soul that has lived in selfishness and sin? Does the conduct of all sane persons prove that they deem it as incredible that the human frame should be sustained without food, or that harvests should be gathered where no seed has been sown, or that tares should yield wheat, or that flowers should bloom on ice, or on hard and soilless rock, as that without a holy life here it is possible to attain to eternal happiness hereafter? It is quite clear that no such conviction of the uniformity and inexorableness of moral laws, and of the certainty of their results, has lodged itself in the minds of many. The sequence between cause and effect which all men believe, and on the belief in which all men act in the natural world, they show that they regard as much less infallible in the moral: and whilst they plough, and sow, and reap, prepare food, build houses, sail in ships, observe in science, construct in art, on the principle that material sequences will never, by the faintest appreciable variation, be altered,—yet they speak and act, live careless, easy, irreligious lives, gratify their passions, resist the demands of duty, and in short, in a thousand ways on the obvious persuasion that there is no such

inevitable certainty in the sequence between holiness and happiness, between sin, and misery, and death.

Now the appeal to Nature, of which I have spoken, may be said to be grounded on the supposition that there is no difference in point of certainty betwixt moral and physical laws. When it is said, for instance, that the Almighty "shall call to the heavens from above, and to the earth, that He may judge His people," may we not interpret this invocation as implying that the results of moral acts are as inevitable as those which depend on material causes? Heaven and earth, the whole order of physical nature, may be called to witness that God's moral laws shall not with impunity be transgressed; that selfishness or goodness, sensuality or purity, malice or benignity, pride or humility, ungodliness or piety, shall work out results as sure and invariable as those which obtain in every experiment of the chemist, in every process of the husbandman.

It is true, indeed, that moral laws do not work with the same rapidity as material laws. In many cases the consequences of physical acts—acts of obedience or disobedience to natural laws—are all but immediate. Thrust your hand into the fire, and the smart of burning, which is the penalty of the reckless act, comes in a moment. Fling yourself from the toppling cliff, and on the maimed limb, or crushed and lifeless body, gravitation instantly avenges the transgression. Inhale the deadly vapour, or swallow one grain of the poisonous acid, and with incalculable rapidity the fatal result succeeds. Sow bad seed, or on ill-cultivated ground, and a few revolving weeks bring on the inevitable consequences. If the sequence of cause and effect were equally rapid in the moral world, unbelief would in this case be equally impossible. Disobedience to moral laws would be as inconsistent with sanity as disobedience to natural laws. If every act of sin were followed by an immediate penalty,—if, for instance, the hand that had just committed the ruthless act were instantly stricken palsied by the side—if the tongue of the blasphemer were struck dumb the moment after the impious word had crossed the lip—if the eye that had just darted the angry or lascivious glance, glazed over on the spot with incurable blindness—if dishonesty stole the hue of health from the cheek, and premature age blanched instantaneously the traitor's head—if the remorse that sometimes attends a course of guilt, instead of coming after a long interval or settling down on the spirit at the close of life in gradually darkening, deepening horror, were the immediate and universal consequence of sin—if, in short, moral penalties trode on the heels of transgression swift as material results on their causes,—then would disbelief and disobedience be as much precluded in the one case as in the other.

But this distinction does not affect the appeal before us. The difference is only a difference in

time. Nemesis, though slow, is not less sure of coming. Moral retribution ripens gradually but not less certainly than the seed which the sower casts into the earth. The virus of evil may operate only after a longer interval, but the deadly result is as inevitable as when the poison works in the veins. The descent to ruin may not be so rapidly accomplished as when the wild leap is taken over the fatal brink; but there is a moral gravitation that hurries the impenitent soul to a destruction which is as inevitable, though longer delayed:—nay, even more inevitable. For material laws, though never changed, are not, like moral laws, essentially unchangeable. Gravitation may cease to act, but justice and righteousness and truth shall endure for ever. The material system in which we live may one day be subverted, but not the will of Omnipotence could change the essence of a moral act. "The world may pass away, but he that doeth the will of the Father abideth for ever." Therefore does all nature respond to the summons when called to bear witness by its uniform and changeless order to an order that is more constant still. And every circling orb fulfilling its appointed course, and every returning season that revisits the earth, and every swelling tide and rushing stream, and every ray of light, and every springing blade, and every falling stone,—nay, every vagary of each wandering wind, and every capricious motion of each vapoury cloud that appeareth for a little while and then vanisheth away, all in the constancy of their obedience to inexorable laws respond with one consent to the summons when, in testimony of the unchangeable fixedness of the order of His moral government, the Judge of all the world "shall call to the heavens from above, and to the earth, that He may judge His people."

To the principle on which we have been insisting, the invariable and uniform operation of moral laws, an objection may be urged, to which, in conclusion, I shall offer a brief reply. If this principle be true, where, it may be asked, is there any place for the redemption that is in Christ Jesus? Every moral act, it is averred, shall infallibly work out its retributive effects; how, then, can it be maintained that Christ redeems us from the consequences of transgression? If no sinful act can go unpunished, can it be any longer averred that Christ saves us from sin and from all its fatal results? Must we not give up either our belief in the unchangeableness of moral law, or our faith in Christ?

I answer, No; we are reduced to no such alternative. The law that connects sin and punishment, transgression of moral law and its penal consequences, is not abrogated though every sinner who believes in Jesus Christ shall be saved. For it

must be considered that it does not imply the abrogation or suspension of one law, when another and higher law interferes with or modifies its results. By the law of gravitation a stone falls to the ground; but that law is not abrogated, or altered, or infringed, when the interposition of my hand prevents the stone from falling. It is only that the lower law is modified by the higher law of muscular action; nor, again, is there any subversion of the laws of winds and tides, according to which a boat would be swept down by the rushing stream, or by the force of the wind, if the power of steam introduced into the vessel enable it to beat up steadily against wind and tide. In this case it is, as in the former, only a higher law that is modifying the operation of a lower, and the result is the combined effect of both. Or, once more, the chemical laws of nature acting on a lifeless body would disintegrate and decompose it; it does not imply the subversion of these when the principle of life knits together indissolubly flesh and bone, and sinew and muscle. Here, again, the two laws are both acting, are alike constant and invariable, yet the lower is modified by the higher.

In like manner the moral laws according to which unrepented sin inevitably issues in wretchedness and ruin, are not subverted, when he that repents and believes in Christ is saved from all the effects of sin. It is only that the lower law of moral retribution is modified by the higher law of love and mercy and purifying power in the Redeemer of the world. There is proclaimed through Him pardon to the guiltiest, purity to the vilest, peace to the wretchedest, eternal life to those who are dead in trespasses and sins. Accept the interposition of His outstretched hand who is omnipotent to save, and the gravitation of sin will be arrested, and the soul that is being borne down with ever-accelerated velocity to perdition will be stopped on its fatal career. Open your heart to the mighty internal force of his love and grace, and though the winds of passion, the strong tides of evil habit, the overmastering current of temptation, be beating you down, by the help of that divine energy you will beat them back. Receive the vital spark of heavenly life into your soul, and though moral corruption have set in, and the whole moral nature, rendered foul and loathsome by the ravages of sin, seems beyond the possibility of recovery, that divine power will restore it. He who stood by Lazarus' grave of old, hastes ever at the cry for help to stand by the deeper, darker grave of moral decay; and still as ever there is restoring virtue in the Voice which declared "I am the resurrection and the life: he that believeth in me, though he were dead, yet shall he live."

THE UNMERCIFUL SERVANT.

THE PARABLES

READ IN THE LIGHT OF THE PRESENT DAY.

BY THOMAS GUTHRIE, D.D.

XI.—THE PARABLE OF THE UNMERCIFUL SERVANT.

MATTHEW xviii. 21—25.

THE boy who, catching a poor fluttering insect, impales it, and then with curious and eager eyes watches it spin round and round, may not be of a cruel disposition. It is right by instruction, or by the rod even, to teach children kindness to the meanest thing that lives, still this barbarous and apparently cruel act may be entirely due to ignorance. The child does not know the pain it inflicts; and may just illustrate in the nursery what is so often illustrated by older people in the world, how, in miseries unrelieved, feelings wounded, and the poor neglected, more ill is done for want of thought than for want of heart. The nursery however presents a scene where, as through a rent in that veil of innocence which throws its sweetest charms over infancy, we see the bad passions of our nature. Proud and pleased as it takes its first steps across the floor to the mother, kneeling with radiant smiles and open arms to receive it, the infant totters, and falls with a lurch against chair or table. In such a case it is easier to stanch its wound than calm its anger. And yet, though the remedy is worse than the disease, that may be done. Revenge, says one, is sweet. There is nothing smells so sweet, said Louis XII., as the dead body of an enemy; and blowing up a spark she should have quenched, the foolish nurse or mother pretends, by beating chair or table, to avenge the wrong. The device succeeds—though it be, after a fashion, casting out devils by Beelzebub the prince of devils, and by another voice than his who spake peace to the storm of Galilee, calming the passions of that little bosom. Alas, her success in soothing anger by gratifying the passion for revenge, proves not so much the nurse's skill, as that forgiveness is not a virtue that belongs to our fallen nature.

To say that we forgive, is easy. But when engaged as a peacemaker, how have I seen the manner give the lie to the speech, and in the clouded brow, and sullen look, and reluctant advance, and cold hand of this scene, the strongest contrast to that where his father, seeing the prodigal afar off, runs to meet him, and rushes into his arms to kiss him? It is the forgiveness of the heart which God links to the forgiveness of the heavens—that which recalls Calvary, with Jesus bending eyes of pity on his murderers,—not the death-bed of an old highland chief in the days when clans met clans in deadly feud. It is told that the minister urged him to make his peace with men as well as with

God, declaring that he could not expect to be forgiven unless he forgave. The word at length passed his reluctant lips; but, as if that dying chamber had been a stage, and the dying man an actor, who, having played his part, doffs his theatrical attire to resume his real character, so soon as it was spoken, he turned on his son to say, that he left him a father's curse if he forgave them!

Foreign to nature, forgiveness is difficult even to grace,—so difficult, that he who suffers a wrong and feels no impulse to retaliate, recalls one without aught of malice, endures cruel wounds which heal without festering into corrupt, acrid humours, has, if such grace there be on earth, reached its highest pinnacle; and presents the finest image of Him, who, when reviled, reviled not again, and when his mangled form lay stretched on the cross, raised his meek eyes to pray, "Father, forgive them, for they know not what they do!" This grace, be it observed, is not incompatible with a deep sense of our wrongs. The apathy which feels a blow no more than a stone does, an insult no more than the cold corpse which, spit upon, lifts no hand to wipe off the stain, a wound no more than the air which the arrow cleaves, or the water which kisses the prow and closes its arms around the keel that tears its bosom, does not constitute a forgiving temper. They forgive most who feel the deepest indignation at ingratitude, and on whom injuries inflict the keenest pain. On them as, in forgiving wrong, and returning good for evil, achieving the greatest victory over self, the wise man pronounces his high eulogium, "He that ruleth his spirit is better than he that taketh a city."

So foreign is this grace to humanity, that we are unable not only to practise but even fully to understand it—as is shown by the question which formed the occasion of this parable. Although the law of vengeance, as expressed by the proverb, "an eye for an eye and a tooth for a tooth," was the rule in Heathendom, God's ancient people had some notion of the duty of forgiveness. The dyer's hands are stained by the colours of his trade, and the very clothes of one who works among spices steal some of their fragrant perfume: so their familiarity with those Scriptures where God's forgiveness is so eagerly sought and highly extolled, inspired the Jews, to some extent, with a forgiving spirit. They held forgiveness to be a duty, binding up to the third offence; but beyond that limit, let the wrong-

doer beware ; outside that charmed circle, man had a right to say, with God, Vengeance is mine, I will repay. Now, Simon Peter had not lived these months or years with Jesus without catching something of his Master's gentle, placable, forgiving spirit. The leaven had begun to work ; and his heart, swelling with something of Jesus's love, found the narrow limits of Jewish forgiveness too contracted for it. Though imperfect as the vision of him who, with sight but partially restored, saw men as trees walking, he had caught a glimpse of the truth : and came to Jesus, saying, Lord, "How oft shall my brother sin against me, and I forgive him? Seven times?" Hail to the dawn! The night is past, and the sky shows the first bright streaks of morning. "Seven times?" Simon has stepped out in advance of the men of his age and nation ; and our Lord seizes the opportunity to lead him onward and upward to higher ground—to make him better acquainted with Christian mercy, fairest of all the graces. "Not," is his reply, "seven times, but seventy times seven"—seventy multiplied by seven. A big number : and yet we would fall far short of the lofty mark if we suppose, that forgiveness is to be confined to the limit of four hundred and ninety insults, wrongs, or robberies. Here, as elsewhere, a definite is employed to express an indefinite number : so that by this expression Jesus taught Peter, and teaches us, that mercy, like the regions of space, has no limit ; and that as these stretch away before the traveller who looks out from the farthest star, so the loftiest intellect and largest heart can descry no bounds to mercy. Like our Father in heaven, we are to forgive without stint—forgiving as we expect to be forgiven. And for the purpose of illustrating and of enforcing this truth, our Lord tells the parable of the Unmerciful Servant.

THE MASTER'S TREATMENT OF HIS SERVANT.

He was reckoned with.—As the story runs, the King enters on an inquiry into the way his servants have discharged their trust—an incident, since the King here represents God, which reminds us that He with whom we have to do, will ere long reckon with every man—saying, "Give an account of thy stewardship : thou shalt be no longer steward." God will reckon with us : first, when Death, grim officer of justice, comes to seize man by the throat, and, as he drags him away into the presence of the Judge, seems to say, Pay that thou owest ;—and, secondly, when the Archangel, sounding his loud trumpet at the gates of Death, shall call us from our graves to see the throne set, the books opened, the world wrapped in flames, and God descending in majesty to judgment. But it is neither the hour of death nor the day of judgment which is meant here. Alas ! for us, if we are not reckoned with till then. It is too late then—too late to ask for patience ; too late to hope for pardon ; too late for repentance and return. The door is shut.

"In the cold grave to which we haste
There are no acts of pardon past,
But fixed the doom of all remains,
And everlasting silence reigns."

It is to the reckoning which God holds with men in time, through His Word, and by the agencies of His Spirit and their consciences, that this parable refers. The King reckons with us, "his servants," when he brings us to a sense of our guilt ; sets our sins in dread array before us ; impresses us with feelings of contrition, and alarms us with fears of judgment ; and by rebukes, corrections, and convictions, pleads with us to flee to Jesus. The bar here is one at which, some time or other, we all have stood ; and where, without regard to rank or office, kings, and priests, and purest women, as well as the lowest criminals, have been tried. This court holds its sittings within our bosoms—the presiding judge, God's vicegerent, is conscience—the law is the statutes of Heaven—and each man, turning king's evidence, bears witness against himself. And though in a sense man himself here constitutes the whole court,—being at once prosecutor, witness, judge, and jury, and the trial is conducted under circumstances not favourable to an impartial decision,—yet in every case the verdict is, and must be, guilty. We cannot shut our eyes to the fact, that we have all sinned times and ways without number. Whose conscience does not condemn him as a debtor to the law of God ? Who boasts, my hands are clean, my heart is pure ? The one redeeming feature in that Sanhedrim of sanctimonious hypocrites where Jesus stands facing the guilty woman, is that, when he says "Let him who is without sin cast the first stone at her," a sense of guilt paralyses every arm—they retreat, and she goes scatheless. To say that we have not sinned, is, in fact, to sin in saying it ; for we make God a liar, and our mouth proves us perverse. We have all sinned, and come short of the glory of God.

He owed an immense debt.—This is expressed by the very number here—ten thousand, or a myriad, being the highest in the Greek notation. Nor does the debt look less when narrowly examined—being such indeed as could have only been contracted by one who, representing his sovereign in some wealthy province of an Eastern empire, had squandered in boundless extravagance revenues that should have swelled the public treasury. In Roman talents this debt amounts to five millions of our money ; and if we reckon by the Jewish talent, and calculate the amount in gold, and not in silver, it rises to a sum equal almost to the whole revenue of the British empire—the servant stands indebted to his master more than seventy millions sterling.

A most enormous sum ! but on that account the better fitted to set before a money seeking, making, loving world, in a way suited to its understanding, our enormous guilt in the sight of God. Such is the sum of our transgressions ; and representing our debt to the divine law, these figures leave us no

hope of being able to pay it—laying on each man a load of guilt enough to sink not one, but ten thousand souls into perdition. That we are guilty, and, as debtors to a broken law, are sinners to the extent represented here, is a conclusion so humbling to our pride and alarming to our fears, that we may be unwilling to admit it. Yet better people than we, God's noblest saints, have spoken of the number and guilt of their sins in terms as strong. The man of whom, not partial friends, but God himself said, "there is none like him on the earth, a perfect and an upright man," on seeing his own image in the mirror which God held before his face, started back with horror; and seeming viler in his own eyes than he appeared to his friends when they found him covered with ashes, and his body one loathsome sore, Job exclaimed, "I abhor myself, and repent in dust and ashes." To the same effect is Ezra's confession when, rending his mantle, that man of the highest piety and patriotism threw himself on the ground to cry, "Oh my God, I am ashamed, and blush to lift up my face to thee, my God, for our iniquities are increased over our head, and our trespass is gone up unto the heavens;" and David's harp sounds forth the same mournful notes, when touching its strings with trembling hand, "the man after God's own heart" lifts his weeping eyes to Heaven, saying, "O Lord, for thine own name's sake, pardon mine iniquity, for it is great!"

He was bound to pay.—Therefore, seeing "he had not to pay, his lord commanded him to be sold, and his wife and children, and all that he had, and payment to be made." This first, as selling a man for debt, and secondly, as involving an innocent family in ruin, looks a hard sentence. It is not necessarily approved of here, and I am not called to justify it; yet, I may remark by way of explanation, that in some countries creditors were allowed to recover their claims by the sale of their debtors. Nor need we hold up our hands in horror at this, seeing, not only that it appears right to compel a man who has obtained another's property by fraud or wasted it by extravagance, to work till he has liquidated the debt, but that once on a time, and not so long ago, in this our own country, debtors were occasionally doomed to a fate more severe. The law allowed their creditors to throw them into jail—not fraudulent debtors only, but those also who under the loss of their fortunes had preserved their integrity—and there, amid the scum and off-scourings of society, through malice of enemies or lack of friends, whilst wife and children were left to starve, the unhappy debtor was left to rot. No jail-delivery for him, till a messenger from a higher court—Death—came to set the captive free.

Before considering the bearing of this part of the parable, it may be well to advert to the fact, that this law appears, though under certain important modifications, in the Mosaic code; and that, with such perversion of Holy Scripture as the Devil employed in the Temptation of the Wilderness, men—

and, sad to say, even ministers of the Gospel—have used it to defend slavery, and gloss over its abominable crimes. Nature occasionally produces strange monsters—creatures that only excite emotions of terror or disgust, and which, by a merciful law of Providence, rarely prolong their life, and never propagate their species. But in the spectacle of free men, and especially of Christian ministers, standing forth before an astonished world to justify slavery as a divine institution—in a people called Christian, holding that God made one race of human beings to be, like dogs and horses, the servants of another, and, while proposing to erect an empire on the foundations of slavery, with unblushing effrontery and unparalleled blasphemy applying to a system which the Christian world rejects, the sacred words spoken of our dying Lord, "the stone which the builders refused is become the headstone of the corner"—in this what age has produced anything so monstrous as our own? Nothing so cruel to man or insulting to his Maker is found in all history; and, done by men with Bibles in their hands, but without a blush on their cheeks, this offers a most remarkable and terrible illustration of the Saviour's words, If the light that is in you be darkness, how great is that darkness? The whole tone of God's blessed word, its spirit of grace and love, its golden rule, "As ye would that others should do unto you, do ye also to them likewise," are as irreconcilable with slavery as with robbery, or adultery, or murder, or any one of all the crimes of which this system has ever proved the cruel patron and the prolific parent. None—not Satan himself—has more wickedly perverted the word of God than those who attempt to make Jewish servitude an excuse and a defence for modern slavery. So far, for example, as the case in hand is concerned, the debtor who was sold to meet the demands of his creditor had a *right*, by the laws of Moses, to kind and brotherly treatment during the whole period of servitude; and whether the debt was paid out or not, freedom came with the seventh year. In the larger number of cases the bondage was thus no longer than an apprenticeship; and in those few cases where it lasted till the return of the year of jubilee, at the first blast of the trumpet the bondsman went free—"Then," said God, "shall he depart from thee, he and his children with him, and shall return unto the family and possession of his fathers." To pretend that such laws lend any countenance to American slavery, is to insult man's understanding and profane God's word.

Proceeding now to apply the parable, let it be observed that the servant takes no objection to the sentence. He does not challenge its justice: he only proposes to suspend its execution. Drowning men catch at straws. So did he, when, distracted with sudden terror, he cast himself at his master's feet to say—as if ten thousand talents, the revenue of a kingdom, had been but ten thousand pence—Lord, have patience with me, and I will pay thee

all! Did he know what he was saying? One can hardly believe it. And yet in undertaking such an impossible task, he was the veritable type of many a sinner. Promising to God never more to commit the sin of which their conscience accuses them, henceforth to keep their hands clean and their hearts pure, they, as it were, undertake, without having one penny, to pay ten thousand talents. So they also do who propose to reconcile themselves to God, and wipe out the guilt of their past sins, by living henceforth lives of blameless obedience. Have patience with me, they say, and then I will pay thee all. Now, suppose that they who have always fallen will fall no more, and that henceforth they will succeed in conquering the temptations which have always conquered them, what then? Keeping out of debt does not liquidate obligations already contracted. What merchant to whom I stand indebted would grant me a discharge on my undertaking hereafter to buy with ready money? To vary the illustration, fancy a man found guilty of murder, on being asked to say why sentence of death should not be passed on him, standing up, and, as a good reason why he should not be hanged, gravely promising to commit no more murders, never more to shed human blood. Some might laugh; none would listen to so absurd a plea. Such, however, is the way in which some sinners propose to pay old debts: it never satisfied man, and cannot satisfy God.

Still, incalculably great though the debt be, there is a way of paying all. It is not by works of righteousness that we have done. He who consents to be a debtor to the grace, will cease to be a debtor to the law, of God. Going to prison for us, to bondage for us, to death for us, Jesus, by rendering in his life a perfect obedience to the law, and in his sufferings a perfect satisfaction to the justice of his Father, has paid all. The benefits of his suretyship are ours if we believe. Trembling at the bar, overwhelmed by proofs of guilt, condemned, crushed,—guilty one lift your head, look up, behold

“Where high the heavenly temple stands,
The house of God not made with hands.
A great High Priest our nature wears;
The Guardian of mankind appears;
He who for men their surety stood,
And poured on earth his precious blood.
Pursues in heaven his mighty plan,
The Saviour and the Friend of man.”

He was forgiven.—In those old historic straits which join the Mediterranean to the broad Atlantic, there is an upper current from the ocean flowing into the sea, and an under and saltier current from the sea which flows out to the ocean; and in like manner the human bosom may, at one and the same time, be moved by the counter-currents of opposing passions—mercy and vengeance; anger and pity; what prompts to punish, and what to pardon. And as in yonder straits all merely floating things, from ships of war to seaweeds, are borne onward of the upper stream, so the fate of one whose crimes excite our anger, but whose

misery moves our pity, depends on which of these two passions gets the upper hand—obtains the mastery over us.

Such a case was his whose story forms the groundwork of this parable. His unfaithfulness, and the enormous loss it entailed on a kind and confiding master, called for punishment, and left him no claim to forgiveness. On the other hand, there he was, a miserable wretch—by one sudden turn of Fortune’s wheel thrown from its top into the dust, where, as with every bone broken, he lies writhing, crushed by the tremendous fall; none so poor now as do him reverence; by one step he has descended from a proud position to stand, with a wife and children whom his crimes have hurried into ruin, in the auction mart—nothing before him and them but the miseries of life-long slavery. His heart is wrung with grief; he stands appalled at the prospect; from his fate, pale with terror, and a picture of despair, he shrinks back to throw himself at his master’s feet, and implore his pity. “Have patience with me,” he cries, “and I will pay thee all.” Looking down on this form of abject misery, his master is moved with compassion—“Mercy rejoiceth against judgment.” He who asked but patience receives pardon. He who sought but time to toil and save to pay his debts, has them all forgiven. Seeking more than he deserved, he obtains more than he desired. His least fears are disappointed, and his greatest hopes surpassed. Without doing a turn to pay a penny of the sum, the debt of ten thousand talents is at once and entirely cancelled.

Behold a picture of the munificent mercy which God is ready to extend to us—even to the chief of sinners! Intoxicated with “the cup of devils,” many are insensible to their misery; having even “no bonds in their death,” they are like that degraded wretch who, stupefied with drink, lies prostrate in the gutter, and, while his family blush with shame and strangers look on with pity, feels neither cold, nor hunger, nor disgrace. But what costs many a gay and thoughtless one no care, moved God to compassion, and brought his Son to the rescue. To save us from sin, and from that hell where they seek for death but cannot find it, and only find after unnumbered ages that their torments are beginning, Jesus interposed, saying, I will save them—suspend the sentence—I come to do thy will, O my God,—deliver from going down to the pit, I have found a ransom—have patience with them, and I will pay thee all!

He paid it. Making atonement for sin, “he was wounded for our transgressions; he was bruised for our iniquities; the chastisement of our peace was upon him; and with his stripes we are healed.” The debt was paid on Calvary to the uttermost farthing; and now God only awakens our convictions and alarms our consciences, reckoning with us, that he may bring sinners to acknowledge their guilt, and so prepare them to receive his mercy. Sins are not pardoned till they are acknowledged.

If Justice wears a stern aspect ; if we think it hard that she will not pass by the smallest sin, that she holds him who offends in one point to be guilty of all, that, like a rough and stern officer, she takes us by the throat, saying, Pay what thou owest, there is Divine love here—"a bright light in the clouds." In dealing with us thus God seeks to bring us to a sense of our sins, that we may flee to the Saviour ; breaks down that he may bind up ; wounds that he may heal ; kills that he may make alive. The upbraidings of conscience, an awful sense of guilt, David's horror when he cried, "The terrors of death compassed me about, and the pains of hell gat hold upon me," are the harbingers of forgiveness. It is as in nature, where lightnings flashing through the horrid gloom, and thunders which rend the skies, are preludes of the rain that descends in copious showers on the parched and thirsty ground. Or it is as on that night of old, when a frail and lonely bark, watched by the Saviour's eye, was battling for life in a headwind on the sea of Galilee—Jesus comes in the tempests that agitate the soul. Wrapt in the dark mantle of the night, he advances over the stormy billows ; and, ere long, filling the troubled heart with a holy calm, his voice is heard, saying, "It is I, be not afraid."

THE SERVANT'S TREATMENT OF HIS FELLOW-SERVANT.

Of the four men lately hanged at Kirkdale, two had seen a man executed for murder but a few weeks before they committed the very same crime. Without sufficiently considering that ardent spirits, —maddened by which both imbrued their hands in blood,—while they weaken the reason, strengthen the passions, and, acting on these as on fire, make them burn with a fiercer heat, people are shocked at such an instance of human depravity. Such a case certainly and awfully illustrates God's question : "Why should ye be stricken any more? ye will revolt more and more"—for, unless checked by the restraints of grace or of providence, correction but exasperates our corruptions, and, producing no other effect on them than fire on clay, hardens rather than softens the heart. The crime of these felons who, swung from the gallows, turn slowly round and round in the wind—a ghastly spectacle, was shocking ; yet this servant presents a specimen of humanity in some respects still more detestable. Kindness seems only to have made him more cruel, and generous treatment more selfish ; nor do the love and mercy of his lord appear to have produced any other effect on him than the heat of the tropics on poisonous plants and venomous reptiles,—imparting to juices and fangs a deadlier virus. In proof of this, look at his treatment of his fellow-servant !

It is extremely harsh.—If we have civil rights we should use them civilly—refuse even a beggar with courtesy—be kind to all—bear ourselves to the meanest without forgetting that he is a brother, a

fellow-creature, one who, though less favoured by fortune, may carry on his shoulders a better head, and within his bosom a kinder heart, than ours. But this ingrate could not have treated the poor man worse had he been, not his fellow-servant, but his slave ; not a debtor, but a robber ; not, as probably he was, a man whose infirm health, or numerous family, or unexpected misfortune, had involved him in debt, but one more extravagant in his habits and faithless to his trust than himself. All of a sudden, like a police-officer who lights on some criminal for whom he has been hunting the streets, and haunts and hiding-places of vice, he catches his debtor by the throat, with the peremptory demand, "Pay me that thou owest."

It is most unmerciful.—Though unable to pay the debt, his fellow-servant is too honest to deny it ; nor, under feelings of irritation, natural to one treated with such insolence and severity, does he tell this man to keep off hands, and remember, that though he is his creditor, he is not his master,—but a servant as well as he, nor a man so good. Without even attempting to excuse himself, and show how innocently perhaps he fell into debt, the poor man casts himself entirely on his compassion. Though the other, as a servant, was his equal, he stoops to prostrate himself before him as his superior ; and, crouching at his feet, makes the same pitiful appeal, that but a few minutes before his creditor himself had made, crying, "Have patience with me, and I will pay thee all !"

Regarding the generous and entire forgiveness of the king which is set forth in the first act of this parable, as illustrating the manner in which God deals with men, in the answer of this servant to his fellow what an illustration have we of David's wisdom when, required to choose between the pestilence in God's hand and the sword in man's, he said : "Let us fall now into the hands of the Lord, for his mercies are great, and not into the hands of man." There is heat locked up in polar ice, and sparks of fire may be struck from the coldest, hardest flint—but there's no pity in this man's bosom. So bad is human nature capable of becoming ; no heart more merciless to man than man's ! There was no pity to be expected here—do men gather grapes of thorns ? This haughty and heartless upstart could not have incurred such an enormous debt without having passed many years in the indulgence of vice ; and all debauches are selfish—a life of vice resembling those petrifying wells which turn into stone whatever is immersed in them, fairest flowers or finest fruit. The ravages of the worst diseases which vice engenders in the body present a loathsome, but yet a feeble image of the wreck it works on the noblest features of the soul. No wonder, therefore, that this man's heart was not touched by the pitiful appeal—that the only reply to it was, a prison. "He would not," says the story, "but went and cast him into prison, till he should pay the debt."

The circumstances of the unmerciful servant greatly

aggravated his guilt.—Good men remember kindnesses, and forget injuries. Doing the reverse, bad men remember injuries, and forget kindnesses—in their hearts, the first are graven on a rock, and the second written in sand. But this merciless servant had not even time to forget the mercy which he himself had received; hardly recovered from his terror, his heart was still beating, as, when the storm is past, the waves continue for a while to roll, thundering on the beach. He had just left the house; he found his fellow-servant at the door; so that when he seized him by the throat, demanding payment and refusing mercy, the whole scene of his own forgiveness must have been fresh on his mind—lying there, though not like the dews that sparkle on every leaf, and bless the flowers they bathe. Himself loved, he should have loved; pitied, he should have pitied; having obtained mercy, he should have shown it. Nor was that all. In ten thousand talents, he had been forgiven much; yet in a hundred pence he refused to forgive little. What was the debt this servant owed him to the enormous debts which he had owed his master? As nothing. And by this the parable teaches us that the debts man owes to us are as nothing to those we owe to God,—that the greatest sins man commits against man are as nothing to those we have committed against God. These are motes, but these beams; those have their type in the gnat, these in the camel; those are a mole-hill, these a towering mountain, as Ezra says, “grown up unto the heavens;” these are one hundred pence, but these, represented by ten thousand talents, are what it needed the blood of Jesus to pay, and the mercy of God to pardon.

THE RESULT.

When some ruffian man beats a woman, or a grown lad a weeping child, without waiting to inquire into the merits of the quarrel we cry, shame! and even the lowest mob wins our esteem, and lights up its rags with some touch of glory by its promptitude in espousing the side of the weak, against the strong; and thus in feelings of indignation at ingratitude, oppression, inhumanity, cruelty, our nature, when fallen into the greatest ruin, still shows some vestiges of the image of God. Under the influence of such a noble anger the other servants, when they saw this poor man seized by the throat and dragged away to prison, went straight to their master and told him of the outrage. They could not right the wrong, he could; nor were they mistaken in believing that he would. He summons the culprit to his presence. His brow grows dark,—the court is awed into silence—as in nature before a burst of thunder, the gloom grows deeper and deeper; and so soon as the culprit appears, his Lord's pent-up indignation launches itself forth on his head, like a thunderbolt, in these words, “O thou wicked servant, I forgave thee all that debt because thou desiredst me; shouldst thou not also have had compassion on thy fellow-servant

even as I had pity on thee?” The pardon is instantly cancelled. He is handed over to punishment; and, opening to receive one who parts with hope at its door, the prison closes on him for ever—in other words till, accomplishing an impossibility, he pays the uttermost farthing. And there we leave him, the captive of a prison—the symbol of that place “where their worm shall not die, and neither shall their fire be quenched.”

It has been said that no figure walks on all its four feet—in other words, applies in all respects to that which it is employed to illustrate. Christ, for instance, is a Rock; but a rock is dead, while he liveth for evermore—is a lamb; but a lamb is without reason, while he with a true body has a reasonable soul—is a lion; but a lion is savage and blood-thirsty, while he, the express image of God's person, is “very pitiful and of tender mercy.” Now this remark applies especially to our Lord's parables, from which, were we to forget that many things in the story form but its surroundings and drapery, we would draw notions the most absurd and doctrines the most unsound. That the king here might illustrate the lesson, With what measure ye mete it shall be measured unto you again, it was necessary to cancel the pardon—crushing this merciless wretch under the load of his original debt. But to infer from that part of the story that such as God has pardoned may notwithstanding be lost, were contrary to his Word and utterly destructive of the believer's peace.

There is enough here as elsewhere to warn us that unless, living a life of faith in Jesus Christ, the branch abide in the vine, it cannot bring forth fruit, and shall be cast into the fire; that the perseverance of the saints, is inconsistent with their perseverance in sin—being in fact perseverance, not in a course of sin, but in a state of grace. But, type of the sinner who leaves God, this man, as the story runs, “went out.” Temptation met him at the door, and he fell, and by his fall teaches us that our safety lies in living near to God, on his bosom—nestled like an infant in the embraces of a mother's arms. Nor, though people may fancy they are pardoned who are not, is the safety of Christ's pardoned ones less secure. By convictions which are mistaken for conversions, and a reformation of the conduct which seems a renewing of the heart, Satan may beguile men, saying, Peace, when there is none to be found; yet our Lord's words shall stand true, “Peace I leave with you, my peace I give unto you; not as the world giveth give I unto you: let not your hearts be troubled, neither be ye afraid.” Did he ascend to heaven to prepare mansions for those who might never occupy them? If pardons once past are acts which may be repealed, how could he say of his people, “They shall never perish, neither shall any pluck them out of my hand: my Father which gave them me is greater than all, and no man is able to pluck them out of my Father's hands”? How can angels rejoice when a sinner is converted, if his salvation still

hangs in dread suspense, and neither man nor angel can tell but that the bark which, with head turned to the harbour, comes bravely through the roaring sea, may, notwithstanding, strike on the treacherous bar, and be scattered in broken fragments on the beach? Thank God, the covenant is well ordered in all things and sure—"the gifts and calling of God are without repentance."

THE LESSON.

"Forgive us our debts as we forgive our debtors," is a clause in the Lord's prayer, which has in words its best comment in this parable, as it had a very striking one in fact in an event which I happened to witness,—and where the sentence "so likewise shall my heavenly Father do also unto you if ye from your hearts forgive not every one his brother, their trespasses," was, so far as the judgment of the unseen world is ever anticipated in this, fearfully fulfilled. Between a mother and her daughter there had sprung up a serious quarrel. One house could not hold them. At length filial affection triumphed over pride; and swelling like a dammed up stream till it burst its barriers, nature resumed her course in the daughter's heart. She sought reconciliation. She repaired to her early home. No welcome met her at the door. She humbled herself to her mother, on bended knees imploring her forgiveness. She appealed to the bosom that had nursed her; but might as well have knocked on a coffin—there was no response. Nor, though imploring her by the mercies of God and entreating her to forgive as she desired to be forgiven, could I, called in as a peacemaker, bend that stubborn, iron will. By-and-bye, to this lonely home came another visitor. Death, who would not be denied admittance, arrived—summoning her to a bar where they shall have judgment without mercy who have shown no mercy. Called to her dying bed on a night dark, and starless, and stormy, I found the scene within darker than that without. On the floor of the dim and dreary chamber stood a group of pale, trembling, terror-stricken attendants. Death had his victim by the throat; and, with the coldest, cruellest hand of the two, despair had her by the heart. The Bible was there, the offers of mercy there, but no hope—there was no delirium, but the deepest darkness—and, after setting her sins and the Saviour before her, holding up the cross and Christ crucified to her dying eye, I shall never forget, on bending down to ask if she had any hope, the shadow of a hope, the expression of that face. The candle, set

in a corner of the bed, shone full on her pallid, sunken, bloodless countenance, and her answer was to throw on me such a look as painters give to the faces of the damned—gnashing her teeth the while. I would not, in any case, claim the prerogative of the judge, nor attempt to raise the curtain which conceals the future; yet no wonder, as I left the scene with shaken nerves, that voices amid the shrieks and howlings of the tempest seemed to sound out these awful words, "There shall be weeping, and wailing, and gnashing of teeth."

Teaching us not to make quarrels, but make them up, to be as ready to forgive others as God is to forgive us, and like him, though the offended, to make overtures of peace to the offender, this parable admits of a wider application. In attempting to heal the wounds and redress the wrongs of humanity, let us learn, from the servants who went and told their king, to tell God of the evils we cannot cure; and let those also who, given up to selfishness, are not touched by the miseries of others, learn that in other things as well as in matters of forgiveness, as they mete, it shall be meted to them. It sounds out this warning, Be pitiless and go unpitied—neglect man's wrongs, and have your own neglected—close your heart to the appeals of misery, and find God's heart closed against you—shut your door in the face of the wretched, and have heaven's shut sternly in your own—live in your selfishness, and die in your sins—be deaf to the wails of earth, and wail in hell—be a curse to man, and be accursed of God! Whether it be bane or blessing which we diffuse around us, let us rest assured that there is a mysterious tide circling in the government of God as shall, here or hereafter, bring back to us the bread which we have cast upon the waters. It shall return. As men sow, they shall reap. By an infallible decree, they shall have judgment without mercy who have shown no mercy; while those who, Christ-like, go about doing good, forgiving such as wrong them, helping such as need, pitying such as suffer, seeking to save others from sin as well as succour them in sorrow, shall, Christ-like also, on leaving the world, go to the Father. Blessed are the merciful, says our Lord, for they shall obtain mercy. Renewed in his image and born again of his Spirit, they are children of God—and so the poet sings:

"But deep this truth impress'd my mind,
Of all his works abroad,
The heart benevolent and kind,
That most resembles God."

A PLEA FOR THE QUEEN'S ENGLISH.

No. III.

BY THE DEAN OF CANTERBURY.

I MUST begin my present paper with two explanations.

The first explanation relates to a mistake of mine in a matter of fact. In my last paper I cited Numbers xii. 2, as a passage where the adverb "only" preceded its verb, whereas by the common rule it ought to have followed it. "Hath the Lord only spoken by Moses?" In thus citing it, I fell into a trap which I ought to have been careful, and generally am careful, to avoid. The words stand thus in that most useful, but most inaccurate book, "Cruden's Concordance," where the citations are often made from memory, and sometimes indeed in a paraphrase more or less free. In the text of the English version the words stand, "Hath the Lord spoken only by Moses?" *i. e.*, in accordance with the ordinary rule. This may serve to teach us how necessary it is for a writer never to cite without reference to the original source of the citation.

My second explanation will be a very short one, and will lead on to the subject-matter of my essay. In speaking of the words "honor" and "favor," spelt without the *u* in the final syllable, I quoted Archdeacon Hare's remark, that "he hoped they would henceforth be confined to the cards of the great vulgar." But my Censor has found them thus spelt in an edition of my own poems, and, in his exultation at that discovery, he observes that something is said in the preface to that edition about some of those poems having been published in America, but does not apprehend how this circumstance accounts for my having retained the transatlantic spelling. I think, if he had noticed what is really said in the preface, his mind would have been satisfied on this point. What I there state is this: "an edition was printed a few years since in America, a portion of which has been brought over to England, and forms the nucleus of the present edition. This will suffice to account for a few specimens of transatlantic orthography, for which the author must not be accounted responsible." It will be observed that I distinctly disclaim any sanction of these mis-spellings, on the ground of that portion of the volume having been "*printed*,"—not, as my Censor quotes it, "*published*," in America, and beyond my own control.

Having given these explanations, which seemed to be necessary, I will not trouble my readers with any more matters of personal controversy. Abundance of material for the present paper has been furnished both by my own observation and by correspondents, and I will at once enter on its treatment, and confine myself to it.

In speaking of words ending in "our," we described them as mostly having come to us from the Latin in "or," through the French in "eur." It

has been observed that this is not the case with some words involved in the "or" and "our" question. One of these is "*neighbour*." This has come from the German "*nachbar*;" and it is therefore urged, that an exception should be made in its case to the ending with *our*, and it should be written "*neighbor*." I am afraid the answer must be, that English custom has ruled the practice the other way, and has decided the matter for us. We do not follow rule in spelling the other words, but custom. We write *senator*, *orator*, *governor*, in spite of the French *senateur*, *orateur*, *gouverneur*. If we once begin reforming our spelling on rule, we ought to be consistent, and to carry our principles throughout. It is only the maintenance of our national custom and usage for which a reasonable man can plead. We have no Academy to settle such things for us: and as long as *neighbour* is universally spelt in England with a *u*, I fear we must be content to conform, even though it appear to have been first so spelt by those who forgot its derivation. It is when custom is various, and some rule is needed to decide which is right, that I have advocated the application of rules, in order to that decision. In the case of another word thus variously spelt, *control*, the rule is plain, and general usage conforms to it. *Control* never acquired any right to be spelt with a "*u*." It comes from the French *controle*, *i. e.*, *contre-rolé*: and the original meaning is still found in the name "*Controller*," when applied to finance: *i. e.*, an officer whose duty it is to keep a counter-roll, or check on the accounts of others. It seems also clear, from this account of the word, that it ought not to be spelt *comptroller*, as it frequently is, but *controller*.

With regard to one word of the class under consideration, *tenor*, it has been alleged that it bears different senses, according as we spell it with or without the final *u*: *tenour* signifying the character, or complexion, or drift of a course of action or speaking; and *tenor* signifying the part in music. But I can find no such distinction observed, either by writers, or by the compilers of our dictionaries. Some dictionaries give *tenor* for both, some *tenour*; and with regard to usage, the distinction attempted to be set up is certainly not observed. Sir Philip Sydney, Shakespeare, Dryden, Pope, Waterland, Locke, all use *tenor* in the sense of the constant mode, or manner of continuity, as may be seen in the dictionaries. The distinction is observed in French, but never appears to have been made a point of in English: and the word thus remains in the same predicament as the rest of those in this class—subject to be varied this way or that, according to prevailing usage.

Sometimes our acknowledged English custom in

spelling seems to defy all rule. How does it stand, for instance, with those words ending in *-ent* and *-ant*, derived from the participles of Latin verbs? Some of these follow rule, others depart from it. The first conjugation of Latin verbs, forming its participle in *-ans*, genitive *-antis*, gives rise to a set of derivatives in our language which keep constant to the termination *-ant*. We have *abundant*, *reluctant*, *exuberant*, *remonstrant*, *recusant*, *recalcitrant*, and the rest. But in the case of the second, third, and fourth Latin conjugations, forming their participles in *-ens*, genitive *-entis*, the derivatives have not kept steady to the original type. In the greater number of cases, they follow it: in some, usage varies; in a few, they have rejected the primitive form, and have adopted the *-ant*. We always write *different* and *diference*; indeed the derivative *differential* seems to fix these forms on us, as *transcendental* fixes *transcendent*. *Dependent* and *dependant* seem to be written indifferently. But *defendant* and *attendant* are universal. In some cases, the rules of pronunciation have kept the *-ent* unvaried. Take, for instance, those derivatives from Latin verbs ending in *-esco*,—*crescent*, *quiescent*, *acquiescence*, *arborescent*: and such words as *detergent*, *emergency*. In all these, the substitution of a *f* for *e* would change the soft sound of the preceding consonant into a hard one: we should be obliged to say *crescant*, *detergant*, &c.

A sentence in my first paper gave great offence to the supporters of phonetic spelling. I had imagined that this endeavour to substitute irrational for rational spelling had entirely failed, and died away; and I expressed myself accordingly. It appears that it is still going on, and that the "Phonetic Journal," its organ, has attained a circulation of 1000: no very large figure, certainly, considering the number of years during which the movement has existed. I have stated the fact as I was requested to do: but I cannot change my opinion either as to the character or as to the prospects of the movement. Its character may be in some measure illustrated by the view which its promoters seem to take of the facts of etymology. Enclosed in a letter of remonstrance to me was a copy of a reprint by them of Dean Swift's burlesque, in which he facetiously proves that the Greek and Latin tongues were derived from the English, making out that *Andromache* was *Andrew Mackay*, and the like. Here is a rich specimen. "Alexander the Great was very fond of eggs roasted in hot ashes. As soon as his cooks heard he was come to dinner or supper, they called aloud to their under-officers, 'All eggs under the grate,' which, repeated every day at noon and evening, made strangers think it was that prince's real name, and they therefore gave him no other: and posterity has been ever since under the same delusion." Now it is one thing to write or to enjoy a joke, and another to use it with a view to an ulterior purpose. It is natural that those who are obliterating the traces of the historical formation of the language, should

endeavour to cast ridicule on etymologists; but it is not easy to say why they should have republished Swift's squib, if, as they profess, their system tends to preserve the history of the language, and not to efface it. And as to the future, I cannot bring myself to believe that the system will ever prevail generally among English writers. It is perfectly allowable to devise every means by which a shorthand writer, whose object is to note down with all speed what he hears, may be enabled to abridge his work. Let him by all means set at nought conventional spelling, and use what symbols he finds most convenient for the sounds expressed by combined letters. But our object is not expeditious writing only, nor is it easy spelling, nor uniformity in expressing the same sounds. We employ, in writing, an instrument which has been adapted to our use by nearly sixty centuries; which bears on it the marks of many a conflict of thought and belief; whose very uncertainties and anomalies are records of our intercourse with other nations, and of the agglomeration of our mingled English people. You may gain, with no great trouble, uniformity of spelling and pronunciation according to spelling; but you will do it at the sacrifice of far more than the gain is worth. A smooth front of stucco may be a comely thing for those that like it, but very few sensible men will like it, if they know that in laying it on, we are proposing to obliterate the roughnesses, and mixture of styles, and traces of architectural transition, from the venerable front of an ancient cathedral. I have fulfilled my promise to my phonetic correspondent, and announced that my former statement was not correct. I can only say I am sorry for it, and express a hope that it may not be long before the result then anticipated is fully accomplished.*

Ought the district over which a bishop has ecclesiastical jurisdiction to be spelt *diocese*, or *diocess*? The latter form is found in some of our older writers, and is by some retained in our own days. The "Times" newspaper seems pertinaciously to adhere to it. I have observed in letters inserted and extracts given, the spelling is even altered to this form. But there is really no justification for it. It seems to have come from the Norman-French *diocisse*; but the derivation of the word, as well as the usage of the great majority of English writers, fix the spelling the other way. The word is derived from the Greek "*diokēsis*," with the "eta" or long *e* in the last syllable but one; and ought no more to be spelt *diocess*, than *cheese* ought to be spelt *chess*.

Very nearly related to questions concerning spelling are those which affect the way of writing words with regard to contraction, the position of

* Since writing the above I am informed by a phonetic correspondent, that there is serious division in the camp of the reformers of spelling: the gentleman who is regarded by one party as the apostle of the reform, being looked on by the other as the great obstacle in its way!

the apostrophe, the writing of the plural of compound names, &c.

We will begin with the last-mentioned of these. Which of these two is right—the *Misses Brown*, or the *Miss Browns*? For the former it may be said, that *Brown* is the name of the whole species, and that the young ladies, being individuals of that species, are *Misses*; for the latter, that each of the young ladies being *Miss-Brown*, the whole taken together, or any two or more, are *Miss-Browns*. So that either way is justifiable. Usage is all but universal in favour of the latter in conversation. We say we met the *Miss Browns*, not the *Misses Brown*. But we can hardly justify this, our colloquial practice, if we bring in *Mrs. Brown*, and say we met *Mrs. and the Miss Browns*. For, by enumerating thus first the individuals, and then the species, we bind ourselves to the former way of spelling. The sentence, as I have last given it, is inaccurate; because it really says that we met *Mrs. and the Miss Browns*; i. e., one *Mrs.* and one *celebrated Miss*, rejoicing in the name of, not *Brown*, but *Browns*. If we had wished to keep to the ordinary colloquial usage in this case also, we ought to have said that we met *Mrs. Brown and the Miss Browns*.

A dispute was referred to me by the compositors of a certain journal, as to whether we ought to write *Messrs. Jacksons works* with the apostrophe before the final "s" in *Jacksons*, or after it: in other words—for it comes to the same—whether, in speaking of the firm, we ought to say *Messrs. Jackson*, or *Messrs. Jacksons*. You will observe, that this question has in fact already been answered, in our consideration of the last. By using the plural appellative *Messieurs*, we have already adopted the "*Misses Brown*" form. Each member of the firm is *Mr. Jackson*: we may regard the whole firm, if we will, as made up of *Mr. Jacksons*. But in speaking of the firm as a whole, we use the other form, and say the *Messrs. Jackson*. It is plain that we have no right to mix both forms together, and to say the *Messrs. Jacksons*, with both names in the plural. So that, the practice of the commercial world having bound us to speak of the *Messrs. Jackson*, when we speak of *Messrs. Jacksons works*, the apostrophe or sign of the genitive case ought to come before the final s (*Messrs. Jackson's works*), and not after it (*Messrs. Jacksons' works*). The example by which the other side in the dispute defended their view, was ingeniously chosen, but did not apply. They urged that in writing "*nine months imprisonment*," the apostrophe is put, not before, but after, the final s in *months*. Certainly: because we cannot say, and never do say, *nine month*: whereas we can and do always say, *Messrs. Jackson*.

We are led on by our last paragraph to say something about this same apostrophe itself. First, what is it? what does it mean? When I speak of "*the senator*" in one sentence, and of "*the senator's son*" in another, what has happened to the word

senator in becoming *senator's*, with the apostrophe? The question was at one time answered by saying that "*the senator's son*" was an abbreviation of "*the senator his son*." And you may remember that the prayer for all conditions of men in our Common Prayer Book ends with the words "*for Christ his sake*." But more attention showed that this was an erroneous view of the matter. It failed to account for all feminine genitives: "*your wife's father*" cannot be "*your wife his father*:" and for all plural genitives; "*the children's bread*" cannot be "*the children his bread*." More attention showed that the s preceded by the apostrophe is an abbreviation of the added syllable "*is*," marking the possessive or genitive case. Thus "*the senator's son*" in English answers to *senatoris filius* in Latin.

But if the *senator's son*, with an apostrophe between the r and s, signifies *the son of the senator*, how am I to express in a similar form *the sons of the senators*? in other words, what becomes of the apostrophe when we want to make a possessive case in the plural? We have no inflexion, as in *senatorum filii*, by which it can be expressed. Can we use the final *-is* to mark the possessive in the plural as we do in the singular? It would seem to a Latin scholar absurd so to do, yet we do it: we have already cited *the children's bread*. But most of our plural nouns end in s; and to them we do not superadd another s with the apostrophe, but indicate its omission by simply putting the apostrophe after the plural noun. We say "*the senators' sons*:" "*the senators' sons' wives*:" "*the senators' sons' wives' fathers*." I mention this, not to inform any one of so well known a practice, but because it gives rise to a few cases in which there is some difficulty. The reason of the usage may be, that we may avoid the occurrence of the two sibilant letters together. This seems likely, because we extend it to other words ending in s, or in a sound like s, though they may not be plural. Thus we say, "*for thy goodness' sake*," meaning, *for the sake of thy goodness*: in which case the word "*goodness*" ought plainly to be written with the apostrophe after it. Thus, too, we should say "*for patience' sake*," meaning *for the sake of patience*; and, again, we ought to put the apostrophe after "*patience*."

But we are not consistent in this. If we were speaking of a person named *Patience*, we should say "*Patience's father is here*:" and we form the possessive cases of *James*, and *Thomas*, and *Charles*, not by the mere apostrophe, but by the apostrophe with the s. "*Thomas is Charles's son*: *James is Thomas's son*; therefore *Charles is James's grandfather*."

I mentioned in my first paper the mistake frequently seen of writing the s of the plural with an apostrophe before it, as "*Pip's and gig's to let*." But a correspondent reminds me that at one time this used to be, among literary men, the usual way of writing the plural. In the "*Spectator*," Addison writes "*Purcell's opera's*" with an apostrophe before the "s." And we find "*the making of grotto's*"

mentioned as a favourite employment of ladies in that day.

Occasionally this apostrophe before the "s" in plurals is adopted to avoid an awkward, incongruous appearance: as in another instance from the "Spectator," given by my correspondent, where Addison speaks of the way in which some people use "their *who's* and their *whiches*." Certainly "*whos*" would be an awkward-looking word, and so would "*whoos*." It would seem as if we were compelled to admit the intruder in these cases: for without it how should we ever be able to express in writing that people drop their *h's*, or omit to dot their *i's* and cross their *t's*? But if we do, we must carefully bar the gate again, and refuse to tolerate his presence in any plurals where he is not absolutely required.

There seems to be a liability to error in the formation of some plurals themselves. The words "*attorney*" and "*money*" are often made into "*attornies*" and "*monies*" in the plural. This is of course wrong: we might as well turn the singular "*key*" into a plural " *kies*." And this is not a case of rule against usage: for all our better and more careful writers use the right plurals, viz., "*attorneys*" and "*moneys*."

I have observed, on the part of our advertising post-house keepers, a strange reluctance to give the proper plural of *fly*, used to denote a vehicle. Where we do not see *fly's*, we commonly find "*flies*" instead, and very rarely indeed "*flies*," the obvious and only legitimate plural: the reason apparently being that there is a fear of a ludicrous meaning being suggested by the word. But if we do not think of the insect when we see "*fly*" in the singular, why should the plural form necessarily raise the thought in our minds?

I have but little to say in the present paper on the subject of pronunciation.

There is a very offensive vulgarity, most common in the midland counties, but found more or less almost everywhere: giving what should be the sound of the *u* in certain words as if it were *oo*: calling "*duty*," *dooty*; "*Tuesday*," *Toosday*; reading to us that the clouds drop down the *doo*; exhorting us "*dooty* to do the *dooties* that are *doo* from us;" asking to be allowed to see the "*noos-paper*." And this is not from incapacity to utter the sound, for though many of these people call "*new*," *noo*, no one ever yet called "*few*" *foo*; but it arises from defective education, or from gross carelessness.

There are two words, the pronunciation of the former of which can easily be settled, whereas that of the latter seems to defy all settlement.

How are we to call the Christian poet who spells his name *C-o-u-p-e-r*? He himself has decided this for us. He makes his name rhyme to *trooper*. We must therefore call him *Coo-per*, not *Cow-per*; seeing that a man's own usage is undeniably the rule for the pronunciation of his own name.

The other word also brings into question the

"*coo*" and "*cow*," but without any such chance of a settlement. It is the agreeable but somewhat indigestible gourd spelt *c-u-c-u-m-b-e-r*. Is it to be *coo-cumber*? *cow-cumber*? or *kew-cumber*? The point is one warmly debated: so warmly in certain circles, that when I had a house full of pupils, we were driven to legislation on it, merely to keep the peace of the household. Whenever the unfortunate word occurred at table, which was almost every day during the summer months, a fierce fray invariably set in. At last we abated the nuisance by enacting, that in future the debatable first syllable should be dropped, and the article be called for under the undebatable name of "*cumber*." Perhaps, of the three, the strongest claim might be set up for *kew*, or *Q-cumber*: seeing that the Latin name, *cucumis*, can hardly by English lips be otherwise pronounced.

I now come to that which must form the principal part of my paper,—some notes on the usage of words and construction of sentences. And let me premise, in order to prevent mistakes, that my object in these papers is not to lay down nor to exemplify mere rules of grammar,—though of course the consideration of such rules must often come before us,—but to illustrate the usages and tendencies of our common language, as matter of fact, by the discussion of questions arising out of doubtful words and phrases. One of the most interesting subjects connected with a language is its tendencies,—the currents, so to speak, which set in for or against certain modes of speech or thought. These are to be discovered in all languages, and in none more notably than our own. We are a mixed race, and our tongue everywhere bears traces of the fact. We have gone through more crises of religious and political strife than most nations, and thought and speech have ever been freer in England than in other countries. From these, and from other circumstances, the English language has become more idiomatic than most others; and the tendency is still going on among us to set aside accurate grammatical construction, and to speak rather according to idiom than according to rule. Let me explain myself: and to this end let me say something about that which is known as the *idiom* of a language, as distinguished from strictness of grammatical construction. This word "*idiom*" is derived from the Greek, and properly signifies a thing or habit peculiar to one person or set of persons, and forming an exception to general rules. Our usage of the term has confined this its meaning in English to matters of language. When we speak of an idiom, we mean some saying, or some way of speaking, peculiar to some one language or family of languages, which can only be accounted for by the peculiar tendency, or habit of thought, of those who use it. When we say that a phrase is *idiomatical*, we mean that it bears this character.

Now let us see to what this amounts. Such expressions, if judged by strict rules, will commonly fail to satisfy them. In so far as they are idiomatical,

they are departures from the beaten track of that grammatical construction, or that logical analogy, which is common to all languages. For the rules of grammar and of logic, being dependent not on local usage, but on the constitution of the human mind, are common to all nations. And when any nation sets up, so to speak, for itself, and indulges in the peculiarities which we call idioms, it takes a course which these general rules do not justify.

Let us show this by some examples. It is the habit of modern European nations to avoid the second person singular in addressing individuals. Some languages use the second person plural instead: some, the third person. The English, French, and others say "you" for "thou:" the Germans, and those cognate to them, say "they" for "thou." These are the idioms or idiomatic usages of those languages respectively. Every one speaking any of those languages must use the idiomatic expression, or he would render himself ridiculous. But if we judge such expressions by strict rules, they cannot be defended. It cannot be correct to address one person as if he were many: it cannot be correct to look at and address one person as if he were not present, and, being absent, were more than one. We all know this: notwithstanding we do not criticise and carp at every such usage, but simply acquiesce in it as being the common custom.

Let us take another instance. Some languages are more elliptical than others: that is, the habits of thought of some nations will bear the omission of certain members of a sentence better than the habits of thought of other nations. In English we should say, "At the Equinox the sun rises at six and sets at six." But if we were speaking in French, we should say, "At the Equinox, the sun rises at six hours of the morning, and sets at six hours of the evening." Now here there is no doubt that the Frenchman has the advantage in fulness and propriety of expression. Any one disposed to cavil at our English sentence, and to treat it as you have seen some of my sentences treated, might say, "rises at six and sets at six! Six what? Six miles, or six minutes, or six occasions?" But we do not in practice thus cavil, because we are in the enjoyment of common sense, and we are prepared, in the daily use of our language, to omit that which the thought would naturally supply.

One more example. In English, our common mode of salutation to one another is, "How d'ye do?" Now of course we all understand, that in this phrase we use the verb "do" in a neuter sense: in the same sense which it bears in the reply of the disciples concerning Lazarus: "Lord, if he sleep, he shall do well." But suppose a person were to insist on this usage being carried throughout our converse, and to make it an objection to the question "How d'ye do?" that one cannot say in the same sense, "I went to see A, or B, and he did well." We should at once reply, if we thought on the matter, that while the verb admits of being thus used in certain tenses,

and in certain connexions, it does not admit of being thus used in certain other tenses, and in certain other connexions; and that the account to be given of this is, that the English people will have it so: it is an idiom, or arbitrary usage, of their language.

The capricious character of idiomatic usage is admirably illustrated by this very example. For though it is admissible to say, "I went to see A, or B, and he was doing well," the words would not carry the sense that I was able to say to him "How d'ye do?" and he to reply, "Very well, thank you;" but would convey the impression that he had lately met with an accident, and was going on favourably.

Some idiomatic expressions seem to defy any attempt to give a satisfactory account of them. Take the phrase "*methinks*." It is believed to have arisen from a strange impersonal use of the verb, and the transposition of the pronoun, which should come after it. We have the similar phrase, "*me-seems*," which can more easily be resolved: viz., into "*it seems to me*." That this is the account to be given of both appears plain, seeing in both cases we find in use the other and more formal third person, "*me-thinketh*" and "*me-seemeth*." But what an expression to come under the ferule of the strict grammarian!

I may now proceed to make use of these remarks to clear up some misunderstandings respecting a matter treated in my first paper, and to carry what was there said somewhat further. When I treated of such expressions as "*It is me*," "*I knew it to be him*," and the like, I was not maintaining that they were grammatically correct. They may or may not be. It is in most of these cases not easy to decide, however ready persons may be with strong assertions and hard words on the subject. But this was not my point. All I said amounted to this: I urged that they have well-nigh become idiomatic, and I attempted to account for the fact by certain tendencies in the popular mind.

It may astonish some of my critics and correspondents to hear, that Dr. Latham, in his admirable book on the English language, has gone thoroughly into the expression "*it is me*," and justified it, not on idiomatic grounds only, but on grammatical also. He has shown that "*me*" is not the objective case of "*I*," which latter is indeclinable; but is an independent personal pronoun by itself, and is as much nominative as accusative. "We ought not," he says, "to be required to say '*it is I*,' in English, any more than '*c'est je*' in French." Both languages have retained the ancient form of the personal pronoun: the English, in this and some other commonly used phrases; the French, far more generally. You must say "*c'est moi*" in French; you may say "*it is I*," or "*it is me*" in English.

I might also have adduced, in favour of the tendency to avoid joining the pronoun of the first person with a proposition in the third person, that when the Greeks, Latins, Germans, Italians, and

Spaniards, want to say "*it is I,*" they alter the form of the proposition and say, "*I am it,*" or "*I am.*" The outcry raised by some of my critics and correspondents might have been spared if they had taken the pains to observe, that I was not defending an ungrammatical sentence, but merely stating the fact that the tendency to make it idiomatic was very general, and endeavouring to account for that tendency by referring it to a well-known habit of thought.

Let another thing also be remembered. We must distinguish between the English which we speak, and that which we write. Many expressions are not only tolerated but required in conversation, which are not usually put on paper. Thus, for instance, every one says "*can't*" for *cannot*, "*won't*" for *will not*, "*isn't*" for *is not*, in conversation; but we seldom see these contractions in books, except where a conversation is related. This is a difference which the foreigner is generally slow in apprehending. He says "*I will not,*" "*I cannot,*" "*I must not,*" "*I shall not,*" "*I am,*" "*they are,*" and often may be detected by his precision in these matters, even after he has mastered the pronunciation and construction of our language. This difference between our spoken and our written language should always be borne in mind when we are treating of expressions commonly found in colloquial English. Many, perhaps, in judging of them, bring them to the test of the stricter rule of written composition, to which they are not fairly amenable.

Let me further illustrate the tendency of nations by another usage not so nearly become idiomatical, and certainly not to be recommended, but still almost inevitable, and sometimes found in the talk of us all. I mean the expression "*these*" or "*those kind of things.*" Of course we all see that this is incorrect and indefensible. We ought to say "*this kind of things,*" "*that kind of things.*" Now, seeing that we all know this, and yet are all sometimes betrayed into the inaccuracy, it becomes an interesting inquiry, as it was in the other case, why this should be so. And here my readers must excuse me if I go to a dead language for my illustration—not, mind, for my reason: the reason will be found in the laws of thought: but it will be best illustrated by citing the usage of that language in which, more than in any other, the laws of thought have found their expression.

In the Greek language there is an idiomatic usage called *attraction*. It may be thus described. If an important noun in a sentence is in a certain case, say the genitive or dative, a relative pronoun referring to it is put in the same case, though by the construction of the sentence it ought to be in another. Thus, if I consented to put into Greek the sentence, "*I gave it to the man whom I saw,*" the relative pronoun "*whom*" would not be in the accusative case, as it ought to be, governed by the verb "*saw,*" but in the same case as "*man,*" viz., dative, and the sentence would be roughly represented, as far as

the mere form of it is concerned, by the English, "*I gave it to the man to whom I saw.*"

Now, in the inaccurate way of speaking, of which I treat, it is evident that this same tendency to draw the less important word into similarity to the more important one, is supposed to prevail over grammatical exactness. We are speaking of "*things*" in the plural. Our pronoun, "*this,*" really has reference to "*kind,*" not to "*things;*" but the fact of "*things*" being plural, gives a plural complexion to the whole, and we are tempted to put "*this*" into the plural. That this is the account to be given of the inaccuracy, appears still more plainly from the fact that not unfrequently we find a rival attraction prevails, and the clause takes a *singular* complexion from the other substantive, "*kind.*" We often hear people say "*this kind of thing,*" "*that sort of thing.*" It must be confessed that the phrases, "*this kind of things,*" "*that sort of things,*" have a very awkward sound; and it may be one of those cases where, ultimately, the inaccuracy will be adopted into the language.

One word on "*this*" and "*that,*" as we pass onward. "*This*" and "*these*" refer to persons and things present, or under immediate consideration; "*that*" and "*those*" to persons and things not present nor under immediate consideration; or if either of these, one degree further removed than the others of which are used "*this*" and "*these.*" We find this rule sometimes curiously violated in conversation and in writing. I have a Scottish friend who always designates the book which he has in his hand as "*that book;*" the portfolio of drawings which he is turning over as "*those drawings.*" We have this usage in England, but it carries another meaning. If I have a book in my hand, and say "*that book will make a great sensation,*" I mean to remove my own and my hearer's attention from the particular volume, or even the present consideration of its contents, and to describe it in its general, and as it were historical, effect on the world. The oddest departure from the common usage of "*this*" and "*that,*" which I remember to have observed, was in a notice which I repeatedly saw this summer posted on houses in Devonshire, "*Those houses to let,*" "*That house for sale.*"

Confusion sometimes arises in our language from the treble meaning of "*that,*" which, with us, is a demonstrative pronoun, a relative pronoun, and a conjunction. It is possible to use six "*thats*" consecutively in the same sentence. Take the sentence, "He said, that the meaning which the report which that man told him had been thought to mean, was more than had been intended." Here I have already "*that,*" conjunction; and I may express "*the meaning*" by "*that,*" demonstrative pronoun; "*which*" by "*that,*" relative pronoun; "*the report*" by "*that,*" demonstrative pronoun; "*which*" again by "*that,*" relative pronoun; and then I end with "*that man,*" "*that*" being, in this last case, again a demonstrative pronoun. So that I get the foregoing sentence, with, as I said, six

"*that*" occurring consecutively:—"He said, *that that that that that* man told him had been thought to mean, was more than had been intended."

From this threefold import of the word, it sometimes is not apprehended which of its meanings it bears in a given sentence. Ps. xc. 4, in the prayer-book version runs thus—"A thousand years in Thy sight are but as yesterday, seeing that is past, as a watch in the night." Here, of course, *that* is the demonstrative pronoun, and refers to "*yesterday*," which has just been spoken of, and it ought, in reading, to have a certain emphasis laid on it. But not unfrequently we hear it read in the responses of the congregation, as if it were the conjunction: "Seeing that is past as a watch in the night." I remember having some trouble in curing our choristers at Canterbury of singing it thus.

What are we to think of the very common expressions, "*this much*," "*that much*?" We continually hear and read, "This much I know," "Of that much I am certain," and the like. It might be supposed at first sight that this way of speaking was indefensible. "*Much*" is an adjective of quantity, and requires, in order to define it, not a pronoun, but an adverb. We may say *very much*, *pretty much* (where "*pretty*") is used in its colloquial adverbial sense of *tolerably*, *moderately*), *as much*, *so much*, or *thus much*; but from such a view it would appear that we must not say "*this much*," or "*that much*." Still may not another view be taken? High, deep, long, broad, are adjectives of measure; but we may say *a foot high*, *a yard long*, *an ell broad*. And if we choose to designate with the hand, or otherwise, the measure of a foot, yard, or ell, we may substitute the demonstrative pronoun for the substantive, and say with precisely the same construction of the sentence, "*this high*," "*this long*," "*that broad*." Now how is this with "*much*?" If I may use *this* and *that* to point out the extent of length, height, and breadth which I want to indicate, why not also to point out the extent of *quantity* which I want to indicate? When I say "*Of this much I am certain*," I indicate by the pronoun *this*, something which I am about to state, and which is the extent of my certainty. When I say "*That much I knew before*," I indicate by the pronoun "*that*" the piece of intelligence which my friend supposed to be new to me. But, it may be replied, I might have said, "*Of this I am certain*," "*That I knew before*." True; but then I should express nothing as to the extent of my certainty or previous knowledge. I believe both expressions to be correct; not so elegant perhaps as "*Thus much*," but at the same time more fitted for colloquial use.

There is one use of *that* which is quite indefensible, and, indeed, is not found except as a provincialism. I mention it, because some might suppose that what I have said might be cited in defence of it likewise. I mean, when it is used as a qualifying word with adjectives not denoting extent, and when itself must be explained by "*to that extent*."

I have heard in the midland and eastern counties, "I was *that ill*, that I could not go to work:" "He was *that drunk*, that he didn't know what he was about."

It will be well to attempt some explanation of the usages of "*who*" and "*which*," especially in our older writers. It may, perhaps, serve to clear up a matter which may have perplexed some, and to show that there is reason and meaning where all has appeared confusion and caprice. The common modern distinction between these two forms of the relative pronoun is, that "*who*" is used of persons, "*which*" of things. And this, if borne in mind, will guide us safely throughout. It may be well to notice that what I am about to say does not apply to colloquial English; indeed, hardly to modern English at all: for this reason, that now we do not commonly use either the one or the other of these pronouns, but make the more convenient one, "*that*," do duty for both. We do not say, "the man *who* met me," nor "the cattle *which* I saw grazing," but "the man *that* met me," "the cattle *that* I saw." We must take care, however, to remember that *which* was not always accounted the neuter of *who*, nor is it so in grammar. Dr. Latham says: "To follow the ordinary grammarians, and to call *which* the neuter of *who*, is a blunder. It is no neuter at all, but a compound word." It is made up of *who* and *like*: and this he shows by tracing it through the various Gothic and German forms, till we come to the Scottish *whilk* and the English *which*.

Both *who* and *which* are in our older writers used of persons. When this is so, is there any distinction in meaning, and if so, what is it?

I think we shall find that the composition of the word *which*, out of *who* and *like*, will in some measure guide us to the answer, and I think, without presuming to say that every case may be thus explained, that the general account of the two ways is this: "*who*" merely identifies, whereas "*which*" classifies. Let us quote in illustration one of the most important and well-known instances. If, in the solemn address, "Our Father *which* art in heaven," "*who*" had been used instead, then we should have been taught to express only the fact that HE, whom we address as our Father, dwelleth in heaven. But as the sentence is now written, as I understand it, we are taught to express the fact that the relation of Father in which He stands to us is not an earthly but a heavenly one; that whereas there is a fatherhood which is on earth, His is a fatherhood which is in heaven. And herein I believe that our translators have best followed the mind of Him who gave us the prayer. The bare construction of the clause in the original does not determine for us whether the relative pronoun applies to the person only of Him whom we address, or to His title of Father. But from our Lord's own use so frequently of the term "your heavenly Father," I think they were right in fixing the reference to the relationship, rather than to the person only.

One word with regard to the colloquial contractions which I have mentioned. We occasionally hear some made use of, which cannot be defended. For instance, "*I ain't certain*," "*I ain't going*." This latter, in the past tenses, degenerates still further into the mere vulgarism, "*I warn't going*." This last is heard *only* as a vulgarism: but the other two are not infrequently used by educated persons. The main objection to them is, that they are proscribed by usage; but exception may also be taken to them on their own account. A contraction must surely retain some trace of the resolved form from which it is abbreviated. What then is "*ain't*?" It can hardly represent "*am not*." What "*arn't*" is contracted from is very plain; it once was "*are not*," which, of course, cannot be constructed with the first person singular. The only legitimate colloquial contraction of "*I am not*," is "*I'm not*." "*I'm not going*;" "*I'm not quite sure*."

The same way of contracting is used in the case of "*are not*." It is usually contracted by attaching the verb to the personal pronoun, not by combining it with the negative particle. We say, "*You're not in time*," not "*you arn't*." "*They're not coming*," not "*they arn't*," or "*ain't*."

A few remarks may be made on the use in English of feminine substantives. Certain names of occupations and offices seem to require them, and others to forbid them. We say *emperor* and *empress*; but we do not, in the same sense, say *governor* and *governess*. In this latter case the feminine form has acquired a meaning of its own, and refuses to part with it. I remember, during the first weeks of our present Queen's reign, hearing a clergyman pray for "*Alexandrina*, our most gracious Queen and *governess*." Very many, indeed most names of occupations and offices, are common to both sexes; and it savours of pedantry to attempt, by adding the feminine termination, to attempt to make a difference. The description "*pilgrim*," for instance, may include both men and women; yet I saw the other day advertised, "*The Wanderings of a pilgrimness*," &c. "*Porter*" is another of these words. When we are told to apply to the porter, we are not surprised to see "her that keeps the gate" answer to our knock. But in many public establishments we see the "*portress*" announced as the person to whom we are to apply. I expect we shall soon see "*groceress* and *tea-dealeress*, and licensed *vendress* of stamps." A rule regarding the classification of both sexes together is sometimes forgotten. When both are spoken of under one head, the masculine appellation is used. Thus, though some of the European rulers may be females, when spoken of altogether, they may be correctly classified under the denomination "*kings*." It has been pointed out that Lord Bacon does this even in the case of two: "Ferdinand and Isabella, kings of Spain." This would hardly be said now; and in ordinary language, we should perhaps rather choose to call the European rulers *sovereigns*. But this is no

reason why the rule should be forgotten, nor why sentences, when it is observed, should be charged with incorrectness, or altered to suit modern ears. A correspondent writes that his clergyman, in the following sentence in the prayer for the Queen, in the Communion service, "We are taught that the hearts of kings are in Thy rule and governance," alters the word *kings* into *sovereigns*.

A correspondent writes: "Many, especially I think ladies, say, 'He is not as tall as his brother.' Am I not right in saying that after a negative 'so' should be used—'He is not so tall as his brother'?" Such certainly appears to be the usage of our language, however difficult it may be to account for it. We say, "one way of speaking is as good as the other;" but when we deny this proposition, we are obliged to say, "one way of speaking is not so good as the other." *So* cannot be used in the affirmative proposition, nor *as* in the negative. Change the form of the sentence into one less usual and still allowable, the one way of speaking is equally good with the other, and the same adverb will serve for both affirmative and negative: "the one is equally good with the other;" "the one is not equally good with the other."

A question has been asked about the expressions "*I had rather*," "*I had as soon*," or "*as lief*." What is the "*had*" in these sentences? Is it really part of the verb "*have*" at all? If it is, how do we explain it? We cannot use "*to have rather*" in any other tense: it is no recognised phrase in our language. And therefore it has been suggested, that the expression "*I had rather*" has originated with erroneous filling up of the abbreviated *I'd rather*, which is short not for *I had rather*, but *I would rather*. "*I would rather be*" is good English, because "*I would be*" is good English; but "*I had rather be*" is not good English, because "*I had be*" is not good English.

I am now going to speak of a combination of words which is so completely naturalised, that it would be vain to protest against it, or even to attempt to disuse it one's self. I mean, the joining together of a present and a past participle, as we do when we say "*The letter was being written*," "*The dinner is being cooked*." Such combinations were, I believe, not used by our best and most careful writers, until a comparatively recent date. The old and correct way of expressing what is meant by these phrases was, "*The letter was in writing*," or "*was writing*;" "*The dinner was cooking*:" the verbs being used in a neuter sense. The objection to "*being written*" for "*in the process of writing*," is this,—that "*written*" is a past participle, indicating a finished act. When I say "*I have written a letter*," I mean I have by me, or have as my act accomplished, a letter written. So that "*being written*" properly means, existing in a state of completion. "*My letter being written, I put it in the post*." But, strictly speaking, we cannot use the combination to signify an *incomplete* action. Still, as I have said, the inaccuracy has crept into the

language, and is now found everywhere, in speech and in writing. The only thing we can do in such a case is to avoid it, where it can be avoided without violation of idiom, or giving harshness to the sentence.

Complaint is made of the growing practice of using the word "*replace*," to signify just the opposite of its real meaning. "Lord Derby went out of office, and was *replaced* by Lord Palmerston." This, as now used, conveys the meaning, *was succeeded by* Lord Palmerston. But put the sentence before our grandfathers, and they would have understood it to mean that Lord Derby went out of office, and Lord Palmerston *put him in again*; he was *replaced* by Lord Palmerston. I need not say that the usage is borrowed from that of the French "*remplacer*." But there is this difference, that the French verb does not mean to *replace*, in our sense, nor has it in its derivation anything to do with "*replace*," but is "*remplir la place*," "*to fill the place*," and thus has for its proper meaning that which it is now attempted to give the English word *replace*. Lord Derby went out of office, and was *remplacé*, i. e., *his place was filled*, by Lord Palmerston; but he was not *replaced*, i. e., *put back again*, by his rival.

The "*enclosure*" of a letter, what is it? Is it that which *encloses* the letter, viz., the envelope? or is it something *enclosed in* the letter, as a dried flower, or a lock of hair? or is it something *enclosed with* the letter, as another letter of the same size, or a map or plan of a larger size?

Strictly speaking, I suppose the noun is an abstract one, signifying *the act of enclosing*, as *exposure* means *the act of exposing*. In this sense we might say "the *enclosure* of letters in envelopes, before the penny postage was established, incurred the payment of double postage." Then, when we pass from the abstract to the concrete use of the word, i. e., use it to signify not the act of enclosing, but something which is the instrument, or object, or result of that act, the question arises, ought it to signify the thing *enclosing*, or the thing *enclosed*? There are examples both ways. *Cincture* is properly the act of girding. A *cincture* is the thing which girds, not the thing which is girded. But on the other hand, a *fissure* is the rift produced by cleaving, not the thing which cleaves it. There seems no reason why *enclosure* may not be used in both senses, that which encloses, and that which is enclosed. We may say of sheep in a fold, "the flock was all within the enclosure," meaning, within the hurdles surrounding the square; or we may say that "the flock occupied the whole of the enclosure," meaning the whole of the square enclosed. In the case in question, usage seems to have fixed the meaning in the latter of these two senses, viz., the thing enclosed. An envelope is not said to be the enclosure of the letter, but the letter is said to be the enclosure of the envelope. If I write to the Committee of Council on Education, I receive printed directions as to our correspondence, the first of

which is, "Every letter *containing enclosures* should enumerate them specially." Clearly, however, in strict propriety the word ought to apply to matter enclosed *in*, and not merely *with*, the letter. But when this is departed from, when we write on a sheet of note paper, and speak of a drawing three times its size as *the enclosed*, or the *enclosure of this letter*, we may say that we are using the word *letter* in its wider sense, as meaning the envelope as it is received unopened from the post.

It is a curious symptom of our having forgotten the usages of the best age of English, that several correspondents should have objected to my having written "*I take it*," signifying, "such is my opinion." For it is constantly found, from Shakspeare onwards, in this sense; and the sense is amply justified by other cognate usages of the verb *to take*: such as, *to take it well or ill*, *to take it in good part*, *to take a man for his brother*, and the like. The fact of such an objection having been made, shows the necessity for upholding our plain nervous colloquial English against the inroads of modern fine language. It would be a loss instead of a gain if "*I take it*," were to be superseded by "*I apprehend*;" or, as we should be sure to have it pronounced, "*I happyrend*."

The very simple and intelligible word "*centre*" comes in for a good deal of maltreatment in our days. *Centre* is from the Greek word "*kentron*," meaning merely a *point*: the point of a needle, or of a sting, or of anything else: and hence used in geometry to denote that point round which a circle or any other symmetrical curve is drawn. And in accordance with this its original meaning, ought its use always to be: a *centre* should always designate a *point*, never a line, nor, except as presently defined, a middle space. But we see this often departed from. "A gangway will be left down the centre of the room," is a clear case of such departure. I do not of course mean to advocate absolute strictness in this or in any other usage. Accuracy is one thing, punctiliousness is another. The one should be always observed, the other always avoided. While I should take care not to say that I walked up and down the centre of the lawn, I should not object to say that there is a large bed of geraniums in the centre, although strictly speaking the centre of the lawn is in the bed, not the bed in the centre.

And in the figurative use of this word, and of all words, intelligent common sense, rather than punctiliousness, ought to be our guide. *Centre*, and its adjective, *central*, are often used in speaking of objects of thought, as well as of sight. Let it be borne in mind, when this is done, that these words apply only to a principal object round which others group themselves, and not to one which happens to be pre-eminent amongst others. To say that some conspicuous person in an assembly was *the centre of attraction*, is perfectly correct; but to say that some subject of conversation, merely because it happened to occupy more of the time than other subjects, was

the *central topic* of the evening, is incorrect and unmeaning.

The next thing I shall mention, not for its own sake, but as a specimen of the kind of criticism which I am often meeting with, and instructive to those who wish to be critics of other men's language. I have said that Dr. Donne preaches so and so. My correspondent takes exception to this, and tells me that Dr. Donne has been dead some two hundred years, and therefore I ought to say Dr. Donne *preached*, and not *preaches*. This may seem mere trifling, but it is worth while to notice, that we speak thus in the present tense of writings permanently placed on record. Their authors, being dead, yet speak to us. It would be affected and unusual to speak otherwise of things cited from books. If we use the past tense at all, it is not the indefinite, but the perfect, which also conveys the idea of a living and acting even now. I should say, "Dr. Donne *has explained* this text thus or thus;" not, "Dr. Donne *explained* this text thus or thus." This latter sentence would bear a different meaning. If I say, "Livy *tells* us," or "Livy *has told* us," I imply that the book containing the incident is now extant. But if I say, "Livy *told* us so and so," I should naturally be taken to mean in one of the books of his history which have been lost. You may say of a sick man yet living, "He has lost much strength during the past week." But the moment he is dead, you can no longer thus speak: you must say, "He lost much strength during the past week." If I say, "I have seen Wales twice," I carry the period during which my assertion is true through my whole life down to the present time. If I say, "I saw Wales twice," my words simply refer to the fact, and the period to which they refer is understood to have terminated; I mean in my youth, or when I was in Cheshire, or the like. Sometimes the difference between the two tenses may convey an interesting moral distinction. If I say, "My father left me an injunction to do this or that," I leave the way open to say, but now circumstances have changed, and I find another course more advisable: if I say, "My father has left me an injunction to do this or that," I imply that I am at this moment obeying, and mean to obey, that injunction. The perfect tense is in fact a present, relating to the effect, at the present time, of some act done in the past.

An important difference in meaning is sometimes made by the wrong or careless use of one of these tenses for the other. An instance of this occurs in the English version of the Bible in the beginning of Acts xix. There we read, in the original, that St. Paul finding certain disciples at Ephesus, asked them, "Did ye receive the Holy Ghost when ye believed—when ye first became believers?" To this they answered, "We did not so much as hear whether there were any Holy Ghost." On which St. Paul asked them, "Unto what then were ye baptized?" They replied, "Unto the baptism of John." Then he explained to them that John's

baptism, being only a baptism of repentance, did not bring with it the gift of the Holy Ghost. In this account, all is clear. But the English version, by an unfortunate mistake, has rendered the narrative unintelligible. It has made St. Paul ask the converts, "Have ye received the Holy Ghost since ye believed?" So far, indeed, all would be clear; for they certainly had not, though this does not represent what was said by the Apostle. But it is their answer which obscures the history. "We have not so much as heard," they are made to say, "whether there be any Holy Ghost." Strange, indeed, that these disciples, who had probably been for years in the Church, should by that time, and up to the time when St. Paul spoke, never have heard of the existence of the Holy Spirit. Render the words accurately, and all is clear.

I am reminded by this of a very curious and choice bit of criticism sent me in a newspaper the other day. The writer is dealing with my former essays, and he says: "There seems, to our mind, something small, not to say ludicrous and absurd, about the notion of a dignitary of the Church of England constituting himself the censor and reporter of small slips of pronunciation, such as Sophœnetus for Sophœnētus, and the like. We should think none the worse of a man for tripping once, or even twice, in those long Pauline lists of salutations. Not to trip at all would, except in the case of practised and familiar scholars, suggest to us the notion that rather more pains and time had been bestowed upon the matter than it deserved." Where this critic found the name *Sophœnetus* among the Pauline salutations, I am at a loss to say: at all events, it shows that he practised his own advice, and had not bestowed more time nor pains on the matter than it deserved. But it is his doctrine, that in knowledge of the proprieties of these minute points in Scripture, inaccuracy is better than accuracy, that I would especially hold up for reprobation. Very little time and pains are really required in the matter. Every clergyman is, or ought to be, familiar with his Greek Testament: two minutes' reference to that will show him how every one of these names ought to be pronounced; or if he is in the practice of regular reading in the original, he will not want even this two minutes' reference. And those who cannot refer to the original will be kept right without any pains at all, if the clergy are right; for they will simply follow their leaders. Surely this doctrine of the writer in the "Nonconformist" cannot represent the general opinion among those bodies, who have of late years been making such remarkable advance in the accurate study of the original text of the Scriptures, and have by the results of the training in some of their admirable colleges, done so much for the credit of biblical scholarship in England. For my own part I was disposed to put together this critique and a letter which I received from a friend, saying that he had heard a person, not a clergyman, read Arctūrus and Orion and the Pleiades. I could not help imagining

that I had here discovered my critic "tripping twice or even more" in what I dare say he believes to be some more of these "Pauline salutations."

The really serious aspect of the matter comes before us, when we hear what my friend adds, that the man thus reading proceeded to *expound the chapter*. An error in pronunciation may be in an ordinary person, a trifle; but when a *teacher* makes it, it is no longer a trifle: and for this reason, that a teacher is bound to be acquainted with the real meaning of that which he expounds, and enforces; with the context of the passages, and with the spirit and force of the sacred Word, as the Spirit has given it to us. And when we find a teacher ignorant of even outward matters of common information respecting the text, we are not led to hope much for his power of rightly dividing the word of truth. That it may please Him who is the fountain of wisdom, to make exceptions, and to endow even ignorant men with insight into the meaning of His Word, no one would deny; still, it is not our business to take such exceptions for granted, but rather to take for granted His ordinary course of proceeding, and on our part to provide for its success as we best may. He who feels this will not think correctness, even in the lists of Pauline salutations, a trifling matter.

I must say something on the question of adjectives used as adverbs: or rather of the allowable forms of qualifying verbs. The common rule, believed in and universally applied by the ordinary teachers of grammar, is, that we must always qualify a verb by the adverbial form, and never by the adjectival. According to these teachers, such expressions as the following are wrong, "The string of his tongue was loosed, and he spake *plain*."

"The moon shines *bright*."

"How *sweet* the moonlight sleeps upon this bank!"

"Breathe *soft*, ye winds, ye waters gently flow."

These, we are told, ought to have been written with "*plainly*," "*brightly*," "*sweetly*," and "*softly*." But this is a case where the English language and the common grammarians are at variance. The sentences which I have quoted are but a few out of countless instances in our best writers, and in their most chaste and beautiful passages, in which this usage occurs. On examining into it, we find that it is very much matter of arbitrary custom. Some adjectives will bear being thus used: others will not. Most of those which can be so used seem to be of one syllable; *plain*, *soft*, *sweet*, *right*, *wrong*, and the like. In all these cases it may be more precise and accurate to say *plainly*, *softly*, *sweetly*, *rightly*, *wrongly*, &c., but we certainly can, and our best writers certainly do, use these and other monosyllabic adjectives as adverbs. But as far as my memory serves me, in no case do they thus use adjectives of more than one syllable. We may say, "*He spoke plain*:" but we cannot say "*He spoke simple*," or "*He spoke delightful*." We may say, "*The moon shines bright*," but we cannot say "*The moon shines brilliant*." What may be

the reason for this, I do not pretend to say; I only state what seems to be the fact.

What has been said hitherto applies to the positive degree of comparison only; when we pass beyond that to the comparative and superlative, another consideration comes in. All adverbs do not admit of degrees of comparison. That some do, is acknowledged. *Oftener*, *oftenest*, *seldom*, *veriest*, seem to be good English words. But these exceptions are rare. We cannot say *simplier*, *brighlier*, *plainlier*. And in consequence, when we want to express comparative and superlative degrees of qualification of a verb, we commonly have recourse to one of two other constructions: we either take the resolved comparative and superlative, *more plainly*, *most plainly*, or we take the comparative and superlative of the corresponding adjective. Thus, for instance, we have "*well*" as the adverb of good: we cannot say "*weller*" and "*wellest*": we do not say "*more well*" and "*most well*": but we go back to the adjective and we say, for our comparative and superlative adverbs, *better* and *best*. So, too, whereas we may in the positive degree say either "*the moon shines bright*," or "*the moon shines brightly*," we should say in the comparative and superlative not, "*the sun shines more brightly*," and "*the fire shines most brightly*," but, "*the sun shines brighter*," and "*the fire shines brightest*." Take another example. I wrote in my first essay: "If with your inferiors, speak *no coarser* than usual; if with your superiors, *no finer*." My language was characterized as being ungrammatical, because we cannot say "*to speak coarser*." True: but, as we have seen, what cannot be done in the positive, must be done in the other degrees of comparison: and my sentence was strictly correct, and according to usage. In this case, too, there was no choice open between the two forms, the resolved and the adjective comparative. Had I written, "*Speak no more coarsely*," "*speak no more finely*," the phrase would have been ambiguous, owing to the term *no more* being capable of meaning *never again*.

A question arises as to the proper construction of certain nouns bearing the plural form. The first which I shall notice is "*means*." "Those pieces of hypocrisy were, with them, *means* to an end." That piece of hypocrisy was, with him, *a*—what?—*a mean* to an end? No,—this is not English, though it may be correct in grammatical construction. That piece of hypocrisy was, with him, *a means* to an end. This is how we speak. And we say, "the best *means* of accomplishing your end *is*," if we are going to speak of one mode of action only: not, "the best *mean is*," nor "the best *means are*," unless we mean to enumerate more than one.

Very similar is our way of dealing with "*news*." If we are about to mention one fact only, we say, "*the latest news is*," not "*are*." In this case indeed the use of the plural verb at all is unusual, even if several things are to be mentioned. If we pick one out of several, we sometimes say, "*The latest piece of news is*."

There is another word which I was not aware had become one of this class, till I perceived on the London walls an undoubted proof that it had. I mean, *mews*. I should have been inclined to say, "South Portman Mews are on the left as you go up Orchard Street." But clearly this is not the way of speaking most intelligible to the coachmen and grooms of London, for at the entrance of every one of the London mews (I am using my own plural), I see that Sir Richard Mayne has posted a notice for the regulation of the "*mewses*" of the metropolis. Besides the incongruity of its poetic associations, this word "*mewses*" is a very queer monster. Fancy ordering "*two Daily Mewses*," by way of two copies of the "*Daily News*." Still, we must allow Sir Richard Mayne thus much indulgence, as to confess that his word is not altogether without precedent. A *summons* is another of these plural words become singular; and we have long ago become accustomed to read that "*summonses* were served on all the offenders."

Since my last paper was written, I have culled a few choice specimens of ambiguous sentences, which may serve by way of conclusion to amuse my readers. The following is, from a daily paper:—"The most interesting news from Italy is that of the trial of the thieves who robbed the bank of Messrs. Parodi at Genoa, on May 1, 1862, in open daylight, which commenced at Genoa on the 5th." In a letter addressed to another paper, this sentence occurs: "I with my family reside in the parish of Stockton, which consists of my wife and daughters."

Now both these sentences are instructive to us. We may see from them how such ambiguity really arises: viz., by the occurrence, between the antecedent and its pronoun, of another word which by its means suggests to the mind of the hearer a connection with the following clause. In both these sentences this is the case. *Daylight* is said to commence at a certain time, as well as a trial: a parish is said to consist of certain persons, as well as a family. Hence the ambiguity: and not, as is often maintained, from the mere form of the sentence. Any one so disposed may cull sentences out of any English writer, not even excepting Lord Macaulay, and show that they may be understood in a certain number of hundred, or thousand, different ways. But the simple answer is, that nobody ever will so understand them: and there are often reasons why the apparently ambiguous form should be preferred to the strictly perspicuous one, as being more forcible, putting the emphatic word or clause in the proper place, or even as avoiding stiffness and awkwardness of sound. Let your style be idiomatic, simple, natural: aim at satisfying the common sense of those who read and hear, and then, though any one who is so minded may pick holes in every third sentence, you will have written better English than one who suffers the rules of the ordinary grammarians to cramp the expression of his thoughts.

The following note has been sent me, received after a tithe dinner in Devonshire: "Mr. T. presents his compliments to Mr. H., and I have got a hat that is not his, and if he have got a hat that is not yours, no doubt they are the expectant ones." It would defy any analysis to detect the source of confusion here. Perhaps "*he*" and "*his*" refer to some third person, not the Mr. H. who is addressed. But I fear we must look for the clue in the notice, "after a tithe dinner." Evidently, the effects of the banquet had not passed away.

Here is another specimen, in this case an extract from a criticism of Mr. Fechter's "*Hamlet*," in a daily paper: "His whole system consists in playing the character upside down. He does not ignore tradition, but employs it so far that it enables him to do precisely the reverse. Dress, gait, action, everything, like his pronunciation, are alike unintelligible." This is indeed a delightful specimen of confusion, and obscurity, and bad English. What is precisely the reverse, which his employment of tradition enables him to do? The reverse of what? Is it the reverse of ignoring tradition? Does the critic mean, that he employs tradition so far that it enables him not to ignore it? Surely this is not the meaning. After feeling about in the dark some time, we arrive at a sort of suspicion, that the meaning must be, that Mr. Fechter employs tradition so far, that it furnishes him with the means of flying in the face of tradition—of contradicting the whole scope and tenor of tradition—of doing, in fact, precisely the reverse of that which an actor would do who scrupulously followed tradition. Bad as this sentence is, it might be matched ten times over any day on the table of a reading room.

And just let me notice one defence which has been deliberately set up for English of this kind. It has been said that one who sits in his study writing at leisure may very well find time to look about him and weigh the structure of his sentences; but that the contributors of articles to the daily press are obliged to write always in a hurry, and have no such opportunities of consideration. Now this plea either fails in its object of excusing the practice complained of, or it proves too much. It fails if it does not assign sufficient cause for the phenomenon: if, as I believe, it is not mere haste which causes a man to write such English as this, but deficiency in his power of putting thoughts into words, it proves too much, if it really does sufficiently excuse the writers: for if such writing is the inevitable result of the hasty publication of these critiques, why is not more time given for their production, and why are not more pains bestowed on them? For surely it is an evil for a people to be daily accustomed to read English expressed thus obscurely and ungrammatically: it tends to confuse thought, and to deprive language of its proper force, and by this means to degrade us as a nation in the rank of thinkers and speakers.

OLIVER SHAND'S PARTNER.

BY H. K.

"It is a pity, Oliver, you did not wait till next month, for I have a thought of going into partnership then," said old Oliver Shand, to his nephew, young Oliver, on the occasion of the latter's visit to the sea-port of Helmsfield.

Old Oliver was a ship-broker, long established, wealthy, and a bachelor, with few relations. Young Oliver was a barrister, and in very good practice.

The men resembled each other curiously, but did not agree the better in consequence. This might have arisen from their both being natives of the cold sea-port. At all events they were both long, lean, dry men, with something enduring in their bare muscles. They were bare-faced too, and altogether as stiff, sarcastic men as ever were seen.

"You are going to take a partner, Uncle Oliver:—well, I think you are right, you will be the better of one," commented young Oliver; coolly adding within himself, "the close old dog, could he not have consulted me? cannot he come to particulars now?—as if I cared, as if I would interfere with his comfort or pleasure."

"Yes, I am certainly thinking of a partner," repeated old Oliver softly (that is, softly for him). But hugging himself privately, he thought, "He won't ask who—he is in a huff; there would be a pretty blaze if he were apprised of the terms of the articles. Not that I care to hide them if he choose to put a question, but I'm not going to thrust them down his throat and be twitted with folly. He won't walk over me. I have managed my own affairs and I will manage them to the end, and make what alterations in them I see fit, strictly for my pleasure and convenience. *My* pleasure and convenience, without saying, by your leave, Master Oliver, though the fellow shall have his share when I am done with the goods, partner or no partner."

The two men were always at this by-play—honest, disagreeable, grumpy men as they were, both of them.

"Uncle Oliver thinks I'm looking after his money. I'll make my attentions scarce. As to interfering with his concerns, by pumping him or spying upon him, I would scorn to do it," meditated the one.

Considered the other, "Ay, Mr. Oliver expects his own out of my property. So sure is he of it he does not care to court me. He has no more interest in me or in the ships, than if I were an old stranger beggar."

If there had not been something good in the men apart from this jealousy and self-consciousness, some real regard for each other, which they acknowledged to themselves, beneath their formality and their gruffness, they would have flown off at a

tangent and never come near each other again. As it was they had never quarrelled. They kept up a grim correspondence, and young Oliver visited old Oliver during the long vacation, and saw that his kinsman was in the body. He was short and restrained to old Oliver, as old Oliver was short and restrained to him; and generally spent an uncomfortable, unsatisfactory week or fortnight with him before returning to his files of papers and leading speeches. They were a pair of kinsmen who were not selfish, and not hypocritical, but refractory and defiant to each other in their kindred blood and kindred kindness.

Young Oliver was a married man, but he had never yet brought his young wife or baby children to see their elderly relation, lest people should say he used them as instruments to flatter and fawn on his wealthy bachelor uncle. He was strong in himself and his power to provide for his own household.

Old Oliver would not beg for the introduction; he was not curious about his heirs, neither did he mean to imply that his nephew Oliver's family were his heirs, though no doubt Oliver should have his portion of the old fortune.

Thus the uncle and nephew stalked home past the old cross, and into one of the grey massive undecorated houses, and sat in the handsome, precise dull room which young Oliver had never deigned to brighten with another presence. They ate their excellent matter of fact dinner, drank their good routine wine, exchanging occasional curt and crusty sentences, for they were made of too unyielding material to come into contact without rubs and scratches and fractures.

However old Oliver reverted again to his proposed partnership. "It is a pity, Oliver," he harped, "you had not waited till next month and witnessed my deed of partnership."

"Does the fellow fancy I grudge him a partner," reflected young Oliver restively, "I am sure he is welcome to him, though the stranger should eat up all the profits. I am glad to say, I can fight my own battles, I am not a novel hero, or briefless barrister."

Under this persuasion, young Oliver suddenly made a proposal, with ten times the affability he would otherwise have displayed. "If you are disappointed, Uncle, that I have not timed my visit better by inspiration, or spiritual affinity, for you know you never dropped me a hint on the subject, I can come back again a month hence. I am going to my wife's brother-in-law, who has taken a house in Rosemount this season; I can return by Helmsfield and send my family home before me in the steamer."

"Let 'em wait with you, Oliver," the old gentle-

man said succinctly, fingering at his necktie, "I have sufficient accommodation, and I should like them to be present also on the occasion."

"A fitting occasion for Anne and the children's presence, and fitting persons Anne and the youngsters to mix in a mercantile transaction. The old man must be slipping into his dotage, or going crazed about his partnership:" and Oliver stared a little. But as it struck him, if he did return to Helmsfield it would be more becoming and agreeable, and more in accordance with his wife's feelings, to permit her to visit his uncle, he stretched a point and submitted, saying carelessly, "Very well, sir, if they will not put you about, my family may stay for a few days."

"What he deserves," calculated the old man, as alert as ever he was in his life, and chuckling to himself; "good enough for them, I warrant, any day. But he won't ask me, proud puppy! set up because he has grown a London man and lays down the law! He will get a surprise, a cold bath, I dare say: no business of his, either, after the supercilious way he has treated me; but he will have his portion. Oliver shall have his portion, and a tolerably handsome portion when all is done, as well as his cousins—those sneaking Burtons, who are not fit to clean his shoes—I am glad they are a good bit off in blood and in right."

The uncle and nephew, according to their wont, said no more on the agreement between them, and parted on the simple understanding that young Oliver was to resign a great deal of grouse shooting, and a little deer stalking, and bring the live moveable part of his household to Helmsfield, to show his superior dignity and unconcern when his uncle Oliver entered into terms of partnership with an individual or individuals unknown.

Young Oliver the barrister, his wife, twin babies, and couple of servants, set out for Helmsfield. The barrister's wife was a warm-hearted, good-tempered, contented, lively woman. She was girl-like yet in her cloak and hat, with her flaxen hair in profuse plaits. Her eyes were blue—not the sleepy blue, but the steel or rather the sapphire blue, and were the quickest as well as the kindest imaginable. She had merry, mobile dimples, and altogether she was a very fair young matron, a very bright young matron, a dear loving joyous woman, shrewd but guileless, who made everybody with whom she came in contact better and gladder. Her husband might snap and snarl at her at his will; she never minded him; she was fully persuaded that he was an excellent fellow in the main, only unlucky in his manner, and that was his misfortune, poor fellow, and no affair of other people's. So industrious was he, so constant, so considerate to her, so careful of the babies, she was well convinced that he loved her and his children with all his heart, and that he would have laid down his life for them if need were. As it was, he toiled and slaved to keep them in comfort; in short he was the best of men. If this faith did not go

far to sweeten the morose man who inspired it, and make him the best of men, it is hard to say what would have done it.

There was no difficulty about introducing Anne to uncle Oliver. It would have been better for all parties if she had been introduced to him from the first, and spent a portion of every summer at the seaport since she took young Oliver in hand and shone upon him like a perpetual sun-beam.

Uncle Oliver was at the coach station, before the spacious hotel, on the evening of their arrival. Young Oliver distinguished the old make of hat, the check necktie, and the swallow-tailed coat, which were quite the thing when uncle Oliver was in his prime. He pointed out to his wife a figure well advanced in the vale of years, a tall man slightly stooping with the burden of time, a face by no means inexpressive or of a common type, and a long head thatched with dry worsted brown hair which declined to turn grey, and might as well have been a wig for any sympathy between it and its owner.

Oliver junior was rather astonished to find the old gentleman waiting for them. Courtesy and attention were things out of his way, though he was a somewhat liberal man, under a churlish exterior—a man to be respected if not liked. It must have been this partnership that was so working with him. It began to look a serious matter when it was so altering the old man's habits. And yet young Oliver had not made any inquiry about it, important as it might be to his prospects. Dour as a door nail and with a certain rude nobility, he would not take steps to obtain from other sources the information his uncle had not vouchsafed, and which he would not solicit from him.

Having come to the coach office, uncle Oliver did not behave in any astounding fashion. He did not embrace Anne (young Oliver's wife) or hug Nolly and Norry. He shook hands with the first, took no notice of the last, but asked young Oliver what he wanted done with the luggage. Here was a cab, they might have two, half-a-dozen if they chose, or here were a couple of porters from the yard if the men's services would be preferred.

Uncle Oliver never suffered himself to be driven, so that Anne saw no more of him until she reached one of those solid houses, so stately in their plainness, about Union Crescent. Oliver, her Oliver, had never told her that uncle Oliver had been improving it, but the hall was fresh painted. She smelt it yet, and she was sure the drawing-room, with its fresh carpet of sheaves of the lily of the valley and its low rosewood chairs and tiny oval foot-stools, had been furnished quite recently; but of course her Oliver never noticed these things.

Old Oliver came in with Anne's husband, and hoped she would make herself comfortable. He bade her ring for whatever she wanted, and he himself ordered tea for the travellers, since, in consideration of his clock-work four o'clock dinner,

they had dined on the road. He was clearly anxious to be hospitable, but to entertain strangers was a hard duty to him. Anne thought disinterestedly how much more agreeable it would have been, and how much better for the old gentleman, if he had married a well-disposed wife, to take half his burdens off his shoulders, thirty years before. Thirty years before and uncle Oliver would have been the age of his nephew Oliver, that is, five-and-thirty—the years of discretion for a man in matrimony as in everything else.

Anne did her best to relieve uncle Oliver by pouring out the tea. She was hungry and thirsty, and cheery and chatty, and interested in her husband's native town, and delighted with uncle Oliver's handsome, comfortable house.

Uncle Oliver listened to the last praise with a flicker of his well-opened eyelids, and this, as she very well knew, invariably betokened lurking gratification in young Oliver. Then he rose and excused himself, and said in a short, abstracted manner, that he must leave her. He should like to take his nephew Oliver, if he had no objection, to introduce him to—hem—his future partner.

"Oh! never mind me, uncle Oliver," Anne said, heartily, "don't let me be in your way; you two gentlemen go about your business, I have plenty to do,—I have my clothes to unpack, and I have to order Nolly and Norry to be put to bed; I hope we will see more of each other to-morrow evening, or at least during the next week."

But uncle Oliver muttered he was engaged to-morrow evening, and he had to go from home for part of the week, but no doubt they would get better acquainted; and she must ring the bell if she wanted anything.

"Just you, Oliver, over again," Anne remarked archly, from the tea-tray to her husband, while uncle Oliver was putting on his great coat in the lobby. "A great deal more in him than he lets out, and all the more precious, Noll, on that account. It is a little odd of him to go from home when we are here, but perhaps it is business, and you never mind any visitor when business comes in the way; or perhaps it is that we may make ourselves fully at home and get accustomed to the house without him, and see all your old acquaintances without any restraint. Any way I am sure I shall like Helmsfield very much. I say, Noll, you may well hope that I should like uncle Oliver, for otherwise I would never have liked you, sir."

Uncle Oliver walked deliberately with his nephew in the September dusk towards Anchor-street and into a little square. The old man was growing heated and excited. "Oliver," he said, "you don't think fit to ask me anything about my partner,—yet it is fit that I should have company and support, if it were only that I am breaking up, or shall be breaking up soon."

Stout Oliver, the barrister, was the least thing in the world touched by this appeal. It was the first

time he had heard his uncle confess a weakness or look forward to a solace. Judging from himself, poor old uncle Oliver must have felt his needs keenly before he came to this pass. But he only answered: "I declare I have not the least objection, uncle; it would be entirely out of my sphere to object, and I am even pleased if you have found a person to meet your requirements. I have thought it well that I should know him in good time. It is no business of mine, you know, uncle, who he is,—that is your look out. You have always conducted your business without my counsel, and quite right too. Indeed, my opinion would be next to worthless, as I am a barrister, and you are a ship-broker, and I take it our ideas would not square. I have been away from Helmsfield for the last dozen years too, and I begin now not to know even the ship-owners and merchants by name. I suppose this partner of yours is some fellow in your own line, able to take the active part of your concern. He may be some lad you have taken an interest in, and reared, and promoted, and who is already familiar with your corner of the docks as manager or clerk. I only hope he may suit, for your sake, but I repeat it is no business of mine."

"It is no business of yours," echoed uncle Oliver, driven to a sardonic grin by his nephew's haughty reassurance of liberty; "but it is not a man, but a woman, that is in question."

Young Oliver stopped, as if he had been shot, and the truth flashed upon him. "You don't mean to say you are going to be married?" he cried out.

"I do mean to say it," acknowledged old Oliver, with a good deal of shame, but the utmost obstinacy. "It has been kept quiet, but you might have heard it if you had put yourself to the trouble to ask a question. I am sixty-five, and she is fifty; but though she were only seventeen there is no law that could interfere when we two are agreed. I have known her all her life; but if I had only known her since yesterday, what is that to anybody but myself? She has tried the experiment before, and managed her husband's house and reared her children without a voice doing anything but lip-lard her; but though she were an ignorant fool of an old maid who had been kept out of the world in a drawing-room for half-a-century, as a girl is stowed away in a school-room until the ware is wanted, it is my venture, and nobody need interfere."

Oliver was very much put out by the old man's trick, but he had time to recover himself during his uncle's unusually long speech. It would not do for him to make a rout about his wealthy uncle's marriage, even although it was to a widow, and a widow with children. That proceeding would be foreign to all his notions and actions.

"Oh! of course, uncle, I won't interfere,—no fear of that;" in a moment he forced himself to the customary congratulations, delivered very ungraciously. "I wish you joy, if there is any joy going, only it is a pity you had not been a little

more explicit beforehand, that my wife and I might have been ready with our good wishes, and come provided with the ordinary stock of finery."

"No finery wanted," the old man growled; "the thing is to be done quietly to-morrow afternoon." And his whole manner expressed very plainly that young Oliver need not attend if he did not wish it; it was not yet too late to take his wife home; and he need not go now to see Mrs. Rose even, if he were not inclined.

Oliver did not complain that he had been entrapped upon the back of his own loud profession of indifference, and forced either to countenance the old man's folly or to make a public exposure and laughing-stock of his unwarrantable disapproval. "You forget," he said again, ironically, "it is no business of mine. It seems you have given me and my wife an invitation, such as it was, to your marriage, and to stand on ceremony at this hour would argue a right to object, to which we don't pretend."

So young Oliver entered the bride elect's house with his uncle, feeling as if he were walking on stinging-nettles. He was so disturbed in his mind that he scarcely saw where he was going. It was one of the smaller of those grey houses so much alike in Helmsfield. They were shown into a room where a comely middle-aged woman, a good deal more confused than uncle Oliver, and some half-grown young people, two lads and a girl, were waiting to receive them. Young Oliver neither saw nor cared to see anything more than that there was no evidence of wretchedness about the place. The family appeared respectable, and the woman—the widow—was like her kind. After she had got them seated, she began to recover herself and prattle in a placid simple style. No great show of design here. It must have been uncle Oliver, the old dog, who walked wilfully into this net.

If Anne had been there she would have noticed a thousand things more than that obtuse, irate man did. She would have seen that the house was very plain, but was not shabby, as must have been the case, had it not been the house of a good manager and a motherly heart; that Mrs. Rose was not stylish, or refined, or clever, but that she was certainly kind, a lover of flowers and birds, living and dead, and of her boy Jack's natural history specimens, and her boy Cathcart's drawings and models, and her girl Chatty's embroidery. And looking at the elderly couple talking together in so matter-of-fact a tone, and looking at each other covertly and awkwardly in their regard, Anne would have surmised that in this house, hard and dry uncle Oliver was seen under a different light from that which shone upon him in his own or any other dwelling.

Young Oliver recognised nothing of all this, as he sat brooding over his uncle's ridiculous behaviour, and the extreme provocation of becoming a party to it. Not that Oliver the barrister's manner was specially offensive. He was a man, and a gentleman,

though not a pliant one, and he looked upon his entrance into that house as a pledge to be on tolerable behaviour in it. He was not more rigid and self-concentrated then than he was in general.

It was a welcome relief to young Oliver's feelings, however, to get away, to return to his own room, unbosom himself to his sympathetic wife, and give vent to his indignation against the offenders.

Even Anne, with her inveterate inclination to look at the brightest side of everything—an inclination so irrepressible that it would often have looked like affectation in a less open, sincere, charitable woman—stood aghast and was largely aggrieved. Uncle Oliver's marrying was like cheating Nolly and Norry. She had been glancing about the house and thinking how her boys would come into a handsome inheritance, and not require to quit England to go out as sheep farmers to Australia, or as engineers to India. To marry a widow with children too, when his nephew Oliver had not only a baby, but twin babies, and the best judges assured her, there were not two finer little fellows of eleven months in the kingdom! Even their papa could scarcely carry them one on each arm now, and twins were such a pretty sight! It was a great shame in old uncle Oliver not to be engrossed with these boys, his natural descendants, and not forget everything for them. And to think: Anne had not a gown with her fit for a wedding, and not a day to prepare one, making her look like a fright, and Oliver like a ninny. She had a great mind to excuse herself from being present, though she was staying in the bridegroom's house.

But as young Oliver continued to rage, Anne began to look less glum and even contradicted him with, "Not so bad as that," "Oh! fie, Oliver," and "After all, we must make the best of it." Anne, though she was as sweet as honeysuckle in her flaxen plaits, was not insipid or phlegmatic, or subservient to any one. She was a true frank woman, with a mind and principles of her own. She had always been fearless of her husband; she had contradicted him flatly the first night she saw him; and this had possibly been one of her attractions to him. And while she admired him and obeyed him in all wifely duty, she had continued to contradict him flatly every time she thought him in the wrong to this day. She would do it to the last, and a vast deal better it was for Oliver.

Now while Oliver was inveighing rather savagely about his uncle, making him out to be a malicious rascal in his stratagem, and Mrs. Rose a mercenary, truckling creature of a widow, with pauper children, Anne, being very sensitive to an injustice and very generous to all injured persons, cut him short at once: "I'll tell you what, Noll, you will make me believe you cared very much for uncle Oliver's money if you come so near to slandering him and Mrs. Rose." She had peace, for Oliver was silent, in towering dudgeon.

She had galled him, touched him on the quick.

He had cared for uncle Oliver's money. He felt that now in his bitter disappointment; and if he had not intentionally deceived others, he had deceived himself. It was a blow to his pride, for he had plumed himself on his independence, while in truth he had been looking forward confidently to his succession to uncle Oliver's cheques and shipping. This was what most other men would have done in his circumstances; but he had counted himself superior in this respect to other men. It might not have been altogether for himself. He was conscious of that, when a chill came over his indignation as he reflected what would become of bouncing Nolly and Norry, and their mother, if he happened to be taken away from them prematurely. For all that it was an intense humiliation to young Oliver's exaggerated manliness that he had coveted another man's gains, and calculated on the profit of his kinsmanship and favour. He had esteemed himself a self-sufficient, thoroughly-equipped man, who feared no amount of work in his profession, and could always rely, since he had surmounted the first hard start, on obtaining his wages. Yet all the time he had been resting on prospects which were at the will of another,—looking to old Oliver to be backed and propped.

It may have been a singular thing for a purely worldly man to do, but it is true that young Oliver forgot the money-loss in the wound to his self-esteem. He was so goaded and lashed by the thought that he had allowed a crafty mask to blind his feelings alike from himself and his neighbours, that he went at once to the other extreme, and began to take a really tolerant view of old Oliver's dereliction. He now thought that his uncle had merely done what he had a good right to do, and if he had been somewhat secret about it in the first place, he had in the second place brought the principal members of the family to witness its consummation.

Young Oliver tossed and tumbled, eating and digesting his humble pie, till, to divert his mind, he was glad to turn to remembering how the widow had looked, and speculating what sort of woman she would be. His being a lawyer helped him here, but he could not arrive at any more distinct conception though he laboured hard at it (to withdraw his attention from sorer subjects) than that she struck him as being like his wife's mother, about whom he did not imagine he had any particular associations, since he had rather meant to be a son-in-law of iron. Still the recollection of his mother-in-law blended with his impressions of Mrs. Rose, and would not be separated from them.

When Anne rose next morning, she had certainly made up her quick mind, and was bent on announcing her resolution.

"I am determined to make the best of it, Noll, and really I think we are raising a mountain out of a mole-hill. I'll tell you what, I'm not going to lend myself to the fancy that we have been injured, or work myself into a fit of sulkiness

and fury. No one has done us wrong. What is it? Uncle Oliver is going to marry; the best thing any man can do, soon or late. He will now have a suitable companion, and an interested nurse when he needs one, and we will be freed from care on his account. No doubt the widow must be a horrid creature," continued Anne, making a wry face, "though I have not had time to hear that she has compromised herself in any other way than by consenting to marry him. She could not help another man marrying her, and then dying and leaving her and her family not very well off. I dare say if they had been in affluent circumstances she would not have changed her state a second time. Women are so selfish, arn't they, Noll, and fickle and false through their selfishness? But a family of any kind will wake up uncle Oliver's silent house. I heard the echoes of my footsteps here last night long before it was dark. As it is to be a quiet wedding, I believe my purple silk will do very well."

Oliver said not a word, and Anne turned quickly and looked into the grim face.

"It is not that I am not sorry for you, dear, since it is such a blow to you," she added, administering another blow by way of recovering him, "but you have taken such good care of us all, that I have no dread about your providing for the future. Why, Noll, you could support half a dozen households by the might of your brains, and your unwearied arm. I think I prefer to depend upon them: do you hear that, Noll? And if difficulties do beset us, we will only fare the harder. Surely that need not cost us a sigh beforehand, or at the time either. Two young, healthy, able, attached persons, with Nolly and Norry—we are passing rich. I should be horribly ashamed to think otherwise, for a single moment. As for Nolly and Norry, I am persuaded now it is the very best thing that could have happened to them, this loss of uncle Oliver's inheritance. I have heard times without number, there is not a greater misfortune for young men than to have a fortune made for them, and elegant shoes to step into without any exertion of their own. So, Noll, you take care, and not make your fortune too quickly, or leave a pair of shoes behind you that won't pinch, and gape, and want cobbling, and blacking here and there, for Nolly and Norry."

Not a word from young Oliver except a gruff snort; but his wife understood him, and she would have told you that that was Oliver coming round.

Down-stairs into the dining-room tripped Anne, the sensible, affectionate peacemaker. There sat uncle Oliver on his wedding morning—that morning that looked so great to his imagination thirty years ago. There was no change on his room, no change on his work-a-day coat or his usual habit of reading his newspapers.

Anne went straight up to him to say good morning, and to express in tone and look what her husband would not have accomplished in a hundred years.

"Am I right, Oliver?"

"I wish you much joy, uncle Oliver: but why did you not tell me what you told Oliver last night? Don't you know that men are dreadfully stupid in these things?—and I would have liked to have been ready for my new aunt; but I will do my best, and I am convinced we will all get on nicely together."

Little words easily spoken, little words never to be forgotten.

Uncle Oliver stared, and half dropped his newspaper, and got out a "I—I beg your pardon, thank you, my dear."

It would have cost Anne little effort to kiss the gaunt poker of an old man, he was so like her husband. She had often kissed that other gaunt poker (like a sweet-pea twining round a rugged stick), and the operation had not created resentment or been without its effect. But she refrained. She would leave that ceremony to Mrs. Rose.

Anne made tea to the two rueful looking men, and let them talk in their own pugnacious, wrangling style. At the close of the breakfast she resumed the charge. A man to be married that day at half past three, in time for the second last train south, and not to speak about it, was preposterous and not to be endured! "Uncle Oliver, I understand you want the wedding to be very quiet," she observed, in an off-hand way, as if she were at a wedding every day of the week. Old Oliver made a restless gesture, as if he were disposed to bolt at the last moment, and young Oliver snuffed the air.

"And it is not to be till after three," continued Anne easily, as if it were a dinner. This was a piece of delicate and exquisite art on Anne's part, for of course women in their hearts and mostly on their tongues, make a thousand times the fuss about a wedding that men do. "I should like, if you think it would be agreeable to her, to call for Mrs. Rose this morning, as I have to be out buying some things at any rate."

This was rather cruel towards old Oliver, friendly as Anne seemed to consider it. To-morrow he was to have a Mrs. Shand, for whose dispositions he was to be held answerable thenceforth to the end of their joint lives, but that he was to take time by the forelock and speak up for Mrs. Rose's humour to-day!

"As you like, my dear," he dismissed the subject impatiently enough. But at that instant a scream sounded faintly from Nolly and Norry in the distant bed-room (transformed into a nursery), and he continued hastily: "I hope you ring the bell, ma'am, if you want anything. I trust the children are all right."

"Perfectly, uncle Oliver," Anne nodded; "they are two wild, reckless young fellows, who thrive and tease their nurses everywhere. Yes, I ring, thank you, and I fetch in addition." Anne checked herself, for an inspiration was coming upon her, and she was about to perform a brilliant *coup d'état* which might be likened in skill to some of the feats of a certain Imperial gentleman.

"I say, Oliver," she faced round upon her husband

with consummate saucy candour and daring, "you may come with me if you like, as you have nothing to do, and are like a fish out of water in consequence. If you don't care for a walk you can stay at home; I have a good tongue in my head, and I can do very well in your native place without you, Noll."

To Anne's astonishment and self-congratulation, Oliver was disposed to comply, crustily and sheepishly. He was tired of his own thoughts, and he was not going to have it said that he was full of jaundice and wrath at his uncle's marriage. He would go abroad and bow coolly to his acquaintances, and allude calmly to the event of the day, and put a stop to the laugh which he was aware was going the round of Helmsfield at his expense.

Anne was so accommodating and sympathetic in her nature that she was getting interested and gleeful about uncle Oliver's marriage. Young Oliver suffered her to lead him into a jeweller's shop. She selected a gold bracelet,—chaste, sober, rich; and she told him: "You know, Noll dear, it is the thing for a woman of her age—a grasping harpy without question," looking him full in the face, "from a poor, ill-used, imposed-upon couple of our means. If we had been great folks, old man, it must have been diamonds I suppose, and how you would have set your teeth and grudged it, you Jew!"

Anne either was, or made believe to be, delighted with Mrs. Rose's house when they found it. They had some difficulty about this, for Oliver had not even brought away its number. Of course it was out of sorts to-day, but Anne could see with half an eye that it was an unpretending pleasant home. Mrs. Rose herself was so gratified at seeing Anne and her husband this morning, there was so much spiritual affinity (shall we say?) between the women, that she was a different person from what she had been the night before. Still she appeared the same placid motherly woman Oliver the lawyer had taken her for, as she begged the two strangers coming out of the stinging wind to sit closer to the fire, and to throw off their wraps, lest they should suffer going out to the cold again.

Poor bride of a second and mature experience! When she came to think of herself, it was yet not of herself that she thought, but of the children—those half-affronted, half-comprehending, children—who were nevertheless firm in their allegiance to their mother. The half-grown lads, glooming and reddening, drew near to stand at her beck, and the pale, precocious, thoughtful girl (such as comely simple mothers often have), started out of her stillness to take what was in her mother's hand, and serve her and bow before her.

Mrs. Rose was eager that the children should impress their new connections favourably, and was desirous to impart the information that Jack had the prospect of going abroad as a doctor in a whale ship until he was old enough to take his degree,

which would be in two sessions; and Cathcart was to pass up to his uncle in London this very autumn to study as an artist, and even Chatty spoke of following her brother to keep his house whenever Cathcart had a house to keep. Mrs. Rose's voice broke down a little in the middle of her self-assertion. She had never whispered, not even to the children, how she would not have dared to indulge these schemes in their behalf had it not been for her old friend Mr. Shand, that friend to whom she bore a soft penitence since she had slighted him long ago for another, and a less sterling man.

Mrs. Oliver knew none of these facts but she could penetrate them. She could see that Mrs. Rose was gentle and trembling, and the children on the defensive, poor things. She was afraid they would think her Oliver detestable (till they knew him better), like their step-father elect. She at least could afford the luxury of being affable and kind.

The children were not to come to their new home till their mother had returned from her second marriage tour, but Anne looked at them, and promptly borrowed Charlotte. "The boys can look after themselves, I dare say," she said, "so can my husband here, but I want a young lady to walk about with me, and take me to the shops, and tall me the gossip. Please come, Miss Chatty."

Chatty, shy, sensitive, suspicious, gazed in Anne's face, trusted her on the spot, laughed, and consented.

Anne admired the embroidery and the objects of natural history, but when she came to the sketches, she burst out enthusiastically "your son will be a painter, Mrs. Rose. Oliver, how proud you and I would be if Nolly or Norry grew up to draw like that."

Not only the mother's eyes brightened, but Cathcart started forward, the praise was so genial, so unsophisticated, so evidently sincere. "You are flattering me, Mrs. Shand," he said, though he did not think it flattery, looking admiringly at the fair dimpled face of the young matron; "but I will think you in earnest if you let me try your likeness."

"My wife is a vain goose," put in Oliver; "that was just what she wanted."

"It is not true. I was only photographed once, and it was at his request—there, traitor! But only think, Noll, what it would be to get the boys taken now, and have their likenesses after they are men, if they are spared, dear boys."

"What would be the use of it?" protested blunt, matter-of-fact Oliver. "They will no more be like what they are now, than full-grown frogs are like sprawling tadpoles."

What was the bracelet to this family, though it had been diamonds, in comparison with these familiar, jesting words, with their subtle compliment, from the cynic Oliver?

"Mrs. Rose is a good, kind woman," Anne assured Oliver, when they were in the street again. "Do you know what person she reminds me of? I declare—of my mother. You need not find fault, for I cannot criticise her after that. Did you really think so, too, Noll? Well, that was wonderful. I think Uncle Oliver has done very well, exceedingly well—yes, I do. The children are a fine family, and Uncle Oliver may have reason to be proud of that Cathcart."

Anne mentioned the resemblance she had detected to Uncle Oliver at luncheon. It was an easier matter now to touch on Mrs. Rose, for the clock was running off its minutes, and the old man was almost standing face to face with his marriage.

A third time that day, and it was something ominous, Uncle Oliver addressed Anne as my dear. "I am glad you think so, my dear," he said to her, with alarming submission. But perhaps it was because it was his marriage-day, and a great deal of licence is allowed to a man on his marriage-day. Again a third or fourth time he urged, "And if you want anything, Mrs. Oliver, be sure you ring for it," so emphatically, that he might have been intending to subjoin, "and rather than you should not have it, I will get it for you myself."

It was a sober, humdrum marriage; so humdrum that the principals, aware of its total want of interest to the public at large, huddled it over in a corner. Nobody present but the priest, the nephew, Oliver, and his wife, and another widow to serve as bridesmaid to the mother and bride in her lavender-like second mourning for her first husband. Uncle Oliver forgot to provide himself with the trifle of a best man, and had to call on one of the reluctant lads to do the duty.

Uncle Oliver took young Oliver aside before he set out with his douce partner on his douce journey. "Oliver, I always meant you to succeed to a fair portion of my property."

"Do as you please," exclaimed young Oliver, more testily than ever. "I tell you it is not my business how you dispose of your fortune. I cannot dictate to you in that respect."

"Hold your tongue, man," said his uncle, imperiously; "who is asking you to dictate? What I want to say is this: I would like now to leave an equal share to your wife. Of course, I shall do something for my sister's children;" and Uncle Oliver, gaunt poker as he was, manifestly thrilled at the words as if they touched his nerves in the spirit of a far-away dream. "But," he continued, "I can do all that. I should like also to leave a small legacy a-piece to your boys, because their mother would like it. Am I right, Oliver?"

The articles of partnership being now signed and sealed, the partners drove away, amid no loud manifestations of mirth, it is true, but amid a good deal of very tender and very sympathetic joy.

WHAT THE WORLD OWES TO THE JEWS.

THE Jews are at once the most ancient and the most extraordinary people on the face of the earth. Their history may be traced back without any admixture of fable for nearly forty centuries; and throughout that long course of ages their ancestral blood has remained unmingled. The other famous nations of antiquity have long ago disappeared, and now survive only on the page of the historian. But the Jews are still an extant people. And in spite of the denationalising influences to which they have been exposed during many centuries of exile and dispersion, they still retain in their physiognomy the indelible features of their ancestors, and abide as unchanged in their distinctive qualities and habits as the mountains which are round about their own loved Jerusalem.

This singular people have not been in the world for four thousand years in vain. Long before their existence as a nation, it was foretold to their great progenitor that in his seed should all the nations of the earth be blessed; and subsequent history, both ancient and modern, shows how completely the prediction has been fulfilled, not only in our blessed Lord who "took on him the seed of Abraham," but in the ordinary descendants of the patriarch. The Jews have been from the first, are still, and will continue to be, a blessing to the nations.

At first sight, one might suppose that the Jews were unfavourably circumstanced for a world-wide mission, placed, as they long were, under a theocratic government which devolved on them the exclusive custody of the true religion, and debarred them from intercommunion with the idolatrous nations around. But in point of fact, the theocratic institute, so far from being exclusive and sectarian, was singularly elastic and expansive. Instead of being prohibited from admitting Gentiles to their religious privileges, the Jews were enjoined and encouraged to keep the door open for "the stranger." At the very beginning of their national existence, it was enacted by Moses, that the stranger who might wish to keep the passover should be allowed to "come near and keep it," and be "as one who was born in the land." And at the dedication of the temple, when the theocracy reached its culmination, the same liberal principle was solemnly reiterated in the inaugural prayer of King Solomon. "Moreover, concerning a stranger that is not of thy people Israel, but cometh out of a far country for thy name's sake, when he shall come and pray towards this house; hear thou in heaven thy dwelling-place, and do according to all that the stranger calleth to thee for, that all people of the earth may know thy name, to fear thee, as do thy people Israel." It is true that at a later day the Jews became the sworn enemies of the rest of mankind, calling them Gentile "dogs," and sullenly refusing even to eat with them; nor is it denied that even apostles of

Jesus were for a time so much under the influence of this morose and sectarian spirit, that they believed it to be "an unlawful thing for a man that is a Jew to keep company, or come unto one of another nation." But the relation towards the Gentile world in which the theocratic institute really placed the Jews, was one, not of antagonism, but of sympathy; and the office which it assigned them as custodiers of the true riches was not that of misers and monopolists, but that of stewards and almoners. It was indeed necessary that they should be debarred from intermingling with idolaters; for otherwise they would have been unable to conserve and transmit incorrupt and unimpaired, that sacred deposit of religious truth, with which, for the benefit of all mankind, they had been entrusted. But it was only while their Gentile neighbours remained idolaters, that they were so debarred. The moment idolatry was forsaken they were enjoined to welcome those neighbours to fellowship, and even allowed to intermarry with them. The once idolatrous Ruth had only to say to Naomi, "Entreat me not to leave thee, for thy people shall be my people, and thy God my God," in order, though a woman of Moab, to become "a mother in Israel"—nay, an ancestress of the Messiah Himself. In truth, the position of the Jews as a separate and peculiar people was scarcely at all different from that of the Christian believer who, though forbidden to join with a wicked world in its sins, is yet allowed to hold as much intercourse with it as may enable him to Christianise and otherwise benefit it.

In proceeding to enumerate the chief benefits which the Gentiles owe, under God, to the Jews, I may fitly begin with that inestimable one—the Old Testament Scriptures. In a certain sense, the New Testament also is a gift from the Jews; for the Gospel was originally published by Jewish tongues and Jewish pens. But the Old Testament is an exclusive product of the Jewish soil. Its sacred books were all, with the doubtful exception of the Book of Job, composed by Jewish authors, and transmitted by Jewish custodiers; and its most prominent subjects, moreover, are the institutions and fortunes of the Jews. No other national literature is so exclusively the growth of one people and one country as the Scriptures of the Old Testament.

And what an immense boon has the Old Testament been to the world! Think of its value simply as a contribution to history. But for it, we should have been ignorant of the origin of the world, of the creation of man, of the true cause of "the natural shocks that flesh is heir to." But for it, the history of the fall, of the antediluvians, of the flood, of the original descent and distribution of the nations—nay, of the fortunes of our race for the first two thousand years, would have been to us an absolute

blank, or only a phantasmagoria of myths and legends.

Think, too, of its value as a contribution to legislation. The Mosaic books contain the oldest code of laws in the world. And while it is certain that subsequent legislators have been indebted to them for many of their wisest enactments, as well as for the very idea of written law, it is highly probable that from them also has been derived the theory of a constitutional monarchy. This much at least is certain, that in no other ancient writings is that form of government described. The conception which even the intellectual Greeks had of a king was that of an irresponsible ruler who possessed the right to dispose at his pleasure of the lives and properties of his subjects. The theory of a constitutional king, who should govern, not according to his own personal will, but only according to the laws and within the limits prescribed by the constitution, first meets us in the Book of Deuteronomy, and was first realised under the government of David.

Think, again, of the value of the Old Testament as a gallery of biographical portraits. Is it possible to overrate the benefit which, as a mere study of human nature, mankind have derived from the lives of Abraham, Lot, Jacob, Joseph, Moses, Samuel, David, Solomon, Elijah, Elisha, Daniel, Nehemiah? Take from us the ideas and associations which these names suggest, and you rob us of half our knowledge of man's true character and nature. All uninspired biography is so one-sided, so rose-coloured, so untrue to real human life, that *it* at any rate would furnish but a miserable substitute for those old portraits of actual men—men of like passions with ourselves.

Still more valuable is the Old Testament as a revelation of the Unity, the Supremacy, and especially the Providence of God. As regards this last point indeed it may be doubted if even the New Testament would have sufficed for our instruction and guidance, apart from the Old. It is only in the recorded dealings of God with the Hebrew people that we see the veil withdrawn, which conceals the secret workings of Providence. Other historians confine themselves to a narration of sublunary events and their proximate causes. But the writers of the Old Testament, not content with showing us what is transacted on this side the cloud, convey us beyond it to the highest heaven, and exhibit the Unseen Governor directing and controlling all agents and all events. In the sacred history, as in the classic epos, there is always a supernatural machinery. The reader is made to behold, like Elisha's servant, not merely the horses and chariots of Syria in the valley, but the mountain full of horses and chariots of fire.

Nor let us forget the benefit which the Old Testament has conferred by its devotional books. Think how many human hearts the Psalms of David have soothed and exalted. Think how often their mingled music and devotion have gone up to heaven alike from the solitary worshipper and from

the assembled congregation—from the rafters of the turf-built cot and from the arches of the solemn cathedral. While thousands of literary works of far higher pretensions have perished, leaving not even their names behind, these poems, written thirty centuries ago among the green hills of Judea, still give a voice to devotion throughout the length and breadth of Christendom; yielding to childhood its lisping praise, to manhood its loftiest prayer, to the mourner his choicest solace, to the dying believer his latest accents. And doubtless in the ages yet to run—let the human mind put forth what new powers it may, these holy psalms will continue to furnish the language in which piety shall clothe its heavenward aspirations.

It is not, however, by means of the Old Testament Scriptures alone, that the Jews have been a blessing to the nations. They have been a blessing *personally* and *directly*. As the exclusive depositaries of the true religion, they have all along possessed the means of making God's way known on earth. And, to appreciate their services as propagators of the truth, we have only to take a retrospective glance at their history in its two grand periods—the period before Christ, and the period since Christ.

Even while they were only the bondsmen of Pharaoh, they occupied a position far from unfavourable to their appointed function of blessing the nations. For four hundred years, they had their abode in a land which is universally admitted to have been the fountain-head of ancient civilisation. And it may be safely inferred, alike from the legends of classical mythology, and from the ancient names of the twelve constellations in the zodiac, which singularly resemble the description of the sons of Jacob as given by that patriarch in his dying benediction and prophecy, that the stream of wisdom and science which subsequently flowed forth from Egypt upon the Mediterranean nations, received not a few of its more salutary properties from the theology and traditions of the Hebrew shepherds of Goshen.

In their passage through the wilderness, they were brought into communication with many of the native tribes, as the Amorites, the Edomites, the Moabites, the Midianites. And since we are expressly told that the terror of Jehovah's name and mighty acts preceded them wherever they went, we may warrantably conclude that their intercourse with those tribes of the desert did much to abate the prevalent idolatry; and that many besides Jethro, priest of Midian, were persuaded to join in their sacrifices, and confess that "Jehovah was greater than all Gods." Nor is the fact without significance, that during the period of their sojourn in the wilderness, that most valuable of all arts, alphabetical writing, had its origin. It is certain that symbols to denote the elementary sounds of language were then unknown in Egypt; and it is equally certain that they were first carried to Greece, at a period not long subsequent to this, by

the Phœnicians who were the neighbours of the Jews. Assume that the Phœnicians derived their knowledge from the Jews; and how probable is the conjecture, that alphabetic writing had its cradle on Sinai, and was born into the world when Moses brought down the two tables of stone from the Mount.

On entering the Promised Land, the religious impression made by the Jews upon the Canaanitish nations was great and salutary. Of this we have decisive evidence in the conduct of the Gibeonites, who, from dread of Jehovah's name and judgments, cast themselves on the mercy of the invaders, and purchased exemption from the doom of extermination by adopting the Mosaic religion and laws. The miracles, too, which signalled the first stages of the conquest were evidently designed to inspire the fore-doomed inhabitants of the land with a new religious awe; as was also the long respite of seven years accorded them for repentance. Nor need we hesitate to believe that Rahab the harlot was but one of very many Canaanites who were brought by means of the Hebrew conquest and invasion to believe and confess that "the Lord, the God of Israel, was God in heaven above and in earth beneath."

During the reigns of David and Solomon, facilities for blessing the nations were greatly enlarged. Both these princes had commercial relations, not only with Phœnicia, Egypt, and Arabia, but also with countries beyond the sea—with Tarshish and Ophir—the West and East Indies of that early time. Such widespread intercourse cannot but have served to extend that divine knowledge which was peculiar to the Jews. The queen who came from the south to hear the wisdom of Solomon must have carried back with her some portions of his heavenly lore. The kings of Tarshish and the isles, who brought presents, must have received gifts in return of higher value than their gold or rubies. Nor is this mere conjecture. It is a well ascertained fact that Abyssinia, the Sheba of the Old Testament, has possessed a comparatively pure theology from a period which national tradition carries back to the age of Solomon. Nay, were there nothing else to mark the reigns of David and Solomon than the commencement of that close intercourse which so long subsisted between the Jews and the Phœnicians, there would be enough to justify the assertion that these reigns were rich in spiritual benefits to countries far beyond the frontier of Palestine. The Phœnicians were then, and for a long period afterwards, the chief maritime people in the world; and being, moreover, a people of considerable literary culture, they were enabled, during their visits to the ports of the Mediterranean for purposes of traffic, to convey to the Greeks and other Western nations, not only the letters of the alphabet and the art of writing, but also many Oriental ideas and opinions previously unknown in the West. Is it supposable that among the ideas and opinions thus conveyed to Europe there were

no Jewish ones,—no ideas derived from the Jewish religion and polity? Recollect how closely the Phœnicians were connected with the Jews, both geographically and commercially. Recollect that they were dependent on "the Jews' country" for supplies of the staff of life; that their language did not differ farther from the Hebrew than Portuguese from Spanish; and that they were, moreover, in the practice of sending large bodies of their artisans to instruct and assist the Jews in architecture and carpentry. Thus circumstanced, how could the Phœnicians have been unacquainted with the moral and theological tenets of Judaism? And if acquainted with them, how could they have failed to impart the knowledge of at least some of them to the various countries to which their commercial pursuits conducted them? We sometimes come upon passages in the writings of the Heathen sages of Greece, which amaze us by their ethical sublimity and wisdom; and to such passages infidels delight to point as evidence of man's ability to discover religious and moral truth independently of a divine revelation. But we may safely hold that the real source of such passages, and indeed of all that is good and true in the moral writings of Pagan antiquity, is to be found in those Jewish ideas and opinions which the Phœnician mariners and merchants, so early as the days of David and Solomon, began to diffuse and circulate—thereby scattering on the tops of the mountains that handful of corn, the fruit whereof was to shake like Lebanon.

After the partition of the kingdom, the Jews had additional seals of their ministry—as witness the notable instance of Naaman, the Syrian general. But their largest harvest of Heathen converts was reserved for the period when they were thrown into association with the four great monarchies which successively ruled the East.

With the Babylonian monarchy they were connected by the bond of a seventy years' captivity. And, by God's merciful overruling, that captivity, though humiliating to their national pride, proved the means, not only of weaning themselves from idol worship, but of reforming the religious usages of their captors. Their jealousy for the honour of the one living and true God struck the Babylonians with awe. Their self-denial in temptation and constancy in suffering won the admiration of the luxurious court and city. Though they often sat down and wept when they remembered Zion, and hanged their harps upon the willows, yet it was not always in mockery that "they that carried them away captive," said to them, "Sing us one of the songs of Zion." Nebuchadnezzar, the king, was so impressed with the sublimity of their creed and the splendour of their virtues, that he publicly interdicted "every people and nation and language" within his dominions from speaking anything amiss against the God of the Hebrews.

With the Persian Empire, which rose on the ruins of Babylon, their connection was yet closer.

It had been foretold by Isaiah a hundred years before, that Cyrus would overturn the Babylonian power and bid the captive Jews go free; and the event corresponded. Not only did that great monarch empower such of the Jews as wished it to return to their own land, but he elevated many of them to places of trust and authority in his own immediate dominions: and embracing himself the belief of the true God, he encouraged his subjects to do the same. Several of his successors followed his example. One of them, Ahasuerus, had a Jewess for his queen, and a Jew for his prime minister. And for several ages after, as ancient history attests, Persia professed a purer theology than the surrounding Asiatic countries.

When the Persian Empire fell in its turn before the Macedonian, the Jews entered upon a yet wider field of usefulness. Taking advantage of the liberal policy of Alexander the Great, they speedily settled in large numbers, as teachers or as traders, in all the chief cities of the empire; thus multiplying the centres whence the true light might stream forth into the surrounding darkness. In Egypt, in particular, they soon became, through successive emigrations, a great and prosperous colony. There, foregoing their national unapproachableness, they associated freely with the native inhabitants. There they built a temple, accessible to Gentile as well as Jewish worshippers, in which the whole routine of divine service was performed in the same manner as at Jerusalem. And there, too, with the full sanction and approval of the reigning princes, they executed that celebrated Greek translation of their own Scriptures—the Septuagint—which perhaps did more than all other causes combined, to prepare the world for the advent of the Saviour.

Nor was the last and greatest of the four empires unbenefited by the Jews. Whence sprung that general expectation of a great Deliverer which prevailed throughout the Roman dominions about the time of our Lord's birth? Whence, but from the previous wide diffusion of the Jewish Scriptures? Tacitus, the most accurate of the Roman historians, speaks expressly of this expectation as drawn from the sacred books of the Hebrew priests; and no scholar can read the contemporary Latin poems—such as the “*Pollio*” of Virgil—which foretell and celebrate the coming Prince, without being struck with palpable marks of plagiarism from the Septuagint. It was thus through the leavening influence of Jewish literature and Jewish opinion, that the mind of the Empire became filled with the presentiment of a new and better era. And if, then, the world was now ripe for the epiphany of “the Desire of all nations”—if the train was already laid all around the Mediterranean, which the first preachers of the cross had only to ignite, in order to set on fire and consume the gigantic fabric of classical Paganism—let not the Jews be denied the praise and honour of thus “preparing the way of the Lord.”

Blessed be the God of Israel for making His chosen

people so helpful to the nations of antiquity! On a first view, the Heathen world prior to the advent of Christ seems a very valley of the shadow of death. But the gloom, as we have seen, was neither universal nor uninterrupted. The lamp of truth, which burned so bright in Canaan, and went with the Jews in all their dispersions, threw its healing rays frequently and far into the darkness. And thousands upon thousands, we may thankfully believe, who were born to the dark heritage of idolatry, were taught by its light to turn from dumb idols to the living God, and emboldened to breathe out their last sigh in the hope of a blessed immortality.

In now turning to the benefits which the Jews have conferred on mankind during the Christian era, I must not pass unnoticed that small but important portion of the nation, which St. Paul styles “the remnant according to the election of grace.” For to that “remnant” we are indebted for the very choicest of our religious advantages. That “remnant” formed the original stem of the Christian Church—Jesus himself being the root. By that “remnant” the Gospel was originally preached, and the New Testament written. And through fellowship with that “remnant” have the Gentiles acquired their spiritual privileges. We sometimes hear indeed of the Gentile Church as distinguished from the Jewish. But it ought to be remembered that the Christian Church was at first composed exclusively of Jews, and that the Gentiles who have since been admitted into it, have been admitted, not as a separate and independent body, but simply as an addition to the original Jewish remnant. “Fellow-citizens with the (Jewish) saints”—“Fellow-heirs, and of the same body,” these are the phrases by which the believing Gentiles are described in the Apostolical writings. Nor is it other, therefore, than an abuse of language to speak of the Gentile and the Jewish believers as forming different Churches. It is as “grafted in among” the Jewish “remnant,” that we Gentiles have come to “partake of the root and fatness of the olive-tree.” And hence in counting up the long roll of Jewish benefits, we should never forget that to a portion of that people we owe, under God, the inestimable blessing of Christianity and the Christian Church.

But what of the great bulk of the nation—the unbelieving Jews? Have *they* also been our benefactors? Certainly, no service to the Christian world was to be expected at their hands. Nay, their very survival as a people after that terrible destruction of Jerusalem which followed and avenged their rejection of Christ, was a marvel. “Never,” as has been eloquently said, “was vessel dashed upon the rock into smaller fragments than the Jewish nation in that tremendous overthrow. Their heaven-built polity went to pieces; their holy temple was ruined from topmost tower to foundation-stone; a million of their best lives were sacrificed;

and all whom the sword spared were sold into hopeless captivity." One might have thought that so profound a calamity would have made a "full end" of the people. But no. Prophecy had sealed them for a further mission to the world: and events ere long showed that they had yet a long career of usefulness to run.

It would be interesting, did space permit, to narrate how speedily the scattered fragments of the wreck were collected, and reconstructed into two great communities—the one at Tiberias in Palestine, and the other on the eastern bank of the Euphrates. Nor would it be less interesting to trace the subsequent fortunes of these modern Jews—their alternate patronage and oppression by the Roman emperors—their persecutions by Mahomet and their prosperity under his successors—their rise to almost fabulous wealth and power in France and Spain during the Moorish dominion—their depression and sufferings during the Crusades—and their singularly varied fortunes ever since in all quarters of the globe. But waiving historical details it may suffice to indicate in general terms the chief benefits of which the unbelieving Jews have been the source or the occasion.

One very notable thing is the vast influence which, owing to their peculiar bent and aptitude for traffic and accumulation, they have all along exercised on the world's material and industrial progress. Strange as *their* possession of great wealth may appear, considering how often they have been peeled and spoliated, it is undeniable that they have been in every land of their dispersion the pioneers of trade and commerce, and in many lands the chief capitalists and financiers. At this hour Jewish bankers form the money-barometers of the world.

For music no less than money the modern world is largely indebted to the Jews. Famous from the earliest times for their taste and skill in that fascinating art, they have been in later times, too, its most successful cultivators. And at the present day many of our greatest composers and performers belong to the Hebrew race.

As educationists, also, the Jews have set the rest of mankind a beneficial example. The rule prescribed by Moses that parents should count it a sacred duty to instruct their children in the national history and laws, seems to have been more or less followed on to the fall of Jerusalem. But it is only since the final dispersion of the people that their educational institutions have attracted the notice, and commanded the imitation of other nations. It was under the Rabbins that the system of tuition was matured, which connected the school with the synagogue. And there can be no doubt that Christendom has borrowed from the Rabbins the principle and system of combined secular and religious instruction. The Church of Rome, in particular, owes those Jewish teachers a heavy debt; for the far-famed schools of the Jesuits are almost an exact copy of the schools of old Rabbinitism. And, singular to say—if a digressive remark may be allowed—even Popery itself, considered as a great politico-

religious institute claiming universal sway over its adherents, is a wholesale plagiarism from the system established and long exercised by the Rabbinical oligarchy. The Pope of Rome, in claiming implicit faith and obedience from his spiritual subjects, in co-ordinating tradition with Scripture, and even in assuming the title of "His Holiness," only does what the Rabbinical Patriarch of Tiberias did centuries before him.

But the grand distinctive benefit conferred by the unbelieving Jews yet remains:—They have been for eighteen centuries a standing witness to the truth of the Gospel; certifying all men how just were His claims to faith and obedience, who declared that, for their sin in rejecting Him, they should "be led away captive into all nations," and their beloved "Jerusalem trodden down of the Gentiles, until the times of the Gentiles be fulfilled." It is true, the Jews themselves have no idea that they are witnesses on the side of a religion which they contemptuously reject. They mean not to give evidence in its favour. Nay, such an office, if named to them, they would repudiate with all a Hebrew's bitter scorn. Yet this is their office not the less. And most effectively do they perform it. If there is an evidence of the truth of our religion which makes up to the men of this latter age for the cessation and want of the miracles of the first age, it is the existing condition of the Jewish people. Can any mere natural causes account for such a peculiar condition as theirs? Is there any other instance on record of a people retaining its nationality, age after age, notwithstanding the entire rupture of all the ties of a common country and a national government? Is there any other instance of a people continuing for centuries in a state of dispersion, without being absorbed in the surrounding races? Look at our own island. Though conquered and colonised by a succession of distinct races—Celts, Saxons, Danes, Normans—yet its inhabitants have long since lost nearly all traces of their separate descent, and become the one undivided people of Britain. Look at the city of London. It is only a few hundred years since a colony of Frenchmen established themselves in its suburb of Spitalfields; and yet these immigrants are now undistinguishable, except by their French names, from the native population of London. Why is it so diametrically the reverse in the case of the Jews? Nor is it only when cursorily surveyed that the case of the Jews seems anomalous. The longer you ponder it, the anomaly appears the more striking. For what sort of a life is it that the Jews lead in the lands of their dispersion? Is it a life which tends to keep them isolated? Is it a roaming, vagrant, gipsy-like life on the outskirts of society? Quite the contrary. It is a life of close and active communication with other men; it is a life of sleepless traffic and industry in the heart of crowded cities; it is a life of busy and incessant money-making—the very life of all others most fitted to obliterate original distinctions of race and lineage. And yet they mix

thus closely and constantly with other men, without ever amalgamating. They crowd and jostle in the world's thoroughfare of toil and traffic, without ever crossing that boundary, broad and deep, which their ancestral blood and ancient religious usages draw around them. Even their adherence to these ancient usages is itself an anomaly; for they have now no legitimate grounds for retaining them. Their religion wants its indispensable aids of temple and sacrifice; yet they adhere to it with changeless pertinacity. Their hope of restoration to their own land has no ground of support in the prophecies, as interpreted by cautious expositors; yet they cling to that hope after long centuries of "hope deferred." And these strange contrarities—seclusion in the midst of society, addiction to temple-worship in the absence of a temple, hope of national restoration without any ostensible ground of hope—are not things of to-day or of yesterday merely, but hereditary and unchanging characteristics of the people;—attending and distinguishing them in every clime, under every form of government, when they live together and when they live apart, in the crowded capitals of Europe and in the lonely isles of the Indian sea. Has such a phenomenon any parallel in history? Unbelievers ask us for a sign from Heaven to attest our religion—a sensible miracle which would leave no room for disbelief. We bid them look at the Jews; we point them to that standing miracle; and we make bold to tell them

that if they believe not on its sure and striking testimony, "neither will they be persuaded, though one rose from the dead."

Great and manifold, then, are the services which, during their long and eventful career, God's ancient people have rendered to the rest of mankind. Ought these services to remain unacknowledged and unrepaired? If we Gentiles are *such* debtors to the Jews—if to them we owe, under God, our religious knowledge, our helps of grace, our prophets, our apostles, our Church—yea, our blessed Redeemer Himself, what can be more incumbent on us than to repay the debt *in kind*, by sending them the Gospel of salvation? Too long has it been the habit of Christians to despise the Jew, to deny him the honour due to "all men," to aggravate the hardships of his lot by pointing at him the finger of scorn. Too long have the Churches of Christendom expended their missionary zeal almost exclusively on their Gentile brethren; emulating that selfish and morose exclusiveness of which the Jews at the beginning of the Gospel set so odious an example. But surely if any branch of the human family has a prior claim to our sympathy and help, it is God's ancient people—the people whose poverty has made us rich, whose religion differs from our own only as the cold grey dawn from the perfect day, and whose unexampled sorrows enhance their title to our Christian commiseration.

J. M'ULLOCH.

RECONCILED.

I.—NOONDAY.

Two angry men—in heat they sever,
And one goes home by a harvest field:—
"Hope's nought," quoth he, "and vain endeavour;
"I said and say it, I will not yield!

"As for this wrong, no art can mend it,
The bond is shiver'd that held us twain;
Old friends we be, but law must end it,
Whether for loss or whether for gain.

"Yon stream is small—its water shallow;
But winning is sweet, but right is fine;
And shoal of trout, or bed of sallow—
Though Law be costly—I'll prove them mine.

"His strawberry cow slipped loose her tether,
And trod the best of my barley down;
His little lasses at play together
Pluck'd the poppies my boys had grown.

"What then?—Why nought! *She* lack'd of reason;
And *they*—my little ones match them well:—
But *this*—Nay all things have their season,
And 'tis my season to curb and quell."

II.—SUNSET.

So saith he, when noontide fervours flout him,
So thinks, when the West is amber and red,
When he smells the hop-vines sweet about him,
And the clouds are rosy overhead.

While slender and tall the hop-poles going
Straight to the West in their leafy lines,
Portion it out into chambers, glowing,
And bask in red day as the sun declines.

Between the leaves in his latticed arbour
He sees the sky, as they flutter and turn,
While moor'd like boats in a golden harbour
The fleets of feathery cloudlets burn.

Withdrawn in the shade, he thinketh over
Harsh thoughts, the fruit-laden trees among,
Till pheasants call their young to cover,
And cushats coo them a nursery song.

And flocks of ducks forsake their sedges,
Wending home to the wide barn-door,
And loaded wains between the hedges
Slowly creep to his threshing floor—

RECONCILED.

Slowly creep. And his tired senses,
Float him over the magic stream,
To a world where Fancy recompenses
Vengeful thoughts, with a troubled dream!

III.—THE DREAM.

WHAT'S this? a wood—What's that? one calleth,
Calleth and cryeth in mortal dread—
He hears men strive—then somewhat falleth!—
“Help me, neighbour—I'm hard bestead.”

The dream is strong—the voice he knoweth—
But when he would run, his feet are fast,
And death lies beyond, and no man goeth
To help, and he says the time is past.

His feet are held, and he shakes all over,—
Nay—they are free—he has found the place—
Green boughs are gather'd—what is't they cover?—
“I pray you, look on the dead man's face;

“I dare not look—he wrong'd me never,—
Men say we differ'd—they speak amiss—
This man and I were neighbours ever,
I would have ventured my life for his!

“But, Sir, my feet were fast with tangles,—
Aye! words—but they were not sharp, I trow,
Though parish feuds and vestry wrangles—
O pitiful sight—I see thee now!—

“If we fell out, 'twas but foul weather,
After long shining! O bitter cup,—
What—dead?—why, man, we play'd together—
Art dead—ere a friend can make it up?”

IV.—THE WAKING.

OVER his head the chafer hummeth,
Under his feet shut daisies bend:
Waken man! the enemy cometh,
Thy neighbour, counted so long a friend.

He cannot waken—and firm, and steady,
The enemy comes with lowering brow;
He looks for war, his heart is ready,
His thoughts are bitter—he will not bow.

He fronts the seat,—the dream is flinging
A spell that his footsteps may not break,—
But one in the garden of hops is singing—
The dreamer hears it, and starts awake.

V.—LOVERS.

WALKING apart, she thinks none listen,
And now she carols, and now she stops;
While the Evening Star begins to glisten
Between the lines of blossoming hops.

Sweetest Mercy! your mother taught you
All uses and cares that to maids belong,—
Apt scholar to read and to sew, she thought you,
But she did not teach you that tender song!

A crash of boughs!—one through them breaking!
Mercy is startled, and fain would fly,
But e'en as she turns, her steps o'ertaking,
He pleads with her—“Mercy, it is but I!”

“Mercy!” he touches her hand unbidden—
“The air is balmy, I pray you stay—
Mercy?” Her downcast eyes are hidden,
And never a word she has to say.

Till closer drawn, her prison'd fingers
He takes to his lips with a yearning strong;
And she murmurs low, that late she lingers,
Her mother will want her, and think her long.

“Good mother is she, then honour duly
The lightest wish in her heart that stirs;
But there is a bond yet dearer truly,
And there is a love that passeth hers.

“Mercy, Mercy!” Her heart attendeth,
And the blush on her maiden brow is sweet;
She lifts her face when his own he bendeth,
And the lips of the youth and the maiden meet.

VI.—FATHERS.

MOVE through the bowering hops, O lovers,—
Wander down to the golden West,—
But two stand mute in the shade that covers
Your love and youth from their souls opprest.

A little shame on their spirits stealing,—
A little pride that is loth to sue,—
A little struggle with soften'd feeling,—
And a world of fatherly care for you.

One says: “To this same running water,
May be, Neighbour, your claim is best.”
And one: “My son has kiss'd your daughter,
Let the matters between us—rest.”

JEAN INGELOW.

ON SOCIAL INDEPENDENCE.

WE all assent to the truth of the maxim that "Cleanliness is next to Godliness." Lord Brougham attributes the origin of this proverb to George Whitfield, in addressing the colliers at Kingsdown, near Bristol, and adduces it as a proof of Whitfield's sagacity and knowledge of human nature. He saw that the men of black visage and grimy features who stood before him, would never take a single step toward godliness until they passed over the threshold of cleanliness. The value of this maxim is acknowledged by us at the present day, even more than it was in the time of Whitfield. The legislature, the clergy, patriots, philanthropists, and politicians have set their seal to its importance by adopting measures for the promotion of personal and domestic cleanliness, by instituting baths and wash-houses, by attention to sanitary regulations, by requiring that common lodging-houses shall be provided with a due supply of the primary requisites of comfortable and healthy existence—light, air, and water.

Cleanliness, however, is only one out of many qualities which may be called the precursors of godliness. It is one only out of many auxiliaries to the highest interests of morality and religion. It is only one class in the community which has ever been remarkably deficient in this virtuous habit, viz., the class of those who work with their hands. Besides these there are other classes; those who work with their head, those who work with hands and head, and those who work not at all, either with hands or with head. To all these classes we may say that "Social Independence is next to Godliness."

Now, I will not speak of the mischief which arises from indiscriminate almsgiving; of the pauperism, the waste, the want which is created by ill-considered and impolitic benevolence. I know that the poor will never cease out of the land; that it is an essential part of Christian duty habitually to consider the poor, to do good and lend, hoping for nothing again. I envy not the feelings of the man who can boast that he has never been deceived by an artfully concocted tale of woe, or who systematically ascribes all temporal distress to improvidence, extravagance, idleness, and like crimes; but I am convinced there are those who may say, "Silver and gold have I none, but such as I have" I cheerfully impart. I propose, then, to discuss the facilities which Savings Banks, in connection with Life Assurance, offer for the promotion of Social Independence—to the poor that they may emerge from their poverty—to the rich that they may keep far from the folly of trusting in uncertain riches.

My model of Social Independence shall be the Apostle who has told us that, "Godliness is profitable unto all things." He could appeal to those who,

for the space of three years, had been the objects of his unwearied labours, exhortations, and prayers, "I have coveted no man's silver, or gold, or apparel. Yea, ye yourselves know that these hands have ministered unto my necessities and to them that were with me." "Ye remember our labour and travail; labouring night and day because we would not be chargeable unto any of you." "In all things I have kept myself from being burdensome, and so will I keep myself." Elsewhere he tells us of the principle from which he acted, but the full meaning of the passage is not clearly expressed in our version. He gratefully acknowledges the kind attentions of the Christians at Philippi; he assures them that their contribution was an odour of sweet smell, a sacrifice acceptable, well pleasing to God; but he tells them plainly that it was not the amount of the gift, or the personal relief which he prized; the thing he supremely valued was the fruit and recompense which would abound to their account; for he makes the memorable remark, "Not that I speak in respect of want; for I have learnt to be independent in the circumstances in which I am;" independent, self-sufficing, self-relying, and self-supplying.*

Many attempts have been made to encourage the Social Independence of those who work with their hands. Witness the establishment of clothing, coal, shoe-clubs; of funds for provision in sickness, of burial and benefit societies, of building societies, of co-operative stores; of Manchester Unity, Odd Fellows, Foresters, and Druids. But the distinction between the humblest of these, a penny bank, for instance, and the largest assurance office, is in name only, not in reality. The patrons and promoters of all, be they lay or clerical, whatever their designation may be—managers, directors, actuaries, secretaries, or clerks—are engaged in inculcating the great duty of Social Independence. They are all great moral instructors, generating habits of thrift, economy, industry, prudence, and forethought; they are useful alike to the child, the youth, the man, in teaching thoughtfulness for others; they all assist us to bear our own burdens, while they teach, "Bear ye one another's burdens and so fulfil the law of Christ." They preach the necessity of self-denial and frugality; they point to

* The word in the original of Philip. iv. 11, is, *αὐτάρκειαν*, 1 Tim. vi. 6, *αὐτάρκειαν*. The nearest words in English are "self-sufficient," "self-sufficiency." But as these are generally used in a bad sense, the words "independent," "independence," may be more appropriate, though they do not convey the sense of personal exertion implied in *αὐτός*. The same compound occurs in 2 Cor. ix. 8, "self-supply of every kind." In 1 Tim. vi. 3, the word is *ἀνεπιβουλεύετα*, "with these we will make do." The Apostle (says Bishop Ellicott, in 1 Tim. vi. 6) associates *αὐτάρκειαν* with *σωτηρίαν*, and gives the mere ethical truth a higher religious significance.

the temporal recompense of reward which attends self-restraint. Under their guidance and direction all classes may solve the great problem of Social Independence, and learn, in the circumstances in which God has placed them, to be self-sufficing, self-relying, and self-supplying.

But, apart from this Christian feeling of honourable competency, and apart from the use of those means which are within our reach; who are so abjectly helpless, who so absolutely dependent on others for personal comfort, peace and happiness, as those who work neither with hands nor head, and are ignorantly assumed to be independent? Your millionaire has often very few genuine friends, and has often none of those internal resources which may enable a Lancashire spinner to say, "I am instructed both to be full and to be hungry, both to abound and to suffer need."

As I am not writing for the upper ten thousand, I will leave the case of those who work not at all, commending to their consideration the remark of the Duke: "I wish I could clean my own boots; I hate to see a number of idle men about me." With this connect the professional testimony of an eminent conveyancer, who has sketched the history of a landed estate of £10,000 a-year; and shows that under the usual system of charging it with portions for the younger children, it will, in the course of three generations, be more than half eaten up with mortgages, and will probably be sold. He then draws the contrasted picture of three tenants for life insuring their lives to the same amount for the benefit of daughters and younger sons. The result is that though each of them must submit to a personal sacrifice, all but the first derive advantage in respect of actual income, whilst the inheritance is descending unimpaired.

But, it will be asked, how can the plan already suggested be an effectual means of promoting Social Independence when so many savings banks, benefit societies, and assurance offices have issued in disastrous failures, when funds have been squandered in reckless expenditure or misappropriated in other ways, so as to bring the whole system into discredit? The cause generally assigned for these frauds is the dishonesty of a few who live by their wits. These schemes, however, would not have met even with partial success, but for the ignorance of the first principles of financial success which prevails in the public at large, among the educated classes or those who are entitled to this conventional appellation, no less than among the uneducated. It is unnecessary to dwell on the frauds which have been perpetrated in connection with savings banks at Dublin, Tralee, Rochdale, Brighton, Reading, Bilston, or to speak of the high reputation in which the defaulters were held for honour and integrity, for their patronage of scientific and charitable objects; let us look at the assent and consent given to various schemes by some who occupy the highest station in our land, by noblemen and senators, by bankers and merchants, by ministers of State, and

ministers of religion. If we bear this in mind we shall not be surprised at any amount of ignorance or carelessness among those who have enjoyed limited advantages.

The opening of three thousand Post Office savings banks under the immediate management and responsibility of the Government may be reasonably looked to as furnishing an effectual safeguard against the malversations and defalcations which have attended these valuable institutions. We should be glad to render the upper ten thousand amenable to the verdict passed by the select committee of the House of Commons in 1853 on life assurance. They refer to flagrant frauds which consist of an open violation of all law, "such as it would be difficult for any legislature to prevent, so long as private persons exercise so little precaution in the conduct of their own affairs." They speak of great abuses more akin to swindling than regular trade. Who aid and abet these great abuses? Who give their names, or, rather, whose names are used as patrons, presidents, directors, honorary directors, trustees, of these flagrant frauds? Cast your eye over any insurance almanack published since 1853, and see how many members of both Houses of Parliament are printed in connection with schemes which have existed only to oppress the needy, to plunder the fatherless and the widow. We may well say to the collective wisdom of the nation, "Thou therefore which teachest another, teachest thou not thyself? Thou that preachest a man should not steal: dost thou steal?" It would be a novel sight during the heat of a contested election to see placards, "Vote for the Bank of Deposit"; but this would only be a righteous retribution on many senators, and on many aspirants to senatorial honours, for the sanction they have given to schemes of heartless deception. Public persons as well as private persons might thus be taught a wholesome lesson, on the necessity of exercising precaution in the conduct of their own affairs.

The part which these upper ten thousand take in these heartless deceptions is very subordinate, but is very effective. They take care of the remnant of the spoil. The persecuting Saul took no active part in encompassing the death of Stephen, but he kept the raiment of them that slew him. If every trustee would apply his arithmetic to ascertain the financial position of the office with which his name is connected, an immediate and happy revolution would be effected in some thirty life assurance schemes.

As to ministers of religion, it is deeply humiliating and painful to reflect that not less than 300 availed themselves in one year of the insidious offers made by a Samaritan Loan and Discount Office. The directors and shareholders of this body proposed by some legerdemain to work a costly agency which would promote the pecuniary welfare of the poorer clergy, and yet secure to the promoters a profitable return on their own investments. If Mr. Manager

had advertised a way of proving that eight florins were equal to nine half-crowns, and that both were of the same value as a sovereign, it may be presumed that no sane person would have been caught in the snare. All these frauds and failures may be accounted for by want of attention to the elementary principles of financial success, by the suspension of good sense, and by casting arithmetic to the winds.

As a review of the past presents so many savings banks and assurance offices which have 'made shipwreck, it might seem to a superficial observer impossible to reach the port of Social Independence by them. This would be a very hasty conclusion, as if a man were to assert that there was no coin in the land, of lawful currency and sterling value, because he had been frequently imposed upon by base and adulterated counterfeits. How few have made independent inquiries, how few have exercised diligent search as to the practicability or efficient management of these institutions. As in former occasions, so in the present, fraudulent schemes may well sharpen the invention of the thrifty. Hypocrisy is the homage which vice pays to virtue. The 300 offices which have vanished into air during the last twenty-five years, being conducted on false and deceptive principles, are a tribute to the thirty sound and stable offices founded on a sure basis and conducted so as to last in perpetuity.

When I speak of thirty, I am aware also that there is a second thirty worthy of general confidence; some of the first thirty I shall mention, but as I designedly omit all in the success of which I am personally interested, the reader may consider them not as the *best* which might be brought forward, but only as the *second best*.

I have spoken of the ignorance which prevails on the subject of life assurance as a matter of great surprise. Can any reason be assigned for this ignorance? My answer is this: "Few intelligent persons have turned their attention to the subject, except so far as concerns the merits and success of their own office; and the very few who have considered the financial condition of twenty or thirty offices, are not at liberty to state the result of their investigations."

There is a large number of genuine philanthropists in the present day who are ready for every good word and work. They can talk of penny banks, of model lodging-houses, of baths and wash-houses, of sanitary regulations, everywhere, and on all occasions. But they cannot speak of life assurance without seeming to recommend their own office to the disparagement of rival institutions. It is said that there are sixteen offices of which the proprietors receive on an average the annual return of forty per cent. on their shares. If any proprietor in a mixed assembly gave the results of his experience, and descanted on the undoubted merits of life assurance, some malicious auditor might turn all his statements to ridicule, by representing that whereas he now received forty per cent., he would

have no objection to receive fifty. Under such circumstances, men of gentlemanly feeling and delicate propriety must be silent, however eligible the office may be, and however pure their motives in introducing it to public attention. Others there are who may reasonably be excused if they decline to expose the defects and the mistakes of the unsuccessful offices with which they have been connected. However great may be their desire to prevent other men from becoming dupes, they are under no obligation to call general attention to old matters which they would gladly have buried in oblivion.

Neither can we expect to receive full information from actuaries. These are the professional advocates and advisers of the offices they represent. Like solicitors, they are bound not to admit anything to the prejudice of their clients. It would be unprofessional for a barrister to speak freely of the different solicitors who retain his advocacy. Even so it is unfair to expect that actuaries should give the public the benefit of their professional knowledge. There are actuaries who make it their honourable boast that they have been connected with none but prosperous offices. These deem it advisable to know nothing of offices which are unworthy of public confidence. The business of other actuaries lies principally with offices which are not of the prosperous class. Frequently they give advice to directors which is not adopted. The only way open to them is to retire. But by every tie of duty, of honour, and interest they are bound over to secrecy.

Many of the reasons already alleged apply to the conductors of the periodical press, who may naturally plead that it is their business to give information, and that it is for private persons to judge what is suitable to their peculiar case.

As then but little help can be expected from the members of the fourth estate, from those who have made this branch of science their professional study, and from intelligent philanthropists, such as the members of the Association for the Promotion of Social Science, it is especially necessary for all who would be preserved from the snare of the swindler to obtain for themselves an accurate acquaintance with the elementary principles of life assurance.

The primary requisite in a well-conducted office is unreserved publicity. Many offices avoid publicity. They take their stand on the prestige of their high and honourable character, on the integrity with which they have fulfilled all their engagements, on their undoubted wealth and prosperity. The grounds on which some offices use this plea cannot well be assailed; other offices love to work in the dark, that they may conceal the real state of their finances from a confiding and an unsuspecting public.

Assurance offices have been well called our Bankers for Posterity. The Legislature has required the Bank of England to make weekly returns

of its issues, and other banks in the metropolis and country districts to make monthly or quarterly returns, binding all alike with stringent restrictions not to abuse or exceed the powers with which they are intrusted. It cannot be supposed that the Legislature had any doubt whatever of the integrity and good faith of the directors of the Bank of England and similar establishments when they imposed upon them these conditions of publicity ; but, looking to the magnitude of the interests confided to them, it was deemed advisable that a distinct statement of their financial proceedings should be required of them weekly, monthly, and quarterly. What reasons, then, can our Bankers for Posterity adduce for refusing to comply with the spirit of an enactment which the Legislature has passed with the object of preventing great abuses and flagrant frauds ? Until a satisfactory answer can be given to this question, I would recommend every good citizen to mark the offices which defeat or evade the intentions of the Legislature respecting publicity, and to avoid them.

Again, we shall do well to avoid those offices which give only a partial account of their condition. Thus we may meet with Mammoth offices which advertise — “Accumulated fund, three millions. Income, one thousand pounds a day. New business at the rate of five hundred thousand a year. Bonus largest ever known. Funds paid to deceased members, about two millions.”

Now, in this prodigious announcement there is everything stated to entrap the unwary, but nothing to prove the stability of the office, or to distinguish it from a gigantic sham. Of what satisfaction is it to us to know that Mammoth has paid to survivors two millions ? We may suppose that it had promised to pay these sums, and we may hope that it is not so unusual for an office to fulfil its engagements as to claim credit for discharging its debts. “The largest bonus ever known.” But was Mammoth justified in declaring this bonus ? We are told that it has three millions ; but what are the liabilities ? The sums assured, with the unparalleled additions made by way of bonus—do they amount to ten millions, or twenty millions ? If they amount to the larger sum, it is probable that Mammoth is insolvent in spite of its three millions. “But then look at the amount of new business last year—five hundred thousand pounds. Was there ever the like ?” In what way is this large business gained ? Has the zeal of the agents been stimulated by the payment of ten per cent. commission on every annual premium, or by a composition allowance of the whole of the premium for the first year ? Commission has been granted on such terms that every additional policy has sunk the office deeper in irreticvable ruin. This new business—is it all genuine business ? How much of it is composed of reassurances ? A policy for 10,000*l.* can be inflated to three times that amount by a judicious arrangement between offices which work together. The policy is first effected for 10,000*l.* in A, of which

8000*l.* is reassured in B ; then 6000*l.* in C, which reassures 4000*l.* in D ; while E takes to itself 2000*l.* of the original policy. Thus, five offices may issue policies to the amount of a million when the aggregate of new business in them all is really less than half a million. By a similar process of dividing and subdividing, a policy to the amount of 20,000*l.* may be distributed among ten confederate offices so as to represent 110,000*l.* of new business.

Next we meet with an advertisement of an office of humbler pretensions, especially intended for industrial assurances. The Minnow states realised fund 180,000*l.*, sums assured 1,500,000*l.* From these two facts we can draw an approximate inference as to the solvency of the office, although there are other particulars with which we should be glad to be acquainted, especially the expenses of management, and the average age of the assured. From the small amount of business it is probable that Minnow has been recently founded ; but such are the tricks of the insurance world, that offices of modern date have been so changed by the wand of the enchantress, as to bear upon their front the influence, the weight, the experience and reputation of half a century. As Minnow does not mention its age, we will try its solvency on three different assumptions of financial condition, and though we have known industrial offices to spend 20,000*l.* a year, we will assume that Minnow spends only 5000*l.* a year.

The average age of the assured may be 40, 45, 50, 55. Hence the expectation of life will be 27, 24, 21, 17. I must request my readers, those of them at least who have considered that calculations applicable to life assurance are quite beyond them, to bear in mind the difference between the amount of *l.* for a number of years at three per cent., and the amount of *l.* per annum for the same period. It is all the difference between depositing *l.* in the savings banks without making further additions, and the depositing *l.* for several successive years.

Amount of £1	for	£1 per Annum.
2-2213	27 years	40-7096
2-0328	24 ”	34-4265
1-8603	21 ”	28-6765
1-6528	17 ”	21-7616

The realised fund of Minnow is now 180,000*l.* What will this amount to at the end of 27, 24, 21, 17 years, three per cent. compound interest.

27 years	£180,000 × 2-2213 =	£399,834
24 ”	× 2-0328 =	365,904
21 ”	× 1-8603 =	334,854
17 ”	× 1-6528 =	297,504

The premium income may be 2½ or 3 per cent. on the sum assured. If the Minnow be a young office, and the average age of entrance be 35, the probable premium is 2½, which upon 1,500,000*l.* amounts to 37,500*l.* But as the expenses of management are 5000*l.* a year, the premium which is available for the assurance fund is only 32,500*l.*

Now £32,500 × 40.7096	=	£1,323,062
Add the amount of £180,000 for	}	=
27 years		
		£1,722,896

Minnow has a surplus of £222,896.

But if the expectation of life be 24 years, taking the expenses at 5000%, and the premium income 2½ per cent. on the sum assured.

£32,500 × 34.4265 =	£1,118,881
Amount of £180,000 =	365,904
	£1,484,785

The deficiency in this case is rather more than 15,000%. It is perfectly clear that the deficiency must be still greater if the average age of the assured is 50, and the expectation of life is 21 years. But how will it be if the premium is 3 per cent., while the expenser are 5000%? The available premium in this case is 40,000%.

£40,000 × 28.6765 =	£1,147,060
Amount of £180,000	334,854
	£1,481,914

Even in this case there is a deficiency of nearly 20,000%. Yet many offices like Minnow stand for a series of years, and go on with a fair show of prosperity. How are we to account for this?

It will be observed that we have taken the rate of interest at 3 per cent., while we readily admit that, looking to the experience of many offices, the sum of 3*l.* 15*s.*, or even 4 per cent. has been realised. But we have as a compensation for this taken the expenses at a much lower rate than usually prevails even in small offices. There is one source of profit upon which some actuaries rely, which we must put wholly out of the question, viz., that which springs from lapsed or forfeited policies. Even the profit which an office makes upon surrendered policies is artificial rather than real. It produces a temporary gain for the current year or period, but is injurious to the future interests of the office, and strikes at the root of Social Independence. Every lapsed or surrendered policy is the means of deterring future insurers. The injury which is done to the cause of life assurance by the inability of a few to keep up their payments is incalculable.

To look with satisfaction on the profits which may accrue to the more fortunate members of an office, from the disasters of the unfortunate, is at variance with all sound fiscal policy, as it is opposed to all charity whether human or divine.

In the hypothetical offices we have suggested, it appears, that Mammoth gives no details whatever by which we can form an estimate of its solvency; Minnow, on the other hand, states its realised assets at 16 per cent. of the sum assured. Now there are many offices of this class in which the assets are from 12 to 15 per cent. of the liabilities. If they have been in existence only for 12 or 15 years, if the business steadily increases without

the stimulus of liberal commissions, the expense of management continuing to be moderate, this per-centage will gradually improve; but as a general rule, I would recommend no office as having passed the diseases incident to infancy and childhood until the assets are 20 per cent. of its liabilities, and if they amount to 25 per cent., so much the better.

With reference to these two hypothetical offices, I would say that the Minnow is more satisfactory to me than the Mammoth on another ground. The Mammoth is, like the "Great Eastern," a huge unmanageable vessel, which has no port sufficiently capacious to receive it, which can find no secure anchorage in the event of a storm or distress of weather. The Minnow may be said to be a light crazy craft, which can be upset by any squall, especially if it carries a press of canvass; but the captain, the crew, the passengers of the Minnow, with all their effects, can be secured by a life-boat, and safely harboured without any material loss of property, so that all may have reason to congratulate themselves on being transferred to another vessel which is more adapted to breast the billows of the surging ocean. Or, to drop the language of metaphor, the Minnow can be amalgamated without serious loss more easily than the Mammoth.

Publicity must be insisted on as the essential requisite, that we may ascertain the offices which can be considered secure, economical, and eligible.

Among those which are secure, I would direct attention to the Equitable, London Life, Scottish Widows', Scottish Amicable, Law Life, Rock, Provident (of 1806), Guardian, Hand in Hand, Norwich Union, Metropolitan, National Provident, Eagle, Atlas, Economic. All these have assets varying from 20 to 50 per cent. of the sums assured; besides these there are fifteen others of the same financial stability. If then there are as many as thirty stable offices, how lamentable it is that any who wish to maintain an honourable independence should entrust their savings to offices which may be likened to a bag full of holes. All of these offices issue from time to time balance-sheets by which every one may satisfy himself of their financial prosperity. I have no pecuniary interest, that I am aware of, in the success of any one of them, and have no reason to commend them to public attention, except as valuable agencies for enabling individuals to provide for the future. Their solvency may be shown in this way. Some have their assets 50 per cent. of the liabilities. Let us suppose the age of the assured to be 55, and the premiums payable only 1½ per cent.

The expectation of life is 17 years in this case.

50 × 1.6528 =	82.64
1.5 × 21.7616 =	32.64
	115.28

These offices are in a position to pay 115*l.* for every 100*l.* assured with them; and as not one

of them charges a premium so low as 1½ per cent., we see that they can afford to give large bonuses.

In other offices the assets are 40 per cent. Let us suppose the average age to be 50, and the premium to be 2 per cent.

Expectation of life is 21 years.

40 × 1.8603 =	74.4
2 × 28.6765 =	57.353
	131.753

These offices are in a position to pay 181*l.* for every 100*l.* they originally engaged to pay.

Take now the offices in which the assets are 30 per cent. Suppose the average age to be 45, and the premium to be 2½ per cent.

Expectation of life is 24 years.

30 × 2.0328 =	60.984
2.5 × 34.4265 =	86.066
	147.050

These offices are in a position to pay 147*l.* for every 100*l.* assured.

If we pursue the same calculation for the offices which had 20 per cent., we shall find that, supposing the average age is 40, and the premium is 3 per cent., they can pay 166*l.* for every 100*l.* But I very much doubt whether there is any office in which the average age is as low as 40, or in which the expectation of life can be correctly assumed to be as great as 27 years.

It will be said that I have deducted nothing for expenses; but as in practice there are no premiums so low, the reader may add ½ per cent. for expenses to all but the last case, and this will provide a sufficient margin for all contingencies.

But I would observe, that in all these fifteen offices the expenses are already provided for out of the accumulated assets, so that the gross premiums accumulate first to meet the payment of the sum assured, then to provide an additional sum which will be appropriated as bonus.

Some of these have large sums reserved from former divisions of profits, the interest upon which alone is sufficient to meet all expenses of management. I enter not into the abstract question how far these accumulations have arisen with justice and equity to the assured in days that are past, but I see clearly that these accumulations render it highly probable that every pound paid in the way of premium will be invested to the benefit of the assurer, without any deduction whatever. There are many offices which have one million invested at 4 per cent.; 3 per cent. of this is required to meet their present engagements, the remaining 1 per cent., which produces 10,000*l.* per annum, is virtually so much spare cash to pay the expense of management.

Security is the first requisite; economy the second. How will these offices stand the test of economy? They are not all of them conducted with that economy which I consider desirable. Some pay large dividends to proprietors, and liberal

commission to agents: these expenses are quite unnecessary, and might be entirely saved. In respect of economy no offices can compete with the Mutual Associations, which give no commission. These rely for support on that limited portion of the public which has the good sense and discernment to buy in the best market. Of the proprietary offices I have named, one adopts the honest plan of allowing the assurer who pays the premium on his own policy to receive the commission for himself. Another habitually advertises its balance sheet. Its expenditure, including commissions and dividends, is less than 9 per cent. on its income. An office like this is quite as beneficial to the assurer as some Mutual Offices, and is more economical than many which issue professedly industrial policies.

If, then, life assurance be thus secure and economical as we have represented it, why is it not more generally adopted? What else is required to render it eligible to the industrial as well as to the professional and mercantile classes? The great objection is that it provides no fund for relief in sickness.

Now if our artisans and mechanics will make provision in no other way, it is highly desirable that they should use our ordinary benefit societies, rather than be under no influence for the exercise of judicious foresight and wholesome frugality. I speak of ordinary benefit societies; not of those which are founded under the patronage and with the pecuniary assistance of many employers of labour, such as exist in large manufactories, in the different railway companies, and in establishments like the "Times" newspaper office.

The chief attraction to ordinary benefit societies is the opportunity afforded for social intercourse, the delight of an annual festival, and the charm which free citizens find in managing their own affairs in their own way. Well would it be if they would calculate the price at which they purchase these advantages. Any healthy person at the age of twenty-five can assure his life for 100*l.* for 2*l.* per annum. If an artisan or mechanic wishes to provide 10*l.* or 20*l.* for funeral expenses, he may reasonably be called on to pay a higher rate of premium. At 3 per cent., the annual payment of six shillings ought to secure 10*l.* in case of death. But the price asked in benefit societies is 10*s.* and even 12*s.* The time of sickness for healthy persons between the ages of 15 and 45 is one week in the year. Where 12*s.* is the sickness allowance, the usual monthly payment is 1*s.* 8*d.* 1*l.* is paid with the prospect of receiving 12*s.* For this there is secured also the assistance of a medical man. But there remains the undoubted fact, which the reader may establish by examining the balance-sheet of any such society in his own neighbourhood, that four shillings in every pound, or 20 per cent. of all the monthly premiums, is absorbed in the expenses of management. It has indeed been ascertained by an analysis of the accounts of some life offices in London, that the annual working expenses

vary from 20 to 50 per cent on the premiums; but these are offices formed to last for 7, 14, or 21 years, while of the offices which are formed to last in perpetuity, the deduction from the premium might be estimated as low as 2 per cent. I cannot consider any system of provision to be eligible which is extravagant and insecure. But my great objection to benefit societies is of another kind; viz., that they are not favourable to Social Independence.

In all these societies the prudent pay for the folly and extravagance of the imprudent; the man of easy conscience receives far more from the funds of the society than he is entitled to; the man of scrupulous conscience, of high and honourable feeling, receives far less. The medical attendant who has to certify to the sickness of a member can never satisfactorily distinguish between those who would represent themselves as worse than they really are, and those who wish to appear better than they are; between those who apply for relief on any occasion which can be brought within the legal interpretation of the rules, and those who affix a moral interpretation according to their own sense of the rule of right. In every society there will be a few who care not what others think of them, provided they can get relief; and a few who, from knowing that they are liable to be suspected, make no application until further postponement is impossible, though the delay aggravates the nature and duration of their sickness. Then there is the nice distinction between full-pay and half-pay; the prohibition from earning anything, the restriction from taking a walk except under prescribed regulations, and even from attending a place of worship; the liability to be visited by an inspector to see that the rules are duly observed; all these form a social bondage, the more intolerable, as the honourable workman may be painfully aware that there are some members for whom these inquisitorial regulations and vexatious restrictions must necessarily be maintained.

If, however, our industrial classes have no higher notions of social independence than the rules of their club allow, let them adhere to their present plan until they are satisfied they can change it for a better. My own opinion is, that among those who work with their hands, there are quite as many who can exercise self-control, as among those who work not at all. To these my specific would be, keep 10% in the savings' bank as a provision for three months' sickness; go on adding to your deposits, and when these have reached 20% you then have enough wherewith to maintain a policy in a life office for 100%; if your health is good, employment brisk, and prospects bright, and your age is from 30 to 35, you may be able to spare even 5% a year for life assurance and effect a policy for 200%.

I cannot but think that if the economical advantages and social independence of this plan were brought before the industrial classes, many of them would recognise its eligibility, and give it a decided

preference. It may be said that attempts of this kind have been made, and have failed. But I never heard of an attempt in which there was not an evident intention, or an ill-concealed desire, to obtain an accession of business to some particular office; and in one case, where a proprietary office was suggested as the one to be preferred, a large and important meeting of influential persons was entirely broken up by the very pertinent question, What are the present liabilities of the office?

But the real difficulty to the working of this plan is this, that the best offices, those offices in which the assurer gets the most in return for his money, do not like to issue policies to the amount of 100%, especially to our hand-workers, who from the unfavourable influence of unhealthy abodes, from exposure to weather, from the dangers incident to their calling, have not the same prospect of length of days as the professional or mercantile classes. The assurer for 10,000% is really a better life than the assurer for 100%. The former, if anything seriously affects his health, has generally the power of suspending his usual duties for a season, he can remove his residence to a healthier locality, he can spend a winter abroad, and renovate his constitution so as to prolong his life for 7 or 10 years, when the assurer for 100% must continue his daily task. It may thus be proved to demonstration that no office in which the policies average only 150% can possibly succeed at the same rates of premium as other offices in which the policies average a much larger sum.

I would hope that our thriving and flourishing offices will still be conducted on the same principles, upon which they were founded and under which they have attained their prosperity, viz., the principle of mutual benevolence. The advocates of proprietary offices will sometimes point to mutual offices, and assert that their large accumulated funds have sprung from injustice to a portion of the assurers. The fact is, that the founders of our most successful offices, both in the past and present century, were perfectly willing to receive nineteen shillings in the pound for themselves, in order to secure twenty-one shillings in the pound for their posterity. If their successors are actuated by a like spirit, they will anxiously consider whether they cannot invite the accession of the sons of toil without entailing any appreciable loss on their present clients.

One of the most recent institutions for bettering the condition of the working classes in London is the establishment of a friendly society for cabmen. By the means of this fostering agency, some who were mere drivers may become owners of the cab, horse, harness, and all appurtenances. The improvement in their external bearing, in their manner, speech, and tone, indicates the happy change which has taken place in their financial condition. If Cabby has a mind to grow rich, he will get a second horse, a second cab: more horses, more cabs. What

the result will be who shall tell? He may die a wealthy man, or he may be reduced to the condition from which he has lately emerged.

I would not encourage his desire, or any one's desire, to grow rich; but I would have him aim at becoming independent. I wonder now whether next Wednesday morning as Cabby drives a gentleman to the Equitable, if he made bold to enter in and ask for a form of application, whether he would be given to understand, "No cabmen admitted here." If he is a young man of the age of twenty-five, he could not do better than apply at the Equitable, though the price is high; but if his age is fifty, he can do quite as well elsewhere. Let him not be discouraged; his object is to buy a certain article in the best market. Let him call at the Eagle, he may find friends there; or he can look in at the Economic. If he is travelling to the east, he can inquire at the Metropolitan or the National Provident; or if westward, let him ask at the Provident in Regent Street, whether the directors have matured and carried into effect the patriotic and benevolent plans which Mr. Barber Beaumont designed fifty years ago for the introduction of life assurance among the working classes.

The great impediment, I fear, lies in the reluctance of directors to issue policies within the compass of the sons of toil; but those who out of 30s. a week can save half-a-crown, or single men and youths of eighteen who out of 20s. a week can save 5s., might break through this impediment by depositing money in the savings bank with the view of effecting an assurance to the amount of 100*l.*, for which all offices *profess* to issue life policies. The Scottish Amicable offers peculiar facilities for those who feel the difficulty of keeping up their premiums year by year. In this office, on the minimum premium scale, a paid-up policy of 100*l.* is granted at lower terms than in any office which has come under my notice—*viz.*, for 3*l.* at the age of thirty, for 3*l.* at the age of forty, and 4*l.* at the age of fifty. In this, too, as in the Scottish Widows', there is gratifying evidence that the practice of life assurance is taking root in the lower strata of society. The average value of a policy in the Scottish Widows' was at first 1000*l.*, then 720*l.*, 670*l.*, and recently 650*l.* In the Scottish Amicable the average value is 460*l.*, and in more recent years the new policies have averaged 420*l.* One of the lessons which the industrial classes will learn from insuring their lives is the necessity of taking care of their own health. The proposal of our hypothetical cabman may be declined on the ground that he does not take the same care of himself as he does of his horse.

I have dwelt at greater length on the advantages of life assurance to the industrial classes from feeling that this mode of promoting their Social Independence is auxiliary and supplementary to other methods which are in happy and successful operation. But even among those who adopt this system there are several popular errors which tend to impede its progress.

One of these errors is, that the assurer derives no benefit from his money; that all use of it is foregone during his lifetime. But, now, is this really the case? Is money valued by us as an end or as a means? Shall we say that we prize it for its own sake or for what it will produce? Do we seek for wealth or for welfare? If a young man under thirty knows by revelation that he will certainly reach the age of threescore and ten; that he can invest his money securely, though at moderate interest (for good interest means bad security); if he is sure that nothing will induce him or compel him to change his purpose, then, if wealth is his object—if he considers the accumulation of money the end of his being and existence—then he is wise in his generation in eschewing life assurance.

But if welfare is our object rather than wealth—if we cherish the spirit of Social Independence as a precursor of godliness—if we cultivate that charity which begins at home and provides the means to give to him that needeth—the beneficial results of life assurance are such that I am reminded of the words of Holy Writ, "Length of days and long life and peace shall they add to thee."

As to the pecuniary return, let it now be conceded that those who live pay for those who die. Those who are spared to reach seventy or eighty years furnish the fund to defray the policies of those who are removed at the age of thirty or forty. But are we to judge of this matter by the pecuniary return only? If so, those who live to an advanced period of life are subjects of commiseration. This is to assume that we value money for its own sake, and not as a means for obtaining necessities, requisites, conveniences, advantages. The investment of money in a policy brings with it even upon the payment of a single premium a comfort, a satisfaction which no other investment can produce; the highest possible reward in a freedom from anxiety with regard to the future. The father can rejoice in the consciousness that some provision is made, that should death come upon him prematurely he will not leave his widow and orphans penniless. He thus gains a serenity of mind and a self-possession which leaves him free calmly to devise, and firmly to attempt whatever is needed for his own welfare or the welfare of others. The satisfaction which springs from this source is worth all the money which he pays for the first seven or ten years. What actuary will name an equivalent price for a quiet mind?

It is not however true that the assurer foregoes all pecuniary benefit from the money he pays for maintaining a policy. At the expiration of twelve or fifteen years he will find that through his policy he can raise a loan on easy terms for the education of his children, or for any other purpose. This must be done with caution, that he may not forestall benefits which were intended for the widow and fatherless. Those however who are of opinion that a good education with a good name is the best inheritance that a father can bequeath to his children,

will not deem a loan for educational purposes an infringement or a perversion of the objects for which he insured his life. In connection with the pecuniary benefit resulting to the insurer, it should be remembered, that in the extreme case of wife and children being removed before him, his life policy is readily convertible into an annuity to maintain his own social independence when his age has fallen into the "sear and yellow leaf." I cannot then conceive of a system of provision which offers a greater combination of advantages; and surely it is unwise not to provide against contingencies, because we cannot foresee and guard against every conceivable contingency.

But it is a misfortune to consider that only husbands and fathers can resort with advantage to this means of maintaining Social Independence. Those who have read the "Experience of Life" will remember how Aunt Sarah adopted the plan of life assurance as the only way in which the double objects could be attained, of securing relief to her relatives, and of forwarding plans of benevolence. There are few persons so very simple as the one depicted in Mrs. Halliburton's troubles, who began to think of insuring his life when he noticed the premonitory symptoms which terminated in consumption. But how many young men are there having the means of self-support, rejoicing that they are able to some extent to requite their parents, who intend to insure their lives, when they marry. But what if they are taken off as in a moment! Have they made suitable provision for their funeral charges, for the expenses of their last illness? Are there no small accounts not settled? Shall they throw this burden on their parents? Or do they trust to the kindness of friends to raise a contribution? Why do they not provide at once for these contingencies, which they can easily do at the expense of 1s. a week, or perhaps 1d. a day?

Whatever plan be adopted, there will always be need to attend to the caution, "Take heed and beware of covetousness." This spirit may be indulged under the form of life assurance as well as under the habit of accumulation. To leave a family

dependent on public benevolence or private charity is an act of fraud upon the community and of cruelty to the fatherless and widow. Provision by way of life assurance least exposes us to be entangled by the deceitfulness of riches, and the love of money, which is the root of all evil. All may not be able to leave their families with the competency they could desire; but a man may well be thankful if he can secure a suitable provision for seven or ten years. Should he aim at leaving behind him the largest sum possible, and be dissatisfied if his office does not give unparalleled bonuses, he will forfeit the blessing of a quiet mind, he will become the prey of unamiable, unchristian dispositions, and may degenerate into a miser, greedy and grasping, a mere mass of selfishness.

From this abuse he will be effectually preserved by cherishing the sentiments of mutual benevolence and Social Independence. Having thus provided for his own, and served his generation in this respect, according to the will of God, he may look forward with calm serenity, with thankful hope. We cannot suppose that any who have thus lived will fall into the mistake of substituting their duty to their neighbour for their duty to God. Should length of days be granted him, being disengaged from secular cares, and released from temporal anxieties, he may reciprocate the language of Aunt Sarah: "Old age is a blessed time. It gives us leisure to put off our earthly garments one by one, and dress ourselves for eternity." At all events his widow, whom he had vowed to love and to cherish, will not have to endure, in addition to the pangs of bereavement, the accumulated pains of absolute dependence on her friends, and of taking a lower position in society, owing to the want of reflection on the part of him who was her support and stay. Throughout his whole course he finds that Social Independence is a great auxiliary to godliness, and the experience of his life confirms the language of the Psalmist: "Trust in the Lord and do good; dwell in the land, and verily thou shalt be fed."

W. WEBSTER.

TWO EXAMPLES OF THE MANY-SIDEDNESS OF THE BIBLE.

[THE FIRST EXAMPLE—THE RAVEN.]

THERE is no characteristic of the Bible more remarkable than its *many-sidedness*. The aspects under which it may be regarded are as diversified as they are interesting. It is not my purpose, in the following pages, to exhibit it, at least directly, in its highest of all characters—as the inspired repository of God's message of salvation to mankind. I may confidently assume that the readers of *Good Words* firmly maintain this as an essential part of that "faith once delivered unto the saints (Jude 3), which they have received as an inval-

able bequest from their fathers, and which it is incumbent on them alike to cherish in their own hearts, and to hand down in all its integrity to those who shall come after them.

I propose, then, to deal with the Bible in some of its secondary points of view; to look at it in its literary rather than its spiritual character;—for, like Him who is its great subject, it has its human as well as its divine aspect;—and I trust that the result of our contemplation will be an increased admiration of a volume which, even in points

admitting of comparison with other works, ever bears away the palm of superiority, and successfully challenges for itself the title of The Book.

In opening this wonderful volume, we are arrested at the very threshold by statements which evince the truth of this position. At the close of the fourth day of the Adamic creation, this world of ours had scarcely emerged from the watery abyss in which it had beenwhelmed ever since the last great geological catastrophe had reduced it to a state of chaos. Although a separation had taken place between land and water, the former must still have been in such a condition as to preclude the possibility of life being sustained on its yet moist surface. How appropriately, therefore, does the sacred narrative inform us that the first animals of the new creation were the aquatic and amphibious species. Then naturally came birds and insects, not exclusively dependent on the yet saturated land, and connected with their predecessors by a link the closeness of which has been remarkably illustrated by the recent discovery of the fossil remains of a winged reptile.

And now, on the sixth day, the earth was sufficiently dry to begin to receive its proper tenants; but even yet, the same nicety of gradation is observable. First, we have the wild quadrupeds, best able to rough it over the dank and oozy ground; next, there came forth, as the process of desiccation went on, the more delicately organized animals which were destined to the service of man; then, the land reptiles, great and small, whose fragile structure was incompatible with the low temperature and prevailing moisture of the previous periods; and, last of all, came man, when everything was fitted for his comfort and happiness, when the ground on which he was to tread was dry and firm, when the last vapour had fled from the blue sky, when the sun at length shone forth with unclouded majesty on such a scene of sublimity and beauty as constrained its omnipotent Creator to pronounce it "very good" (Gen. i. 31).

I cannot quit this topic, which forms so grand an exordium to the inspired volume, without adverting to the four terms which describe the crowning work of this marvellous series of events.

In the twenty-sixth verse we read, "God said, let Us *make* man in Our image, after Our likeness;" to which is added in the following verse: "So God *created* man in His own image, in the image of God created He him." Now I, for one, am not disposed to give up to the exacting spirit of the age the good old theory which saw in the two words here represented an essential and significant distinction: the one, rendered "create," implying formation out of nothing; the other, rendered "make," formation from materials already existing. One of the principal arguments alleged against this time-honoured theory in the "Essays and Reviews," is the fact that both terms are employed in the history of Adam's creation, as though they were mere synonyms. This, however, by no means follows:

on the contrary, that mysterious combination in man of two natures would seem to demand the use of two words, and those of unequal force;—one referring to his body, which was made out of the previously existing dust of the ground; the other, to his higher nature, which was the product of an original creation. Nor are the words synonymous in the second chapter, where God is said to have "rested from all His work which God created and made" (ii. 3). The original, as indicated in the margin, evidently implies that in this retrospective summary, allusion is naturally made, first, to the act of creation, and then, to the subsequent elaboration of the materials thus created.

This latter process is denoted by a third and very expressive term in the seventh verse: "The Lord God *formed* man" (literally, *moulded* him, as the potter fashions the plastic clay) "of the dust of the ground,"—more exactly, dust out of the ground; the former or creative work being further indicated by the words which follow: "and breathed into his nostrils the breath of life, and man became a living soul." Such is the affluence and expressiveness of the sacred tongue, that a fourth term is employed to describe, in all its significance, the formation of woman,—as though a word denoting careful manipulation and elaborate construction were alone adequate to express the superior symmetry and beauty characteristic of the latest and best of God's works.

Having thus paid a passing tribute to the race which stands at the head of the animal kingdom, I will now choose one of the lower creatures for more detailed examination; and lest it should be thought that I had fixed on one peculiarly suited for my purpose, I will take the first animal that is specifically referred to in the Bible. The word translated "whales" in the first chapter of Genesis does not fall under this category, inasmuch as it is a generic term, including the different cetaceous and saurian orders, of which the whale and the crocodile are familiar types. The raven proves to be the animal which first fulfils the required conditions. Let us take the several allusions to this bird, and see how far they will stand the test of comparison with the results of modern science.

(1) I would begin by observing that Noah showed much wisdom in his choice of this inquisitive and observant bird for the task of reconnoitring the slowly-emerging earth (Gen. viii. 7). Strong of wing, rapid in flight, and restless in its movements, it would find its congenial food by day in the carrion which floated on the retiring waters, and would roost by night, as its instincts would prompt it, on some high rock or tree. It would not feel lonesome, for it is naturally solitary; nor would it experience any discomfort from the scene of appalling desolation which everywhere met its shrewd and watchful gaze: for we are told that it revels in storms, and is deterred by no inclemency of weather from seeking its prey.

(2) Passing on to the next reference, we are not

surprised to find that the raven, gorging itself with carrion, and characterized by that sinister expression which has always made it a bird of ill-omen, should be reckoned among the unclean animals forbidden to be eaten by the Mosaic law (Lev. xi. 15; Deut. xiv. 14). An expression is there appended to the mention of this bird which shows the scientific accuracy of the legislator. Whenever, in this enumeration, the phrase "after its kind," follows a particular word, it indicates that the word so qualified is used *generically*, and includes a variety of kindred species. Thus, in the first seventeen names in the list of unclean birds, we find it used in connection with three only; but in each instance its propriety is obvious to any one who pays equal regard to the force of the original Hebrew and the conclusions of physical science. One is the vulture, which, with its allied species, differs so essentially from the majestic eagle on the one hand, and the noble tribe of hawks or falcons on the other. The latter, with its numerous subdivisions, is also, as we should naturally expect, singled out as a generic term; and the third instance is the raven. This is in perfect accordance with the opinions of the best naturalists, who speak of this bird as entitled, by its size and character, to rank as the head and representative of the corvine family, which includes, among others, the rook, the crow, and the jackdaw, all of which are found at this day in Palestine and the adjacent regions.

(3) The next allusion is of a very different nature, but is equally susceptible of corroborative illustration. We find the names "Oreb" or "Raven," and "Zeeb" or "Wolf," applied to two great chieftains of the Arabian hosts over whom Gideon gained so glorious a victory (Judg. vii. 25). The custom of bestowing on individuals the names of certain animals, either from some supposed resemblance of character or some remarkable circumstance in their history, has prevailed in different countries at all times. Curiously enough, Dr. Stanley tells us that the title "Leopard" is now given to the chief of the Arabs beyond the Jordan, who may be considered as the modern successor of Oreb and Zeeb. If we look into Roman history we find yet more apposite examples in the eminent family of the Gracchi, so called, it is said, from a word signifying "Jackdaw," and in another distinguished man who, we are told, in consequence of the unexpected and effectual assistance of a crow, while engaged in deadly conflict with a gigantic Gaul, received the surname of "Corvinus." That it was not a crow but a raven that espoused the cause of Valerius, is evident from two considerations: first, Corvinus is derived from a word which means, not "crow," but "raven;" secondly, the adventure would be incredible, if related of the crow, whereas it is precisely in accordance with the ascertained habits of the raven. This sagacious bird sometimes forms strong and sudden attachments, and has been known to accompany a dog to which it took a fancy, in its hunting expeditions. On their arrival

at a cover, the dog entered, and drove the hares and rabbits from the thicket, whilst the raven, posted on the outside of the cover, seized every one that came in its way, when the dog immediately hastened to its assistance, and by their joint efforts nothing escaped. On various occasions the raven has proved of more use than a ferret, entering a barn with several dogs, and thoroughly enjoying the sport of rat-hunting. The sagacity of these birds is certainly quite extraordinary, and might almost lead us to suppose that they were gifted with reasoning powers.

It is not surprising, therefore, that the raven, with such strongly-marked characteristics, should be employed as a significant designation. Superstition has always invested it with preternatural powers, especially with the faculty of foretelling future events. In ancient mythology, we find the appellation of ravens bestowed upon an oracular order of priesthood. In Egypt, it seems, the temples of Ammon were served by such—perhaps those priests that occur in the mural paintings playing on harps, and clothed in black. More than one temple in Greece had similar raven priests. By a strange coincidence, the priests of the North American Indians at the present day wear, as a distinguishing mark of their sacred profession, two or three raven skins, fixed to the girdle behind their back in such a manner that the tails stick out horizontally from the body. They have also a split raven skin on the head, so fastened as to let the beak project from the forehead. Moreover, it was the usual symbol of slaughter among the Scandinavians; a raven banner belonged to the Danes, and also to the Saxons, and one occurs among the ensigns of the Normans in the Bayeux tapestry.

The scene of Oreb's death was a "rock" or "crag," evidently near one of the fords of the Jordan, for he was attempting to recross to the eastern side of the river when he met his end. This was ever afterwards known as the "rock Oreb" (Judg. vii. 25; Isa. x. 26); and when we bear in mind the signal importance of Gideon's victory, as well as the tenacity with which names are retained in the East, we may not unreasonably look for some traces of it in modern Palestine. Accordingly we find a spot, described as a "low projecting point" (Robinson's "Later Bib. Res.," p. 293), not far from the southernmost ford of the Jordan (called Bethbarah in the Old Testament, and Bethabara in the New), bearing the significant title "El-Ghurâb," or "the Raven." Nor is this position too far south to satisfy the conditions of the narrative. We are expressly told that Gideon guarded *all* the passages of the Jordan against the enemy, even "unto Bethbarah" (Judg. vii. 24); and Oreb, foiled in his endeavours to cross the river at the northern ford of Bethshan (by which he had doubtless entered the country at first), would naturally flee southwards in the hope of finding the more remote passage less vigilantly watched.

(4) In the next reference (1 Kings xvii. 4—6) ravens are miraculously employed to convey bread and flesh to Elijah during his concealment "by the brook Cherith, before (*i.e.*, east of) Jordan." Various hypotheses, based on resemblances of sound, have been proposed by those writers who object to the generally-received opinion. Some think that the word rendered "ravens" should be translated "merchants," as in Ezek. xxvii. 9; others, that it signifies "Arabians," on the strength of which they gratuitously assume the convenient proximity of an encampment of those wanderers; and others, again, that it refers to the inhabitants of a place called Oreb or Orbo, some miles distant on the other side of the Jordan, and not otherwise alluded to until twelve or thirteen centuries afterwards. In reference to the first opinion,—that we are to understand merchants not ravens,—admirably as the wild seclusion of the brook Cherith suited the prophet's purpose of concealment, as well as the natural habits of the solitary raven, it would scarcely answer the purpose of busy merchantmen to visit, twice every day, for many months (probably a year), a spot which was so far removed from the haunts of men as never again to be thought worthy of mention. And with regard to *all* the hypotheses, or any other which would require *human* purveyors of food to the concealed prophet, apart from the consideration that Elijah's safety would be seriously compromised by the fact of his secret being in the possession of so many persons, this fatal objection underlies the whole, that our critics, in their anxiety to get rid of a miracle, utterly ignore the essential difference between eastern and western life. *Oriental*s do not habitually eat flesh. The occasions are extremely rare when they partake of animal food. The unexpected arrival of distinguished visitors—as, *e.g.*, of the angels to Abraham at Mamre, and of King Saul to the witch of Endor,—or of a long-lost prodigal son, occur at once to our thoughts as examples of the infrequency of a diet which with us is a matter of daily routine. If *men* or even *angels* had been commissioned to feed the prophet, bread would have been the simple fare provided, as we see in the case of Obadiah and the hundred prophets in the cave, and of Elijah himself in the wilderness of Beersheba. When, therefore, we find the sacred narrative recording a daily supply of animal food, morning and evening, kept up for a whole year, a greater miracle would be required to constrain men so far to depart from their daily habits (to say nothing of their braving the wrath of a despotic king), than is involved in causing carnivorous birds to bring within reach of Elijah what the very instincts of their nature prompted them to do.

(5) The raven is next introduced under very different circumstances. We have just seen it employed as a succourer of the good; it is now held out as a warning to the evil: "The eye that mocketh at his father, and despiseth to obey his mother, the ravens of the valley shall pick it out, and the young

eagles shall eat it" (Prov. xxx. 17). It was a common punishment in the East, and one which the Orientals dreaded above all others, to expose in the open fields the bodies of evil doers, who had suffered by the outraged laws of their country, to be devoured by the beasts of the field and the fowls of heaven. The wise man insinuates that the raven makes its first and keenest attack on the eye; which perfectly corresponds to its habits, for it always begins its banquet with that part. One naturalist says, "Its favourite food is carrion, which it scents at a great distance; it will also devour rabbits, young ducks, and chickens; nay, it has been known to seize on young lambs, and even sheep when sick and weak, and pick out their eyes while yet alive." Another remarks, "It is a very crafty bird, and can with difficulty be approached; but by laying a dead carcase near its haunts, and being carefully concealed, it may be seen cautiously approaching: first perching on an eminence, it looks carefully round, then advancing with a sidelong step, it examines its expected prey. When fully satisfied as to its own safety, it pecks out the eyes, and proceeds to satiate itself with food." "The *ravens* of the *valley* shall pick it out, and the *young eagles* shall eat it." I cannot forbear noticing, as a proof of the minute truthfulness of Scripture, that the juxtaposition of the words "ravens," "valley," and "young eagles," is curiously illustrated in a single sentence from a modern traveller in Palestine: "In one *valley* we passed [near Jericho], there were several *ravens*, and in another were fifteen or eighteen *eagles*, resting at sunset on an acacia thorn: some were *young* birds." What is yet more to the purpose, is the fact recently ascertained, that "a deep and narrow chasm," not far from Jerusalem, to the west (a part not ordinarily frequented by travellers), bears the name "Wady Ghuráb," the "Valley of the raven" (Robinson's "Later Bib. Res.," p. 154), doubtless so called from its being the favourite resort of that bird. I am not aware that this coincidence has hitherto been noticed; but it is not unlikely that this was the very spot in the sacred writer's mind when he penned these words. Professor Paxton, who wrote long before Wady Ghuráb was discovered, was of opinion that there is a reference here "to some sequestered valley in the land of promise, much frequented by these birds, which derived its name from that circumstance." This happy conjecture may be considered to have been fully verified in the valley just mentioned, actually bearing the required name, sufficiently near to Jerusalem to be generally known, and yet at such a distance from the great highways as to render it a congenial residence for a bird notoriously fond of solitude. The hypothesis of the learned Bochart, on the other hand, that the valley in question was Tophet, which he also identifies with the "Valley of dead bodies," mentioned by Jeremiah (xxxix. 40), is quite untenable: for in each of these three cases, the word translated "valley" is a different one in

the original; and all who are conversant with the marvellous precision of the sacred writers in the employment of apparent synonyms—a quality which is only beginning to be appreciated as it deserves—know that this circumstance alone is sufficient to prove that the “Valley of the ravens,” the “Valley of Tophet” or “Hinnom,” and the “Valley of the dead bodies” or “Jehoshaphat,” are three distinct places.

(6) The next reference to this bird is contained in the Song of Solomon, where the bride says of the bridegroom, “His head is as the finest gold, his flowing locks are black as the raven” (v. 11). There is more in this comparison than appears at first sight. The Hebrew word for “raven” is composed of the same letters as that for “evening,” both derived from a common root, signifying “to mingle.” Hence evening is the period between sunset and night, when there is a “mixture” of light and darkness, the latter not having yet gained the ascendant, but being still irradiated by the splendour of the western sky. In like manner, the raven is so called from that peculiar character of its colour which has been so much admired; “not a dead, but a glossy shining black,” “with gleams of purple passing into green,” “a mixture of darkness and splendour.” We now see the force and beauty of the inspired description—no less true to nature than felicitous in its imagery. In allusion to that golden light on dark hair, which is not uncommon, the bride exclaims, “His head is as finest gold, his flowing locks are black as the raven.”

(7) The next passage in which this bird occurs, takes us into the region of fulfilled prophecy; and here, too, the same features of truth and fidelity are apparent as heretofore. Isaiah—writing about 700 years before Christ, when Edom was a powerful kingdom (having long thrown off the yoke of Judah), and Petra, its capital, was a flourishing city, and it continued to be for ages afterwards—proclaims, with all these appearances against him, that the time would come when Edom should be a desolation, and “thorns should come up in her palaces, and nettles and brambles in the fortresses thereof” (xxxiv. 13). The word “palaces” evidently refers to the metropolis, Petra, as “fortresses” stands for Bozrah, the chief stronghold of the kingdom, the two words being the same in the original; moreover, it had already been declared, a few verses before, that “the Lord hath a sacrifice in Bozrah, and a great slaughter in the land of Idumea” (ver. 6). Of this country, then, in general, and of these two cities in particular, it was predicted that certain animals should take up their abode there, and among these—a sure token that solitude and desolation were the predominant characteristics of the scene—it is specified that “the raven shall dwell in it” (ver. 11). That this is even so in regard to Petra, at least two travellers have testified; while another, speaking of the immediate neighbourhood of Bozrah (yet called Buseirah), says, “the

fields are frequented by immense numbers of crows” (i. e., rooks),—these birds, it will be remembered, being included, both in Hebrew and Arabic, under the generic term “raven.” The best commentary on this testimony, as well as the truest encouragement to such researches as we are now prosecuting, is the voice of God Himself by the mouth of His prophet in this same chapter: “Seek ye” (the original word is a strong one, and should be rendered, “Search diligently and earnestly”) “out of the book of Jehovah, and read: no one of these shall fail, none shall want her mate: for the mouth of Jehovah hath commanded, and His spirit itself hath gathered them” (ver. 16).

(8) The last trait in the raven’s character noticed in Scripture is mentioned by no less than three of the sacred writers. In Job xxxviii. 41, we read, “Who provideth for the raven his food? when his young ones cry unto God, they wander for lack of meat.” And again, in Psalm cxlvii. 9, “He giveth to the beast his food, and to the young ravens which cry.” This repeated reference at once conveys the impression that the young of the raven are exposed to more than usual peril and privation; which is fully corroborated by the researches of naturalists. Pliny, Aristotle, and others, were guilty of no exaggeration when they asserted that the ravens drive out their young ones early from their nests, and oblige them to seek food for their own sustenance. Unlike the rook, which is gregarious in its habits, the raven will not even suffer its young, from the moment they can shift for themselves, to remain within its haunt; and therefore, though a bird found in nearly all countries, it is nowhere abundant. “Some years ago (writes a popular naturalist), “in consequence of the ravages committed by a pair of ravens among the young turkeys of a neighbouring farm, war was declared against them, and one of them was eventually shot. It proved to be the female, whose young ones had unfortunately been hatched, and were then nearly fledged. For a time, the surviving parent hovered about the nest, uttering loud and menacing croakings whenever anybody approached. At length, however, he disappeared, absenting himself for two or three days, and then returned with another mate; when a strange scene occurred. The poor half-starved nestlings were attacked without mercy by the step-mother, who after severely wounding, precipitated them from the nest; two, however, were found at the foot of the tree with signs of life, and, with great care and attention, reared at a house about half-a-mile distant, and after being slightly pinioned, were allowed their liberty; but they seldom quitted the lawn or offices, roosting in a tree in the shrubbery. Here, however, they were soon discovered by their unnatural parents, who for a long time used to come at early dawn and pounce upon them with fierce cries.” This peculiar antipathy to their young has been remarked by many, who have not only known them to show great indifference to any young ones accidentally

thrown out of the nest, but have further ascertained that the parents actually devour them.

The lesson of trust in Divine Providence which our Saviour deduces from this characteristic, may fitly conclude this part of our subject:—"Consider

the ravens: for they neither sow nor reap; which neither have storehouse nor barn; and God feedeth them: how much more are ye better than the fowls?" (Luke xii. 24).

EDWARD WILTON.

TREASURE TROVE.

I.

A LONG while ago, says the legend, when the dominion of the Moors was beginning to decline in Spain, it was rumoured on a certain day, in Toledo, that the Christians were coming down in great force to besiege the city, and had vowed that they would desecrate the Mosque, and despoil it of its gold and jewels—that they would fight their way over the bridge of the Tagus, and bear away the choicest of its treasures from the great Alcazar of Toledo.

But a few days before these tidings arrived, a marvellous stupor had come upon the Moorish masters of the city: some said it was the heat, but they had never cared for the heat before, since they came from a hotter region. They walked about it is true, but it was slowly, and in the great shadows of their houses, and if any man crossed over the street, he held his hand to his forehead and sighed. A few were so faint, that they lay down to rest on the steps of the Alcazar; they thought the scent of the pomegranate flowers oppressed them, though none had complained of this scent before. Others believed that it was a thin vapour which rose up in the heat from the glassy bosom of the Tagus, and spread out like steam above the highest roofs, making the sun look red and fiery.

In spite of this, says the legend, they set about defending themselves; and the danger being imminent, they shipped great store of costly merchandise, with jewels, and gold, and coined money, on board their vessels; which lay in the Tagus, and sent them off, to the number of five, with orders to drop down the river, double the Cape St. Vincent, and sail up the Guadalquivir, that their precious lading might be given over into the keeping of the Moorish King of Seville.

But alas, says the legend, of those five fair vessels, not one ever cast anchor before the walls of Seville, for a great wind took them, scattered and drove them northward as soon as they were clear of the Tagus, and it is supposed that four of the five foundered with their crews and their lading, for they never were heard of more.

It was supposed of so, says the legend, but the Moorish masters of Toledo had little time to fret themselves for their sunken treasure, since that same week the plague appeared, and while the Christians were harassing them without, they lay in the still heat, and perished in the streets by hundreds and by thousands within.

One vessel was left, and day after day in the wind and the storm she drove still further northward, and that strange lethargy had crept on board with the sailors, though now there was neither any heat, nor scent of pomegranate flowers, to plead as a reason for it. And now the white cliffs of a great island were visible, and they said to themselves that they should never behold the sunny country of Spain any more, but be cast ashore at the end of the earth, in the kingdom of William the Norman.

Still the north wind raged, and the foaming billows broke—that was a long and fearful gale: some of the sailors died at the oar, but it was neither hunger nor toil that killed them; and when at last the wind dropped suddenly, and the vessel drifted on to a sandy shore, only three men sprang out from her. There were but three survivors, for the plague had come on board with them and their treasure.

These three men sprang ashore; they landed one coffer filled with gold, precious stones, and coined money. It was as much as their failing strength could do. The islanders fell back from them, for they had seen the dark faces of the dead Moors as they lay in the plague-stricken vessel. They did not molest the sailors, but let them sit alone on the shore bemoaning their fate till night came on, and their vessel at high tide drifted out again to sea, while these three desolate men took up the coffer and went inland, up and up, among the Cumberland hills.

It was as much as they could carry, but no man cared to help. They wandered about among the mountains, and the last time they were seen, it was apparent that they had hidden their treasure in some cavern, or sunk it in the earth, or heaved a stone upon it, for the coffer was gone. Soon after, the men disappeared also; but whether they perished among the rocks, or died of the plague, none could tell; but though many and many a cavern has been searched, and many a stone displaced, from that day to this, says the legend, no man has ever set eyes upon the glittering Moorish gold.

II.

So much for legend; now for more authentic narrative.

An old gentleman sat in a boat on one of the loveliest of the English lakes, and looked up at the mountains with delight.

"Glorious!" he exclaimed; "superb! it beats Switzerland out and out."

Whether he was right is nothing to the purpose, but he said it. He was stout, had a red face, blue spectacles, and a straw hat tied to his button-hole with black ribbon.

Now, when he exclaimed: "It beats Switzerland out and out!" his footman sitting opposite to him, and thinking the observation called for an answer, replied with prompt respect, "Certainly, sir, no doubt."

Thereupon his master looked at his fat white face, which expressed no manner of enthusiasm, but rather showed an absorbing interest in the provision basket which he held on his knee.

"Pray, Richard," said the old gentleman, "do you take any pleasure in the beauties of Nature?"

Richard pondered, and answered as before, respectfully, "Not in particular, sir."

"It's for want of knowing more about them," said his master, good-humouredly; "to-morrow I am going up a mountain to see such a view as everybody must delight in—you shall go too."

Richard touched his hat.

The next morning, the old gentleman with two others, quite as enthusiastic, but by no means so fat; and with a guide, and two hampers containing patties, pigeon pies, hard boiled eggs, potted salmon, new bread, and butter, and water-cresses, set off, his servant accompanying him, to see the beauties of Nature among the mountains.

How many times the gentlemen exclaimed: "Glorious hot day! fine view! lovely scenery!" it is impossible to say. How many times the footman wished himself at home, cleaning his plate, waiting at table, or doing anything in the world but climbing a mountain, it is also impossible to say. Happily for him, the path got so steep, and the day got so hot, that all at once the gentlemen bethought themselves of luncheon, and decided that the very spot where they then stood was the right one to take it in.

So the guide, not by any means disinclined to rest, led them a little aside, and turning the angle of a steep rock, suddenly introduced them to a little quiet nook enclosed with high rocks. It was about the size, Richard thought, of the back parlour at home, only it was open to the sky, and its walls were hung with foxgloves, broom, tufts of heath in blossom, and a few trailing eglantines, instead of pictures and looking-glasses. How still the place was, and how blue the sky above!

"Well, Richard," said his master, "what did you think of the view?"

Richard replied as before, respectfully, "That he had been wondering at it all the way up; everything below looked so small, in particular the haystacks; the round ones, he observed, had reminded him of queen-cakes, and the square ones of penny sponge-cakes or quartern loaves, just exactly that shape, and certainly no bigger."

His master was disappointed to find that Richard's

comparison was queer enough to make both the other gentlemen laugh—not, however, at the footman, but at his master, for expecting him to relish the scenery.

They soon rose from their lunch. It was a sin, they said, to waste the sweet weather in that nook; they should go higher; but Richard might stay behind if he liked and pack the baskets; if he had not had enough to eat either, his master said he was to help himself.

"Thank you, sir, I'm sure," said Richard, gratefully.

Accordingly, when they were gone, he *did* pack the baskets, regaling himself with many a tit-bit meanwhile. This pleasing duty fulfilled, he stretched himself under the steep sandstone walls of his roofless room, basked in the hot sun, looked up into the glowing sky, whistled, and fanned himself with some twigs of broom, which were covered thick with flowers like yellow butterflies.

A thicket of broom bushes grew against the side of the rock, and as he stretched out his hand to one of them to pull off another bough, the bush swung back to its place, and a bird flew out so close to him, that she swept his forehead with her wings.

He peeped into the bush. Yes, it was, as he had thought, a nest—as pretty as moss and feathers could make it; and with four pink eggs in it, quite warm, and half transparent; he parted the thick branches of the broom, and as he held them so, a sunbeam struck between them, and showed a little hole in the rock close to the ground; it looked, he thought, much as the arch of a bridge might look, if the river beneath was so high as to reach within a few inches of the key-stone. He pushed himself further into the broom, and with his hands idly swept down the soft sand, and let it slide down a little rise till it had buried to their heads some tall bluebells that grew there. Then he noticed that the arch, as more of it became disclosed, was very regular for a natural opening, and as the sand slipped away, it revealed the top of what seemed a worm-eaten wooden door, which fitted it with tolerable accuracy. Nearly a foot of this door was visible, when Richard, impatient to know what was behind it, took a stone, and striking the old wood with some force, drove in a small portion of it. He withdrew his head that the light might shine into it; there was a deep cavity, and a narrow sunbeam entering, glittered and trembled upon something which lay on the sand in a heap within, and was red and fiery.

His heart beat quick, his eyes became accustomed to the dim light within, he could see bags lying side by side; one of them had burst open, its contents were large coins—surely gold coins—the sunbeam was red upon their rims—yes, they were gold, they were unknown, they were unclaimed, they were his!

He withdrew his eyes. The broom boughs swung back again and concealed the opening; he *sat down, propped his head upon his hands, and a*

whirling wondering sense of possession, together with a suffocating fear that he should never be able to grasp all his treasure unshared, strove within him, and threw him into such a fever of excitement, that for a while he could scarcely move or breathe. At last he mastered these feelings, forced himself again into the thicket, and thought he should never be satisfied with staring in again and again at the glittering, gleaming gold.

Incalculable riches, and all to be his own!

Yes, *all*: he had heard of such people as Lords of the Manor, his master was one down in the south, but Richard did not mean to consider the law, they should all be his own. He would secure them, buy a fine house, and eat, drink, and dress of the very best. He exulted, as in that quiet nook alone he capered and laughed aloud; then he sat down and began to arrange his thoughts.

Let us see, should he open his heart and share them with his brother? Share them! nonsense; no. What had his brother done for him? Why only this—when Richard was out of place this brother gave him two sovereigns out of his own wages, and afterwards he spared with difficulty five shillings more. Now his brother never expected to see it again. Well, Richard decided to exceed his expectations; he would return it, every farthing: possibly he might give him another sovereign besides. Then there were his two sisters. As to the elder, she certainly had been very good to him; she had many children, and worked hard, yet when Richard was taken ill, she had nursed him, and sheltered him, and sat up with him at night; she had been a true and tried friend to him. Well, he would reward her; he would send her all his clothes; for of course he should in future dress like a gentleman. He would also send her five pounds. No; what would be the use of that? Her drunken husband would only squander it all away; perhaps, instead of that, he would adopt one of her boys—that would be so good, so generous, it would surely be full payment. Or perhaps it would be better to pay his schooling, and let him live at home; if he were brought into a fine house he might grow presumptuous; yes, it would be better to pay for his schooling, and now and then to send him some cast-off clothes. Then there was his other sister. Why she had never done anything particular for him, so there was no reason why he should for her.

And his parents? It certainly would be his duty to allow them something, and he should do it. His father, as he heard from home, was getting very feeble, and could hardly earn five shillings a week by the chance work he did for the farmers, for he was past regular day-labour. His mother had been used to go out washing, but lately she had often been laid up with the rheumatism. A regular allowance should it be? Why look what a sum horses and carriages cost! perhaps a present each quarter would be better; tea for his mother, and tobacco for his father. Yes, that would be better; his mother could make a little go a long

way, and he would send a blanket also. No pledging himself to allowances; he might find that money would not go so far as he expected. Why Squire Thorndyke was always deep in debt, and he had four thousand a-year. Sir Thomas Ludlow was known to be in difficulties, poor gentleman! He said free trade had made his means so small. Ah! free trade was a very hard thing; he should find it hard himself, when he had land, as of course he meant to have. He would send his parents something sometimes—not regularly—lest it should be supposed that he bound himself to continue it, which he might not be able to do. For of course he should have shares like other people in these railways—he might lose a great deal of money by them, as his master had done; he might by such means become quite poor again; and then how cruel it would seem to the old people to stop their money. He would send them something or other as soon as he knew himself what he was worth. Well, he was happy to say he had a generous mind, and did his duty to everybody that belonged to him.

Thus he sat and reflected till he had decided all this and more; he then peered through once more at his treasures, and having feasted his eyes sufficiently, contrived by means of a long stick to pull up two of the gold pieces. They were as large as silver crowns. He handled them, and turned them over. The whole, now he had part in his power, seemed doubly his own, but he knew that gold was heavy; he could count upwards of twenty of these bags; each, for aught he knew, might contain hundreds of gold pieces; and besides that, jewels glittered here and there, which he shrewdly suspected to be diamonds.

He heard voices at a distance, and hastened to emerge from his thicket of broom, first carefully putting the coins and a jewel in his waistcoat pocket. Covetousness grew stronger in his soul, and his breath came quick, and all his pulses throbbled with anxiety, lest he should not be able to secure and conceal the whole of the treasure for himself. The tourists returned, and Richard, as he followed them down the mountain, was so absorbed, that he was constantly treading on their heels. Afterwards, when he waited at table, his master thought the air must have intoxicated him, for he handed him powdered sugar to eat with his fish, salad with his gooseberry tart, and set a pat of butter on table with the desert. Right glad was Richard when the work of the day was over, and he could retire to think upon his good fortune, and examine his spoils. They had been a very cumbersome possession to him, and had inspired him with an almost irresistible desire to be always feeling in his pocket to ascertain if they were safe, and a constant fear lest they should chink together and be heard.

Now, he thought, what must he do? Should he leave his master's service at once, buy some boxes, and, going up the mountain every day by himself,

bring down by degrees the contents of that little cavern till all was secured? No, that would be a suspicious mode of proceeding; people would think the footman was mad, or, if he paid for what he wanted with ancient gold coins, they would suspect, watch, discover, and either betray him or insist upon sharing the spoils. He never doubted that there was a Lord of the Manor in those parts, and if so he must be very secret, as of course these riches belonged of right to him.

No, it would not do to leave his master at once; far better to go south with him as far as the busy city of B—, where he was going to stay with a very learned old gentleman, a friend of his, who had a large collection of curiosities and dusty stones, shells, stuffed animals, and other such gear. He should have a great deal of leisure there, and B— would be a likely place to dispose of his coins in, for his master would be busy with his friend tapping stones in the country with tiny hammers, magnifying sand, and bottling tadpoles in proof spirits.

III.

Not to trouble my reader with accounts of how Richard visited his treasures again by night, and in coming down was very nearly discovered; how he went again, and was very nearly falling over a precipice; how he forgot his duties, was disrespectful, and recklessly whistled as he followed his master; how he entertained the project of shortly changing his name, and conned "The Peerage and Baronetage of England" to find a grand and uncommon one; how conveniently he thought this plan would hide him from all those who had a claim upon him; how he had compunctions on this head, and overcame them with the thought of how much his poor relations would expect of him if they knew about his riches; how the landlady declared him to be the "braggingest" young man she had ever met with; how he carelessly neglected his master's luggage at B., by reason whereof it went down the line to London, and thence to Dover; and how he spent the first two days of the visit in staring out of the hall window—I pass on to say that never was there an old gentleman so fond of old wood carving, old stained glass, old china, old marbles, old mail, old books, old prints, old pictures, and old coins, as this very old gentleman, this friend of Richard's master.

On the third day Richard slipped out, and going into a back street soon found a shop that he thought suited to his purpose. Here, after a little beating about the bush, he produced his coins and his diamond, and after a little hesitation on the part of the shopman, received eight guineas for the stone and one coin—far less than they were worth; but the man would not give more.

On returning, he was told that his master had been ringing for him; he ran up-stairs in some trepidation, and found the two old gentlemen examining a large cabinet full of coins. "Richard,"

said his master, "I want you to hold this tray." Richard did so, and looked down on its contents. "Those," said the host to his friend, "are early English." He lifted up another light tray, and Richard held it on the top of the first. "Now then, old fellow," he exclaimed, "this is something to be proud of indeed; Spanish coins—date of the Moors—all rare—this one, unique; I gave forty pounds for it."

"A penny too much," said Richard's master; and these two coins set apart, are they Spanish too?"

"Moorish, and all but unique; they've been in my family for generations."

Richard looked down, and his heart beat so loud that he wondered they did not hear it; then he drew a long breath, and gazed intently, as well he might, for, reposing on cotton wool side by side, were the very counterparts—the exact facsimiles—of the great gold pieces that he got out of the cavern.

"What's the matter, Richard?" said his master; for Richard's hands shook, and he stared as if fascinated.

"Nothing's the matter, sir," replied Richard, with a face of terror.

"I'll tell you what," said the friend, when Richard had been dismissed, "there's something queer about that lad; what does he mean by turning red and pale, and breathing as hard as if my coins had knocked the breath out of his body?"

His master also thought it queer when that same evening Richard gave him warning, and added that he wished to leave that night, for his brother's wife had written to say that her husband was dangerously ill, and wished to see him.

His master was vexed; but being an easy man, he paid Richard his wages, and let him go, with many kind wishes for his brother's recovery.

"And now," said Richard, "I'll be a gentleman. I've left my old clothes, and when I'm missed, my family can claim them. Honest industry is the best thing after all. Let them do for themselves; they ought to be above troubling me: my name shall be Mr. Davenport St. Gilbert; I shall keep myself to myself, for I want nothing of them, and that alone will be a good thing for them, and more than they ever had reason to expect.

He then went to a number of shops, and soon supplied himself with everything that he thought necessary to constitute him a gentleman—a handsome suit of clothes, studs, a new hat, a cane, and lastly a pair of gloves which he had been very near forgetting; then he went to an hotel, ordered supper and a bed, and by seven o'clock the next morning was on his way to the Cumberland mountains. The image of that mountain was always present to his imagination, and the thought of the treasure lying there, with nothing but a little bird to watch it, filled him with a secret, sordid joy: it should be all his own—no other living man should touch one penny of it: poor Richard!

He went to an inn, ordered a good dinner and a bottle of wine. Alas! he was not used to port wine, and he thought as he paid for all, he would drink all. He did so, and the next day a racking headache made him glad to lie in bed till noon. He stayed at that place another night, and unhappily for him repeated the folly of the previous one. It was not till the fourth day from his leaving B. that he reached the end of his journey, and stepping out of a postchaise found himself at the foot of the well-remembered Cumberland mountains.

He sauntered to the shore of the lake, and began to hurrah! with irrepressible exultation. He thought himself alone, but a dry cough behind him, and a finger laid on his shoulder, undeceived him. He turned round hastily, and beheld two policemen.

"What's your business, fellows?" he exclaimed, half angry, half afraid.

"*You're* our business," was the reply.—"There's been a theft; you must come back with us to B—."

"It's a lie, a base lie; it's a cruel lie," cried Richard, frantically; "there was no theft in the matter, the coin was my own."

"Indeed!—Well, young man, you needn't criminate yourself: how do you know we came after you about a coin?—it's no use stamping, nor crying either, you must come."

The mountains and the lake swam before Richard's eye, as the two policemen took him between them, and walked him off to the railway station; he was frightened, but bewildered, and throughout the long journey he preserved a dogged silence, till at last the train arrived at B—, and there stood his master and the old gentleman waiting for him.

"This is the young fellow, sir, isn't it?" inquired the policemen confidently.

"Yes," said his master, in a tone of deep regret: "I grieve to say it is."

The next morning he was examined before a magistrate, but alas! during the night he had reflected that no one could prove his having stolen the coins (for on their account he never doubted that he had been arrested); he had also reflected that to tell the honest truth about them was most certainly to lose all; moreover, he had made up his mind that nothing worse than a month's imprisonment was at all likely to befall him, even if a case could be made out against him. He therefore resolved to run all risks, and declare that he had found the coins and the jewel in his father's potato garden; he had turned them up with a hoe. How the time passed with Richard till his trial came on, I do not know, but his kind old master visited him frequently, and told him it would be his duty to give evidence against him.

Richard, however, persisted in his tale, though he became quieter and more fearful as the assizes drew near.

At length the eventful day of trial came on, his turn came; he felt guilty, though not of the crime imputed to him; and his anxiety increased as he listened to the evidence brought against him. The

counsel for the prosecution stated the case against him thus:—

The prisoner on the 22nd of August arrived with his master at the house of the prosecutor; he had often been there before, and was known to have acquaintances there. On the 24th he was present while certain valuable coins were displayed by the prosecutor; he was observed to regard them with particular attention; that same evening he gave warning to his master, giving as a reason that his brother's wife had written to him, declaring that her husband was at death's door. He requested to be paid his wages at once, alleging that he had but five shillings in his pocket. He took his leave; and in the evening of the following day, his brother, whose employer was travelling that way, called in to see him, in perfect health; and on being told of the letter supposed to have been received from his wife, replied that his wife, being a Frenchwoman, lady's-maid in the family where he lived, could neither read nor write English, and that Richard knew that quite well.

The day after this, the prosecutor happened to observe a certain scratched appearance about the keyholes of two of his cabinets; he opened them hastily, and found every tray gone with all their contents; in short, the whole case gutted. Inquiries were instantly set on foot, and plate to a considerable amount was also found to be missing; thereupon the servants, being examined, Richard's name was mentioned by all with suspicion. The cook deposed that during dinner, the day he left, Richard had inquired concerning the word "unique." "Unique," said the servants, "means that no one has got such a coin except master;" to which he replied: "If that's unique, they are no more unique than I am, and that I could prove to the present company, if I chose." The servants further deposed, that looking upon this as an idle boast, they had laughed at him, and dared him to produce one, and at last he had said that perhaps he might before he took his leave of them.

This evidence being important, the police had been set to work, and had discovered a fac-simile of the coin, of which only two specimens were supposed to be extant, exposed for sale in a shop window; they had also discovered that he had entered several shops, and spent money to an amount greatly exceeding his wages. The recovered coin being shown to the prosecutor, he challenged it, and produced a written description wherein it was set forth, that these ancient Spanish coins were supposed to be fresh from the Mint, and never to have passed into circulation.

The prisoner, on being arrested, had instantly mentioned these coins, and declared he came by them honestly. On being examined before a magistrate, he declared that he had dug them up in his father's potato garden. On being searched, another coin was found in his waistcoat pocket. On being told that the sharp outline of the coins proved that they had not been exposed to friction or damp,

he added that he found them sealed up in an earthen pot.

On being asked how long it was since he had found them, he replied, that it was while he lived in his late master's service. On being reminded by that gentleman that he had only visited his parents twice during that period, and that the first time they were paupers in the Union, and had no potato garden, he replied, that it was the second time; on being further reminded that during his second visit, the ground was covered with a deep fall of snow, he refused to give any answer.

And now witnesses were called, and then followed the feeble defence of his own counsel. Richard was bewildered, but he perceived that the circumstantial evidence was so strong against him, that nothing but the truth could save him, and the truth no man knew. He was brought in guilty, and sentenced to seven years' transportation.

Alas! what a casting down of his dream of riches! What a bitter disappointment for his covetous soul! He was sent back to prison, and there, when he had duly reflected on his position, he determined to purchase freedom by discovering the whole truth, and thus giving up his monopoly of the Moorish gold.

He sent for his master; he looked miserable, and as he sat on the bench in his prison dress, with his face propped on his hands, he felt plainly that his master pitied him.

The old gentleman heard him to the end, and made no comment, but he remained so long silent when the tale was finished, that Richard looked up surprised. "Sir," he exclaimed, "surely you believe me now?"

"Alas, my poor fellow!" said his master, "you have told so many falsehoods, that it is no longer in my power to believe on the testimony of your lips, but only of my own senses; and this last story, Richard, seems to me the wildest of all. It will not serve you nor delay your sentence one hour."

"Yes it will—indeed it will—O sir, sir, try me this once, and go and look behind those broom bushes."

"Richard, you have a good father and mother, and good sisters, who are very very poor,—if you had really found such a treasure, you would have contrived to send something to them."

"I—I forgot them, sir," faltered Richard.

"No, Richard," said his master with a sigh, "you are a bad fellow, I'm afraid; but you're not so bad as that comes to. You have deceived me so often, that I'm not to be taken in any more."

Richard protested, but his master would not believe his tale, and was about to take leave of him, when a bustle was heard outside the door, and his master's old friend appeared in a state of great excitement. He opened both hands, and in the palm of each was seen a coin, the very coins that had been missing. The real thieves had been detected, and, with very little delay, Richard was set at liberty.

"And now, sir," said he, "come with me to the mountain, and see whether I spoke the truth."

His master wondered greatly, but he went. They were within ten miles of the mountain, when a tremendous storm came on; the floods of rain and peals of thunder drove them into an inn for shelter, and there they stayed during a long night of storm and tempest.

It was not till high noon that that terrible storm subsided; then as soon as it was safe to go abroad, Richard and his master set off on their mission. They went toiling up the same path that they had pursued before; the way was very rugged, for stones and earth had been dislodged by the storm.

"Richard," said his master, "we are nearly at the top of the mountain, surely we must have passed the place."

They came down again, and the agitated Richard looked from right to left; all was so changed, so torn and disfigured, that he could not tell where he was. The tiny streams were tumbling torrents; the road was blocked with stones and rocks.

"Richard," his master said again, "we are nearly at the foot of the mountain, surely we have passed the place."

His master went down to the inn. Richard continued to search: for three weary days he wandered up, and down, and about. Whether the force of the storm had driven rocks down, and filled up that little roofless room, or whether a torrent had defaced the place and concealed it, he could not tell, but certain it is he never found it; and from that day to this, no man's eyes have ever been gladdened with the sight of the Moorish gold.

He came to his master—"Sir," said he, "the gold is not to be found, but I have had a great deal of time to consider, and I have come to think that my own greed has brought all this misery on me. Here's the two coins that I got of the treasure; let them go to my relations, for I'll have none of them, but try to win back my good character, for the loss of that has been worse than the loss of this gold."

FROM NORWAY.

Do you wish your lungs to expand, your eyes to dilate, your muscles to spring, and your spirits to leap?—then come to Norway! I repeat it—be you man or woman, grave or gay; if you ever indulge in lofty aspirations, in bold contemplations, in desperate imaginings—come to Norway, and you will receive much satisfaction, I assure you.

Are you a man? You will find subject and occasion for your manhood. Are you a woman? You will find yourself at the fountain head of the sublime and beautiful! Are you scientific? The rocks are bold and bare—the flora rich and varied. Birds and beasts of many kinds there are; glaciers, too, miles and miles of them, filling up the valleys, and covering the mountain tops—awaiting the inspection of your critical eye. Are you a painter? There is ample field for the wildest pencil and the boldest brush.

Are you a fisher? Here is your terrestrial paradise. But you must be a fisher of the rough school,—not “a follower of the gentle art.” Can you wade all day in snow-water? Can you swim down a roaring rapid—perchance shoot over a cataract, and count it but a trifle—with a twenty foot rod in your hands, and a thirty-pound salmon at the end of your line, making for the sea at the rate of twenty miles an hour? Then, by all means, come to Norway. But you must be possessed of a singularly patient and self-denying character. Mark that well. I have heard of two gentlemen who came to Norway for six weeks expressly to catch salmon. They came, they fished, they went back—one having caught two fish, the other none. The trip cost them 150*l*. They came in the wrong season, that was all. It is not easy to ascertain the right season, for the time that is suitable for one river is not suitable for another. What a false impression of fishing in Norway must have been given by those luckless gentlemen to their friends! I could give a very different account of it, but fishing is not my theme at present.

Are you a daring mountaineer? The mountains of Gamle Norge (Old Norway), though not so high as those of the Himalaya range, are high enough for most men. The eagle will guide you to heights—if you can follow him—on which human foot has never rested.

Do you love the sunshine? Think of the great luminary that rules the day, rolling through the bright blue sky all the twenty-four hours round. There is no night here in summer, but a long, bright, beautiful day, as if Nature were rejoicing in the banishment of night from earth for ever.

But, above all, do you love simplicity, urbanity, unsophisticated kindness in man? Are you a student of human nature, and fond of dwelling on its brighter aspects? Then once more I say, come to Norway,

for you will find her sons and daughters overflowing with the milk of human kindness.

I was fortunate enough to come to Norway in a friend's yacht, and voyaged along the west coast from south to north. This trip is one of the most agreeable that can be made. Steamers ply regularly during the summer months. For information of all kinds in minute detail, I refer the reader to Murray's excellent “Hand-Book to Denmark, Norway, and Sweden.”

There is an advantage in voyaging along the west coast, which those who abhor the sea would do well to consider. The islands are so numerous that the swell of the ocean is completely broken, consequently there is no unpleasant motion—no sea-sickness! Ponder that well, and do not shudder prematurely at the bare mention of yachts and steamers.

It is impossible to give any one an adequate idea of what is meant by sailing among the islands off the coast of Norway, or of the delights attendant on such navigation. If you would understand this thoroughly, you must experience it for yourself. Here is a brief summary of pleasures. Yachting without sea-sickness. Scenery ever changing, always beautiful and wild beyond description. Landing possible, desirable, frequent. Expectation ever on tip-toe. Hope constant. Agreeable surprises perpetual. Tremendous astonishments numerous, and variety without end. Could anyone desire more? The islands extend along the whole coast in myriads. I presume that their actual number never has been, and never can be, ascertained. Some are so huge that you mistake them for the mainland. Others are so small that you might take them for castles floating on the sea. And on many of them—most of them, perhaps—you find small houses—quaint, gable-ended, wooden, and red-tile-roofed—in the midst of small patches of verdure, or, not unfrequently, perched upon the naked rock. In some cases a small cottage may be seen unrelieved by any blade of green, sticking in a crevice of the rock like some miniature Noah's Ark, that had taken the ground there and been forgotten when the flood went down.

There is not within the bounds of the known world a more splendid cruising ground than this great archipelago, which may, I think, be appropriately termed the island-world of Norway. Most travellers are inclined to class it with the wonders of the world; and he who does not, when passing through its wondrous intricacies, find himself transported into a new world of thought and feeling, must himself be deemed a world's wonder. Of course a good deal depends on the weather being propitious. Let this remark be particularly noted, for of all subjects of discussion, there is not one more fertile of difference of opinion and flat

contradiction on the part of travellers than that of scenery; and, having pondered this subject, I have come to the conclusion that, apart from variety of taste, which induces one to admire extravagantly what another views with comparative indifference, or with absolute dislike—this difference of opinion is altogether due to weather.

You come on deck in the morning; the sun is blazing in the bright blue sky; the water is flat as a mill-pond—clear as a sheet of crystal. Sky-piercing mountains surround you, islands are scattered everywhere, but no mainland is visible, yet much of what you see appears to be mainland, for the mountains are islands and the islands are mountains. Indeed it is almost impossible to tell where the mainland begins, and where the island-world ends. The white mists of early morning are rolling over the deep—shrouding, partially concealing, partly disclosing, mingling with and ramifying everything, water and sky inclusive. On one side an island-mountain, higher and grander than Ben Nevis, rears itself up so precipitously and looks down on the sea so frowningly, that it appears as if about to topple over on your head. On the other side a group of low skerries, bald and grey, just peep out above the level of the water, bespattered with mud overshadowed by myriads of clamorous sea-gulls. You gaze out ahead, you glance over the stern, and behold similar objects and scenes endlessly repeated, and diversified.

The ascending sun scatters the mists, glitters on the sea, and converts the island-world into gold. You almost shout with delight. You seize your sketch-book (if a painter), your note-book (if an author), and, with brush or pencil, note down your fervid impressions in glowing colours or in words that burn. Ten to one, however, you omit to note that a large proportion of the beauty in the midst of which you are revelling is transient, and owes its existence very much to the *weather*.

Another traveller passes through the same scenes under less favourable circumstances. The sky is grey, the mountains are grey, the water is grey or black, and a stiff breeze, which tips the wavelets with snow-white crests, causes him to feel disagreeably cold. The gulls are silent and melancholy; the sun is nowhere; perhaps a drizzle of rain makes the deck sloppy. The great island-mountains are there, no doubt, but they are dimly, gloomily grand. The rocky islets are there too; but they look uncomfortable, and seem as if they would fain hide their heads in the troubled sea, in order to escape the gloom of the upper world. The traveller groans and brushes away the rain-drops that hang from the point of his lugubrious nose. If, in the eccentricity of despair, he should retire to the cabin, draw forth his note-book, and apply his stiffened fingers and chilled intellect to the task of composition, what does he write? "Detestable weather. Beauty of scenery absurdly overrated. Savage enough it is, truly; would that I were not in a like condition." Thus difference of

opinion arises, and thus the non-travelling public is puzzled in its mind by the conflicting statements of men of unimpeachable veracity.

Through this island-world we sailed until the great mountain ranges of the interior became clearly visible, and as we gazed into the deep fjords we felt that that boldness and ruggedness so eminently characteristic of the old Norse vikings must have been fostered, if not created, by the scenery of their fatherland. As we gazed and pondered, a huge old-fashioned ship came out suddenly from behind an island, as if to increase the archaic character of the scenery. There it was, undoubtedly (and there it may be seen every day), with the same high stem-post as the galleys of old, only wanting a curve at the top and a dragon's head to make it complete,—and the same huge single mast with its one unwieldy square sail. Presently a boat shot alongside and a sedate seaman stepped on board—a blue-eyed, fair-haired, sallow man with knee-breeches and long stockings, rough jacket, no vest, a red night-cap, and a glazed hat on the top of it. This was the pilot. He was a big, placid-looking man of about forty, with a slouching gait and a pair of immensely broad shoulders. We found that he had been away north for several weeks, piloting a vessel of some sort beyond the Arctic circle. He was now close to his home, but our signal had diverted him from his domestic leanings, and, like a thorough seamouster, he prepared, at a moment's notice, for another voyage.

The obvious advantage that a yachter has over the voyager by steam-boat is, that he can cast anchor when and where he pleases, and diverge from his course at will. Thus he discovers unsuspected points of interest and visits numberless spots of exquisite beauty, which, I verily believe, lie thickly hidden among these isles, as completely unknown to man (with the exception of a few obscure native fishermen in the neighbourhood) as are the vast solitudes of Central Africa. The yachter may sail for days, ay, for weeks, among these western islands, imbued with the romantic feelings of a Mungo Park, a Livingstone, or a Robinson Crusoe! This is by no means a wild statement. When we consider the immense extent of the Norwegian coast, the innumerable friths of all sizes by which it is cut up, and the absolute impossibility of being certain as to whether the inlets which you pass in hundreds are fjords running into the main or mere channels between groups of islands, coupled with the fact that there is comparatively little traffic in the minor fjords except such as is carried on by native boats and barges, we can easily conceive that there are many dark friths along that coast which are as little known to travellers now, as they were in the days when Rolf Ganger issued from them with his vikings to conquer Normandy and originate those families from which have sprung the present aristocracy of England.

We ascended a fjord of this kind which we knew

had not up to that time been visited, because there was a glacier at the head, which is mentioned by Professor Forbes as being known only through native report—no traveller having seen it. This was the Skars fjord in lat. 67° N. The mere fact of this glacier being unknown, except by report, induced us to turn into the fjord with all the zest of explorers. A run of twelve miles brought us within sight of the object of our search, the first glance at which filled us with awe and admiration. But the longer we stayed and explored this magnificent "ice-river," the more were we amazed to find how inadequate were our first conceptions of its immense size.

Appearances here are to our eyes very deceptive; owing, doubtless, to our being unaccustomed to scenery of such grandeur and magnitude. This glacier of the Skars fjord appeared to be only a quarter of a mile wide. On measuring the valley, which it entirely filled up, we found it to be nearly two miles in breadth. Its lower edge appeared to be a few feet thick, and about twenty yards or so from the sea, the shore of which was strewn with what appeared to be large stones. On landing, we found that the space between the ice and the sea was upwards of half-a-mile in extent; the large stones turned out to be boulders, varying in size from that of a small boat to a large cottage; while the lower edge of the glacier itself was an irregular wall of ice about fifteen or twenty feet in height. Standing at its base we looked up the valley over the fissured surface of the ice to that point where the white snow of its upper edge cut clear and sharp against the blue sky, and, after much consultation, we came to the conclusion that it might be three or four miles from top to bottom. But, after wandering the whole day up the valley by the margin of the ice and carefully exploring it, we were forced to believe that it must be at least eight or ten miles in extent, and undoubtedly it was many hundreds of feet thick. When we reflect that this immense body of ice is only one of the many tongues which, descending the numerous valleys, carry off the overflow of the great *mer de glace* on the hill-tops of the interior, we can form some conception of the vast tract of Norwegian land that lies buried summer and winter under the ice.

There was a little blue spot in the glacier at a short distance from its lower edge which attracted our attention. On reaching it we found that it was a hole in the roof of the sub-glacial river. The ice had recently fallen in, and I never beheld such intensely soft and beautiful blue colour as was displayed in the caverns thus exposed to view, varying from the faintest cerulean tinge to the deepest indigo. Immense masses of rock which had fallen from the cliffs lay scattered along the surface of the ice near the edge, and were being slowly transported towards the sea—so slowly that probably months would pass before the smallest symptom of a change in position could be observed.

There were very few natives in this wild spot—

so few that their presence did not in any appreciable degree affect the solitude and desolation of the scene. They expressed much surprise at seeing us, and said that travellers like ourselves had never been there before. Indeed, I have no doubt whatever that in many out-of-the-way places we were absolutely the first individuals of a class somewhat different from themselves that these poor Norse fishermen and small farmers of the coast had ever set eyes upon. Their looks of surprise in some cases, and of curiosity in all, showed this plainly enough.

In one chaotic glen or gorge where we landed we distributed a few presents among the people—such as knives, scissors, and thimbles—with which they were immensely delighted. Three of our party were ladies; and the curiosity exhibited by the Norse women in regard to our fair companions was very amusing. By the way, one of the said "fair" companions was a brunette, and her long jet black ringlets appeared to afford matter for unceasing wonder and admiration to the flaxen-haired maidens of Norway. Of course I speak of the untravelled districts. In the regular highways of the country, travellers of every class and nation are common enough now. But Norway, in the interior as well as on the coast, has this advantage over other lands, that there are regions, plenty of them, where travellers have never been, and to reach which is a matter of so great difficulty that it is probable few will ever attempt to go. This fact is a matter of rejoicing in these days of railroads and steam-boats!

On another occasion, while we were sailing up the Sogne fjord, which runs between stupendous mountains about a hundred miles into the interior of the country, we came to a gap in the mountains into which ran a branch of the fjord. The spirit of discovery was strong upon my friend, the owner of the yacht, so he ordered our skipper to turn into it. We were soon running into as wild and gloomy a region as can well be conceived, with the mountains rising, apparently, straight up from the sea into the clouds and tongues of the great Justedal glacier peeping over their summits. We turned into a large bay and cast anchor under the shadow of a hill more than 5000 feet high.

Here we found the natives kind and hospitable; but, indeed, this is the unvarying experience of travellers in Norway. They were not, in this fjord, like the poverty-stricken fishermen of the outer islands. They were a civilised, comfortable looking, apparently well off, and altogether jovial race of people, some of whom took a deep interest in us, and overwhelmed us with kind attentions. Their houses, which were built of wood, did not present much appearance of luxury, but there was no lack of all the solid comforts of life. No carpets covered the floors, and no paintings, except a few badly-coloured prints, graced the walls. But there were huge, quaint-looking stoves in every room, suggestive of a genial temperature; and there were

scattered about numbers of immense meerschaum pipes and tobacco pouches, suggestive of fireside gossip—perchance legends and tales of the old sea kings—in the long dark nights of winter.

I was strengthened, here, in my belief in the indissoluble connection between fat and good-humour; for all the people of this fjord seemed to me to be both good-humoured and fat. It was here, too, that I was for the first time strongly impressed with my own lamentable ignorance of the Norse language. Nevertheless, the old proverb—"Where there's a will there's a way"—held good, for the way in which I managed to hold converse with the natives of that region was astounding even to myself!

One bluff, hearty fellow of about fifty, with fair hair, a round, oily countenance, and bright blue eyes, took me off to see his wife and family. Up to this time our party had always kept together, and, being a lazy student, I had been wont to maintain a modest silence while some of my companions, more versed in the language, did all the talking. But now I found myself, for the first time, alone with a Norwegian!—fairly left to my own resources. Well, I began by stringing together all the Norse I knew (it was not much), and endeavouring to look as if I knew a great deal more. But I soon found that Murray's list of sentences did not avail me in a lengthened and desultory conversation. My speech quickly degenerated into sounds that were quite unintelligible to either my new friend or myself, and I terminated at last in a mixture of bad Norse and broad Scotch!

I may remark, in passing, that there is a strong family likeness between Norse and broad Scotch. For instance, they call a cow a *ko* or *coo*. *Gaae til land*, is, go to land, go ashore. *Tage place*, is, take place, or sit down. *Vil de tak ain dram?* scarcely requires translation—and the usual reply to that question is equally clear and emphatic—Ya, Jeg (pronounced Yie) vil tak ain dram! If you talk of bathing, they will advise you to *dook oonder*; and should a mother present her baby to you, she will call it her *smook bürn* (pronounced barn)—her pretty child, or bairn, smook being the Norse word for pretty. And it is a curious fact, worthy of particular note, that all the mothers in Norway think their bairns *smook*, very smook, and they never hesitate to tell you so. Why, I cannot imagine, unless it be that if you were not told, you would not be likely to find it out for yourself!

My fat friend and I soon became very amicable and communicative on this system. He told me innumerable stories, of which I did not comprehend a sentence; but, nevertheless, I looked as if I did, smiled, nodded my head, and said "Ya, ya;" to which he always replied, "Ya, ya," waving his arms and slapping his chest, and rolling his eyes, as he bustled along towards his dwelling.

The cottage was a curious little thing—a sort of huge toy, perched on a rock close to the water's edge. If it had slipped off that rock—a catastrophe

which had at least the appearance of being possible—it would have plunged into forty or fifty fathoms water, so steep were the hills and so deep the sea at that place. Here my friend found another subject to expatiate upon and dance round, in the shape of his own baby—a soft, smooth counterpart of himself—which lay sleeping like Cupid in its crib. The man was evidently extremely fond of this infant, not to say proud of it. He went quite into ecstasies about it; now gazing at it with looks of pensive admiration; anon starting and looking at me as if to say, "Did you ever in all your life behold such a beautiful cherub?" The man's enthusiasm was really catching—I began to feel quite a paternal interest in the cherub myself.

"Oh!" he cried, in rapture, "det er smook bürn."

"Ya, ya," said I, "megit smook" (very pretty), although I must confess that *smoked* bairn would have been equally appropriate, for it was as brown as a red-herring. I spent an agreeable, though mentally confused, afternoon with this hospitable man and his two sisters, who were placid, fat, amiable, and fair. They gave me the impression of having never been in a condition of haste or perturbation from their birthdays up to that time. We sat in a sort of small garden, round a green painted table, drinking excellent coffee, of which beverage the Norwegians seem to be uncommonly fond.

The costume of these good people was of an uncommonly sombre hue; indeed, this is the case throughout Norway generally. But when a Norse girl marries, she comes out for once in brilliant plumage. She decks herself out in the gaudiest of habiliments, with a profusion of gold and silver ornaments. The most conspicuous part of her costume is a crown of pure silver, gilt, and a scarlet-cloth breast-piece, which is thickly studded with silver-gilt brooches and beads of various hues, besides little round mirrors! This breast-piece and the crown usually belong, not to the bride, but to the district! They are a species of public property hired out by each bride on her wedding-day for the sum of about five shillings. This costume is gorgeous, and remarkably becoming, especially when worn by a fair-haired, blue-eyed, and pretty Norse girl.

Some time after the little touch of domestic life above narrated, we had a specimen of the manner in which the peasants of these remote glens indulge in a little public recreation. We chanced to be up at the head of the Nord fjord on the eve of St. John's day,—not the day of the Evangelist, but of the Baptist. This is a great day in Norway; and poor indeed must be the hamlet where, on the eve of that day, there is not an attempt made to kindle a mighty blaze and make merry. On St. John's Eve, bonfires leap and roar over the length and breadth of the land.

The manner in which the people rejoiced upon this occasion was curious and amusing. But here I must turn aside for one moment to guard myself

from misconstruction. It needs little reasoning to prove that where the mountains rise something like walls into the clouds, and are covered with everlasting ice, the inhabitants of the valleys may have exceedingly little intercourse with each other. Hence, what may be true of one vale may not be true of another. In these rough descriptions I would not have it understood that I attempt to give the characteristic features of the Norwegian people. The doings on this occasion may or may not have been peculiar, in some points, to this particular valley at the head of the Nord fjord. I simply describe what I saw. With an apology for this defensive digression, I proceed.

It was midnight when we went to a field at the base of a mountain to witness the rejoicings of the people. But the midnight hour wore not the sombre aspect of night in our more southerly climes. The sun had indeed set, but the blaze of his refulgent beams still shot up into the zenith, and sent a flood of light over the whole sky. In fact, it was almost broad daylight, and the only change that took place that night was the gradual increasing of the light as the sun rose again, at a preposterously early hour, to recommence his long-continued journey through the summer sky.

Assembled on the greensward of the field, and surrounded by mountains whose summits were snow-capped and whose precipitous sides were seamed with hundreds of cataracts that gushed from frozen caves, were upwards of a thousand men and women. There seemed to me to be comparatively few children. To give a pretty fair notion of the aspect of this concourse it is necessary to give an account of only two individual units thereof. One man wore a dark brown pair of coarse homespun trousers, a jacket and vest of the same material, and a bright scarlet cap, such as fishermen are wont to wear. One woman wore a dark coarse gown and a pure white kerchief on her head tied under her chin. There were some slight modifications no doubt, but the multiplication of those two by a thousand gives very nearly the desired result. The men resembled a crop of enormous poppies, and the women a crop of equally gigantic lilies. Yet, although the brilliancy of the red and white was intense, the deep sombreness of the undergrowth was overpowering. There was a dark rifle-corps-like effect about them at a distance, which—albeit suggestive of pleasing military memories in these volunteering days—was in itself emphatically dismal.

Having come there to enjoy themselves, these good people set about the manufacture of enjoyment with that grave, quiet, yet eminently cheerful demeanour, which is a characteristic feature of most of the country people of Norway whom I have seen. They had delayed commencing operations until our arrival. Several of the older men came forward and shook hands with us very heartily, after which they placed three old boats together and covered them outside and in with tar, so

that when the torch was applied there was such a sudden blaze of light as dimmed the lustre of the midnight sun himself for a time. Strange to say, no enthusiasm seemed to kindle in the breasts of the peasants. A careless observer would have deemed them apathetic, but this would have been a mistaken opinion. They evidently looked on the mighty blaze with *calm* felicity. Their enjoyment was clearly a matter of fact: it may have been deep; it certainly was not turbulent.

Soon we heard a sound resembling the yells of a pig. This was a violin. It was accompanied by a noise resembling the beating of a flour-mill, which, we found, proceeded from the heel of the musician, who had placed a wooden board under his left foot for the purpose of beating time with effect. He thus, as it were, played the fiddle and beat the drum at the same time. Round this musician the young men and maidens formed a ring and began to dance. There was little talking, and that little was in an undertone. They went to work with the utmost gravity and decorum. Scarcely a laugh was heard—nothing approaching to a shout during the whole night—nevertheless, they enjoyed themselves thoroughly: I have no doubt whatever of that.

The nature of their dances was somewhat incomprehensible. It seemed as if the chief object of the young men was to exhibit their agility by every species of impromptu bound and fling of which the human frame is capable, including the rather desperate feat of dashing themselves flat upon the ground. The principal care of the girls seemed to be to keep out of the way of the men and avoid being killed by a frantic kick or felled by a random blow. But the desperate features in each dance did not appear at first. Every man began by seizing his partner's hand, and dragging her round the circle, ever and anon twirling her round violently with one arm, and catching her round the waist with the other, in order—as it appeared to me—to save her from an untimely end. To this treatment the fair damsels submitted with pleased though bashful looks.

But soon the men flung them off, and went at it entirely on their own account; yet they kept up a sort of revolving course round their partners, like satellites encircling their separate suns. Presently the satellites assumed some of the characteristics of the comet. They rushed about the circle in wild erratic courses; they leaped into the air, and, while in that position, slapped the soles of their feet with both hands. Should any one deem this an easy feat, let him try it.

Then they became a little more sane, and a waltz, or something like it, was got up. It was really pretty, and some of the movements were graceful; but the wild spirit of the glens re-entered the men rather suddenly. The females were expelled from the ring altogether, and the youths braced themselves for a little really heavy work; they flung and hurled themselves about like maniacs, stood on their heads and walked on their hands—in short,

became a company of acrobats, yet always kept up a sympathetic feeling for time with the music. But not a man, woman, or child there gave vent to his or her feelings in laughter! They smiled; they commented in a soft tone; they looked happy—nay, I am convinced they *were* happy—but they did not laugh. Once only did they give vent to noisy mirth, and that was when an aspiring youth (after having made the nearest possible approach to suicide) walked round the circle on his hands and shook his feet in the air. We left them, after a time, in the full swing of a prosperous manufacture of enjoyment, and walked home, about two o'clock in the morning, by brilliant daylight.

But if the yachter enjoys many advantages in voyaging on the coast of Norway, he who travels by steamer has the comfort of rapid transit from place to place, and enjoys many opportunities of studying the character and habits of the people.

I chanced, once, to be the only Briton on board the steamer that plied between the Nord fjord and Bergen, and I was particularly struck, on that occasion, with the *silence* that seemed to be cultivated by the people as if it were a virtue. I do not mean to say that the passengers and crew were taciturn—far from it: they bustled about actively, and were quite sociable and talkative; but all their talk was in an undertone—no voice was ever raised to a loud pitch. Even the captain, when he gave orders, did so in a quiet voice, usually walking up to the men and telling them gently to do so and so. When I called to mind the bellowing of our own nautical men, this seemed to me a remarkably modest way of getting on, and very different from what one might have expected from the descendants of the rough vikings of old.

The prevailing quiescence, however, reached its culminating point at the dinner table, for there the silence was *total*, although a good deal of gesticulative ceremony and vigorous muscular action prevailed. When we had all assembled in the cabin at the whispered request of the steward, and had stood for a few minutes looking benign and expectant, *but not talking*, the captain entered, bowed to the company, was bowed to by the company, motioned us to our seats, whispered "*ver so goot*," and sat down.

This phrase *ver so goot* (I spell it as pronounced) merits explanation in passing. It is an expression that seems to me capable of extension and distension, and is frequently on the lip of a Norwegian. It is a convenient, flexible, jovial expression, which is easily said, easily remembered, and means much. I cannot think of a better way of conveying an idea of its signification than by saying that it is a compound of the phrases, "be so good"—"by your leave"—"if you please"—"go it, my hearties"—and "that's your sort." The first of these, *be so good*, is the literal translation, the remainder are the superinduced sentiments resulting from the tone and manner in which the words are uttered. You may rely upon it that when a Norwegian offers you

anything and says "*ver so goot*," he means you well, and hopes you will make yourself comfortable.

But to return to our dinner party. There was no carving at this meal—a circumstance worthy of consideration and imitation. The dishes were handed round by waiters. First of all we had sweet rice soup with wine and raisins in it, the eating of which seemed to me like the spoiling of one's dinner with a bad pudding. This finished, the plates were removed.

The silence had by this time begun to impress me. "Now," thought I, "surely some one will converse with his neighbour during this interval." No; not a lip moved! I glanced at my right and left hand men. I thought for a moment of venturing out upon the unknown deep of a foreign tongue, and cleared my throat; but every eye was on me in an instant, and the sound of my own voice, even in that familiar process, was so appalling that I subsided. I looked at the pretty girl opposite me. I felt certain that the young fellow next her was on the point of addressing her, but I was mistaken. Either he had forgotten what he meant to say or his thoughts were too big for utterance. I am still under the impression that this youth would have broken the ice had not the next course come on and claimed his undivided attention.

The second course began with a dish like bread pudding, minus currants and raisins—suggesting the idea that these ameliorative elements had been put into the soup by mistake. It looked as if it were a sweet dish, but it turned out to be salt; and pure melted butter, without any admixture of flour and water, was handed round as sauce. After this came veal and beef cutlets, which we ate mixed with cranberry jam, pickles, and potatoes. Then came the concluding course—cold sponge cake, with almonds and raisins scattered over it. By this arrangement we were enabled, after eating the cake as pudding, to slide naturally and pleasantly into dessert without a change of plates.

There was a general tendency in the company to bend their heads over, and rather close to, their plates while eating, as if for the purpose of communing privately with the viands, and a particular tendency on the part of the man next me to spread his arms and thrust one of his elbows into my side, in regard to which I exercised much forbearance. The only beverages used, besides cold water, were table beer and St. Julien, the latter a thin acid wine much used in Norway; but there was no drinking after dinner. It seemed to be the etiquette to rise from table simultaneously. We did so on this occasion, and then a general process of bowing ensued.

In regard to this latter proceeding I have never been able to arrive at a clear understanding as to what was actually done or intended to be done, but my impression is, that each bowed to the other, and all bowed to the captain; then the captain bowed to each individually, and to all collectively; after which a comprehensive bow was made by

everybody to all the rest all round, and then we went on deck. In fact, it seemed as if the effect of dinner had been to fill each man with such overflowing benignity and goodwill that he would have smiled and bowed to a bedpost had it come in his way, and I am certain that the obliging waiters came in for a large share of these civilities, and repaid the company in kind.

As each guest passed out, he or she said to the captain, "*tak for mad.*" This is a "manner and custom" throughout all Norway, and means *thanks for meat*. The expression is usually accompanied with a shake of the host's hand, but that part of the ceremony was not performed upon this occasion, probably because the captain was not a *bona fide* host, seeing that we had paid for our dinner. With the exception of these three words at the end, and "*ver so godt*" at the beginning, not a single syllable was uttered by any one during the whole course of that meal.

When the deck was gained the gentlemen immediately took to smoking. As a matter of course, Norwegians smoke, and they entertain enlarged ideas on that subject, if one may judge from the immense size of their meerschaums, and the large fat tobacco-pouch that is worn by every man, strapped across his shoulders.

There was a youth in this steamer—a beardless youth—whose first thought in the morning, and whose last glimmer of an idea at night, was his pipe, the bowl of which was as large as his own fist. I remember watching him with deep interest. He was long, cadaverous, and lanky—in these respects unlike his countrymen. He slept on the sofa just opposite the spot whereon I lay, so that, unless I turned my face to the side of the vessel or shut my eyes, he was an unavoidable subject of contemplation. On awaking he stretched himself, which act had an alarming appearance in one so long by nature, and so attenuated. Then he filled his pipe with an air of deep abstraction and profound melancholy—the result, I suppose, of his being unrefreshed by his recent slumbers. Of course no one of sense would think of attributing this to excessive smoking! The pipe filled, he arose; on rising, he lit it; while dressing, he smoked it; and till breakfast it burned fiercely like a blast-furnace. During the morning meal it went out, but before the big bowl had time to cool it was rekindled. He smoked till dinner-time; dined, and smoked till tea-time; tea'd, and smoked till bed-time. Then he lay down for the night, and still continued to smoke until I or he, I forget which, fell asleep. He awoke before I did next morning, so that when I opened my eyes the first object they rested on was the bowl of that youth's meerschaum enveloped in clouds of smoke! I am tempted to moralise, but I refrain. Mankind is smitten with the disease, and I am afraid that it is incurable.

Of course the farther north you go in voyaging along the coast during the months of June and July the brighter and longer becomes the daylight, until

at last you arrive at the regions of perpetual day. The exquisite charm of this novel state of things is utterly beyond the comprehension of those who have not experienced it. Apart altogether from the gladdening influence of sunshine, there is something delightfully reckless in the feeling that there is no necessity whatever for taking note of the flight of time—no fear lest we should, while wandering together, or perchance alone, among the mountains, be overtaken by night. During several weeks we lived in the blaze of a long nightless day.

While we were in this bright region most of us laid aside our watches as useless, leaving it, if I remember rightly, to the skipper of our yacht to tell us when Sunday came round, for we always, when practicable, spent that day at anchor, and had service on board.

I do not use hyperbolical language when speaking of this perpetual daylight. During several weeks, after we had crossed the arctic circle, the sun descended little more than its own diameter below the horizon each night, so that it had scarcely set when it rose again, and the diminution of the light was quite insignificant; it did not approach in the slightest degree to twilight. If I had been suddenly awakened during any of the twenty-four hours, in the cabin of the yacht, or in any place from which it was impossible to observe the position of the sun, I could not have told whether it was night or day! Having said that, it is almost superfluous to add that we could, even in the cabin, read the smallest print at midnight as easily as at noon-day. Moreover, a clear midnight was absolutely brighter than a cloudy forenoon.

Nevertheless, there was a distinct difference between night and day—a difference with which light had nothing to do. I am inclined to think that the incalculable myriads of minute and invisible creatures with which God has filled the solitudes of this world, even more largely than its inhabited parts, exercise a much more powerful influence on our senses than we suppose. During the day-time these teeming millions, bustling about in the activities of their tiny spheres, create an actual, though unrecognisable noise. I do not refer to gnats and flies so much as to those atomic insects whose little persons are never seen, and whose individual voices are never heard, but whose collective hum is a fact that is best proved by the silence that follows its cessation. In the evening these all retire to rest, and night is marked by a deep impressive stillness, which we are apt erroneously to suppose is altogether the result of that noisy giant man having betaken himself to his lair. Yet this difference between night and day was only noticeable when we were alone, or very quiet; the preponderating noises resulting from conversation or walking were more than sufficient to dispel the sweet influence.

We were often very far wrong in our ideas of time. Once or twice, on landing and going into a hamlet on the coast, we have been much surprised

to find the deepest silence reigning everywhere, and, on peeping in at a window, to observe that the inhabitants were all abed, while the sun was blazing high in the heavens. Sometimes, too, on returning from a shooting or fishing expedition, I have seen a bush or a tree full of small birds, each standing on one leg, with its head thrust under its wing and its round little body puffed up to nearly twice its usual size, and have thus been reminded that the hours for rest had returned. Of course a little observation and reflection would at any time have cleared up our minds as to whether day or night was on the wing—nevertheless, I state the simple truth when I say that we were often much perplexed, and sometimes ludicrously deceived, by the conversion of night into day.

On one occasion we lay becalmed in a fjord somewhere beyond the arctic circle. It was fine weather, but the sky was not so bright as usual, being obscured by clouds. A fisherman's boat happening to pass, we resolved to take advantage of it and escape the monotony of a calm by having a row up the fjord. The fisherman said there was a good salmon river and plenty of ptarmigan at a place little more than a Norse mile off—equal to about seven English miles—so we took rods and guns with us. It was evening when we set forth, but I did not know the exact hour.

The scenery was lovely—there, good reader, don't exclaim "Pshaw! of course; I know all that!"—I merely refer to that hackneyed subject in this place in order to remark that the scenery through which we passed, at this particular place, was on a smaller scale than is usual in Norway, and that we enjoyed our row more than usual in consequence; and to deduce from these two facts the great general principle that scenery on a small scale is more enjoyable than scenery on a large scale. Moreover, I would add that the reason of this seems to be that, when in the midst of scenery on a small scale, the traveller is constantly and rapidly presented with new views, as well as with beautiful and varied combinations of the same views, while in that on a large scale the eye becomes indifferent to the almost changeless grandeur of prospects which are so vast that they are necessarily presented to the view for hours at a time.

On our way we met with a Finn. He stood on a rock, gazing at us with much interest. I know not in what circle of Finnish society this individual moved, but his class and tribe had certainly no reason to be proud of his personal appearance. He was diminutive, dishevelled, and dirty. His dress was a leathern tunic, belted round the waist; his leggings were of the same material. But the most conspicuous portion of his costume was a tall, conical, worsted night-cap, which we neatly, but accidentally, knocked off his head with a piece of tobacco. He looked angry at first, but on becoming aware of the nature and quality of our missile, his weather-beaten visage beamed with forgiving smiles.

Next, we came upon an eagle, which alighted on a tree and allowed us to come within long range—at

least our sanguine temperaments induced us to hope that it was long range—before taking flight. Of course it took no notice whatever of the three shots we fired at it. Soon after that we reached the mouth of the river.

Here we found a small hamlet of exceedingly poor people, who received us hospitably, but with such evident astonishment, that we concluded they had never seen civilised visitors before. Their fjord was off the track of steamers, and far distant from any town. They themselves were little, if at all, better than North American Indians. They gathered round us with open eyes and mouths, and the women handled our clothes with evident wonder. We presented them with several pairs of scissors, whereupon they shook hands with us all round and said "*tak*"—thanks—very heartily. In this custom of shaking hands when a gift is presented, I usually found that the receiver shook hands not only with the donor, but, in the exuberance of his gratitude, with the whole party.

The looks of the people betokened either that scissors were entirely new implements to them, or that those we presented were of unusually good quality. They went about snipping everything in the most reckless manner. One woman caught hold of the ends of her daughter's neckerchief and snipped them both off; whereupon her husband plucked them out of her hand, and snipped off the ends of his beard.

Here, the huts being dirty, we pic-nicked on the greensward. We had brought tea and biscuit with us, and the natives supplied us with some thick sour milk with half an inch of sour cream on it—a dish which is common all over Norway, and is much relished by the people as well as by many of their visitors.

This disposed of, we set out—some to fish, and others to shoot. I went off alone with my gun. Ptarmigan, in summer plumage, which is brown, with pure white feathers intermixed, were numerous, but wild. They were just tame enough to lead me on in an excited and hopeful state of mind for several hours, regardless of the flight of time. At last I became tired, and having bagged four or five birds I returned to the boat, where I found my comrades. One of them chanced to have a watch, and from him I learned that it was just two o'clock in the morning! so that I had actually been shooting all night by daylight; and the sun had set and risen again without my being aware of the fact. We did not get back to the yacht till eight o'clock a.m., when we found the crew just sitting down to a breakfast of oatmeal porridge. Some of us having refreshed ourselves with a dip in the sea, took a plate of this. Then we went to bed, and rose again at six o'clock that evening to breakfast.

During one of my solitary rambles with the gun, I had the good fortune to shoot a magnificent eagle. I say good fortune advisedly, because the eagle is so wary that few sportsmen succeed in killing one,

and those who do have more cause to be thankful for their luck than proud of their prowess. It happened thus: About two o'clock one beautiful morning in July I lay wide awake in my berth, looking up through the sky-light at the bright blue heavens; the yacht being becalmed somewhere between latitudes 64 and 65, and the sun having commenced to ascend the vault from which it had disappeared for only half an hour.

On that night—if I may be permitted the inappropriate expression—I could not sleep. I counted the hours as they passed slowly by; practised without success the various little devices that are erroneously supposed to bring slumber to the sleepless; grew desperate, and finally jumped up at four a.m., resolving to row myself to the nearest island and shoot. There were usually eider ducks in the little creeks, and ptarmigan among the scrub. Should these fail me I could vent my spleen on the gulls. Arming myself with a double-barrel, I quaffed a tumbler of water and sallied forth, ignorant of the fact that it contained a large dose of morphia, which had been prescribed for an ailing but refractory member of our party the previous evening. No one was stirring. It was a dead calm.

Landing on a lovely island, of perhaps five or six miles in extent, which rose in the form of a rugged mountain to a height of about four thousand feet, I rambled for some time among low bushes and wild flowers, but found no game. The gulls, as if aware of my intentions, had forsaken the low rocks, and were flying high up among the precipices and serried ridges and peaks of the mountain. Resolved not to be discomfited I began to ascend, and as I mounted upward, the splendour of the island scenery became more apparent. The virtuous feelings consequent upon early rising induced a happy frame of mind, which was increased by the exhilarating influence of the mountain air.

It was a wild lonesome place, full of deep dark gorges and rugged steeps, to clamber up which, if not a work of danger, was at least one of difficulty. While I stood on a rocky ledge, gazing upwards at the sinuities of the ravine above me, I observed a strange apparition near the edge of a rock about forty yards off. It was a face, a red, hairy, triangular visage, with a pair of piercing black eyes, that gazed down upon me in unmitigated amazement. The gun flew to my shoulder; I looked steadily for a moment; the eyes winked; *bang!* went the gun, and when the smoke cleared away the eyes and head were gone. Clambering hastily up the cliff, I found a red fox lying dead behind a rock. Bagging Reynard, I ascended the giddy heights where the gulls were circling. Here the clouds enshrouded me occasionally as they sailed past, making the gulls loom gigantic. Suddenly an enormous bird swooped past me, looking so large in the white mist that I felt assured it must be an eagle. I squatted behind a rock at once, and as the mists cleared away a few minutes

later I saw him clearly enough sailing high up in the sky. I glanced down at the yacht that lay like a speck on the water far below, and up at the noble bird that went soaring higher and higher every moment, and I felt a species of awe creep over me when I thought of the tremendous gulf of space that lay between that eagle and the world below.

He was evidently bent on making closer acquaintance with some of the gulls, so I sat down behind a rock to watch him. But knowing the shyness and the sharp-sightedness of the bird I soon gave up all hope of getting a shot. Presently he made a rapid circling flight downwards, and, after hovering a few minutes, alighted on a cliff several hundred yards distant from my place of concealment. Hope at once revived; I rose, and began, with the utmost caution, to creep towards him. The rugged nature of the ground favoured my approach, else I should never have succeeded in evading the glance of his bold and watchful eye. When I had approached to within about eighty or ninety yards, I came to an open space, across which it was impossible to pass without being seen. This was beyond conception vexing. To lose him when almost within my grasp was too bad! I thought of trying a long shot, but feeling certain that it would be useless, I prepared, as a last resource, to make a sudden rush towards him and get as near as possible before he should rise.

The plan was successful. Cocking both barrels I darted out of my place of concealment with the wild haste of a maniac, and, before the astonished eagle could launch himself off the cliff, I had lessened the distance between us by at least thirty yards. Then I took rapid aim, and fired both barrels almost simultaneously. I might as well, apparently, have discharged a pop-gun at him. Not a quiver of wing or tail took place. He did not even accelerate his majestic flight, as the shots reverberated from cliff to cliff, and I watched him sail slowly round a rock and disappear. Re-loading I sauntered in moody desperation in the direction of his flight, and soon gained the point round which he had vanished, when, behold! he lay on the ground with his broad wings expanded to their full extent and his head erect. I ran towards him, but he did not move, and I soon saw that he was mortally wounded. On coming close up I was compelled to halt and gaze at him in admiration. He raised his head and looked at me with a glance of lofty disdain which I shall never forget.

The conformation of the eagle's eye is such that its habitual expression, as everyone knows, resembles that of deep indignation. This bird had that look in perfection. His hooked beak was above four inches long, and it struck me that if he were disposed to make a last gallant struggle for life when I grasped him, such a beak, with its corresponding talons, would give me some ugly wounds before I could master him. I therefore laid my gun gently across his back and held him down therewith while I caught him by the neck.

But his fighting days were over. His head drooped forward and his bold eye closed in death a few seconds later.

Afterwards I found that the whole charge of both barrels had lodged in his body and thighs, yet, on receiving this, he did not wince a hair's breadth, or in any other way indicate that he had been touched.

He measured exactly six feet six inches across the expanded wings.

Alas! his stuffed skin, which I have preserved as a Norwegian trophy, gives but a feeble idea of what the bird was when, in all the fire of strength, courage, and freedom, he soared above the mountain peaks of Norway.

R. M. BALLANTYNE.

DEAD IN THE DESERT.*

TOWARDS the close of a sultry day in the summer of 1860, we camped down upon the banks of a little stream on the eastern slope of the Sierra Nevada mountains, and in the midst of a sheltered and romantic valley. At a little distance we discerned a small pine plank standing endways and just visible above the luxuriant herbage that surrounded us—it was just such material as would serve well to kindle our camp fire. A tall rough-visaged Missourian—one of our party—rose and moved towards it, but suddenly stopped, paused a moment, returned, and in reply to our question, "What is it?" silently pointed to it. One and another visited it, each returning silent and pensive—it was a child's grave, with its tablet and its inscription too, speaking in that desert solitude with all the holy eloquence of grief.

"TO OUR ONLY CHILD,
LITTLE ANNIE,
AGED FOUR YEARS."

A transverse line was cut deep under the word "only," as though the parent would thus emphasise his grief. There was nothing more: this was all we could glean of "Little Annie" or her belongings. It was *very* simple, but *very* touching.

The sun had not yet sunk behind the mountains. Silently, and without spoken concert, we struck our camp and moved further down the stream, for it was holy ground, and had been consecrated by a father's and by a mother's tears. That night we rested with the sky for our canopy; and as the moon sailed high, like a silver seal upon the closing day, and the stars like jewels strewed the boundless night-sea, we had visions of "Little Annie," dead in the desert.

"Dead in the Desert," said a grief-worn father one day to us. Upon the top of a granite hill within the state of California, a few hundred yards from the old emigrant track, far removed from human habitation, we came to a grave with this inscription upon the head-board:—

"Here lies the shattered wreck of a Father's hopes,
A BRAVE BOY—A LOVING SON."

Then follows a Latin inscription to this purport—

"*None are happy until after Death.*"

The occupant of this lone sepulchre was slaughtered by Indians while defending a mother and sister in the absence of the father, who was a day's journey in advance of them. The mother and sister escaped. The lad was killed within three days' travel of his destination, after a weary journey of two thousand miles.

"Dead in the Desert," said an orphan boy then in the city of Brooklyn, when asked of his father and mother.

On the banks of the Rio Colorado, near to the borders of the territory of Nebraska, and in a direct line from "the high prairies" of Texas, through New Mexico to Salt Lake City, in Utah, is a solitary grave. By this grave has been erected a strong and substantial head-board, over which has been stretched and securely nailed, while yet green, a buffalo hide, with the flesh side outermost, so that in drying it has shaped itself to the wood. Upon this parchment surface, with a hot iron, has been singed the following inscription:—

"HENRY UDOLF lies here.
Died Sept. 14, 1854.

PRAY FOR HIS WIDOW AND SORROWING BOY."

Thousands know of the existence of this grave who have never passed it—and why? More than 600 miles to the north-west, and on the banks of a crystal stream bearing an Indian name which signifies "Sweet-water," is another grave with a head-board of exactly similar construction. On this, too, is inscribed—

"THE WIDOW OF HENRY UDOLF lies here.

HIS GRAVE IS ON THE COLORADO.

PRAY FOR THEIR ORPHAN BOY.

Jan. 1st, 1855."

Within little more than three months of each other, the husband and wife—the father and mother—lay sleeping in death with more than six hundred miles of desert between them. "What then of the orphan boy?"—More of him anon.

"Dead in the Desert," said an old Hudson Bay trapper, one of a company who, upon a bright moonlight night in the month of October, 1860, on board a river craft, were dropping down the stream of the Sacramento towards San Francisco. The old mountaineer had passed a life of hardship and perilous adventure; he bore the scars of many

* The writer vouches for the truth of this narrative.—
EDITOR.

an Indian conflict, he could count his fights with the fierce Grizzly of the mountains by scores, knew well the meaning of hunger and of thirst, had buried many a companion in the lone wilderness: stern and rugged in his appearance, with a voice like the low growl of a lion, nevertheless lacking nothing of true human sympathy, his heart beat with the tenderness of a woman's, and the rough sun-burnt hand wiped away the starting tear, as he told us of his two noble sons who were "Dead in the Desert."

"The ashes of my elder son," said the old man, "lie on the shore of Clear Lake, on the little island of Alempo, shut in by the densely green foliage of the Manzanita, at the foot of the sacred mountain Co-noks-te or High Mountain, whose steep sides are clothed with the tall dark pine which, interlocking with the evergreen oak, shed a funeral gloom over his resting-place. My boy was loved by the Indians who had seen his courage and admired his manly spirit, and, that his grave might be undisturbed by the wild beasts of the mountains, they helped me to raise a funeral-pile, and as the smoke of the blazing pyre curled and twined around the tree tops, a mournful wail, prolonged by the echo of the mountain, rose from the assembled Indians, while, to comfort me, they pointed to the western horizon—"whither," said they, "his spirit is passing to its far-off home, for he was good, and his spirit has travelled towards sundown, where the earth and sky meet, and he has become a star."

"And what of your younger son?" we inquired.

The old man's eyes fell, his lips became compressed, his breathing short and quick, and the violent heaving of his chest indicated the deep agony of his soul: at length in the deepest accents of his rich bass voice he replied: "He sleeps on the banks of the Sweet-water," and hastily leaving us, he paced in moody abstraction up and down the deck. There was a sorrow in connection with the death of this son too deep for inquisitive curiosity to meddle with, and we made no further effort to renew the subject.

Two hours or more had elapsed, and our vessel was nearing a little wooded island about a mile below what is now the landing-place to the village of Rio Vista. The old trapper was reclining upon the deck wrapt in silent musings; the silver rays of the moon bringing out in fine relief the careworn rugged features of this grand old man of the mountains.

Seating myself by his side, I said: "You mentioned a stream called the Sweet-water, have you ever seen upon its banks the grave of a widow named Udolf, a Swede?"

"Seen it?" said the old man, "ay, often, and full well I know too the grave of her husband on the far-off Colorado;" and then, beckoning me to follow him to the fore-castle, he pointed out the decaying trunk of a sycamore tree lying near to the water's edge, hanging from which, by an iron chain, was the rusty fluke of an old anchor, and a

short distance further on, but almost hidden by the dense underwood, he pointed out the ruins of a wooden shanty, the roof crushed in by a fallen sycamore, and the whole scene looking weird and desolate. "Now," said my companion, "sit down by me, and when I have lit my pipe I will tell you something of the orphan boy of Henry Udolf the Swede, for a strange story hangs to that old anchor fluke."

'Tis nearly twelve months ago, (said he,) that towards the close of a sultry day I was seeking near this spot an anchorage for the night. For several days I had been successful in trapping beaver, and I sought a suitable spot for preparing my skins. As I neared the island off which we are now sailing, I observed a man intently watching me from the shore, and he was evidently seeking to attract my attention, so, just feeling that my six-shooter was in readiness, I pulled hard into shore and landed; the stranger advanced towards me, and confidence was soon established between us. He proved to be a citizen of San Francisco who had been spending some days in this solitary island to sport among the abundant wild-fowl.

"You seek a camping place for the night?" said he. "If you will join me, we can occupy a ruined shanty close by; but first we must bury the body of its late occupant, for he lies there cold and lifeless." "Dead in the Desert?"—I found myself involuntarily grasping my revolver. Could my companion be a murderer? But my nerves were too intured to danger to feel fear, and so I followed on. We entered the dreary desolate cabin, and there, upon a heap of withered tule-rushes, lay stretched the body of a man in all the squalid wretchedness of poverty.

"Now," said the stranger, "a short distance away is a prospecting hole. We will place the body there and cover it in, and then I will tell you a strange adventure that concerns an orphan boy, the son of one Henry Udolf, a Swede." "Henry Udolf the Swede?" said I; "I know the grave of Henry Udolf the Swede, on the Rio Colorado." "The same," replied my companion, "'tis of his son I would tell you."

We hastened to bury the body, we burned the tule bedding within the cabin, that we might purify it with fire, and then, lighting our pipes, I called eagerly for this strange story; and thus he narrated it.

"Two days ago, I was wandering near nightfall along the opposite bank of the river, when I saw near the shore of this island a man waist-deep in the water. With a pole he seemed to be dragging the river's bed, and changing his position from time to time he continued his labours until, in the decreasing light, he was lost to my view. I thought little of the circumstance until on the following evening I observed him in the same place and similarly occupied. My curiosity was now excited, and, proceeding to the spot where my skiff was moored, I hastened to the lower end of the island.

Having often hunted here I knew of a path through the tangled undergrowth that would quickly lead me to the scene of his operations. Hidden by the brushwood I soon gained a position so close that I could distinctly hear his laboured breathings. He had in his hands a long boat-hook which had evidently fixed upon something, which dragging heavily, he at length brought to the water's edge.

"At this moment he suddenly dropped his boat-hook, and facing round towards the shore exclaimed in a voice full of terror and defiance, 'What's that you say?' But I had said nothing, and save the sound of his own voice and movements everything around was silent as death. Again he stooped, and, picking up something, looked at it for a moment in the moonlight, and then hurled it into the thicket. It fell almost close to me, and I involuntarily exclaimed aloud, 'A human skull!' Then again his hollow unearthly voice rang out in the solitude, 'What's that you say?' and then listening for a moment he added, 'The boy seems talkative to-night.' From that moment I believed him to be a murderer. He then gathered something up from the river, and wading into deep water flung it from him, and as he returned to shore mutteringly exclaimed: 'Now, with head and body far apart, talk to me further if you can.'

"The hot blood was now rushing through my veins. I could endure it no longer, so springing over the intervening brush-wood, in a moment I was at his side. His glazed eyes shone by the bright moonlight and glared on me in mortal terror; while with a voice like that of a doomed man he cried, 'Man or demon, have mercy upon me!'

"Instead of being stalwart and strong, I found him a heart-broken, conscience-stricken, bowed-down man. I assured him I would show mercy, but insisted that he should at once clear up the mystery of his movements.

"With weak and tottering steps, that gave too certain evidence that his days were nearly numbered, he guided me to this cabin, and throwing himself upon the tulle pallet and pointing me to the seat beside him, he gave me the following narrative:—

"My real name is Douglas: I am English by birth, and from my earliest recollection I laboured with my father in the Northern collieries. In 1845 I sailed for America, but in the spring of 1850 I settled in Texas; there I lived for four years, but at length determined to strike overland for California.

"In company with a Swede named Rawne I travelled across the high prairies of Texas into New Mexico, as far as Santa Fé on the Rio Grande.

"Here we made the acquaintance of one Henry Udolf, a Swede, who with his wife and child—a little boy six years of age—were preparing to start for California. Udolf had money, and in addition to his teams and rolling stock, some fifty head of cattle.

"It was soon arranged that we should join them, and we engaged ourselves for six months.

"Crossing the New Mexican Cordilleras we reached the banks of the Rio Colorado in the territory of Utah. Here Udolf was taken ill and in two days died. We buried him and raised a head-board by his grave on which we inscribed his name. We continued our journey with the heart-broken widow and her fatherless boy, who became the darling and pet of myself and my companions.

"We reached at length the grassy meadows of the Carson, and here Mrs. Udolf was seized with cholera. In a few hours she was dead, and we left her body in a deep grave upon the banks of the Sweet-water.

"Rawne and I now took the control of the party, and dismissing the other men who had accompanied the train, with the orphan boy and the property we continued our route to California.

"And now for the first time came over me the thought that I might enrich myself at the expense of the boy, but I had no thought of destroying him, for little Charley grew every day in our affections.

"We found nearly \$2000 in Udolf's waggon; and, upon reaching Sacramento, we sold the waggons, teams and cattle for \$3000 more—all of course the property of the orphan boy.

"The desire to possess this money now haunted me day and night. We had been residing in Sacramento city about three weeks, when one day, as though by way of joke, I proposed to Rawne, deserting the boy and taking the property. 'There is a better way than that,' replied Rawne; 'for in that case the boy might tell on us.' Thinking that I had in my companion a ready accomplice, I at once divulged to him a plan I had formed for murdering the boy; and it was thus we carried it out.

"Under pretence of a trip down the Sacramento River to locate farming lands, we hired two row-boats, and taking with us a tent and provisions, we started down the river, and, for the purpose I had in view, I procured the old anchor-fluke, and chain which you see now on the spot where I was dredging.

"On the second day out we were joined by two men, who kept company with us for several days, camping with us at night. With these men was a huge English mastiff, to which our little Udolf became greatly attached, while the affection manifested by the dog for the child was truly remarkable. At the earnest entreaty of the boy we purchased the dog, and on the next day parted company with its late owners. We had now reached this little island, and I found my companion Rawne ready to listen to any method I might suggest for disposing of little Charley; but he left all the planning to me. And now for the part of my story that I would to God were blotted from my memory. I proposed to Rawne that towards nightfall he should drug the boy to stupefaction, and then, when all else was arranged, I would do the rest. We then put all our most

valuable effects into one boat with the money, all but about \$50 which I had in my pocket.

"It was agreed that when night came I should leave the camp, taking the mastiff with me; that the moon's rising should be the signal for my return, and for Rawne's departure with the treasure-boat to the lower part of the island, where he was to await my arrival, having first placed the helpless but not lifeless body of the boy, encircled by the chain, and attached to the old anchor fluke, in the bottom of the other boat. I was not to see him place the lad there; he was not to see me draw the plugs from the boat and cut it adrift.

"Twilight came. I rose to depart, and though a murderer at heart, I felt a choking sensation in my throat, and the great hot tears chased down my cheeks as I gazed upon the utter helplessness of my victim. Soon after my departure I missed the dog,—he had probably returned to the camping ground. At length the moon rose; and steeling my heart against every generous impulse and every touch of pity, I hastened back. Rawne had departed, leaving everything ready. I approached the water's-edge, laid my hand upon the boat, and could distinctly hear the half-suppressed breathings of the child as he lay wrapped in blankets. I waded as far as I could towards deep water, drew the plugs, held to the boat by a short line, heard a low gurgling groan, and the waters closed over it.

"Returning to the shore, I hastened to the appointed place of meeting, when, judge of my rage and disappointment, I found Rawne was not there,—he had gone, taking boat, money, valuables, and dog, all with him,—all snatched from me when almost in my grasp,—left me without the means of escape from this fearful place; but what was worse, I was *alone* with no covering but the angry sky. A murderer *alone! alone!!* with no screen from the flashing eye of God. *Alone!* all alone in this awful silence, where every sigh of the night wind seemed speeding up towards heaven, laden with the cry of *blood*. From that hour I have been more a demon than a man. At the end of two days I was obliged to drag up the sunken boat as my only means of escape, and now again my heart sank within me.

"I felt a cold terror at the thought of gazing again upon the accusing corpse of my victim, but overturning the boat before it reached the shore, I saw nothing of the burden it had borne.

"For three long and weary years I have wandered over every part of the state, from town to city, from camp to camp, seeking the hated object of my revenge, but all in vain; and now with the terrors of death upon me, with remorse eating out my soul,

—oh! that I might sink into forgetfulness and the grave!

"'Stranger,' continued he, 'that is the dark mystery of my life, the seal of blood is on my forehead, the cry of blood ever rings in my ear. And yet, oftentimes in my dreams, while sleeping here close to the mouldering bones of my victim, with fiends and demons shrieking and dancing round my bed, I see the radiant face of that poor murdered boy, and what is stranger still, it seems to beam with pity and forgiveness.'

"The recital of this fearful tragedy proved too much for his shattered system, and he sank back for a time in a deathlike torpor; reviving again, however, he pointed to yonder wall, and in broken accents and with labouring breath, asked me to hand him an old coat that hung there.

"He tore apart a portion of the lining and produced a letter with the seal unbroken, for he could not read. It was addressed—'John Douglas, San Francisco.'—'I have had that letter by me for three years,' said he, 'but I dared not ask any person to read it, fearing that it might divulge the great crime of my life: it can do no harm now, for I shall soon be beyond man's reach—read it to me, if you please.'

"I broke the seal, and read as follows:—

"JOHN DOUGLAS,

"Should this letter ever reach you, it may possibly relieve your mind of a heavy burden.' ('What is it?' eagerly inquired Douglas.) 'You must know then of a truth that Charley Udolf still lives. In place of the boy I substituted the mastiff, having first drugged him, bound the chain heavily round him, placed him in the boat, and covered him with the lad's blankets. Then I took the stupified body of the boy with the treasure, and proceeded hastily to San Francisco, and in two days we were on the ocean homeward bound.

"The lad is now with his father's relatives in Brooklyn. From the first I never intended you should destroy him, and I pray God that ere you die, you may learn that you were not his murderer.

"Yours truly,

"THOS. RAWNE.'

"I raised my eyes," said the narrator, "towards Douglas; his long bony hands were clasped together, a smile seemed struggling to play over the pallor of Death—the eyes were fixed with a glassy stare, and with the death-rattle in his throat he exclaimed, 'God have mercy upon me—Christ have mercy upon me,' and he fell back—"Dead in the Desert."

H. C. PAWLING.

THE SICK AND WOUNDED OF THE ARMY OF THE UNITED STATES.

MY DEAR SIR,—I answer your question about our sick and wounded with real pleasure, because I am sure you will feel an interest in the working of the many means of relief which earnest and sympathising hearts have arranged to meet the needs of the times. This war, which has called forth such beautiful charities as we see around us on every side, cannot be an unmixed evil. Can that be all evil which makes men brave to fight for their country, and (harder far) brave to *endure* long weary nights and days of languor and pain and privation; brave, gentle, and patient, when their first experience of illness comes with the shattered limb or the surgeon's knife? Can that be all evil which calls forth all woman's true, unselfish tenderness? which teaches many who never knew it the beauty and delight of self-sacrifice, of giving up time and strength and ease and wealth to minister to the sick and dying?

Believe me, our country is learning a lesson in these dark hours which will never be forgotten, and as the soul, crushed and subdued by sorrow, rises purer and stronger, with earthly hopes cast away, and selfishness driven out, so is it with a land like our own, which has only hitherto known prosperity. Those who watch the signs of the times cannot but see the great work which our Heavenly Father is doing in our midst; silently but surely it goes on, and to those who bow to His Will, out of sorrow will come joy, out of the darkness of battle and bloodshed, of wounds and weary weeping, will, in His own good time, come rest, and peace, and light!

When the war of the Crimea called all eyes to look at the work of women for the sick and wounded, no one could have imagined that before many years American women would have an opportunity of testing the sincerity of the admiration with which they had followed the work of Florence Nightingale and her associates.

Without warning, and almost without knowing what they were undertaking, the women of our land began their labours to meet the needs of the vast armies which had arisen to put down the unholy rebellion from which we are now suffering; and nobly have they gone on, whether in the battlefield, the field-hospitals, or in the crowded hospitals of our large cities, where the wounded and maimed are gathered in by thousands. There never have been wanting during the long two years and a half of the war Christian women to nurse and tend and soothe the suffering, or receive the last breath of the dying.

But to enable you to understand better how the work is done among us, I must enter into detail, and begin with the "United States Sanitary Com-

mission,"* the most perfect and thorough organisation which has been called forth by the needs of the times. Under its auspices, the Sanitary regulations of the army are cared for, large stores and supplies kept ready and sent forward, whenever a battle is looked for, so that, in the hurry and confusion which ensues, all that the surgeons need, and which Government cannot always supply, is at hand. Æther for amputations, bandages, lint, stimulants, and nourishment of every sort, are supplied.

After the terrible battle of Gettysburg, when the fearful storm of shot and shell had left thousands in the field, and the surgeons were endeavouring to do what medical skill might, to save life, one who was on the spot says he can never forget the gratitude with which they saw the store-wagons of the Sanitary Commission coming up.

"Thank God," said the surgeon, "here come the Sanitary supplies, now we shall do well."

The Commission has its central office in Washington, and from thence radiate, as from a great centre, streams of help and comfort, reaching the army wherever it is doing its work, and like a good angel, watching and waiting to offer blessings. Under its direction, railway ambulances have been fitted up with comfortable beds, arranged for the transportation of the sick and wounded, who are to be sent farther north; beds hung so that the motion of the carriage does not jar them. A surgeon and nurses have charge of these ambulances, and with them is connected a newly-invented cooking-apparatus, in compact form, where food can be prepared, water boiled, tea or gruel made ready, or any other nourishment required. On one occasion fifty men were brought from Washington to New York, a distance of at least 300 miles. Their food being prepared entirely in this little extempore kitchen connected with the railway-carriage, exhaustion was avoided, and in some cases life actually saved.

Another good arrangement is a lodge, established

* It is perhaps well to add that the "United States Sanitary Commission" is purely voluntary, organised as an aid to the Government in its immense labour. No service done by its members is other than a willing offering to the good cause, and this gives a double value to its far-reaching work. One tribute to its worth has come from a source rather unlooked for, and may be mentioned here. A letter has been sent to General Lee (rebel commander-in-chief), signed by twelve rebel surgeons, now prisoners at Gettysburg, requesting the release of several Sanitary agents taken in battle, and now in prison at Richmond. They say that the wounded of their army have received such help and comfort from the Sanitary Commission, that it seems only justice to release those who were taken while engaged in a work of mercy, and to recognise them as non-combatants.

in Washington, where the discharged soldier, waiting perhaps for his pay, may go and find a bed, good lodging, and meal, free of charge, before he is sent on his way. Some thousands have had help and comfort from the Sanitary Commission in this way, and been saved from temptation—perhaps from ruin.

In connection with the central office of the Commission, at Washington, a branch is established in each of our large cities, as a *dépot* where boxes are received which come in from the country. Each little town or village has an aid-society, as an auxiliary to the great centre, where clothing is made up, and articles of various kinds contributed. Thus, as it were, a great net-work is formed over our land; or, to express it better, each little rill pours in its stream to the main ocean, the treasury, whence it flows out again, to refresh and sustain the army.

The boxes which arrive are opened, the contents assorted, marked with the stamp of the Commission, and re-packed, each kind of article together. Thus a box containing five or seven hundred shirts can be sent to the field-hospital, and obviate all trouble to surgeons or Sanitary agents on the spot. Jellies, wines, brandies, and preserved fruits, condensed milk, and many similar stores, are also sent in this way.

In times of great emergency, the Sanitary Commission has sent out supplies, to the amount of 1000 dollars (or 200*l.*) a day, and it may be well to mention that California, from the shores of the Pacific, thousands of miles distant, has sent her offering of 500,000 dollars (100,000*l.*), to aid in this good work; adding, that when the Commission needs further help, the same amount will be sent again. The proof thus given of the confidence felt in the work, and of the value of a plan working on so large a scale, is very encouraging.

The branch office sometimes furnishes a sort of centre, where soldiers in distress, on their way home, discharged, or in any need, may find a helping hand. One little incident which happened this summer will prove the truth of this statement. One sultry afternoon, just before the hour of closing the rooms, a soldier, worn with travel, and evidently troubled and in distress, came into the office. He told his story. He had, he said, a furlough; named his regiment; but on the way his transportation papers and furlough had been lost. He was a stranger, with no one to prove the truth of his story, was without money, and his home in Maine was at least 500 miles distant. What was to be done? Would the Sanitary Commission help him? Fortunately, one of the gentlemen connected with the office was present; and, although he was struck by the manner and bearing of the man, and inclined to trust him, it would not do to act without a telegram to the medical director, to confirm the truth of the story. In due time the wires sent back the reply, the man's statement was confirmed, his name, regiment, furlough, were all correct—he

was sent on from Washington to his home, just as he said. The Sanitary agent then offered him money for his expenses home; and added, that he must receive it as a free gift from the United States Sanitary Commission. He had been unfortunate, and had applied to those whose duty and pleasure it was to help the soldier in his time of need. He hesitated, seemed much touched with the kindness, and then with an effort:—

“God bless you, sir,” he said. “I see now *who* sent this help to me, and if you'll allow me, sir, I'll tell you all.”

He then said that he was in great distress, after losing his papers: he was a stranger in Philadelphia, had no money, and did not know what to do, or where to go. As he walked through the railway-station he saw a roll of papers lying on the ground: on picking it up, he found it contained the furlough and transportation papers of another man, dropped, probably, just as his own had been. At first he thought nothing of it, until the quick suggestion of the Tempter flashed upon him, “Why not use them? I am a stranger on this railway; these papers will enable me to reach home; no one knows my name, why not use them, &c.?” and some companions with him told him not to be a fool, and throw away his good luck. He hesitated, and then he said the thought of his wife came to him, and how she had told him, when he went to the war two years ago, that she gave him to his country without grudging, and that all she asked of him was, not to lose his love of truth and of his duty to his God, and “How could I go back and look into her eyes if I had *acted* this untruth?”

So the good prevailed, and what wonder that the God whose law he struggled to keep raised up friends for him, and sent him on his way with that best of blessings, a good conscience!

Another department of labour which should not be omitted, is the removal of the sick and wounded in hospital transports, on our eastern and western rivers. These transports, furnished and fitted up by the Commission with every necessary, supply important aid to the Government in its arduous work. Eight thousand wounded men were thus brought home after the terrible battles of Fair Oaks and the Peninsular battles in the summer of 1862: the details of this work may be found in a little book of much interest, made up of extracts from the letters written by nurses and surgeons engaged in it, and just given to the public.*

The Sanitary Commission does not want its martyrs, who have laid down their lives for their country as nobly and as truly as if the cannon-ball or the bayonet had sent them to their last account, instead of the slower process resulting from exposure or malaria.

After the battles of South Mountain and Antietam, when the urgency was great for supplies, in consequence of the frightful slaughter, and the

* “Hospital Transports.”

surgeons were almost without the common necessities for their work, one earnest, never-wearied member of the Commission went forward himself to the field, to urge on the supplies with the despatch then all-important. Every effort was made, and when he could do nothing more, he carried the lantern through the long night before the supply-waggons, so that the drivers might be able to direct their course, and avoid the dangers of the roads, always rough and broken in this part of the country. The point was at last gained; the supplies came up in time to save many lives, and after a short interval Mr. P—— returned to his home. A few weeks more, and in the delirium of a typhoid fever, which quickly followed his return, those who stood by his dying bed learned what had been his work during those exciting nights and days; a work which he had never described before. His talk was, without ceasing, of the dying, whom he was himself bearing away to a neighbouring barn, of the amputations at which he was assisting the surgeons, and of all the dreadful details of necessary work among the wounded and dying. Days went by, but no other thought seemed present, no other picture passed before his mind, until his strength gave way, and rest came—the rest and peace of a better world. It was granted him to lay down, for the cause of his country, a life which had always been consecrated to the honour and glory of his God. He does not stand alone; there are other honoured names, others who “counted not their lives dear unto themselves,” but whose earnest self-devotion ended in giving up, not health and strength and ease only, but to whose quiet graves we can point, when we tell what our Sanitary Commission has done for the country.

In the city of Philadelphia, through which the regiments necessarily pass on their way south, good meals are given them in a very unpretending little establishment, which, like many of the other charities of the day, sprung from the temporary emergency. A cooper's shop this building was originally: the owner, seeing the weary, exhausted soldiers passing, on their way to the railway station for Baltimore, offered them, as they passed by, coffee, bread, and some such simple refreshment, which were most gladly accepted; and thus began the work, which has lasted during the war, and in this humble place have more than 500,000 famished soldiers enjoyed comfortable meals, free of charge.

Those in the immediate neighbourhood came forward to help, and brought what they could offer; and those who had nothing else to give, gave freely of their time and labour, cooking, laying the tables, and waiting on the soldiers, during the hour they stopped on their journey. There seemed something of good-will and true charity in thus “feeding the hungry,” which brought with it a blessing; for money flowed in to keep up the work, and from the first day in April, 1861, until

the present moment, August, 1863, no service under this roof has been done for hire. It is the people's offering to their brothers of the United States' army, and as a free-will offering, willing hands and earnest hearts have never been wanting to carry it on.

A temporary hospital is also added, offering at least twenty or thirty beds, so that, on the return of regiments, in case that the wounded or sick need care, they can find it here. Faithful women watch, nurse, and care for the patients until they are restored to health, and again sent on their way.

To show the earnestness of those who carry on this work, the fact may be stated that as the arrival of a regiment takes place at any hour of the night, a signal has been agreed upon by those who prepare the meals, and when this gun is heard they report themselves for duty at once. This is done cheerfully and constantly, no matter at what time of the night, and no one who sees the hearty welcome which goes with the meal can doubt the spirit which prompts the work, and which makes loss of rest, fatigue and privation, all as nothing to those who work in so good a cause.

In our large army hospitals one may see the influence of women's work in another way, and here more directly to alleviate suffering in its countless forms. A civil war, like our own, sad as it is, brings the scene of suffering so near us as to make it more easy for women to do what natural feeling must prompt for the relief of the wounded.

In most of the hospitals a board of lady-visitors, in addition to the ward-masters and nurses appointed by Government, attends to the patients. Two, or sometimes three, ladies are present every week, spending the entire day in the hospital. They prepare the delicacies required by the sick, in a room appropriated to them, and known as “The Ladies' Room;” go through the wards; write letters for the men; cheer the down-hearted, and do what is possible to supply the home-element to those who sorely need a word of kindness as day goes by after day, and month after month, marked only by varied phases of misery.

“How is — to-day?” said a lady to one of the surgeons.

“Doing well—*very* well; almost ready to have his arm taken off.”

Her exclamation of disappointment was sincere.

“After so many weeks; and we have watched and fed him so constantly—must it come off?”

“He would never have lived,” said the surgeon, “to bear the operation but for your care, and now he may do well.”

The largest of the military hospitals near Philadelphia will contain five thousand, or may be crowded to the extent of eight thousand patients, another will accommodate three thousand, while the smaller ones vary from eight to four or three hundred men, so that the usual number of sick and wounded men, constantly among us, amounts to ten thousand.

This only refers to Philadelphia, the army hospitals near Washington are of course full, and a general hospital has been lately established at Gettysburg, with 2700 men, after 10,000 have been brought to hospitals nearer their homes.

In addition to the systematic work done by the lady-visitors in the wards, no week goes by without offerings of many kinds, fresh eggs, fruit, jellies, soup prepared in the best way at home, cushions for the comfort of the wounded, books, games, Cologne water, and even flowers, being brought to those who never lose sight of the comfort of the soldiers, or forget to do what they can to relieve their weary hours.

One must be struck by the patient endurance of the men; for it is one thing to face shot and shell in the wild enthusiasm of the battle, and quite another to endure the slow suffering and the agony which must follow the surgeon's knife and probe.

"How can we wonder at their patience and quiet endurance," said a lady, somewhat familiar with the men and their conduct under trial; "how can

we wonder, when the whole country is praying for them, day and night, that they may have strength to bear?"

There are, of course, other volunteer associations, following in the wake of larger undertakings, doing much good, but with the great evils necessarily connected with any effort lacking order and system. The value of obedience and system, and the failure of any scheme of benevolence which lacks them, have never been more signally made manifest than in this very work to which I have alluded, the work of relieving the sick and wounded, in the great masses in which they must be met and ministered to.

A beautiful record would it be, and worthy of an angel's keeping, if I could register all the deeds of generous kindness which have been done since this war began. Deeds of love and mercy have followed our army through its length and breadth, and though I have only offered a most incomplete and imperfect sketch of the work, it may furnish an idea to those who have never known before "how the sick and wounded are cared for" in America.

ESSAYS FOR SUNDAY READING.

XI.—THE MADNESS OF ST. PAUL.

BY JOHN CAIRD, D.D.

IT is not difficult to account for the conduct of the Roman governor when he accused the Christian Apostle of extravagance or madness. From Festus' point of view the words and actions of St. Paul seemed to admit of no other explanation. For if ever two men existed alien from each other in spirit and character, acting from motives reciprocally unintelligible and irreconcilable, it was here. On the one hand there was the cold, sagacious, sceptical, self-interested worldling; on the other the lofty-minded, impassioned, and self-devoted religious enthusiast. In the Roman procurator we have one who probably reflected the tone of polite scepticism, characteristic of his class and age,—the hard, passionless incredulity, or at best the contemptuous toleration of one to whom the pursuit of truth was but the play of intellectual idleness, and religion an instrument of state policy to be used and despised in all countries alike. In the Christian Apostle we have one to whom his faith in truth and God was all in all,—a man of strong religious convictions, whose every word and act breathed the intensity of his belief, and who was ready to dare and suffer everything in its defence. Here sat the man of the world, the time-serving hack government official, living only for preferment, to whom this world's good things—money, advancement, power, pleasure, luxury—were the sole ends of existence, and who knew not, or rather scorned as the dream of fools the notion of any other world

than this: and over against him, calm in the strength of a heavenly hope, the man to whom this world was nothing, who had sacrificed all that renders life dear to most men, and was ready to surrender life itself in the assured expectation of another and nobler life beyond the grave. How could such an one as Festus understand a man like Paul? What common measure was there by which the one mind could interpret the expressions of the other? Compelled by his official duty to take notice of him, to observe him and listen to his words, we may imagine Festus for a little amazed or puzzled by the enigma which the man's conduct and bearing involved, and at length when some words more outrageous than the rest fell from the Apostle's lip, making up his mind that the man was mad. A man, he thought, probably, of natural intellectual vigour and force of character—for his whole tone and bearing indicate that—but who has permitted himself to pore over old Jewish records, till his brain has been heated by some mystical visions, some contemptible vaticinations of Hebrew superstition. The healthy balance between imagination and sense, the world of thoughts, fancies, speculations, and the world of material realities, has been disturbed, and this clever man, of whom better things might have been made, has become a morbid dreamer and enthusiast—"Paul, thou art beside thyself, much learning doth make thee mad."

Great wit is, proverbially, to madness near allied,

and in appearance, if not in reality, the same thing is true of great piety or moral earnestness. To an observer who has not the key to his mode of action, the conduct of a man whose views, motives, principles are greatly elevated above his own, will often seem to be that of a dreamer, an enthusiast, a hair-brained fool. As the motions of the heavenly bodies are to the eye of ignorance but a mazy, inexplicable dance, capricious as the whirlings of leaves in the blast, or of insects in the summer air, though to the scientific observer all are reducible to laws fixed, regular, invariable; so to the careless, worldly mind, destitute of spiritual sympathy and insight, the movements of the spiritual life, the path and orbit of those who are living for God and eternity, seem often little better than the wildest aberrations, the most fitful vagaries of unreason or madness. Nor is it difficult to trace in many points between intense religious earnestness such as St. Paul exhibited, and madness, a superficial resemblance sufficient to give colour to the charge of Festus.

The madman, for instance, is very frequently a man of one idea. Some one oppressive thought has taken possession of the brain. Some object of eager pursuit, some one dire and dreaded evil, some scheme or invention, some notion or conception too subtle or exciting for the mental capacity of the thinker has been dwelt upon, brooded over, has absorbed day after day, and hour after hour, to the exclusion of all besides, the whole spiritual energies, till it has at last crushed or overset them by its continuous pressure. And when reason totters or falls, still in its ruins it will cling to the old familiar thought. Visit the poor victim of an overburdened mind, and you will find the brain still busy and the lip still babbling with strange persistence on the one unvarying theme; and however with well-meant kindness you attempt to divert the thoughts to other topics, back again speedily by a diseased perversity of association they fly to that which has wrought the mind's ruin. Now, it is no indistinct analogy which can be discerned betwixt this aspect of the disordered mind and that which to a superficial and unsympathising observer would be presented by such a mind as Paul's. St. Paul was pre-eminently a man of one idea. His whole life of thought and action was but a comment on his own words: "This one thing I do." Whoever came into contact with him, his discourse ever turned to the one topic that was continually uppermost in his mind—Christ and Him crucified. All the wisdom and philosophy of the world were foolishness to him. He ignored them, refused to let his mind dwell upon them, counted them all but loss for the excellency of the knowledge of Christ Jesus his Lord. He would speak and think of nothing else. This thought ruled his actions by day, coloured his very dreams by night. Nobody could be with him for ever so brief an interview, but it was sure to be introduced. What wonder that to men altogether out of the plane of such ideas—to the worldly, the sensual, the selfish; to the Jew who hated, or the

heathen who supremely contemned, this absorbing subject of his contemplations—the readiest solution of such unparalleled absorption of mind was that the man was mad.

Another aspect of insanity to which religious earnestness might seem to be allied, is that its victim *dwells, in an unreal world.* Often when reason has lost its sway, the illusions of mental disease deprive it of half its terribleness. The sober matter-of-fact world vanishes from the sight, and fancy conjures up out of the most unlikely materials a world of visionary brightness and splendour. The veriest beggar will enact the prince, the poor wretch beholden to the hand of charity for support will strut about arrayed in tinsel and finery. Rags become purple robes, bare walls a palace, and twisted straws a crown. Or the lonely and friendless man, whose very bereavements perhaps have unhinged his mind, will regain in the world of unreason the happiness which in the real world he has lost,—begin to talk of departed joys as still present, of friends and companions long gone as living still, accost the merest strangers by the old familiar names, and please himself by transforming them into loved ones whose faces he shall never see again. And what but this, or a not remote semblance of this mental condition, would be presented to the eye of the world by a character such as Paul's. He too seemed to live in a world of illusions. He was heard to declare that he looked not to things that were seen, but to the things that were unseen. The visible and temporal world,—its hills and plains and fields, its cities and towns, its wealth and honour and greatness,—was but a world of phantoms and shadows to him, whilst he gazed seemingly with rapt eye on a world invisible and eternal. Poor, he was heard to speak of himself as making many rich, having nothing, as possessing all things. A miserable tent-maker, familiar with gauls and stripes and the experiences of a vagabond life, he babbled of himself, and such as he, as the only free men upon earth; as possessed of the glorious liberty of sons of God, as kings and priests unto God and His anointed. And though to common eye he was but a homeless, friendless wanderer, the companion at best of the very dregs and offscourings of the earth, he seemed to be ever fancying himself surrounded by a glorious fellowship of unseen yet loving friends, dwelling in the midst of an innumerable company of angels and spirits of just men made perfect, and in the sweet society of Jesus of Nazareth, whom every one knew to have been years ago crucified at Jerusalem. Of such a fantastic despiser of realities, of such an unpractical dreamer, what so natural for the world to conclude as that he was "beside himself?"

It is a further extension of the same thought, that the man of intense religious earnestness may to the eye of the world appear to resemble the madman, in his being *scared by fanciful, and rushing recklessly on real dangers.* He is the sport of fancies, trembling at the rustling of a leaf or the

sound of the harmless wind, shaping the viewless air into spectres of horror, rushing madly from the presence of the imaginary assassin, and conjuring out of the most innocuous objects causes of danger and destruction. And yet, on the other hand, the madman will not seldom be reckless of real dangers, climb heedless of peril the giddy height, dance on the brink of the precipice, or play with firearms and destructive implements,—sporting thus in a thousand ways with life, whilst the sober spectator is filled with horror and dismay. And somewhat similar, doubtless, would be the impression left on the unbelieving observer's mind by such a career as Paul's. What seemed unreal terrors were ever before his eye; by invisible enemies did he act and talk as if he fancied himself beset;—wrestling, not with flesh and blood, but with principalities and powers of darkness; flying as if he heard the howl of the wild beast, from some terrible imaginary foe "seeking whom he would devour." And, on the other hand, equally heedless did he seem of real dangers. He was a man reckless of life. Dreaming of some unknown future joys, he seemed to be insensible to stripes and imprisonments and torture; and, gazing with rapt eye on things unseen by others, he treated those injuries and disasters from which other men would have recoiled in dismay, and under which his own weak frame was wasting away, as "light affliction, but for a moment." Amidst the horrors of shipwreck, on the deck of the reeling crazy vessel, when experienced and practical men saw nothing but imminent destruction, he seemed strangely calm and unconscious of danger. And often when, by a slight sacrifice of foolish scruples, he might have turned aside from peril, he rushed with foolhardiness into the very jaws of death. What could sober practical men think of all this, but that his conduct was no longer under the restraints of reason—that the man was mad.

Such, then, was the accusation—an accusation not, as we have seen, without a colour of plausibility. In his answer St. Paul simply denies the charge, and avers that his words and actions were those of "truth and soberness." "Whether we be beside ourselves," said he, on another occasion, "it is to God." If there was madness in his conduct it was a divine madness, madness with a method in it, inspired insanity. If he had got off the world's centre it was because he had become attached to a new and higher one. If he ceased to regulate his actions by its standard, it was because they had become amenable to an infinitely loftier one. His career was not wayward, methodless, ungoverned, now any more than formerly, only the governing power or principle was unseen and unintelligible to common men. Suppose a steam-vessel were to approach for the first time the shores of some land where the application of this agent to the propelling of ships was unknown, as it sailed along, or changed its course, and swept rapidly hither and thither, its varied movements would seem to the ignorant gazers from the land utterly unaccountable,—they

would be filled with amazement, and if very ignorant or superstitious, ascribe the movements of the vessel perhaps to the agency of magic or of supernatural powers. Or if one of the planets of our system should suddenly be disconnected from its relation to our sun, and begin by some more potent attraction than gravitation to revolve around some new and undiscovered orb; its new movements, to observers ignorant of their cause, would perhaps appear as the wildest vagaries; it would seem to be undergoing some strange perturbations; lawlessness, disorder, anarchy, would appear to be introduced where formerly all had been subjected to the absolute and unvarying dominion of law. And yet in both these cases there would be no real arbitrariness, and the charge of arbitrariness would arise simply from the spectator's ignorance of the new power or influence at work. Explain to him the application of steam to machinery, point the telescope to the new orb, and all would become clear.

Now, so it was in the case before us. To the cold and unspiritual contemner of an intensely earnest religious nature it might with emphasis be answered:

"All anarchy is art unknown to thee;
All chance, direction which thou canst not see;
All discord, harmony not understood."

To those who knew of no higher than earthly motives, whose only principles of action were love of money, or pleasure, or fame, or power, or learning, he might well seem mad, whose conduct could be accounted for by none of these, who set them all at nought, who, with splendid talents, devoted them to the service of an obscure sect; with golden opportunities of fame, position, wealth, chose a lot of poverty, ignominy, and association with the wretched, the base-born, the abandoned; whose whole life, that might have been one of ease and pleasure, was one long pain, one continuous self-sacrifice. To easy, comfortable, prudent, worldly observers, what wonder that the path which such a man followed seemed the wildest eccentricity? For such observers knew nothing of that new-discovered power, that strange, sweet, irresistible affection which had been kindled in the hearts of men, and which superseded all old motives and passions—the love of Christ. To men whose whole hearts bound them to the world, to whom this life, its beauty, and brightness, and joy constituted the whole universe, and all beyond it was a horror of thick darkness, who with all the desires and energies of an earthly and selfish nature gravitated to the world, what wonder that a life such as Paul's, cut off from all mere earthly attractions, dead to the world, and devoted to God in Christ Jesus, disrupted from *their* sphere and revolving round an invisible sun and centre of the soul, seemed to be eccentric, orderless, anarchical? But one little sentence, could they have comprehended its glorious import, would have explained it all:—one little sentence would have supplied the key to the enigma, read the heart of Paul's mystery, shed the

luminous beauty of heavenly law over his unintelligible life ; and that little sentence was : "The love of Christ constraineth us."

And as with Paul, so will it ever be with those in whose hearts this heavenly impulse acts. They will be in the world, but not of it,—exceptions to its rules, unintelligible on its principles, acting with a sort of eccentricity in the eyes of its votaries. The world knoweth us not because it knew Him not who is our model, in whom and to whom we live. Even in the world's own sphere, men who act from higher secular motives, are often unintelligible and strange to those who act from lower ones. The poet with his rapt thoughts, his flights of fancy, his glorious visions, his fine frenzies, looks half mad, at best an utterly unpractical dreamer, to many a plain and prudent man of trade or business. The scientific enthusiast, squandering health, ease, resources, in the ardent pursuit of knowledge, shutting himself out from the pleasures and amenities of life, scorning delights, and living laborious days — such an one's pleasures, aims, manner of life, are to the illiterate, the sensual, the indolent, utterly unintelligible. The cold, the unloving, the selfish, again, cannot understand the philanthropist, who abandons comfort, ease, home, to spend existence in prisons and lazaret-houses. They may vaguely assent to his praise, perhaps ; but a life so exceptional, so imprudent, a beneficence so Quixotic, is set down by them as a sort of fantastic modern knight-errantry, and they account for it by the notion that the man is not altogether sane.

But far above all such motives, far above all worldly ambitions, all natural philanthropy even, and therefore far more unintelligible to those who are out of its sphere, is the strange, unearthly, all-swying motive of Christian love. Even earthly love, where it is pure and deep, is the most unpractical of motives. There is a certain strange unworldliness about it. Under its strong impulse, a man will oftentimes set ordinary motives at defiance. Take it in that form to which the name is commonly attached, and is it not a passion which oftentimes, for a brief season at least, raises the most selfish, practical, unimaginative mortal out of himself and the sphere of his common motives ?

He rises for the time into a life poetic, where common principles cease to rule. He thinks not of selfish ease, of money-making, eating, drinking, worldly comforts ; he becomes self-sacrificing for the nonce. And when this passion spends its force, and the man settles back into the dull round of common life, many a sober, prosaic, prudent, money-making citizen looks back from amidst the business of life on that brief dream of love, and, utterly out of sympathy with his former self, as he recalls himself, a foolish, hot-brained, hot-blooded youth, scorning money and business and all practical sobrieties of life, thinks, perhaps, of that passage in his history as at best a brief madness.

But there is, as I have said, a motive more unintelligible to the world, because more potent, comprehensive, all-constraining, all-superseding, than these. Let the love of God in Christ Jesus come in its power upon the soul, and it will absorb and conquer all besides. Where they conflict, it has mastered, it will master every other motive, and raise a man above their influence. It enters into the fellowship of Christ's sufferings, and conforms us to the spirit of his cross. And that spirit is of all others the most unworldly, the most unpractical, the widest apart from motives which the world can understand. It is superior to the love of money, for it is the spirit of Him who, the Lord of heaven and earth, for our sakes became poor ;—to the love of fame and honour, for it is sympathy with Him who made Himself of no reputation, who was despised and rejected of men ;—to the love of ease, comfort, pleasure, for it is fellowship with Him whose life was one long sorrow, and whose dying couch was a cross ;—to the love of friends, for who-soever loveth father or mother more than Christ is not worthy of Him ;—to the love of life itself, for it reaches beyond the grave, aspires to an immortal inheritance, and when the hand relaxes from every earthly treasure, and the eye grows dim to every earthly attraction, only then, in what would seem the ruin of all earthly aims, attains the consummation of its desires. Assuredly if to be superior to earthly motives, governed by no earthly hope, living for no earthly end, be madness, the man in whose heart the love of Christ beats strong and true, is one who is "beside himself."

THE PARABLES

READ IN THE LIGHT OF THE PRESENT DAY.

BY THOMAS GUTHRIE, D.D.

XII.—THE PARABLE OF THE LABOURERS IN THE VINEYARD.

MATTHEW xxi. 1.—16.

IN this passage of Scripture commentators have found a grand battle-field—all manner of opinions having been entertained, and maintained, about its proper meaning. It forms a part of Christ's answer to Peter's question, "Behold, we have forsaken all, and followed thee; what shall we have therefore?" That is plain: but who the labourers are, what is meant by the hours, what is the true value of the penny, how the story affords either a satisfactory reply to the question that originated it, or a sufficient foundation to the moral that Christ builds on it, are points on which divines have widely differed. The key is yet to be found—if it ever will be found—which, fitting all its wards, will fully unlock this parable. Hitherto it has baffled the efforts of the ablest critics; and in the obscurity under which, to a greater or less extent, it remains, after all that they have done to elucidate its meaning, it stands here recalling the words of David, "I will incline mine ear to a parable, I will open my *dark* saying upon the harp." Rather than attempt to settle controversies which seem insoluble, we shall take a practical view of this parable,—turning our eyes on some great truths which are plainly discernible through what is dusky and ambiguous; and which are calculated, with God's blessing, to reward our attention and, if not to entertain our fancy, to profit our souls. For notwithstanding the doubts, and difficulties, and differences of commentators, this parable resembles a mountain which, though partially concealed by the mists that are wrapped around its bosom and fall in grey folds on its ample limbs, presents in noble forests, and stupendous crags and peaks which, crowned with snow and bathed in sunshine, pierce the skies, many grand views. In opening these up let us first look at the parable as it relates the proceedings of the householder.

His is a story of Eastern life.—He had a vineyard—as indeed have all men of any position or substance in those lands, where vines, planted in the fields, or clothing the naked rocks, or drooping in beautiful festoons from tree to tree, are cultivated, and the grape forms an important article of food, its juice taking the place which milk has in the diet of our farm-labourers, and the fruit of the vine, dried in the sun and prepared in various ways besides, forming a means of subsistence the whole year

through; facts these from which to learn the true, full meaning of such expressions as "a land of corn and wine," "corn shall make the young men cheerful, and new wine the maids." The time of this parable is that season of the year when, like farms at harvest or at hay-making, the vineyard required more than the work of its regular hands. The householder must hire others; and for that purpose he rises with the dawn, and repairs to the market-place of the town or village where he resided, and where sun-burned, hardy men of bone and muscle, on the outlook for employment, were in the habit of assembling. Such stalwart groups may be seen in our own towns; and in the East, where all things are stereotyped, the custom of this householder's time still remains—a recent traveller mentioning that on passing through a town in Palestine, he saw such a gathering in its market-place; and on asking the people why they were standing idle there, got for answer these very words, "because no man hath hired us." Hiring such as he found there at early morn, the householder sent them off to his vineyard, agreeing to pay them a penny for the day's work—a sum which, though it appears small to us, amounting in our money only to sevenpence or eightpence, was the pay of a Roman soldier, and the average wage of a working man. About nine o'clock of the day, here called the third hour, the householder, finding himself still slack of hands, returns to the market-place, and hires others; he does the same at twelve, and the same again at three o'clock,—promising these labourers, since they could have no claim to a full day's wage, to pay them whatsoever was right. By and by the sun sinks low, the day shortens, and the shadows lengthen; another hour; and the chance of an engagement is gone from any who are standing in the market-place. Yet once more, late though it be, as with one turned to God when his head is grey, the householder returns; and undertaking to give them also what was right, he hires others, who betake themselves to work, confiding in his justice—perhaps also in his generosity. And now the sun sets; the labourers drop their toil, wipe their brows, and at the summons of the steward come for their hire—the law of Moses, which jealously protected the poor man's rights and leaned rather to the side of the weak than the strong, requiring that the day which saw work done should see it paid. The parable states that the householder directed

those to be first paid who were last hired : and so indeed the story required to be constructed—in order to bring forth the bad passions of those who had, to use their own words, borne the heat and burden of the day. Because, had the paying followed the order of the hiring, it is evident that they would have been off to their homes with their wages ; nor have had their envy roused by the generosity which made all alike, and, unarrested in its flow by their demerits, bestowed the same wages on such as had wrought one hour as on those who, toiling from morn to night, had wrought all the twelve. These on seeing the last hired receive in a penny the price of a full day's work, fancied that they would receive more. But here, as in other cases, greed cheated herself. They found themselves mistaken : but, instead of swallowing their disappointment to laud the householder, and congratulate their fellows on his generosity to them, they began to murmur against his injustice to themselves. One bolder than the rest, undertaking to be their mouthpiece, steps out, and, showing the penny in his open palm, remonstrates with the householder, saying, "These last have wrought but one hour, and thou hast made them equal to us, which have borne the heat and burden of the day." They make no appeal to the bountifulness which had lavished its gifts on the others, but, assuming the air of injured men, rest their complaint on grounds of justice. The householder accepts battle on the ground of their own choosing : and how signal their defeat ! If they had fulfilled the conditions of the bargain, so had he. They had agreed to accept a penny for the day's work, and he had paid it. Friend, or fellow, he says, I do thee no wrong. If I choose to be generous to others, what is that to thee ? It should excite thy admiration, why does it kindle thy envy ? Injustice ! Is it not lawful for me to do what I will with my own ? Begone—away with you and your wages !

Such is the story which our Lord told ; and now, to regard it in some of its plain and practical aspects, I remark that we find here

The rejection of the Jews, and admission of the Gentiles.—Fancy, which sometimes roams as wide and wild over the field of parables as over that of prophecy, may think she discovers in the different hours at which the labourers were called, distinctly different periods in the history of the Church—its leading epochs. So in the band which, brushing the dew from the grass, enters the vineyard in the morning, she may see the world's grey fathers, the good men before the flood—in such as were hired at the third hour, the patriarchs who, kindling their torch at Noah's altar, preserved religion alive till the call of Abraham—in their successors, who enter on work when the sun is at his height, the nation that left Egypt to conquer and cast out the inhabitants, and occupy the land, of Canaan—in those summoned at the ninth hour, or three o'clock of our day, the same people, reanimated by a revival under Elijah, or returning under Ezra from captivity to

the worship and land of their fathers. Perhaps our Lord, sketching the past with rapid hand, had these events before him : but it is to those of which Time, long pregnant, was on the eve of giving birth, that this parable mainly refers. For many centuries, and all alone, the Jews have been labouring in the Lord's vineyard ; while the Gentiles, wholly given up to every species of idolatry, have been standing unhired, and idle,—living without God or hope in the world. The hour of their call being at hand, they were about to be admitted to equal privileges with the Jews : and within the pale of a Church which, made for mankind, was-to recognise no external distinctions, knowing men neither as Jew nor Greek, barbarian, Scythian, bond or free ; they were to be placed on a level with those who, accounting themselves the meritorious as well as special favourites of Heaven, had looked down with contempt on all other humanity—their boastful cry, "The temple of the Lord, the temple of the Lord, are we." This delightful, glorious prospect was peculiarly obnoxious to the Jews—had no beauty in their jaundiced eyes. Proud and haughty, animated by passions unbecoming fallen man, and most offensive to a gracious and holy God, they rejected both the Scheme and the divine Schemer ; and, crucifying the Lord of Glory, were themselves rejected. Filled with pride, scorn, envy, self-righteousness, their eyes open to other's faults but blind to their own, they placed themselves in the same relation to God as these labourers to the householder whose justice they could not justly challenge, but whose generosity to such as, types of the Gentile nations, were called at the eleventh hour, they wickedly and insolently grudged. So, as Christ here and elsewhere teaches, the Jews forfeited the favour of God, and with a "Go thy way," were dismissed from the glorious honours and gracious rewards of his service. Thus, warning us against building our hopes on any outward religious advantages, "the first were last"—as in the adoption of the Gentiles, "the last were first."

A warning against selfishness and self-righteousness.—In the Shorter Catechism of the Westminster Assembly, the answers, as a series of distinct theological propositions, stand independent of the questions to which they are attached ; but it is sometimes necessary, in order to fully understand an answer, first to read the question—as in some plants, we find their true substance lodged in the roots from which they spring ; and here Peter's question helps to decipher the parable which forms a part of Jesus' answer. A short while before our Lord spake these words, there had occurred one of the saddest and most touching scenes in his history. A young man, liberally endowed with wealth, and, better still, with admirable moral qualities, had, elbowing his way through the crowd, come to Jesus ; and, with gaze fixed on heaven and wings outspread for flight, sought his counsel—saying, Good master, what shall I do to inherit eternal life ? Go, was the answer, sell all that thou hast and give to the

poor, and thou shalt have treasure in heaven; and come, follow me! He was not prepared for this—for such a complete surrender of all which men hold dear. He longed, and looked, and wistfully looked again; but the price was too high. He was unfortunate enough, as others have been, to be very wealthy; and so, though Jesus loved him and followed his departing steps with kindly interest, he returned to the embraces of the world—strange yet true conjunction—"sorrowful, for he had great possessions." What an event for a sermon!—the subject Mammon, and he the text. Seizing the occasion, and taking his eyes from this youth, as, with drooping head and slow, reluctant steps, he disappears in the distance, Jesus turns a solemn, sad look on his disciples to say, "Verily I say unto you, that a rich man shall hardly enter the kingdom of heaven. And again I say unto you, It is easier for a camel to go through the eye of a needle, than for a rich man to enter the kingdom of God."

This is a wreck—made, I may say, at the very mouth of the harbour; and not difficult to be accounted for. It can be traced entirely to this, that he acted in the matter from a regard to self, and not to God; and also that he sought eternal life on the score of his own merits, and not on grounds of mercy. Yet hardly has Simon Peter seen the catastrophe, and heard the warning, than, apparently blind to the one and deaf to the other, he comes to his Master with a question, in which we detect distinct traces of a selfish and self-righteous spirit. He and his companions had not left great possessions to follow Jesus—their "all" being the gains of men who, as fishers, earned a precarious livelihood from the treacherous sea; yet he contrasts himself and them with this youth; and putting in a claim of merit, under cover of devotion to Christ, says, "Behold, we have forsaken all and followed thee;" asking, as if it were not enough to have Him for their reward, "What shall we have therefore?" It needs no chemist's fine tests and delicate analysis to detect base and bad elements in this speech. What shall we have?—the question which seems most to interest him is not Christ's honour, but his own profit—what shall we have *therefore* in compensation for our sacrifices; in the shape of wages which we deserve, and you owe to us? "Get thee behind me, Satan," were words with which, like a blow in his face, our Lord once on a time astonished Peter; and it is not less as a rebuke of his spirit, and a warning both to him and the others, that Jesus relates a story where those who stand on the value of their works forfeit the master's favour and are dismissed from his service; and where such as work but one hour receive as great a reward as those who toil all day. Thus he teaches that salvation is not of works, but of grace—warning Peter not what he *should*, but what, save for divine grace, he *might* become by indulging the envious, unkind, uncharitable, selfish, and self-righteous spirit of these

labourers; how he would, like the youth of "great possessions," illustrate the saying, "Many are called but few are chosen;" or, like the labourers in the vineyard, the other saying, "The first shall be last, and the last shall be first." Looking, not at its accessories, but main object, this parable could find no better motto than the words of an inspired apostle—so dashing to human pride, but so cheering to the humble and broken-hearted, "Not by works of righteousness that we have done, but according to his mercy he saved us."

Salvation is not of works, but of grace.—Papists and others have drawn the very opposite doctrine from this parable. Misunderstanding or misrepresenting its scope, they have appealed to it as proving that we are saved by works; and that though Christ is, so to speak, the key-stone, our good works form the body and main structure of the arch. In evidence of this, they maintain that heaven is represented here under the form of wages—a reward due to men for their works; and that, of course, those labourers who incurred the householder's displeasure, as well as those who were the objects of his favour and the pensioners of his gracious bounty, represent the saved. If this is so, we have altogether mistaken the nature of heaven and the spirit of its glorified inhabitants. We fancied that it was the abode of happiness, disturbed by no jealousies, embittered by no bad and unhallowed passions—where, though saints, like the stars, might differ in glory, none envied the brighter lustre of other's crowns, but all with one accord, ascribing their salvation to the mercy of the Father and merits of the Son, magnified the grace, none impugning the justice, of God. It is enough to say that an explanation of this parable which, besides contradicting the whole tenor of Scripture, involves such absurdities, introducing envy and jealousy and discontent into heaven, must be wrong. As to the payment of the penny to the murmurers, it is a necessary part of the story. It was a matter of equity on the part of the householder; and had he failed to do that, these grumblers would have had occasion to impeach his justice—not that generosity which is the true point of the parable, the feature of salvation it is set forth to illustrate.

What this parable, where the Church is the vineyard and men are the labourers, intends to illustrate, meets us on the threshold—in the circumstance that the householder, who represents God, seeks the labourers; not they the householder. Early morn does not find them crowding his door, and offering to work in his service: nor even when it becomes known that he has already hired a number, do those who stand idle in the market leave it to repair to the vineyard, soliciting employment. On the contrary, again and again and again, he comes for labourers—in every case the approach and first movement being on his part; never on theirs. Even so, the first steps toward reconciliation between man and God are always taken by

Him. He designed redemption in the councils of eternity, so that, in a sense, before man lived he was loved, was redeemed before he sinned, and raised up before he fell. Without any application on our part, of his own free spontaneous will, God sent his Son to redeem, and sends his Spirit to renew. The spark of grace which we have to nurse, He kindled in our bosoms; it was his hand on the helm that turned us round; and whether we were at first, as some are, driven to Christ by terrors, or, as others are, sweetly drawn to Him by the attractions of his love, anyway it was the Lord's doing—Jesus, all praise be to his grace, being at once the Alpha and Omega of salvation, the author as well as finisher of our faith. A great truth this!—it finds fit and glorious expression yonder, where the saints, descending from their heavenly thrones, cast blood-bought crowns at Jesus' feet; and one well put by the simple Christian, who, on being taunted with believing the doctrine of election, replied, "I know that God chose me, because, unless He had first chosen me, I am sure I never would have chosen Him."

Till we enter God's service, all our industry is idleness.—As we have the Church in the vineyard, we have the world in the market-place of this parable: and how striking the picture! There, where some talking with their neighbours tell the news, and some having nothing else to do engage in games, and some are laughing, and some are yawning, and some with their back to the wall, or stretched out at full length on the ground are sleeping, but none are working, is the world—this busy world, as it is called, where people, believe them, in their daily toil for bread, or keen pursuit of wealth, or pleasure, or fame, have not one hour to spare for the things that belong to salvation and their everlasting peace. Ay, how would many deem us mad, and fancy that religion had turned our brain, were we to walk into the counting-room, the crowded shop, the silent study, the public assembly, to say nothing of the festive hall, the applauding theatre, the gay, whirling ball-room, and address them thus: "Why stand ye here idle all the day?" Mad?—"I am not mad, most noble Festus." There is such a thing as laborious idleness. Busy? So was the shepherd on the Alps, mentioned by Dugald Stewart, who spent fifteen years of life learning to balance a pole on his chin: and the philosopher sagely remarks how much good, had they been directed to a noble object, this diligence and perseverance would have accomplished. Busy? So have I seen the miller's wheel, which went round and round: but idly, grinding no corn. Busy? So, in a way, was the Russian who, facing the winter's cold nor regarding the cost of massive slabs brought at great labour from frozen lake and river, built him an icy palace, within whose glittering, translucent walls, wrapped in furs and shining in jewels, rank and beauty held their revelry, and the bowl and the laugh and the song went round. But with soft breath, and other music, and opening buds, Spring returned; and then

before the eyes that had gazed with wonder on the crystal walls of that fairy palace as they gleamed by night with a thousand lights, or flashed with the radiance of gems in the bright sunshine, it dissolved, nor left "a rack behind"—its pleasures, "vanity;" its expense, "vexation of spirit." Busy? So, in a way, are the children who, when the tide is at the ebb, with merry laughter and rosy cheeks and nimble hands build a castle of the moist sand—the thoughtless urchins, types of lovers of pleasure and of the world, so intent on their work as not to see how the treacherous, silent tide has crept around them, not merely to sap and undermine, and with one rude blow of her billow demolish the work of their hands, but to cut off their retreat to the distant shore, and drown their frantic screams and cries for help in the roar of its remorseless waves. From a death-bed, where all he toiled and sinned and sorrowed for is slipping from his grasp, fading from his view, such will his life seem to the busiest worldling; he spends his strength for naught, and his labour for that which profiteth not. With an eye that pities because it foresees our miserable doom, God calls us from such busy trifling, from a life of laborious idleness, to a service which is as pleasant as it is profitable, as graceful as it is dutiful, saying,—Work out your salvation—Work while it is called to-day, seeing that the night cometh when no man can work.

And work now. Why, some may ask, now? Their sun is not yet in his meridian; or, if the shadow has turned, he has still a long bright path to travel ere he sinks in night—eleven hours for play and one hour for work, eleven for enjoyment and one for employment, is their reading of the parable. It is not the right reading. God forbid that I should limit the Holy One of Israel! If one day is with him as a thousand years, so is one moment; and salvation being altogether of mercy and not at all of merit, one last, dim, dying, believing look turned on the cross of Christ, can save a soul on the very brink of hell—passing over into the yawning pit; even as in the camp of Israel "it came to pass that if a serpent had bitten any man, when he beheld the serpent of brass, he lived." True as that is, still the case of the labourers who did not enter the vineyard till the eleventh hour, nor begin to work till the others had begun to think of rest and the coming night, affords no encouragement to procrastination. Admit that these hours, as some think, stand for the different periods of human life—childhood, youth, manhood, and old age, yet let it be observed that the labourers who entered the vineyard at the close of day were never called till then. They had never refused a call—they had no offer till the eleventh hour; and instead of having rejected offers, they accepted the very first they got. None who have read the Bible from childhood, who have heard it preached Sabbath after Sabbath, who have been urged a thousand times by the voices of the dead and of the living to accept of mercy, can reply with these labourers, "No man hath hired

us." Their case therefore affords us no encouragement to put off what concerns our salvation, I say not a year, or a day, but even a single hour. These rose, responded instantly, to the call. It is not procrastination, but promptitude, therefore, which this parable teaches—promptitude like his who, sinking, drowning in the swollen river, so soon as a rope, spinning out from one who has hurried to the bank, comes within his reach, with sudden and convulsive gripe closes his hand on it; and, holding on like death, is drawn safe to shore. Do thou likewise. Behold, now is the accepted time; behold, now is the day of salvation.

Salvation, though not of works, is for works.—"Show me thy faith by thy works," is the demand of St. James; "Be careful to maintain good works," is the counsel of St. Paul; and the testimony of the whole Bible is, that faith without works is dead. We are not called into the vineyard to sit idle, to fold our hands and go to sleep. They that sleep, sleep in the night; but believers are children of the light and of the day, and have much to do. In amending our habits, in cultivating our hearts, in resisting temptation, in conquering besetting sins, in fighting the good fight, to keep the faith, our banner flying, and, step by step, win the way to heaven, how much have we to do?—so much, that an idle, were as great a contradiction in terms, as a dishonest, a lying, or licentious Christian. In respect even of our own interests and spiritual welfare, may we not use the words of Nehemiah, and say to the world when, with winning smiles or brow of care, it solicits our hearts and time, "I have a great work to do, therefore I cannot come down"? But no man liveth for himself—no Christian, at least: and in a world bleeding from so many wounds, so brimful of sorrow, and suffering, and oppression, and ignorance, and wrong, and crimes, where sinners perish around us as in a great shipwreck, some dashed on the cruel rocks and others drowning in the waves, and all by their dangers crying, Help, we perish!—instead of having nothing to do, might we not wish to have a thousand heads to plan, and a thousand hearts to feel, and a thousand hands to work, the zeal of Paul, the wealth of Solomon, and the years of Methuseleh? Let us pity the world; and endeavour, praying and working, so to shine that others, seeing our good works, may be guided to heaven,

and glorify our Father there—each such a light, or rather lighthouse, as one of England's bold engineers raised on the reef which owed its dreaded name to the waters that eddied and boiled around it. To save our seamen from a watery grave, their wives from widowhood, their little ones from the miseries and crimes of neglected orphanage, what dangers he faced!—as on that night when, hurrying on deck, he saw white breakers all around, and above their roar and the shrieks of the tempest, heard the helmsman cry, For God's sake, heave hard at that rope, if you mean to save your lives!—and the vessel, with scripp room to turn, obeyed her helm and rounded off. Example to all who seek a yet higher object—to save men's souls from ignorance, and vice, and hell—what anxieties he felt to bring his enterprise to a happy issue! On the Hoe headland, where Drake first saw Spain's proud Armada, alone in the grey of morning, after a tempestuous night, he might be seen looking out, with telescope at his eye, over a raging sea, for his yet unfinished structure; and heard saying, as a tall white pillar of spray suddenly gleaming on the far horizon revealed his work and removed his fears, Thank God, it stands! Would that Christian men and women were as anxious that God would "establish the work of their hands;" and make each of them, through a loving, active, zealous, pious life, a light shining in a dark place, in a dangerous and perishing world!—such as that lighthouse to the homeward-bound, whose course it guides, and whose hearts leap with joy when, as it rises to the eye of the outlook like a star across the waters, the cry is sung out from the mast-head, and echoed in every cabin, The Eddystone is in sight! Nor do we fear but that they who thus work for God, and Christ, and the good of men, will imitate Smeaton in giving the glory where the glory is due—in inscribing on their lives the words which, as the last work of the mason's chisel, he had cut on that monument of his genius and humanity, *LAUS DEO*—praise to God! A fitting motto these for the heavenly crown; and also for a life on earth which, founded on the Rock of Ages, and built up through grace amid many trials, hardships, and storms of temptation, has been blessed of God to guide the heavenward-bound to their desired haven, and, by shining on their way to Jesus, to save those that were ready to perish!

AMERICAN SLAVERY AS IT NOW STANDS REVEALED TO THE WORLD.

WHATEVER may be yet the issue of the American conflict, it will have done two great things,—it will have cast a flood of light upon the condition of the American slaves,—it will have given freedom to great masses of them, if not to all.

Until the secession war broke out, the means of accurately ascertaining the positive conditions of the slave in the United States were scanty, and to a great extent doubtful. On the one hand, we had the representations of masters and of their friends. These were always likely to be warped by self-interest; even when most sincerely meant, to exhibit but a portion of the truth. In all countries the best employers are the most accessible, the most willing to come forward in testimony of the condition of the employed; yet none are generally more ignorant of the worst practices used in their trade. How much more must this be the case in the slave system, where every possible malpractice in the employment of labour must be intensified a hundredfold, by the practically absolute powers of the master, and by the darkness with which he has the right to shroud his proceedings. Here evidently those who come into the light of publicity will be those only who have no cause, or think they have no cause, to fear it; and who, living in comparative light themselves, have no idea of what may be passing in the dens of darkness around them. The tendency of slave-owning is, moreover, emphatically one of insulation. The best of slave-owners as well as the worst would fain have never a neighbour, since all intercourse with other plantations tends to undermine either the slave-owner's moral or his physical authority.

But if the testimony of slave-owners, their friends and casual visitors, was always likely to be too favourable to the slave-system, such testimony as came in to the contrary seemed likely to be overcharged. It was seldom more than superficial; if otherwise, as in the case of fugitives, it was at best local and limited, presumably tinged with passion, resentment, habits of falsehood, likely to represent only extreme cases;—even when seemingly most veracious, only individual, and lacking the strength which the comparison of different witnesses to the same matter alone can afford. The same disadvantages applied partly to the testimony even of white men, ministers and others, who, after living in the midst of slavery, were driven away by it, either forcibly or by their own feelings. The only thoroughly satisfactory pre-secession testimony as to slavery in its general aspects within the Southern States, that I am aware of, is that of Mr. F. L. Olmsted. And yet it is obvious that Mr. Olmsted, a mere traveller, could not see all.

But a wholly new state of things has now sprung up. The domain of the slave-power has been over-

run well nigh from end to end. The Northern armies have poured down the whole valley of the Mississippi. They hold the whole of the border Slave States of Missouri and Kentucky, with about one-third of Virginia (to say nothing of Delaware and Maryland), the whole of the great slave-breeding State of Tennessee, nearly half of Arkansas, a large portion of Mississippi, the chief present centre of the cotton cultivation, of Louisiana, Northern Alabama, much of the coasts of Georgia, Florida, South Carolina, nearly a third of North Carolina. Within those limits, slavery has no longer any secrets. It lies naked and open to the sight under all its various aspects,—in the cotton cultivation, whether of the uplands or the sea-islands,—in the sugar cultivation of Louisiana,—in the rice-cultivation of South Carolina and Georgia,—in the turpentine collecting of North Carolina. The Northern forces have, moreover, in some States, penetrated beyond their present limits of occupation. They have already their foot in Northern Georgia. Their cavalry has skirmished up to nearly the walls of Richmond, their gun-boats have run up one of the affluents of the Mississippi, almost to the borders of Texas, whose chief seaport was for a time occupied by the Federal fleet. And what the white man may have failed to see, the black man has told. The South at one time made much of the escapes of slaves. Few people have any idea how trifling was the grievance. The seventh census of the United States (1850), gave the total number of their fugitive slaves at 1011. Ten years after—the fugitive slave law having in the interval come into play,—this number had fallen to 803, of whom upwards of one half (462), were from the free Border States of Delaware Kentucky, Maryland, Missouri, and Virginia. South Carolina, with the densest slave population of the whole union—402,406 out of 703,708,—had but 23 fugitive slaves; and Florida, only 11. Now, as will be shown hereafter, the number of slaves restored to practical as well as manual freedom, can hardly be reckoned at less than half a million. When the Federal forces were working their way down the Mississippi, 1000 once came in in one day from Arkansas. South Carolina alone contributes 12,000 freedmen; Florida, 6000. And a vast number of these are no longer what the fugitives of old must have been, namely, picked specimens of black humanity,—the most energetic morally, the most enduring physically. In the sea-islands particularly the slaves left behind were mainly women and children, the old, the infirm. To the testimony of the blacks, has to be added that of numbers of unionist refugees, who have either been expelled from or have left the Slave States, and whose tongues are no longer tied

respecting the beauties of the "patriarchal system," as they used to be whilst living in the midst of it, and of many others whose voices would have been of old unheeded. Thus, to quote one single instance, Mrs. Butler has been led to publish her invaluable "Residence on a Georgian plantation," which, although relating back twenty years, starts as it were into life when compared with the tales of the refugees. Again, an official "Freedmen's Inquiry Commission," consisting of Messrs. Robert Dale Owen, James McHay, and Samuel G. Howe, has collected valuable evidence as to slavery in the districts of Columbia, Eastern Virginia, North and South Carolina, and Florida, and published a preliminary report.

Thus slavery has come to be seen at once in all its breadth and in all its detail. Where formerly it could only be outlined or lightly sketched from a few points of view, it may now be photographed in its minutest features, and from every point. The mass of testimony is overwhelming, and may be checked and counterchecked from white to black and from black to white to any extent. But an ugly picture it offers, look at it how and whence you will. For the result of all this mass of new evidence is simply this,—that the worst that has been hitherto said by isolated voices against American slavery, has been abundantly confirmed; that the distant picture of it has turned out faint and pale beside the reality; that contact with the "patriarchal institution," so far from converting one sincere abolitionist from the errors of his ways, or confounding one dishonest one, has turned into ardent abolitionists, hundreds and thousands of men who, when they first went down South, were avowedly strong pro-slavery Democrats.

There are indeed, of course, infinite gradations and varieties in slavery. Apart from what might almost be termed the semi-Slave States only of Delaware and Maryland, where slavery has been, so to speak, withering for years under the gaze of too near freedom, the State in which, upon the whole, the condition of the slave is highest, where he is most a man, and most nearly treated as such, is North Carolina; next to it are the great towns of Louisiana, with the immediately adjoining districts; then Virginia, the "Old Dominion," and the "good" counties of Georgia, "Liberty County" in particular, where the physical condition of the field slave is perhaps at its highest. As a general rule, slavery becomes harsher as we proceed from East to West, from North to South, from town to country. At the same time, there is probably no district in which "good" masters are not to be found, men who, either by innate benevolence of character or by a sense of duty, render the slave's lot one of comparative happiness. Bishop Polk in Tennessee may probably be cited as a model slave-owner; in the sea-islands the Freedmen's Inquiry Commissioners mention "the plantation of Mr. Aiken, one of the largest in the State," as "a noble exception" to the "general system of inhumanity." It would be tedious

of course to follow step by step the details of the slave's condition in all the various States, I shall therefore endeavour to confine myself to those characters of the slave-system which may be said to be either general, or to point out what it has been generally tending to.

The legal elements of the slave's condition have long since been known. They are all mainly summed up in this: He is not a person, but a thing; at least as towards his master, he or she has no signal honour, no family ties. There is no punishment under any of the Southern slave-codes for the worst outrage by a master on a slave woman's virtue, on a slave man's marriage-tie; no legal limit to the uses to which he may put either. The slave has no rights of property; is legally forbidden to develop his intellect by education. The slave has indeed, in certain States, a right to a minimum of subsistence; and there are penalties for his murder or barbarous ill-usage. But the slave's testimony, and very often that of the free coloured man's, is not receivable against the white.

Such was the law of professedly Christian countries. But it was said till now that it was nothing more than the law; that the practice of slavery was quite other. This man had seen slaves very fat and sleek; therefore slaves could not be ill used. That man had seen and heard them laugh and sing; therefore slaves were very happy. That lady had noticed how gorgeously some slave women dressed; therefore slaves must have plenty of money. And all who had seen a slave-owner return home knew how glad the slaves seemed at it; therefore slaves were devotedly attached to their masters. And all these scattered observations being gathered into one focus, were said to flow from one common-sense principle, that the slave being property, it was the interest of the slave-owner to be careful of his property.

Now it is obvious that such an argument—which is used every day by kind-hearted men and women—is not simply an excuse for American slavery, but a plea for universal slavery.

If it is true, that a man will care for his brother man because he is his slave, and not care for him if he be free, then was our Lord and Saviour Christ *wrong* when he bade men Love their neighbour as themselves; He should have said, evidently, as *their things*. Let there be no mistake on this point: it is a new Gospel which is thus preached unto us. Those who still deem that "the old is better," can have no concern with it.—But to take far lower ground, I confess I have always wondered how any man who takes the trouble to look over the "Times," for instance, every day for a fortnight even, could dare to use the argument, that because slaves are property, therefore they will be well treated as such. For scarcely a day passes but some two-legged brute is had up before English justice, and punished for mal-treatment of that kind of four-legged property called a domestic animal. We dare not deny, that in order to secure the decent treat-

ment of this kind of property, there have been needed not only Acts of Parliament and penalties affixed to the violation of them, but a Special society to see that those penalties are enforced; and yet, in spite of Acts of Parliament, penalties, courts of justice, police, prisons, Society for the Prevention of Cruelty towards Animals, with its special constables, acts of the most diabolical cruelty towards these dumb sufferers are daily discovered to have been perpetrated—to say nothing of the thousands which must escape discovery. And therefore the moment that a human being becomes simply a two-legged piece of property, there will surely be perpetrated upon him, so far as the law does not expressly hinder it, every species of barbarity that is perpetrated upon the four-legged property; and such barbarities will surely be perpetrated upon him to a great extent, whether the law interferes or not, just as they are perpetrated upon dumb beasts. Nay more,—the two-legged human property is sure to be worse used than would be the four-legged, precisely because it is human, because it has will, reason, and the image of God printed on it as on the master himself. Instead of saying, Because slaves are property they will be well treated; the true reasoning is, Because slaves are property, therefore they will be ill-treated, therefore they will surely call forth against them in many an instance every latent capacity of absolute devilhood which lies in the master's bosom.

Are you sorry that this should be so? God forbid. As is the tree, so is its fruit. Thank God that men do not gather grapes of thorns, or figs of thistles! else would they allow the whole world to be overspread of them. Let the thorn tear, let the thistle prick, that man may know that they are there simply to be fought with and rooted out.

Now the worst side of slavery is no doubt the moral side of it. Though it had no evil physical side to it, it would yet be abominable. Though every slave had plenty to eat, plenty to drink, good shelter, good clothing, moderate work, skilful care in sickness, it is yet hideous that a man should not be a man, a husband not a husband, a father not a father. But the war has shown that the physical maltreatment of slaves was anything but a rare exception. Some persons have laboured hard to persuade others, and many have been led to believe, that the crack of the driver's whip, summoning the slave-gang to their labour, was but a stimulating and innocent music, a local substitute for accordion or concertina. The enlistment of negroes in the Federal armies has shown what is to be thought of this theory. Thousands of adult negroes who have been enlisted—as many thousands more who have been rejected,—have stripped to the skin before Federal surgeons and officers, and the state of their bodies has borne irrefragable witness to the gentleness of the "Patriarchal Institution."

Mr. De Pass, surgeon to a Michigan regiment, Tennessee, says that out of 600 negro recruits

whom he has examined, one in five bore the marks of severe flogging, "scores showed numerous gashes that you could not cover the scars of with one and often two fingers," whilst in one case he found more than 1000 marks of from six to eight inches in length. Think of the benevolence of that labour system in which one working man in five has to be flogged till the scars remain! But this estimate probably falls far short of the truth. Mr. De Pass's report is of very recent date (I find it quoted in the "Spectator" of Sept. 5), and belongs to a period when it must have been pretty well known amongst the coloured men what disabilities would exclude them from military service. Earlier reports tell a far worse account. An officer, writing from Louisiana to the "Boston Transcript," stated that not one recruit "in fifteen is free from marks of severe lashing," and that "more than one half . . . are rejected" (the rejections being themselves more than half of the number that offer) "because of disability, arising from lashing of whips, and biting of dogs on their calves and thighs;" whilst Mr. Wesley Richards, a surgeon, writing May 25, 1863, to the Cincinnati "Free Nation," after examining about 700 recruits, says that "at least one half bore evidence of having been severely whipped and maltreated in various ways;" some "stabbed with a knife, others shot through the limbs, some wounded with clubs until their bones were broken;" and others had their hamstrings cut to prevent their running off. And General Saxton, in command of the Department of the South (comprising South Carolina, Georgia, Florida), on being examined before the "Freedmen's Inquiry Commission," stated that there was scarcely one of the negroes whose back was not "covered with scars." East and west, it will be seen, the testimony is the same.

Now it may surprise many who have known what it is to be chastised even severely in their childhood, and who have retained not the slightest trace of the correction, that *scars* should be constantly referred to as the result of the flogging of slaves. But we must not confound the patriarchal slave-owner's corrections with those of a Dr. Busby. McMillan, a trustworthy contraband, examined before the Commissioners, will explain the difference. The slave is stretched out on his face, with his arms and legs tied to bolts or rings, and then—a firm, resisting position being thus secured—lashed till the flesh is laid open. But this is mere routine punishment. A more refined instance of our slave-owning patriarchs' reformatory discipline is where the slave is buried in a hole in the ground just large enough to receive his body, a door put on the top, and he is thus kept for two or three weeks, or even for a month—if life, of course, so long hold out. Another punishment, which is said to have been several times inflicted, is so indescribably filthy, that I can only hint at it by saying that it consists in turning men into living cesspools, with the application of artificial means

for increasing the amount of sewage. Of a Port Royal woman whom Mr. Nordhoff saw, he says, "She had suffered treatment so inhuman that I cannot describe it here; I will only say, that not only her back but her breasts bore deep scars, the marks of unmerciful and brutal flogging."

Again: no doubt to favour the slave's well-known devoted attachment to his master and his master's plantation, a 50 lb. weight is hung to his ankle, or he is invested with an iron collar with long prongs or horns. But Solomon Bradley, a blacksmith by trade, who, for his superior intelligence, had been appointed chief steward, at \$30 a month, on board a Federal transport, and resigned the situation to enlist, when he could only receive \$11 a month, because he "could not feel right as long as he was not in the regiment,"—Solomon Bradley describes the following as the most cruel punishment he ever saw inflicted, by one Mr. Farraby, owner of one of the largest South Carolina coast plantations, near Port Royal. Attracted by the noise of fearful screams in Mr. Farraby's own yard, he went up, and saw a slave-girl stretched on the ground on her face, her hands and feet tied fast to stakes, her master standing over her, beating her with a leather trace from a harness, every blow of which raised the flesh if it did not gash it, and now and then kicking her in the face with his heavy boots when she screamed too loud. When he had become exhausted by this benevolent exertion, our "patriarch" sent for sealing-wax and a lighted lamp, and dropped the blazing wax into the gashes; after which, finally, his arm being rested apparently, he switched the wax out again with a riding-whip. Two grown-up Miss Farrabys were all this while watching the humane series of operations from the upper windows. And the offence of the girl was burning the waffles for her master's breakfast.

A black man's testimony, some may say. Yes; and that of a man who is described as being as thoroughly truthful and conscientious as any white. Do you want white testimony to similar acts? The Rev. William Taylor, in a pamphlet on the "Cause and probable Results of the Civil War in America," relates the following, which has the advantage of showing the patriarchal institution under its "pious" aspect:—

"A dear friend of mine, in my native county, in the Shenandoah Valley, Virginia, was passing the house of a neighbour, and saw in the barn-yard, suspended from a beam . . . a coloured woman hung up by her hands. She was nearly naked, had been whipped till she was unable to moan aloud, and had an ear of Indian corn stuck in her mouth as a gag. In that condition she was left hanging till her master should take his breakfast, and have family prayers. My friend went in to see him, and remonstrated in vain to have her taken down, till after the family devotions were over. . . . This pious (?) family I knew well, and their three children, William, Arthur, and Adeline, were

taught authority between the ages of five and ten years by being set to whip the said poor woman at will, and she was beaten and scarred up so as to present a most unnatural and hideous appearance."

But these are only the milder mercies of the Eastern sea-board. We must go to the dreaded South-west to find the lashings carried to the pitch of disabling the sufferer—the stabbings, shootings, poundings of limbs with clubs, cuttings of hamstrings, of which the surgeons speak. Yet the surgeons had nothing to say but to men, and those living ones. In God's avenging hosts which we see not, there may be other and more helpless recruits. The Rev. Mr. Aughey, who was a minister in Mississippi at the outbreak of Secession, in a work called "The Iron Furnace," tells of some of these. "Mr. P——, who resided near Holly Springs" (Mississippi), "had a negro woman whipped to death while I was at his house during a Session of Presbytery. Mr. C——, of Waterford, Mississippi, had a woman whipped to death by his overseer. But such cruel scourgings are of daily occurrence. . . . Mrs. F—— recently whipped a boy to death within half a mile of my residence. Old Mr. C——, of Waterford, Mississippi" (apparently the same patriarch as before referred to), "punished his negroes by slitting the soles of their feet with his bowie-knife. One man he put into a cotton-press, and turned the screw till life was extinct. He stated that he only intended to alarm the man, but *carried the joke too far.*" Of course the laws which exist in every State against the murder or torturing of slaves, are about as well observed as might be laws enacted by wolves against sheep-murder, and providing that between wolf and sheep no sheep could be witness. Sometimes, indeed, in this black south-west, some peculiarly atrocious excess of patriarchalism raises the horror even of the white crowd, and the offender is lynched or his or her house burnt down. But in no single one of the instances above quoted do we find that any punishment was inflicted. When Mrs. F——, of Mississippi, whipped her slave-boy to death, the coroner's jury returned a verdict of death by cruelty; but Mr. Aughey expressly states that "nothing more was done."

In the real South, the lash is evidently a regular daily element of the institution. "I am residing," writes Mr. Aughey, "on the banks of the Yochanoahany. . . . In this vicinity there are large plantations, cultivated by hundreds of negroes. . . . Every night, the negroes are brought to a judgment-seat. The overseer presides. If they have not laboured to suit him, or if their task is unfulfilled, they are chained to a post and severely whipped." Of these overseers, the writer has just said: "I never knew a pious overseer—never. . . . Overseers, as a class, are worse than slave-owners themselves. They are cruel, brutal, licentious, dissipated, and profane. They always carry a loaded whip, a revolver, and a bowie-knife." Such are the dispensers of the Southern slave-owners' justice. Of course the terror they excite is extreme; and the

writer says he has known an instance of a woman through fright giving birth to a child at the whipping-post. It need hardly be said that it is at the option of the overseer to strip the slaves to any extent. "In Louisiana, women, preparatory to whipping, are often stripped to a state of perfect nudity." Black women only, perhaps some aristocrat of colour may think. "There is a girl," said one Colonel H—, a member of Mr. Aughey's church, to the latter, "who does not look very white in the face, owing to exposure; but *when I strip her to whip her, I find that she has a skin as fair as my wife.*" It is thus evidently the habit of these Mississippi patriarchs to strip and whip women as white of skin as their own wives. And the slaves are so fond of the system that "every night," Mr. Aughey tells us, "the Mississippi woods resound with the deep-mouthed baying of the bloodhounds."

Remember always, that, between Virginia, and even South Carolina, on the one hand, and the South-west on the other, every intermediate stage must be supposed to exist. *E. g.*, Mr. Taylor—a Virginian, let us recollect, of the Shenandoah Valley, whose wife was brought up in Alabama—mentions an instance in the latter State, where a master, riding home with a runaway, flogged the latter with a heavy whip "till he sunk in his tracks and died within a few hours;" whereupon all the neighbourhood sympathised deeply with the patriarch who had lost so valuable a man, and deemed the accident "a warning to niggers to stay at home and mind their own business."

But, after all, say many, the negro is but an idle vagabond. He is punished because he will not work as he ought to do. That the slave does not *do* as much work as a freeman is a fact, and one which I for my part rejoice over. I do rejoice, I repeat it, over the fact that the lash and all its tortures, and every other brutality of the slave-system, have no other effect than that of making men what are termed "lazy vagabonds." We shall see hereafter what they turn out without the lash, when once treated like men, by men who understand the word. And yet it is the fact that these "lazy vagabonds" are over-worked. The reports of the Federal surgeons, in addition to the evidence they afford of maltreatment, show also the frequency of a painful affliction—hernia—the well-known result of over-exertion. This is perhaps especially the case on the sugar-estates of Louisiana. "One beautiful Sabbath morning," says Mr. Aughey, "I stood on the levee at Baton Rouge, Louisiana, and counted twenty-seven sugar-houses in full blast. I found that the negroes were compelled to labour eighteen hours per day, and were not permitted to rest on the Sabbath during the rolling season. The negroes on most plantations have a truck-patch, which they cultivate on the Sabbath. I have pointed out the sin of thus labouring on the Sabbath, but they plead necessity; their children, they state, must suffer from hunger if they did not cultivate their truck-patch, and their masters would

not give them time on any other day." But even where the work is not in itself so severe, it is made oppressive by its continuousness. Thus, in the sea islands, where the hours of work were from daylight to 5 P.M., there was no cessation of labour allowed for meals, and the slave must eat whatever food he could get without leaving off his hoeing or cotton picking. And those who are most over-worked are of course the weakest,—those least able to bear it,—women and children.

Mr. Nordhoff tells us in his interesting pamphlet of "the Freedmen of South Carolina"—and his statement is abundantly confirmed—it was there the custom to extort field-work from women up to the very day when their children were born; when the child was two weeks old, the mother was again sent to work with the hoe; and he notices as "the only" labour-saving arrangement he saw on the islands, contrived by slaveholders, that in most of the large cotton-fields there were single palmetto trees dotted at regular intervals over the field: these being meant to shelter the babies under the care of some old women, till at stated hours the mothers came to suckle them. I can do no more here than hint at the consequences of such labour on the female frame. Its terrible ravages are pointed out by Mrs. Butler in her "Residence on a Georgian Plantation"—a book which, for the sake of her sex, every wife and mother should read.

But the slaves are surely well fed? No one need doubt that the house-slaves in a rich slave-owning family live as thoroughly on the very fat of the land as any Jeanes Footman, or Tom Coachman, or William Butler in Belgravia or Essex; and the same applies more or less to all town slaves. But the bulk of the Southern field hands live under very different conditions. For, says Mr. Nordhoff, "the only food these negroes on the sea islands of Carolina received from their masters was one peck of Indian corn per week. On a very few plantations the masters gave in addition, during the season when the field-work was most exhausting, a little bacon twice or thrice in the week. Fresh meat they tasted probably once or twice in the year." Of one "berv mean missus" it was told that "she kill a cow once in t'ree year!"

Of course the negroes cannot live on a peck of corn a week, which they have to grind in small hand-mills after their day's work. So, when the master has got all the work out of them he chooses, he graciously allows them to work for their own subsistence. Hence the "truck patch" of Mississippi, which has to be cultivated on the Sunday. This is a general institution, except on the coast, where the waters supply easier means of subsistence. Thus in the sea-islands, Mr. Nordhoff found in every cabin a scoop net, and pigs and hens cackling around the "quarters" of the blacks,—raised, however, to sell and not to eat. And there is no doubt that throughout the "better counties," not only is better food supplied by the masters, but considerable indulgence is generally shown to the

negroes in allowing them to raise vegetables, pigs, and poultry for their own use or for sale. But it will of course be remembered that this is only an indulgence,—that such privileges are often withheld,—and that the master or his creditors often enforce his absolute legal rights over the earnings of the slave. It is probably chiefly in the eastern agricultural States, where the soil is being gradually worn out, that insufficient food is a most frequent grievance in the slave's lot. The "Times" and its congeners are never tired of talking of the wretched condition of the free coloured men of the North (a class, be it always recollected, better educated than the Southern whites, the amount of school attendance being more than one-ninth of the total Northern coloured population, whilst at the South it is less than one-tenth of the total white). But Northern observers concur in remarking, not only the aspect of intellectual degradation, but the less robustness of frame, amongst the Port Royal negroes, than amongst the Northern ones; and the greater prevalence of scrofula is noted by the Northern physicians. And the insufficiency of food, again, told most strongly on the weakest,—the children. Thus an old woman described to Mr. Nordhoff the children "in de old time" as "lean, lean like buzzard. For why? dey used to make me work, work, work, so poor moder hab nuffin to gib her child—child starve 'fore it born—dat's what make 'em lean like buzzard" (meaning of course the turkey-buzzard, a frightful flying scarecrow). In the West, where the labour was harder, the food given was necessarily more abundant; but being often unwholesome and too little varied, brought on amongst other diseases the well-known one of clay or dirt-eating. I will only add here the words of one who has been a slave, and whose experience embraces nearly the whole of the Slave States, except Florida and Texas: "As to what the condition of the slaves is in some of the worst counties, I should not like to tell it, for you would not believe me."

In passing from the physical to the moral aspects of slavery, we are met by the great difficulty, that a large portion of its daily working consists really of things such as should not be named among Christian men. It is difficult for us to realise the fact that men and women professing to be Christians should allow other men and women around them, whom they claim as their own property, to gratify their passions like brute beasts, the name of marriage representing a mere temporary relation. In the sea islands, Captain Hooper bears testimony to the fact that many of the negro men "now have two or three wives, and children by each." The masters, it is distinctly stated, do not care whether the slave women are married or not, so long as they have children, nor have they, as a matter of fact, any scruple in breaking up such unions. The wife and children of Solomon Bradley, an "Uncle Tom" among the Port Royal negroes, were sold away some years ago, and he never expects to meet with

them again. Between white and coloured it is a principle of law throughout the Slave States, that there can be no legal union. But the number of mixed bloods shows that the white man's horror of "amalgamation" only starts into vitality within the church door. On Port Royal island already the "yellow niggers" form a considerable part of the population. "In almost all the schools," says Mr. Nordhoff, "you find children with blue eyes and light hair—oftenest yellow." Yet the description lists found at Hilton Head of the slaves shipped from thence showed that the greater number of these were mixed bloods. Now as such shipments are almost universally for the dreaded South, it follows that the "patriarchs" and their overseers send their own offspring to a harsher slavery than that around themselves. And, owing partly to these shipments of the mixed breeds, partly to the more unbridled licentiousness of the whites themselves, it appears beyond a doubt that in the south and south-west the proportion of "white" and "yellow niggers" is far higher than in the eastern States. Mr. Aughey speaks of preaching "to a large congregation of slaves, the third of whom were as white as himself," some with red hair and blue eyes. We remember that slave girl in Mississippi whose skin when she was stripped for whipping was as white as that of her master's wife. Mr. De Camp, the surgeon above referred to, speaks of having seen standing before him three negro recruits, in whom "the most critical examination could not detect the slightest trace of negro blood." General Mac Dow says that in the district of Louisiana which he is writing from, there are very few slaves of unmixed negro blood. It is notorious that many planters have families of white and families of coloured children, and perhaps give the latter to wait on the former. Remember always that the chastity of the slave has no legal protection. I cannot here enter into details: suffice it to say, that the slave system has ere this enforced incest at the will of the master. But, without descending to such horrors, let any of my countrywomen picture to herself what must be the lot of women (often, as we have seen, as white as herself) placed from year's end to year's end under the absolute control of an overseer, such as Mr. Aughey, and in fact almost all witnesses, describe—"cruel, brutal, licentious," always armed with the loaded whip, the bowie knife, and the revolver,—liable, too, at any time, without any recourse under heaven, to be sold or hired out into harlotry, as is practically done in every Southern city—and then say whether the system in which such things are possible has the right to insult God and man any longer by its existence.

Treating the slave thus like a brute, none could feel surprised if he were to become such. The coloured witnesses who have been examined before the Freedmen's Inquiry Commission are very frank on the subject of the moral condition of their race. The slaves, says Robert Small—a bold fellow, who

ran a steamer, the "Planter," out of Charleston Harbour, past Sumter and its dangers, to join the Federal fleet, a feat which Mr. Nordhoff calls "one of the bravest and most brilliant acts of the war"—are very envious of one another, cannot bear to see one of their number advanced to any position which all cannot reach, and will resort to any means in their power to degrade him. They are, as slaves, selfish, cowardly, untruthful, thievish. Though they have strong religious impulses, their religion is little more than sentiment. Even professedly pious slaves have often no scruple in "taking" from their masters—the term "stealing" being reserved for thefts as between themselves—the general argument being that, as their masters take everything from them, they may take back what they can. A simple detail shows the brutish habits engendered. The blacks are, says a former slave, "voracious and solitary in their eating, snatching the food prepared for them, and each one walking off to some distance to eat, and, when the supply is exhausted, walking back to snatch more, if there is any left; which is seldom the case, as each is likely to take more than he can eat." They are often unfeeling and cruel, so far as becoming the instruments of their master's cruelty. The great bulk of the punishments are inflicted by the hands of the slaves themselves—even sometimes those which end in death. And let it always be remembered that the negro has no means of self-improvement. A father is known to have received twenty lashes for teaching his son to read. "In Mississippi," says Mr. Aughey, "a man who taught slaves to read or write would be sent to the penitentiary instanter." As a matter of fact, out of the eight thousand slaves whom the occupation of Port Royal threw upon the hands of the Federal Government, only a very few had picked up the elements of book learning, and a couple of the older men were able actually to read. And whilst the means of self-instruction are forbidden by law, religious teaching is entirely subject to the discretion of the master. If the preacher does not preach sound patriarchal doctrine, he is either hunted out of slavery or lynched within it. The jargon used by the slave is of itself sufficient proof of the degradation to which he has been reduced. It is not, like the dialects and *patois* of our own country, of France, Germany, Italy, a form of speech probably coeval with the language, and which had originally as good a chance of developing into the standard one. It is a mere corruption of the master's language, the fruit of estrangement and neglect. When the "patriarchal system" of South Carolina results in debasing the plain English, "I will go and see about it," into the negro's "I go shun" (see 'em), we may see at once what a gulf it has opened between master and man.

Such, then, is Southern slavery, as it now stands thoroughly revealed to the world—a system which, aiming at treating black men as brutes, not only succeeds in making them such, but generally makes two brutes for one—the white and the black. Mr.

Aughey, after an experience of eleven years in eight different Slave States, declares that he has "never yet seen any example of slavery" that he did not "deem sinful." He "cannot do otherwise than pronounce it an unmitigated curse" to white and black alike.

There is but one touch to add to the above picture. Bad as it was in itself, slavery was getting worse. South Carolina,—the acknowledged pioneer of Secession,—which tried thirty years ago by means of "nullification" to throw off the control of the Federal authority,—which was the first to declare actual Secession, the first to fire upon the Federal flag, the first to reduce a Federal fort by force of arms,—is a State which, as one of the luminaries of Secession, the Hon. L. W. Spratt, has declared, fairly exhibits "the normal nature of the institution" in a population where the slaves outnumber the freemen by 120,000. Yet in this State, the Freedmen's Inquiry Commissioners emphatically declare slavery "has been darkening in its shades of inhumanity from year to year." They found "conclusive evidence that, half-a-century since, its phase was much milder than now. It is the uniform testimony of emancipated freedmen from this State above the age of sixty that, in their youth, slavery was a merciful and considerate system compared with what it has been for thirty years past. These old men are bright and intelligent compared with the younger field hands, in many of whom a stolid, sullen despondency attests the stupefying influence of slave-driving under its more recent phase."

And what is true of South Carolina is true of all the South. Within the last quarter of a century especially, slavery, from a mere practice, has grown into a system and a creed. Its economic powers have been calculated to the last figure; it has reckoned exactly what work could be got out of a man at every species of labour, how many years he should "last" at cotton-growing, how many at rice-growing, how many at sugar-growing, &c.; the relative advantages of driving him,—i.e., killing him off quick,—or husbanding his strength, have been discussed; and food, clothing, shelter, have been regulated with reference to the data obtained. On the other hand,—since by one of the most inflexible, most awful, yet most salutary rules of God's government, those who "set up their idols in their heart and put the stumblingblock of their iniquity before their face," when they inquire of the Lord, shall always be answered "according to the multitude of their idols," so the South, proclaiming the evil thing slavery to be good, has thought to find its consecration even in that Book which is a message to all mankind of deliverance from every shape of bondage; and it has hardened itself in this faith, and its priests and prophets have been deceived of the Lord to speak lies in its ears, to prophesy unto it the smooth things which it loved, till at last, in its devilish pride, unable to brook the very contact of freedom, it turned away as from an

accursed thing, and would fain set up its own model Republic, based, said its Vice-President, "upon the great truth that the negro is not equal to the white man; that slavery, subordination to the superior race, is his natural and moral condition."

And then were seen upon the walls of slavery's palace fingers of a man's hand, writing "Mene, mene, Tekel. . . ." Then struck for the Southern slave an hour such as his friends afar off had scarcely hoped to see, but which, with blind God-sent instinct, he seems himself to have been long waiting for. From the moment that the secession flag was raised, slavery, as all see now, was doomed.

But this was little:—through the collision between his oppressors and his despisers, the oppressed and despised negro has grown to be by this time the earthly arbiter of the contest. If the 400,000 or 500,000 able-bodied negroes who may yet remain in the South were armed by their masters and chose to fight on their side, it is plainly seen that no force which the North could henceforth bring to bear could possibly prevent the establishment of a Southern republic. If those 400,000 or 500,000 able-bodied negroes chose to side actively with the North, it is equally plain that no force which the South can now call forth would suffice to overcome them. Has not God chosen once more before our

eyes "the weak things of the world to confound the things which are mighty, and base things of the world, and things which are despised, and things which are not, to bring to nought things that are?"

One word, however, to prevent misconception. I have lived myself amongst slave-owners, though not on the American continent. I know that they are men and women like others, capable of and manifesting all human virtues. It would ill beseem Englishmen, above all others, who know that by England slavery was introduced and maintained in her North-American colonies, to be Pharisalical against those whose misfortune it has been to be burdened with that legacy of crime. But no tenderness that we may feel towards any individual slave-holder should induce any toleration towards slavery itself, or towards the slave-owner's character in the abstract. And while we may admire the gallantry with which the Southern slave-holders have carried on the contest with the North; and may do full justice to the purity of the motives which led a Stonewall Jackson into the thick of so many a fight, we must remember that the heroic defence of Vicksburg or Sumter no more palliates Southern slavery than did the heroic defence of Jerusalem by the Jews of old palliate the crucifixion of our Lord.

J. M. LUDLOW.

REMINISCENCES OF A HIGHLAND PARISH.

BY THE EDITOR.

CHAPTER XX.—THE STORY OF MARY OF UNNIMORE, AS TOLD BY HERSELF.*

THAT was the day of the sadness to many—the day on which Mac Cailein† (*Argyle*) parted with the estate of his ancestors in the place where I was reared.

The people of Unnimore thought that "fitting" would not come upon them while they lived. As long as they paid the rent, and that was not difficult to do, anxiety did not come near them; and a lease they asked not. It was there that the friendly neighbourhood was, though now only one smoke is to be seen from the house of the Saxon shepherd.

When we got the "summons to quit," we thought it was only for getting an increase of rent, and this we willingly offered to give; but permission to stay we got not. The small cattle‡ were sold,

and at length it became necessary to part with the one cow. When shall I forget the plaintive wailing of the children deprived of the milk which was no more for them? When shall I forget the last sight I got of my pretty *cluster* of goats bleating on the *lip* of the rock, as if inviting me to milk them? But it was not allowed me to put a *cuarch* (pail) under them.

The day of "fitting" came. The officers of the law came along with it, and the shelter of a house, even for one night more, was not to be got. It was necessary to depart. The hissing of the fire on the flag of the hearth as they were *drowning* it, reached my heart. We could not get even a bothy in the country; therefore we had nothing for it but to face the *land of strangers* (Lowlands). The aged woman, the mother of my husband, was then alive, weak, and lame. James carried her on his back in a creel. I followed him with little John, an infant at my breast, and thou who art no more, Donald beloved, a little *toddler*, walking with thy sister by my side. Our neighbours carried the little furniture that remained to us, and showed every kindness which tender friendship could show.

On the day of our leaving Unnimore I thought my heart would rend. I would feel right if my tears would flow; but no relief thus did I find. We sat for a time on "Knock-nan-Carn" (Hill

* From the Gaelic of the late Dr. Mac Leod, of St. Colombo, Glasgow.

† *Mac Cailein*. Sir Walter Scott, and after him Macaulay, writes Argyle's patronymic as *Mac Callum*, a mistake which sounds very offensive to a Celtic ear. Colin—Celtic, *Cailein*—was the founder of Argyle.

‡ Cows forming the chief property of the Highlanders, known as *ni*, "substance," or "wealth," and furnishing epithets expressive of strong affection, the sheep were thought to be highly honoured by being styled "small cows," or "small cattle;" and here we are reminded of Isaiah xliiii. 23—"the small cattle of thy burnt-offerings."

of Cairns), to take the last look at the place where we had been brought up. The houses were being already stripped. The bleat of the "big sheep"* was on the mountain. The whistle of the Lowland shepherd and the bark of his dogs were on the brae. We were sorrowful, but thanks to Him who strengthened us, no imprecation or evil wish was heard from one of us. "There is no fear of us," says James. "The world is wide, and God will sustain us. I am here carrying my mother, and thou, Mary, with my young children, art walking with me on this sorrowful 'fitting'; yet we are as happy, and possibly as great objects of envy, as the owner of this estate who has driven us to the wandering."

What have you of it, but that we reached Glasgow, and through the letter of the saintly man who is now no more, my beloved minister (little did I think that I would not again behold his noble countenance), we got into a cotton work. Here James got good steady *earning*,† as did also the children when they grew up. We were comfortable, and I hope that we were grateful. The old woman was still living, her intellect and memory as good as ever they had been. She knew so much of old Highland lore, that it was a relief to James, when he came home weary from the work, to sit down and converse with her.

We were able to do much justice (*give a good opportunity*) to the children. They read English and Gaelic equally well, and nothing did the old woman ever see that she valued like listening to thee, Donald beloved, reading the Bible and other good books; and it is thou who could do that distinctly and sedately.

It pleased God to call the old woman away, and she fell into the quiet sleep of death, bequeathing her soul to the blessed Saviour who went to death for her. We missed her greatly. Instead of being thankful for the time that it had pleased God to spare her, we lamented for her beyond measure. God chastised us. My beautiful, splendid boy took the infectious fever, which was at the time in the great city, and shortly after his father and his sister took it. It is He alone who enabled me to

stand that has knowledge of what I endured at the time. Let men never say that there is not kindness in the Lowlanders. It is I who did not find them destitute of pity. Though the fear of the fever kept away the greater number of my acquaintance, God raised up friends who sustained me. A neighbour's wife, with whom I was but slightly acquainted, took the lassie from me, and I sent John to a friend's house to avoid the fever. My husband (*the man*)* and Donald were taken to the infirmary at the head of the town, and it was permitted to myself to follow them. Cheerless and heavy was my step after the carriage that conveyed them. I thought it could not be more sorrowful, though I were following them to the churchyard; but, oh! far asunder, as I have since felt, are the two things.

I heard so many stories of this nursing-house, that horror was on me for it: but it is I who did not need. They were placed in a chamber which might suffice for a king, and a physician and a sick-nurse were as kind to them as if they had been their dearest on the face of the world. Fifteen days after they went in—on the morning of the Communion-day—that pang entered my heart which has not left, and never will leave it. From that time the world has lost for me much of its gladness. Thou didst change (*die*), Donald, son of my love, who never saidst to father or mother, "It is ill." But why should I complain? He who called him to himself had more right to him. We must be resigned.

Donald departed: but, thanks to the benign Father, all did not depart. James recovered, and eight weeks after he had gone in we returned again to our home; but, oh! it was on that home that the change had come. Donald was not. It was he who used to read to us in the evening at the time of going to rest. I noticed the sad cloud that was on the countenance of my husband as he said:—

"Wife, where is the Bible? Bring it to myself to-night."

"Come here, John," said I, "and take the Bible."

"Oh! it is not right?" said James. "Thank God that you are spared!"

James had no strength for work. He was feeble and without courage. We had nothing but what John brought in from day to day; so that it was necessity to me to sell, little by little, what we could best spare of the furniture, hoping that better days would come. At length the rent was to be paid and nothing to meet it. James went out with Donald's watch, and the name of my darling out on the back of it. He returned after paying the rent, and laid himself down on the bed without a word out of his head. But, as God brought it round, who came in that very evening but the minister,

* The small cattle (*meanbh-chro*), the indigenous breed of sheep, small in size, most delicate in flesh, and fine in wool, like the Shetland kind, housed every night, and milked every day, were favourites with the people; but the large sheep that ranged the mountain and the strath alike, and which have led to so many unhappy clearances, are to the common Celt objects of utter detestation. The "tooth of the big sheep" is "the root of all evil" in his estimation, and the "good time coming" is always associated with the extirpation of this accursed breed. We knew a minister who preached in Skye—a native not of the Highlands, however, but of the Lowlands—within the last thirty years; and who, wishing to present a very attractive picture of heaven, assured his hearers that "there would be no big sheep there."

† *Earning* is the Gaelic equivalent of employment. I suppose it may be inferred from this that the Highlander was often employed without remuneration; and, beyond question, "remunerative work" would readily solve the difficulty as to the maintenance of the population of the Highlands.

The husband, styled in Scotch the "good-man," is in Gaelic styled simply the *man*, and, possibly, *the man*—the man, *par excellence*, is the most complimentary title that can be given.

and that was the visit of blessedness to us. He held much discourse with us. He offered up a prayer which dropped on our hearts. Our courage rose greatly. His language was like dew of the evening on tender plants which were withering.

The health of James was improving, and he obtained some kind of night work during the year. But on a night of those nights at the beginning of winter five years ago, John came in and great grief was on his countenance, as if he had been weeping.

"What is the matter, my love?" I said.

"There is not much," he said. "Perhaps another place may open, though the work in which I am has stopped. The work-people have risen against the masters, demanding a heightening of wages, and threaten to burn the works if they will not yield. They have drawn out a writing, and they threaten evil to every one who will not put his hand to it."

James was stretched on the bed, but as soon as he heard this, he raised his head and said:

"I hope, John, that thou hast not put thy hand to that bad paper."

"Is it I, father?" said the poor lad. "Truly I have not put, and will not put."

"Thou never wilt, my brave boy. Be faithful and true, as were the men from whom thou hast come. Stand thou by thy king and the laws of thy country, and let there be to thee no companionship with those who seek to lawlessness. We have what will suffice us to-night, and put the Sabbath past. When Monday comes God will open another door. God comes in want, and there is no want when He comes.' Let us go to rest. Bring over the books, John, and let us give praise to God. To-night let us sing the 146th Psalm, and raise the tune together. Oft have I sung it in the great assembly, with many of those who are not now on the face of the world, and I never heard it that it did not give relief to my heart." We went to church on the next day, and heard teaching that helped us to forget this poor world.

"Blessed," said James, as we returned home, "is the day of the Sabbath; it is God himself hath set it apart."

At the beginning of the week two men, whom we knew, came from the cotton-mill, asking James and my son to stand out with them, saying there was no good for them to continue separate; speaking much against the tyranny and covetousness of the great merchants, and very much about king and kingdom which I could not understand.

"Leave me," says James. "There is no use in your speaking further. I will not stand out, neither will I do injury to the kind man who has given me employment ever since I came to the place, and whom I found truly steadfast in every distress. Leave me; the blood of rebelliousness is not in my veins."

They told him it was in their power to help him—that they had money from England to aid those who would stand out with them, and as a proof of this they offered to leave a crown-piece with him.

"No," said James. "Not a penny of your money shall be left in this house—there is a curse along with it. I will not stand with you; no more will my son. I have only him. I saw his brother, my good and faithful son, borne to the grave without the power of my being under his head, and it was a hard trial; but I would choose to see him who is alive laid by his brother's side before seeing him in the midst of those who seek to bring confusion and bloodshed on the country. Take away your money. There is not a coin to-night in my house. I have not a single (*red**) penny on the face of the world; but on the day that I rise with you may I be without shelter for the night. Go," said he; "but I beseech you give up your folly; it will not prosper with you."

They gave a loud laugh, and went away ridiculing his language.

Day after day was passing, and employment was not to be found. Everything that could be sold was gone, except the two beds and a few small articles which were not worth the disposing of. James lost his cheerfulness entirely. He would not go over the door; but kept rocking himself by the fireside, without a syllable from his head. We had new Bibles, which had belonged to Donald. I noticed my husband taking them now and then out from the place in which they were locked, and after gazing on them he would shed tears, start back with a heavy sigh, and replace them in the very spot where they had been.

"You will not sell these, father, while I am alive," said John.

"Truly, my son, I would not wish to part with them, if I were at all able to keep them."

That very evening John went out, and as he did not return at the time of our usual going to rest, we were under great anxiety (*many pangs*)† for him. When he came, there was a kind of flush in his cheek, and a raised look in his countenance, which caused us to wonder and to fear.

"Father," said he, "forgive me; and thou, mother of my love, do not thou condemn me. You shall not sell the Bibles of Donald, nor yet the bed on which you are lying. There is what will help you."

He took out ten gold coins, and he placed them on the table. His father started with horror, and had there not been a support to his back he would have been clean over on the floor.

"What is this that thou hast done, my son? What hast thou done? Has God let thee completely off His hand?‡ What, I say, has befallen thee?" (*has risen to thee*).

* A *red* penny, i. e., a copper penny, the lowest coin contrasted with the *white* penny—the silver shilling. *White money* is the common expression for silver coin generally.

† *Ionaguin*, literally, "many pangs," or "shooting pains," translated by *anxiety*, is a most expressive word; better than even the Greek, which refers to being taken to pieces.

‡ i. e., Abandoned thee. The idea of being borne on the arm of the Almighty is a fine one.

"Nothing," said he, "but that I have joined the army. To-night I am a soldier belonging to *Red King George*;* and I trust I shall not bring shame on my ancestors or on my country."

James raised his eyes, and the blood which had forsaken his cheek returned.

"John, come near me. It might have been worse, my brave boy, much worse."

"Oh, it is good that it is not worse; but wherefore did you not tell us what was in your intention?"

"It is not customary with youth," said he, "to consult with their parents before they take the gold? and good is it to the king that it is thus. I have enlisted with Allan of Errach † (with the man of Errach), and he promised to come to-morrow, to make my excuse."

On the morrow Allan *Mòr* (great Allan) came, and when he understood who we were, he assisted us liberally. What is there to say but that he did not lose sight of John when he was under him? He advanced him step by step in the army. He is now on his way home with a pension from his king and country, which will keep him easy for life. He is quit of soldiering any more, and we look for his return home in the course of a month. James is now in good health. He has got an easy place from the humane men, who did not forsake him. My daughter is married to a prudent, industrious lad from the Highlands, and now, thanks to the gracious One who sustained us, the voice of joy is to be heard among us. Hardship did meet us: but God blessed it for our good. He stood by us in every difficulty. Often does James, in the communing of the evening, go over everything that has befallen us, tracing as he best can the steps of the Lord's providence towards the good of our souls. "It is good for me that I have been afflicted," is his language, and of every cause of gladness the least is not that, according to every account, John remembers his God and loves his Saviour. He never parted with his brother's Bible. Often has it accompanied him on the day of battle, and his pillow at night in a far distant land.

He has been writing to us that this very Bible has been blessed for good to several of his fellow soldiers to whom he used to read it. And now have we not cause to be thankful? Oh, let people never lose their hope in God. Let neither hardships nor poverty compel them to break his law, nor to neglect his ordinances. The *higher the tempest strikes* (the louder the tempest rages), the closer may they flee to the shadow of the Great Rock in the weary land. Their Lord hast said, and true are all thy words, "Because he hath set his love upon me, therefore will I deliver him. I will set him on high, because he hath known my name;" and it is we who have

experienced that "Faithful is He who hath promised."

CHAPTER XXI., AND CONCLUSION.—THE COMMUNION SUNDAY.

On a beautiful Sunday in July I once again sat down at the foot of the old Iona-cross in the churchyard of "the Parish." It was a day of perfect summer glory. Never did the familiar landscape appear more lovely to the eye or more soothing and sanctifying to the spirit. The Sound of Mull lay like a sea of glass, without even a breath of fitful air from the hills to ruffle its surface. White sails met their own shadows on the water; becalmed vessels mingled with grey islets, rocky shores, and dark bays, diminishing in bulk from the large brigs and schooners at my feet to the snow-white specks which dotted the blue of the sea and hills of Lorn. The precipice of Unnimore, streaked with waterfalls, rose in the clear air above the old Keep of Ardtornish. The more distant castled promontory of Duart seemed to meet Lismore. Aros Castle, with its ample bay, closed the view in the opposite direction to the west; while over all the landscape a Sabbath stillness reigned, like an invisible mantle of love let down from the cloudless heaven over the weary world below.

It was a Communion Sunday in "the Parish."

Few of the people had as yet arrived, and the churchyard was as silent as its graves. But soon the roads and paths leading to the church from the distant glens and nearer hamlets began to stir with the assembling worshippers. A few boats were seen crossing the Sound, crowded with people coming to spend a day of holy peace. Shepherds in their plaids; old men and old women, with the young of the third generation accompanying them, arrived in groups. Some had left home hours ago. Old John Cameron, with fourscore-years-and-ten to carry, had walked from Kinloch, ten miles across the pathless hills. Other patriarchs, with staff in hand, had come greater distances. Old women were dressed in their clean white "mutches," with black ribands bound round their heads; and some of the more gentle-born had rags of old decency—a black silk scarf, fastened with an old silver brooch, or a primitive-shaped bonnet—adornments never taken out of the large wooden chest since they were made, half a century ago, except on such occasions as the present, or on the occasion of a family marriage feast, or a funeral, when a bit of decayed crape was added. And old men were there who had seen better days, and had been "gentlemen tacksmen" in the "good old times," when the Duke of Argyle was laird. Now their clothes are threadbare; the old blue coat with metal buttons is almost bleached; the oddly shaped hat and silk neckerchief, both black once, are very brown indeed; and the leather gloves, though rarely on, are yet worn out, and cannot stand further mending. But these are gentlemen nevertheless in every thought and feeling. And some respectable

* Referring to the "Red Army," as the Highlanders always call the regular army.

† Allan *mòr* of Errach, who raised the 79th Regiment, was one of the most popular Highland officers in the army. He was knighted for his gallantry, and has left descendants in very influential positions.

farmers from "the low country," who occupy the lands of these old tacksmen, travelled in their gigs. Besides these, there were one or two of the local gentry, and the assisting clergymen.

How quiet and reverent all the people look, as, with steps unheard on the greensward, they collect in groups and greet each other with so much warmth and cordiality! Many a hearty shake of the hand is given; and many a respectful bow, from old grey heads uncovered, is received and returned by their beloved Pastor, who moves about, conversing with them all.

No one can discover any other expression than that of the strictest decorum and sober thoughtfulness, among the hundreds who are here assembling for worship.

It has been the fashion indeed, of some people who know nothing about Scotland or her Church, to use Burns as an authority for calling such meetings "holy fairs." What they may have been in the days of the poet, or how much he may himself have contributed to profane them, I know not. But neither in Ayrshire nor anywhere else have I ever been doomed to behold so irreverent and wicked a spectacle as he portrays. The question was indeed asked by a comparative stranger, on the Communion Sunday I am describing, whether the fact of so many people coming from such great distances might not be a temptation to some to indulge overmuch when "taking refreshments." The reply by one who knew them well was, "No, sir, not one man will go home in a state unbecoming a Christian."

The sentiment of gratitude was, naturally enough, often repeated:—"Oh! thank God for such a fine day!" For weather is an element which necessarily enters into every calculation of times and seasons in the Highlands. If the day is stormy, the old and infirm cannot come up to this annual feast, nor can brother clergymen voyage from distant Island Parishes to assist at it. Why, in the time of the old minister, he had to send a man on horseback over moors, and across stormy arms of the sea, for sixty miles, to get the wheaten bread used at the Communion! And for this reason, while the Communion is dispensed in smaller parishes and in towns every six months, and sometimes every quarter, it has hitherto been only celebrated once a year in most Highland Parishes. At such seasons, however, every man and woman who is able to appear partakes of the holy feast. No wonder, therefore, the people are grateful for their lovely summer day!

The previous Thursday had been, as usual, set apart for a day of fasting and prayer. Then the officiating clergy preached specially upon the Communion, and on the character required in those who intended to partake of it; and then young persons, after instruction and examination, were for the first time formally admitted (as at confirmation in the Episcopal Church) into full membership.

The old bell, which it is said was once at Iona, began to ring over the silent fields, and the small church was soon filled with worshippers. The service in the church to-day was in English, and a wooden pulpit, or "tent," as it is called (I remember when it was made of boat sails), was, according to custom, erected near the old arch in the churchyard, where service was conducted in Gaelic. Thus the people were divided, and, while some entered the church, many more gathered round the tent, and seated themselves on the graves or on the old ruin.

The Communion service of the Church of Scotland is a very simple one, and may be briefly described. It is celebrated in the church, of course, after the service and prayers are ended. In most cases a long, narrow table, like a bench, covered with white cloth, occupies the whole length of the church, and the communicants are seated on each side of it. Sometimes, in addition to this, the ordinary seats are similarly covered. The presiding minister, after reading an account of the institution from the Gospels and Epistles, and giving a few words of suitable instruction, offers up what is called the consecration prayer, thus setting apart the bread and wine before him as symbols of the body and blood of Jesus. After this he takes the bread, and, breaking it, gives it to the communicants near him, saying, "This is my body broken for you, eat ye all of it." He afterwards hands to them the cup, saying, "This cup is the New Testament in my blood, shed for the remission of the sins of many, drink ye all of it; for as oft as ye eat this bread and drink this cup, ye do show forth the Lord's death until He come again." The bread and wine are then passed from the communicants to each other, assisted by the elders who are in attendance. In solemn silence the Lord is remembered, and by every true communicant is received as the living bread, the life of their souls, even as they receive into their bodies the bread and wine. During the silence of communion every head is bowed down, and many an eye and heart are filled, as the thoughts of Jesus at such a time mingle with those departed ones, with whom they enjoy, in and through Him, the communion of saints. Then follows an exhortation by the minister to faith and love and renewed obedience; and then the 103rd Psalm is generally sung, and while singing it the worshippers retire from the table, which is soon filled with other communicants; and this is repeated several times, until the whole service is ended with prayer and praise.

Let no one thoughtlessly condemn these simple services because they are different in form from those he has been accustomed to. Each nation and church has its own peculiar customs, originating generally in circumstances which once made them natural, reasonable, or perhaps necessary. Although these originating causes have passed away, yet the peculiar forms remain, and become familiar to the people, and venerable, almost holy, from linking the past with the present. Acquaintance with

other branches of the Christian Church ; a knowledge of living men, and the spirit with which the truly good serve God according to the custom of their fathers ; a dealing, too, with the realities of human life and Christian experience, rather than with the ideal of what might, could, would, or should be, will tend to make us charitable in our judgments of those who receive good and express their love to God through outward forms very different from our own. Let us thank God when men see and are guided by true light, whatever may be the form or setting of the lens by which it is transmitted. Let us endeavour to penetrate beneath the variable, the temporary, and accidental, to the unchangeable, the eternal, and necessary ; and then we shall bless God when, among "different communions" and "different sacraments," we can discover earnest believing souls, who have communion with the same living Saviour, who receive with faith and love the same precious sacrifice to be their life. I have myself, with great thankfulness, been privileged to receive the sacrament from the hands of "priests and bishops" in the rural churches and hoary cathedrals of England, and to join in different parts of the world, east and west, with brethren of different names, but all having the same faith in the One Name, "of whom *the whole family* in heaven and earth is named." I am sure the "communion" of spirit was the same in all.

Close behind the churchyard wall I noticed a stone which marked the grave of an old devoted Wesleyan minister. He was a lonely man, without any "kindred dust" to lie with. It had been his wish to be buried here, beside a child whom he had greatly admired and loved. "In memory," so runs the inscription, "of Robert Harrison, missionary of the Lord, who died 29th January, 1832. "I have sinned ; I have repented—I have believed, I love ; and I rest in the hope that by the grace of God I shall rise and reign with my Redeemer throughout eternity." Beyond the churchyard are a few old trees surrounding a field where, according to tradition, once stood the "palace" of Bishop Maclean. The Bishop himself lies under the old archway, near the grave of Flora Cameron. Now, I felt assured that could Wesleyan missionary and Episcopalian bishop have returned to earth, they would neither of them have refused to have remembered Jesus with these Presbyterian worshippers, nor would they have said "this is no true Sacrament."

When the service in the church was ended, I again sat down beside the old cross. The most of the congregation had assembled around the tent in the churchyard near me. The officiating minister was engaged in prayer, in the midst of the living and the dead. The sound of his voice hardly disturbed the profound and solemn silence. One heard with singular distinctness the bleating of the lambs on

the hills, the hum of the passing bee, the lark "singing like an angel in the clouds," with the wild cries coming from the distant sea of bird that flocked over their prey. Suddenly the sound of psalms rose from among the tombs. It was the thanksgiving and parting hymn of praise :—

"Salvation and immortal praise
To our victorious King,
Let heaven and earth, and rocks and seas,
With glad hosannas ring !
To Father, Son, and Holy Ghost,
The God whom we adore,
Be glory as it was and is,
And shall be evermore !"

So sang those humble peasants, ere they parted to their distant homes,—some to meet again in communion here, some to meet at a nobler feast above. So sang they that noble hymn, among the graves of their kindred, with whose voices theirs had often mingled on the same spot, and with whose spirits they still united in remembering and praising the living Saviour.

Some, perhaps, there are who would have despised or pitied that hymn of praise because sung with so little art. But a hymn was once sung long ago, on an evening after the first Lord's Supper, by a few lowly men in an upper chamber of Jerusalem, and the listening angels never heard such music ascending to the ears of God from this jarring and discordant world ! The humble Lord who sang that hymn, and who led that chorus of fishermen, will not despise the praises of peasant saints ; nor will the angels think the songs of the loving heart out of harmony with the noblest chords struck from their own golden harps, or the noblest anthems sung in God's temple in the sky.

As the congregation dispersed, and the shades of evening began to fall, I went to visit the spot where the many members of the old Manse repose. A new grave was there, which had that week been opened. In it was laid the wife of the parish minister. This was the last of many a sad procession which he had followed from the old Manse to that burying-place since boyhood, and of all it was the most grievous to be borne. But of that sweet one so suddenly taken away, or of the bitter sorrow left behind, I dare not here speak.

These "reminiscences" began with death, and with death they end.

As I stood to-day among the graves of the Manse family, and sat in the little garden which its first-born cultivated as a child nearly eighty years ago, and as at midnight I now write these lines where so many beloved faces pass before me, which made other years a continual benediction, I cannot conclude my reminiscences of this dear old parish, which I leave at early dawn, without expressing my deep gratitude to Almighty God for his gift of those who once here lived, but who now live for evermore with Christ—enjoying an eternal Communion Sunday.

AN ORPHAN FAMILY'S CHRISTMAS.

AN ORPHAN FAMILY'S CHRISTMAS.

I.

A BLITHE old Carle is Christmas ;
 You cannot find his fellow !
 Match me the hale red rose in his cheek,
 Or the heart so mild and mellow ;
 The glitter of glory in his eyes,
 While the Wassail-cup he quaffs,
 Or the humour that twinkles about his wrinkles,
 As helplessly he laughs.

And of all High-Tides 'tis Christmas
 Most richly crowns the year ;
 Right through the land there ripples and runs
 Its flood of merry good cheer.
 Troops of friends come sailing down,
 Making a pleasant din ;
 Fling open doors ! set wide your hearts !
 For Christmas coming in.

A happy time is Christmas,
 When we gather all at home,
 And, like the Christmas fairies
 With their pranks, our darlings come ;
 And gentle Sylvan Spirits hid
 In holly-boughs they bring,
 To grow into good Angels,
 And bless our fairy-ring !

A jolly time is Christmas,
 For Plenty's horn is poured ;
 Then flows the honey of the Sun,
 Our fruits all summer hoard !
 Merry men tall march up the hall :
 They bear the meats and drinks ;
 And Wine, with all his hundred eyes,
 Your hearty welcome winks.

A glorious time is Christmas ;
 Young hearts will slip the tether ;
 And lips all merry, beneath the berry,
 Close thrillingly together.

A gracious time ! the poorest Poor
 Will make some little show,
 As ailing infants, seeing the fun,
 Will do their best to crow !

And O the Fire of Christmas,
 That like some Norse God old,
 Mounts his log up-chimney, and roars
 Defiance to the cold !
 He challenges all out-of-doors ;
 He wags his beard of flame ;
 It warms your very heart to see
 Him glory in the game.

A hallowed time is Christmas,
 Of loftiest festival ;
 For, eighteen hundred years ago,
 It opened Heaven to all.

'Twas then our Father, in his arms,
 The Blessed Babe held forth
 To win back wandering human love,
 And lure it up from Earth.

II.

BUT there are nooks in Poverty's dim world,
 Where the high tide of richness never runs.
 No drop of all its wealth for some who sit
 And hear the river running brimming by.
 They see the Christmas shows of wealth and
 warmth,
 At window, whilst at every door shut out !
 The Plenty only flouts their poverty ;
 The music mocks them with its merriment ;
 They look into each passing face to find
 No likeness of their own deep misery.

In one of these dark nooks, at Christmas time,
 An Orphan family, with little fire,
 And only light enough to see the gloom,
 Together sat ; two Sisters, and one Brother ;
 The youngest six years old ; the eldest twelve ;
 An old Grandfather lying ill in bed.
 They knew that Christmas came, but not for them.
 Thus had they often sat o' winter nights,
 Shivering within, as the dark shuddered without,
 And creeping close together for heart-warmth ;
 Poor unfledged nurselings with the Mother gone !
 Knowing a Presence brooded over them,
 In whose chill shadow they were pall'd and hooded ;
 So mournfully it kept the Mother's place !
 Till flesh would creep as tho' 'twere going to leave
 The spirit naked—bare to that cold breath
 Which whispered of the grave—all lidless eye
 To that appalling sight the helpless Dead
 Lie looking on, in their amazement, dumb,
 And petrified to marble !

So they sat ;
 The Shadow in the house and on the heart ;
 The old Clock ticking thro' the lonely room,
 With sounds that made the silence solemn,
 And weird hands pointing to far other times ;
 Talking of merry Christmas coming in ;
 Of visionary futures, and old days,
 With thoughts so far beyond their years ! The life
 In their young eyes gleamed supernaturally,
 Betwixt the fire-shine, and the night-shadow,
 As their old inmates of the heart stole forth
 To walk and talk in the old ways once more.
 And so, like those lorn pretty Babes i' the Wood,
 That Robins buried when the talk was done,
 They told each other stories ; sang their Hymns ;
 By way of bribing the grim Solitude,
 Not to look down upon them quite so dreadful !
 Poor darlings, with no Father, and no Mother.

III.

AH, me, dear Sister, gentle Brother,
 How soft the thought of a Mother lies
 At heart; how sweet in sound 'twill rise;
 And these poor Children had no Mother!

No Mother-arms, in secret nook
 To fold the sufferer to her breast,
 With love that never breaks its rest,
 And Heartsease in her very look.

No Mother-wings to brood above
 The winter nest, and keep them warm;
 And shield them from the pitiless storm,
 With the large shelter of her love.

No Mother's tender touch that brings
 A music from the harp of life,
 Like hovering heaven above the strife
 And precious tremblings of the strings.

No Mother with her lap of love
 Each night for heads that bow in prayer;
 Dear hands that stroke the smiling hair,
 And heart that pleads their cause above.

No Mother whose quick, wistful eye,
 Will see the shadow of Danger near,
 And face, with love that casts out fear,
 The blow that darkly hurtles by.

No Mother's smile ineffable,
 To stir the Angel in the bud,
 Till, into perfect womanhood,
 The Flower blushes at the full.

No Mother! when the Darling One
 Bends with a grief that breaks the flower,
 To loose the sorrow in a shower,
 And lift the sweet face to the sun.

No Mother's kiss of comfort near
 The River that Death overshades;
 Or voice that, when the dim face fades,
 Sounds on with solemn words of cheer.

Ah, me, dear Sister, gentle Brother,
 How soft the thought of a Mother lies
 At heart; how sweet in sound 'twill rise;
 And these poor Children had no Mother.

IV.

YET, God is kind, and wondrous are His ways.
 Affliction's hand, it seem'd, had, at a touch,
 Awoke the Mother in the young Child-heart
 Of little Martha, who had now become
 A wee old woman at twelve years of age,
 With many motherly ways. Yea, God is kind.

The tiny Snowdrop braves the wintry blast;
 He tenderly protects its confidence
 That lifts the venturous head, safe in His hand:
 And Martha, in her loneliness of earth,

And such a dearth of human fellowship,
 And such companionship with solitude,
 Had found a way of looking up to Heaven:
 And oft I think that God in heaven smiled:
 Holding His hand about her little life,
 As one that shields a candle from the wind.
 She had the faith to feel Him nearest, when
 The world is farthest off; and, in this faith,
 Her spirit went on wings, or, hand-in-hand
 With Love that digs below the deepest grave,
 And Hope that builds above the highest stars.
 In the old days before their sorrow came,
 And vast Eternity oped twice to them,
 And each time, following the lightning-flash,
 They groped in darkness for a Parent gone,
 She was the merriest of merry souls;
 The gay heart laughing in her loving eyes;
 The peeping rose-bud crimsoning her cheek;
 There was as quick a spirit in her feet,
 As now had pass'd into her toiling fingers,
 That match the Mother's heart with Father's hands,
 In their unwearied working for the rest.
 In those old days the Father made a song
 About his little maid, and sang it to her.

V.

"It is a merry Maiden,
 With spirits light as air;
 While others go heart-laden,
 And make the most of care,
 She trips along with laughter:
 Old Care may hobble after.

"A sunbeam straight from heaven,
 She dances in my room;
 The gladdest thing e'er given
 To cheer a heart or home,
 My stream of life may darkle;
 She makes the brighter sparkle.

"Her smile is like the Morning
 That turns the mist to pearls;
 All thought of sadness scorning,
 She shakes her sunny curls;
 And, with her merry glancing,
 She sets all hearts a-dancing."

VI.

BUT now the Maid was changèd; she had been
 With Sorrow in its chilly sanctuary;
 Her face was paler, for it had been toucht
 With that white stillness of the winding-sheet,
 And wore a sweet pathetic sanctity.
 Henceforth her life went softly all its days.
 Her beauty was more spiritual; not aged
 Or worn; less colour, but more light.
 It was a brier-rose beauty, tremulous
 With tenderest dew-drop purity of soul.

I've often seen how well their beauty wears
 Whose sufferings are for others, not for Self;

How long they keep a fair unfurrow'd face,
Whose tears are luminous with healing love,
Like pearly cars that bring good angels down
To water and enrich their special flowers !
They do not come from cares that kill the heart ;
They sere no bloom ; they leave no snaky trail.
So Martha kept her face, and might have been
The younger sister of that lily Maid,
The loveable Elaine of Astolat.

VII.

WE write the tale of Heroes in the blood
They shed when dying where they nobly stood ;
And the red letters gloriously bloom
To light the warrior to a loftier doom.
But there are battles where no cheers arise,
And no flags wave before the fading eyes ;
Heroes of whom the wide world never hears ;
Their story only writ in Woman's tears.
Yet that invisible ink shall surely shine
Brightest in Heaven, and verily divine.
And when God closes our world's blotted book,
To cast it in the fire with awful look,
It was so badly written, leaf on leaf
Thus lived might touch the Father's heart with grief.
And this Child-Mother's life may yield one story
That shall be told above, and win eternal glory.

Her busy love and thoughtful care are such,
The others do not miss the Mother much.
From dawn to dark her presence lights the place
With many a gleam of reliquary grace.
Their few poor things in seemly order stand,
Bright as with last touch of the Mother's hand.
The clothes are mended, and the house is kept
Clean as of old ; bravely hath Martha stepped
In Mother's foot-prints ; her wee feet have tried
Their best to track the parent's larger stride.
With household work her little hands are hard,
Her arms are chill'd, her knees with kneeling scarred :
Dusty her hair that might have richly roll'd
With warm Venetian glow of Titian's gold.
Great hearted little woman ! she toils still,
Tho' the Grandfather, lying old and ill,
To her twin troubles adds a heavier third,
She works on without one complaining word.

And once a year she has her holiday ;
One day of airy life in fairyland.
When young leaves open large their palms to catch
The gold and silver of the sun and shower ;
Shy Beauty draweth back her glittering hood,
To peep with her flower face ; the Silver Birk
Shakes out her hair full-length against the blue ;
The Fir puts forth her timid finger-tips,
Like shrinking damsel trying a cold stream
In which she comes to bathe.

In merry green woods
She rambles where the blue wild hyacinths
Smile with their soft dream-light in tender shade :
Above, the lightsome dance of gladsome green ;

Below, the whispering sweetness of the wood ;
And the birds singing, as if in love, all round :
Or, by the Brook that turns some stray sunbeam
To a crooked scimitar of wavy gold,
Then to itself laughs at the elfish work !
With her large eyes, and eager leaping looks,
At Nature's living picture-page she glowers,
And gets some colour in her own pale life.
Then home, with kindled cheek, when Eve's one star
Stands, waiting on the threshold of the night,
In golden expectation of the rest.

VIII.

TO-NIGHT they sit with sadder, lonelier thoughts
Than ever ; closer comes the Wolf of Want,
And darker falls their shadow of Orphanhood.
For now the old man keeps his bed, and seems
Death-stricken, with his face of ghastly grey ;
His life is all in those cold glittering eyes
Watching the least light movement that is made.
The Boy, a blithe and sunny godsend, gay
As a singing fountain springing in their midst,
With loving spirit leaping to the light,
Is down at heart to-night, and sad and still.
While Dora, in whose purple-lighted eyes
There seems the shadow of a rain-cloud near,
With but a faint shine of the cheery heart ;
She longs to fly away and be at rest,
And gives her wishes wings in measured words
That win strange pathos from her sweet young voice.

"Come to the Better Land, where Angels grow ;
They walk in glory, shining as they go !
The King in all His beauty takes the least
To sit beside Him at the eternal feast."
Thus sings the voice that calls me night and day.

"This is a weary world,
Come, come, come away !
Ah, 'tis a dreary world,
Come, come, come away."

"From old heart-ache, and weariness, and pain—
Sorrows that sigh, and hopes that soar in vain—
Come to the Loved and Lost who are now the Blest ;
They dwell in regions of Eternal rest."
Thus sings the voice that calls me night and day.

"This is a weary world,
Come, come, come away !
Ah, 'tis a dreary world,
Come, come, come away."

"Here all things change ; the warmest hearts grow
cold ;
The young head droops and dims its glorious gold ;
Where Love his pillow hath made on Beauty's breast,
The creatures of the Grave will make their nest."
Thus sings the voice that calls me night and day.

"This is a weary world,
Come, come, come away !
Ah, 'tis a dreary world,
Come, come, come away."

"The dear eyes where each morning rose our light,
Soon darken with their last eternal night ;
The heart that beat for us, the hallowed brow
That bowed to bless, are cold and silent now."
Thus sings the voice that calls me night and day.

"This is a weary world,
Come, come, come away !
Ah, 'tis a dreary world,
Come, come, come away."

"Nor fear the Grave, that door of Heaven on Earth ;
All changed and beautiful ye shall come forth :
As, from the cold dark cloud the winter showers
Go underground to dress, and come forth Flowers."
Thus sings the voice that calls me night and day.

"This is a weary world,
Come, come, come away !
Ah, 'tis a dreary world,
Come, come, come away."

"Come to the Better Land, where Angels grow ;
They walk in glory shining as they go !
The King in all His beauty takes the least
To sit beside Him at the eternal feast."
Thus sings the voice that calls me night and day.

"This is a weary world,
Come, come, come away !
Ah, 'tis a dreary world,
Come, come, come away."

IX.

"NAY, Sister," says the cheery Martha, "though
Our lot be sad, your strain's too sorrowful !
We cannot spare you yet. Nor must we stoop
To make our Burthen heavier ; hear me, love.

"How His heart toward Children warms !
How He takes them in His arms !
Little hearts make merry and sing ;
Little voices cheerily ring !
Tho' there's room for all the rest,
Jesus loves the Little Ones best.

"Around his throne we hope, ere long,
To stand and sing a nobler song ;
But, while journeying here below,
Sing we cheerily as we go—
Tho' there's room for all the rest,
Jesus loves the Little Ones best."

Then silent Leonard lifted up his look,
Bright as a Daisy when the dews have dried ;
A sudden thought struck all the sun in his face.
"Martha and Dora, I know what I'll do !
I'll write a Letter to our Saviour ; He
Will help us if we put our trust in Him."
The Sisters smiled upon him thro' their tears.

This was the Letter little Leonard wrote.

"Dear, beautiful Lord Jesus,
Christmas is drawing near ;

Its many shining sights we see,
Its merry sounds we hear.
With presents for good Children,
I know thou art going now,
From house to house, with Christmas trees,
And lights on every bough.

"I pray thee, holy Jesus,
To bring one tree to us,
All aglow with fruits of gold,
And leaves all luminous.
We have no Mother, and, where we live,
No Christmas gifts are given ;
We have no Friends on earth, but thou
Art our good friend in Heaven.

"My Sisters, dear Lord Jesus,
They hide the worst from me ;
But I have ears that sometimes hear,
And eyes that often see.
Poor Martha's cloak is threadbare quite,
Poor Dora's boots are old ;
And neither of them strong like me,
To stand the wintry cold.

"But most of all, Lord Jesus,
Grandfather is so ill ;
'Tis very sad to hear him moan,
And startling when he's still.
And well I know, Lord Jesus,
If thou would'st only come,
He'd look, and rise, and leave his bed,
As Lazarus left his tomb.

"Forget us not, Lord Jesus,
I and my sisters dear ;
We love thee ! when thou wert a Child,
Had we been only near,
And seen thee lying, bonny babe,
In manger or in stall,
Thou should'st have had our Bed, our Home ;
We would have given thee all."

X.

THE Letter sign'd and seal'd, their prayers are said,
And Martha lights the younger Bairns to bed.
With all a Mother's heart she bends above
Their rest, and her eyes fill with Mother's love.
For soon their voices cease ; life fades away
Into its quiet nest, till morrow-day :
As the lake-lilies shut their leaves of light
When down the gloom descends the hush of night,
In fear of what is passing, bow the head
Beneath the water, they shrink down in bed !
But soon the Angel Sleep doth smile all fear
Away with wooing whispers at the ear ;
And they will ope at morn eyes bathed in bliss ;
Their faces fresh from the good Angel's kiss.
But Martha sleeps not yet ; now they are gone,
Brave little woman, she must still work on,
And watch, to-night, for Grandfather is worse,
She thinks, with no one near, save her for nurse.

'Tis very sad to hear a man so old,
Talk of *his* Mother who, beneath the mould,
Has lain an age, and see him weep young tears,
That have to pierce the crust of seventy years.
He turns and turns, incapable of rest,
Toss'd on the billow that heaves in brain and breast;
A life that beats with all too weary a wave
To land him on the other side the Grave!
The old Man mutters in his broken dreams.
"Last night I wander'd in a world of moan;
I saw a white Soul going all alone,
Over the white snows of eternity:
I follow'd far, and follow'd fast to see
The face, and lo, it was my own."

And now he wanders by some weird sea-side.

"The tide is a-making its bonny Death-bed;
The white sea-maidens rise ready to wed;
Nearer and nearer, unveiling their charms,
They toss for their lovers, long, shadowy arms!
Dancing with other-world music and motion;
Brides of dead Sailors; the Beauties of Ocean.

"Wave after wave my worn, old Bark has toss'd;
One moment saved, another it seem'd lost
For ever, still it righted from each blow;
But the great wave is coming on me now!
I see it towering high above the rest;
A world of eyes in its white glittering crest;
See how it climbs, calm in its might, and curls
Ready to clasp me in the wildering whirls.
And when it bursts, in darkness, for last breath,
I shall be fighting with the grappler Death."

He sees an Image of Martha now, with dim
Wet eyes; it moves in brightness far from him.

"I am like the hoary mountain,
Grey with years, and very old;
And your life, a sprightly fountain,
Springs, and leaves me lone and cold;
Dancing, dancing on your way,
Down the vallies warm and gay.

"There you go, Dear, singing, sparkling,
I can see your dawn begin;
While the night, around me darkling,
With its death-dews, shuts me in—
Hear you singing on your way
To the full and perfect day."

The suffering passes into weariness;
The weariness fades into kind content;
Faintly the tired heart flutters into stillness,
And he has done with Age, and Want, and Illness.

Gently he passed; the little Maiden wept;
Sank down o'erwearied by the dead, and slept,
With such a heavenly lustre in her face,
You might have fancied Angels in the place:
Companions thro' the day of our delight,
That watch as wing'd Sentries all the night.

XI.

NEXT day a group of serious silent men
Found a "Dead Letter" with strange life in it;
It was address'd to "Jesus Christ in Heaven."
It call'd up their old hearts into their eyes,
For a lofty meeting in the touch of tears.
At length it reach'd the Lady Marian.
And the Boy's letter had not miss'd its mark.

The child had call'd on Christ, and lo, He came:
In spirit loving, helpful, as of old!
In person of the Lady Marian;
One of those representatives of His
Who help to make the Poor believe in Him:
Believe Him once a dweller on our earth
Because He hath some living likeness yet.

XII.

ALL paint you Lady Marian:
She walks this world, a Shining One!
A Woman with an Angel's face,
Sweet gravity, and tender grace;
And where she treads this earth of ours,
Heaven blossoms into smiling flowers.
This is the Lady Marian.

One of the spirits that walk in white!
Many dumb hearts that sit in night,
Her presence know, just as the Birds
Know Morning, murmuring cheerful words,
Where Life is darkest, she doth move
With influence as of visible Love.
This is the Lady Marian.

One of God's treasurers for the Poor!
She keepeth open heart and door.
That heart a holy well of wealth,
Brimming life-waters, quick with health;
That door an opening you look through,
To find God our side of Heaven's blue.
This is the Lady Marian.

Her coming all your being fills
With a balm-breath from heaven's hills:
And in her face the light is mild
As tho' the heart within her smiled,
And in her heart doth sit and sing
Some spirit of immortal Spring.
This is the Lady Marian.

"We shall not mend the world; we try,
And lo, our work is vain!" they cry.
With her pathetic look, she hears;
You see the wounded soul bleed tears;
But toward the dark she sets her face,
And calmly keeps her onward pace.
This is the Lady Marian.

True picture of the Master of old!
Touches of likeness manifold!

The human sweetness in His face ;
 Large love that would a world embrace ;
 His heavenly pity in her eyes,
 And all the soul of sacrifice.

This is the Lady Marian.

XIII.

FROM out the blackness that took shape in death,
 The Lady Marian came, on Christmas Eve,
 With sweetest sylvan tenderness of soul ;
 Her starry smile so radiant through their night,
 Her hands brimful of help, as was her heart
 With yearnings to arise and go when first
 She read the letter little Leonard sent
 In such confiding faith and trustful hope.
 And Martha knows that her worst days are done ;
 In Dora's rich sad eyes a merry light
 Soon dances ! Lady Marian will be
 A Mother, sent of God, to all the three.

A trembling prayer had shook the Tree of Life,
 And golden out of heaven the fruitage falls
 Into the childrens' lap direct from God.

XIV.

THE Master call'd a little Child,
 And placed it in their midst, to show
 The clearest mirror men could know,
 In which the face of Faith e'er smiled :

A little Child with eye unworn,
 Whose heart goes straightway for the light,
 Like buds that put forth all their might
 To start up heavenward soon as born :

A little Child, that even in play,
 The nearest path to heaven walks ;
 And in its innocent brightness talks
 With God in the old wond'rous way :

Friends of a failing faith, when your
 Lighthouses of eternal life
 Hold trembling lamps across the strife,
 And darken, darken hour by hour :

While higher climb the waves that quench :
 And on the rocks the breakers roar ;
 And Light in Heaven opes no new door,
 And higher climb the waves that drench,

When timid souls that sail the sea
 Of Time are fearful lest you band
 Of Cloud should not be solid Land,
 When they step in Eternity,—

And faint hearts flutter 'twixt a nest
 That is not seal'd to wind and wet,
 And one that is not ready yet,
 With wandering wings, and find no rest :

Our Heaven-scalers in the dust
 Sit, with their hopes dead or discrown'd ;
 Their splendid dreams all shiver'd round,
 And broken every reed of trust :

The Sheep are scatter'd, sore distress'd ;
 Their Shepherd miss with many alarms ;
 While the young Lambs can feel His arms
 Enfold them safely to His breast :

I'll sit me down, no more beguiled
 By those who are too serpent-wise ;
 And seek my Saviour through the eyes
 And pure heart of a little Child.

Christ, give me but this Little-one's grace,
 With faith to feel in darkest night,
 How the good Father's heart of light
 With that mild radiance fills Thy face.

GERALD MASSEY.

TWO EXAMPLES OF THE MANY-SIDEDNESS OF THE BIBLE.

[THE SECOND EXAMPLE—THE LOCUST.]

LET us now turn to the insect world, and, adopting the same plan as before, to avoid any difficulty which might be experienced in selection, take the first specific example that occurs in the Scriptures. This happens to be the locust, a subject which furnishes ample scope for the utmost illustration our limits will afford. There are at least nine words employed in the Bible to designate the locust, each of which serves to indicate some special property or characteristic.

The one most frequently used (*arbel*), is derived from a word signifying to "multiply," or "be numerous," and may be called, for the sake of distinction, the *swarming* locust. The Midianites and others (already referred to) who came up

against Israel in the days of Gideon, are said to have been "like grasshoppers for multitude" (Judges vi. 5, vii. 12). In Jer. xlvi. 23 we read, "They are more than the grasshoppers, and innumerable ;" so also, in Nah. iii. 15, "Make thyself many as the locust." In each of these passages, the original is the same word, and refers to this species of locust. The Arabs are accustomed in the same manner to compare large armies to locusts. On the other hand, it is interesting to note the animal employed in the ancient Egyptian hieroglyphics to express the same idea—"numerous as the lizards"—a comparison quite as appropriate, in that land of reptiles, as the phrase "numerous as the locust" is in the mouth of a Syrian or an Arab.

I need not say that this species was conspicuous among the agents of the divine vengeance in the eighth plague of Egypt; and most vividly does the narrative of that fearful pest pourtray the significance of the word by which they are denoted: "They shall cover the face of the earth, that one cannot be able to see the earth . . . And they shall fill thy houses, and the houses of all thy servants, and the houses of all the Egyptians; which neither thy fathers, nor thy father's fathers have seen, since the day that they were upon the earth, unto this day . . . And the locusts went up over all the land of Egypt, and rested in all the coasts of Egypt: very grievous were they; before them there were no such locusts as they, neither after them shall be such" (Exodus x. 5, 6, 14). It is, in fact, the incalculable immensity of their numbers which makes them so terrible a scourge. "The quantity of these insects (writes the infidel Volney, who so often bears his unconscious testimony to the truth of that Book which he reviled) is incredible to all who have not themselves witnessed their astonishing numbers; the whole earth is covered with them for the space of several leagues." Let us compare with this the evidence of another eye-witness, Gordon Cumming, the lion-hunter of South Africa:—"On the following day I had the pleasure of beholding the first flight of locusts that I had seen since my arrival in the colony. We were standing in the middle of a plain of unlimited length, and about five miles across, when I observed them advancing. On they came like a snow-storm, flying slow and steady, about a hundred yards from the ground. I stood looking at them until the air was darkened with their masses, while the plain on which we stood became densely covered with them. Far as my eye could reach, east, west, north, and south, they stretched in one unbroken cloud; and more than an hour elapsed before their devastating legions had swept by." One flight of locusts, recorded in history, was calculated to have extended over 500 miles. Another is said, on respectable authority, to have literally covered the whole surface of the ground for an area of nearly 2000 square miles.

II. But this was not the only kind of locust employed by the Almighty to scourge the Egyptians. A second species (*chastil*) occurs, along with the first, in that instructive summary of early Israelitish history contained in the 78th Psalm, and is described by a word which signifies "to consume." Though Moses does not mention this variety by name, his narrative unmistakably indicates the presence of a species which may emphatically be designated the *consuming* locust: "They did eat every herb of the land, and all the fruit of the trees which the hail had left; and there remained not any green thing in the trees, or in the herbs of the field, through all the land of Egypt" (Exodus x. 15). That this is no exaggeration, is evident from the concurrent testimony of observant eye-witnesses. "The Tartars themselves (says

Volney) are a less destructive enemy than these little animals. One would imagine that fire had followed their progress. Wherever their myriads spread, the verdure of the country disappears: trees and plants stripped of their leaves, and reduced to their naked boughs and stems, cause the dreary image of winter to succeed in an instant to the rich scenery of the spring." An old Rabbinical writer relates that in his youth "there came a prodigious swarm of locusts, which seized upon all the fields near the city where he dwelt, and devoured all the growing herbage; and that they are so dreaded by the Jews, that when they make their appearance, they immediately sound the trumpet for a fast." What a commentary is this on the language with which the prophet Joel ushers in his magnificent description of a locust visitation—"Blow ye the trumpet in Zion, and sound an alarm in My holy mountain: let all the inhabitants of the land tremble, for the day of the Lord cometh, for it is nigh at hand . . . A fire devoureth before them, and behind them a flame burneth; the land is as the garden of Eden before them, and behind them a desolate wilderness; yea, and nothing shall escape them" (ii. 1, 3). The consuming locust is also mentioned (as well as the swarming species) in Solomon's prayer at the dedication of the temple (1 Kings viii. 37; 2 Chron. vi. 28); in Isaiah xxxiii. 4, where it is compared to the spoiling of an invader; and in Joel i. 4, ii. 25, where it constitutes one of the four divisions of "God's great army" sent against His apostate people. In every case it is improperly translated "caterpillars" in the authorised version.

III. A third species (*yelek*) is enumerated among the devastators of Egypt, and, judging from the meaning of the term, must have been remarkably *rapid* in its movements. It is associated with the first kind in another historical Psalm (cv. 34); so that there were at least three species employed in executing the divine judgments on that devoted country. This enables us the better to understand what was the miraculous element in this and other plagues of Egypt. It was not the mere fact of such calamities; for Egypt has always been, and still is, subject to these visitations. An English lady, writing from Cairo a few years ago, says:—"It is a singular and sad fact, that during our few months' sojourn here, this country has been visited by three of its peculiar plagues—murrain, boils and blains (or common pestilence), and locusts. The first has destroyed cattle to an almost incredible amount; the second has not been so severe as it usually is; but the locusts are still fearfully eating the fruits of the ground." The miracle of the locusts, therefore, consisted in the appearance of these insects precisely at the time and in the manner appointed; in the intensely aggravated character of the pest; in the combination of several distinct kinds, some of them, it would seem, previously unknown in the country; and last, but not least, in the unexampled rapidity of their

movements. This quality, so characteristic of the species now under consideration, has often been observed by travellers and residents in the East. An old chronicler, speaking of a swarm of locusts "of an unheard-of size," which committed great ravages in the ninth century, remarks that "when they alighted, they in one hour consumed every thing that was green upon a hundred acres or more." A French traveller, who had frequently encountered them, declares that "fire itself eats not so fast; nor is there a vestige of vegetation to be found, when they again take their flight, and go elsewhere to produce like disasters." A missionary in Syria speaks of the "wonderful expedition" with which they "devour every green thing," and adds, "A large vineyard and garden adjoining mine was green as a meadow in the morning, but long before night it was naked and bare, as a newly ploughed field or dusty road."

The *swift* locust is also mentioned in Jer. li. 14, being further defined in the 27th verse as "rough" or "bristly"—in allusion to the ancient accoutrement of war-horses, bristling with sheaves of arrows. This description applies to several varieties of the locust, which are furnished with spines and bristles, and, coupled with the other property of rapid motion, formed a very apt emblem of the thronging hosts of Cyrus, consisting in great part of horse, whose triumph over Babylon is here predicted. In the passages already mentioned it is translated, like the previous kind, "caterpillar;" but in Joel (i. 4, ii. 25) it is rendered "cankerworm," as it is likewise in Nahum iii. 15, 16, where its rapid movements are briefly but significantly referred to in connection with Nineveh: "It shall eat thee up like the swift locust. . . . it spoileth, and fleeth (or rather, flieth) away."

IV. I have mentioned three kinds of locusts as having taken part in the Egyptian plague. A fourth, fifth, and sixth are enumerated in Lev. xi. 22, where they are erroneously translated "the bald locust, the beetle, and the grasshopper." The fourth (*sal'am*), from its etymology, evidently refers to a species of locust remarkable for its voracity. This is another characteristic of these animals which has been observed by travellers and recorded by historians. The province of Nejed, in Arabia, is sometimes overwhelmed to such a degree, that, having destroyed the harvest, they penetrate by thousands into the private dwellings, and devour whatever they can find—even the leather of the water-vessels. One of the most grievous calamities ever inflicted by the locust, happened to the regions of Africa in the time of the Romans, and fell with peculiar weight on those parts which were subject to their empire. Scarcely recovered from the miseries of the last Punic war, Africa was doomed to suffer, about 123 B.C., another desolation, as terrible as it was unprecedented. An immense number of locusts covered the whole country, consumed every plant and every blade of grass in the

field, without sparing the roots, and also the leaves of the trees, with the tendrils upon which they grew. These being exhausted, they penetrated with their teeth the bark, however bitter, and even ate away the dry and solid timber. It has been remarked that locusts seem to devour not so much from a ravenous appetite, as from a rage for destroying. Destruction, therefore, and not food, is the chief impulse of their devastations; they are in fact omnivorous. The most poisonous plants are indifferent to them; they will prey even upon the crowfoot, whose causticity burns the very hides of beasts. They simply consume *everything*, without predilection, vegetable matter, linen, woollen, silk, leather, &c.; and Pliny does not exaggerate when he says "and even the doors of houses," for they have been known to consume the very varnish of furniture. I may add, as a fitting climax, that more than one writer has recorded of certain locusts, that when nothing else remains to be eaten, they proceed to devour one another. These must undoubtedly have belonged to the species we have been considering.

V. A fifth kind of locust (*chargol*), mentioned in the Bible, derives its name from the remarkable power of *springing* or *leaping* with which it is endowed. It is also referred to in Job (xxxix. 20) in the wonderful description of the war-horse. This is one of the many passages in the book of Job in which our version is not very happy. Instead of "Canst thou make him afraid as a grasshopper?"—it should be, "Dost thou cause him to leap as a locust?"—i.e., "is he indebted to thee for that bounding elastic step in which he resembles the springing locust?" It is not uninteresting to remark, that it is a current expression among the Arabs to this day, that a prancing horse "acts the locust." A recent traveller has observed great differences in the leaping powers of distinct species. "The black and brown locusts (he says) have a short, heavy, jerking spring of six or eight inches; unlike the yellow-green locust, which springs, and flies, and flits 100 yards or more at a time."

VI. Another species (*chagab*) are expressively called the "darkeners," from the circumstance of their flying in such dense masses as to hide the sun. Joel alludes to this characteristic in that sublime description of divine judgments to which I have already had occasion to refer: "A day of darkness and of gloominess, a day of clouds and of thick darkness, as the morning spread upon the mountains. . . . The sun and the moon shall be dark, and the stars shall withdraw their shining" (ii. 2, 10). Here, again, every shadow of this sombre picture is reproduced in the descriptions of intelligent observers. Dr. Kitto says "he has himself seen the mid-day light darkened to evening shades as their myriads passed, layer above layer, over head, for more than half-an-hour. He has seen the ground covered with them for miles around, without a visible interstice." A French traveller remarks, "Their approach darkens the horizon; and

so enormous is their multitude, it hides the light of the sun." Mr. Darwin, the well-known naturalist, bears similar testimony: "The insects overtook us (he says) as they were travelling northward, by the aid of a light breeze, at the rate, I should suppose, of ten or fifteen miles an hour. The main body filled the air from a height of twenty feet, to that, as it appeared, of two or three thousand above the ground. . . . The sky seen through the advanced guard appeared like a mezzotinto engraving, but the main body was impervious to sight. . . . When they alighted they were more numerous than the leaves in a field, and changed the green into a reddish colour." The following quaint but graphic description is from the pen of an old traveller in Abyssinia, which country, together with Arabia, has the unenviable distinction of being the cradle of these terrible creatures:—"While we abode in the town of Barua, we saw the sign of the sun and the shadow of the earth [this is explained by what the writer had before said, that the approach of the locusts was known the day beforehand by the yellow tinge of the heavens, "and the ground becometh yellow through the light which reverberateth from their wings, whereupon the people became suddenly as dead men, saying; 'We are undone, for the locusts come!'" We see, then, what the writer means when he says, "We saw the sign of the sun and the shadow of the earth], which was all yellow, wherewith the people were half dead for sorrow. The next day the number of these vermin which came was incredible, which, to our judgment, covered four-and-twenty miles in compass, according to what we were informed afterwards." In a journey subsequently, he writes: "We travelled five days through places wholly waste and destroyed, wherein millet had been sown, which had stalks as great as those we set in our vineyards, and we saw them all broken and beaten down, as if a tempest had been there; and this the locusts did. The trees were without leaves, and the bark of them was all devoured; and no grass was there to be seen, for they had eaten up all things; and if we had not been warned and advised to carry provision with us, we and our cattle had perished. This country was all covered with locusts. The number of them was so great, that I shall not speak of it, because I shall not be believed. . . . We found the ways full of men and women, travelling on foot, with their children in their arms and upon their heads, going into other countries where they might find food; which was a pitiful thing to behold." Well might the prophet Joel exclaim, "Before their face the people shall be much pained; all faces shall gather blackness" (ii. 6).

This species, although thus formidable in its collective capacity, appears to have been the most insignificant of all the locust tribe in point of size and strength. It is mentioned no less than three times in words of evident disparagement. The spies, in reference to the sons of Anak, remarked, "We were in our own sight as 'grasshoppers,' and so we

were in their sight" (Numbers xiii. 33). This comparison the Hebrews had probably borrowed from their Egyptian taskmasters; for we find Sesostris, in the hieroglyphic inscriptions which record his career of conquest in Palestine and elsewhere, boasting that he "went through their valleys like a young man among the grasshoppers." This same species is alluded to in that sublime passage of Isaiah (xl. 22), "It is He that sitteth upon the circle of the earth, and the inhabitants thereof are as grasshoppers." Once more, in Solomon's description of the infirmities of old age, the "grasshopper" is said to be a "burden" (Eccles. xii. 5). That true locusts (though of a small species) are intended in all these passages, is clear from God's answer to Solomon's prayer, where our translators, feeling the manifest impropriety of rendering the term (as they do elsewhere) by "grasshoppers," rightly translate "locusts:" "If I command locusts to devour the land" (2 Chron. vii. 13).

VII. The seventh name for the locust (*gob*) denotes, not a distinct species of these insects, as is the case with the preceding words, but the first stages of their existence, when, after having been hatched in the early spring, they "creep out" of the ground, and, while yet unprovided with wings, commence their devastating career. Their habits at this stage are minutely depicted by the sacred writers. Isaiah speaks of them as "running about" in their insatiable eagerness (xxxiii. 4);—the same term as that employed by Joel, "they shall run to and fro" (ii. 9). Amos tells us that they are "formed"—i.e., the eggs are hatched—"in the beginning of the shooting up of the latter growth after the king's mowings" (vii. 1). This last word is an amusing example of the ignorance of Eastern usages occasionally betrayed by our translators. Finding the word used to denote the shearing of sheep, they think themselves justified in employing it to signify the shaving of the head, and the mowing of grass; although the two latter processes essentially differ from the former one, which bears a much closer analogy to the double action of the upper and lower teeth in eating, which is really the meaning here. Thus we read in our version that Job, on receiving the dreadful tidings of his successive losses, "arose, and rent his mantle, and shaved his head" (i. 20); as though the same deliberate operation were intended as is described, by a very different word, in the case of Samson and Delilah. It simply means that he plucked off his hair, as any Oriental may be seen to do at the present day, when under the influence of deep sorrow. Equally unhappy is our version when it deals with this word in relation to grass: "He shall come down like rain upon the mown grass" (Psalm lxxii. 6); and here, "after the king's mowings." Unfortunately for this rendering, we know, on the most unexceptionable authority, that hay is not made in Syria, whose inhabitants (says Burckhardt), "ignorant of the advantage of feeding their cattle with hay, suffer the superfluous grass to wither away

and in summer and winter feed them on cut straw" ("Syria," p. 246). So that, instead of "mown grass" or "mowings," we should understand pastures which have been eaten up by the cattle, and are left to grow again. Now we are distinctly told by a writer who lived many years in Palestine, that March is the only month during which the horses and other cattle are out at grass. Consequently "the beginning of the shooting up of the latter growth," spoken of by Amos as the time when the young locusts "creep out" of the ground, would synchronise with the end of March or beginning of April. "In six or eight weeks," writes Dr. Thomson, "the very dust seems to waken into life, and, moulded into maggots, begins to creep. Soon this animated earth becomes minute grasshoppers; and, creeping and jumping all in the same general direction, they begin their destructive march. After a few days their voracious appetite palls; they become sluggish, and fast, like the silkworms, for a short time. Like the silkworms, too, they repeat this fasting four times before they have completed their transmigrations, and are accommodated with wings." In exact agreement with these statements, we find Dr. Robinson, on the 4th of June, "falling in with several small swarms of young locusts, the first we had seen (he remarks) during our journey. They were quite green, with wings just sprouting; they entirely resembled grasshoppers, and hopped briskly away from our path." Curiously enough, at this very spot (south of Hebron), young locusts were encountered, nine years after, by another traveller, as early as the end of March, which must have been immediately after they had emerged from their eggs. It is clear that this particular spot had some special advantages which thus led to its choice by the locusts, on at least two occasions, as a nursery for their young progeny. And here we are met by a remarkable coincidence, which, while incidentally illustrating the accuracy and consistency of Holy Scripture, in its minutest details, shows that even zoology is sometimes available as an important element in topographical investigations. For in this very neighbourhood there stood of old one of the cities of the hill country of Judah, which was called *Arab*, signifying "a locust" (Joshua xv. 52). Let us now follow these young locusts in their subsequent movements. Their track will soon be only too perceptible. Just a fortnight after Dr. Robinson's first encounter with them on the southern hills of Judæa, he again fell in with them far to the north. In the vicinity of Nazareth (he says) "we came upon a spot of ground which had been burnt over; and learned this had been done in order to destroy the young locusts, which were lying dead in great numbers. We had seen them occasionally for several days; and had passed some fields of cotton, which had been greatly injured by them. At Jenin we were told that the governor, who had extensive fields upon the plain, fearing for his cotton and other crops, had mustered the peasants of the neighbouring villages, and destroyed the

locusts by burning and otherwise. But every few miles, as we travelled across the plain, the ground was covered by the young swarms. They were green, and yet too young to fly; but just at the right age to eat. The environs of Nazareth, for some distance around, were covered with them, devouring vineyards, gardens, and everything green." But we have still to speak of them when arrived at the perfection of their noxious powers. "For several days previous to the 1st of June (writes a resident on Mount Lebanon), we had heard that millions of young locusts were on their march up the valley toward our village, and at length I was told that they had reached the lower part of it. Summoning all the people I could collect, we went to meet and attack them, hoping to stop their progress altogether, or, at least, to turn aside their line of march. Never shall I lose the impression produced by the first view of them. I had often passed through clouds of *flying* locusts, and they always struck my imagination with a sort of vague terror; but these we now confronted were without wings, and about the size of full-grown grasshoppers, which they closely resembled in appearance and behaviour. But their number was astounding; the whole face of the mountain was black with them. On they came like a living deluge. We dug trenches, and kindled fires, and beat and burned to death heaps upon heaps; but the effort was utterly useless. Wave after wave *rolled* up the mountain side, and poured over rocks, walls, ditches and hedges—those behind covering up and bridging over the masses already killed. After a long and fatiguing contest, I descended the mountain to examine the *depth* of the column; but I could not see to the end of it. Wearied with my hard walk over this living deluge, I returned, and gave over the vain effort to stop its progress. By the next morning, the head of the column had reached my garden, and, having eight or ten people, I resolved to rescue at least my vegetables and flowers. During this day we succeeded, by fire and by beating them off the walls with bushes and branches, in keeping our little garden tolerably clear of them; but it was perfectly appalling to watch this animated river as it flowed up the road, and descended the hill above my house. At length, worn out with incessant skirmishing, I gave up the battle. Carrying the flower-pots into the house, and covering up what else I could, I surrendered the remainder to the conquerors. For four days they continued to pass on toward the east, and finally only a few stragglers of the mighty host were left behind."

We see, then, an increased significance in the language of Nahum (iii. 17), which is very feebly rendered in the authorised version "great grasshoppers." The original is simply a *repetition* of the particular word we are now considering, the first time in the singular, the second, in the plural number, and is intended to convey the idea of immense numbers. The second of the travellers already referred to as having seen these young

locusts south of Hebron, thus testifies as to this point: "The myriads which swarmed for miles, were beyond belief. They lay, like clusters of bees, on the grass, covering it for large spaces; and they filled the air, for about a foot above the ground, by jumping as we passed. I may safely say I never saw so many living creatures in the same space before." What Nahum proceeds to say respecting these as well as the adult locusts, in this same verse, is very curious, and has only recently been made intelligible, from the simple circumstance that no qualified observer had previously been in a position to witness the phenomenon. The prophet says that the locusts "camp in the hedges [literally it is "stone walls," but our translators, not thinking such a thing probable, I suppose, rendered it loosely, "hedges"], in the cold day, but when the sun ariseth they flee away, and their place is not known where they are" (Nahum iii. 17). Dr. Thomson tells us that "in the evening, as soon as the air became cool, they literally camped in the hedges and loose stone walls, covering them over like a swarm of bees settled on a bush. There they remained until the next day's sun waxed warm, when they again commenced their march. One of the days on which they were passing was quite cool, and the locusts scarcely moved at all from their camps, and multitudes remained actually stationary until the next morning. Those that did march crept along very heavily, as if cramped and stiff; but in a hot day they hurried forward in a very earnest, lively manner. It is an aggravation of the calamity if the weather continues cool; for then they prolong their stay, and do far more damage. When the hot sun beats powerfully upon them, they literally 'flee away, and the place is not known where they are.' This is true even in regard to those which have not wings. One wonders where they have all gone to. Yesterday, the whole earth seemed to be creeping and jumping,—to-day, you see not a locust. And the disappearance of the clouds of flying locusts is still more sudden and complete." To this testimony of a twenty years' resident in Syria I would just add a single remark of Gordon Cumming's as to the effect of changes of temperature upon them: and his opinion is the more valuable, as coming from one who was far more intent on shooting lions and elephants than illustrating an obscure passage in the book of Nahum, of the very existence of which he was probably ignorant. "The cold frosty night (he says) had rendered them unable to take wing until the sun should restore their powers."

VIII. The eighth word (*gazam*) does not appear to denote a distinct species, but the *adult* growth of the insect whose earlier and yet wingless state was indicated by the previous term. They are called by the Arabs the *flying* locusts, in contradistinction to the others, which are named the *devouring* locusts. "The flying locusts (says Burckhardt) are much less dreaded than the others, because they feed only upon the leaves of trees and vegetables,

sparing the wheat and barley. They attack only the produce of the gardener, or the wild herbs of the desert." This writer also refers to some extensive *olive plantations*, the fruit and foliage of which had, for five successive summers, been devoured by locusts who alight upon them in preference to all others. The same locusts are evidently referred to by another traveller, as being very destructive to the almonds, olives, and cypresses. Dr. Kitto clearly indicates the distinction between the two, and the reason why the one is so much more dreaded than the other: "Those locusts (he observes) which come in the first instance from the east are not considered so formidable, because they only fix upon trees, and do not destroy the grain. But they give birth to a new brood, and it is the young locusts, before they are sufficiently grown to fly away, which consume the crops." With the strictest propriety, therefore, the full grown locust (now under consideration), whose ravages are first in order of time, is also the first in Joel's enumeration, answering to the "palmerworm" of our version: "That which the 'palmerworm' hath left hath the locust eaten" (i. 4). The word by which they are designated in the original is from the same root as that to which I have already referred, as signifying primarily to "shear," or "clip." There is an evident allusion here to the four teeth of the full-grown locust, two in each jaw, which traverse each other like scissors, being eminently calculated, from their mechanism, to gripe or cut. With this we may compare the bold imagery of the prophet Joel (also employed in the Revelation), "Whose teeth are the teeth of a lion, and he hath the cheek-teeth of a great lion" (Joel i. 6, cf. Rev. ix. 8). Naturalists tell us that the jaws of locusts are so strong that they are able to inflict a severe wound when incautiously handled. Even the inoffensive grasshopper (to which our translators do such injustice by ascribing to it the misdoings of its more guilty cousins) will nevertheless, under similar treatment, bite sharply; and our common house-cricket (which belongs to the same numerous family) is able, with its powerful teeth and jaws, to cut away the mortar so effectually, that it sometimes eats completely through the wall, opening communication between two or more houses. This *cutting* or *gnawing* locust, as it may be termed, is also mentioned by the prophet Amos, who distinctly recognises the fact that the locust in this particular stage confines its ravages to trees and fruit: "When your gardens and your vineyards and your fig-trees and your olive-trees increased, the 'palmerworm' devoured them" (Amos iv. 9). We cannot but admire the appropriateness with which creatures that subsist on trees and their produce are thus armed with teeth and jaws peculiarly fitted for their special office; as well as the striking accuracy with which Joel immediately subjoins to his description of their teeth, already noticed, these words: "He hath laid my vine waste, and barked my fig-tree: he hath made it clean bare, and cast it away; the

branches thereof are made white" (i. 7). An eye-witness of their ravages observes, "These locusts at once strip the vines of every leaf and cluster of grapes, and of every green twig. I also saw many large fig-orchards 'clean bare,' not a leaf remaining; and as the bark of the fig-tree is of a silvery whiteness, whole orchards, thus rifled of their green veils, spread abroad their branches, 'made white,' in melancholy nakedness to the burning sun."

IX. The ninth and last word in the Scripture nomenclature of the locust (*tseltsal* or *tsaltsal*) refers to, and indeed is an imitation of, the shrill sounds which several varieties of this insect are capable of uttering, and of which the *cicada* or tree-cricket of the classical writers, and the grasshopper of our own meadows, are familiar examples. It occurs with certainty only once, viz., Deut. xxviii.; where Moses, predicting the consequences of national apostasy, first says, "Thou shalt carry much seed out into the field, and shalt gather but little in; for the swarming locust shall consume it" (ver. 38);—and then, four verses later, he adds, "All thy trees and fruit of thy land shall the shrill locust consume" (ver. 42). I have said that the name of this locust (*tsaltsal*) is evidently derived from the peculiar cry it utters. Now it so happens, that there is a Hebrew word of similar sound which signifies "to pray;" one kind of locust, moreover, is known among naturalists (and is found in Palestine) under the name "*Mantis religiosa*" or "*Prier-Dieu*," from the position in which it raises its front legs, resembling that of supplication. We can easily understand, then, how this species of locust, with its devotional attitude, and ever-recurring note, which might well be interpreted to mean "pray, pray" (thus adding precept to example), should be deemed a very model of piety, and, as such, be held by the Turks in great respect. Burckhardt's description of a locust which he saw near the source of the Jordan, clearly identifies it with the one we are now considering, while, at the same time, it concurs with preceding remarks in proving that the prediction of Moses has been literally fulfilled. "I found," he says, "a species of locust with six very long legs, and a slender body of about four inches in length. My guide told me that this insect was called 'Salli al Nabi,' i.e., 'Pray to the prophet.'" It is amusing to find the Mohammedans, even in such a case as this, true to their proselytising instincts, and enlisting an insect as a preacher of their faith.

A few general remarks are necessary in order to give completeness to this analysis of the locust of Scripture: let us gather up the fragments, that nothing be lost which may tend to throw a single ray of light on the marvellous accuracy of the Bible, even in matters pertaining to the natural world.

1. Observe the scientific exactness with which Moses describes this insect. Our version, that speaks of "every flying-creeping thing which have legs above their feet," and of "fowls going upon all

four" (Leviticus xi. 20, 21), is certainly not all that can be desired, either for grammar or sense. Moses really defines the locust as a "winged creeper, that goes upon four feet, having joints at the upper part of its hind legs, with which to leap upon the earth" (Leviticus xi. 21). Aristotle assigns the same number of feet to locusts, carefully distinguishing "the parts used in leaping."

2. David says, "I am tossed up and down as the locust" (Psalm cix. 23). An observant traveller noticed that "in springing they usually alight in a contrary direction." And again, "Its lighting down seemed remarkably *uncertain*. At each spring, one knew not exactly whither it would go, or in what way and posture it would alight again." And with regard to the flying locusts, another says, "I have had frequent opportunities of observing how these squadrons are tossed up and down, and whirled round and round by the ever-varying currents of the mountain winds." They have evidently little if any control over their movements, but are the sport of every wind. It will be remembered that when it was determined in the divine counsels that locusts should devastate Egypt, "The Lord brought an east wind upon the land all that day, and all that night; and when it was morning the east wind brought the locusts" (Exodus x. 13). And after they had fulfilled their terrible commission, the same agency was employed for their removal: "And the Lord turned a mighty strong west wind, which took away the locusts, and cast them into the Red Sea; there remained not one locust in all the coasts of Egypt" (ver. 19).

3. This very absence of self-control serves to illustrate another Scriptural notice respecting them which has only recently been verified by the best entomologists. Standard writers like Hartwell Horne and Mason Harris have represented them as living under a form of government resembling that of bees, and having "a leader, whose motions they invariably observe." That blind, unreasoning impulse, which urges them forward over every kind of obstacle, impelling them to climb the highest houses, when the slightest deviation might have spared them the trouble, which does but furnish another illustration of the inspired writer:—"They shall march every one on his ways, and they shall not break their ranks: neither shall one thrust another; they shall walk every one in his path" (Joel i. 7, 8)—and which yet at the same time makes them obey the caprice of every gust of wind, prepares us for the announcement that theirs is a *republican*, not a monarchical, form of government. I have said that this is now the opinion of the best writers on entomology—such as Kirby and Spence, Denham, and Mouffet. What says the wise man in the book of Proverbs? "*The locusts have no king, yet go they forth all of them by bands*" (xxx. 27)—influenced, doubtless, by some common instinct to play their part in the great drama of the universe. I may mention, in passing, that this "going forth in bands" or "divisions" is, like every other parti-

cular, verified by the observation of travellers. "Those which I saw (writes Burckhardt) fly in separate bodies, and do not spread over a whole district."

4. Many writers mention the curious resemblance which the head of the locust bears to that of the horse; whence the ancient Greeks call it "the horse of the earth," the modern Italians, "the little horse," and the Arabs, "the soldier's horse." This last comparison seems to include something more than the mere shape of the head; and when we read Salt's description of the Abyssinian locust: "the head and shoulders . . . armed with a thick shell or case, that of the head of a leaden grey colour . . . the body cased with seven strong plates on the back, folding over one another;" and when we remember that one genus takes its name from the spine or spike which projects from the middle of the breast; we seem to have no faint or imaginary picture of the ancient war-horse, armed with projecting spikes and thick plates of solid metal. "The appearance of them (says Joel) is as the appearance of horses; and as horsemen, so shall they run . . . and when they fall upon the sword they shall not be wounded" (ii. 4, 8). Compare with this the language of the Apocalypse: "And the shapes of the locusts were like unto horses prepared unto battle . . . and they had breastplates as it were breastplates of iron" (Rev. ix. 7, 9).

5. It is curious to observe the *impressions* produced on different writers by the *noise* of these insects, individually so insignificant, yet in the aggregate so imposing. One compares it to "an army foraging in secret;" another to "a flame driven by the wind;" a third to "the rattling of hailstones;" a fourth to "the rushing of a torrent;" a fifth to "the noise of a great cataract;" a sixth describes it, less elegantly, but very significantly, as "a sort of cracking noise;" a seventh says, "it may be heard at six miles' distance;" while to an eighth, it seemed like "a strong breeze passing through the rigging of a ship;" and a ninth declares that "when first rising from the earth, or turning upon the wing," he "cannot compare their noise to anything more appropriate than the roaring of the sea when agitated by a storm." What a flood of light do these varying yet concurrent testimonies pour upon the language of inspiration! "Like the noise of chariots on the tops of mountains shall they leap, like the noise of a flame of fire that devoureth the stubble" writes Joel (i. 5). "And the sound of their wings (says St. John) was as the sound of chariots of many horses running to battle" (Rev. ix. 9).

6. We have repeatedly had occasion to observe, during this investigation, how truth underlies even the boldest figure of Oriental poetry. This is the case with another part of Joel's imagery; as we see from Dr. Thomson's account of his "first introduction to the far-famed locusts of the East." "Noticing (he says) something peculiar on the hill-side, I rode up to examine it, when, to my amazement, the whole surface became agitated, and

began to roll down the declivity. My horse was so terrified that I was obliged to dismount." It is not all hyperbole, then, when the prophet writes, "The earth shall quake before them; the heavens shall tremble (Joel ii. 10).

7. Another example is afforded in the book of Revelation, in regard to the *smoke*, as of a furnace, out of which the locusts are said to have emerged upon the earth (ix. 2, 3.) Mr. Darwin, in his "Researches," says, "We observed to the southward a ragged cloud of a dark reddish-brown colour. For some time, we had no doubt but that it was thick *smoke* proceeding from some great fire on the plains. Soon afterwards we found it was a flight of locusts."

8. Our last topic relates to the locust as an article of food. The Hebrews were expressly permitted to eat it, no less than four varieties of it being specified (Leviticus xi. 21, 22) that there might be no room for misapprehension or uncertainty on the subject. It is strange that there could ever have been two opinions respecting the food of John the Baptist in the wilderness. There can be no reasonable doubt but that "his meat was (*literally*) locusts and wild honey" (Matthew iii. 4). Many scrupulous Mohamædians of the present day, who hold even fish to be unclean food, do not hesitate to partake of locusts. The Bedawin of Arabia are in the constant habit of eating them, and there are regular locust shops in the towns, where they are sold by measure: but in Egypt they are only used as food by the poorest beggars, and in Syria by the Arabs of the extreme frontiers. This difference of usage in countries which profess the religion of Mohammed, may be accounted for from the fact that his own opinions and practice, in this respect, had not been uniform. In his earlier days, when engaged in his military campaigns, he was accustomed to eat locusts like those around him; but latterly he abstained from doing so, on the ground that they were "armies sent by God against those with whom He was angry." He, however, left it an open question with his followers; some of whom have adopted his earlier, others, his more matured convictions. Any diversity of usage, therefore, among the modern inhabitants of Palestine is no argument whatever against our understanding the sacred narrative in its strictly literal sense. I will only add, that there are several modes of preparing locusts for food, and that, whether boiled, roasted, or fried (salt being largely used in each case), and afterwards eaten with honey and butter, they are pronounced by Europeans to be most wholesome and palatable, and not unlike our freshwater crayfish, prawns, or shrimps.

The inference I would draw from the whole is this, that where difficulties appear insurmountable, in prosecuting such inquiries as these which have now engaged our attention, they are to be attributed, not to some mistake on the part of the sacred writer, but to some lack of information on our part, to the absence of some link, which has

only to be sought for, or, it may be, waited for patiently and reverently, and in due time the lack shall be supplied, the missing link shall be added to the chain of convincing evidence, and the truth shall come forth in all the grandeur of its power and persuasiveness.

An illustration of my meaning will form a suitable conclusion to these very imperfect remarks. Probably many of my readers have been, like myself, not a little puzzled by a passage in the 68th Psalm (ver. 13), which is generally admitted to be full of obscurity: "Though ye have lien among the pots, yet shall ye be as the wings of a dove covered with silver, and her feathers with yellow gold." Happily, in this case, the difficulty has just been solved, and I cannot do better than quote the exact words of the lady to whom we are indebted for the discovery of the solution. Speaking of the flat house-tops of the Eastern city in which she was sojourning, and especially of that belonging to a neighbour called Hasna, she says, "The roofs are usually in a great state of litter, and were it not that Hasna gets a palm branch and makes a clearance once in a

while, her roof would assuredly give way under the accumulation of rubbish. One thing never seemed cleared away, however, and that was the heap of old broken pitchers, sherds, and pots, that in these and similar houses are piled up in some corner; and there is a curious observation to be made in connection with this. A little before sunset, numbers of pigeons suddenly emerge from behind the pitchers and other rubbish, where they had been sleeping in the heat of the day, or pecking about to find food. They dart upwards, and career through the air in large circles, their outspread wings catching the bright glow of the sun's slanting rays, so that they really resemble shining yellow gold; then, as they wheel round and are seen against the light, they appear as if turned into molten silver, most of them being pure white or else very light-coloured. This may seem fanciful, but the effect of *light* in those regions is difficult to describe to those who have not seen it; and evening after evening we watched the circling flight of doves, and always observed the same appearance."

EDWARD WILTON.

WATCHING.

WATCHING when the morning breaketh
O'er the mountains cold and grey;
Watching when the evening fadeth
In the last long flush of day;
Watching when the stars look gladly
Over all the moonlit sea,
When the night is silent round us—
Love, for thee.

Holy memories steal o'er me
Of the far far distant past;
Fairest visions float before me,
All too bright, too sweet to last.
Watching in the midnight dreary,
Longing thy dear face to see;
Watching till the heart grows weary,
Love, for thee.

Ceaselessly against the window
Beats the dismal plashing rain,
Telling stories weird and wretched
Of what ne'er can come again;
And the night-lamp burneth faintly
On the table, cheerlessly,
And my heart is weary, watching,
Love, for thee.

Watching for the lightest footstep
While my soul is deeply stirr'd
By a murmur 'neath the casement,
By a softly spoken word;

And I gaze into the darkness,
Rain and darkness, dreamily
Watching, longing, longing, watching,
Love, for thee.

Oh! the day succeeds the night-time
With its floods of rosy light;
Following the gloomy winter
Comes the summer warm and bright.
The light comes to the flowers,
And the leaflet to the tree,
And all is gay in spring-time,
Love, but me.

The birds will mate them gladly
When the year is in its prime;
The flowers will smell the sweetest
In the happy summer-time.
I, sad, alone, will watch it—
The wide, the cruel sea—
While its billows bear thee farther,
Love, from me.

Watching all the happy summer,
When the days are long and bright;
Watching while the autumn noontide
Fadeth slowly into night;
Watching through the dreary winter,
When the spring's first buds I see;
Watching till the heart grows weary,
Love, for thee.

THE TWO GENERALS.

A CHRISTMAS STORY OF THE WAR IN KENTUCKY.

CHRISTMAS of 1860 is now three years past, and the civil war which was then being commenced in America is still raging without any apparent sign of an end. The prophets of that time who prophesied the worst never foretold anything so black as this. On that Christmas day Major Anderson, who then held the command of the forts in Charleston harbour on the part of the United States Government, removed his men and stores from Fort Moultrie to Fort Sumter, thinking that he might hold the one though not both against any attack from the people of Charleston, whose State, that of South Carolina, had seceded five days previously. That was in truth the beginning of the war, though at that time Mr. Lincoln was not yet President. He became so on the 4th March, 1861, and on the 15th of April following Fort Sumter was evacuated by Major Anderson, on the part of the United States Government, under fire from the people of Charleston. So little bloody, however, was that affair that no one was killed in the assault;—though one poor fellow perished in the saluting fire with which the retreating officer was complimented as he retired with the so-called honours of war. During the three years that have since passed, the combatants have better learned the use of their weapons of war. No one can now laugh at them for bloodless battles. Never have the sides of any stream been so bathed in blood as have the shores of those Virginian rivers whose names have lately become familiar to us. None of those old death-doing generals of Europe whom we have learned to hate for the cold-blooded energy of their trade,—Tilly, Gustavus Adolphus, Frederic, or Napoleon;—none of these ever left so many carcasses to the kites as have the Johnsons, Jacksons, and Hookers of the American armies, who come and go so fast, that they are almost forgotten before the armies they have led have melted into clay.

Of all the states of the old Union, Virginia has probably suffered the most, but Kentucky has least deserved the suffering which has fallen to her lot. In Kentucky the war has raged hither and thither, every town having been subject to inroads from either army. But she would have been loyal to the Union if she could;—nay, on the whole she has been loyal. She would have thrown off the plague chain of slavery if the prurient virtue of New England would have allowed her to do so by her own means. But virtuous New England was too proud of her own virtue to be content that the work of abolition should thus pass from her hands. Kentucky, when the war was beginning, desired nothing but to go on in her own course. She wished for no sudden change. She grew no cotton. She produced corn and meat, and was a land flowing

with milk and honey. Her slaves were not as the slaves of the Southern States. They were few in number; tolerated for a time because their manumission was understood to be of all questions the most difficult;—rarely or never sold from the estates to which they belonged. When the war broke out Kentucky said that she would be neutral. Neutral,—and she lying on the front lines of the contest! Such neutrality was impossible to her,—impossible to any of her children!

Near to the little State capital of Frankfort there lived at that Christmas time of 1860 an old man, Major Reckenthorpe by name, whose life had been marked by many circumstances which had made him well known throughout Kentucky. He had sat for nearly thirty years in the Congress of the United States at Washington, representing his own State sometimes as senator, and sometimes in the lower house. Though called a major he was by profession a lawyer, and as such had lived successfully. Time had been when friends had thought it possible that he might fill the President's chair; but his name had been too much and too long in men's mouths for that. Who had heard of Lincoln, Pierce, or Polk, two years before they were named as candidates for the Presidency? But Major Reckenthorpe had been known and talked of in Washington longer perhaps than any other living politician.

Upon the whole he had been a good man, serving his country as best he knew how, and adhering honestly to his own political convictions. He had been and now was a slaveowner, but had voted in the Congress of his own State for the abolition of slavery in Kentucky. He had been a passionate man, and had lived not without the stain of blood on his hands, for duels had been familiar to him. But he had lived in a time and in a country in which it had been hardly possible for a leading public man not to be familiar with a pistol. He had been known as one whom no man could attack with impunity; but he had also been known as one who would not willingly attack any one. Now at the time of which I am writing, he was old,—almost on the shelf,—past his duellings and his strong short invectives on the floors of Congress; but he was a man whom no age could tame, and still he was ever talking, thinking, and planning for the political wellbeing of his State.

In person he was tall, still upright, stiff and almost ungainly in his gait, with eager grey eyes which the waters of age could not dim, with short, thick, grizzled hair which age had hardly thinned, but which ever looked rough and uncombed, with large hands, which he stretched out with extended fingers when he spoke vehemently;—and of the Major it may be said that he always spoke with

vehemence. But now he was slow in his steps, and infirm on his legs. He suffered from rheumatism, sciatica, and other maladies of the old, which no energy of his own could repress. In these days he was a stern, unhappy, all but broken-hearted old man; for he saw that the work of his life had been wasted.

And he had another grief which at this Christmas of 1861 had already become terrible to him, and which afterwards bowed him with sorrow to the ground. He had two sons, both of whom were then at home with him, having come together under the family roof tree that they might discuss with their father the political position of their country, and especially the position of Kentucky. South Carolina had already seceded, and other Slave States were talking of secession. What should Kentucky do? So the Major's sons, young men of eight-and-twenty and five-and-twenty, met together at their father's house;—they met and quarrelled deeply, as their father had well known would be the case.

The eldest of these sons was at that time the owner of the slaves and land which his father had formerly possessed and farmed. He was a Southern gentleman, living on the produce of slave labour, and as such had learned to vindicate, if not love, that social system which has produced as its result the war which is still raging at this Christmas of 1863. To him this matter of secession or non-secession was of vital import. He was prepared to declare that the wealth of the South was derived from its agriculture, and that its agriculture could only be supported by its slaves. He went further than this, and declared also that no further league was possible between a Southern gentleman and a Puritan from New England. His father, he said, was an old man, and might be excused by reason of his age from any active part in the contest that was coming. But for himself there could be but one duty;—that of supporting the new Confederacy, to which he would belong, with all his strength and with whatever wealth was his own.

The second son had been educated at Westpoint, the great military school of the old United States, and was now an officer in the National army. Not on that account need it be supposed that he would, as a matter of course, join himself to the Northern side in the war,—to the side which, as being in possession of the capital and the old Government establishments, might claim to possess a right to his military services. A large proportion of the officers in the pay of the United States leagued themselves with Secession,—and it is difficult to see why such an act would be more disgraceful in them than in others. But with Frank Reckenthorpe such was not the case. He declared that he would be loyal to the Government which he served; and in saying so, seemed to imply that the want of such loyalty in any other person, soldier or non-soldier, would be disgraceful, as in his opinion it would have been disgraceful in himself.

"I can understand your feeling," said his

brother, who was known as Tom Reckenthorpe, "on the assumption that you think more of being a soldier than of being a man; but not otherwise."

"Even if I were no soldier, I would not be a rebel," said Frank.

"How a man can be a rebel for sticking to his own country, I cannot understand," said Tom.

"Your own country!" said Frank. "Is it to be Kentucky or South Carolina? And is it to be a republic or a monarchy;—or shall we hear of Emperor Davis? You already belong to the greatest nation on the earth, and you are preparing yourself to belong to the least;—that is, if you should be successful. Luckily for yourself, you have no chance of success."

"At any rate I will do my best to fight for it."

"Nonsense, Tom," said the old man, who was sitting by.

"It is no nonsense, sir. A man can fight without having been at Westpoint. Whether he can do so after having his spirit drilled and drummed out of him there, I don't know."

"Tom!" said the old man.

"Don't mind him, father," said the younger.

"His appetite for fighting will soon be over. Even yet I doubt whether we shall ever see a regiment in arms sent from the Southern States against the Union."

"Do you?" said Tom. "If you stick to your colours, as you say you will, your doubts will soon be set at rest. And I'll tell you what, if your regiment is brought into the field, I trust that I may find myself opposite to it. You have chosen to forget that we are brothers, and you shall find that I can forget it also."

"Tom!" said the father, "you should not say such words as that; at any rate, in my presence."

"It is true, sir," said he. "A man who speaks as he speaks does not belong to Kentucky, and can be no brother of mine. If I were to meet him face to face, I would as soon shoot him as another;—sooner, because he is a renegade."

"You are very wicked,—very wicked," said the old man, rising from his chair,—"very wicked." And then, leaning on his stick, he left the room.

"Indeed, what he says is true," said a sweet, soft voice from a sofa in the far corner of the room. "Tom, you are very wicked to speak to your brother thus. Would you take on yourself the part of Cain?"

"He is more silly than wicked, Ada," said the soldier. "He will have no chance of shooting me, or of seeing me shot. He may succeed in getting himself locked up as a rebel; but I doubt whether he'll ever go beyond that."

"If I ever find myself opposite to you with a pistol in my grasp," said the elder brother, "may my right hand —"

But his voice was stopped, and the imprecation remained unuttered. The girl who had spoken rushed from her seat and put her hand before his mouth. "Tom," she said, "I will never speak to

you again if you utter such an oath,—never.” And her eyes flashed fire at his and made him dumb.

Ada Forster called Mrs. Reckenthorpe her aunt, but the connection between them was not so near as that of aunt and niece. Ada nevertheless lived with the Reckenthorpes, and had done so for the last two years. She was an orphan, and on the death of her father had followed her father's sister-in-law from Maine down to Kentucky;—for Mrs. Reckenthorpe had come from that farthest and most straitlaced State of the Union, in which people bind themselves by law to drink neither beer, wine, nor spirits, and all go to bed at nine o'clock. But Ada Forster was an heiress, and therefore it was thought well by the elder Reckenthorpes that she should marry one of their sons. Ada Forster was also a beauty, with slim, tall form, very pleasant to the eye; with bright, speaking eyes and glossy hair; with ivory teeth of the whitest,—only to be seen now and then when a smile could be won from her; and therefore such a match was thought desirable also by the younger Reckenthorpes. But unfortunately it had been thought desirable by each of them, whereas the father and mother had intended Ada for the soldier.

I have not space in this short story to tell how progress had been made in the troubles of this love affair. So it was now, that Ada had consented to become the wife of the elder brother,—of Tom Reckenthorpe, with his home among the slaves,—although she, with all her New England feelings strong about her, hated slavery and all its adjuncts. But when has Love stayed to be guided by any such consideration as that? Tom Reckenthorpe was a handsome, high-spirited, intelligent man. So was his brother Frank. But Tom Reckenthorpe could be soft to a woman, and in that, I think, had he found the means of his success. Frank Reckenthorpe was never soft.

Frank had gone angrily from home when, some three months since, Ada had told him her determination. His brother had been then absent, and they had not met till this their Christmas meeting. Now it had been understood between them, by the intervention of their mother, that they would say nothing to each other as to Ada Forster. The elder had, of course, no cause for saying aught, and Frank was too proud to wish to speak on such a matter before his successful rival. But Frank had not given up the battle. When Ada had made her speech to him, he had told her that he would not take it as conclusive. “The whole tenor of Tom's life,” he had said to her, “must be distasteful to you. It is impossible that you should live as the wife of a slaveowner.”

“In a few years there will be no slaves in Kentucky,” she had answered.

“Wait till then,” he had answered; “and I also will wait.” And so he had left her, resolving that he would bide his time. He thought that the right still remained to him of seeking Ada's hand, although she had told him that she loved his

brother. “I know that such a marriage would make each of them miserable,” he said to himself over and over again. And now that these terrible times had come upon them, and that he was going one way with the Union, while his brother was going the other way with Secession, he felt more strongly than ever that he might still be successful. The political predilections of American women are as strong as those of American men. And Frank Reckenthorpe knew that all Ada's feelings were as strongly in favour of the Union as his own. Had not she been born and bred in Maine? Was she not ever keen for total abolition, till even the old Major, with all his gallantry for womanhood and all his love for the young girl who had come to his house in his old age, would be driven occasionally by stress of feeling to rebuke her? Frank Reckenthorpe was patient, hopeful, and firm. The time must come when Ada would learn that she could not be a fit wife for his brother. The time had, he thought, perhaps come already; and so he spoke to her a word or two on the evening of that day on which she had laid her hand upon his brother's mouth.

“Ada,” he had said, “there are bad times coming to us.”

“Good times, I hope,” she had answered. “No one could expect that the thing could be done without some struggle. When the struggle has passed we shall say that good times have come.” The thing of which she spoke was that little thing of which she was ever thinking, the enfranchisement of four millions of slaves.

“I fear that there will be bad times first. Of course I am thinking of you now.”

“Bad or good they will not be worse to me than to others.”

“They would be very bad to you if this State were to secede, and if you were to join your lot to my brother's. In the first place, all your fortune would be lost to him and to you.”

“I do not see that; but of course I will caution him that it may be so. If it alters his views, I shall hold him free to act as he chooses.”

“But, Ada, should it not alter yours?”

“What,—because of my money?—or because Tom could not afford to marry a girl without a fortune?”

“I did not mean that. He might decide that for himself. But your marriage with him under such circumstances as those which he now contemplates, would be as though you married a Spaniard or a Greek adventurer. You would be without country, without home, without fortune, and without standing-ground in the world. Look you, Ada, before you answer. I frankly own that I tell you this because I want you to be my wife, and not his.”

“Never, Frank; I shall never be your wife,—whether I marry him or no.”

“All I ask of you now is to pause. This is no time for marrying or for giving in marriage.”

“There I agree with you; but as my word is

pledged to him, I shall let him be my adviser in that."

Late on that same night Ada saw her betrothed and bade him adieu. She bade him adieu with many tears, for he came to tell her that he intended to leave Frankfort very early on the following morning. "My staying here now is out of the question," said he. "I am resolved to secede, whatever the State may do. My father is resolved against secession. It is necessary, therefore, that we should part. I have already left my father and mother, and now I have come to say good-bye to you."

"And your brother, Tom?"

"I shall not see my brother again."

"And is that well after such words as you have spoken to each other? Perhaps it may be that you will never see him again. Do you remember what you threatened?"

"I do remember what I threatened."

"And did you mean it?"

"No; of course I did not mean it. You, Ada, have heard me speak many angry words, but I do not think that you have known me do many angry things."

"Never one, Tom:—never. See him then before you go, and tell him so."

"No,—he is hard as iron, and would take any such telling from me amiss. He must go his way, and I mine."

"But though you differ as men, Tom, you need not hate each other as brothers."

"It will be better that we should not meet again. The truth is, Ada, that he always despises any one who does not think as he thinks. If I offered him my hand he would take it, but while doing so he would let me know that he thought me a fool. Then I should be angry, and threaten him again, and things would be worse. You must not quarrel with me, Ada, if I say that he has all the faults of a Yankee."

"And the virtues too, sir, while you have all the faults of a Southern —. But, Tom, as you are going from us, I will not scold you. I have, too, a word of business to say to you."

"And what's the word of business, dear?" said Tom, getting nearer to her as a lover should do, and taking her hand in his.

"It is this. You and those who think like you are dividing yourselves from your country. As to whether that be right or wrong, I will say nothing now,—nor will I say anything as to your chance of success. But I am told that those who go with the South will not be able to hold property in the North."

"Did Frank tell you that?"

"Never mind who told me, Tom."

"And is that to make a difference between you and me?"

"That is just the question that I am asking you. Only you ask me with a reproach in your tone, and I ask you with none in mine. Till we have mutually

agreed to break our engagement you shall be my adviser. If you think it better that it should be broken,—better for your own interests, be man enough to say so."

But Tom Reckenthorpe either did not think so, or else he was not man enough to speak his thoughts. Instead of doing so he took the girl in his arms and kissed her, and swore that whether with fortune or no fortune she should be his, and his only. But still he had to go,—to go now, within an hour or two of the very moment at which they were speaking. They must part, and before parting must make some mutual promise as to their future meeting. Marriage now, as things stood at this Christmas time, could not be thought of even by Tom Reckenthorpe. At last he promised that if he were then alive he would be with her again, at the old family house at Frankfort, on the next coming Christmas day. So he went, and as he let himself out of the old house Ada, with her eyes full of tears, took herself up to her bedroom.

During the year that followed—the year 1861—the American war progressed only as a school for fighting. The most memorable action was that of Bull's Run, in which both sides ran away, not from individual cowardice in either set of men, but from that feeling of panic which is engendered by ignorance and inexperience. Men saw waggons rushing hither and thither, and thought that all was lost. After that the year was passed in drilling and in camp-making,—in the making of soldiers, of gunpowder, and of caunons. But of all the articles of war made in that year, the article that seemed easiest of fabrication was a general officer. Generals were made with the greatest rapidity, owing their promotion much more frequently to local interest than to military success. Such a State sent such and such regiments, and therefore must be rewarded by having such and such generals nominated from among its citizens. The wonder perhaps is that with armies so formed battles should have been fought so well.

Before the end of 1861 both Major Reckenthorpe's sons had become general officers. That Frank, the soldier, should have been so promoted was, at such a period as this, nothing strange. Though a young man he had been soldier, or learning the trade of a soldier, for more than ten years, and such service as that might well be counted for much in the sudden construction of an army intended to number seven hundred thousand troops, and which at one time did contain all those soldiers. Frank too was a clever fellow, who knew his business, and there were many generals made in those days who understood less of their work than he did. As much could not be said for Tom's quick military advancement. But this could be said for them in the South,—that unless they did make their generals in this way, they would hardly have any generals at all, and General Reckenthorpe, as he so quickly became,—General Tom as they used to call him in Kentucky,—recommended himself specially to the Confede-

rate leaders by the warmth and eagerness with which he had come among them. The name of the old man so well known throughout the Union, who had ever loved the South without hating the North, would have been a tower of strength to them. Having him they would have thought that they might have carried the State of Kentucky into open secession. He was now worn out and old, and could not be expected to take upon his shoulders the crushing burden of a new contest. But his eldest son had come among them, eagerly, with his whole heart; and so they made him a general.

The poor old man was in part proud of this and in part grieved. "I have a son a general in each army," he said to a stranger who came to his house in those days; "but what strength is there in a fagot when it is separated? of what use is a house that is divided against itself? The boys would kill each other if they met."

"It is very sad," said the stranger.

"Sad!" said the old man. "It is as though the Devil were let loose upon the earth;—and so he is; so he is."

The family came to understand that General Tom was with the Confederate army which was confronting the Federal army of the Potomac and defending Richmond; whereas it was well known that Frank was in Kentucky with the army on the Green River, which was hoping to make its way into Tennessee, and which did so early in the following year. It must be understood that Kentucky, though a slave state, had never seceded, and that therefore it was divided off from the Southern States, such as Tennessee and that part of Virginia which had seceded, by a cordon of pickets; so that there was no coming up from the Confederate army to Frankfort in Kentucky. There could, at any rate, be no easy or safe coming up for such a one as General Tom, seeing that being a soldier he would be regarded as a spy, and certainly treated as a prisoner if found within the Northern lines. Nevertheless, General as he was, he kept his engagement with Ada, and made his way into the gardens of his father's house on the night of Christmas-eve. And Ada was the first who knew that he was there. Her ear first caught the sound of his footsteps, and her hand raised for him the latch of the garden door.

"Oh, Tom, it is not you?"

"But it is though, Ada, my darling!" Then there was a little pause in his speech. "Did I not tell you that I should see you to-day?"

"Hush. Do you know who is here? Your brother came across to us from the Green River yesterday."

"The mischief he did. Then I shall never find my way back again. If you knew what I have gone through for this!"

Ada immediately stepped out through the door and on to the snow, standing close up against him as she whispered to him, "I don't think Frank would betray you," she said. "I don't think he would."

"I doubt him,—doubt him hugely. But I suppose I must trust him. I got through the pickets close to Cumberland Gap, and I left my horse at Stoneley's, half way between this and Lexington. I cannot go back to-night now that I have come so far!"

"Wait, Tom; wait a minute, and I will go in and tell your mother. But you must be hungry. Shall I bring you food?"

"Hungry enough, but I will not eat my father's victuals out here in the snow."

"Wait a moment, dearest, till I speak to my aunt." Then Ada slipped back into the house and soon managed to get Mrs. Reckenthorpe away from the room in which the Major and his second son were sitting. "Tom is here," she said, "in the garden. He has encountered all this danger to pay us a visit because it is Christmas. Oh, aunt, what are we to do? He says that Frank would certainly give him up!"

Mrs. Reckenthorpe was nearly twenty years younger than her husband, but even with this advantage on her side Ada's tidings were almost too much for her. She, however, at last managed to consult the Major, and he resolved upon appealing to the generosity of his younger son. By this time the Confederate General was warming himself in the kitchen, having declared that his brother might do as he pleased;—he would not skulk away from his father's house in the night.

"Frank," said the father, as his younger son sat silently thinking of what had been told him, "it cannot be your duty to be false to your father in his own house."

"It is not always easy, sir, for a man to see what is his duty. I wish that either he or I had not come here."

"But he is here; and you, his brother, would not take advantage of his coming to his father's house?" said the old man.

"Do you remember, sir, how he told me last year that if ever he met me on the field he would shoot me like a dog?"

"But, Frank, you know that he is the last man in the world to carry out such a threat. Now he has come here with great danger."

"And I have come with none; but I do not see that that makes any difference."

"He has put up with it all that he may see the girl he loves."

"Psha!" said Frank, rising up from his chair. "When a man has work to do, he is a fool to give way to play. The girl he loves! Does he not know that it is impossible that she should ever marry him? Father, I ought to insist that he should leave this house as a prisoner. I know that that would be my duty."

"You would have, sir, to bear my curse."

"I should not the less have done my duty. But, father, independently of your threat, I will neglect that duty. I cannot bring myself to break your heart and my mother's. But I will not see him.

Good-bye, sir. I will go up to the hotel, and will leave the place before daybreak to-morrow."

After some few further words Frank Reckenthorpe left the house without encountering his brother. He also had not seen Ada Forster since that former Christmas when they had all been together, and he had now left his camp and come across from the army much more with the view of inducing her to acknowledge the hopelessness of her engagement with his brother, than from any domestic idea of passing his Christmas at home. He was a man who would not have interfered with his brother's prospects, as regarded either love or money, if he had thought that in doing so he would in truth have injured his brother. He was a hard man, but one not wilfully unjust. He had satisfied himself that a marriage between Ada and his brother must, if it were practicable, be ruinous to both of them. If this were so, would not it be better for all parties that there should be another arrangement made? North and South were as far divided now as the two poles. All Ada's hopes and feelings were with the North. Could he allow her to be taken as a bride among perishing slaves and ruined whites?

But when the moment for his sudden departure came he knew that it would be better that he should go without seeing her. His brother Tom had made his way to her through cold, and wet, and hunger, and through infinite perils of a kind sterner even than these. Her heart now would be full of softness towards him. So Frank Reckenthorpe left the house without seeing any one but his mother. Ada, as the front door closed behind him, was still standing close by her lover over the kitchen fire, while the slaves of the family, with whom Master Tom had always been the favourite, were administering to his little comforts.

Of course General Tom was a hero in the house for the few days that he remained there, and of course the step he had taken was the very one to strengthen for him the affection of the girl whom he had come to see. North and South were even more bitterly divided now than they had been when the former parting had taken place. There were fewer hopes of reconciliation; more positive certainty of war to the knife; and they who adhered strongly to either side, and those who did not adhere strongly to either side were very few,—held their opinions now with more acrimony than they had then done. The peculiar bitterness of civil war, which adds personal hatred to national enmity, had come upon the minds of the people. And here, in Kentucky, on the borders of the contest, members of the same household were, in many cases, at war with each other. Ada Forster and her aunt were passionately Northern, while the feelings of the old man had gradually turned themselves to that division in the nation to which he naturally belonged. For months past the matter on which they were all thinking,—the subject which filled their minds morning, noon, and night,—was banished from

their lips because it could not be discussed without the bitterness of hostility. But, nevertheless, there was no word of bitterness between Tom Reckenthorpe and Ada Forster. While these few short days lasted it was all love. Where is the woman whom one touch of romance will not soften, though she be ever so impervious to argument? Tom could sit up-stairs with his mother and his betrothed, and tell them stories of the gallantry of the South,—of the sacrifices women were making, and of the deeds men were doing,—and they would listen and smile and caress his hand, and all for a while would be pleasant; while the old Major did not dare to speak before them of his Southern hopes. But down in the parlour, during the two or three long nights which General Tom passed in Frankfort, open secession was discussed between the two men. The old man now had given away altogether. The Yankees, he said, were too bitter for him. "I wish I had died first; that is all," he said. "I wish I had died first. Life is wretched now to a man who can do nothing." His son tried to comfort him, saying that secession would certainly be accomplished in twelve months, and that every Slave State would certainly be included in the Southern Confederacy. But the Major shook his head. Though he hated the political bitterness of the men whom he called Puritans and Yankees, he knew their strength and acknowledged their power. "Nothing good can come in my time," he said; "not in my time,—not in my time."

In the middle of the fourth night General Tom took his departure. An old slave arrived with his horse a little before midnight, and he started on his journey. "Whatever turns up, Ada," he said, "you will be true to me."

"I will; though you are a rebel, all the same for that."

"So was Washington."

"Washington made a nation;—you are destroying one."

"We are making another, dear; that's all. But I won't talk secesh to you out here in the cold. Go in, and be good to my father; and remember this, Ada, I'll be here again next Christmas-eve, if I'm alive."

So he went, and made his journey back to his own camp in safety. He slept at a friend's house during the following day, and on the next night again made his way through the Northern lines back into Virginia. Even at that time there was considerable danger in doing this, although the frontier to be guarded was so extensive. This arose chiefly from the paucity of roads, and the impossibility of getting across the country where no roads existed. But General Tom got safely back to Richmond, and no doubt found that the tedium of his military life had been greatly relieved by his excursion.

Then, after that, came a year of fighting,—and there has since come another year of fighting; of such fighting that we, hearing the accounts from day to day, have hitherto failed to recognise its

extent and import. Every now and then we have even spoken of the inaction of this side or of that, as though the drawn battles which have lasted for days, in which men have perished by tens of thousands, could be renewed as might the old German battles, in which an Austrian general would be ever retreating with infinite skill and military efficacy. For constancy, for blood, for hard determination to win at any cost of life or material, history has known no such battles as these. That the South have fought the best as regards skill no man can doubt. As regards pluck and resolution there has not been a pin's choice between them. They have both fought as Englishmen fight when they are equally in earnest. As regards result, it has been almost altogether in favour of the North, because they have so vast a superiority in numbers and material.

General Tom Reckenthorpe remained during the year in Virginia, and was attached to that corps of General Lee's army which was commanded by Stonewall Jackson. It was not probable, therefore, that he would be left without active employment. During the whole year he was fighting, assisting in the wonderful raids that were made by that man whose loss was worse to the Confederates than the loss of Vicksburg or of New Orleans. And General Tom gained for himself mark, name, and glory,—but it was the glory of a soldier rather than of a general. No one looked upon him as the future commander of an army; but men said that if there was a rapid stroke to be stricken, under orders from some more thoughtful head, General Tom was the hand to strike it. Thus he went on making wonderful rides by night, appearing like a warrior ghost leading warrior ghosts in some quiet valley of the Federals, seizing supplies and cutting off cattle, till his name came to be great in the State of Kentucky, and Ada Forster, Yaukee though she was, was proud of her rebel lover.

And Frank Reckenthorpe, the other general, made progress also, though it was progress of a different kind. Men did not talk of him so much as they did of Tom; but the War Office at Washington knew that he was useful,—and used him. He remained for a long time attached to the western army, having been removed from Kentucky to St. Louis, in Missouri, and was there when his brother last heard of him. "I am fighting day and night," he once said to one who was with him from his own State, "and, as far as I can learn, Frank is writing day and night. Upon my word, I think that I have the best of it."

It was but a couple of days after this, the time then being about the latter end of September, that he found himself on horseback at the head of three regiments of cavalry near the foot of one of those valleys which lead up into the Blue Mountain ridge of Virginia. He was about six miles in advance of Jackson's army, and had pushed forward with the view of intercepting certain Federal supplies which he and others had hoped might be within his reach.

He had expected that there would be fighting, but he had hardly expected so much fighting as came that day in his way. He got no supplies. Indeed, he got nothing but blows, and though on that day the Confederates would not admit that they had been worsted, neither could they claim to have done more than hold their own. But General Tom's fighting was in that day brought to an end.

It must be understood that there was no great battle fought on this occasion. General Reckenthorpe, with about 1500 troopers, had found himself suddenly compelled to attack about double that number of Federal infantry. He did so once, and then a second time, but on each occasion without breaking the lines to which he was opposed; and towards the close of the day he found himself unhorsed, but still unwounded, with no weapon in his hand but his pistol, immediately surrounded by about a dozen of his own men, but so far in advance of the body of his troops as to make it almost impossible that he should find his way back to them. As the smoke cleared away and he could look about him, he saw that he was close to an uneven, irregular line of Federal soldiers. But there was still a chance, and he had turned for a rush, with his pistol ready for use in his hand, when he found himself confronted by a Federal officer. The pistol was already raised, and his finger was on the trigger, when he saw that the man before him was his brother.

"Your time has come," said Frank, standing his ground very calmly. He was quite unarmed, and had been separated from his men and ridden over; but hitherto he had not been hurt.

"Frank!" said Tom, dropping his pistol arm, "is that you?"

"And you are not going to do it, then?" said Frank.

"Do what?" said Tom, whose calmness was altogether gone. But he had forgotten that threat as soon as it had been uttered, and did not even know to what his brother was alluding.

But Tom Reckenthorpe, in his confusion at meeting his brother, had lost whatever chance there remained to him of escaping. He stood for a moment or two, looking at Frank, and wondering at the coincidence which had brought them together, before he turned to run. Then it was too late. In the hurry and scurry of the affair all but two of his own men had left him, and he saw that a rush of Federal soldiers was coming up around him. Nevertheless he resolved to start for a run. "Give me a chance, Frank," he said, and prepared to run. But as he went,—or rather before he had left the ground on which he was standing before his brother, a shot struck him, and he was disabled. In a minute he was as though he were stunned; then he smiled faintly, and slowly sunk upon the ground. "It's all up, Frank," he said, "and you are in at the death."

Frank Reckenthorpe was soon kneeling beside his brother amidst a crowd of his own men. "Spurrell,"

he said to a young officer who was close to him, "it is my own brother."—"What, General Tom?" said Spurrell. "Not dangerously, I hope?"

By this time the wounded man had been able, as it were, to feel himself and to ascertain the amount of the damage done him. "It's my right leg," he said; "just on the knee. If you'll believe me, Frank, I thought it was my heart at first. I don't think much of the wound, but I suppose you won't let me go?"

Of course they wouldn't let him go, and indeed if they had been minded so to do, he could not have gone. The wound was not fatal, as he had at first thought; but neither was it a matter of little consequence as he afterwards asserted. His fighting was over, unless he could fight with a leg amputated between the knee and the hip.

Before nightfall General Tom found himself in his brother's quarters, a prisoner on parole, with his leg all but condemned by the surgeon. The third day after that saw the leg amputated. For three weeks the two brothers remained together, and after that the elder was taken to Washington, —or rather to Alexandria, on the other side of the Potomac, as a prisoner, there to wait his chance of exchange. At first the intercourse between the two brothers was cold, guarded, and uncomfortable; but after a while it became more kindly than it had been for many a day. Whether it were cold or kindly, its nature, we may be sure, was such as the younger brother made it. Tom was ready enough to forget all personal animosity as soon as his brother would himself be willing to do so; though he was willing enough also to quarrel,—to quarrel bitterly as ever,—if Frank should give him occasion. As to that threat of the pistol, it had passed away from Tom Reckenthorpe, as all his angry words passed from him. It was clean forgotten. It was not simply that he had not wished to kill his brother, but that such a deed was impossible to him. The threat had been like a curse that means nothing,—which is used by passion as its readiest weapon when passion is impotent. But with Frank Reckenthorpe words meant what they were intended to mean. The threat had rankled in his bosom from the time of its utterance, to that moment when a strange coincidence had given the threatener the power of executing it. The remembrance of it was then strong upon him, and he had expected that his brother would have been as bad as his word. But his brother had spared him; and now, slowly, by degrees, he began to remember that also.

"What are your plans, Tom?" he said, as he sat one day by his brother's bed before the removal of the prisoner to Alexandria.

"Plans," said Tom. "How should a poor fellow like me have plans? To eat bread and water in prison at Alexandria, I suppose."

"They'll let you up to Washington on your parole, I should think. Of course I can say a word for you."

"Well, then, do say it. I'd have done as

much for you, though I don't like your Yankee politics."

"Never mind my politics now, Tom."

"I never did mind them. But at any rate, you see I can't run away."

It should have been mentioned a little way back in this story that the poor old Major had been gathered to his fathers during the past year. As he had said himself, it would be better for him that he should die. He had lived to see the glory of his country, and had gloried in it. If further glory or even further gain were to come out of this terrible war,—as great gains to men and nations do come from contests which are very terrible while they last,—he at least would not live to see it. So when he was left by his sons, he turned his face to the wall and died. There had of course been much said on this subject between the two brothers when they were together, and Frank had declared how special orders had been given to protect the house of the widow if the waves of the war in Kentucky should surge up around Frankfort. Land very near to Frankfort had become debatable between the two armies, and the question of flying from their house had more than once been mooted between the aunt and her niece; but, so far, that evil day had been staved off, and as yet Frankfort, the little capital of the State, was Northern territory.

"I suppose you will get home?" said Frank, after musing awhile, "and look after my mother and Ada?"

"If I can I shall, of course. What else can I do with one leg?"

"Nothing in this war, Tom, of course." Then there was another pause between them. "And what will Ada do?" said Frank.

"What will Ada do? Stay at home with my mother."

"Ah,—yes. But she will not remain always as Ada Forster."

"Do you mean to ask whether I shall marry her;—because of my one leg? If she will have me, I certainly shall."

"And will she? Ought you to ask her?"

"If I found her seamed all over with small-pox, with her limbs broken, blind, disfigured by any misfortune which could have visited her, I would take her as my wife all the same. If she were penniless it would make no difference. She shall judge for herself; but I shall expect her to act by me, as I would have acted by her." Then there was another pause. "Look here, Frank," continued General Tom; "if you mean that I am to give her up as a reward to you for being sent home, I will have nothing to do with the bargain."

"I had intended no such bargain," said Frank, gloomily.

"Very well; then you can do as you please. If Ada will take me, I shall marry her as soon as she will let me. If my being sent home depends upon that, you will know how to act now."

Nevertheless he was sent home. There was not

another word spoken between the two brothers about Ada Forster. Whether Frank thought that he might still have a chance through want of firmness on the part of the girl; or whether he considered that in keeping his brother away from home he could at least do himself no good; or whether, again, he resolved that he would act by his brother as a brother should act, without reference to Ada Forster, I will not attempt to say. For a day or two after the above conversation he was somewhat sullen, and did not talk freely with his brother. After that he brightened up once more, and before long the two parted on friendly terms. General Frank remained with his command, and General Tom was sent to the hospital at Alexandria,—or to such hospitalities as he might be able to enjoy at Washington in his mutilated state,—till that affair of his exchange had been arranged.

In spite of his brother's influence at headquarters this could not be done in a day; nor could permission be obtained for him to go home to Kentucky till such exchange had been effected. In this way he was kept in terrible suspense for something over two months, and mid-winter was upon him before the joyful news arrived that he was free to go where he liked. The officials in Washington would have sent him back to Richmond had he so pleased, seeing that a Federal general officer, supposed to be of equal weight with himself, had been sent back from some Southern prison in his place; but he declined any such favour, declaring his intention of going home to Kentucky. He was simply warned that no pass South could after this be granted to him, and then he went his way.

Disturbed as was the state of the country, nevertheless railways ran from Washington to Baltimore, from Baltimore to Pittsburgh, from Pittsburgh to Cincinnati, and from Cincinnati to Frankfort. So that General Tom's journey home, though with but one leg, was made much faster, and with less diffi-

culty, than that last journey by which he reached the old family house. And again he presented himself on Christmas eve. Ada declared that he remained purposely at Washington, so that he might make good his last promise to the letter; but I am inclined to think that he allowed no such romantic idea as that to detain him among the amenities of Washington.

He arrived again after dark, but on this occasion did not come knocking at the back door. He had fought his fight, had done his share of the battle, and now had reason to be afraid of no one. But again it was Ada who opened the door for him. "Oh, Tom; oh, my own one." There never was a word of question between them as to whether that unseemly crutch and still unhealed wound was to make any difference between them. General Tom found before three hours were over that he lacked the courage to suggest that he might not be acceptable to her as a lover with one leg. There are times in which girls throw off all their coyness, and are as bold in their loves as men. Such a time was this with Ada Forster. In the course of another month the elder General simply sent word to the younger that they intended to be married in May, if the war did not prevent them; and the younger General simply sent back word that his duties at Head Quarters would prevent his being present at the ceremony.

And they were married in May, though the din of war was going on around them on every side. And from that time to this the din of war is still going on, and they are in the thick of it. The carnage of their battles, and the hatreds of their civil contests, are terrible to us when we think of them; but may it not be that the beneficent power of Heaven, which they acknowledge as we do, is thus cleansing their land from that stain of slavery, to abolish which no human power seemed to be sufficient?

ANTHONY TROLLOPE.

THE POOR.

AN UNPUBLISHED PAPER, BY EDWARD IRVING.

THERE is a panegyric of poverty, not unusual with poets and sentimentalists, in which the simple manners of humble life are set off in contrast with the affectation and falsehoods which make up the staple of high and fashionable life; and where the healthy meals and tranquil slumbers and innocent scenes of the cottage are contrasted with the luxury and revels and intrigues of the palace. And the picture which they make by culling out whatever is pleasant and agreeable in the poor man's lot, and adorning it for the fancy with whatever is sweet and graceful in rural scenery (for these Arcadian peasants are generally planted in an Arcadian scene) is very taking to us who are pent up in the

confinement and confused with the noise of cities, because of the emblems of quiet and freedom and honesty with which it is surrounded. Doubtless, putting the exaggerations of poets and sentimentalists to a side, there are many things in humble life which may make high life ashamed; and he who adorneth poverty with the grace of sentiment, or stirreth it with the maxims of prudence and economy, doth the best service both to rich and poor. But it must be confessed by those who have dwelt with the cottager, that there is nothing very poetical in the realities of his life, and nothing very sentimental in the manner of his discourse; that his meals are simple only because niggard necessity

hath snatched superfluities away, and his slumbers sound only because hard work hath worn out the sinews of his strength; and that the simplicity of his life toucheth close upon rudeness, boldness, and indeecency; that his thoughts are few, and his aspirations limited; his knowledge scanty, his feelings blind, his business small, his delights coarse and sensual. And whosoever hath dwelt with poverty—not in rustic cottages, but in city cabins, in its narrow smoky quarters among the alleys of the city—will say that poverty is not there blessed but cursed, and hath the most miserable fare, and the most scanty pittance of all the abundance of life; is straitened of room for decency's sake, pinched of accommodation, hindered of the fresh air and pure light of heaven, tormented with the fear of want, or deluged with the consequences of excess; and is squalid, naked, and miserable. There is no poetry there except for the service of scorn and malignity, to which poetry hath too much ignobly devoted herself; the poetry of pandemonium in abundance, but surely none of the poetry of Arcadia or of Paradise. Nay, let not the poet go into that region; he will but soil the gay raiment of his muse: it is a region proper only for the foot of him who preacheth glad tidings to the poor.

And into this region of poverty—of wretched city poverty, whither the poet and sentimentalist bring no comfort, and into which power and policy have generally carried misery—the Son of God was anointed to carry glad and joyful tidings. To preach glad tidings to the poor was the first sentence of his commission from heaven to earth. And accordingly He openeth the first discourse which He made to his disciples with these words: "Blessed are ye poor, for yours is the kingdom of heaven." He lifted up his eyes on his disciples, and said, "Blessed are ye poor, for yours is the kingdom of heaven."

He lifted up his eyes on his disciples, and what did He behold? A company of poor, hungry, doleful, and outcast men. There was assembled a great multitude who had come from all parts to hear Him; to gratify curiosity by hearing Him of whom fame had spoken so widely, and to be healed of their diseases; to take all which He had to give, and give Him strokes, rejection, contempt, and death, in return for his divine gift of health and strength. But, besides this multitude congregated from the corners of the earth, there was the company of his disciples whom He had called up to the mountain at the break of day, from whom he had separated twelve to be his apostles, with whom He descended into the plain, and who, it is to be believed, stood around the person or sat at the feet of the Master to whose doctrine and to whose fortunes they had dedicated themselves. Upon this company who had made a covenant of faith with Him—weak, doubtless, and by many to be broken, yet in whom were contained the rudiments of his future Church—the men who laid the foundations of Zion, and built up its walls, till they overthrew the idolatries of every high

place, and have stood against all assaults of evil powers, and still do stand the hope and glory of the world; upon this dishevelled company,—for well I know, though our Saviour had not characterised them as the poor, the hungry, the dejected, and the outcast, that they must have been dishevelled, seeing it was never known since the world began that the rich and well-endowed and high-conditioned classes ever drew around one who had none of those ornaments, or cared for none of those commodities in which standeth the fashion of their life—upon this dishevelled company of poor, hungry, dejected, and forlorn disciples, in whom stood the strength and hope of the Church, lifting up his eyes, how did He proceed to encourage and comfort their souls? Yes, it is instructive to mark how He comforteth their conditions. He doth not draw out sentences of condolence because they were in such a pitiful case. He maketh no weeping ditties like a poet, or mournful lamentations like a diseased sentimentalist; He commenteth not upon the badness of the times like a worldling; nor, like an economist, doth He make strictures upon frugality and management; nor, like a moralist, doth He set forth a sermon upon patience, with now and then a word of pity to season the unsavoury dish. All these, I allow, be good enough in their proper place, and, with such poor as we oft have to visit, most necessary. They are strains proper enough to be used by men who know nothing of the dispensations of grace towards the poor and the miserable, who know them as little. They are apples of comfort such as grow upon the earth, and have a certain refreshment for the earthy part of man. But the Lord from heaven looked upon his disciples, the first denizens and planters of the kingdom of heaven, with another eye, and spoke to them in another strain than a son of earth doth to a son of earth. He saw that they were encompassed with want and affliction, but what of that? He was encompassed with the same, and He knew that through much tribulation we must enter into the kingdom. He could have showed them the way to rise in the world, but that, unfortunately, is the highway from heaven, for the world, and the things and friendships of the world, are enmity with God; and He could have given them deep insight into men, for He knew what was in man; or He could have showed them how to wind and turn men to their own private and peculiar ends. But his soul, beholding that dishevelled company, was otherwise moved, his thoughts were at the other pole. He was meditating the good conditions of these men, their advancement and their glory, their riches, their joy, and their renown; He did not see so many ragged Jews, but so many souls adorning themselves to meet the King in his beauty. He saw the twelve men who should sit on thrones to judge the twelve tribes of Israel. He saw the fathers of the holy nation, the patriarchs of the everlasting Church, and the holy priesthood of God. And if they were a little flock, it was that little

flock to whom it had pleased the Father to give the kingdom. And if they were poor, they were the poor whom God had chosen, rich in faith, heirs of the kingdom which He had promised to them that love Him; and if they are foolish, they are the fools who are to confound the wise; and if they are weak, they are the weak who are to confound the things which are mighty; and if they are base, and if they are despised, and if they are of no account, they are to confound the things which are of highest estimation, and stoutest strength, and most famous report amongst men. He saw men who were struggling to get above, not the hardness or softness of the times, but above time altogether; men who, if the world frowned upon them and smote them with pitiless strokes, were preparing their souls to bless it, and to redeem it by their own sufferings out of its thralldom; men, in short, ambitious of the liberties and honours of heaven, the chosen generation of God, though in rags; the fathers and founders of the Church's everlasting liberty, though in present hunger and misery.

Say that any one whose spirit is set upon things noble and true, had lived in the ages which are past, and in his travels through the world had fallen in with a dishevelled corps of men standing out in the frost and the cold against oppression; it may be of covenanters against crusading churchmen, or hardy Switzers against the foreign tyrants and oppressors of their soil,—men fed on roots, and watered at the mountain rill,—would he account of such men, because they are found rough, ragged, and forlorn, as he would account of a pack of runagates from justice interdicted by the laws of honest life from human habitation? Then verily he were a man to have his heaven in a royal pageant, and his occupation in driving American slaves. But say that the departed spirit of a Hampden or a Knox should hover over such a tattered and weather-beaten squadron of brave and patriotic men, would they pass them without a blessing,—without a warm and hearty blessing? Nay, but the one would stay his course and speak them a cheerful speech due to the heart of freedom, and the other would pronounce over them a discourse due to the spirit of religion, wherein everything honoured of man and honoured of God should be given them as their need.

Even so Jesus Christ (and do not revolt, I pray, from my illustration, which is unworthy of the thing illustrated, as all illustrations must be: do not revolt, seeing the great Apostle likens himself to the captain of a band, and his followers even to prize-fighters and race-runners),—even as such men, I say, who expended their lives in the cause of our temporal and spiritual welfare, would recognise that trusty band, and, perceiving the nobleness of their warfare, would encourage them to hold it out; and, foreseeing the end and issue thereof to generations yet unborn, would bless them:—even so did our Lord and Saviour, looking upon that ragged and heart-broke

band of followers, expand over them the wings of his brotherly spirit; and well knowing the greatness and goodness of the work into the fellowship of which He had adopted them, He did bless them with the highest blessings; and foreseeing the evil report and bloody footsteps through which they were to urge onward the salvation of men, He did cheer and encourage them as the chosen of heaven. Having Himself, in the great love wherewith He loved us, undertaken, in a servant's menial form, by abasement to the very dust and humiliation to the death of the cross, to make his way to high exaltation, and to a name above every name, to the supremacy of heaven and earth, and of things under the earth,—thus having Himself undertaken, what saw he in these poor, hungry, miserable, and forlorn disciples, but a band of brothers, the companions of his gracious love, and the great heirs of his glorious inheritance?—men who were trying to follow his footsteps, and to face all the terrors of the world, of hell, and of the grave, in order to prosper that cause which He had come from heaven to establish upon the earth.

Could He but love, could He but bless them, could He but cheer them with the sweetest strain of blessing? Is it wonderful that He should strike the highest chord of joy, and, as if already mounted to the throne of heavenly dispensation, pronounce with brief decree the eternal preferment which they were yet to win by their patient continuance in well-doing? They were being tried after the similitude of his trial, and they should reap after the similitude of his reward; they were enduring after the similitude of his endurance, and they should rejoice after the similitude of his joy. "Ye are partakers in my sufferings, ye shall be partakers also of my resurrection; ye are travelling in the greatness of your divine strength the valley of humiliation, ye shall yet rise with me to the exaltation of heavenly places. It hath pleased the Lord to bruise you and put you to grief, and your life He shall make an offering for sin, yet shall you see your seed; He shall prolong your days, and the pleasure of the Lord shall prosper your hand. And your raiment shall be as the sun when he shineth in his strength, and your countenance shall be replenished with the brightness of the morning; and gold tried in the furnace from the treasury of heaven shall be your portion, honour and glory and immortality your inheritance, and a crown that fadeth not away shall for ever encircle the brows of those whom my Father delighteth to honour."

Such was the frame of spirit and such the tone of speech which Christ, at once the boast and the blessing of poverty, held towards the poor who had entered themselves of his school. No drawing expressions of pity that they were of the lower and more indigent classes, doomed to toil and slavery; no stirring of their blood to throw off the yoke and turn the tables upon mankind; no holding out of sickly hopes that times will soon be better; no casting of the blame upon their own wasting and improvi-

dence; no tone of condescension, though He had condescended from heaven to visit them. Blame me not for arraying these contrasts, because it rusheth upon my memory how, in my short intercourse with life, I have heard the poor talked of as if man's glory lay in dress, housing, and victuals—the glory of a brute; and how I have heard the poor talked to, with hasty, brief, cutting speeches, and tones of affected condescension, than which, for my own self, as far as nature goes, I'd as lief hear a lion roar me in the teeth; how I have heard the poor, not the trespassing poor, who waylay you and seduce your ear with falsehoods, but the poor in their habitations; how I have heard the narrative of their griefs, marred and ill delivered, until the tears standing in their eye, and the face that fain would speak if speak it dared, is all the eloquence left for shrinking poverty to speak its sore grief withal. But our Lord, far from such cold counsels and prudent calculations, taketh a bound at once across the limits of time, and maketh a flight into the regions of immortality, and striketh out all the physical distinctions of time, as a merchant striketh a fraction from an immense amount, and He telleth the poor who adhere to Him that the kingdom upon the other side of the line is theirs,—yours is the kingdom of heaven. And that Lazarus is making no complaint there, where he lies in Abraham's bosom, of the evil things which he had in life, and that Dives is crying in the waves of torment for a drop of water to cool his tongue. That poverty, with all its vile and mean attributes, is but an incognito which God puts upon some of his sons that they may see into the mysteries of his providence, and know the riches of his grace towards the most forsaken of the children of men; and that they may know the amplitude and sufficiency of his consolation, and be instructed in humility and peace and trust, and the other graces of his children. That they are suffered to come into straits, and under the distress of manifold wants, in order that they may be kept in constant close communication of prayer and petition with their Father's throne, and become experienced in the graciousness of his ear and the bounty of his hand.

Then, when they are delivered, they make mention of his kindness and sing songs in praise of his deliverance, and remark their progress in the path in which their great Leader taught them to walk, and their growing meetness for the inheritance of the saints in bliss. All the while they are under a disguise to the eye of the world, who know not that they are the children of God passing upon a journey to his heavenly court: the world knoweth them not, because it knew Him not; they have no form nor comeliness in their eyes, and there are about them no beautiful ornaments to catch the world's coarse and sensual eye. They shove them about, they beat them, and buffet them, and put upon them mean and wretched offices,—they hide their faces from the sight of their calamities and shut their ears against the voice of their complaints.

The pilgrims are despised and rejected, men of sorrows, and acquainted with grief. Nevertheless, the pilgrims, whose life is hid with Christ in God, are not unknown to themselves, having the earnest of the Spirit of God, their own spirits testifying that they are the sons of God, and crying out within them, Abba, Father. And knowing that they are God's adopted sons, they put up with the affronts and abuses which they plentifully undergo, well content at so cheap a rate to come to the knowledge of their Father's love, to come to the fellowship of their Saviour's sufferings, and to be prepared for the inheritance of their Father's house. And always as they travel along in their pilgrim's weeds, and with their pilgrim's staff and scarf, they say and sing to one another,—Behold what manner of love the Father hath bestowed upon us, that we should be called the sons of God: therefore the world knoweth us not, because it know Him not. Beloved, now are we the sons of God, and it doth not yet appear what we shall be: but we know that when He, who is our life, shall appear, we shall be like Him, for we shall see Him as He is. We are dead in the world's sense, dead to honour and pleasure and temporal profit, and our life is hid with Christ in God; but when Christ, who is our life, shall appear, then shall we also appear with Him in glory. Now we see through a glass darkly, but then face to face; now we know in part, but then shall we know even as we are known.

Such is the high and heavenly consolation which Christ teacheth unto the poor, such the condition of blessedness which He hath brought within their reach, and such the sure and stable contentment which He hath bestowed upon them in all their distresses. But let the poor not mistake, as if it was to the poor indiscriminately that the kingdom of heaven was promised, and that a man hath only to be born in a cottage to be a favourite of Heaven, or to strip himself and become a mendicant friar, in order to be blessed with the treasures of the kingdom of grace. Against this misinterpretation our evangelist hath guarded well, by saying that He lifted up his eyes upon his disciples, and said, "Blessed are ye poor, for yours is the kingdom of heaven." And though He had not so characterised the blessed poor as those only who were disciples, no one would surely be so foolish as to fancy that the pure and holy Jesus, like a radical leader and deceiver of the mob, would bless the poor, the hungry, the wretched, and the forlorn, without distinction of persons, and admit men into his kingdom not by character, but as it were by caste, not by respect of righteousness, but by respect of the lowness and wretchedness of their station. Then truly it were a heaven which would take in the tenantry of prisons and bridewells, who are outcast and evil-spoken of. Let no man be deceived: it is not the physical attributes of poverty, but the moral attributes of poverty, which draw on the fulfilment of the promises. It is not the slender pittance, the lowly roof, the toilsome day, nor the coarse fare which make men meet for heaven; nor

yet voluntary fasting and a coat of sackcloth, stripes of penance and a bed of stones, as the Church of Rome long did and still doth beguile men to believe. Heaven is not an Arcadia in which none but poor shepherds are, nor a Utopian commonwealth where none but men of low and level conditions are. That is all folly and delusion, by which the poor are cunningly taken and craftily wound into the snares of the tempter. But it is the slender pittance enriched with the faith of Christ and the hope of heaven, it is the coarse fare seasoned with contentment and partaken with a blessing, the toilsome day spent with a light heart and a pleasant countenance as the good appointment of God, and all the scantiness of poverty made up, made sufficient and more than sufficient, through the exceeding plenty of the grace of the gospel of Christ. This it is which hath departed (alas! that it should have ever departed!) from the generality of the poor of our cities; this it is, and this alone is the estate of poverty to which any hope of heaven can be permitted; for how can heaven be expected there, where no reverence is paid to the tidings of it, or no preparation made for the coming of it?

Nevertheless, let not any one say that I cheat poverty of its right by thus interdicting the whole estate of poverty from the heritage of this blessing and confining it to those who elose with the overtures of the gospel and enter themselves of the school of Christ. For though the words of our Lord have an eye only to the disciples, they are not indifferent in their bearing even to the poor at large, but full of kind invitation and generous welcome, setting open to them a wide door, and by the example of their companions who have passed within the veil, pressing all who find themselves in the same humble predicament to have recourse to the same glorious escape. If a master were to come into a family of poor people who were at their wits' end for bread, and were threatened daily and hourly with the most terrible woe of cleanness of teeth,—if into such a downcast family, where burly sons and healthy daughters sat around a scanty meal dressed upon a scanty hearth in the cold of winter, a good master were to come and say unto one of them, "Come thou into my service, mine honourable and easy service (for my yoke is easy and my burden is light), come and thou shalt have sufficiency in the mean time, and if thou be faithful and content thou shalt have promotion to be one of the stewards of my house; and not thou only, but all thy brethren and sisters who will follow thy example and join himself to our Saviour:" I ask if that were not great heartening to the hungry household, and would they take it the worse, or would it be the worse for them, that he examined into the character of them all and took the best behaved amongst them, promising that, as soon as they should be in like manner worthy, they should in like manner be delivered? Such comfort Christ brought to the great household of poverty, by having taken as the stewards of his house, the ministers of

his kingdom, so many of the poorest of the family, and offered equal honour to all the rest if they would care to have it. Again, if any physician were to slip into a family afflicted with disease and grief, and say, "Follow my prescription,—not hard to follow,—and length of days, with health and prosperity, shall be your portion;" and, to confirm their faith, were to lead in his hand a number of their neighbours whom he had delivered from the same epidemic pestilence: I ask, would there be no gladness of heart in such a visitation? And again, were an outcast misbelieving youth, banished from home and wandering in silence and despair upon a foreign shore, to fall in with a courteous native of the land who should lend a willing ear to his distresses, and forgive his trespasses, and offer him shelter, would there be no relief nor providence in such a meeting, no cheer to the fainting heart of the desolate lad? In like manner, though our Lord lifted up his eyes and poured his benediction only on his band of followers, was there no hope nor cheer in his language to the poor and the miserable who might happen to stand aloof in the general congregation of the people, who had nothing to do, if so it liked them, but to cross the line and join the chosen? Was it not offering them a city of refuge which no barrier nor flaming sword defended? Was it not offering them a kingdom in which they might rise, notwithstanding their sordidness, their squalidness, and their mechanical air and calling? Our poor here at home hear tidings that the emigrants who went forth from amongst themselves are prospering in the parts whither they went, becoming the owners of the soil, the magnates and the statesmen of the land. They hear it, and forthwith strain a point, sell all off, and follow them across the ocean. But in that crowded plain where Jesus, after blowing abroad the blessed breath of healing upon all the afflicted, lifted up his voice, they beheld across no ocean, but in their immediate presence, their fellows in poverty, their former companions in the lowly vale of life, blessed with heavenly blessings and on the high way to royal immunities. If they believe, what hindereth that they cross the strand and partake the like. And there were to boot all bonds of sympathetic union, and arguments of equal brotherhood to move their slow resolutions, fellowship of suffering, companionship in contempt, equal experience of hardship, equal meanness of fortune, and whatever cements the classes of men together. Is any one afflicted, lacking comfort, this man the other day was in equal affliction, but now behold him refreshed with joy. Is any man degraded and full of shame, behold here those who lately were their fellows and co-partners, grouped together as men for whom are prepared the thrones and principalities of the kingdom of heaven. Let it never be said, therefore, that our Saviour kept his gifts to his own family, when every alien might enter that family unrecommended, unrepresented. He did bless his own certainly, and them alone, because they alone

had come within the scope of his blessing, but where all might come, then verily they chose the curse who came not, they spurned his blessing if they came not where the blessing was.

What that place was to the poor of that assembly, the world is to the poor of the children of men. For in the world, ever since Jesus preached glad tidings to the poor, there hath been a brave and goodly company from amongst them who have held fast the profession of his faith without wavering, and tasted the blessedness which is declared to be theirs, being made heirs of the kingdom of heaven. These are they who in all ages have been the strength and glory of the Church, who first adopted her mournful ensign and followed it through bad report, bearing the brunt of the ten great persecutions of the Church. These are they who maintained in the rocky fortresses of the Alps and the mountainous solitudes of the North, the faith and laws of the kingdom. To these, that Father of reformation, that second Baptist and bright morning star of reformation, Wickliffe, addressed himself when he and his Gospellers, as they were honourably styled, went forth among the villages of England in their coarse frocks preaching the Gospel of the kingdom, and delivering the land from those mendicant friars who preyed upon her wealth like locusts. And it was the poor in the fulness of time who shook off the yoke of Rome in these and other lands. The rich and titled orders laid their hands upon the goods of the Church, making gain of godliness, but the poor, as heretofore, had the spiritual treasure of the kingdom chiefly to themselves; and they are but poor men who are now labouring over the earth for the propagation of the kingdom of Christ, and it is chiefly by the poor that they are sustained. So that, I judge, in every age of the Church, had the disciples of Christ been gathered under His eye, the feature of their poverty would have stood so prominently forth, that upon lifting up his eyes upon them, he would have addressed himself to that first of all, and said, "Blessed are ye poor."

On the other hand there always hath been, and still is, found in the world, a large proportion of the poor who stand aloof from the school of Christ, and will not be sharers of his blessings, over whom our bowels yearn that they might be persuaded to come over and join themselves to the blessed company to whom appertaineth the kingdom of Heaven. These are they who are oppressed with the dense and dark cloud of ignorance, which, to the disgrace of the political and spiritual guardians of the realm, broodeth over the lower classes both in town and country places. And many there be of them as of every class who, knowing the truth, hide themselves from the light of the truth, loving better the darkness in which they enjoy their evil deeds. And many there be, enlightened to a certain point of knowledge, whom the enemy, by his artful agents, hath served to wind to his own purposes and their own ruin, amongst whom he

hath sown the dragon teeth of social discord, inflaming their minds with a knowledge that puffeth up, and spreading amongst them that wisdom which is full of strife and quarrel, which is of the earth, proud, sensual, and devilish. Through this blindness of nature, and ways of sin, and serpent discords, a large mass of the poor to whom the kingdom is promised, care not for the promise, and many of them trample it under foot. And where this is the case, I never fail to observe that the glory of the poor man's house is departed and the cottar's fire-side loseth its blitheness, and the lyart locks of the sire are no longer his crown of glory, and the meal is unblessed by his religious vows, and the family drop off to their beds unsanctified by the evening prayer; and the mother's heart sinks, having no longer the sustenance of the father's devotion. He is an uncheered slave to his toil, and she fights among the children, and few, few are the blessings of life they taste. The strength of their years passeth in drudgery, and waxeth weak, often for an ungrateful progeny. And when their labours under the sun shall have an end, there remaineth for them no blissful rest, no better country where they may share a better lot. And, oh, their soul being unsustained by religion becomes overlaid with sense, drowned and overwhelmed with wickedness; their life spent in repinings against their betters, in contentions at home, in rude sallies of mirth, in discontents, combinations, plots, and conspiracies, which sink them deeper in the sorrowful waters of their unspiritual state.

And what do they gain in return for all these discomforts and distemperatures of their estate brought on by casting away the kingdom of heaven? Do they thereby conjure a meal upon the table or cheat sorrow of the heart-ache? Does the devil, as in our mother's tales, offer loaves and royal palaces if we will serve him? Some few, one perhaps in a thousand, make a good bargain of his service, but what he doth for the backs or bosoms of the poor, the sluggard can tell, and the wan drunkard can tell, and the sour democrat, and the fell infidel. The devil is no help to the poor, whatever he be to the rich. He is your fair-weather and sunshine friend, who cleaves to the well-conditioned, and if he have aught to give, gives it to those who need the least. But let a poor man once do him a good turn, pick a pocket, knock a companion down, spend a night at the ale-house, or plot against the State, and the devil rewards him with cold comfort at home, and with a seat in the stocks abroad, with a constant fearfulness which the quaking of the aspen leaf disturbs, with an unquiet conscience which ever seeketh the quietus of an intoxicating draught. And in the end he bringeth them to their high honour, a solitary cell in the prison-house, an occupation in the hulks, an exile to a foreign shore, a violent and disgraceful end; and what he hath within the scenes of the future life, I lift not the curtain *al fresco* to display. If any prefer these

hopes and gifts, to the hopes and gifts which Jesus proffereth, that is, contempt to respectability, a troubled licentious to a happy thrifty home, sourness to contentment, ruffian constables for visitants to pastors of the church of Christ, imprisonment to freedom, hell to heaven,—then to the devil they are drawn, and who can hinder them?

If any one be weary of his poverty, of its abjectness, of its misery, of its openness to every wind of temptation, and crieth out, Who will deliver me? here is poverty's great Deliverer lifting up his voice, and with its first utterance, as if it had to carry the consolation where the consolation most is wanted, he crieth out, "Blessed are ye poor, for yours is the kingdom of Heaven." What hindereth your response—Blessed art thou who first preached glad tidings to the poor? What hindereth your taking heart, and considering yourselves as heirs of the kingdom? But what better, do you say, would we then be: will it give us meat when our bowels yearn with hunger? hope is but poor diet to misery; and words are but an unsubstantial meal. Hence the wicked maxims of that deceiver of the poor, who would persuade them that religious consolation is a cunning trick to withdraw them from the true remedy of their ills, and that the true nobility of the poor man's condition consisteth in a plentifully stocked pantry and a well-served table. It is thus that designing men take advantage of the noble temper which distinguisheth the poor of these realms, to bring them into bondage to the things of sense. They feed the souls of the people with the bitter waters of discontent; they fill their imaginations with restless, aimless speculations, and encourage them to daring enterprises. Their knowledge, their reading, their resolution, are turned to their destruction by these agents of the evil one. They unsettle the principles of their faith by the grossest falsehoods; they overthrow their allegiance to their Master by base insin-

uations; they set them loose from all restraint, and having brought them to this pass, they leave them there to plunge on without helm or helmsman, from misery to deeper misery, from crime to more heinous crime. Oh that the poor would learn to know these designing men by their fruits! Go amongst their converts, and show me one family into which their writings have not carried discord and grief. Know them by their fruits. I take their own arguments; their words are sounds, but look to the fruit of their words, and show me what cottages they sanctify, what souls they elevate, what broken hearts they heal, what afflicted souls they cheer, what quarrels they pacify, what children they edify and love, what grey-headed men they bring with honour and glory to the grave. Oh! that the poor would hear the gospel of Him who blessed them, and listen to the voice of his messenger. It is not words alone the minister of Christ hath to offer, but charity, open-handed charity. It is false as hell, that the spiritual visitants of the poor carry nothing with them but cold consolation. I for one must state from much experience that ninety-nine parts in a hundred of all the misery which I have seen alleviated upon the earth, hath been by the servants of Christ, who, while they gave with their hands, spake with their mouth that which this world hath not to give.

Ye poor, turn unto your strongholds in the world of hope by faith. Lay hold of your inheritance in the promises, and possess the treasures which are in heaven, where neither moth nor rust doth corrupt, and where thieves break not through to steal. Quarrel not with the allotments of God's providence. He who hath kept you hitherto will keep you still, by the dispensation of His bounty. And if ye do suffer loss for your adherence to righteousness, count it joy when you are called to suffer for His sake.

A DUTCHMAN'S DIFFICULTIES WITH THE ENGLISH LANGUAGE,

AS EXPERIENCED BY MYNHEER STEVEN VAN BRAMMELENDAM.

MY DEAR FREDERICK,

* * * * *

And now let me tell you how I fared with your Dutch friend, Steven van Brammelendam. You really could not have given me a greater treat than by introducing him to me.

You know I had picked up as much of Brammelendam's native tongue as enabled me to converse tolerably well with him. Still, I always tried to get him to speak English, for his mistakes were often very funny, and his observations upon the peculiarities of our language amusing beyond description. Being somewhat of a Latin and Greek scholar, and knowing French and German, he found little difficulty in understanding the English *grammar*. His pronunciation also was remarkably

correct, an advantage which I believe he owes to his having got a few lessons from an Englishman when a boy of twelve. His stock of English was rather scanty, but he never was at a loss. When he wanted a word, he would simply take a Dutch or a Latin one, give it somewhat of an English turn, and launch it forth with a feeling of confidence which often made us laugh heartily. Steven took everything in good humour; and when we explained to him the oddity of his phrase, would laugh as heartily as any of us.

As you had informed me of his intention of arriving, *viâ* Dover, on the 14th, I kept looking out for him all day at my office in Cornhill. I purposed to drive him down at once to my residence at Chelsea. Steven, however, did not turn up till

the forenoon of the next day, when, after delivering your letter of introduction, he told me with an air of perplexity that he had passed the night at some inn in the neighbourhood—that he had left his luggage there—but could not find the place again, as he was quite bewildered with the countless number of streets and lanes, each of which was “as full with people, carriages and ’busses, as an egg is with meat.” But let me tell you his story as he told it to us that same evening over our tea at Chelsea.

Owing to some difficulty about his luggage at the Custom-house, Steven could not leave Dover before the last train, which arrived at London Bridge at 10:30 P.M. He took a cab and drove up to my office at Cornhill. Of course he found it locked up. He rang the bell—rang again—rang a third time, but the merciless door was immovable. No wonder, indeed. Good Mrs. Jenkins, our house-keeper, was already enjoying the luxury of her first sleep. Nor was she much pleased at being roused out of it by a tremendous tolling, that rang through the premises as if the police had come to tell her that the whole neighbourhood was on fire. She put on her gown, or, to use an expression of Steven’s, “she flung herself into her frock” as quickly as she could, and, frantic with excitement, hurried up the stairs, candle in hand, to ascertain the cause of the disturbance, the like of which had not occurred in her long house-keeping experience. No sooner had she opened the door, than Steven, presenting your letter of introduction, said: “Is my gentleman Dobson to house?”

“Pray, sir, I cannot read,” answered Mrs. Jenkins, returning the letter.

“Is my gentleman Dobson to house?” Steven repeated.

“Sir?”

“Yes, Sir Dobson.”

“What about Sir Dobson?”

“Is he to house?”

“What house? I don’t understand you.”

“Give this letter to your gentleman,” said Steven, in the kindest tone he could assume.

“There are no gentlemen here,” answered Mrs. Jenkins, rather indignantly; “call to-morrow at ten;” and the door was shut upon the benighted Brummelendam.

A cabman now came to the rescue. With some difficulty he succeeded in making Steven understand that he would have to take a bed at a *hinn* for the night. Then after having crossed some four or five streets he put him down at the entrance of a gin palace, whose splendid lanterns promised “chops, steaks, and well-air’d beds” to travellers. The landlord, observing two big portmanteaus and a hat-box on the top of the cab, had no objection, of course, to take in the late visitor.

“What am I guilty to you?” Steven said to cabby, pulling out his purse.

“Guilty?” cabby repeated with a smile; “don’t know, unless you run away without paying me.”

Steven understood the word “paying.”

“Yes, I will pay the load. How much?”

“Half-a-crown.”

“What is half-a-crown?”

“Why, it’s two-and-six.”

“Frightful!” Steven exclaimed. “Twent-six shilling! only for riding me such a short end!”

Cabby, who fortunately was one of the better stamp, could not help laughing at this mistake, which certainly was something out of the common. After some further explanation, Steven, much to his satisfaction, saw Jehu off with his two shillings and sixpence.

After having seen his luggage taken up to his bed-room, Steven entered the tap-room, which consisted of twelve boxes, six on each side.

“Where is the coffee-room?” asked Steven.

“This is the coffee-room,” the landlord replied.

“What? This?” Steven exclaimed. “This is a place for horses. There is precisely room here for twelve horses. Do you put men into horse-stables in this country?”

The landlord gave no reply. Steven, perceiving that no choice was left to him, took a seat in one of the “horse-stables,” and ordered his supper.

“Give me a butterham with flesh and a half-bottle wine.”

“No bread?” the landlord asked.

“Natural,” Steven replied, not knowing the English expression “*of course*.”

The landlord smiled and shook his head. He brought up some butter and a few slices of ham.

“Which wine do you take, sir, sherry or port?”

“None of both. Give me *Bordeaux*.”

“Don’t know that wine,” the landlord replied, shrugging his shoulders.

“I aim at *red* wine.”

“Why, that’s port.”

“No port. Port is too heady to me.”

“Perhaps you mean French wine?”

“Mean French wine!” Steven exclaimed. “No; French wine is not mean. It is drunk by kings and princes. Pour me a glass.”

While the landlord fetched a bottle of claret, Steven murmured within himself: “Those conceited Englishmen! Everything which is not English, is mean in their estimation.”

“Where is the butterham?” Steven asked, while the landlord put down the bottle.

“Why, it is before you,” the landlord replied, pointing at the plates. “This is the butter, and this is the ham.”

Steven burst out laughing.

“Oh yes, natural!” he said. “This is butter and ham. But I ordered a butterham. I aim at bread for smearing the butter upon it.”

With such difficulties as these Steven struggled, till at length he had got his wants supplied, and thought of retiring for the night. Not being in the habit of shaving himself, he thought it might be as well to order a barber for the next morning. Remembering that the name of the instrument which

the barbers use is called a razor, he said to the landlord: "Can I be razed to-morrow?"

"Raised?" the landlord repeated, smiling, "yes, to be sure you can."

"Will you then send up a man to raze me?"

"I will raise you myself."

"Ah, very well. At nine o'clock, if you please."

The next morning, punctual to time, the landlord knocked at Steven's door.

"Within!" Steven cried, and the landlord entered.

"Where is your knife?" Steven asked.

"My knife? What for?"

"Well, to raze me."

"Why, you *are* razed."

"I am *not* razed. You must raze me with a knife along my visage."

With these words Steven passed his hand to and fro over his chin to imitate the operation of shaving.

"Oh, I see," the landlord cried in a fit of laughter.

"You want to be shaved! But I am not a barber, sir; you must go to a shaving shop."

"Where is a shaving shop?" Steven asked.

The landlord took him to the window, and pointing to a street on the opposite side, said something about a turning to the right, and then to the left, and an outstanding pole, and a brass plate, and told him to look out for the word *shaving*.

Steven understood scarcely a word, but from the direction in which the landlord pointed, he concluded that he had to walk up the indicated street. Before leaving the inn, however, he was careful to note down the name of its owner, the number of the house, and the name of the street.

He walked up the street, looking carefully to right and left, but no shaving place could he see. At length, after having turned down half a dozen streets, he noticed on a window the inscription: "Savings Bank."

"Ah," he said to himself, "this is it. Here is a bank upon which people are placed to be saved."

It did not escape his notice that the landlord had spoken of *shaving*, and not of *saving*, but he surmised that this difference was owing to the innkeeper's cockney pronunciation, which always likes to squeeze in an *h* where it is not wanted.

He entered the savings bank. A young man was standing at a desk, apparently engaged in some calculation.

"Can I here be saved?" Steven asked.

"I'll attend to you in two minutes," the clerk answered.

Steven looked round the place. It was a magnificent office. A large set of mahogany desks seemed waiting for half a dozen clerks who had not yet made their appearance. Steven perceived that he was mistaken. "Still," he thought, "I will ask this young man to help me on my way."

"Well. What can I do for you?" said the clerk to him.

Now Steven wanted at once to tell him that he perceived he was wrong, but he did not know the word "wrong." What is *verkeerd* in English? he

asked himself. He translated the word into Latin, and giving it an English termination, said:

"My gentleman, I see I am perverted. I wish to be saved."

The comical face with which Steven said these words called up an equally comical expression on the face of the clerk.

"What? Are you perverted?" he asked, contracting his brow with a queer look.

"Yes, I see I am here on the perverted place, but perhaps will you be so good of to help me on the way."

"Do you want to deposit some money?" the clerk asked.

"Yes, I have money," Steven answered, producing a handful of coppers from his pocket; "I must be saved with a razor along my visage."

The clerk laughed uproariously, and so did some of the other clerks who had now come in, until the whole office echoed. Steven, perceiving the oddity of the case, heartily joined them. The young man then took him to a barber's shop, where he soon got what he wanted.

A few days later he read on a shop window: *Shavings for grates.*

"Ah," he said to himself, "I suppose this is a philanthropic establishment for poor people to be shaved gratis."

After leaving the barber's shop poor Steven again found himself in an awkward predicament. He could not find his inn. In vain he walked up one street after another. At length he asked a person whom he met:

"Can you tell me where Truman, Hanbury, Buxton, and Co.'s Entire is?"

"I don't know, I'm sure," was the answer. "Ask the cabman over there."

Cabby readily offered to take Steven to the place. After half-an-hour's drive, he found himself at the entrance of the brewery down at Spitalfields. Of course cabby was ordered to drive back; and this time it was to my office. I was glad to meet him and give him welcome.

"Where have you passed the night?" I asked.

"Well, in an Entire," Steven replied. "It was written up with big letters: Truman, Hanbury, Buxton, and Co.'s Entire."

I could not help laughing out, however unpolite. But he laughed as heartily when I explained the matter to him.

"Don't you know the name of the street?" I asked, looking as grave as I could.

"Yes," he answered, looking into his pocket-book, "it is *Stick no bills street* F. P. 13 ft."

"How in the world did you get that address?" I asked, scarcely able to contain myself.

"Well," he answered, "I went to the corner of the street where a church stands, and there I read these words."

Really it was no easy method to find out the place from such an address. The circumstance, however, that the corner of the street was occupied

by a church, supplied us with a thread to track our way through the labyrinth. After an hour's searching we were successful in finding the "Entire;" and soon we were on our way to Chelsea.

With deep interest Steven studied the shops as we drove along.

"You are a great nation," he said; "I see you have even warehouses for separate nationalities, such as Italian warehouses and Babylonian warehouses. I suppose statues from Italy are sold in the one and antiquities from Babylon in the other."

"You are mistaken as to the Italian warehouse," I replied. "It has nothing to do with Italian art or literature. It is only a shop for selling fruits and dainties. But as to the Babylonian warehouses, I really do not know that there are such in this country."

"Well, there is one!" cried he, pointing at a shop which we passed by.

I looked out of the window. It was a baby-linen warehouse.

You can understand how we received the story of Steven's difficulties. He took it all good-naturedly, however, and by repeated questionings showed a great thirst for information. Here is one out of many of his interrogatories. He asked why the entrance to a railway station bore the inscription *Tuo yaw*, which he noticed at the London Bridge terminus. He looked into his dictionary, but the word *Tuo* was not there, and as to the word *yaw*, he found it was a nautical term, meaning a quick out-of-the-way motion. But what it had to do with a railway station he was not able to make out. Various solutions were offered. Some thought it might be the name of one of the stations on the line. Others supposed it might be the name of an advertiser. At length, after much questioning and musing, we found that it was the words *Way out*, which, stuck on the transparent glass door, had been read by Steven when coming from an opposite side.

Being engaged next day in some important business matters, I left Steven to see London for himself. With his dictionary in one pocket and his map in the other, he set out in the direction of Hyde Park. He refused to take a guide, preferring to find his way unassisted. "On that manner," he said, "shall I the city better learn to know, and I shall better to my eyes give the food." After having walked a couple of hours, however, he found that he ought to "give the food" also to his stomach. He noticed a pie-house.

"Can I here a little eat?"

"Yes," the lady replied. "What do you want?"

"What have you?" Steven asked.

"I can give you a pork pie."

Steven took his dictionary. He had never heard the word before. He soon found it, or at least he thought so.

"What!" he exclaimed, "do you eat those beasts in this country?"

"Of course we do," the lady replied. "We aren't Jews."

"Tastes it nicely?"

"Very," the lady answered, with a smile.

"Give me a piece, if you please."

"I cannot give you a piece, you must take a whole."

"But I cannot eat a whole porcupine," Steven exclaimed.

"Oh dear!" the lady cried, shaking with laughter. "Did you mean I was to give you a hedgehog! No, sir, I cannot treat you to such a dainty. A pork pie is make of a pig."

Steven again referred to his dictionary, and turned up the word *pork*.

"That's in the whole no food, that's a hammer," he said. "I cannot eat iron and steel," he added with a smile.

The lady felt quite perplexed. She called her husband, to whom she explained her difficulty. He at once took a pie, and pointing to it with his finger, imitated the grunting noise of a hog in such a perfect way that there could be no further misapprehension. Steven therefore ate the pie with comfort and relish.

One evening when a party of friends were spending a couple of hours with us, we had a conversation about the Dutch and the English languages, which soon grew into a friendly and amusing controversy. Steven, in his usual humorous mood, held that the Dutch was the best and most perfect language in the world. He believed it was spoken in Paradise. One of our friends agreed with him there, because he believed it was spoken by the Serpent. Upon this Steven quickly answered: "Natural, for the cunning animal knew that in English, which was its own language, it would not be understood." However little complimentary this explanation was to our English feeling, yet Steven earned the applause of the whole company through his adroit application. To prove his assertion about the perfection of the Dutch language, he pointed at the various sizes of its words. "If you come to us for words," he said, "we can serve you in all manners. We have words so short that they only exist in two letters, for example: *ei*, which in English is *egg*. Here, you see, we are thirty per cent. shorter than you. On the contrary, if you want a long word, take this:

Verbeeldingskrachtsontwikkelingswerkzaamheden, which means: Operations for the development of the power of imagination. Or this:—

Middenwinteravondtyd kortelingsgesprekken, which means: Intercourses for shortening the time during the evenings in the middle of the winter."

He wrote the words down on a slip of paper, and we could not help confessing that we were unable to put English words of equal length against them. We then tried to imitate him in pronouncing them, by which means the whole company assumed the appearance of an assembly of people who were suffering from sea-sickness, or whose food had

got into their windpipe. We gave up the experiment, declaring that our throats were too refined for such barbarous proceedings.

"Barbarous proceedings!" Steven exclaimed, cheerfully. "No, you are barbars!"

"Barbers!" cried the whole of us.

"Ah, Steven," I said, "you must know better, since you experienced that neither the landlord at the 'Entire,' nor the clerk at the savings bank, was able to 'raze' you.

Steven looked into his dictionary.

"Excuse me, I mean, you are barbarians," he answered. "Nothing is so barbarous as *your* pronunciation. You speak out *lieutenant* with an *f*, and *colonel* with an *r*. Is that not totally unrhymed? Yesterday I met a gentleman who told me that his name was *Da-el*. He gave me his card and I read, *Mr. Dalziel*. You swallow your words up like oysters, shells and all. *Cholmondelis* becomes *Chomly*; *Leicester* evaporates into *Lester*; *Colquhoun* melts away into *Kehoon*. What in the world do your letters serve for if you don't speak out them? If you meet with a word of some length, you pick out one syllable, which you pronounce with a strong accent, while the remaining syllables are rattled away with such a speed that no human ear can understand them. Some days ago I heard two gentlemen talk over the American war. As far as I could make it up, they disagreed over the question, whether the broken union could be restored. In this discussion the one made frequently use of a word which apparently existed in many syllables, but the only one I could understand was, *rap* or *rep*. At length, after much sharp listening, I discovered that it was *irreparableness*. Now I know this word wholly good. I have hundred times the word *irreparabilis* in Latin read and written. But, with *such* a pronunciation, would even Cicero, with all his knowledge of Latin, tumble into the ditch. And then, what a ridiculous way of putting the accent! you place it exactly there where nobody thinks of to place it. *Photography* is composed of two Greek words, *phos*, light, and *graphia*, writing. The *to* is merely a syllable for to link the two together. It has no meaning of itself. Yet you leave the *pho* and the *gra* alone, but you place your accent upon that miserable, good-for-nothing *to*. It is just like building a spire on the roof of a fire-engine house. So I heard yesterday two ministers in full earnestness discuss the question, whether, in *bicentenary*, the accent ought to be on *cen* or on *ten*!"

Steven here paused, but, no one wishing to interrupt him, he proceeded.

"And were you yet but regular in the placing of your accents! But you are upon this point so despotic that the Turkish Sultan may take his hat off to you. In *photography* you place the accent upon *to*. Very good. We must allow it, because we can do nothing against it. But in *photographic*, you at once, without to ask somebody's permission, transplace the accent upon *gra*. This is really

inhuman. I protest against such arbitrariness in the name of all the nations who come to your country. We have the right of to expect that your language, as being a human language, be speakoutable, following rules which are learnable by men. But your pronunciation is like a ship without helm and compass in the open sea. I believe it is lighter to set the cackling of ducks and geese upon notes, than to make rules for the pronunciation of the English language."

In this way Steven scolded us in his Anglicised-Dutch style, of which I have tried to give you an idea. While reading over what I have written, however, I find I only have given you a poor copy. Sometimes he was quite unintelligible, by translating a Dutch word wrongly, or taking a wrong word from the dictionary. I had then to come between, as interpreter, and with the aid of my knowledge of the Dutch, to try to put him on the right way again. I recollect he said: "In this supervision," instead of "in this respect;" "to traduct" for "to translate;" an "underputting" for a "supposition;" "to come over one" for to "agree;" an "underseparation" for a "distinction." To a lady who made an objection to one of his statements, he said, "I believe I can easily over-harness you." He meant to say, "I can easily convince you." And so there were a great many other odd mistakes which made us laugh heartily, and contributed much to our amusement.

Now as to Steven's invective against our irregular pronunciation we could not help pleading guilty. But then one of us ventured to say something in defence of our language by pointing out its practical tendency, the simplicity of its grammar, and the conciseness of its structure.

"Oh, speak there not of!" Steven replied in his amusing tone of mock-indignation. "Yes, you are short in your expressions, but one must not ask what you sacrifice to that brevity. You hold house among the foreign languages with true vandalism, and you break the neck of the finest words to make them usable for your abbreviationism. So by example take the word *omnibus*. Is that not a beautiful Latin word? Well, how did you handle it? You chopped off its tail, and threw its head and body overboard; and thus you got the word *bus*! On the contrary, with the word *cabriolet*, you went to work in the round-turned manner; you chopped off the head, and threw away body and tail, and thus you kept the word *cab*. That is really dealing with languages like a butcher. What a confusion must there out come forth!"

"True," I said, interrupting him. "You experienced that yourself the other day, didn't you? when you were staying with Mr. Hayborne, and had to go to a tea-party."

"Oh, yes," he replied, "it was with the cab. I had dined with Mr. Hayborne, and we should drink tea by his cousin Mrs. Johnis (Mrs. Jones). 'We will take a cab,' he said to me. 'A cap?' I asked. 'Is that usage in this country by evening

parties?' 'Yes,' he said, 'why not? You see it will rain.' 'Just so,' I answered, 'it would corrupt our hats.' 'Of course it would,' he said. So I went into the hall to take my cap from the cloth-rake, meanwhile thinking by myself, 'how parsimonious these English are with their hats!' I could not find my cap on the cloth-rake. The servant had brought it above in my sleep-room. I rang the bell for a candle and went above. Meanwhile the cab came before the door. Mr. Hayborne came up to me. 'What keeps you?' asked he. 'Why,' answered I, 'I cannot find it. The servant said to me it is here upon my sleep-room.' 'What is here?' asked he. 'Why, the cap.' 'The cab?' he said, bursting out. 'Do you expect the cab to come up to your bed-room to ride with you to a tea-party?' I then comprehended my misguessing, and laughed heartily for it."

"I wonder you speak our language so well after such a short stay in our country," said one.

"Oh, I find that it is very difficult," Steven replied; "and I believe that I make much errors."

"Of course, there are some faults, but they are not of such a kind as to prevent us from understanding what you mean. They are more amusing than perplexing. As, for instance, when you said you 'went above,' instead of 'upstairs.'"

"Indeed," Steven said. "Do you always say 'up-stairs'? Then I suppose that you do also not say, 'below,' but 'under stairs.'"

"No, 'down-stairs,'" cried some voices.

"Ah, that is very difficult," Steven sighed. "You are very irregular and arbitrary also in the use of your prepositions. How can we ever learn it? You say, by example, that a child for its support depends *upon* its parents. Now is that not absurd? We say in Dutch that it depends *from* its parents, and I think that we have it right. For 'to depend' literally signifies 'to hang down,' just as you picture to the wall 'hangs down' from the nail which supports it, thus the child, as it were, 'hangs down' from its parents. Now would it not be absurd to say that the picture 'hangs down' *upon* the nail? Just so absurd it is to say that the child depends *upon* its parents."

"I never thought of that," one said, "but I must confess you are right."

"I am glad for that," Steven replied.

"Of that," I remarked, correcting him.

"Of that? But did I not hear you say this morning that you were 'sorry *for*' something?"

"Yes; we say, 'I am glad *of* it,' and 'I am sorry *for* it.'"

"Ah, that is frightful!" Steven exclaimed.

"Glad *of* and sorry *for*! Just the world turned upside down! The preposition *of* always more or less shuts in the idea of 'disinclining from,' at least of 'moving away from.' So you say, by example, that I am *of* Amsterdam, which is the same as *from* Amsterdam. Yet you unite this word with *glad*, which is one of the strong ex-

pressions of inclinations towards an object. On the other side you unite *for*, the preposition of favour and inclination, with *sorry*, a word which expresses grief, displeasure, and dislike."

"Indeed," one of the ladies observed, "it never struck me that we used our prepositions in such a strange way. It really must be perplexing to a foreigner to learn all such irregularities."

"Oh, I am disgusted from them," Steven replied in a joking tone.

"With them!" several voices burst out.

"With them?" Steven repeated. "Do you say, 'I am disgusted *with* that drunkard?'"

"To be sure we do."

"Well, that is most absurd. We Dutchmen are disgusted *from* him; we do not want to be *with* him at all. Disgust seems to bring forth a strange effect in you. It drives you to be *with* the object which you dislike. I suppose you consequently say: I am pleased *from* my wife and children."

"No, no! *with*!" the gentlemen cried. "We are all of us pleased *with* our wives. No mistake about that."

"So whether you are disgusted or pleased, it is all the same," Steven replied jocosely. "You must always be *with* them."

"We can't help it!" some answered archly.

In this way the conversation went on till we were called to supper. A great many other prepositions were brought up for discussion, upon which Steven gave his opinion, much to the amusement of the party. Among others, the verb *to put*, with its numerous prepositions and equally numerous significations, became a source of most amusing controversy. How "to put up," for instance, could mean, "to place, to expose, to dwell, and to have fellowship with," it was quite impossible for poor Steven to understand.

Before I close this long letter, I must tell you Steven's experience at a public meeting of the "Society for Training School-teachers." Sir Edward Templerow, with whom Steven was staying for a couple of days, was its chairman, and of course invited him to attend. As Steven took a lively interest in everything connected with school education, the invitation was very welcome to him. He even promised to give an address, and, to be able to do so, kept his room all day to write down his speech. At half-past seven, Sir Edward came to tell him that his gig was at the door. Steven had never heard the word "gig" before, but he guessed that it must be a conveyance. He got a place by Sir Edward's side on the platform, and after some business was gone through, "the friend from Holland" was summoned to address the meeting.

"Dear friends," he said, "when I rode through the streets in the wig of your chairman——"

Poor Steven! he could not proceed. An uproarious burst of laughter drowned his voice. He took it with the best possible humour, though, and patiently waited till the people, both on and under

the platform, had recovered. Meanwhile Sir Edward, amid much chuckling, explained to him in a whispered tone the cause of this unexpected but amusing disturbance, and when the noise had subsided, Steven thus proceeded :—

“When I rode through the streets of your giant-like town (applause), and when I saw the many churches which heave their towers up stairs (cheers), I thought, the English are a very churchical people (loud cheers). I therefore wonder not that you also are an educational people, for religion is the mother of education, and where there are many churches, there we may expect that there are also many schools.”

Here Steven could annex his written speech, which he then read as follows :—

“But schools are not the unique thing which is necessary for a good education. The great requisite is to have understanding schoolmasters, who are not principleless, as many, alas! are, but who go out from the true beginning. A good school-building with a bad schoolmaster, is equal to a fine coach with a drunken coachman (loud cheers). Some schoolmasters give the children too little. They neglect them, as if our children were but monkeys, walking on their behind legs (uproarious applause). No, our children are not monkeys, but such schoolmasters are donkeys. Others give to the children too much. They endeavour to make professors of them. They endeavour to replenish their little heads with the inkeepings of the whole universe. They will make famous astronomers of them, and climb up with them up-stairs far beyond sun and moon, and still above. Or they will make learned geologists of them, and valley with them

down-stairs into the bowels of the earth, or still below. But this is perverted. When we communicate knowledge to men we must be prudent, as we are in giving them natural food. We give roast beef and entries to great people, but we feed our babies with poultice (uproarious laughter). Just so we must make our teaching-stuff for children so low that it falls under their childish comprehension. Schoolmasters must not stand among the little fellows like Goliath among the Philistines (cheers). They must know how, as it were, to squat down by their side and thus teach them as if they were their ancienter brothers. Teachers who refuse thus to humble themselves, bereave the children of great before-parts. It exhilarates me to learn that your Society fosters the same feelings as I with relation to this weighty subject. I hope that you will find many low young men, who stick out by humility as well as by ability. I hope that your schools will more and more be illustrious spectacles for the eye of the nation, spectacles of order, and discipline, and solid instruction, and of many other useful proprieties and predicaments. I hope that your schools will more and more be the wet nurses of great men, so that whole Europe, looking at the English people, shall be pulled up in stupefaction at the bigness of this nation.”

Here Steven van Brammelendam sat down amid deafening applause. And here I must also lay down my pen, which has run on too far already. I hope you will not be disappointed, however, with my rambling account of the experiences of our good, kind-hearted friend.

* * * * *

A FIRESIDE WRONG.

It has always been the fashion to regard the fireside as the altar of home—the seat of all the domestic virtues. Round that hallowed spot are supposed to be nourished all those tender feelings and sentiments which soften the harder features of humanity. There it is that the true father, the true mother, the true sister, and the true brother are grown, and there it is that society looks for its brightest ornaments. No patriot or philanthropist, worthy of the name, ever sprung from any other soil, or was really moulded by any other influence.

As the fireside has done so much for the world at large, it seems a pity that it cannot do something for itself, and prevent the perpetuation of a cruel wrong which oppresses the weak and helpless. This wrong is so entirely a fireside wrong, and is so easily destroyed by fireside guardians, that it is difficult to believe in its existence. Public feeling, nearly a quarter of a century ago, condemned the climbing-boy system, and the result was an Act of

Parliament,* to render the use of children in cleaning chimneys illegal, and to compel the use of a machine invented as substitute. No particular machinery in the shape of inspectors was provided to see that this act was not evaded, it being generally felt that each householder would willingly be his own inspector.

Much reliance was also placed upon informations

* The act now in operation was passed in 1840; it is entitled “An Act for the Regulation of Chimney Sweepers and Chimneys” (3 & 4 Vict. c. 85). By this act it is provided, that any person who, after the 1st of July, 1842, shall compel or knowingly allow any child or young person under the age of twenty-one years to enter a chimney or flue for the purpose of sweeping or coring the same, or for extinguishing fire therein, shall be liable to a penalty varying from 5*l.* to 10*l.*, and in default of payment to imprisonment, with or without hard labour, for any time not exceeding two months. It is also provided, that no child under sixteen years of age shall be apprenticed to a chimney-sweeper, and regulations are made for the proper construction of chimneys to prevent accidents from fire, and to facilitate the use of the sweeping machine.

laid by a few of the sweeps who used the machines against a few others who secretly clung to the old bad system. A few benevolent individuals—chiefly Quakers—formed themselves into associations to save children, under the provisions of the act, from this bitter slavery; but beyond this there was no organised attempt to see that the master-sweeps did their duty.

More than twenty years have elapsed since the passing of this act, and now there is too much reason to believe that the evil, never wholly destroyed, is gaining new life. The Birmingham Association for the Suppression of Climbing-boys—one of the associations we have just alluded to—is compelled to report that within the last few years seventy poor boys have been rescued from this wretched life in the Potteries alone. Mr. Francis Wedgwood, of Etruria, Stoke-upon-Trent, the treasurer of the North Staffordshire Association for Suppressing the use of Climbing-boys, is compelled, at the close of 1862, to write as follows:—"No chimney need be climbed, and yet there is no very general strong feeling against the use of climbing-boys. Lords, squires, magistrates, and mayors have their chimneys so swept without shame, and, of course, are very unwilling to convict sweeps for doing the same for others. One justice, if I remember rightly, required the age of a little boy produced in court to be proved by certificate of baptism. Of course such a requirement made a conviction impossible."

Another report, from Leicester, alluding to the state of things existing in 1856 and the subsequent years, says:—"The whole number of children and young persons illegally employed in this town and county was found to be upwards of one hundred." These children were liberated by the efforts of a few individuals acting together; but as soon as the boys were let loose in Leicestershire, they were bought up and carried off to other counties, still to be kept in their cruel and illegal occupation.

This painful subject has recently engaged the attention of the commissioners appointed in the early part of 1862 to inquire into the number and condition of children under thirteen years of age, and young persons under eighteen years of age, employed in trades and manufactures not already regulated by law. In the course of their inquiry much evidence was tendered to them respecting the inefficiency and violation of the "Chimney-Sweepers' Act," and the cruelty consequently often inflicted upon a large number of unfortunate and helpless boys. From the evidence gathered in England, Ireland, and Scotland, it appears that several thousand children, varying in age from five years to fourteen years, and including many girls, are still condemned to this fireside life of slavery. The evil is greater throughout the country and in the second-class country towns than it is in London and the chief cities, but everywhere it shows unhealthy signs of revival. As this state of things could not exist without great apathy or connivance on the

part of householders and fathers of families, it is charitable to suppose that they are ignorant of the cruelty which always did and must form a part of the climbing-boy system. What that system now is can best be shown by a narrative embodying the chief features of a sweep's life and calling, compounded from the evidence just laid before Parliament by the commissioners.

My name is George Stevens, and I am now a master-sweep, but I began life fifty years ago as a climbing-boy. I went to sweep at less than five years of age. I remember my first chimney very well, for I was told that there was a pork pie at the top. The masters used to carry a broad belt with a buckle round their waist to thrash the boys with. My master had three little girls who used to climb, and sleep in their sooty skins and clothes like the rest of us, and when they grew up young women they went about doing sweep journey-work, dressed in male dress.

I was so cruelly treated that I ran away. I went to Congleton, and Newcastle, and Chester, doubling back and so to Mold, and then I thought I was safe, but my master was pursuing a day behind me all the time. I had just hired myself to a man there, and was thinking that he looked kind, and his wife was giving me some tea, when I heard my old master's voice, and the tea choked me. I couldn't eat another morsel, though I was very hungry. He took me off at five o'clock in the morning. There was a league then between all the masters, and the sweep at Mold could not hold me against the other. We walked the whole way to Manchester without resting: he waited until we got to the forest, and then he nearly killed me.

Many people will say that this was under the old system, and that things are changed for the better now; but I can assure them that this is a great mistake. I have given a good deal of attention to this business, and I am sure that in the country, and in many large towns, the boys are as badly off as ever. Mr. Herries, of Leicester, has got twenty-three cases of boys who have been killed in chimneys by being stifled, since 1840. I have known many cases of cruelty. A few years ago a boy died up a court in Manchester. He was apprenticed to a master-sweep in Haslingden. His food was bread which beggars sold to his master. On a Sunday, when his master's family had good dinners, he was still kept to the same hard fare. He had frequent and long journeys into the country, and was forced to leave his heavy and badly-fitting clogs at home. He was constantly exposed, barefooted, to rain and cold; he often lodged in outhouses upon straw, and had no chance of drying his wet clothes. He was very young, and his health failed, and then, being of no more use to his master, he was sent back to Manchester, with marks of most cruel neglect and ill treatment upon him. He had a large abscess on his back, and one of his ears was nearly torn off. He lingered a few weeks in extreme suffering, and then

died. His death was painful, but I have known worse cases. There was one about seven or eight years ago at Nottingham. A little boy was smothered in a chimney there. The doctor who opened his body said *they had pulled the child's heart and liver all out of place in dragging him down*. That doctor can now be referred to, if necessary, to prove the truth of this.

Unfortunately there is no difficulty in getting boys for the climbing work, and as they are allowed to go about with the masters under the name of assistants, to carry the machine and bags, the law is easily broken. The thousands of climbing-boys are much worse off now, as the masters who keep them are only the least respectable ones. You can buy boys by the dozen. Parents themselves go hawking their children about. A woman was urging me the other day to take her boy, but I would not. Many want to get rid of their children and make a little money by it as well. The women sometimes are more hardened than the men. Only lately a woman who had sold her child to a sweep, followed me, and threatened to pull my hair for speaking against the use of climbing-boys. A man very recently said to me, "You shall have my two lads for nothing," instead of asking for the usual 10s. or 1*l*. I have often had children as young as six years old offered to me in the same way. Sometimes as much as 5*l*. has been paid for a boy, but very seldom. In Liverpool, where there are lots of bad women, you can get any quantity you want. I knew of a boy working at Burslem who was bought from Stockport; he was only six years old. No children can be got in the Potteries. There are no lots of bad women there as there are in the big towns; and besides, the Potteries give too much work for children for parents to want to get rid of their boys to sweeps. I know, however, of three cases at Tunstall, where two women, not married, sold their boys to a sweep there.

Nottingham is, perhaps, the most famous place for climbing-boys, on account of the chimneys being so narrow. A Nottingham boy, for this reason, is worth more to sell. A boy from this place was once stolen from me. As he was in the street a man seized him from behind in his arms, carried him off straight to a low lodging-house, and stupefied him with drugged tea. After the tea, the child fell into a deep sleep and lost all appetite. An inspector and I traced him to Hull. The boy was so glad to find that "master" had come. The man had said that if they had got him to France, they should have had 10*l*. for him. There was another boy found with him. The stealer was a sweep at Hull; letters were found on him giving orders for more boys, and these letters were read before the magistrates. The prosecution was afterwards dropped, as the magistrate said the man must be transported for kidnapping, if it were pressed. He paid 20*l*., and promised not to do it again. About the same time three climbing-boys were missed from Nottingham, and traced by their masters to a cellar where

they were hidden. The eldest was not more than ten years of age, and they were going to be sent to Hull, and from there to France.

I have heard of many cases of the same kind in Derby, Leicester, and other towns. I hear from sweeps that come from other parts that this is still the regular thing to this day. I have myself had several letters from distant places asking me to send boys, or to say where some could be got. I had such a letter last summer, offering to pay me well and give me a sovereign. The way it is done is this:—to find some poor boy and tell him that you know of a nice place where there is plenty of food and clothes, deluding him all the while, until you send him off by the train. This is more done now, because boys may not be got from the union as they formerly were. Besides this, boys are "trafficked" about from one master to another, 10s. or so being given for the "lent" of them. Whether they ever get back or not depends often on whether they have parents who care to look after them. In some cases they are not heard of for years, and sometimes never again. I remember well two nice little boys (brothers), aged nine and eleven, when I was an apprentice, being sold one Sunday morning for 30s. the two. A brute of a journeyman used to knock them about very much before. They were bought by another journeyman sweep, and put into a country waggon and sent off. They were never heard of again. The poor widow of a mother used to come backwards and forwards to our place to make inquiries, but she could never hear any tidings of them.

No one knows what the boys have to go through to be trained but those who have been climbing-boys, like myself. In learning a child you can't be soft with him; you must use violence. I have kept a lad four hours up a chimney when he was so sore he could scarcely move, but I wouldn't let him come down until he had finished. I shudder now when I think of it. It has often made my heart ache to hear them wail, even when I was what you may call a party to it. I have seen boys go to bed with their knees and elbows scabbed and raw, and the inside of their thighs all skinned. I have seen five or six boys sleeping in dirty straw, banked up with stones, in a dark cellar, covered with soot-bags, which stuck in their wounds. The bags were the same they had used in the day—wet or dry. One could read, and they all subscribed for a candle for him to amuse them with a book when they were in bed. I have seen the steam from their bodies so thick as to obscure the light, so that the boy couldn't read. Dozens of such children die of consumption. They get up to their work in all weathers, and often at two and three in the morning. They are filthy in their habits, and often wear one shirt right through until it is done with. I, myself, have been for fifteen months without being washed, except by the rain, until I was almost eaten away by vermin. Formerly the sweeps, as they said themselves, had three washes a year—

viz., at Whitsuntide, Goose Fair (October), and Christmas. I once knew a sweep who had never been washed, and another who had never been sober. The custom of "sleeping black," as it is called, is still very common, and you may often hear the men and boys "dusting" themselves in the morning.

Most masters prefer to take their climbing-boys very young, as they learn more readily. Six years is considered a nice trainable age. I have known two at least of my neighbours' children begin at the age of five. I once saw a child only four years and a half old in the market-place in his sooty clothes, with his scraper in his hand. Some people said, "Look at that little fellow; he is not four." One man, however, standing by, said, "He's four and a half; his father told me his birthday, and said that he began when he was four, and that he would make a nice little climber."

I have had boys as young as this, but I never liked them. They were too weak, and I was afraid they might go off. It is no light thing having a life lost in your service. They go off just as quietly as you might fall asleep in your chair by the fire after you had had two or three glasses of strong drink. A son of mine, as well as myself, was very nearly gone so once, and I was a long time before I came round.

If, as often happens, a boy is gloomy, or sleepy, or anyway "lenty," and you have other jobs on at the same time, though I should be as kind as I could, yet, as I said before, you must ill treat him somehow. Sometimes you will strike him with the hand, sometimes with the brush. It is remembering the cruelty which I have suffered which makes me so strong against boys being still employed. I have the marks of it on my body now, and I believe the biggest part of the sweeps in the town have. I have a deep scar on the bottom of the calf of my leg which was made by my master with an ash-plant—a young ash-tree that is supple and will not break. The limb was cut to the bone, which had to be scraped to heal the wound. I was six years old at the time. I have marks of nailed boots in other parts of my body. It was a common thing with sweeps to speak of "breaking-in" a boy; if he was hard, like a ground-road or a stone, they gave it up. It is necessary to harden the children's flesh when they begin the work. This is done by rubbing it, chiefly on the elbows and knees, with the strongest brine, such as you may get from a pork-shop, before a fire. You must stand over them with a stick while the rubbing is going on.

At first they will come back from their work with their arms and knees streaming with blood, and the knees looking as if the caps had been pulled off. Then they must be rubbed with brine again, and perhaps go off at once to another chimney. In some boys I have heard that the flesh does not harden for years. I once found a boy in the market-place, about eight years of age, who had run away from some place of correction,

and who offered himself to me. Part of his knee-caps had got torn off, the gristle all showed white, and the guiders (tendons) all round were like white string, or an imitation of white cotton; his back was covered with sores all the way up. To harden his knees, a salt lotion, simmered with hot cinders, was put on them; and to make him hold them straight under this, he had a brush-tail tied up and down his back, and something else like it in front, and he was made to walk in this way twenty, forty, or fifty times up and down the room. He counted each time, once up and once down, "one." It was like killing him, and I had to stand by and see it all. However, he was the clumsiest boy I ever saw, and had no activity.

Some use the water from a smithy in which iron is hardened, others salt and water; but I think that is no good at all, but makes it worse. Besides all this, there is what the boys suffer from the employment itself; they must go barefoot even on the coldest winter mornings, or the soot would shake from their trousers into their boots, and gall and fester their feet. I have often carried boys myself on my back, out of pity to them at such times. Then, in some, the climbing scrapes the flesh very much; and from "sleeping black" and breathing the soot all night, they get the sooty wart or cancer. The parts which this disease gets hold of are generally eaten away; the sooty warts are sometimes, however, cut out.

Boys suffer much from blisters got in climbing up hot flues, and also in other ways. Sometimes a loose bit of mortar falls and catches them in the waistband of their trousers, and, as there is always very little room to spare, it easily fixes them. The more they twist to get free, the tighter they stick. A piece no bigger than an egg will sometimes do this. Boys get stuck in other ways, especially if they are clumsy at the work. I knew a boy who went up a chimney at nine one morning and was fixed there till ten the next morning, by which time a bricklayer had opened the chimney from above and dug him out. A boy was found dead in a flue in this way, at the west-end of London, about two years ago, and his master was only fined heavily. Another man, in Eastcheap, was fined last summer for using a boy. Few informations, however, have been laid in London of late years, although the use of boys is undoubtedly on the increase.

The common price in the London trade for the use of a climbing-boy is half-a-crown for the job, and the 900 ill-constructed flues of the Houses of Parliament have all been lately "cored" by five boys in direct opposition to the law. An idea of the importance of chimney-sweeping in large towns may be formed from the fact that the Bank of England allows its contractor 400*l.* a year for this work.

The common hour for beginning work in London is about four o'clock in the morning, and work goes on at any hour up to nine o'clock at night. The usual hours that the boys work in the small country

towns are eight or nine—it is only morning's work ; but in the larger towns they work for twelve or sixteen hours daily. The younger they are the more they labour, as the masters can get through more work with the smallest boys. Some masters work short hours, and give their boys a chance of going to school, but not always with the consent of their employers—the householders. A lady in Nottingham who wished to have her chimneys swept in the evening, and could not get the work done by her sweeper for this reason, exclaimed—“A chimney-sweep, indeed, wanting education! what next?”

When the boys get too big to climb, which in town chimneys is about fifteen or sixteen, and in the large country chimneys a few years older, they are unfitted for other employments, and often do nothing, or worse. They fall into the ranks as criminals, and no prison is ever without one at least of this unfortunate, ill-treated class. Scarcely one in a hundred of them can write, and not six in a hundred of them can read. When they get older they seldom improve. They have not been accustomed to education when young, and they don't think of it.

The Chimney-Sweepers' Act, as I have said before, is not thought much of, and is broken through every day. In Yorkshire, where there is no association to see the act enforced, the climbing system is very bad. In all Sheffield, when Mr. Roberts and Mr. Montgomery were alive, there was not one boy, and now there are twenty-two, varying from five to ten years of age ; there are also several in the villages about. Bury was free for four years, now there is one. There are fourteen at Chester. In Nottingham there are twenty, and in all the towns northward to Newcastle-on-Tyne (Halifax excepted), there are from two to ten boys employed. It is the same all over South Staffordshire, also at Coventry, Ashby, Leamington, Bridgenorth, Wolverhampton, Birkenhead, &c. I could give the names of fifty other towns where climbing is going on. As I have said before, it is not abandoned in London and its suburbs, very young boys being employed. In the county of Kent there are many, especially in Maidstone and Gravesend ; also at Greenwich and Woolwich. At Birmingham, where during several years “The Association for the Suppression of the Use of Climbing-boys” has been taking active measures to enforce the Act of Parliament, and where nearly five hundred pounds have been thus expended in the last five years, twenty-five boys are employed. Some are very young, and one poor child, not more than seven or eight years old, can scarcely walk along the streets from sores and bruises received in climbing. I am told his master is going to have pads made like those of horses for his knees. A child was dragged out of bed at two o'clock in the morning to sweep the chimneys at a certain noble lord's mansion in that county, and at another noble baron's house, climbing-boys are always used. At Wakefield there is a

man who has three or four climbing-boys, at Blackburn another, at Preston another, at Rochdale another. At Stockport, the other day, I saw a child of about eight with a sweep who had just come out of gaol ; and I know of another sweep who keeps children, who has been committed more than thirty times, for every kind of offence. At Ashton, last December, a sweep was fined for sending a boy, aged seven, up a chimney on fire, by which the poor child was dreadfully burnt ; and at Whitchurch there is a boy with a wound on his head an inch and a half long, which his master gave him with a poker. Those masters who have never climbed are by far the most barbarous.

All this cruelty is not only illegal but unnecessary. Though machines will do the work well, and are not dear, there is a great antipathy to them amongst the old masters. It is mere laziness that causes this. The machine requires working about to make it do the sweeping properly : it is much easier to stand below, gossiping with the housemaid, and send a boy up the chimney. Journeymen who go about with the boys, working, as is frequently the case, for masters who were never apprenticed,—travelling tinkers, and such like, who know nothing of the trade,—speak against the machine to save themselves the trouble of using it. They generally work with closed doors, so that no one may see what is done. Want of capital has something to do with it at times, though not always. A common machine with iron fittings costs twenty-five shillings ; a good one with brass fittings, which are much lighter, can be had for about two pounds ; and the best, with all extras complete, for three pounds. With yearly repairs and all, I have not laid out more than equal to two good new machines in twenty years, and parts of my first are still in use. Careless workmen, of course, may wear out a machine much sooner, perhaps in about four years.

There may be chimneys which cannot be swept by a machine, but I have never seen one. If there is any slope at all it can be done by means of traps. If people only thought of what the boys suffer they would not have the heart to mind the small expense of traps. Instead of this, the use of boys is much encouraged by householders who will not have their chimneys swept by the machine. I have myself lost a great deal of custom which I should otherwise have, and some which I formerly had, at large houses and public establishments because I will not use boys. That reason was, of course, not given, but I was sent away after I refused. I have been sent away even from magistrates' houses, and, in some cases, even by ladies who have professed to pity the boys.

In many public buildings now being built or recently built, the Act of Parliament relating to the form of chimneys is disregarded alike by architects, builders, and landlords. Some of the “motel” lodging-houses are the worst. All the old chimneys that I have known for more than

forty years could be altered to suit the machine; but in Piccadilly and the large houses at the West-end of London, where they are generally the worst, the objection to altering them is the strongest. It is these people who make the law, and they are the first to break it. They don't go so far as to positively say they will have a boy, but they say, "I won't have my house pulled about," and leave the rest to take care of itself.

It would be a very good thing to make the law positive, and say, "boys shall *not* be allowed." There should be a penalty on the landlord if his chimneys are so built that the machine cannot be used in them, and a penalty on the tenant for having a boy. A tenant going into a house for a short time, say for a year or two, doesn't like to go to the expense of alterations; but if landlords were made liable they would look into the state of the chimneys when they buy a house. They never think of this now. Of course, at present, they cannot be called to account for chimneys which they didn't build themselves, and I am afraid they are too strong a party in Parliament ever to allow themselves to be called to account for anything.

This is no imaginary narrative compiled to create a sensation. Every statement in it has been collected in the form of evidence, and will doubtless be used to stimulate further legislation on the subject. Further reliable evidence has also been gathered to prove that all fears of the increased risk of fire from what we must now call the proposed

abolition of climbing-boys are entirely without foundation.

This is no case in which a large army of government inspectors will be wanted if the public—if fathers and mothers of families—will do their duty. That they have not done their duty hitherto is painfully apparent throughout the course of this inquiry. "We should not do justice," say the Children's Employment Commissioners, "to a large number of master sweeps, were we not to state that many of their number, both in a large and small way of business, have highly distinguished themselves by their disinterested and humane efforts to suppress this cruel system,—frequently to their own pecuniary loss. In our opinion, it is the public more than the sweeps who are responsible for the revival and extension of these great evils—physical, moral, and religious—which it was the benevolent object of the legislature to suppress." Surely the guardians of the homes of England—those homes that are always referred to with so much national pride—will do something to remove this great reproach from their doors. They will hardly allow themselves to be outdone in humanity by common chimney-sweeps. The full power of destroying this infant slavery is ready in their hands, if they will only rouse themselves and use it. Surely they will not lie snoring in their beds when those hoarse plaintive cries are heard in the late night or early morning at their doors, leaving the duty of watching to their yawning cooks and housemaids.

JAMES ALMOND.

MR. JOSEPH WALKER.

BY THE EDITOR.

MR. JOSEPH WALKER was what is called "a respectable man"—indeed a highly respectable man. Within a certain circle he was recognised as almost a model man. All his little defects and shortcomings were by that circle put down to the debit of fallen humanity in general, but never to that of Mr. Joseph Walker in particular. Very properly Mrs. Walker looked up to him as an oracle, and wisely accommodated herself to all his opinions and prejudices regarding men and "things in general."

There was nothing very remarkable in Mr. Walker's outward appearance. His hair was short and sandy, his eyes keen and restless, his lips dry and thin, his body lithe and active. When in his Sunday clothes, he might have passed for an ex-bailie, a physician in good practice, or a retired clergyman with a coloured neckcloth.

And yet there must have been something amiss with Mr. Walker, for he was recognised by all beyond the Walker interest as a sort of stumbling-block in their road—an odd figure which lessened the sum total of their enjoyment—a ghost at their feasts of charity.

Was he, then, a bad man? I have already said that the world pronounced him a highly "respectable" man, and the world was so far right, for Joseph was never guilty of any crime or vice. He was, for example, as incapable of being the "worse for liquor," as the east wind is when dryest and sharpest. I don't believe he ever cheated any man, or was ever guilty of an act of dishonesty in his accounts; and that same fact in these days, or in any days since shékels were weighed or bills discounted, is something to say for a man, and forms no small guarantee for his respectability.

Or was he false? To do him justice, it must be admitted that Mr. Walker reached the mark of the world's standard of truth. I don't think he ever proposed to himself to tell a falsehood, or ever imagined that he could tell a falsehood, or put a "yes" where a "no" should be. But that he was an out-and-out truthful, transparent man, who could not do a very sneaking, mean thing, I will not be so bold as to affirm.

Nor was Joseph a passionate, bad-tempered man, as these infirmities are generally understood. I

don't think he ever so far forgot himself as to be in a passion. The flint strikes fire, and straight is cold again; but Joseph, though a good deal of a flint, did not strike fire, from some damp or clay of selfish prudence which adhered to his surface. He was not a man who would, in the hey-day of duelling, have ventured to send a challenge to even a hen, or who would ever have laid himself open to the nervous pain of being called out. Whatever anger was in his heart growled far back in its den, or paced noiselessly there with green eyes flashing in the darkness, but never flew up against the bars of his cage with thud and roar. Joseph, therefore, could never have struck a man; but I am inclined to think he would have given a vicious pinch to his neighbour, especially if he were asleep.

Joseph Walker was not even a bore. I never knew a bore who had not more than ordinary confidence in his fellow-men, for he not only craves their sympathy for himself and his schemes—(and what bore is there without a scheme of some kind?)—but relies on their sympathy with a confidence which often creates sympathy. There is also, I think, generally a large amount of kindness and amiability in a genuine bore. If society will only submit to be bored, he will repay society by a large amount of fair value in return. Besides, a bore has often a great deal of generosity in him, and can laugh with others who may laugh at his hobby even. Joseph Walker was too silent, too mysterious, too self-conscious for a bore.

Were we to classify him according to his skin, we would say at once that he was decidedly not pachydermatous, or thick skinned. His skin was of the finest texture; it was almost transparent: hence his extreme touchiness. He often shrank back from a brother's approach as from a red-hot iron.

Mr. Walker was very quiet, circumspect, cautious, calculating, prudent. His smile was always arrested and snubbed long before it approached the rash outburst of joyous laughter. I don't believe he ever enjoyed a hearty laugh in his life, or that even when a child he could have been tickled. To have been pleased with a rattle was possible for him, but to have been tickled with a straw I think impossible. Joseph was calm, solid, serious, as became a highly respectable man.

He was, as we might guess, intensely sectarian, which means, not that he loved his own Church, for that is not only natural but right, but Joseph had a grudge against every other Church, as he had against everything on earth which was not stamped with his own goods-mark, that mark being MY.

As to his religious habits, as the phrase is, he was blameless. No man was more regular at church. He would have been missed there as much as a pillar, or side window. The most gossiping or uncharitable never imagined that a shadow of Scepticism ever rested on Joseph's brain, any more than on the well-brushed hat which covered it. His church prin-

ciples were all as accurate and clearly arranged in his mind as the squares on a chess-board. He not only believed his Church "principles" (as he liked to call them) true, but he was thankful in having been delivered from the dangerous weakness of imagining any other principles by any possibility to be other than false, and the men who held them equally so. He tithed rigorously all rye and cummin, and could mark off a Sabbath-day's journey to a yard; but the weightier matters of the law were more difficult to be comprehended by him, and he feared to fall into deadly errors about works.

It was Joseph's secret opinion that a man ought to form a fair and just estimate of himself—of his own talents, influence, position in society, or what was due to him as an exactor of customs from his neighbour. All he wanted was fair play and justice. If he got that, he himself being judge of its amount, he accepted it as his right. If he got less, he complained. If he got more than his due—which, he said, very rarely happened—he was grateful, and smiled. I may just state, in passing, that Joseph was often at variance with society upon this point, his own worth and importance; and that there were great difficulties in adjusting their respective claims. He and society met like cross tides, and created a jumble. The law could not take the matter up, and arbitration was impossible, for Joseph insisted on his wife being one of the arbiters, which no one would agree to. There was, therefore, great difficulty in adjusting the difference.

As might have been expected, Joseph was very prone to take offence, and required particularly nice and discriminative handling. The brittlest glass or wax is more pliable than he was. Was he a member of committee in connection with any work or "movement," as it is called? If so, let the other members have a care, and see that Mr. Joseph Walker's ideas, suggestions, and proposals, are respectfully considered, whatever becomes of those of others. Recollect, he and his resolutions are one flesh, and that to touch the one is to touch the other. Measures, not men, may be a very practical aphorism with some, but Joseph's measures and the man are inseparable. In one word, study him, and have always oil with you to pour into his machinery, which otherwise won't work, or will get hot in its gears.

If Mr. Walker was opposed on any occasion with decision or vigour, the question was always suggested by him, why? Why did this man, at this time, oppose *him*? Was it on fair, just and necessitous grounds? Impossible! How could Joseph be so far wrong? But he saw through it all at last. It was from pure spite and envy, no doubt of it; and he would smile, with a profound shake of his head, looking at the floor, and remark, "that it was a queer world, and that there was no knowing *what* some people would do." Ill-used Joseph!

Mr. Walker included within his immediate personality not merely such things as his proposals and

his resolutions, but all his plans and schemes, and all that belonged to his household—everything, in short, having his mark. He protected them all, demanded homage for them all. The enemies of any thing marked with his MY he considered as his own enemies. Any want of attention to his dog even, with J. W. on its collar, would have been considered personal: and any dislike which your supposed or real neglect might have engendered in him towards yourself, was not confined to you, but extended to your whole tribe. And thus he suffered from a vast number of imaginary grievances, supposed hits against himself,—neglects, or forgets, with reference to his dues.

“Are you and Joseph Walker good friends?” asked Jones of his friend Jenkins.

“Yes; why do you ask?” replied Jenkins. “Anything wrong?”—

“Oh no, nothing; no—but”—

“Out with it, Jones, what is it? I never knew Walker intimately, but now that your question has suggested the idea, I do think he has been very cold and distant to me.”

“Did you ever travel with his niece Miss Trotter to London?”

“Yes, what then?”

“And did not get her a cab when you reached the station?”

“Whew!” said Jenkins with a whistle, “I see it all. So *that's* what has offended him! Now hear me,” continued Jenkins, laughing, “I remember the day well: it was July a year ago, for my wife, then my sweetheart, and her mother, were waiting my arrival. In the hurry and fuss of the exciting moment, I forgot Miss Trotter till it was too late, but I wrote to her, making an ample apology, and expressing my annoyance, and I told it all to Joseph! What a thin-skinned fellow?”

“Well, I will explain the whole matter, Jenkins, to him, and it will be all right.”

“Right or wrong, Jones, I hate that hoarding up of little offences. It is paltry. We must all give and take in this world, or the cords of friendship will snap. What a memory Joseph has, to be sure, to have kept this in his mind so long! And he voted against me, canvassed against me, and, I fear, all because of Miss Trotter! Well, give him my compliments, and tell him not to make an ass of himself; not that, Jones—but drop oil with my love in his wounds. I am sorry he has been unhappy.”

But after all, I question if Mr. Walker *was* so very unhappy from these cruelties of society, and its general conspiracy against him. Our friend did not always like to be disabused of his prejudices and dislikes; there was, if he would confess it, a secret comfort in them which could not be relinquished without consideration—his grievances having their consolations, as shipwrecks have their salvages. Joseph often contemplated himself as a martyr to human ignorance, envy, or spite, and sympathised with himself accordingly. To ponder

upon the annoyances of the day was a favourite evening exercise. He was often disposed to say to himself—“Joseph, was there ever a man whose merits were so inadequately appreciated as thine? But rise above all these mean and paltry jealousies, crackling in unworthy bosoms. Rejoice in this, at least, that thou art a green oasis amidst a desert of human hearts, and if no one else will feel for thee, admire thee, and sympathise with thee, be thou just and true to thyself, excellent Joseph Walker.” Ah! there are few forms of worship so constant, so established, so free from dissent, so sincere and unmixed, as self-worship.

A special feature of Mr. Walker's character was his remarkable talent for diplomacy. He had no idea of going straight towards his object, but worked his way up to it by zig-zag parallels, as engineers do against a fortress. Nor was he ever seen by the enemy. You could detect his presence only by carefully watching the earth and dust which, like the mole, he occasionally raised, as he peeped up with half-shut eyes, to disappear again as rapidly out of sight. He was therefore a chief man at every species of election, from a beadle to a bailie, from a minister to a member of parliament. In such circumstances, indeed, he became great. His silence was as remarkable as his speech; his caution was sublime; his wisdom unfathomable.

Behold him slowly pacing down the street, arm-in-arm with some confidential friend, whom he is indoctrinating, their heads close together, his stick or umbrella moving in emphatic unison with the sagacious counsel he is breathing into the listening ear of his friend.

“Observe now,” he says: “if Mr. A. gets this situation, the one which he vacates might be filled by Mr. B., and this would enable us to put C. into office instead of B., which would be the very thing, don't you see?”

Equally sagacious were his methods of getting at a voter. If Joseph wished to get his hand into the house that Jack built, it was quite possible that he could not attain his end directly through the influence of the cat, or the rat that eat the malt. But, thinking over the matter, he would remember most fortunately that he knew the “priest all shaven and shorn;” and for certain reasons he believed the priest, who was obliging, could be easily got at; then the said priest was well acquainted with the “maiden all forlorn,” for she was one of his own flock, and he had married her to the man “tattered and torn;” and there was, therefore, no difficulty through her of influencing the “cow with the crumpled horn,” which she herself milked; and the cow would arrange everything with the dog, in spite of his tossing; and then the dog knew the cat, who was certain of getting sooner or later at the rat, and then at the malt, and thus at last into the House that Jack built!

When Walker could take no active part himself, his hints were invaluable. “You know Nobbs?” he would say, in a quiet, confidential way, to a

Behold him slowly pacing down the street, arm in arm, with some confidential friend."

friend, when unfolding the mystery of his plan. "Well, then, you are aware that his nephew, Smith, is married to a daughter of old Spencer. Now I have cause to know that Mr. Turner, who is a partner of old Spencer, will be opposed like ourselves to Robertson. Why not try to get Nobbs up to speaking, through Smith, to Spencer to give a hint to his partner, Turner, about Robertson?"

"O, I see, I see!"

"Don't you?" says Walker, with delight; "that's your game! that's your game; there's no mistake about it. Don't lose an hour, see Nobbs." What a knowing man is Mr. Joseph Walker!

But on the other hand, tramp on Joseph's toe—ruffle his skin—refuse to give him the big fiddle—only offend his vanity or his self-esteem, and let him become your enemy: then, depend upon it that, by shakes of the head, shrugs of the shoulder, and small plots, Mr. Joseph will thwart you, traduce you, throw out hints against you, and,

as far as in him lies, demolish you and your prospects; and he will accomplish all this in a highly respectable way. He will express the most kindly hopes that he may have been misinformed and mistaken in what he has heard of you, but he fears, alas! that his information is correct. He is truly sorry (dear kind Joseph!), that he is obliged to conclude that you are not the man—that you will never do. He has no wish to enter into details, but he has the best reasons for saying, that it will be decidedly better for yourself even not to get this appointment. Honest Joseph!

Joseph, you see, never forgot himself. He was not a man who had anything open, true, or generous in his disposition; but one who, Sunday and Saturday, saw himself the centre of the universe. He was "highly respectable" in the courts of the temple, yet who would compare him with the poor and miserable publican who stood afar off and smote upon his breast?

THE VICTORIA MILITARY HOSPITAL, NETLEY, AND THE WORK DONE THERE.

WHEN people read in the newspapers that the Queen, breaking the seclusion in which her Majesty had lived since the death of her lamented husband, had visited the Military Hospital at Netley, some curiosity was awakened as to the institution thus honoured, and the purpose it serves in the military system of the country. To gratify this curiosity is the object of this paper.

The Royal Victoria Hospital, like many other improvements in our military system, dates from the Crimean war. For more than forty years Great Britain had not fired a hostile shot in Europe.

When the popular desire to humble a despot whose power had become "a standing menace" to the liberties of his neighbours, urged the Government of England into a war with Russia, our want of military preparation was exposed, not only to ourselves, but to all the world. No better illustration can be given of this than the fact that we had the presumption to fight a great battle without the means of removing our wounded soldiers from the field. We were indebted to our allies for the hospital transport that conveyed our wounded from the Alma to the fleet. A few lumbering ambulance waggons we had, but these, such as they were, were left behind at Varna; and had we met with reverse instead of victory on those gory heights, the mortification of defeat would have been added to the bitter disgrace of leaving our wounded officers and men in the hands of the enemy.

Where such was the case as regards field-hospital equipments, it need hardly be told that we were equally ill-prepared in the way of military hospitals at home for the reception of the sick and wounded from the seat of war. The limited accommodation

at Fort Pitt, Chatham, not originally constructed for such a purpose at all, and felt even in time of peace to be but a paltry make-shift, was soon exhausted, and the sick and wounded as they arrived were lodged in the Engineer Barracks at Brompton. The buildings thus extemporised into hospitals were wholly unsuited for such a purpose; and although the medical officers did their best to meet difficulties, it was felt on all hands that a great military hospital was one of the crying wants of the country. Under these circumstances, it was determined to build one worthy of England, and of the gallant army which England had at last learned to appreciate. It is not our intention to record here the "battle of the sites." Much ink was spilt in the contest; but while the controversy raged, the construction of the building went on; and when at last the party opposed to the site on Southampton Water claimed the victory, it was found that between sixty and seventy thousand pounds had been expended on the foundations,—so the victory was barren, the building rose, and has at last been completed on the site originally selected near the small village of Netley, on the eastern side of Southampton Water. It is understood that the late Prince Consort was strongly in favour of the present site. It was always a source of astonishment to his Royal Highness that a great maritime colonising power had made so little use of Southampton as a port for embarking and disembarking troops for foreign service. The truth is, that it was not until the age of ocean steam navigation had fully come, that the capabilities of Southampton Water came into play. This beautiful estuary, a few years ago only frequented by the graceful craft of the Royal Yacht

squadron, is now the point of departure for mighty steam-ships that have "the plain of ocean for their wide domain." Before passing from this part of the subject we think it right to add, that there appears to be no cause to fear that the site will realise the gloomy anticipations of those who were opposed to it. The hospital stands on a bed of gravel, the health of the people in the vicinity is extremely good, and we believe that few districts in England can be found where the average duration of human life is longer. It is true that a vast sheet of mud is left exposed for some hours daily at low water; but the best proof possible that no exhalations hostile to health proceed from it, is to be found in the fact that an old gun-brig, for many years beached on this flat and used as a barrack by the Coast Guard of the station, had not a single case of fever or other serious disease for sixteen years.

The foundation-stone of this magnificent building was laid by the Queen with much ceremony on the 19th of May, 1856. One wing was opened for the reception of patients on the 1st of March, 1863, and the other some months after. Thus seven years were occupied in its construction—a space of time not excessive when we consider its vast dimensions, the solidity and finish of the structure, and the perfection and complexity of its internal fittings. The front extends over 1424 feet; it contains 99 wards, ample room for administrative purposes, and affords accommodation, according to the cubical space required by the new regulations, for 1000 patients. The hospital is built in the Italian style, of red brick elaborately ornamented with stone. Exceptions can doubtless be taken by critics in architecture to some of the details: for example, the dome at once strikes the eye as too small for the great length of the building; still, taken as a whole, and particularly when seen from the water, the effect is grand, and no Englishman need blush as he points out to foreigners the place prepared for the reception of those who have fought the battles of England, or in pestilential climes have suffered in her cause.

Our imaginary Englishman, exultingly pointing out to the "distinguished foreigner" the beauties of Netley Hospital, will exercise a sound discretion if he leaves his friend to believe that the hideous building on the Southampton side has not only "no connexion" with the Hospital, but is in reality what it looks, a manufactory eloped from Birmingham or Manchester. The truth, however, must be told; this brick and mortar abomination, this "Bleak House," is not what its appearance indicates, a manufactory that has lost its way, it is the Officers' Quarters. The architect had designed a front for it in harmony with that of the Hospital, but when the time came to embody this design in brick, and to decorate its front with stone, the hot fit of liberal expenditure had passed away, the cold fit of parsimony and penny wisdom had come again, the estimates were reduced by 3000*l.*, and for this infinitesimal saving, a great national building that

cost hundreds of thousands was debased and disfigured by the centiguty of this staring ugliness alongside of it. Looking a little beyond on the same side, another abortion meets the eye, and offends it. This is a pert, naked, red-brick, would-be-rural-looking house, which fortunately is mistaken by nine strangers out of ten for the Porter's Lodge. In sober seriousness, it is the official residence of the principal medical officer of the Royal Victoria Hospital, an Inspector General, with the relative army rank of a Brigadier General, charged with the medical responsibilities of this enormous establishment.

It is to be regretted that for a small saving a hideous little excrescence like this should mar the effect of the general design, and still more that foreign visitors should carry away the impression, that while England is rich enough to afford a palace for her sick and hurt soldiers, she can only, from economical considerations, provide a mean residence for the chief medical officer in charge of them. "The battle of the sites," was not the only matter in dispute between those who took an interest in this great national building. A lively controversy was waged on the principles of construction. The Victoria Hospital is built upon what is called the corridor principle, that is to say, all the wards open on vast corridors, which run from one extremity of the hospital to the other. It must, we fear, be admitted that this is not a sound principle. The first and last thing to be attended to in hospital construction, the thing to which all others should give place, is a full and free supply of fresh air in the wards. If each ward has what is called cross ventilation from windows opening on both sides of the room directly into the open air, what is called "hospital air" can never pervade the building; whereas, if the wards open on one side into a common corridor on every floor, it is a matter of extreme difficulty to secure that free ventilation, that constant renewal of air which, as we have just said, is the first necessity in all buildings where human beings are congregated. Were the Victoria Hospital to be built over again, it is certain that the corridor principle would not be adopted. As the matter stands, the medical officers are well aware of the difficulties they have to contend with, and the greatest watchfulness is exercised to counteract this acknowledged error in construction.

Having mentioned this cardinal defect, we have nothing more to say in disparagement. Everything that ingenuity could devise calculated to forward the one great object in view, the well-being of the Queen's soldiers, has been supplied without stint or limit. The central part of the building is chiefly occupied by the officers connected with the administration to be presently mentioned. In this block there is a complete establishment of baths,—a swimming bath, supplied with salt water from the sea, and hot, cold, shower, and vapour baths, ready for use at a moment's warning. In addition to these, every ward has its own hot and cold bath, lavatory, &c., &c.,

so placed as to be within easy reach of all but bed-ridden patients. The material employed in the construction of these baths and lavatories is slate, highly polished and covered with enamel, presenting a surface at once hard, elegant, and easily kept in a state of perfect purity. The water supply has been carefully attended to, and to prevent the possibility of patients suffering from lead contamination, not an atom of that metal has been used in the construction either of the pipes or cisterns; the former are made of block tin, and cost 9000*l.* It would be well for the health of the community if in our private houses similar precautions were used. In each wing of the building there is a cooking apparatus capable of cooking for 700 men, with all the appliances required to facilitate the dressing and arranging of the various diets ordered for the inmates. These, after being arranged on a hot plate, are passed up by means of "lifts" to dining halls where all patients, not confined to bed, take their meals. There is an excellent bakery, furnished with the most modern machinery, which supplies bread of superior quality; and at a little distance in rear of the hospital, are placed the wash-house and gas works. The former is on such a scale that it washes, not only for the hospital but for the garrisons of Portsmouth and Winchester.

While so much has been done for the bodily wants of the sick, their spiritual wants are equally well provided for. There is a handsome chapel, which is much admired for its elegant proportions, and which affords accommodation for 600 worshippers. The Episcopal, Presbyterian, and Roman Catholic services are performed in it regularly every Sunday; and Government, with wise and catholic liberality, provides zealous chaplains of these three persuasions, who minister to the patients according to the rites and ceremonies of their respective communions. There is besides this a library and reading room provided with books adapted to all tastes; and out of doors, those who are strong enough to partake in such amusements play at quoits, skittles, and such like games.

Our readers who have had the patience to follow us thus far, will naturally desire to know how the great machine is worked and governed. Its affairs are conducted on the principles laid down for the government of all military general hospitals in her Majesty's regulations for the medical department of the army. The guiding principle in these regulations, was to relieve administrative medical officers as much as possible from all details likely to interfere with their chief duty,—the care and cure of the sick. The better to effect this, a military commandant is placed at the head of the establishment. This officer is responsible to the Commander-in-Chief for the discipline of the Hospital, and to the Secretary for War for the general care of the building and the public property thereunto belonging. The commandant is assisted by an officer of the rank of major, by an adjutant, and by an officer called the Captain of Orderlies, who holds

the rank of ensign, and whose chief duty consists, as his official designation indicates, in maintaining discipline among the orderlies who wait on the sick. The field officer of Royal Engineers who superintended the construction of the building, still forms part of the establishment, and is in charge of all public works in and about the building. There is also a military paymaster with a complete staff of clerks, whose duty it is to pay the establishment and to settle the claims and accounts of the soldiers admitted into the Hospital from all parts of the world.

At the head of the medical establishment is an officer of the rank of Inspector-General, whose relative military rank is that of Brigadier-General; this officer is responsible to the Director-General of the Medical Department of the Army and to the Secretary for War for everything relating to the care of the sick. He is the medical chief of the Hospital, and in all professional matters is supreme; in the absence of the Governor he takes his place and performs his duties. Under the principal medical officer are two deputy inspectors-general, one of whom is at the head of the surgical, the other of the medical, division of the Hospital. They hold also the office of Professors in the Army Medical School, one being professor of military surgery, the other of military medicine. Under these officers are staff surgeons, never less than two to each division, with a number of staff assistant-surgeons and medical cadets, varying in number according to the number of patients in hospital, and the number of pupils in the Army Medical School. The sick are waited upon by a body of men called the Army Hospital Corps. These men are all soldiers, mostly volunteers from regiments; they are in all military matters under military command, and in their ward duties are under the orders of the medical officers, whose assistants in point of fact they are. These men receive a regular course of instruction in "nursing," attendance on the sick, the performance of such duties as carrying wounded men out of action to the ambulances, &c., &c. None but men of good character, conduct, and intelligence are retained in the corps. A few nurses are now employed at Netley under a lady superintendent. They are very useful in attending on bed-ridden and helpless patients, and also in instructing the orderlies in such duties. The commissariat department of all hospitals in the British army is under a separate class of officers, called Purveyors. These officers are responsible for the food, wine, and clothing for the sick, and, under certain regulations, comply with the requisitions of the principal medical officer for all such supplies. At Netley a principal purveyor and two deputies are required for the duties of this department. The Royal Victoria Hospital is intended for the reception of sick and wounded officers and soldiers from the scene of any war in which we may be engaged, and in times of peace for invalids from all the foreign stations of the empire, including India.

Let us now see how invalids are dealt with when they arrive at Netley. Most of the ships arriving from foreign stations have orders to call at Spithead, a Government steamer is in attendance, and at the proper stage of the tide, the invalids are conveyed to Netley, and at once disembarked. The medical officer of the day is in attendance, and inspects the men as they arrive. The Hospital is divided into three divisions, medical, surgical, and convalescent; those requiring no treatment are sent to the convalescent division, the rest are distributed according to the nature of their complaints. The helpless are conveyed at once by means of "lifts" to their respective divisions. The admitting officer prescribes for any case requiring immediate attention, and should any difficulty arise, one or more of the staff surgeons give their assistance. Every soldier brings with him what is called a "Medical History Sheet." In this document is recorded every admission into hospital, from the day of the man's enlistment, with the nature of the ailment or accident, and period of time under treatment. Also a brief "Abstract," drawn up by the last medical officer under whose care he was, of the history of the disease or wound for which the man has been invalided home. These documents are in the first instance handed to the registrar, whose duty it is to keep the statistical records of the Hospital, they then pass into the hands of the medical officers in charge of the men. A brief abstract of these papers is entered in the "Medical Register" of the ward, followed by a precise description of the physical condition of the patient on admission; and from day to day a note is made of the progress of the case, with the prescriptions and diet ordered, and this is done daily until the man is discharged to duty, or is sent to his home unfit for further service, or dies.

On the following day, the deputy inspectors of divisions, with their respective staff surgeons, see the men thus admitted, give the executive medical officers in charge the benefit of their opinion on the case, and see that the regulations of the service are strictly complied with.

They select the men fit to be discharged, and send them for inspection by the principal medical officer, whose decision as to the man's fitness or otherwise for military service is final. The principal medical officer and the commandant report on each man who passes what is technically called the "Invaliding Board," composed of these two functionaries, and from this report the Chelsea Commissioners determine the amount of pension to which the soldier is entitled. When this last stage is completed, the man is sent to his home: if blind or weak, or from any cause incapable of taking care of himself, a "guide" is provided, whose business it is to see him safely to his destination.

There remains one other point to notice. The Victoria Hospital is the seat of the Army Medical School, an institution which, like the Hospital itself, was one of the results of the famous inquiry

into the sanitary condition of the army. The medical officers of the army receive their medical education like other members of the profession in the various civil schools and universities of the kingdom. Before being admitted to compete for commissions in the department, they must possess a double qualification, that is, have taken a degree in medicine as well as a diploma in surgery from one or other of the bodies recognised by law. Competitors appear before a board of examiners specially selected for their attainments and experience in testing the qualifications of medical aspirants. Successful candidates are then designated Medical Cadets, and are sent to the Army Medical School at Netley. They receive during their period of probation there 5s. a day, wear the uniform of medical staff officers with certain distinctive exceptions, are admitted honorary members of the medical staff mess, and have comfortable quarters assigned them. The Army Medical School enjoys a separate and independent constitution under the Secretary of State for War. It is governed by a senate, composed of the Director-General of the Army Medical Department, who presides, the Physician to the Council of India, and the four professors of the School. The proceedings can be overruled only by the Secretary for War, its government is therefore independent of every other department, and it is responsible solely to the Secretary of State.

There are four professors, whose duty it is to teach military surgery, military medicine, hygiene, and the pathology of army diseases. The two first are military medical officers, the other two are civilians, selected for their fitness for their peculiar duties, and their experience as successful teachers. The term military surgery explains itself. Under this head are comprised all the accidents and injuries of war, the transport of sick and wounded, the selection of men for military service, and the duties and administration of military hospitals generally. The duty of the professor of military medicine is to give a course of instruction on the diseases of armies, and chiefly those of tropical climates; both professors find in the invalids and wounded soldiers sent from every quarter of the globe where the British army serves—and where does it not serve?—invaluable materials for illustrating the lessons they teach. Their labours are not confined to the lecture room, they accompany the young medical officers to the bed-side, and from living examples show the effects of injuries and the ravages of all climes. In no other hospital in the kingdom could the materials for this invaluable clinical instruction be found and it was this consideration which chiefly led the senate of the school, with the assent of the Secretary for War, to fix the seat of the Army Medical School at Netley. But perhaps the most important part of the instruction given at Netley, that which probably will produce the most abundant fruit in the future, is that given by the professor of hygiene. Netley is the only place in this kingdom where this

comprehensive science is taught. Everything bearing on the health of the soldier, directly or indirectly, is here carefully considered. The sites of military stations, barracks, hospitals, the mode of constructing, warming, and ventilating such buildings, water supply, drainage, medical police, food, clothing, drink, in a word, the whole art of dealing with men in such a manner as to preserve their health and efficiency, is taught. There is a magnificent hygienic laboratory, complete in all its fittings, in which, under the professor's instructions, the young medical officers go through a course of chemical analysis having a direct bearing on the above topics. The professor of pathology, with the aid of a splendid pathological museum, expounds the science of army diseases. It is his duty also to make the young men adepts in the use of the microscope, an instrument without knowledge of which neither things old nor new relating to physical science can be profitably studied. Although no provision was made for the Army Medical School in the original design of the Victoria Hospital, by a little ingenuity space within its ample walls has been found for it, without in the least interfering with the administration of the Hospital. The lecture halls, libraries, pathological, hygienic, and natural history museums are well adapted for their re-

spective purposes, and the hygienic laboratory and microscopic room cannot be rivalled by any similar places of instruction in this or any other country.

When the medical cadets have completed the course of instruction thus briefly sketched, they are subjected to a final examination, confined strictly to the studies pursued at Netley; the marks obtained at this trial, added to those gained at the first examination, determine the position of the young medical officer on the list. He now obtains his commission, and the State has done its part to make him a useful public servant, to qualify him to deal successfully with the diseases and accidents of military life, and to be a safe and competent adviser to those intrusted with high command in all that relates to the important questions of military hygiene.

Such is the Royal Victoria Hospital, such is the nature of the work done within its walls. To see this building, in the contriving and construction of which her late Consort took so great an interest, and to cheer the hearts of the "bronzed veterans" who had maintained her cause in every clime, the Queen first left her retirement—a day that will long live in the remembrance of the brave men who then "devoured her with their eyes."

VERSES WRITTEN BY A WORKING-MAN FOR HIS CHILDREN.

CHILDREN'S EVENING PRAYER.

GRACIOUS Saviour! meekly crave your
Little Lambs their fold to-night:
Wilt Thou hear us, and be near us,—
Thro' the darkness lead to light,—
Fence our weakness with Thy might?

Night is nearing! timid, fearing
Life is shrinking in its nest;
To Thy keeping take us sleeping,
Gentle Shepherd, in Thy breast:
There we nestle and are blest.

White Mists wreathing their soft breathing,
Where the water-courses run,
From their hiding-place are gliding,
Hanging dewdrops one by one,
To be lighted by the Sun!

We, too, kneeling for Thy healing,
Pray Thy dews may fall apace
In rich showers, that Thy Flowers
May up-lift their morning face,
Glistening with Thy freshest grace.

May good Angels with evangel's
Glad our slumbers by one gleam
Of their covering white wings hovering
Down the ladder of our dream—
Soft the hardest pillow will seem.

1V-61

Oh, Thou solace of the weary,
Oh, Thou Rest for those that roam,
Cloudless Sunshine for the Dreary;
For the Homeless endless Home!
To Thy waiting arms we come.

A SONG IN THE MORNING.

AWAKE, poor Soul, the Shadows flee,
The Dawn rolls up the sky!
Oh, lift the drooping head, and see
Redemption draweth nigh.

A little further we must bear
The load, and do our best;
Then take immortal solace where
The Weary are at rest.

A few more Meetings on the Deep,
And partings on the shore,
And then in Heaven at last we keep
Our Trysts for evermore.

Oh, we shall see our Saviour's face
Turn on us full ere long;
And safe in His serene embrace,
We'll sing the Victor's song.

The Devil standing in our light,
And darkening all our day,
Shall spread his wings for final flight,—
His Shadow pass away.

This Pilgrimage will soon be past,
Our worst afflictions borne,
Some weary Night 'twill be our last,
And then eternal Morn.

“AND THEY SANG A NEW SONG.”

[For Chanting.]

HEAR what the Saint in solemn dream was shown
Thro' Heaven's own Gates of Gold ;
He saw them standing by the great White Throne ;
He heard their raptures roll'd !
Christ was the Sun of that new firmament,
And there was no more night,
While thro' the golden City harping went
The glorious all in white.

These out of their great tribulation came
To bow before the Throne !
These lifted up their foreheads from the flame
And by His name were known !
Some on the rack were living witnesses,
And many fell a-field ;
But Christ did greet His Martyrs with a kiss,
And all their hurts were heal'd.

These had to wrestle with wild waves of strife,
Long ere they reach'd that shore
Where they at last have won the crowns of life
They wear for evermore.

There do they drink of Life's all-healing Stream,
And quench their thirst of years ;
All star-like now the precious jewels gleam,
They sow'd on Earth in tears.

Help us, O Lord, to reach that Better Land,
So far from sorrow and sin,
And join that Blessed band all harp-in-hand,
All safe with Christ shut in !
Feeble and poor the songs we sing ! at most,
Some selfish Prayer we raise ;
While the white Harpers on that Heavenly coast,
Hymn everlasting Praise.

HIS BANNER OVER ME.

SURROUNDED with unnumber'd Foes,
Against my soul the battle goes !
Yet, tho' I weary, sore distress'd,
I know that I shall reach my Rest :
I lift my tearful eyes above,—
His Banner over me is Love.

Its Sword my spirit will not yield,
Tho' flesh may faint upon the field ;
He waves before my fading sight
The branch of palm—the crown of light :
I lift my brightening eyes above,—
His Banner over me is Love.

The cloud of battle-dust may dim ;
His veil of splendour curtain Him !
And in the midnight of my fear
I may not feel Him standing near :
But, as I lift mine eyes above,
His Banner over me is Love.

ESSAYS FOR SUNDAY READING.

XII.—THE REFORMATION AND ITS LESSONS.

BY JOHN CAIRD, D.D.

THE value and importance of any great movement in human history seems to be determined by these two considerations, first, that all history is the record of a divine plan, the manifestation of a purpose or design for our race, in which each successive event has its definite place and influence ; and, secondly, that through all history there is to be discerned a constant progression towards some higher state, an ever-advancing movement of humanity towards perfection. It is very obvious that our interest in any event, great or little, in civil or ecclesiastical history, will be greatly enhanced if we view it in the light which these two principles throw upon it. For, to take the first, the idea of a divine plan will make all the difference in the importance of any given event which there is

between the disorderly wayward movements of a crowd, and the exact, systematic, well-conceived and executed movements of a disciplined army on the field, or in the progress of a well-organised campaign. In civil history, the Persian invasion, the Roman conquests, the inroad of the Goths and other northern nations, breaking like successive waves of a rolling tide on the effete civilisation of Rome, the dissolution of the Roman Empire, the revival of letters, and the like events ; in ecclesiastical history, the call of Abraham, the exodus of Israel from Egypt, the rise of the judicial and prophetic offices, the captivity, the decline and final extinction of the Jewish polity, and then the propagation of Christianity, the conversion of Constantine, the rise of the Papacy, the absorption of the barbarian races into

the Church—on to that great crisis in the Church's history, the Reformation of the sixteenth century—obviously our interest in any of these great movements will be vivified if we regard it, not as one of a thousand isolated and disjointed incidents each of which might have occurred at any other time as well, but as playing a distinct and essential part in the great purpose for humanity which runs through all the ages. The Reformation, for instance, is not as a mere chance sound breaking upon the ear amidst a dissonance of voices, but it is a note clear and loud in a great choral harmony of which the universal history of man will be the completion; it is not a mere purposeless displacement of men and nations, but there belongs to it the peculiar interest with which we watch the procedure of a skillful player in a game of chess, in which each separate move, each new relative position of pawn or king or bishop or knight, has a purpose and exerts a definite influence on the final issue of the game. In itself it may be interesting to read of that strange heaving of society, that disturbance of old relations, that breaking up of the smoothness of long-settled conventions, that swelling and tossing of the waters under the strong breath of new thought which characterized the religious movement of the sixteenth century; but its deeper interest, its true meaning and importance, will be lost to us if we view it in its isolated aspect, just as we look on one of the myriad waves that ruffle the wind-swept lake, and not rather as one definite sweep onwards of a great advancing tide, one out of many of those risings and impetuous onward rushings of the great billows which we have watched on the beach when the waters are making steadily and rapidly to the flood.

And this illustration suggests also the second principle which I have mentioned as lending interest to our view of any great event in history, viz., that in all history there is discernible not only a plan, but that plan one which involves a progress, a sure and gradual movement or march onwards to a glorious consummation. In knowledge, in purity, in happiness, the world has a splendid destiny before it, to which each successive event and epoch in history is helping us on. The life of the race, no more than the life of the individual, is a stationary thing, but is ever through successive stages,—infancy, childhood, youth, manhood,—advancing to maturity;—with this difference, that whilst the life of the individual in this world reaches its zenith, its highest point of development, and then declines again into the second childhood of old age, the life of the race is one ever growing, never, in the long run, retrograding, and its glorious maturity is a point yet to be reached, from which it will still ever advance into new developments of knowledge and goodness and blessedness. In this the race of man differs from any of the lower races of animal life that are our fellow tenants of this earth. For these last have only a progress of individuals, not of races. Each individual in this world reaches its zenith, its highest term of life, through which it grows, develops,

and declines, but the whole species does not grow. The bee built its cell thousands of years ago exactly as it does now in an English garden. The instinct of the swallow has guided its migrations with precisely the same accuracy since the first of its race took its first flight from the approach of winter to a summer clime;—and so universally. But reason, conscience, will, in man, are not, like instinct, fixed, but ever making new acquisitions of power, each generation handing down its gathered treasures to the next, and the latest ever becoming the heir of the intellectual and moral wealth of all the ages past. All that was great or good in the past is immortal, and lives in the deeper life of to-day; and all that God's Church is now, is but the promise of a nobler Church of the future which the world will one day see. For ever

“—thro' the ages one increasing purpose runs,
And the thoughts of men are widen'd with the process of
the suns.”

It is true that, in one view of it, the Reformation of the sixteenth century, and other great crises in the history of the Church, do not present the appearance of progress or advance, but rather of the clearing away of corruptions from primitive truth, the removal of the accretions of falsehood and impurity that had gathered in the course of ages around the ancient fabric of the Church, and the reproducing again in its original beauty and nobleness of the Church of earlier days. In one aspect of his divine mission Christ came to restore, not to innovate; to fulfil the law, not to destroy it. Spurious admixtures and additions, Pharisaic glosses, traditions of the elders, tithings of mint and anise and cumin, minute and elaborate ceremonial observances which had become a grievous burden which men were no longer able to bear,—in one word, the casuistical sophistries that had distorted the simple letter of the law, the superstitious rites that had supplanted the piety of the heart and life—all this Christ came to sweep away, and to bring back the minds and hearts of men to the grand eternal law of love to God and man. And so in the case before us, what Luther, Zwingle, Knox, and the other Reformers did, was, what that designation literally means, to re-form, or re-mould the Church into her older and better state of doctrine and worship. Their ideas of the sacredness and supremacy of the individual conscience, of the impossibility of any human priesthood or mediation between God and the sinful soul, of the absurdity of all penances and meritorious works and bought or borrowed goodness, of atonement through participation, not corporeally, but spiritually, in the one sacrifice of Christ, of religion as a thing developed from within the soul, and not to be manufactured from without by sacramental spells and ceremonial charms,—these and the other ideas of the Reformers, on which we find them ever ringing the changes, were not new, were not fresh discoveries breaking upon the world like the discoveries of Kepler, or

Galileo, or Newton, and increasing at one stroke incalculably the world's treasures of knowledge. They were not new stars breaking out on the spiritual firmament where before was nothing but blank space, they were only the old lights that had shone there for 1500 years; and all that was done now was to bring them out from that eclipse under which for many ages they had been hidden from the common eye. In this point of view the Reformation was not an advance to new, but a going back to old ground; and, instead of illustrating that law of progression of which I have spoken, it would seem rather to indicate that for ages the race of man had been spiritually retrograding, and was only now returning to the position from which it had receded.

Yet it was not so. In religion as little as in science is there any period in the past that can be regarded as the moral high-water mark, the time of the highest spring-tide of souls, from which they may have receded, but beyond which they can never hope again to rise. The history of the Church from the Apostolic age is not a record of corruptions and restorations, a recountal of a weary succession of struggles, with varying success, to regain a lost level of purity and truth. The notion that found expression in the dream of successive ages—first a golden age, then a silver, then one of brass, and the last one of iron, each as we descend deteriorating from that which went before—is an utterly false one. The reverse order is the true one. The iron or the brazen may be now, but humanity may find incitement and ardour in the hope, nay assurance, that the golden age of the world is ever a-head of us.

For whilst it is true that, as in the Reformation, there is often in the great movements of history a going back to former truth, a return to lost ground, it is yet a return which is virtually an advance. A river in its windings may often seem at the bend to be going back in the direction from which it has come, but though partially it does, yet at each successive winding it is further on in its course. There may seem, to a careless eye, when the tide is rising, to be nothing but a ceaseless flux and reflux of waves, each advancing billow only recovering what the retiring wave had lost; but we know that all the while there is progress, and that in its recession each wave has retired only as a man recedes a few paces for a leap, to gain fresh impetus and heave itself higher up on the shore. Or, to take a case still more closely analogous, when one is ascending a steep hill by a zig-zag path, at each turn you come back in a direction contrary to your last, and so are just in one sense retracing your steps, but at the end of each retrogression you find yourself a stage higher than before, and with many returns you are rising nearer, ever nearer to the summit.

Now so is it in the history of the Church, and therefore of the race of man. There never in the spiritual history of man recurs a fac-simile

of the past. The Reformers might seem, even to themselves, to have no higher aim than to produce a simple copy of the unadulterated truth and fresh spiritual life of the primitive Church, but unconsciously to themselves the attempt must have failed, and the copy contained touches, lines, colouring in it which made it altogether a deeper and richer thing than the original. The truths which the Reformers preached might be a revival of the very truths which were the creed of the Apostolic age, but they were held with a firmer grasp because of the conflicts through which they had passed, and with a profounder realisation of their meaning by contrast with errors and caricatures from which they had been rescued. The religious life of the reformed Churches might be a revival of the purity, the personal earnestness, the devotion, the godliness, the brotherly love of the infant Church, but it was as the piety of the aged Christian is a revival of the piety of the child—the same but different, alike in form and pattern, but of a texture richer, firmer far,—both pure, but the former the purity of untried and unstained innocence, the latter the purity that has past through many a fiery trial, been soiled and stained by many a fall, but has struggled through them all, and emerged at last from the strife with all its pristine loveliness, yet with a strength and consolidation which before it never knew. In one word, the Church at the Reformation went back in the direction from which it had come, to regain its lost faith and purity, but it was to find it at a higher level, nearer to the summit of the everlasting hills; her movement was a reflux of the retiring wave over the very space through which it had fallen, but it was to find herself, at the end of that reflux, higher up upon the eternal shore.

And as with those who have preceded us, so, we cannot doubt, it is with ourselves. As they held the truth of an antecedent age, so do we hold the truth of theirs. But as in their case so in ours, it is the same, but with a deeper meaning, a profounder spirit infused into it. The mind of man did not stop just at the period when the Reformers of the sixteenth century passed from it. The wheels of human progress were not then arrested, so that in matters spiritual and ecclesiastical, any more than in matters secular, we are to stick for ever at the point which the Church then reached. Innumerable moral problems have risen for solution since their day, of which the Reformers never dreamt, and on which therefore their writings can throw no light. The social life of man has become infinitely more complicated, science has made vast advances; in philosophy, in art, in literature, the mind of modern society has received an incalculably wider culture, and on all quarters there are emerging a thousand questions, difficulties, discussions, in which religion is deeply implicated; and although to the solution of these the same fundamental principles of religious truth must be applied, yet obviously the result will be to develop

meanings in them which could not possibly be contemplated by the men of that earlier day. It would therefore be no true honouring of the Reformers to pin our faith to their teachings, to canonise them as the permanent masters of the Church, and to treat with blind deference their dogmas and creeds and confessions. Instead of true homage, this would be treachery to the very spirit of their lives; it would be to make new Popes and infallibilities out of the very men whose glory it was to have shaken off the old, and to seat them in that chair of irresponsible supremacy over the conscience from which they had driven its former occupant, declaring that therein no mortal can sit. And just as in politics the true followers of the great Reformers of other days—of the men who set their seals to the great Charter, of the great statesmen of the Commonwealth or the Revolution—would not be those who determined to stick by Magna Charta or resolved not to budge one step beyond the Revolution settlement, but rather they who, going on in the same direction, were in modern times the authors of the Catholic Emancipation Bill, of the Reform Act, of the measures for the promotion of Free Trade; so in matters spiritual and ecclesiastical, the true successors of the Reformers of the sixteenth century are those who, imbibing their spirit, go on to apply their principles to the new and deeper life of the nineteenth, and instead of blindly adhering to, are ever seeking to reform the Reformation.

It is impossible on the present occasion to illustrate at length this view of our relation to the Reformers of the sixteenth century. I shall adduce but a single specimen of the deeper and truer interpretation of their principles to which the progress of events has led or is leading the Church of our day.

The Reformation, in one and perhaps the most important aspect of it, may be described as a revolt of the individual conscience against an authoritative and impersonal religion. It was the long oppressed and enslaved spirit of man rising in insurrection against an unreal and degrading spiritual supremacy. Deep in the heart of man lies the conviction that its relation to God is a personal matter, that religion can never be deputed, that no created being can come between the soul and God, or relieve it from the awful burden of individual responsibility. A mind awakened to a sense of its spiritual wants can never find rest by devolving the care of the soul and the business of religion upon another,—believing blindfold what another declares to be true, or doing what another declares to be right and good. I can no more believe by another man's faith than I can see with another man's eyes. In my deep sense of spiritual want, I can no more be satisfied by another man's creed than in bodily hunger and weakness I could be fed and strengthened by another man's food. Second-hand piety is as much a contradiction in terms as second-hand health, or happiness enjoyed by proxy.

Now the Reformation was virtually a revolt of

this first instinct of the soul against a Church which presumed to satisfy man's religious needs by prescribing his faith, and authoritatively controlling his life. An authority arrogating to itself religious infallibility, and armed with the terrors of external power, demanded of him to believe only what it declared to be true, and do what it declared to be right and holy. And when, submitting to this through long ages of intellectual and spiritual darkness, the mind of man began to awaken to thought and reflection, and the conscience to a sense of personal responsibility, a bitter feeling of indignity and wrong was engendered in earnest souls over Christendom, till at last, roused by some new and more flagrant insult, some monstrous demand on the mind's credulity, or assault upon the inward sense of right, the long pent-up spiritual force broke forth, and, through all ancient conventionalities, tore its way to liberty.

Now this great principle of the individuality of religion, is one which no lapse of time, no progress of society can ever subvert or alter. It is the principle of the Church in the nineteenth as it was of the reformed Churches in the sixteenth century. But though we must ever recur to it and hold by it, yielding all honour to the men by whose struggles and sacrifices it was extricated and realised, yet perhaps the course of events has gradually been leading us to infuse into this great principle a deeper meaning, and to hold it in a sense which at the first was not attached to it. For the individuality, the personal contact of the soul with religion, to which by degrees, from causes into which we cannot enter, importance was mainly attached, was an intellectual contact, the assent of the understanding to logical creeds and confessions. Religion no longer consisted in belonging to an outward Church, but it came to be regarded but too much as the acceptance and profession of what was deemed a sound and orthodox creed. The free, flexible, glowing, unsystematic teaching of Scripture was digested by subtle and scholastic minds into long and elaborate confessions, catechisms, and articles of faith, assent to which was demanded as the condition of Church-fellowship. Intellectual harmony thus became the basis of communion, and difference of opinion an adequate reason for separation or ejection from the Church.

Now I believe that on this point, slowly indeed, but surely, the Church of our day has been reforming the Reformation. The conviction is gradually winning its way that too much stress has been laid on doctrinal accuracy, and that the relation of the individual soul to Christ—that to which He attaches chief importance, and therefore which in his Church should be the true badge of membership—is a relation not of the head but of the heart. The essence of religion, it has begun to be felt, is not orthodoxy, but piety—not that which a man can learn by a clear or clever understanding, but that which implies a loving and earnest heart. However valuable and important correct opinions

in systematic theology may be, it is felt that that is quite separable from what makes a man a true Christian, that there may be the utmost intellectual accuracy where there is little or no piety, and the purest and most fervent piety where there is little intellectual accuracy. If the truth as it is in Jesus were a philosophy, and the Bible a book of reasonings and notions, like a system of metaphysics, then would intellectual soundness of belief be everything, and the tie that connected the soul with Christ be the vigorous application of the critical and logical faculties of the mind to propositions and demonstrations. But it is not so. The Bible is no philosophy. Its glorious truths are to be apprehended not by the critical intellect but by the humble and loving heart. As a man may perceive and love music who knows nothing of the theory and laws of sound or of harmony, or whose perception of that theory may be imperfect or erroneous; as a man may have the faculty to perceive and relish the loveliness of nature who cannot analyse and construct his emotions into a theory of beauty, so a man may know and delight in the things of God, whose theoretical knowledge of theology is of the slenderest or the most inaccurate. The consciousness of spiritual need, the shrinking of a contrite heart from sin, the longing for pardon and reconciliation to God, the contrition, the humility, the meek self-renunciation and self-surrender to Christ of an earnest heart,—these constitute the soul that possesses them, be its intellectual or ratiocinative conclusions what they may, a true member of Christ's Church. There may be sympathy amongst the possessors of such qualities where there is little intellectual harmony. Devout Christian men who from the natural diversity of intellect, from habit, education, training, may extract very different systematic views and interpretations from the letter of Scripture, may yet be thus most truly united to Christ, and so to each other as brethren in Him. The logic of the heart, in one word, may overleap the logic of the head; and as the all-embracing firmament overarches the mountains and seas that separate nations and countries from each other, so the all-comprehending spirit of love

in Christ may breathe over, and bind into purest fellowship, men whom a thousand intellectual differences divide. And so, with the gradual admission of such views, there is growing up in the minds of all thoughtful men a spirit of larger and wider charity, a disposition to be less exacting and stringent in the demand for intellectual conformity, and a willingness to waive a thousand scruples of reason for the sake of one grain of Christian love. It is beginning to be regarded as the true mark of fidelity in a Church to her Great Head, not when she can strain at every gnat of so-called heresy, but when she can contrive to embrace within her pale the largest number of men who, whatever their diversities of mind, are on the way to heaven. The ideal of a Church platform which commends itself to all but bigots is that, not which presents the longest array of articles and points of belief drawn out with the most keen-eyed logical subtilty and minuteness, but that which under a creed or confession of the simplest form,—enunciating but those grand facts and verities of God, of Christ, of sin, of salvation, on which the great mass of Christians are agreed,—can comprehend the largest range of opinions in the sympathies of a common faith and love. Thus, after the lapse of ages, are we returning to the principles of the Reformation, but on a higher level, making individual relationship to Christ our first aim, but that a relationship the essence of which is in the heart. Thus are we doing what is better than any reviving of the past,—anticipating the glorious Church of the future, the bright era to which all earnest souls are looking on, when truth shall be no longer a watchword of contention nor purity a ground of strife, when individualities shall only contribute to a deeper and richer concord,—when, as the many voices of a great host are gathered up into one grand choral harmony, we shall “lose our individual selves to find our true selves in that distinctness where no division can be,—in the Eternal I Am, the Everliving Word of whom all the elect, from the archangel before the throne to the poor wrestler with the Spirit until the breaking of the day, are but the fainter and still fainter echoes.”
