material. All of these are *God's* acts—acts of Almighty power and infinite wisdom, by which life may originate and may be supported; but, except in a sense which I am not yet considering, they are not like this first one. And what is this act? One of which, as I said, we have no conception: which as far surpasses us as any other of the ways and acts of God: it is, the calling matter into being out of *nothing*. Let us try to make this real to ourselves. Our imagination must, in order to this, traverse back far above the earliest period known even to the vast inferences of geological science, even to the time when God was alone in the void universe, and nothing besides: an infinite Spirit inhabiting Eternity. Perhaps we can form some conception approaching to the truth of this, strange as the conception may be. But it is the next step which appears so utterly to baffle us. Suddenly or gradually—for this makes no difference to our difficulty or to the resulting fact—at the command of God, matter comes into existence. Vast masses of solid material are, where absolutely nothing was before: are, without having been transported from elsewhere: come into existence out of nothing. Am I not right in saying, that such a thing utterly and entirely passes our power of comprehension, and all obvious examples and analogies of which we know? We believe it: but we are obliged to stop when we get close up to the fact, so to speak, and to pass from inquiry to acceptance; from reason and imagination, and all that we ever saw or knew or heard of, to faith, and faith only. "Through faith we understand that the worlds were framed by the word of God, so that things which are seen were not made of things which do appear."

Here, then, we stand at the same point where we stood in our former meditations in the same strain respecting the Lord's coming, and our own final account.* The great thing which we believe is one

* *Good Words*, January, 1863, p. 65.

only to be believed, not to be assured to us by any power of our own to comprehend it. All the arguments about God's benevolent designs in creation, His wonderful arrangements for the well-being and good of His creatures, do not apply to this point at all: for this point is, not the arrangement, but the bringing into existence, of the materials of this and of all the worlds. The ancient heathen could reason as touchingly and as convincingly about the benevolent designs of the Creator, as have our own Christian writers; but the heathen never knew, as a doctrine of their religion, this wonderful fact of the creation of matter out of nothing. With them, matter was eternal; and the Creator only used the material which was ready to His hand.

But now let us take the same course which we did on those other occasions, and let us see whether our faith in the fact that God in the beginning created the heavens and the earth may not find present confirmation from what we behold going on around us day by day. We said, that we see no such thing now as creation of new matter. In the natural world, such a phenomenon is unknown. But is it in the spiritual? When the existence of each of us began, what happened? As far as the body is concerned, no more than what we have already spoken of. The body is composed of, the body is nourished by, materials previously existing in the world. But is this so with the mental part of us? is it so with the spiritual part? It is true that to a certain extent even this is affected by descent from minds and spirits previously existing. But it is also true, that there is no way of accounting for the personality and responsibility of the human soul, without believing every individual spirit to have come immediately from God's creative hand. The creation of each human being was as completely a calling into existence out of nothing, as the creation of the material of a world. Let us go back in our thoughts here, as we did in that case before, to a time when there was no created rational being: to the first creative act by which sentient being began. Where a moment since all was blank, there sprang into life a soul, with all its powers, all its responsibilities, all its sympathies, but above all these, and including all these, with its personal being, existing side by side with Him who called it into life. If we compare these two together, the creation of a mass of matter and the creation of a living soul, far above our comprehension as both of them are, shall we not necessarily confess that to create a spirit seems to us, when we ponder on the matter, the greater and more marvellous work? And yet this is going on before our eyes every day. Tell me not, that God's creative acts in the spiritual world are ever carried on in subordination to certain natural laws. This makes no difference to my argument: my argument is, that we daily witness the creation of spirits: we constantly see before us a living, thinking, responsible soul, where but just now there was none. The fact is there, and we cannot deny it; we can understand it as little as

we can understand the other; but here it is, continually going on. Why then should we feel it against us to believe in God's having called the material of the worlds out of nothing, seeing that He daily calls immortal souls out of nothing?

It is plain that I might have sought my example further down in animal creation. The life that moves in the brute animal is not any necessary result of the combination of the particles of matter of which the animal consists. Man might put together those particles with all the skill in his power, but there would be no life. Every life of animal, every life of any organised matter, is a creation of God. God is ever creating, as well as ever using, in His marvellous wisdom, materials which He has already created.

Now, I have as yet been meditating on the Creator, and on creation, as those might meditate who simply believed in one Supreme Ruler of the universe. But be it never forgotten that we, as Christians, have other and more satisfactory grounds to go on than the mere Deist, as to the process, and the intent, of creation. We know that the making of the worlds was not an act of power only, nor was it only an act of divine benevolence toward those who might inhabit them. It had a further and a far higher purpose than these. Indeed, if it had not, the charge might not unfairly be brought, that neither of the aims of the Creator has been accomplished; that there is not universal happiness and well-being in the world which we know; nor is it a perfect display of His supreme power: but that His benevolent designs have been marred by sin, and misery, and death, and His power thwarted by an adversary. Now I do not mean to say that Christianity has enabled us to solve the whole mystery of sin, and misery, and death; nor of the irruption of that adversary into God's world. There will be still, even when we have all its revelations in their fulness, much in these things that will be painfully incomprehensible, and that will require faith to arrive at, and yield to faith only; but I do mean to say, that Christianity has given us the master-key to all such difficulties, and that we may well believe, from the number of closed doors which it already opens, that those to which we have not access, and those whose locks refuse at present to yield to our weak hands, will eventually give way to it. And how has that master-key been furnished? What do we Christians know about Creation more than the mere unaided reasoner, more than the mere Deist knows?

In answering this question, I shall assume the great doctrines of our faith: I shall not stay to confirm them, but simply take them for granted: wishing to inquire, not now into them, but into that which by means of them we know of the world about us, more than they do who receive them not. We believe then that the Great Creator of the universe, the One God over all, has from eternity existed in three divine Persons—Father, Son, and Holy Spirit—co-eternal together and co-equal. And

Holy Scripture has not left us ignorant, as regards the process of creation, of the parts borne in it by those several Persons of the Holy Trinity. The Father, doing all things after the counsel of His own will, created the world by the Son, who is His Word, the expression of His power and love; and the Holy Spirit, the Lord and the Giver of life, wrought in this Creation, to the production of light, and life, and order, and being, and perfection. And all this we know was done for a gracious and glorious purpose. The material world was created to subserv the spiritual. Man was created the lord of the material world, that by means of his use of it, and of his own spiritual faculties, as served by his senses, he might rise into participation of the nature and blessedness of God himself. And we further know that, in order to this glorification of God in and by His human creatures, trial, and conflict, and sorrow, and suffering, and death, are steps necessary and inevitable. We know that these were originally introduced by man's own choice and fault, that choice and fault being brought about by the action of temptation on his will, which was necessarily created free to stand and free to fall. Again, I do not mean to say that our understanding can master every step of this; but I am bringing it all forward, as that which we read and believe, and in order to see what light it throws upon the process and the aim of Creation.

Now when we take these things into account, it seems very plain to me that we must take into account a good deal more, before we shall properly appreciate this aim of Creation. Think of the words, "the Lamb slain from before the foundation of the world." When I read such a Scripture sentence as this, am I wrong in saying or writing, as I have often done, that Creation is only a part of Redemption? It was God's design from eternity to bring the sons of men to a sharing of His glory by the elevation of their spiritual nature. Not, observe, by any act of His power; not to create at once beings who might sit upon thrones near to Himself; but to create spiritual, responsible beings, who might, by action on their own spirits aided by His grace, become renovated, become elevated, become glorified, even till they should ascend up where He is, and sit down with Him on His Throne. Now for this purpose He made the worlds: made the worlds by that blessed Son of His, who was from eternity destined to be the Head by Lordship over all created things; the Head, by actual participation, of the great human family; the Captain in the mighty conflict; the Lamb slain as a sacrifice for sin; the first-born from the dead, and the Conqueror of Death; the Prince and Saviour of His people. For Him and for His, God created all this which we see around us. For Christ, and Christ's Church it is, that nature exists; that the laws of nature have been established. For us, and for our souls and for our glorification, soul and body it is, that the sun rules the day, and the moon the night; that the earth buds and blooms, and

brings forth her fruit; that a thousand inferior races live and move around us; that seasons pass onward, and times recur, and all the vast fabric of creation works onward to a final consummation. For "all things are ours: whether life or death, or things present or things to come, all are ours; and we are Christ's, and Christ is God's."

So, then, Creation, to the Christian—and allow me to say to the Christian alone—has its voice and its meaning, though not everywhere actually and at present understood, yet speaking so as to show the way to the understanding of it all another day. Of this great and blessed view of Creation, the unbeliever knows nothing. It is to him simply a painful riddle. He weighs misery which he does see, against happiness which he does not see, and he is confounded by the comparison. It all seems blank, and aimless, and inexplicable. He sees not why God the Beneficent should have made man to suffer, should have made the animals to suffer, should have allowed the clear skies to be dashed with storm, and the bright flowers to wither with blight, and strength to pass into weakness, and power to be baffled, and beauty to decay, and promise to issue in disappointment. Neither do we see *all* this: but there hath sprung up to us light in the darkness; there is in the cloud the bow of the covenant, and we are assured that, though we cannot see all, all is well: that in the end God will be justified, and everything that He hath made will be shown to be very good.

From this let us carry away the lesson that we ought, as Christians, to be very careful to keep Creation, in our thoughts, in its right place. Second let it ever be, not first: subordinate to our holy faith, not overruling it. From neglecting this, much unbelief arises. A man regards the world about him as his reality: and his religion as mere matter of shifting opinion, turned about hither and thither by things around him: by converse, and by books. Now this ought to be just the other way. Our religion is our reality: it alone is certain. It may be that God's creation, and God's providence, may cast light upon it from time to time; but, in the main, by it must they be interpreted, not it by them. We know that God made the heavens and the earth, and all that therein is: we know that He made them by His Eternal Son, and the agency of His blessed Spirit: we know that He made them to manifest the wonders of His Love by victory in the conflict with Evil: we know that He who by His Death and Resurrection won for us this victory, upholds all creation by His power. These are our facts, and on these everything else depends; all our outward knowledge, all science, all wholesome research, all that we can say or be persuaded about outward things: from these great truths of our faith is their truth derived, and by their subordinate truth shall those great truths shine clearer and be better known.

Thus let us think of Creation, and it will be to us not a painful and dispiriting enigma, but a por-

tion of the ways of Him, whom to know truly is life eternal.

II.

Creation then, material made out of nothing by God, is all around us; and we are part of it ourselves: we see it, we hear it, we touch it: and our own bodies are in these respects acted on by it, as it is acted on by them. And all this is a portion of our Christian life, in the wondrous scheme of Redemption. For the carrying out of that scheme, as we saw before, Creation was called into existence.

Now belonging to this part of our subject, our present connexion with Creation, there are some considerations full of wonder and mystery. We, our personal and immortal part, are at present inseparably bound up with created matter. By means of it we live, and move, and have our being. If it receives injury, we suffer: if its waste is not daily repaired, our spirits sink, and our vital energies decay. And this is wonderful to think of, even in itself: to think that such a thing ever should be so at all. But it is still more wonderful to think of, when viewed in this light. At any moment, any one of us may be called on to quit this connexion, at present so necessary, with created matter. I who write, using organs now consisting of created matter, may, before an hour has passed, become entirely unconnected with any created matter whatever: may go forth into space, or—for even such an expression is too material—simply exist, as a disembodied spirit. Two things are wonderful here. First, that such a thing should be: next, that it should be able to take place in an instant, and without preparation.

That it should be. As we are now, everything depends on the state of the body: everything depends on the outward conditions around the body. In racking pain, in deadly faintness, in unconquerable fatigue, of what avail is the vigour of the spirit? How dependent for exertion are we on the firmness of the step, on the steadiness of the hand, on the correctness of the eye, on the powers of the brain to collect and concentrate thought! And even if all these were in vigour, yet if external conditions are unfavourable, all will be in vain. If the earth were shaken, and the ground beneath us were unsteady: if the light of day were withdrawn: if the materials of our work were wanting to us, or the proper shelter in which that work should be carried on: all our own powers would be unable to effect that for which they are calculated. We are, in this present state, the slaves of matter. That we should exist in entire disconnexion from it, is at first sight almost inconceivable. And when we come to join to this, that an instant only is the boundary of two states so apparently inconsistent with one another; that at one moment the soul is bound in the fetters of sense, nay, entirely held down by them in powerless and utter prostration, and at the next moment is

absolutely free from them, and existing independently, the wonder and difficulty of the fact do indeed seem to be greater than we are able to surmount in our imagination.

Still, let us view it by the light of other considerations, as undoubted, and forming part of our every-day experience. We can hardly speak or act, without bearing testimony that things really are, as it has just now appeared so wonderful that they should be. How do we regard things about us? How do we regard our own bodies, with which we are thus bound up? Do we ever look on them as part of ourselves? As far as I know, never, on any occasion. As to things about us, palpably and clearly, not. We migrate from home to home: we loosen and we bind attachments: and, however some persons may be disposed to cling to the same circumstances and places, we are quite unable to conceive that any one should ever come to imagine external things necessary to his own existence. And even so is it with our own very bodies: they are our possessions, but they are not ourselves. However near portions of them may be to the apparent seat of life, and essential to its maintenance, we never for a moment treat or speak of them as if they were ourselves. Injury or loss of them will be sure to dissolve that life: yet we ever call them *ours*, not *us*. Nay, sometimes, in their utter disorganisation and destruction, the spirit asserts its mastery: and it is seen, amidst the crash of the fatal accident, or from the all but finished decay of the wasted frame, that matter is not man: that man is not bound to matter.

As we proceed, we have other analogies suggested to us which illustrate our subject. Thought—what is it? Clearly, nothing that is, or that is in itself dependent upon, matter. Yet are we entirely beholden to matter for our power of communicating thought. It is spoken—we receive it through the agitation of the air by sound: it is written—we receive it by the stains made by some colouring matter on paper. Yet that which is received in each case is as entirely distinct from any sounds or any written characters, as the spirit is from the body. It is a spiritual thing; and, when once received into the mind, subsists there independently of any material medium. It may be conveyed to the deaf by signals—to the blind by touch: one mind may make use of matter in various ways to communicate with another mind, but the communication is of that which is of itself not material. Nay, in all the purer and higher processes of thought, when we work on inwardly by the laws of our reasoning faculties, be it on our own spiritual life, or on the nature of God, or on the laws of abstract science, or on any other purely mental subject that we meditate, then for the time, however liable such thought may be to be disturbed by things around us, we are, as nearly as the case admits of, actually putting ourselves into the state of freedom from the body, and anticipating our condition when this shall really have come to pass.

So that, though it may be to us, in our present state, a most wonderful thing that we should exist as spirits and be conscious without the body, yet from much that now passes we see that it is not inconceivable; but that in our purest and highest moods we are continually approaching that condition.

I said just now that the suddenness of the transition to the disembodied state was a strange and a wonderful thing. We cannot indeed tell by what gradual steps the spirit, set free from the body, may be permitted, or empowered, to realize its new condition: but of this we are sure, that however this may be, all those steps must be taken in the disembodied, not in the corporeal state. If we do not hold a sleep of the soul (and I suppose no thinking Christian possibly can hold this), there must be an instantaneous passage in most men's case from consciousness in the embodied state to consciousness in the disembodied state. And this has ever to my mind been the strangest thing about death; the consideration of that moment of transition—that new awakening to consciousness in the world of spirits.

But again, I do not see anything in it which may not be: anything of which we have not example at least approaching in kind to the reality, though very short of it in degree. For what is our awakening each morning of our lives? or to come even nearer, what is awakening from a dream to real life? Are not these, is not especially this latter, an instantaneous exchange of one state for another? And this is done every day without any violent shock; as tranquilly and naturally, as we pass from one subject of thought to another.

Now in coming to the main portion of that which concerns us, the use of Creation about us in our present state, what we have been but now considering will be of great use to us; and we must carry it somewhat further, to get at its full use.

The disembodied state is not our final state. We are again to be joined to the body: we are again to be joined to the *same* body with which we were before united. It will not be of the same particles of substance; but that is not necessary to its identity, for its substance has been changed over and over again, while it remained the same body here. It will probably not be the exact actual body, even in appearance, which we bore at any time during our earthly pilgrimage: but it will be the same body. It will have lost its mortality, its liability to decay, to pain, to weakness,—possibly all its traces of all these; but not its identity. Created matter it will still be, and it will be in a world of created matter. Thus much I am obliged to say in anticipation of the next portion of my subject: and I shall anticipate it no more. Thus much was necessary, to show the use of this world of matter which lies about us.

And I must also look back for a moment on what we showed before. We tried to make it clear, that the world was made for Christ, and for Christ's Church. It was a part of the great and glorious

scheme of Redemption, to lead the sons of God, through trial, and through increase of knowledge, and through a course of holy obedience, all in a material body, and surrounded with material circumstances.

Well then, if we ask the question, what purpose does Creation at present serve to us who are parts of it and surrounded by it,—the first and most obvious answer will be, that it is our appointed sphere of trial, and condition of preparation, for our glorious final state. Now this may sound a commonplace thing to say, but I very much doubt whether it enters one half as much into men's thoughts of themselves, and of the world about them, as it ought to do. When we say, Creation is our sphere of trial, what do we mean? Consider how wide the words ought to extend, if they have really any meaning at all. God has given us senses: God has given us created matter for those senses to act on, and to be acted on by. The objects with which we are thus brought into contact are innumerable. Have we a right to say that any, even the meanest of those objects, bears no part in the trial and preparation of us for our final state? Of all that the eye can behold, and the ear can hear, and the hand can touch, and the tongue can taste, is there anything so mean, as to be altogether without part in acting for good or for harm on the immortal spirit? The question is easily answered by taking an example in one direction. When a man suffers himself to be brought under by any one of these objects of his senses, and becomes a slave to it, we all know the effect on him: he is degraded, and becomes incapable of rising into spiritual freedom, and exertion, and dignity. It is manifest that they do produce an effect on the soul in this direction—that of evil. But is there none in the direction of good? The meanest thing that God hath created is fearfully and wonderfully made; adapted to its use with infinite and inconceivable skill. Is it likely, knowing the object which we know He had in Creation, that He should have lavished such skill on the inferior works of His hand, with no regard whatever to those for whom all this was made? Can a man therefore be safe in going through this world, making no use of the Creation of God, further than is required by his bodily wants and occupations? I have ever regarded it as one of the great arguments for imparting useful knowledge to all classes amongst us, that God evidently intended us to know and to admire and to behold Him in His works around us; and that therefore as long as we are not doing this, we are losing something which we might be gaining, and are defective for the higher purposes of our immortality. The beasts that perish stray over the plains and the mountain-side, and look but on the grass whereon they browse: but man has special powers given to him to apprehend God's works, and to turn them into good for his undying spirit. It was for this that the Creator made the dreary abysses of space put on the lovely blue which arches over us, and caused the great

light of the day to carry gladness to our sight, and decked the nightly heavens with glittering stars ; for this that He so wonderfully turned aside the axis of our globe, and gave us the ever-varying round of seasons, so full of interest and hope and cheering prospect, and recurring toil : for this that He subjected to us the tribes of the earth, and air, and waters, for use, and for beauty, and for research : for this that He clad the earth in refreshing green, and enamelled her surface with a thousand blossoming gems, and gave us her manifold offspring, fruits, and herbs, and trees of the field. And the seas, and the mountains, and the plains, and the valleys, these He has made to be to us not mere accidents of the earth's surface, but never-failing wonders of refreshing beauty and grateful change : all for the teaching and nurturing and cheering of our spirits, whether by their own thoughts, or by their share in the invigoration of our bodies and renewal of our energies.

Let us approach somewhat closer this portion of our subject, and so draw our meditation towards its end. Let us boldly ask—what is the intent of these things which we see thus wonderfully and wisely made about us ? What are we to think of Light, in which Creation lives and rejoices ? What are we to believe respecting Life, that holy mystery which pervades this world of matter ? What are we to say respecting the equally great mystery of Food,—the power granted to certain material substances to become portions of organized bodies, and supply their waste, and contribute to their growth ? Are all these things mere happy contrivances of the Creator, to be admired for their wonderful skill and wisdom, but carrying no further lesson with them ? Are they parts of *one* system, and is the Gospel of our Blessed Redeemer part of *another* ? Do the processes of this world furnish no instruction to the Christian believer, and does the faith in Christ find no confirmation from the consideration of them ?

Not so has our Redeemer Himself taught us ; not so that beloved Apostle, who received the Holy Spirit of inspiration in the soaring rapture of the eagle's flight, and the undazzled steadiness of the eagle's gaze. Read the Gospel of St. John, and see there the natural philosophy of the faith : see there, not a number of ingenious similitudes to nature and her processes, but the true and ultimate science of nature herself : learn thence, not that Christ is like light, is like life, is like food : but that light, life and food all have their blessed qualities and their genial powers, *because they are LIKE HIM*. He is the true Light, He is the true Life, He is the Bread of Life, and the only real sustenance. Nature is but a stray spark struck out from under the chariot-wheels of His path of Glory. Nature is but a shell cast up by the Ocean of His infinite love, in which the childlike listener may hear faintly and afar off the everlasting melodies of its unfathomable waters. The sun shines, because there is an eternal Sun of Righteousness : the morning star burns on the kindling forehead of the East, because there is a blessed

Day-star on high. The wind bloweth where it listeth, because there is a Divine Spirit, moving over confusion and death and calling forth life : the tree puts forth her leaves and buds and blossoms and fruit, because there is a true Vine, with a multitude of fruit-bearing branches which no man can number : the wheat is laid in the ground as seed, and puts forth first the blade, then the ear, then the full corn in the ear, and is reaped, and gathered into barns, and threshed, and winnowed, and made into bread for man, not because of the necessities of nature, nor of man's fleshly body, but because there is a holy seed, even the word of God, capable of begetting man to a new life ; because there is a growth in grace for the plants of our heavenly Father's planting, in which they ripen for His harvest, and shall be winnowed by His judgment, and laid up in His garner : because there is a blessed Bread of Life, which whose eateth of shall live for ever. And so of a thousand processes of nature about us : they are because of, and they owe their creation to, eternal spiritual verities, of which the believer in Christ knows ever more and more, but of which he that believeth not, and the man of this world, knoweth nothing.

And what if the listener at the mouth of the shell sometimes hear the echo of other sounds than the gentle ripple sporting on the beach,—what if there be the striving of the winds of heaven on the sea, and the wailing of the rising gale, and the fierce conflict of the tempest at its height ? Why are these heard in Nature ? Why is there darkness, and blight, and dreariness, and disappointment, and decay, and death, but because all this has come first upon the spiritual world ? There the sun has first been clouded, there the calm first disturbed ; there the lurid form of evil appeared, before it blotted with its leaden mass the clear horizon of nature. When the Son of God passed into the shadow of His agony, and the crisis of His dread conflict, the sun hid his face, and the earth was shaken : when the First-born of Creation was in anguish, the whole vast family was troubled, and the beauty of the heavens was saddened, and the foundations of the earth gave way.

Yes—this is the use of Nature, this is the end and aim of the Creation ; to set forth God, to glorify Christ—to shadow forth the truth, as it is in the spirit of man, and as it is in God. Nature is not a ladder whereby to mount to Him : not a building of matter, on which we may climb up to heaven. There are no inferences from Creation, which will lead men on to God. But nature is a ladder *let down from God* : a ladder at the top of which He stands as He has revealed Himself in Christ, and by the power of His Blessed Spirit. Revelation is the only key to Creation : the only solution of the enigma of its use, as well as of its purpose and destiny. The Christian believer only can be the true naturalist ; for he alone enters on the study of nature aright. He alone feels the ineffable majesty of that august temple of the Creator, and treads its aisles with the

humility which leads to wisdom, and kneels at its altars with becoming devotion.

Its original purpose—its present purpose—these, as a Christian believer, I have thus endeavoured to enter into, writing for Christian believers, as a brother member of the Church, whose inheritance is this knowledge and this benefit.

One great inquiry yet remains: what will Creation be to us in the future: what shall be Nature's part, when Death shall have been swallowed up in victory?

III.

We stand at this point in our meditations. We have brought them to an end as regards this present state, and it is yet left for us to inquire concerning the use of Creation in the final glorious condition; whether it will have any use, and if any, what use, for the blessed in that other world. The former of these questions is very soon and very simply answered. The resurrection body will be created matter. However changed, however glorified, this will still be true of it. Our Lord's risen body was tangible by the disciples. It took into it the common food upon which we subsist. And as He challenged them to handle Him, and did eat and drink before them, with the set purpose of proving to them His identity, we are compelled to believe that both these,—the property of being handled, and the capacity of assimilating food,—were no visionary or assumed attributes of His glorified body, or else the proof would have been a mere delusion. That it could put off its liability to the observation of the senses, we know; that it needed not food for its subsistence, we may surely believe: but neither of these alters the above-mentioned facts. He was handled: and He did eat and drink. And as He, the firstfruits, so they that follow; not perhaps in all points, but certainly in all essential points. Our bodies will be risen, glorified, spiritual bodies; but they will still be bodies: created matter, and, as we before said, and I see not how we can escape inferring, living in a world of created matter.

Now, on the very threshold of this inquiry, one astonishing thing meets us, and it is this: that there should be those who call themselves Christians, and yet cast a doubt on the future resurrection of the body. I cannot see how a man who doubts this doctrine can be in any complete sense a Christian at all. If the dead rise not, then Christ is not risen; and if Christ is not risen, we are yet in our sins; our faith is vain, our preaching is also vain, and the gospel is a delusion. This is St. Paul's argument in that wonderful funeral chapter: and surely he who goes not with St. Paul in it, call himself what he will, is a mere unbeliever. And yet I fear there are many such: men who argue about that future state, that bodies will not be wanted there, and so on: neither knowing what they say, nor whereof they affirm. For if Christ has not saved man's body, He has not perfected

that for which He came on earth; He has failed in that for which He died and rose again. It is indeed this doctrine, and not that of a future existence of the soul, which is the characteristic feature of Christianity.

I say no more on this point, but simply take it for granted, and proceed upon it as certain. We shall live for ever in the glorified body. Now, what kind of circumstances will surround us in that new corporeal state? It is not easy, except for those who go to the Bible with the eye of their understanding shut, to mistake its testimony on this point. There are to be "new heavens and a new earth." "The whole creation," we are told, "groaneth and travaileth together in pain in this present state, waiting for the manifestation of the sons of God," *i.e.*, for the day when the sons of God shall be revealed and glorified: "because," the Apostle proceeds, "the creation itself shall be delivered from the bondage of corruption into the liberty of the glory of the children of God."

Now these seem to be our facts to go upon. We need not seek further testimony: but may at once proceed to ask, what does this imply? As far as we are now capable of treating such a question, what are we to imagine respecting this new heaven and new earth,—this Creation freed from the bondage of corruption, and made partaker of the glory and freedom of the perfected children of God?

Now at this point we are met by the fact, that the question of the use of Creation in our future perfected state is, like some which we have considered in these meditations before, beset with considerable difficulties. Of these, some arise from the language of certain passages of Scripture, and others from the nature of the subject itself.

First then, there is no denying that Holy Scripture seems in some places to speak as if this world and all that is therein were to bear no part at all in the employments and interests of those who shall inherit life eternal. The earth and the works therein are to be burnt up. All these things are to be dissolved; and considerations founded on that certainty are pressed upon us, as to affect our present practice. Again, we are told that the things seen are but for a time, whereas the things not seen endure for ever. And many passages of a similar tendency might be quoted. Are we, then, to understand these of a total annihilation and passing away of the fabric of material creation? Unexplained, it would seem as if we hardly could take them otherwise. But they are not left unexplained. Scripture also contains plain declarations, such as we have already quoted, not in figurative passages only, but in passages which cannot be taken otherwise than literally, that there must and will be a material creation, in the midst of which our future life will be spent. Not to mention at present the imagery which runs through the Prophets and the book of Revelation, which I venture to say can hardly have any sense assigned to it without such an assumption, the whole declarations of our Lord and

His apostles respecting the resurrection of the body absolutely require it, in order to fall into any connected and consistent meaning. Nay, we are not called upon to make any inferences of our own upon the point: for St. Paul himself distinctly gives us the testimony already cited, than which nothing can be plainer, that the world which we see about us shall not always be the prey of decay, and disappointment, but shall itself be made partaker of the freedom and power of advance to perfection which shall result from the glorification of the triumphant church. And it is clear, that one such plain declaration as this, which it is impossible to misunderstand, outweighs, by the very fact of its being the key to their true signification, any number of passages which seem to tend the other way. Their true sense must be made apparent by it, not its clear meaning explained away in order to bend it to them. If Creation is to be delivered from the fetters of decay, and wrong, and death, then must that burning up and dissolving, elsewhere spoken of, be the purifying and liberating process, not the exterminating and annihilating one.

So much may be laid down, then, as to the testimony of Scripture, that it is clear and precise concerning the future destiny of Creation. It is to partake of our blessedness, we are to have it about us as we have the Creation about us here. Whether this is to take place on our globe or not, is for us perhaps an idle question, though we are naturally prone to ask it. There are in Scripture, reasons for the supposition; and there are also reasons against it. And so too in the nature of things. This earth is full of the past: if it retained any of its distinctive features, would it not also, we may say, retain the traces of sin and sorrow? If it is not to retain those distinctive features, then it would matter little to us, if it were to be locally and materially the same. At all events, whatever becomes of this lesser question, Scripture informs us that the Creation of God is not always to continue, as now, the prey of imperfection and blight and corruption; but that there is reserved for it, as well as for us, and for it as participating with us, a perfect and a glorious state.

I would not shrink from confessing (and this is that to which I alluded when I spoke of the difficulties of our subject) that the positive nature of those passages, especially that in 2 Peter iii., which seem to announce the destruction of nature, is, after all, somewhat perplexing. The idea that they describe a purifying process, though our only resource, does not seem an entirely satisfactory one. One other way, indeed, of explanation is open to us: that they may describe the destruction of this globe, and those other places may be spoken of some different ones. In this case, such words as those of St. Paul just now cited, "the Creation shall be delivered from the bondage of corruption," cannot mean what they almost must mean, that the same Creation which now suffers, shall then be free from suffering.

And now let me pass on to the considerations arising out of the subject itself.

First of all, then, there is this tendency in the affirmative direction. If we believe that Creation is but a part of Redemption, and with this belief we ask ourselves the question, Has Creation in this point of view served its purpose? we surely must reply that it has not. The points of contact between man and the material world are very few. In those exercises and employments which most concern His eternal being, he secludes and insulates himself from it. Besides, it cannot be assumed to have served its purpose of bringing glory to God by the recognition of His wonderful work. In this present state, their mysteries are for the most part hidden from us. We know almost nothing about Creation. Its history, indeed, is told in Scripture in very general terms: but those terms themselves are mysterious; and when we compare them with the facts visible on the earth itself, we find that we have yet to learn how to understand many of them. And there can be no doubt that this will continue to be so to the end of time.

How little, again, do we know of the most interesting questions about Creation! We examine, and we classify, and we speculate: but who can tell the processes whereby the most ordinary phenomena in Nature take place? Who can satisfy us why the leaf is green, and the flower constant to its own peculiar colour? Doubtless there might be an account given of the reason of all such facts: but at present they defy our analysis and baffle our research.

But will this always be so? Are we to imagine that God has created that most wonderful of His works, the mind of man, with faculties able to comprehend these inner mysteries of His creation, and then that such understanding is never to take place? Are we to believe that Nature is to be set before us, during our imperfect state here, as an enigma which we cannot solve, and that it will then, when we shall be endowed with superior faculties, be withdrawn from our observation? If this were so, then I must think that one of the great elements of the glorifying of God by His redeemed ones, would be absent. So that on this ground, the nature of the case itself leads me to believe that a material Creation will lie about us in that other state.

And if we inquire into the nature of our connection with and employment in that Creation, we must be guided to an answer, not by the very slight knowledge which we possess of the nature of the resurrection body, but by what seems to be the very first requisite of any idea at all which we can form of that future life, viz., that there must be continuity of being and interest in each one of us; that our life here, and our life there, should not be two distinct lives, but the continuation of one and the same life, however, much that life may be ennobled, and exalted, and purified. Now what conclusions shall we draw from the application of this thought to our inquiry?

"At Thy right hand there is pleasure for ever-

more." What pleasure? Proceeding on the same course which we have just pointed out, we may say that surely this pleasure, for the majority of mankind, cannot be entirely disconnected from this present life here: will not be an entirely new beginning of a delight previously unknown, but the purification and ennobling of a delight already begun below. I know that this may seem strange to some: that we have been accustomed to view that future state as a sort of great school of theology, in which we shall be always contemplating the great and difficult doctrines of the faith, and especially those of them which surpass and baffle us here. Doubtless, in some cases this may be so; doubtless, in all cases, the mental vision will be so cleared and strengthened, that even those who were duller on earth will be able to see and know more of the divine love and power, than could the ablest and deepest here: but this, I take it, is not the question: it is rather, whether the impressions and effects produced by what man has gone through here, will not be in the main the foundation of the exceeding blissfulness which he shall inherit there. And I venture to think that if this is to be so, that a very large proportion of our impressions which we derive through the senses here, will not be broken off and discontinued there, but will be carried forward in a more blessed and elevating form.

Let me, without hesitation, apply this to the consideration of our subject, and I will at once deal with a difficulty, which at first sight quite seems to baffle our powers. We cannot think of nature without decay. Decay is the very life of nature, as now constituted. There is hardly one of her productions which does not, by its decay and corruption, furnish the essential material for supply and for subsistence. Remove decay, deliver nature from the bondage of corruption, and all things would be always the same: no pleasant succession, no interchange of grateful seasons. Bring all in nature to perfection, and stop all at that point, and, however beautiful, the face of the new earth would seem to be but as a picture, and that an incongruous one.

This then, it would appear, cannot be meant by deliverance from the bondage of corruption. The words must somehow bear another and a worthier sense. It cannot be that the world, in her change into a fit habitation for the blessed for ever, should lose all that beauty and that glory which carried gladness to our hearts before. Some things indeed belonging to the present state we can hardly admit in our thoughts into that other: the desolating storm, the withering blight, the nipping frost, the unfruitful season,—these, and the like of these, cannot be where all is free to expand, and where the meanest child of nature will not fail to reach its best and highest degree. And we may well conceive also, that certain combinations of circumstances, to which we owe much of our enjoyment of nature here, will hardly be found there. The first outbreak of spring makes the heart leap within us,

chiefly perhaps because of the winter which has so long bound up vegetation with his icy fetters: when the woods put on their fresh green, and the earth on which we tread becomes radiant with flowers, it is above all things the contrast which gives zest and delight. But we can hardly imagine that there will be winter there: or that bareness and dreariness will ever characterise the hills and vales of the new earth. And if we pursue the train of thought thus suggested, we may perhaps arrive at some account of how this may well be. Here, in our weak and everchanging state of thought and feeling, contrast is always necessary to add piquancy to our interest. There, where satisfied calm shall have taken the place of restless craving for change, contrast will no longer be wanted. To our ears now, perpetual spring sounds as if it would soon pall upon us: and even if there could be a happy mixture of the three propitious seasons, and the earth could at one and same time be budding into leaf, and opening the flower, and ripening the fruit, it might be a question whether our senses would not soon weary of the continual strain on them, and yearn for some entire rest, some fallow time like winter, when they might repose from excitement.

But there, it may well not be so. Weariness will no longer exist: good enjoyed will lead on to good desired: the eye will not want respite from seeing, nor the ear from hearing, nor the brain from searching and gaining conclusions. So that it may well be, that there shall be no decay there, and yet no feeling of dullness; no desire for change, where the thoughts and interests themselves will be always changing, because always advancing from one height of blessedness to another.

And if a further consideration is wanted to convince us, that there may be the highest bliss in the enjoyment and contemplation of God's works, without the elements of decay and renewal, we may think of what will be our own state in that other life, and derive from that a strong argument as to the condition of the blessed world itself of which we shall form a part. We are told by our Lord that we shall be like the holy angels; ourselves without death and decay, and therefore without the necessity of renewal. Doubtless there will be beauty there, far surpassing the fairest dream here; there will be majesty there, compared to which all the splendour of man here is but contemptible: but there will be no fluctuation—no oscillating backwards and forwards into degrees of greater and less: either all will be always the same, or the only progress will be advance.

And as man himself will be, so in all likelihood will also be the world in which man will be found. Here, decay and change are the very conditions of beauty and majesty. The loveliness of infancy, the gaiety of childhood, the strength and comeliness of youth, the force of manhood, the veneration claimed for age, the sympathies called forth by feebleness, the solemn lessons bequeathed us by death,—all

these are but circumstances attendant on so many onward steps in a course which reaches its height and then declines. But there, all these, or as many of them as are consistent with a blissful state of perfection, will be fixed at their height and their best, and there will for ever continue to flourish, filled with loveliness and purity, according to the measure of each, by him, the great author and source of all that is lovely and pure. Each, we may well conceive, will have its place and its work, and in that place and work will be an element in the multitudinous blessedness of the whole. And even so will it be with Creation itself. Of whatever members and details Creation may then consist, whether of the same that we see here, or more, or less, each will be advanced to its highest point of perfection, each will have attained all its possible beauty and majesty, and at this point will remain for ever. As the blessed contemplate the wonderful works of God, new wonders, fresh points of interest, will continually occur: more praise will be rendered to him, more true pleasure will accrue to his redeemed ones, throughout the countless ages of eternity.

And if it be asked, how is this to be, seeing that all Creation has inherited man's sin, seeing that the ground is cursed for his sake, and nature suffers because the lord of nature was disobedient;—we may fearlessly reply, it will take place, this deliverance from the bondage of corruption and of sin, owing to the Death and Resurrection of the Lord. Having made peace by the blood of his cross, by him it pleased the Father to reconcile all things to himself, all things in heaven and earth. And in that vision of St. Peter, when he was instructed not to call that unclean which God had cleansed, this was distinctly set forth to him: this bringing of all things created into a state of reconciliation with God, and fitting use for man, by the great Sacrifice of the Death of the Son of God. So

that I believe we may surely expect, and I do myself confidently look for, this renewed and glorious condition of God's material Creation in the next happy state. I believe nature has not been, as the loose belief of many would suppose it to have been, a great mistake on the part of the Creator—a gigantic failure—an imperfect mould, to be cast aside one day as though it had never been; but I hold firmly that for even material nature there is a good time coming, when the desert shall rejoice and blossom as the rose:—that God's wonderful works, here so much abused, so little understood, will there, in all their highest forms of beauty and proportion, be the everlasting study and admiration of the blessed. Not, it is true, before,—still less to the exclusion of,—his still more wonderful work of Redemption, but as contributing to it, and indeed themselves forming part of it.

And this leads us to the same point where we brought to a close our other meditations: that it is for the sake of Christ, and of Christ's work of love, and of Christ's redeemed ones, that all things are, and were created. For this will be then most clearly shown and most fully carried out, when not only the Church, but material Nature also, has reached its highest aim and end: when no decay mars the one, as no sin the other; when the wonders of the created universe are read, not as now, with failing eyes and doubting hearts, but with the purified and unerring vision of the sons of God in glory; when there will be no peril of science invading faith, because faith and knowledge will be one: when none can go astray, because he who made and who redeemed all things will be himself our teacher, and will lead us beside the fountains of living waters; when great acquirements will no longer mar perfect holiness, because he who sanctifieth the elect people of God will dwell in us, in full measure, for ever.

REMINISCENCES OF A HIGHLAND PARISH.

BY THE EDITOR.

CHAPTER IX.—TACKSMEN AND TENANTS.

THE "upper" and "lower" classes in the Highlands were not separated from each other by a wide gap. The thought was never suggested of a great proprietor above, like a leg of mutton on the top of a pole, and the people far below, looking up to him with envy. On reviewing the state of highland society, one was rather reminded of a pyramid whose broad base was connected with the summit by a series of regular steps. The dukes or lords, indeed, were generally far removed from the inhabitants of the land, living as they did for the greater part of the year in London; but the minor chiefs, such as "Lochnell," "Lochiel," "Coll," "MacLeod," "Raasay," &c., resided on their respective estates

and formed centres of local and personal influence. They had good family mansions; and in some instances the old keep was enlarged into a fine baronial castle, where all the hospitality of the far North was combined with the more refined domestic arrangements of the South. They had also their handsome "barge," or well-built, well-rigged "smack" or "wherry;" and their stately piper, who played pibrochs with very storms of sound after dinner, or, from the bow of the boat, with the tartan ribbands fluttering from the grand war-pipe, spread the news of the chief's arrival for miles across the water. They were looked up to and respected by the people. Their names were mingled with all the traditions of the country: they were

as old as its history, practically as old, indeed, as the hills themselves. They mingled freely with the peasantry, spoke their language, shared their feelings, treated them with sympathy, kindness, and, except in outward circumstances, were in all respects one of themselves. The poorest man on their estate could converse with them at any time in the frankest manner, as with friends whom they could trust. There was between them an old and firm attachment.

This feeling of clanship, this interest of the clan in their chief, has lived down to my own recollection. It is not many years—for I heard the incident described by some of the clan who took part in the *émeute*—since a new family burial-ground was made in an old property by a laird who knew little of the manners or prejudices of the country, having lived most of his time abroad. The first person whom he wished to bury in this new private tomb near “the big house” was his predecessor, whose lands and name he inherited, and who had been a true representative of the old stock. But when the clan heard of what they looked upon as an insult to their late chief, they formed a conspiracy, seized the body by force, and after guarding it for a day or two, buried it with all honour in the ancient family tomb on

“The Isle of Saints, where stands the old grey cross.”

The Tacksmen at that time formed the most important and influential class of a society which has now wholly disappeared in most districts. In no country in the world was such a contrast presented as in the Highlands between the structure of the houses and the culture of their occupants. The houses were of the most primitive description; they consisted of one story—had only what the Scotch call a *but* and *ben*; that is, a room at each end, with a court between, two garret rooms above, and in some cases a kitchen, built out at right angles behind. Most of them were thatched with straw or heather. Such was the architecture of the house in which Dr. Johnson lived with the elegant and accomplished Sir Allan Maclean, in the island of Inch Kenneth. The old house of Glendessary, again, in “the Parish,” was constructed, like a few more, of wicker-work; the outside being protected with turf, and the interior lined with wood. “The house and the furniture,” writes Dr. Johnson, “were ever always nicely suited. We were driven once, by missing our passage, to the hut of a gentleman, when, after a very liberal supper, I was conducted to my chamber, and found an elegant bed of Indian cotton, spread with fine sheets. The accommodation was flattering; I undressed myself, and found my feet in the mire. The bed stood on the cold earth, which a long course of rain had softened to a puddle.” But in these houses were gentlemen, nevertheless, and ladies of education and high breeding. Writing of Sir Allan Maclean and his daughters, Johnson says:—“Romance does not often exhibit a scene that strikes the imagination more than this little

desert in these depths and western obscurity, occupied, not by a gross herdsman or amphibious fisherman, but by a gentleman and two ladies of high rank, polished manners, and elegant conversation, who, in an habitation raised not very far above the ground, but furnished with unexpected neatness and convenience, practised all the kindness of hospitality and the refinement of courtesy.” It was thus, too, with the old wicker-house of Glendessary, which has not left a trace behind. The interior was provided with all the comfort and taste of a modern mansion. The ladies were accomplished musicians, the harp and piano sounded in those “halls of Selma,” and their descendants are now among England’s aristocracy.

These gentlemen Tacksmen were generally men of education; they had all small but well-selected libraries, and had not only acquired some knowledge of the classics, but were fond of keeping up their acquaintance with them. It was not an uncommon pastime with them when they met together, to try who could repeat the greatest number of lines from Virgil or Horace, or who among them, when one line was repeated, could *cap* it with another line commencing with the same letter as that which ended the former. All this may seem to many to have been profitless amusement, but it was not such amusement as rude and uncultivated boors would have indulged in; nor was it such as is likely to be imitated by the rich farmers who now pasture their flocks where hardly a stone marks the site of those old homes.

I only know one surviving gentleman Tacksman belonging to the period of which I write, and he is ninety years of age, though in the full enjoyment of his bodily health and mental faculties. About forty years ago, when inspecting his cattle, he was accosted by a pedestrian with a knapsack on his back, who addressed him in a language which was intended for Gaelic. The tacksman, judging him to be a foreigner, replied in French, which met no response but a shake of the head, the tacksman’s French being probably as bad as the tourist’s Gaelic. The Highlander then tried Latin, which kindled a smile of surprise, and drew forth an immediate reply. This was interrupted by the remark that English would probably be more convenient for both parties. The tourist, who turned out to be an Oxford student, laughing heartily at the interview, gladly accepted the invitation of the tacksman to accompany him to his thatched home, and share his hospitality. He was surprised, on entering “the room,” to see a small library in the humble apartment. “Books here!” he exclaimed, as he looked over the shelves. “Addison, Johnson, Goldsmith, Shakespeare—what! Homer, too?” The farmer, with some pride, begged him to look at the Homer. It had been given as a prize to himself when he was a student at the University. My old friend will smile as he reads these lines, and will wonder how I heard the story.

It was men like these who supplied the High-

lands with clergy, physicians, lawyers, and the army and navy with many of their officers. It is not a little remarkable that the one island of Skye, for example, should have sent forth from her wild shores since the beginning of the last wars of the French revolution, 21 lieutenant-generals and major-generals; 48 lieutenant-colonels; 600 commissioned officers; 10,000 soldiers; 4 governors of colonies; 1 governor-general; 1 adjutant-general; 1 chief baron of England; and 1 judge of the Supreme Court of Scotland. I remember the names of 61 officers being enumerated, who, during "the war," had joined the army or navy from farms which were visible from one hill-top in "the Parish." These times have now passed away. The Highlands furnish few soldiers or officers. Even the educated clergy are becoming few.

One characteristic of these Tacksmen which more than any other forms a delightful reminiscence of them, was their remarkable kindness to the poor. There was hardly a family which had not some man or woman who had seen better days, for their guest, during weeks, months, perhaps years. These forlorn ones might have been very distant relations, claiming that protection which a drop of blood never claimed in vain; or former neighbours, or the children of those who were neighbours long ago; or, as it often happened, they might have had no claim whatever upon the hospitable family, beyond the fact that they were utterly destitute, yet could not be treated as paupers, and had in God's Providence been cast on the kindness of others, like waves of the wild sea breaking at their feet. Nor was there anything "very interesting," about such objects of charity. One old gentleman beggar I remember, who used to live with friends of mine for months, was singularly stupid, often bad-tempered. A decayed old gentlewoman, again, who was an inmate for years in one house, was subject to fits of great depression, and was by no means entertaining. Another needy visitor used to be accompanied by a female servant. When they departed after a sojourn of a few weeks, the servant was generally laden with wool, clothing, and a large allowance of tea and sugar, contributed by the hostess for the use of her mistress, who thus obtained supplies from different families during summer which kept herself and her red-haired domestic comfortable in their small hut, during the winter. "Weel, weel," said the worthy host, as he saw the pair depart, "it's a pair situation that of a beggar's servant, like yon woman carrying the bag and poke." Now this hospitality was never dispensed with a grudge, but with all tenderness and nicest delicacy. These "genteel beggars" were received into the family, had comfortable quarters assigned to them in the house, partook of all the family meals, and the utmost care was taken by old and young that not one word should be uttered, nor anything done, which could for a moment suggest to them the idea that they were a trouble, a bore, an intrusion, or anything save the most wel-

come and honoured guests. This attention, according to the minutest details, was almost a religion with the old Highland "gentleman" and his family.

The poor of the parish, strictly so called, were, with few exceptions, wholly provided for by the Tacksmen. Each farm, according to its size, had its old men, widows, and orphans depending on it for their support. The widow had her free house, which the farmers and the "cottiers" around him kept in repair. They drove home from "the Moss" her peats for fuel; her cow had pasturage on the green hills. She had land sufficient to raise potatoes, and a small garden for vegetables. She had hens and ducks too, with the natural results, of eggs, chickens and ducklings. She had sheaves of corn supplied her, and these, along with her own gleanings, were threshed at the mill with the Tacksman's crop. In short, she was tolerably comfortable, and very thankful, enjoying the feeling of being the object of true charity, which was returned by such labour as she could give, and by her hearty gratitude.

But all this was changed when those Tacksmen were swept away to make room for the large sheep farms, and when the remnants of the people flocked from their empty glens to occupy houses in wretched villages near the sea-shore, by way of becoming fishers—often where no fish could be caught. The result has been that "the Parish," for example, which once had a population of 2200 souls, and received only 11% per annum from public (Church) funds for the support of the poor, expends now under the poor-law upwards of 600% annually, with a population diminished by one-half, and with poverty increased in a greater ratio. This, by the way, is the result generally, when money awarded by law, and distributed by officials, is substituted for the true charity prompted by the heart, and dispensed systematically to known and well-ascertained cases, that draw it forth by the law of sympathy and Christian duty. I am quite aware of how poetical this doctrine is in the opinion of some political economists, but in these days of heresy in regard to older and more certain truths, it may be treated charitably.*

The effect of the poor-law, I fear, has been to destroy in a great measure the old feelings of self-respect which felt it to be a degradation to receive any support from public charity when living, or to be buried by it when dead. It has loosened, also, those kind bonds of neighbourhood, family relationship, and natural love which linked the needy to those who could and ought to supply their wants, and which was blessed both to the giver

* In no case can a poor-law meet the wants of the deserving poor. In every case it must be supplemented by systematic benevolence. If it attempts, by means of a few officials, to deal kindly and liberally with every case of poverty, it will soon pauperise and demoralise the community. If it applies such stringent tests as starvation and extreme distress alone can submit to, a vast mass of unrelieved suffering must be the result. Christian charity has yet to fill up, as it has never done, the gap between legal paupers and the deserving poor.

and receiver. Those who ought on principle to support the poor are tempted to cast them on the rates, and thus to lose all the good derived from the exercise of Christian almsgiving. The poor themselves have become more needy and more greedy, and scramble for the miserable pittance which is given and received with equal heartlessness.

The temptation to create large sheep-farms has no doubt been great. Rents are increased, and more easily collected. Outlays are fewer and less expensive than upon houses, &c. But should more rent be the highest, the noblest object of a proprietor? Are human beings to be treated like so many things used in manufactures? Are no sacrifices to be demanded for their good and happiness? Granting even, for the sake of argument, that profit, in the sense of obtaining more money, will be found in the long run to measure what is best for the people as well as for the landlord, yet may not the converse of this be equally true—that the good and happiness of the people will in the long run be found the most profitable? Proprietors, we are glad to hear are beginning to think that if a middle-class tenantry, with small arable farms of a rental of from £20 to £100 per annum, were again introduced into the Highlands, the result would be increased rents. Better still, the huge glens, along whose rich straths no sound is now heard for twenty or thirty miles but the bleat of sheep or the bark of dogs, would be tenanted, as of yore, with a comfortable and happy peasantry.

In the meantime, emigration has been to a large extent a blessing to the Highlands, and to a larger extent still a blessing to the colonies. It is the only relief for a poor and redundant population. The hopelessness of improving their condition, which rendered many in the Highlands listless and lazy, has in the colonies given place to the hope of securing a competency by prudence and industry. These virtues have accordingly sprung up, and the results have been comfort and independence. A wise political economy, with sympathy for human feelings and attachments, will, we trust, be able more and more to adjust the balance between the demands of the old and new country, for the benefit both of proprietors and people. But I must return to the old tenants.

Below the "gentlemen" Tacksmen were those who paid a much lower rent, and who lived very comfortably, and shared hospitably with others the gifts which God gave them. I remember a group of men, tenants in a large glen which now "has not a smoke in it," as the Highlanders say, throughout its length of twenty miles. They had the custom of entertaining in rotation every traveller who cast himself on their hospitality. The host on the occasion was bound to summon his neighbours to the homely feast. It was my good fortune to be a guest when they received the present minister of "the Parish," while *en route* to visit some of his flock. We had a most sumptuous feast—oat-cake, crisp and

fresh from the fire; cream, rich and thick, and more beautiful than nectar,—whatever that may be; blue Highland cheese, finer than Stilton; fat hens, slowly cooked on the fire in a pot of potatoes, without their skins, and with fresh butter—"stoved hens," as the superb dish was called; and, though last, not least, tender kid, roasted as nicely as Charles Lamb's cracklin' pig. All was served up with the utmost propriety, on a table covered with a pure white cloth, and with all the requisites for a comfortable dinner, including the champagne of elastic, buoyant, and exciting mountain air. The manners and conversation of those men would have pleased the best-bred gentleman. Everything was so simple, modest, unassuming, unaffected, yet so frank and cordial. The conversation was such as might be heard at the table of any intelligent man. Alas! there is not a vestige remaining of their homes. I know not whither they are gone, but they have left no representatives behind. The land in the glen is divided between sheep, shepherds, and the shadows of the clouds.

There were annual festivals of the Highland tenantry, which deeply moved every glen; and these were the Dumbarton and Falkirk "Tysts," or fairs for cattle and sheep. What preparations were made for these gatherings, on which the rent and income of the year depended! What a collecting of cattle, small and great; of drovers, and of dogs,—the latter being the most interested and excited of all who formed the caravan. What speculations as to how the "market" would turn out. What a shaking of hands in boats, wayside inns, and on decks of steamers by the men in homespun cloth, gay tartans, or in the more correct new garbs of Glasgow or Edinburgh tailors, what a pouring in from all the glens increasing at every ferry and village, and flowing on a river of tenants and proprietors, small and great, to the market! What that market was I know not from personal observation, nor desire to know.

Let Yarrow be unseen, unknown,
If now we're sure to rue it,
We have a vision of our own,
Ah, why should we undo it?

The impression left in early years is too sublime to be tampered with. I have a vision of miles of tents, of flocks, and herds, surpassed only by those in the wilderness of Sinai; of armies of Highland sellers trying to get high prices out of the Englishmen, and Englishmen trying to get low prices out of the Highlandmen—but all in the way of "fair dealing."

When any person returned who had been himself at the market, who could recount its ups and downs, its sales and purchases, with all the skirmishes, stern encounters, and great victories, it was an eventful day in the Tacksman's dwelling! A stranger not initiated into the mysteries of a great fair might have supposed it possible for any one to give all information about it in a brief business form. But there was such an enjoyment in details, such a

luxury in going over all the prices, and all that was asked by the seller and refused by the purchaser, and asked again by the seller, and again refused by the purchaser, with the nice financial fencing of "splitting the difference," or giving back a "luck's penny," as baffles all description. It was not enough to give the prices of three-year-olds and four-year-olds, yell cows, crock ewes, stirks, stots, lambs, tups, wethers, shots, bulls, &c., but the stock of each well-known proprietor, or breeder, had to be discussed. Colonsay's bulls, Corrie's sheep, Drumdriesaig's heifers, or Achadashenaig's wethers, had all to be passed under careful review. Then followed discussions about distinguished "beasts," which had "fetched high prices;" their horns, their hair, their houghs, and general "fashion," with their parentage. It did not suffice to tell that this or that great purchaser from the south had given so much for this or that "lot," but his first offer, his remarks, his doubts, his advance of price, with the sparring between him and the Highland dealer, must all be particularly recorded, until the final shaking of hands closed the bargain. And after all was gone over, it was a pleasure to begin the same tune again with variations. But who that has ever heard an after-dinner talk in England about a good day's hunting, or a good race, will be surprised at this endless talk about a market?

I will close this chapter with a story told of a great sheep farmer—not one of the old "gentleman tenants" verily!—who, though he could neither read nor write, had nevertheless made a large fortune by sheep farming, and was open to any degree of flattery as to his abilities in this department of labour. A purchaser, knowing his weakness, and anxious to ingratiate himself into his good graces, ventured one evening over their whisky toddy to remark, "I am of opinion, sir, that you are a greater man than even the Duke of Wellington!" "Hoot toot!" replied the sheep farmer, modestly hanging his head with a pleasing smile and taking a large pinch of snuff. "That is too much—too much by far—by far." But his guest, after expatiating for a while upon the great powers of his host in collecting and concentrating upon a Southern market a flock of sheep, suggested the question, "Could the Duke of Wellington have done *that*?" The sheep farmer thought a little, snuffed, took a glass of toddy, and replied, "The Duke of Wellington was, no doot, a clever man; very, very clever, I believe. They tell me he was a good sojrer, but then, d'ye see, he had reasonable men to deal with—captains, and majors, and generals that could understand him,—every one of them, both officers and men; but I'm not so sure after all if he could manage say twenty thousand sheep, besides black cattle, that could not understand one word he said, Gaelic or English, and bring every hoof o' them to Fa'kirk Tryst! I doot it—I doot it! But I have often done that." The inference was evident.

CHAPTER X.—MARY CAMPBELL'S MARRIAGE.

MARY CAMPBELL was a servant in the old manse, about sixty years ago, and was an honest and bonnie lassie. She had blue eyes and flaxen hair, with a form as "beautiful as the fleet roe on the mountain," a very Malvina to charm one of the heroes of old Ossian. Her sweetheart was not, however, an "Oscar of the spear;" a "Cochullin of the car;" or a Fingal who "sounded his shield in the halls of Selma," but was a fine-looking shepherd lad named Donald Maclean, who "wandered slowly as a cloud" over the hills at morning after his sheep, and sang his songs, played his trumpet, and lighted up Mary's face with his looks at evening. For two years they served together; and, as in all such cases, these years seemed as a single day. Yet no vows were exchanged, no engagement made between them. Smiles and looks, improvised songs full of lovers' *chaffing*, joining together as partners in the kitchen dance to Archy M'Intyre's fiddle, showing a tendency to work at the same hay-rick, and to reap beside each other on the same harvest rigs, and to walk home together from the kirk; these were the only significant signs of what was understood by all, that bonnie Mary and handsome Donald were sweethearts.

It happened to them as to all lovers since the world began; the old history was repeated in the want of smoothness with which the river of their affection flowed on its course. It had the usual eddies and turns which belong to all such streams, and it had its little falls, with tiny bubbles, that soon broke and disappeared in rainbow hues, until the agitated water rested once more in a calm pool, dimpled with sunlight, and overhung with wild flowers.

But a terrible break and thundering fall at last approached with rich Duncan Stewart, from Lochaber! Duncan was a well-to-do small tenant, with a number of beeves and sheep; was a thrifty money-making bachelor, who never gave or accepted bills for man or for beast, but was contented with small profits, and ready cash secured at once and hoarded in safety with Carrick, Brown, and Company's Ship Bank, Glasgow, there to grow at interest while he was sleeping—though he was generally "wide-awake." He was a cousin of Mary's, "thrice removed," but close enough to entitle him to command a hearing in virtue of his relationship when he came to court her; and on this very errand he arrived one day at the manse, where, as a matter of course, he was hospitably received—alas! for poor Donald Maclean.

Duncan had seen Mary but once, but having made up his mind, which it was not difficult for him to do, as to her fair appearance, and having ascertained from others that she was in every respect a most properly-conducted girl, and a most accomplished servant, who could work in the field or dairy, in the kitchen or laundry,—that beside the fire at night her hands were the most active

in knitting, sewing, carding wool, or spinning—he concluded that she was the very wife for Duncan Stewart of Blairdhu. But would Mary take him? A doubt never crossed his mind upon that point. His confidence did not arise from his own good looks, for they, to speak charitably, were doubtful, even to himself. He had high cheek-bones, small teeth not innocent of tobacco, and a large mouth. To these features there was added a sufficient number of grey hairs sprinkled on the head and among the bushy whiskers, to testify to many more years than those which numbered the age of Mary. But Duncan had money—a large amount of goods laid up for many years—full barns and sheep-folds. He had a place assigned to him at the Fort William market, such as a well-known capitalist has in the city Exchange. He was thus the sign of a power which tells in every class of society. Are no fair merchant's daughters, we would respectfully ask, affected in their choice of husbands by the state of their funds? Has a coronet no influence over the feelings? Do the men of substance make their advances to beauties without it, with no sense of the weight of argument which is measured by the weight of gold in their proffered hand? Do worth and character and honest love, and *sufficient* means, always get fair play from the fair, when opposed by rivals having less character and less love, but with more than *sufficient* means? According to the reader's replies to these questions will be his opinion as to the probability of Duncan winning Mary, and of Mary forsaking poor Donald and accepting his "highly respectable" and wealthy rival.

It must be mentioned that another power came into play at this juncture of affairs, and that was an elder sister of Mary's who lived in the neighbourhood of the farmer, and who was supposed, by the observing dames of the district, to have "set her cap" at Duncan. But it was more the honour of the connection than love which had prompted those gentle demonstrations on the part of Peggy. She wished to give him the hint, as it were, that he need not want a respectable wife for the asking; although of course she was quite happy and contented to remain in her mother's house, and help to manage the small croft, with its cow, pigs, poultry, and potatoes. Duncan, without ever pledging himself, sometimes seemed to acknowledge that it might be well to keep Peggy on his list as a reserve corps, in case he might fail in his first plan of battle. The fact must be confessed, that such marriages "of convenience" were as common in the Highlands as elsewhere. Love, no doubt, in many cases, carried the day there as it will do in Greenland, London, or Timbuctoo. Nevertheless the dog-team, the blubber, the fishing-tackle, of the North will, at times, tell very powerfully on the side of their possessor, who is yet wanting in the softer emotions; and so will the cowries and cattle of Africa, and the West-end mansion and carriage

of London. The female heart will everywhere, in its own way, acknowledge that "love is all very well, when one is young, but—" and with that prudential "but," depend upon it the blubber, cowries, and carriage are sure to carry the day, and leave poor Love to make off with clipped wings!

Duncan, of Blairdhu, so believed, when he proposed to Mary, through the minister's wife, who had never heard the kitchen gossip about the shepherd, and who was delighted to think that her Mary had the prospect of being so comfortably married. All the *pros* and *cons* having been set before her, Mary smiled, hung her head, pulled her fingers until every joint cracked, and, after a number of "could not really says," and "really did not know," and "wondered why he had asked her," and "what was she to do," &c., followed by a few hearty tears, she left her mistress, and left the impression that she would in due time be Mrs. Duncan Stewart. Her sister Peggy appeared on the scene, and, strange to say, urged the suit with extraordinary vehemence. She spoke not of love, but of honour, rank, position, comfort, influence, as all shining around on the Braes of Lochaber. Peggy never heard of the shepherd, but had she done so, the knowledge would have only moved her indignation. Duncan's cousinship made his courtship a sort of family claim—a social right. It was not possible that her sister would be so foolish, stupid, selfish, as not to marry a rich man like Mr. Stewart. Was she to bring disgrace on herself and people by refusing him? Mary was too gentle for Peggy, and she bent like a willow beneath the breeze of her appeals. She would have given worlds to have been able to say that she was engaged to Donald; but that was not the case. Would Donald ask her? She loved him too well for her to betray her feelings so as to prompt the delicate question, yet she wondered why he was not coming to her relief at such a crisis. Did he know it? Did he suspect it?

Donald, poor lad, was kept in ignorance of all these diplomatic negotiations; and when at last a fellow-servant expressed his suspicions, he fell at once into despair, gave up the game as lost, lingered among the hills as long as possible, hardly spoke when he returned home at night, seemed to keep aloof from Mary, and one evening talked to her so crossly in his utter misery, that next morning, when Duncan Stewart arrived at the manse, Peggy had so arranged matters that Mary before the evening was understood to have accepted the hand of the rich farmer.

The news was kept secret. Peggy would not speak. Mary could not. Duncan was discreetly silent, and took his departure to arrange the marriage, for which the day was fixed before he left. The Minister's wife and the Minister congratulated Mary; Mary gave no response, but pulled her fingers more energetically and nervously than ever. This was all taken as a sign of modesty. The shepherd whistled louder than before for his dogs, and

corrected them with singular vehemence; he played his trumps with greater perseverance, sang his best songs at night, but there was no more dancing, and he did not walk with Mary from the kirk; and the other servants winked and laughed, and knew there was "something atween them," then guessed what it was, then knew all about it; yet none presumed to tease Donald or Mary. There was a something which kept back all intrusion, but no one seemed to know what that something was.

The marriage dress was easily got up by the manse girls, and each of them added some bonnie gift to make Mary look still more bonnie. She was a special favourite, and the little governess with the work of her own hands contributed not a little to Mary's wardrobe.

All at once the girls came to the conclusion that Mary did not love Duncan. She had no interest in her dress; she submitted to every attention as if it were a stern duty; her smile was not joyous. Their suspicions were confirmed when the cook, commonly called Kate Kitchen, confided to them the secret of Mary's love for the shepherd—all, of course, in strict confidence; but every fair and gentle attempt was made in vain to get her to confess. She was either silent, or said there was nothing between them, or she would do all that was right, and so on; or she would dry her eyes with her apron, and leave the room. These interviews were not satisfactory, and so they were soon ended; a gloom gathered over the wedding; there was a want of enthusiasm about it; everyone felt drifting slowly to it without any reason strong enough for pulling in an opposite direction. Why won't Donald propose? His proud heart is breaking, but he thinks it too late, and will give no sign. Why does not Mary refuse Duncan—scorn him, if you will, and cling to the shepherd? Her little proud heart is also breaking, for the shepherd has become cold to her. He ought to have asked her, she thinks, before now, or even now proposed a runaway marriage, carried her off, and she would have flown with him, like a dove, gently held in an eagle's talon, over hill and dale, to a nest of their own, where love alone would have devoured her. But both said, "'Tis too late!" Fate, like a magic power, seemed to have doomed that she must marry Duncan Stewart.

The marriage was to come off at the house of a Tacksman, an uncle of the bride's, about two miles from the manse; for the honour of having a niece married to Blairdhu demanded special attention to be shown on the occasion. A large party was invited, a score of the tenantry of the district, with the minister's family, and a few of the gentry, such as the sheriff and his wife; the doctor; and some friends who accompanied Duncan from Lochaber; big Sandy Cameron from Lochiel; Archy, son of Donald, from Glen Nevis; and Lachlan, the son of young Lachlan, from Corpach. How they all managed to dispose of themselves in the *but and ben*, including the centre closet, of Malcolm Morrison's

house, has never yet been explained. Those who have known the capacity of Highland houses,—the capacity to be full, and yet to be able to accommodate more, have thought that the walls possessed some expansive power, the secret of which has not come down to posterity. On that marriage day a large party was assembled. On the green, outside the house, were many Highland carts, which had conveyed the guests; while the horses, their fore-legs being tied together at the fetlock, with ungainly hops cropped the green herbage at freedom, until their services were required within the next twelve hours. Droves of dogs were busy making one another's acquaintance; collie dogs and terriers—every tail erect or curled, and each, with bark and growl, asserting its own independence. Groups of guests, in homespun clothes, laughed and chatted round the door, waiting for the hour of marriage. Some of "the ladies" were gravely seated within, decked out in new caps and ribands; while servant-women, with loud voices and louder steps, were rushing to and fro, as if in desperation, arranging the dinner. This same dinner was a very ample one of stoved hens and potatoes, legs of mutton, roast ducks, corned beef, piles of cheese, tureens of curds and cream, and oat-cakes piled in layers. Duncan Stewart walked out and in, dressed in a full suit of blooming Stewart tartan, with frills to his shirt, which added greatly to his turkey-cock appearance.

But where was the bride? She had been expected at four o'clock, and it was now past five. It was understood that she was to have left the manse escorted by Hugh, son of big John M'Alister. The company became anxious. A message of inquiry was at last despatched, but the only information received was that the bride had left the manse at two o'clock, immediately after the manse party. A herd-boy was again despatched to obtain more accurate tidings, and the governess whispered in his ear to ask particularly about the whereabouts of Donald the shepherd. But the boy could tell nothing, except that Hugh and the bride had started on horseback three hours before; and as for Donald, he was unwell in bed, for he had seen him there rolled up in blankets, with his face to the wall. The excitement became intense. Duncan Stewart snuffed prodigiously; Malcolm, Mary's uncle, uttered sundry expressions by no means becoming; Peggy, full of alarming surmises, wrung her hands, and threw herself on a bed in the middle closet. The ladies became perplexed; the sheriff consulted the company as to what should be done. The doctor suggested the suicide of the bride. The minister suspected more than he liked to express. But two men mounted the best horses, and taking a gun with them—why, no one could conjecture—started off in great haste to the manse. The timid bird had flown, no one knew whither. The secret had been kept from every human being. But if she was to leave the parish it could only be by a certain glen, across a certain river, and along one path, which led to the regions beyond. They

conjectured that she was *en route* for her mother's home, in order to find there a temporary asylum. To this glen, and along this path, the riders hurried with the gun. The marriage party in the meantime "took a refreshment," and made M'Pherson, the bagpiper, play reels and strathspeys, to which the young folks danced, while the older people brewed whisky punch, and assured Duncan Stewart that the mystery would soon be satisfactorily cleared up. Duncan seemed to enjoy his tumbler, and pretended to laugh at the odd joke—for a joke he said it was. Peggy alone refused to be comforted. Hour after hour passed, but no news of the bride. The ladies began to yawn; the gentlemen to think how they should spend the night; until at last all who could not be accommodated within the elastic walls by any amount of squeezing, dispersed, after house and barn were filled, to seek quarters at the manse or among the neighbouring farms.

The two troopers who rode in pursuit of Mary came at last, after a hard ride of twenty miles, to a small inn, which was the frontier house of the parish, and whose white walls marked, as on a peninsula, the ending of one long uninhabited glen, and the commencement of another. As they reached this solitary and wayside place, they determined to put up for the night. The morning had been wet, and clouds full of rain had gathered after sunset on the hills. On entering the kitchen of the "change house," they saw some clothes drying on a chair opposite the fire, with a "braw cap" and ribands suspended near them, and dripping with moisture. On making inquiry they were informed that these belonged to a young woman who had arrived there shortly before, behind Hugh, son of big John M'Allister of the manse, who had returned with the horse by another road over the hill. The woman was on her way to Lochaber, but her name was not known. Poor Mary was caught! Her pursuers need not have verified their conjectures by entering her room and upbraiding her in most unfeeling terms, telling her, before locking the door in order to secure her, that she must accompany them back in the morning and be married to Duncan Stewart, as sure as there was justice in the land. Mary spoke not a word, but gazed on them as in a dream.

At early dawn she was mounted behind one of these moss-troopers, and conducted in safety to the manse, as she had requested to see the family before she went through the ceremony of marriage. That return to the manse was an epoch in its history. The shepherd had disappeared in the meantime, and so had Hugh M'Allister. When Mary was ushered into the presence of the minister, and the door was closed, she fell on her knees before him, and bending her forehead until she rested it on his outstretched hand, she burst forth into hysterical weeping. The minister soothed her, and bid her tell him frankly what all this was about. Did she not like Stewart? Was she unwilling to marry

him? "Unwilling to marry him!" cried Mary, rising up, with such flashing eyes and dramatic manner as the minister had never seen before in her, or thought it possible for one so retiring and shy to exhibit; "I tell you, sir, I would sooner be chained to a rock at low water, and rest there until the tide came and choked my breath, than marry that man!" and Mary, as if her whole nature was suddenly changed, spoke out with the vehemence of long-restrained freedom breaking loose at last in its own inherent dignity. "Then, Mary dear," said the minister, patting her head, "you shall never be married against your will, by me or any one else, to mortal man." "Bless you, dear, dear sir," said Mary, kissing his hand.

Duncan heard the news. "What on earth, then," he asked, "is to be done with the dinner?" for the cooking had been stopped. To his Lochaber friends he whispered certain sayings borrowed from sea and land—as, for example: that there were "as good fish in the sea as ever came out of it"—"that she who winna when she may, may live to rue't another day," and so on. He spoke and acted like one who pitied as a friend the woman whom he thought once so wise as to have been willing to marry Blairdhu. Yet Blairdhu's question was a serious one, and was still unanswered:—"What was to become of the dinner?" Mary's uncle suggested the answer. He took Duncan aside, and talked confidentially and earnestly to him. His communications were received with a smile, a grunt, and a nod of the head, each outward sign of the inward current of feeling being frequently repeated in the same order. The interview was ended by a request from Duncan to see Peggy. Peggy gave him her hand, and squeezed his with a fervor made up of hysterics and hope. She wept, however, real tears, pouring forth her sympathies for the bridegroom in ejaculatory gasps, like jerks for breath, when mentioning a man of his "res—pect—a—bil—i—ty." Before night, a match was made up between Duncan and Peggy: she declaring that it was done to save the credit of her family, though it was not yesterday that she had learned to esteem Mr. Stewart; he declaring that he saw clearly the hand of Providence in the whole transaction—that Mary was too young, too inexperienced for him, and that the more he knew her, the less he liked her. The hand of Providence was not less visible when it conveyed a dowry of 50*l.* from Peggy's uncle with his niece. The parties were "proclaimed" in church on the following Sunday and married on Monday—and so the credit of both the family and the dinner was saved.

But what of Mary? She was married to the shepherd, after explanations and "a scene," which, as I am not writing fiction, but truth, I cannot describe, the details not having come to me in the traditions of the parish.

Donald enlisted as a soldier in some Highland regiment, and his faithful Mary accompanied him

to the Peninsula. How he managed to enlist at all as a married man, and she to follow him as his wife, I know not. But I presume that in those days, when soldiers were recruited by officers who had personally known them and their people, and to whom the soldier was previously attached, many things were permitted and favours obtained which would be impossible now. Nor can I tell why Mary was obliged to return home. But the rules or necessities of the service during war demanded this step. So Mary once more appeared at the manse in the possession of about 60*l.*, which she had earned and saved by working for the regiment, and which Donald had intrusted, along with an only daughter, to his wife's care. The money was invested by the minister. Mary, as a matter of course occupied her old place in the family, and found every other fellow servant, but Donald, where she had left them years before. No one received her with more joy than Hugh M'Allister, who had been her confidante and best man. But what stories and adventures Mary had to tell! And what a high position she occupied at the old kitchen fireside. Everything there was as happy as in the days of auld lang syne, and nothing wanting save Donald's blithe face and merry trumps.

Neither Mary nor Donald could write, nor could they speak any language except Gaelic. Their stock of English was barely sufficient to enable them to transact the most ordinary business. Was it this want, and the constant toil and uncertain marches of a soldier during war, which had prevented Donald from writing home to his wife? For, alas, two long years passed without her having once heard from him!

After months of anxious hope had gone by, Mary began to look old and careworn. The minister scanned the weekly newspaper with intense anxiety, especially after a battle had been fought, to catch her husband's name among the list of the dead or wounded. He had written several times for information, but with little effect. All he could hear was that Donald was alive and well. At last the news came that he was married to another woman. A soldier journeying homewards from the same regiment, and passing through the parish, had said so to several persons in the village, after he had had "his glass." But the soldier was gone long before he could be cross-questioned. Mary heard the news, and though scorning the lie, as she said it was, she never alluded to the fearful story. Still the secret wound was evidently injuring her health; her cheek became paler, "the natural force abated" while at her work, and "Kate Kitchen" had on more than one occasion discovered tears dropping on the little girl's face as her mother combed her hair, or laid her down to sleep.

There was not a person in the house who did not carry poor Mary's burthen, and treat her with the utmost delicacy. Many an expression calculated to

strengthen her faith in God, and to comfort her, was uttered at family prayers, which she always attended. Yet she never complained, never asked any sympathy; she was quiet, meek, and most unselfish, like one who tried to bear alone her own sorrow, without troubling others. She worked diligently, but never joined in the chorus song which often cheered the hours of labour. She clung much to Hugh M'Allister, who, like a shield, cast aside from her the cruel darts which were shot in the parish by insinuations of Donald's unfaithfulness, or the repetition of the story "told by the soldier."

The fifth year of desolation had reached mid-summer, and it was clear that Mary was falling into permanent bad health. One day, having toiled until the afternoon at the making of a haystack, she sat down to rest upon some hay near it. Above, lads and lasses were busy trampling, under the superintendence of Hugh M'Allister. Hugh suddenly paused in the midst of his work, and gazing steadfastly for a minute or two at a distant person approaching the manse from the gate, said, with a suppressed voice, and a "hush" which commanded silence, "If Donald Maclean is in life, that's him!" Every eye was directed to the traveller, who, with a knapsack on his back, was slowly approaching. "It's a beggar," said Kate Kitchen.—"It's like Donald, after all," said another, as the sounds of the traveller's feet were heard on the narrow gravel walk.—"It is him, and none but him!" cried Hugh as he slid down to the ground, having seen Donald's face as he took off his cap and waved it. Flying to Mary, who had been half asleep from fatigue, he seized her by the hand, raised her up, and putting his brawny arm round her neck, kissed her; then brushing away a tear from his eye with the back of his rough hand, he said, "God bless you! this is better than a thousand pounds, any day!" Mary, in perplexity and agitation, asked what he meant, as he dragged her forward, giving her a gentle push as they both came round the haystack which concealed Donald from their view. With a scream she flew to him, and as they embraced in silence, a loud cheer rose from the stack, which was speedily hushed in silent sobs even from the strong men.

What an evening that was at the manse! If ever Donald heard the falsehood about his second marriage, there was no allusion to it that night. He had returned to his wife and child with honourable wounds, a Waterloo medal, and a pension for life. He and Mary settled down again at the manse for many months, and the trump was again heard as in the days of yore. On the last night of the year Donald insisted on dancing once more with Mary, in spite of his lame leg and the laughter of his girl.

I will not follow their adventures further, beyond stating that they removed to Glasgow; that Donald died, and was buried thirty years ago in the old churchyard of "the parish;" that the daughter

was married, but not happily; that Mary fought a noble, self-denying battle to support herself by her industry, and her army savings, the capital of which she has preserved until now.

When nearly eighty years of age she went on a pilgrimage to visit Donald's grave. "Do you repent marrying him," I asked her on her return,

"and refusing Duncan Stewart?" "Repent!" she exclaimed, as her fine old face was lighted up with sunshine; "I would do it all again for the noble fellow!"

Mary yet lives in Glasgow, respected by all who know her.

OUR FIRST LOST.

SIT close beside me, dearest wife;
We are together, if alone;
The dew upon the bloom of life
Is gathered, and the bloom is gone;
And part of us is in the grave,
And part is in the heaven above;
But stronger is the tie we have
In mingled cords of grief and love.

Sit very near, and let me dry
This tear that trickles down thy cheek,
And this that trembles in thine eye;
For it is time that we should speak:
The choking stupor of the hour
Is past, when weeping was relief;
Now yield thee to a gentler power—
The tender memory of grief.

Let's talk of her—our little one
Who walks above the milky way,
Arrayed in glory like the sun
That lightens the eternal day;
The little gift that we did make
To God, by whom the boon was given—
He wished it, deeming she would take
Our hearts away with her to heaven.

Remember that sweet time when hope
Sat brooding o'er its future joy,
And low, fond laughter wakened up
With bets upon a girl or boy;
And little caps, in secret sewn,
Were hid in many a quiet nook:
You knew the secret to be known,
Yet hid them with a guilty look.

Remember all the gush of thought
When first upon your arm she lay,
And all the pain was all forgot,
And all the fears were smiled away;
And looking on her helplessness
Awakened strong resolve in you,
And mother-love and tender grace;
And all was beautiful and new.

For you were sure, a week before,
That you should never live to see
A baby laughing on the floor,
Or placid lying on the knee,

Or laid on my ungainly hand
That always feared to let her slip,
Or held up, with a fond command,
For pressure of a father's lip.

O sweet bud flowering dewy bright
To crown our love's rejoicing stem!
O great eyes wondering in their light,
With long dark lashes fringing them!
And over these the forehead broad,
And then her full and parted lips,
And rounded chin, meet for a god,
And pink shells on her finger-tips!

O beautiful her life! and we
Were just too full of happiness:
As dewy flowers hang droopingly,
O'erburdened with the weight of bliss,
And, fearful lest the treasure spill,
Close up their petals to the light,
So we forgot all, good or ill,
To clasp to us that dear delight.

Remember how we noted all
Her little looks and winning ways,
And how she let her eyelids fall
As I was wont in wooing days,
And held her little finger up
In curious mimicry of mine;
But when the smile was on her lip,
Lo! all the beaming face was Thine.

O say not she was only seen,
Like song-bird lighting on the tree,
A moment, while the leaves were green,
Filling the boughs with melody,
And then, when hope arose serene,
She left us sadder than before;
And better she had never been,
Than leave us stricken to deplore.

And was it nothing then to feel
A mother's love, and do her part,
While soft hands o'er the bosom steal,
And soft cheeks press against the heart?
Nay, let us kneel together, love,
And bow the head, and kiss the rod;
We gave an heir to heaven above,
A child to praise the Christ of God.

He would have infant trebles ringing
 The glories of the great I AM ;
 He would have childish voices singing
 The hallelujahs of the Lamb ;
 And shall we faint in grief's desire
 Because this grace to us is given,
 To have a babe amid the choir
 White-robed around the throne of heaven ?

We had a joy unto us given
 Transcending any earthly pleasure ;
 We had a messenger from heaven ;
 Let us be better for her presence.
 Our mother earth where she is laid
 Is dearer to my heart for her :
 We have such kindred with the dead,
 The very grave is lightsomer.

ORWELL.

COAL AND PETROLEUM.

BY HENRY D. ROGERS, LL.D., F.R.S., &c., Professor of Natural History in the University of Glasgow.

COAL AN EMBODIMENT OF THE SUNSHINE OF A LONG PAST AGE.

COAL may be contemplated in some other very suggestive aspects. We may regard it as a consolidated form of the sunshine of a long-past day ; as a portion of the generously expended solar force of one age, fixed in material shape, and by simple yet wondrous process sealed up from all dispersion and loss, and transmitted to another age long later to assist to fulfil in it the development of a state of life incomparably higher than that in which it originated. It is evident that a given quantity of vegetable product represents, or is the equivalent of, a definite amount of the sun's action on the earth. A sheet or bed of coal of any especial thickness and area expresses—if we knew the relation or coefficient accurately we might convey it in figures—the very quantum of time expended by the coal-moss in growing, and the total of sunshine tributary directly and indirectly to its entire vital development. It is no mere sport of fancy, then, but an utterance of science, to say, that all the while we are imbibing the warmth of our coal fire, we are actually basking in the sun's rays which vivified the vegetation out of which the coal was produced countless ages ago. In this act of its combustion, we behold as it were the completion of a marvellous cycle, a sort of *respiration* by the earth of the solar heat and light ; and attendant upon this breathing-in and out, of the life-giving emanation or influence, we note also the play of another beautiful round of actions, the imbibition and assimilation into the globe's tissues of the carbon of the air, and the restoration of it again, enacting a function for the earth, curiously analogous, but on a far grander scale, with that it discharges in the nourishment of an individual plant. How wonderful a succession of phases, these of the world's carbon ! In one age a part of the atmosphere, in another of living vegetation, again a component of the solid rocky crust, and finally, when ministering to human wants, regaining once more its primal station in the all-encompassing and life-sustaining air. In this inhaling, prolonged retention, and ultimate re-exhaling of the carbon, the earth, it may be said with a little stretch of fancy, almost *breathes*. In so viewing this course of the

carbon, how stupendous is the duration of the one long-drawn breath we are describing !

AMOUNT OF CARBON IN THE ATMOSPHERE AT THE BEGINNING OF THE CARBONIFEROUS PERIOD.

It must be obvious from the fact that while all the sedimentary strata of lower position or older geological date than the coal-measures, are comparatively destitute of coaly matter, or, indeed, of any large amount of air-derived carbon, the so-called carboniferous formation embraces in a solid or condensed form so prodigious a quantity of this element, that there must have arisen during the growth of the coal-forming marshes, a solidification or fixation from the gaseous state of a store of carbon so immense, as to influence materially the subsequent amount of it held in the earth's general atmosphere. No matter what the vast proportion already included in the vegetables and animals that clothed and peopled the earth, this immense bulk of the carbon stored away in the form of coal must originally have come altogether from the air. The animal organisms of the period would, no doubt, as in the present day, resupply to the atmosphere a large part of the carbon appropriated by them as food from the vegetable ones. It is of the surplus quantity of the carbon beyond that perpetually interchanged between the animal and vegetable kingdoms, and placed outside of this beautiful organic cycle and hoarded securely away for a far future age to appropriate, that we are here speaking.

How much of the primeval supply of carbon in the air was thus ultimately solidified as coal, by vital organic action, during the carboniferous ages, must, in our present defective knowledge of the whole mass of coaly substance in the earth, be a matter rather of conjecture than of computation. Nevertheless, I cannot but believe that the atmosphere at the beginning of the carboniferous period on the great day of plant-life was many times richer in carbon than it was at the close of it. An estimate carefully made from the best data of the sum-totals of coal within the principal coal-fields of the world, indicates, indeed, that the aggregate of carbon buried under the soil cannot be less than some six

times the quantity still resident in the air. If we can assume it to have approached at all to this proportion, we need no longer wonder at the colossal dimensions of the ancient coal-plants, nor at their exuberant growth. Coupling this conception of so high a supply of carbon—the main pabulum of all vegetation—with that of a commensurate abundance of warmth and moisture indicated in the very structures of the fossils, we clearly see that it was an age in which all the conditions, chemical, physical, and climatal, were in an especial degree fitted and pre-arranged for a most fertile summer of plant-life all over the globe.

Allusion has been made to the curious deduction that the heat engendered during the combustion of a mass of coal is in truth the equivalent of a given amount of the ancient sunshine originally operative in stimulating the growth of the vegetable matter. Let us indulge a little further in this speculation upon the relationships of the sun's powers, as these are exerted through this its potent offspring, its subservient representative. Consider what takes place, as far as the sun is concerned, when a mass of the fossil fuel, the coal, is used as the agent for propelling a steamer against an opposing wind. The wind, every natural movement of the atmosphere, is primarily, as we all well know, a consequence of the unequal warming by the sun of the different latitudes and tracts of the globe's varied surface. But to what is due the speed of the vessel which defies the blast? It is impelled by a potent wind, or rather by most aptly balanced and well adjusted alternating winds of steam of a tempest's strength, awakened from torpor by the heat engendered in the mere burning of the coal. What is the power in this blazing fuel, but that of the ancient carboniferous sunshine which the coal embodies? This now, at the will of men, stirs the artificial blasts that have a might under skilful guidance capable of withstanding or defying the strongest storms which the existing sunshine can arouse. The engineer may well be termed the "master of the winds," for he generates his mechanical ones precisely in such force and directions as he likes, while his source of power is still the breeze-arousing sunshine of the old sun of the earth's early days.

CHANGES WHICH THE COAL HAS UNDERGONE SINCE IT WAS IMBEDDED.

Coal is not a substance of uniform elementary constitution. It presents itself indeed in many varieties, each adapted to especial applications and wants in the economy of human affairs, yet all of them so related as to bespeak, when compared with one another, a most interesting phasis in their history. The two currently used classification recognises but two chief sorts, common bituminous coal, and the non-bituminous or anthracitic; a nicer subdivision is founded on the relative abundance of the uncombined carbon or coke, and the volatile or distillable and inflammable bituminous matters

so-called. These, in the phraseology of chemistry, are known as the *hydrocarbons*, a group of substances in liquid and gaseous conditions, according to the temperatures they exist under, and all constituted of hydrogen and carbon united in definite proportions. A coal destitute altogether of the hydrocarbons is a true anthracite; if it contains some ten or twelve per cent. of those volatile compounds and burns with a soon-exhausted flame, it should be called a semi-anthracite; if it have as much of them as twenty or twenty-five per cent., it is best termed a semi-bituminous coal; and in all cases where it possesses as much as or more than thirty per cent. it claims the title of a true bituminous coal. All these four classes may be divided into sub-varieties founded, not on the amount, but rather on the specific nature of their hydrocarbons or flame-making elements, and partially on the texture or physical structure of the coal as a rock. Such, for instance, is the distinction between the cannel coals and ordinary glance coals. There is a general law in the geographical relations of the above-named four classes of coals—noticeable in crossing many of the larger coal-fields, especially those of the United States between the Alleghany Mountains and the Missouri River—which will demand our attention when we enter presently on a consideration of the physical conditions which have produced the rock-oil or petroleum, which so abounds in certain districts. To this and the other hydrocarbons, the associated inflammable gases found escaping naturally or extracted artificially from the earth, let us now direct our attention.

PETROLEUM (ROCK-OILS) AND NATIVE INFLAMMABLE GASES.

The chief of the chemical compounds of hydrogen and carbon (hydrocarbons) which issue spontaneously or are derivable from the strata under the soil, are the so-called bitumens and petroleums, and the carburetted hydrogen gases. Bitumen properly embraces several hydrocarbons, some solid, some liquid. Asphaltum, one of them, is a brownish-black solid substance, of bright fracture, and burning with a brilliant flame; and naphtha, another chief ingredient, is, when pure, a colourless liquid of bituminous odour, and a specific gravity about three-fourths that of water. Petroleum, strictly defined, is a dark-coloured liquid compound of the hydrocarbons, containing much naphtha. Asphaltum in a semi-solid shape abounds on the shores of the Dead Sea; it also borders the famous bitumen lake of the Island of Trinidad. Naphtha flows profusely from the ground in some localities in Persia, also in the Birman Empire. It is stated that at Rangoon there are upwards of 500 wells of naphtha, yielding annually more than 400,000 hogsheads of the oil. The bitumen lake in Trinidad is half a mile in breadth; the materials are solid at its shores, but liquid and even boiling towards its centre. This lake is said to repose upon a bed of coal.

Of petroleum, by far the most abounding district

known is that in North America, now attracting so much attention. This wide region of the rock-oils extends, according to late authorities (see "Scientific American," vol. vii., No. 2, July, 1862), from the southern portion of the Ohio valley to Georgian Bay of Lake Huron in Upper Canada, and from the Alleghenies in Pennsylvania to the western limits of the bituminous coal-fields in the vicinity of the Missouri River. The material, they allege, "has been found in Virginia, Maryland, Pennsylvania, New York, Ohio, Michigan, Kentucky, Tennessee, Kansas, Illinois, Texas, and California." Of course this general statement does not imply that the petroleum is to be met with anywhere throughout the wide area thus vaguely defined. On the contrary, we know that hitherto it has been found only in scattered localities within these limits. Of the more specially productive oil-fields, the best known and hitherto most abounding one is a broad area embracing a part of Canada West from Lake Ontario to Lake Huron, and portions of western New York, and western Pennsylvania, the south-eastern half of Ohio, all north-western Virginia, and the eastern districts of Kentucky. The approximate centre of this wide region so profusely "running with oil," is somewhere near Marietta, on the Ohio River, and the superficial extent of it cannot be less than about 50,000 square miles.

The copiousness of the supply of the petroleum in certain districts of the coal-oil region of Pennsylvania is forcibly set forth in some statistical statements recently published in an official "Preliminary Report on the Eighth Census of the United States." It will interest the reader to have some of the principal facts.

The first indications of a high abundance of the oil were apparent in 1845, when a steady and rather copious gush of it was procured on boring an Artesian well for salt water, near Tarentum, thirty-five miles above Pittsburg, on the Allegheny River. Subsequently, in 1859, a boring was made expressly for the petroleum at Titusville, on Oil Creek, and a fountain or fissure full of it was intersected at the depth of only seventy-one feet, which yielded 400 gallons daily. "Before the close of the year 1860, the number of wells and borings was estimated to be about 2000, from seventy-four of the larger of which there outpoured daily, by the aid of pumps, an aggregate of 1165 barrels of crude oil, worth, at 20 cents, or 10*d.* a gallon, about 10,000 dollars. Wells were soon sunk to the depth of 500 or 600 feet, and the flow of petroleum became so profuse, that 3000 barrels were obtained in a day from a single well, though the less productive ones yielded only fifteen or twenty barrels per diem. The quantity sent to market by one railway, the Sunbury and Erie road, from this Pennsylvania oil-region, in 1861, amounted to 134,927 barrels, and the total supply the same year was nearly 500,000 barrels. The product has subsequently very rapidly increased, and it was lately estimated at 250,000 barrels per week." A newspaper, the "Register,"

published at Oil City, Pennsylvania, stated in 1862, that the then "daily flow of the oil was as much as 5717 barrels, and that the wells were in a condition which showed that the production was on the increase" (see "Report on Eighth Census of U.S.," by Jos. C. G. Kennedy, Superintendent, Washington, 1862).

Geologists familiar with the great petroleum tract entertain no doubt that the rocky strata within its limits are, in almost every square mile of it, more or less impregnated with the precious fluid and its gaseous adjuncts, but not everywhere in the same high degree. Indeed a merely superficial exploration of the country will convince, that the subterranean oils and gases are distributed very unequally through the vast territory. I shall essay to show before this brief description closes, by what law these products seem to arrange themselves in more or less regular zones of comparative abundance and scarcity. But preliminary to this exposition of the causes which control their local distribution, let us examine the rock-oils and gases in their general geological relationships.

SOURCES OF THE PETROLEUM OF THE UNITED STATES AND CANADA.

It is an error to suppose that the petroleum and inflammable gases of the great rock-oil region above sketched, are all restricted to the coal measures, or even to the carboniferous formation. Geologists of the United States and of the adjoining British Provinces have clearly shown that they rise from strata in those regions seated far beneath the coal. The stratified rocks of the region consist of an immense development of Silurian, Devonian, and Carboniferous deposits of an aggregate depth or thickness of not less than 25,000 or 30,000 feet, or some five or six miles. They include, at the least, three or four continuous and widely diffused great beds, of a magnitude entitling them to be called formations, whose chemical nature well adapts them to yielding mineral oils and carburetted gases, as copiously as do any coal measures. The lowest placed or oldest of these, the Utica black shale, ranging in its outcrop from E. to W., through New York, and thence N.W. through Canada, has a variable thickness amounting in some places to 300 feet; this rock is, for the most part, a crumbly shale, of a prevailing dark bluish or brownish black colour, and it abounds in bituminous and carbonaceous products; it even contains a few thin coaly layers,—and has often been mistaken for a genuine coal-bearing formation. So charged is it with mineral charcoal, that it has been in certain localities converted into a black pigment. It is replete in many places in fossil sea-weeds, and fucoids, and there can be little doubt that it owes its richness in carbonaceous matter mainly to these plants. Petroleum is known indeed to issue plentifully from this rock on the Great Manitoulin Island, in Lake Huron. It underlies, let it be observed, all the higher Silurian, Devonian, and Carboniferous strata

which in succession occupy long east and west-trending zones of country to the south of its outcrop in New York, Pennsylvania, Michigan, and Ohio. To it chiefly must we credit the petroleum and gas-springs, which occur north, or outside of the districts occupied by the gently south-dipping Devonian and Carboniferous strata.

Ascending in the series of the old or Palaeozoic formations, we come in stratigraphical order, at an interval of many, say from ten to fifteen thousand feet, to other yet thicker or more massive deposits of very similarly constituted dark carbonaceous and bituminous shale and slate rocks of the Devonian period, and known in the geological survey of New York as the Marcellus shale and the Genesee shale, and in that of Pennsylvania as the cadent lower and upper black slates. In the latter-named state these formations attain a maximum thickness respectively of 800 and 700 feet, but in New York and in the North Western states they are much thinner, the Marcellus rarely exceeding fifty feet, and the Genesee shale seldom measuring more than twenty-five feet, which is its average bulk at its outcrop near Lake Erie. Further S.W. it is thicker. They are both of them very bituminous strata, and they encompass and pass under all the great western coal fields, at depths below the coal-beds of only a few thousand feet. Thus they can as readily have contributed, we may conceive, as the coal itself to the bituminizing or impregnating with the hydrocarbons all those portions of the upper strata where the circumstances have been conducive to the discharge of the volatile products, and their retention in the pores and crevices of the rocks nearer the surface.

There are still other members or subdivisions of the great Palaeozoic system of strata underneath the coal measures, that upon examination will show a sufficiency of bituminous constituents to convince us that they too may have assisted in charging the overlying coal containing sandstones and shales with mineral oils and gases.

But as the main object of this paper is less to describe details, than to convey inductively certain generalizations and facts of large relationship which go to establish the sources of the petroleum and the physical actions which have developed it and placed it within man's reach, I shall refrain from further defining these more or less carbonaceous sub-formations. I prefer rather, for the reader's sake, to ask his attention to some facts respecting the laws of the distribution or greater or less concentration of the volatile hydrocarbons or bituminous matters both in the coal seams of the country and in the other strata, as I feel assured that, these facts and laws once recognised, the theory I have to advocate of the actions which have placed the petroleum where it is, cannot fail of meeting his acceptance.

It was said incidentally in a previous page, when describing the four several varieties of coal in the great American basins as they are distinguishable by their respective proportions of volatile or bitu-

minous ingredients, that the anthracitic or non-bituminous coals are in all instances situated in the Alleghanies, or along the south-eastern border of the great Appalachian coal-basin, and that the bituminous coals belong as invariably to the western or north-western districts of the coal-field taken as a whole.

There is indeed a law of gradation in the increase of the proportions of the hydrocarbons to the free or solid carbon, so universal and steady for change of locality, from the S.E. towards the N.W. for any traverse or section across the coal-fields, that it is practicable, within trivial limits of error, to foretell the quantum of coke or gaseous matters the coal will yield, by merely knowing what we may term its *geological longitude* from the line or axis of total debituminization or complete conversion into anthracite. And it is pertinent to our argument here to note, that not only must we traverse across the first fields a given distance of many miles, before we can meet in the coal-beds themselves an assignable amount of the hydrogenous ingredients, but we must go a still further distance ere we encounter any marked indications or displays of the corresponding petroleums and carburetted hydrogens issuing from the general strata of the country. It is not in fact until we are almost half way across the great Appalachian basin, in Pennsylvania and Virginia, where its coals are already more than half endowed with the full share of their bituminous matters, that we fairly enter for the first time on the wide territory so marked by tracts or belts of gas springs and petroleum, and it is only when we approach the western and north-western margin of the vast basin, or get near the Alleghany River, and then enter western Pennsylvania, western Virginia, and eastern Ohio and eastern Kentucky that the native or mineral oils and gases gush from the earth in their full abundance. How unmistakably does this curious gradation indicate that the coal measures at least, and we cannot but include the other formations underneath them, must all have undergone at some crisis, or during some long period, a widely diffused and graduated or locally modified and attempered distillation or expulsion of the gaseous ingredients of the carbonaceous strata. This change was an almost total discharge of the volatile matters along the eastern most heated and convulsed zone, with a less and less complete displacing of them from the coaly or carbonaceous beds in the regions further west. There the subterranean action did not wholly dispel the hydrocarbons, but merely saturated or infiltrated the pores, crevices, and fissures of the over-resting rocks more or less fully with them. The anthracite belt is like a row of loaves or puddings in a cook's unequally-heated oven, where an excess of warmth has dried the dishes to a crust, whereas the other more and more bituminous belts are in the state of articles less and less baked, retaining larger and larger proportions of their primitive juices.

The hypothesis here suggested, namely, that the volatile hydrocarbons were distilled, as it were, from out the low-lying carbonaceous strata, into the pores and fissures of the over-resting ones, receives strong confirmation from the fact that the elsewhere bituminous shales of the Silurian and Devonian ages, deep under the coal, are altogether as much desiccated and debituminized everywhere in the districts contiguous to the anthracites as the coalbeds themselves. Thus while the pies resting within the upper shelves of our hypothetical oven have been over-cooked and rendered juiceless, the already more crusty ones lower down, and therefore still more effectually heated, are seen to be even more thoroughly baked and dried.

This generalization embraces, as a main element, a curious and beautiful law of structure of the whole American coal-field and its circumjacent regions. By giving due regard to it, the reader will be greatly assisted in apprehending the full inductive strength of the theory. The prevailing structure alluded to is this. The entire Appalachian mountain chain, and the vast interior continental plain, or gentle slope, with an everywhere variegated and curved surface, stretching from these mountains to the great valleys or water channels of the St. Lawrence and the Mississippi, are, when structurally viewed, simply one grand broad area of approximately parallel *elongated waves or undulations* of all the rocky strata. Now the gradation in the quantity of the volatile matter in the coal is upon a general scale very nearly in proportion to a gradation which prevails in the openness or gentleness of these flexures of the crust. As already stated, the anthracite or non-bituminous coal belongs to the most disturbed ranges of the Alleghany chain, and the basins where it has the least amount of gas, seldom more than six per cent., are those where the strata show the boldest flexures and the greatest dislocations. The semi-bituminous coals are embraced in all the wider, deeper troughs, in the undulated crust, which hold a line more to the N. W., but parallel to the anthracitic ones. In them the volatile matter in the coal is generally from eighteen to twenty per cent., and the strata or coal measures, ranging along the S. E. edge of the great table-land of the Alleghany mountain are nowhere undulated in steep flexures or intersected with dislocations of magnitude. Still further westward, where the last really conspicuous great anticlinal and synclinal flexures of mountain magnitude disappear, the coals contain of volatile matters as large an amount as thirty or thirty-five per cent. Westward again of this line, as along the borders of the beautiful Monongahela River where the stratification is almost horizontal, and there is a nearly total absence of faults, the average is as high as forty per cent. While still further on towards the western border of the field, where the undulations in the rocks are extremely broad and gentle, the quantity of volatile ingredient in the coal ascends to forty-five, and even to fifty, per cent., varying with local circumstances. This

gradation in the two conditions, or the extent of debituminization and degree of flexure, that is of alternate uplift and depression of the strata, holds true, not only in Pennsylvania, but by whatever lines we *cross-section* or traverse the grand Appalachian coal-field, though its length exceeds 800 miles, and its maximum width is about 200.

In accordance with the above-shown general relationship between the dissipation of the volatile matters of the carbonaceous beds and the amount of flexure, and of internal fracture, which these beds have experienced, is the very striking fact, that throughout western Pennsylvania, north-western Virginia, south-eastern Ohio, and eastern Kentucky, or, in other words, throughout all the western borders of the great coal-field, where the general flatness of the coal-rocks is only at wide intervals interrupted by narrow, but long and sometimes rather sharp, anticlinal waves, the more copious emission of the rock-oil and the native gases is found to be chiefly restricted to the tracts occupied by the crests and sides of these local billows in the strata. It was long ago, before 1840, noted by my brother, Professor W. B. Rogers, in his geological survey of Virginia, and was observed and made known by myself in my own similar exploration of Pennsylvania, that nearly all the localities of abundant and comparatively permanent Artesian salt-wells or artificial brine-springs, with their almost invariable concomitants, the liquid and gaseous hydrocarbons, were situated upon, or nearly coincident with, the artificial archings of the strata. This was seen on the Kenawha by him, and on the tributary rivers of the Alleghany and Ohio by myself. At the salt-wells of the Big Kenawha (Charleston), the outflow of the inflammable gases was at one time so free in one of the borings, that the manager of the works caused it to be collected and converted into fuel for evaporating the briny water along with which it ascended, as it does in so many of the salt-wells of the West. The gas issues from out the interstices and crevices of the rocks, coming up with the salt-water with which it has reposed for so many ages.

Strange accomplishment this of a long suspended connection; the carbon and hydrogen of some old sea-girt fields of vegetation, now allowed to extricate and crystallise the salt of the old ocean, which at such a lapse of antiquity once washed the precincts of the very marshes where they first came together under the potent spell of vegetable life.

It was obvious to us as a corollary of our theorem of the actions concerned in elevating and maintaining the great flexures of the crust of the region we were studying, that the subterranean heat connected with these stupendous long-ago-arrested waves, must not only have been in past periods, but must now be, more transmissible to the surface and more influential in all its agencies along the anticlinals than anywhere else throughout the country. In the spirit of this conviction, W. B. Rogers ascertained in noting the geologic relations of the native thermal waters (warm and hot springs) of

the Appalachian mountains, that they are almost invariably coincident with the ruptures of the strata along or near the anticlinal flexures or crests of the uplifted crust waves.

More recently, Professor E. B. Andrews, of Marietta College, Ohio, has shown in a paper on the rock-oil of that state and western Virginia (see "American Journal of Science and Arts," vol. xxxii.), that throughout the field he has examined few or no productive oil-wells exist, where the strata are very nearly horizontal and comparatively destitute of fissures, although a large number of wells have been bored; and he alleges that "the most oil is found where the strata have been most disturbed and where the fissures in them are most numerous." At an early period in the geological survey of western Pennsylvania it was apparent that an anticlinal arching of the strata ranges under the localities which are now so rich in petroleum on Oil Creek near the Alleghany River.

Having adduced a sufficient array of statements to show where the chief districts of the petroleum are, the nature of the strata to which we ascribe its origin, and the conditions which determine its abundance, it only now remains to close this review of the phenomena by attempting a concise enunciation of the theory we have arrived at as to its sources and its distribution.

We are inclined to attribute the petroleum and its associated hydrogenous gases to a fermentation and distillation, by subterranean heat, of the hydrocarbon elements resident in all the carbonaceous strata underlying the rock-oil region, that is to say, impregnating the Silurian black slate (Utica), the Devonian black shales (Marcellus and Genesee of New York), and the coal seams and carbonaceous shales of the bituminous coal measures. Indeed we are disposed to assign the oil and gas to the lower-seated Silurian and Devonian deposits almost exclusively, and for these strong reasons:—First, that they come forth, and very abundantly, in large districts far remote from any tracts of the coal formation, and where those inferior rocks are the only carbonaceous ones which underlie the surface. Secondly, that a like discharge of petroleum and combustible gases occurs in none of the other coal-fields of the earth, even where their coal-beds are notoriously bituminous and dangerously full of fire-damp. Thirdly, there are some differences, so the chemists inform us, between these native hydro-

genous products and the genuine coal-oils and their resultants, procured by artificial methods of separation. All these facts awaken a strong surmise, confirmed by the obvious diversities in the specific gravities and other qualities, and by the excessively offensive and non-bituminous odours of some of the petroleum of the countries exterior to the coal-field, such as that of certain localities in Canada, that the greater portion of the oil and gas is really derived from the marine animal carbonaceous shales, and not from the vegetable beds of coal and their coaly rocks. The occurrence of so many symptoms of rock-oil within the limits of the coal-fields, now replaced by such a multitude of productive oil-wells, tells for almost nought against this hypothesis, as it is known that the Silurian and Devonian black carbonaceous shales pass under all the north-western and western districts of the coal measures.

My view of the process of extrication of the petroleum from the lower strata and of its accumulation in the pores, crevices, and joints of the upper ones, is simply this. We may conceive that during the epoch, or the perhaps successive epochs, of the uplifting of all these water-buried and water-side sedimentary strata, earthquake pulsations and other undulations of the crust formed and fixed the flexures in the strata which we have described, and that during the earthquake oscillations, and even after their cessation, a copious amount of the highly heated subterranean steam, the constant attendant upon earthquakes, heated the strained and ruptured rocky beds, dislodged their more volatile constituents, and carried or distilled these latter, one portion into the atmosphere and a residuary part into the interstices of the overlying cooler and less fractured strata. Upon this hypothesis we see how in those belts of the Alleghanies where the crust was most convulsed and the rocks were most contorted and highly heated, the coal-beds were actually coked into dense anthracite, and how further from the lines of maximum subterranean pulsation and steaming of the rocks the volatile matters below the surface were progressively less expelled, till entering the petroleum districts the crust movements and warming were so moderate, that they only sufficed to displace the tarry and gaseous matters from the underlying beds to leave them, at least in part, in the cavities and cells and fractures of the over-resting strata.

SUMMER SNOW.

ONCE in a garden fair,
 Huddling close their heads together,
 Flowers were heard to whisper there,
 "Oh the changeful April weather!
 Far hence we saw them fly
 Sullen frost and angry blast;
 Not a cloud is on the sky,
 Yet the snow is falling fast!
 Soft falls the summer snow,
 On the springing grass drops light,
 Not like that which long ago,
 Fell so deadly cold and white;
 This wears the Rose's flush,
 Faint, ere bloom hath quite foregone her,
 Soft as maiden's timid blush,
 With the looks she loves upon her."

Then all the leaves o'erhead
 Shook and stirred in merry scorn,
 Light winds laughing through them, shed
 Thickest shower that fell that morn;
 "Fast falling one by one
 Will ye name then, summer snow,
 Blossoms giving not the sun
 Time to kiss them ere they go!
 All in such haste to die,
 Fading, fleeting, one by one,
 That the West Wind in his sigh
 Scarcely mourns that they are gone;
 While we, each changeful hour
 All the firmer, broader grow;
 Waving light through sun and shower
 Through the summer's fervid glow,

Round the fruit we cluster kind
 Fed with honey-dropping dew,
 Shielding safe from storm and wind,
 But letting every sunbeam through,
 Till warm it blushes bright,
 And beneath our veiling shade
 Peeps all rosy forth to sight,
 Then, and not till then, we fade!
 Spells solemn, soft, and strange,
 Steal upon us, and we show
 In a rich and wondrous change
 Brightest when about to go;
 Till Autumn as he flies
 O'er us shakes his torch of fire,
 Quick we flash in gorgeous dyes,
 Kindling on our funeral pyre;
 Then sings the wailing wind
 Dirges o'er us, as we lie
 Wept upon by droppings kind
 From a sad and constant sky."

Then said those buds, "We die
 Not like you in splendour shrined
 Yet we perish willingly,
 We have left our fruit behind."
 Word spake they never more;
 Gentle souls! e'en thus, methought,
 Ye depart, but not before
 All your quiet task is wrought;
 Little missed or mourned below,
 Slender record would ye find,
 All your sweetness with you go,
 But for Fruit ye leave behind!

ESSAYS FOR SUNDAY READING.

V.—THE OLD IN THE NEW.

BY JOHN CAIRD, D.D.

IN one sense there is nothing so true, in another nothing so false as that saying of the wise man, "There is no new thing under the sun." Viewed in one light it is the utterance of profoundest wisdom, viewed in another it is contradicted by universal experience. To the common observer the world seems full only of novelty; to whatever quarter he turns the eye, change, variety, fluctuation—everything rather than unvarying sameness seems to be the law of life. In that vast system of worlds with which the astronomer is conversant, for instance, the telescope never at any two successive moments reveals the same aspect of the heavenly bodies—the same orbs presenting the same phases or in precisely the same relations to each other, the same firmament stereotyped into changeless stillness, but rather ceaseless

variety and vicissitude of suns and stars and systems—of bodies rising, setting, waxing, waning, crossing and recrossing each other's orbits, as in the mazes of a bright and endless dance of worlds. The earth beneath our feet, again, contains in its secret depths a record of countless revolutions in its structure—telling to the eye of the geologist a strange story of submerging and upheaving, of dissolving and solidifying, of ocean beds that once were continents, of tracts of solid land or mountain summits over which once flowed the waves of the sea. Or, as we narrow the range of observation to the period of man's existence, how do the proofs multiply of change and newness as the condition of all created being. What is history but a record of changes—of the rise and fall of races, nations, dynasties; of

THE SUMMER SNOW.

the progress or decline of knowledge, freedom, and civilization; of the perpetual shiftings and sortings of characters on the world-wide stage of life? Everywhere the old is seen giving place to the new. On the ruins of ancient cities, and amidst the buried remains of an extinct civilization, modern habitations are built. The trim and luxurious mansion rises beside the grey ruins of some stern old border peel; the modern church confronts the crumbling shafts and shattered cloisters of the ancient abbey—telling to the living generation of the men of a ruder, wilder age, and of forms of faith and worship that have long yielded to other and newer types of religion and of life. And we, too, ourselves are changing. Our views of life, our opinions, tastes, pleasures, our outward circumstances and relations have altered with every year of our history. From some of us the experiences of the earlier years of life have long passed away, or are gradually fading into the indistinctness of retrospection. The exuberant mirth of childhood, the buoyant cheerfulness of youth, the emotions of delight which commonest pleasures could once evoke, the light that once shone to our eye on the world's face, the immature views and rash expectations of early life, all have passed from us and come no more; another and newer consciousness, other feelings, tastes, habits are now ours. New men, new manners, new opinions, and habits, too, are ever developing themselves in society, so that sometimes where life is long protracted the old man will begin to feel as if he were almost a stranger amidst the race that is rising around him, and that it is time for him to quit the stage where everything is becoming so inconsistent with the type of life on which his opinions and habits were formed. Thus to the cursory observer it would seem as if the new were everywhere obliterating the old, and as if it were more consistent with experience to aver that everything is new rather than that "There is no new thing under the sun."

Nevertheless this saying, after all, contains a profounder truth. Amidst all this seeming change there is real sameness. Novelty and variety are in very many instances but the superficial aspect. In the world and human life there is a something that never alters, a grand stability amidst seeming fluctuation, a deep and firm substratum of reality underneath all the hurried flow and tossing of the restless stream of appearances. Let me endeavour to illustrate this view of the matter, and to deduce some of the lessons with which it is fraught.

Notwithstanding the appearance of ceaseless change and novelty, the averment that "There is nothing new under the sun," will be to some extent borne out, if you consider that *much which seems new is but the reconstruction or revival of the old*. The forms of things are ever varying, whilst the substance or essence remains the same. Each successive spring and summer budding plants and flowers come forth with a rush of beauty and fresh-

ness on the world; but, with apparent newness, the glory of each season is but a recreation or revival of the past. The leaves of bygone autumns withered and fell, not to be annihilated, but to moulder away into the earth, from which new forms of life are again brought up. Nature only, as it were, melts the old materials in her crucible, and moulds them into shapes of grace and beauty again. Not an atom does she ever suffer to go to waste; not one particle of matter, with all her vast wealth of materials, does she ever lose. There is no annihilation in the world, only decay, disorganization, and reconstruction. Never since the world's creation has there been one new atom of matter under the sun. And not only the same materials, but the same types of things are continually reappearing. Multifarious, almost infinitely diversified though they be, yet it is after the same patterns that the successive productions of nature, the flowers of each spring, the successive races and generations of animate existence, are formed. No two plants, indeed, are ever shaped exactly alike; every acorn unfolds a different oak; each separate flower, each tiny insect's wing, is tinted with different loveliness: still all this variety is subject to a law of unity. The individuals slightly differ, the race or type remains the same. With lavish munificence, yet at the same time with wondrous frugality, ever changing, yet ever repeating and reiterating, Nature works so that, amidst her myriad aspects and forms of organic existence, it may yet be pronounced that "There is no new thing under the sun."

And the same thing holds good of man and of human life; the elements of which it is composed are ever the same. The individuals vary, but the type is constant. Each separate soul is a new creation; each separate history differs more or less from all that preceded it. Still in substance human nature is the same wondrous product of Infinite wisdom, the same thing of thought and feeling and will, of restless desires and mysterious capacities, of awful responsibility and immortal destiny. The varieties are but on the surface. In outward circumstances, in the accidents of fortune, birth, station, in the peculiarities of personal aspect, in the degree of talent or intellectual attainment, in the greater or less prominence of special elements of character, men may differ from each other; but these, after all, are but the surface forms of life, the root or essence is everywhere the same. The substantial agreement is infinitely more real and important than the outward and accidental differences. Everywhere man is the same creature of thought and feeling and energy, possessed of the same moral nature, tainted with the same guilt, capable of the same glorious restoration, and with the same untold possibilities of being and of blessedness before him. That which is really great and wonderful in human life changes not with the changing years. Wherever mortal man exists, the same story, inexhaustible in its interest, is told anew—the strange story of "a being breathing thoughtful

breath, a traveller 'twixt life and death." Can any repetition ever change the wonder and interest of childhood to the eye that can read it truly? Ever in each new beginning of a life it comes, appealing to our pity and tenderness, "symbolizing to us our unuttered conceptions of innocence and simplicity," of unworn freshness and unworldly purity; coming, as if it had just wandered hither from some more glorious region, and with the light of its former home still lingering upon it—a nature over the silent chords of whose being no hand but that of God has swept, no breath of lawless passion yet made discord of its notes, or rough wear of circumstance left them jangled and out of tune. Ever, too, in human life as it proceeds are to be found the same moral elements of love, and sorrow, and hope, and disappointment—of short-lived raptures and enduring cares, of temptation issuing in the strength of conquest or the weakness of discomfiture—the same strange medley of greatness and littleness, things mundane and things celestial—of contrasts that move now our laughter at their incongruity, and now our terror at their awfulness;—in one word, in all times and places, under a thousand accidental varieties, human existence is the same rapid course, run out beneath the silent heavens, with the shadow of the awful future creeping ever nearer and more near, till the darkness closes round us, and our little life is lost in its impenetrable mystery. In this respect, emphatically it may be averred, that "That which has been is that which shall be, and that there is no new thing under the sun."

Again, not only with respect to the essential elements of human existence may this be averred, the same thing may be said of the *moral spirit and character of human life*. In this respect, too, amidst endless incidental diversities, there is in successive ages a continual reproduction of that which has already been. In the course of the world's history there have been occasionally instances of reproduction so marked as to strike the most superficial observer. The great of past times seemed to come alive again and revisit the world in the forms of modern men. Old friends of bygone times are ever meeting us in modern history with new faces, and between some of them the resemblance could scarcely be closer if the spirit of the ancient hero or sage had in very deed transmigrated into the breast of his modern representative. The student of history is sometimes conscious, in going over the annals of the past, of the same sort of feeling with which, in visiting old mansions, the seat of long-descended families, one has mused in the dim old picture-gallery over the portraits of a long series of representatives of the same line. How curious, amidst external diversities of dress, of form, of circumstance, of sex, to trace ever and anon some unmistakable characteristic, some family peculiarity of feature, or expression, or bearing, re-appearing. How unlike in all his surroundings

that old, fierce, half-savage, mail-clad warrior with the scar across his brow who bore off that mark of his manhood in the wars of the Roses, to the "ruffled and wiggèd courtier" in the costume of Charles II.; or he again to that grave college dignitary, or that bustling, commonsense matter-of-fact country gentleman, or magistrate, or member of parliament, who is the present inheritor of the family name and honours. Yet as you pass from portrait to portrait, *there*, lost occasionally at intermediate stages, but ever and anon re-appearing, meeting you on the canvas again, and yet again, is that contour of face, that moulding of lip, that indescribable something playing around eye or mouth, that trick of motion or gesture, which tells you that there is in the latest bearer of the name, a something reproduced or revived in our day which lived and died and lived again and again in the men of ages and generations past.

But these are but outward and superficial reproductions. There is a far deeper and more real resemblance between men, age after age, in virtue of which it may be averred that "That which hath been is now, and that that which is done is that which shall be done." There may be, and often there actually is, a most real identity of life betwixt men, the outward scene, form, circumstances of whose history is as dissimilar as can be conceived. It matters little to the real meaning of a man's life what its outward form may be. As the same thoughts may be conveyed in many different languages, so through a thousand different forms of expression, you may decipher substantially the same thought, the same spiritual meaning in many different lives. You may never do one single act in a whole life-time exactly as another man has done it; in all that lies on the surface and constitutes the shape and semblance of life, you and he may be utterly, irreconcilably unlike—he poor, you rich, he famous, you obscure, he one who has made for himself a deathless name on the page of history, you a man never heard of beyond your own narrow sphere and whose very name will be forgotten almost as soon as the grave has closed over you; he—shall we say—an old Greek philosopher, a Roman patriot, a Jewish prophet or psalmist, a Christian apostle, a monk of the middle ages, a feudal monarch or warrior, and you a man of business, a shopkeeper, a humble artizan, a domestic servant, pursuing the common-place round of duties in our prosaic modern life; and yet, strip off the mere superficial covering, go down to the root and core, the moral essence of a life, and your life and his may be substantially identical. For instance, men will tell you that the age of chivalry and romance is gone, never to be revived. The silly sentimentalist dreams of a bright and brilliant Past,—of fair women and brave men, of courts and camps, of feudal pomp and pageantry, and sighs perhaps to think that his lot has fallen on our dull and common-place life of shops and manufactories and merchandise, when all the poetry and the beauty have vanished from the world. But it

is not so. The essence of chivalry lay not in the mere glitter and pomp of castle and court and hall, in its tournaments and forays and coats of mail and cloth of gold; to revive these were but a silly and ineffectual attempt to bring back the past. But if the essence of chivalry lay deeper far than that, if it consisted in unselfish nobleness of mind, in stainless honour, in scorn of baseness and cowardice, in respect for womanhood, in tenderness to the weak and oppressed, and implacable hostility to the oppressor,—then, though it be that outwardly the old order has passed, giving place to new, yet surely as God fulfils himself in many ways, there are amongst us in many a lowly scene and amidst many a common-place sphere of duty, brave and gentle and true-hearted souls in whom the ancient spirit of chivalry is living still.

Or shall we ascend in search of illustration to a far higher type of character, and ask, what is it that gives its unity to the church of Christ in successive ages, if it be not this, that Christ is born afresh in every Christian soul, and the Christ-life repeated with more or less distinctness in every Christian biography? In this sense there is in the history of the church, as of the world, nothing new under the sun. For whatever of nobleness or purity, or self-devotion, of zeal for God or love to man, whatever peculiar feature of greatness or goodness has ever shone forth in any Christian life, was long ago anticipated in Christ. He is the great head and founder of the family, the first of the long ancestral line; and as in the annals of the church's history, in the biographies of saints and martyrs and eminently holy men, you study the successive portraits in that vast gallery, ever as you look, beneath a thousand accidents of age, fortune, circumstances, there the old and well-known lineaments of the Christ-face are unmistakably discernible. Down through the lapse of ages we trace a glorious succession of Christ-like ones—each face with a halo of spiritual nobleness shining round it. And they are with us still,—men and women in whom, now one, now another, feature of the Master comes out in more bold and marked relief,—in whose unselfishness, or tenderness, or large-hearted affectionateness, or considerate many-sided sympathy, in whose combined magnanimity and lowliness, power and gentleness, fervour and calmness, hatred and hostility to wrong, yet pity and helpfulness for the erring and the fallen,—in whose persons you can detect ever and anon as if the very face of the Crucified haunting in bright glimpses the homes and ways of men. What matters the outward guise of such a life—the age, the place, the rank or calling? These are but the changeful dress through which the same form of one like unto the Son of Man can be discerned. King or craftsman, scholar enriched with the ripe results of study, or little child lisping the first accents of its simple faith and love to the good God at a mother's knee, delicate and soft-natured woman surrounded by all the refinements of rank and

education, or hard-featured, rough-handed mechanic, blackened with the toil and sweat of labour, Christian soldier on the deadly march daring all for country and home, and breathing with dying lips the one undying name, or frail attenuated invalid stretched helpless on the bed of sickness—in all alike there may be traced with more or less distinctness, the spirit that in the ancient days breathed in all its fulness in one glorious life, the manifold copies of the same character ever old, yet ever fresh and new, which eighteen hundred years ago reached its crisis on the cross. And so, surely in this fact there is the grandest fulfilment of that saying: "The thing which hath been is that which shall be, and that which is done is that which shall be done, and there is no new thing under the sun."

That there is nothing new under the sun, that only appearances and accidents change, whilst realities are permanent, is true, again, with relation to the *laws of God's moral government*. With all the apparent variety and novelty of Nature's aspects, we have seen that there is in principle nothing really new, but that her great laws remain constant from age to age. And still more emphatically true is this of the laws by which the moral world is regulated. Of these only can it be said, that "that which has been is that which ever shall be," that they are by the very idea of their nature absolute and immutable. Material laws, with all their apparent constancy and stability, are only temporary. They remain indeed constant, so far as human experience extends, from age to age. They have been the same from the creation of the world, they will endure to the consummation of all things. Yet are they in their nature mutable. They have no inherent necessity. We can at least conceive the thought of their subversion. The laws of light and heat, of attraction and repulsion, of chemical combination and solution, are what they are, by no internal necessity, but simply because a Supreme will has ordained them. The planets might move in other than elliptical orbits and at different times and distances from those which now obtain. A projectile might describe a different curve, water might freeze or ice melt at different temperatures, had the mechanism of creation been differently arranged. A revolution in the course of Nature might take place, and heaven and earth be henceforth organised according to different laws. Our Lord himself, by his miraculous interferences with her order, proved that Nature is mutable, that no everlasting necessity presides over the processes of the material universe; that there is a Will to which earth and sea and skies, winds and waves, seed-time and harvest, the processes of growth, the whole physical order of things is flexible and pliant. It is not impossible to believe, therefore, that in the outward world with all the seeming stability and constancy of law, the old order may one day give place to a new. The glory of the earth and heavens is but after all as the beauty of a fading flower. Nature may serve her day: and when the purposes of her Great Author are answered with it,

the present material economy may give place to "a new heavens and a new earth wherein dwelleth righteousness."

But no such arbitrariness or flexibility can be predicated of the laws of the moral world. Heaven and earth may pass away, but these are the transcript of the very being and character of God, and Deity can change as soon as they. The time may come when we shall find ourselves in a different material system, in worlds whose course is strange and new, where other suns are shining and other seasons come and go. The time may come when the accumulated experience of ages of investigation into Nature's laws shall be superseded, and all the lore of science shall be as the waste lumber of a bygone epoch. The time may come when the calculations of the astronomer shall be useless, for other orbs differently constituted and ordered by different laws shall surround him: when the experiments of the chemist shall be futile, for the old affinities and attractions, the old laws of combination and solution, may no longer hold: when the skill of the mariner shall be vain, for other seas may roll and

other winds may blow; or the treasured experience of the husbandman be worthless, for the old seed-time and summer and harvest that for uncounted ages have come and gone in orderly succession, may come no more. But here and for ever there is a law which shall never change. Go where we may, into whatever regions and worlds unknown,—let a thousand revolutions change and rechange all besides,—never shall the soul that loves God and has built its happiness on the foundation of holiness, find its trust betrayed. Those grand principles of truth and justice and goodness, of love and purity and self-devotion on which all religion is based, which Christ by his Gospel fulfils, not destroys, shall follow us wherever we go. Their goings forth have been of old from everlasting ere ever the earth was; and when the earth shall be no more and the heavens shall be rolled together as a scroll, still unaltered and unalterable, in the grandeur of changeless, eternal stability, the law of God shall reign—the one thing that above or beneath the sun is, like God himself, "the same yesterday, to-day, and for ever."

NOTE.

THE writer of an essay *Concerning Resignation*, in *Good Words* for March, has been assured from several quarters, that the estimate of the mother of Christopher North, stated in that essay (p. 172), is an entirely erroneous one; and that Mrs. Wilson's character was in truth as nearly as possible the opposite of that drawn. The impression of Mrs. Wilson set out in the essay was founded on no personal knowledge, but was formed from Mrs. Gordon's Memoir, lately published, and from the comments upon it of various periodicals in this country and in America. The writer is thoroughly convinced, from facts which have been made known to him by those best entitled to speak, that his estimate of Mrs. Wilson was a thoroughly unfair one; and he has great pleasure in saying so. He desires to add, that, from accurate information as to the circumstances, he is persuaded that Mrs. Wilson's conduct in the matter referred to was kind and wise; and that Mrs. Wilson, far from being a stern or unreasonable person, was one of the kindest, the most unselfish and indulgent of mothers, as well as one of the most uniformly amiable and thoroughly lovable of human beings.

As the passage in reference to Mrs. Wilson was published in *Good Words*, and may have affected the views of some of its readers, the writer is anxious to state, with equal publicity, that it was written under an entire misapprehension of the facts; and that he is persuaded that, were these made known to any unprejudiced reader, they could not fail to lead to the conclusion stated above in Mrs. Wilson's favour.

A. K. H. B.

THE PHARISEE AND THE PUBLICAN.

THE PARABLES

READ IN THE LIGHT OF THE PRESENT DAY.

BY THOMAS GUTHRIE, D.D.

VI.—THE PARABLE OF THE PHARISEE AND PUBLICAN.

LUKE xviii. 9-14.

NATURE divides our globe into different belts of vegetation. Each zone has plants peculiar to itself. Under and beside the burning line lies the region of palms and bananas; then appear the vine and olive; then the oak and chestnut; then forests of evergreen of pine, with fields of hardy oats; then the birch with its silver dress and the mountain-ash with its coral berries, dwarfing away as you approach the pole—till they vanish; and, the utmost limits of vegetation reached, you enter the domain of eternal winter, snow and ice, silence and death. While there is only one bird that, a citizen of the world, frequents every shore, there is not one plant, so far as I know, that inhabits every country. Plants grow only in certain soils, or at certain heights, or under certain lines of latitude. Unlike these, pride is a weed that, springing up in every heart, grows at all elevations—as well in the humblest as in the highest stations of life; and under every system of religion, the true as well as the false. Strange to say, it is often found where it seems to have nothing to feed on, where there is the least occasion and the least excuse for it—like wallflower rooted in the crevices of shattered rock or mouldering tower, it seems to grow best on ruins. Never till man fell, did he form the ambitious project of building a tower whose top should reach to heaven.

Pride is a sin of the heart; and while in his prayer, "Cleanse thou me from secret errors, keep back thy servant also from presumptuous sins," David showed himself alive to the dangers of such sins, others, in guarding only against the temptation to gross offences, leave themselves exposed to what is their greatest danger. Lodged in the heart like a robber who has concealed himself in some dark recess, and waits till nightfall to seize the plunder, this sin is more likely than many others to escape our notice. Not entailing the loss of character, or health, or wealth, which are the common penalties of crime, it can be indulged in with apparent impunity. Not always early or easily detected, this vice sometimes indeed assumes the features of a virtue—apes a noble independence of spirit, self-respect, a due regard to our rank and position; nay, even a sacred respect to God's truth, to purity of doctrine or holiness of life. In Herod it wore the mask of conscience, and for his oath's sake he beheaded John; in the Jews, of a tender regard for God's honour, and they would have no dealings with the Samaritans; in the Pharisee, of

purity of life, and so, sailing magnificently past the woman that was a sinner, lest his robes should be defiled by the touch of hers, he warns her off, saying, Stand aside, I am holier than thou. Obtaining access to hearts which would close the door in the face of grosser vices, pride, besides, is a very dreadful and deadly sin. Has it not proved itself so? It cost Nebuchadnezzar his reason; in his successors it cost Hezekiah his kingdom; on Galilee it nearly cost Simon Peter his life; taking root in the hearts of our first parents, it cost them and mankind Eden; springing up in angels' bosoms, it cost them heaven. And as the wary mariner, dreading it more than lowering skies or stormy sea, takes alarm at the first sign of the leak which, hid beneath the surface and gaping by the keel, admits the water into the hold, our Lord, alarmed, if I may say so, at the first signs of this insidious and fatal sin in his disciples, promptly proceeds to stop the evil; and for this purpose, to instruct, warn, and alarm them, he relates the parable of the Pharisee and Publican.

Before studying these two characters in their order, let us take a general survey of the religion of the Pharisees, and attend to such practical lessons as it is calculated to suggest and teach.

THEIR RELIGION HAD NOT ITS SEAT IN THE HEART.

Baron Humboldt mentions a remarkable custom of some of the native tribes of America—one that would have carried our thoughts homeward as much as a daisy springing from the sod of their prairies, or a lark singing in Indian skies. Some time after a child is born, a font full of water is brought into the tent, and a fire kindled on its floor. The babe is then taken from its mother's arms, not to be burned or drowned, but plunged overhead into the water and swung rapidly through the flames. In this custom, which is practised on all their children, we see a rude baptismal rite: nor is it possible to read of it and still less were it possible to see this ceremony without recalling the words of John: "He shall baptise you with the Holy Ghost and with fire;" and those of Christ Himself: "Except a man be born of water and of the Spirit, he cannot enter into the kingdom of God." As I have seen an insect that may have fluttered among the flowers of Eden, or perished amidst the waters of the flood, embalmed in amber, in this custom we seem to

see, embalmed in tradition, a fragment of patriarchal piety, and of the divine truths which man knew when the ancestors of these Indians—perhaps the world's earliest emigrants—left the cradle of mankind. It is a symbolical confession of human depravity, and of the necessity that the soul should be purified as by fire and water from inborn corruption; and to witness this remarkable rite among these distant heathen could hardly fail to transport us on the wings of fancy to the old church at home, where a father was holding up his babe for baptism, or the voices of the great congregation were singing to some familiar, plaintive tune,

Behold I in iniquity
Was formed the womb within,
My mother also me conceived
In guiltiness and sin.

How strange to turn to the Pharisees, and find them, with the Word of God in their hands, apparently more ignorant than those painted savages—illustrating the paradox of Scripture: "They have eyes but they see not, ears but they hear not, and minds but they do not understand." They were profoundly ignorant of the plague of their own hearts. They did not feel the need of being renewed, or know that religion cannot live anywhere but in the heart, and lies in nothing so much as a heart right with God. Even Nicodemus seemed ignorant of this. When informed by our Lord that he must be born again, he was surprised, filled with astonishment; and with a simplicity which we might expect, and would excuse in a child, replied, "How can a man be born when he is old? Can he enter a second time into his mother's womb and be born?" If it was thus with him—a ruler in Israel, a man who felt such an interest in religion that he sought our Lord, though under the cloak of night, what must it have been with others? How appropriate to the followers of such leaders, the question, "If the light that is in you be darkness, how great is that darkness?"

It was great, gross, darkness. The religion of these Pharisees consisting of mere ceremonial observances, lying in such matters as meats and drinks, washing platters, paying tithes and keeping fasts, the worst passions were left to rage and burn within their hearts—as do volcanic fires beneath the purple vineyards and green forests of Vesuvius' slopes. Outwardly saints, they were inwardly devils. And lest I should be considered uncharitable, let us hear his account of them, who in the fullness of his tenderness and mercy promised Paradise to a dying thief, and turned eyes of pity on the woman that was a sinner. "Woe unto you, Scribes and Pharisees, hypocrites," said our Lord, "for ye are like unto whited sepulchres, which indeed appear beautiful outward, but within are full of dead men's bones and of all uncleanness. Even so ye also appear outwardly righteous unto men, but within ye are full of hypocrisy and iniquity. Fill ye up the measure of your fathers. Ye serpents, ye generation of vipers, how can ye escape the damnation of hell."

THEIR RELIGION LAY IN OUTWARD ACTS OF WORSHIP AND A SCRUPULOUS OBSERVANCE OF ITS FORMS.

In one of our late Indian battles, a native officer lay mortally wounded on the field beside one of our own. Exhausted with loss of blood and exposed to the fierce rays of a burning sun, both were tortured with thirst. One, whose motions they eagerly watched, at length approached them with a supply of water. After our countryman had taken a long, deep, draught, it was presented to the Hindoo. He had been crying for water, and had it now. Yet, ere he drinks, he turns a dying eye on the Good Samaritan to ask his caste. It is low; and his religion forbids him to take meat or drink from such impure hands. Our countryman, seeing him hesitate, remonstrates—telling how it will assuage his sufferings, and may save his life: but remonstrates in vain. The other turns one greedy look on the blessed water, and pours it out on the ground—a sacrifice to the claims of conscience. And, esteeming a devout Pagan a better man in God's sight than a careless, unconscientious Christian, I say, whatever judgment others may pronounce on this act, would God that Christ's followers were as ready to take up their cross, deny themselves daily, and follow Jesus; dying with Him rather than denying Him!

The scrupulous observance which the Pharisees paid to mere forms, has no such claims on our respect. They knew, or ought to have known, better. Yet, neglecting the moral law and even violating its plainest precepts, they made religion lie wholly in ritual observances and certain outward acts of worship. They gave alms. They prayed often. They fasted and paid tithes; fasting oftener and paying tithes on more things than even the law required—as if they would make God their debtor. They were scrupulously careful to avoid any ceremonial uncleanness; and that was one reason perhaps why the priest and Levite left the wounded man on the road, lest the touch of what might be a dead body should render them unclean. They were particularly careful also to observe all ceremonial duties; and therefore the murderers of our Lord, with his blood still red on their guilty hands, sought to have his body removed from the cross, and respect rendered to the law which required that whosoever was hanged should be taken down by sunset. They were close attenders also on the temple, where, as in a Roman Catholic church, with a crowd of worshippers, on their knees, telling their beads, repeating their prayers with eyes cast on the ground or raised to an image, there was great appearance of devotion. Apparently abstracted from all sublunary things, with hands and eyes raised to heaven, with loud and sonorous voice sounding forth his prayer, with texts of Scripture sewn on his dress, and ashes sprinkled on his head, there stood the Pharisee—a living lie—a whited sepulchre, with a head as dark and a heart as foul as the grave.

Lights are kindled on the seaboard, some to guide the ship in, others to warn her off: this burns at the harbour's mouth, and that, a beacon of danger, flashes where the sea breaks foaming on a fatal reef. And the Pharisees have left us, not an example to follow, but to avoid. How does their case warn the churches against attaching much importance to religious forms, either in the way of unreasonably adhering to such as are old, or unnecessarily introducing such as are new. It is in the nature of a religion of many forms to degenerate into one of form. By occupying and indeed engrossing the attention of the worshipper they withdraw it from the state of his heart, and prove as pernicious to true piety as a superabundance of leaves to the plant whose sap is spent on feeding the leaf, to the detriment of the fruit: and perhaps some churches might be benefited by a free use of the knife with which the gardener prunes away the flush of green wood to increase the crop of fruit. I see much danger in a multiplicity, but little, or none, in a variety of forms. Unity with variety is God's law in the kingdom of nature; and why should not his law in the kingdom of grace be unity of spirit with variety of forms? Uniformity is but the shadow of unity: and how often have churches in vain attempts after the first, lost the second—like the dog in the fable lost both? At the Lord's table I have knelt with Episcopalians, I have sat with Presbyterians, and I have stood with fellow-worshippers in a foreign church under the shadow of the Alps; and I can only pity the person who, believing in the communion of the saints, could find in the attitude any reason for not engaging in the ordinance. This were to be great in little things; and forget that Christian love and charity which are the weightier matters of the law. It may be that the forms of worship in some of our churches are, as is alleged, bald and bare. If so, there is no reason why this should not be amended. But there is much reason why we should beware, on the one hand, of putting uniformity of worship in room of the unity of the spirit, and, on the other, of substituting dead forms for a living faith. Let us never forget that forms are not religion, but only its drapery; and that, as they dress children lightly who wish to brace their frames, as the labourer throws off his coat to work, and as in the ancient games the candidates stepped into the racecourse unencumbered with many, or heavy, garments, the fewer forms which religion wears, consistent with decency and order, the more robust she will grow—she will work with greater energy—and, like one of beautiful mould and symmetry, she will walk with more native, queenly, grace—when

Unadorned, adorned the most.

THEIR RELIGION WAS CHARACTERISED BY
OSTENTATION.

The Pharisees distributed charity; but it was to the sound of a trumpet, seeking the praise of men

under pretence of caring for the poor;—therefore our Lord said, "When thou doest thine alms, do not sound a trumpet before thee, as the hypocrites do in the synagogues, and in the streets, that they may have glory of men." They fasted; but not from sin;—therefore our Lord, detecting "the lust of the eyes and the pride of life" looking out from the holes of their rueful mask, warned his disciples, saying: "When ye fast be not as the hypocrites, of a sad countenance, for they disfigure their faces that they may appear unto men to fast." They prayed; not that they might be pardoned of God, but praised of men, and gaining a character for piety, gain the widow's esteem for the villanous purpose of plundering her house. Their humility was but the stepping-stone of their ambition—tigers, they crouched to make the surer, deadlier, spring; and therefore our Lord warned his disciples, saying, "Thou shalt not be as the hypocrites, for they love to pray standing in the synagogues and in the corners of the street, that they may be seen of men." That they may be seen of men! he rings the changes on that—exposing the pride and vanity that lay at the root of their religion. Loud, ostentatious, and unprofitable, it was like the brawling, noisy, foaming, frothy torrent, which, with a rock for its bed and barrenness on its banks, makes itself seen and heard. How different genuine, gracious piety! Affluent in blessings but retiring from observation, it has its symbol in the stream that pursues a silent course, and, flashing out in the light of day but here and there, but now and then, is not known but by the good it does—the flowers that bloom on its banks, and the evergreen verdure which it gives to the pastures through which it winds on its quiet path.

To appreciate the justice of these remarks, we have only to look at the sect in the specimen of it this parable presents. Judging the stock by the sample, look at

THE PHARISEE.

Sweeping contemptuously by others who, feeling themselves unworthy to tread the holy courts, worshipped reverently at a distance, he makes his way to the front, pride in his eye, and self-complacency in his bearing; and now beyond the vulgar throng, he stands to begin his devotions, not only to pray thus *with* himself, but that he might be the observed of all observers *by* himself—an interpretation of the words which betrays no lack of charity, since our Lord has told us that the Pharisees did pray to be seen of men. There is often a great incongruity between the language of our prayers and the state of our hearts—the one, alas, is so much more devout than the other. But there was no inconsistency here. Out of the abundance of the heart the mouth spake here; and seldom has God listened to such an offensive outpouring of pride and arrogance. Observe *first* the fashion and form of his prayer. In a sense, it is no prayer—it contains neither confession nor petition; there is neither guilt acknow-

ledged nor pardon asked; it expresses no want, and it asks no help. No doubt there is an acknowledgment of divine goodness—God is mentioned, is thanked; yet there is no redeeming point in this. Under a flimsy pretence of glorifying God, he glorifies himself; and as to his expression of thanks, I regard that as on a par with those professions of humility in which many vain men are in the habit of indulging; and which are but a cover, and a very transparent one, for their self-conceit—for telling what feeds their vanity and is intended to exalt themselves. To thank God is right. We have much to thank him for; and had the Pharisee said, God I thank thee that I am not in hell, that thou hast not dealt with me according to my sins, that thou hast so restrained the corruptions of this wicked heart as to keep me back from presumptuous, flagrant sins—if the thought of others had excited such gratitude in his heart as was expressed by one who, seeing a felon led to the gallows, exclaimed, speaking of himself, But for the grace of God, there goes John Bradford!—imperfect as his prayer was, on that one leg it might have limped to heaven. Done in the spirit that does not despise but pity the wicked, to thank God that we are not as they are is a pious thing. All are hewn out of the same rock, and dug out of the hole of the same pit; and the purest woman therefore has cause to thank God that she is not as the basest of her sex; nor is there a good man who has been preserved from becoming, like some of his early associates, a wreck of character, of body, of soul, but, as he sees in their fate what his might have been, will thank God that he is not as others—giving the glory where it is due; saying, with the apostle, “By grace I am what I am.”

Secondly, observe the substance of his prayer. He tells God how he fasted and paid tithes. And if religion lay in abstaining from food but not from sin, in giving our property but not our hearts to God, he was indeed a religious man—and more religious than may at first appear. The Mosaic economy, which is misrepresented by many as a system of great austerity, established numerous feasts during which the people, set loose from toil and arrayed in holiday attire, were to eat of the fat and drink of the sweet and pass their time in innocent pleasures. It enjoined but one fast—only one in the whole fifty-two weeks of the year. But this Pharisee, not content with fasting once each year as the law required, fasted twice each week; and, teaching us to set little value on such ritual observances, the fasts that starved his body seem only to have fed his pride; the austerities which mortified his flesh became the means of gratifying his vanity. He showed a corresponding excess of zeal in the matter of tithes. God required his people to tithe the fruits of the olive and vine, the sheaves of the field and the produce of their flocks; but as in those countries where, devoted to a life of celibacy, men immure themselves in monasteries, and women wither in convents, the sacrifices of the Pharisee rose above the requirements of the law

—anise and cummin and other common pot-herbs were all scrupulously tithed. Hence his boast, I fast *twice* a week, and pay tithes of *all* that I possess. In other words: What a good man I am; let others acknowledge their shortcomings; as for me, I dread not a day of count and reckoning; for me, the day of judgment that brings man face to face with God has no terrors; I have done more than he requires; He is my debtor rather than I his—the balance will stand in my favour. What great, swelling words of vanity! How may we apply to this miserable self-deceiver, and to all that self-righteous class of whom, though the pride of their hearts may not be so fully developed, he is the type, our Lord's language to the Laodiceans, “Thou sayest, I am rich, and increased with goods, and have need of nothing: and knowest not that thou art wretched, and miserable, and poor, and blind, and naked.” So we might dismiss him to make way for a better man—praying God by his Holy Spirit to keep us not only from the lust of the flesh and the lust of the eye, but also from the pride of life.

But we are not done with the Pharisee. He has certain negative as well as positive merits. Here is what he is not, “I am not as other men are.” To entertain a bad opinion of others without sufficient evidence proves more than the lack of the charity which hopeth all things, and believeth all things. Who does not believe others virtuous would be found, were the secrets of his heart and life known, to be himself vicious. We may lay it down as an axiom, that those who are ready to suspect others of being actuated by a regard to self-interest, are themselves selfish. Thieves do not believe in the existence of honesty; nor rakes in virtue; nor mercenary politicians in patriotism; and the reason why worldlings regard religious people as hypocrites is their own want of religion—knowing that were they to profess a warm regard for Christ, the glory of God, and the salvation of souls, they would be hypocrites, they conclude others to be so. Hence also you find many novelists representing every man into whose mouth they put the language of piety as either a rogue or a fool, most commonly a rogue—a very unsound but not unnatural conclusion on their part; for prejudices resemble the fogs that turn the bright sun into a dull, copper ball, and a bad heart is like the jaundice that sees its own dingy yellow in the purest lily. I conclude, therefore, however fair the whited sepulchre looked, that in his heart at least this Pharisee was, what he took other men to be—an extortioner, unjust, and an adulterer. He had no right to put on such airs, or, as his eye fell on him, to make a foot-stool of the publican to stand higher before God—saying by way of climax, “nor as this publican.”

In this proud, arrogant man we see the spirit of self-righteousness fully developed. Although they may not come out so prominently, the elements of his character are in all who trust in themselves for salvation. May God enlighten our eyes, show us ourselves! For who knows himself, knowing much

more ill of himself than he can of anyone else, will indulge in no such proud, and self-complacent, and odious comparisons—his prayer will be that of David, Enter not into judgment with thy servant, for in thy sight shall no man living be justified—his language that of Job, I abhor myself—his confession, Ezra's, O my God, I am ashamed, and blush to lift up my face to thee, my God—and glad to enter heaven at the back of Manasseh, or the woman that was a sinner, or the thief of the cross, he will leave the Pharisee to place himself beside the publican, and catch from his lips the heartfelt prayer, God be merciful to me a sinner!

THE PUBLICAN.

The white trimmings on a coffin, catch the eye; and pure as it seems when, falling softly, it lies level on the fields, or the sport of wintry winds has been tossed into fantastic wreaths, snow never looks so white as in the church-yard—beside the black mould and gaping mouth of a new dug grave. Studying effect, the painter and orator make use of such strong contrasts: and no doubt it was for this purpose that the Pharisee dragged the publican into his prayer, using him as a foil to set off himself—a dark and sombre background to present his merits in a more striking light. In this, "He made a pit and digged it, and is fallen into the ditch which he made." The Pharisee becomes a background to set off the publican; and never did humility appear more beautiful in the eyes of God and man than here where it stands contrasted with the empty vanity, and haughty arrogance of this inflated Pharisee. In illustration of this, observe

THE MANNER OF HIS PRAYER.

He stood afar off.—Both prayed standing, teaching us that that attitude, which was the one commonly assumed by the Jews in the temple, is one which we may use with propriety in public worship. It is equally with kneeling an attitude of worship—though the latter may be more suitable for prayer where the congregation stand up to sing. There is propriety, but there can be no devotion in an attitude. Man looketh on the outward appearance, but God looketh on the heart; and the only rule applicable to such matters as are not the weighty matters of the law, is to assume the attitude which rather aids than hinders devotion, and avoid that, which acting through the senses disturbs the mind. That posture is the best which least distracts attention by a feeling of bodily weariness, or otherwise drags our thoughts downward—hanging like a dead weight on the wings of prayer.

But while both stood, the publican stood *afar off*, as one who felt himself unworthy to enter the house of God—as a beggar with the mud of the road on his shoes and the rags of poverty on his back might hang about the door of a lordly hall, and, oppressed with a sense of his meanness, modestly decline the invitation to enter. Men often, very often, speak more eloquently by acts

than words; and in the arrestment of his steps, in the reverential distance at which he stands, the poor publican seems to say, I am less than the least of all thy mercies. Blessed are the poor in spirit! It is to him and all such as come modestly in to seat themselves down, if I may say so, at the lower end of the table, that the Lord, who has his eye on them, will send the message, "Come ye up hither!"—for, while everyone that exalteth himself shall be abased, he that humbleth himself shall be exalted.

He would not lift up so much as his eyes to heaven.—The Pharisee looked boldly up. Why not? There was nothing in heaven's cloudless azure purer than himself. No doubt the angels veil their faces with their wings; but there is no brightness in God's glory, sunlike, to dazzle him—nor awfulness in God's holiness to daunt him. Standing to God in the relation of a creditor rather than a debtor, why should he be ashamed to look him in the face? Fasting twice a week, and paying tithes of all that he possessed, he has not overdrawn but overpaid his accounts—doing more than the law required. Turn now to the publican, and what a contrast? There, like one caught in some act which overwhelms with a sense of shame, and covers the cheek with burning blushes, he stands with his head bent and his eyes cast on the ground. Self-accused, self-abased, and self-condemned, he shrinks within himself, and wonders perhaps that the very earth does not open its mouth to swallow him up. He does not dare to look up. But though his eyes are not lifted to heaven, his heart is; and, while he seems ready to sink to the ground, his soul is soaring aloft on the wings of prayer, upward to the heaven of heavens.

He smote upon his breast.—The hands of the Pharisee are stretched to heaven to receive the reward he expects at God's. There he stands, proud as the victor who, covered with the blood of a hundred battles and the laurels of a hundred victories, only bends his head to receive the crown from a king whose throne and whose country his valour has defended; and from whose hands he accepts the proudest honour, not so much as a matter of grace as of right. The hands of the publican are otherwise employed—he smote upon his breast. By this action, or by smiting on the thigh, the impassioned natives of the East expressed the deepest sorrow. But these sounding blows expressed more than sorrow. They said, as they fell thick and heavy on his bosom, Here lies the root of all my sins—oh, this hard, foul, wicked heart!—My life has been bad, but it has been worse—here lies the inner spring of all these polluted streams! These blows were inarticulate prayers. They sounded forth to God's ear such wishes as these: "Create in me a clean heart and renew a right spirit within me." It had surely been done; for it was from the bosom which he smote that there went up to heaven, like an arrow from the bow-string, this brief, but blessed, believing prayer.

GOD BE MERCIFUL TO ME A SINNER.

Earnestness does not express itself in long, inflated, pompous sentences. It is brief; it is simple. The moment has arrived when victory, long doubtful as the tide of success ebbcd and flowed, may be won by one splendid, dashing, daring attack—the order is given in one brief word, Charge! On the distant waves a flag is seen now sinking in the trough and again rising on the crest of the foaming billows; and beneath that signal, clinging to the fragment of a vessel that lies many fathoms down in the depths of ocean, are two human forms—and all the cry that sounds from stem to stern is, A wreck, a wreck! and all the order, Lower the boat!—words hardly uttered when she drops on the water, and, pulled by stout rowers, is leaping over the waves to the rescue. One late in the deserted streets sees the smoke creep, and the flames begin to flash and flicker from a house whose tenants are buried in sleep; he bounds to the door and thunders on it—all his cry, Fire, Fire! Peter sinks amid the boisterous waves of Galilee and all the prayer of lips the cold water kisses is, as he stretches out his hand to Jesus, Save me, I perish! And with the brief, urgent, earnestness of one who seeing his danger, knows that there is no time, and believing in God's great mercy, feels that there is no need for long prayers, the publican, like a man who in falling over a crag catches the arm of a friendly tree, throws his whole soul into this cry, these few, blessed, accepted words, "God be merciful to me, a sinner!"

Both have prayed, and our Lord tells us the result. Insulting to God and man, the prayer of the Pharisee, like a stone cast at heaven, falls back and returns to break his own head—while the Publican's ascends like the cloud of incense that floated away fragrant and heavenward from the morning or evening sacrifice. Perfumed with a Saviour's merits, it is accepted as a sweet smelling savour, and sins confessed are sins forgiven. Not that his confession and sorrow were the price of pardon; but that, feeling undone and lost, he cast himself on divine mercy, and so became a partaker of the righteousness which Jesus Christ has provided for the chief of sinners.

Thus he went down to his house "justified;" and so may we all—with a pardon in our bosoms and the peace of God in our hearts. Ah, that were the happiest home-going we ever made—sufficient to turn the barest hovel into a palace, and impart to the humblest fare more enjoyment than sumptuous banquets afford. Light is the step of one before whom the prison gates roll open, leaving him to walk forth to life and liberty. The sun never shone so bright, the flowers by the wayside never looked so beautiful, the birds in sky and merry woodland never sang so sweet, nor did love to every thing ever glow and burn so in his bosom, as now when taking an everlasting leave of strong jail and gloomy cell, he hastens home to embrace his wife and little ones—goes down to his house a free, pardoned,

happy, blessed, man. Yet lighter his steps, and happier his heart, who, accepting Christ in God's house, goes down justified to his own. And what should hinder us? We have only to throw away all confidence in ourselves; and with confidence throw ourselves at Jesus's feet, or rather into his open arms, on his loving bosom—on which, when the work of our sanctification is completed, we shall be borne up to another and a better house, there to be crowned with everlasting glory and dwell for ever with the Lord. Thus, while casting the proud down into hell God abases them, he will exalt the humble—them, and them only. He dwelleth with such as are of a humble and contrite spirit; and they only with whom he dwells on earth, shall dwell with him in heaven.

I cannot close these observations without remarking that the Pharisees, of whom the man before us is a specimen, have furnished the world with a term wherewith to reproach those whose religion is less loose than its own. Such as are for living a strict and pure and holy life, who, believing that no man on his death-bed ever found that he had given too much time to God and Christ, the interests of his soul, and that eternal world on whose verge he stands, wish the Sabbath day to be spent in the public or private exercises of God's worship, such as seek to remove all temptations to spend it otherwise—whether in the form of theatres, or museums, public-gardens or public-houses, such men are opprobriously called Pharisees. Now, not to say that it is a bad cause which needs to be supported by calling bad names, this application of the term betrays, as I undertake and proceed to show, the grossest ignorance.

The Pharisees cared nothing for the poor. Does this character applies most to those who are called Pharisees, or to those who call them so? Which of these two classes are most frequently found imparting both material and spiritual comforts to the desolate abodes of poverty, I would leave the poor to say. It is no breach of charity to fancy them turning from those called Pharisees to such as call them so, to say, "Jesus we know, and Paul we know—these others we know—but who are ye?"

Again, the Pharisees, devouring widow's houses, made religion a mere pretence to promote their own secular and selfish ends. Now let impartial history say, whether in the dark days of trial, in times that demanded a noble self-denial, those called Pharisees, or those calling them so, have been the most ready to sacrifice their interests to their religion, their place to their principles, and leave father and mother, wife and children, houses and lands, to take up their cross and follow Christ.

Again, the Pharisees were sensual and self-indulgent. "They bound," said our Lord, "heavy burdens, and laid them on men's shoulders, but they themselves would not move them with one of their fingers." And do those whom the world calls Pharisees ask others to make efforts on behalf of humanity or of religion, while they themselves make

none? Are theirs the names you miss in the lists of public charities? Do they bear the least part of such burdens? I venture to affirm the contrary: and that, were their support withdrawn, many of our philanthropic and religious schemes would tumble into ruins, like an arch deprived of its piers.

Again, the Pharisees were men of low *morale*; and therefore our Lord said, "Except your righteousness exceed the righteousness of the Scribes and Pharisees, ye shall in no wise enter into the kingdom of heaven." Now are those whom the world reproaches as such, less moral than those who reproach them? As a class, do their greater sins distinguish them from others as much as their greater professions? In the upper ranks of society, are impurity and loose morals more characteristic of those who keep the Lord's day sacred, than of those who make it one of business or of pleasure? and among the lower classes, is it those who resort to the church or to the public house on the Sabbath, who supply most work to the police and the greatest number of tenants to the prison?

Again, the Pharisees persecuted piety, and hating Jesus because he was holier than they, called him bad names, imputed to him bad motives, and held him up to public scorn—charging him with crimes which his soul abhorred, and of which he was innocent as the babe unborn. Now are those whom the world calls Pharisees, haters of serious and pure religion? Is it their pens and tongues which are dipped in poison, and employed to wound Christ in his members? Are they the successors of the men who, hating religion in their hearts and feeling that Christ's holy and unselfish life condemned theirs, crowned his forehead with thorns, and cried, Away with him to the cross?

Again, the Pharisees were a self-righteous class.

They trusted to their own works for salvation, and were, however little occasion they had to be so, remarkably well pleased with themselves. Puffed up with vanity, they thanked God that they were not as others who might need a Saviour—they did not. But whoever found these to be the features of such as the world calls Pharisees? On the contrary, is not Jesus Christ and him crucified the very centre of their religion—the sun of their sky—the foundation of their most precious hopes? Disclaiming all self-confidence and merit in their own works, may not their creed be summed up in the words of him who raised himself on his dying bed to exclaim with life's latest breath, None but Christ, none but Christ! Let the world call white black, or light darkness, or sweet bitter, but not such men Pharisees. The north and south poles are not farther asunder.

Inapplicable as is such an epithet to devout Christians, let them beware how they furnish any, the least occasion for others using it by any inconsistency between their profession, and their practice—by magnifying little things and overlooking the weightier matters of the law—by straining at a gnat, and swallowing a camel. Never overlook the difference between what is vital in divine truth and what is indifferent in human forms. Never mistake the dead robes for the living body of religion. Never forget that "to do justly and love mercy and walk humbly before God," is what the Lord requires of thee; that faith without works is dead; that form without spirit is dead; and that, the highest piety being ever associated with the deepest humility, true religion is like that sweetest of all singing birds, the skylark, which with the lowest nest but highest wing dwells on the ground, and yet soars to the skies.

EDUCATION IN THE ARMY.

BY A PRIVATE SOLDIER.

"THE English common soldier is a rough, powerful, and valiant man, who, in common with the whole people, possesses a high feeling of nationality, and therefore unites in himself all the qualities of an excellent soldier; if with these qualities the discipline of the army were combined, he would be all that could be desired in a warrior. Instead of this, the soldier is, by complete alienation from social life, and peculiarly cruel punishments, degraded and brutalized; he is acted on by the coarse indulgence of being well fed, and the gratification of the lowest desires, without the least prospect of improvement in his situation. . . . Such is the position of the British soldier: avoided and undervalued by his own nation, to which he stands opposed, what he effects against the foreign enemy, is more to be ascribed to his original good qualities, and to his

contempt of all that is not English, than to a discipline which would make a wild beast of him if left to himself."

A number of years have elapsed since the Prussian general, Von Grobman, penned the above, and although we must make some reservation from his sweeping criticism upon the British soldier, there still remains a great deal of truth in it which will apply as well to our army now, as it did upwards of twenty-seven years ago.

The English soldier is still brave and ignorant, he is still isolated from his friends, and he is still undervalued, if not by the nation, at least by his own officers, the majority of whom, from the moment he joins the service, treat him as a mere machine, destitute alike of sense and feeling, whose word is scarcely ever to be taken, his oath only

occasionally. And if he is not now subjected to such cruel punishments as he was thirty years ago, these have become more abundant, so that soldiering, through the number of trivial punishments for trifling crimes, is still as unpopular as ever.

In most regiments learning is looked down upon, and not at all encouraged. If a man can sign his accounts, that is all the scholarship required, and anything more is generally condemned as a useless encumbrance. This is no exaggeration, and I am positive further, that on an average there are not twelve men in a hundred throughout the army, who can write correctly from dictation, or go beyond the first four rules of arithmetic without making mistakes. If we refer to the Report of the Council of Military Education, published last year, we shall see that the march of improvement has been very slow. The per-centage of those who could neither read nor write was as follows :—

	1853.	1860.
Cavalry	24·8	22·3
Royal Artillery	40·4	25·65
Royal Engineers	3·0	5·36
Military Train	32·6	42·37
Foot Guards	20·4	10·96
Infantry of the Line	44·6	45·62

This shows that of all her Majesty's subjects the British soldier presents the greatest contrast between his professional efficiency and his general culture. Admirable as he is in the field of battle, he is deplorably ignorant of nearly every other exercise of the mind, so far as the training of his non-military faculties is concerned; and it would appear as if any knowledge beyond elementary reading and writing, were an obstacle rather than otherwise, in the defence of his country. We learn from an article in the April number of the "Cornhill Magazine," that in the French army a good education is ensured to a large number of men for nearly 200,000*l.* less than we spend in a poor education upon a small number of men. Surely this fact is humiliating to our pride, our common sense, and our good feeling; and reflects bitterly upon those who are in fault. It is very rare for a soldier to complete his term of service in the French army, and to return to his *commune* without having learned to read and write; and it is well known that the instruction provided in the *Écoles du premier degré de l'armée* is not a little relied upon as the means of diffusing primary education through the rural districts of France. So far back as 1836, the per-centage able to read and write in that army stood as follows :—

Engineers	84·7
Artillery	69·1
Cavalry	61·1
Infantry	56·2

An average at that time equal to ours of the present day! for among those returned as educated with us, it must be kept in mind that numbers who can read, cannot write.

But that much has been tried within the last

few years to better the British soldier's condition in every respect, none will attempt to deny. An entirely new system of education has been introduced, and with the new schools came fresh schoolmasters and schoolmistresses, of varied learning and accomplishments, who are as much in advance of the old teachers, as the present grammar-schools in every town and village are in advance of the academies and dame-schools of the last century. There have also been established in all camps and garrisons, good libraries, reading-rooms, and institutes: magic-lanterns have been supplied to every station, and slides and diagrams of history, war, science, and art, caused to circulate for the illustration of popular lectures. Chaplains, with scripture readers to aid them in their good work, have been appointed to most regiments and depôts; gymnasiums have been built; and indoor as well as outdoor games liberally supplied. Nothing apparently that could be imagined has been neglected, and no expense spared, to make the soldier, not only a wiser and a better, but a more comfortable and happy man. Now as all this has entailed, and does entail, considerable expense, it is only reasonable that the nation should expect that benefits of a corresponding value to the soldier should accrue—that with the onward march of the world the army should also advance, and likewise that its moral culture should not be overlooked.

Have these benefits accrued? I will allow the reader to judge for himself. Although many years have elapsed since I joined the service, I can still remember the feeling of awe and astonishment that crept over me on first hearing the profane and immoral language used in a barrack room; and I have not the slightest hesitation in declaring—for it is of little use trying to colour or disguise facts—that the soldiers of that day were "not a patch" upon those of the present, either as regards their vicious inclinations or their swearing propensities, and that to them Uncle Toby's "Flanders army," which swore so terribly, would be mere tyros. I am in no light mood nor jesting spirit, God knows, when speaking of all this. It is in sad earnest and sober seriousness that I call public attention to this great blot on the character of the British soldier, a blot which is second only to that of drunkenness. Privates Brown, Smith, and Robinson are still very much addicted to drinking, swearing, and low company; they are still prone to use violence towards non-commissioned officers, and consequently still liable to corporal punishment and penal servitude. These are melancholy facts, which show that all the preaching of chaplains, all the teaching by example and precept, of scripture readers and schoolmasters, all the benefits which libraries and instructive lectures should confer, have not tended to make the soldier more averse to crimes of personal violence and even of murder. Indeed, from the prevalence of these crimes within the last few years, one would almost be led to imagine that the very antidotes had strengthened the dis-

ease. Certainly among all classes there will be thieves, vagabonds, and murderers, and these, the scum, will always float upon the surface. But allowing all this, we must still draw the inference, that the system of education has signally failed in the army. Such being the case, I will now, to the best of my ability, endeavour to show how and where the system, good in many respects, has in the main points fallen short of the general expectation.

The Council of Military Education in their annual report have principally blamed "the irregularity of attendance." This undoubtedly is a serious evil, as it is impossible to teach to read and write in six or even in twelve months an uneducated man whose attendance is limited to two and a half hours weekly, the average of attendance in the army. And further, all must admit, that to incite the scholar so that he may be attentive and take a pleasure in his studies, it is absolutely necessary that he should plainly perceive he is progressing, not year by year, nor month by month, but week by week and day by day—feeling hourly that he is adding to his previous knowledge. Again, it is a recognised axiom, that "emulation is a great stimulant both of body and mind;" yet military schools are the only places of instruction where there are neither premiums nor rewards given for ability, progress, or regular attendance. As it is, soldiers do not care whether they improve or not; there is no idea of comparative acquirement, no wish to be industrious, no desire to excel. Nor need we ever expect this interest from men whose hours for drill are so many, and whose hours of improvement are so few. But the principal error in the system is, that the support, both moral and practical, which the officers should give to it, is withheld; and while such is the case, army education can never prosper. This is the great stumbling-block and bar to the soldier's progress, and until it is removed from the path, no great nor permanent result should ever be expected.

In no military service in the world are the officers so entirely separated from the men under them, as the officers of the British army are from the privates under their command. They have nothing in common; no feeling for, nor sympathy with, those over whom birth or accident has placed them; nor do they, except in very rare cases, try by kindness to foster a feeling of attachment such even as the dog has for the hand that caresses it. Officers are taught not to pay attention to any complaints of privates against non-commissioned officers, and if a man were to insist upon reporting any tyranny or injustice on the part of such non-commissioned officers, the chances are that the report would be dismissed as frivolous, and the forwarder punished. Will it be credited out of the service, I wonder, that although every soldier has a small book, in the fourth page of which is plainly stated for his guidance, "that if he wishes to see the captain of his troop or company on any subject, he can do so

[but that no more than two men are to approach an officer at one time], and that he may be accompanied by a non-commissioned officer only if *he* (the man) *should wish*"—will it be credited, I repeat, that were he to act up to these instructions and go to an officer by himself, he would be confined for so doing and severely punished? Yet such is the case. The way it is managed is this. The man must explain to the sergeant of his squad what he wishes to see the officer about,—to inform, probably, *the very man* against whom he is reporting. Of course the sergeant takes care to see the officer first, and after giving *his* version of the transaction, the complainant is had up, scarce listened to, sent away without getting satisfaction, and probably reprimanded, and told "he is a dissatisfied fellow." The officers and men certainly meet at stated times on parade; but what do the officers know of the men's habits, how and where they spend their evenings—in short, their daily life when away from drill? Nothing—absolutely nothing. There is one class they may know a little about, the bad characters in their troops or companies, and they only gain this knowledge through having the trouble of attending the orderly room, when these men are prisoners and go before the commanding officer. The only other opportunity they have of coming in contact off parade is when, I will say, Private Job Smith is brought before Captain Martinet by Sergeant Stiff, for having his kit or bed untidy, or some dust on his pouch, or some other equally heinous offence. On such an occasion the officer, who has already been assured by the sergeant "that this is not the first, second, nor third time that he has had occasion to speak to this man about the same thing, but that it was invariably the case with him," will, after lecturing the offender, and pointing out the awful crime that he has been guilty of in leaving his "pipe or bacca" in his blankets, and explaining how detrimental it would be to the service at large were such gross breaches of discipline overlooked, conclude by awarding the delinquent three days' confinement to quarters. And so they part, and here perhaps it ends. Only *perhaps*—for they may meet again next morning in the orderly room, before the commanding officer. Job Smith, being blessed with a good appetite, may have wanted a bit of bread and cheese for supper, at a time when his more fortunate comrades had gone out for their evening walk, and being confined to barracks and hungry, he was obliged to go to the canteen himself for these articles, and when there was seen by Sergeant Pivot, who, with all laudable zeal, places the unfortunate wight in the guard-room, "for having attempted to go into the canteen when a defaulter." And as there is no want of hands "to help the lame dog o'er the stile," Captain Martinet informing the Colonel "that he was obliged to punish the prisoner only the day before," and Sergeant Stiff adding "that he (J. S.) had become very troublesome of late,"—for this last transgression he will be sentenced probably to fourteen days' con-

finement to quarters. But will it end here? I am sorry to inform my non-military readers that often it does not, for Job Smith, finding that he has got seventeen days' punishment so very simply, gets callous, and determines that he will do something worth being punished for, so he absents himself, and as this is termed "breaking out of barracks when confined thereto," and considered flying in the face of his commanding officer, the chances are ten to one that on his return he gets a court-martial, and is sentenced to at least forty-two days' imprisonment. By the time he has finished this, a dislike to the service in general and his superiors in particular is generated in him. On his release, the seed sown requires but little cultivation in one who, perhaps, is already half prepared to meet the cordial reception he receives from the black sheep of the regiment. At this point of his career, when all that is wanted is a kind word from a superior to turn him back, there is no hand held out to save him, no friend with "a word in season" to recall to life the good spirit within,—to remind him of home, of his mother's prayers, of his former innocence; ne'er a heartfelt wish or hope expressed "that he will yet do well," "that this is only one false step; and that there is plenty of time and opportunity to retrace it and regain his former good character." No! he is allowed to choose the worst associates for his companions, to fall into the waters, to drift down the rapid current, and ere long he is amid the eddies and whirlpools on that fatal river whose only outlet is into a sea of crime, upon the shores of which, when shipwrecked, he meets with floggings—imprisonment—and death.

It is no overdrawn picture that I have depicted, but one which in military life is daily portrayed; and such will be the case so long as officers who take no interest in their profession nor in the men under them, depute all their duty to non-commissioned officers; to men totally unfit by birth, ability, or education to command others; and who, frequently being devoid of any susceptible feelings or generous spirit themselves, quite ignore the possession of these in others. What petty tyranny grows up under this system! Sure I am that the wearisomeness, worry of detail, oppression, and wrong, inflicted by non-commissioned officers, have goaded more soldiers into insubordination, tempted more into debauchery, and driven more to despair, than all the public-houses or dens of vice ever have done!

It is far from my design in this article to advocate a too great familiarity between officers and privates, but as landowners and manufacturers do not lessen the esteem in which they are held, nor lower their dignity, when they converse with or visit the homes of those in their employment, neither, I am positive, would the officer lower his position, were he to take a greater interest in the men's welfare, encourage them to do right, let them perceive that their good or bad behaviour were not all alike, and, by occasionally visiting them in their barrack rooms, prove

that he is really interested in their well-doing. Not visit them as at present—only for the purpose of fault-finding and punishing—but visit them to converse with them, "dropping the shop" as much as possible; see them at ease, when some would be working, a few writing or reading, and others idling. Then, a word kindly spoken, a wish gently expressed, would prove far more beneficial than all the confinement to barracks, cells, or imprisonments that could be inflicted.

The officers of the British army may be divided into four classes. The first are those who, having joined the service from a pure love of their profession, have followed it up with all the zeal and ability they possess; and having made war their study, prove to the men under them their fitness to command, not by harassing and annoying them in every possible manner, but, being possessed of a high sense of honour themselves, treat others as if all were similarly gifted. And as a great light sheds lustre over an immense surface, which in turn gives back a portion of its brightness, so they cause a reflection of their own high qualities to emanate from all with whom they come in contact. These are the true Soldiers: real ornaments to their profession, venerated and respected by all other true soldiers; but I am sorry to say that of such there are but few. In the second class we find quite a different sort: those who, having plenty of money or large expectations, come into the army for pastime. They look upon all drills and such like as fatigues, and any duty is to them a hardship. They are on leave six months of the twelve; and when with their regiment, and it comes to their turn to be orderly officer or captain of the day, they manage to exchange their duty with some one else. Hunting by day and dancing by night are their favourite occupations; and the signing of papers, or backing of passes, is their detestation. This class—the Dandies—is much more numerous than the first. The third class is formed of those who can never hope to conceive the great principles of war or strategy, but in lieu thereof are great and particular in small things, and catch eagerly at the drill book. In that they find a sphere for their faculties—become grand in trifling manoeuvres; are difficult to please with the dressing and distance of divisions and sections; and just manage to master the increase or diminishment of front in a troop or company. These—the Buffsticks—are triumphant in their turn, but they never get beyond this worship of the "movements of Dundas." In the fourth class are those to whom drill is, and always will be, a mystery; but, who, being fond of fuss and interference, also have a vocation. For can they not detect the slightest speck of rust on scabbard or stirrup? And what authorities they are as to the folding of blankets, rolling of cloaks, and putting on of baggage! What eyes they have for these things! Let not the desperate delinquent who has dared to deviate one hair's breadth from the regulation, hope to escape them! So they, too,

can be a torment; and the Pipeclays are as jubilant as their brethren the Buffsticks, the Dandies, and the Soldiers.

I am not sanguine enough to suppose for a moment that any opinion of mine will have much or any weight with old officers, knowing from experience that their mode of managing the "animal soldier" (a term used by a General officer now in command of a district) is a coercive one. And they are not much to blame; for at the age when most officers enter the army, they are far more likely to take up whatever opinions are in vogue, than to form fresh ones of their own; and as they grow to manhood and carry into effect measures founded on such opinions, they become in time identified with them, so that as years advance, and rank is gained, their ideas grow too firmly fixed to be shaken by any argument or demonstration. It is, therefore, principally to the young officers that I wish to address myself; to those who, fresh from home, retain still its tender recollections, and as yet find it hard to believe that the British soldier is the mere machine or animal represented; but who, on the contrary, are justly of opinion that these men are made of flesh and blood like themselves, some perhaps quite as highly sensitive to honour and dishonour,—that they are capable of forming deep attachments to those who deal fairly by them, and are glad to obey, esteem, and love those who treat them as men.

It is a well-known fact, that in the few regiments where officers have taken an active interest in the welfare of their men and their education, the school attendance has been far above the average, and the pupils have been eager and willing to learn. A system thus fostered will be certain to succeed, but without this help soldiers are altogether too thoughtless and improvident to value education.

Look at what one French officer, Colonel De Brack, did for his regiment. The story is not a new one, but it is not the less worthy of being told here. An account of the inspection of his corps having appeared in the "United Service Magazine" a number of years since, I beg to quote an extract from it. "In the 4th Hussars, commanded by Colonel De Brack, a system of interior and reciprocal instruction has been lately introduced, and pursued with a general co-operation and zeal which alone could have ensured the successful results of which we possess unquestionable evidence. These results have been obtained solely by the internal and independent resources of the corps itself. The plan adopted may be represented as a sort of Regimental University, classed into schools of the several branches of instruction, of importance theoretically or practically to the soldier, the officers and sub-officers acting as the instructors. Principles of loyalty, patriotism, and propriety of conduct are inculcated by precept and example, and the regimental orders, distinguished by their rationality, are enforced with firmness. The agreeable is not wholly neglected for the useful, nor that for the

ornamental. Music is cultivated, both for the education of regimental trumpeters and musicians, and for the gratification of individual taste." "On the 24th October, 1835, the regiment was minutely inspected at Fontainebleau by the Dukes of Orleans and Nemours." "They exhibited before the Princes in every capacity—mounted, in the field, on foot, and in the stables; in the barracks, as artilleryists, and in the schools: in all situations with the highest credit to themselves, and to the perfect satisfaction of their gallant and illustrious inspectors." "At the close of these exercises and examinations, prizes were distributed by the Duke of Orleans to the successful candidates with much enthusiasm and good effect. Colonel De Brack replied in an eloquent exposé of the origin, objects, and results of this system of regimental instruction, of which he gave the following report (for greater exactness I give the heads of instruction in the original terms):—

"*Gymnastique et Voltage*—(In three months), 175 pupils.

"*Lecture et Écriture*—97 pupils, of which 17 had finished their education in the year.

"*Théories Militaires*—All the sub-officers, brigadiers (corporals), and 97 hussars.

"*Escrime*—(fencing), 173 pupils.

"*Mathématiques*—156 pupils.

"*Fortification*—130 pupils.

"*Artillerie*—300 pupils.

"*Musique*—52 pupils.

"*Tactique*—All the officers, sub-officers, brigadiers, and hussars, students of the other courses."

By the opponents of progress in our army, it is urged against all kinds of education, that however well it may do in the French service, it would never answer with us; that the habits and inclinations of our soldiers are averse to learning, and that the benefits to be derived would not be commensurate with the trouble and expense taken. These objections I will answer with facts which have come under my own observation, proving that it is no impossibility to teach the British soldier and to elevate his character, so that he will reflect back with renewed brilliancy the lustre which his profession in a greater or less degree sheds over all its followers.

On the —th being ordered to India some years since, I joined that corps as a volunteer. When a regiment is ordered to a foreign station, it is customary to leave all the old soldiers and sickly men at the depôt, and make up this deficiency by allowing volunteers to come from other corps. Consequently a regiment going abroad is in a manner broken up, all the old hands dispersed, and the new lot thus thrown together (officers, non-commissioned officers, and men) meet for the first time in their lives. There is, therefore, wanting that unanimity and sociable feeling which are necessary to bind men together. It will be allowed, then, that the —th could be no better sample of a dragoon regiment than any other. As regards intelligence among the men, I need only mention that an assertion made one

day on the voyage out, by a private to a number of his comrades, "that the world was round," was met by a shout of derision from all, followed by the question, "did he take them for fools?" On arriving at our destination the men, after the confinement and restraints of a long voyage, ran into all kinds of excesses. As might be anticipated, the assembling of district and general courts-martial was of daily occurrence, to try the most serious of all soldiers' crimes—"insubordination with violence;" for not only were sergeants struck in the execution of their duty, but even officers were insulted. The sentences of these courts varied; some men were flogged, others imprisoned, and many transported, "according to the nature and degree of the offence." Still crime continued rife, and to such a length had it proceeded, that at last it called forth the direct interference of Lord Gough, at that time Commander-in-Chief in India. He deemed it necessary to issue a General Order reflecting on the amount of crime, more especially that of striking a superior, which had become so prevalent in the regiment, also reminding all that by the "Articles of War" death was the punishment laid down for such gross breaches of discipline, and concluding with the assurance "that he would confirm and cause to be carried into execution the sentence of any court-martial which awarded the full penalty—death." This sad state of things continued for about six months, when there gradually came a change for the better, for a good library had been opened, and the regimental school set a-going. A difference then might be perceived, as the men, instead of spending their leisure time in going to the villages hunting for country arrack, or in drinking bad brandy in Parsee-go-downs, employed it in reading and writing and the acquisition of knowledge. If they wanted exercise they took it in the cricket-field, went shooting, or fishing, or played at "long bullets" on the field-day ground, or at fives in the ball alley. Health increased also as learning became disseminated through the regiment, and in course of time it was as difficult to meet with an ignorant man, as formerly it had been to find one of the simplest intelligence. And not only did this desire for knowledge and a wish to excel spread everywhere, but the men likewise took a becoming pride in themselves, and made it a rule to appear dressed at all times neat and clean; and the canteen, instead of being, as formerly, a place for debauchery, became more like a club, a place for *rendezvous* for the members who met there to converse and hear the news. At this time a man would as soon think of appearing dirty on parade, as at the canteen, where all made it their business to come faultlessly dressed; most wearing black ties, low shoes, and patent leather waist-belts—a pleasant and becoming contrast to the light open jackets and white trousers worn in hot climates. However, with respect to the excellent regulations in our canteen, we certainly had the Colonel (an old Indian officer) principally to thank for a great

favour—a privilege which I am positive was enjoyed by no other corps in India. This was, that the men were never stinted in what they drank, as were those in all other regiments: and they, finding themselves trusted, rarely abused the trust; and although it was a well-known fact in the Presidency, that the —th indented on the Commissariat for more than three times the quantity of spirits and malt liquors consumed by any other corps, yet there was not one-third as many cases of drunkenness in it as in the less privileged regiments. This apparent paradox is easily explained, for the men of other regiments being debarred from getting above their "two marks" (two glasses of liquor), flew to *shamshoo*, a drink that filled their guard-rooms, their hospitals, and their graveyards. The 78th Highlanders, the strictest corps as to their canteen regulations in the country, when they lay at Goorpuric lines, in the newest and best barracks of the healthiest station in India, Poona, had so many men in hospital that on more than one occasion medical boards assembled to discover the cause, and were near condemning the barracks for being built on an unhealthy site, when the true cause was discovered or rather surmised—that the men being so restricted in their canteen went to the jungle, and there procured the country poison. From our canteen being a very large and commodious building we had another advantage, which was, that each one could choose his own society in it; and as the inveterate swearer or drinker found his company shunned, he speedily discovered that either an alteration must take place in his conduct, or that he must remain separated from the more respectable and intelligent portion of his comrades. And in this way a goodfellowship and *esprit-de-corps* sprang up amongst the —th that it has taken years to obliterate. Each draft of recruits as they joined were perfectly astonished at the prevalence of sociability and gentlemanly conduct in the men of the regiment, being such a favourable contrast to what they knew about soldiers at home. It appeared very strange for them to be accosted on the first morning of their arrival by perfect strangers, who, *volens volens*, would hurry them off to breakfast, and from that to the canteen, with a heartiness and kindness that showed the good feeling of the regiment towards their new comrades; and all this was managed in that peculiarly handsome manner which not only made the recipients perfectly at ease, but almost caused them to feel that they were conferring a favour when accepting what was so freely offered. At the same time, it must be remembered that all this improvement was not brought round at once. It was a gradual change for the better, caused by the spread of education in the corps, which would not have flourished as it did, had not the Colonel, Adjutant, and other officers taken an interest in all that led towards the progress of the soldier. I doubt if ever our "old chief" felt prouder of his regiment than when he was told at Suez by the ladies on board the *Feroze* (which took the mail and over-

land passengers as well as the head quarters of the —th), "that his men had behaved like gentlemen, which to them was as gratifying as it was unexpected, and that they would always look back upon the voyage with pleasure, as it had cured them of the mistaken idea that soldiers were in manners coarse and ruffianly." But a change for the worse came as our ranks were thinned of many of the best men by the numerous casualties caused by war, pestilence, and famine; this was completed when peace was made by the reduction of the army in 1856; and that being followed shortly afterwards by the augmentation of all the regiments, brought an entirely new description of men into the corps. But it was a fact to be observed in India, that in nine cases out of ten, when you met with men who had been in the country for a few years, you would not only find them well informed, and capable of conversing upon a variety of subjects, but really gentlemanly in their behaviour. Not exactly as regards etiquette, but as men having a sensitive feeling of honour; who would not be guilty of a mean action, for the credit of the corps to which they belonged and the cloth that they wore; and among whom I have known acts of kindness so disinterested, and favours bestowed in so refined a manner, and with such rare tact, as to make the donors appear to be the obliged party. But comradeship of this sort does not flourish now; people say the men are different, I think the system alone is to blame; and still remain in the belief that if religion and education are instilled into the soldier, liberal ideas, generous thoughts, and comrade-like actions will assuredly be the fruit.

These circumstances will show the superiority of the educational system in India, where, in spite of the enervating influence of a hot climate, the adults attend school for at least six hours weekly: and what is done there, can surely be done at home. It will be said that in India they have more time at command: but will any one be bold enough to declare, that there, where all drills and field days are over before 8 a.m., the regiments are not as well disciplined, and in as high a state of efficiency, as in England? None, I will venture to assert; for the superiority of the E. I. C. troops was proved in the late wars, and especially that of the Artillery, who greatly surpassed in every respect the brigades fresh from the Woolwich Marshes.

Many commanding officers have a deep-rooted objection to the Normal schoolmasters, for being, as it were, in a kind of indefinite position; they are neither officers nor sergeants, but a sort of mixture of the two; disliked, and termed upstarts by one party, while looked down upon and snubbed by the other. What I would suggest is, that Normal schoolmasters should hold the rank of staff-sergeants, and that the schools should be placed entirely under the control of the regimental authorities. That the first-class schoolmasters should be appointed deputy-assistant inspectors, and do duty as such on foreign stations, and in large camps and garrison towns

like London, Dublin, or Portsmouth. In this way, as the schools would be under the direct care of the colonels, they would take a greater interest in their progress than they do at present; for the Normal schoolmasters, having to look up to them for approval, would be more assiduous in endeavouring to deserve it; and not care alone for the opinion of the assistant-inspector general, who makes an inspection at most twice a year. My principal objection to Normal schoolmasters is, that they appear to be too highly trained for the duties they have to perform. Now, it is quite useless for them to be clever, unless they can convey a portion of their cleverness to their pupils; and whether these men are partly educated or entirely ignorant, they should take an equal interest in the progress of all. It would be much better for the scholars in such cases were the master's ability less, and his application to his duties greater. Another fault is, that, getting their appointments very young, they are apt to form too high an opinion of themselves and the position they fill; and knowing little or nothing of military life, are far from being as submissive as they ought to be. All this is greatly against the scholars, and every impediment is thrown in their way by commanding officers, who naturally feel little concern about what they are told does not concern *them*, but the Council of Military Education.

What I venture to recommend then is, that when a vacancy for a schoolmaster occurs in any regiment, the commanding officer should forward the names of at least three candidates (belonging to the regiment) to the Council of Military Education, who would order an assistant inspector, or a first-class schoolmaster, to examine them by printed papers, allowing them a month or six weeks for preparation, during which period they should attend the regimental school, and practice teaching. This would be better than the present plan; as nearly all soldiers attending school are in the fourth class, and a number of these in the fourth section of that; and so teachers fresh from the ranks themselves, would be better able to enter into the ideas and feelings of their scholars, than can any young Normal schoolmaster fresh from Chelsea, whose whole mind is absorbed in the "differential and integral calculus," and his head teeming with "conic sections."

The next thing of importance to be considered, is the irregularity and paucity of attendance; and the best remedy, in my opinion, would be to adopt the French method, and make it compulsory on every one to attend at least six hours weekly until dismissed. It is quite a mistaken idea of commanding officers that there is no time to spare to allow men to attend school for an hour daily. How is it managed in the Royal Artillery or Engineers, where the drill is greater and the duties more onerous than in either of the other arms? With them the school is regarded as an indispensable part of their drill and discipline, and the result is shown in the superior intelligence

of the men as compared with the infantry and cavalry. It has been urged that legally there is no power by the Articles of War or Mutiny Act to compel men to learn or attend school; but an excellent solution of the difficulty is given by J. P. Sargeant, Esq., in his "Report on Army Schools in North Britain." When advocating the necessity of soldiers understanding the theory of rifle practice, he says, "Go a step lower, and teach the way of understanding the scientific education given in musketry instruction, and we should be met with the objection that compulsory school attendance is not legal. But suppose out of the regimental school system there were established classes, which might most properly be called elementary musketry classes, then surely the schoolmaster's duties might become as much a portion of compulsory regimental instruction, as any drill that is now ordered; and let the compulsory attendance of every soldier in such elementary classes continue until the musketry instructor certify him in every respect qualified to keep the musketry returns, and to be in a fair way of acquiring a reasonable knowledge of the theory as well as the practice of rifle shooting." In addition to this, I would also suggest that the adult school should be placed under the direct supervision of the musketry instructor, who must necessarily be an officer of more than average ability, and therefore better fitted to superintend the men's studies than any other.

There is one other drawback to education which, as it would extend this paper to too great a length, I will only touch upon. Perhaps I should rather say there is another incentive withheld; for if promotion were made a reward for good scholarship, not only would a larger attendance at school follow, but a great deal more attention be ensured from the men while there. Now in some regiments this is done, but in most there is a non-compliance by the officers commanding with what is laid down in the Queen's Regulations for their guidance on the subject, which is not at all creditable; and a culpable inattention also is paid to the War Office Circular of July, 1857, wherein it expressly states, "That no man is to be considered eligible for promotion (unless in the field) who has not been dismissed from the fourth class;" and likewise "directs the attention of commanding officers to the importance of carrying on the education of non-commissioned officers to a much higher point than the mere acquisition of reading, writing, and arithmetic." One would imagine that this was explicit enough; but no attention is paid to it, and the Circular is to all intents and purposes a dead letter. In nine-tenths of the regiments in the service, men are promoted without reference to their education or ability, and it is an incontrovertible fact, that three-fourths of the non-commissioned officers could not stand the test, *i.e.*, could not pass the examination necessary to get dismissal from the fourth class! Why, in France, to qualify for the first step, that of corporal, the candidate has to undergo an examination that

would puzzle many of our captains. In the British service, corporals unable to write are not uncommon, and I know sergeants who cannot read their own writing after it is written, far less that of anybody else!

Colonel Lefroy, in his "Report on Army Schools," gives a fair sample of the intelligence of most of our non-commissioned officers. Should further proof be wanted, the authorities can easily bring the error or truth of the statement to the test by ordering the assistant inspectors of schools, when they make their next inspection, to examine also all the sergeants and corporals in reading, writing, and the first four rules of arithmetic. This would not take above a couple of hours longer to do, if the usual examination papers were given in each corps. And were these papers afterwards collected and published, I am certain that they would not only afford amusement to all, but they would be valuable to linguists and scholars, as showing the multifarious ways in which a number of words in common use can be spelt. Colonel Lefroy says: "The specimens of writing from dictation are themselves enough to prove that many of the words dictated" (to non-commissioned officers) "must have been unknown by sound or sense to the hearers."

To illustrate the imperfect education of so many non-commissioned officers in the army he cites two cases. "The first is afforded by the experience of the School of Musketry at Hythe, which in the year 1857 was able to find only 44 eligible for the corps of instructors out of 121 candidates." Major-General Hay observed that: "The chief cause which led to the rejection of so large a number of non-commissioned officers—*viz.*, 77—was a deficiency of writing and arithmetic, in which qualifications they fell very far short of the standard required for the efficient discharge of the special duties of the corps. The deficiency among non-commissioned officers generally in this respect is serious, and calls for careful consideration." The second was afforded at an examination for the office of Provost-Sergeant at Parkhurst, in Sept. 1856. As the duties of this post require a knowledge of accounts, the two following questions were set by the Officer Commanding:—

1. "What is the daily cost of rations for seven court-martial men and four seven-days' men, their allowance being respectively as follows?"

	C.-M. Men.	7-days' Men.	
Bread,	20 oz.	15 oz.	at 2½ <i>d.</i> per lb.
Meal,	8 oz.	6 oz.	at 2½ <i>d.</i> per lb.
Milk,	½ pint	½ pint	at 1½ <i>d.</i> per pint."

2. "It appears at the end of a quarter that 540 court-martial men, and 360 seven-days' men, have paid for rations at the above rate. The allowance for this 22*l.* 5*s.*, find the debit or credit of the accounts for the quarter, and the daily average, or excess, or deficit per man."

Not one out of all the candidates could answer either question in three hours!

STEAM IN THE FIELD.

It is becoming necessary that we should remodel all our notions about the country. It is no longer the "slumberous home" it was wont to be. Its quiet, poetical felicity has been rudely broken in upon. Farmers are now men whose talk is not always of oxen; and their servants, Tom, Dick, and Harry, have ideas stretching beyond the stable and the byre. The *Grazier's Companion* and the *Journal of Agriculture* are not the only works in the agriculturist's library; books on scientific and literary subjects are common, and *Good Words* and other magazines are monthly to be found on the drawing-room table. Sneers at the slow, dull tiller of the soil are altogether without point now-a-days; for there is no department of industry in which more energy and skill are exhibited. Poets in search of similes for stagnation or "holy calm," must not hope to find them in the fields; they must search for them in the grass-grown courts and squares of cities.

Old Tusser sums up the whole "husbandry furniture" (as he calls farm-offices and implements) of his day (sixteenth century) in twenty-one verbose and doggerel verses; at the International Exhibition, in Battersea Park, there were exhibited agricultural implements and machines, and other articles more or less connected with the working of the farm, to the number of 5,064, the value of which was estimated at £100,000. But we need not go back three hundred years for a contrast. Less than a century ago, the old wooden plough was the only implement employed for stirring up the land in most parts of the country; and in Scotland, wooden harrows with thorn teeth hardened in the fire, were the only instruments in use for burying the seed. Six or eight horses, or ten or a dozen oxen, drew the unwieldy plough along, half-a-dozen people guiding and following in its train. Creels, currocks, and litter-trees did duty as carts; winnowing *wechts* supplied the place of fanners; willow and birch withes served instead of hempen ropes; the sickle was the one instrument in use for cutting corn, and the flail was the only thrashing-machine. Creels and currocks, litter-trees and winnowing-*wechts*, are no more; the sickle and the scythe are superseded by the reaper; for the slow thud, thud of the flail on the barn floor, we have the whirr and the buzz of the high-speed thrashing-machine. Only in museums may we hope to find the old wooden plough, and even the two-horse iron plough of the newest and usefulest pattern is about to follow its clumsy predecessor into oblivion.

Although it is only some half dozen years since steam-ploughing has been successfully introduced, it is well-nigh two centuries and a half since it was thought of, and schemes devised for its accomplishment. In 1618, David Ramsay, a Scotchman evidently, and Thomas Wildgosse, jointly took out

a patent for "Newe apte or compendious formes or kindes of engines or instrumentes to ploughe grounde withoute horses or oxen, and to enriche and make better and more fertill, as well barren peate, salte, and sea-sande, as inland and upland grounde, within our kingdomes of England and Irelande, and our domynyon of Wales." A dozen years after, the same Scotchman took out several other patents with the same object in view. What success attended any or all of his patents we are not told; but probably his notions were too crude for profitable practical application. About 1634, a William Parham, with partners, obtained a patent for "a certaine newe and readie way for the good of our commonwealth, for the earinge and plowinge of lande of what kinde soever, withoute the vse or helpe of horses or oxen, by means of an engine by them newly invented and framed."

In the course of the next two centuries, various attempts were made to cultivate the soil by steam, but none of the methods were sufficiently practicable and inexpensive to take the place of the horse and ox-drawn plough. In the year 1832, Mr. Heathcoat, M.P., a lace manufacturer of Tiverton, invented a plough with which he sought to obtain the premium of £500, offered by the Highland Society for a successful plan of steam tillage. From volume sixth of the *Highland Society's Transactions* we learn that a deputation of that Society, who had witnessed it in operation on Red Moss in Lancashire, were expected to report "very favourably" on the invention, but we cannot find from perusal of succeeding volumes of this valuable agricultural work that they ever did so. And indeed, looking at the heavy clumsiness of the apparatus, the vast expenditure of horse-power and manual labour required for its working—twenty-five horse-power, and ten men and boys, to accomplish 8½ imperial acres of ploughing per day—we would not be surprised to learn that the deputation did not consider it worthy of the premium. Some dozen years ago the Marquis of Tweeddale adopted a system of steam-ploughing with which he did really splendid work at Yester, but, excellent though it was, the expense at which it was performed did not justify its continuance.

The idea of the desirability of steam tillage had now, however, become impressed upon the minds of many, and year after year new patents were applied for and granted by the Patent Office. One of the most promising of these inventions was one by Mr. Fiskien, towards the expense of perfecting which the Highland Society contributed some money. Shortly after, Mr. John Fowler, now of Leeds, came into the field with an apparatus much more perfect than any previously exhibited. He succeeded in carrying off all the large money prizes offered by the national agricultural societies, and also many given by local

associations; and year by year he has continued to make improvements, until there is now little to be desired save a reduction in price. The merit of the successful application of steam to land culture however belongs to Mr. Smith, a farmer at Woolston, near Bletchley, who commenced with an implement manufactured under the direction of Fowler in 1855-56, and his farm has demonstrated very strikingly the benefits of steam tillage.

At the trial of steam ploughs at Farningham, in connection with the International Agricultural Exhibition in Battersea Park, there were seven competitors entered the lists. There were, however, only three distinct modes of applying the power, the other four showing novelty only in the form of the plough or grubbers, and in the size and character of the windlasses upon which the wire-rope is wound.

Though despairing of making these methods perfectly intelligible to those of our readers who have not seen them in operation, we must perforce attempt a brief description, which, we trust, will at least give them some notion of the *modus operandi*.

In Fowler's system,—and it deserves to be first mentioned, not only because it has been the most successful prize-taker, but because its inventor has perhaps laboured harder and spent more money in bringing it to perfection than any of his rivals,—we have an engine, an anchor, a wire-rope, a balance plough, and grubber. In commencing operations, the engine is placed at the end of one of the headlands of the field, and opposite it on the other headland is placed the anchor. Beneath the engine there is a large sheave or drum, five feet in diameter, the groove of which drum is composed of a series of small leaf-like pieces of chilled cast-iron, each moving independently upon its own axis. The object of these is to prevent the rope from slipping, which it is apt to do in a plain groove under great strain, and this they do in a very ingenious manner by closing on the rope as soon as it takes the bend; that is, as soon as the rope presses upon them; and they in the same manner open and release it immediately on the pressure being removed, or, in other words, as soon as the rope resumes the straight on the other side of the sheave. The anchor is quite unlike the instrument known in pictures as the symbol of Hope. It is a massive square framework of wood mounted on six sharp disc wheels, each about two feet in diameter, which cut deep into the ground, and on the lightest land they take such hold as effectually to resist the pull of the rope which is passed round the sheave beneath. The anchor has a self-acting motion which enables it to move along the headland and keep opposite to the engine. The plough is a framework of iron, balanced upon two large wheels. To each side of this framework there are attached four plough-bodies and coulters, so that four furrows are cut at one "bout," and the headland on which the anchor is stationed being reached, the side of the beam that was out of the ground is depressed (the other,

of course, being raised), and the four plough-boards that were out of the ground, and which point in the opposite direction, are inserted in the soil, and turn up the furrows on the way back to the engine. This mode of balancing the plough is a most important invention, as it saves all the trouble and loss of time that would otherwise be involved in turning. Four furrows are cut each time the plough traverses the field, and in ordinary working an acre an hour is accomplished, the ploughing being altogether more satisfactory than that done by horse-power with the ordinary plough. The wire-rope, by which the plough is dragged through the land, is made in lengths, in order that it may be adjusted to irregularly shaped fields. The rope is borne off the ground—a very necessary precaution, without which the wear and tear would be alike annoying and expensive—by a number of pulleys or "rope-porters," as they are called, mounted on frames. The outside ones, that is, those farthest from the work, are moved along by the action of the rope; those in front of the plough are removed by boys, and placed behind the implement as it proceeds. A nice arrangement enables the ploughman, who rides upon the implement, to wind up and let out slack when necessary, without stoppage and loss of time. The number of hands required to manage this apparatus are three men and two boys, viz., a man at the engine, another on the plough, a third at the anchor, and the lads to look after the rope-porters. The water and coals needed for the engine must be brought by other men. The cost of this steam-cultivating apparatus complete, with grubber and diggers, as well as plough-bodies, is about £950.

The system known as Smith's or Howard's consists in a stationary engine driving a windlass placed in front of it, round which is coiled about 1600 yards of wire-rope. The engine is usually placed at the corner of the plot to be ploughed, and the rope is carried round the field on rope-porters, and fixed at the corners by light anchors. A snatch-block placed in front of the windlass prevents the slack-rope running out too fast, and trailing on the ground. The plough is balanced on three wheels, something after the fashion of Fowler's, and is constructed to cut three or four furrows each way, but three are the usual number turned over. In this method the plough is not pulled direct between engine and anchors, but at right angles to the power—between one anchor and another, the anchors being removed inwards and nearer the engine every time the field is traversed by the plough. With this system there are five men and two boys required; viz., a man at the engine, another at the windlass, a third on the plough, two at the anchors, and the boys to look after the rope-porters. The cost of this apparatus, without the engine, is £220, and it can be driven by any portable engine costing from £200 to £300. The work done by this method is also excellent, and in small and irregular fields it is perhaps preferable

“There went not the least waft of wind thro’ the tree,
Then why did the Aspens shiver?”

to Fowler's; but the latter has unquestionably the advantage in large enclosures, as also in very light lands, on account of the better holding qualities of his anchor. There appears also to be less wear and tear of rope in working Fowler's.

In Coleman's system, the drums upon which the rope is wound are attached to the sides of the engine, and give out and take on rope alternately. The engine moves along the headland, and the anchor, upon which there is very little strain, and which is, therefore, a very light, portable article, is shifted opposite to it by a man as the work is performed; direct action being obtained here, as in the case of Fowler's. The peculiarity of the plan consists in having two implements instead of one at work, the implements being grubbers, which smash up the ground,—a practice now preferred by some farmers in England to turning the sod over with the plough. On commencing operations on this plan, the field is divided into two equal parts. The cultivators or grubbers work only one way—*towards* the engine. They are attached by the front to each end of a strong wire-rope, while a smaller wire-rope is fastened to their rear. The one cultivator is placed at the far side of the field, where its teeth or "tines" are inserted in the ground; and it is pulled towards the centre of the field, tearing up the soil as it comes, the other meanwhile going out empty to meet it. When the latter reaches the middle of the field, the action of the engine is reversed, and it is dragged back to the engine, cultivating the land as it travels, while the other goes back to the headland empty. The pull

out empty and in working is, of course, continued until the whole land has been tilled. By this plan some little time is saved at the ends; but then there is loss of power in pulling an empty implement, and some wear and tear of rope in dispensing with rope-porters.

By all the plans in use, however, the ploughing is much more effectually done than it can be by horse-power; and this, I apprehend, together with the fact that the steam-plough, owing to the greater amount of acreage it can accomplish in a specified time, will enable farmers to get through their tillage at the proper season—more work being equivalent to more fine weather—is the great argument in favour of its adoption. In many places, no doubt, the work has been performed for absolutely less money per acre than by horses; but agriculturists would be wrong, I think, to build much upon this—at least in the early days of the steam-driven implement.

Already about 600 sets of steam-tackle by the different makers are employed in steam tillage in England, and two Scottish tenants in East Lothian have been enterprising enough to purchase Fowler's implement on their own account; and the work already accomplished by these latter has been done to the satisfaction of all who have witnessed the machines in operation. Without doubt, steam-ploughing means more produce than has hitherto been got out of the land, and this is just the same as if it really added to the too limited arable acreage of our country.

JAMES ROBB.

THE ASPEN.

I WENT out into the wistful night,
Along with my little Daughter;
Down in the Valley the weird Moonlight
With an elfin shine lit the water.

The Trees stood dark in a flame of white;
A Nightingale sang in the stillness,
As tho' the husht heart of the sweet spring-night
Ran over because of its fullness.

Not a breath of air in the region wide;
Not a ripple upon the river;
Yet all of a sudden the Aspens sigh'd,
And thro' all their leaves ran a shiver.

My Darling she nestled quite close to me,
For such shield as mine arms could give her:
"There went not the least waft of wind thro' the
Tree;
Then why did the Aspens shiver?"

I told her the tale, how, by Kedron's Brook,
Our Saviour one evening wander'd;

A Cloud came over His glorified look,
As He paused by the way and ponder'd.

The Trees felt His sighing! their heads all bow'd
Towards Him in solemn devotion,
Save the Aspen, that stood up so stately and proud;
It made neither murmur nor motion.

Then the Holy One lifted His face of pain:
"The Aspen shall quake and shiver,
From this time forth till I come again;
Whether growing by Brook or by River."

And oft in the listening hush of night,
The Aspen will secretly shiver;
With all its tremulous leaves turn'd white,
Like a guilty thing by the River.

So the Souls that look on His sorrow and pain
For *their* sake, and bow not, shall quiver
Like Aspens, and quake when He comes again,
Thro' the night of for-ever and ever.

UP THE RHINE IN WINTER.

BY FOUR TRAVELLERS.

It was on the brightest of wintry days that we stepped out of the train at Calcum, and into the mail-omnibus that lumbers leisurely over the sandy road to Kaiserswerth. One or two country-folk, a young deaconess from Strasbourg like a quaker dressed in black, and an ancient servitor who had come from the village to meet her, with the four travellers above named, made up the company. The ugly yellow waggon set us down in the street opposite the new house. Beyond a child or two playing on the pavement, a woman standing at her door, and a man cutting wood, there was no one to be seen. The sunshine filled the broad street with a summer warmth and silence, and at the further end the Rhine swept softly past. The "new house" which had been just opened is a great improvement on the three or four irregular buildings that occupied its place, and by which, as by the rings round a tree, strangers could tell the growth and age of this deaconess work; and the imposing and long and almost stately front made it be quickly felt that Kaiserswerth means now Dr. Fliedner, and his institutions. A moment or two was all that was permitted us to linger. We were anxious to examine the entire arrangements, and were placed under charge of two of the most experienced sisters. These arrangements have been so often described, that it would be useless to repeat them. There was great neatness, great order, and great homeliness. There are many hospitals in England that have airier and larger rooms, finer corridors, more perfect and abundant mechanical appliances. In these respects even the new house will not compete, nor is it intended it should. It cost about five thousand pounds, and that would seem a trifle at Guy's or Bartholomew's. But everything was in order; the cleanliness was perfect; as an hospital, it was a very fair and comfortable place to be nursed in, and a most singular place to meet with in a distant and out-of-the-way village. The striking feature it presented was the universal presence of women. The portress was a woman, the apothecary was a woman, the officials were women; they flitted softly about, and with most pleasant and happy faces;* they did everything; they were the authorities on every subject; at their morning worship a woman is the chaplain. It is the "Princess" of our poet laureate realised under human and possible conditions, and it works well. The patients looked not only comfortable but cheerful. There was a human sunshine that threw itself over all the pain. The number of women was also noticeable, not that there was any confusion or

idleness, but that none of our hospitals are half so well officered. This, again, arises from the character of the place, that it is a training-school. The deaconess, as far as possible, goes through the routine of work. She may be an apprentice in the kitchen, the laundry, the house-keeper's, the apothecary's, as well as in each hospital ward. Every department has its learners, and these, again, are all used as workers, so that by careful distribution and subdivision of labour every one has enough to do. The special work is chosen for each by Dr. Fliedner, according to the aptitude of the woman and the necessities of the time, for Dr. Fliedner is supreme, and the influence of the man is superior to that of the woman; and though one of the deaconesses opens their morning meal with free prayer, and though they are all encouraged to converse freely with their patients on religious subjects, and to pray with them, yet Mr. Disselhoff (Dr. Fliedner's son-in-law) is the recognised chaplain. At Kaiserswerth, though not at some similar institutions, it is thought best that a man should control; and the character of the rule is very much that of a father over his children.

After visiting the hospital, the lunatic asylum (distinguished from the other buildings by the simple elegance of its arrangements), the Magdalen, the orphanage, the training-school for governesses, the infant school, and the quiet home for sick and infirm deaconesses, we visited Dr. Fliedner. He was already known on German ground to one of our party, and another had met him at Cairo; and the conversation flowed freely from the mother house at home, to the hospitals and orphanages scattered through the East; as freely, at least, as the harassing cough of our host would permit, for he has been an invalid for many years. His tall slight figure is bent now; his light sandy hair is turning grey. He looks a simple country clergyman, with more sweetness than command in his features. Yet he has strong will and clear and rapid perceptions, and is a man to whom it falls naturally to rule, though in a gentle way. His conversation, like his work, bears the mark of a deep impulsive piety, checked and balanced by extraordinary common sense, and the wisdom of a shrewd observant man. He has strong enthusiasm, and the influence of an enthusiastic nature; and moreover a buoyant, and, like many Germans, quiet and quaint humour. His heart is in his work, or indeed he could never have done it: it is his life, and ambition, and joy.

And it is curious to compare the statistics of what has been done and the influence of Kaiserswerth on the Church of this century, with the modest and feeble-looking pastor who has made Kaiserswerth what it is. The number of the sisters is now about 400, of whom 240 are deaconesses. The head-quarters of their work are in Rhenish

* "What sweet and joyous faces!" was the exclamation of the Queen of Denmark as she went through the house last year.

Prussia and Westphalia, where there are 119 at 55 different points. They have hospitals at Beirut, Sidon, Constantinople, Alexandria, and Jerusalem. They care for 40 orphans at Kaiserswerth, 70 at Altdorf, 106 at Beirut, and some more at Smyrna. They have educated about 1000 female teachers; they have at present at their schools 8500 children (of whom at Jerusalem 50, at Smyrna 200, at Florence 70, and more at Bucharest); and they care for 2800 sick and poor. Yet these statistics do not represent a tithe of what has been accomplished. They are not merely educational or hospital figures, but they are the results of so much Christian energy that would otherwise have been wasted and unknown. Dr. Fliedner has won for Christian women their rightful recognition as fellow-labourers in the Christian church. He has proved that it is not a question between Catholics and Protestants; that there is nothing Romish in it; that it is in perfect harmony with Scripture and the position of women in the world. It is a double gain: to those women who find their solace and duty in Christian work, to those works that are never so well done as by Christian women. There are already 1200 deaconesses in Germany. There are parishes with their own hospitals and orphanages, as well as church and schools, with their own Christian women to nurse the sick and visit and counsel the poor. These parishes are a great power in the country; they are the nearest approach to the true, and hitherto ideal, conception of the Church in its practical aspect. And they are as much needed and would be as great a blessing with us as abroad. German women may fuse better into a body, and submit with less reserve to rules, than Englishwomen. Dr. Fliedner may have some suspicion that an Englishwoman's obedience is not very reliable to any one but her husband; that even his easy order might conflict with "our strong individuality." But what he has given to us is the principle; what he has done for us is to test that it is a workable principle. And when leaving Kaiserswerth we could not but feel that it is a very noble and salutary principle, and that it has found a very devout and single-hearted exponent; we could not but join in Dr. Fliedner's aspirations that it would take deep root among ourselves.

Elberfeld—which we reached next—is a town of very marked individuality. It lies irregularly along the river Wupper, and pushes out one of its suburbs till it touches Barmen higher up on the same river, and the two together form a city with a population of about 107,000, and one of the busiest and wealthiest communities in Germany. Outside and inside both have almost the same character: the same quaint and cleanly houses, the same independent self-reliant population, the same peculiar municipal government, the same intensity and forms of religious life. They are the Siamese twins of German towns; and what the one does the other is almost sure to do. But we shall speak here of Elberfeld alone. It has both a very foreign and a very

homely look: the one from the brown wooden framework of the houses and the multitude of bright green jalousies contrasting with the vivid white of the walls; the other from the manufactories and knots of chimney stacks, and the large artisan population such as might be seen any day in the suburbs of Manchester or the High-street of Paisley,—the long deep-bowled pipes excepted.

Lying in a neighbourhood more beautiful than falls to the lot of manufacturing cities—Glasgow, with the site of Edinburgh—it has also thriven; its population of 57,000 is double what it was thirty years ago. Notwithstanding this rapid increase, it has held a more rigid morality than its neighbours, and whilst absorbing so many strangers, seems also to have been strong enough to reject their vices. The rate of bastardy, notwithstanding the number of mills, was last year but one in twenty-three. More than three-fourths of the people are Protestants, and of them more than half are Calvinists. There is also a Dutch-Calvinistic Congregation, a community of ultra-Lutherans, and a body of Plymouth Brethren; there are about 200 Jews, and 12,000 Catholics. There are twelve Protestant pastors, and the system of Church government for both Calvinists and Lutherans, is, as in almost all Rhenish Prussia, Presbyterian. The town educates its own children in its own way. It has seventeen elementary schools (of which three are Catholic), and a gymnasium; and it spends on these 3300*l.* a year. They are attended by 10,000 children, who commence their school days at six, and end them at fourteen; but from twelve, they attend only half time, and so earn some money at the mill. The Bible and Catechism are taught in them all, but with due regard to the denomination of the children; and a parent who will not send his child, or keeps him at home, is punished with twenty-four hours in prison. The education is controlled by a board of thirty, including the ministers of the town (among them the Catholic priest), and eight members of the Common Council. The town also cares for deserted children, using this word in a wide sense. If the father is in hospital, in prison, or has run away, and the mother is destitute, the children are taken into a special institution, and carefully kept until the father returns. Naturally the majority of these children are of the most wretched class; and it was pleasant to hear of the influence they exercised on going back to their miserable homes. There were 50 in the house; 103 had been admitted, and 101 discharged during the year. As might be expected, the same children often return. The cost per head is 7*l.* 10*s.* per annum. The town has also its orphan house, where it supports 250 children, with room for 330. Should the mother die, bastard children are received. There are hospitals, Roman Catholic and Protestant; there is a Reformatory connected with the Lutherans. And there is a poor-house, tenanted almost exclusively by infirm old men and women. It is not

to be compared with an English poor-house; but the people are evidently well and kindly cared for.

In all this Elberfeld sets an excellent example as a city that cares for its own and those of its own house. But the chief peculiarity, and indeed glory of Elberfeld, is its poor-law. The results of that poor-law have been already communicated.* The three years that have since elapsed have only confirmed them. Unable to meet their poverty and officialism, and finding that with the best administration it grew upon them with appalling rapidity, the citizens resolved upon a new system. They would themselves be the officials. No one could be so interested as they were that the poor should not only be helped but diminished. A new poor law was sanctioned; and a number of the ratepayers voluntarily offered their services from among them the Common Council constructed a Poor-Law Board. It superintends all details, and charges itself with the relief of all the poor, both in the public institutions and in the poorer quarters. It also estimates the annual poor-rate, which is levied by authority of the Common Council. The town is divided into eighteen districts; and the poor of each district are distributed among fourteen persons, whose services for poor relief have been offered and accepted. A man can only offer for three years, and at the expiration of that time must offer himself for re-election. But so well has the system worked, that not only are the applications considerably in excess of the 252 required, but the majority of those in office at present have been in since the beginning, ten years ago. Being a matter of the city and not of the Church it is strictly undenominational. There are Roman Catholics and Protestants, infidels and devout Christians; and it is said that the influence of the work has been to open some avowed sceptics to religious impressions. Being a matter that concerns all, position in the town is not required. Persons of every rank come forward. It may happen that a manufacturer sits under the presidency of his foreman. And it is to the credit of Elberfeld that there has been no social clashing. The two chief elements of the Elberfeld population are the merchants and the artisans. Out of the 252 required, there are at present 88 of the former, including many names well known in England, and 85 of the latter. A large part of the manufacturing population is composed of weavers, and twelve, or one-seventh, of the artisan poor-helpers are weavers. There are fifteen farmers, seventeen tradesmen, nine teachers, five apothecaries, three persons of private means, two bankers, two clerks, two Government secretaries, two architects; there is an advocate, and a contractor, and even a gravedigger. No civic offices could be conceived more fairly distributed. And the benefit is, that while the town is increasing by very nearly a thousand a-year, the poverty has diminished from 1202 cases in

1855, to 572 for the same period of 1863. It would have been cause of reasonable congratulation if after one or two years of the new system the poverty had been brought down within easy limits and kept there. It would have been no cause of surprise if the poor increased with the increase of population. More has been accomplished than that. The following table shows the number relieved in three periods of a fortnight each at the beginning of six successive years. It is commenced five years after the Poor Law was established, and when, it may be supposed, the previous accumulations of poverty had altogether disappeared:—

	1858.	1859.	1860.	1861.	1862.	1863.
First Fortnight	675	625	689	567	586	565
Second Ditto	764	640	686	643	596	572
Third Ditto	892	638	666	646	614	572

Fluctuations are apparent in this table: they can be accounted for by temporary pressure. Making due allowance for these, it will be plain that there has been a steady decrease of the poor relieved, and that the number for 1863, and with a much larger population, is less than at any previous period. And with the decrease of poverty there is a decrease of crime. There can be no surer index that the poor relief is healthy and real. It proves that it is the poverty itself that is fought against and overcome, that men are relieved from the most fertile temptation to crime. There are but ten policemen for Elberfeld with its 57,000. We were invited to hear a debate in the Common Council, whether or not the spread of the town demanded an eleventh! Elberfeld and Barmen together have about 107,000 people; Cologne about 104,000. They are in the same district, and both large trading cities. The magistrates sit once a fortnight for the two former, and find it too often; they sit twice a week for Cologne, and find it is not enough.

These are encouraging facts for those that have to do with the poor—and who has not? Some of the principal towns in Germany are copying the Elberfeld plan—Barmen and Bremen among the rest. Confessedly it is not the best conceivable; the very men who originated it have been always affirming that the true machinery for relief should be found in the Christian parish and the Christian congregation; that Christians are bound as such to deal with poverty. It is up to that that Christian men and the Christian church should strive. Yet it has been shown that even a mere civic poor-law would work well when administered voluntarily, when it brings the helper into personal contact with the helped. And after all, that is the Christian principle, which will not suffer the wounded man to be passed by because there are magistrates and police to look after him, but will stop and help him because he is wounded.

* *Good Words*, 1860, p. 5.

We spent a Sunday in Elberfeld. For three centuries, we are told, this neighbourhood has been favoured with faithful and eminent ministers of the Word; and while, in many other parts of Germany, the pulpits were without the testimony of the Gospel, there seems to have been here an uninterrupted succession of powerful and devoted Evangelists from the time of the Reformation up to the present day. It was here—to confine ourselves to more recent times—that Rauschenbach, of whose depth of fervour, manly wisdom, and pastoral love such a vivid and edifying picture is presented in his life and diaries,—it was here that he laboured with tears and prayers, and indefatigable perseverance. Here laboured Gottfried Daniel Krummacher, brother of the author of the Parables; a man of strong faith and great originality, whose lectures on the wanderings of the children of Israel through the wilderness, notwithstanding occasional unexegetical fancies, are rich in profound thought, and evince a very wonderful range of spiritual experience. It was here, that Sander fought with holy energy against Rationalism, and Romanism, seeing with remarkable clearness, their inward relation and connection; and while he defended the bulwark of truth, laboured with unwearied zeal and manly wisdom in the ministry of the Word. It was before an Elberfeld congregation, that the lectures on Elijah and Elisha were preached, which have won for William Frederick Krummacher so many grateful readers in Europe and America.

Such are only a few of the names which occur to us, and many others might easily be added. When a neighbourhood has enjoyed such privileges, and that for a long period, we feel as if in an old well-cultivated garden. Family religion, intimate knowledge of Bible history and doctrine, and a general tone of reverence and morality characterise the population. We are told, that social meetings of the people are frequent, and that in these gatherings of artisans and tradesmen, there is a delightful interchange of Christian thought and experience. One, who has lived here for many years, and is every way well qualified to judge, assures us, that in these circles he has heard thoughts so profound, and opinions so discriminating, that it confirmed to him the saying of a great man: "The Bible and Hymn-book, alone, are sufficient to give the people a solid and true education."

Were we to take Elberfeld as an average town, our estimate of the spiritual condition of Germany would obviously be too favourable. How often, however, is it the case, that a tourist takes what comes under his immediate observation as a specimen of the whole country. Instead of in Elberfeld we might have spent our Sunday in a place where Rationalism has ruled for many years, where on Easter Sunday the learned and practical Doctors preach on the advantages of early rising from the Gospel, which tells us that, very early in the morning Mary Magdalene came to the sepulchre—or where an aged Pastor on his jubilee-festival mentions it

as a sign of his successful ministry, that under his teaching the number of communicants has gradually dwindled down, so that with the last years he has no occasion to administer the sacrament. We might have found most probably in such a place some faithful and laborious servant of Christ, but the effects of a dead ministry in a neighbourhood are too deep-seated and widely spread, to disappear very rapidly. In Germany, especially, it is difficult for a stranger to arrive at a correct conclusion. Every State has its individuality and requires to be studied by itself. How unjust are often the inferences which a stranger draws! A Prussian clergyman, for instance after having spent a few days in Edinburgh, expressed his great astonishment and delight at what he had seen of the Christian piety and activity of the people, but there were two things, that staggered him. He could not understand, how such a church-going and church-loving people, who were evidently generous and liberal in their contributions, could allow their city churches to remain without organs, while even the poorest church in Germany if it has a spark of Christian life, makes a desperate effort to get some instrument; and again he could not at all comprehend how a people religious and devout could stand at prayer and not even fold their hands! However, a few words of explanation enabled him to put himself on another "stand point"!

But although Elberfeld has in many respects enjoyed unusual advantages, it stands by no means isolated, for throughout the great Fatherland, a new life has arisen in Church, and School, and Home. From Hamburg with its Rauhe House and the Lüneburger Heath with its missionary village, to Würtemberg with its warm-hearted devout people, among whom the Word of Christ dwells in all wisdom, and among whom the work of Christ is carried on with wonderful simplicity and affection—from the German Church in Livland, to the Rhenish Provinces with their Kaiserswerth and Barmen, and on to Bavaria, with its apostolic Pastor Löhe and his labours of Christian love at home and abroad: everywhere it is as if we heard the beautiful words: "For lo, the winter is past, the rain is over and gone, the flowers appear on the earth, the time of the singing of birds is come, and the voice of the turtle is heard in our land, the fig-tree putteth forth her green figs, and the vines with the tender grape give forth a good smell."

We could only stay a few hours at Bonn, but were glad to see again a German university town. We do not wonder that the Germans are proud of their universities, which have exerted so powerful an influence on the national life, and which form so strong a bond of union between the various parts of the Fatherland. At present the twenty-eight German universities have a staff of 1600 professors and assistants, and are attended by an average of about 16,000 students.

It was natural, that when the German universi-

ties first attracted the attention of other nations, the picturesque peculiarities of the student life should be chiefly noticed and described. Their quaint caps and ribands, their spurs and rapiers, their songs and phraseology, their social meetings, traditions and usages, their civil liberties and immunities, were points so striking, that they often prevented people from taking a deeper and a more correct view of the true and valuable peculiarities of the German college life. It is easy to lay hold of the student's absurd trappings and appendages, which it cannot be denied not unfrequently lead to waste of time and energy; still with the great majority of them these things are not merely harmless, but are positively useful, as promoting health, cheerfulness, and friendship among the youths of all the various faculties; while the outward separation, which isolates the student from the life and routine of civil society, affords him quiet and uninterrupted leisure for the pursuit of science. The amount of hard work in the German colleges is very great, and it is all the better, that it is coupled with youthful mirth, and the cultivation of social life and friendship. In the selection of lectures, and the course of reading, the student has greater liberty in Germany than is usually accorded him in other universities. This is partly owing, perhaps, to the circumstance, that the age at which it is usual to commence academic studies is about nineteen. The *esprit de corps* is very strong, and not limited to the members of the same college. The German universities form, as it were, a great whole, and the students regard themselves as members of one organism. It is customary to attend lectures in more than one university, and the connection between the various colleges in South and North, East and West, is kept up in many ways.

The relation subsisting between the professors and the students is very beautiful. Nowhere do teachers take a more kindly interest in their students, and nowhere do students regard their teachers with warmer affection, deeper gratitude, and more unreserved confidence. During the walks, which the Professor frequently takes with his youthful friends, or the evenings, in which his house is open to them, the freest expression of opinion takes place. Doubt and difficulties are stated in the most fearless and candid manner; thoughts and views exchanged with frankness and cordiality. Where such mutual esteem and trust reign, based on love of truth and faith, good and lasting results must inevitably follow. Especially in the theological faculty has this been of the utmost importance. Owing to the state of religious thought in the country, very few youths enter the university without bringing with them a mind unsettled on a hundred important questions, and agitated by the conflicting opinions, which on the highest and most solemn problems have been presented to their view. Doubts, which become hard and obstinate when banished into silence, disappear in the atmosphere of free

discussion, of fatherly affection, of brotherly appreciation, sympathy, and patience. How many of the German theological Professors have nobly performed the difficult and delicate work which was entrusted to their care; and what joy it must give them, to see their former pupils, whom in a period of great mental conflict and doubt they instructed and watched over, labouring now as faithful preachers of the everlasting Gospel and as wise and diligent pastors. How very important and practical does the Professor's life appear when we view it in this light, as pervading the pulpits, and parishes, and religious literature of the country.

We had the privilege of seeing a noble representative of German theology in the person of the venerable Professor Lange, who received us with German simplicity and kindness. Very rarely are gifts so various, blended so harmoniously as in the eminent Divine. Professor Lange is chiefly known by his profound work on the Life of Christ, which was occasioned by the attacks of the celebrated Strauss. It possesses not merely a polemical and temporary interest but is a permanent and valuable contribution to theological literature. In his dogmatic and exegetical works, we meet a deep and acute thinker, and metaphysician; and while perusing his sermons or his exquisitely tender and thoughtful religious poems, or his miscellanies on modern literature and science, we are astonished at the variety and extent of the subjects, in which he is at home and a master, and at the depth, vigour and beauty of thought and feeling which characterise all his writings. He is a bold and uncompromising champion of Christian truth.

But it is time to turn to the goal and aim of our journey. Of course none of our readers have any idea of the Rhine. It is a comfort to find some subjects, fresh and unhackneyed, or on which one may indulge the hope of being original. Have you not been bored to death with Central Africa, Palestine, Japan, and the Andes, Zulus and Cingalese, Turks and Tartars? Look at the catalogue of your circulating library, and mark off how many such nuisances you run the risk of being subjected to, and then honestly answer whether you have discovered one book of travels on the Rhine! But who, you say, would ever think of ordering Murray, or Bradshaw, or Baedeker, in their parcel from Mudie's? No one, assuredly; and therefore, we repeat it, we have found untrodden ground—we take up the Rhine!

Can't you remember when, by some lucky chance, fever or measles in a mild form broke out, long ago, at school—when it was pronounced “a proper precaution to send the other boys away,” and you—oh! *felix puer!*—at the very toughest and driest stretch of your winter term, were ordered home. Was it not doubly delicious to tumble in on the familiar every-day life, and to find nothing “got up” as at regular vacation time. The very absence of your old companions and silence of the once

noisy haunts, gave you a new impression of the place, and you were able to take a calm and philosophic estimate of the ditch cleared by Tom, and appreciate the true character of Brown's memorable run. We felt something akin to this in "doing our Rhine" in winter. We found everything *en famille*, from the dismantled steamer to the dismantled hotel. The very vineyards had their stakes down, and the Lurleifelsen beckoned apologies for the absence of the cunning man hid in the cave, who ought to have awaked their echoes. Here we were in February, from the very midst of our work, standing idly on the quay of Bonn, the broad river flashing past us in the bright winter sun, and with no less than a day and a half for "up the Rhine" and back again. But waiting for a Rhine steamer in winter has an interest of its own, for the Dampfschiff in winter is an entirely different animal from the Dampfschiff in summer. In summer the Dampfschiff is cosmopolitan: in winter she subsides into her normal German habits. In summer the Dampfschiff is punctual, practical, and energetic, having hours observed for her arrival and departure. But in winter, who can tell what the Dampfschiff will do, or not do? She may come to day, or she may not. She may be tomorrow. *Chi lo sa!* Perhaps like an honest Deutscher she lies speculating in a fog at Cologne when she ought to be at Coblenz, or taking a quiet smoke on a sandbank at Nonnenwerth when there is a crowd on tip-toe for her arrival at St. Goar. The telegraph and railways make up, however, now-a-days, for such inconveniences, and one can generally learn at the Bureau whether there is a chance of the steamer being one or twenty-four hours behind time, and act accordingly. In our case we found that an hour's patience would probably be rewarded by at least two hours of daylight, sufficient to take us by water as far up as Remagen. In the meantime we retired to a tidy Gasthof which had a charming little bay-window, overhanging the river, like those one sees painted on German clocks. And there we enjoyed such a view, and such outlets! Outside, the Sieben Gebirge stretched their soft outline against a winter sky, clear and brilliant as in Egypt; the river rolled below us burnished and glittering with sunshine, the long string of boats which form the quaint ferry swayed backwards and forwards in the current, like the tail of a vast kite waving in a peaceful Zephyr. Inside, the "Kellner," chuckled and chatted, and stirred up the embers in the white china stove, rejoicing to see anything approaching to tourists once more. We were a sort of first snow-drops, or primroses, to him,—so early for the season as to be curiosities. And by-and-by came the distant smoke of the steamer; a small knot of peasants gathered on the Quay; and we, shouldering our bundles of coats and rugs, soon found ourselves on board, with the whole quarter deck to ourselves. There is something very sad in the matter of fact, empty aspect of a Rhine steamer

in winter. It is like going into a ball-room when the music is silent, the revellers gone, and the upholsterers are removing the last wreath of ever-greens. After his Churchyard, Gray might have composed a touching elegy on a Dampfschiff in winter, had he but seen it. Where are now the sunny awnings, the bright flags, the bands of minstrels? What ghosts hover about the cold deck, what shades of happy bridal couples seem yet to "bill and coo" in that cosy corner by the companion. Where are the flaxen-haired English girls, the gruff Paterfamilias, the piles of luggage, the groups of soft-cheeked clerks from the City, *hasperating* their way to Switzerland, with the large checks and courier-bags? Where your silent routé of the extensive rings and chains, *en route* for Baden Baden or Homberg?

We at least are thankful they are not here, and that we have the Rhine all to ourselves on this glorious evening of more than summer clearness and golden beauty, though of somewhat less than summer heat. And now for the river! With merry pulses the little paddles beat up the stream, tossing out momentarily glittering jets of sunny hail. The tiled roofs of Bonn float away behind, and gradually, as we approach the Sieben Gebirge and the Drachenfels, the pale delicate lavender hue deepens, until each ridge and valley, and "castled crag" grows distinct. The long wavy outline which these hills presented, as seen from the south, changes as you get near them, and the whole group becomes resolved into a cluster of massive truncated cones, of the true volcanic type, and generally crowned with some church or convent, or "windy keep." Their sides, clothed in summer with leafy greenness, are now however bare and purple-dyed. Here is the true gateway of the Rhine. On one side the Drachenfels lifts its grey warder tower from its frowning precipice, on the other the Roderberg, bends in on the river, ending in the rough buttress of Rolandseck, with its ruined arch. From between these winds on the noble stream, like a vast avenue, walled in by wooded hills up to their knees in vineyards,—sweeping past old quaint towns, noisy with happy bells, and everywhere the rounded softness of the scenery broken up by jutting crags, each bearing its stately ruin and hoary tradition. Let people say what they will, the Rhine stands alone in the world. The Rhone, at certain localities, approaches it. Parts of the Danube may surpass it in grandeur—nay, some of our own rivers, as the Clyde, far excels it in another kind of scenery. But where will you find more beauty, combined with such a continual stream of human interest? With what songs and histories, with what old tales of chivalry or legends of wicked cruelty, is not each spot associated. Grim feudal castles, frowning hatred at one another, as they did when "Roland the Brave" watched the silent nunnery walls of Nonnenwerth, rise side by side with fortresses, whose familiar names call up "the great wars." Above all, whether wrongly or rightly, there is "a voice of freedom

in her roar." German song has consecrated the Rhine as the genius of German liberty.

After an hour more of villages, churches, bare vineyards, and swelling hills, we slowed up at the wooden jetty of Remagen. Daylight had been perceptibly decreasing, and the chillness increasing, so that, while sorry to leave the river, yet the prospect of a warm railway carriage to Bingen was not disagreeable. Finding, however, that we had a couple of hours to wait for the train, we employed the remaining twilight in strolling up to the new Gothic church and convent of St. Apollinaris, which stands nobly out on a crested height above the town. We found the door open, and the church empty. Daylight was almost gone—only a faint glimmer remained, hardly enough to reveal the stained windows and the outlines of the rich mullions. We half groped our way towards the high altar, and sat down on a bench to enjoy the perfect stillness and holy peace of the spot. One crimson lamp burned dimly, a single star in the gloom, but sufficient to throw into dark relief the great beam and crucifix crossing the apse above. We were soon disturbed by hurried footsteps and the rattle of keys, followed by sounds unmistakably symptomatic of doors about to be closed for the night. It was no wonder the young Capucino in his coarse flannels and rope girdle started as we suddenly emerged from the dim religious light of the penetralia. On finding, however, that we were "no robbers of churches," he entered into a frank chat, and told us how the pious family of Fürstberg had built the chapel at their own expense, and how rich it was in beauty,—but, above all, in possessing the skull of the potent Saint Apollinaris. It is a fair spot for a church and quiet convent, raised high above the noisy world, whose traffic goes sweeping past on the broad pathway of the stream below. Before we turned down from the hill we lingered, listening to the evening bells chiming from the many villages along the Rhine valley, now bursting out in merry peals, and now in dropping notes, deep-toned and musical, from tower and town and lonely convent far up among the heights.

It was Scotch fog as we reached Remagen, thickening into an honest pour of rain, which battered lustily on the carriage windows as we ran up in darkness and dreary unconsciousness to Bingen—the *ultima Thule* of our journey. There we found the great hotel fairly in its winter quarters, and more than half shut up. The long suites of rooms were closed—their windows blinded with shutters; the salons dismantled and nearly filled with piles of chairs. A forlorn hope of a waiter attended us in a little room, over-heated by two enormous stoves, which burnt the air into that dry exhausting sort of atmosphere, of which a sirocco in the Desert is the perfection. The last of the "Kellners" had been wisely preserved. He had an ideal head, and an omnipresent busy little body. He might have sat for his portrait as Oliver Goldsmith, and, but for the napkin under his arm,

Oliver himself would have been puzzled as to his identity. We, of course, at once pronounced him the true Oliver, and the hotel, not unworthily, his Deserted Village. It might be a good subject for Notes and Queries, to discover what becomes in winter of all the waiters. How postillions and donkeys disappear has ever been a mystery to the wise, but surely not more so than this strange annual vanishing of thousands of waiters ought to be. Where are gone those ranks of black coats and white neckcloths, and snowy fronts, beneath which, they say, beat human hearts, if so, then the most un murmuring and uncared for of any hearts? Do they migrate as do the swallows? and, as unable to exist without having some useful ministry to fulfil, do they fly south to Italy or Egypt, that they may still sun themselves in the smiles of happy voyageurs? Or do they hibernate, sleeping for the six months of winter, as they are certainly awake for the six months of summer? Do you not envy the lucky *garçon* as he pitches napkin, and collar and tie, and all the seedy black suits aside, and stretches himself once more under the timber rafters of his home, far away in the quiet Swiss valley, dumb and silent in the soft deep snows? No more turnings out in the grey morning to receive the parting thunders of the angry millionaire over his reckoning, and bound himself to return but a smiling "*Bon voyage, Monsieur!*" What sleeps the rogues must have now to make up for it all—what days and days of unshaved slovenly blessedness. We confess to a profound reverence for their cloth. May their dreams be sweet, as ours were, in the Deserted Village!

Our next morning was grey and cold, and grey and cold were the steep heights of Niederwald opposite us, with the surly Bingen Loch at their base. Bingen fronts the finest wine country on the Rhine. From these hills, now chill and bare, what kindly streams of ruddy Rudesheimer, Assmanshauser, and costliest Johannisberger, have trickled their way through Europe, Asia, America, finally disappearing over the nice palates of kings and kaisers, prelates and presidents. Rhine and wine rhyme naturally, they seem made for each other. Did you ever hear a German song in which the couplet did not come in? And good cheerful wine it is, merrily and wisely taken by its people, without intemperance. Liebig attributes the happiness of the Rhine peasantry to their sober enjoyment of their wine. Such a thing as a suicide was never heard of in all the Rhine land. Only once, he says, there was an approach to one. Something went wrong with an honest burgher of Rudesheim. He could not make out why it should be so, but he felt very miserable. Life became a burden to him, and in an evil moment he determined to hang himself. He procured a rope, retired to a lonely apartment, attached the cord to a beam in the roof, and proceeded to adjust the noose. But as he was on the point of effecting his purpose, his fingers paused,—a thought struck him. Would he not

like merely to taste that wonderful vintage, the best he ever had, before he finally dropped? Under the circumstances the opening of a whole bottle would be perhaps excusable. So drawing his head out of the noose, he went away to his cellar. "Ach! what a bouquet! Such wine as that he had never drunk; how it had improved! He would take but one other glass, and then"—his eyes fixed meditatively—"Was it right that he who possessed such a cellar should hang himself?" The burgher was convinced, and, almost ashamed to look his wine-rack in the face, he hurried up to destroy the rope. This, according to Liebig, was the first and last attempt at suicide in the Rhine valley.

To-day the steamer failed us, for, instead of coming in the morning, as advertised, we were told she might probably arrive about six at night. The railway, however, as it winds generally by the very brink of the river, gave us a rapid but pleasant glimpse at things. The day was gloomy—the distances muffled in haze, but the nearer views picturesquely relieved by the strong shadows, so that crags and castles stood out in fine outline against the dimmer background. It is hard work enjoying such scenery from the windows of a railway carriage—as now, at one side, you have to stretch yourself past your neighbour, or flatten your nose against the glass, to gain a look at this turn, where in grand vista you see river, and towns, and castled promontories stretching away behind; or now, if very enthusiastic, you have to rush frantically to the other side, and almost dislocate your neck in trying to have a peep up at the great walls of some Rheinstein or feudal rampart, "toppling to its fall" over your very head. And so we ran down from Bingen to St. Goar, past the little tower in the stream where the noble rats ate the ignoble Hatto, and by many another spot whose fame or infamy is written in the book of Murray. What lively times the Rhine must have had in those days when all those "keeps" were filled with their feudal chiefs—when the mild Archbishop of Treves held this Schloss, and the reverend father of Mentz levied black mail from that other. Castle threatens castle the whole length of the happy valley. There are two, not far from one another, whose names are suggestive—"The Cat," "The Mouse." This seems to have been the game they all played.

To-day the Lurlei rocks were but a huge India-ink mass, without scar or cranny visible on their worn sides. The echo, too, had caught cold, and was unable to do more than hoarsely clear her throat as we went flying down the narrow gorge. The river itself was much as it is in summer, the only difference being that the volume of water was much smaller, and there were no rafts of wood dragging their slow lengths along. The melting of the Swiss snows are the cause of the summer increase of tide and traffic. At St. Goar we alighted and crossed in a sort of Charon's ferryboat to St. Goarhausen, intending to go up to the high ruins of Katzenellin.

Breakfast at the "Adler," followed by what the Germans call "*oosenfischer*," made us change our minds, so we hailed Charon once more, and gave him his obolus to take us back again. As conscience and a virtuous minority however checked us for our laziness, we compensated for it by making a toilsome ascent to the great fortress of Rheinfels, above St. Goar, only to find the door locked, and the key in possession of some worthy burgher in the town below. We therefore contented ourselves in wandering for awhile round the crumbling bastions, enjoying pretty peeps into the quiet valleys lying behind the Rhine, and in listening to a fervid description, from an old fellow who had joined us, of how the French revolutionary army had riddled the strong place "into road metal," and how the German commandant had been afterwards sent "to Hades" by his government, for not preventing them.

From St. Goar we took the railway to Capellen, and once more alighted, in order to visit Stolzenfels. This castle, piled on a projecting crag, several hundred feet above the river, is a modern restoration by the present King of Prussia, at that time Crown Prince, of the old feudal fortress, with all its antique "properties" and appliances, from drawbridge and portcullis, up to the high machicolated tower. The interior, though itself modern, is most interesting as an accurate representation of the ancient "Schloss." The Prince has also gathered here a fine collection of mediæval furniture and curiosities, but above all, a marvellous display of old drinking cups and wassail bowls. The dining-hall is a very museum of tankards of every device and dimension. And there too, in Stolzenfels, are the rooms from which our own Queen and "Albert the Good" had, years ago, looked out together on that noble view, stretching from the ramparts of Ehrenbreitstein to the lofty battlements of Marksburg.

But our short winter day was now over. The drizzly evening gradually shrouded the hills, affording us but a hazy glimpse of Coblenz and Andernach, with its romantic towers and steep roofs, quaint with their multitude of dove-cote windows. And so in mist and drizzle and haze we hurried back to Cologne.

Before parting from Cologne, we must record our impressions of its carnival; which we saw in all its glory, and in all its folly. We *did* the great cathedral, of course—for the tenth time in our life—with all due solemnity and increasing satisfaction. We paid our respects even to the three kings, and in that dimly lighted sarcophagus chambers tried in vain to resuscitate the feelings with which we looked for the first time—how long ago we dare not tell!—on those three worthies, who had then a romantic mediæval charm about them which locomotives, Bradshaws, and "through tickets" have banished. And so it happened, to our sorrow, that, in spite of all the eyes which we knew have gazed upon these eastern monarchs; all the trusting minds which have been awed by them;

all the good peasants, powerful kings, simple nuns, and weeping penitents, whose faith in the Church, and let us hope in a story of something more worthy of their confidence, had been strengthened by them;—in spite of all these associations, so intensely prosaic and modern had we become, that those three brown skulls which once presumed to be real anatomical endings of three actual bodies, were nothing else, in our eyes, than three skulls only, which had befooled and humbugged thousands for many centuries.

No one, now-a-days, describes the cathedral of Cologne, any more than the eau-de-cologne. The world knows both sufficiently well. But it may be satisfactory for the lovers of art to be assured that the grandest work of human hands—not the eau, but the dome—will in all human probability be completed in ten years. So we at least were assured by a person who seemed as one having authority over the busy workmen, and who moreover was himself a fine old strong building—though not quite of the religious order—having been in all the campaigns of Napoleon, from Aspern, Essling, Wagram, down to Waterloo.

But let us to our Carnival. We admit that it is almost like profanity to include in the same page an allusion to Cologne Cathedral and a description of the masks and big noses, so prominent on a day of Carnival. But we are encouraged to attempt this union by the vivid remembrance we have of a priest at the altar of the Cathedral, with a nose quite as demonstrative and quite as highly coloured as most of those we witnessed on the day of festival.

Though there was much to see on that day, yet there is little to tell; for not much of what we did see is after all worth remembering. But if D'Alembert was right when he said that "to know that we cannot know certain things is positive knowledge," so must it be allowed that it is positive knowledge to know that we cannot enjoy or admire certain things; and such was pretty much the result of our experience of a German Carnival.

The day was splendid. The trains were crammed with people at every stoppage, struggling to get to the point of attraction. The masters and officials in all the "Expeditions" of the different stations were in such a state of excitement that they sometimes actually stopped smoking their pipes, and ran shouting along the platforms to the eager crowds! Every hotel and gasthaus was full of "Jas" and "Mein Herrs." The streets were, as the phrase is, a living torrent. Masks concealed, and we imagine, in many cases, improved the faces of the multitude. All pressed and crushed towards the large open space of the "Newmarket," and thither we went, receiving as strangers innumerable compliments, and spiced remarks, from the unseen mouths within the masks.

On paying a few groschen we were admitted within the great square in which the grand procession was to assemble. As the event of the day,

it was thence to promenade through the town, and compel laughter that would suffice for the next year, among the staid burghers who with their wives and little ones filled every window from the streets to the slates in all the thoroughfares which the grand procession was to pass. On entering the square we beheld numerous bands of music. These bands, let us say, performed admirably, and it was probably this feat, with the contrast presented between their artistic skill as musicians, and their costume as old fools, which made them specially ludicrous.

One band, for example, was on horseback, the riders being dressed as Arabs. But the most absurd consisted of about twenty-three first-rate performers, all dressed in top-boots, coat, and waistcoat of an old cut. Each differed from the other in the colour of some portion of his clothes. No coat, waistcoat, or breeches were alike; green, blue, yellow, red, saffron, purple, &c., had their respective patrons. A sober red wig crowned each head; while an appropriate nose adorned each face. The grand decoration, however, was the head-dress. This represented some well-known dinner dish, copied from life (or death). One player gently moved his head in a beautiful waltz, while on his head again moved a large tureen with ladle, or drinking spoon, in it; on another was a large plate with a roast leg of mutton; on another a salmon, with salad; on another bottles of champagne; on another a large ham, and so on. And the ancient company with red wigs and old clothes played with intensest gravity the finest tunes, while the leg of mutton nodded on one head, and the huge tureen threatened to fall from another. The whole spectacle was extremely ludicrous. Even we laughed. Then followed a series of great waggons, drawn by several horses, concealed by gay trappings, and adorned with all sorts of devices. They were filled with men and women in fancy costume, who scattered among the eager crowd printed slips of poetry, descriptive of their peculiar exhibition.

Each of these cars had more or less of a political meaning. One, for instance, had a gilt boat on which were seated men dressed as English sailors. Above was an empty throne, and beside it a figure of a heroine representing Greece, with sundry other artistic arrangements in silver and gold to tell the story of the vacant throne. And in the same way, by means of huge cars, many fantastic ornaments, and stately personages dressed in character, as kings, queens, soldiers or sailors, the prevailing topics of public interest were expressed. Even "Progress" was represented by a spirited horse trampling under foot kings, princes, and soldiers, all supposed to be its opponents. There were a multitude of figures and all sorts of symbols representing the political and commercial state of Germany, until one got wearied of the crowd, the crush, the grave nonsense of the whole thing, and wondered how sensible people could make such fools of themselves and pay about 20,000 dollars for doing so.

We end by expressing a conviction which we have

long held and now hold more firmly than ever, that the merriest, cheerfullest, and happiest country one enters is England; that the saddest is France; and that between them both are Scotland and Germany. The Carnival at Cologne has not altered our belief, however heterodox this may appear to be to those who measure the gaiety of a people by the amount of the means required to produce it.

By the way, we shall give something useful to

travellers—an ounce of bread after all this sack—by publishing an announcement which we copied from a placard on the door of the luggage office at Cologne station. Here it is *verbatim et literatim*: “Gentlemen travellers are begged to surrender their tickets unfold open.” We hope all will do so—we have done our best to make the request known. Its meaning is their look out, not ours.

N. M^cL., A.S., W. F. S., D. M^cL.

CHRISTMAS EVANS.

THESE are very few travellers or tourists in Wales who will not remember having seen at some halting-place in their rambles, either at the sea-side lodging-house, or in the little parlour of the country inn, a picture of an unprepossessing countenance, with one eye quite closed up, and very little apparent speculation in the other. If this portrait were met with anywhere but in Wales, it would probably at once be taken for a representation of some renowned pugilist copied from the original very shortly after one of his professional engagements. But as every one knows that in Wales the people seldom exhibit portraits of any but divines, the visitor is constrained to take a closer inspection of the picture, and from the wisp of white neck-tie, the high black coat collar, and the *tout ensemble* of the costume, he is impelled to the conclusion that the suspected gladiator is verily a member of the clerical ranks. Though by profession clerical, however, our friend does not seem to be very dainty of his “cloth;” for even in an engraving his coat appears to indicate rude manufacture, and long wear. Lavater himself might well be puzzled to divine the powers or the passions which the drowsy face denotes; for, with the exception of a sort of sluggish, elephantine humour expressed in the one eye which is supposed to be susceptible of daylight, a drearier or more stolid physiognomical blank it is difficult to conceive.

Yet this is a faithful likeness of a great man. We use the word great in its more conventional sense, and not as implying the possession of the higher and subtler intellectual endowments, for the most partial and enthusiastic Cambrian would scarcely claim these qualities for his idol. For it is before the picture of an idol that we stand; a man as emphatically and devotedly worshipped in his day, as any deity of heathendom; and more so, probably, within his own sphere than any one hero of a man-worshipping age.

It is a pity that this picture was not taken whilst this Welsh apostle was engaged in public labour, at the moment that his violent imagination was revelling amidst its mildest and most grotesque extremes. Then would have become apparent in the face some index of the specialities of the man; for if ever there was a man whose general

appearance in repose belied his character, that man was Christmas Evans.

It is difficult, if not impossible, for the most phlegmatic spectator to look upon a dense and eager crowd of people unmoved. But no phlegmatic spirit could attract a crowd around himself. There never probably in the history of oratory was an eye which surveyed such vast multitudes of which itself was the centre, as the one eye of Christmas Evans. If an artist could have sketched him then, there would have been an almost inspired animation in the face which is stereotyped as so dull and heavy. Not that there was no fire within; far from that. He had a feverish soul—an almost volcanic nature—there was lava under that drowsy exterior, and it lay very near the surface. But it needed some fire from without to kindle the fire within, and oftentimes the inspiration of the mighty crowds which came to hear him preach effected this in a marvellous degree. Vast crowds they were; and as curious as they were vast. It would have been indeed a study for a painter to have looked upon the rapt fixedness of the upturned faces of the tens of thousands who thronged round this uncouth declaimer, as he held them spell-bound by his weird and rugged eloquence. I can imagine a reader starting at the expression tens of thousands, as applied to one congregation, but in several instances it is not an overstatement. I have been assured by several ministers in Wales, that as many as forty or fifty thousand people have been congregated together at the services he has conducted. The effect of his name in the heyday of his popularity in Wales was talismanic. No matter how formal the company, you had but to introduce his name to lift the thermometer from zero to fever heat. The mention of “old Christmas,” instead of causing a Welshman instinctively to button his top-coat, would be enough to make him literally perspire with enthusiasm—for he would not associate the name with the hoary king who wears a holly crown; but with the travelling preacher, with his old hat, his threadbare coat, his black gaiters—and his one eye.

It is not an easy matter to convey a correct idea of the necromancy of his power by any specimens we might furnish of his style of preaching, as they

must lose much of their wild music from their translation into the English dialect. Still, however, an extract or two will give some notion of the grotesqueness of his imagery; and will furnish an incidental illustration of the susceptibility of the Welsh character to the influence of a luxuriant and perfectly unbridled imagination. It will be seen that Christmas Evans did not trouble himself much about consecutiveness of thought or illustration, but crowded metaphor on metaphor, and absolutely precipitated his soul into the wild turmoil of excitement he was creating in others.

Possibly, however, it may be well to postpone our extracts until we have furnished a very hasty account of his life, with a few of its more amusing incidents.

From among the picturesque hills of Cardiganshire there runs down a mountain stream known as the Tify, or, according to our English mode of pronunciation, the *Tivy*. Until a few months ago the angler found here congenial sport, and many a brave salmon has been landed on its banks. But business enterprise, always unromantic and un-sportsmanlike, has discovered a rich vein of lead amongst the mountain slopes which dip into these leaping waters; and their impregnation with the lead ore has banished the Waltonian from the spot, while the undermining of the hills has also undermined the constitutions of the fish. This part of the Principality has hitherto escaped the relentless invasions of the outer world, and has remained shut up in a sort of intramural seclusion and aboriginal retirement. It was in one of the sparsely sprinkled hamlets of this neighbourhood that Christmas Evans first looked upon the light. He saw the world with *two* eyes at his birth, though an accident closed up one before he reached to man's estate.

While occupied as a farm labourer, he met with a series of narrow escapes, which fomented in his mind a kind of faith in special and supernatural agency. He had a fall from a tall tree whose boughs he was engaged in cutting, and was found senseless with his open pruning knife in his hand. On another occasion he fell into a swollen torrent of water, and, by almost a miracle, escaped drowning. Subsequently, on quarrelling with a comrade, he was stabbed in the breast so savagely as to render his recovery for some time precarious. These things stirred within him that belief in what is preternatural, which from time to time became apparent in the private converse, and even the public addresses of his after life. Speaking about accidents, although the mishap which deprived him of his eye occurred some time after those related above, it may as well be mentioned now. He was a lad of about eighteen, and, stirred by the impassioned fervour of the "revivals" which were continually rife in Wales in the latter half of the eighteenth century, had already begun to preach, though with little satisfaction to himself or profit to others. He had run to a fair at a place called Capel Cynon, and was returning home with a copy of "The

Pilgrim's Progress" he had purchased, when he was attacked by a number of the "roughs" who frequented these fairs, and in the struggle received a blow in the eye, which permanently closed it, and necessitated the truthful artist to present our hero with the *unsightly* wink upon his countenance which his portraits bear.

Christmas Evans showed much of his natural energy in the uphill work of self-education. For the first ten or more years of his life he could neither read nor write, but contrived to teach himself these accomplishments very perfectly as far as his own language was concerned. The prospects of his life beginning, however, to shape themselves more definitely in the direction of the Christian ministry, he began to acquire a very slender smattering of the classics under the Rev. D. Davies of Castell Hywel. This Mr. Davies appears to have been quite a phenomenon. He was a man of gigantic stature and proportions. The neighbours round were afraid to lend him their little Welsh ponies, lest he should break their backs; and his tailor was wont to speak of him after his death with a kind of awful veneration. He was educated at the Caermarthen Presbyterian College, but he wandered widely from the orthodox faith. He was led into these aberrations, not from a sceptical habit of mind, but from the essential tenderness of his nature, which caused him to shrink from all doctrines which seemed to him in any way to interfere with the happier hopes of mankind. He declared his belief alike in the true piety of John Calvin, and Dr. Priestley, though he condemned the materialism of the latter in the following humorous stanza:—

"Here lie at rest, in oaken chest,
Together packed up neatly,
The bones and brains, flesh, blood, and veins,
And SOUL of Dr. Priestley."

Despite his cultured scholarship and refinement of mind, he retained a more than rustic uncouthness of appearance. A Welsh bard, happening to see him in a deluge of rain all swathed from head to foot in twisted bands of straw, delivered an impromptu upon him, of which the following is a translation:—

"O Bard and Teacher, famed afar!
Such light I never saw;
It ill becomes a house like thine
To wear a roof of straw."

to which Davies is said to have replied:—

"The rain is falling fast, my friend;
You know not what you say:
A roof of straw, methinks, does well
Besseem a house of clay."

Such was the tutor of Christmas Evans; a congenial mentor for such a pupil. That pupil continued to preach first under Presbyterian auspices, and afterwards nominally as a Baptist, but actually as a Christmas Evansite, with an increasing degree of acceptance. At first he did not seem very particular how he obtained his sermons, but it appears

he had more confidence in other people's resources than his own. One of his earliest successful efforts was a discourse readily extracted from the "The-saurus Theologicus" of Beveridge. The plagiarism was not detected at the time, though probably confessed by himself after his popularity had been achieved. A second attempt, however, proved less successful;—for having committed to memory and appropriated another published sermon, he was found out and taxed with the fact, which he could not deny. Some of his friends, by way of excuse, were loud in their praises of the young preacher's prayer, but it subsequently transpired that he was indebted also for this prayer to a minister of the name of Griffith Jones! He even went so far as to vindicate to some extent this doubtful policy, for in a charge to a young minister many years after, he is reported to have said—"You may steal the iron, brother, if you like, but be sure you always make your own nails;—then, if needs be, you can swear they are your own property." In accordance with this principle, he gave the following comparison between adroit and awkward plagiarism: "G— goes to Llandovery fair, sees his chance, runs away with a horse, and at the first smithy gets it newly shod, docks the mane and tail, and transforms the animal as much as possible; W— goes to the fair, steals a horse too, but leaves it precisely as he found it;—the consequence is, W— is caught as a thief, while G— passes for an honest man."

I fear I have related nothing yet of this Cambrian apostle to recommend him to the reader's esteem; certainly nothing to account for the wondrous popularity he afterwards attained. I had nearly said, "his *unbounded* popularity;" but that would have been a mistake, for it never extended beyond the hills of "the Principality." Of course the fame of his "sensations" made his name well known throughout the United Kingdom, insomuch that his sermons and memoirs have met with a considerable Transatlantic circulation; and within the last twelve months, or little more, he figured conspicuously in a meritorious French publication. Still, I can never believe, from reading translations of his most notable discourses, that he would ever have attained anything like the legitimate popularity and position in England or Scotland which he attained in Wales. There was an unbridled and an inconsecutive revelry about his pictorial conceits which would have been regarded as savouring of coarseness, and would have repelled any people in whom a taste for what is essentially grotesque and wild did not predominate over more literary and chastened predilections. He was a Welshman to the backbone, and as such we must regard him. And the extravagancies which would have caused him to rank amongst the most illiterate of revivalists here, raised him to a pinnacle of notoriety amongst the *élite* of his own province; and have placed his compositions amongst the selectest of Cambrian classics! So strong were all his Welsh propensions, that he jealously watched

and strenuously censured any appearance of a tendency on the part of the younger ministers with whom he came in contact to import any English idioms or mannerisms, or to select the basis of their discourses from any English source.

But with all this uncouthness, and apparent intolerance of that which we should deem simply becoming and seemly in an aspirant to prelectorial influence, there were a true power and poetry in his mind, which entitle him to stand out as a man of mark. It was his advantage to find his birthplace in a land which has been the nursery of rugged fancies; to speak in a language the most fitting his mind, and which gave a sort of Æolian melody to what in any other dialect would have been harsh; and to flourish at a time when the public mind around him was heated with hectic influences, and the pulse of pietism was at fever point. He had an imagination, and a strong one; and so impetuous was his temperament, that he could scarcely help pouring forth the wild fancies which disturbed him. If his imagination had been more chaste, and his taste more scrupulous, he would undoubtedly have been less popular. There was more of the audacious than the sublime about his flights, if flights they could be called. He seemed fonder of diving than of soaring, and sometimes there would be an unshrinking precipitancy in his descents which seems almost shocking to our reverential sensibilities. Verily, of him it might be said, "*Facilis decensus Averni,*" for he would pitch headlong into some boiling Phlegethon of his own creation—if he could not find one in his text—and flounder there in energetic convulsions until both himself and his audience were almost frenzied by the fervent heat.

The great Carthaginian rival of Scipio lost his eye in a quagmire; and if we had been assured that Christmas Evans sustained a similar loss by tumbling into some sulphurous cauldron, which the hags of his imagination, like Macbeth's witches, had mixed under his pulpit, we could scarcely have marvelled at the fact.

When his popularity was at its height, itinerancy was prevalent amongst the country ministers of the Principality; so our hero was much engaged in journeying from place to place, principally on foot, preaching as he went. As he advanced, his fame went before him, and his admirers clustered round him in vast force. Preaching now in a chapel, whose every corner would be crowded, and whose vicinity would be besieged by as many thousands as there were hundreds within; and now in the open air, his congregations gathered and swelled like a rolling snowball until they attained prodigious proportions. This "Pilgrim's Progress" must have had its deeper as well as its more grotesque appearances. Fully persuaded that he had received a "commission from on high" to undertake the journey, the fervid evangelist would start forth upon an excursion extending from one extremity of the Principality to the other. At first, during the time he was travelling the northern counties, his

success was not quite equal to that which his sanguine presentiments had presaged. Discomfited by this discovery, his tender conscience troubled him with tormenting misgivings that he had not been "called" to the work of the ministry. And as he arrives at that well-known road which lies through the lovely and majestic "Pass of Aberglaslyn," there commences a strong heart-wrestling with the Supreme, which is most touching in its sacred earnestness. We love him better, believe him more, and feel more tender towards his extravagances now that we have seen him weighed down by modest self-distrust—alighting from the pony which has been lent him for a few miles, and going into a field to pray that some inward witness may be given him to attest the truth of his mission, and to assure him of his divine credentials in its discharge. The heart even of the Christian man of taste and culture cannot fail to warm towards the poor wayfarer as he turns aside into those mountain glens and kneels down upon the heather to implore an assurance of his high commission. And as he carries that assurance with him on his further way, in place of the weight of misgiving which had surcharged his soul, we can scarcely wonder at the spreading enthusiasm which his appeals created amongst the population, and that by the time he reached the south his ascendancy over the simple-minded multitude should have become strong and influential. Behold him now amongst the valleys of Glamorganshire in the midst of one of his greatest excitements. The trumpet has been sounded before him, a voice has prepared the way in the wilderness in the shape of "publications" from all the pulpits in every hamlet and town, and the one-eyed evangelist is expected by a mighty crowd at every halting-place. Chapels are by this time out of the question, and nothing but a twenty-acre field will accommodate the worshippers. In the middle of a working-day at harvest time Christmas Evans will arrive. A most inconvenient time! No matter—service at two o'clock. Hodge flings down his sickle and Polly her fork, and away they rush to the field where Christmas is to preach. They perspire more over the sermon than they did over their work. Christmas is to preach again at seven o'clock that evening. Long before the time appointed the stir begins. The housewife cannot keep her servants to their work, and perhaps she would not if she could; but the dairy-maid forgets her milking-pail, and leaves the kine to low untended in the meadow, and all set off to the great point of attraction. Wayfarers from all the country-side come crashing through the hedge, sadly destroying the poor farmer's fences, who cannot interfere, because he stands in the cart with Christmas, with his steel spectacles across his nose, and his best top-boots on, to give out the hymns; and he feels that it will be a much easier job for him to stop the gaps with hurdles in the morning, than to spell out the hymns and pitch the tune: so, like a true philosopher, he concentrates his

energies on the matter in hand, and leaves the rest to take its chance. And now the preacher rises. He peers queerly at the throng out of his one eye as he gives out his text. A very few moments suffices for exposition, for that is not his forte. Soon the stir amongst the crowd begins. The Cambrian clown stands open-mouthed, splashed to the eyes with the soil of many strata: for the orator has slackened the reins, and his wild fancy begins to plunge and grow ungovernable. Very soon the steed becomes as frantic as that of Phaeton himself, and carries its driver *volens volens* up hill and down dale with fearful randomness. But the charioteer has no sense of fear,—there seems to be something in the wild motion which exhilarates and delights him, and away he goes, flinging aside the bridle, and postilioned by relays of "spirits from the vasty deep," who ply whip and spur to make the pace still madder. Judgment and taste run still panting up and make a dive at the heads of the prancing coursers; but the "fast and furious" Tam o' Shanter strikes them down and runs over them, turning back to laugh at them as they lie sprawling in the dust. One can almost fancy the shade of some learned gardener amongst Hebrew roots and Greek derivations rising from the grave, and lifting up its flaccid hands in horror as old Christmas flings all sober commentaries to the winds, and dramatises away as follows concerning the demoniac, whose spirits were transmitted to the swine: "By this time the devil became offended with the Gadarenes, and in a pout he took the demoniac away and drove him into the wilderness. He thought the Gadarenes had no right to meddle with his property; and he knew that 'a bird in the hand is worth two in the bush.' He could not send him home, so he thought he would try to persuade him to cut his own throat. But here Satan was nonplused, his rope was too short; he couldn't turn executioner himself, as then the act would have been his own sin and not the man's. The poor demoniac must therefore go and hunt up a sharp stone or anything he could get. It was while looking for this that he met the Son of God." After a little more similar description the preacher goes on: "Methinks that one of the men who fed the hogs kept a better look-out than the rest of them, and said,

"What ails all the hogs? Look sharp there, boys—keep them in—use your whips. Why don't you run—Why, as I live, there's one of them bolted headlong over the cliff! There! there—Morgan—yonder goes another! Drive them back, Tom."

"Never was such running and whipping and hallooing; but down go the hogs, before they were aware of it. One of them said—

"They are all gone!"

"No, sure, not all of them gone into the sea?"

"Yes, everyone of them; and if ever the devil entered anything in this world, he has entered into those hogs."

"What," says Jack, "and is the noble black hog gone?"

“Yes! yes! I saw him scampering down that hill as if the very devil himself were in him; and I saw his tail take the last dip in the water below.”

Then he goes on most ludicrously to describe the meeting of the drovers with their master—their rueful tale—and the owner's anger at the loss of his pigs. Then he gives a weird account of the delivered demoniac going through the cities declaring his deliverance, which, if he did it after the fashion which old Christmas ascribes to him, must have left some doubt upon the public mind as to the perfectness of his cure! The preacher makes him shout—

“O yes! O yes!—Please to take notice of me the demoniac among the tombs—I am the man”—and so on—describing the features of his deliverance. After this comes a description of the return of the demoniac to his wife, and the meeting between them. The children are depicted as playing outside—at length they come running into the house.

“O mother! father is coming, and he will kill us all.”

“Children, come all into the house,” said the mother—“let us fasten the doors.”

“Are all the windows fastened, children?”

“Yes, mother.”

“Mary, my dear, come from the window; don't be standing there.”

“Why, mother, I can hardly believe that it is father! that man is well dressed.”

I should like to extract the whole of this grotesque scene; but space will not permit, for the preacher's descriptions are so very minute. Suffice it to say, the demoniac comes tapping at the window; and when the wife has been in strong hysterics and “brought to” by the usual appliances, she finds her husband sitting quietly beside her, tenderly consoling and soothing her, and giving an account of the deliverance wrought upon him. And then he winds up with a chorus of “Glory in the highest! Hosanna! Hallelujah! Praise the Lord! Let the whole earth praise Him. The Lord God Omnipotent reigneth!” And this chorus would be taken up by the vast concourse who had been swaying to and fro in unrestrained excitement, until the very air resounded with the shouts of “Gogoniant! Hallelujah! Praise the Lord!”

The following is part of a most grotesque description of the search of the Wise Men after the young child:—

“I imagine them entering a village, going up to the gate and inquiring, ‘Do you know anything of the child?’ The gate-keeper comes to the door, and, mistaking their question, answers, ‘You have to pay three halfpence for each of the asses.’ They explain, ‘We didn't ask whether there was anything to pay, but whether you knew anything of the child.’ ‘I know nothing of him,’ says the gate-keeper, ‘but a little further on you will find a blacksmith's shop, inquire there.’ The wise men go to the shop. ‘Do you know anything of the young child?’ The smith answers, ‘The asses

can't be shod just now, you will have to wait two hours.’ ‘You mistake us,’ say the Wise Men, we don't want the asses shod, but we want to hear of the young child.’ ‘I don't know anything about him,’ says the smith, ‘but ask at the public-house.’ The wise men go to the inn. ‘Do you know anything of the young child?’ The landlord shouts to the servants, ‘Be quick, a quart of porter for the strangers.’ ‘No, no, we want neither porter nor ale; but can you tell us anything about the young child?’ ‘No: but in the shop to the left there is a person who reads all the newspapers (!), and perhaps he can tell you.’ At the shop they ask. ‘Do you know anything here about the young child?’ ‘Half a quarter of tobacco for the strangers,’ says the shopkeeper to his apprentice. ‘We don't want any tobacco, but we want to hear about the young child.’ And so old Christmas sends these unfortunate wise men here and there, afflicting all his creations with deafness, until at last they meet with John the Baptist, with his camel's hair, and leathern girdle, who says he knows all about him—“Behold the Lamb of God who taketh away the sins of the world!”

Such are specimens of the wild pictorial style of Christmas Evans. Many other extracts might be given, manifesting greater power and poetry than these, and savouring a little less of the grotesque. But it will be easy to draw from such as have been given some idea of the effects such a man would be likely to produce when speaking vehemently in a language suited to his style, and to a multitude of kindred temperaments with his own. I have made these few transcriptions from a great number of specimens furnished by the Rev. D. M. Evans, of Llanelly, in a very able memoir* of Christmas Evans recently published.

It will be plainly seen that there is something more than the mere illiterate rant of vulgarity and ignorance in this good man. His imagination was by no means of a lofty type; but it was potent of its kind. It made common things available for illustration, and spoke at once to the meaner comprehensions of men. It might be said that he degraded lofty and sacred themes by bending them down to a too material standard; but this fault was not the result of irreverence, or of a desire to popularise himself at the expense of his theme, but only a necessary part of a nature wherein fancy and emotion predominated over every moderating faculty—a mind which was nothing if not pictorial, and which was so natural and unstrained in its painting and dramatic tendency that even in the article of death it could not curb the inspiration of its visions, but with a wave of the hand and a whispered adieu to the weepers round his bed, cried “Drive on!” as though he saw some heavenly chariot waiting to carry him away to the homes of the “spirits of the just.”

ARTHUR MURSELL.

EVENING HEXAMETERS.

BY THE DEAN OF CANTERBURY.

DARKLY the minster-towers, against the glow of the sunset,
 Rise from the purple band of mist that beleaguers the city :
 Golden the sky behind, into purest silver melting,
 Then dissolved into azure, and arching over the zenith ;
 Azure, but flush'd with rose, in token that day yet lingers.
 Porcelain-blue in their haze, the hills watch over our dwellings ;
 O'er them the evening-star its pale clear beacon hath kindled.
 All is calmness and silence,—a scene from the happier country.
 O blest shades of Eve ! O gentle parting of daylight !
 Masses of colour divine, all human skill surpassing !
 Earthly pleasures may flit, and leave but a pang behind them :
 Friends that we love may die, and their faces be past recalling ;
 Only an hour like this fades never away from remembrance,
 Only thoughts like these track all our life with blessing.
 If the sun setteth no more in the golden country of promise,
 Then must all be changed,—or else were this earth more lovely !
 Sunset, beautiful sunset—summer, and winter, and autumn,
 Ay, and the budding springtide—what were they all without thee ?
 Lulling the day to sleep with all its busy distractions,
 Calming the soul from toil to share the blessing of converse,
 Tinting the skies with a thousand hues unknown to the daylight,
 Touching the temples of earth with a coal from the fire of the altar,
 Fading away into calmness, and bringing the mood of devotion :—
 Hail, thou time of prayer, and praise, and holy reminders !
 Never does God come down on the soul, as at fall of Evening :
 Fair is the rise of the Sun, and glorious the East in its kindling,
 But then comes the day, and the surface of thought is ruffled ;
 Day, with the world and with care, and with men's importunate faces.
 Far more blessed is Eve : when all her colours are brightest,
 One by one they have time to grow slowly fainter and fainter,
 Fade, and fade, and fade, like music that dies in the distance :
 Then still night draws on, and drops her veil over all things,
 Sealing the memory up, a possession of beauty for ever.

Surely the western glow lay warm on the vaults of the temple,
 When the parents came in, with the doves, the poor man's offering,
 Bringing the holy Child to do as the law commanded.
 Fell not the roseate light on the snow-white hair of the Ancient,
 Lit it not up in his arms the soft fair flesh of the Infant,
 Sparkled it not on the tear in the eye of the maiden Mother,
 While like incense there rose from the depths of the satisfied spirit
 " Let me depart in peace, for mine eyes have seen thy promise !"
 Therefore the Church doth sing her *Nunc dimittis* at evening,
 Evening, when all is peace, and the land of peace looks closest,
 When life seems at an end, and all its troubles behind us,
 And the salvation so near, that the soul yearns forth to grasp it.

Burned not the domes of the city with day's last beam in the distance,
 When those two turned in, arrived at their door in the village,
 When they besought Him, saying, " Abide with us, for it is evening ?"
 Fell not the purpling shadows o'er rock and crumbling ruin,
 As they sped joyful back to tell their tale to the mourners ?

Thus doth the spirit, in singing of earth, pause ever and listen,
 Seeking an echo from Him, her centre of life and blessing :
 Thus flows forth all beauty from Him, who is best and brightest.
 All fair things are of Thee, thou dear Desire of the nations,
 Thou art the Sun of life, and day is alone where Thou art :
 Thine the effulgence there, and Thou the orb of its glory.
 Set Thou never on me, best light of my soul ! Be near me
 In the meridian hours, the toil and heat of the noonday :
 Nor do Thou fail, when the night falls round, and the shadows enwrap me.

But by this, from the western heaven hath faded the daylight,
 Vesper hath trimm'd his lamp, and the keen stars twinkle around him ;
 Still loom forth from the bank of mist that hath buried the city
 Darkly the minster-towers ; but gone is the glow of the sunset.

“The Harlequin Boy usually kept at a slight distance from the procession.”

A TOUCH OF NATURE.

FROM THE HISTORY OF A REFORMATORY.

It was a beautiful afternoon in summer, as a company of rope-dancers approached a small town in Germany. The dingy appearance of the people, and their strange dresses, consisting chiefly of fragments of used-up wardrobes, betrayed their irregular mode of life. The troupe consisted of five persons—the master, the harlequin boy, his mother, and two assistants, one of whom was beating cruelly a lean exhausted horse, which was dragging a heavy-laden waggon. The harlequin boy usually kept at a slight distance from the procession, as he loved to roam about at discretion; and so it was this afternoon.

The boy's mother, already advanced in years, had charge over the common property of the band, and had also the management of their daily expenditure, although she was altogether destitute of the necessary qualifications for such duties. She was untidy, dishonest, and always scheming for some petty gain. The master of the troupe retained her merely as an indispensable adjunct of the harlequin boy, whose agility and cleverness he found profitable. The only gentle and better sentiment in the heart of the old woman, was her affection for her boy, and under no circumstances would she have left him behind her, if she had been dismissed from the company. The little harlequin himself would never have consented to a separation. As long as he could remember, they had been associated together in their strolling life, and he felt that he owed to his mother the slight protection which he enjoyed from the rough treatment of his companions. The only fixed rule of life which he knew, was,—as you treat me, so I treat you; and this maxim, although it had often led him into evil, had also nourished the dim light of a better feeling in his soul.

His earliest reminiscences were connected with the peculiar interest which the master took in him. He was acute enough to see that the love of money was the motive power in this. As a little boy, his master had often compelled him to fast and to force his body into certain positions and movements. He knew that he was praised and blamed, just as he succeeded in obtaining money for his greedy employer.

Neddy was displeased that his efforts benefited his master exclusively, and were of no advantage to himself or his mother; but when this thought made him negligent in his performances, he was severely punished. He would often have run away, but his mother told him that they would then starve. With disgust, he forced himself to serve the humours of his money-loving master, but the more he found out that he was indispensable to the success of the troupe, the more he found out ways of secretly gratifying his hatred to it. At the same time, he availed himself of the advantages of his

vagabond life, and roamed about during his leisure hours.

In such rough company and with such cruel treatment, what good feelings could awaken in the heart of the child, other than the sentiment of affection to his mother? He loved her, and sometimes thought of showing her kindness. She could easily have turned his mind to what is good, but she herself had become deaf to the voice of conscience, in a protracted life of sin. She approved of his wicked ways, and praised the cunning with which he executed his mischievous pranks. She even taught him how to indemnify himself by theft, for the injustice of the stingy master. Still the boy's chief pleasure was to spend a few hours in the evening with his mother, when the troupe rested in an inn. Often they stayed in an empty barn, when she would deprive herself of her scanty covering, to make his bed warmer and more comfortable. On these occasions he listened eagerly as she told him of her manifold adventures and experiences in life.

On the afternoon above referred to the little harlequin as usual was lagging behind. The master expressed in angry words his dissatisfaction, and threatened the mother that he would give the boy a good thrashing if he did not turn up before they reached the gate of the little town, "for I am afraid," he concluded his ill-natured speech, "that growling fellow of an — won't allow us to stay all night, and we must give the performance at once."

"My poor Neddy," murmured the old woman, in a low tone, "has nothing but toil and trouble. He has been running about the whole day to pick up something for his empty stomach, and who knows whether he got anything. When he comes back, tired and faint, what welcome does he get?—without mercy the whip dances on his back, and he has to jump and cut capers as if he was the merriest lad in the world. Darling boy! there is not a finer boy anywhere. But if I could get hold of you," she added, lifting her fist in a threatening manner behind the master's back, "to plague a boy in such a way."

"There he is! there he is!" she cried, after looking about for a few moments, and pointed to the boy, who was running towards them across the field.

"He has just saved his time," said the master, "but not his punishment; but he must wait for it, as I have to go now to get permission from the town authorities."

He went on in great haste, giving directions for the others to follow. The mother was glad of the short respite.

"Where have you been so long? I have been

frightened about you," she cried, when Neddy was close to her.

"Mother," answered he in a whisper, without entering on a reply, and pointing to a huge piece of bread and some thick slices of ham, "see what I have got for you."

"Where did you get this?" she asked, in the same under tone.

"In the village on the other side."

"Did they give it you?"

"Out there, they don't give at that rate; but what isn't given, must be taken."

"Did it go off easily?"

"The farmer's wife screamed as if her hair was on fire, when she saw me run off, and a man ran after me with a hay fork, but I was as quick as lightning, and left him a long way behind."

"Yes, yes," said the old woman, "they won't beat you in a race, Neddy dear; but I am afraid you are getting too bold; and if they caught you, they would give you an awful thrashing."

"Well now, mother," said the boy, with glistening eyes, "I should not have cared a pin if they had beaten me to-day. I am glad, though, they did not catch me, else you would not have got this supper. Just look at it. The bread is quite new, and what a splendid piece of ham, white and red. You must eat it all yourself."

The old woman took it from him, wrapped it in a piece of paper, and put it in her pocket. "To night, when we are alone, we'll divide it."

"No, no," replied the boy, "I couldn't eat a bite."

"You are a good boy," said the old woman, "and you'll always be a good son to your mother, and not leave her when you are grown up."

"Why, I have often promised you that. I'll get you a good cushioned seat on the cart, and you won't have to run on your poor sore feet any more."

The old woman laughed.

"And when we give our performance in the circus, you'll sell the tickets, and I'll buy you a yellow gown and a cap with a red ribbon."

The old woman laughed still louder. "Red does not become old women," she said.

"Never mind that," said Neddy, with emphasis. "I like a red ribbon best, and what is the prettiest you must have."

They had by this time reached the gate, and stopped for a few minutes, till the men who had charge of the heavy cart came up to consult about an inn where to rest. The master was waiting for them impatiently. As he had expected, he only obtained permission to go through the streets of the town, and was ordered to leave before night. The reason of this was that some years previously he had been in jail in this very place for some theft, and the police did not regard him and his troupe with favour. There was so little time, that the performances had to be considerably curtailed; the ropes could not be adjusted; the only attraction to draw the public was gymnastic feats.

The dresses were rapidly changed in the tavern, and a suitable street fixed upon for their performance. Jack, the musician, began with his trumpet; the master, with his sonorous bass voice, announced the extraordinary and wonderful feats which, with permission of the magistrates, they were about to show; and little Harlequin with the drollest antics spread the carpet on the pavement. Of course he did it badly a dozen times, and gave a few grins in anticipation, to ingratiate himself with the youthful portion of the spectators. Jack was Neddy's great support in all his efforts. Whenever he felt it impossible to play his tricks, the sound of Jack's music revived him. Even the miserable instrument, so sadly out of tune, made his weary limbs agile. He did his work admirably this evening, his leaps and capers were astonishing and funny, and the people looked on with amazement and laughter. The old, used-up sallies of wit which he had uttered a thousand times, came with as much freshness and vivacity as if he was improvising them. When the master pretended to be in a great fury and ran after him to beat him, the boy disappeared among the crowd, after having cleverly substituted a gaping lad in his place.

Near this scene two gentlemen were standing at a window, looking on; one of them a merchant, the other his friend Mr. Werner, the director of a Refuge for deserted and neglected boys.

"How old do you think the little fellow is?" the latter asked his host.

"Well, I dare say he is about ten."

"I think he is older. Children don't grow fast when they lead such a life as I am sure he does. I should like very much to have him in my Home."

"Why do you take such a special interest in him?"

"I'll tell you. In the first place, I know that his master is a rogue, and his mother is not much better, for both of them were in jail not long since. In the second place, I have a special pity for children in a troupe of rope-dancers. This feeling has its origin in my early childhood. Without my parents' knowledge I had become intimate with a little Harlequin boy. In a small place like my native town, the arrival of rope-dancers always creates considerable sensation, and if the troupe remains for any length of time, every one, especially young boys, know them well; and in this way 'clever Dick' became quite a favourite. I got to know him intimately, and the stories which he told me about his life made a deep impression, all the deeper, because my secret intercourse with him was at last discovered, and earned for me a severe rebuke from my father. The boy told me many things which were not proper either for him or me to know. I did not fully understand them till many years after, but since then I have always felt the deepest compassion for these poor creatures. How many sins may this poor little fellow have seen and committed, without almost knowing them to be sins!"

At this moment Neddy was standing under the window, holding up his pointed felt cap, and asking for a small coin.

"Come in," said Mr. Werner to the boy, and when he had entered he asked him his name.

"Harlequin," was the answer.

"You act the Harlequin, but what is your Christian name?"

"Harlequin," repeated the boy.

"Do you see," said Mr. Werner, looking significantly at his friend, "what ignorance he is in?"

"You know that you have a name," the merchant said.

"My mother calls me her Neddy," the boy said, impatiently; "but nobody calls me that except her. Other people always call me Harlequin.

The merchant could not help laughing, and threw a piece of money into the felt cap. The Director said: "if you come to me after the performance I'll give you something better."

"Won't the gentleman be so kind," said Neddy, in a begging voice, "to give poor Harlequin a trifle? he has a hard master, who does not like him to bring anything but money."

"Here is a penny for you; but don't forget to come back for what I promised you."

The boy promised to return, and with a pleased countenance ran away.

Little did he think that during this transaction he was carefully watched by one whose interest in him was not of the philanthropic character of Mr. Werner's. This was the farmer from whose house Neddy had stolen. The farmer had come to town on some business; the sound of the music and the crowd drew him to the street corner where the performers were playing, and he immediately recognised the youthful thief. He quietly went for a policeman, who seized Neddy the moment he came out of the house.

The Harlequin's mother interfered, "What is your business with him?" she demanded angrily.

"He must be punished," replied the policeman, "for the bad practices which you taught him. Don't try to keep him, he must go to the magistrate."

The boy had to follow the policeman. The mother went with them, and the mob pursued them with loud cries and questions. "I told you," whispered the old woman to Neddy, "you were too bold, and you'll now have to suffer for it."

"Never mind, mother," replied Neddy; "don't be alarmed."

The policeman pushed the woman back. "You must not talk to your boy," he said, "he is now my prisoner."

She went only a step back, determined not to lose sight of the boy. They soon reached the police-court. The mob dispersed. The farmer, the harlequin boy, and his mother were admitted. The magistrate examined first the farmer by himself. After a short time the other two were admitted. Pointing to the woman, the magistrate

asked the farmer, "Did you see this woman on your farm?"

"I only saw the boy," replied the farmer.

"He is accused of theft, and he must remain here," said the magistrate to the mother. She made no reply, but looked sulky. "You may come for him the day after to-morrow, and better go away now." She began to sob, but was immediately removed.

The boy confessed immediately after a few questions which the magistrate addressed to him. Being asked his age and his previous mode of life, he stated that he had always been with his troupe, and that he was now twelve years of age, that he had never seen his father, and that during the last winter he had for the first time in his life, been at school for a few weeks. The severe rebuke of the magistrate seemed to make no impression upon him, and with great equanimity he allowed himself to be led to prison.

His situation there did not appear to him very disagreeable; with the exception of his liberty he had everything that he required for the moment; he had often slept upon a harder bed, he had often to content himself with a scantier meal. The bread which was brought to him by the servant of the jail was good, and the water clear. He very soon fell into a sound sleep, but the next day he became impatient, and felt the monotony of his position. He was accustomed to see many novelties in a day, and his eyes were pained looking always at the bare walls. He became irritated, that in his lonely cell he could catch no other sound than the twittering of the swallows flying past.

While he was thus undergoing his imprisonment, Mr. Werner remembered him with affection and pity. Immediately after the sentence had been passed, he had gone to the magistrate, who was one of his friends, and asked him to use his influence that the boy should be sent to the Reformatory. The magistrate was glad to have an opportunity of assisting the philanthropist in his endeavours, so he agreed to hand over the boy to his care on the following day, and promised to see the mother whenever she should appear.

Accordingly, Mr. Werner went into the prison on the evening of the next day. The little Harlequin jumped from his bed when he heard the key turn in the lock, for he was impatiently expecting his supper. Disappointed, and with a sullen face, he returned to his pallet. The Director addressed him in a kind tone: "You have got into a sad plight. How is it that you are guilty of such bad practices?"

"What is that to you?" asked Neddy, impudently. "Are you also a magistrate?"

"No. But why do you ask me?"

"Because if you are not I'll not answer you."

"But the magistrate has sent me."

"What for? will you give me what you promised?"

"You shall have it, and if you are a sensible boy you may be free to night."

"Has my mother come?" he asked eagerly.

"She will come to-morrow, but she has nothing to do with your being allowed to leave the prison. It is I who have obtained permission to take you with me."

"You! and where will you take me?"

"To my Home, where you shall live among boys of your own age, and learn good and useful things, so that you may grow up an honest man."

"Do you want me to stay with you?"

"I do."

"And not to be a harlequin any more?"

"You must become something better."

The boy burst into loud laughter. "That will never do, there is nothing like it," and he took his felt hat and placed it on his head with a roguish expression. Mr. Werner, however, was not taken aback; and continuing in the same calm and kind tone, he asked, "Does your master treat you well?"

"My master," said the boy, with a contemptuous look, "is a —;" and here he whispered a wicked word.

"Does he beat you?"

"Don't he!"

"Does he give you enough to eat?"

"He sometimes does not even give me dry bread."

"Well, I think you are a fool not to go with me. I promise you good food, a good bed, and good clothes."

"Yes, but you'll want me to learn lessons and work, and you won't let me run about as I'm accustomed to."

"My boys all work, but they are quite happy. You can come and see yourself how they live."

"What is to become of my mother?"

"I cannot receive her into my Home, but I hope she will be able to remain in the neighbourhood. I shall try and get her some employment in the town, and keep her as much as I can."

"Mind," said Neddy, with great decision, "if you do not allow me to see her every day, and if she does not get what I get, I won't stay with you."

"Well, at all events you can come with me to-night, and see how you like it."

To this the boy consented. He was provided with a suit of clothes, for which he had to exchange his grotesque dress, and soon they arrived in the Reformatory.

Mr. Werner conducted him to twelve boys who were busy in the garden under the superintendence of a teacher, and who constituted, as they called it, a family. He was told to keep to them. Impudent as his behaviour had been to the magistrate and the director, he was now shy and awkward when these boys of his own age accosted him kindly, and taking him by the hand, showed him their little flower-beds, and told him how comfortable they were. Neddy, who hitherto had only been with people older than himself, was quite bewildered by this unexpected and cordial reception from his young associates. But they knew how to talk to

him, and gradually he breathed freer in this atmosphere of kindness, and was pleased with their little attentions. The bell rang for the evening service. They took him to the little chapel, and there was great competition as to who should sit next to him. A hymn was sung, with the accompaniment of an organ. It sounded strange and yet beautiful. He remembered how often he had heard jests about people who sang pious hymns, and said prayers; but it seemed to him now that the reality was different from what he had imagined. After the service, every family retired to its own apartments. The one to which he was attached, treated him as their guest. During supper they showed him every attention, and the most comfortable bed was assigned to him. He could not fall asleep for a long time, so many thoughts were passing through his mind. In the light of the moon, which was gleaming in through the window, he examined again the suit of clothes which he had received, and saw that although they were not new and handsome, they were much better than any he had ever worn. He was astonished at his comfortable bed, remembered with satisfaction his good supper, and guessed what they would likely give him for breakfast in the morning. But he felt puzzled. It was too good to continue. He felt far more anxious than he did the night before in the solitude of his prison, and he was longing eagerly for his mother, who he thought would be wise enough to know what these people intended to do with him. He was called early in the morning. After the morning service and breakfast, the boys wanted him to join them in their work, but he would not go with them; and as they had been told by Mr. Werner not to press and urge him in case he should refuse to join them, they left him alone to give him time to get reconciled to his new position. He went to the garden gate, and for hours kept his eyes fixed on the road. Hunger drove him into the house at dinner time, but he had scarcely finished his meal when he ran again to his place at the gate. In vain he waited there for hours. It became dark, and his mother had not arrived. The boy became restless. He suspected that there was some plot, and that he was to be detained without the knowledge of his mother. Suspicion roused again his boldness, which had disappeared before the kindness and the gentleness of his new companions. He went to Mr. Werner, and in a defiant manner asked, "What have you done with my mother?"

"You must not harbour suspicious thoughts," was the quiet reply. "I cannot tell you where she is. I have just been at the magistrate's where she was to call for you, but she has not made her appearance."

"If that is true, something must have happened to her. She would never leave me in a scrape if she could help it," said the boy, bursting into tears.

"I dare say you are right, and she was prevented from coming to day; but keep up your heart till to-morrow, when you will most likely see her."

Neddy went into the darkest corner that he could find. He was afraid his tears would be noticed, and that the other boys would laugh at him and mock him, as Jack and his companions used to do—their rough treatment sometimes making him cry.

Next morning very early he went again to the garden gate. The director cheered him to prevent his running away, out of impatience. The whole day the boy never left his post. In the evening he disappeared. He was not able to bear suspense any longer, and trusting to his knowledge of the roads, he thought he would have no difficulty in finding his mother. But he had taken the wrong road. His inquiries after the players did not lead him in the right direction. He was unsuccessful in getting bread, and faint and exhausted, was at last recaptured by a policeman, who brought him to the magistrate, by whom he was sent back to the Reformatory. He was received with the same kindness as before, but was too excited to notice it.

It is high time now to look after the mother of the boy. When she found that she could not obtain Neddy's release, she went to the next village. The master was there waiting till the harlequin boy should be restored to him. He was not in the best humour, and could not allow the old woman to go again into the town to make inquiries after him. The wardrobe, he said, required mending, and she had better employ her leisure to the advantage of the company.

Jack returned late in the evening. "Don't expect to see your boy again, you'll never get him back," he addressed her roughly.

"What do you say?" she screamed. "Does the magistrate refuse to let him go?"

"He has taken precious good care of him. He has sent him to the Reformatory."

"Reformatory?" she asked in astonishment, not having the remotest idea of what the word meant. "What sort of place is that?"

"Why, I never heard of it before myself; the people told me queer things about it. There is a set of pious people who get up these houses and live in them with boys who have done something wrong like your Neddy. They just want people to talk about them and praise them; they pretend it's to do good to the lads,—but what good do they do them? just making hypocrites and cowards of them."

"Do you think they treat him badly?"

"I dare say he will be well enough treated, but he'll have no fun; and perhaps they'll get him round and make him crazy, and he'll be quite happy singing and praying and will forget all his old friends and old ways."

"They have no right to keep him," she said, in an excited voice. "I'll go and fetch him."

"I say, old woman, don't try that, I advise you. It's like running into the trap. If you don't want to march into the house of correction, don't go into the town."

These words of Jack, which he seemed to relish,

frightened the woman, and she asked what their meaning was.

"Why that's easily explained. I saw your boy had a beautiful shirt. You tried to take out the traces of the letters and the coronet, but your old eyes could not see to do it. I know something about your bundle."

"Don't betray me," said the old woman, coaxingly.

"Yes, don't betray me," he said very unfeelingly; "you got yourself into the scrape. I suppose whoever took the linen out of the press, took the silver spoons out of the kitchen."

"Don't betray me, don't betray a poor woman," she begs of him in her most imploring tone. "I'll divide the spoons with you."

"It's easy to give a present of stolen goods when the police are after you. But I won't have them. If I was in your place I should cut for it as fast as I could. But mind, take your spoons with you, else you'll get us all into the same scrape."

The old woman seized her bundle and seemed inclined to follow his advice, but suddenly she hesitated and said: "I can't do it, Jack; I can't do it. I can't go away without my boy."

"Foolish woman," said Jack, impatiently; "you must forget the boy; he doesn't exist for you any more."

She looked at him for a few seconds, and then laughed contemptuously. "Little do you know him," she said; "no window is high enough, no door so barred and locked, but Neddy will find his way to his mother."

"It isn't high windows and strong locks that'll keep him, but it's witchcraft. They keep the boys by magic from running away."

"I don't fear their black art," said the woman, confidently; "I have charmed him myself, and no witchcraft can hurt him; and I am sure he loves me and will come to me."

"It will be too late," replied Jack; "the policemen are sure to have you to-morrow."

The old woman began to tremble. "Jack," she said, after a few moments' consideration, "you know the old tumbled-down barn where the smugglers used to hide long ago. I'll hide myself there for a month. Have pity on me and bring Neddy to me. I'll give you all the spoons, only promise you'll tell him where I am waiting for him."

"I'll see what I can do," her companion assured her. "But do get off as fast as you can."

She went away, she ran, her conscience and the dread of the house of correction chased her. At midnight she reached her hiding-place. She concealed her bundle, and prepared for herself a couch in the barn, but she could not sleep or rest. During the day she begged in the neighbouring villages, and in the evening she went up a hill and spied round her in every direction. This was her life for three weeks; she obtained some food in the houses and farms, and as soon as she had got it she crept back to her barn, dreading the pursuit of the police. She

waited till the labourers had left the fields and no traveller was to be seen on the road, and then she went to her watch-tower. There she sat in the still, peaceful summer nights; the darkness lasted only a very short time; soon after the last streak of the evening light had faded, the grey morning dawned; the cold night breeze played with her white hair, the owls screeched about her head, she stared fixedly on the road, the boy never came. The fourth week drew to a close; she could bear it no longer; she took the road again. She crouched down on a stone, drew from her pocket an old pack of cards, and began to consult them as to which road she should take. She laid them out three times, and the answer was always the same. The left road was the lucky one, which would bring her to safety and comfort. Cheered by these incantations, she felt quite revived, and commenced her journey: that very moment, she saw in the distance the uniform that she had dreaded all her life. How often had the glittering shako of a gendarme, the tread of his horse, and the glitter of his sword frightened her in her dreams and in waking hours! The thought of her guilt and of the house of correction made her tremble. Running back, she arrived at the barn out of breath, and went behind a bundle of hay which she had stolen from a field in the neighbourhood. For several hours she did not venture to leave the spot. When at last she went to get a drink of water, she was frightened again by the sound of approaching steps. But she soon heard the watchword of the troupe, and from a state of great terror she passed to most confident expectation. She looked up, and saw Jack.

"I scarcely thought I would find you."

"Where is he?" she asked, eagerly. "Did you not bring him with you?"

"Who?"

"My boy. Did I not promise to give you all the spoons if you brought him? Have you done nothing for me?"

"I told you from the beginning that you must give up the boy," said Jack, making himself comfortable on the hay.

"What have you done?" she asked, angrily. "Have you done nothing to earn the spoons?"

"Wait a bit, and listen. The first fortnight the master wouldn't let me go near the town; but since then I have found my way back to it, and if it was my own boy I couldn't have acted the spy better."

"Did you speak to him?" she interrupted him.

"No, but I saw him three times in the garden."

"Well, and what did you do?" she asked impatiently; "why did you not call him? what's the use of seeing him and doing nothing?"

"Will you keep your peace, old woman, and let me talk. The first time I saw him, he was with other boys, busy in the garden, watering flowers and sowing; I couldn't catch his eye or ear. But I can tell you, he is quite jolly."

"How can you say so? I am sure he is miserable."

"You may think so if you like. You always made a pet of him, and if anybody found fault with him you flew into a passion; but I wouldn't be angry with the boy, if he forgets you and feels happy in his new place. He has plenty to eat, and a young boy like him soon gets used to that silly hymn-singing and praying. What a pity. Such a clever urchin! Capital harlequin! He might have grown up a first-rate fellow, and now will turn out a miserable, dry, honest fool. But cheer up, old woman; he'll get used to it, and may like it in the end."

"Never mind your silly talk, tell me all about the boy."

"Very well. I saw him in the garden a second time; but the third time I took another opportunity. The boys were all in the field, sitting together, and singing a sort of hymn or psalm. Neddy was in the middle, standing beside the teacher, and he sang parts all by himself. I don't know why he got the post of honour. Maybe because he has a good voice, or perhaps he is more pious than the rest. I caught his eye and made our signal, but he shook his head, and kept shaking it. Well, thought I, if Neddy likes to sing psalms, he won't like to whistle for us, and I went away."

"You did wrong," the old woman said. "You ought to have gone boldly into the house and asked to see him, and then given him my message."

"If you like to venture it yourself, you may try. I do not like to go into such houses. I can imagine what they would say to me."

The mother only sighed. "Did you hear whether they are after me for the theft?" she asked after a short pause.

"I could not well make any inquiries, as I was anxious to avoid suspicion; but I would advise you to keep out of the way."

After a few remarks on the suspicions that had been excited, and the chances she had of escape, Jack wanted to compose himself to sleep, but the old woman gave him no rest. She had many questions to ask about her boy, and as the answers were unsatisfactory, she began to give vent to her feelings of sorrow. Jack was at first angry, but at last seemed to feel compassion. In a milder tone than was his wont he said: "Be sensible, you cannot alter things at present; but if you exercise patience for a few years, and wait till your boy is grown up and has left the institution, you can go to him, and move his heart with your tears. You are very clever at that sort of thing, and as you are able to persuade strangers and make them pity you, you won't have any difficulty in softening your boy's heart, and he'll provide for you and be kind to you. But really you musn't plague me any longer about Neddy. If you like you may go with me to-night, I am looking out for another engagement."

She was sickened, and Jack's words afforded her no consolation. To suspect her son's love was the

keenest pang that she ever felt. She waited till Jack had finished his siesta; they then went together, but they soon parted.

Neddy, who was called Frederick in the Reformatory, had not remained there from choice, for every day he thought of some plan how he could run away to his mother. The only reason why he did not carry out his intention was that he was always hoping for a better opportunity. The teachers and boys were constantly in his immediate neighbourhood, and he imagined that he was purposely kept in ignorance about his mother. This irritated him; his heart was filled with anger and hatred; and consequently he committed many acts of insubordination and naughtiness. He never imagined that his mother was dreading any danger from the police; he had long ago destroyed the mark in his shirt which could have led to discovery. His idea was more correct than the fear of Jack; the police were looking in a *totally different quarter for the culprit.*

While the teachers were unsuccessful in their endeavours to exercise a soothing influence on the lad, the more advanced and right-minded of the boys gradually gained his confidence. They cheered him in their boyish way, which he understood better; they advised him to be obedient; their example showed him industry and tidiness. But their good example would certainly not have exerted so powerful an influence, if they had not told him how they also formerly wished to escape from the Home. Some of the boys tried to excite him to disobedience, and to kindle his desire for a lawless life, by telling him of their previous ways and adventures. But the better boys, some of whom had formerly been even more wicked than he, regarded neither the Home as a prison nor the teachers as keepers. They were now glad to have a protection against the seductive temptations of the world; and their love and loyalty to their teachers influenced Neddy, who had by nature a grateful disposition, which had hitherto been very little called forth, and could only manifest itself in affection for his mother. He felt also that his bodily wants were amply supplied. He remembered his former existence, and it struck him that he had never to starve now, had never to exert himself above his strength, had never to wear tattered clothes. Nor was he altogether insensible to the kindness and love which he experienced without interruption. Even when he had to be punished, there was mingled with severity a gentleness which quite perplexed him, because he had never experienced anything similar. Often he gave way, and could not persevere in the resistance which he purposed to offer. Then he would be obedient for several days, and enter into his work cheerfully, and seem to do his best to recompense love with love. He was in this mood when Jack appeared and beckoned him, and as he always had an antipathy to this coarse man, it was natural that he refused his invitation.

But whenever the remembrance of his mother became vivid, his good resolution vanished. He suspected that Mr. Werner had only deceived him when he promised to look after his mother and care for her, and this suspicion drove him to sulkiness and disobedience. In this way his conduct alternated.

One day the boys got a lesson in reading the Scripture. They read verse about. When it came to Neddy's turn, he shut the Bible, and said, "I won't read." The verse was Matthew x. 37. The teacher asked him to read; threatened him even. But in vain. He asked why he was not willing to read his verse like the other boys: but to this question he could not obtain a reply. "I shall have to report your behaviour to Mr. Werner," said the teacher; and after the lesson Neddy was summoned to the director's room. It was not his first citation. Often the director's serious and kind exhortations had filled the boy's eyes with bitter tears of repentance. He was sobbing violently, and for a long time was so excited that he could not find words. At last he said; "I counted the verse that would come to my turn. It was this—'He that loveth father or mother more than me is not worthy of me.' I thought of my mother, and how fond I am of her."

"Do you think, then," Mr. Werner supplemented the fragmentary statement, "that you love her more than the Lord Jesus, and that you are not worthy of him?"

"Yes," said the boy; "I can't bear it any longer; I must go to her. I promised her that I would live for her, and share everything with her; and now I won't stand it a single day longer, that she should run about the world alone and without me. But you must help me; if I run away secretly the policemen will seize me. You must not keep me back, you are not treating me well."

"And suppose I complied with your request, and allowed you to go to your mother, would you again take to stealing and other sins?"

"I can't say," was the evasive reply.

"You have been taught here that these things deserve God's wrath."

"Oh, I wish I had never learned it," replied the boy, vehemently. "It is this which makes me miserable; now I know that my mother has led a very wicked life, and I shudder when I read in the Bible about the lost, and think of her." Tears interrupted his voice. "You did not keep your word, you promised to look after my mother; I will keep my promise, and go again to her."

"My dear boy," said Mr. Werner, "you are excited, and accuse me wrongly. I have often thought about your mother, and was confident that she would apply for you to the magistrate; in that case I should have been able to keep my promise."

"That's not enough for me; I know that she never came; I must find her out."

"It is quite right of you to think of her, and to

be anxious about her. But you yourself cannot go to look after her. You would only make matters worse. I shall call to-day on the magistrate, and consult with him about the best way of finding her out, and I have no doubt we shall succeed. But if I promise you to do my best to get information of your mother, you must also give me a promise."

"What is it?"

"You must promise me not to resist the knowledge which we are trying to plant in your heart, and which God in his mercy has already begun to give you. You said before, that you would try to think there is no God. Can you believe this?"

"No," replied Frederick.

"Your conscience will never believe it, never. You will never have peace until you listen to the Lord. He is speaking to you through us, through the Bible, through a voice in your own soul which you can't silence. You are tormented by the thought that you might one day inherit heaven, while your mother would be under the curse of God in hell. Did you never think, that if you were again to be brought together, you might lead her to the better path, and teach her how to obtain mercy through faith in Christ's dying love?"

"Very often," answered Frederick; "but it would never succeed. We would soon be driven again to steal, and to do other wicked things which we cannot avoid."

"That is the very reason why I dare not allow you to go back to your former courses. But suppose I obtained some employment for your mother in this neighbourhood, she would then have no temptation to do anything dishonest, and she would be permitted to see you. Would you then tell her what we are teaching you of the love of God?"

The boy's eyes glistened with delight while Mr. Werner was uttering these words. "Yes," he said, "I would tell her all I know, and I would learn very diligently to be able to tell her much."

"Have patience, my boy, and faith; I shall do my best to find your mother."

Frederick went away tranquilized, and Mr. Werner called on the magistrate to consult with him.

He explained to him how affairs stood.

"Can you really not manage the boy without the old woman?"

"No," replied Mr. Werner; "and I regret that I did not make inquiries sooner."

"I never could have imagined the existence of such affection among these ragamuffins."

"The influences of the Divine Spirit are mysterious, we cannot fathom them. I feel convinced that every step of progress which the boy makes in divine knowledge, will intensify his love for his mother. It can scarcely be otherwise. God's truth purifies natural affection. God has many ways of drawing us to himself, and the family tie is a very sacred one. Its very strength may often be a temptation, and instead of bringing us nearer to God, keeps us from him."

"I could easily get hold of the woman, if you allowed me to pursue her in the ordinary way."

"I should prefer to have the thing managed without the aid of the police."

"Well, and how do you think of obtaining your end, unless you apply to the police courts? How can you treat a vagabond woman like that in any other way?"

"I am afraid necessity compels me to follow your advice; but could you not manage it, that your inquiries appear to be made, not for the vagabond, but for the mother of the boy?"

"I daresay I can do that. But we must get the boy to give us an exact description of her appearance. He will easily be able to do that, and this is the only way open to us."

Such was the result of their deliberation, and Frederick, eager to be of use in the search for his mother, did not hesitate to give an exact description of her appearance and dress.

The next few days were a very trying time to the boy. He seemed hopeful and happy; and often sang some of the cheerful songs he had learned in his new home. He was diligent and obedient, and very anxious to please all his teachers, especially the director. He repeated Scripture passages and hymns, to be able to repeat them to his mother, as a testimony of the new and better life which had commenced in his soul. Formerly his acts of disobedience and wickedness did not arise so much from weakness of purpose, as from his hardening himself against the conviction of sin which was forcing itself on his mind. But now he was animated by the hope of a reunion with his mother, and though he knew he was not to return to his former mode of life, yet he resolved firmly to eradicate all the evil thoughts which during his previous course had been instilled, and he resisted every temptation to faults and vices which originated in his old habits. Every morning and every evening he promised God that he would serve Him; at every meal he silently added to his thanksgiving for God's goodness, the petition that God would allow him to share again his bread with his mother. And although a considerable time elapsed without any information being obtained, he did not waver in his hope. His hope had grown side by side with his faith in the mercy of God, and a confidence based upon such foundation is not easily shaken.

At last they heard from a distant town that a person answering to the description sent, was in the jail of the province. She had been guilty of theft and other trespasses. "I must go to her," said Frederick immediately when he heard the news from Mr. Werner.

"And I shall accompany you," replied the director.

The next day they started. The quick way of travelling from town to town was quite a novelty to the boy. He had only had a vague idea of railways and mail-coaches, and though his present journey was so entirely different from his former

wanderings, yet it vividly brought to his mind the olden times. He took a childish pleasure in examining the railway carriage, and thought he would have no difficulty in persuading his mother to travel with him in so comfortable a manner. He also hoped that the prospect of a settled and easy life, which, according to Mr. Werner's promise, he could hold out to her, would induce her to accompany him; but he thought of something still better—he would tell her about God.

A few hours before the two travellers reached their destination, the prisoner was tried. She had always followed evil courses, and, without scruple, continued a life of brawling and theft; but from the time that the only ray of light which illumined her dark soul had vanished, from the time that she lost faith in her boy's affections, she sank lower and lower. Her hand which used to caress her child, and was thus a sign that her heart was not quite dead yet to nobler emotions, closed now with a spasmodic angry jerk whenever she thought of him; her voice, which formerly lost somewhat of its harshness when she mentioned his name, was now often lifted up in imprecations on his head. She went about the country begging and stealing with great daring; she was anxious now to get something for her old age, and to make up by what she could gather in any dishonest way for the disappointment which she felt in her boy. The description sent by the magistrate was very welcome to the authorities. It was shown to her, and in order to compel her to confess her identity, she was told that it was drawn up with the assistance of her own boy, who was in the Reformatory.

"My son? I have no son!" she cried out, trembling with excitement.

"Do not persevere in lying; truth must come out sooner or later, and you cannot escape the punishment you deserve," said the magistrate; "your son has got among people who teach him to hate evil. Do not imagine you can gain anything by falsehood; the best thing you can do is to make a full confession."

The old woman yielded. She replied willingly to all questions, and acknowledged so many crimes that the judge scarcely knew whether or not to credit her statements.

A few hours later Mr. Werner and Frederick were admitted to her cell. The boy ran to her with a loud exclamation of joy; but she pushed him harshly from her.

"Go away," she said. "What do you want with me? I don't want to see you."

"Mother," said Frederick, in fearful alarm, "don't you love me?"

"Love you," she replied, in a wrathful tone; "have you loved me, boy? You did not care what became of me. You enjoyed your life with strangers, and now that you have brought your mother to this wretched place, you come to me. Get away. That's what you call keeping your promise."

"I would have give anything to have come sooner, but I did not know where to find you."

"That's it!" said the old woman, roughly.

"Don't tell me lies; and why did you get me into shame and ruin? Why did you not stay with me?"

"You are unjust to your child," interfered Mr. Werner. "He did not leave you of his own accord, and was always wishing for your return."

"Is it you, parson?" she said furiously, holding her fist before his eyes. "You have stolen my child, and have made him crazy; and it's owing to you that he has brought his mother to the house of correction."

The servant of the jail reproved her for her rude behaviour, and threatened to complain of it to the authorities.

"Why did you bring them here?" she asked. "I didn't want them. Take them away. I won't listen to their chattering. The boy is good for nothing. I loved him better than myself, but he rewarded me with shameful ingratitude."

"Mother, mother," said Frederick, with tears, "how can you say so? I have come to make you happy."

"To make me happy," she repeated, mocking him. "In a few weeks I have to go to the house of correction. Is that your happiness? Besides, that's not why you are come. There's something behind it. You could tell lies cleverly enough when you were a little boy."

"Who taught me?" said Frederick. "You did. But I don't tell lies now: I have learned to hate them."

"Hate?" she interrupted him, angrily. "Now you tell the truth. You hate me. You have been taught to hate me, and they who have taught you are not better than I am; they had no right to come between you and me, they had no right to steal a child from his mother—it's shameful."

"Mother, how can you be angry with them? they mean well with you and with me. It was through their kindness that I found out where you were living, and I was so anxious to see you, to tell you all I have learnt, and to make you happy."

"Don't talk to me in this deceitful way. I know your fine and pious words are just to blind me to your wickedness. I taught you to tell lies—it was me—but it was only to save you from the cruel master when he was angry with you, a poor little boy, and wanted to beat you or to give you no bread to eat. But why are you telling me lies just now? I can see through it all; you won't cheat me. You are a bad, ungrateful child to your mother."

Frederick was anxious to explain still further, but Mr. Werner gently took his arm, and, composing him as well as he could, retired with him to the inn where they were staying.

Notwithstanding Mr. Werner's consolations, the boy, as soon as they had reached their room, burst into tears, and for a long time wept bitterly. The

director spoke kindly to him. "Do not give up hope; all may end well yet."

"Ah," sobbed the boy, "if she does not love me and listen to me, I am sure she won't listen to any body."

"You cannot know this. We often think God has only the one way which we see; and yet a thousand ways are open to Him who is allwise and almighty."

"I would do anything to help my mother. I have no other way of showing my love to her. I would do anything for her."

"You can still pray for your poor mother to God," said Mr. Werner. Gradually he succeeded in soothing the excited mind of the boy, and to encourage him to wait and hope.

They were not allowed to see the prisoner a second time. She continued to utter harsh and angry words about her boy, and the director did not think a second interview would be of any use. So Frederick returned to the Home, but although his comrades did all they could to cheer him, he could not banish his deep grief. His health, which had never been robust, and had doubtless been undermined by the irregularity of his early life, began to suffer visibly.

After a few weeks Mr. Werner had to tell Frederick that his mother was sentenced to ten years' imprisonment in the House of Correction, which was not very distant from the Reformatory. Frederick asked whether he would be allowed to see her? He was told that the application for such permission had been refused. "Perhaps it is better so, she will have good spiritual instructors, and an interview at some future period may be more beneficial."

"But if my mother break stones on the road along with the other prisoners, I might see her. May I go there to-morrow during the play-hour?"

"You will not be allowed to speak to her."

"But," replied the boy, "I should be satisfied if I could only see her."

"You may go, my boy."

Frederick went accordingly next day. He saw his mother, and observed her from a distance; she was lifting and breaking heavy stones, and his heart sank when he saw her toiling. He went again the following evening, and as Mr. Werner noticed that he was soothed by these silent visits, he gave him permission to continue them. And so Frederick went every evening. At a little distance from the place where the prisoners worked, he stood still and looked at his mother. The autumn was advanced, and the weather bleak and cold, but Frederick thought not of wind or weather, the only thought that absorbed his mind was his mother. His eye was fixed on her: she never rewarded him even with a glance, but he had no rest, he returned to the spot every evening.

His regular appearance was noticed by the officer who had charge of the prisoners. He entered into conversation with the boy, and on hearing the circumstances, was so touched by his affection,

that he said, "I pity you, and if you say nothing about it to any one, I'll allow you to talk to your mother." But the mother, when she heard of it, refused angrily. She said: "I can never forgive him, and though he should come for ten years, day after day, to see me, I can't forget his behaviour to me."

Still Frederick hoped that she would avail herself of the officer's permission, and he could scarcely await the next evening. Just as he started, one of the boys asked him to help him with his lesson. He could not refuse him. It was growing late; he ran to make up for lost time, and almost out of breath reached his destination. It was a cold, sharp evening, and frost was setting in. The prisoners had to finish part of their task that evening, and remained longer than usual at their work. Frederick's head was burning, his limbs trembling with cold. He stood there for some time, and when he returned, the stars were shining brightly, and looked to him like the lights of a large, splendidly lit-up house, into which he would fain have entered if he could have taken his mother with him.

The next day he did not go to look at his mother; he was seriously ill. The mother was very inattentive during the evening, and had to be exhorted several times to mind her work. She was conscious that the spot which she used to avoid with her eyes about that time of the evening was empty. She could not help looking in that direction very often. When evening after evening for a whole week the boy did not make his appearance, she felt her anger give way. She had noticed that her heart began to beat more quickly when the accustomed hour drew near, and now, when for so many evenings the boy had not come, she felt an indescribable anguish.

One morning she was told that she was to go and see a child who was dying. When she heard this, she trembled violently; she uttered not a word, but silently and gently followed the messenger. She stood soon at the bedside of her boy. He was not able to speak loud, but in a feeble voice assured her that he had always loved her, and asked her to listen to those who were teaching her the word of God. She resisted no longer, she believed his assurance of affection, tears flowed down her deeply furrowed cheeks. "Mother, mother," said the boy, "I wish you knew the way to Heaven. I wish you knew it before I die."

She fell on her knees. "Don't speak about dying," she moaned. "You must not die."

"I am dying," Frederick replied. "I am going to the angels. Mother, I am not afraid to die; I am only afraid that you are not on the way to Heaven."

"I will do whatever you tell me, dear, dear child," she said, with choked voice, while she bent over him. He put his thin arms round her, and looked into her deep-set eyes. How often had they flashed in rage; but now they looked so imploring. He kissed her lips, round which for years no other smile had played than the smile of scorn and despair,

but which had now uttered the vow that she would change her life.

After an hour she returned to the House of Correction. Owing to the severity of the season the out-door work was discontinued. She was sitting with the other prisoners busy at the spinning-wheel. She heard the sound of the wheel, and the questions which were whispered by her neighbours as soon as the keeper left them for a moment, but it was only in a mechanical way; her heart was with her child, and she was constantly hearing the feeble affectionate voice which had addressed lately such serious words to her. She could not think of anything else. Hitherto she had cared little about her imprisonment; satisfied with the shelter and food which were provided, her chief dissatisfaction was with the amount of labour she was obliged to perform; but now she began to feel most painfully the want of liberty, to go where her heart drew her. Every minute increased her torture; instead of sympathy she had only the unfeeling curiosity of her companions; her impatience and angry passions were again roused. She forgot her son's request, and the sacred promise she had given him; she forgot all he had told her about the blessedness of heaven and the darkness of hell; she thought and felt only one thing—that it was cruel of people to keep her from her dying child.

The evening came, and she had to go to her lonely cell. The outward quiet and solitude soothed her mind, and she became more calm. Her boy had told her to pray; she wanted to follow his advice. She could think of no petition to offer up except to ask for his life to be spared. But she had not courage to make this request. The thought of God, so unusual and strange to her, filled her with fear, and she could not discover any reason to hope for an answer to her petition. Her doubts and misgivings prevented her from praying; at last she thought that if she limited herself to ask a very small favour; if she asked only to be permitted to see him once more, she might entertain confidence. But even this she could not ask; her lips remained silent and closed. She could not find it in her heart to pray; in vain she sought comfort.

Next morning she was again called to see her child. It was with the greatest trouble that Mr. Werner had obtained this permission for her. He was told that it was not advisable to relax the rule a second time in the case of this woman; that it might easily lead to irregularity and insubordination among the other prisoners. But the kind-hearted man was not discouraged by the refusal; and, aided by the chaplain of the jail, he ultimately succeeded. They both saw the great blessing which might be granted to the old woman through the love and the words of her dying child. And as the boy's life seemed to be rapidly drawing to a close she was allowed to go to the Home for a day, and if necessary to return on the subsequent day.

When the mother entered into the sick-room, the nurse was just busy adjusting the pillows, to give

the sufferer a more comfortable position. "Let me do it," the mother begged; "let me do it. I am his mother, and know best how he likes it. . . . When he was still a little boy," she continued, after the nurse had yielded to her, "he was once sick for several weeks. We were in a barn; I had only a little straw and a few rags, but I managed to make him comfortable, and he stretched out his little hands to me and said, 'It is very nice, mother.' Do you remember it, Neddy?"

"I do remember it," said the boy, pressing her hand. "You were very kind to me then, because you loved me; and if you love me still you may do many things for me now."

"And tell me what, my child. How sick you look. I am afraid you are not the least better." She did not wait for an answer; but glancing at the bottles of medicine which stood on the table with an air of impatience, she exclaimed, "Poor child, are they hurting you with doctor's stuff. It won't do you any good. When you were ill long ago, I made for you a draught from herbs with a charm, and the charm never fails. If I were only free and I could get the herbs, though the frost is so hard—but, wretched woman that I am, the prison!"

"Never think of charms any more, mother," said the boy, seriously. "We must hope only in God: He alone can help us. Did you pray to Him?"

She wept, but remained silent.

"I have prayed," he resumed. "I have prayed for you, that God may have mercy on you, and that He may help you to love Him."

"Oh, you good, child," the old woman said, with many sobs; "if you die, the angels of whom you spoke yesterday will take you, for you are an angel yourself; but as for me—oh, you must not die. I would try to learn from you how to be good."

"Others will teach you, mother, and you must read the Word of God."

They were left alone, that they might have an opportunity of unrestrained intercourse. As much as his feeble voice and general weakness permitted him, the boy spoke to her of the kingdom of God here on earth and in eternity. When he spoke to her about her sinful life, she looked at him in a bitter reproachful way, but he returned her glance with a calm, firm and loving look; then instead of saying what she had first thought, that he should not speak to his mother of her faults, she cast her eyes to the ground. Frederick spoke of his peace. He assured her, that though he remembered his great sins, and knew that his death was near, his heart was quite happy. When he said this, she looked into his countenance with amazement, and was scarcely able to recognise her child.

For a whole day she was allowed to remain with him and to be his nurse. He made a deep impression on her. His gentleness, his love to all who came to see him, his patience in suffering, his whole character, made her feel,—He is your child in a sense,

but it is not from you he has his meekness, reverence, and piety; he belongs more to God, whom he loves, and the people who have taught him this way of peace, than to you, and if you do not love God, you are separated from your son. After a while she was so overcome that she fell at the foot of his bed, and weeping bitterly concealed her face. In the dark lonely night she saw awful pictures of the state of her soul, of the great gulf which separated her from her child, and of the torment of hell. She was in anguish, and for the first time cried to God for help, for mercy. And as her son had told her, and as he had earnestly besought God to grant it to her, she obtained mercy, and began to believe that God would have compassion on her.

Next morning she told Frederick the agony of the night. It was the last thing he knew on earth. Death approached now very quickly, but he died in the blessed hope that his prayers for his mother

were answered. His last words were directed to her. Then he gently fell asleep; peacefully, calmly. She could scarcely believe that life had departed. She was allowed to remain in the house of mourning till the evening. She was then removed to her cell. Before she left, she asked Mr. Werner to give her Frederick's Bible. It was given to her, and he promised to visit her often. The promise was faithfully kept, and the chaplain of the house bestowed also special care on the bereaved mother.

With God's gracious aid she continued in sincere repentance and genuine faith. Her conduct proved the reality of the change. She was now so obedient and diligent, that she was often permitted to ask a favour as a reward for her good conduct. She always asked the same favour,—to be permitted to visit the grave of her boy.

Before the term of her imprisonment had expired, God took her into his heavenly kingdom.

IMMANUEL WICHERN.

A PLEA FOR THE QUEEN'S ENGLISH.

No. II.

BY THE DEAN OF CANTERBURY.

If a man cares for his peace of mind, and that peace of mind is to be estimated inversely as the number of letters he receives by post, let him avoid publishing on the "Queen's English."

As soon as my former Essay appeared in "Good Words," letters began to flow in from all parts of England, and on all imaginable subjects connected with the article. Some questioned this or that opinion contained in it: some found fault with me for dealing at all with such a matter: some had objections to my style of writing, and contrasted Queen's English and Dean's English. Almost all begged for an answer. Some even enclosed an envelope stamped, which seemed to compel a reply. One gentleman first sent me a letter extending to several folio sheets, on the rules of composition, and my own violations of them: and then, when my answer to his letter was not altogether to his liking, published a pamphlet in the same strain.

Of these replies to my Essay, and of the criticisms contained in them, I shall have a good deal to say, as they furnish the very best material for this my second plea for the Queen's English. I shall, then, make no further apology for entering on the matter at once.

One of the principal complaints against me is that I am not borne out by the dictionaries; that I give small heed to the writers on rhetoric. I need hardly say that I fully expected this charge. If I had believed the Queen's English to have been rightly laid down by the dictionaries and the professors of rhetoric, I need not have troubled myself

to write about it. It was exactly because I did not believe this, but found both of them in many cases, as I conceived, going astray, that I ventured to put in my plea for some of the rules which common sense lays down, and to defend some of the colloquial usages of the English people. My endeavour in this second Essay will be, to follow still further the same track. If I treat of some of the letters of my correspondents, and put in a rejoinder to the replies, written and printed, which have been made to my former Essay, it will be, not so much for the sake of justifying myself, as for the sake of introducing additional matter of the same kind as that with which their answers have dealt, and of leading on to two or three new subjects of which it is my purpose to write. I may be pardoned if I occasionally criticise my critics, when neither of these purposes is directly to be served. It is not in nature to refrain from sometimes making yourself merry at the expense of a man who has made himself very merry at your expense: especially if, in so doing, he has laid himself open to your mirth far more than you ever laid yourself open to his. But I hope that whatever I find occasion to say may be taken in good part: and that it will be believed that (to borrow a figure from the enemy), though I may sometimes break windows, it is only as our windows are broken in the Canterbury precincts, in fair honest bowling and batting, and with no malicious intent to damage the family inside.

It is not easy to arrange the notices of my correspondents in any reasonable order. I will take them as they come, reserving the largest and most im-

portant till last. I had a very curious communication on the subject of the pronunciation of the aspirate. My correspondent objected, that the portion of my Essay which treated of this matter conveyed no meaning to him, for that from a child he had never been able to tell the difference in pronunciation between a word beginning with an "h," and one beginning without: and he insisted that I ought to have adopted some method of making this plainer. He adds, "In all cases where the 'h' is used, *to me* it appears superfluous." I adduce this without comment, to show how inveterate and incurable the habit of neglecting the aspirate must be:—even more so than I had ever imagined.

Another, writing from the sister isle, charges me with being in error for finding fault with those who drop the aspirate in the word "*hospital*," "for," says he, "no one in *Ireland*, so far as I am aware, ever thinks of aspirating the *h* in that word." This is certainly a curious reason why we should not aspirate it in England. It reminds me of an American friend of ours, who, after spending two or three days with us, ventured to tell us candidly, that we all "*spoke with a strong English accent*." The same correspondent states that he never met an Englishman who could pronounce the relative pronoun "*which*." He charges us all with pronouncing it as if it were "*witch*." I may venture to inform him that it was his ear which was in fault. The ordinary English pronunciation "*which*" is as distinguishable from "*witch*," as it is from the coarse Irish and Scotch "*wh-ich*."

A third correspondent finds fault with me for using the Latin names of the cases of nouns—*genitive* and *accusative*, instead of *possessive* and *objective*; as if these latter were not quite as much Latin names as the former. I used those names as being more generally understood, and conveying a more definite idea than the others.

Several gentlemen have found fault with my prohibiting the expression "*on to*;" their general inquiry has been whether it is not necessary in such phrases as "*the cat jumped on to the chair*." One correspondent urges that in saying "*the cat jumped on the chair*," "*the man jumped on the ice*," I might mean merely that the cat remained on the chair, and then jumped; or the man remained on the ice, and then jumped. In reply, I would say that in neither case is there any danger of a mistake. The verb "*jumped*" is not of itself sufficient to indicate that which is suggested, it would require some adverb* to qualify it, as "*about*" or "*up and down*." "*The cat jumped about*," or "*jumped up and down*," "*on the chair*." Occurring alone, "*to jump on the chair*," must of necessity convey the idea of motion from some other place. I should say

that "*on to*" can never be good English. One correspondent asks me why it is not as good English as "*into*"? I answer, first, because one word exists in common usage, and the other does not; and secondly, because "*in*" and "*on*" are not exactly alike in extent of meaning: "*in*" conveys more definitely the idea of rest, and requires "*to*," the preposition of motion, to be attached when it is used as indicating motion; whereas "*on*" is itself employed to indicate motion, "*he fell on the ground*," "*he got on his horse*," and needs no such addition.

A correspondent asks for a comment on the pronunciation of the word "*manifold*." He thinks that we lose the idea of its original composition by calling it, as we generally do, "*mannifold*," and that it ought to be called "*many-fold*," as if it were two words. My reply would be, that the end proposed is a praiseworthy one, but I am afraid it will not justify the means used in attaining it—viz., the violation of common usage, which has stamped "*mannifold*" with its approval. I would remind him, that this is not the only word which suffers change of pronunciation when compounded. We call a "*vine-yard*," "*vinyard*": the man would be deservedly set down as a pedant who should do otherwise. We call a "*cup-board*" a "*cubboard*," a "*half-penny*" a "*haepenny*," and so of many other compound words. The great rule, I take it, in all such cases of conventional departure from the pronunciation of words as spelt, is, to do nothing which can attract attention. We naturally think somewhat less favourably than we otherwise should of a person who says "*vic-tu-al*," when the rest of the world say "*vital*;" "*med-i-cine*," when others say "*med-cine*;" "*ve-ni-son*," where we thought we should hear "*ven'son*." We commonly expect that such a man will be strong-willed, and hard to deal with in ordinary life: and I don't think we are often wrong.

The mention of unusual pronunciation reminds me that Mr. Moon in his pamphlet expresses a hope (these are his words, not mine) that, "as I so strongly advocate our following the Greeks in the pronunciation of their proper names, I shall be consistent, and never again, in reading the lessons, call those ancient cities, Samaria and Philadelphia, otherwise than *Samaria* and *Philadelphia*." The answer to this is very simple—viz., that I do not advocate the following of the Greeks in the pronunciation of their proper names in any case where English usage has departed from their pronunciation. This he might have gathered from the general spirit and tenor of my Essay. It is in cases where there is no such usage, and where the reader is thrown back on what ought to be his own knowledge of the form and composition of the name, that we are pained at discovering that one who ought to be able rightly to divide the Word of Truth, is not in the habit of consulting his New Testament in the original Greek.

But there is more to be said about the two rather unfortunate instances given by my critic. The

* The same correspondent thinks the adverb superfluous in the expression "*stand up*," and that the command would be better given by the verb alone. But here, again, the verb is not of itself sufficient, and completeness of meaning is given, as well as fulness of sound, by the addition of the adverb "*up*."

tendency of modern languages has been universally to shorten the last syllable but one in those names of cities which in Greek ended in *ia*. Alexandria is now called Alexandr^{ia}; Seleucia, Seleuc^{ia}; and Samaria and Philadelphia, Samar^{ia} and Philadelph^{ia}. But no such usage infringes the proper Greek pronunciation of Epanētus, Asyncritus, Patrōbas, Aristobulus, and the like. Of course, usage is not immutable. We now say Zabūlon, but the day may come when the stricter scholars may have overborne common usage, and we may say Zabūlon, which is right according to the Greek. When I was at school, the common practice was to pronounce the names of two of the Greek letters, as "*Epsilon*," and "*Omicron*:" now, such sounds are unknown in schools, and the right pronunciation, "*Epsilon*" and "*Omicron*," is universal.

Three correspondents have written about a Scripture name which was inadvertently left unnoticed in my last Essay. It is that of a person saluted in Rom. xvi. 9, and in our present Bibles spelt *U-r-b-a-n-e*. The common idea respecting this name is that it belongs to a woman, and most readers pronounce it as three syllables, *Urbané*. But it is simply the English for the Latin name *Urbanus*, in English, *Urbane*, or, as we now call it, *Urban*. The assumed name of the Editor of "The Gentleman's Magazine" has been time out of mind, Sylvanus Urban. The king's printers, who have made so many unauthorized alterations in the text of our Bibles, might with advantage drop out the final "*e*" from this word, and thus prevent the possibility of mistakes for the future.

The mention of the king's printers has reminded me of another matter which has been notified to me by no less than six correspondents, and forms the subject of one of Mr. Moon's caustic sentences. "You make," he says, "the assertion that the possessive pronoun '*its*' never occurs in the English version of the Bible. It is to be regretted that you have spoken so positively on the subject. Probably the knowledge of our translators' faithfulness to the original text, and the fact of there being in Hebrew no neuter, may have led you and others into this error. But look at Leviticus xxv. 5; 'that which groweth of *its* own accord,' and you will see that '*its*,' the possessive of '*it*,' *does* occur in the English version of the Bible."

The conjecture as to what it was that misled me and others in this case is singularly unfortunate as regards myself, for I am no Hebrew scholar. But the fact is that it is Mr. Moon, and not myself, that has been misled. What I stated, I stated because I knew it to be the fact: and it *is* the fact. "*Its*" does not occur in the English version of the Bible. Its apparent occurrence in the place quoted is simply due to the king's printers, who have modernised the passage. What is to be regretted is, that a gentleman who is setting another right with such a high hand, should not have taken the pains to examine the English version as it really stands, before printing such a sentence as that

which I have quoted. Setting it where he does, the last sentence in his pamphlet, and introducing it by "and now one word in conclusion," I suppose he means it for something very telling. And so it is, provided we duly appreciate *which way* it tells. But, as Mr. Thackeray has told us, "the critic must pretend to be the author's superior, or who would care for his opinion? And his livelihood is to find fault." I ought to add that the writer, in a letter to me since, justifies his mistake on the ground that if I intended to say that the word never occurs in editions published hundreds of years ago, I should have so expressed myself, and not have said "*in the English version of the Bible*," as by that expression every one understands me to mean the "English version of the Bible as we now have it." But surely this is more unfortunate still.

What I said was intended to illustrate the fact that "*its*" is a word of modern introduction. In support of this I said, "it was never used in the early periods of our language; nor, indeed, as late down as Elizabeth. It never occurs in the English version of the Bible." What words could more distinctly show that I was treating the matter as connected with the *date* of the introduction of the word, and that what he is pleased to call an edition published hundreds of years ago, is and must be our only authority in such an inquiry? But as to this edition published hundreds of years ago. There never has been more than one edition of our English authorised version: the alterations introduced have been made without legitimate authority.* On referring to the only authorised edition, King James's Bible, we find that Leviticus xxv. 5, stands thus: "That which groweth of it own accord of thy harvest, thou shalt not reap," &c. Now this is curiously corroborative of my statement, that there seems to have been a reluctance to attribute personality or possession to the neuter pronoun. The use of "*it*" for "*its*" is even now universal among the lower classes in parts of England. They say of a child, "It won't take *it* food;" of a dog, "It had lost *it* master;" and so on: the word "*it*" in such cases being of course only a clipped form of "*its*," testifying that there was a time when "*its*" had not come fully into use. So that the example by which my critic would demolish my character for accuracy, not only reflects his attempt on himself, but illustrates in a very striking manner that which I was endeavouring to show. †

* Certain emendations were made by Dr. Blayney in 1769, but no new edition has ever been authorised.

† It may be interesting to trace the words in Leviticus xxv. 5, through the earlier versions, and to their present form:

In the first Wycliffite version, about 1380, they stand—"thingis that the erthe frely bringeth forth."

In the second, about 1395—"thingis that the erthe bringith forth in fre wille."

In Tyndale, 1534, and Taverner, 1539—"the corn that groweth by it selfe."

In Coverdale's Bible, 1535—"what groweth of it selfe."

In Henry VIII.'s Bible, 1539, and the Bishops' Bible, 1568—"that which groweth of y^e owne accorde."

While upon the date of introduction of an expression, I may mention that since writing my former Essay, I have noticed the word "*party*" used for an individual, occurring in Shakspeare ("*Tempest*," act iii. sc. 2):

STEPHANO: How now shall this be compassed? Canst thou bring me to the party?

CALIBAN: Yea, yea, my lord; I'll yield him thee asleep, where thou may'st knock a nail into his head.

A correspondent who gives me his name vouches for the following anecdote. I own I had fancied it was an old story: but so many things related in Joe Miller have happened again within my own experience, that I must not too readily admit a doubt of my correspondent's accuracy. "My friend," he says, "happened to be present one Sabbath in a parish church some miles north of Aberdeen, the clergyman of which (a true Gael) read to his hearers a portion of the book of Daniel, containing the names 'Shadrach, Meshach, and Abednego.' The reverend gentleman finding some difficulty in delivering himself of these vocables, resolved not to attempt the task a second time, but simply referred to '*the three "poys" just mentioned.*'" In illustration, not of the habit of mispronouncing, but, what is worse, of misunderstanding, another correspondent assures me that he heard a man, pretending to be a teacher of the Gospel, preach on what he called "Religion in the arm-chair," his text being (1 Tim. v. 4), "*Let them learn first to show piety at home:*" where the word "*piety*," as the margin of the English Bible would have informed him, means merely "*kindness to their relations*," and has nothing to do with religion in the stricter sense.

Another correspondent is puzzled by my having said that a man who talks of Aristobölus in the lesson, is as likely as not to preach from St. Paul's, "*I know nothing by myself*," to show us that the apostle wanted divine teaching, and not to be aware that he meant he was not conscious of any fault. My correspondent cannot conceive how the words can have any other meaning, than that the apostle had no knowledge of his own. His difficulty (and I mention it because it may be that of many others besides him) is that he has missed the peculiar sense of the preposition "*by*," as here used. It bears the sense of "*of*," in the words "*I know no harm of him*." This is still in the midland counties, "*I know no harm by him*." We have a somewhat similar usage in the Prayer-book version of Ps. xv. 4, "*He that setteth not by himself*," i. e., is not self-conceited, setteth not store by himself, as we even now say. I have heard a parish clerk pronounce these last words, "*he that setteth not by himself*," in allusion, I suppose, to the

In the Geneva Bible, 1560, and King James's, 1611—"that which groweth of it owne accord."

In the Douay Bible, 1610—"the things that the ground shall bring forth of itself."

The first copy in our Cathedral Library in which I find "*its own accord*," is one published at Oxford in 1717.

Squire's pew. To return to "*I know nothing by myself*." The meaning is decided for us by the original Greek, which is simply, "I am conscious of no fault:" and it is plain that the words of the English version were so understood when they were first written; for Dr. Donne, in King James the First's time, preaches on them, and quotes them over and over again, in this sense.

I have had a very amusing letter, written anonymously, from the clergyman in the West of England to whom the verses were sent about the household of Stephanas. He comes to a rather curious conclusion from the fact of my having told the story in my former Essay. He infers that I was present, and that I made the verses. As this may be my only means of communicating with him, let me assure him this was not the case. I merely told the tale as 'twas told to me. He informs me the original lines were these:—

To-day you said ye know Stephanas,
This misconception, sir, doth pain us:
For it is Stephanas we know,
And beg that you will call him so.*

A writer in the "*English Churchman*" adds the following to many instances of mis-pronunciation of Scripture proper names. I strongly recommend Mr. Moon to adopt and teach them, that we may not too strongly advocate the "following the Greeks in their pronunciation." "Too well," says the writer in the "*Churchman*," "do I remember the city of *Colossé* pronounced *Coloss*, as if it were a word of only two syllables; the epistle to Philémon; '*the gainsaying of Core*' (one syllable), betraying that the speaker had no conception he was

* I have had two interesting communications from Cambridge, giving accurate details respecting "*Johnny Stittle*," whom I had mentioned in my former Essay as "a redoubtable preacher who used to hold forth at Cambridge in the chapel which was afterwards Robert Hall's, and now is the debating-room of the Union Society." This was what I had always heard in my day; but, it appears, such was not the fact. Stittle preached, not in the chapel now occupied by the Union Society, but in another chapel in the same (Green) street, which was taken down some years ago; and Robert Hall, not in either of those in Green Street, but in the Baptist Chapel in St. Andrew's Street. Hall and Stittle were contemporaries.

"Johnny Stittle" is mentioned in the Rev. Abner Brown's "*Recollections of Rev. Chas. Simeon*," Introduction, p. 13, where he is described as a "day labourer," and it is said that Mr. Simeon thought well enough of him to encourage him by pecuniary assistance.

In a memoir of Rowland Hill by Mr. Jones, are the following notices of Stittle:

"During Mr. Hill's residence at Cambridge he was much attached to '*Johnny Stittle*,' one of Mr. Berridge's converts. He was naturally a gifted man, though, like his patron, he moved in his own orbit. He preached for many years in Green Street, Cambridge, and died in 1813, in his 87th year.

"As Mr. Hill was on his way to Duxford to preach for the Missionary Society, he suddenly exclaimed, 'I must go to Cambridge, and see the widow of an old clergyman who is living there, for I have a message to leave with her.' On being asked if the message was important, he replied, 'Yes, sir, I want the old lady—who will soon be in heaven—to give my love to Johnny Stittle, and to tell him I shall soon see him again.'"

talking of the person who in the 16th Chapter of Numbers is designated 'Korah.'"

I have also a complaint sent me of a clergyman who insists on always saying "*Achaicus*." Really, what with *Stephānus* and *Achaicus*, occurring together, Mr. Moon seems likely soon to receive his wish, that these names may be pronounced otherwise than the Greeks pronounced them. The trio only wants *Fortunātus* to complete it.

The same writer stigmatises the expression "*different to*," which he shows (I own I was not aware of it) has become very common of late. Of course such a combination is entirely against all reason and analogy. "Compare," says this writer, "any other English words compounded of this same Latin preposition, for example, '*distant*,' '*distinct*,' and it will be seen that '*from*' is the only appropriate term to be employed in connection with them." The same will be seen, I venture to add, by substituting the verb "*to differ*" in the places where "*different*," which in fact is only its participle, is thus joined. For instance, in the sentence quoted from Mr. Taylor's *Convent Life in Italy*, "Michael Angelo planned a totally different façade to the existing one," make this substitution, and read it, "Michael Angelo planned a façade which totally differed to the existing one," and the error will be immediately seen.

As might have been expected, I have been found a good deal of fault with in the matter of "*humble*," and some very curious things have been said about the question. It has been asserted by one correspondent that the alliteration in the words, "*humble and hearty*," is as perfect without the aspirate on the former word, as with it; and I am told that the fact of the occurrence of "*thy humble servants*," and "*thine unworthy servants*," decides nothing, because we have "*thy honour and glory*." But be it observed, that in order to answer my argument, an instance ought to have been produced, not of a *different* unaspirated vowel with "*thy*" before it, but of the *same* unaspirated vowel; because some vowels have in themselves sounds more or less nearly approaching to the power of a consonant, and therefore enduring "*thy*" and "*a*" before them. The long "*u*" has this power; we may say "*a unit*," "*a university*," because the first syllable sounds as if it began with "*you*," and "*y*" has here the power of a consonant. But the short "*u*," as in "*humble*," is not one of those vowels which require a consonant to enunciate them: one could not say "*a unlearned man*," and I must therefore still maintain that the occurrence of "*thy humble*," and "*thine unworthy*," shows us that the "*h*" was meant to be aspirated in the former case, as we know it was not in the latter.

A correspondent questions the propriety of the common use of "*an*" before "*one*," in the phrase "*such an one*." I bring this forward not with any idea of deciding it, but because in my examination of the usage of our translators of the Bible, a curious circumstance has come to light. They

uniformly used "*such a one*," the expression occurring about thirteen times. In the New Testament, the king's printers have altered it throughout to "*such an one*:" in the Old Testament, they have as uniformly left it as it was. It seems to me that we may now, in writing, use either. In common talk, I should always naturally say "*such a one*," not "*such an one*," which would sound formal and stilted.

The verb to "*progress*," is challenged by one of my friends as a modern Americanism. This is not strictly accurate. Shakspeare uses it in *King John*, act v. sc. 2:

Let me wipe off this honourable dew,
That silverly doth *progress* on thy cheeks.

But you will observe that the line requires the verb to be pronounced *progrēss*, not *progrēss*, so that this is perhaps hardly a case in point, except as to the word, a verb formed on the noun *progress*.

Milton also uses such a verb, in the magnificent peroration of his "Treatise of Reformation in England." I cannot forbear citing the whole passage, as it may be a relief to my readers and to myself in the midst of these verbal inquiries:

"Then amidst the Hymns and Hallelujahs of saints, some one may perhaps be heard offering at high strains in new and lofty measures, to sing and celebrate thy divine mercies, and marvellous judgments in this land throughout all ages; whereby this great and warlike nation, instructed and inured to the fervent and continual practice of Truth and Righteousness, and casting far from her the rags of her old vices, may press on hard to that high and happy Emulation, to be found the soberest, wisest, and most Christian people at that day, when Thou the Eternal and shortly expected King, shalt open the clouds to judge the several kingdoms of the world, and distributing national honours and rewards to religious and just commonwealths, shalt put an end to all earthly Tyrannies, proclaiming thy universal and mild Monarchy through heaven and earth. Where they undoubtedly, that by their labours, counsels and prayers, have been earnest for the common good of Religion and their country, shall receive above the inferior orders of the Blessed, the regal addition of Principalities, Legions, and Thrones into their glorious Titles, and, in supereminence of beatifick vision, *progressing* the dateless and irrevoluble circle of Eternity, shall clasp inseparable Hands with Joy and Bliss, in *over measure* for ever."

It may be noticed again that Milton's use of the verb is not exactly that which is become common now. He seems to make it equivalent to "*moving along*," or "*moving throughout*," in an active sense. These favoured ones are to *progress* the circle of Eternity, i.e., I suppose, to revolve for ever round and round it. The present usage makes the verb neuter; to *progress* meaning to advance, to make progress. I can hardly say I feel much indignation against the word, thus used. We seem to want it; and if we

do, and it does not violate any known law of formation, by all means let us have it. True, it is the first of its own family; we have not yet formed *aggress*, *regress*, *egress*, or *retrogress*, into verbs; but we have done in substance the same thing, by having admitted long ago the verbs *suggest*, *digest*, *project*, *object*, *reject*, *eject*; for all these are formed from the same part of the original Latin verbs, as this "progress" on which we have been speaking.

A correspondent finds that the newspapers are in the habit of using "predicate" where they mean "predict." I have not observed this; but it may be well to say, that to *predicate* is simply to affirm this or that of anything, whereas to *predict* is to foretell a future event.

There are certain cases where either word might be used without a fault. And such is the very instance cited by my correspondent:—"It is impossible to predicate what the result will be." The writer very likely meant, to *predict*; but he might have intended to say, that no one can *predicate* this or that probable result. If so, he expressed himself clumsily, but did not fall into the error complained of.

"If" for "whether," is another mistake which I am asked to point out. But this usage, though it may not be according to our modern habit, is found in our best writers; and I cannot see that there is anything to complain of in it. Under the word "if," in Johnson, we have, cited from Dryden:

Uncertain if by augury or chance;

And from Prior,

Doubting if she doubts or no.

We also read (Gen. viii. 8) that Noah "sent forth a dove from him, to see if the waters were abated from off the face of the ground."

Another of my correspondents is offended with "seldom or never," and prefers "seldom, if ever." It seems to me that the two express the same idea in slightly differing ways, but that both are perfectly legitimate. The one is analogous to "very little, or not at all," the other to "very little, if at all."

"Like," used as an adverb, is also brought under my notice, and the complaint in this case is not without reason. "Like I do now," "like he was," "like we are," are quite indefensible, and are avoided by all careful speakers and writers. The mistake has been occasioned by the legitimate use of "like" as an adjective at the beginning of a sentence, where it means "like to." You may say, "Like David, I am the youngest of my family;" but you may not say, "Like David was, I am the youngest of my family."

Nouns of number are also proposed as a subject for treatment. I am supposed to have written incorrectly "When the band of French Guides were in this country;" and the opinion is supported by reminding me that we say "There was a large congregation," not "there were a large congregation."

Most true: and from the consideration of this example we may derive something like a rule in such cases. In saying "there was a large congregation," I am speaking of the assembly as a whole. If I were saying anything which suggested the idea of the individuals composing it, I should use, not the singular verb, but the plural. I should hardly say, "the congregation was not all of the same opinion," but "the congregation were not all of the same opinion." The slightest bias either way will influence a writer, when using such words, towards a singular or a plural verb. I should say, that in the case complained of, perhaps it was the fact of "Guides" in the plural being the word immediately preceding the verb, that induced me to put it in the plural; or perhaps the knowledge that I was about to speak of the band, throughout the following sentences, as "they," "the Frenchmen," &c.

A correspondent, speaking of that part of my former Essay where I had found fault with "smelling sweetly," "looking sweetly," &c., thinks that I have fallen into the error myself in writing "The sentence would read rather oddly:"—and yet I could not have said "would read rather odd." The fact seems to be, that in this case I was using the verb "read" in a colloquial and scarcely legitimate sense, and that the adverb seems necessary, because the verb is not a strict neuter-substantive like "smell" or "look"; it conveys the meaning "would strike people, when read: and then I must say, rather oddly." For whatever reason, the adverb does seem necessary here.

But I must pass on to a matter on which I shall have a good deal to say—the arrangement of words and clauses in sentences. Mr. Moon, in the pamphlet which he has done me the honour to direct against my former Essay, has made the violation of certain conventional rules for the arrangement of words and clauses to be the head and front of my offending. He begins his work by saying, "I was surprised to observe inaccuracies in the structure of your sentences, and more than one grammatical error." That such inaccuracies may exist, I should be the last to deny; but seeing that he and I differ entirely as to the rules of arrangement of words and clauses, it may be worth while to devote some time to the subject, and to show, at all events, that I have something to say, right or wrong, in favour of certain sentences which he condemns. It will hardly be possible to do this without incidentally remarking on his pamphlet itself. I must say that when I first looked it through, it reminded me of the old story of the attorney's endorsement of the brief:—"No case: abuse the plaintiff." For the objections brought against the matter of my Essay are very few, and by no means weighty; but he has spent almost all his labour in criticism of my style and sentences. Being himself eminently a purist in English writing, maintaining, as he does, that every sentence ought, by its correctness and perspicuity, to preclude the possibility of a mistake on the part of even the

lullest reader, he opens his preamble thus:—"The subject of your Essay naturally courted attention to the language you had employed." What he meant to say was, "The circumstance, that your Essay itself dealt with language, naturally directed attention to the language you had employed." But I must ask—although I shall use a term which he forbids me ever to mention again,—was there ever such a piece of "slipshod English" as his sentence? The subject of my Essay was "the Queen's English." That subject did not court attention to the language I had employed; but the fact of my having written on that subject. And then, "courted attention to the language you had employed." Surely, a thing or a person can be only said to court attention to itself, not to some other thing or person. He means "directed attention to the language you had employed." Now, I am not purposing to criticise Mr. Moon's English as he has criticised mine; but only give you this sample just by way of showing, that we have not to deal with a very formidable judge of perspicuous English.

He goes on to state this as the *gravamen* of his charge against me:—"When by your violations of syntax, and your defence of those violations, you teach that Campbell's 'Philosophy of Rhetoric,' Kames' 'Elements of Criticism,' and Blair's 'Lectures on Rhetoric' and 'Belles Lettres' are no longer to be our guides in the study of the English language, no apology is needed from me for asking the public whether they will endorse the opinion that these hitherto acknowledged authorities are to be superseded." And further on, he adds to these, Murray's "Grammar," Dr. Irving's "Elements of English Composition," and Dr. Jamieson's "Grammar of Rhetoric."

I really ought to be quite overwhelmed, and to shrink away abashed, at such an array of venerable Scotchmen.* To some of them I have never had the honour of being introduced: and the recollections which I have of those with whom I once made acquaintance at school are not of the most agreeable kind.

I have a very strong persuasion that common sense, ordinary observation, and the prevailing usage of the English people, are quite as good guides in the matter of the arrangement of sentences as the rules laid down by rhetoricians and grammarians. And I must freely acknowledge to Mr. Moon, that not one of the gentlemen whom he has named has ever been my guide, in whatever study of the English language I may have accomplished, or in what little I may have ventured to write in that language. The one rule, of all others, which he cites from these authorities, and which he believes me to have continually violated, is this: that "*those parts of a sentence which are most closely connected in their meaning, should be as closely as possible connected in*

position;" or, as he afterwards quotes it from Dr. Blair, "*A capital rule in the arrangement of sentences is, that the words or members most nearly related should be placed in the sentence as near to each other as possible, so as to make their mutual relation clearly appear.*"

Now doubtless this rule is, in the main, and for general guidance, a good and useful one: indeed, so plain to all, that it surely needed no inculcating by these venerable writers. But there are more things in the English language than seem to have been dreamt of in their philosophy. If this rule were uniformly applied, it would break down the force and the living interest of style in any English writer, and reduce his matter to a dreary and dull monotony. For it is in exceptions to its application, that almost all vigour and character of style consist. Of this I shall give abundant illustration by-and-by. Meantime let me make some remarks on two very important matters in the construction of sentences: the requirements of *emphasis*, and the requirements of *parenthesis*; of neither of which has Mr. Moon, apparently, any idea.

EMPHASIS means the stress, or force of intonation, which the intended sense requires to be laid on certain words, or changes, in a sentence. Very often (not always) we can indicate this by the form and arrangement of the sentence itself. Some languages have far greater capacities this way than our own; but we are able commonly to do it sufficiently for the careful and intelligent reader.

Now, how is this done? A sentence arranged according to the rule above cited from Mr. Moon and Dr. Blair, simply conveys the meaning of its words in their ordinary and straightforward construction; and in English, owing to the difficulty, often felt, of departing from this arrangement, we must very generally be contented with it, at the risk of our words not conveying the fullness of the meaning which we intended. For let me explain, that whenever we wish to indicate that a stress is to be laid on a certain word, or clause, in a sentence, we must do it by taking that word or that clause out of its natural place which it would hold by the above rule, and putting it into some more prominent one. A substantive, for example, governed by a verb, is in a subordinate position to that verb; the mind of the reader is arrested by the verb, rather than by the substantive; so that if for any reason we wish to make the substantive prominent, we must provide some other place for it than next to the verb which governs it. Take, as an example, the words "*he restored me to mine office*": where the words are arranged in accordance with Mr. Moon's law, and the idea expressed is the simple one of restoration to office. But suppose a distinction is to be made between the narrator, who had been restored to office, and another man, who had been very differently treated. Of course we might still observe Mr. Moon's rule, and say "He restored me to mine office, and he hanged him;" but the sentence becomes thus (and it is to this that I request

* I am aware that Lindley Murray was an American by birth, and lived and wrote in England; but of his Scottish extraction I suppose there can be no doubt.

your attention) a very tame one, not expressing the distinction in itself, nor admitting of being so read as to express it sharply and decisively. Now, let us violate Mr. Moon's rule, and see how the sentence reads: "*Me he restored unto mine office, and him he hanged.*" Thus wrote our translators of Genesis (xli. 13), and they arranged the words rightly. No reader, be his intelligence ever so little, can help reading this sentence as it ought to be read.

And let there be no mistake about this being a violation of the rule. The words nearest connected are "*restored,*" and "*me,*" which it governs: "*hanged,*" and "*him,*" which it governs. When I take "*me*" out of its place next "*restored,*" and begin the sentence with it, letting the pronoun "*he*" come between them, I do most distinctly violate the rule, that those words which are most nearly connected in the sense should also be most nearly connected in the arrangement. I have purposely chosen this first instance of the simplest possible kind, to make the matter clear as we advance into it. Let us take another. St. Peter (Acts ii. 23) says to the Jews, speaking of our Lord, "*Him, being delivered by the determinate counsel and foreknowledge of God, ye have taken, and by wicked hands have crucified and slain.*" Here we have the pronoun "*Him*" placed first in the sentence, and at a considerable distance from the verbs that govern it, with the clause, "*being delivered by the determinate counsel and foreknowledge of God,*" inserted between. Yet, who does not see that the whole force of that which was intended to be conveyed by the sentence is thus gained, and could not otherwise be gained? Arranged according to Mr. Moon's rule, the sentence would have been, "*Ye have taken Him, being delivered by the determinate counsel and foreknowledge of God, and by wicked hands have crucified and slain Him,*" and the whole force and point would have been lost.

And as this necessity for bringing into prominence affects the position of words in sentences, so does it also that of clauses. A clause is often subordinate in the construction to some word or some other clause; while it is the object of the writer to bring the subordinate, not the principal clause, into prominence. And then, as we saw with regard to words just now, the clause which is inferior in constructive importance is brought out and transposed, so that the reader's attention may be arrested by it. Or perhaps the writer feels the necessity of noticing, as he passes on, certain particulars which will come in flatly, and spoil the balance of the sentence, if reserved till their proper place. Such passing notices are called "*parentheses,*" from a Greek word, meaning *insertion by the way*; and every such insertion is a violation of the supposed universal rule of position.

Thus, for example, I am narrating a circumstance which, when it happened, excited my astonishment. Undoubtedly the natural order of constructing the

sentence would be to relate what happened first, and my surprise at it afterwards. "I was looking at a man walking on the bank of the river, when he suddenly turned about, and plunged in, to my great surprise." But who does not see the miserable way in which the last clause drags behind, and loses all force? We therefore take this clause out of its place, and insert it before that to which it applies, and with which it ought to be constructed: we word the sentence thus: "I was looking at a man walking on the bank of the river, when, to my great surprise, he suddenly turned round, and plunged in." I need not further illustrate so common a transposition: I will only say that it produces instances of violation of the supposed rule of arrangement in almost every extant page of good English; and in common conversation, every day, and all day long.

Sometimes these insertions are such obvious interruptions to the construction, that they are marked off by brackets, and it is thus made evident that the sentence is intended to flow on as if they did not exist; but far more frequently they are without any such marks, and the common sense of the reader is left to separate them off for himself. It is impossible to write lucidly or elegantly without the use of these parenthetical clauses. Care ought of course to be taken that they be not so inserted as to mislead the reader, by introducing the possibility of constructing the sentence otherwise than as the writer intended. But at the same time it may be fearlessly stated, that not one of our best writers has ever been minutely scrupulous on this point: and that there does not exist in our language one great work in prose or in poetry, in which may not be found numerous instances of possible misconstruction arising from this cause. And this has not been from carelessness, but because the writer was intent on expressing his meaning in good manly English, and was not anxious as to the faults which casting and captious critics might find with his style. Mr. Moon quotes from one of his high authorities, Lord Kames, a rule that "*a circumstance ought never to be placed between two capital members of a sentence: or if so placed (I suppose he means, if it be so placed), the first word in the consequent member should be one that cannot connect it with what precedes.*"

Any one on the look out for misunderstanding may convince himself by trial, that there is hardly a page in any English book which will not furnish him with instances of violation of this rule. The principal example which Mr. Moon gives from my Essay is the following:—I have said that certain persons "fall, from their ignorance, into absurd mistakes." The parenthetical clause here is "from their ignorance." Mr. Moon would amend it thus—"certain persons, in consequence of their ignorance, fall into absurd mistakes." Now this is not what I wanted to say; at least, it is a most blundering and roundabout way of expressing it. The purpose is, to bring the fact stated into prominence: and

this is done by making the verb "*fall*" immediately follow its subject, "*certain persons.*" According to Mr. Moon's arrangement, it is the fact of what is about to be stated being a consequence of their ignorance, which is put into the place of prominence and emphasis. Very well, then: having stated that they *fall*, and being about to say *into what*, it is convenient, in order to keep the sentence from dragging a comparatively unimportant clause at its end, to bring in that clause, containing the reason of the fall, immediately after the verb itself. To my mind, the clause, in spite of the possible ambiguity, reads far better with "*from*" than with "*in consequence of,*" which is too heavy and lumbering. The "*possibility of a ludicrous interpretation*" which he speaks of—the falling from ignorance as a man falls from grace, or falls from virtue, seems to me to be effectually precluded in the mind of any man who happens to remember that ignorance is neither a grace nor a virtue. Really, we do not write for idiots: and it must require, to speak in the genteel language which some of my correspondents uphold, a most abnormal elongation of the auricular appendages, for a reader to have suggested to his mind a fall from the sublime height of ignorance down into the depth of a mistake.

I have given a fair sample of the instances of ambiguity which Mr. Moon cites out of my Essay. The others are, if possible, even more puerile than this. Can it be believed that, quoting this sentence from me, "Commas are inserted by the compositors without the slightest compunction," he asks, how can we certainly tell that the words, "without the slightest compunction," refer to "inserted"? and adds, "They seem, by the order of the sentence, to describe the character of the compositors."

Can it be believed, again, that on the words, "the by-rules, to compare small things with great, which hang up framed at the various stations," he asks, "what are the great things which hang up framed at the various stations?" Again, for this is all directly to our present purpose, let us see how he would amend the sentence. "It would," he says, "have been better thus: '*or, to compare small things with great, the by-rules which hang up framed at the various stations.*'" Now this is a precious example of the way in which our sentences would be spoiled if left to the mercy of these philosophy-of-rhetoric gentlemen. The parenthetical clause, "*to compare small things with great,*" is introduced solely as apologetic for the word, "*by-rules.*" As Mr. Moon constructs the sentence, this clause applies to something not yet mentioned. And if any reader really ever thinks that the sentence is meant to be read, "to compare small things with great which hang up, &c.," all I can say is, that his ears must be at least a foot longer than those of the former gentleman, who fell off his ignorance into a mistake.

I said it was not my purpose to tire my reader's patience by replying at length to Mr. Moon. There are, however, two or three points more in his tract

well worth noticing for the illustrations which they will furnish on matters connected with our present subject. Mr. Moon quotes, with disapprobation, my words, where I join together "would have been broken to pieces in a deep rut, or come to grief in a bottomless swamp." He says this can only be filled in thus, "would have been broken to pieces, . . . or would have been come to grief in a bottomless swamp:" "for," he adds, "a part of a complex tense means nothing without the rest of the tense." This wonderful saying, being interpreted by his own filling up of my sentence (for his words have no meaning of their own, "*part of a tense*" being simply nonsense), seems to mean, that the whole of the auxiliary verbs which belong to the first verb in a sentence must also belong to all other verbs which are coupled to that first verb. Now, is this so? I do not find that our best writers observe any such rule. In Deut. vi. 11, Israel is admonished, "*When thou shalt have eaten and be full, beware lest thou forget the Lord.*" We all know that this means "When thou shalt have eaten and shalt be full." But, according to Mr. Moon, it must be filled up, "When thou shalt have eaten and shalt have be full."

Again, he finds fault with me for calling "*the mispronunciation of Scripture proper names, that fertile source of mistakes among the clergy.*" "It is not," says he, "the mispronunciation of Scripture proper names which is the source of mistakes: the mispronunciation of Scripture proper names constitutes the mistakes themselves of which you are speaking. And a thing cannot at the same time be a source, and that which flows from it. It appears that what you intended to speak of was, that fertile source of mistakes among our clergy, Scripture proper names, the mispronunciation of which is quite inexcusable." Again I must beg Mr. Moon's pardon. I did not mean to say anything half so silly as that which he puts into my mouth. Fancy *Scripture proper names being a source of mistakes!* They are not the source of the mistakes, they are the material in which they are made. The source, or origin, of the mistakes is, the clergy not knowing how to pronounce the names, and consequently their habit of mispronouncing them, which I called, speaking generally, their mispronunciation of them.

On his page 18 the following occurs:—"In that elegant sentence of yours about 'Adam's first,' you thus express yourself: 'What a history, it has been well said, is this earth's atmosphere, seeing that all words spoken, from Adam's first until now, are still vibrating on its sensitive and unresting medium.' Query, on the sensitive and unresting medium of Adam's first? And then, first what? First child, or first word? Of course the latter. Still, what nonsense; from a word till a time; from Adam's first till now. Pray never talk of other people's slipshod English after having published such sentences as these." Now, I don't know whether anything by way of a criticism was ever more childish than this. Who does not see that "from Adam's first till now" is simply a note of

time, parenthetically inserted? And then, as to the silly objection, that the expression is *from a word till a time*. Pray may not a word, or an act, or an event, be a *terminus a quo*, as we call it, as well as a date? Did Mr. Moon never read the words of St. Peter in Acts i. 22, "Beginning from the baptism of John unto that same day that He was taken up from us?"

By the way, this last "he" must mean *John*, by Mr. Moon's rule. And you might, by applying to any chapter in the Bible the same treatment, which he has applied to my Essay, show it to be full of ambiguities, which no one in all these generations has ever found out. Take examples from Acts xxii., which happened to be our second lesson on the morning when I received his pamphlet. In verse 4, I read, "*And I persecuted this way unto the death.*" This violates the supposed law of arrangement, and falls under the charge of ambiguity. The gospel may (?) be understood from it to be a way unto death instead of a way unto life. Take again verse 29, "*Then they departed from him which should have examined him.*" Now we all know what this means. It is a more neat way of expressing what would be Mr. Moon's sentence, "*Then they which should have examined him departed from him.*" But here again the captious and childish critic may find ambiguity—"Then they departed—from him which should have examined him."

I must not, however, forget, that Mr. Moon finds it convenient to depreciate the language and grammar of our authorised version of Scripture. "Its doctrines," he says, "being divine, are, like their Author, perfect: but the translation, being human, is frequently obscure." I may venture to tell him, that if the language which conveys doctrines be obscure,—however divine those doctrines may be, they will necessarily be obscure also. And I would recommend him to try the experiment of amending that language. He may then perhaps find that what the translators themselves once said is true. A story is told, that they had a recommendation from a correspondent to alter a certain word in their version, giving *five* sufficient reasons for the change. They are said to have replied that they had already considered the matter, and had *fifteen* sufficient reasons against the change. I think if Mr. Moon can bring himself to consider reasonably any passage in which the English grammar of our authorised version appears doubtful, he will find himself in the same predicament as this correspondent of the translators. I have often tried the experiment, and this has generally been the result. Mind, our present question is not that of their having adequately translated the Greek, which he cunningly tries to make it to be, but whether or not they wrote their own language grammatically and clearly.

Still, lest I should seem to him to be a "man of one book only," I will give him, from our greatest English writer, an instance (from among many) of what he would call a similar ambiguity. In the

"Two Gentlemen of Verona," act i. scene 2, Julia says:—

O hateful hands, to tear such loving words!
Injurious wasps, to feed on such sweet honey,
And kill the bees that yield it with your stings.

According to Mr. Moon, we ought to understand this as saying that the bees yield the honey by means of the wasps' stings.

But surely we have had enough of Mr. Moon and his rules. All I would say on them is, the less you know of them, the less you turn your words right or left to observe them, the better. Write good manly English; explain what you mean, as sensible intelligent men cannot fail to understand it, and then, if the rules be good, you will be sure to have complied with them; and if they be bad, your writing will be a protest against them.

Much has been said by my various correspondents about the placing of adverbs and other qualifying terms in respect of the verbs or nouns with which they are connected; and the dispute has turned especially on the situation of the adverb "*only*," with regard to its verb. "*Did you see a man and a woman?*" "*No; I only saw a man.*" This is our ordinary colloquial English. Is it wrong? Of course the pedant comes down on us, and says, "Yes; it is wrong. You don't want your adverb '*only*' to qualify your act of seeing, but to qualify the number of persons whom you saw. The proper opposition to '*I only saw a man*' would be '*I saw and heard a man*,' or '*I saw and touched him.*'" So far the pedant; now for common sense. Common sense at once replies, "I beg the pedant's pardon; he says I didn't want the adverb '*only*' to qualify my act of seeing. I say, I did. For what was the act of seeing? The two things to be opposed are two acts of seeing. Seeing a man, and seeing a man and a woman. It was not the same sight. I only performed the one; I did not go further, and perform the other. I only saw a man; I did not see a man and a woman." Of course the other way is right also, and, strictly speaking, the more technically exact of the two; but it by no means follows that the more exact expression is also the better English. Very often we cannot have exactness and smoothness together. Wherever this is the case, the harsher method of constructing the sentence is, in colloquial English, abandoned, even at the risk of exactness and school rules. The adverb "*only*," in many sentences where strictly speaking it ought to follow its verb and to limit the objects of the verb, is in good English placed before the verb. Let us take some examples of this from the great storehouse of good English, our authorised version of the Scriptures. In Num. xii. 2, we read, "hath the Lord only spoken by Moses? hath He not spoken also by us?" According to some of my correspondents, and to Mr. Moon's pamphlet, p. 12, this ought to be "Hath the Lord spoken only by Moses?" I venture to prefer very much the words as they stand. Again, Ps. lxii. 4, "They only con-

sult to cast him down from his excellency ;" *i. e.*, their consultation is on one subject only, how to cast him down. You see the account of the matter before us is just this : I may use my adverb "*only*" where two things are spoken of which are affected by the same action, to qualify the one as distinguished from the other, or I may, if I will, separate the action into two parts, the one having regard to the one thing acted on, and the other having regard to the other ; and I may make use of my adverb to qualify one part of the action as compared with the other. If I say "*I will state only one thing more,*" I mean, that being about to state, I will confine that action to one thing and not extend it to any more ; if I say "*I will only state one thing more,*" I mean that all I will do, is, to make one statement, not more. But our gentlemen with their rules never look about to see whether usage is not justified ; they find a sentence not arranged as their books say it ought to be, and it is instantly set down as wrong, in spite of the common sense and practice of all England being against them.

But the adverb "*only*" is not the only word whose position is thus questioned : "*both*" is another. This word, we are told, should always be placed strictly before the former of the words to which it belongs in the sentence, not before the verb or noun which applies equally to the two. Thus, if I say "*They broke down both the door of the stable and of the cellar,*" I am charged with having violated the rules of good English. The pedant would have it, "*They broke down the door both of the stable and of the cellar.*" Now, to my mind, the difference between these two sentences is, that the former is plain colloquial English : the latter is harsh and cramped, and could not have been written by a sensible man, but only by a man who thought less about conveying the sense of what he said, than about the rules by which his expression should be regulated. But let us see how the great masters of our English tongue wrote. Let us balance Shakspeare against Lindley Murray. In the "*Tempest,*" act i. scene 2, Prospero tells Miranda that the usurping Duke of Milan, her uncle,

Having both the key
Of officer and office, set all hearts i' th' state
To what tune pleased his ear.

This is, of course, a clear violation of the rule ; according to which the words ought to have run, "*having the key of both officer and office.*"

As connected with the question of the arrangement of words, I may mention that I have been in controversy, first and last, with several people, while I have been engaged on my edition of the Greek Testament, about the expression "*the Three first Gospels.*" My correspondents invariably maintain that this expression, which I always use, must be an oversight, and that I ought to say "*the first Three Gospels.*" I should like to argue this out ; and the present seems a good opportunity for doing so.

There are Four Gospels, as we all know. And

such is the distinctive character of the three which are placed first, as compared with the one which is placed last, that it often becomes necessary to speak of the three, and the one, in two separate classes. It is in doing so that I say "*the Three first Gospels,*" and my correspondents want me to say "*the first Three Gospels.*" Which of the two is right ? or, if both are right, which of the two is the better ?

My view is this. The whole number is divided into two classes : the *first* class, and the *last* class. To the former of these belong three : to the latter, one. There are three that are ranged under the description "*first.*" and one that is ranged under the description "*last.*" Just in this way are the two classes spoken of in that saying of our Lord, "There are last which shall be first, and there are first which shall be last." (Luke xiii. 30.) It is not necessary that *one only* should be spoken of as first, and *one only* as last, as this quotation shows. The whole class is first, as compared with the whole other class, which is last. Of twelve persons I may make two classes, and speak of the *five first*, and the *seven last*. This is a correct and logical way of speaking. The opposition between the two classes is as strict and complete, as when I say that of twelve men there are five tall and seven short. If then I wish to divide twelve men into two classes, I say, and I maintain I say rightly, *the five first and the seven last*. If I wish to divide the four Gospels into two classes, I say, and maintain I say rightly, *the three first Gospels, and the last Gospel*.

Now let us try the correctness of the other expression, "*the first three Gospels.*" Used in common talk, it would of course convey the same idea as the other. But that is not our present question. Our question is, which of the two is the more precise and correct ? When I say "*the first three,*" the idea presented to the mind is, that I am going to speak of *another three*, which shall be set in contrast to it. The proper opposition to "*a tall man*" is "*a short man,*" not a short stick. When therefore I take twelve men, and, dividing them into two classes, speak of the tall five and the short seven, I may be intelligible, but I certainly am not speaking precisely nor properly. And so when I take four Gospels, and, dividing them into two classes, speak of "*the first three,*" and "*the last one,*" I may be complying with technical rules, but I maintain that I am not complying with the requirements of common sense, and therefore neither with those of good English.

The next point which I notice shall be the use of the auxiliaries "*shall*" and "*will.*" Now here we are at once struck by a curious phenomenon. I never knew an Englishman who misplaced "*shall*" and "*will*" : I hardly ever have known an Irishman or a Scotchman who did not misplace them sometimes. And it is strange to observe how incurable the propensity is. It was but the other day that I asked a person sprung of Irish blood whether he would be at a certain house to which I was going

that evening. The answer was, "I'm afraid I won't." Yet my friend is a sound and accurate English scholar, and I had never before, during all the years I had known him, discovered any trace of the sister island.

In attempting to give an explanation of our English usage, I may premise that it is exceedingly difficult to do so. We seem to proceed rather on instinct, than by any fixed rule. Yet instinct, in rational beings, must be founded on some inherent fitness of things; and examination ought to be able to detect that fitness. Let us try to do this, though it may be difficult, in the case before us.

The simplest example that can be given is "I will." Now this can have but one meaning. It can only be used as expressing determination: only, where the will of the person speaking is concerned. "Wilt thou have this woman to thy wedded wife?" Answer, "I will." We cannot use "I will," where a mere contingent future event is concerned. We cannot use "I will" of anything uncertain, anything about which we hope or fear. "Help me, I'll fall," if strictly interpreted, would be an entreaty to be saved from an act of wilful precipitation. "I fear I won't" is an impossible and unmeaning junction of terms. If it meant anything, it could only be, "I fear that when the time comes, my power of volition will be found too weak for its work." But this is obviously not what it is intended to mean. The account then of "I will" seems very simple.

Now, what is "I shall?" In its ordinary use, it just takes those cases of things future, where "I will" cannot be said: those cases where the things spoken of are independent of our own will. "Next Tuesday I shall be twenty-one"—an event quite out of my own power. So far, all is plain. But there is a case of "I shall" which somewhat complicates the matter. We are in the habit, when announcing something which we positively mean to do, to speak of it as if it were taken, so to say, out of the region of our own will, and placed among things absolutely certain: and in such cases we turn "will" into "shall." The traveller meets with incivility, or he cannot find his luggage, at the station. He breaks forth, in angry mood, "I shall write to the 'Times' about this,"—and he means the station-master to conclude that his writing is as certain as if it were already done. The "shall" is intended to elevate the "will" into the category of things indisputable. So far then for "will" and "shall" when used in the first person. But how when used in the second? Let us take "You will." "You will" is used when speaking to another person of a matter entirely out of the speaker's power and jurisdiction. "You will be twenty-one next Tuesday." "If you climb that ladder you will fall." This is the ordinary use. Here again there is an exception, which I cannot well treat till I have spoken, of "You shall." "You shall" or "You shall not" is said to another, when the will of the speaker compels that which is spoken of. "Thou

shalt love the Lord thy God." "Thou shalt not steal." The exceptions to both these usages may be stated thus, and they are nearly related to that of which I spoke when on the first person. A master writes to his servant, "On the receipt of this you will go," or "you will please to go," "to such a place." This is treating the obedience of the servant as a matter of certainty, sure to follow of course on his lord's command. The exception in the use of "shall" is when we say, for instance, "If you look through History, you shall find that it has always been so," and the account of it seems to be, that the speaker feels as perfect a certainty of the result, as if it were not contingent, but depended only on his absolute command.

It remains that we consider the words "will" and "shall" as applied in the third person, said of persons and things spoken about. And here, what has already been said will be a sufficient guide in ordinary cases. For all announcements of common events foreseen in the future, "will" is the word to be used. "I think it will rain before night." "Tomorrow will be old May-day." We may sometimes use "shall," but it can only be in cases where our own will, or choice, or power, exercises some influence over the events spoken of: as for instance, "The sun shall not set to-night before I find out this matter." "Next Tuesday shall be the day." Notice, you would not say, "Next Tuesday shall be my birthday:" you must say, "Next Tuesday will be my birthday:" because that is a matter over which you have no control: but the Queen might say, "Next Tuesday shall be my birthday:" because she would mean, "shall be kept as my birthday," a matter over which she has control.

There are some very delicate and curious cases of the almost indifferent usage of the two auxiliary verbs. Take this one, "If he will look, he will find it to be so." Here we use the first "will" in the sense of "choose to:" "If he please to look." But the second has its mere future use: "he will find that it is so." Here however we might use, though it would be somewhat pedantic English, the word "shall" in both members of the sentence: "If he shall look, he shall find it to be so," and then the former "shall" would be in the sense of a mere future, and the second in that sense of absolute certainty, "I will undertake that he shall find," of which I spoke just now. This sentence might in fact be correctly said in four different ways:

- If he will look, he will find:
- If he shall look, he shall find:
- If he will look, he shall find:
- If he shall look, he will find.

I may mention that the almost uniform use of "shall" as applied to future events and to persons concerned in them, is reserved for the prophetic language of the Bible, as spoken by One whose will is supreme and who has all under His control.*

* I am reminded, in writing this, of a criticism of Mr. Moon's on my remark, that we have dropped "thou"

There are certain other cases in which we may say either "will" or "shall." In reporting what another said, or what one said one's self, we may say "*He told me he should go up to town to-morrow and settle it,*" or we may say, "*He told me he would go up to town,*" &c. This arises from the possibility, already noticed, of using either word in speaking in in the first person.

Sometimes an ambiguity arises from the fact that "will" and "would" may either convey the idea of inclination of the will, or may point to a mere future event. We have two notable instances in the English version of the New Testament. Our Lord says to the Jews (John v. 40), "*Ye will not come to me that ye might have life.*" Is He merely announcing a fact, or is He speaking of the bent and inclination of their minds?

We consult the original, and the question is at once answered. What our Lord says is this: "*Ye are not willing,*" "*ye have no mind,*" "*to come to me that ye might have life.*"—Matt. xi. 27.

Again (Matt. xi. 27). "*No man knoweth the Father save the Son, and he to whomsoever the Son will reveal Him.*" Is this "will" a mere auxiliary for the future meaning, or does it convey the idea of exercise of will? Here again the original sets us right in a moment. It is, "he to whom the Son is minded to reveal Him."

Let us take a still more remarkable case. The Pharisees said to our Lord (Luke xiii. 31), "Get thee hence, for Herod will kill thee." This seems a mere future, and I have no doubt English readers universally regard it as such: but the original is "Herod wishes," "is minded" "to kill thee."

The sense of duty conveyed by "*should*" sometimes causes ambiguity. Thus we have (Matt. xxvi. 35), "*Though I should die with thee, yet will I not deny thee.*" This, to the mere English reader, only conveys the sense, "*Even if it should happen that I should die with thee.*" But on consulting the original we find we should be wrong in thus understanding it. It is "*Even if it be necessary for me to die with thee*"—and would have been better rendered, "*Even if I must die with thee.*" But in another clause (John xxi. 19), "*This said He, signifying by what death he should glorify God,*" the "*should*" does not represent any necessity, but the mere future.

Great fault has been found with me by Mr. Moon (for I am obliged to return to him for a few minutes) for the confused use, as he is pleased to regard it, of the personal pronouns "he" and "it." Now, here is another matter on which he and I are entirely at

and "thee" in our addresses to our fellow-men, and reserved those words for our addresses in prayer to Him who is the highest personality. It will be hardly believed, that he professes to set this right by giving his readers and me the information that "these pronouns are very extensively and profusely used in poetry, even (!) when inanimate objects are addressed:" and thinks it worth while to quote Celeridge's Address to Mont Blanc to prove his point! Really, might not the very obvious notoriety of the fact he adduces have suggested to him that it was totally irrelevant to the matter I was treating of?

issue. His rule is taken from Dr. Campbell, that "wherever the pronoun 'he' will be ambiguous, because two or more males happen to be mentioned in the same clause of a sentence, we ought always to give another turn to the expression, or to use the noun itself and not the pronoun: for when the repetition of a word is necessary, it is not offensive. The translators of the Bible," continues Dr. C., "have often judiciously used this method: I say judiciously, because though the other method be on some occasions preferable, yet, by attempting the other they would have run a much greater risk of destroying (he means a much greater risk, namely, that of destroying) that beautiful simplicity which is an eminent characteristic of Holy Writ. I shall take an instance from the speech of Judah to his brother Joseph in Egypt: 'We said to my lord, the lad cannot leave his father, for if he should leave his father, his father would die. The words 'his father' are in this short verse thrice repeated, and yet are not disagreeable, as they contribute to perspicuity. Had the last part of the sentence run thus: 'if he should leave his father he would die,' it would not have appeared from the expression whether it was the child or the parent that would die.'

So far Dr. Campbell, "Philosophy of Rhetoric." Now it so happens, that although Dr. Campbell has been able to find an instance to illustrate his point, this is a matter about which the translators of the Bible, and indeed the best of our English writers, care very little; of this, numerous instances might be produced out of our English Bible. I will content myself with two: the first from 2 Kings i. 9: "Then the king sent unto him a captain of fifty with his fifty: and he went up to him: and behold, he sat on the top of an hill." Now, to common sense it is plain enough who is meant in each case by *he* and *him*, and I don't suppose a mistake was ever made about it: but the sentence is in direct violation of Dr. Campbell's rule. Again, in Luke xix. 2, 3, we read of Zaccheus: "And he sought to see Jesus who he was, and could not for the press, because he was little of stature. And he ran before, and climbed up into a sycamore tree to see him; for he was to pass that way."

Now here you see the pronouns "*he*" and "*him*" are used indiscriminately, sometimes of our Lord, sometimes of Zaccheus: and yet every one knows to whom to apply each of them. The caviller might find ambiguity over and over again; and accordingly Mr. Moon says of this very example, "you surely do not defend the construction of these sentences?" All I can tell him is, they run thus in the *original*: and this, our translators very well knew, is not a matter of the grammar of *our* language, but of all languages, belonging in fact to the laws of human thought. As to the translators having, as Dr. Campbell says, often judiciously used the other method, the expression is peculiarly unfortunate. Our translators rendered most commonly what they found in the original, and very rarely indeed would

have thought of repeating the noun, where the original had the pronoun. In the example from Genesis, it would have been better if they had not repeated the words "his father" the third time, but had left the sentence ambiguous, as I believe it is in the original Hebrew.

What are we to think of the question, whether "*than*" does or does not govern an accusative case? "*than I*:" "*than me*:" which is right? My readers will probably answer without hesitation, the former. But is the latter so certainly wrong? We are accustomed to hear it stigmatised as being so; but I think, erroneously. Milton writes, "*Paradise Lost*," ii. 299,

Which when Beelzebub perceived, than whom,
Satan except, none higher sat.

"*Than who*" would be intolerable: and this seems to settle the question.

The fact is that there are two ways of constructing a clause with a comparative and "*than*." You may say either "*than I*" or "*than me*." If you say the former, you use what is called an elliptical expression: *i.e.*, an expression in which something is left out:—and that something is the verb "*am*." "*He is wiser than I*," being filled out, would be, "*He is wiser than I am*:" "*He is wiser than me*," is the direct and complete construction. The difference between the two usages seems to be this: and it is curiously confirmative of what was said in my former Essay about men in ordinary converse shrinking from the use of the bare nominative case of the personal pronoun. Where solemnity is required, the construction in the nominative is used. Our Lord's words will occur to us (John xiv. 28), "*My Father is greater than I*." But in ordinary conversation this construction is generally avoided, as sounding too weighty and formal. In colloquial talk we commonly say either, "*He is older than me*," or perhaps more frequently, "*He is older than I am*." And so with the other personal pronouns, *he, she, we, and they*.

There is an unfortunate word in our language, which few can use without very soon going wrong in grammar, or, which is worse, in common sense. It is the word "*one*," used in the sense of the French "*on*" or the German "*man*," and meaning, people in general.

What one has done, when one was young,
One ne'er will do again;
In former days one went by coach,
But now one goes by train.

So far, "*one*" is pretty sure to be right. It is only when this is carried on further, that the danger arises. Suppose I wanted to put into English the saying of the French gourmand, which, by the way, I am glad an Englishman did not originally utter: "*Avec cette sauce on pourrait manger son propre père*;"—how am I to express myself? In other words, how am I to take up the "*one*" with the possessive pronoun, or with any possessive, in English? The French, we see, say, "With this

sauce one could eat his own father." Is this an English usage (I don't mean the meal, but the grammar)?

I believe not, though it is becoming widely spread in our current literature.

In such a scene one might forget his cares,
And dream himself, in poet's mood, away.

And one of my correspondents says, "When writing on language, grammar, and composition, *one* ought to be more than usually particular in his endeavours to be *himself* correct."

These sentences do not seem to me to be right. Having used "*one*," we must also use "*one's*" cares, and "*one's*" self. We must say, at the risk of sacrificing elegance of sound,

In such a scene one might forget one's cares,
And dream one's self, in poet's mood, away.

The fact is, that this "*one*" is a very awkward word to get into a long sentence. I have sometimes seen it in our newspapers, followed not only by "*he*" and "*his*," but by "*they*" and "*their*," and "*we*" and "*our*," in all stages of happy confusion.

There is another word in our common English very difficult to keep right. It is the verb "*use*," signifying, to be accustomed. "I used to meet him at my uncle's." When the verb is affirmatively put in this manner, there is no difficulty, and no chance of going wrong. These arise when we want to put it in the negative; to speak of something which we were not accustomed to do; and then we find rather curious combinations. I "*didn't use*," I "*hadn't used*," I "*wasn't used*." This latter would be legitimate enough, if the verb were "*used to*," meaning "*accustomed by use to*." We may say, "*I wasn't used to the practice*." But it will be plain that it is a different meaning of which I am now speaking. A friend tells me that in his part of the world the people say, "*didn't use to was*."

If you ask me what we are to say in this case, I must reply that I can answer very well on paper, but not so well for the purposes of common talk. "*I used*" is negated by "*I used not*." But unfortunately, this expression does not do the work in common talk. "*I used not to see him at my uncle's*" does not convey the idea that it was not your habit to meet him there. It rather means, that he was there, but that for some unexplained reason you did not see him. You meant to express, not something which it *was* your practice *not to do*, but something which it *was not* your practice *to do*. "*I never used*" is better, but it may be too strong. I am afraid there is no refuge but in the inelegant word "*usedn't*," to which I suppose most of us have many times been driven.

I had intended to add something on several sayings and habits of speech which seemed to require notice. But I must hurry to an end, and will only quote a few rich bits of English which have been picked up since my last essay was written, and then, with one more criticism, conclude.

A correspondent sends me the following. A placard is to be seen in a certain farmyard in this county:—

“There is a place for everything, and everything for a place. Any person offending against these rules will forfeit 2d.”

By-the-bye, what are we to think of the phrase which came in during the Crimean war, “*The right man in the right place?*” How can the right man ever be in the wrong place? or the wrong man in the right place? We used to illustrate the unfitness of things by saying that the round man had got into the square hole, and the square man into the round hole; that was correct enough; but it was the *putting incongruous things together* that was wrong, not the man, nor the hole.

This puts me in mind of the servant at school once coming into the schoolroom, in consequence of some interchange of slippers, and calling out, “Has any gentleman got his wrong slippers?” Now, if they were his, they were not wrong; and if they were wrong, they were not his.

In the same note, my friend sends me the following: A Mr. Crispin of Oxford announced that he sold “boots and shoes made by celebrated Hoby, London.”

Mr. Hoby, irate, put into the Oxford paper: “The boots and shoes Mr. Crispin says he sells of my make is a lie.”

Some odd descriptions of men have been forwarded me, arising from the ambiguous junction of compound words. In two or three places in London, we see “*Old and New Bookseller*”—an impossible combination in one and the same man; but of course meaning a seller of old and new books. Another tradesman describes himself as “*Gas-holder and Boiler-maker*,” meaning that he makes gas-holders and boilers, but giving the idea that he undertakes to contain gas himself. We have in Canterbury a worthy neighbour who advertises himself as “*Indigenous Kentish Herbalist*”; meaning, of course, not that he was born amongst us, but that he makes *herbs indigenous in Kent* his study.

I have lying on my table a note just received, in the following words: “R. C. begs to apologise for not acknowledging P. O. order at the time (but was from home), and thus got delayed, misplaced, and forgotten.”

“*By doing a thing*,” for “*if he will do it*,” is noticed by a friend as a common error in Scotch papers.

“Found on board the steamer ‘Vulcan,’ a gold locket. The owner may have it *by* giving the date, when lost, and paying expenses.”

“Found, in Stockwell Street, on Friday early, a gold or gold-plated Geneva watch. The owner may have the same on proving his property, *by* applying to Mr. R. B., 166, Hospital Street.”

The one criticism with which I will conclude, is on the practice of using in general society unmeaning and ridiculous familiar nicknames or terms of endearment. A more offensive habit cannot be

imagined, or one which more effectually tends to the disparagement of those who indulge in it. I find myself, after the departure of the ladies from the dining-room, sitting next to an agreeable and sensible man. I get into interesting conversation with him. We seek a corner in the drawing-room afterwards, and continue it. His age and experience make him a treasure-house of information and practical wisdom. Yet, as talk trieth the man, infirmities begin to appear hear and there, and my respect for my friend suffers diminution. By-and-by, a decided weak point is detected: and further on, it becomes evident that in the building up of his mental and personal fabric there is somewhere a loose stratum which will not hold under pressure. At last, the servant begins to make those visits to the room, usually occurring about ten o’clock, which begin with gazing about, and result in a rush at some recognised object, with a summons from the coachman below. I am just doubting whether I have not about come to an end of my companion, when a shrill voice from the other side of the room calls out, “Sammy, love!” All is out. He has a wife who does not know better, and he has never taught her better. This is the secret. The skeleton in their cupboard is a child’s rattle. A man may as well suck his thumb all his life, as talk, or allow to be talked to him, such drivelling nonsense. It must detract from manliness of character, and from proper self-respect: and is totally inconsistent with the good taste, and consideration, even in the least things, for the feelings of others, which are always present in persons of good breeding and Christian courtesy. Never let the world look through these chinks into the boudoir. Even thence, if there be real good sense present, all that is childish and ridiculous will be banished; but at all events keep it from the world. It is easy for husband and wife, it is easy for brothers and sisters, to talk to one another as none else could talk, without a word of this minced-up English. One soft tone, from lips on which dwells wisdom, is worth all the “loveys” and “deareys” which become the unmeaning expletives of the vulgar.

And, as we have ventured to intrude into the boudoir, let us go one step further up, and peep into the nursery also. And here again I would say, never talk, never allow to be talked, to children, the contemptible nonsense which is so often the staple of nursery conversation. Never allow foolish and unmeaning nicknames to come into use in your family. We all feel, as we read of poor James I., with his “Steenie” for the Duke of Buckingham, and “Baby Charles” for his unfortunate son, that he cannot have been worthy to rule in England. We often find foolish names like these rooted in the practice of a family, and rendering grown-up men and women ridiculous in the eyes of strangers. And mind, in saying this, I have no wish to proscribe all abridgments, or familiar forms of names, for our children, but only those which are unmeaning and absurd. I hold “Charley” to be perfectly legiti-

mate: "Harry" is bound up with the glories of English history: Ned, and Dick, and Tom, and Jack, and Jem, and Bill, though none of them half so nice as the names which they have superseded, are too firmly fixed in English practice and English play, ever to be banished. Kate has almost become a name of itself; few maidens can carry the weight of Eleanor, whereas there never was a lass whom Nelly did not become. The same might be said of Milly and Amelia, and of many others. But the case of every one of such recognised nicknames differs widely from that, where some infantine lisp of a child's own name is adopted as the designation for life: or where a great rifleman with a bushy beard is called to hold his mamma's skein of wool by the astounding title of "Baby."

All perhaps do not know the story of the kind old gentleman and his carriage. He was riding at his

ease one very hot day, when he saw a tired nursemaid toiling along the footpath, carrying a great heavy boy. His heart softened: he stopped his carriage, and offered her a seat: adding, however, this: "Mind," said he, "the moment you begin to talk any nonsense to that boy, you leave my carriage." All went well for some minutes. The good woman was watchful, and bit her lips. But alas! we are all caught tripping sometimes. After a few hundred yards, and a little jogging of the boy on her knee, burst forth, "Georgy porgy! ride in coachy poachy!" It was fatal. The check-string was pulled, the steps let down, and the nurse and boy consigned to the dusty footpath as before.

This story is true. The person mainly concerned in it was a well-known philanthropic baronet of the last generation, and my informant was personally acquainted with him.

REMINISCENCES OF A HIGHLAND PARISH.

BY THE EDITOR.

CHAPTER XI.—CHURCHYARDS AND FUNERALS.

THE Highland churchyard is a spot which seldom betrays any other traces of human art or care, than those simple headstones which mark its green graves. In very few instances is it enclosed; its graves generally mingle with the mountain pasture and blooming heather, and afford shelter to the sheep and lamb from the blast of winter and the heat of summer. But although not consecrated by holy prayer and religious ceremony, these are, nevertheless, holy spots in the hearts and memories of the peasantry, who never pass them without a subdued look, which betokens a feeling of respect for the silent sleepers. To deck a father's or mother's grave, would be, in the estimation of the Highlander, to turn it into a flower-garden. He thinks it utter vanity to attempt to express his grief or respect for the departed, by any ornament beyond the tombstone, whose inscription is seldom more than a statistical table of birth and death.

Many of those Highland churchyards, so solitary and so far removed from the busy haunts of men, are, nevertheless, singularly touching and beautiful. Some are on green islands whose silence is disturbed only by the solemn thunder of the great ocean wave, or the ripple of the inland sea; some are in great wide glens round the ruins of a chapel, where prayers were once offered by early missionaries who with noble aim and holy ambition penetrated these wild and savage haunts; while others break the green swards about the parish church on ground where God has been worshipped since the days of St. Columba.

One of the most beautiful I ever visited is on a small green island in Loch Shiel in Argyshire. The loch for nearly twenty miles is as yet innocent

of roads on either shore, so that the tourist who visits the place has to navigate the lake in a rude country boat; and if he attempts to sail, he must do so with blankets attached probably to the oar, and then trust to a fair wind. Yet what can be more delicious than thus to glide along the shore with a crew that won't speak till they are spoken to, and in silence gaze upon the ever varying scene—to skim past the bights and bays with their reedy margins—the headlands tufted with waving birch—the gully torrents pouring down their foaming waterfalls and "blowing their trumpets from the steeps"—with the copse of oak and hazel, that covers the sides of the mountain from the deep dark water up to the green pasture, and beyond, the bare rocks that pierce the blue.

Not unlikely the crew, when they take to their oars, will sing "Ho Morag," in honour of Prince Charlie, "the lad wi the Philabeg," who on the green alluvial plain at the head of the loch—where his monument now stands—first unfurled his banner, to regain the British crown; and if you don't know this romantic episode in history, the boatmen with pride will point out the glens where the Camerons, Macdonalds, Stewarts, and Macleans poured down their kilted clans, the last old guard of the feudal times, to do battle for "the yellow-haired laddie;" and unless you cordially believe (at least until you leave Loch Shiel) that you would have joined them on that day, with the probability even of losing your head and your common sense, you are not in a fit state of spirit to enjoy the scene.

Half way up this lake, and at its narrowest portion, there is a beautiful green island, which stretches itself so far across as to leave but a narrow passage for even the country boat. Above

it, and looking down on it, rises Ben Reshobal for 2000 feet or more, with its hanging woods, gray rocks, dashing streams, and utter solitude. On the island is an old chapel, with the bell,—now we believe preserved by the Laird,—which long ago so often broke the silence of these wilds on holy days of worship or of burial. There lie chiefs and vassals, fierce cateran robbers of sheep and cattle, murderers of opposing clans, with women and children, Catholic and Protestant, Prince Charlie men, and men who served in army and navy under George the Third. Yet the only monument we remember consisted of a wooden stake driven into the ground, with no other carving on it than D. W. 1746. How silent is the graveyard! You sit down among the ruins and hear only the bleat of sheep, the whish-whish of the distant waterfalls, the lapping of the waves, or the wind creeping through the arclways and mouldering windows. The feuds and combats of the clans are all gone; the stillness and desolation of their graves alone remain.

But "The Parish" churchyard is not much less picturesque. It is situated on a green plateau of table-land which forms a ledge between the low sea shore and mountain background. A beautiful tall stone cross from Iona adorns it; a single gothic arch of an old church remains as a witness for the once consecrated ground, and links the old "cell" to the modern building, which in architecture—shame to modern Lairds—is to the old one what a barn is to a church. The view however from that churchyard of all God's glorious architecture above and below makes one forget those paltry attempts of man to be a fellow-worker with Him in the rearing and adorning of the fitting, and the beautiful. There is not in the Highlands a finer expanse of inland seas, of castled promontories, of hills beyond hills, until cloudland and highland mingle; of precipice and waterfall, with all the varied lights and shadows which heathy hill sides, endless hill tops, dark corries, ample bays and rocky shores, can create at morn, noonday, or evening from sun and cloud,—a glorious panorama extending from the far west beyond the giant point of Ardnamurchan, "the height of the great ocean," to the far east, where Ben Cruachan and "the Shepherds of Etine Glen" stand sentinels in the sky. No sea king could select a more appropriate resting place than this, from whence to catch a glimpse, as his spirit walked abroad beneath the moonlight, of galleys coming from the Northland of his early home; nor could an old saint find a better resting place, if he desired that after death the mariners, struggling with stormy winds and waves, might see his cross from afar, and thence snatch comfort from this symbol of faith and hope "in extremis;" nor could any man, who in the frailty of his human nature shrunk from burial in lonely vault, and who wished rather to lie where birds might sing, and summer's sun shine, and winter's storms lift their voices to God, and the

beautiful world be ever above and around him, find a spot more congenial to his feelings than the kirkyard of "The Parish."

The Highlander has a love which amounts to a decided superstition to lie beside his kindred. The Celt is intensely social in his love of family and tribe. It is long ere he takes to a stranger as bone of his bone and flesh of his flesh. When sick in the distant hospital, he will, though years have separated him from home and trained him to be a citizen of the world, yet dream in his delirium of the old burial ground. To him there is in this idea a sort of homely feeling, a sense of friendship, a desire for a congenial neighbourhood, which, without growing into a belief of which he would be ashamed, unmistakably circulates as an instinct in his blood, and cannot easily be dispelled. It is thus that the poorest Highlanders always endeavour to bury their dead with kindred dust. The pauper will save his last penny to secure this boon.

A woman from "the main land," somewhere in Kintail, was married to a highly respectable man in one of the Hebrides which need not be specified. When she died, twelve of her relations, strong men, armed with oak sticks, journeyed sixty miles to be present at her funeral. They quietly expressed their hope to her husband, that his wife should be buried in her own country and beside her own people. But on ascertaining from him that such was not his purpose, they declared their intention to carry off the body by force. An unseemly struggle was avoided only through the husband being unable to find any one to back him in his refusal to what was deemed by his neighbours a reasonable request. He therefore consented, and accompanied the body sixty miles to the old churchyard.

This feeling is carried to a length which is too ludicrous to be dignified even by the name of superstition. A Highland porter, who carried our bag but the other day, and who has resided for thirty years in the low country, sent his amputated finger (!) to be buried in the graveyard of the parish beside the remains of his kindred! It is said that a bottle of whiskey was sent along with the thumb that it might be entombed with all honour!—but I don't vouch for the truth of the latter part of the story. I never heard who dug the grave of the thumb—whether it was "I says the owl"—nor who attended the funeral, nor what monument was erected over the respected member. But there, nevertheless, the thumb lies, to be some day joined by the whole body.

This desire of being interred with kindred dust or with "the faithful ones," as they express it, is so strong, that I have known a poor man selling all his potatoes, and reducing himself to great suffering, in order to pay the expense of burying his wife in a distant churchyard among her people; and that too when the minister of his parish offered to bury her at his own expense in the churchyard of

the parish in which the widower resided. Only last year a pauper in the parish of K—— begged another poor neighbour to see her buried beside her family. When she died, twelve men assembled, carried her ten miles off, dug her grave, and paid all the expenses of her funeral, which, had she been buried elsewhere, would have been paid by the parish.

It is still a very common belief among the peasantry that shadowy funeral processions precede the real ones, and that “warnings” are given of a coming death by the crowing of cocks, the ticking of the death watch, the howling of dogs, voices heard by night, the sudden appearance of undefined forms of human beings passing to and fro, &c.

It has also been the custom of the poorest persons to have all their dead clothes prepared for years before their death, so as to insure a decent orderly interment. To make these clothes was a task often imposed upon the ladies, or females in a parish who were good at their needle. The pattern of the shroud was fixed, and special instructions were given regarding it by the initiated. Such things are common even now among Highland families who have emigrated to Glasgow. A few months ago a highly respectable lady, when she found that her illness was dangerous, gave a confidential servant the key of a box, where, in the event of death, all would be found that was required to dress her body for the grave.

The old wrapping of the body was woollen cloth, and the Gaelic term used to express it (*Ollanach*), which may be translated “woolening,” is still used to describe the dressing of the body before burial.* The old stone coffin is dug up in the Highlands as elsewhere, but the coffins hollowed out of the solid log—one of which was discovered a few years ago in Lochaber—seem, as far as I know, to have been peculiar to the Highlands. The Gaelic term still in use for a coffin (*Caisil Chrò*), the “wattle enclosure,” points to what we doubt not was equally peculiar to the Highlands, that of surrounding the dead body with slender branches of trees, and bending them firmly together with *withe*s or twisted rods of hazel or willow, and thus interring it.

From the time of death till that of interment, the body is watched day and night. A plate of salt is always placed upon the breast. Candles are also frequently lighted around it. When the body, on the day of funeral, is carried a considerable distance, a *cairn* of stones is always raised on the spots where the coffin has rested, and this *cairn* is from time to time renewed by friends and relatives. Hence the Gaelic saying or prayer with reference to the departed, “Peace to thy soul, and a stone to

thy *cairn*!”—thus expressing the wish, that the remembrance of the dead may be cherished by the living.

The bagpipe is sometimes still played at funerals. Five or six years ago, a medical man greatly beloved and respected for his skill, and kindness to the poor, died at Fort William from fever, caught in the discharge of his duties in close, ill ventilated huts. The funeral was attended by about 1400 people. Strong men were weeping, and women threw themselves on the ground in the agony of their impassioned sorrow. Three pipers headed the procession, playing the wild and sad lament of “I’ll never, I’ll never, I’ll never return.”—The whole scene has been described as having been most deeply affecting. Many tourists who have ascended Ben Nevis, will remember that green and beautiful churchyard near Fort William which looks up to the overhanging mountain, and down upon the sea and Inverloch Castle, with the dark peat-moss of the Lochy beyond, and further still, the hills of Lochiel.

But after these digressions I must return to the churchyard of “The Parish.”

There are two graves which lie side by side across the ruins of the old archway I have spoken of. The one is an old stone coffin, the other a grassy hillock—and I shall tell what I have heard, and what I know about their inhabitants.

CHAPTER XII.—THE OLD STONE COFFIN ; OR, THE TOMB OF THE SPANISH PRINCESS.

In the year 1588, the good ship “Florida,” one of the Spanish Armada, was driven into the harbour of Tobermory, in Mull, by the great storm which scattered that proud fleet. The ship was visited by the chief of the Macleans of Duart, the remains of whose castle are still among the most picturesque objects in the Sound of Mull. The clan had a feud at the time with the clan Macian, of Ardnamurchan, immediately opposite Tobermory harbour, and for some “consideration” or other, Maclean induced a party of Spanish soldiers to aid him in attacking his rival. Having revenged himself by the powerful and unexpected aid of the Spaniards, he failed to implement his bargain with them, and shortly afterwards, whether through treachery or not is uncertain, the “Florida” was blown up. The body of a female was washed on shore and buried in a stone coffin in the consecrated ground of “The Parish.” She has ever since been dignified by the name of “the Spanish Princess.”

Oliver Cromwell sent a vessel to the Highlands, commanded by a Captain Pottinger, to coerce some of the rebellious Highland Popish chiefs. This vessel was wrecked upon a rock opposite Duart, and only a few years ago the spot was examined, in which, according to tradition, Pottinger’s body was buried, when human remains were discovered. Some of the guns of the vessel have also, I believe, been seen.

* I cannot at this moment quote from authority, but I have somewhere read that in some English Parliament, if I remember rightly, in the reign of Henry VII., it was enacted, in the interest no doubt of the wool trade, that corpses should be dressed in woollen grave-clothes.

So much for true history : * now for the Highland myth founded on these facts. It is literally translated from the *ipsissima verba* of an old woman.

In the time that is gone, the daughter of the King of Spain, in her sleep of the night, beheld in a dream a hero so splendid in form and mien, as to fill her whole heart with love. She knew that he was not of the people of Spain, but she knew not what his race, his language, or his country was. She had no rest by day, or by night, seeking for the beautiful youth who had filled her heart, but seeking him in vain. At last she resolved to visit other lands, and got a ship built—a great ship with three masts, and with sails as white as the young snow one night old. She went to many countries and to many lands, and whenever she reached land she invited all the nobles of the neighbourhood to come on board her great ship. She entertained them royally. There were feasting, and wine and music, dice and dancing. All were glad to be her guests, and very many gave her the love of their hearts ; but among them all she found not her love, the hero of her bright night-dream (her whisper). She went from one harbour to another—from one kingdom to another. She went to France, and to England. She went to Ireland and to Lochlinn. She went to the “Green Isle of the Ocean at the end of the land of the world” (Scandinavia). She made feasting and music wherever she went. Around her all was gaiety and gladness—the song and the harp—the wine, and the voice of laughter—hilarity and heartiness, but within her breast all was dark, and cold, and empty.

At length, passing by the land under the wave (the flat island of Tyree), she came near the kingdom of *Sorcha* (Ardnamurchan), and after this to “Mull of the great mountains,” to the harbour of all harbours, curved like a bent bow, sheltered from every wind and every wave. Here the great ship of the three masts and of the white sails cast her anchor, and here, as in all other ports, the daughter of the King of Spain sent invitations to all the nobles of the neighbouring country to visit her on board her ship. Here many a bold steersman of the *Birlinns* who quailed not before ocean’s wrath, many a brave swordsman who rejoiced in the field of slaughter, and many a daring rider who could quell the wildest steed, with the owner of

many a hospitable house whose door was never shut, and many a leader of numerous hosts who never turned their face from the foe, came on board the great ship. But all were strangers unto her, until at length the Lord of Duart, the chief of the numerous, the warlike, the renowned Macleans, shone upon her sight. Then did her heart leap with joy, and soon turn to rest in gladness ; for he was her vision of the night, and the desire of her heart, in quest of whom she had travelled to so many lands.

It was then that there was the magnificent and royal entertainment. There was red wine in “*cup, iorn, and cuach*” (cup, goblet, and bicker). There was music of sweetest sound. Sorrow was laid down, and joy was lifted on high. The daughter of the King of Spain had a sunbeam in the heart, and brightness in the countenance. The Lord of Duart was so blinded by her beauty and her nobleness that he saw not the black gulf before him. He surrendered himself entirely to her loveliness, and great was the happiness of their converse. He forgot that in the strong black castle of frowning Duart, he had left a youthful bride. On board of the great ship days passed like moments in the midst of enjoyment ; but not faster flew the days than rumour flew to Duart, proclaiming to the forsaken Lady of the castle, the unfaithfulness of her Lord. The colour left her cheeks, sleep departed from her eyes, gnawing jealousy entered her heart, and fierce revenge filled her mind. Often as she turned on her pillow, as often turned she a new plan in her head for the destruction of her who had robbed her of her love ; but none of these did satisfy her. At long and at last (at length and at worst), she contrived a plan which succeeded in drawing the Lord of Duart, and him alone to the land ; and, one of her most attached followers * being on board the ship, set fire to the store of powder, which, with sound louder than the thunder of the skies, rent the great ship of the three masts and the snow white sails into ten thousand pieces, bringing death and utter destruction on all who were on board, and, saddest woe ! on the beautiful and loving daughter of the King of Spain.

The Lady of Duart rejoiced. Her Lord wished not to show his grief, nor to keep in remembrance the wandering love he had given to a stranger. Thus, though he sent followers to gather the

* In the year 1740, Spaldin, the diver, was sent by the British Government to regain some of the treasure which was supposed to have been sunk in the “Florida.” He succeeded only in obtaining ten of the guns, which are now at Inverary Castle. We ourselves have a portion of one of the black oak planks which was raised at the time.

Mr. Gregory, in his learned and accurate history of the Highlands, confirms the tradition of Maclean of Duart having been instrumental in destroying the “Florida.” He states that Spain, being at that time at peace with Scotland, though at war with England, demanded reparation for the savage and inhospitable conduct of Maclean of Duart, and that the records of council in Edinburgh show that the Highland chief had to confess his guilt and sue for pardon, as one who had justly forfeited his life.

* “Most attached follower,” *Cota-encais*—“coat of the waist,” and *Leiné chríos*—“skirt of the girdle,” are the terms used in Gaelic to denote a thoroughly devoted follower. It was customary of old, when a lady married beyond her father’s clan, as was generally the case, that she took with her two or more of her family followers, who always formed a sort of body-guard to her, considering themselves entirely at her disposal, and at her command were ready to stab husband or son. Many strange interminglings of names and races have thus arisen. In the very centre of Lochaber there are several Burkes and Boyles. On inquiry I found that these had come from Ireland ages ago as the followers of an Irish lady, who had married MacDonal of Kippoch. There the descendants still are.

remains of the fair daughter of the King of Spain, and to bury her in holy ground, and though they laid her bones in the (*Cill*) churchyard of the holy Columba (Callum Cille) in Morven, she was committed to the dust without priest or prayer—without voice of supplication or psalm of repose—silently and secretly in the blackness of midnight.

It chanced, shortly after this, that two young men in Morven, bound in ties of closest friendship, and freely revealing to one another all that was in their hearts, began to speak with wonder of the many great secrets of the world beyond the grave. They spoke, and they spoke of what was doing in the habitation of the spirits beyond the thick veil that hides the departed from the friends who sorrow so sorely after them. They could not see a ray of light—they could discover nothing. At length they mutually promised and vowed, that whichever of them was first called away, would, while engaged in the dread task of *Fair'e Chlaidh*, or, "Watching of the churchyard,"* tell to the survivor all that he could reveal regarding the abode of the departed; and here the matter was left.

Not long after it fell out that one of them, full as his bone was of marrow, yielded to the sway of death. His body, after being carried *Deas iùl* † (according to the course of the sun) around the stone cross in the churchyard of Callum Cille (Columba), in Morven, and allowed to rest for a time at the foot of that cross, was laid amid the dust of

* This is a curious idea. In many parts of the Highlands it is believed to this day, that the last person buried has to perform the duty of sentinel over the churchyard, and that to him the guardianship of the spirits of those buried before is in some degree committed. This post he must occupy until a new tenant of the tomb releases him. It is not esteemed as an enviable position, but one to be escaped if possible; consequently, if two neighbours die on the same day, the surviving relatives make great efforts to be first in closing the grave over their friend.

A ludicrous but striking illustration of this strange notion occurred three years ago in the parish of A—. An old man and an old woman, dwelling in the same township, but not on terms of friendship—for the lady *Kate Ruadh* (or red-headed Kate) was more noted for antipathies than attachments—were both at the point of death. The good man's friends began to clip his nails—an office always performed just as a person is dying. He knowing that his amiable neighbour was, like himself, on the verge of the grave, roused himself to a last effort, and exclaimed, "Stop, stop; you know not what use I may have for all my nails, in compelling Kate Ruadh to keep *Fair'e Chlaidh* (to watch the churchyard), in place of doing it myself!"

† Carried *Deas iùl*—"a turn the right or the south way;" i.e. following the course of the sun. This is said to be a Druidical practice, followed in many places to this day. Very recently it was customary in the churchyard of "The Parish" to carry the bier around the stone cross which stands there, and to rest it for a few minutes at its base before committing the body to the grave. It is still customary with people, if any food or drink goes wrong in the throat, to exclaim *Deas iùl*, apparently as a charm; and sending the bottle round the table in the course of the sun, is as common in the south as in the north. The *south* seems to have been held in high estimation by the Celts. Thus the *right* hand is termed the *south* hand: *Deas*. The same word is used to signify "the being prepared or ready," "the being expert," and "being handsome in person."

his kindred. His surviving comrade, Evan of the Glen, mourned sore for the loss of his friend; and much awe and fear came upon him as he remembered the engagement made between them; for now the autumn evening was bending (or waning), and like a stone rolling down a hill is the faint evening of autumn. The hour of meeting drew nigh, and regard to the sacredness of a promise made to him who was now in the world of ghosts, as well as regard for his own courage, decided him to keep the trust (meeting). With cautious, but firm, step he approached the *Cill*, and looked for his departed friend, to hear the secrets of the land of ghosts. Quickly as his heart beat at the thought of meeting the spirit of his friend, he soon saw what made it quiver like the leaf of the aspen tree. He saw the gray shade of him who had, at one time, been his friend and his faithful comrade; but he saw all the "sheeted spectres" of the populous churchyard moving in mournful procession around the boundary of their dark abodes, while his friend seemed to lead the dread and shadowy host. But his eye was soon drawn by the aspect of utter woe presented by one white form which kept apart from the rest, and moved with pain which cannot be told. Forgetful of what had brought him to the *Cill*, he drew near this sight of woe, and heard a low and most plaintive song, in which the singer implored the aid of him whose "ship was on the ocean," bewailed her miserable condition, in a land of strangers, far from father and from friends, laid in the grave without due or holy rites, and thus she moaned:—

Worm and beetle, they are whistling
Through my brain—through my brain;
Imps of darkness they are shrieking
Through my frame—through my frame.

Evan, whose heart was ever soft and warm towards the unhappy, asked her the cause of her grief, and whether he could lighten it. She blessed him that he, in the land of the living, had spoken to her in the land of the dead; for now she said she might be freed from evil, and her spirit might rest in peace.

She told him that she was Clara Viola, daughter of the King of Spain. She told him of the bright vision of her youthful dream, and how, after drawing her over many an ocean, and bringing her to many lands, it had, like the *Dreag*,* the shooting star of night, suddenly vanished in darkness, or, like the flame of the *sky-fire* (lightning), quickly ended in thunder and in ruin. She pointed out the grave into which she had been cast without holy rites. She implored of him to raise her bones—to wash them in the holy well of Saint *Molliag* in Lismore; thereafter to carry them to the kingdom of Spain; and she described a place where he would get a chest full of gold, and a chest full of silver.

* *Dreag* signifies the death of a Druid, and is the common name still for a bright meteor or shooting star, implying the belief that the spirits of the *Druids* departed in fiery chariots.

With many fears, but with the courage of a hero, he accomplished what the Princess asked of him. He washed her bones in the Sainted Well of Molluag, in Lismore, and her name is now attached (bound) to the spring, *Tobar Clàr Mheolain* (pronounced *Clàir Ve-ò-len*), the Well of Clara Viola.* Thereafter he set off for the kingdom of Spain, and though it was a long way off, he was not long in reaching it. He soon made his way to the palace of the King of Spain, and that was the palace of many windows, of many towers, and of many doors, doors which were never closed—the great house of feasts and of royal hospitality. He was received with honour. He got the chest full of gold, and the chest full of silver, and many a reward besides. But when the King of Spain heard how his beautiful daughter had been treated in Albin (Scotland), his heart swelled with wrath, and his face flamed with fury. He ordered his three strongest and most destructive ships of war to be immediately fitted out, his three best and bravest captains to command them, to sail as fast as possible to the three best harbours in Scotland, one in the Kyles of Bute, one in the “Horse-shoe” of Kerrera, and one in the Bay of Tobermory, Mull, and there to load them all with the limbs of Scottish men and of Scottish women.

One ship did come to Tobermory Bay, and fearful she looked, as with masts bending, and great guns roaring, she leaped and bellowed along the Sound of Mull. She was commanded by Captain Pottinger. He was skilful in sailing, firmer in fighting, and besides had great knowledge of magic (Druidism). He spoke the direst threats against the people of Mull, and said that he would sweep the island with a besom,—that he would leave it bare.

The people of Mull were seized with great fear, and the Lord of Duart, though dreading no ordinary foe, had many things to move him. He found no rest in his house or out of it. He sorrowed for the past, and he dreaded what was to come. Not thinking any human power of avail against the great and deadly war-ship of Spain, commanded by a man deep in magic, he and his men sought evil from magic also (Druidism), and with effectual spells and charms, gathered all the witches of Mull, the *Doideagan mìleach*, to one meeting-place. He told them of the dire threat of Captain Pottinger, and begged them to raise a wind which would sink his ship, even in the harbour that was better than any other harbour. The *Doideag* asked him if Captain Pottinger, when uttering his threat of devastation, had said “With God’s help?” “He did not.” “Good is that,” said she.

She and her companions began their work. What every *ùbag*, *obag*, and *gisreag* (charm, incantation, and canting) they used I know not (“Christ’s

cross between us and them all,” says the narrator); but I know that she tied a straw-rope to a *Braa* (a *quern*-stone), passed the rope over one of the rafters of the house, and raised the (*Braa*) *quern*-stone as far as she could. As the *quern*-stone rose the wind rose; but all the strength of the *Doideag* could not raise it high, for Captain Pottinger could put weight on the stone and keep it down. She summoned her sisters from various quarters: one *Laovag Thirideach* from Tiree, *Maol-Odhar* from Kintyre, and *Cas a’ Mhogain riabhaich* from Cowal.* They came to her aid and pulled at the rope. They could not raise it higher. Some of them flew through the air to the ship, and in the shape of cats ascended the rigging. They numbered nine. Captain Pottinger said he was stronger than these—that he feared them not. They increased to fifteen, reached the very top of the mast, and scrambled along all the yard-arms, and up and down the shrouds. Captain Pottinger was stronger than these yet, and defied them all.

At last the *Doideag* seeing her work like to fail, called on a very strong man, *Domhmull Dubh Laidir* (black Donald the strong) to hold the rope and keep the (*Braa*) *quern*-stone from falling lower. He seized the rope with the grasp of death, and with his muscles stretched and strained he held fast the *quern*-stone.

The *Doideag* quickly flew to Lochaber to beg for the assistance of *Great Gormal* of Moy, whose powers were more than that of all the others put together. *Gormal* yielded to the request, and no sooner did she spread her wings on the air than the tempest raged and roared, blowing the sea to *spin-drift*, tearing the trees from the ground, and splintering the adamant rock. Captain Pottinger felt that evil was approaching, resolved to leave the bad neighbourhood, and ordered his cable to be cut with speed. His sailors began to do so with gladness; but when the hatchet was raised aloft to strike the blow, the wind blew the iron head off the handle before it could reach the cable. Not an axe-head would remain on the haft. *Gormal* soon reached the harbour. In the likeness of a cat, larger than ever was seen before, she climbed to the top of the mast and sang—

Aha, Captain Pottinger, thou didst boast
Last year to desolate Mull’s coast,
But now Hoo-hoo! thy ship is lost!

And with this, Captain Pottinger and his men, and the great deadly war-ship of Spain, sank down into the depths.

And so ends the Highland myth!

* The names of the witches may be thought of very little consequence; but it is interesting to observe that these are names all implying some personal deformity or peculiarity, and show that the witches were more objects of dislike than respect. *Doideag* means little frizzle, applied to anything dry and withered, but more especially to frizzled hair; *Laovag* signifies hoofie, clootie, or spindle-shanked; *Cas a’ Mhogain riabhaich*, the foot of the russet, or brindled old stocking—*Osan* is the ordinary term for stocking; *Mogan*, Scottice *Hoggan*, a ragged

* A well in the churchyard of St. Molluag, in Lismore, does actually bear this name, “*Tobar Clàir-Ve-o-len*”—but I cannot in the least certify that it is derived from that of the Spanish princess.

CHAPTER XIII.—THE GRASSY HILLOCK, OR THE GRAVE OF FLORY CAMERON.

We might expect to find peculiar types of character among a people who possess, as the Highland Celts do, a vivid fancy, strong passions, and keen affections; who dwell among scenery of vast extent and great sublimity; who are shut up in their secluded valleys, separated even from their own little world by mountains and moorlands or stormy arms of the sea; whose memories are full of the dark superstitions and wild traditions of the olden time; and who are easily impressed by the mysterious sights and sounds created by mists and clouds and eerie blasts, among the awful solitudes of nature; and who cling with passionate fondness to home and family, as to the very life and soul of the otherwise desert waste around them. But I never met, even in the Highlands, with a more remarkable example of the influence of race and circumstances than was Flora, or rather Flory Cameron.

The first time I saw her was when going to the school of "the parish," early on an autumnal morning. The school was attached to the church, and the churchyard was consequently near it. The churchyard, indeed, with its headstones and flat stones, its walled tombs and old ruined church, was fully appreciated by us, as an ideal place for our joyous games, especially for "hide and seek," and "I spy." Even now, in spite of all the sadder memories of later years, I can hardly think of the spot without calling up the blithe face of some boy peering cautiously over the effigy of an old chief, or catching the glimpse of a kilt disappearing behind a headstone, or hearing a concealed titter beside a memorial of sorrow.

As I passed the churchyard for the first time in the sober dawning of that harvest day, I was arrested by seeing the figure of a woman wrapt in a Highland plaid, sitting on a grave, her head bent and her hands covering her face, while her body slowly rocked to and fro. Beside her was a Highland terrier that seemed asleep on the grave. Her back was towards me, and I slipped away without disturbing her, yet much impressed by this exhibition of grief.

On telling the boys what I had seen, for the grave and its mourner were concealed at that moment from our view by the old ruin, they, speaking in whispers, and with an evident feeling of awe or of fear, informed me that it was "Flory the witch," and that she and her dog had been there every morning since her son had died months be-

stocking without a sole; *Moalodhar*, bald and dun; *Gorm-mhor*, the great blue-eye, is the only one who has a respectable name.

One of my story-tellers gave a different list of the witches engaged in this work. *Luidag*, *Agus Doideag*, *Agus Corrag Nighinn Ian Bhàin*, *Cas a' mhogain Riabhach a Gleaconnham*, *Agus Gorm-shuil mhor bhàr na Maighe*, *Raggie* and *Frizzle*, and the finger of White John's Daughter; that is "*Hogganfoot* from Glenco, and Great Blue-Eye from Moy" (in Lochaber).

fore; and that the dog had been a favourite of her son's, and followed the witch wherever she went. I soon shared the superstitious fear for Flory which possessed the boys; for, though they could not affirm, in answer to my inquiries, that she ever travelled through the air on a broomstick, or became a hare at her pleasure, or had ever been seen dancing with demons by moonlight in the old church, yet one thing was certain, that the man or woman whom she blessed was blessed indeed, and that those whom she cursed were cursed indeed. "Was that really true?" I eagerly asked. "It is true as death!" replied the boy Archy Macdonald, shocked by my doubt; "for," said he, "did not black Hugh Maclean strike her boy once at the fair, and did she not curse him when he went off to the herring fishery? and wasn't he and all in the boat drowned? true! ay, it's true." "And did she not curse," added little Peter M'Phie, with vehemence, "the ground officer for turning old Widow M'Pherson out of her house? Was he not found dead under the rock? Some said he had been drunk; but my aunt, who knew all about it, said it was because of Flory's curse, nothing else, and that the cruel rascal deserved it too." And then followed many other terrible proofs of her power, clinched with the assurance from another boy that he had once heard "the maister himself say, that he would any day far rather have her blessing than her curse!"

This conversation prepared me to obey with fear and trembling a summons which I soon afterwards unexpectedly received. Flory had one day, unseen by me, crossed the playground, when we were too busy to notice anything except the ball for which we were eagerly contending at our game of shinty. She heard that I was at the school, and seeing me, sent a boy to request my presence. As I came near her, the other boys stood at a respectful distance, watching the interview. I put out my hand frankly, though tremblingly, to greet her. She seized it, held it fast, gazed at my face, and I at hers. What she saw in mine I know not, but hers is still vividly before me in every line and expression. It was in some respects very strange and painfully impressive, yet full of affection, which appeared to struggle with an agonised look of sorrow that ever and anon brought tears down her withered cheeks. Her eyes seemed at one time to retire into her head, leaving a mere line between the eyelashes, like what one sees in a cat when in the light; they then would open slowly, and gradually increase until two large black orbs beamed on me, and I felt as if they drew me into them by a mysterious power. Pressing my hand with one of hers, she stroked my head fondly, muttering to herself all the time, as if in prayer. She then said, with deep feeling, "Oh, thou calf of my heart! my love, my darling, son and grandson of friends, the blessed! let the blessing of the poor, the blessing of the widow, the blessing of the heart be on thee, and abide with thee, my love, my love!" And then, to my great

relief, she passed on. In a little while she turned and looked at me, and, waving a farewell, went tottering on her way, followed by the dog. The boys congratulated me on my interview, and seemed to think I was secure against any bodily harm. I think the two parties in our game that day, competed for my powerful aid.

I often saw Flory afterwards, and instead of avoiding her, felt satisfaction rather in having my hand kissed by her, and in receiving the blessing, which in some kind form or other she often gave. Never, during the autumn and winter months when I attended that Highland school, did she omit visiting the grave on which I first saw her. The plashing rain fell around her, and the winds blew their bitter blast, but there she sat at early morning, for a time to weep and pray. And even when snow fell, the black form of the widow, bent in sorrow, was only more clearly revealed. Nor was she ever absent from her seat below the pulpit on Sunday. Her furrowed countenance with the strange and tearful eyes, the white *match* with the black ribbon bound tightly round the head, the slow rocking motion, with the old, thin, and withered body,—all are before me, though nearly forty years have passed since then.

In after years, the present minister of the parish told me more about Flory than I then knew. The account given to me by the boys at school was to some extent true. She was looked upon as a person possessing an insight into the character of people and their future, for her evil predictions had in many cases been fulfilled. She had remarkable powers of discernment, and often discovered elements of disaster in the recklessness or wickedness of those whom she denounced; and when these disasters occurred in any form, her words were remembered, and her predictions attributed to some supernatural communications with the evil one. Although the violence of her passion was so terrible when roused by any act of cruelty or injustice, that she did not hesitate to pour it forth on the objects of her hate, in solemn imprecations expressed in highly-wrought and poetic language; yet Flory herself was never known to claim the possession of magic powers.* “She spoke,” she said, “but the truth, and cursed those only who deserved

* In many Highland parishes—aye, and in Scotch and English ones too—there were persons who secretly gave charms to cure diseases and prevent injuries to man or beast. These charms have come down from Popish times. A woman still lives in the “parish” who possessed a charm which the minister was resolved to obtain from her, along with the solemn promise that she would never again use it. We understand that if any charm is once repeated to and thus possessed by another, it cannot, according to the law which regulates those powers of darkness, be used again by its original owner. It was with some difficulty that the minister at last prevailed on “the witch” to repeat her charm. She did so, in a wild glen in which they accidentally met. She gave the charm with loud voice, outstretched arm, and leaning against the stem of an old pine-tree, while the minister quietly copied it into his note-book, as he sat on horseback. “Here it is, minister,” she

it, and had they not all come true?”—Her violent passion was her only demon possession.

Flory was not by any means an object of dislike. She was as ardent and vehement in her attachments as in her hates, and the former were far more numerous than the latter. Her sick and afflicted neighbours always found in her a sympathising and comforting friend. With that strange inconsistency by which so much light and darkness, good and evil, meet in the same character, Flory, to the minister’s knowledge, had been the means of doing much good in more than one instance by her exhortations and her prayers, to those who had been leading wicked lives; while her own life as a wife and a mother had been strictly moral and exemplary. She had been early left a widow, but her children were trained up by her to be gentle, obedient, and industrious, and she gave them the best education in her power.

But it was God’s will to subdue the wild and impassioned nature of Flory by a series of severe chastisements. When a widow, her eldest son, in the full strength of manhood, was drowned at sea; and her only daughter and only companion died. One son alone, the pride of her heart, and the stay of her old age, remained, and to him she clung with her whole heart and strength. He deserved, and returned her love. By his industry he had raised a sufficient sum of money to purchase a boat, for the purpose of fishing herring in some of the Highland lochs—an investment of capital which in good seasons is highly advantageous. All the means possessed by Donald Cameron were laid out on this boat, and both he and his mother felt proud and happy as he launched it free of debt and was able to call it his own. He told his mother that he expected to make a little fortune by it, that he would then build a house, and get a piece of land, and that her old age would be passed under his roof in peace and plenty. With many a blessing from Flory the boat sailed away. But Donald’s partner in the fishing speculation turned out a cowardly and inefficient seaman. The boat was soon wrecked in a storm. Donald, by great exertion, escaped with his life. He returned to his mother a beggar, and so severely injured that he survived the wreck of his boat and fortune but a few weeks.

There was not a family in the parish which did not share the sorrow of poor Flory.

I have the account of his funeral now before me, written by one present, who was so much struck

said, “and to you or your father’s son alone would I give it, and once you have it, it will pass my lips no more—

“The charm of God the Great
The free gift of Mary:
The free gift of God:
The free gift of every Priest and Churchman:
The free gift of Michael the Strong:
That would put strength in the sun.”

Yet all this echo of old ecclesiastical thunder was but “a charm for sore eyes!” Whether it could have been used for greater, if not more useful purposes, I know not.

by all he saw and heard on that occasion that he noted down the circumstances at the time. I shall give them in his own words:—

“When I arrived at the scene of woe, I observed the customary preparations had been judiciously executed, all under the immediate superintendence of poor Flory. On entering the apartment to which I was conducted, she received me with perfect composure and with all that courteous decorum of manner so common in her country. Her dress she had studiously endeavoured to render as suitable to the occasion as circumstances would admit. She wore a black woollen gown of a peculiar, though not unbecoming form, and a very broad black riband was tightly fastened round her head, evidently less with regard to ornament than to the aching pain implanted there by accumulated suffering. According to the custom of the country she drank to the health of each individual present, prefacing each health with a few kind words. In addressing the schoolmaster, who had been assiduous in his parish attentions towards her, she styled him the ‘Counsellor of the dying sufferer, the comforter of the wounded mourner.’ Another individual present she addressed as ‘the son of her whose hand was bountiful, and whose heart was kind,’ and in like manner, in addressing me, she alluded very aptly and very feelingly to the particular relation in which I then stood towards her. She then retired with a view of attending to the necessary preparations amongst the people assembled without the house. After a short interval, however, she returned, announcing that all was in readiness for completing the melancholy work for which we had convened. Here she seemed much agitated. Her lips, and even her whole frame seemed to quiver with emotion. At length, however, she recovered her former calmness, and stood motionless and pensive until the coffin was ready to be carried to the grave. She was then requested to take her station at the head of the coffin, and the black cord attached to it was extended to her. She seized it for a moment, and then all self-possession vanished. Casting it from her, she rushed impetuously forward, and clasping her extended arms around the coffin, gave vent to all her accumulated feelings in the accents of wildest despair. As the procession slowly moved onwards, she narrated in a sort of measured rhythm her own sufferings, eulogised the character of her son, and then, alas! uttered her wrath against the man to whose want of seamanship she attributed his death. I would it were in my power to convey her sentiments as they were originally expressed. But though it is impossible to convey them in their pathos and energy, I shall endeavour to give a part of her sad and bitter lamentation by a literal translation of her words. Her first allusion was to her own sufferings.

“Alas! alas! woe’s me, what shall I do?
Without husband, without brother,
Without substance, without store;

A son in the deep, a daughter in her grave,
The son of my love on his bier—
Alas! alas! woe’s me, what shall I do?

“Son of my love, plant of beauty,
Thou art cut low in thy loveliness;
Who’ll now head the party at their games on the plains
of Artornish?
The swiftest of foot is laid low.
Had I thousands of gold on the sea-covered rock,
I would leave it all and save the son of my love.
But the son of my love is laid low—
Alas! alas! woe’s me, what shall I do?

“Land of curses is this!—where I lost my family and
my friends,
My kindred and my store,
Thou art a land of curses for ever to me—
Alas! alas! what shall I do?

“And, Duncan, thou grandson of Malcolm,
Thou wert a meteor of death to me;
Thine hand could not guide the helm as the hand of
my love.
But, alas! the stem of beauty is cut down,
I am left alone in the world,
Friendless and childless, houseless and forlorn—
Alas! alas! woe’s me, what shall I do?

“Whilst she chanted forth these and similar lamentations, the funeral procession arrived at the place of interment, which was only about a mile removed from her cottage. The grave was already dug. It extended across an old Gothic arch of peculiar beauty and simplicity. Under this arch Flory sat for some moments in pensive silence. The coffin was placed in the grave, and when it had been adjusted with all due care, the attendants were about to proceed to cover it. Here however they were interrupted. Flory arose, and motioning to the obsequious crowd to retire, she slowly descended into the hollow grave, placed herself in an attitude of devotion, and continued for some time engaged in prayer to the Almighty.

“The crowd of attendants had retired to a little distance, but being in some degree privileged, or at least considering myself so, I remained leaning upon a neighbouring grave-stone as near to her as I could without rudely intruding upon such great sorrow. I was however too far removed to hear distinctly the words which she uttered, especially as they were articulated in a low and murmuring tone of voice. The concluding part of her address was indeed more audibly given, and I heard her bear testimony with much solemnity to the fact that her departed son had never provoked her to wrath, and had ever obeyed her commands. She then paused for a few moments, seemingly anxious to tear herself away, but unable to do so. At length she mustered resolution, and after impressing three several kisses on the coffin, she was about to arise. But she found herself again interrupted. The clouds which had hitherto been lowering were now dispelled, and just as she was slowly ascending from the grave, the sun burst forth in full splendour from behind the dark mist that had hitherto obscured its rays. She again prostrated herself, this time under the influence of a superstitious belief still general in the High-

lands, that bright sunshine upon such occasions augurs well for the future happiness of the departed. She thanked God 'that the sky was clear and serene when the child of her love was laid in the dust.' She then at length arose, and resumed her former position under the old archway, which soon re-echoed the ponderous sound of the falling earth upon the hollow coffin.

"It was indeed a trying moment to her. With despair painted on her countenance, she shrieked aloud in bitter anguish, and wrung her withered hands with convulsive violence. I tried to comfort her, but she would not be comforted. In the full paroxysm of her grief, however, one of the persons in attendance approached her. 'Tears,' said her friend, 'cannot bring back the dead. It is the will of Heaven—you must submit.' 'Alas!' replied Flory, 'the words of the lips—the words of the lips are easily given, but they heal not the broken heart!' The offered consolation, however, was effectual thus far, that it recalled the mourner to herself, and led her to subdue for the time every violent emotion. She again became alive to everything around, and gave the necessary directions to those who were engaged in covering up the grave. Her directions were given with unflinching voice, and were obeyed by the humane neighbours with unhesitating submission. On one occasion indeed, and towards the close of the obsequies, she assumed a tone of high authority. It was found that the turf which had been prepared for covering the grave was insufficient for the purpose, and one of the attendants not quite so fastidious as his countrymen, who in such cases suffer not the smallest inequality to appear, proposed that the turf should be lengthened by adding to it. The observation did not escape her notice. Flory fixed her piercing eye upon him that uttered it, and after gazing at him for some moments with bitter scorn, she indignantly exclaimed, 'Who talks of patching up the grave of my son? Get you gone! cut a green sod worthy of my beloved.' This imperative order was instantly obeyed. A suitable turf was procured, and the grave was at length covered up to the entire satisfaction of all parties. She now arose, and returned to her desolate abode, supported by two aged females, almost equally infirm with herself, and followed by her dog.

"But Flory Cameron did not long remain inactive under suffering. With the aid of her good friend, the parish schoolmaster, she settled, with scrupulous fidelity, all her son's mercantile transactions; and with a part of the very small reversion of

money accruing to herself she purchased a neat freestone slab, which she has since erected as the 'Tribute of a widowed mother to the memory of a dutiful son.' Nor has her attention been limited to the grave of her son. Her wakeful thoughts seem to have been the subject of her midnight dreams. In one of the visions of the night, as she herself expressed it, her daughter appeared to her, saying, that she had honoured a son and passed over a daughter. The hint was taken. Her little debts were collected; another slab was provided on which to record the name and merits of a beloved daughter; and to his honour I mention it, that a poor mason employed in the neighbourhood entered so warmly into the feeling by which Flory was actuated that he gave his labour gratuitously in erecting this monument of parental affection. But though the violence of her emotion subsided, Flory Cameron's grief long remained. In church, where she was a regular attendant, every allusion to family bereavement subdued her, and often, when that simple melody arose in which her departed son was wont very audibly to join, she used to sob bitterly, uttering with a low tone of voice, 'Sweet was the voice of my love in the house of God.' Frequently I have met her returning from the burying-ground at early dawn and at evening twilight, accompanied by her little dog, once the constant attendant of her son; and whilst I stood conversing with her I have seen the daisy which she had picked from the grave of her beloved, carefully laid up in her bosom. But her grief is now assuaged. Affliction at length tamed the wildness of her nature, and subdued her into a devotional frame. She ceased to look for earthly comfort, but found it in Christ. She often acknowledged to me with devout submission that the Lord, as He gave, had a right to take away, and that she blessed His name; and that as every tie that bound her to earth had been severed, her thoughts rose more habitually to the home above, where God her Father would at last free her from sin and sorrow and unite her to her dear ones."

Flory continued to visit the grave of her children as long as her feeble steps could carry her thither. But her strength soon failed, and she was confined to her poor hut. One morning, the neighbours, attracted by the howling of her dog, and seeing no smoke from her chimney, entered unbidden, and found Flory dead and lying as if in calm sleep in her poor bed. Her body was laid with her children, beneath the old arch and beside the stone coffin of the Spanish Princess.

A TRUE WOMAN'S QUESTION.

Why should women pay taxes? That is the question. They have not the laying on of the taxes; and that slight difference exempted the plebs of Rome, unless ancient history lies. Women have enough to do without paying taxes—at least

the working ones have; and it is little the generality of men do to help them in their struggle. So why not this? Let every bachelor engage to pay the taxes of every spinster (every single working woman, working for her livelihood, if you prefer the limita-

tion), and women may have some faith in their gallantry. A recent accomplished traveller in America complains bitterly of the ingratitude and ungraciousness of women there, who claim precedence from men, and as a right too, and yet pay them back with no light coin of smiles and murmured thanks; with no faith or hope in their good qualities, no charity in their bad practices. But were the substantial service that we hinted at above rendered to women, we will engage, both in the old world and the new, in peace and war, that every benefited woman would do her best to be obliged and cordial, humble and graceful,—at least while the memory of the old burden lasted.

But for a higher argument: the justice of man is the virtue he takes his stand upon. No woman is perfectly just—of course not. It is man who is thoroughly honest and upright. In this character let men look at the unfairness and the positive immorality involved in women paying taxes. As a rule, no woman understands tax papers, though the bold ones may grasp them knowingly, as the timid ones clutch them in terror. Tax papers are puzzled over with far more dubiousness and confusion than railway guide-books, and at last they are deposited under lock and key like loaded guns, safe out of the reach of prying servants (as if they could understand them), but still hovering, like the sword of Destiny, over the unhappy mistresses' heads. Occasionally these mistresses refresh themselves in their misery by taking them out and shaking their heads over the knotty points. "'For property,' I am sure I have very little," one of them groans; "'police,' I'll soon have nothing to guard, and he don't guard me! My servant gets out, my door is left ajar, my door-mat is stolen, I might be stolen myself! My windows are broken by cowardly blackguard lads who know there is no man in the house, and the police knows nothing about it, and is saucy when I complain. 'For lighting the street,' I never go out at night; if I did, I should prefer to carry a lantern. 'Water rates,' they'll leave me no bread to eat, and I need not mind about water; and this annoying due on the house,—the house is not my own, I know that to my cost, but I have to pay, and then the landlord pays me back something; how much am I to get from him though, and when am I to get it? Oh! dear, I will never understand it. I don't believe the collectors and clerks understand it themselves, though it fills their pockets. I know when Mrs. Lorimer's husband was appointed clerk of the Sasine, she said to me, 'Sasine, what on earth is that?'"

It is no exaggeration to say the study of these abominable tax papers must have hastened the death of many a frail old woman, and overwhelmed the mind of many a weak one. It would serve them right—those layers-on of the taxes—if a company of lunatic old women were to invade their territories, and clamour round them, and scratch and pinch them.

Some infatuated women have been known to go and attempt to pay their taxes before the day speci-

fied, in order to get rid of the horrible oppression. As might be expected, they have been snubbed and dismissed by the collectors for their pains. To be behind the day would make the hair of these victims of conscientiousness and nameless terrors stand on end and drive them nearly out of their wits with fright.

"What would happen if you were not in time?" inquired a neophyte at one of these unprotected females, restless under her tremendous responsibility.

"Goodness gracious! child, don't you know? A sheriff-officer would come publicly—do you hear?—publicly, and carry away the table, or perhaps the sofa you are sitting upon,—you may well jump!—for the National Debt."

Well, not to have contracted that debt, and yet to live in such awful apprehension of the creditors, is hard.

Yes, women are punctual souls, at least all except the giddy, giggling ones who have fathers, brothers, husbands, or sons to fall back upon,—and they start betimes on their excursions of severe duty to a public office. Now it is not necessary to explain to any well-principled, well-brought-up reader, man or woman, that to go to a public office filled with men standing before extravagantly large fires,—sitting at desks, casting sharp eyes on the trembling woman as if she were guilty of an impertinence in interrupting their mightinesses,—coming forward and cross-examining her,—sneering at her stupidity and awkwardness,—cutting short her explanations, and entering into no explanations themselves,—showing her out more bamboozled than ever,—it is unnecessary to say, that to go through all this, is a trial of no ordinary kind to a feminine mind of common delicacy. And who does not know that with the spinsters of the sex, the blushes of sixteen may be on the wrinkled cheek of sixty, and the tremour of the voice may be half the quaver of age, half the quaver of bashfulness?

This ordeal is difficult to endure, even where its stage is before a bank counter, and the business is only the presenting of a cheque, and the signing on its reverse side of the maiden name—in the old-fashioned hand which has signed so many protests of dutiful filial affection, vows of devoted youthful friendship, possibly confessions shyer and sweeter still. Even here the hand that did all the rest so deftly, and many a hundred yards of tape trimming and needlework without a blemish, will turn aside perversely, and commit queer errors in the familiar task, purely under the press of adverse, uncongenial circumstances.

But what must the case be when it is in the tax-collector's office, and he rises in his superior knowledge, strength, and power, and expects her to be prepared beforehand with a mass of information and comprehension; and then, when he is done, advises her, if she has anything to object to, to appeal? Appeal! Women worthy of the name never appeal in a tax court or any other, either

for love or money. "No, no, my dear, have my name and my affairs discussed in a public court, and perhaps be called upon to swear,—I could not think of it, though they have put me down for five pounds more rent than I pay. I must just submit; there is nothing else left for me to do."

Women are not capable of much. We hear a good deal of that now-a-days. They have not muscle or nerve or equanimity for doctors, they have not impartiality or assiduity for judges, they want something or other which disqualifies them for being clergymen, though I know not what it is, unless it be St. Paul's consent, for we all know that they frequently undertake and perform parish work. Even without their original defects, they have other claims upon them which might interfere with their fitly preaching, pleading, or physicking the sick. They never wrote a great epic, or composed a great opera, or painted a great picture. They have been lately proved to have so many ounces less bulk of brain than men. Well then, did it ever strike any man who knows all this, that they were not capable of paying taxes,—that they might have demands upon them interfering with that arrangement,—that it was about as unreasonable and unfair as asking irresponsible young persons, and half-grown children, to take care of themselves and others in a position they have never been trained to, and are punished by the weight of public opinion if they so much as try to comprehend? If there is inequality in all else between men and women, why should there exist equality on one head, and that taxes?

One other argument. Women are always clamouring for their rights—these silly women who ought to be more reverent and obedient! Well, might not this act of favour or justice stop their mouths, as it stopped the mouths, for whole centuries, of the old plebs of Rome, whom they resemble? Yes. I go back to my reference at starting: the old plebs at Rome had no votes, and paid no taxes. Women, who are incapable of deciding on any public question, should surely also be held incapable of contributing to discharge the interest of the National Debt, to endow men in office with their salaries, to do any one of the mighty and complicated matters for which taxes are imposed.

Suppose the exemption were tried; suppose it helped those workers whose weakness is so much insisted upon to provide for their bodily wants without coming upon the charity of their brethren, would not virtue have its own reward, and the act of magnanimity to women redound as a benefit to the men who granted it?

But if the great truth is not conceded, then, single women, be prepared for a sacrifice in order that you may come out conquerors. Sell off your beloved household goods, and go into furnished lodgings. Do not hesitate to mulct the Government which does not hesitate to mulct you in your ignorance and helplessness. Follow the example of many a heartless wretch of a man, who boasts of his triumph, his liberal income, his enjoyment of all bachelor pleasures—his exemption from taxes.

SARAH TYTLER.

THE SANGREAL.

A PART OF THE STORY OMITTED IN THE OLD ROMANCES.

PART I.

How Sir Galahad despaired.

THROUGH the wood, the sunny day
Glimmered sweetly glad;
Through the wood, his weary way
Rode Sir Galahad.
Every side stood open porch,
Stretched long cloister dim:
"I was a wavering, wandering church,
Every side of him.
"What if this should be the one
Holiest church of all,
Where through ages dim and lone,
Lies the Sangreal!"
On through tree-built arches high,
On and on went he;
Parched with thirst that made him sigh
Like a misery.
Came the moon, through ghostly trees,
Glimmering faintly glad;
Worn and withered, ill at ease,
Down lay Galahad;
Closed his eyes, and took no heed
What might come to pass;
Listened to his busy steed,
Cropping dewy grass.

Sweet to him the juicy blade,
Cold in the moonshine;
For his labour he was paid—
Galahad must pine.
Dry and fevered, faint and sad,
Prayer itself was dead;
All the joys he might have had,
Gathered round his bed;
Gathered with averted face,
Clothed in sorrow's weed—
Unborn souls that find no grace,
Motherless indeed.
Like the poorest in the land,
He a maiden fair
Might have led, with virgin hand,
To the altar-stair.
Youth and strength away would glide—
Age bring frost and snow;
With no woman by his side,
Downward he must go.
He at noble monarch's board,
Monarch strong and wise,
Drank no more with stalwart lord,
Saw no ladies' eyes.
And, instead, he wandered wide,
Resting never more,
Over lake and mountain-side,
Over sea and shore.

THE SANGREAL.

Gone was life and all its good,
Gone without avail!
All his seeking never would
Find the Holy Grail.

PART II.

How Sir Galahad found and lost the Grail.

Galahad was in the night,
When man's hope is dumb;
Galahad was in the night,
When God's wonders come.
Wings he heard not floating by,
Heard not voices fall;
Yet he started with a cry,
Saw the Sangreal!
Close beside him on the moss,
As if cast away,
Homely wood, with carven cross,
Rough and worn it lay.
Ages hidden from the sun,
Moon, and stars, and all—
Lo! from realms of darkness won—
Lo, the Sangreal!
To his knees, with fluttering soul,
Rose the reverent knight;
Trembling, daring, to the bowl
Went his hand of might.
In a well the mailed hand sinks,
Full of water dim;
All the grey moss floats and drinks,
Flooded from the brim.
Water plenty, but no cup!
Down he lay and quaffed:
To his feet the Knight rose up—
Rose and gaily laughed;
Fell upon his knees to thank,
Fell and worshipped there—
To his heart the water sank
And awoke the prayer.
Down he lay and slept a sleep
Healthful as a death;
Like the sun from ocean deep,
Rose at morning's breath.

PART III.

How Sir Galahad gave up the Quest.

As the sun came quivering
On the little well,
Galahad from couch did spring,
Sat full firm in selle.
"Now," said Galahad, "no more
Seek I dim chapelle;
But in every forest hoar,
Such a hidden well.
Not my thirst alone it stilled,
But my soul it stayed;
And my heart, with gladness filled,
Wept and laughed and prayed.
Hence let every fountain whose
Waters never fail,
Be to me the cup I choose
For a Holy Grail!"

PART IV.

How Sir Galahad sought yet again for the Grail.

On he went, to succour bound,
Through the forest dim;
Many living wells he found,
None that succoured him.
Never more the throb of prayer
Followed on the draught;

Never more he, rising, there
Wept, or gaily laughed.
Common water, all they bore,
Rose and filled and flowed;
Quenched his thirst, but nevermore
Eased his bosom's load.
For he sought no more the *Best*,
And he found it not;
Lofty longing was at rest—
Good was all he got.
Yearned the pain within his mind,
Like a quenched wail:
"Nought will ease me, till I find
Yet the Holy Grail."

PART V.

How Sir Galahad found the Grail.

Galahad went on again,
Thorough wood and wave;
Sought in every mossy glen,
Every mountain-cave.
Sought until the evening red
Sunk in shadow deep;
Sought until the moonshine fled,
Slept, and sought in sleep.
Where he wandered, weary, sad,
Story does not say;
But at last Sir Galahad
Found it on a day.
Took the Grail into his hand,
Had the cup of joy;
Carried it about the land,
Gladsome as a boy.

PART VI.

How Sir Galahad hid the Grail.

Horse and spear and splendour gone,
Gone his sheltering mail—
Singing went he on and on,
For he had the Grail.
Woods he wandered with his staff,
Woods no longer sad:
All the earth and sea did laugh
Round Sir Galahad.
Without place to lay his head,
Singing on he went—
Every cave a palace-bed,
Every rock a tent.
Every tree of sunny fruit
Was a festival;
And the fountain at its root
Was a Sangreal.
Maidens met him in the vale,
Youths on mountains hoar;
And he told them that the Grail
Might be found once more.
Where he went, the smiles came forth;
Where he left, the tears.
Thus he wandered, south and north,
Days and months and years.
Spear nor charger needed he,
Sword nor mighty mail:
Not a foe was left, to flee
From the Holy Grail.
When he died, with reverent care
Opened they his vest,
Seeking for the cup he bore
Hidden in his breast.
Nothing found they to their will,
Nothing found at all:
In his bosom, deeper still,
Lay the Sangreal.

ESSAYS FOR SUNDAY READING.

VI.—MARRIAGE AND A SINGLE LIFE.

BY JOHN CAIRD, D.D.

It is a narrow view of the office of the religious teacher which would confine him to the discussion of theological doctrines or the inculcation of devotional duties. Religion is character, and the ultimate end of all religious teaching and discipline is to produce character, to make men holy, and loving, and pure. But character is not a thing that can be developed or cultivated *in vacuo*. It requires the manifold persons, relations, circumstances, interests, trials, difficulties of social life, in order to its manifestation,—to some extent, to its very existence. It is true indeed that there is one side or aspect of religion which might exist if there were but one created soul in all God's universe. The essence of goodness, holiness, piety, might be developed in a man's being if he were alone with God in the world. As gravitation might be manifested if all the material system were annihilated, save the sun and one solitary planet revolving ever in a lonely heaven, so the primary element of true religion—love, might find ample sphere for its manifestation if all created beings should be swept away save one soul, and that were left to pass an eternity in isolation of worship, in the ceaseless exercise of aspiration, reverence, adoring gratitude and affection, towards the Great I Am. But the religion of man, religion according to the human idea of it, is not mere aspiration; it is the outgoing of thought, feeling, energy towards the creature as well as the Creator, towards equals and inferiors as well as towards the supreme Lord of all. The religious teacher, therefore, has to do not merely with theology and devotion, with the unfolding of the relations and duties of sinful man towards God, but with the elucidation of the principles of social duty, with the right modes of thinking, feeling, and acting in the varied situations and intercourses of daily life. He has to do with man, not as a recluse, a devotee, a divine, but as a member of the family, the community, the nation,—with the duties of the husband, the father, the child, the citizen, the subject. Religion is, or ought to be, the regulating principle of man's being in each and all of these relationships. And as gravitation is acting, and is in its principle illustrated, as really by the falling stone as by the planet revolving round the sun, so religious principle may be developed as truly in a kind word or a self-denying act in the family circle as in repentance towards God and faith in Jesus Christ. A man's mind may be in a religious attitude, engaged in a spiritual, evangelical contemplation, when considering how to behave towards his wife, or treat his servants, or invest his money, or vote for a member of parliament. Piety may be brought

into exercise in the endeavour to bring Christian principle to bear on the gains, losses, rivalries, competitions of business, on the cares and toils and sacrifices of domestic life, as really as in meditating on the doctrine of justification by faith or the perseverance of the saints. Principle elevates everything it touches, ennobles every phenomenon in which it can be traced. Facts lose all their littleness when transfigured by principle or law. The chemist's or geologist's soiled hands are no signs of base work; the coarsest operations of the laboratory cease to be mean or mechanical when intellectual thought and principle govern the mind and guide the hands. And religious principle is the noblest of all kinds of principle. Let it be brought to bear on life, and all its littleness, meanness, vulgarity, all its secularity vanishes. Not only the holy offices of the sanctuary, but the trivial common acts of the household and the family circle gather thus a sacredness round them. The relations of husband and wife, of parent and child, become types of heavenly things; the daily meal becomes sacramental, common work is transmuted into worship, and the very attire of the person converted into priestly raiment. It is upon this principle that we explain the importance which we find the writers of the New Testament attaching, and the frequent and minute reference they make, as to the other relationships of life, so especially to that around which they all converge, the relationship of husband and wife.

Has religion, then, anything to say as to the formation of the marriage tie? Is this a question which is to be relegated to the province of worldly prudence or of worldly passion? Is the union of two human beings for life a matter too light and sportive to be settled anywhere else than in drawing-rooms and social festivities, or, at best, too secular to be discussed, save in the chambers of the lawyer, over financial contracts, jointures, and deeds of settlement? As there are matters too grave and sacred to be introduced amidst the flutter of ball-rooms, the light play of jest and song, of sparkling compliment and blushing retort, so, on the other hand, are there matters too light and gay to come under the cognisance of religion and to be discussed by its ministers. Is the question, Shall I bind myself irrevocably to another, for weal or woe, on to my life's end, one of these? Whatever answer we may be disposed, under the influence of modern conventionalities, to give to this question, it is obvious that if we wish to regulate our conduct by Scripture precept and example, there is but one answer which it admits of. For not only do we find, in the instructions addressed by inspired

apostles to the members of the primitive churches, frequent counsels and admonitions as to the duties of the married state, but also repeatedly an authoritative opinion is pronounced as to the kind of marriage which alone is legitimate for a Christian; and, in one passage at least, a discussion of the question, whether in certain circumstances a single or a wedded life is that in which we can serve God best. I do not think, therefore, that it is in any measure a breach of Christian propriety, whatever it may be of conventional clerical decorum, if I throw out a few thoughts on each of the points which I have indicated as treated of by the sacred writers: viz., first, the general question, whether in any circumstances marriage or a single life is the state in which we can best serve God; and secondly, where marriage is best, what is the sort of marriage into which it is lawful or desirable for a Christian man or woman to enter.

L As to the former of these, the only direct instruction to be gathered from Scripture is contained in a well-known passage in St. Paul's first letter to the Corinthian Church. The question whether, in the existing circumstances of the church, it was better to marry or remain single, seems to have been submitted to him for solution. And the answer which, in various forms of expression, he seems to give, is to the effect that, whilst in no case could marriage be absolutely forbidden, in most cases celibacy was best. "I would," says he, "that all men were even as I myself," that is, unmarried; "but every man hath his proper gift of God, one after this manner, and another after that. I say, to the unmarried and widows, it is good for them if they abide even as I." And again, "I suppose that it is good for the present distress, for a man so to be. Art thou bound unto a wife? seek not to be loosed. Art thou loosed from a wife? seek not a wife." But that these and similar expressions are not to be taken absolutely, as a recommendation of celibacy as the holier or better state for a Christian, is proved not only by St. Paul's general tone of speaking in other parts of his writings, but especially by one passage in his First Epistle to Timothy, in which he denounces the prohibition of marriage as one of the most deplorable errors of false teachers. "The spirit speaketh expressly, that in the latter times some shall depart from the faith, giving heed to seducing spirits and doctrines of devils . . . forbidding to marry, and commanding to abstain from meats which God hath created to be received with thanksgiving of them which believe and know the truth."

Whatever, therefore, be the import of St. Paul's advice to the Corinthians, it contains no sanction of that notion which became so common in later ages of the church—the notion that a special dignity and holiness characterises the virgin life; that they, of all others, live nearest to God on earth, those holy men or maidens who tear themselves away from all the soft amenities, the tender charities, and sweet associations of home and wedded life, and

devote their whole existence to solitary prayer and perpetual self-denial. For this and kindred errors were but parts of a system which, even amongst Protestant communions, has not yet been altogether eradicated: a system which identified piety with austerity, and regarded the privation and pain of the creature as, in and for itself, acceptable to the Creator. Yet it can never be too often repeated that pain as pain, gloom as gloom, evil in any form, is not pleasing but hateful to God. Our Father has no grim jealousy of his children's joy. Himself the blessed and only Potentate, He delights in the communication of happiness; and it would be not only not contrary, but infinitely congenial, to His nature that all the world should be flooded with joy; that every heart should throb with delight, every countenance be radiant with happiness, every home, with its reciprocation of domestic sympathies and affections, become to man and woman a very heaven on earth. The ascetic conception of religion, therefore, which of old led men and women to choose a life of loneliness, pain, and privation, as in itself, of necessity, holier than one of human love and tenderness and innocent joy, and which in modern times associates religion with a severe look, a whining half-querulous tone, a grim distaste for all that is bright and festive and graceful, a suspicious tolerance of beauty and poetry and art, and the manifold delights of sense and imagination—this conception of religion is a miserably mistaken one. There is a kind of pain, suffering, sacrifice, that is noble and pleasing to God—pain endured for others' good, suffering which is borne for the sake of truth and conscience, sacrifice that surrenders its dearest wish and casts to the winds its most prized earthly treasure, rather than forsake Christ or betray His cause. But then the suffering or privation, in this case, is good, not in itself, but merely as the means for the attainment of something else which is essentially good; and if the good could be reached without the suffering, it would be all the better. Disconnect the suffering from the good result, and it is not only not meritorious, but sheer unmitigated folly or wickedness. To let money go, rather than tamper with conscience, and, if need be, to become a beggar rather than a fraudulent bankrupt, is noble loss, for it is to become poor in worldly substance in order to be rich in spirit; but to fling away money into the sea, or take a vow of poverty for no end but to be poor, would be either stark madness or fanatical folly. Our Lord admonishes us to pluck out a right eye, or cut off a right hand, if need be, rather than be shut out from the kingdom of heaven; but no one would infer from this that it is a meritorious thing in itself to maim or blind one's self. To be sad when there is reason for sadness, when the hand of God's chastening providence lies heavy upon us, or when He awakens us by His word and spirit to a sense of our guilt and danger as sinners, is a sign of a right state of mind and heart; for levity in bereavement, or making light of sin, indicates utter heartlessness or moral insensibility. But to go

about with a lugubrious face, or to connect piety with a starchy aspect and a chronic tendency to sighing and groaning, is a piece of weakness which we may overlook in well-meaning, good people, only because we believe that their hearts are better than their heads. Our Lord commanded men to forsake all and follow Him; to hate father and mother and wife and children for the Gospel's sake; and declared that "whosoever he was that loved father or mother, or wife or child, more than Him, and that forsook not all that he had, was not worthy of Him." And so, full often in the history of His church has this test been applied to the strength of a Christian's principles, and applied not in vain. How often have the dearest earthly ties been severed, and home, friends, kindred—all that makes life sweet to a man—surrendered, fearful though the struggle it cost to give them up, for a dearer Master's sake! How often have men of large-hearted, genial, loving natures, thirsting for human love and sympathy, formed to bless and to be blessed amidst the charities of home and wedded life, condemned themselves at the call of duty, like Paul, to a wandering, homeless, loveless existence, carrying, perchance, on to the grave the secret burden of an ungratified affection, the ever-bleeding wound of a love that might be lacerated, but that could not die! And it was this that St. Paul meant when he inculcated on others, if need were, that solitary life of which he himself gave notable illustration. It seemed to him at such a time as that in which he lived, and for men called to such work as his, that there was a possibility of more entire devotion to the work of the Lord, of a more complete and heart-whole surrender of self, of time, thought, energy, to the one great service to which his own life and being were dedicated, if men were undistracted by family cares, unhindered by the entanglements of domestic life. He did not love loneliness for its own sake, or scorn the support and strength and soothing of sympathy from man or woman. Far otherwise. Yet, with a nature singularly open to love, ardent, genial, impassioned beyond that of most men, he was ready at Christ's call to sacrifice all natural yearnings, in order that, as the sap of the lopped branches of the vine rushes with greater intensity into the shoots that are left, or as the force of the stream, cut off from diverging courses, flows all the more impetuously into the main channel, so might the ardent vital force of an undivided affection, the current of his being's energy, not one drop lost by diffusion, flow out only and ever to Christ. There once sat upon the English throne a Queen who lived ever, as has been said, "In maiden meditation, fancy free," and the explanation of whose solitary life is contained in her own well-known declaration, that "England was her husband, and all Englishmen her children," and that she desired no higher character, or fairer remembrance of her to be transmitted to posterity, than this inscription engraved on her tombstone, "Here lies Elizabeth, who lived and died a maiden

Queen." Whether it was a right expediency, or a false pride, or motives of mistaken policy, to which her conduct is to be ascribed, surely her words are suggestive of that nobler solitariness which explained itself in the language of the great Apostle, "Who is weak and I am not weak? Who is offended and I burn not? In weariness and painfulness, in watchings often, in hunger and thirst, in fastings often, in cold and nakedness. Beside those things that are without, that which cometh upon me daily, the care of all the churches."

The character of the age in which we live, and the circumstances of the church in our day, are very different from those of Apostolic times, and rarely, for the same reasons, are any now called to imitate the self-denying solitariness of St. Paul. Yet not seldom voluntarily, often involuntarily, are Christians in our day called, in the providence of God, to a lot apart from the cares and joys of wedded life; and wherever this arises from arrangements of society over which they have no control, or from other inevitable causes, there is addressed to such, a call as clear and sacred as that which came to the inspired Apostle: "This is the lot in which thou canst best glorify God and do the work of thy Master in the world." To the unwedded, as to the wife or husband or parent, there is a special mission assigned by Christ. "The unmarried woman," it is written, "careth for the things of the Lord that she may be holy both in body and spirit; but she that is married careth for the things of the world, how she may please her husband." And though the special work or mission of those who are called to lead a single life cannot be definitely pointed out, forasmuch as it varies with the special conditions of each individual case, yet it might not be difficult to indicate generally the direction in which that work very frequently lies.

To take the case of one sex only. It is at least one part of that special duty to which the unwedded woman is called, to remove from her sisterhood that reproach of sourness and censoriousness which often most unjustly points the cheap sneers of superficial and flippant wits. It is not true, whatever the frequent tone of coarse jocularities would seem to imply, that the spring of human tenderness is often turned to gall in her whose youth is fading or has passed away, uncheered by wedded bliss. It may be so in some cases where the fountain of love is not fed from the deeper sources of Christian faith and fellowship with God. There may be those whose whole hearts' desire in early life has been given to the world, and who cannot bear the passing away of those pleasures which had become necessary to their peace. The beauty which once perhaps attracted admiration is gone, but the admiration is as much longed for as before, and, when yielded to younger and fairer candidates, the sight of it excites envy and bitterness in the heart, and even poisons the poison of detraction on the tongue. The old home is broken up; brothers, sisters, companions have settled into

their own separate circles of interest, apart from her. No longer occupied with education, or sought after as a gay and welcome participant in the round of youthful festivities and amusements, and having never cultivated her mind so as to find solacement in intellectual resources, or her heart so as to occupy herself with pleasure in works of Christian charity, she can contrive nothing to fill up the vacant thoughts and the time that hangs heavy on her hand, but an intrusive and impertinent inquisitiveness into the private affairs of her neighbours, the maintaining a strict keen-eyed surveillance over the conduct of younger women, and the performance of the duties of fetcher and carrier of petty gossip and small scandal to a whole district. No spectacle certainly can be more unlovely or provocative of censure than that of one of a sex in which all the gentleness, the tender sympathies and kindnesses of life should predominate, dried up into unwomanly hardness, or settled, like thin sweet wine, into a condition that is saved from insipidity only by its tartness. But God forbid we should present this picture as the type of a class. Far otherwise. There are unwedded women, not a few, who, though they have outlived their youth, have not outlived a beauty that fades not with the bloom on the cheek or the light of youth in the eye. There are those whose Christian cheerfulness and good sense, whose ready sympathy and serviceableness, whose equanimity and helpfulness and helpfulness, render them universal favourites. The unwedded aunt, who with almost, if not all, a mother's love for children, herself set free from domestic responsibilities, becomes the dear friend and confidant of others' cares; ready ever to enter into their difficulties and share the burden of their sorrows; to whom the little ones fly for story or song, or well-contrived sport, the more advanced for sympathy and advice in all their youthful struggles and perplexities; who bears about with her ever the "sunshine of a gentle smile" and the melody of a voice sweet and low—"a most excellent thing in woman,"—surely this is a picture taken from real life which some of us can fill up from our own observation, and which, to all who rightly study it, far more than removes the reproach which unwedded women less amiable have brought upon their sisterhood. And if, in addition to this, you reflect on the more public usefulness of others who, set free from family cares and engagements, gladly and earnestly devote themselves to works of Christian love and charity, to the care of the poor, the sick, the aged,—consecrating their gifts of leisure, of education, of gentle and refined habits, to the service of their Lord in the various works and enterprises of His church,—is there not presented to us a view of unwedded life which may well convince us that Christ in our day, as in the earlier times of the church, has a place and a work not insignificant or ignoble for the unmarried man or woman "who careth for the things of the Lord?"

II. Let me now add a few sentences on the

second topic, viz., the kind of marriage proper for a Christian man or woman. Without attempting any formal exposition of the language of the sacred writers on this subject, I think we may gather from it generally that a Christian marriage is one in which there exists between the parties the sentiments of mental fellowship and moral or spiritual sympathy. For instance, we are told by St. Peter that the husband and wife are to dwell together "according to knowledge," and they are to regard each other as "heirs together of the grace of a life." And by this account of it there is excluded from the idea of Christian marriage a union of mere passion, or a marriage of convenience. A relationship that is indissoluble should not be based upon things that are destructible and that may perish in a moment. "Of all earthly unions," writes one, "this is almost the only one permitting of no change but that of death. It is that engagement in which a man exerts his most awful and solemn power,—the power of doing that which in this world can never be reversed,—the power or the responsibility which belongs to him as one who shall give account, of abnegating his freedom, of parting for ever with the right of change. And yet it is perhaps that relationship which is spoken of most frivolously and entered into most carelessly and wantonly. It is not a union merely between two creatures, but between two spirits; and the intention of the bond is to perfect the nature of both by supplementing their deficiencies with the force of contrast, giving to each sex those excellencies in which it is naturally defective,—to the one strength of character and firmness of moral will; to the other, sympathy, meekness, and tenderness. And just so solemn and just so glorious as these ends are for which the union was intended, just so terrible are the consequences, if it be perverted and abused. For there is no earthly relationship that has so much power to enoble and exalt, and, on the other hand, to wreck and ruin the soul. There are two rocks in this world of ours on which the soul must either anchor or be wrecked. The one is God, the other the relation we are considering. On the Rock of Ages, if the human soul anchor, it lives the blessed life of faith; against it if the soul be dashed, there is the wreck of Atheism, the worst ruin of man. The other rock is of a different kind. Blessed is the man, blessed the woman, whose life-experience has taught a confiding belief in the sex opposite to their own—a blessedness second only to the blessedness of salvation. And the ruin in the second case is second only to the ruin of perdition. For these are the two tremendous alternatives—on the one hand, the possibility of securing, in all sympathy and tenderness, the laying of that step on which man rises towards his perfection; on the other, the blighting of all sympathy, the being dragged down to the earth, and forced to become frivolous and commonplace, losing the zest and earnestness of life, and having the whole being degraded by per-

petually recurring meannesses and vulgar causes of disagreement."

If such be the alternatives in the marriage union, can it but be that they fearfully risk the worst who rush into marriage in the frivolous haste of passion, or, if with deliberation, with the deliberation not of Christian wisdom, but of cold and calculating worldly prudence? That man miserably errs who lets himself drift into a connection which may make or mar his happiness to the grave, and mould his being for eternity, as lightly and thoughtlessly as he undertakes a brief excursion, or accepts an invitation to a party of pleasure. If the charm that lures him be mere physical beauty and attractiveness, then this is the deplorable incongruity, that whilst the relationship is lasting, that on which alone it is based is not: accident may disfigure it, disease may stamp its ugly seams on it, advancing years will surely wear away the beauty that consists in the bloom and symmetry of face and elegance of form. Even if the toy could keep its glitter, it would soon cease to please. But it will not keep it. The gloss rubs off, the surface polish wears away; and when the man who has married a pretty doll for its prettiness finds that that is gone, all that made the marriage real goes too. In the heat of passion, and amidst the fresh charms of novelty, even a man of sense is sometimes blind to the weakness or silliness which youth and beauty conceal. There is a time when even nonsense sounds charming when it falls from pretty lips; but the misfortune is, that the prettiness goes, but the nonsense remains. And so it comes often to this, that that which ought to be the strength and solacement of life—that relationship in which there should be found the soothing of wise sympathy and the strength of mutual confidence and counsel—becomes, if one of the parties be possessed of sense or principle, a yoke which ever galls and frets, but is borne, like other self made burdens, in silence, because nobody else can be blamed for it, and because it is inevitable. Nearly the same thing may be said of the marriage of convenience. Prudential motives are not, of course, to be despised; but to make prudential considerations the beginning and end of the matter is as foolish as it is base.

The only union, then, that deserves and does not dishonour the name of marriage is one in which, whatever external attractions accompany it, there is mental and moral sympathy, and, above all, the

hallowing presence of religious faith. For this alone brings us into real union with another. We may dwell in the same home with another, and yet be wide apart as if oceans rolled between us. But where there is congeniality of taste, sympathy of souls, union of heart in the same God and Saviour, no external distance can affect, or lapse of time weaken it, nor can even that which breaks up all other connections, dissolve this. The hands that were clasped at Mammon's altar may soon drop from each other's grasp. The hearts which passion's force united, when passion's fire has cooled, may fall off from each other, or, in the recoil, fly far apart. But they whom God and holy love bind together, none can ever put asunder. Money may go, hardship and ill fortune betide them, but there are those, many and many a one, whom sorrow and toil and suffering, borne together, have only bound into a closer, deeper, dearer affection. The ardour of youthful passion may evaporate, but there is a calmer, serener, profounder feeling that rises, as the years pass on, in hearts that have known and trusted each other long. The fair face may lose its outer loveliness, and the form its roundness, and the once light and airy step its elasticity. But even on the outward face and form there is a beauty which steals out often, to replace with a more exquisite charm that which the years bear away—the beauty of Christian gentleness and sweetness, of maturing character and more deeply settled inward peace,—“the ornament of a meek and quiet spirit.” Onward through life's path, stage after stage, truer and more trusted, loving and more beloved, they who are thus united may tread together;—on, amidst the gathering evening shadows and the soft waning lights that tell how fast their sun of earthly joy is westerling—pensively, it may be, yet not sadly or despairingly;—on, hand clasped in hand, heart knit to heart, till the hour when the inevitable parting comes. And yet even in that which to all besides has in it a horror of darkness too dreadful to be calmly contemplated, there is no lasting gloom for them. A little longer, and the loved and lost shall be once more and for ever united; and when the churchyard shadows in summer and winter days play softly on the grave where side by side their dust reposes, bright with immortal beauty, loving as immortal spirits only love, they shall dwell together in the presence of the Lamb.

THE HID TREASURE.

THE PARABLES

READ IN THE LIGHT OF THE PRESENT DAY.

BY THOMAS GUTHRIE, D.D.

VII.—THE PARABLE OF THE HID TREASURE.

MATTHEW xiii. 44.

ONE of the most beautiful legends of old times is that of the Golden Age. As sung by the heathen poets, this once was a happy world; its earliest periods being like the bright dawn of a dark and cloudy day; cheerful and happy, as the infancy of a life which afterwards grows beset with troubles and stained by crime. In these days, envy and strife and war were unknown; the habits of men were simple, their wants were few, their lives were virtuous: no slaves toiled in chains, nor captives pined in dungeons, nor bloody tyrants reigned on thrones: plenty filled every cup to the brim, and peace, unbroken by the strife of tongues or clash of arms, brooded on every shore. In contrast with those which followed them and went by the name of the Iron, these happy times were called the Golden Age. No poet's dream, this, like many other legends preserved in ancient song, is a fragment of true history, and one in which it is not difficult to recognise a tradition of Eden, and of man's early innocence—changed, no doubt, from its original form, as, like a stone in the bed of a river, it has come rolling down the long and turbulent stream of time.

Literally, as well as figuratively, the earliest periods of the world were the Golden Age: for the discoveries of archæologists show that man's acquaintance with the metals began with gold and silver. Long ere he had forged iron into sword or ploughshare, sheathed his ships with copper, covered his bull's-hide shield with brass, or cast lead either into pipes to convey water or into bullets to carry death, with no palace other than a hut, and no throne other than a stone, kings wore crowns of gold; while women, attired in wolf's skin, danced on the green with golden ornaments tinkling on their naked ankles. It was so in this island among the brave and hardy savages from whom we trace our descent. It was much more so in sunnier and richer lands. At the invasion of Peru, for instance, Pizarro and his Spaniards found the interior of the king's palaces adorned with the finest and most costly materials; the sides of the apartments were studded with gold and silver ornaments; their niches were filled with images of plants and animals made of the same precious metals; and even much of the domestic furniture displayed the like wanton magnificence. The Temple of the Sun shone with something of his own dazzling splendour. Every part of its interior was richly ornamented:

on the eastern wall, and so situated that at his rising the rays of the sun struck directly on it, was a figure of their god, engraved on a golden plate of massive dimensions, and studded all over with emeralds and precious stones; nor was there in that vast and splendid edifice any utensil whatever that was not made of gold or silver. Besides this, there were a hundred inferior temples in the Holy City, and many in the provinces, that almost rivalled in magnificence that of the metropolis. Historians also mention, that even the pipes which conveyed, and the fountains that contained, water in the garden of the summer palace of the Incas were of silver; and that one ornament of this fairy-like retreat consisted in full-sized imitations of foreign plants, with stalks of silver, and leaves of gold.

Where are these treasures now—the gold and silver of the world's departed empires, of such kings as Solomon, the Pharaohs of Egypt, the Cæsars of Rome, the mighty satraps and sultans of the East? They have vanished, not perished; for, while silver resists the influences that tarnish the baser metals, gold is absolutely indestructible—resisting the action of fire itself. Expose water to fire, and it dissolves in vapour; wood, and it vanishes in smoke and flame, leaving but grey ashes behind; iron, and it is converted into rust:—but fire may play on gold for a thousand years without depriving it of a degree of its lustre or an atom of its weight. Beautiful emblem of the saints of God, gold cannot perish—their trials, like the action of fire on this precious metal, but purifying what they cannot destroy.

The disappearance of the old world's treasures finds its explanation in the custom to which the man of this parable owed his fortune. In ancient times there was little trade in which men could embark, and there were no banks in which they could lodge, their money. And as secrecy offered them the best, if not only, security, it was common for people, while reserving a portion for ordinary use, to hide their gold and silver in the ground; and it often happened, through sudden death or otherwise, that the treasure was left there, their secret being buried with them. Besides this, old times were unsettled. A country was suddenly invaded,—to preserve their valuables from the hand of the spoiler, the inhabitants buried them in the earth: falling in battle or dying in exile, they never returned to claim them; and thus the earth became a bank in which was accumulated during the course of

ages a vast amount of unclaimed deposits. Even in our country, though scantily supplied with the precious metals, the spade that digs the railway, the plough that breaks up some waste moorland, is ever and anon bringing old coins to light, or still older ornaments of gold and silver. And, since the lands of the Bible were much richer than ours, and had accumulated vast stores of wealth at a period when our forefathers were naked savages, nothing was more likely to happen in these countries than the circumstance which forms the groundwork of this parable.

A peasant goes out to plough. The ground has lain undisturbed, perhaps, for centuries; or, in order to recruit an exhausted soil with virgin earth, he sends his share deep into its bosom. Suddenly, as he whistles carelessly behind his oxen, he is startled by the ring of metal; and on turning his head, how he stares to see the black furrow yellow with scattered gold, and sparkling in the sun with jewels! The plough is abandoned; he drops on his knees;—happy man! he has lighted on an old hid treasure, and has a fortune within his grasp. Restoring the treasure to its place, he conceals with care all traces of the discovery, and, masking his joy under an air of indifference, hastens homeward. To the amazement of his neighbours, who pity him as moon-struck or mad, he sells his house, his furniture, his bed, and pulling the beds out from beneath his sleeping children, sells them—parting with all he has in the world. He is not mad, though men think so—not he. He knows what he is about. Making what others reckon a bad bargain, he purchases the field in question: and ere the villagers have recovered from their surprise, their astonishment at his folly changes to envy of his fortune. Possessor of an enormous treasure, he has exchanged a hard, humble, toiling life for the respect and ease, the comforts and luxuries, which are the eager desire of all and the happy lot of few.

Such is the incident which forms the groundwork of a parable where

THE BLESSINGS OF THE GOSPEL ARE COMPARED TO A TREASURE.

In a world which looks down on poverty, where beggars are counted offscourings, and the respect is often paid to wealth that is due only to worth, a considerable fortune will secure its possessor from contempt, and a splendid one secure his introduction to the proudest circles of the land. Yet how much higher are the rewards which the treasures of the Gospel secure to him who, though poor in this world's goods, is rich in faith? Lifting "the poor from the dust, and the needy from the dunghill to set him with princes," they introduce him to the presence of the Divine Majesty and the palace of the Great King—to the society of angels and the communion of saints—to the general assembly of those high-born and first-born, compared with whom in point of worth, or dignity, or lofty and enduring glory, your kings are but worms of the

dust. Again, if wealthy, you may reside in a splendid mansion, but it is to leave it one day for the narrow house; you may pamper the body with the costliest luxuries, but you are fattening it for worms; nor can the flashing blaze of a thousand diamonds blind our eyes to the melancholy fact that this gay, beautiful, charming form shall, stripped of all that bravery, be wrapped in a shroud, nailed up in a coffin, and thrust down into a black hole to rot. But give me the treasures of redemption, my food is manna, and my wine is love; my sweet pillow the bosom of the Son and my strong defence the arm of Almighty God; my home that palace, eternal in the heavens, where angels' harps supply the music, and woven of Jesus' righteousness the robes are fairer than angels wear. Again, the bankrupt who succeeds to a fortune is placed in circumstances to pay his debts. Is there a stain on his honour, he wipes it out; if none, he relieves himself of a load which lies heavy on the heart of an honourable man. Henceforth he neither fears to examine his accounts nor look all men in the face: and on the day when he summons his creditors to pay his debts in full, he is esteemed a happy, applauded and fêted as an honourable man. But possessed of the treasures of the Gospel, I pay debts whose sum no figures can express, nor long ages in Hell atone for; with Jesus' infinite merits I pay God all his claims; and obtaining a full discharge from the hands of Eternal Justice in the High Court of Heaven, I lift up my head, not only before men but before angels; not only in the presence of holy angels but of a holy God; and looking round on conscience and the Law, on Death and the Devil, challenge them all, saying, "It is God that justifieth, who is he that condemneth?"

A treasure! So men speak of the child who, like a beautiful flower with a worm at its root, may droop and die;—of fame won on a stage, where the spectators who applaud to-night may hiss to-morrow;—of riches that, like scared wild fowl on the reedy margin of a lake, take to themselves wings and fly away. But how much worthier of the name the Friend who never leaves us; health that sickens not, and life that dies not; love that never cools, and glory that never fades; a peace that troubles may disturb but do not destroy—being to it but the raging tempest that shakes the arms of a tree which it cannot uproot; the swelling, foaming, angry billows that toss the bark which, securely anchored, they cannot part from its moorings nor dash on the surf-beaten shore!

The unspeakable value of those blessings of divine mercy, pardon, peace, and grace represented by this treasure may be tested in a simple way. In London, within whose heart there is gold in more senses of the expression than one, stands a building with armed sentinels by its door, and at its table directors with the fate of empires, with war or peace, want or plenty, in their hands. Entering by the guarded portal, and passing through the bustle of a crowded hall where Mammon sits enthroned,

and gold coins are tossed about like pebbles, and silver, as in the days of Solomon, seems nothing accounted of, you descend, by strongly protected passages, to a room whose walls, divided into compartments, are formed of massive iron. Around you there are heaped, pile on pile, not thousands, but millions of money—the wealth of a great nation—the price of crowns and kingdoms. You are in the strong room of the Bank of England, one of the wonders of the world. Now, from his loom where the shuttle flies from early morn into the night, take a poor, pale-faced, but pious weaver;—from the dark mine, where any moment he may be drowned by water, blasted by fire, suffocated in the choke-damp, or buried beneath falling rocks in the bowels of the earth, take a poor, begrimed, but pious pitman—and placing either in that room, offer him all its treasures on condition that he parts with that in his bosom! He would spurn the glittering bribe, saying as he returned to bless God for his brown bread and lowly home, “Get thee behind me, Satan;” or, “Thy money perish with thee!” With this blood-bought treasure he will rather die than part, saying, “It cannot be gotten for gold, neither shall silver be weighed for the price thereof; the gold and the crystal cannot equal it, and the exchange of it shall not be for jewels of pure gold; no mention shall be made of coral or of pearls, for the price of it is above rubies.”

THE BLESSINGS OF THE GOSPEL ARE COMPARED TO
A HID TREASURE.

The discovery of gold some years ago in our most distant colony agitated the whole kingdom; and as the news spread, thousands, breaking the ties which bound them to home, hurried away to the seaports, where crowded ships bore off the adventurers—all eagerly striving under press of sail which should first touch the happy strand. The voyage ended, our countrymen threw themselves on the gold fields; and soon the lonely dells of Australia, with emigrants from all lands, rang with the sounds of labour and a Babel of tongues. Yet long years before its treasures were brought to light, shepherds had left our hills to herd the flock on Australia's boundless pastures: the hut of the squatter had encroached on the hunting grounds, and his axe had sounded in the forests of the wondering savage; and there, earning only a bare subsistence, far removed from the homes and friends of their love, without hope of improving their condition or returning with a fortune, many had pined and drooped—like a flower removed from its native to an uncongenial soil. Yet all the while a fortune lay hid beneath the exile's feet; the roots of the tree under whose shadow he reclined, recalling scenes and friends far away, were matting rocks of gold; and from the bed of the stream where he quenched his thirst, thousands, with thirst for gold burning as his, came afterwards to draw splendid fortunes,—vaulting at once from abject poverty to the heights of affluence. He lived poor in the

midst of riches; and daily walking above wealth that had made him independent of labour, he sank, exhausted by toil and care and sad regrets into an early and lonely grave. Such fate befell many a one, with gold enough in the stones that formed his rude hearth, or in the rock against which his log-hut stood, to surround him with the splendours of a brilliant fortune.

Now that poor man, with his ragged tent pitched on a gold field, but ignorant of the treasure which he might have possessed and enjoyed, is the type and image of thousands. The treasures of the Gospel, they, as he had those of gold, have and yet have not. They are hid from them. Their minds, as Paul says, are blinded—“The God of this world hath blinded the minds of them which believe not.”—“The natural man receiveth not the things of the Spirit of God, for they are foolishness unto him; neither can he know them, because they are spiritually discerned.” Were God to make these treasures as plain to men as the ploughshare did this to the peasant's wondering, rejoicing, sparkling eyes, they would leave the house of God for their homes happier far than he. What is gold to these? Within the two boards of the poor man's Bible is a greater wealth of happiness, of honour, of pleasure, of true peace, than Australia hides in the gold of all her mines. That, for example, could not buy the pardon of any of the thousand criminals whom a country, weary of their crimes, once cast on her distant shores; but here is what satisfies a justice stricter than man's, and procures the forgiveness of sins which the stoutest heart may tremble to think of. Again, the wealth of the most successful adventurer cannot conceal the meanness of his birth, give polish to his manners, or raise him to a level with an ancient and jealous nobility: it alters the condition, but not the character of the man; and associated with ignorance, meanness, vulgarity, is, to use the figure of the wise man, only as “a jewel in a swine's snout.” But, accompanied with the blessing from on high and received into the heart by faith, the Gospel alters both our character and condition—making the rude gentle, the coarse refined, the impure holy, the selfish generous—working a greater transformation than if a felon of the prison were to change into a courtier of the palace, or the once ragged boy who had been educated to crime on the streets were to wear a star on his manly breast and stand in the brilliant circle that surrounds a throne. In the blood of Christ to wash out sin's darkest stains, in the grace of God to purify the foulest heart, in peace to calm life's roughest storms, in hopes to cheer guilt's darkest hour, in a courage that defies death and descends calmly into the tomb, in that which makes the poorest rich and without which the richest are poor indeed, the Gospel

—— has treasures greater far
Than east or west unfold,
And its rewards more precious are
Than all their stores of gold.

THE TREASURE WAS FOUND WITHOUT BEING
SOUGHT.

Each spring which by the voices of birds breaking the long winter silence, reminds us that other voices, now mute, shall wake again, and by the flowers on the green sod above our dead, reminds us that they also shall rise again—beautiful from dust, immortal from the bed of mortality, is emblematical of conversion as well as of resurrection. It is Christ's own voice speaking through the Spirit to souls for love of whom he left the skies, which I recognise in this beautiful and tender address, "Rise up, my love, my fair one, and come away. For, lo, the winter is past; the rain is over and gone; the flowers appear on the earth; the time of the singing of birds is come; the voice of the turtle is heard in the land; the fig-tree putteth forth her green figs; and the vines with the tender grape give a smell. Arise, my love, my fair one, and come away." In new life, life as from the dead, in songs of love, smiling skies and balmy air, budding woods and fields which hold the seeds of future, golden, bountiful harvests, the spring is an emblem worthy of conversion—the fitting dress of so great an event.

Besides, both in trees and flowers the spring presents remarkable illustrations of that variety with which God is pleased to work in saving souls, and turning sinners from the error of their ways. All his people are converted; must be so—for our Lord says, "Except a man be born again he cannot see the kingdom of God." But all are not converted in the selfsame manner; and there are in grace, as in nature, to use Paul's words, "diversities of operations, but it is the same God which worketh all in all." For example, the leaves of roses, of tulips, and of our orchard fruit-trees appear first—preparing the way for flowers still in the bud. In other cases this order is reversed. In the catkins of the hoary willow hung on naked stems, in the gold and silver cups of the crocus, whether they spring from the grass of Alpine meadows or edge our parterres with a beautiful border, the flowers precede the leaves—these plants, like a day unheralded by a dawn, burst into blossom without any apparent preparation. Even so, while some after a long search for true happiness and their souls' good, in fulfilment of the promise "seek and ye shall find," get in Jesus Christ the treasure of this parable and the pearl of the next, others find a Saviour without seeking him. They burst at once into a state of grace; and without seeking, or so much as thinking of it, they stumble on salvation, if I may say so, as this man on the treasure hid in the field. They are converted, and it is a great surprise to them—what neither they nor any one else expected.

Ambitious of riches and yet averse to work, men have resorted to necromancy to discover hidden treasures, digging for them in fields and amid hoary ruins. The man whose good fortune is recorded here was otherwise employed. Bred up in poverty,

and satisfied with his lot—the robust health of out-door occupation, an appetite that gave zest to the plainest fare, the lively prattle of his children when he came home at even, he thought no more of riches than some of conversion, who, suddenly changed, rise in the morning in a state of nature and close the day in a state of grace. His good fortune, if I may say so, was an accident—the merest accident; and thereby distinguished from the case of him who found the pearl of great price. He, a merchant seeking goodly pearls, found what he sought; but this man what he was not seeking, nor even so much as thinking of. Equally different are the cases of those whom a God, sovereign in working as he is great in mercy, converts to a saving knowledge of the truth. For example, Nicodemus, who repaired to Christ under the cloud of night, was one seeking goodly pearls; so also was the centurion, who "was a just man and one that feared God," and to whom Peter was sent with the tidings of a Saviour; and so in some sense also was that unhappy youth who with more courage than Nicodemus came in open day, and pushing his way through the crowd, thus accosted our Lord, "God master, what shall I do to inherit eternal life?"—only when Jesus told him to sell all, give the price to the poor, and follow him, he judged the terms too hard, the cost too great. Like many others he sought the pearl but disliked the price. On the other hand, showing that God will have mercy on whom he will have mercy, and that salvation is of grace and not of merit, he sometimes bestows it where it has never been sought; and a change comes as unlooked for as in the case of Saul, the son of Kish—leaving home to seek his father's asses he found a crown on the road, and he who went out a commoner came back a king. Look, for instance, at the case of Zaccheus! Curiosity to see Jesus draws him from the receipt of custom; and leaving his books and money-bags—for he was rich, he throws himself into the crowd. In vain the little publican stands on tip-toe. He can see nothing. Leaving the throng behind, he hies away; and climbing a friendly sycamore that threw its branches over the road, he perches himself on a bough, proud of his ingenuity and congratulating himself on the excellent view he will command as Jesus passes—borne along on the crest of popular favour. His curiosity once gratified, he has no purpose other than of returning to his old habits and resuming the pursuit of gain. What he sought he found; but more, in that, besides a sight of the Saviour, he obtained a hold of salvation. Jesus, as he passed by, looked up, and calling him down, invited himself to his house; and ere nightfall there was a greater transformation wrought on that poor worldling than appears in the insect which lies confined in the morning within its narrow cell, and ere sunset is roaming on wide-spread wings from flower to flower—its bed their cups, its food their honied nectar. Another instance of people obtaining salva-

tion who were not seeking it, is found in that Samaritan who after long years of sin, is sitting crowned like a queen in heaven. With pitcher poised on her head, she leaves her village to draw water,—having no other purpose than to prepare a meal for her paramour on his return from the labours of the day. Shading her eyes from the glare of the sun, she descries a lone traveller resting on Jacob's well. The man and she meet; they converse; and she who had approached the well with the slow step and graceful carriage of Eastern women, leaving both it and her pitcher, hurries back with eager eyes and flying feet. What has happened? She has found her Saviour—found, as she said, “the Christ;” and at the news the whole village,—mothers with infants at the breast and old age bending on its staff,—leave looms silent and streets deserted to see Jesus.

Even so, it may happen that some who repair to the House of God without any expectation or even wish to be converted, and with no better purpose than to see or be seen, may there behold a sight they never expected, and meet one whom they looked not for. Drawn to the church only by curiosity to hear some preacher, they may, Zaccheus like, receive a call from the preacher's master; and so the scene of an idle curiosity may be turned into that of a true conversion. There are some cases in which God has made even the wrath of man to praise him—those who went to mock having stayed to pray. Let me give an example. A stranger to the congregation was one day preaching in a church in England. He wound up an impressive sermon by telling them that, some twenty years before, three bad young men had entered that very house with the intention of stoning the minister. Something, a look or word from the preacher, led one of the three to hesitate. In consequence of this the plot was abandoned: and while his associates who were angry with him for his pusillanimity left the scene, he lingered behind from no other motive than curiosity. The preacher went on to tell how one of the two who left was, some few years afterwards, guilty of a horrid murder, and hanged for it; and how the other also for some other crime ended his life on the gallows. As to the third who stayed behind, strange to say, he was converted on that occasion, and afterwards became a minister of the gospel; and the preacher added, his voice trembling the while with ill-suppressed emotion, He now addresses you in me—a monument of the grace of God, a brand plucked from the burning. And since, as that case proves, God's grace is sovereign, and Jesus is the same yesterday, to-day, and to-morrow, of whom may we not hope? The pardon of all our sins through the blood of the Lamb of God, the sanctifying influences of his Holy Spirit, glory for a crown and heaven for a home, these, like the treasures which the ploughshare brought to light, lie at our feet. They are within our reach. And why, if yet poor and miserable, with no better portion than a passing,

perishing world, should not we stoop down to make them our own; and saved, through God's free grace and sovereign mercy, be of those of whom it is said, “He was found of them who sought him not?”

THE CONDUCT OF THE FINDER.

He hid the treasure.—“It is naught, it is naught, saith the buyer;” and though this man may not have depreciated the real, he took pains to conceal the accidental value of the field. We are not required to settle such questions of moral casuistry as the method he took to possess himself of this treasure may suggest. To the profits of such discoveries as are the fruits of a man's observation or inventive genius, our law gives him the exclusive right—at least for a term of years; nor would it regard the profits of this discovery as belonging of right to the proprietor of the soil. In this country, *treasure-trove*, as it is called, is claimed by the crown. But whether this man's conduct was justifiable is not a question we are called to settle. In hiding the treasure till he had made himself owner of the field, he took the surest way of making it his own, and expressed, better than any words could do, its value in his eyes. Teaching us how to act in those matters that belong to salvation, he spared no pains, and lost not an hour, and grudged no sacrifice to possess himself of this treasure—and, as applied to the infinitely more valuable treasures of the gospel, these are the points which Jesus proposes for our imitation. By this parable the Saviour calls men to leave no stone unturned, no pains untaken, no anxiety unfelt, no prayer unsaid, no Sabbath nor day unimproved to make these treasures theirs. And, oh, how happy the wretched, how calm the troubled, how cheerful the sad, how pure the foulest, how rich the poorest, in view of death how brave the timid, in death itself how tranquil, even triumphant, all might be, if we only felt as much concern and took as much care to find Christ, as this man to secure a fleeting treasure.

Unless in the sense of guarding their peace of mind from being disturbed by temptation, and their purity from being stained by sin, those who find treasures in the Gospel, do not hide them. On the contrary, they seek to make the great discovery known, and to communicate its benefits to all. There is no temptation to do otherwise, to keep it to ourselves, since it has blessings in the pardon and peace of God enough for us and for all others. It is as if one of a caravan that had sunk on the burning desert, were, in making a last effort for life, to discover no muddy pool, but a vast fountain—cool as the snows that replenished its spring, and pure as the heavens that were reflected on its bosom. He revives at the blessed sight, and, pushing on to the margin, stoops to drink; yet ere his thirst is fully quenched, see how he speeds away to pluck his friends from the arms of death; and, hark! how he shouts, making the lone desert ring to the cry, “Ho, every one that thirsteth,

come ye to the waters." None ever found Christ but they wished that others also might find him, were ever saved without a desire to save springing up in their hearts—theirs the spirit of Andrew, when he went to his brother Peter, crying, "We have found the Messiah,"—of those who said "Come thou with us, we will do thee good," "Arise, for we have seen the land, and behold it is very good."

HE PARTS WITH ALL FOR THIS TREASURE.

On boating once along a coast where the billows roared in the deep caves, and broke in sheets of foam on the face of cliffs that rose hundreds of feet sheer up from the sea, we heard the sound of merry voices mingling with the sea-mew's screams; and on looking up saw to our surprise a group of urchins standing with their backs against the rocky wall, and with scant room on its projecting ledges for their naked feet. One false step, a dizzy moment, and the body, bounding from ledge to ledge, had sunk like lead into the deep. Yet these children, poised on the beetling crag, were light-hearted as any culling the flowers of the meadow, or sitting by their mother's side on the hearth of the fisherman's hut. Their safety lay in this, that they had been reared among such scenes, and accustomed from early infancy to positions that would have turned our heads. On the other hand a sudden elevation is usually followed by a sudden fall; and such is the danger he is exposed to, who, like the man of this parable, is raised by one rapid revolution of the wheel of fortune from great poverty to great affluence. The man gets intoxicated with joy; the head grows giddy; and falling into habits of boundless extravagance, or, worse still, into habits of profligacy and vice, he is ruined—his fortune proving in the end a great misfortune. So imminent indeed is this danger, that there is no wise and prudent pious father but would tremble for his boy, should he, when preparing himself to fight his way on in life, suddenly succeed to the possession of a fortune.

In the treasures of gold and silver there lurks great danger; in those of grace none: nor is there a good man but would rejoice should his son come, with beaming face, to announce the tidings that he had found a Saviour; pardon and grace and peace in Jesus Christ.

Unlike common riches, this treasure breeds neither jealousies nor fears nor envy. No Christian woman repines that her husband loves Jesus better than her: no godly mother, however she may feel the pang of parting, but approves the son who, burning

with love to souls, tears himself from her arms to plant the cross on heathen shores. Your families of noble blood or ancient pedigree eye him with jealousy who, emerging from the obscurity of humble life, rises with his plebeian blood to a position lofty as their own. But next to the joy of possessing the treasures and honours of the Gospel is that of seeing poor sinners made heirs of the grace of God, and heaven's highest titles bestowed on those that were the vilest of mankind. The greater the number who get this treasure, the greater the joy of those who already have it. And how great and deep that joy, is set forth in the conduct of this man—he parted with all he had to possess the treasure. What he paid indeed was not the value of it; and certainly this parable was not told to teach us that when the haughty part with their pride, and drunkards with their cup, the licentious with his vices, the gay with their vanities, the avaricious with the love of money, others with their darling sins, they thereby purchase salvation. Assuredly not. Salvation is all of grace. Yet these things are required. — "Let him that nameth the name of Christ depart from all iniquity."—"Whosoever would be my disciple, let him take up his cross, deny himself daily and follow me." "Ye cannot," says our Lord, "serve God and Mammon." Shrink not from the pain these sacrifices must cost. It is not so great as many fancy. The joy of the Lord is his people's strength. Love has so swallowed up all sense of pain, and sorrow been so lost in ravishment, that men of old took joyfully the spoiling of their goods, and martyrs went to the burning stake with beaming countenances, and sang high death-songs amid the roaring flames. Let us by faith rise above the world, and it will shrink into littleness and insignificance compared with Christ. Some while ago two aeronauts, hanging in mid-air, looked down on the earth from their balloon, and wondered to see how small great things had grown—ample fields were contracted into little patches—the lake was no bigger than a looking-glass—the broad river with ships floating on its bosom, seemed like a silver snake—the wide-spread city was reduced to the dimensions of a village—the long, rapid, flying train appeared but a black caterpillar slowly creeping over the surface of the ground. And such changes the world undergoes to the eyes of him who, rising to hold communion with God and anticipating the joys of heaven, lives above it and looks beyond it. This makes it easy and even joyful to part with all for Christ—this is the victory that overcometh the world, even our faith.

A RIDE ROUND SICILY.

THERE is no country within the same distance of home which affords such a refreshing change from everything English as Sicily. It is a *multum in parvo*. Its substratum is of course Italian, but its Grecian remains rival any to be found in Greece itself, and, as is well known, Greek colonists, with their Greek costumes, inhabit the "Piano dei Greci" to the present day. The Spanish element is also strongly represented both in the style of its houses and in many characteristics of its people. I would recommend any one who may have six weeks of Spring at his disposal to take a through ticket to Palermo: and, when they have ridden the three weeks' journey from that city by Segesti, Girgenti, and Syracuse, to Messina—or for a week longer, so as to return by the northern coast to Palermo,—they will have enjoyed some pieces of unrivalled coast scenery; have in a measure visited Italy, Greece, and Spain; seen many of the finest specimens of ancient art; imbibed an endless amount of sunshine and sunbrow; endured just as much discomfort and filth as is salutary for their moral and physical discipline; and not improbably have had "a new sensation" in the shape of meeting real banditti, in being carried off to the mountains, or at once robbed in the most approved highway fashion. We trust, however, that few will take our advice. There are too many tourists—(or, as a certain Highland gamekeeper, a friend of ours, calls them, "touracks") in Sicily even now for the permanent security of her peculiar privileges. We tremble lest those great districts, with no road but the bridle-path winding through bean fields and by groves of Cactus, should be opened up by dusty turnpikes. *Diu absit Macadam!* We are horrified at the idea of the little "Locanda" with its grimy labyrinths, unglazed windows and armies of fleas, not to speak of other and diverse species of irritants, giving way to a great staring Hotel. By and bye there will not be a spot within any reasonable distance from home, where we may, conscientiously and for necessary reasons, enjoy the "great unwashed great unbrushed" principle, which, when so enjoyed, is the most health-giving of all restoratives. Who would exchange the long day on the great mule, with his ponderous ears flapping clouds of flies, or lifting his loud clarion of joy, when in the balmy twilight he reaches the little village and scents the "Stallo" afar off, for the easiest of four-wheelers or most luxurious of railways? In many notable respects, civilization and comfort are a mistake—for a week or two.

The time, when with the companion of many another such expedition, I rode round Sicily, was before the days of Garibaldi, and when the notion of "Italia una" was but an idea, fermenting in the brains of Cavour and a few brother patriots. Bomba Rex, Pater Patrie, then held an undisputed sway.

He was master of the war-steamers we used to see heaving along the brilliant coast, and his hand moved the arms of those signal posts, which passed his commands from headland to headland, and station to station. Things may be changed now, by the opening up of new roads, but travelling in Sicily was then rather a formidable matter, as almost everything had to be carried, from bed and table linen, down to pots and pans. Capital fellows are however always to be had in Palermo, who are quite up to all that is required, being possessed of excellent canteen-chests, and who are themselves good cooks as well as guides. We had a famous old man with us, a certain Giovanni Dimaria, who, if all he told us was true, had led as romantic a life as any contained in the wildest fiction. According to his own account, he had exercised in his time the various functions of cabin-boy, jockey at Newmarket, man-of-war's man, opera singer and cook; and, as a little episode, had once fallen in love and eloped with a young lady of Naples, whom he discovered to be a step-sister of his own within an hour or two of the celebration of the marriage at Portici! Of these many accomplishments I can only vouch for his cooking and singing.

Before the dawn of a glorious April morning, this same Giovanni, leading four large mules hung with trappings and bells, came jingling into the quiet court-yard of the slumbering Trinaeria. There were also Vincenzo our muleteer, in his white Sicilian cap of "Kilmarnock" fashion, and Garofalo the boy, *servus servorum*, besides sundry waiters with pale unwashed faces, and Ragusa, the best of hosts, with his stentorian voice, superintending the preparations. After the usual hubbub of packing, adjusting of saddles, balancing and lashing on of canteen-chests, breaking numberless straps, buckles, and old cords, and with much loss of temper and of breath among all the parties concerned, we got away from the Hotel about six, leaving its inmates to enjoy whatever share of rest might still remain to them. We passed up the sombre street, still in deep shadow, with its great houses of Spanish fashion, and heavy eaves and balconies, and out by the Moorish looking city gate, to the dusty road leading up in long ascent to the hills. The little fragments of suburbs were bright with morning sunshine, that lit up the rough fresco daubs on their walls into colour; women stood in the sunshine, spinning from the distaff; mothers tossed their half-dressed babies in the sunshine; the very donkeys, waiting to have their panniers laden, brayed and made their tails quiver for joy of that warm brilliant glory flooding hill and sea. The first leaves of spring were just beginning to tremble on the vines and fig-trees, the fields were freshly green with the young crops of corn and rows of shumack, here and there were orange groves with the golden clusters

still hanging on the branches, while the grey olive mingled its sober colouring amid the brighter foliage. Long gossamers, beaded with glittering dew-drops, waved from the sharp spikes of the aloe or prickly pear, and spring flowers, blue, and yellow, and scarlet, were strewn like stars among the natural grasses. An hour or two brought us to Monreale, with its grand old church, half Byzantine, half Moorish, standing boldly out on the hill-side overhanging the valley. Except St. Mark's in Venice, there are few finer specimens of that particular style of art, than Monreale. Its mosaic roof-pictures more than rival St. Mark's, and however rude and conventional the stiff hard drawing may be, nevertheless there is something most impressive in those gigantic countenances. Enter at the western door, for instance, and walk up the dim-lit nave, towards that apse, whose whole space is filled with a half-length colossal figure of our Lord, all set in blue and gold, with the long hair divided meekly on either side the brows, the hands raised in act to bless, and the large almond eyes, whose sad loving gaze follows you wherever you go; while all around this central figure and idea of them all, are rows of saints and angels and cherubims—"Thrones, Dominions, Princedoms, Powers," filling the spaces on roof and walls, and every sense of rudeness in the art becomes lost in the pervading feeling of reverence which is inspired.

A short way past Monreale we took our last glimpse at Palermo. In the distance was the deep bay, shaped like a horse-shoe, held in on one side by the bare craggy height of Monte Pellegrino, at whose base were the harbour and the clustered roofs of the city; and ridged in on the other by the long stretching hills of Bagaria, while between, the crescent disk of blue sea swelled up into the bosom of the plain—"La Concha d' oro,"—which, itself a sea of green, lay embayed between the waves, and the purple mountains. "La corona di Montagne," as the spot is proudly called by the Sicilians. When we had crossed the "Col," our path lay among rolling upland hills, to Alcamo, famous as Garibaldi's resting-place—as it was ours, after our first and long day's ride.

And now a word or two as to our mode of travelling. First came Giovanni, his diminutive jockey-figure perched like a crow on the top of certain large bags and sacks slung from his mule. In heat or cold, there Giovanni sat, wrapped in a little brown great-coat, telling us stories of his former life, or of the different travellers he had accompanied, and breaking out sometimes into snatches from the old operas. His favourite song was a high-pitched tenor air from the *Pirata*, "Nel furor delle tempeste," when, as he approached a particular bravura flourish, the little man almost rose from the large bags, in the vain attempt to accomplish what, as inevitably, ended in a collapse and a groan over his lost powers. "Ah, gentlemen, if you had only heard how I could once do it!" After Giovanni came "I Signori viaggiatori,"—

sometimes followed and sometimes preceded by Vincenzo (*Sicilice* Vincenz') balanced on the top of the canteen-chests, which, again, were balanced on the top of a gigantic mule. By his side trotted the boy Garofalo, between whom and Vincenz' there waged a chronic warfare, ever carried on with many gestures, and in the roughest Sicilian. And then there were the mules,—curious, ungainly, pains-taking animals, with many peculiar propensities. They are of course lazy, but for this the Sicilians have devised a simple remedy in the shape of an instrument called a *puntarebbe*. The *puntarebbe* is a neatly fashioned conical piece of wood about two inches long, attached from the larger end, by a light chain and ring, to the finger, and having at the smaller extremity a modestly protruding point, like the end of a thick blunt pin. It is extraordinary the effect this primitive contrivance has even on the laziest of mules. To be sure cruel fellows, like our Vincenzo, do sometimes actually knock it into the animal. Especially when we had a deepish river to ford, and the "Ceccho" showed any inclination to lie down in some tempting pool, then with an Ee-ee! of desperation, and tremendous swing of the arm, you saw Vincenzo digging into the beast's quarters so that the agonized brute absolutely sprang up the opposite bank at a trot, to the great danger of the rider's seat, not to speak of the burden of crockery. But with persons possessed of common humanity, the *puntarebbe* could be made as efficacious, without the infliction of any pain. Is your mule lazy? then all you require to do is to insert the point of the *puntarebbe* among the hairs of his mane, and let it gently rest on his skin. Instantly the charm works, the animal wakes up from any reverie however engrossing, and shuffles merrily away.

From the time we left Alcamo, until, nearly a fortnight afterwards, we reached the neighbourhood of Lentini and Syracuse, we scarcely saw a road, and consequently no wheeled conveyance. We passed towns of as many as 18,000 inhabitants, without any road more than a mere bridle-path, and yet the island had for thirty years been heavily taxed for "road-money." This want implies however no loss of enjoyment to the traveller, as nothing could be more delicious than following those tracks, sometimes wandering through fields of wheat or pale-green flax, or cotton, or of beans in full blossom;—or sometimes among olive copse-woods and by great hedges of the prickly pear;—and sometimes for days, along the coast,—winding round wide bays, with the long roll of the waves thundering on the yellow sands, and the blue sea, dotted with white sails, stretching to the far horizon. We usually began the day at sunrise and ended at sunset, stopping for two hours at mid-day under some broad-leaved Carub or fig-tree for lunch and siesta. Our resting-places at night were not however quite so agreeable. Let me describe one—Sciacca—as a specimen of many others. In the evening we enter a squalid half-town half-village, filled with tall

peasantry lounging about in brown, ragged capotes—untidy, unwashed women, and hordes of sad-looking children. Palaces of noble architecture, but crumbling in decay, their unpainted shutters hanging from broken hinges, and weeds growing from the crevices, rise from the midst of the poorer tenements. We stop at that house in the street where swings a board, bearing the now faded, but once richly emblazoned sign of the "Albergo dell' Aquila d'oro." A dingy-looking peasant at the door, without a coat, is recognised by Giovanni as "mine host" under the magnificent half Spanish, half Sicilian title of Don Puddo (Pietro). Mr. Peter, who in the sister isle would, unmistakably, be simple "Pat," helps us to ungirth our mules, which immediately roll and luxuriate in the warm dust, kicking up their heels and squeezing myriads of flies to death. As the ground floor of "The Golden Eagle" forms the stable of the establishment, we must ascend to our apartments on the "Piano Nobile," where the Don shows us into two little rooms like prison cells, with an iron bed in each, a couple of rickety chairs, a table, and on it a basin about the size of a breakfast-cup. The odour, half garlic, half staleness, of the Hotel, is not agreeable, and the unwashed filth of the rooms is indescribable. On the walls, little stars of blood, here and there, revealing where certain insects had met a violent death, make us tremble lest the surviving relatives should take their vengeance out of us. There is no glass in the windows, so that if we wish to keep out the rain or wind, we must close the shutters and sit in darkness. Until our own linen is put on, we do not in the meantime think it necessary to examine the beds very minutely. By-and-by Giovanni comes in with dinner, his face flushed, and followed by the lank, meek, bandit-looking countenance of Don Puddo. "Per Bacco! Signori, if you only saw where I cooked this dinner," is his introduction, intended doubtless to enhance his own powers, but which would have proved discouraging to any save those who were as hungry and in as jovial health as we. After dinner we stroll about, or watch the noisy population from our balcony, until night comes, when, with a creeping shudder, we commit ourselves to our fate—

"Ah night, thou wert not made for slumber : "

For every now and then come sounds of warfare from the mules, kicking and *squealing* among themselves in the stable immediately below, followed by very audible curtain lectures from the muleteer, as well as the thunders of well-deserved chastisement. No sleeping powers could resist the noise of these riots, and no sooner were you thereby roused, than there came a dawning consciousness of other conflicts with which you yourself had a more personal interest, suggesting the possibility of the tragedy of Bishop Hatto, demolished by mice, being repeated in your case, by smaller, but no less greedy animals. Fatigue and custom, however, work marvels, and,

at early sunrise, a refreshing "header" in the clear blue sea, drowned all evil memories.

The chief points of interest in Sicily are the remains of Greek art, Mount Etna, and the wondrously grand coast-scenery from Taormina to Messina.

Of all the Greek temples, that of Segesti is the most lovely, crowning a lonely eminence with its fair cluster of Doric columns; and picturesquely embosomed among desolate gorges and mountain tracts. When standing in its stately portico, your eye looks across a deep valley, to the ruins of the old city, whose theatre and houses strew the opposite hill-side. Far beyond, are the mountains of Trapani, and the blue bay of Castellamare, while to the right, a wild glen leads down to the rugged "Acropolis" of Calatafemi, since then famous as the battle-field of Garibaldi. Like those of Pæstum, the three temples of Salinuntum, on the other hand, rise by the dreary shoreland flats, but are shaken down into majestic heaps of utter ruin. The great temple of the Sun, has but one column standing, around which the giant fragments of capitals and entablatures have been poured down in fantastic piles. Enormous blocks of masonry, such as are to be found only in Egypt and the East, lie the one tossed on the other. The temple has never been finished, having been destroyed by earthquake many years before the Christian era, and a touching monument of that event still remains, in a solitary block lying in the field, about a hundred yards off, which had thus been stopped when being transported to the building, and has so remained for more than 2000 years. But the most remarkable of all these old places is Girgenti, whose five temples, one rising above the other, crest the graceful line of a long sloping ridge. I first saw them in the splendour of a golden sunset, their broken columns rising against the sky over a foreground of green almond-trees and dark cypresses, while rolling pasture-lands below, swept down to the shining levels of the Mediterranean. And it is only as thus seen that one can duly appreciate the surpassing beauty of Greek architecture, which appears as nothing when choked into the crowded streets of a large city. But when lifted up into the wide air, with bits of blue sky gleaming through the lace-work of the columned porticoes, and the fair outline of the entablatures relieved against the snowy bosom of a floating cloud, you see the very embodiment of summer loveliness, and feel how verily this was the becoming temple-form for sunny Greece, with her clear skies and seas, and craggy heights.

After some pleasant days spent in wandering among the antiquities of Syracuse and Catania, we prepared for our long-desired expedition to the summit of Etna. Never can I forget the first view I had of that mountain, when, the evening we arrived at Terra Nuova, we saw cleaving the northern sky, a white pinnacle, a cone of gleaming snow, and learned that, though more than sixty miles from us, this was Etna. Almost every day since it had

formed the leading object in our landscape, and it was with no small expectations we left Catania to make the ascent. Etna is like no other mountain in Europe. All our other high mountains are in a measure lost among their surrounding rivals, and much of their real height is diminished by the high elevation of the spots from which they are viewed. The valley of Chamounix is itself many hundred feet above the sea. But Etna, all alone, sweeps up in one proud line from the blue sea and almost tropical warmth of the bay of Catania, to where her cold white snows are lost in the blue sky. At her feet are the vine, and fig, and aloe, but her brows are bound with a coronet of ice. As we were very early in the season, and as at that time falls of snow and thick mists often render the ascent impracticable, we went the first day to Nicolosi, a little village about half-way up, in order to take the first favourable opportunity for departure which might present itself. That night, and all next day, "a bad wind" blew, and we had to content ourselves resting at the Little Locanda, and in strolling among the extinct craters, of which there are upwards of seventy, rising on the sides of the larger mountain like so many enormous ant-hills. On the evening of the second day the long-looked-for *Tramontana* blew, and after calling on Signor Gemellaro, the scientific observer, or, as he is called, *Custode* of the Volcano, who gave us his imprimatur, we determined to leave at midnight.

In order to start fresh, we "turned in" for some rest at eight, and had no sooner fallen into a balmy slumber, than we were disturbed by the sounds of music. To our astonishment our bed-room door was thrown open, and in marched the village band, consisting of a few string and wind instruments, and marshalled by Vincenzo, the muleteer, who in return for a great mess of macaroni we had given him that day, thought we might possibly feel rewarded by seeing himself and one or two large young mountaineers dance a *Tarantella*. As performed by our obliging but not very graceful friends, the dance resembled partly a Highland reel, partly a polka, varied by a series of *pas seuls*, in which there was much wriggling, and jumping, and shuffling of the feet. After expressing our profound admiration and gratitude, we persuaded Vincenzo to withdraw his musicians and himself, and had soon the satisfaction of hearing the grunts of the trombone becoming fainter and fainter in the distance. It took us some time to sleep after this episode; but, no sooner had sweet unconsciousness once more stolen over us, than a shake from Giovanni, accompanied by the intimation "the mountain is ready, gentlemen," fairly dispelled our dreams. I confess at that moment I wished the mountain had been asleep too; but there was no help for it, so tumbling up, and swallowing some hot tea and abominable butter toast, which afterwards wreaked vengeance on me, we pulled on tremendous *gambali*, or woollen leggings, rolled ourselves in our capotes and plaids, and mounted the mules. There was a

clear starry sky, a moon half-full, Etna rose chilly white in front and a keen biting wind blew in our faces. We rode up through the silent street of the sleeping village and emerged on an old lava bed, which on every side presented a scene of utter desolation and *erie* solitude. The masses of blackened stone and scoriae were tossed and tumbled in every possible shape and position, looking weird and spectral in the moonlight. Beyond were the mounds of old craters, some rising to 400 and 500 feet, but appearing only as so many pimples on the rugged face of the old mountain.

Mount Etna is divided into three parts—*Piedmontana*, *Regio del Bosco*, and *Discoperta*. We now entered the second of these—or the Forest—where the broken, rocky ground is thinly covered with old trees, more than half-stripped of their branches, and between whose peeled and gnarled trunks glimmered the clear stars. The view backwards was remarkable. Far below stretched the moonlit sea, and the whole coast was visible, stretching to Syracuse, more than fifty miles off. At the extreme edge of the *Regio del Bosco* stands the *Casa del Bosco*—a little hut, in the neutral ground between vegetation and primeval desolation—between the blackened rocks and the white snow. As we approached the *Casa del Bosco*, about three in the morning, dawn began to appear on the banks of cloud which rimmed the sea-line. At first a pale light dimmed the moon, and then a belt of faint orange gleamed on the surface of the clouds, gradually deepening to scarlet. We had intended to leave our mules at the *Casa del Bosco*, and were astonished on nearing it, to hear the bark of a dog, followed by the figure of a gaunt old man, who, as we rode up, presented himself at the door, from which issued also forth a blinding cloud of smoke. It seemed that he and a band of boys were engaged in collecting snow for the *Caffés* at Catania, and had come here to spend the night. No artist ever painted a wilder interior. Closely packed round a half-slumbering green-wood fire in the centre of the floor, were at least two dozen full-grown lads, half-wrapped in ragged capotes, their thin faces begrimed with smoke and filth, and their feet turned towards the hot embers. Some were crouching, and resting their heads on their knees; others were at full stretch; some sleeping, some peering with wistful eyes at the well-fed strangers, who were making way for themselves into their circle. The old man heaped on more wood, till a red blaze lit up the dark rafters, and cast a livid colouring on the strange group around us. The wind moaned drearily outside, and we half-regretted the necessity of leaving the warm fire, where we had been gradually thawing, to resume our ascent once more.

When we again came out, the whole horizon, where it met the eastern sea far below us, was barred with burning clouds; but as we rode on, a thin vapour, blown down from the mountain, swept itself between us and the sun. Never have I seen anything so strangely beautiful as the effect of the

strong red light filling that thin vapour with glory, as blown about and interwoven with itself, it flew rapidly past us like so many aerial webs of gauze glowing with colour. When we reached the snow we had to bid farewell to the mules, and take to our feet. A pure white slope, not very steep, but long, stretched before us up to the *Cima*. I never realised what cold was till that morning. Although wrapped like Esquimaux, and toiling up an ascent through deep soft snow which had lately fallen, yet the wind, which cut along the hill-side, seemed to pierce through us and freeze the very blood. Gradually, as we ascended, and the mist cleared up, the view became superb. The southern and eastern portions of Sicily lay like a relieved map below us. We could see away to the right, the broad plain dotted with villages stretching as far as Terra Nuova, while almost below us, were the Straits of Messina and Calabria, with Rheggio overhanging the sea.

After about a couple of hours' steady walking, I began to feel very unaccountable sensations. Without any symptom of fatigue, my "wind" seemed about to fail me entirely, and a giddiness and sickness, like that at sea, came over me. The thin air was proving too much for me. I struggled on for more than an hour, throwing myself every now and then on the snow, and kept up by the cheery *Coraggio* of the guide, until reaching the Casa Inglese at the foot of the cone, and about 10,000 feet above the sea, I had fairly to give in. I regretted this the less as a mist seemed to be gathering, and our chances of any view small. So as the Casa Inglese was literally buried in snow, I contented myself with wandering over to the summit of the precipice overhanging the Valle del Bove, while my companion went on to the summit. On relating my mishaps afterwards to Signor Gemellaro he quite accounted for all my sensations. The Valle del Bove was the scene of the fearful eruption in 1852, which laid waste one of the fairest regions of Sicily. As seen from where I stood, the side of the mountain seemed to have been torn open, and yawned into a dark ragged ravine. What it must have been during the eruption, let Signor Gemellaro tell. The eruption began on the 12th of August, and on the 2nd of September, when it was in full force, he determined to make an attempt to witness the terrible scene from as near a point of view as possible. Accompanied by a friend, and with a guide and muleteer, he set out from the village of Zaffarana, and passed the night in the open air, amid fearful thunder and lightning and drenching rain, and not far from Monte Finocchio, the point to which they were going. I translate from the published extracts of his journal, his description of the scene which presented itself to his eyes, when next morning they reached the top of Monte Finocchio, a spot almost in the midst of "the eruption."

"A sea of fire, was the first spectacle which met our eyes, filling that great valley of four miles wide and five long, and presenting an irregular surface of

valleys and hills, all of fire, reflecting themselves with a red glow on every visible point around. Great fissures from which flowed the tide of liquid lava, showed their burning depths, and from these every now and then rose livid flames for ten or fifteen minutes, while masses of scoriform rocks forced out by the current, were shot down or split into blazing fragments. From one crater, whose mouth was about 100 feet in circumference, millions on millions of scoriae were launched to an immense height in such uninterrupted succession, that it was almost impossible to keep the eye fixed on them, so blinding was their light, seeming to form but one gigantic column of living flame. The air, too, was laden with sand, which afterwards was found to have covered in its fall all the eastern slopes of Etna." He states another curious fact: "During the four hours we were on Monte Finocchio, our minds were so intently occupied in contemplating the grand scene before us, that we paid no attention to the *continuous movement of the whole mass of the mountain itself on which we were standing*, while, in fact, the motion was such that our guide and muleteer were affected as if in a vessel at sea, so as to suffer from giddiness and faintness, which was succeeded by vomiting."

Before we descended from the high elevation at which we stood, a level bank of dappled cloud floated itself along below and between us and "the under world." We found ourselves, in short, above the clouds, with a clear sunny sky overhead, and this far-stretching sheet of snow-white down, entirely shutting out from us the visible world below, except where we gazed through *holes* on a little patch of blue sea, with perhaps the white sail of a ship crossing it, or on an island fragment of the populous plain. We felt as if we could almost leap through these hatchways, so near did they appear, while the places beneath seemed again to be still further removed and diminished, as when one looks through the larger end of a telescope.

Another fortnight on the mules brought us round the rest of the coast by Messina and the northern shore, to Palermo. It is after leaving Etna that the wonderful coast scenery of Sicily begins, some portions of which surpass anything in Italy. Take, for instance, the view from the old Roman theatre of Taormina, nestled high up on a cliff above the sea, where through a framework formed by the crumbling walls, you see the long yellow coast and soft full sea-line, sweeping from beneath you in a wide curve up to Catania and round to distant Syracuse; while in another line, as soft and full, Etna swells up, white as a cloud, into the blue sky; and beside you are richly wooded crags and hills, crowned with villages. The road, too, for days, wound by a coast like that of Amalfi, where deep mountain gorges, held in by cliffs falling in sheer precipice into the sea, formed little bays of golden sand, with fishing villages filling the mouth of the ravines, and fishing boats lazily heaving on the sparkling waves. We did not repent making the

whole circuit back to Palermo. Although few travellers go further than Messina, yet we found the northern coast, as a whole, more picturesque than the southern, and with many strange old Norman towns.

From what we saw of the people, we thought them, like their island, capable of great things, but so utterly ill-governed as to have become in a measure demoralised. Education was at the lowest ebb. Even such men as our guides on Etna could not read; and I remember the expression with which one of them turned and left me, when I was telling him of the electric telegraph—as if he said, “There is a branch of Her Majesty’s service you may have heard of called the Marines, but you know—” Their religion too had many peculiar features. “La Santissima Vergine” seemed to have a greater share of worship than even in the other parts of Italy. When the peasantry are in the fields, they begin work generally with a sort of hurra, “Viva Maria Vergine!” And I remember listening to a sermon delivered by a Capucino from a moveable pulpit, to the people gathered at a fair in the market-place of Lentini—where, in like manner, as a climax to all his most telling passages, he shouted out “Viva la Santissima Vergine!” to which came the

loud response from the crowd, standing the while When he had got them to the necessities of the state to the enthusiasm, a hat was sent round. As in the great of Italy, one of the great curses of the country is the lottery and the base gambling spirit, the mother of idleness and greed, which it fosters. The late government of Naples used this engine of rapine to the utmost. Wherever any public works were going on, a “Lotto Reale” was at once established, and by this most ingenious contrivance, the larger proportion of the people’s wages was drained back again to Naples. As an instance of this, at a small poverty-stricken village called Gioiosa—in the neighbourhood of which a new road was being made—our innkeeper, who was agent for the lottery, told me he sent to Naples about 10% weekly. Let us trust that things may be improved now!

We were sorry when the day arrived which ended our ride round Sicily, in spite of all its discomforts—and felt sad, as if parting with old friends, when we bid good-bye to little Giovanni and his canteen-chests, and saw Vincenzo leading off our honest mules, and heard their bells tinkling in the distance as they trotted away to their native village, far up among the hills.

DONALD MACLEOD.

IN THE DARK.*

BY ISA CRAIG.

He is down! He is struck in the dark!

By command of his own;
By the men who had stood, as he said,
“Like a wall”—each live stone
Moving into the death-gap, thus builded
As soon as o’erthrown.
And their fire flashes swift at his word,
He who meets it unknown

In the dark!

Every man who fired shot then, obeying
The Gen’ral’s command,
With hot heart is thinking, it may be,
His blood’s on my hand:
Every man to his fellow is turning,
Such comfort to gather,
As each finds in assurance that all,
To a man, had died rather

In the dark!

And strong in their hearts the assurance
That he would say, “Wherefore
My own men I’ve marched with and fought with
And wrestled in prayer for,
Stand ye thus self-accused? Know ye not
That ye did but in one
The will of the Lord and your duty,
And both must be done

In the dark?”

“Take this arm! Take this life! They are Thine!

Life and work, soul and sword—
If my death serve Thee best, be it so:
Thou, not death, art the Lord.”
Thus the soul of the soldier arose
To his God like a saint,
As he lay, yielding up to death,
In his blood, in his faint

In the dark!

“Was this cause, I have led, Thine in truth?
With strong crying and tears,
I have pled, with my soul, O my God,
And the right still appears,
That the State must be free to serve Thee—
Search Thou out our confusions!
That, howe’er we may err by the way,
We may reach Thy conclusions

In the dark!”

“It was no deed of ours,” said his foes,
With a strange exultation,
That none of their side had laid low
This one man of the nation:
They claim him—not one side or other,
But both, now he’s gone—
As brethren, their hero, their brother,
And still they fight on

In the dark!

* General Jackson was shot on the 2nd of May, by his own men, in the dark.

 “ Wh-

KALAMPIN.

BY THE COUNTESS DE GASPARI, Author of “The Near and Heavenly Horizons.”

THIS singular name belongs to a no less singular figure, that I am in the habit of seeing from time to time in a corner of my anteroom in Paris—the figure of a negro. This figure conceals itself as well as it can behind the bench, and unless one were careful to notice it, would remain silent, motionless, like those China negroes placed as torch-bearers in the vast halls of Venetian palaces;—you have seen them, no doubt, with their curly heads; you have admired their diadems, resembling those worn by Mexican princes, their golden bracelets, sky-blue tunics, red cushions, their whole attire, in short, half-oriental, half Louis Quinze.

This particular negro of mine, however, had neither diadems nor bracelets, nor sky-blue tunic to set him off, nor did he carry a red cushion; simply there he was, his own poor self, in a very humble attitude; old and ugly.

Ugly! yes. But exquisitely neat and clean. In former days he had held some post of steward or major-domo,—I don't exactly know what,—in a creole family who had vanished from the scene. He retained, in consequence, habits of exact propriety and excessive politeness. A great coat, the age of which no one could have calculated, shining in parts by force of friction, wrapped his insignificant figure; his shirt, stiff with starch, dazzlingly white, bulged out over his chest like a cuirass; his boots were bright and shining, let the mud be ever so thick; his hands, which guarded a hat much dinged indeed, but brushed so as to endanger its last hair, were covered with gloves once straw-colour, at present of a quite indefinable hue.

I have said that Kalampin was silent. There were two reasons for this, his ignorance of French, and his extreme timidity: timidity, though, is not the word, I should have said humility.

Now there are people humble from a sense of duty. To become so they have had need of much effort and many prayers. Not so Kalampin. Kalampin was humble, because quite naturally he had not one high thought of himself, or rather, he had no thought of himself at all. His own person was, as it were, unknown to him; he never contemplated himself acting, listened to himself speaking; he had very little compassion for his own afflictions, was hardly indeed aware of them. His mind, absolutely simple in its character, had none of those myriad convulsions with self for their centre, so common to our race. He expected little, asked for still less, and when assistance was rendered him, fell into an amazement that bordered on ecstasy.

From time to time he was in the habit of coming, in his silent discreet way, to creep into the corner I have indicated. If I saw him as he passed, that was well, that was all. If I did not see him, he

continued silent. Without care on the part of others, he would have gone away as he came.

Now this delicacy, this deference, these bursts of gratitude had the effect of rousing my conscience more effectually than—I confess it to my shame—ten fine sermons on charity could have done.

In the presence of this modest and reticent creature, who received the least gifts like manna from heaven, one of those cross-examinations would suddenly take place within me, the severity of which freezes one's blood. Home questions, implacable, searching in their precision; truths starting from their accustomed shadow, and having for result a confusion, nay, more than that, an anguish which leaves one prostrated with a sense of sin at the feet of Him who pardons. I believe that you, dear reader, have had experiences like this.

When you have happened to meet natures of this stamp, little in their own sight, who thoroughly admire you, tell me, have you not been plunged at once into self-scorning? Oh! those fair illusions of others; not open praise, flash notes, which we all know to be valueless, but the admiration—I repeat the word—the admiration of some simple heart which believes you really good, really a-flame with the love of God! The veil falls; we see our own face as it is. What semblance does it wear? Of a truth, never did the sun himself, uncourtly painter though he be, trace it so crudely on the metal plate.

And again there is this opposite phenomenon, if you come across some presumptuous individual, given to harsh judgment of others, your virtues instantly range themselves around you like a sort of civic guard. This takes place spontaneously, without our willing, almost without our knowing it.

A look, the carriage of a head, an inflexion in the voice, something less still, and there you are, sincerely humble, or unmistakably proud.

Words are eloquent, actions have their influence. I know a still more powerful agent—the heart within. The heart is the urn concealed in the sanctuary, which gives out its perfume incessantly. Close the doors, draw the curtains; no bolts, no heavy folds will prevent the aroma from ascending: it is not seen, it is not heard; but we breathe it, we feel it. This is the secret of truth; the spell she has reserved to herself.

Kalampin, simple creature that he was, would have been mightily astonished with the train of thought into which he has thrown me.

To the respect which he felt for men in general, to his traditional deference towards the aristocracy, there was joined an incomparable veneration for the white race.

Now he himself, black, old and poor as he was, possessed a treasure, the contemplation of which filled his days. This was a child—his great-grandson, without father or mother—his life, in short.

He! he was nothing! but his boy, his beautiful boy! Hercules!

The child was a mulatto, or a quadroon. In Kalampin's eyes he was pure white. He belonged to the dominant race. The old grandfather would pass his weak fingers through the rather crisp hair of the handsome little head, pull out its curls, and delight to feel them silky. But indeed that charm was scarcely needed; he loved the child with all the might of his poor solitary heart; he did not define, he only ardently enjoyed.

Kalampin would never have solicited anything to support his aged existence; it was for the sake of his beautiful boy that he came to my house, on those silent quests that so stirred my soul.

The old man occupied a little room, with a southern aspect, on the Boulevard du Mont Parnasse. This room was low, whitewashed (the poor negro put white wherever he could), and the decoration of its four walls showed the peculiar genius of his race.

Pink curtains to the windows, coloured prints on the walls; on the chimney-piece and the cupboard, a very chaos of knick-knacks. Lustrous buttons of mother-of-pearl, bits of china, shells, little mirrors, tinsel—everything shone and sparkled. Involuntarily I thought of those charming birds who adorn their nests for the pairing time. Kalampin had adorned his for his child.

He was very happy there, this handsome little fellow. How many hours passed in looking, one after the other, at these wonderful objects from which the sun brought out all manner of jewel-coloured rays. What reveries he would fall into, distant journeys into some land of light, and then the getting absorbed in the splendid colours that fascinated his eyes, and the asking his grandfather for the explanation a hundred times given of this or that picture!

Indeed, whenever I entered that low room, so warm and light, and Kalampin had a little got over his embarrassment; when I saw him seated, his child on his knees, and the sun playing with all that trumpery, I too was aware of a certain feeling of expansion, such as plants have on the morning of a fine summer day.

Hercules was not unworthy of his name. His curly hair showed his bodily vigour, his bright eyes the energy of his spirit; he carried his head high, looked straight before him, with a martial air and an instinctive authority which was not unpleasing. A fine nature his, affectionate and caressing, a little proud—a complete young Dauphin.

Never, do what he would, could poor Kalampin teach his grandson his own code of manners. As soon as Hercules saw me, he came running up, putting his hand into mine with perfect boldness, calling me *thou* invariably, and asking me what toy

I had brought him. Kalampin, standing the while bareheaded, in perfect torture, would agitate himself, make all manner of excuses, dictate to the child formulas that the latter either did not repeat at all, or repeated wrong. It was a comical scene, but at bottom a very happy one.

Towards spring, when the weather was dry, Kalampin would walk upon the Boulevard with his pretty boy. The great-grandfather's legs would not carry him far. They did not get much beyond that long white line, bordered on one side by elms, on the other by monumental work-yards and sellers of everlasting wreaths.

In the matter of trees, Hercules knew only those rugged trunks surrounded by a handful of leaves, rather grey than green. In the matter of flowers, his only experience was of those little yellow knots which rustle like paper when you crush them; which do not wither, it is true, and grow originally, one would say, woven into wreaths. The child was perfectly satisfied with these.

Oh, how amused he used to be when, pulling the old negro on by the hand, he could get him to make a long pause opposite the urns and the broken columns, where he could watch the workmen turning up their sleeves, and vigorously attacking the marble, while the chips flew on every side.

But the everlastings, those piles of garlands, those letters so skilfully manufactured, those arrested him most completely. Eyes opened wide, motionless, his heart stirred by a silent longing, he counted the ciphers, counted the wreaths; and when his grandfather, yielding to the pressure of that little hand, advanced, took two halfpence out of his pocket, placed them on the table, and said, "Choose!" then dazzled, perplexed, looking now at this and then at that, and having his mind suddenly made up for him by the seller, Hercules would hang the crown on his arm, take it off each minute to look at it closer, and bound about the old man like a kid in April. Why, that was joy enough for a whole day.

As for playing with the boys in the street, Hercules had no wish for that. He loved his grandfather in the same way his grandfather loved him, exclusively. And so they went along, sometimes the great-grandfather behind, supposed to be under arms; the child in front at a proper military distance, head high, eyes straight forward; the old man's eye-balls flashing as he assumed a martial air for the first time in his life.

One day the urchins of the Boulevard attempted some jests at the expense of the old negro, but they never did it again. Hercules, aiming at the ring-leader of the attack, hit him such a neat blow with a stone just in the middle of his back, that the whole troop took the hint.

As to knowledge, Kalampin's did not, it is true, go far; but on the other hand, it soared very high.

"Grandfather, who is it who made these trees?"

"God Almighty."

"Who made sheep?"

"God Almighty."

"Who made the sun?"

"God Almighty."

And so they went on for hours. The notions implanted were not broad, were by no means complex, but the foundation was all the more firmly laid in the child's heart. These words, God Almighty, fell into it like rocks, upon which a super-structure could be raised. In fact, this great doctrine of the creation is the beginning of all.

When Hercules and his great-grandfather had passed in review all that they knew of the material world, animals and things both, Kalampin would speak to the child of Jesus. His theology was meagre; his narrations interminable. Jesus loves little children; Jesus takes pity upon sinners; that was all he knew in point of dogma; but the birth of the Saviour; the shepherds; the adoration of the Magi; oh, all that he would go on about for ever. Hercules listened eagerly; liked to have the story of the Christmas night told him a hundred times over, and the angels' hymn as well. His grandfather described the heavens lit up; the silent country, the bleating of the lambs. Then came the arrival of the three kings of the East in their royal attire, such as Kalampin had seen them wear in some old picture, with golden caskets and censers in their hands; tiaras on their heads, and trailing their brocaded cloaks after them—one of them quite black. "Like you, grandfather!" The grandfather coughed. To liken himself to one of the royal Magi would be a bold thing indeed! Nevertheless, of the three, one had a skin black as ebony, that was certain. Many a time during his prolonged contemplation of the picture the old negro's heart had thrilled at the sight. Then the child would gaze thoughtfully at his grandfather, a holy respect pervading his little mind; he could almost have fancied that he saw on his head an oriental mitre all starred with rubies.

When they came to the murder of the innocents, Hercules would press close to his old ancestor. "Grandfather, they would have killed me,—but not you, grandfather!"

At the story of the passover, when the armed band sallied forth to lay hold on Jesus, Hercules drew his little sword from the same impulse that actuated the apostle Peter. Like Clovis he would have exclaimed, "Why was I not there with my Franks!"

And so the seasons passed by.

One morning I bought upon the quays which were covered with flowers, a certain red rose-tree, and I carried it into the little room. Hercules was for a moment stupefied, then he approached, touched it with the point of his finger, touched the beautiful green leaves, touched the petals with their wondrous texture, inhaled their fragrance, then looked at me, looked at his grandfather with a glance that inquired whether God Almighty had made this miracle too,—made this rose-tree.

Two days later, Kalampin came to my house. Contrary to his custom he rang loudly.

As soon as he was admitted he insisted upon seeing me. His features were distorted, his blood-shot eyes could not fix for a moment. In an impatient voice he said, "The child—the child!"

"Sick?"

He just made a sign of assent, and then rushed away.

When I entered the room an hour later, I felt that a tragedy was going on there.

The little bed was drawn into the middle of the room. The child was lying on it, very pale, and with eyes preternaturally large. Above his head the rose-tree displayed two purple blossoms. The counterpane was covered with wreaths of everlasting; and the boy's little fingers kept moving them with a feverish touch.

It was a striking scene; mortally sad, wondrously beautiful.

I don't know why; but it called to my mind the pictures of Luini and of Francia, with their ideal lines, their faded colours, and their angels holding lilies.

Kalampin had heard me; he did not stir. He remained seated; stiff, arms crossed, his face impassive. Not a word, not a gesture, not a tear.

I drew nearer. The old man preserved the same attitude; alarming in one of his kindly, courteous nature.

The child was dying. His grandfather had prayed; he prayed no longer. He had implored; he implored no longer. What God meant to do, God would do. How was a poor negro to hinder it? He did not struggle, he did not submit, he awaited the blow. His tortured heart still passionately clasped its treasure. It seemed to him as though God had retreated into the cold depths of an inaccessible heaven; his faith had crumbled away.

The little boy kept turning his dilated eyes towards his grandfather. Pain racked his frame; delirious dreams suggested incoherent utterances. But through them all one thought possessed him, vague but tenacious, a doubt, an anxiety; and still he kept looking at that old face. That changed countenance frightened him. He could not enter into the distress of that poor heart; he was only aware of something new and inexorable there. The dying have these intuitions; they see the thoughts. Words are over, this life's noises have ceased to sound, soul penetrates soul to its inmost depth. The child's glance was fixed on those dry and gloomy eyes, and on his little forehead, between the eyebrows, a furrow was forming.

I neither know what I said, nor how I said it. I did not dare pronounce the word *death*; I might as well have killed that old man outright. I spoke of the Saviour, the Friend, He whose arms enfold us in the hour of our last agony, and who carries us pressed to his breast into his Father's house.

The child listened. The negro remained stone

He endured ; he did not consent. On the contrary, his arms still stiffer, his lips still more compressed, his eyeballs fixed and glazed, expressed one of those despairs unlightened by a single ray of faith.

Alas ! my lips were frozen ! That desolation, bordering upon open rebellion, I knew it myself but too well.

And by one of those tricks of memory which sometimes accompany our most agonising emotions by some air, some words repeated over and over again, as if some antique chorus were returning answer in melodious rhythm to the cry of our anguish,—two verses that our village children were wont to sing, kept coming back into my mind—

“The Lord He has a garden fair,
Sweet rosemary is blowing there.”

From my mind they passed to my lips. I supported the child. The Paradise of God Almighty, the beautiful Paradise, full of angels, full of flowers, where those whom Jesus loves walk to and fro,—I spoke to him about that. The little sufferer had grown calm ; he fixed an earnest look upon me. Then suddenly, in a strong and tender voice, “Are there grandfathers there ?”

There was a pause. Then a sob broke out. The old man had sunk on his knees, arms unlocked. He no longer resisted ; he no longer withheld. The Paradise to which his child was going ; yes, he would go there too. Torrents of tears flowed from his eyes ; and as these tears fell the bitterness of his spirit found vent in broken words : “God Almighty ! God Almighty ! if thou hadst chosen, but thou dost not choose ! God Almighty, as thou wilt ! Me, poor sinner ; me, old negro ; me, good for nothing more ! God Almighty, the child not mine.” He buried his head in the bedclothes ; he looked distractedly at that lovely little face, at the roses, the wreaths, and then he suddenly flung himself upon the floor, crushed before the Lord, repeating, “Paradise, God Almighty, Paradise !”

Him that resists, God breaks in pieces. For the soul which throws itself unreservedly on the mercy of the Father, the Father has answers of ineffable tenderness. Yes, in our days, as in those glorious times when the Lord Jesus raised up the little daughter of Jairus, the Saviour, the same still, approaches our dying beds, looks at us with his beaming, radiant glance : “Believest thou me ?” And when, beside ourselves, we remain prostrated, arms outstretched toward him, and voiceless, Jesus raises his hand, lays it on the pale forehead, and says—“Arise.” The dying one awakes, the blood flows back to his face, he speaks ; it is he, it is my son ! Thou hast given him back to me, Jesus, Conqueror, blessed be thy name from eternity to eternity !

In that lowly room, it was thus the Lord entered, thus the Lord drew near, thus that He worked that miracle, of which the language of man can never relate the full glory—a resurrection.

All the timidity of the old negro returned with the first symptom of amendment. He shuddered at the dawn of a hope. He, to have such mercy shown him ! He staggered, he shook, his trembling hands could hardly support his child ; he did not dare to contemplate Him, he did not dare to give thanks ; he thought it was too presumptuous.

But yet a day came when the old negro saw his grandchild smile at him ; another day when he saw him sit up on his bed, and stretch out his arms to him. That day the old negro gave himself up, without reserve, to God the Saviour.

For a long time afterwards you might have seen the child and the old man bent over the Gospels, spelling them out, while they followed each word with their fingers. And when they reached the tomb of Lazarus, when they met the funeral procession of Nain, they stopped and looked into each other's faces.

ON COMETS.

BY SIR JOHN F. W. HERSCHEL, BART.

[THE FIRST OF TWO PAPERS.]

THE subject of comets, about which I here propose to say something, is one that has of late naturally drawn to it a good deal of inquiry and general interest, by reason of the unusually magnificent spectacles of this description which have within the last few years been exhibited to us. In itself it is perhaps not one of the best adapted for popular discussion and familiar explanation, because there are so many things in the history of comets unexplained, and so many wild and extravagant notions in consequence floating about in the minds of even well-informed persons, that the whole subject has rather, in the public mind, that kind of dreamy, indefinite interest that attaches to signs

and wonders, than any distinct and positive practical bearing. The fact is, *that* though much is certainly known about comets, there is a great deal more about which our theories are quite at fault, and in short, *that* it is a subject rather calculated to show us the extent of our ignorance than to make us vain of our knowledge, and to cause us to exclaim with Hamlet—

“There are more things in heaven and earth, Horatio,
Than are dreamt of in our philosophy.”

This, the sublimity of the spectacle they afford, and the universal interest they inspire, make the appearance of a great comet an occasion for the

"You might have seen the child and the old man bent over the Gospels, spelling them out, while they followed each word with their fingers."

imaginings of men to break loose from all restraint of reason and luxuriate in the strangest conceptions. I have received letters about the comets of the last few years enough to make one's hair stand on end at the absurdity of the theories they propose, and at the ignorance of the commonest laws of optics, of motion, of heat, and of general physics they betray in their writers. This is always the case whenever a great comet appears; but in the latter instances one feature of the general commotion of mind they inspire has been wanting. Thanks to the prevalence of juster notions of the constitution of the universe, and of the relation in which man stands to its Author, countries calling themselves civilized appear not to have been disgraced by any of those panic terrors, or thought it necessary to propitiate Heaven by any of those superstitious extravagancies, about which we read on several former occasions. Even at Naples, which not long ago seemed to be almost the lowest point of Europe in the scale of intellectual and social progress, I have not heard that it was thought necessary to liquefy the blood of St. Januarius, or to carry his bones about the streets, on account of any of these later great comets.

When we look through nature and observe the manifest indications of design which every part of it exhibits, it would be very presumptuous in us to assert that comets are of no use, and serve no purpose in our system. Hitherto, however, no one has been able to assign any single point in which we should be a bit better or worse off—materially speaking—if there were no such things as comets. Persons, even thinking persons, have busied themselves with conjectures, such as that they may serve for fuel for the sun (into which, however, they never fall); or that they may cause warm summers, which is a mere fancy; or that they may give rise to epidemics, or potato-blight, and so forth. But I need hardly say this is all wild talking, as my readers will be better able to judge when I shall have stated a few things which are known for certain about them. But *there is* a use, and a very important one, of a purely intellectual kind, which they have amply fulfilled; and who shall say that it has not been *designed* that such should be the case? They have afforded some of the sublimest and most satisfactory verifications of our astronomical theories; they have furnished us with a proof amounting to demonstration of the existence of a repulsive force, directed under certain circumstances, and acting on certain forms of matter, *from* the sun, as well as of that great and general attractive force which keeps the planets in their orbits; and they have actually informed us of the *weight* of one of the planets, which could not have been determined with any exactness if a comet had not on one occasion passed very near to it.

The ancients believed comets to be much of the same nature as meteors or shooting-stars—either in the earth's atmosphere, not far above the clouds, or at all events much lower than the moon; or else as

a species of vapours or exhalations raised up from the earth by the sun's heat, or by some other unknown cause. But they never for a moment dreamed of their forming part and parcel of that vast system of planetary bodies circulating about the sun, of which in fact they had hardly any distinct notions. In ancient history, however, several very remarkable comets stand recorded. One is mentioned by the Greek philosopher, Aristotle, in 371 B.C., with a tail extending over a third part of the sky. Many great comets are recorded at even more ancient dates in the Chinese annals; for that strange people kept an official record of all the remarkable stars, meteors, and other celestial appearances for more than a thousand years before the Christian era, and, what is stranger still, that record has been handed down to us, and seems dependable. A great comet was seen close to the sun sixty-two years before Christ, during a total eclipse; and one which appeared in the year 43 B.C., soon after the murder of Julius Cæsar at Rome, was seen by all the assembled people in full daylight. Such a thing, though very uncommon, is by no means singular; it has happened several times, and in one even quite recently; for the great comet of 1843 was seen at noonday quite close to the sun, both in Nova Scotia and at Madrid, and before sunset at the Cape of Good Hope.* Of course it is only the brightest part or the head of a comet that can ever be so seen; the faint light of the tail has no chance of contending against broad daylight.

Before the invention of telescopes, the appearance of a comet was a rare occurrence, because only a small proportion of them can ever be seen by the naked eye; and of these again only a small portion are considerable enough to attract much attention; but since that discovery it has been ascertained that they are very numerous—hardly a year passes without *one*; and very often two or three, and in one year, 1846, no less than eight were observed. Taking only two a year on an average as visible if looked for in a telescope, and considering that at least as many must occur in such situations that we could not expect to see them, in the 6000 years of recorded history there must have been between 20,000 and 30,000 comets, great and small. A *great* comet, however, hardly occurs on an average oftener than once in fifteen or twenty years, or even yet more rarely; though, as sometimes happens in matters of pure accident and in the course of chances, it is not *very* unfrequent (and we have lately seen it remarkably exemplified) for two, or even three, very great comets to follow each other in rapid succession. Thus the great comet of 1680 was

* At Halifax, in the first-mentioned colony, my informant saw a number of persons, natives of the place, hale and sturdy men, gathered in a group, and gazing full on the sun, which, when he attempted to do, dazzled and almost blinded, he was compelled to desist, and inquire what they were looking at, and how they could do so without being blinded? "Blinded!" was the reply; "Lord bless you! it does not hurt us; what, can't you see it—that thing up by the sun?"

followed in 1682 by another very conspicuous one, of which we shall have more to say. When a comet is first discovered in a telescope, it is, for the most part, seen only as a small, faint, round or oval patch of foggy or, as it is called, *nebulous* light, somewhat brighter in the middle. By degrees it grows larger and brighter, and, at the same time, more oval, and at length begins to throw out a "tail," that is to say, a streak of light extending always in a direction *from* the sun, or in the continuation of a line supposed to be drawn from the place of the sun, below the horizon, to the head of the comet above it. As time goes on, night after night the tail grows longer and brighter, and the "head," or nebulous mass from which the tail seems to spring, also increases, and within it begins to be seen what is called a "nucleus," or kernel,—a sort of rounded, misty lump of light dying off rapidly into a haziness called the "*coma*," or *hair*. Within this, but often a good deal out of the centre, there is seen, with a good telescope and a high magnifying power, a very small spark or pellet of light, which may or may not be the solid body of the comet, and which is the real nucleus. What in an indifferent telescope looks like a rather large puffy ball, more or less oval, is certainly not a solid substance. All the while the comet is getting every evening nearer and nearer to the place of the sun, and is therefore seen for a shorter time after sunset, or before sunrise, as the case may be (for quite as many comets are seen in the morning, before sunrise, as in the evening, after sunset). At last it approaches so near the sun as to rise or set very nearly at the same time, and so ceases to be seen except it should be so very bright and so great a comet as to be visible in presence of the sun.

When this has taken place, however, the comet is by no means to be considered as dead and buried. After a time it reappears, having passed by the sun, or perhaps before or behind it, and got so far away on the other side as to rise before the sun, or set after him. If it first appeared after sunset in the west, it will now reappear in the east before sunrise. And, what is very remarkable, its shape and size are usually totally different after its reappearance from what they were before its disappearance. Some indeed never reappear at all. The path they pursue carries them into situations where they could not be seen by the same spectators who saw them before. Others—like those which appeared in 1858 and 1861—without altogether disappearing as if swallowed up by the sun, after attaining a certain maximum or climax of splendour and size, die away and, at the same time, run southward, and are seen, as that of 1858 was (on the 11th of October, for the first time), in the southern hemisphere, the faded remnants of a brighter and more glorious existence, of which we here witnessed the grandest display. And, on the other hand, we here receive, as it were, many comets from the southern sky whose greatest display the inhabitants of the southern parts of the earth only have witnessed. It also may

often happen that a comet, which before its disappearance in the sun's rays was but a feeble and insignificant object, reappears magnified and glorified, throwing out an immense tail, and exhibiting every symptom of violent excitement, as if set on fire by a near approach to the source of light and heat. Such was the case with the great comet of 1680 and that of 1843; both of which, as I shall take occasion to explain, really did approach extremely near to the body of the sun, and must have undergone a very violent heat. Other comets, furnished with beautiful and conspicuous tails before their immersion in the sun's rays, at their reappearance are seen stripped of that appendage, and altogether so very different that, but for a knowledge of their courses, it would be quite impossible to identify them as the same bodies. This was the case with the beautiful comet of 1835-6,—one of the most remarkable comets in history. Some, on the other hand, which have escaped notice altogether in their approach to the sun, burst upon us at once in the plenitude of their splendour, quite unexpectedly, as did that of the year 1861.

I come now to speak of the paths described by comets in the sky among the stars (which I need hardly observe keep always the same relative situations one among the other, and stand as landmarks, among which comets, planets, the moon, and the sun pursue, or seem to us to pursue, their destined courses). Now, we all know that the sun, moon, and planets keep to certain high roads, like beaten tracks in the sky, from which they never deviate beyond definite and narrow limits assignable by calculation. With comets it is far otherwise. They are wild wanderers, and care nothing for beaten tracks. A comet is just as likely to appear in any one region of the starry heavens as in any other. They are no respecters of boundaries. The first time a comet is seen, no one can tell where it may next day be. The next observation still leaves a great uncertainty as to its future course. The third nails it. After three good observations, carefully made, of its place, we can thenceforth tell where it will go. Meanwhile, such is the variety of which their paths are susceptible, that for a very long time their movements were considered to be altogether capricious and unaccountable—creatures of chance—governed by no laws. *Now*, the case is different. Most persons will remember that the comet of 1858 passed, on the 5th of October of that year, close to a very brilliant star, Arcturus, which shone through its tail at a very little distance from its root, or outspring from the head. Well! within a very short time from the first appearance of that comet, while yet it was but a faint object, it was known to calculating persons that it *would* pass over Arcturus. The day, the hour, nay, almost the minute, when the nucleus of the comet would be closest to the star were predicted; and the prediction was exactly verified. How this could happen I must now proceed to explain; but before I

do so I must premise that my readers are not to be startled if I use some words that are not familiar to many of them, and ask for a little more of their attention than if I were merely telling some amusing story. What I am going to say will be already well known to a portion of them, but will be quite new to many; and I will try to put it in such a way as shall not only be clearly intelligible, *but shall stick by them* and become part and parcel of their minds and thoughts henceforward; and I am mistaken if many of this class of readers (provided they will give me the attention the thing requires) do not rise from the perusal of this brief statement with much larger and higher conceptions of the magnificent system we belong to than they commenced it with.

The sun, as we all know, or may have heard, stands immovable, or nearly immovable, in the centre of our system, and all the planets, including the earth, circulate or revolve round it, each in its own time and at its own proper distance. These distances, for each planet, stand to each other in relations of proportional magnitude which have become, by a long course of astronomical observation and calculations, known to us with extreme exactness, so that if the exact distance of any one of the planets from the sun, or the exact interval between any two of their orbits, can anyhow be ascertained in miles, yards, or feet, the dimensions of all the rest in similar units of measure may thence be derived. Supposing, for instance, we knew exactly the interval between the orbits of the earth and Mars; then, if we would know the respective distances of the several planets in their order from the sun, it would only be necessary to multiply that interval, in the case of Mercury, by the decimal fraction 0.7392; in that of Venus by 1.3812; of the earth by 1.9095; of Mars by 2.9095; of Jupiter by 9.9349; of Saturn by 18.2146; of Uranus by 36.6293, and of Neptune, the most distant of the known planets, by 57.3551.*

Now, the interval between the earth's orbit and that of Mars (or the distance between that planet and the earth when they approach nearest) has quite recently been ascertained by a concerted system of observation made during the past year, in which the astronomers at all the principal observatories of the globe have borne a part, and of which the final result has only within these few weeks become known. From these observations, so far as they have as yet been communicated and reduced,† it has been concluded that the interval in question is 16,071 diameters of the earth; and as we know to a great nicety, by actual measurement of the earth's circumference, that its diameter is $7912\frac{1}{2}$ miles, we are enabled at once to reduce the interval so obtained into miles (which gives 48,036,200 miles), and thence, as above indicated,

to derive the earth's distance from the sun, which comes out 91,718,000, or about ninety-two millions of miles; and in the same way we may obtain the numerical dimensions in miles of the orbits of all the other planets, as also the sun's actual diameter, which appears to be 852,600 miles.

Such of our readers as may take the trouble to compare the distances and dimensions here set down with those stated in my paper on the Sun, in the number of *Good Words* for May last, will not fail to observe that they are materially smaller—by one-thirtieth part of their respective amounts. The numbers there stated are in accordance with the then generally accepted state of our knowledge, which rested for its basis on observations made upon Venus at the time of the transit across the sun's disc in the year 1769—observations by which the nearest distance of the orbits of Venus and the earth was concluded in terms of the earth's diameter, on the same general principle, though by a somewhat more refined and circuitous process, as that from which the least distance of Mars has just now been derived. As the circumstances of this earlier determination (delicacy of instruments and means of observation alone excepted) were much more favourable to exactness, astronomers would have hesitated in accepting the more recent conclusion in preference to the former, were it not for the support and corroboration it derives from another determination, also quite recent (though somewhat prior in point of date), depending on a direct measurement of the velocity of light by a peculiarly ingenious and delicate process invented and executed by M. Leon Foucault. To explain the nature of this process here would lead me too far away from the immediate object of this essay, from which indeed the whole of what is above said on the distance of the sun and planets would be justly considered as a digression, were it not in some sort obligatory on every one to account for a departure from numerical statements once made. Suffice it, therefore, to say that the velocity of light so concluded was found to be somewhat less (and that by about one-thirtieth part) than that which had been hitherto received (192,000 miles per second), and which was concluded from the observed *fact* of its traversing the diameter of the earth's orbit in 16m. 26s. of time, and very considerably less than that before obtained by M. Fizeau with a less perfect apparatus and a less delicate and refined system of procedure.

Now, it will not fail to be remarked, that the *time* (16m. 26s.) remaining unaltered, and the velocity *diminished* by one-thirtieth; the distance traversed (the diameter of the orbit) in that time will also be diminished by the same aliquot fraction, so that there is a coincidence between the two corrections of the sun's distance, which, coming simultaneously from such very different sources, cannot but lead to their acceptance, at least provisionally, and until the recurrence of that grand phenomenon, the transit of Venus, which will take

* We consider in this and what follows the orbits as circles, which is quite sufficient for purposes of illustration.

† Some time will probably elapse before the whole series can be collected and finally reduced.

place in the year 1874, shall put an end to all uncertainty on the subject of the true numerical dimensions of our system.

Bearing now these dimensions in mind, let the reader construct in imagination a figure consisting of concentric circles, to represent the orbits of the planets. Taking the largest, that of Neptune, as 30 feet in diameter, then will that of Uranus measure a little more than 19 feet across, Saturn's somewhat less than 10, Jupiter's rather more than 5, Mars' about 18 inches, and the earth's a foot, while the enormous body of the sun will stand represented in the centre of all by a pellet of very little more than one-ninth of an inch in diameter, the orbits of Mercury and Venus by circles of $4\frac{1}{2}$ and 9 inches respectively, that of the moon about the earth by one-fifteenth of an inch, and the globe of the earth itself by a dot barely the thousandth part of an inch in size.

Strictly speaking, the orbits are not circles; they are slightly oval or, as it is called, elliptic in form; and the sun does not occupy their common centre, but what is called the *focus* of each, that is to say, one of the two pins round which an ellipse may be described by carrying a pencil round them confined by a looped string encircling them both. The planetary orbits, moreover, all lie nearly in one plane, or very slightly inclined to that in which the earth performs its annual revolution, which is called the *plane of the ecliptic*, the angle at which the plane of each orbit meets and cuts this being called its *inclination* to the ecliptic. They all circulate the same way round the sun, and the further they are from the sun the slower they move, so that while the earth goes round it in 365 days, Mercury occupies only 88 in its revolution, while Neptune requires no less than 168 *years* to complete one of his circuits.

When we come to the comets, however, we find a very different state of things. A comet, it is true, moves round the sun as his centre of motion: not, however, in a circle, or any approach to a circle, but (with a very few, and those highly remarkable exceptions) in an immensely elongated or, as it is termed, a very eccentric ellipse. In consequence, the nearest distance to which they approach the sun bears almost universally an exceedingly small proportion to that which they attain when most remote; that is to say, at the two extremities of their elliptic orbits, or what are termed their *perihelion* and *aphelion*. By far the great majority approach it at their perihelia near enough to arrive within the earth's orbit; very many within that of Venus or even of Mercury; and not a few attain an extreme proximity to the actual surface of the sun; while, on the other hand, only four or five among the vast number of recorded comets (those of 1747, 1826, 1835, 1847,) have failed to arrive within twice the earth's distance, or within the orbits of those small planets called asteroids; and one only has had a perihelion distance exceeding four times the earth's distance (that of 1729), still falling short of

the orbit of Jupiter. Probably, however, a comet which should always remain outside of the latter planet's orbit would have no chance of ever being seen by us. As to the extreme distances to which they recede from the sun, it is only in comparatively few instances that it can be even estimated—their ellipses being in general so elongated as to be undistinguishable from that extreme and limiting form which is called a parabola, which never returns into itself at all. The form of this curve is that which a stone thrown into the air describes, or which a jet of water thrown up obliquely by a smooth round pipe assumes in the air, being very much curved or bent about the point which is called the vertex, and less and less so in the ascending and descending branches.

Comets, we have said, are wild wanderers, and despise beaten tracks. No way confined as the planets are to move in planes nearly coincident with the ecliptic, they cut across it at every possible angle, and, as nearly as can be ascertained (with the exception of one small class of comets), quite indifferently as to the degree of their *inclination*, or to the direction of their *longer axes* or longest dimensions of their orbits in space. So that there is no region of space, however situated, either in direction or distance from the sun, which a comet may not visit. Neither do they conform to that other universal planetary rule of circulation round the sun in one direction. *Retrograde* comets, or those whose motion is opposite to that of the planets, are as common as *direct* ones, or those which conform to the planetary rule. Here again, however, there is a small class in which a tendency to conformity is exhibited, coextensive with that above noticed, which affords a certain proximity to the ecliptic. But of this we shall have occasion to speak more at large.

It is only when all the particulars which determine geometrically the situation, and the form of the orbit of a comet, its nearest distance from the sun, and the direction in which it is moving—or what are called the *elements* of its orbit—that it can be ascertained whether it has ever been seen before, and whether we are to expect ever to see it again, and that its future course while it remains visible can be predicted with certainty. These elements are technically called:—

1. The *perihelion distance*, or nearest approach to the sun.
2. The *eccentricity* of its ellipse, or whether the orbit be sensibly a parabola.
3. The *inclination* of its plane to the ecliptic.
4. The *longitude* of its node, or the direction of the line in which its plane intersects the ecliptic, which is called the *line of its nodes*.
5. The *longitude of its perihelion*, or, which comes to the same thing, the angle which the axis of the orbit makes with the line of nodes.
6. The exact moment when the comet passed through its *perihelion*, or was nearest to the sun.
7. The direction of its motion (direct or retrograde).

It is natural to ask *how* all these particulars ever can be known; and to this the answer is: By the same system of observation and calculation combined, by which we have come to know the form and dimensions of the orbits of the planets, their times of revolution round the sun, and their situation in space. It was Tycho Brahe, a celebrated Danish astronomer, who first rose to the conception that comets are beyond the moon, and not mere exhalations. The appearance of a great comet in 1577 set him thinking about it, and he was led by his observations and reasonings on them to a certain knowledge of the fact of its being much more remote than our own satellite. He was therefore led to conjecture that the motions of comets had reference rather to the sun as their centre than to the earth. The elliptic form of the planetary orbits was not then known, and Tycho accordingly supposed that comets moved about the sun in perfect circles, in the same manner as the other planets, in the system of astronomy known by his name as the Tychonic system.

In the century which elapsed after the observations of Tycho, his system had been exploded, and the modern or Copernican system established. Juster, though still very confused notions as to the relations between the sun and the bodies circulating round it had begun to prevail. Hevelius, in a work on comets published in 1668, otherwise filled with absurdities (forgetting the circular motions of the planets, or considering them as determined by quite different causes), struck on the idea that as here on earth, when a stone is thrown up it falls in a parabola, so any body, as a comet, tossed from Jupiter or Saturn (as he fancied might be the case), coming into the sphere of the lower planets, it would, *pari ratione*, describe a parabola concave to the sun—the sun, of course, occupying the focus, as the most remarkable point—a sort of [natural] centre appropriate to that curve. We may regard this as a happy conjecture, or a lucky blunder (being founded on a total misconception of the case): but it fructified in the mind of Doerfell, a German astronomer, who in 1680, on the occasion of the appearance of the great comet of that year, which he observed assiduously, came to the positive conclusion that this comet did really pass round the sun and return in a curve of that form, having the sun in its focus. Borelli, indeed, a Neapolitan mathematician, had also suggested the same idea as a matter of speculation, but Doerfell's conclusion went to the matter of fact. This was an immense step; but neither Doerfell, nor any one else, could at that time give any account of the *reason why* this should be the case, or in what *manner* the comet was made to conform its sweep through space in so singular a way to the sun. Indeed, speculation at that epoch pointed rather to a species of instinct, or a pre-siding mind, for guiding the heavenly bodies in their movements than to any physical cause.

The wonderful discoveries of Sir Isaac Newton made all this clear. He first showed that the sun

controls the movements of these wanderers by the very same force acting according to the very same law which retains the planets in their paths,—that marvellous law of gravitation: the same power which draws a stone thrown from the hand back to the earth; which keeps the moon from flying off, and holds her to us as a companion; which keeps the planets in their circles or, rather ellipses, about the sun; and which we now know holds together several of the stars in couples, circulating one around the other.

That same great comet of 1680, which occurred while Newton was brooding over those grand ideas which broke upon the world like the dawn of a new day in his "Principia," afforded him a beautiful occasion to test the truth of his gravitation theory by the most extreme case which could be proposed. The planets were tame and gentle things to deal with; a little tightening of the rein here, and a little relaxation there, as they careered round and round would suffice, perhaps, to keep them regular and guide them in their graceful and smooth evolutions. But here we had a stranger from afar—from out beyond the extremest limits of our system—dashing in, scorning all their conventions, cutting across all their orbits, and rushing like some wild infuriated thing close up to the central sun, and turning short round it in a sharp and violent curve, and with a speed (for such it was) of 1,200,000 miles an hour at the turning point, and then going off as if curbed by the guidance of a firm and steady leading rein held by a powerful hand, in a path exactly similar to that of its arrival, with perfect regularity and beautiful precision; in conformity to a rule which required not the smallest alteration in its wording to make it applicable to such a case. If anything could carry conviction to men's minds of the truth of a theory, it was this. And it did so. I believe that Newton's explanation of the motions of comets, *so exemplified*, was that which stamped his discoveries in the minds of men with the impress of reality beyond all other things.

This comet was perhaps the most magnificent ever seen. It appeared from November, 1680, to March, 1681. In its approach to the sun it was not very bright, but began to throw out a tail when about as far from the sun as the earth. It passed its perihelion on December 8th, and when nearest, it was only *one-sixth* part of the sun's diameter from his surface (one-fifty-fourth part of an inch on the conventional scale of our imaginary figure), and at that moment had the astonishing speed I have just mentioned. *Now, observe one thing.* The distance from the sun's centre was about $\frac{1}{160}$ part of our distance from it. All the heat we enjoy on this earth comes from the sun. Imagine the heat we should have to endure if the sun were to approach us, or we the sun to $\frac{1}{160}$ part of its present distance! It would not be merely as if 160 suns were shining on us all at once, but 160 times 160, according to a rule which is well known to all who are conversant with such matters. Now that is 25,600. Only

imagine a glare 25,600 times fiercer than that of an equatorial sunshine at noonday with the sun vertical! And again only conceive a light 25,600 times more glaring than the glare of such a noonday! In such a heat there is no solid substance we know of which would not run like water, boil, and be converted into smoke or vapour. No wonder it gave evidence of violent excitement. Coming from the cold region outside the planetary system torpid and ice-bound, already, when arrived even in our temperate region, it began to show signs of internal activity: the head began to develop and the tail to elongate, till the comet was for a time lost sight of. No human eye beheld the wondrous spectacle it must have offered on the 8th of December. Only four days afterwards, however, it was seen, and its tail, whose direction was reversed, and which (observe) could not possibly be *the same tail* it had before (for it is not to be conceived as a stick bran-

dished round, or a flaming sword, but fresh matter continually streaming forth),—its tail, I say, had already lengthened to an extent of about ninety millions of miles, so that it must have been *shot out* with immense force in a direction *from* the sun: a force far greater than that with which the sun acted on and controlled the head of the comet itself, which, as the reader will have observed, took from November 10th to December 8th, or twenty-eight days, to *fall* to the sun from the same distance, and that *with all the velocity it had on November 10th to start with*.

All this is very mysterious. We shall never perhaps quite understand it; but the mystery will be, at all events, a little diminished when we shall have described some of the things which are seen to be going on in the heads of comets under the excitement of the sun's action, and when calming and quieting down afterwards.

GOOD WORDS FOR CHILDREN.

BY THE EDITOR.

"When I was a child, I spake as a child, I understood as a child, I thought as a child."—1 Cor. xiii. 11.

No. I.—ENDLESS LIFE.

MY DEAR CHILDREN,—You are never to die, but to live for ever, and ever! You will live a year, and, when that is done, another year, and so on and on for thousands and thousands of years. If but one of the grains of sand on the sea-shore was counted each year, yet, long after every grain was counted, you would still be alive. You are to live as long as God lives—that is, for ever.

I know what you are thinking about. You are thinking of death, and wondering why I say such a strange thing as that you are never to die. For, though you have lived a very short time, yet you have often seen burials, and heard of people dying, and have perhaps known some one in your own house who used to be with you every day, but whom you never see now, nor ever hear; and you know, too, that you will never see them more in the house, because they are dead. And, perhaps, you remember some little brother or sister who used to play with you, and whom you loved very much, but who became unwell, and got worse and worse; and then every one looked sad; and by and by you were told that they were dead; and you saw them taken away, but never more come back. Remembering all this, you ask, Am I not to die some time? and thus no doubt you sometimes think of death, though of course you do not like to do so—for death itself is not good. I one day saw a little bird in a cage, and it was very happy singing its songs, and picking its food, and drinking out of its cup. Next day I went to pay it a visit and to hear it sing—but the cage was lying all broken on the floor, and no bird was there! I never saw the bird again. Was it dead? No! It fled away through the blue sky

on a beautiful sunny day, and some people heard it singing as it used to do, near a clear stream of water, among trees and flowers. When your little brother or sister died, it was only the cage that was broken and buried, but the spirit that used to speak to you, and love you, and be happy with you, was never touched, or broken or buried; never!—but it went to Jesus Christ, and there it is living, and thinking, and singing, quite cheerful and happy; and getting far wiser, and learning far more there than you can do here, because it lives in a better place, where there is no sickness and no sin, and where everything is beautiful and good, and every one is kind and joyful.

Now, it may be, you will live for a long, long time in this world, and not leave it till you are old with grey hairs. This, however, is just as God pleases; and God always pleases to do what is best for you, because His name is Love, and so you should be always pleased with whatever He does. But remember, Death, when it comes, touches only the cage, not the bird. It is the body, not yourself, that dies. You yourself will never for one moment be away from Jesus, but always be as close to Him as those babes were whom He clasped to His heart and blessed when He was on earth.

My dear children, is it not good and kind in God to make us in order to live with Himself for ever? He made all the trees and plants on the face of the earth, but He did not breathe into them His own life; they did not, therefore, become living souls, and so they shall all perish. God made all the fish of the sea, all the birds of the air, and all the beasts of the field, but neither did He make them living souls, nor say to them "live for ever," and therefore, they also perish. God made all the

great world, the mountains, rivers, and seas; and He made the sun, the moon, the thousands of stars that shine in the sky, but He never said to them "live for ever," and so, too, they must pass away. The earth is very old; the mountains are just the same as they were in the days of Adam; you can walk in the Holy Land just in the same places where Abraham, and Moses, and David, and Jesus, walked: and long after our bodies die, the hills we see will remain the same, and the rivers will roll the same, and the sea will flow and ebb the same; yet these old, old hills, and rivers, and seas, must one day depart and "no place be found for them!" But you, my dear children, will live long, long after them—for as I have told you, you will live for ever! Has not God, then, loved you far more than the birds, or fish, or beasts, or mountains, or the whole world? Has He not loved you when He made you so great, breathed into you the breath of life, and said to each of you, "I wish this child to live for ever?" And now you ought to love God as your own Father, for He surely did not make you that you should be frightened for Him, and try to forget Him, sin against Him, and make Him angry with you! No, no! God, as it were, says to you:—"love me, my child, and be good and happy." Remember then *you are never to die, but to live for ever*, and I wish you to be good, so that you may be happy while you live for ever, and not be wicked and therefore miserable. Pray in this way to God:—

"My Father, Thou hast made me to live for ever with Thyself. I thank Thee for Thy kindness to me. Forgive all my sins. Teach me to know Thee, and help me to love Thee my Father now, that so I may be good and happy. Deliver me from evil. Hear me for the sake of Jesus Christ my Saviour, who died for me. Amen."

No. II.—ENDLESS JOY.

MY DEAR CHILDREN,—I have told you that you are never to die, but to have endless life. I wish to teach you now how you may have endless joy.

Of course you *wish* yourselves to have joy, and all who love you wish this also for you. Your good friends and relations wish it, and are glad when you are glad. The good angels wish it, for they all rejoice when they see even one sinner—and every one is a sinner—come back to God. Your own Saviour Jesus Christ wishes you to rejoice; for did He not leave heaven and come here to enable you to do so? Did He not become a little child, and live for thirty years in the world to teach you how to be good? And did He not die for your sins, and rise again and live for ever to make you like Himself? And is He not always seeing you and thinking about you every day, and all to make you good? And God, your own Father, loves you; and does a father not wish to make his own children good and glad?

How very glad everything is in God's world! The woods in spring are a great concert of singing birds, busy building their nests and singing their songs. The air is full of larks that hymn like angels in the clouds. Bees hum over the meadows, and visit with a song every flower; and the flowers open their hearts, and give all their sweets to them, and then the bees return with joy to their hives, ready to start off at early morning singing again to their work. The waves dance in the sunbeams, and the streams go singing and dancing to the sea, and the fish leap and play in the water. The lambs sport and run races on the hill sides. The flowers have on gay clothes, and look so beautiful and glad, as the breeze plays with them and whispers to them. Even in winter, when the snow drifts, and the wind is cold, and the woods bare, and everything is asleep and resting till spring, the robin-redbreast and other birds are kept alive day and night. Even the little flies and gnats do not die, but appear again in summer. If you walk by the sea, too, you will observe a great number of birds that swim, and dive, and fly about happy, in spite of cold, and rain, and storm! Now God loves you far more than these, for He never called them His *children*, nor made them to be with Himself and to love Himself; and so God, who makes them so glad, surely wishes you to be far more glad? And does He not give you all your mercies and enjoyments every day? For there is not one day in which you do not laugh, and sing, and play. But He wishes to give you such joy as you never yet had, and to give it to you *as long as you live!* "The chief end of man is to glorify God, and to enjoy Him for ever."

But how are you to be happy? That is the question! I wonder what answer you are inclined to give to it. Shall I guess? It is this, I think: "We would be quite happy if we had our own way, and could do just whatever we pleased! Oh! if there was no one to find fault with us, and if we were never meddled with, but could go where we pleased, and do what we pleased, and get all we liked just by wishing it! Yes; *to have our own will in everything, that would make us glad!*" Have I not guessed well? Are not these your thoughts?

Now I do not blame you very much, my dear children, for thinking this. It is natural for you to do so, because even a child's heart has sin and folly in it, and you are perhaps too young to know how mistaken you are; and you are too young also to know how many people have tried the way of self-will and self-pleasing to be happy, and have never been so after all. But I will tell you an old story, which perhaps you never heard before.

There lived a little gold fish in a globe of water, and a little canary in a cage. One day the fish heard the bird sing, and it said, "Oh, how happy would I be, if I could only *have my own will*, and get out of this cold water, and be in a cage, and sing like that bird! But here I must live, and

swim round and round this narrow globe of water; *what a pity I cannot do as I please!*" Soon after, upon a very hot day in summer, the canary saw the gold-fish swimming about in the water, and looking so clean, and bright, and cool. "Oh," said the canary, "how happy would I be if I could only *have my own way*, and get out of this nasty cage, and, in this hot weather, swim about in that pure and cool water where the fish is; *what a pity I cannot do as I please!*" There was a very wise and good spirit present, and he wished to teach them how ignorant and foolish they were; and so he said to the bird, "Believe me, my dear little bird, it would not make you happy to have your own will in this. Do God's will, and stay where He has put you, and sing your song, and be happy, just as He wishes you to be." "But I wish," said the bird, "to have my own way, and to go to the water. I don't believe what you tell me." Then the good spirit said to the little gold fish, "Believe me, my dear little fish, you would not be happy if you had your own will in this, and if you were in the cage. Stay where your Maker has put you, and swim about in the pure water as He wishes you." "But I wish," said the fish, "to be in the cage, and I don't believe what you tell me." So the good spirit sighed, and he said, "Oh, I wish you believed me, and did your Maker's will and not your own; but I will give you your own way, and you will learn, perhaps, by sorrow and pain, who is right, and who loves you best." So he put the fish into the cage, and the bird into the water! Oh, what misery there was! The bird was almost drowned, and the fish was almost choked, till they both cried in despair to the good spirit to help them, and promised they would always believe what he said, and never after this think they were sure to be happy by having their own way, or by doing their own will.

Now, my dear children, you are just as foolish as the little bird or the little fish, if you think you are sure to be glad by *just getting your own way and doing your own will*, without ever thinking whether your way is right, and your will is wise and good.

I have not yet told you where the right road is, but only of a wrong road to gladness, which is very broad and full of people. In the meantime, say to God,—

"My Father, I thank Thee for creating me to rejoice with Thee, and with Jesus Christ, and with all the good people in the universe. I bless Thee for all the mercies Thou hast already given me in this world,—for my health, my food and raiment, my friends and relations, and all I enjoy every day. But, oh! my Father, help me, and teach me how to be truly happy now and for ever and ever. Leave me not in ignorance, lest I should be so foolish and wicked as to seek happiness in my own way and not in Thy way, and by doing my own will, and not Thine. Hear me, for the sake of Thy Son, who always did Thy will, even unto death. Amen."

No. III.—ENDLESS LIFE AND ENDLESS JOY.

MY DEAR CHILDREN,—What I now wish you to know is, how you may be glad *as long as you live*.

Perhaps you say, "Oh! that is just what we wish to know about, for if we are glad all the days of our life, and until we die, what more can we look for?" But I did not say that I was going to teach how to be happy only till you died; for have you forgotten that you are *never to die*, but to live for ever and ever? And if so, it would be a very little matter to you to be happy only for the few minutes you are to live here, unless you had such happiness as would remain with you *as long as you live* elsewhere. If you were about to take a long voyage of many months across the ocean, it would be of little use to have food in store which would last for a few days only. Now, this is one reason why you need something more than what so many people think would be quite enough to make them happy—such as plenty of money, with grand houses, beautiful lands, servants, carriages, and amusements, all the year round. Suppose you had all this, and that you were as happy as these things could make you, what could they do for you when you went away from the world on your long voyage, to live somewhere else, and had to leave every one of these things behind you, never more to see them? Read a story about this in the Gospel of St. Luke, 12th chapter, verses 16 to 21; and along with this read also what Christ says in the Gospel of St. Matthew, 16th chapter and 26th verse.

It is natural for you, my dear children, to think that riches can make you glad, for you see so many people anxious to obtain them. Remember, I do not say that being rich, or wishing to be rich, is wrong; because riches are a gift from God, and so are houses and lands, and these, with all other beautiful things, are often given as a reward for industry, patience, honesty, and self-denial, which are pleasing to God. Who, therefore, would not like to have riches! But what I say is this, that if you had *nothing more*; if, for example, you were not good, and did not care for God, or love Him, but were proud, vain, and selfish, all the world could not make you good—you would have no *Peace* in your hearts. I am sure, my dear children, if you were afraid of your parents, or if you thought that they were angry with you, because you were doing what was wrong, you *could* not have peace, even though some one gave you money, or tried to amuse you; indeed, it would be a poor sign of you if you could! Or, if you were away from your parents, and did not know where to find them, would you be glad? I am sure not! I saw a little child the other day, that had lost its way in the street, and was taken to a strange house until its parents were found. Oh, how that child mourned! I thought its little heart would break. One gave it sweet things to quiet it, and another some pence,

others showed it beautiful pictures, but it always cried the more, "My mother, my mother, Oh! I want my mother!" And just in the same way you cannot, my dear children, have peace without God, even if you tried it. He loves you so much, that He has made your hearts so, that you cannot be at peace unless you are at peace with Him, and unless you know and love Him as your own Father in heaven, because He alone is worth loving with *all* your heart, soul, and strength, for ever and ever! And if you did not love Him, but were frightened of Him, and tried to forget Him, because you were afraid, then I am sure all the gold and silver in the world could not make you happy! The Bible contains many stories of people who thus tried to find peace without God, but who found they could not do so, any more than their eyes could be satisfied with having money put on them, but the light kept from them. You can read for yourselves about a man who was one of the most powerful kings and richest merchants that ever lived; who had all the world could give him, but who found that all this, *without love to God*, his Father, was but "vanity and vexation of spirit." Read Ecclesiastes, 2nd chapter, from verse 4 to end of verse 11. There is another far more dreadful story than this, of a rich man who cared only for himself, and had no love to his God or to his neighbour. He had a *kind* of happiness, yet you will see, when you read the story, that it did not *last*; and, not only so, but even while it lasted, it could no more fill up his heart, than a candle can fill the world with light without the sun. Read in St. Luke, 16th chapter, from verse 19 to verse 31. And now, my dear children, what do I wish you to learn from all this? It is this, that to be truly glad now, and to continue to be glad for ever, is to *love God as your Father, to trust Him, and do His will*. If you are afraid of past sins, remember Jesus Christ died for your sins, and that God will at once forgive you for Christ's sake, if you sincerely wish to give them up and obey Him; and if you fear the evil in your hearts, God will give you His Holy Spirit to enable you to obey Him.

I have a great deal to say to you about this in other papers. But *think* about what has been already said; and remember, that while God gives you *all* the good you have, your health of body, and cheerful mind, your sports and amusements, with merry hearts to enjoy them, dear companions, friends, relations, parents—everything, in short, except what is bad, and what would therefore make you miserable—that He also gives you what is more than all this, more than all the world,—*He gives you himself in love, and to love!*—and says: "Come, my children, and speak to me, and love me with all your hearts, for I am your Father, and love you, and give you all things richly to enjoy, and wish to make you happy as long as you live." Therefore, speak to Him in prayer, and say:

"My Father! Thou hast made me, and preserved me, and redeemed me from sin and Satan,

through the death of Jesus Christ, Thy Son, my Saviour. Thou hast given me all my mercies, and, best of all, Thou hast given me Thyself, that I might know, love, and serve Thee, with gladness, now and for ever! Oh! my Father, forgive me for having so often forgotten Thee, and kept thee out of my heart as if Thou didst not love me. Forgive me that I do not know Thee better, and love Thee more. Help me, my Father, through the Holy Spirit of love, to think of Thee oftener than I have done, to feel more grateful to Thee for all I enjoy, and never to do anything displeasing to Thee, my Maker, Preserver, Redeemer, my ever present and ever loving Father! Hear me, for Christ's sake. Amen."

No. IV.—"OUR FATHER."

MY DEAR CHILDREN,—God wishes you to love Him, because "God is love," and your Father, and He made you to be like Himself, and redeemed you by the death of His Son for himself, and that you might enjoy himself for ever.

Think of this—*God is your Father!*

God made all things. He made this great world, with its wide and deep seas, which the swiftest ships take months to sail over,—with high mountains, on whose tops no human foot has ever trodden,—and islands and countries far away, many of which no human eye has ever yet seen. God has made the heavens;—the sun which is so large that thousands of worlds as large as ours, moulded into one, would not equal it in size,—and all the countless stars, so great that hundreds you see, like diamonds sparkling in the sky, are each much bigger than this world. "Who can understand all his mighty works?" No one can do so. "They are past finding out." But you can understand enough about God himself to know, dear children, that He, the great Creator, is *your Father*.

God not only made, but also *preserves all living things*. Had you been born in the time of Adam and Eve, and had you lived on earth until now, and been every day travelling over it, you would know but very few of the millions of people in it. Yet God knows every person everywhere! He knows at this moment what all the angels and saints in Heaven, and Satan, the wicked one, and all his followers, are thinking about, and what is in your heart and the heart of every child in the world. He remembers, too, every word that any boy or girl ever spoke long ago in the streets of Nineveh, Babylon, or Jerusalem. He is also at this moment seeing and looking after the people in Africa, India, America, in every city and village, and those who are wandering among the ice mountains near the North Pole, or sailing over the distant ocean. He thus knows every one in the whole world, as well as all who have left the world since it was made. In Him they all live, move, and have their being. "Such knowledge

is too wonderful for us." But it is true, and should make you glad, that God sees you, and knows you, and thinks of you, as if you were alone with himself in the world, for this God is your *Father*.

God not only sees and preserves human beings who can love Him, but He is so great and good that *He takes care of all creatures, great and small*. If any of us were to get a few birds and fish, and a very few other animals of different kinds to feed and preserve, we would find how difficult it was to do this. But God, every day and hour, for thousands of years, feeds all the fish, big and little, in all the lakes, and rivers, and oceans of the world,—all the countless millions of beasts that roam over the earth, in burning deserts, dark forests, wild mountains, or among frost and snow,—all the endless flocks of birds that live on sea or land,—all the insects that creep or fly,—all the creatures which are so small that thousands can live and move about in a spoonful of water. Yes! God sees and preserves them all! And this God is *your Father*, and says to you: "Behold the birds of the air, for they sow not, neither do they reap or gather into barns, yet *your heavenly Father* feedeth them; are ye not much better than they?" Now, dear children, when you go out and look at the world, and see the green fields covered with plants and beautiful flowers, all kept so fresh and clean with God's rain, which the clouds draw from the ocean and pour down upon them as they need it, and all kept alive and warm by the sun,—or when you observe the lovely picture of woods, streams, lakes, mountains, seas, with the sky overhead, blue by day or full of stars at night,—when you watch the numbers of living things that you see everywhere, all so healthy and happy, or the living persons, old and young, that are moving about, whom God wishes to love and enjoy Himself for ever, say to yourselves: "My Father made all these persons, creatures, and things, and He sees us all, knows us all, and loves us all." Should not this thought make you happy, and draw out your hearts to God, the Father Almighty, "maker of the heavens and of the earth?" Read what the King David said of this God, how much he admired His works, and how happy he was in His presence (Psalms 104 and 139.)

But I dare say you have felt afraid of God, and did not like, therefore, to think of Him as David did. Perhaps I know why you were afraid. Was it because you felt somehow that you had not been caring for Him, or trying to please Him, but only thinking about yourselves, and trying to please yourselves, as if God was not your Maker, Master, or Father? Was it not because you knew that you had done many things that were wrong—that you had not always spoken the truth, or obeyed your parents, and had been often selfish and self-willed? If so, nothing can be so bad as not to love God, for He is the best of all, and most glorious and most worthy to be loved of all. I do not wonder that when you thought how wicked it was not to love God, that you said, as it were in your hearts: "I

am sure God is angry with me, and I fear He will punish me, and it makes me unhappy when I think of Him." And perhaps you tried at last not to think of Him. Oh! what hard thoughts these were against God, your own Father! What if He did not think of *you*? What if He had not cared for *you*? How good, then, He must be, when, in spite of all our sins, He is still our Father! For though God is angry with sin, and hates every kind of disobedience, yet He has, as I have told you, provided pardon for you through His Son. "For when we were yet without strength, in due time Christ died for the ungodly. For scarcely for a righteous man will one die: yet peradventure for a good man some would even dare to die. But God commendeth his love towards us, in that, while we were yet sinners, Christ died for us. Much more then, being now justified by his blood, we shall be saved from wrath through him. For if, when we were enemies, we were reconciled to God by the death of his Son, much more, being reconciled, we shall be saved by his life. And not only so, but we also joy in God through our Lord Jesus Christ, by whom we have now received the atonement."

Perhaps you say, "It is quite true that we have been often afraid of God, though we said with our lips, 'Our Father which art in heaven,' for we felt we had sinned against Him. But we would like to know Him better, so as to love Him more: tell us how that may be. How can we know Him?" Your question is just like the one put by Philip: "Show us the Father and it sufficeth us;" that is, let us see our Father's face that we may know and love Him.

Now, dear children, God has spoken to us, and has revealed himself to us in many more ways than you can yet fully understand; but all I would remind you of at present is this, that Jesus Christ, of whom you have heard and read, and who is your brother and Saviour, is one with God; and Jesus came to the world to show to us our Father. Remember, then, when you read of the words Jesus spoke, and read of the things He did, say to yourselves: "Now all this was just God my Father speaking to me, and working before my eyes." Yes, dear children! The love of Jesus is just the same as the love of God. When Jesus says, "Come to me," God also says it. When Jesus takes up little children into His arms and blesses them, you see in this the tenderness and goodness of God. And, therefore, when you know and love Jesus, you see and love God; for "He and the Father are one."

Never forget that it is this same blessed Redeemer who died for all your sins, and suffered on the cross for you, that your sins might be pardoned through His blood, and a new heart given to you by His Spirit.

Say, then:

"Almighty Creator of the heavens and the earth, I adore Thee as my Father! Thou art everywhere present, and Thou seest and knowest me Thy child. 'Thou preservest man and beast,' and

Thou preservest me, and in Thee I live, move, and have my being. Father! I am ashamed to think how I have forgotten Thee, and been a self-willed and ungrateful child. I thank Thee for Thy patience; and for sending Thy Son into the world to teach me to know Thee, and to die for all our sins. God, my Father, forgive me for Christ's sake, and give me Thy Spirit, and enable me to be obedient and loving to Thee as was Jesus Christ, Thy well-beloved Son, my Saviour and my brother! Amen."

NO. V.—TRUST IN GOD.

MY DEAR CHILDREN,—God our Father loves us, and wishes us to trust Him. Now I will explain to you what is meant by trusting God.

Once upon a time a house took fire, in the old town of Edinburgh. All the people escaped. But, somehow or other, a family in the second floor did not awake until the flames almost entered their room. The father and mother seized their children and rushed down-stairs with them to the street; but, just as they reached it, they discovered that their little boy, Willy, had been left behind, for the father thought he was with his mother, and the mother that he was saved by the father; and so, amidst the noise, confusion, and terror, the poor boy was left alone in the burning house. The moment he was missed, his father ran back through fire and smoke to save his child. But, alas! the wooden stair was burning—indeed, most of it was already burnt—so that it was impossible to reach the floor where little Willy was left. But, just as his father returned in agony to the street, the boy was seen standing at one of the windows, weeping bitterly, and evidently in great fear. Not a moment was to be lost. Yet what could be done? There was no ladder near—in a few minutes the flames would reach the child. The father shouted to him to leap down, and he would try to save him. Little Willy was afraid to take so terrible a leap; but the fire was raging through the building, sending out long red tongues of flame, clouds of smoke, and millions of sparks up to the sky; and no wonder Willy was terrified, as he heard the roaring and crackling around him, and, looking down, saw every face in the large crowd gazing up to him! He knew, however, that there was no hope if he remained where he was. "Jump, my boy, and trust me!" cried the father, with tears. In a moment something white was seen, like a flake of snow, falling from the window. Not a word was spoken by the crowd, every one held his breath, and many, I daresay, prayed that God would preserve the child who had sprung from the window in obedience to his father's command, and trusting to his father's power and love! His trust was not put to shame, for he was received in his arms, and clasped to his bosom; and while the crowd gave a loud cheer, the father thanked God that his little Willy was safe!

You see how Willy *trusted* his father.

Now, dear children, you cannot help trusting some one or other every day of your lives. When, for example, you lose your road, and ask some person to direct you, and you follow his directions, then you *trust* that person as a guide. When you sail in a vessel, and perhaps take a long voyage across the ocean, you are obliged to *trust* entirely to others, day and night, for safety, and for reaching your destination. When in sickness, you ask the physician to find out your complaint, and to give you the best remedies for curing it, if you believe what he says, and take the medicines which he gives, then you *trust* him. When you go to school, you *trust* the teacher, that he is able to instruct you, every day and hour. You *trust* your friends who love you, and, above all, you *trust* your father and mother, who must love you best of all, to take care of you, feed you, clothe you, guide you, choose for you, and to do you all the good in their power. Do you not understand now what is meant by *trusting* a person?

Now, to trust God, is just to have confidence in Him, as little Willy had in his father, and, as we all have in a guide, to direct us on our journey—in a captain of a ship, to bring us safely on our voyage—in a physician, to heal us in our sickness—and in our dear friends and parents, to help us in everything; only *we must trust God better* than we can do them, and I shall tell you why.

First of all, *God loves us much more than any one on earth can do*. Although a father and mother may love us with all their heart, yet their heart is not so great in love as is the heart of our Father in heaven.

Secondly, Those whom we trust on earth, though they may wish to help us, *may not be able to do so*. For example, when we need their aid, they may be far away, and not able to give it. But *God is always with us day and night*, as the Psalmist says, "Thou knowest my down-sitting and mine up-rising; thou understandest my thought afar off. Thou compassed my path, and my lying down, and art acquainted with all my ways. For there is not a word in my tongue, but, lo, O Lord, thou knowest it altogether. Thou hast beset me behind and before, and laid thine hand upon me. If I say, Surely the darkness shall cover me; even the night shall be light about me. Yea, the darkness hideth not from thee; but the night shineth as the day: the darkness and the light are both alike to thee."

Thirdly, Friends may be with us, *without the power to assist us*. Willy's father might not have been able to have caught hold of his boy, nor the guide we spoke of to direct us in our journey, nor the captain in our voyage; and the physician may neither know our complaint, nor be able to cure it. But it is not so with God. *He has all power*, and does whatever He pleases; and if we trust Him, it will please Him always to do whatever is best for us, in order to make us good and happy. Trust Him, therefore, for *mercy* to forgive you all your

sins, and for His Holy Spirit to help you to do His will. Trust Him for wisdom to guide you every day; for love to comfort you, provide for you, give you peace, and to make you love Himself, and every one about you. If you do so, you will know more and more the older you get how true it is what the prophet says, "Thou wilt keep him in perfect peace whose soul is stayed on Thee, because he trusteth in Thee;" and then you will have the joy of being able to say in your old age, "O Lord! thou hast been my trust *from my youth!*" Therefore say to Him now:

"My Father! I am weak and helpless; I cannot take care of myself; I know not what may take place in a single hour. But Thou seest me, and Thou knowest all I speak, think, and do. Thou art able to help me always, and to bless me in everything. Thou lovest me; therefore, my God, I put my trust in Thee, and I am sure that I shall never be put to shame. Save me, guide me, heal me, and enable me always to love, trust, and obey Thee, as Thine own child, for Jesus Christ's sake. Amen."

(To be continued.)

WHAT HESTER DURHAM LIVED FOR.

ONE of the East Indian steamers was nearing England. Among the crowd of yellow men and women, dusky ayahs, pale-faced children and excited faces everywhere, was one face no more excited than when it touched at Aden, or appeared in the train crossing the Isthmus. If anything, it was a shade colder and more impassive than ever.

Mrs. Durham had little in common with the rest of the women. They were impulsive, demonstrative, chattering. Yes, even the widows were. They had all friends with them, or friends to whom they were going. The very stiffest, loneliest man on board, who still wore, by habit, light shoes and a broad hat, happened to have a brother's household watching for him. Mrs. Durham was the only passenger who looked up the address of an agent. It followed, as a matter of course, that she had never been a many-friended woman; never a sympathetic woman, going out of herself in the joys and sorrows of others. She had been strange even to the little children, though she had noticed them more than she did anything on the voyage.

She was recalling her going out to India to her father, who was a widower—an officer far up the country. Then she was a handsome, calm girl, whose shyness was mistaken for haughtiness. What hopes and wishes and far-reaching dreams hovered over her spirit when she had last looked on the shores of England and passed the coal-ships and the barges! Now all the buds and blossoms of her spirit had faded and fallen away and come to nought. She had landed at Calcutta and found her father, half-affectionate, half-estranged. She had gone up to the station with him, and found it, like the City of Jericho—a station of palm-trees, of rice-fields, cinnamon, laurels, golden bamboos, and of heathen temples. She had presided at his semi-official table, until, half-oppressed by her own isolation and restless for change, she had married hastily (as women are particularly tempted to do in India) and, as it proved, unhappily. She was the mother of an only child, as she had been an only child herself. Like her too, he had been sent to England in infancy.

Now Hester Durham was disposed to wonder, looking back from this point in her history, what she had lived for? Not for her position surely, for it had often been grievously wearisome to her; not for friendship, for she had hardly a friend, though she had a whole bookful of acquaintances; not for love, for she had never known it; and, not knowing human love, she had not been so blest as to find more than its equivalent in Divine love. Yet she was a conscientious woman, and *felt*, as it were, in her own dim, slow, groping way, after duty and heaven. Missionary churches in India, missionary schools and societies, could have made honourable mention of her name for her large subscriptions and even her personal services; but they would all have spoken of her hesitatingly as a singularly abstracted person—as one who walked in her sleep. Something corpse-like there was indeed about that dignified, low-voiced, noble-featured woman. The fact is, there was not a green spot in her heart, save one, and that was tremulous in its gleam of sunshine and verdure; it was full of as many quaking fears as of shivering hopes; and there was a shrinking veil drawn over its deep passion and its soft fondness.

Mrs. Durham was a mother, but she did not know her child, and would not have recognised him (unless by instinct) had she met him in the street. Each trait, each tone, conned and acquired by heart in the experience of other mothers, remained to her a matter of perplexing ignorance until she grew affronted at it,—affronted in her self-consciousness and morbid sensitiveness. A baby's frock and two curls of hair were the most she had of her child. To say that such a woman could communicate freely by letter with a boy of thirteen whom she had parted with before he was three, would be simply absurd.

Never was lovers' interview after long parting anticipated with more anxiety and agitation than this poor, proud, self-contained mother's meeting with her child. Had he grown up the image of his father,—a hard, selfish man, whose hardness and selfishness she had mistaken long ago for manliness

and independence? Well, she would love him still, and seek to serve him all her life; for she was his mother. She had so worked herself up about this meeting with the boy, so often pictured it under dreary and distressing colours (as a melancholic temperament checked and thwarted inevitably learns to do), that she began positively to dread it. It was a relief to her to think of the few days she was to pass among mere strangers in the agent's house in London before she set out for the school in her husband's native town, where her boy was boarded. She leaned over the side of the vessel absently noting novelties, and conjuring up vague remembrances of the boarding-school from which she had quitted England to place herself under her father's protection and guidance. She even indulged in idle surmises as to what had become of the rosy girlish faces, naturally present to her again in vision—whether they had mouldered into dust or grown careworn like her own. Then she drew back to be out of the bustle, and to wait for the tardy agent.

So left to herself and forgotten did Mrs. Durham seem there among all those loud hails and warm greetings, that a little lieutenant's wife in the middle cabin, who had a fretful baby, and who had regarded with irrepressible envy all the way home the general's wife who had everything so handsome about her, and did not know what the absence of a luxury or the presence of a toil or trouble meant,—the little lieutenant's wife, at this moment, when she herself had put her baby into her important mother's arms to be handed over to her own old nurse, and had transferred her luggage to her careful father, and was supported on each side by proud and happy brothers and sisters, could have taken the liberty of speaking to the general's wife, and asking, in the fulness of her heart, if her friends, in whom she was so rich, could do nothing for the poor great woman who had none. But then Mrs. Durham was such a high dame, and remained so unmoved to the last.

Little Mrs. Myrtle would have felt more for Mrs. Durham—would have even screamed with sympathy had she heard the first words addressed to her by her agent when he succeeded in identifying her. "I beg your pardon, Mrs. Durham; I am very sorry to—to alarm you; but before I accompany you to London, I must tell you that I have had a telegram for you from Basil's Wood. I trust it is nothing bad. You know how people get frightened. It only came this morning, and I answered that the steamer was telegraphed, and that I would communicate with you immediately."

Mr. Brimley ran on unheeded while Mrs. Durham grasped the paper and read it with fixed eyes:

"Basil's Wood, 2nd August.

"James Hill to Mrs. Durham."

"Roger Durham has met with a serious accident. Pray come on straight to Basil's Wood.

"When can I get a train to Basil's Wood?" she asked, without a muscle of her face altering.

Mr. Brimley had thought of that; he had a *Bradshaw* in his pocket with the right page turned down. If they drove direct to the station, they might just be in time. But was there need for such hurry? She would be completely worn out. An hour or two, in all probability, would not signify; and she would then be rested somewhat, and would not run the risk of breaking down. At least she would permit him to accompany her. He pressed this courteously and kindly, not only because General Durham's family were old and esteemed clients of his, but because he was a worthy man, the father of children, and could feel for a mother who had such a home-coming, such a greeting, before she had put her foot on shore.

"No, thank you, I will go at once, and there is no occasion for your going with me. I have been accustomed to travelling by myself; it is nothing to go on to Basil's Wood; I will manage perfectly if you will be so good as to look after my luggage, and have it taken out of the vessel and sent after me."

Down to Basil's Wood rolled Hester Durham with that message burnt into her heart, though she had last kissed her boy when she was a slender unformed young woman, and he a tottering, lisping, three-years old baby. She said it over to herself hundreds and hundreds of times, "Roger Durham has met with a serious accident. Pray come on straight to Basil's Wood," till she was afraid she would cry it out aloud, and her fellow-passengers would lay hold of her as a mad woman. What kind of accident? and how serious? A fall from a tree or a rock, from a horse or a carriage? When a girl, she had seen a man thrown from horse-back and carried bleeding and insensible into a house, but he recovered. Mr. Hill knew that Roger was an only child, and of course was acquainted with the fact that she was returning to England, and therefore he might be desirous to apprise her, and have the presence and countenance of the person most concerned, in any advisable operation or peculiarity of treatment. She had reason to believe him kind and careful. Perhaps Roger himself, looking out for her, had called for her to be by his side, and fretted because she was not with him in his pain; but he had been so long away from her that that was not likely. Every conjecture, however ingenious, with the ingenuity of despair, resolved itself into the leaden certainty that Mr. Hill was a man of experience, with an experienced wife long acquainted with boys, and that he would not alarm her for nothing.

Often as Hester Durham had imagined her return and her meeting with Roger, she had never come near the truth. There was one thing indeed to be thankful for, and that was that the General was not here—full of discipline and his rights; not leaving her eyes at liberty to shed a tear if it would come and ease the brain; thinking more of his own will and pleasure than of his child's danger; and if he did give way at last, breaking down in a way and at a moment when a weak woman would have been

ashamed to indulge her weakness. The suspense too was not for weeks, but hours. Already the post-towns so familiar to her by name, though she had not seen them before, were passed. She had missed the sense of freshness, of old home-like associations in England; but she knew she was close upon Basil's Wood. Mrs. Durham had never seen Mr. Hill either, but she knew in an instant the one grave, watchful, intent face on the platform, and he knew her white face also.

"Roger is alive, Mrs. Durham," he came up with a merciful whisper; "you are not too late."

Merciful but cruel. Roger was alive, that was all. He told all in that sentence. Then he tried to enter into particulars, to occupy her attention and give her feelings a channel of escape if possible, as he got her out of the carriage and took her away on his arm. His house was only a stone's throw from the station, and they could walk faster than they could go in a cab. Roger had gone out to shoot wild ducks on the half holiday with some of his companions. The boys had often and often done so before without any accident. This time Georgie Hill's gun went off in the act of lifting it to fire, and the shot lodged in Roger Durham's leg above the knee. The boys got assistance and he was carried home, and both the doctors of Basil's Wood were in attendance upon him. Amputation was judged advisable, but rest assured he did not feel it. Chloroform was administered successfully, and he did not give a groan.

Mr. Hill paused, and the strong shudder of his companion subsided. Her boy, her boy, shattered, maimed, agonised! She could have turned fiercely on his keeper. Was this his fidelity? But now Roger was hers more than ever—to be her entire thought and care to her dying day.

Mr. Hill spoke again, his voice breaking down: "Georgie is my widowed daughter's son, reared at my knee, the child of my old age; but I could wish him lying at this moment where his dear friend Roger lies, and I know my wishes are Georgie's with all his heart."

Such women as Mrs. Durham are just; besides, nearly all great sufferers are just in the very greatness of their suffering.

"Mr. Hill, I am sorry for your grandson. But I am thinking of Roger. Will it startle him—cause additional risk if I enter his room?"

He looked at her pitifully. They were on the threshold of his house. Curious, lamenting eyes had been looking upon her, and she had not remarked them. But she had noticed in a flash the market-place, the church-tower, the lime-trees, "where the crows would build, mistaking them for firs," as Roger had described them in his formal boyish letters.

"He is sinking rapidly, there is no time to be lost. It is very doubtful whether he will understand who you are," he said plainly, feeling, after all, there could be no preparation, and the sooner she knew the worst the better.

She raised her hand either to put it to her heart or her head, but let it fall again. She neither screamed nor fainted, and the next moment he was ushering her at her own request into Roger's room. As they entered, a doctor had his hand on Roger's pulse, and the rector had just risen from prayer. Hester Durham was only not too late.

"Roger, my boy," said Mr. Hill, stepping forward, and stooping so that his face and voice might penetrate the dull eyes and heavy ears, "your mother has come, she is standing before you."

The lad's eyelids flickered, his lips twitched slightly; he might be rousing himself by a last effort to the news which yesterday had been so great to him. But at the next beat of the watch which the doctor held in his hand he sank back into the stupor closing over him. It seemed as if the deliverance or the destruction of the whole world would not affect the pale, still figure.

What would Hester not have given at that moment for the command of an old familiar look or tone that would have wiled her boy for a second from the grasp of death! She drew close to the bed, she put out her hand and stroked his curls till weeping eyes could not bear to witness them, and then she cried "My son" in a voice the listeners never forgot. It called back the very dying to life. Roger opened his glazed eyes. A wondering, delighted smile flickered over his face. "Mother," he answered the call, and then his accents fell into the mutter of his well-known prayer, "Our Father which art in heaven." The clergyman had been repeating it with him when the drowsiness stole over him; now the faltering tongue took it up again, and then stopped abruptly. The death-rattle rang, the last sigh sobbed through the room, and Hester Durham was childless.

Her grief was not passionate; it had more of the stoniness of despair. Everything was said and done to comfort her. They told her what a favourite her boy had been. What a quick, obedient, frank, happy lad; happy in his good behaviour and the esteem and liking it won for him. They spoke of his many affectionate references and plans for his reunion with his kindred. How he had not bemoaned himself, but his mother, when he met his accident, speaking only in his pain and faintness to say poor Georgie was not to blame, and who was to tell his mother? Oh! did they remember she would be in England the next day, or the next; he had counted it up for so long a time, and then who was to tell his mother? They said that, while he was too young a lad to have thought much on serious subjects, he had always been reverent in his conduct and punctual in the discharge of his religious duties, and there was something very remarkable in the entire submission with which a young, vigorous, joyous lad had borne his fate, and the humble fearlessness with which, while entering earnestly into the last religious services, he had faced death. Both doctor and clergyman had remarked it. He had not even

looked sad, except for Georgie and his mother; he had smiled as long as he could on all around him. He had died, boy as he was, like a hero.

They told her all this, without receiving much answer. They ventured on the experiment of bringing Georgie to her—the poor lad, stricken next to herself, with his light heart half-broken, unable in his innocence to escape pangs of self-reproach because he had proposed the excursion to Roger, and urged it on him, when Roger would rather have hung about and waited a summons from his mother.

After the first spasm, Mrs. Durham was kind to Georgie in her quiet way; but she soon ceased to notice him. Apathy was the chief outward characteristic of her sorrow. Mr. Brimley and his daughter might have mistaken her again for a mere heartless, soulless fine lady, capable of ordering and arranging her mourning. Mr. Hill, who judged far differently, had his fears both for her life and reason, and was more thankful than he could express when, after being little more than a month in England, she announced she had nothing now to keep her here, and proposed to return to India to General Durham. The old miserable question had laid hold of her, and was working with her: What was the use of her life? What had come of it? What had come of her boy's life? It added a peculiar bitterness to her thoughts that she had followed duty, however blindly; she had sacrificed the companionship of her child for the sake of the young life that had been taken on a summer's day. She had remained in India, with her presence often little regarded, from a sense of duty to her husband, and when she came at last to England she found her boy butchered—twice butchered: shot down by the hand of his companion, and then his fair flesh cut and carved by the operating knives of the surgeons; and all that they could tell her was that he smiled in his death! Oh! how dark and stern Providence had been to her. God had forgotten to be gracious to her.

It was not that Hester murmured openly, that she did not make some struggle in her morbid heart against this conclusion; but no other would come. She could not stay in England. If anything could increase her affliction, it was nourishing it on the spot where her hopes had been centred. She could bear it better in the old life of splendid exile, the old life of official form and show—hollow and cold as a fairy court. So she sought again the old atmosphere of punkahs, and bazaars, and elephants, and long-legged birds; and the General, sensible that the presence of a stately lady in his bungalow gave an additional touch to the dignity and refinement he loved so well, approved of the step, paid her the compliment of bringing her up from the ship as he had taken her down; declined an invitation for the first evening on her account; asked her one or two questions, with his head turned away, about the boy; savagely censured his old master, Hill, for a criminal recklessness, of which there was no proof, while he himself had

expressly desired that Roger should not be reared a milksop; and never mentioned his son's name again. The General might have forgotten for whom his wife wore so much crape so long after he had relinquished every rag of mourning, had he not been kept in a state of irritation by her steadily declining to go abroad with him into society, or to receive more than was unavoidable at home. And this was all the more annoying to him, for he liked to show the Indian world what a distinguished-looking woman Mrs. Durham was, and with what grace she could acquit herself; how everything was right in his house; and how he was not deserted, or left to undesirable indemnifications like other men he could mention, whose wives were constantly at the Hills or the Cape, or gone home for the education of the family. General Durham was much better off; and, generally speaking, it suited him that Mrs. Durham was a reserved, cold, inflexible woman. No nonsense about her, no demand for commodities of confidence and communion in which he did not deal, and you knew when you had her, and when you wanted her.

Soon the old question as to what she had lived for, returned with increasing darkness upon Mrs. Durham, and now there was to her no light, and no end in view.

No end? The end as little dreamt of as her meeting with her boy Roger,—his face calm under the death dews, his poor mangled limb hidden from her bodily eyes, but never out of her mental sight,—the end was hurrying on with giant strides. Soon a cry of rage, and fear, and horror, a mingling of many groans,—a shout of revenge was to rise in the east and echo to the west, and awake there a terrible utterance of fresh wrath and anguish.

Mrs. Durham was as ignorant and unprepared as the rest. The General and she were presiding at one of the remoter stations, and so little interest was she taking in the passing events of the day, that a rumour which had flown abroad of disaffection and disturbance in the Presidency had entered her ears on the previous night, and made not the slightest impression upon her. She had lain down to sleep with a fancy of Roger's cold hand in hers, and his boyish curls lying shadowy on the pillow.

The morning saw another world without and within. The Durhams were roused by a sudden message for the General. The troops had turned out on parade, and there was some difficulty among the subordinate officers which required the superior commander's presence. The General—he was an old-looking man, now with grizzled hair, though high carriage—passed out buckling on his sword, amidst secret signs and significant looks from the dark, keen, subtle faces of the servants making way for him with fawning readiness. Before he reached the parade ground, and before dropping shots startled the wives and children left alone in the English quarters of the Indian town, an orderly hurried back with a verbal message from General Durham to his wife. She must not leave the house this

morning; he would return presently and make arrangements for her.

Hester recalled the message many times that day, dwelt on it, associated it half with shuddering awe, half with strange tenderness with their first appointment—with Will Durham's first caress, for she had obeyed him implicitly. In the afternoon a company of agitated men rushed into the compound, and one of them broke the intelligence to Mrs. Durham that the General was shot dead on the parade ground, and so were Major Denis and Captain Hailes; that the sepoy were in open rebellion, and that the news from Delhi were a thousand times worse than they had suspected. And now what was to be done for the handful of English faithful men, helpless women and children, who were left in the paw of the lion, or rather in the jaw of the serpent? The General's bungalow was the most complete building at the station, and the most capable of defence. Those who had not got off on the first warning were of opinion that they should entrench themselves in it, and defend it to the last. The store was in the enclosure, so was the magazine. They might hold them till they were relieved, at any rate. Here duty pointed the way, and brave men did not hesitate or "reason why." Here they would make their stand, and Mrs. Durham must receive the women and children. Some who were already widows like herself, and many fatherless children, were already flocking in, wild with amazement and consternation.

Hester's experience was singular, as the course of one of those meteors for which there is no known law. The first hours of her widowhood were as unlike the first hours of other widows as could well be. There were eager, earnest men tramping up and down and taking everything under their authority; while shrieking, appalled women were huddling around her; and as the inhuman strife began, and the rattle of artillery was heard at the barricades thrown up on the dreadful spur of the moment, these maddened women grew madder. They had come out of England for a very different fate; for many humble servants and much easy luxury, for dressing and driving and visiting *ad libitum*. Not to the wilds of Africa had they come; not as missionary women to the islands of the Pacific, ready to spend and be spent, and, if need be, to enter heaven wearing the pale crown of martyrdom. But many of them (God knows, not all) were gay women—thoughtless and soft young girls, or proud and defiant ones, who had boasted nothing should move them—and see, their challenge is awfully taken up, and they are weighed in the grim balance and found wanting. They forgot Mrs. Durham's higher rank and reticence, in the present hour of common danger. They even forgot the sacredness of her recent widowhood, and her husband's blood fresh spilt at her gate.

They clung around Hester, where she stood like a rock in a stormy sea. One passionate girl, bold in her approach to the last, clutched her shawl; one devoted mother thrust her baby into those passive arms, empty of children of their own. They cla-

moured to her, they all but prayed to her to save them, so struck were the whole terrified band with the silent strength of her composure—so inevitably did every living creature there elect the calm woman their leader and guide, that even a little whining dog came and crouched at her feet.

Hester bore it unresistingly, uncomplainingly, till the noise without waxed louder and more hideous, and one bullet and then another at intervals penetrated the windows and pierced the opposite wall, increasing the hopeless uproar and agony.

Then in the darkness visible of a scene which those who witnessed it had never so much as imagined in the most tragic drama they had ever read, or seen represented, with their hearts quaking on the brink of death, and worse than death, a sudden light shone round about Hester's spirit, enveloping it, irradiating it, lifting it up into a kind of ecstasy as a martyr's might be lifted up, far above disaster, outrage, pain, or shame. God was good to Hester at last. That slow, still, reserved woman received a full answer to her long-mooted question,—received it with ample satisfaction, though it was in the midst of blood, and fire, and groans.

She knew now why she had lived, why Roger had died. Like lightning came the truth to her. All her ways and wants were not for nothing. She looked up; she spoke with so strangely resigned, so strangely sweet a voice, so strangely noble, so strangely beautiful a face, that even those miserable women in that agonised rout were all attracted to her.

"Why do you cry out so, and writhe, and swoon?" she asked them. "Is it so strange a thing that has happened to us?"

"It is very strange—unheard-of—horrible," they would have answered her, wailing, and beating their breasts, and tearing their hair; but they listened to her, astonished, with gaping mouths and hanging-down hands. The room was dark, but the light of Heaven was on that central face.

"Have we not all to die once, and is it only the old who die, or have there been only quiet deaths before now? Listen, and I will tell you about my boy Roger—younger than any one of you, happier than any one of you—shot down like a beast in a moment. He had his delicate body lacerated afterwards, to no purpose. He had not thought of it any more than you, but he never once complained. Do you hear? He never once complained, young, weak boy as he was, because his father had willed it, and his elder brother had died a harder death than he. He knew then, if he never knew before, how Christ had died, and died for him. He could die for Christ, if he could not live for Him. Do you not know now, if you never knew it before, how Christ has died for you, and you can yet die for Him, because you can love Him at first sight with a passion of love, and trust Him with your sins, if you have no more the power to live for Him? Why do you quake like the condemned?"

"They clung around Hester where she stood like a rock in a stormy sea."

Christ died for you; and my boy Roger died smiling with love for Him, and I tell you the tale."

Over and over again she preached that sermon, with the light of Heaven growing brighter and broader on her face. Her hearers did not tire of listening to the few simple words. The bold girl behind her burst into tears of penitence and ravished love, and laid her head on her sister's shoulder; the fainting woman's relaxed hands recovered hold, and tremblingly grasped her skirt. The baby on her lap smiled, and stretched up its dimpled hands to her beautiful, inspired face. The very little dumb dog nestled, as if in peace, beside her.

A mist comes over the group, a silence settles on the tumult. Were they saved by a miracle of gallantry and bravery? Did the one poor bungalow hold out, or did its women and children break through, encircled by their handful of men, to

wander for fearful days and nights through hostile heathen villages, under the tropical sun, by the fordless rivers, struggling back to the world with blistered feet? They did not; but, in truth, it does not seem as if that would have been so much more blessed a fate than that after Hester Durham's sermon on her boy Roger: while their souls were all caught and melted, the rebels burst in, and these poor women and little children went up within the hour in a fiery chariot, spanned by the bow of Christ's love, straight to God's mercy-seat.

I would fain hope that I have not by "words without knowledge" darkened a noble picture in seeking to tell its story through another language to those who have not seen it, or who, having seen it, have not taken from it all the consolation it has to give.

SARAH TYTLER.

SISTERHOODS.

BY J. M. LUDLOW.

I ENDEAVOURED a few months ago* to sketch out the somewhat dim history of the female diaconate in the early Church, showing that it fell through the introduction of a principle inconsistent with its freedom and individuality, that of religious celibacy. Let us not attribute the introduction of that principle to the Church of Rome as such. It was in the institution of the Church-virgins that it took its rise. Female monachism not only must not be confounded with that institution, but was rather a reaction against it. The "perpetual virgins" almost lose themselves in antiquity; female monachism is not by its eulogists traced further back than Syncletica, contemporary with the Egyptian hermits of the third or fourth century, if not indeed herself an allegorical personage. Whilst the Church-virgin belonged to a particular congregation, and was dependent upon the Church for support,—whilst one at least of the Fathers would exclude the younger virgins from all services of active charity, for fear of the temptations of the flesh,—female monachism was at first active, self-devoted. Not only was the practice of manual labour held incumbent both on the nun and on the monk, but, as I have already said, in the African Church the "sanctimonial virgin,"—i.e., nun—is found towards the close of the fourth century fulfilling many of the functions of the deaconess. Jerome, in his letters to Eustochium,—a poor girl who figures frequently in his correspondence,—speaks of a convent founded by Paula, her mother, which was divided into three bodies, each with a "mother" at the head, though all wore one dress, and in which the inmates worked to make clothes for themselves or

others. Chrysostom speaks of the young girls, not yet 20 years of age, and richly brought up, who had taken to a monastic life; how they worked far harder than maid-servants, receiving the sick to be tended, carrying beds, washing others' feet, and even cooking. Augustin says of the "sanctimonial" women that they "exercise and maintain the body by cloth-weaving, and hand over the garments themselves to the brethren, receiving in turn from them their necessary maintenance." This passage points, I may observe, to a practice of which traces occur again and again, and which bears involuntary homage to the true relation between the sexes, though carrying with it the most awful temptations, the establishment of monasteries for women in close proximity to, and connection with, monasteries for men. Again, he says of the monastic communities: "Many widows and maidens, dwelling together, and seeking a living by the weaving of wool and thread, have at their head the most reverend and well-approved among them; women able and ready, not only to form and regulate the conduct of others, but also to instruct their minds."

Female monachism had, moreover, a further superiority over Church-virginship, in its social character. Not that this can have been wholly absent from the latter. The celibate girls attached to particular churches, and maintained in a special building, would scarcely fail to become, in some way or other, a community,—forming, in fact, the often-spoken-of "choir of the perpetual virgins." Those who were not so attached or maintained would find spiritual help, and material comfort and economy, in living together, and are indeed expressly recommended to do so by a religious writer of the time. Female monachism, however, was social from the

* *Good Words*, February, 1863, p. 133.

beginning. Syncretica, the earliest female hermit, was followed into the desert by other women, who sought to strengthen themselves by her counsel and example. Monachism indeed is, in either sex, contagiously gregarious. By its title (*monachus*, *monacha*, solitary) it seems the breaking-up of the social principle. But in fact it soon becomes one of the strongholds of that principle, and carries it at once to its extremest consequences, by proclaiming all things common among the brethren, since nothing is more invariable than the renouncement of all private wealth by the early monks of either sex. The Church-virgins sang together, walked together in procession, sate together in the church. The nuns might do all this, but, instead of being governed by the presbyter or bishop, they were governed by one of themselves; instead of being maintained by the Church, they maintained themselves; instead of being paupers, they had all things in common. Who can fail to see that the one institution had a bond of union, a living principle, which the other wanted, forced as it was to rely on the individual condition of its members, as professing virginity?

And whilst the vow of celibacy must kill well-nigh altogether the freedom and usefulness of the ordained diaconate of the individual woman, it is obvious that it can yet consist with a large development in various directions of what I may call the natural diaconal functions of women, as soon as these were gathered together in communities. Over such, a *surveillance* could be exercised, both from without and from within,—the latter the more zealous of the two,—and by the creation of a little holy inner world, joined only perhaps to the great outer wicked one by a single grated door, it became possible for the caged saints to serve that great wicked world without receiving much pollution from it. Such is one whole side of the sad story of female monachism,—a great yearlong, lifelong, age-long struggle of the loving female heart to be as useful as it can, without endangering that awful vow. And I think it will be found that, precisely in proportion as that vow is slackened or deferred, so does the work of women, even in the Romish Church, become freer, wholesomer, more perfect in every way.

Female monachism therefore, under that aspect of its nature in which it develops itself as a *collective female diaconate*, becomes now the subject of our investigation. But its growth is so essentially connected with that of male monachism, that until about the eleventh century the two can hardly be distinguished from each other. There are Basilian nuns and Benedictine nuns; nunneries, like monasteries for men, become schools or storehouses of learning, sometimes even centres of intellectual activity. At the beginning of the sixth century, the nunnery founded by St. Cesarius at Arles contained 200 nuns, mostly employed in copying books. Their rule bound them to learn "human letters" for two hours a day, and to work in common, either in transcribing or in female labours, especially in making cloth for their garments, so that they should

not be obliged to purchase from without. In the seventh century (640) Bede shows us Earconberth, King of Kent, sending his daughter to Abbess Fara at Brie, in the region of the Franks; "for at that time, many monasteries not having been yet built in the region of the Angles, many from Britain, for the sake of monastic conversation, used to go to the monasteries of the Franks or of the Gauls, and to send their daughters there to be taught, and to be married to the Heavenly Bridegroom." Two female convents must be especially noted. One is that founded at Tours in the sixth century by Queen Radegund the deaconess, whose earlier story I have told ere this, to whom Fortunatus, the poet of the age, and the last Latin poet who has any title to the name, was chaplain, as well as almoner to the convent. Augustin Thierry has given us a charming account of this pleasant little community, and of the literary relations between Radegund and Sister Agnes, the superior of the convent, on the one hand, and the poet on the other; while the graver Guizot has not disdained to dwell on their poetical intercourse, over which not a breath of scandal floats.

Again, in the Swabian nunnery of Gandesheim, there flourished in the latter half of the tenth century the glory of female monachism during the middle ages, the poetess Hrotsvitha (whose dramatic works have been edited and translated into French, within the last few years, by M. Magnin) herself not the first authoress of her convent. From her writings we find that she was instructed in all the Benedictine learning of the age, in the Holy Scriptures, and the works of ancient authors. Nay, in this German nunnery, which we have no reason to suppose peculiar in its constitution, it is clear that women in the tenth century were familiar with the works of Virgil and Terence, and able to converse in Latin metre; that it was considered in nowise contrary to the religious profession for a nun to write comedies, as she says herself, in imitation of Terence; that she did so amidst the universal applause of the learned; and indeed, that, judging from internal evidence, her plays were actually performed in the convent. Let me add, that, amidst much of pedantry and awkwardness, a true woman's heart is felt beating in this nun's breast. The subjects which she has chosen show the germs still dormant, but most living, of that charity which several centuries later will take visible form in many an asylum for the reformation of female sinners. The nun in her convent is yet engrossed with the spiritual miseries of her sex in the wide world. Two of her plays have for subjects the going forth of hermits to rescue women from vice; and the loving words which she puts in her heroes' mouths express the true spirit of a Christian penitentiary. Very nobly too does she speak of knowledge. "All knowledge that can be known," says one of her holy hermits, "offends not God, but the unrighteousness of him that knoweth." "And to whose praise," he says

again, "can the knowledge of the arts be turned more worthily and justly than to His, who made that which may be known, and gave knowledge? For the more wonderful the law through which we recognise God to have constituted all things by number, measure, and weight, the more fervent we grow in His love."

At the same time, up to the eleventh century or thereabouts, so far is female monachism from having yet found a place in the Romish system as a collective female diaconate, that it seems in danger of being a mere mimic of the male. But a period now comes, in which not only does woman's activity take the advance of man's, and make to itself a vast sphere of exercise in the field of charity, but the idea of fellowship is found striving, above all in the female sex, to set itself free from the grasp of monachism, and to stand forth in its simplicity before the world. Through the gradual evangelization of all the Teutonic and some even of the Slavonic tribes, and in the face of Mahomedan conquests, there had sprung up the feeling of a Christendom, a fellowship among all Christian nations. In the Crusades that feeling found an object and a realisation, however imperfect, for the man. But the same religious fervour, the same instincts of fellowship, which threw Europe upon Asia, and united hostile sovereigns under the banner of the Cross, were at work in the breasts of women. Some went forth with their loved ones to the wars; many entered the cloister till theirs should return. Now monachism was in general far in arrear of the religious fervour of the age. The Benedictines—the dominant order of the West—represent mainly the passive principle of monachism. Quiet, stay-at-home folk, very apt to settle on their lees, requiring frequent reform (thrice in the course of the eleventh century): by these very reforms they show the difficulty they have in satisfying the wants of the time. From the latter part of the eleventh century (1086—1207), other orders spring up to supply their deficiencies,—each combining convents of men and of women,—Carthusians, Bernardines, Trappists, Mathurins, Carmelites,—most of them aiming at increased austerity, all eleemosynary in their constitution. As the Crusades proceed, each more hopeless, more ruinous,—as the patrimony of the lord passes into the hands of Jews, Lombards, enriched serfs, or burghers hardly less despised,—the dowerless widow, the portionless orphan, the ruined wife and daughters, and, still more, the families of the obscure dependents who perish in Syria or Egypt, find ever more and more difficulty in obtaining admission into the old-established houses,—rich, idle, corrupt, grasping. The new orders are indeed open to them, and their austerities may seem grateful to those who have lost all earthly hope. But what of those who seek only a temporary asylum during an absence which they fondly hope is but temporary? What of the unmarried daughters? What of all who, however willing to employ themselves with the utmost zeal for God's service, yet shrink from separating them-

selves wholly from their kind? The cloister will not suit these, even if rich enough to buy admission, or strong enough to bear all austerities.

There was a form of life already in practice, which answered this need, that of the *Béguine* sisterhoods, of which a full account is given in a posthumous Latin work of Mosheim, on the "Béghards and Béguines." The origin of their name appears clearly to be the Teutonic *beg*, or pray, used once in no unfavourable sense; so that béghards and béguines were simply "praying" men and "praying" women. The term "béguine" is the earliest, and Mosheim shows it to have been used in Germany and Belgium as early as the tenth century, to designate widows or unmarried girls, who, without renouncing the society of men or the business of life, nor vowing poverty, perpetual chastity, or absolute obedience, yet led, either at their own homes or in common dwellings, a life of prayer, meditation, and labour. The example of these sisterhoods was followed about the twelfth century by young men in Belgium and France. In the thirteenth century these brotherhoods and sisterhoods flourished greatly. Matthew Paris mentions it as one of the wonders of the age for the year 1250, that "in Germany there rose up an innumerable multitude of those continent women, who wish to be called Béguines, to that extent that Cologne was inhabited by more than 1000 of them." Indeed, by the latter half of this century, there seems to have been scarcely a town of any importance without them in France, Belgium, Northern Germany, and Switzerland.

The first of these fellowships were composed of weavers of either sex; and so diligent were they with their work, that their industry had to be restricted, lest they should deprive the weavers' guilds of their bread. Wholly self-maintained at first, they rendered moreover essential service in the performance of works of charity. As soon as a *Béguinage* became at all firmly established, there were almost invariably added to it hospitals or asylums for the reception, maintenance, or relief of the aged, the poor, the sick. To this purpose were devoted the greater part of the revenues of the sisterhood, however acquired, another portion going to the maintenance of the common chapel. The sisters received moreover young girls, chiefly orphans, to educate; went out to nurse and console the sick, to attend death-beds, to wash and lay out the dead; were called in to pacify family disputes. In short, there is perhaps none of the natural diaconal functions of women which they did not fulfil.

Those who were received among the Béguines were required to be of blameless character; but girls were often received in childhood, and invested with the habit; they were not however called sisters, nor did they take any pledge of obedience to the mistress, till the age of fourteen. Great disorders seeming to have flowed from this practice, we find the Archbishops of Mentz and Magdeburg restricting to forty the age of admission; in one case (1310), re-

markedly enough, by reference to the 1st Pastoral Epistle respecting widows. The Béguines were free to marry at any time. The mistress delivered to each, on her reception, the Béguine's dress, and the veil with which she was to cover her head in public and at religious services: the dress scarcely differing from that in ordinary use by respectable women, but coarse and without ornament; in colour varying with each establishment, but generally blue, grey, or brown; the veil invariably white.

In France and Germany the Béguinage usually consisted of a single house, distributed into separate cells, but with a common refectory and dormitory; in Belgium, on the contrary, as we may see still, there were nearly as many small houses as sisters (thus recalling the clustered hermitages of the early monks); the largest and highest buildings being devoted to common purposes. The mistress had usually a sub-mistress under her; in the larger béguinages, numbering thousands of inmates, there were two or more mistresses.

The Béguines had no community of goods, no common purse for ordinary needs. Nevertheless, those among them who were wholly destitute, or broken down with infirmities, were maintained at the public expense, or out of the poor fund; mendicancy was never allowed, unless in the extremely rare case of the establishment not being able to relieve its poorest members.

As contrasted with the deaconess, it will be seen, the Béguine formed no part of the clergy; received no imposition of hands; took no part in baptism. Her office was merely the general diaconal office of the female sex, but carried on by means of a fellowship, and no longer typified in the individual; yet fulfilled with a singular amount of individual freedom, as contrasted with the female monastic orders. It scarcely appears that, under any circumstances, the Béguine was compelled to go out visiting the sick, by the rule of the béguinage. If she did so, it was rather by virtue of a general understanding that, in order to entitle herself to public countenance, respect, and assistance, she was to show herself really helpful to the needy; or it was as a public functionary, nominated, and presumably paid, by the town.

It would thus appear that the Béguine movement really offers the first complete realisation of the idea of a collective female diaconate, in the shape of free sisterhoods of women.

There has now to be told the struggle of Romish monachism with this movement; how it overcame it, how it appropriated to itself the idea of charitable fellowship, and did it so completely that to this day we Protestants can hardly imagine of a religious fellowship that shall not be Romish.

To the end of the eleventh century, it would seem, we must ascribe the first, strictly speaking, charitable monastic foundation of the Romish Church, that of the Augustinian Hospitaliers of St. John of Jerusalem, fellowships both of men and women, established to provide for the necessities of poor

pilgrims to the Holy Land. The example was largely followed, and the charity of the Hospitaliers soon extended beyond the wants of pilgrims only. Cardinal Jacques de Vitry, who died towards the middle of the thirteenth century, says (as referred to by Father Hélyot, the historian of monastic orders) that there were a great many congregations of men and of women, who, renouncing the world, lived, without property and in common, in leper and other hospitals, under the rule of St. Augustin, to serve the sick and the poor, obeying a superior, and promising perpetual continence. The men dwelt apart from the women, not even eating together with them, but both sexes were present at religious services; and in large houses, when the number of brothers and sisters was great, they met together frequently in chapter, to acknowledge publicly their faults and to do penance. Books were read to them during meals; they kept silence in the refectory, and at other fixed times and places, and had several other observances. Father Hélyot supposes that the cardinal must have had chiefly in view the nuns of the oldest Paris hospital, the *Hôtel Dieu*, where there were in 1217—23, thirty-eight Augustinian monks and twenty-five nuns. But I think we cannot mistake here the results of the Béguine movement. The long novitiate—at first of twelve years—indicates at least a protracted period during which the members were free to withdraw and marry, and differed only from the true Béguines in not earning their own livelihood.

But the true parallel, and eventually the successful conqueror of the Béguines of the North, is to be found in the institute of the Tertiarians, or Third-rule Regulars (Tertiaries, as they are called in the English translation of Mosheim).

When St. Francis had instituted the order of Minor Brethren, and that of the Clarissans, or Poor Ladies—doubting whether he should continue to preach, or withdraw into solitude—he asked his brethren to pray for him, and sent two of them to St. Clara and to the hermit Sylvester, to solicit their prayers for his enlightenment, not deeming himself worthy to implore God on his own behalf. On the messengers' return he washed their feet, kissed them, and kneeling down, with bended head and crossed arms, asked what was the will of God? "God had not called him to think only of his own salvation, but also to labour for that of his neighbours, by preaching the gospel, and by a holy example." St. Francis rose up. "In the name of the Lord, brethren, let us go forth." So he and the two brethren went forth from Assisi, not knowing whither. Reaching the small town of Camerio, two leagues off, Francis preached repentance with such effect that the people were about to leave their goods and their families and to withdraw into cloisters and solitudes. But he dissuaded them from doing so, promising to give ere long a form of life which they might follow without quitting the state to which God had called them. This was the Third Rule of St. Francis (1221), which

spread rapidly through Tuscany, and soon formed congregations in Florence itself.

Before reception as a Tertiarian, male or female, the candidate was examined to see if there should be any scandal about him, if he possessed aught of another's goods, if he had any unreconciled enemy. The husband was not admitted without the consent of the wife, nor the wife without that of the husband, "if he were a faithful Catholic and obedient to the Roman Church." A novitiate of one year was required; after admission, none could leave the order, except to take the solemn vows of religion. The dress of the members was coarse and without ornament, neither quite white, nor quite black. They were forbidden to be present at feasts, plays, balls or dances, and were to see that no members of their family contributed to the expense of such entertainments. Besides various obligations as to temperance, fasting, and religious exercises, they heard every month in common a solemn mass and the preaching of the word of God, and took the communion thrice a year, after reconciliation and restitution of unjustly acquired property. Every member was to accept and faithfully fulfil any office which might be assigned to him by the brotherhood, but all functions were temporary only. The brethren were to preserve peace as far as possible, both among themselves and with the world outside; to avoid and conciliate litigation. Sick brethren were visited once a week, and their wants supplied, if necessary, from the common stock; the funeral of one was attended by all. A general assembly and visitation was held once a year or oftener, when those who, after three warnings, were found incorrigible were expelled. The Tertiarians were sometimes officially charged with charitable duties. At Milan, a body of them, including members of both sexes, were invested with the administration of all pious foundations and the laying out of charitable legacies.

It will be seen at once how nearly the Third Rule of St. Francis answers to the Béguine fellowship,—goes seemingly beyond it in its social character. Active duties of charity are, as with the Béguines, closely connected with a religious life; marriage is not forbidden; men and women join alike the institution—are not even compelled to leave their homes. Some may think such monachism no monachism at all. No more it would be, if the Third Rule of St. Francis had been the First. But the First Rule with all its austerities must exist, that the Third may become possible. The Third Rule only subsists to subordinate brotherhood to monachism, charity to asceticism, and so turn the great danger of the age.

There was essential antipathy between the free fellowships and the monastic orders, especially the Mendicants. Not only did they see the Béguines drawing to themselves a large portion of the liberalities which they would otherwise have monopolized, but a larger. The people had taken into their heads that God would rather listen to the prayers of busy

and laborious, as well as pious, women, whom they saw mixing with them in their daily life, freely submitting their conduct to the scrutiny of others, than to those of monks and nuns confined in cloisters, living upon charity, nor even seldom in vice. So gifts and bequests came freely in from the rich, for the sake of the Béguines' prayers, whilst they shared with the religious orders their most important civil privilege—exemption from taxation. Still worse was it when the Tertiarian fraternities grew up, so closely resembling the Béguines in their discipline. There was no friction at first, for the Béguine movement belonged to the North, and Italy was the theatre of Francis's reforms. But as the new tide of monastic fervour swelled by the establishment of new orders,—Dominicans (1215), &c.—all eleemosynary, all with affiliated female communities, all with more or less the same proselytising missionary character, several of them with Tertiarian congregations clustered round them,—collision between the free and the monastic fraternities became imminent, and a conflict indeed broke out about the middle of the thirteenth century, which lasted till the middle of the fifteenth. Council after council, bull after bull, now denounced and excommunicated Béghards and Béguines as heretical. And with every allowance for monkish jealousies and Romish intolerance,—with all due abhorrence for the stake and the rack, and other coercive means by which the extermination of Béghards and Béguines was pursued,—I cannot but feel that the institution fell, like every other, by its own fault. The free fellowships departed from the spirit of their own foundation. In place of the self-supporting industry and active charity which at first characterised them, there crept in the very opposites of these,—reliance upon others' alms, and indifference to good works. So complete was the change, that the very name of "béghard," *pray-er*, surviving in our "beggar," has come to designate clamorous pauperism, and the name "*beguitta*," synonymous with "béguine," surviving in our "bigot," to designate narrow fanaticism.

But the Béguine sisterhoods of the North were too numerous, too useful, too much in harmony with the spirit of their age and country, too deeply rooted in the affections of the people, to perish before the canons of a council, or a Papal bull. Nor, indeed, it was soon seen, did Rome's safety require that they should perish; since, through the priestly director or confessor, generally an essential part of the organisation of any béguinage, they could be kept in dependence, tempted on into monachism. And thus, parallel with the current of censure against Béghardism and Béguinism as a system, there begins to flow another current of toleration, and even, as the danger diminishes, approval, for those "faithful women, who, having vowed continence, or even without having vowed it, choose honestly to do penance in their hospitals, and serve the Lord of virtues in the spirit of humility" (Bull of Clement V., 1311). By little and little the Béguine sister-

hoods are adopted into the monastic system; in the course of the thirteenth and fourteenth centuries they are found growing up in close proximity to Franciscan and Dominican monasteries, taking Dominicans and Franciscans for spiritual directors, receiving rules from them, and becoming mere Tertiarian bodies in connexion with the monastic orders, till Hélyot at last claims them all as Franciscan Tertiarians. The name indeed grew to be applied in common parlance to all religious bodies existing for purposes of active charity, and thereby almost necessarily living under a larger rule. Hélyot relates that in France some béguinages subsisted as late as the beginning of the seventeenth century. There was in his days (beginning of the eighteenth) a flourishing one at Amsterdam; whilst almost every traveller in Flanders has visited one or both of the two surviving ones at Ghent or Bruges.

And now, when the danger of these free charitable fellowships had been turned by means of the Tertiarian fraternities, there appears the inevitable tendency of these latter sham-free bodies, in a monastic church, to become monastic by pronouncing the three solemn vows. The Third Rule of St. Francis soon had its professed nuns. Here, indeed, we travel on that border-line between monachism and pure fellowship, where so much of usefulness mingles with the falsehood of professed celibacy, that we know not often whether to blame or praise. When we read of these communities of Tertiarian Hospitaller nuns,—some leaving their convents to succour the sick, to console the dying, to bury the dead; others exercising hospitality without leaving the cloister,—we may think that all this devotedness might have found another field, might have been exercised in another manner, without spilling all abroad that very precious ointment of spikenard, the family affections of a woman's heart,—without those fearful vows which are, as it were, the breaking of the alabaster box itself. But still a voice whispers, "Why trouble ye the woman? for she hath wrought a good work upon me." The worship of these nuns may not be the highest and best, but it is surely genuine. Not upon them be the blame, but upon that Church which misdirects it, and offers them up as holocausts to its idol of Heaven-conquering pride.

To the end of the thirteenth and to the fourteenth century, I suspect, belong mainly the Tertiarian convents proper, and the chief foundations of Hospitaller nuns. Very beautiful is the vow of the Hospitaller nuns of Pontoise: "To be all their life, for the love of Christ, the servants of the sick poor, so far as in them lay, to do and to hold until death." But the real successors of the Béguines were the so-called Alexian brotherhoods and sisterhoods; and the passage from the one to the other is so gradual, that in one bull of Boniface IX. (1395) we are in doubt which are meant. A bull of Eugenius IV. (1431) exhibits, on the other hand, the Alexian fellowships in their full-developed type, under the name of the "poor of voluntary poverty."

They live, it says, "the men by themselves, and the women by themselves, in separate houses, without mutual intercourse, in poverty and continence; frequent churches devoutly in humbleness of spirit; reverently obey the Church of Rome . . . freely receive distressed and other worthy persons into their houses, for hospitality's sake; take charge of the sick on request; carry the bodies of the faithful departed to church burial, even in time of furious pestilence, and exercise other works of piety and charity; give to the poor out of the fruits of their labour and of the alms which they receive; live in common; and, through their faith in Christ, are surrounded with much popular zeal, favour, and affection." Although we have here the new feature of a community of life, we can hardly doubt that we have before us still Béguines, only become stricter and more monastic.

At a later period, these Alexian or Cellite sisterhoods are treated of by Hélyot as Tertiarian nuns or Hospitallers, under the still familiar title of "Grey Sisters." Without revenues of their own, they lived by alms, and served the sick out of doors,—the name of "Hospitallers" belonging properly to those who merely exercised hospitality at their convents. In 1483, common statutes were received by the Grey Sisters of most of the Flemish and Northern French houses. By Hélyot's time several houses had become cloistered, sometimes not without a struggle. At Beauvais, in 1627, the municipal authorities tried to prevent the claustration of the Cellite Sisters, which however was authorised by the provincial parliament, the nuns retaining their convent-house, an old béguinage. At Nancy, in 1696, the Bishop of Toul tried to compel the claustration of the Grey Sisters of the city. This time, however, on appealing to the provincial parliament, they obtained leave to remain as they were. It is impossible to doubt that the bulk of Hélyot's "Grey Sisters," and of some "Black Sisters," whom he also speaks of as Cellites, are monasticised Béguines. The works on which they are engaged, the localities in which they flourish, are the same; and surely it was the old healthy Béguine spirit which spoke out in that successful protest of the Nancy Grey Sisters against claustration.

It is observable that, although the mission of the male Franciscans and Dominicans was specially one of preaching and teaching, the religious impulse given by Francis and Dominic took shape among women in offices of physical charity rather than of instruction. No doubt the stricter female communities in connexion with the new missionary orders, especially when cloistered, took in young girls to educate; for the strictest claustration generally allows in the long-run this outlet to the nun's poor heart. But educational labours did not form in the thirteenth century, as they did two centuries later, a prominent part of the nun's or Tertiarian sister's vocation. Perhaps the first indication of an educational impulse occurs in the foundation

by Nicola Orsini, Count of Spoleto, towards 1354, in a Clarissan convent at Genoa, of a college of canonesses, to bring up young girls in piety till they should be in a condition to choose their calling. But the origin of the great educational movement of the fifteenth and sixteenth centuries, as that of the great charitable movement of the twelfth and thirteenth, belongs to free religious fellowships, which flourished in the same regions as those of the Béghards and Béguines, and took up their work,—the Brotherhoods and Sisterhoods of the Clerks of the Common Life, or Gerardins, founded in the fourteenth century by Gerard Groot of Deventer. The male members of this institute lived together in common houses, took no vows, but had a common table, a community of goods, and earned their livelihood by teaching the young and copying manuscripts. The sisters lived under the same rule, teaching young girls, and occupied in other womanly labours. The fact of these persons living together a religious and industrious life was enough to make the people call them Béghards and Béguines; enough also to draw upon them the hostility of the regular clergy to those names. But the great Gerson took up the defence of the Gerardins, and the Council of Constance (1414) finally acquitted them, in common with the Alexians, and the true Béghards and Béguines (now mere mendicant fraternities), of the accusations brought against them.

And now came the era of the Reformation, and of the prodigious intellectual development which accompanied it, growing always more and more away from Romanism, until that intellectual development was in part turned again to the profit of the monastic church, through the rise of the Jesuits, and of the female educational orders.

Only as members of some affiliated congregation, or of some female religious order closely analogous to, but not identical with, that of the Jesuits, have women been found able to serve the purposes of Jesuitism. Twice were Jesuitesses established, and twice in vain. Ignatius confessed that "the governing of these women gave him more trouble than all the company;" so that the first community of Jesuitesses, founded in 1545, was put an end to in 1547; and when the attempt was renewed in the next century, Pope Urban VIII. had again to put them down in 1631. In other words, Jesuitism in its typical form—monachism in its last development—is so utterly inhuman, that woman cannot be moulded to it. But the true counterpart to the rise of Jesuitism is to be found in that of the female educational and missionary orders. The "Angelicals" of the sixteenth century used at first to accompany the regular clergy in their missions, seeking to convert women, as the latter, men. Cardinal Ximenes, at the beginning of the same century, founded in Spain convents composed of a limited number of nuns, with annexed communities of young girls, who were to be brought up till marriage or profession, and endowed in case of

marriage. Many similar institutions rose up in Spanish America, for the benefit of the young Indian girls, who were educated by four and five hundred at a time. The first great female educational order is however that of the Ursulines, founded in 1537 by Angela of Brescia, though not, in fact, for educational purposes. She insisted that all the girls of her congregation should remain in the world each in her parent's house, from whence they should go forth to seek out the afflicted for comfort and instruction, to assist the poor, visit the hospitals, tend the sick, and for any work of charity which might offer. Although the founder soon died (1540), the order spread rapidly. It seems to have first assumed its educational character in 1575, when the Ursulines of Parma and Foligno were established to instruct little girls gratuitously in reading, writing, and the catechism. By 1715, there were 350 Ursuline houses, divided among several "congregations;" some of these with affiliated "fellowships" of ladies, for the succouring of the poor at hospitals, of prisoners, and the teaching of trades to poor girls. To the nun, be it observed, belongs the home-work of teaching; to the secular associate, the out-of-door work of relief. Thus monachism uses the lever of free fellowship to move the world.

Augustinians and others soon followed in the wake of the Ursulines, as might be shown in tedious detail. Existing female orders, if reformed in the sixteenth century, generally adopted education for their purpose, or new foundations were established with this view. When a convent of Capucines or strict Clarissans was founded at Rome in 1575, on the old Franciscan basis of manual labour, it was made at the same time a school for young girls. When the order of "Our Lady," ranked as Benedictine, was founded at Bordeaux in 1603, its especial object was the education of young women, and the counteraction of the mischief caused by the schools of the heretics, whilst the order itself was modelled on that of the Jesuits. Indeed from this period, whatever be the primary purpose of any female religious order, education comes almost invariably to be superadded to it. Thus the celebrated abbey of the "Daughters of the Holy Sacrament" at Port Royal was reformed for the (to us) blasphemous purpose of the perpetual adoration of the Host. Yet, in addition to many works of charity which he enumerates, their contemporary historian, the French poet, Racine, particularly specifies the excellent education given by the nuns, who sought to render their pupils equally capable of becoming "perfect nuns or excellent mothers of families."* And one of the most ruinous blows afterwards aimed at them by their Jesuit persecutors was the forbiddance to take in young girls as boarders. It should, indeed, be observed that in

* The readers of Victor Hugo's "Misérables" will recollect the precisely similar instance of the Benedictine-Bernardines of Picpus, whose economy he has so vividly described.

time a distinction grew up, which still subsists, between those foundations for charitable education, which exist really for the sake of the poor and the destitute, and those which are simply religious boarding-schools,—sometimes very costly ones,—for the education of girls, not only of the middle but of the very highest classes.

Meanwhile, at the beginning of the seventeenth century,—whether stimulated or not by the example of a short-lived Protestant society of women, of which rather too much has, I think, been made by Protestant partizans of the female diaconate, the “Damsels of Charity” of Sédan (seemingly only a Ladies’ Visiting Society),—a new tide began to flow in female monachism. Education was no longer alone considered; physical suffering reasserted its claim; and there shone forth a spirit of womanly tenderness to the fallen, embodying itself in the female reformatory orders.

Vincent de Paule, preaching in a French country town, recommended a poor family so strongly to his hearers that many persons went to visit them. Hence arose a charitable fraternity for the succouring of the sick (1617), with which he was so much pleased that he resolved to found congregations for the like purpose wherever he should go. By 1629 these had so multiplied that he was obliged to delegate the charge of them to a lady, Mademoiselle Legras, who had originally wished to enter a convent, but from seeing his example had resolved to devote herself wholly to the poor. At first, in the villages and small towns where the “fraternities of charity” originated, the female members relieved personally the wants of the poor, made their beds, and prepared their food and medicines. But when several had been established at Paris, ladies of high rank entering into them, “who could not,” says Hélyot, “render personally to the poor the required services,” country girls were sought out as “servants of the poor,” of whom many offered themselves for life. These were at first dependent on the ladies of the parish “fraternity,” and unconnected among themselves. Vincent de Paule sought to form them into a community, and placed several with Mademoiselle Legras, who now organised a system which spread far and wide.

Thus the work divided into two branches: these communities of women, mostly of the working classes, the true “Sisters of Charity, servants of the poor,” and the visiting societies of ladies, mostly employing one or more “Sisters of Charity” under them. The former institute was however, as such, quite independent of the latter. The “servants of the poor” received successively the charge of the Foundling Hospital, and of two other charitable establishments in Paris, and, through their branches, of several provincial hospitals; were sent to the army, for the care of the sick and wounded soldiers; or, on the Queen of Poland’s request, as far as to Poland, where they received the charge of the plague-stricken in Warsaw (1652), and afterwards that of an asylum for orphan or deserted girls.

When Hélyot wrote in 1719, they had 290 establishments in France, Poland, and the Netherlands, comprising more than 1500 women. The sisters had generally no property; their very lodgings were held consecrated to the poor. They were maintained by the hospitals where they served, and received a very trifling sum for extra expenses. Candidates were admitted to the seminary of the establishment, after strict inquiry into their character, on payment of a small sum for dress and furniture; being entitled to take away whatever they brought in, should they leave the institution. At the lapse of six months they received the sisters’ dress, and began to be instructed; when deemed competent, they were sent out as required. After five years’ probation, they took simple vows, renewable annually. From time to time they were called back to the seminary, for an eight days’ “retreat.” The superior, elected for three years, was re-eligible for three more. But Mlle. Legras was elected for life.

I have dwelt upon the institute of the “Sisters of Charity” at greater length probably than its intrinsic merits required. But, confounded as it generally is by Protestants with many other similar bodies, although itself forming but a prominent detail in the history of Romish charities, it embodies probably for many all that they know of those charities. Viewed in itself, with its class distinctions, it seems to me far inferior in spiritual beauty to Béguinism, or to several forms of Romish sisterhoods. It exhibits indeed a further disentanglement in the Romish Church of the principle of fellowship from the monastic system. The Sisterhoods of Charity do not, like the Tertiarian fellowships, look up to a First or a Second Rule. The very ground of their formation is found in the recoil of Mlle. Legras from the temptations of the cloister. And thus, instead of the charitable fellowship being a mere outside appendage, bulwark, ornament, and at the same time highway to the cloister, it becomes a centre itself, round which clusters again the larger growth of a visiting society.

Second only to the “Sisters of Charity” is the “Congregation of the Sisters of St. Joseph,” founded by the Bishop of Puy in 1650. The purposes of this institute included all works whatsoever of charity and mercy; the management and nursing of the sick in hospitals, the direction of refuges for penitents, the care of houses for poor orphan girls; schools for the education of little girls, wherever no sisterhoods bound by solemn vows were at hand to hold them; the daily visiting of the sick and of prisoners. The sisters looked especially after poor girls in danger of losing their honour, trying to find lodgings and work for them; sought to establish charitable fraternities of married and unmarried women where none existed; held once a month a ladies’ meeting for the visiting of the sick poor of the parish; besides private Sunday and saints’ day meetings, of widows, married women and girls separately, to converse on religious or

charitable subjects. After two years' novitiate, the sisters made simple vows of poverty, chastity, obedience, humility, and charity. They were authorised to form in villages small communities of three or four affiliated sisters, who only pronounced the three first vows, and were dependent on the superior of the nearest house of their congregation.

Observe that the two great sisterhoods of "Charity" and of the "Congregation of St. Joseph" pronounced only simple, *i.e.*, releasable vows, and the former only from year to year and after a long novitiate. It will be found, I think, almost invariably, that female monachism in its strictest form only exercises Christian charity within the four walls of its convents; that its sphere of usefulness is mainly confined to the education of infants and young girls, the reformation of the erring, perhaps the care of the female sick; that as soon as its charity, even towards the sick, expands to reach the other sex, a long novitiate becomes indispensable, simple vows are substituted for solemn. In other words, as the usefulness of female monachism extends, so must its monastic character sit the looser upon it, and the "sisterhood" take more and more the place of the "order." Would you know how the two principles struggle together? In 1628, the Hospitallers of Toulouse wished to found a hospital for receiving the sick. The council of the order forbade them. It was enough for them to share in the charity which the Knights, to whom they were affiliated, practised with so much edification at the hospital of Malta. So these poor souls, longing to devote themselves to active charity, were put off with the dry husks of a fictitious participation in the merits of others' good works. Would you note the superior efficacy, for active duties, of the comparatively free sisterhood? A secular congregation of Hospitallers under simple vows, and with a five years' novitiate, was placed in charge of the hospitals of Dijon in 1668, after a body of nuns had failed to give satisfaction. Would you see how the free sisterhood gradually loses its efficiency by becoming monasticised? In the order "of the Visitation of our Lady," founded by François de Sales at the beginning of the seventeenth century, the sisters, whilst uncloistered and pronouncing simple vows, used to devote themselves to ordinary works of mercy, such as visiting, relieving, and nursing the sick. In 1626, they became, as the term is, a "religion," changing their simple vows for solemn, attempted the reformation of women, and were entrusted with the direction of a Paris prison for female offenders; and they were received in Poland upon similar terms. Yet in Poland the purpose of their institute was eventually changed to the mere instructing of little girls; in France, they had to give up the charge of the prison which had been entrusted to them, and in Hélyot's time their main work had sunk to the almost passive one of giving an asylum to infirm women and girls. Not, however, that solemn

vows themselves could altogether stifle the active charities of women in this age, although undoubtedly the main strength of the Romish charitable movement lay in the "congregations" as distinct from the "religions." Several orders of Hospitaller nuns — I may mention the "Bethlehemites" of Guatemala — were founded in the seventeenth century, one of which at least took the vow to "serve the poor uncloistered." To the beginning of the seventeenth century belongs also the great reform by "Mother Geneviève Bouquet," a goldsmith's daughter, of the Paris Hospitallers. It should not however be overlooked that the novitiate in this order, although reduced from twelve years, which it had been in the old Béguine days, to seven, was still unusually long.

The new charitable work of female monachism in the seventeenth century was however that of the reformation of erring women. Of the female orders founded for this purpose I will only mention two.

That of "Our Lady of the Refuge" was established in 1624 by a lady whose romantic personal history is given at length by the gossipy Hélyot. She began by taking two women from the streets into her own house, then others, till the number rose to twenty; she herself with her three daughters waiting upon them, one cooking, another serving at table, the third reading to them. When the establishment was finally organised in 1634, the honourable and the penitent formed still but one body, alike in dress and life, except that the virtuous were always to be chosen as superiors, and for offices of responsibility; but lest the institute should ever degenerate into an ordinary convent, the penitents were always to form two-thirds of the whole number. The community was thus divided into three classes: those sisters who devoted themselves entirely to the work of reformation; the penitents, who, being deemed really converted, were admitted to the same profession as the virtuous sisters; and those who were not yet deemed awake to religious feelings. No married woman was admitted unless separated from her husband, or with his consent.

Very beautiful also is the institute of the "Daughters of the Good Shepherd," a much later foundation, established for penitents of all countries, who were freely maintained, beyond the expense of the first dress. The sisters were received at twenty-three, after two years' probation, wore the same dress as the penitents, and were lodged and fed the same. Every sister on her reception kissed all the penitents, waited on them at dinner, and kissed their feet afterwards.

Many other bodies — mostly of a mixed character, partly educational, partly for purposes of physical relief, or again, of moral reformation — were founded during the seventeenth and eighteenth centuries, most of them under simple vows only, the history of whose establishment offers often noble instances of female self-devotion. But the study of these would lead us no further into our subject; nor shall I attempt to carry down the story from where

Hélyot leaves it, before the middle of the eighteenth century. Since then, old orders have become decayed or been reformed: new ones have been founded. But I have yet to learn that any new development of monachism has taken place. On the contrary, the real wonder is to find such a general identity between the picture drawn a hundred and more years ago, and the original as we see it now. Still, throughout every Roman Catholic country, is the education of girls mainly or wholly in the hands of female communities. Still are "Sisters of Charity" or "Mercy," of "St. Joseph," &c., at work in almost every Romish Hospital, and earning, by their self-devotion and skill, the praise of every English surgeon who studies in foreign wards. Still are "Grey Sisters" sought for as private nurses throughout all their olden haunts, from the Channel to the heart of Switzerland. Still is almost every Roman Catholic refuge, reformatory, penitentiary, prison (for females at least), under the control of re-

ligious sisterhoods—as, for instance, the well-known Asylum of the Good Shepherd at Hammersmith. The Papacy may tremble on its base, but the Collective Female Diaconate of the Romish Sisterhood is rooted in almost all lands.

And with the "Sisterhood," it will be obvious the "Deaconesses' Institute" of modern Protestantism has in fact much more in common than with the individual female diaconate of the earlier Church. But if, as I trust to have shown, the Sisterhood, though indispensable to the charitable machinery of the Church of Rome, yet belongs to her no more than the individual female diaconate, but has, on the contrary, been persecuted by her wherever it has sought to exist as a free organisation, then are both institutions freely open to adoption by Protestant churches: the real question being, as it seems to me, how far they should be combined, how far modified, in reference to the wants of the time.

REMINISCENCES OF A HIGHLAND PARISH.*

BY THE EDITOR.

CHAPTER XIV.—THE "FOOLS."

No one attempting to describe from personal knowledge the characteristics of Highland life, can omit some mention, in memoriam, of the fools. It must indeed be admitted that the term "fool" is ambiguous, and embraces individuals in all trades, professions, and ranks of society. But those I have in my mind were not so injurious to society, nor so

stupid and disagreeable, as the large class commonly called "fools." Nor is the true type of "fool," a witless idiot like the Cretin, nor a raving madman, fit only for Bedlam;—but "a pleasant fellow i' faith, with his brains somewhat in disorder."

I do not know whether "fools" are held in such high estimation in the Highlands as they used to be in that time which we call "our day." It may

* Two correspondents have been obliging enough to favour me with communications as to the laws enacted in England and Scotland, on the wrapping of dead bodies in woollen for burial, to which reference was made in chap. xi. (note to p. 445) of our "Reminiscences." An English correspondent writes—

"The Act to which you refer for the encouragement of the woollen trade, was passed 30 Charles II., stat. 1, c. 3, 1678. The Act was unpopular and fell into disuse, and was finally repealed 54 Geo. III., c. 108, 1814.

"The Rev. G. F. Townsend (now of Burleigh Street Church, Strand) refers to this in his 'History of Leominster,' published October, 1862, of which place he was vicar, and gives some curious extracts from their parish register on this subject. He also gave me one of the original certificates—and I now present it to you, as it may be of some little service to you.

"Pope, you may remember, refers to the custom:—

"'Odius! in woollen: 'twould a saint provoke!'

Were the last words the fair Narcissa spoke:

'No! let a charming chintz and Brussels lace

Wrap my cold hands and shade my lifeless face!'"

The following is the quaint certificate referred to:

"Mrs. Eliz. Watcham, of the Borough of Leominster, in the County of Hereford, maketh Oath, That Mr. Solomon Long, of the Borough aforesaid, of the County aforesaid, lately deceased, was not put in, wrapt, or wound up, or Buried in any Shirt, Shift, Sheet or Shroud, made or mingled with Flax, Hemp, Silk, Hair, Gold or Silver, or other than what is made of Sheeps-Wool only: Nor in any Coffin lined or faced with any Cloth, Stuff, or any other Thing whatsoever, made or mingled with Flax, Hemp, Silk, Hair, Gold, or Silver, or any other Material, contrary to the late Act of Parliament for

Burying in Woollen, but Sheeps-Wool only. Dated the Third Day of October, in the Third Year of the Reign of our Sovereign Lord George the Second, by the Grace of GOD, King, of Great-Britain, France and Ireland, Defender of the Faith, Annoq; Dom^o 1729.

"Sealed and Subscribed by us who were present, and Witnesses to the Swearing of the above-said Affidavit.

"PENELOPE POWELL.
ELIZ. x JONES.

"I, Caleb Powell, do hereby Certify, that the Day and Year abovesaid, the said Eliz. Watcham came before me, and made such Affidavit as is above specified, according to the late Act of Parliament, intituled, an 'Act for Burying in Woollen.' Witness my Hand, the Day and Year first above-written.

"CALEB POWELL."

A Scotch correspondent writes us on the same subject: "There are various old Scottish statutes regulating the cloth to be used at burials. One is the statute of James VII. 1686, cap. 16, enacting that no 'corps' should be buried in any cloth but 'plain linen, or cloth of hards, made and spun within the Kingdom,' and specially prohibiting the use of 'Holland; or other linen-cloth made in other Kingdoms, and all silk, hair, or woollen, gold or silver, or any other stuff whatsoever, than what is made of flax or hards, spun and wrought within the Kingdom.' And two responsible parties in the parish had to certify in the case of every burial that the statute had been complied with; and had to bring a certificate to that effect to the minister of the parish who was then to record the same. The statute was re-enacted, with some sumptuary clauses in 1695, but both were repealed in the last Scottish parliament (1707, c. 14) before the union.—

be that the Poor Laws have banished them to the calm and soothing retreat of the workhouse; or that the moral and intellectual education of the people by government pupils, and Queen's scholars, have rendered them incapable of being amused by any abnormal conditions of the intellect; but I am obliged to confess that I have always had a foolish weakness for "fools"—a decided sympathy with them—and that they occupy a very fresh and pleasing portion of my reminiscences of "the Parish."

The Highland "fool" was the special property of the district in which he lived. He was not considered a burthen upon the community, but a privilege to them. He wandered at his own sweet will wherever he pleased, "over the muir among the heather;" along highways and bye-ways, with no let or hindrance from parish beadles, rural police, or poor-law authorities.

Every one knew the "fool," and liked him as a sort of protégé of the public. Every house was open to him, though he had his favourite places of call. But he was too wise to call as a fashionable formal visitor, merely to leave his card and depart if his friend was "not at home." The temporary absence of landlord or landlady made little difference to him. He came to pay a visit, to enjoy the society of his friends, and to remain with them for days, perhaps for weeks, possibly for months even. He was sure to be welcomed, and never churled or sent away until he chose to depart. Nay, he was often coaxed to prolong the agreeable visit which was intended as a compliment to the family, and which the family professed to accept as such. It was, therefore, quite an event when some rare fool arrived, illustrious for his wit. His appearance was hailed by all in the establishment, from the shepherds, herds, workmen, and domestic servants, up to the heads of the family, with their happy boys and girls. The news spread rapidly from the kitchen to the drawing-room—"Calum,' 'Archy,' or 'Duncan' fool, is come!" and all would gather round him to draw forth his peculiarities.

It must be remembered that the Highland kitchen, which was the "fool's" stage, his court, his reception and levee room, and which was cheered at night by his brilliant conversation, was like no other similar culinary establishment, except, perhaps, that in the old Irish house. The prim model of civilised propriety, with its pure well-washed floors and whitewashed walls, its glittering pans, burnished covers, clean tidy fireside

with roasting-jack, oven and hot plate, a sort of cooking drawing-room, an artistic studio for roasts and boils, was utterly unknown in the genuine Highland mansion of a former generation. The Highland kitchen had, no doubt, its cooking apparatus, its enormous pot that was hung from its iron chain amidst the reek in the great chimney; its pans embosomed in glowing peats, and whatever other instrumentality (possibly an additional peat fire on the floor) was required to prepare savoury joints, with such barn-door dainties as ducks and hens, turkeys and geese—all supplied from the farm in such quantities as would terrify the modern cook and landlady if required to provide them daily from the market. The cooking of the Highland kitchen was also a continued process, like that on a passenger steamer on a long voyage. Different classes had to be served at different periods of the day, from early dawn till night. There were, therefore, huge pots of superb potatoes "laughing in their skins," and as huge pots of porridge poured into immense wooden dishes, with the occasional dinner luxury of Braxy—a species of mutton which need not be too minutely inquired into. These supplies were disposed of by the frequenters of the kitchen, dairymaids and all sorts of maids, with shepherds, farmservants male and female, and herds full of fun and grimace, and by a constant supply of strangers, with a beggar and probably a "fool" at the side-table. The kitchen was thus a sort of caravansera, in which crowds of men and women, accompanied by sheep-dogs and terriers, came and went; and into whose precincts ducks, hens, and turkeys strayed as often as they could to pick up débris. The world in the drawing-room was totally separated from this world in the kitchen. The "gentry" in "the room" were supposed to look down upon it as on things belonging to another sphere, governed by its own laws and customs, with which they had no wish to interfere. And thus it was that "waifs" and "fools" came to the kitchen and fed there, as a matter of course, having a bed in the barn at night. All passers-by got their "bite and sup" in it readily and cheerfully. Servants' wages were nominal, and food was abundant from moor and loch, sea and land. To do justice to the establishment I ought to mention that connected with the kitchen there was generally a room called "the Servants' Hall," where the more distinguished strangers—such as "the post" or packman, with perhaps the tailor or shoemaker when these were necessarily resident for some weeks in the House—took their meals along with the housekeeper and more "genteel" servants.

I have, perhaps, given the impression that these illustrious visitants, the "fools," belonged to that Parish merely in which the houses that they frequented were situated. This was not the case. The fool was quite a cosmopolitan. He wandered like a wild bird over a large tract of country, though he had favourite nests and places of refuge. His selection of these was judiciously made accord-

That act forbade the use of linen at burials; and ordered that 'hereafter no corps of any person of what condition or quality soever shall be buried in linen of whatever kind; and that where linen has been made use of about dead bodies formerly, plain woolen cloath or stuff shall only be made use of in all time coming.'

"The preambles of the first two statutes declare the object to be the encouragement of linen manufacture in the kingdom, and the prevention of the exportation of money for foreign goods; and the preamble of Queen Anne's Act (1707), declares its object to be the encouragement of 'the manufacture of wool' within the kingdom."

ing to the comparative merits of the treatment which he received from his many friends. I have known some cases in which the attachment became so great between the fool and the household that a hut was built and furnished for his permanent use. From this he could wander abroad when he wished a change of air or of society. Many families had their fool—their Wamba or jester—who made himself not only amusing but useful, by running messages and doing out-of-the-way jobs requiring little wit but often strength and time.

As far as my knowledge goes, or my memory serves me, the treatment of these Parish characters was most benevolent. Any teasing or annoyance which they received detracted slightly, if at all, from the sum of their happiness. It was but the friction which elicited their sparks and crackling fun; accordingly the boys round the fire-side at night could not resist applying it, nor their elders from enjoying it; while the peculiar claims of the fool to be considered lord or king, admiral or general, an eight-day clock or brittle glass, were cheerfully acquiesced in. Few men with all their wits about them could lead a more free or congenial life than the Highland fool with his wit only.

One of the most distinguished fools of my acquaintance was "Allan-nan-Con," or Allan of the Dogs. He had been drafted as a soldier, but owing to some breach of military etiquette on his part, when under inspection by Sir Ralph Abercromby, he was condemned as a fool, and immediately sent home. I must admit that Allan's subsequent career fully confirmed the correctness of Sir Ralph's judgment. His peculiarity was his love of dogs. He wore a long loose great-coat bound round his waist by a rope. The great-coat bagged over the rope, and within its loose and warm recesses a number of pups nestled while on his journey, so that his waist always seemed to be in motion. The parent dogs, four or five in number, followed on foot, and always in a certain order of march, and any straggler or undisciplined cur not keeping his own place received sharp admonition from Allan's long pike-staff. His head-dress was a large Highland bonnet, beneath which appeared a small sharp face, with bright eyes and thin-lipped mouth full of sarcasm and humour. Allan spent his nights often among the hills. "My house," he used to say, "is where the sun sets." He managed, on retiring to rest, to arrange his dogs round his body so as to receive the greatest benefit from their warmth. Their training was the great object of his life; and his pupils would have astonished any government inspector by their prompt obedience to their master's commands and their wonderful knowledge of the Gaelic language.

I remember on one occasion when Allan was about to leave "the Manse," he put his dogs, for my amusement, through some of their *drill*, as he called it. They were all sleeping round the kitchen fire, the pups freed from the girdle, and wandering at liberty, when Allan said, "Go out, one

of you my children, and let me know if the day is fair or wet." A dog instantly rose, while the others kept their places, and with erect tail went out. Returning, it placed itself by Allan's side, so that he might by passing his hand along its back discover whether it was wet or dry! "Go," he again said, "and tell that foolish child"—one of the pups—"who is frolicking outside of the house, to come in." Another dog rose, departed, and returned wagging his tail and looking up to Allan's face. "Oh, he won't come, won't he? Then go and bring him in, and if necessary by force!" The dog again departed, but this time carried the yelping pup in his mouth, and laid it at Allan's feet. "Now, my dear children, let us be going," said Allan, rising, as if to proceed on his journey. But at this moment two terriers began to fight,—though it seemed a mimic battle,—while an old sagacious-looking collie never moved from his comfortable place beside the fire. To understand this scene, though, you must know that Allan had taken offence at the excellent sheriff of the district because of his having refused him some responsible situation on his property, and to revenge himself had trained his dogs to act the drama which was now in progress. Addressing the apparently sleeping dog, whom he called "the Sheriff," he said, "There you lie, you lazy dog, enjoying yourself when the laws are breaking by unseemly disputes and fights! But what care you if you get your meat and drink! Shame upon you, Sheriff. It seems that I even must teach you your duty. Get up this moment, sir, or I shall bring my staff down on your head, and make these wicked dogs keep the peace!" In an instant "the Sheriff" rose and separated the combatants.

It was thus that, when any one offended Allan past all possibility of forgiveness, he immediately trained one of the dogs to illustrate his character, and taught it lessons, by which in every house he could turn his supposed enemy into ridicule. A farmer, irritated by this kind of *dogmatic* intolerance, ordered Allan to leave his farm. "Leave it, forsooth!" replied Allan, with a sarcastic sneer. "Could I possibly, sir, take it with me, be assured I would do so rather than leave it to you!"

When Allan was dying he called his dogs beside him, and told them to lie close and keep him warm, as the chill of death was coming over him. He then bade them farewell, as his "children and best friends," and hoped they would find a master who would take care of them and teach them as he had done. The old woman, in whose hut the poor fool lay, comforted him by telling him how, according to the humane belief of her country, all whom God had deprived of reason were sure to go to heaven, and that he would soon be there. "I don't know very well," said Allan, with his last breath, "where I am going, as I never travelled far; but if it is possible, I will come back for my dogs; and, mind you," he added, with emphasis, "to punish the Sheriff for refusing me that situation!"

Another most entertaining fool was Donald

Cameron. Donald was never more brilliant than when narrating his submarine voyages, and his adventures, as he walked along the bottom of the sea passing from island to island. He had an endless variety of stories about the wrecks which he visited in the caverns of the deep, and above all of his interviews with the fish, small and great, whom he met during his strange voyages, or journeys, rather. "On one occasion," I remember his telling me with grave earnestness, as we sat together fishing from a rock, "I was sadly put about, my boy, when coming from the island of Tyree. Ha! ha! ha! It makes me laugh to think of it now, though at the time it was very vexing. It was very stormy weather, and the walking was difficult, and the road long. I at last became very hungry, and looked out for some hospitable house where I could find rest and refreshment. I was fortunate enough to meet a turbot, an old acquaintance, who invited me, most kindly, to a marriage party which was that day to be in his family. The marriage was between a daughter of his own, and a well-to-do flounder. So I went with the decent fellow, and entered a fine house of shells and tangle, most beautiful to see. The dinner came, and it was all one could wish. There was plenty, I assure you, to eat and drink, for the turbot had a large fishing bank almost to himself to ply his trade on, and he was too experienced to be cheated by the hook of any fisherman, Highland or Lowland. He had also been very industrious, as indeed were all his family. So he had good means. But as we sat down to our feast, and my mouth was watering—just as I had the bountiful board under my nose, who should come suddenly upon us with a rush, but a tremendous cod, that was angry because the turbot's daughter had accepted a poor thin, flat flounder, instead of his own eldest son, a fine red-rock cod. The savage, rude brute gave such a fillip with his tail against the table, that it upset; and what happened, my dear, but that the turbot, with all the guests, flounders, skate, haddock, and whiting, thinking, I suppose, that it was a sow of the ocean (a whale), rushed away in a fright; and I can tell you, calf of my heart, that when I myself saw the cod's big head and mouth and staring eyes, with his red gills going like a pair of fanners, and when I got a touch of his tail, I was glad to be off with the rest; so I took to my heels and escaped among the long tangle. Pfu! what a race of hide and seek that was! Fortunately for me I was near the point of Ardnamurchan, where I landed in safety, and got to Donald M'Lachlan's house wet and weary. Wasn't that an adventure? And now," concluded my friend, "I'll put on, with your leave, a very large bait of cockles on my hook, and perhaps I may catch some of that rascally cod's descendants!"

"Barefooted Lachlan," another Parish worthy, was famous as a swimmer. He lived for hours in the water, and alarmed more than one boat's crew, who perceived a mysterious object—it might be the sea-serpent—a mile or two from the shore, now

appearing like a large seal, and again causing the water to foam with gambols like those of a much larger animal. They cautiously drew near, and saw with wonder what seemed to be the body of a human being floating on the surface of the water. With greatest caution an oar was slowly moved towards it; but just as the supposed dead body was touched, the eyes, hitherto shut, in order to keep up the intended deception, would suddenly open, and with a loud shout and laugh, Lachlan would attempt to seize the oar, to the terror and astonishment of those who were ignorant of his fancies.

The belief in his swimming powers—which in truth were wonderful—became so exaggerated that his friends, even when out of sight of land, would not have been surprised to have been hailed and boarded by him. If any unusual appearance was seen on the surface of the water along the coast of the Parish, and rowers paused to consider whether it was a play of fish or a pursuing whale, it was not unlikely that one of them would at last say, as affording the most probable solution of the mystery, "I believe myself it is Barefooted Lachlan!"

Poor Lachlan had become so accustomed to this kind of fishy existence that he attached no more value to clothes than a merman does. He looked upon them as a great practical grievance. To wear them on his aquatic excursions was at once unnecessary and inconvenient, and to be obliged, despite of tides and winds, to return from a distant swimming excursion to the spot on the shore where they had been left, was to him an intolerable bore. A tattered shirt and kilt were not worth all this trouble. In adjusting his wardrobe to meet the demands of the sea, it must be confessed that Lachlan forgot the fair demands of the land. Society at last rebelled against his judgment, and the poor-law authorities having been appealed to, were compelled to try the expensive but necessary experiment of boarding Lachlan in a pauper asylum in the Lowlands, rather than permit him to wander about unadorned as a fish out of water. When he landed at the Broomielaw, and saw all its brilliant gas lights, and beheld for the first time in his life a great street with houses which seemed palaces, he whispered with a smile to his keepers, "Surely this is heaven! am I right?" But when he passed onward to his asylum, through the railway tunnel with its smoke and noise, he trembled with horror, declaring that now, alas! he was in the lower regions and lost for ever. The swimmer did not prosper when deprived of his long freedom among the winds and waves of Ocean, but died in a few days after entering the well-regulated home provided for his comfort by law. Had it not been for his primitive taste in clothes, and his want of appreciation of any better or more complete covering than his tanned skin afforded, I would have protested against confining him in a workhouse as a cruel and needless incarceration, and pleaded for him as Wordsworth did for his Cumberland beggar:

As in the eye of Nature he has lived,
So in the eye of Nature let him die!

While engaged in the unusual task of writing the biographies of fools, I cannot forget one who, though not belonging to "the Parish," was better known perhaps than any other in the Western Highlands. The man I speak of was "Gillespie Aotrom," or "light-headed Archy," of the Isle of Skye. Archy was perhaps the most famous character of his day in that island. When I first made his acquaintance a quarter of a century ago, he was eighty years of age, and had been a notorious and much-admired fool during all that period—from the time, at least, in which he had first babbled folly at his mother's knee. Archy, though a public beggar, possessed excellent manners. He was welcomed in every house in Skye; and if the landlord had any appreciation of wit, or if he was afraid of being made the subject of some sarcastic song or witty epigram, he was sure to ask Archy into the dining-room after dinner, to enjoy his racy conversation. The fool never on such occasions betrayed the slightest sense of being patronised, but made his bow, sat down, accepted with respect, ease, and grace his glass of wine or whisky punch, and was ready to engage in any war of joke or repartee, and to sing some inimitable songs, which hit off with rare cleverness the infirmities and frailties of the leading people of the island—especially the clergy. Some of the clergy and gentry happened to be so sensitive to the power and influence of this fool's wit, which was sure to be repeated at "kirk and market," that it was alleged they paid him black-mail in meat and money to keep him quiet, or obtain his favour. Archy's practical jokes were as remarkable as his sayings. One of these jokes I must narrate. An old acquaintance of mine, a minister in Skye, who possessed the kindest disposition and an irreproachable moral character, was somehow more afraid of Archy's sharp tongue and witty rhymes than most of his brethren. Archy seemed to have detected intuitively his weak point, and though extremely fond of the parson, yet often played upon his goodnature with an odd mixture of fun and selfishness. On the occasion I refer to, Archy in his travels arrived on a cold night at the manse when all its inmates were snug in bed, and the parson himself was snoring loud beside his mate. A thundering knock at the door awakened him, and thrusting his white head, enveloped in a thick white nightcap, out of the window, he at once recognised the tall, well-known form of Archy. "Is this you, Archy? Oich, oich! what do you want, my good friend, at this hour of the night?" blandly asked the old minister. "What could a man want at such an hour, most reverend friend," replied the rogue, with a polite bow, "but his supper and his bed!" "You shall have both, good Archy," said the parson, though wishing Archy on the other side of the Coolins. Dressing himself in his home-made flannel unmentionables, and throwing a shepherd's plaid over his shoulders,

he descended and admitted the fool. He then provided a sufficient supper for him in the form of a large supply of bread and cheese, with a jug of milk. During the repast Archy told his most recent gossip and merriest stories, concluding by a request for a bed. "You shall have the best in the parish, good Archy, take my word for it!" quoth the old dumpy and most amiable minister.

The bed alluded to was the hay-loft over the stable, which could be approached by a ladder only. The minister adjusted the ladder and begged Archy to ascend. Archy protested against the rudeness. "You call that, do you, one of the best beds in Skye? You, a minister, say so? On such a cold night as this, too? You dare to say this to me!" The old man, all alone, became afraid of the gaunt fool as he lifted his huge stick with energy. But had any one been able to see clearly Archy's face, they would have easily discovered a malicious twinkle in his eye betraying some plot which he had been concocting probably all day. "I do declare, Archy," said the parson, earnestly, "that a softer, cleaner, snuggler bed exists not in Skye!" "I am delighted," said Archy, "to hear it, minister, and must believe it since you say so. But you know it is the custom in our country for a landlord to show his guest into his sleeping apartment, isn't it? and so I expect you to go up before me to my room, and just see if all is right and comfortable. Please ascend!" Partly from fear and partly from a wish to get back to his own bed as soon as possible, and out of the cold of a sharp north wind, the simple-hearted old man complied with Archy's wish. With difficulty, waddling up the ladder, he entered the hay-loft. When his white rotund body again appeared as he formally announced to his distinguished guest how perfectly comfortable the resting-place provided for him was, the ladder, alas! had been removed, while Archy calmly remarked, "I am rejoiced to hear what you say! I don't doubt a word of it. If it is so very comfortable a bedroom, though, you will have no objection, I am sure, to spend the night in it. Good night then, my much-respected friend, and may you have as good a sleep and as pleasant dreams as you wished me to enjoy." So saying he made a profound bow and departed with the ladder over his shoulder. But after turning the corner and listening with fits of suppressed laughter to the minister's loud expostulations and earnest entreaties—for never had he preached a more energetic sermon, or one more from his heart—and when the joke afforded the full enjoyment which was anticipated, Archy returned with the ladder, and advising the parson never to tell *fib*s about his fine bed-rooms again, but to give what he had without imposing upon strangers, he let him descend to the ground, while he himself ascended to the place of rest in the loft.

Archy's description of the whole scene was ever afterwards one of his best stories, to the minister's great annoyance.

A friend of mine met Archy on the highway,

and, wishing to draw him out, asked his opinion of several travellers as they passed. The first was a very tall man. Archy remarked that he had never seen any man before so near heaven! Of another he said that he had "the sportsman's eye and the soldier's step," which was singularly true in its description.

A Skye laird who was fond of trying a pass of arms with Archy, met him one day gnawing a bone. "Shame on you, Archy," said the laird, "why do you gnaw a bone in that way?" "And to what use, sir," asked Archy in reply, "would you have me put it?" "I advise you," said the laird, "to throw it in charity to the first dog you meet." "Is that your advice? then I throw it to yourself!" said Archy, shying the bone at the laird's feet.

While correcting these sheets, an old woman from Skye, now in Glasgow, and who knew Archy well, has repeated to me the words which he never failed to use with reverence as his grace before meat. They seem to contain some allusion to the sin of the evil eye, so much feared and hated by the old Highlanders. I translate them literally:—

May my heart always bless my eyes;
And my eyes bless all they see;
And may I always bless my neighbour
Though my neighbours should never bless me. Amen.

By this time I fear that my sedate and wise readers will conclude that a sympathy with fools comes very naturally to me. I must bow my head to the implied rebuke. It is, I know, a poor defence to make for my having indulged, however briefly, in such biographies, that the literary world has produced many longer ones of greater fools less innocent of crime, less agreeable, and less beneficial to society, than those which I have so imperfectly recorded among my reminiscences of the old Highlands.*

But lest any one should imagine for a moment that I treat lightly the sufferings of those deprived of God's highest gift of reason, let me say that my fools were generally strong and healthy in body, and in many cases, as I have already hinted, took a share in farm-work, boating, fishing, &c., and that their treatment was most humane and benevolent. At the same time I do not forget another very different class, far lower in the scale of humanity, which, owing to many circumstances that need not be detailed here, was a very large one in the Highlands:—creatures weak in body and idiotic in mind, who in spite of the tenderest affection on the part of their poor parents, were yet miserable objects for which no adequate relief existed. Such cases

* Since writing the above, I have heard of a distinguished general officer who left the Highlands in his youth, but returned a short time ago to visit his early home. "Will you believe me," he said, with great seriousness and *naïveté*, to my informant, "when I tell you that among the many things so long associated with my faithful remembrances that have passed away, and which I miss much—are—are—pray don't laugh at me when I confess it—are my old friends the fools!" I heartily sympathise with the general!

indeed occur everywhere throughout the kingdom to a greater extent than, I think, most people are aware of. Those idiots are sometimes apparently little removed above the beasts that perish, yet they nevertheless possess a Divine nature never wholly extinguished, which is capable of being developed to a degree far beyond what the most sanguine could anticipate who have not seen what wise, patient, benevolent and systematic education is capable of accomplishing. The coin with the King's image on it, though lying in the dust with the royal stamp almost obliterated, may yet be found again and marvellously cleansed and polished! I therefore hail asylums for idiot children as among the most blessed fruits of Christian civilisation. Though, strange to say, they are but commencing among us, yet I believe the day is near when they will be recognised as among the most needed, most successful, and most blessed institutions of our country.

CHAPTER XV.—THE CUSTOMS OF NEW YEAR'S EVE AND MORNING.

AS NARRATED BY A HIGHLAND PIPER.*

ACCORDING to promise, I will give you a true account of the manner in which we used to part with the old year, and welcome the new, during my younger days in the family of Glendessarie. The last night of the year was, as you know, called *oidhe Chaluinn* (the night of *Calluinn*). They tell me that this word signifies *noise*, or *rattling*; and that the Highlanders so designated this night† from the noisy mirth with which they celebrated it.

* This chapter is translated from the first Gaelic magazine ever published, which was conducted by my father, the late Dr. Macleod, of Glasgow. The account of these Highland customs, though bearing the signature of "Findlay the Piper," was written by himself, and is now offered, along with a few illustrative notes, as a Reminiscence of "the Parish," and also as a characteristic specimen of the narratives of the Highland peasantry.

† The term *Calluinn*. The derivation of this word has sorely puzzled Celtic antiquarians, and it is enough to show the straits to which they are reduced, to mention that some derive it from *Kalends*, and others from the name of the goddess Kalydon, said to have been worshipped by some tribes of Slavonians on the shores of the Baltic. We consider the explanation given by the piper fully as good as either of these. Let it be remembered, however, that the corresponding term *Hagmana*, used of old in England (possibly still in some parts of it), or *Hogmanay*, universally used in Scotland, is of equally uncertain origin—some deriving it from the Greek "*Hagia mēnē*," sacred month, while others resolve it into the French, "*Homme est né*," the man is born, referring of course to our Saviour's nativity. And we may remark, without going into antiquarian dissertation, that with the view of discovering the derivation of the word *Yule*, used in England and Scotland, almost every language from Hebrew to Danish has been questioned and tortured all to little purpose.

The Gaelic term *Calluinn*, then, is not alone in the mystery of its origin. The *Cainneal*, or *Coinneal*, used to denote the first day of the year, has also exercised the ingenuity of linguists. Its simplest solution is, however, probably the nearest to the truth. It literally signifies candle, and in all likelihood refers to the illuminations customary at that joyous season.

Nollraig, or *Nollaig*, the Gaelic term for Christmas, is

Well, my father was piper to Glendessarie, as was his father before him, and every son of mine has, as soon as weaned, taken to the pipe-chanter just as naturally as the young kid takes to scrambling up the rocks. It was the habit of this family to gather for *Calluinn night* (New Year's Eve) all the tenantry on their lands, young and old, especially all the foster-fathers, mothers, brothers, and sisters,

evidently of the same origin with the French *Noël*, derived from *Natalis*.

We need say nothing about the Highlanders observing the season of the New Year as a festive, and a joyous one. Almost all nations, Pagan and Christian, have done so, visiting their friends, feasting on the best, and giving a liberal supply to their cattle as well. The piper giving a sheaf of corn to his cows reminds one of Burns' well-known lines to his old mare Maggie, on New Year's Day.

The expressing their joy through rhymes was also common to other nations as well as to the Highlanders. Abundant specimens both of French and English verses used on occasions are to be found in our older books, nor are we aware that the Gaelic rhymes deserve any special mention. We have heard many which were more doggerel—others, again, through which a vein of satirical humour ran, well fitted to rebuke any churlish tendency in those who were addressed; but the great majority of them, like the English ones, expressed kindly wishes towards the households visited, while they all craved a good *Calluinn* for the rhyming visitors.

The carrying about of the *hide*, beating on it with sticks, and surrounding the house three times, going always in the direction of the sun, or *Deas-iul*, is at least in modern times peculiar to the Highlanders. Till very recently it was generally observed, and is, we believe, in remote localities, still practised. Some writers imagine that the thus walking around the house, clothed in the skins of a slaughtered animal, has reference to sacrificial and propitiatory rites. We learn, however, from "Brand's Popular Antiquities," edited by Ellis, that this is a remnant of the wild and fantastic orgies of the old Roman Saturnalia, where men often disguised themselves in the skins of wild beasts, and abandoned themselves to the wildest enjoyments. Early Christian writers state that many of their flocks followed after these heathenish customs, saying expressly—"vestiuntur pelibus pecudum"—"they are clothed in the skins of cattle."

We read of slight traces of this strange transformation being discernible in Yorkshire till a comparatively recent date, but like many other old customs it found beyond the Grampian mountains a more lasting abode than anywhere else.

One other observance we mention which we believe was peculiar to the Highlands. The *Caisein ùchd*, or the piece of skin covering the breast bone of sheep or cow—more especially the former, with its short curly wool—was kept as carefully as was the hide; and on New Year's Eve, after being well singed in the fire, was applied to the nose of every one within the house, visitor or dweller. Thereafter it was carried to the byre, and the olfactories of the cattle also regaled with its fragrance. All we can say of this practice is that it was observed with the view of conferring some benefit on man and beast. Pennant mentions that the cattle in the North Highlands were, on the evening in question, made to smell burnt juniper.

We gather from the old Statistical Account that in some parts of the Highlands *Hogmanay* is called *oidhche dar na Coille*—i.e., "The night of the fecundation of the trees," and that according to the direction of the wind on this night the character of the following season might be predicted. The fresh wind promised fish, and milk. The South, warmth, and general fruitfulness. The North, cold and shivering—literally, *skinning*. And the East wind even as in the land of Pharaoh—the withering of the fruit.

For the principal statements in the foregoing long note, see "Brand's Popular Antiquities."

and according to wont, *Evan Bân maor* (Fair-haired Evan) the ground-officer, went round amongst them a few days before the time. "It is the wish of the family," says he, "that we should observe the *Calluinn* as of old, and see, my lads, that you have your *Camain* (shinties, or clubs) right and ready for New Year's Day." The piper set off in his full Highland garb about the height of the evening (as the sun was beginning to decline). We reached the great house; and can I expect that my heart will ever be as light and joyous as it was on that night? The young ladies of the family met us with bows of ribbon for the chanter of the pipe. The piper played a round on the green before the door, as the men gathered.

The time of *Calluinn* came, when some one had to carry the dry cow hide on his back and run round the house, and every one that could tried to get a stroke at it with his stick. "Who will carry the *hide* this year?" says Evan Bân. "Who but Pàra Mòr?" (Big Patrick) says one. "Who but Broad John?" says another. "Out with the *hide* Pàra Mòr," says Evan Bân, "and you Broad John, stand by his shoulder in case he may stumble." Pàra Mòr drew the hide about his head, taking a twist of the tail firmly around his fist. "*Cothrom na Féinne*"* (i.e., fair play as among the Fingalians, or Fingalian justice), exclaimed he, as he drew near the door of the house where the Laird (*Fear a' bhaile*, the man the place) was standing with his *Camain* (shinty) in his hand. "*Calluinn* here!" says he, giving the first rattle to the hide. Pàra Mòr set off, but swift of foot as he was, the man of the Glen kept at his heel, and you would think that every flail in the country was at work on the one threshing-floor, as every mother's son of them struck and rattled at him, shouting, "a *Calluinn* here! The *Calluinn* of the yellow sack of hide! Strike ye the skin! A *Calluinn* here!" Three times they went *Deas-iul* (in a southerly direction, according to the course of the sun) around the house. "Blow up, piper," (*Seid suas*) said Evan Bân, "and when the company are in order, let them assemble in the Rent-room." My father played *Faill a' Phrionnsa* (the Prince's welcome); for though there was not in the kingdom a man more leal and loyal to the family which then sat upon the throne, yet he loved to listen to this tune; and often have I seen him shedding tears on hearing that thrilling music which had stirred his forefathers to deeds of manliness on these renowned battle-fields, where alas! they lost their men and their estates.

* *Fingalian Justice, or Fair Play.*—We will not enter on the controversy as to whether "Fingal fought," or "Ossian sang." We must remark, however, that expressions like the above, referring to the belief in the existence of a band called *Féinne* or *Fingahans*, renowned for dauntless valour, high-souled honour, and unflinching constancy, are in daily use among the Highlanders from East to West, from North to South.

We may add that the names of the principal heroes, and the scenes of their exploits, are familiar as household words among young and old.

We went into the chamber where the family and the neighbouring gentry were assembled. He himself, the graceful president of the feast, stood in the midst, and his mild, winsome lady by his side. The lovely young branches of the family were around them, though, woe's me! few of them are alive to-day. The Laird (good man) of *Corrie* was standing at the door to guard against anyone slipping in without saying his *Callüinn* rhyme, and John Bän, of the casks (the butler), beside him with a bottle in his hand. Everyone had a rhyme that night except Lowland John and a young conceited fellow from the Glen, who had been for a year or two in Glasgow, and affected to have forgotten his native tongue, as well as the customs of his native land. John Bän dealt round the drink, and the bread and cheese, piled up plenteously, were distributed freely.

After a short time the songs began. He himself gave us an *iorram* (Boat song), and well could he do it. Many a sweet song, lay, and ditty was sung, as well as those which were historical and commemorative. The fox-hunter gave us *Dan a' choin ghlais* (the song of the grey dog), and Angus of the Satires repeated a tale of the Fingalians. After the songs the dancing began, very different from the slow, soft, silken steps of the present day. First came in a smart dame, dressed like a house-keeper, with a bunch of keys jingling by her side; strong, sturdy, and active she looked. The women sang *Port á Beul* (i.e., a tune from the mouth), selecting *Cailleach an Dùdain* (the old wife of the mill-dust), and it was she who capered and turned, and sprang nimbly. After this they danced the *Dùbh-Lùidneach* (Black Sluggard). But the best fun was, when the "Goat Dance," "Weave the Gown," (*Figh an Gìn*), and the Thorny Croft (*Croit am Droighin*) were danced.*

* *Songs and Dances*.—We have preserved these names in the hope that some one more learned than we in Highland antiquities may explain them. The singing called *Port á Beul*, a tune from the mouth, we have ourselves heard, and heard with high pleasure. In the absence of musical instruments, persons trained to it imitate dancing-music with the voice, and when they sing in parts the imitation is remarkably happy. We have seen a company dancing for hours to this primitive music.

As to the dances, there are some of them we can give no account of. A poor remnant of the "Sword Dance" is still preserved among us, and may often be witnessed on the stage; sometimes on the decks of steamers, and even on the streets of our large towns, burlesqued by idle vagabonds who assuredly disgrace "the garb of Old Gaul," by exhibiting it in such contemptible performances. We learn from Brand, that among the Northern nations, and of old in England, the Sword Dance was practised on the most public and solemn occasions, and in a way that put the skill, the strength, and the nerve of the performers to a very severe test.

We know that in one other of those mentioned in our text—the Thorny Croft—there was much pantomimic acting, as well as very dolorous recitative. A farmer, whose lot it was to be located on ground covered with thorns and briars, gives a woful account of the hardship of his fate—with the view, we believe, of exciting compassion of some fair spectator—and we believe there was a considerable amount of dramatic acting in all of them.

The time of parting at length came. The gentry gave us the welcome of the New Year with cordiality and kindness, and we set off to our homes. "My lads," says he himself, "be valiant on the field to-morrow. The sea-board men (*Lethùir*—i.e., Half-land) boast that they are to beat us Glen-men at the Shinty match this year." Thus we passed the last night of the year at Glendessarie, and neither I, nor my father, ever saw a quarrel, or heard an improper word at such a gathering. It is since the gentry have ceased thus to mingle freely with the people that disgusting drunkenness has become common, in these black tipping-houses, which prove the high-way to almost every vice. The people of each estate were as one family—the knot of kindness tying every heart together, and the friendly eye of the superiors was over us all.

I might here give many useful advices to our lairds; but they do not understand Gaelic, and they would not take the counsel of the piper, so I must hasten to tell you about our way of passing the first day of the new year.

On this New Year's morn the sun was late of showing his countenance; and after he came in sight his appearance was pale and drowsy. The mist was resting lazily on the hill-side; the crane was rising slowly from the meadow; the belling of the stag was heard on the mountain; the black-cock was in the birch-wood, dressing his feathers, while his sonsie mate—the gray-hen—was slowly walking before him.

After I had saluted my family, and implored the blessing of the Highest, on their heads, I prepared the Christmas sheep,* (*Caora Nallaig*), gave a sheaf of corn to the cattle, as was customary, and was getting myself in order, when in walked Pàra Mòr, and my gossip Angus Òg (young Angus). They gave me the welcome of the New Year. I returned it with equal heartiness. Then Pàra Mòr produced a bottle from his pocket. "A black-cock," says he, "whose gurgling voice (crowing, *Celticè*, *g'gail*) is more musical than any roar (*rùan*) that ever came out of the chanter of the pipe." We tasted to one another, and then Mary, my wife, set before us a small drop of the genuine Ferintosh, which she had stored up long ago for great occasions in the big chest.

It was my duty to gather the people together this morning with the sound of the pipe. So we set off, going from farm to farm up the Glen, making the son of the cave of the rock (i.e., echo) answer to my music. I played "*A Mhathàn a' Ghlinne so*;"† and if the pipe had been dry that

The *Dùbh-Lùidneach*—Black-Sluggard, or black clumsy one—we may observe, is the name by which the natives of Lochaber still designate the yacht in which Argyle sailed away on the day of the battle of Inverloch—leaving his men to the fury of Montrose and the MacDonnalds. Of the dance so called we can give no account.

* See note †, p. 507.

† The tune "*A Mhathàn a' Ghlinne so*," &c.

This still popular pipe tune, known, we believe, as Breadalbane's March, is said to have been composed on

day it had ample means of quenching its thirst! The company continually increased in numbers until we came down by the other side of the Glen to the ground-officer's house, where it was appointed for us to get our morning meal. The lady had sent a three-year-old wedder to his house. We had a roebuck from the corrie of Yew-trees; fish from the pool of whittings; and such quantities of cheese, butter, and solid oat-cake, sent by the neighbours round about, as would suffice for as many more—though we were fifty men in number, besides women and children. Grace was said by Lachlan of the Questions (*Lachum ceistear*), the Bible reader. Evan Bân well sustained the hospitable character of the house which he represented. We had an ample and a cheerful feast.

Breakfast over, I set off and played the tune of the *Glasmheir*, while Red Ewen, the old soldier, was marshalling the men. We reached *Guala-nancárn* (the shoulder of the cairns), where the gentry were to meet us; and before we knew where we were, who placed himself at our head but our own young Donald, the heir of the family! He had reached home that very morning, having hastened on without sleep, or rest, all the way from Dun-Edin (Edinburgh). Dear heart! he was the graceful sapling. I could not, for awhile, blow a breath into the pipe. "Play up, Finlay," says Pára Mór. "What sadness has seized you?" "Sadness!" said I; "very far is it from me." The people of the sea-board then came in view, and *Alastair* Roy of the Bay at their head. When the two companies observed each other, they raised a loud shout of mutual rejoicing. We reached the field, and many were the salutations between friends and acquaintances exchanged there.

The sun at length shone forth brightly and cheerfully. On the eminences around the field were the matrons, the maidens, and the children of the district, high and low, all assembled to witness the *Camanachd* (shinty match). The goal at each end of the large field was pointed out, and the two leaders began to divide and choose each his men. "I claim you!" (*Buailiaid mi ort*, literally, "I will strike on thee"), says young Donald. "I permit you" (*Leigidh mi leat*), says *Alastair* Roy of the Bay. "If so," says young Donald, "then Donald Bân, of Culloden, is mine." This was by

the following occasion:—The father of *John Glas*, i.e., Grey John, of Breadalbane, to whom such frequent reference is made in the case of the disputed succession at present, was married to a daughter of the Earl of Caithness. The promised dowry was not paid to him, and he, apparently content with his wife herself as his portion, lived and died in peace with the Lindairs. His son, *John Glas*, however, was of a different mind. Collecting a hardy band of Campbells from the age of thirty-five to that of fifty, he made a secret and sudden raid on the land of the Sinclairs, gathered as much spoil as would cover the amount of his mother's tocher, utterly defeated the Caithness-men, who were unprepared for such an invasion, and, as he was leaving their territory, early in the morning, he summoned the poor women to arise, telling them that their cattle had been lifted, and their husbands wounded.

far the oldest man present, and you would think his two eyes would start from his head with delight as he stepped proudly forth, at being the first chosen.

When the men were divided into two companies—forty on each side—and refreshments set at each goal, *Alastair* Roy flung his shinty high up in the air. "*Bas, no Cas, Donald* of the Glen," said he (i. e., *Head, or Handle*). "Handle, which will defy your handling till nightfall!" replies Donald. *Alastair* gained the throw (toss), and was about to strike the ball immediately, when the other exclaimed, "A truce (*Deis-dé*); let the rules of the game be first proclaimed, so that there may be fairness, good-fellowship, and friendship observed among us as was wont among our forefathers." On this, Evan Bân stepped forth and proclaimed the laws, which forbade all quarrelling, swearing, drunkenness, and coarseness; all striking, tripping, or unfairness of any kind; and charged them to contend in a manful, but friendly spirit, without malice or grudge, as those from whom they were descended had been wont to do.

Alastair Roy, as he was entitled to do, gave the first stroke to the ball, and the contest began in earnest; but I have not language to describe it! The sea-board men gained the first game. But it was their only game. Young Donald and his men stripped to their work, and you would think the day of *Blár na Léine* (Battle of the Shirt)* had come again. Broad John gave a tremendous blow, which

* *Blár na Léine*—Battle of the Shirt. This was a very fierce clan battle recorded in history, and of which tradition preserves a very vivid remembrance. MacDonald, of Moidart, married one of the Frasers, of Lovat. The son and heir, Ronald, was brought up at Lovat, or Beaufort Castle, and was known to his clansmen as *Kaonull Gallda*, or Ronald the Lowlander. At his father's death, he came to take possession; but to the utter disgust of the people, he forbade the killing of ox or sheep for the inaugural feast, saying that poultry would be quite enough. He was at once dubbed Ronald of the Hens, expelled the country with ignominy, and a natural brother, John of Moidart, chosen as chief in his unworthy stead. The Frasers were far too powerful to allow such an affront to pass. They speedily mustered, and, to "make assurance doubly sure," asked, and obtained the aid of some friendly clans in the direction of Strathapey. They invaded Moidart with a force which it was vain for the MacDonalds to resist. They therefore betook themselves to the most inaccessible fastnesses, and made no show of opposition. But whenever the invading host departed, the Moidart-men followed carefully in their track for the southern end of Loch Lochy; the auxiliaries from the east struck off by the Badenoch road, judging their friends quite secure at such a distance from the land of Moidart. At the north end of Loch Lochy, however, quite close to where the Caledonian Canal enters that Loch, the Moidart-men made a fierce onslaught on the Frasers, now left alone. Both parties, it is said, stripped to the waist, and on the "lucus a non lucendo" principle, the battle was called the Battle of the Shirt. Both "Ronald of the Hens" and his father were slain, and the Frasers were defeated with great slaughter. History carries us thus far; but we see in a ballad published by Mrs Ogilvie on the subject, that eighty of the Fraser widows were considerate enough to bear each a posthumous son, and these not only restored the weakened clan, but, as a matter of course, inflicted dread vengeance on the men of Moidart.

sent the ball far beyond the goal. We thus gained the day, and we raised the shout of victory; but all was kindness and good feeling among us.

In the midst of our congratulations Pára Mór shouted out, "Shame on ye, young men! Don't you see these nice girls shivering with cold. Where are the dancers? Play up the reel of Tulloch-gorum, Finlay." The dancing began, and the sun was bending low towards the Western Ocean before we parted. There was many a shin and many a cheek of the colour of the *Blae-berries* (*i. e.*, black and blue) that day, but there was neither hate nor grumbling about these matters.

We returned to the house of nobleness, as on the preceding evening. Many a torch was on that night beaming brightly in the hall of hospitality, though dark and lonely is its state to-day. We passed the night amid music and enjoyment, and parted not until the breaking of the dawn guided us to our own homes.

And now you have some account of the manner in which your ancestors were in the habit of passing New Year's Eve and New Year's Morn'—*Calliunn* and *Cainneal*—in days not long gone by.

I know that people will not now believe me, yet I maintain that many good results followed from

this friendly mingling of gentles and commons. Our superiors were at that time acquainted with our language and our ways. The highest of them was not ashamed to address us by name, in our native tongue, at kirk or market. There were kindness, friendship, and fosterage between us; and while they were apples on the top-most bough, we were all the fruit of the same tree. We felt ourselves united to them, and in honouring and defending them we respected and benefited ourselves. But, except in the case of the one family under whom I now am,

All this has passed as a dream,
Or the breaking of the bubble on the top of the wave.

Our superiors dwell not among us; they know not our language, and seek not to converse with us. Pipers are no more, and even their servants many of our Lairds scorn to take from among their own men. They must have their *Flunkies* from the Lowlands—spindle-shanked *shaughling* creatures, with their short breeches and white stockings, without pith or courage enough to rescue the young heir of the family from the beak of the turkey-cock! Not so were thy men, Donald of the Glen, on the day when "thy king landed in Moidart!"

"WOE BECAUSE OF OFFENCES."

BY J. S. HOWSON, D.D.

WHEN the Bible was translated into English, the word "offence" had a different meaning from that which is commonly given to it now. If you see a blind man groping his way with timid and hesitating steps, and lead him into broken and dangerous ground, so that he falls and is hurt,—by so doing, according to the old English expression, you cause him to "offend." It is exactly what is forbidden in one of the provisions of the Law of Moses, where it is said: "Thou shalt not put a stumbling-block before the blind, but shalt fear thy God." (Levit. xix. 14.) Or if, when a young child is unsuspecting, you place something in his way which may throw him down and bruise him and fill him with fear, that stumbling-block, which you have cruelly placed there, is called, in the language of Scripture, an "offence."

Now apply this to spiritual things, and we see immediately the meaning of the word. "Offences," in the spiritual sense, are the occasions of falling into sin—the stumbling-blocks of the soul. If any man misleads the ignorant into false doctrines or wicked practices,—whether it be done consciously and with deliberate intention, as by the evil spirits and those who imitate them,—or whether it be "the blind leading the blind," so that they both "fall into the ditch,"—such conduct is an "offence." And if any man tempts a child into sin, or one who is like a child in simplicity or in weakness, it

was of *him* that our Saviour spoke when He said (and the child whom He had called was standing there in the midst of the disciples): "Whoso shall offend one of these little ones which believe in me, it were better for him that a millstone were hanged about his neck and that he were drowned in the depth of the sea." (Matt. xviii. 6.)

And then He proceeds to add, in reference to the whole world which He came to redeem:—"Woe unto the world because of offences! for it must needs be that offences come; but woe to that man by whom they come" (ib. 7)—a threefold sentence of warning and of prophecy,—which brings three subjects before our attention. 1. The misery of the world because of the offences or stumbling-blocks of the soul; 2. The inevitable necessity of the prevalence of these offences and the existence of this misery; and, 3. The certain judgment which will fall on those who place these hindrances in the way of the soul's progress from earth to heaven.

The misery of the world arises entirely from sin. Everything that makes sin easier and more prevalent, increases the misery. And nothing makes sin so easy or so prevalent, as the mutual example we set to each other, and the mutual encouragement we derive from each other. It may truly be said, that a very large portion of the life of most men is spent in affording to others the occasions of falling,

and in fulfilling the prophetic words: "*Woe unto the world because of offences!*" I do not speak of open persecution,—of deliberate attempts to corrupt the principles of others, or of the effects produced by flagrant examples of notorious profligacy: but rather of what takes place in the ordinary course of the world's proceedings. Take the world as it is, and view some of its ordinary features. Consider, for instance, some of the common distinctions—as of rich and poor—of educated and ignorant—those, on the one hand, who exercise influence on others—and those, on the other, who are influenced by the former. How do men use their wealth, their power, their talents, their knowledge? The answer is very easy. For the most part, they use them for themselves, without thinking of God. They use them not according to the principles of faith, but of unbelief. And unbelief is the parent of all sin. Their life is a testimony against the necessity of faith. And so far as their temporal advantages or mental superiority may give them influence over others, so far their influence tends in the direction of sin.

Now this principle is evidently applicable to all ranks and all ages of life. For no man is quite without influence. Most men have more than they imagine. Wherever a man is placed, his conduct is an example to those around him. He cannot be worldly and selfish without doing harm. An ungodly habit of mind is a perpetual "offence:" and most men are ungodly. This is true everywhere. Neighbours in a village, children at a school, servants in a household, not only by persecution, by ridicule, by profaneness, but by the silent effect of indifference to religion,—is it not too true that they continually cause each other to stumble and to fall?

But to see the extent of this woe and misery, "because of offences," it is useful to consider this influence, where it is strongest and most marked, by looking at the broad distinctions between man and man, which were alluded to before.

If a man is eminent for his possessions or his power, he is closely observed by his neighbours; he is the subject of their conversation; too often the pattern of their life, and the excuse for their sins. And each of these observers and imitators exerts in turn an influence on others. Each observer is observed again. Each imitator is a pattern to somebody. Now let all these results be considered. Accurately calculated they cannot be: but let them be considered: and it will easily be seen how much harm one man may do, not only by open and shameless iniquity, but simply by a selfish, idle, and worthless life.

Or take another of the important differences between man and man,—that which relates to intellectual eminence, natural or acquired. What harm has been worked by individual men, who have sowed the seeds of error in their day, leaving whole harvests of superstition or profaneness to be reaped by subsequent generations! What power

does the imagination possess to spread mischief and undermine all faith and principle, especially when it is found in those minds where a certain kind of natural beauty assumes the appearance of moral goodness, and when fine and delicate feeling can easily pass current for religion. The experience of the woe arising from this kind of offence, in its highest degree, has been reserved for modern centuries, in which so much of our education and so much of our employment are provided by Books. Who can calculate the mischief which can be done by the bad doctrines, or even by the ill-considered fancies, of one man, when they are multiplied by being printed, and circulated among thousands, and then copied into other books, and made the foundation of new structures of falsehood and folly?

By following such trains of thought as these, we come to take a very gloomy, but a very just, view, of the evil and the misery which pervade the whole of society. However widely we may wander among the tracks of human action and human thought, we find them everywhere strewn with stumbling-blocks. But I believe we might gain a still deeper impression of the woe which comes from offences, if we were to look closely into the best and most sacred portions of our natural human life. The Father, who sets an example of careless ungodliness to his family; the Mother, who by the evident worldliness of her own spirit, justifies all the wickedness of her children; the Brothers and Sisters, who imbue each other with a systematic disregard for what is sacred; the Familiar Friends, who learn and teach the habit of unbelief; the close Companions who come together for mutual encouragement in the forgetfulness of God,—here it is that the worst occasions of falling are to be found. I am content to glance at this part of the subject thus lightly in passing. But the writer on such a subject must ask his readers to look closely into their families and their friendships, and to see what is going on there,—to watch carefully that you "walk in a way wherein you shall not stumble," or rather (since our own unassisted watchfulness is nothing else but slumber and blindness) let us all pray to God that He would "hold up our goings, that our footsteps slip not," and graciously in His mercy prevent us from endangering the footsteps of those whom we love.

It will naturally be felt, that the view we have just taken of human life is mournful and dreary. And it is good that we should feel this, if it helps us to appreciate the extent of human corruption, and really to desire that better life for which we profess to be preparing. It is good for us to feel keenly that we are in a fallen world—that no human power can save us—that our best affections may be made the channels of wickedness—that the natural ornaments of character are quite different from Christian holiness—that every man, however pleasing, is a sinner, and can only be withheld by

God's grace from becoming the occasion of sin in others.

We must now go one step further, and having devoted some lines to the *fact* of that woe which offences bring, must now consider the *inevitable necessity* of their existence, and of the misery they produce.

"*Offences must needs come*" in a world of sinful men. The very constitution of the world makes it inevitable. The disparity which subsists between one man and another, is of necessity the occasion of offences. Sin in the higher classes, must act at a great advantage in its effects on the lower. Legitimate influence can never abdicate its throne. It must reign over its subjects, for good or for evil. Where there is superior wealth or superior power, unless there is also superior holiness, the bad cause cannot but reap the benefit of the difference. Where there is a greater height of intellectual eminence, unless there is also a greater depth of Christian humility, our Enemy will always know how to pervert the best gifts for his own purposes.

There is no possibility of escaping this necessity. Suppose that we could, by some violent effort, alter the constitution of society. Suppose that the rights of property were abolished, and all ranks reduced to the same level. This state of things would not last a day. Industry would soon begin to gather its harvest. Prudence would secure what industry had gained. The quick would outstrip the slow. The strong would defeat the weak. The energetic man would become powerful, and the indolent would sink into insignificance. All the old differences would reappear. And then would follow all that admiration of what is worthless, if it has a name to make it honourable,—and all that imitation of what is bad, if it is sanctioned by the rich,—and all those social hindrances to a good and holy life, which cause men, in the language of the prophet, "to stumble in their ways." (Jer. xviii. 15.)

And again: if education could be equalized, if all men could be suddenly made equally learned or equally ignorant, the old intellectual differences would immediately reappear. The man who acquires the most quickly, who retains the most exactly, who judges the most wisely, would again become eminent; and rising with his eminence, would be felt his Influence. Nothing is more impossible than to push aside the Influence of a superior mind. And since the gifts of the intellect have no necessary connection with moral goodness, you have here again Sin acting at an advantage. You see the man of practical wisdom giving his sanction to the lowest motives:—the man of imagination making the vilest doctrines decent and attractive:—the man of cunning argument entangling the unwary in the meshes of his subtlety: and the result is, in the words of another prophet, that men "grope like the blind and stumble at noon-day as in the night, erring in vision, and stumbling in judgment." (Isaiah xxviii. 7, lix. 10.)

And, just to say one word again of those relations which are still more essential parts of the framework of society,—can the Father divest his actions of that authority which God Himself has given to them—can the Brother or the Sister set a bad example and resolve that it shall not be followed—can the Friend and Companion deliberately lead a sinful life, and forbid its natural and inevitable consequences? No: they cannot. Unless we can dissever those bonds which are nearly all that is valuable here, we cannot unbind that necessity which clasp this fallen world, "offences must needs come."

If such is the hopeless state of the world, if offences must needs come by reason of the very constitution of society, if the "woe because of offences" is inevitable, would it not be better to resign ourselves to that which we cannot avoid? Would it not be better to live easily and carelessly, to enjoy life while we can, though such a life should add a few more stumbling-blocks to those which are almost innumerable already?

Yes! such an argument might have some show of wisdom, if we could divest ourselves of personal responsibility. But the world is governed, not by Fate, but by God: and God has given to every man his own conscience. Though individuals are forgotten in that which we call History, every man has his separate Biography. Though he associates others in his sin, he is alone in the account he must render. Though he is occupied all life long in the busy market of human affairs, the eye of God's observation is ever upon him, and the foot of God's justice follows him to the last. Our blessed Saviour, after He had said that "woe was unto the world because of offences," and that "it must needs be that offences come," added in the third place, "*woe unto that man by whom the offence cometh.*"

He who has thoughtlessly done harm,—he who, by a selfish life, has brought others into sin,—he who has been determined to pursue his profits, his amusements, his fancies and his follies, without any regard to the souls of his brethren, what will he say at the Great Judgment, when Christ reminds him of those words? None of those differences of condition which make in this world the sin of doing harm to others so easy, and its effects so extensive, will remain in the next world to shelter the guilty. All the glory which dazzled and blinded the eyes of men, will fade before the Judge's coming. Everything will be seen as it is. The power which fostered evil instead of good, the wealth which was made the encouragement of sin, the intellect which sowed the seeds of falsehood, the genius which made vice attractive, will be held responsible for the mischief they have caused. The differences of condition and capacity were ordained on earth to be the opportunities of good, and if they have been made the opportunities of evil, all that remains is a greater condemnation. To one is given ten talents, to another five, to another one. No

one can be excused because his responsibilities are heavy, and no one can be excused because they are light. If any one is burdened with the thought of the effect his own miserable infirmities may have on the spiritual welfare of others, let him remember for his encouragement that he that was faithful and most highly honoured by his Lord, was he that had received ten talents. And if any thinks his own position in society is so small and insignificant that he cannot hope to do good and can hardly do harm, let him remember that he that was condemned, was he that received one.

And leaving now these general distinctions, which belong rather to the surface of society, let me glance, for the third time, at the closer and dearer relations of life. If on anyone the woe denounced on him who makes his brother to offend, if on anyone that woe will descend with terrible weight, it will be on him who, being linked to others by the ties of close Friendship, might employ his influence for good, but really employs it for evil;—it will be upon those members of the same Family who live on for years together without ever remembering that they have souls to be saved;—it will be upon the heedless Parent, who, while he is following the dreams of earthly ambition, and occupied with the comforts and amusements of life, forgets that his children are copying his example, and preparing to reproduce or to exaggerate his sins.

It is evident that we have all much reason for serious thought and anxious prayer in the three-fold warning and prophecy of our Saviour. And it is in the light of such responsibilities as these, that we see the value of the doctrines of Grace—of free pardon for the past—of Divine strength for the future. If all the harm we have done in the past could only be cancelled by some righteousness of our own,—if all our hopes of doing good in the future rested on our own sufficiency,—we could not bear to look either backwards or forwards. In either direction the prospect would be intolerable. Here it is, between such responsibilities in the past, and such responsibilities in the future, that we learn to adore that mercy which gives us in Jesus Christ a perfect Saviour, and in the Holy Spirit a sufficient Comforter.

And there is another thing which we see very plainly: and this is the last reflection I desire to leave with the reader.

It is very evident that we have all much to look to in our own conduct, without any need for judging our neighbours. "Who art thou that judgest another man's servant? to his own master he standeth or falleth. Yea, he shall be holden up: for God is able to make him to stand. . . Every one of us shall give account of himself to God. Let us not therefore judge one another any more: but judge thus rather, that no man put a stumbling-block or an occasion to fall in his brother's way." (Rom. xiv. 4—13.) And then the Apostle goes on to say, in allusion to some of the scruples which were

harassing the minds of the Christians of that age—"It is good neither to eat flesh, nor to drink wine, nor anything whereby thy brother stumbleth, or is offended, or made weak." (1b. xiv. 21.) And again he says, in another place, "Meat commendeth us not to God: for neither if we eat, are we the better; neither if we eat not, are we the worse. But take heed lest by any means this liberty of yours be made a stumbling-block to them that are weak. If meat make my brother to offend, I will eat no flesh while the world standeth, lest I make my brother to offend." (1 Cor. viii. 8—13.) Here is the pattern of our conduct—watchful care of the consciences of others; self-denial for their sakes; abstinence from things lawful, if it is likely that our example may be perverted into the occasion of sin. And will you say that such a life is mean, spiritless, and contemptible—a life of miserable bondage, and full of unceasing anxiety?

No, my friends, it is not a mean and contemptible life thus to carry with us, in our daily conduct, the thought of our brethren's salvation. Rather it is a noble and honourable task: for however humble may be our own share in the work, we are helping on that which our Saviour came and died to accomplish. No man can propose to himself a higher honour,—whether it be a man of wealth and distinction who devotes his life to the removal of the causes and occasions of moral disease,—or a man of high intellectual gifts who spends his strength in refuting error and circulating truth,—or a friend who gently softens the prejudices of his friend,—or a poor man, who breaks up the stumbling-blocks which he sees around him, and mends the road of his neighbours to heaven.

Nor is it necessarily an anxious life (though anxiety for the salvation of others is never discreditable). It would be an anxious life, if we were forced to calculate all the results of all our actions. But this must be left to God, who alone can follow the effect of what we do in the moments of our life, to all their remote and future consequences. The wise Christian seeks to maintain a conscience void of offence, and he leaves the result to God. He does not live on the ridiculous theory of doing right that he may set a good example. What is our example worth, unless God vouchsafe His blessing? But *He* will take care that those who serve *Him* shall not live in vain. The lamp that is trimmed will shine and give light. He whose face is set toward Jerusalem, shall not be alone in his difficult pilgrimage.

Need I add that such a life is a happy life—the only life that deserves to be called happy? To live for this world only—to set the example of unbelief—to sanction sin—to help no one to be holy—to discourage everybody,—and then to find at the last that your life has been spent in doing harm, because you never honestly sought to do good:—do you call this a life of happiness? Or is not happiness rather to be found in watching for the causes of evil, in

removing prejudices, in supporting the weak, and comforting the feeble-minded, and then at last in taking others along with us to that world where all the pathways of our heavenly employments shall be free from the possibility of danger,—for the angels

shall have “gathered out of the kingdom of the Son of man all things that offend,” and “the righteous shall shine forth as the sun in the kingdom of their Father. Who hath ears to hear, let him hear.” (Matt. xiii. 41-43.)

REMEMBRANCE.

SHALL I, because I have seen the subject which has been simmering in my mind for several past days, treated beautifully by another hand, resolve not to touch that subject, and to let my thoughts about it go? No, I will not.

It was a little disheartening, no doubt, when I looked yesterday at a certain June Magazine, to find what I had designed to say, said far better by somebody else. But then Dean Alford said it in graceful and touching verse: I aimed no higher than at homely prose.

Sitting, my friend, by the evening fireside: sitting in your easy chair, at rest: and looking at the warm light on the rosy face of your little boy or girl, sitting on the rug by you: do you ever wonder what kind of remembrance these little ones will have of you, if God spares them to grow old? Look into the years to come: think of that smooth face lined and roughened; that curly hair gray; that expression, now so bright and happy, grown careworn and sad; and you long in your grave. Of course, your son will not have quite forgot you: he will sometimes think and speak of his father who is gone. What kind of remembrance will he have of you? Probably very dim and vague.

You know for yourself, that when you look at your little boy in the light of the fire, who is now a good deal bigger than in the days when he first was able to put a soft hand in yours and to walk by your side, you have but an indistinct remembrance of what he used to be then. Knowing how much you would come to value the remembrance of those days, you have done what you could to perpetuate it. As you turn over the leaves of your diary, you find recorded with care many of that little man's wonderful sayings: though, being well aware that these are infinitely more interesting to you than to other people, you have sufficient sense to keep them to yourself. And there are those of your fellow-creatures to whom you would just as soon think of speaking about these things, as you would think of speaking about them to a jackass. And you have aided your memory by yearly photographs: thankful that such invaluable memorials are now possible; and lamenting bitterly that they came so late. Yet, with all this help: and though the years are very few; your remembrance of the first summer that your little boy was able to run about on the grass in the green light of leaves, and to go with you to the stable-yard and look with admiration at the horse, and with alarm at the pig, voraciously

devouring its breakfast; is far less vivid and distinct than you would wish it to be. Taught by experience, you have striven with the effacing power of time: yet assuredly not with entire success. Yes; your little boy of three years old has faded somewhat from your memory: and you may discern in all this the way in which you will gradually fade from his. Never forgotten, if you have been the parent you ought to be, you will be remembered vaguely. And you think to yourself, in the restful evening, looking at the rosy face, Now, when he has grown old, how will he remember me? I shall have been gone, for many a day and year; all my work, all my cares and troubles, will be over: all those little things will be past and forgot, which went to make up my life, and about which nobody quite knew but myself. The table at which I write, the inkstand, all my little arrangements, will be swept aside. That little man will have come a long, long way, since he saw me last. How will he think of me? Will he sometimes recal my voice, and the stories I told, and the races I used to run? Will he sometimes say to a stranger, “That's his picture: not very like him;” will he sometimes think to himself, “There is the corner where he used to sit: I wonder where his chair is now?”

Cowper, writing at the age of fifty-eight, says of his mother: “She died when I had completed my sixth year, yet I remember her well. I remember too a multitude of maternal tendernesses which I received from her, and which have endeared her memory to me beyond expression.” For fifty-two years the over-sensitive poet had come on his earthly pilgrimage, since the little boy of six last saw his mother's face. Of course, at that age, he could understand very little of what is meant by death; and very little of that great truth, which Gray tells us he discovered for himself, and which very few people learn till they find it by experience, that in this world a human being never can have more than one mother. Yet we can think of the poor little man, finding daily that no one cared for him now as he used to be cared for: finding that the kindest face he could remember was now seen no more. And doubtless there was a vague, overwhelming sorrow at his heart, which lay there unexpressed for half a century, till his mother's picture sent him by a relative touched the fount of feeling, and inspired the words we all know:

“I heard the bell toll'd on thy burial day:
I saw the hearse that bore thee slow away:

And turning from my nursery window, drew
 A long, long sigh, and wept a last adieu!
 But was it such?—It was.—Where thou art gone,
 Adieus and farewells are a sound unknown.
 May I but meet thee on that peaceful shore,
 The parting word shall pass my lips no more!”

Nobody likes the idea of being quite forgot. Yet sensible people have to make up their mind to it. And you do not care so much about being forgotten by those beyond your own family circle. But you shrink from the thought that your children may never sit down alone, and in a kindly way think for a little of you after you are dead. And all the little details and interests which now make up your habitude of life, seem so real, that there is a certain difficulty in bringing it home to one that they are all to go completely out, leaving no trace behind. Of course they must. Our little ways, my friend, will pass from this earth: and you and I will be like the brave men who lived before Agamemnon. A clergyman who is doing his duty diligently, does not like to think that when he goes, he will be so soon forgotten in his old parish and his old church. Bigger folk, no doubt, have the same feeling. A certain great man has been entirely successful in carrying out his purpose; which was, he said, to leave something so written as that men should not easily let it die. But that which is nearest us, touches us most. We sympathise most readily with little men. Perhaps you preached yesterday in your own church, to a large congregation of Christian people. Perhaps they were very silent and attentive. Perhaps the music was very beautiful, and its heartiness touched your heart. The service was soon over: it may have seemed long to some. Then the great tide of life that had filled the church ebbed away, and left it to its week-day loneliness. The like happens each Sunday. And many years hence, after you are dead, some old people will say, Mr. Smith was minister of this parish for so many years. That is all. And looking back for even five or ten years, a common Sunday's service is as undistinguished in remembrance as a green leaf on a great beech-tree now in June, or as a single flake in a thick fall of snow.

Probably you have seen a picture by Mr. Noel Paton, called *The Silver Cord Loosed*. It is one of the most beautiful and touching of the pictures of that great painter. I saw it the day before yesterday: not for the first or second time. People came into the place where it was exhibited, talking and laughing: but as they stood before that canvas, a hush fell on all. On a couch, there is a female figure, lying dead. Death is unmistakably there, but only in its beauty. And beyond, through a great window, there is a glorious sunset sky. “Thy sun shall no more go down; neither shall thy moon withdraw herself: for the Lord shall be thine everlasting light, and the days of thy mourning shall be ended.” Seated by the bed, there is a mourner, with hidden face, in his first overwhelming grief. Looking at that picture in former days, I had thought how “at evening time there shall be light:”

but looking at it now, with the subject of this essay in my mind, I thought how that man, so crushed meanwhile, if the first grief do not kill him (and the greatest grief rarely kills the man of sound physical frame), would get over it: and after some years would find it hard to revive the feelings and thoughts of this day. People in actual modern life are not attired in the picturesque fashion of the mourner in Mr. Noel Paton's picture: but it is because many can from their own experience tell what a human being in like circumstances would be feeling, that this detail of the picture is so touching. And the saddest thing about it is not the present grief: it is the fact that the grief will so certainly fade and go. And no human power can prevent it. “The low beginnings of content” will force themselves into conscious existence, even in the heart that is most unwilling to recognise them. You will chide yourself that you are able so soon to get over that which you once fancied would darken all your after days. And all your efforts will not bring back the first sorrow: nor recal the thoughts and the atmosphere of that time. When you were a little boy, and a little brother pinched your arm so that a red mark was left, you hastened downstairs to make your complaint to the proper authority. On your way down, fast as you went, you perceived that the red mark was fading out, and becoming invisible. And did you not secretly give the place another pinch to keep up the colour till the injury should be exhibited? Well, there are mourners who do just the like. I think I can see some traces of that in *In Memoriam*. In sorrow that the wound is healing, you are ready to tear it open afresh. And by observing anniversaries: by going to places surrounded by sad associations: some human beings strive to keep up their feeling to the sensitive point of former days. But it will not do. The surface, often spurred, gets indurated: sensation leaves it. And after a while, you might as well think to excite sensation in a piece of India rubber by pricking it with a pin, as think to waken any real feeling in the heart which has indeed met a terrible wound, but whose wound is cicatrized. All this is very sad to think of. Indeed I confess to thinking it the very sorest point about the average human being. Great grief may leave us: but it should not leave us the men we were. There are people in whose faces I always look with wonder; thinking of what they have come through, and of how little trace it has left. I have gone into a certain room, where everything recalled vividly to me one who was dead. Furniture, books, pictures, piano: how plainly they brought back the face of one, far away! But the regular inmates of the house had no such feeling: had it not, at least, in any painful degree. No doubt, they had felt it for awhile, and outgrown it: whereas, to me it came fresh. And after a time it went from me too.

You know how we linger on the words and looks of the dead after they are gone. It is our sorrowful protest against the power of Time, which we know is taking these things from us. We try to bring

back the features and the tones : and we are angry with ourselves that we cannot do so more clearly. "Such a day," we think, "we saw them last : so they looked : and such words they said." We do *that* about people for whom we did not especially care while they lived : a certain consecration is breathed about them now. But how much more as to those who did not need this to endear them ! You ought to know the lines of a true and beautiful poet, about his little brother who died :—

"And when at last he was borne afar
From the world's weary strife,
How oft in thought did we again
Live o'er his little life !

"His every look, his every word,—
His very voice's tone,—
Came back to us like things whose worth
Is only prized when gone !"

I wish I could tell Mr. Hedderwick how many scores of times I have repeated to myself that most touching poem in which these verses stand. But I know (for human nature is always the same) that, when the poet grew to middle age and more, those tones and looks that came so vividly back in the first days of bereavement, would grow indistinct and faint. And now, when he sits by the fire at evening, or when he goes out for a solitary walk, and tries to recal his little brother's face, he will grieve to feel that it seems misty and far away.

"I cannot see the features right,
When on the gloom I strive to paint
The face I knew ; the hues are faint,
And mix with hollow masks of night."

And you will remember how Mr. Hawthorne, with his sharp discernment of the phenomena of the mind, speaking in the name of one who recalled the form and aspect of a beautiful woman not seen for years, says something like this : When I shut my eyes, I see her yet, but a little wanner than when I saw her in fact.

Yes ; and as time goes on, a great deal wanner. I have remarked that even when the outlines remain in our remembrance, the colours fade away.

Thus true is it, that as for the long absent, and the long dead, their remembrance fails. Their faces, and the tones of their voice, grow dim. And sometimes we have all thought what a great thing it would be to be able at will to bring all these back with the vividness of reality ! What a great thing it would be if we could keep them on with us, clearly and vividly, as we had them at the first ! When your young sister died, oh how distinctly you could hear, for many days, some chance sentence as spoken by her gentle voice ! When your little child was taken, how plainly you could feel, for awhile, the fat little cheek laid against your own, as it was for the last time ! But there is no precious possession we have which wears out so fast as the remembrance of those who are gone. There never was but one case where that was not so. Let us remember it as we are told of it in the never-

failing Record : there are not many kindlier words, even there :

"But the Comforter, which is the Holy Ghost, whom the Father will send in my name, He shall teach you all things, and bring all things to your remembrance, whatsoever I have said unto you."

So you see in *that* case the dear remembrance would never wear out but with life. The Blessed Spirit would bring back the words, the tones, the looks, of the Blessed Redeemer, as long as those lived who had heard and seen Him. He was to do other things, still more important ; but you will probably feel what a wonderfully kindly and encouraging view it gives us of that Divine Person, to think of Him as doing all that. And while we have often to grieve that our best feelings and impulses die away so fast, think how the Apostles, everywhere, through all their after years, would have recalled to them when needful, *all things* that the Saviour had said to them ; and how He said those things ; and how He looked as He said them. *They* had not to wait for seasons when the old time came over them ; when through a rift in the cloud, as it were, they discerned for a minute the face they used to know ; and heard the voice again, like distant bells borne in upon the breeze. No : the look was always on St. Peter, that brought him back from his miserable wander : and St. John could recal the words of that parting discourse so accurately, after fifty years.

The poet Motherwell begins a little poem with this verse :—

"When I beneath the cold red earth am sleeping,
Life's fever o'er,—
Will there for me be any bright eye weeping
That I'm no more?
Will there be any heart sad memory keeping
Of heretofore?"

Now that is a pretty verse ; but to my taste it seems tainted with sentimentalism. No man really in earnest could have written these lines. And I feel not the slightest respect for the desire to have "bright eyes weeping" for you ; or to have some vague indefinite "heart" remembering you. Mr. Augustus Moddle, or any empty-headed lackadaisical lad, writing morbid verses in imitation of Byron, could do that kind of thing. The man whose desire of remembrance takes the shape of a wish to have some pretty girl crying for him (which is the thing aimed at in the mention of the "bright eye weeping") is on precisely the same level, in regard to taste and sense, with the silly, conceited blockhead who struts about in some place of fashionable resort, and fancies all the young women are looking at him. Why should people with whom you have nothing to do weep for you after you are dead, any more than look at you or think of you while you are living ? But it is a very different feeling, and an infinitely more respectable one, that dwells with the man who has outgrown silly sentimentalism ; yet who looks at those whom he holds dearest ; at those whose

stay he is, and who make up his great interest in life; at those whom *he* will remember, and never forget, no matter where he may go in God's universe: and who thinks, Now, when the impassable river runs between,—when I am an old remembrance, unseen for many years,—and when they are surrounded by the interests of their after life, and daily see many faces but never mine; how

will they think of me? Do not forget me, my little children whom I loved so much, when I shall go from you. I do not wish you (a wise good man might say) to vex yourselves, little things; I do not wish you to be gloomy or sad: but sometimes think of your father and mother when they are far away. You may be sure that, wherever they are, they will not be forgetting you.

A. K. H. B.

HEARTLESS DECEPTIONS.

BY DR. JOHN CROSSWATHE.

THE biography of a rascal, if truthfully and briefly written, would probably show the same changes in families which we see in respectable society. A father and mother, living on the borders of what have been very affectedly called "guilt gardens," carry on the occupation of "duffers." The father is a tailor; the mother hunts about the drapers' shops for pieces of cheap cloth: the father makes up these pieces into showy garments; the mother pawns them at various pawnbrokers for the highest loans she can obtain for them—generally a little more than their full value. The pawn-tickets are sold separately or in bundles, most probably to play a part in another form of swindling.

If any moralist or teacher were to call these people to account for their occupation, they would consider themselves insulted. They regard themselves as traders making the most of a little capital. They think they are far better than some of their neighbours, and as good as most of them. The frauds of adulterating tradesmen, users of light weights, and sellers under false pretences in more exalted spheres of trade, unfortunately, seem to warrant their deceptive dealings.

What, by a stretch or tolerance, may be considered as being only sharp trading on the part of this father and mother, becomes, by a law of progression or divergence, rank swindling on the part of the son.

The son, made useful from necessity from time to time in pawning the clothes manufactured by his father, becomes familiar with deception. The different uses that may be made of pawn-tickets unfold gradually before him, and if his parents seek to keep this knowledge from him, with the usual keenness of childhood he arrives at it in spite of them. When he starts in the world to get his own living, he probably fancies he sees a way to profits far larger than his father's. Gathering tickets from other "duffers,"—from pawners of duffing watches, duffing jewellery, and duffing cabinet-work; getting also a few made-up tickets from unscrupulous pawnbrokers who wish to sell their unsaleable stock at a good profit, he makes his bow to the public as a "struggling tradesman." The struggling tradesman has always pressing need of ten or twenty pounds to meet a bill, to extend his busi-

ness, or to purchase a beneficial lease; he is always willing to give a five or ten-pound bonus if accommodated with this money for a fortnight or three weeks, and to deposit property with the lender worth four times as much as the required loan. He offers one or two thousand per cent. per annum with excessive security, and advertises almost daily in various forms for tenders. That his advertisements succeed we are bound to believe, because of their regular appearance; and they generally take one or other of the following forms:—

"CASH £50.—£20 given for the IMMEDIATE LOAN of £50 for one week only. Security worth £200 (real, and convertible at a moment's notice) deposited.—Address Alpha, Post-Office, Ludgate Hill."

"MONEY—£25.—A small manufacturer of ten years' standing REQUIRES this SUM till the 30th instant. To insure the punctual return, will deposit real security to treble the amount, and pay £7 for the accommodation. Address X., Money Order Office, Blackfriars' Road, S."

"A BONUS of £8 will be given for the use of £20 for seven days. Security to the value of £100 will be deposited. Address Bonus, Manchester Street, King's Cross."

This form of swindle has now been more or less practised for twenty years; and the somewhat greedy victims who lend their money on bundles of pawn tickets or sham jewellery, tempted by the extravagantly high rate of interest promised, can hardly be astonished when they find that the security is almost worthless. When they redeem the pledges, they ought not to feel surprised that they have been throwing good money after bad, and are left in possession of property made for pawning and nothing else.

There are many schemes which the full-blown swindler tries besides this money-borrowing business, and none probably pay him as well as the sham "Loan Societies." By starting on the assumption that one-half of the world are fools, and that a large proportion of that half are generally in want of money, he is able to extract the largest amount of plunder with the least possible amount of risk. Without the courage of the burglar or the physical strength of the garotter, he arrives at far more

profitable results by merely dodging behind a screen. Under cover of the "Good Samaritan Loan and Discount Association," or some title likely to inspire equal hope and confidence, he attracts unwary dupes from every corner of the country. With a little capital, no scruples, and a large share of low cunning he has founded a business which nothing seems able to destroy. Exposure may follow upon exposure with little or no effect. Persistent prosecutions may secure one member of the gang, but another springs up directly to supply his place. Victims wearied by paying "inquiry fees" which bear no fruit, may be taught prudence in time, or may learn it from heavier losses and the warnings of magistrates; but still a fresh flock is always ready to be fleeced. Just as the billiard-sharper seldom fails to find a ready listener who believes him to be a clergyman's son just come into possession of several thousand pounds, so the sham loan-office keeper is seldom without believing applicants. A certain number of weak but respectable people seem to have formed themselves into a society for the encouragement of scoundrels, and we can therefore hardly wonder that swindlers increase and thrive. It appears, from a hundred cases brought forward in the course of the year, that such swindlers have only to ask and to have. They merely shake the boughs, and the willing fruit drops into their ready mouths. They enjoy an unwholesome security because the law is uncertain, because prosecutions are expensive, and because people who have been swindled often object to be paraded as dupes.

When the "struggling tradesman" buds into the "capitalist," and becomes the manager and owner of a sham "Loan Office," he generally derives his profits from inquiry fees. He entertains no application for loans without a cash deposit to pay for all the supposed necessary inquiries as to the respectability of the applicant, &c. As two or more sureties are always demanded, this gives an excuse for extracting more fees to pay for inquiries touching the securities, and it is almost needless to say that these inquiries never prove satisfactory. The applicants for loans are generally dismissed with letters declining their propositions with thanks, and they may think themselves fortunate if the swindle proceeds no further. Sometimes the capitalist, however, is encouraged to extract much more from his victims by promising the loan on receiving a pre-payment of the first year's interest. This is greediness which brings him within the grasp of the law, and is almost sure to lead to the break-up of the office. A gang of "capitalists" of this kind was very recently exposed and convicted, but not before their members had swindled successfully for two or three years. They consisted of a laundress, a bill-sticker, a commission-agent, a quack who had once been imprisoned for eighteen months for swindling under pretence of curing deafness and diseases of the ear, and one or two other members equally disreputable. Their office was only a

dilapidated tenement in a low neighbourhood, but they succeeded by reason of the uninquiring faith of their dupes, and their own bold and unsparing use of the best banking and commercial names. They advertised in country papers that post-office orders were to be made payable to Gurney, Lindsay, Twining & Co., and were gladdened by receiving thirty or forty communications a day. One letter, stopped by the police, contained thirty pounds sent up as payment of a year's interest in advance on an expected loan of five hundred pounds, and many other letters were intercepted, which showed how easily people might be defrauded of their money.

The thorough swindler is heartless enough in his management of these sham loan offices, but he thrives upon other swindles which are even more heartless. He preys without remorse or pity upon a peculiarly helpless class,—that large, struggling, needy, and believing body who are always seeking employment. A new occupation, or a new invention, is often used by him as a new mask, under cover of which he carries on his frauds. The sewing machines seem to have been the last invention which the swindler has made use of. He puts an advertisement in one of the morning papers headed, "Highly advantageous to young ladies in search of employment," in which he sets forth that the advertiser, who carries on an extensive business, will teach applicants the art of using this machine, and obtain them profitable work when they become proficient, for a fee of half a guinea. The applicants, mostly needy females, scrape up the necessary fees, pay them over to the supposed thriving tradesman, attend at his office, see three or four cheap machines at work for a few days, at the end of which time the machines and their swindling owner disappear together. Hundreds of shops in faded or half-developed neighbourhoods seem to exist only as empty traps, to be occasionally baited by swindlers of this description.

The most common swindling appeal to the pressing wants and scanty purses of females seeking employment, comes in the shape of a "Registry Office"—a parlour fitted up as a general business agency web in which to catch the poor flies who are seeking for situations. These offices are found more or less thriving in every quarter of the town, but particularly in neighbourhoods where the population is dense and has to fight for its living. The proprietors of an agency office of this kind generally fix themselves on some terrace of fading respectability, where they herald the approach of that decay which gives up mansions to small brokers and cheap photographers. They put a black board outside the house where the delusive registry is to be established, and on this they paint the words, "Advertising, Registry, and General Business Agency Offices." This board, with a table, a couple of chairs, and a desk, placed in the front parlour or reception room, constitutes all the "plant" of the office.

The first thing which the keeper of this place

does is to buy regularly two or three of the newspapers most noted for their miscellaneous advertisements, and to copy on slips of paper all those announcements which relate to vacant situations. The names of the persons advertising are carefully omitted from these copies, the object being to attract applications to the "office" and to extract fees. These slips of paper are pasted on the black-board, in a column headed "Vacant," and are made to appear as if they were original applications for servants sent to that particular "Registry."

When applied to by a person writing to accept one of these situations, the keeper of the office charges a fee which varies from sixpence to half-a-crown, according to the look of the applicant. In exchange for this payment, the address of the employer is given, and that is all,—a piece of information which might have been learned from the newspapers. If the fee has been made large enough to entitle the applicant to the first suitable situation which may come to the knowledge of the office-keeper, a few stamps for postage are demanded to cover letters to employers. These letters are often written, because they help to advertise the office, and often lead to a few genuine

applications from employers for servants, which mix well with the borrowed advertisements. Advertisements concerning "businesses to be disposed of," "apartments, warehouses, and shops to let," "articles lost or found," and "servants wanting situations," are also freely borrowed or stolen. In some of these offices an extra fee is charged, which binds the office-keeper to pay for the insertion of one special advertisement in a leading London newspaper, if he fails in obtaining a situation for the applicant within a week. He keeps to his contract by inserting the advertisement, but, by making it sufficiently general, and having the answers addressed to the office under initials, he makes it satisfy a dozen applicants to whom he may be bound in the same way. The whole system is based upon fraud and deception. It is as heartless and cruel as that other system by which applications are encouraged for posts long filled, though formally advertised as open, that a few joint-stock directors may keep up appearances, and seem not to have favoured their friends. By both systems the time and money of the poor are recklessly wasted, and false hopes are held out to those who are already sick with hope deferred.

RHODA; OR, THE WHISTLE.*

INSCRIBED TO THE HON. LORD ARDMILLAN.

A FAIR young girl sat working by the fire ;
Her nimble fingers plied the twinkling wire,
Knitting, the while she read the Book of Grace,
Till a soft light stole radiant o'er her face,
And hid some lines of passion and regret,
Which marred the lines of beauty where they met.
For something—somewhere—what I cannot tell—
Faint and diffused and undefinable ;—
Or in the large grey eyes that strangely gleamed
'Neath drooping lids, as one that inly dreamed ;
Or in the full-lipped mouth, where some old pain,
Now changed to pensiveness, would still retain
A tremulous place ; or in the pallid cheek
That flushed too often with a hectic streak—
I wot not which, but something seem'd to say,
Lo ! now the sin hath all been washed away.

A simple room, but neat and clean : a bed
Stood in a corner, draped in white and red ;
A tall geranium on the window ledge
Breathed perfume from a leaf with silvered edge ;
And over that a caged linnnet sung ;
And dim old prints around the walls were hung—
Eve plucking the sad fruit by which man fell,
A Jesus with the woman at the well,
A Magdalen redeemed from cruel fate,
A Pilgrim hastening to the wicket gate,

In flaming tints a Prodigal's return,
And Death with mowing scythe and funeral urn.
Such pious help the simple worshipper
Still craves from art, debased and secular ;
Craves, yet forbids the chief inspiring theme,
Of Him whose "lifting up" draws all the dream
Of beauty up to Him, by reverence
And purity and high religious sense ;
Making all sacred that its task may be
Crown'd with the bleeding Love upon the accursed
tree.

The fair young girl sat working by the fire,
With nimble fingers on the twinkling wire ;
And by her side a woman old and grey,
Whose wrinkles told of years of kind decay,
And of a simple heart that did not spin
An age of sorrows from remembered sin.
Grey time had marr'd her beauty, yet was she
Gentle and bland, with smiling courtesy
Nicely old-fashioned, and the tender grace
Of wise consideration in her face.
Round her white locks a close white cap was pressed,
And purest muslin folded o'er her breast,
Smelling of rosemary and lavender,
And old and fine, and darned with meikle care ;
And the big Bible in her blue-vein'd hand
Opened where "Jesus wrote upon the sand."

* This story is substantially true, though here somewhat disguised, for reasons which will be understood by those acquainted with the circumstances.

An aged woman wrinkled now and grey,
And all her wisdom in a good heart lay,

"The fair, young girl sat working by the fire,
With nimble fingers on the twinkling wire;
And by her side a woman, old and gray,
Whose wrinkles told of years of kind decay."

And all her knowledge in the book of God,
 And all her schooling in his chastening rod.
 Thankful she was to Him who guides our ways,
 And whose rich mercies compassed her with praise ;
 But lowly too, herself esteeming not,
 Save as a servant happier in her lot
 Than in her service faithful, being led
 In a straight path and helped and comforted.
 Some sorrow had she known ; but she had found,
 Hid in its wrappings, joy of God profound,
 And peace and love and sense of grace supreme,
 Which are the heart of grief. For still we deem
 That every keenest pain and carking care,
 Like the sharp winds of the autumnal air,
 But loosen tender roots, to earth that cling,
 And ripen the ear for heaven's great harvesting.

Strange contrast showed the pair in that small room,
 She old and grey, and she in beauty's bloom :
 Yet the grey woman, mellow with grace and truth,
 Had in her heart the freshness of her youth,
 Had in her face a light serene and clear,
 Had in her voice a tone of blithesome cheer,
 Happy as when they bind the yellow grain,
 Or swathe the hay, or pile the creaking wain,
 Mid sun-brown'd mirth, upon the clover lea,
 With breath of kine and milkmaids laughing free.
 While that fair girl, although a splendour broke
 And beam'd o'er all her beauty, as she spoke,
 Look'd weary with a world's experience,
 And pining for remembered innocence,
 And older in the burden of her thought
 Than aught that wrinkling Time hath kindly
 wrought ;—

Weary and pining, and the grey eyes seem'd
 To gaze far off as one that only dream'd.

She said, "He loved us, and for loving died,
 He took our sins, and He was crucified ;
 In guilt-doomed innocence the Man Divine
 Clasped the shamed cross, and made no other sign.
 And what if, dying, I could thus atone
 For ills I've borne, and bear the grief alone ?
 Or what, if it is wrong in such as I
 To dare comparison with thoughts so high ?
 I know not. I have had fond dreams of good
 Which still returned, like swallows, home, to brood
 In one bright nook which to my heart was given,
 As a sweet window, to look through to heaven ;
 And there they sang, and sweetened life to me,
 Though sometimes terrible in their purity.
 But now I vex you—may be, I am wrong ;
 And shall I sing you then the evening song ?"

"Yes, sing to me ; I like to hear you sing ;
 Better is praise than sad remembering ;
 Better is praise for blessings we have got
 Than wrestling with the universe of thought ;
 Better is praise for woman than to try
 Conclusions with a strange philosophy.
 And in the light of some heroic dream
 Often our daily, homely duties seem

Common and dull, with nothing great to do ;
 And then there's nothing done. The wise and true
 Crave not for lofty tasks, but turn the small
 To greatness by the great heart doing all
 For God. At any rate, the past is gone,
 Nor can our sorrows for its ills atone ;
 But there's a grace of wise forgetfulness,
 The while we forward reach and onward press :
 Let the dead past be buried. It will calm
 Our thoughts now if you sing the evening psalm."

Then rose a voice in song, that once had been
 Liquid and mellow, and round and soft, I ween ;
 Now broken and sad, yet with a pathos sweet,
 And all was feeling true and worship meet.

O blessed Jesus, Christ of God,
 Who this weary earth hast trod,
 Bearing all the sinner's load ;
 Gracious Jesus, let me rest
 On thy promise, on thy breast
 Which the Magdalen hath pressed.

O sweet Jesus, Rose of Sharon,
 Mighty Jesus, Rod of Aaron,
 Making streams flow as we fare on,
 Grant me faith and love and peace,
 Bid my wandering thoughts to cease,
 Give me life and more increase.

Saviour—Brother, King of Glory,
 Heir of all the ages hoary,
 Crown and flower of Time's great story,
 Despised, rejected, crucified,
 Wash me in the crimson tide
 Flowing from thy wounded side.

Take me, Father, for thy child ;
 Keep me, Jesus, meek and mild ;
 Spirit, calm my passions wild ;
 And the glory shall be thine,
 God of our hope, and Man Divine,
 Saviour of the world, and mine.

And then they knelt to Him that heareth prayer,
 And knew He heard, and felt that He was there,
 An ear unseen, a Father's loving heart
 Throbbing with all the good He would impart
 To all his creatures ; and they spake to Heaven
 About the ransom that for us was given,
 About the sins which had defiled the day,
 About the grace that cleanseth sin away,
 About the comfort of his staff and rod,
 About the peace that resteth all in God.
 O happy in this prison-house of clay,
 To whom the grace is given to love and pray !
 Rich in their poverty—though lowly, high—
 Strong in their weakness—living while they die—
 Still hating sin, the more it is forgiven ;
 Still blessing earth the more the more they live for
 heaven !

Now, rising from their knees, peaceful and calm,
 Soothed by the worship, strengthened by the psalm,

The younger to the window softly went,
And stood and mused, with silent soul, intent
On something far off in the misty years,—
The grey, vague eyes more vague through gathering
tears,

Half-conscious. 'Twas a peaceful winter night,
Windless, and with a pale, diffused moonlight,
Although the moon was hid by falling snow
Whose broad flakes glimmered wavering to and
fro,

And feathered all the air, and softly fell,
Ghostly, on the white streets. A distant bell
Rang, muffled, from the steeple; and it seemed
Almost a silent world which she had dreamed,
Save that a cracked voice quavered a street-song,
Or a short laugh rose from a passing throng,
And here and there a hazy glimmer showed
Where a lamp burnt, and here and there the road
Was shadowed by a carriage rolling by;
But all was still as ghostly scenery;
So deep the calm, the very sounds appeared
To mark the silence more than to be heard:
When suddenly there rose in the still air
A long, low whistle strange, that seem'd to bear
On its weird notes a burden of loneliness,
And passion of a wild heart's fierce distress,
And wilful; and it ceased with a sharp strain
Of power impatient, touch'd with some keen pain.

A weird unhappy sound! what could it be
That through the wan night wailed so eerily?
And why did Rhoda blanch so deadly pale,
With frighten'd ghastly look, as when a tale
Of horror, told at midnight, seems to find
Sure confirmation in the crannied wind,
Breaking the troubled silence suddenly,
And answering to the thought? so pallid she
Stood at the window, fascinate, and press'd
Her trembling palms upon her heaving breast,
And gazed into the night, and saw the snow,
Each quivering flake that trembled to and fro,
And heard the crack'd voice, and the muffled bell,—
And the snow crunching where a footstep fell,—
All senses living, tense, with eager pain,
All seen and heard and felt, yet nothing plain,
Save terror of an apprehended ill
Making the heart beat wildly audible.
When hark! again that eerie wail arose,
And rung more clear its sharp, impatient close,
And ceased abrupt; and with a cry of fright,
A low, wild moan, she rush'd into the night.

That night went by in sorrow, and fear, and pain,
And the next day, and then the night again;
Another day of clinging hope arose,
Another night of dread crept to a close;
Three days of hope to see her face once more
Brightening in beauty at the open door;
Three nights of wonder, fear, and weariness,
And idle speculation and distress;
For she had won that aged woman's heart
By many a stroke of simple loving art,

And by a certain greatness in her mind,
And by a nature womanly and kind,
Which her life's error did awhile encrust
And overlay with wasteful envious rust,
But could not all destroy. Three days went by,
And wonder ceased to wonder dreamily;
But on the fourth a shuddering whisper ran
Through all the town about a murder'd man
Found 'mong the spotted rushes of a fen
That swamp'd the oozy bottom of a glen
Among the neighbouring hills—a cursed place!
And there the dead lay with his ghastly face
Upturned to heaven amid the slushy snow,
The spotted rushes wavering to and fro,
And red with spouted blood, and whispering low.

Keen search was made; and by-and-by the scent
Tracked one but late returned from banishment;
But not alone he stood, alas! for she
Was strangely mixed with the fell tragedy.

The court assembled; they were at the bar;
He, with a scowl of grim, defiant war,
Fronting the judge; a fierce, impassioned soul,
Wilful and reckless, scorning the control
Of Law and Love: but she was rapt and high,
And in the glory of an ecstasy,
Beautiful, saintly, tranquil and serene,
Radiant inscrutably, as you have seen
The heaven-light mantling some entranced face
At the high sacrament of love and grace.
You could have sworn her innocent as a child,
Pure as a lily, white and undefiled;
When lo! she rose, and casting back her hair
From her pale face, said with a lofty air:
"Guilty, my Lord; and guilty I alone;
This man is innocent—let him begone,
And let my death for many ills atone."

A moment's hush, and then the startled crowd
Murmured astonishment, or wept aloud.
Deeming her true to love's mysterious law,
Divine, and good, and beautiful, they saw
The false word rooted in a heart of truth,
And pitied her great sorrow and her youth,
Which falsely lied—and still the lie is ill—
But truly loved—and love is holy still;
So they would have her false that she might be
True in her soul to that high mystery.
And the great crowd swayed, sobbing, to and fro,
And bright eyes dimmed, and strong men whispered
low,
With choking syllables of tenderness,
Esteeming her false word a fairer grace
Than truth had been in such an evil case.
The judge was strangely moved; yet only said,
"Record, the female panel 'guilty' pled,
And let the case against the man go on
To proof." But still she cried, "Let me atone
For all his sin—he is not fit to die—
Leave the great God to search the mystery.

What more is needed?—it is Heaven's own way—
 'Tis fit that one should die; but if it may
 Consist at all with your inhuman law—
 I have a father living—do not draw
 The furrows deeper on his broken heart
 By searching out the name he did impart
 Unto the baptism-child long years ago
 In the grey kirk of God. He has had woe
 Enough from me already; let him die
 Unburdened with that needless agony.
 And bury me not in prison: lay me there
 Beside my baby—*He* will tell you where.
 So let the end come—best that I should die;
 Guilty, my Lord, and guilty only I.”
 And the great tears flowed down her pallid face,
 Looking on him with pitiful tenderness—
 A sorrowful, yearning, half-upbraiding glance,
 All haloed with a loving radiance.

There was a sound of weeping in the crowd,
 And sorrow and amazement sobbed aloud;
 An instinct deep of incredulity
 Murmured refusal of her guilty plea,
 Discerning that the falsehood of her tongue
 Was rooted in true love. And she was young
 And beautiful, and had a mournful air
 Of pathos now and patience and despair.
 And the Judge wiped his clouded glass, but saw
 No better; and he spake of Roman Law
 Confusedly, and dashed the tear aside,
 And ordered silence. But she only cried,
 “Let me atone—he is not fit to die—
 And I am weary of life's long agony.”

The trial sped, the proof was led; the truth
 Soon shaped itself most clearly. In her youth
 She loved this man, a guileless village maid,
 Loved all too trustfully, and was betrayed.
 But yet content, if he was only near,
 To brook the scorn, and hide the bitter tear,
 For him to wreath the face with cheerful smiles,
 And win his better heart with tender wiles,
 Through dreary years of outrage and neglect,
 And shame and wrong and loss of self-respect,
 She loved him, clinging to his falling fate,
 As ivy clasps a ruin desolate,
 And clothes its wreck with beauty, where sweet birds
 Nestle and sing; so she with gentle words
 And kindly ministry of love sublime
 Tempered his fate, and soothed the evil time,
 Still finding in meek constancy relief,
 And in the full acceptance of her grief
 A gracious penitence, amid whose fears
 A gracious Heaven made rainbows in her tears.
 Yet ere those years he was not wholly ill;
 But wild and passionate, with imperious will
 Self-confident, which oft to woman seems
 The true heroic strain, if only gleams
 Of generous courage break the selfish gloom;
 And there she finds her idol and her doom.
 But evermore the passion fiercer grew,
 And evermore the wilful temper knew

Less good restraint, and selfish evermore,
 The loveless heart, now rotten to the core,
 Vaunted, as trophies proud, that he had trod
 On broken hearts of man and laws of God.

At length his course seem'd ended; he was sent
 For many crimes to distant banishment;
 And happily she found a home the while
 Where sunless days began again to smile.
 That aged woman, wrinkled, thin, and grey,
 Might not in idlesse waste her years away,
 For in her sorrow she had found the joy
 Which man can neither give nor yet destroy;
 And now, with kindly pity, yearned to draw
 Others to Him who was her life and law.
 And chief her pity was on woman bent,
 Being most womanly; and thus she spent
 Her days, and thoughts, and prayers, and scanty
 all,

For rescue of the hapless who might fall
 By guile, or snare, or folly into sin,
 And them to better ways and better thoughts to
 win.

So in his happy home beside the sea,
 The blither still its brightening hearth may be,
 The more it ring with laughing children dear,
 And warm with mother love and wifely cheer,
 Still as the goodman hears the booming wave
 Break on the beach, and o'er the skerry rave,
 He thinks upon the hapless castaway,
 The drifting wreck, the boat amid the spray,
 And ever the more his mercies are so great,
 His pity stirs for their untimely fate,
 Nor rests until the dripping sailor boy
 Breathes on the bed, and fills their hearts with joy:
 So she, in sacred peace, beside the sea
 Of darkened, troubled life and misery
 Watched, scarcely patient of her happier lot,
 While the wild tide surged round the tranquil spot,
 Speaking unspeakable sorrows. Rhoda found
 A home with her, and in its hallowed ground,
 Some years, had toil'd in patient duty meek,
 Reclaimed the lost, and strengthened oft the weak,
 And lived a life of lowly penitence
 And mercy sweet and fruitful diligence,
 And walked with God in peace, and truth, and
 love,

Kissing the rod, the while she looked above:
 Till that sad night when, through the falling snow,
 She heard his call recalling all her woe,
 And yet in fearful love unto his side must go.

The rest was all uncertain, save that he
 Had plainly wrought the fateful tragedy.
 But was she also guilty, as she said?
 Could those fair hands, so womanly, have shed
 Blood in the rushy fen, which often soothed
 The fevered hour, and oft the pillow smoothed
 For sick and weary souls? Until the close,
 Sullen he stood, regarding all as foes—
 Jury and judge, and laws of God and man—
 And grimly sneering, still his pleading ran,

“She says I’m innocent and unfit to die ;
 She says she’s guilty, and fain to Heaven would fly.
 My Lord, so be it ; I had rather stay ;
 It’s not so bad a world as people say ;
 At least, I know no better ; I’m content
 To stay a while ; but wherefore keep a saint
 In this bad world of sin and punishment ?”
 And bitterly he laughed ; and saw with pride
 A shuddering horror creep on every side.
 For he had reached the pitch of scornful hate
 When the wild heart can triumph, high elate,
 To outrage all the instincts deep of good,
 As flowers and fripperies of weak womanhood.
 But ere the doomster spake the words of doom,
 He rose in the dim twilight’s dusky gloom,
 Perchance half-touched by her meek, patient air,
 Perchance remorseful for her mute despair,
 Perchance remembering brighter, better days,
 And all her gentle love and tender ways ;

And lifting up that drooping lily’s head
 With a rough tenderness, at length he said,
 “My Lord, this farce, or tragedy, or how
 You please to call it, may be ended now :
 I did the deed, even as I swore to do
 When I was yonder, where you sent me to—
 A nice place for repenting of my sin,
 With company and time to do it in.
 No matter. As for her, if prayers and tears,
 And preachments making hours as long as years,
 Are guilt, then she is guilty ; for she hung
 About my neck, and pray’d to God, and sung
 Old psalms of David till she drove me mad ;
 I scarce had done it, but she looked so sad,
 It made me spiteful ; as for aught beside
 She knew no more than her own babe that died
 Long years ago. There now, I’ve righted you.”
 And with a mighty curse he swore the girl was
 true. ORWELL.

A WORD OF REMONSTRANCE WITH SOME NOVELISTS.

BY A NOVELIST.

SHADES of Shakespeare and Sir Walter, what would you think of our new heroines, our charming criminals, our fascinating plots of mystery and wickedness ? You dealt with wickedness, but you had a simple habit of calling things by their right names, and awarding vice its true desert. Suppose your tragedies and novels were re-written in the present day, how all would be changed. Lady Macbeth would wash her little hands quite clean ; then having disposed of Macbeth by a lucky accident at Dunsinane, would marry Malcolm Canmore, or become a second wife to Macduff.

Othello, after his murder of Desdemona, would think better of it and only slay Iago, not himself. He would then begin life anew with Emilia, who would lay aside her guile and hardness for the occasion, and start afresh sincere and transparent as the day,—filching no more handkerchiefs, putting them to no more treacherous uses. You can easily fancy her hanging over the cradle of her first-born little Moor. Would she ever hear “Willow, Willow,” I wonder ? Othello and she would rather sing, “Happy, tawny Moor” together, and be content.

Cordelia would have no interest for us as the sweet low-voiced daughter of Lear. Pooh ! Cordelia, where would be the excitement in so tame, commonplace, milk-and-water, bread-and-butter character and feelings as hers ! All our sympathies would fly to Regan and Goneril, “sublime in passion,” spurning weakness, loving “not wisely but too well,” wild in love and hate. What a pity that one or other was not rewarded by being suddenly transformed into a dying saint, if not into a bountiful, blessed wife and mother !

We would have no time to waste over Portia’s pleading, unless there was an ugly suspicion that

she had in her early youth, when she bought her necklaces, entered into a private marriage with Shylock, who had so far forgot his ducats as to become enamoured of the high-spirited Christian maiden.

In the modern version Rebecca would elope with Bois Gilbert, and, returning penitent, wed poor Ivanhoe.

And with regard to Jeanie and Effie Deans, what a tremendous mistake we and the author together have made in being (like Reuben Butler and Dumbiedikes) devoted lovers of homely, noble Jeanie, and travelling every step with her in that long journey to England, when we had the sinners Effie and George Robertson to engross our thoughts and fancies. What a poor figure Jeanie makes without stage accessories, what a small sensation now-a-days standing up in the court and crying out “Alack, alack, she never breathed a word to me about it,” rather than tell one little lie to save her sister—what a poor figure beside our modern heroines, with their all-excusing taint of insanity, or their glow of impulse, yet who are not so impulsive but that they keep hideous secrets “gnawing at their hearts” for weeks, months, and years,—whose whole life is a cheat and a lie ?

Yet we were wont to set store on immortal Will and Sir Walter, and call their art true art, and boast how they had enlightened and bettered the world. How much health and happiness will redound to society through this modern treatment of sin is a very dubious question.

For a time our rage after criminal heroines owned certain bounds. It began with a frenzy for supercilious or violent damsels, rampagious young women whose waywardness and perversity, that is their selfishness, folly, and slightly-veiled coarseness,

came to be harped upon as their chief attractions. We have long passed these respectable bounds. Falseness, dishonesty, murder even; are rapidly claiming our most intense sympathies. It is the old Jack Sheppard mania, with female Jack Sheppards. We began our infatuation by executing the sentence of reprobation on our favourites. We hanged them like Captain Rock—we banished them—at least, we exiled them and condemned them to die, however becomingly and edifyingly, of remorse and misery. But now, even this small concession is cast aside, and after a little temporary anguish we bring back our criminals to sit at our tables, and “take sweet counsel with us,” as if Jezebel, after having painted her face and tired her head, in place of being thrown to the dogs, was rescued and restored to a dignified palace and an undisturbed reign.

Decidedly the latest, most enticing, engrossing, breathlessly delightful heroine, is she who is in some form connected with the crime of bigamy. I beg to propose, if this style of novel continue in fashion, that the scene be removed to the more appropriate locality of the Mormons' city. By this means a great deal of invention, some improbability, and a few moral and religious scruples may be saved, although there will no doubt be a falling off in the element of danger. Or if this is not granted, then I would suggest the introduction of the slight variety of one man with two wives, and so shift the responsibility in fairness to the opposite side of the house.

I once knew a case of bigamy, and its facts were these. A working man married unhappily, and within a week of his marriage quarrelled with and separated from his wife by mutual consent, neither party seeing nor seeking to see the other's face again. The man removed to a different locality, lived alone for seven years, and then, actuated by an erroneous idea, not rare among the lower class, that seven years' separation breaks the marriage vow, set about courting another wife. He was not guilty of concealment; he told the circumstances of his former life to his intended wife. She was a bold lass, unreflecting, and not over scrupulous. She consented to marry him; still there was no double dealing, both man and woman were aware of the facts. They even took some steps to consult higher authorities; but unfortunately gave up the process as a tedious and contradictory one.

They found a clergyman, who was also made aware, I think, of the old transaction that barred the new, but who, I suspect, shared the ignorance and delusion of those who fancied it of no matter—a thing ended and gone. At all events he married the couple openly, in the circle of their friends. Within a few weeks a charge of bigamy was brought against the man, not at the instance of his first wife, who desired to have nothing more to do with him, and was on the point of a second marriage herself, but upon the information of an old acquaintance. Without any ceremony the man was thrown into gaol. He and the second wife—

who, not very consistently or justly, resented her downfall—did not meet after their honeymoon was thus rudely broken up, until both parties were on their way to the circuit court, the man in his fustian, to be tried as a criminal, the woman in some of her dearly bought marriage finery, to be examined as a witness. Then the man seized an opportunity to speak reproachfully to her with a certain rough pathos, because she deserted him in the day of his calamity.

The court condemned the man, but in consideration of his self-deception and openness, awarded no severer sentence than a few months' imprisonment, while it censured the woman for her heartlessness and rashness.

The poor woman returned to her father's house and remained there till her baby was born. Then, broken in character, and ruined in prospect, she was persuaded into the sin of returning to the man, and living with him in an illegal connection. The gaol brand had burnt into him, and the degradation of her position taunted her, so the couple fell fast into vice and poverty. The man lost his industrious habits and took to drinking. At last the woman wandered back to her first home, a baby in her arms, a baby on her back, a baby at her knee, with white lips and shrunk arms and defiant eyes, to beg bread for her starving children.

A haggard tale enough, but still with no spurious sentiment in it, craving no morbid attraction towards its weak and wretched victims. Yet for this couple in their ignorance and rudeness, I say it advisedly, there are excuses and palliatives a thousand-fold stronger than can be urged for our favourite heroines. This poor man and woman were straight as cedars, and pure as snow, beside them.

I do not protest against the introduction of wickedness into art, living as we do in a wicked world. I believe “terror and pity purge the human heart,” but let wickedness be painted as William Hogarth painted it, in its loathsome, ghastly, downward career, ending in the gallows, the kennel, the mad-house. Do not let us have liars and cheats, and false wives, transformed by a touch into dying saints and honourable matrons. Do not let crime or its penalty be the crucible which converts our dross into gold.

“The greatest sinner may repent.” Thank God, she may; so, also, “while there is life there is hope.” But do not our hearts quake when this is all the assurance that the pitying doctor dare afford us in our friend's peril?

Is it honest or benevolent to take the exceptional cases, flaunt them, distort them, exaggerate them, so that sinners may indulge in excess, clinging to the faith that if they do not become reformed and prosperous men and women, they are at least likely to wipe out the past, by quitting this world as martyrs and saints? It is unutterably mean to lead a life of imposture, under whatever motives of revenge and retribution the life be undertaken, and no mortal can deliberately and persistently follow

it who is not a debased being in the beginning and in the end. One true act can no more make a true woman, than one swallow can make a summer.

In the name of a holy and merciful religion let us profoundly pity and tenderly succour the miserable, but do not let us commit the grave error of preferring degradation to renown, and the infinitely more heinous error of preferring guilt to innocence. When the prodigal's father received the lost son with the kisses of love and the music of joy, he did not fail to answer the protest of the elder brother, "Son, thou art ever with me, and *all* that I have is thine." Is it possible we are more merciful than He who was the type of Divine mercy?

In Solomon's day it was held that jealousy was the rage of a man, and that there was one disgrace

which could not be wiped away till the black curtain of death descended and hid it from the appalled, horror-stricken sight. Why do we depart from the wisdom of the wise king, and believe that it is not a virtuous woman, but a deceiver or a betrayer, whose price is above rubies, and that it is she alone who should usurp our regard, and awe our admiration?

I humbly pray our good writers, moralists, satirists, humourists, by precept and example, by tongue and pen, to exorcise this evil possession of our literature, that we may not have the sorrow and shame of knowing that the reign of good Queen Victoria, our true woman and wife, will be identified in after generations with the reign of female criminals in English literature.

H. K.

ESSAYS FOR SUNDAY READING.

VII.—THE CO-OPERATION OF THE LAITY IN THE GOVERNMENT AND WORK OF THE CHURCH.

BY JOHN CAIRD, D.D.

THERE are two incidents in Scripture history which seem to suggest corresponding lessons with respect to the government and work of the Church. The first of these occurs in the early history of the Israelites. In the book of Exodus it is recorded that, at the suggestion of his father-in-law Jethro, Moses introduced a very judicious change in the management of the civil and ecclesiastical affairs of the people over whom by divine ordination he ruled. For some time after their escape from Egypt he had borne unaided the burden of directing the affairs of the community. He was their sole instructor and guide. "The people," he said, in answer to the inquiries of Jethro, "come to me to inquire of God . . . and I do make them know the statutes of God and his laws." But, besides this, the proper and legitimate function of his office, there had devolved upon him the entire management of the secular affairs of the nation, the settling of disputes, the decision of difficult cases, the multifarious and incessant occupations of the man of business. The consequence of this was, as very soon became apparent to the eye of his sagacious relative, that by taking too much upon him, Moses was doing injury both to himself and to the people whom he wished to serve. In the attempt to do everything, he did nothing thoroughly and well. Let him select his own proper province and stick to it—devolving upon others the work that properly belonged to theirs. Let him confine himself mainly to the duties of his high vocation as the interpreter of the Divine Will to the people, and not cramp his energies, waste his strength, and abstract from the time so precious when devoted to thought and reflection and communion with God, in order to fritter it away on the perpetual demands of secular business. Other men,

pious and wise in their own department, might be found among the community who could attend to its inferior interests as well, or better, than he. Let him call in the aid of these men of practical sagacity in the daily government and discipline of the people, and thus secure for himself liberty to devote his thoughts and energies more undistractedly to the peculiar duties of his sacred office. Such, in substance, was the advice which Jethro gave to Moses. "And Moses' father-in-law said unto him, The thing that thou doest is not good, thou wilt surely wear away, both thou and this people that is with thee, for this thing is too heavy for thee; thou art not able to perform it thyself alone. Hearken now unto my voice, I will give thee counsel, and God shall be with thee. Be thou for the people to God-ward that thou mayest bring the causes unto God: and thou shalt teach them ordinances and laws, and shalt show them the way wherein they must walk and the work they must do. Moreover, thou shalt provide out of all the people able men, such as fear God, men of truth, hating covetousness; and place such over them; and let them judge the people at all seasons. And it shall be that every great matter they shall bring unto thee, but every small matter they shall judge: so shall it be easier for thyself, and they shall bear the burden with thee." (Exodus xviii. 17—22.)

Here, then, is a specimen of the way in which many of those arrangements, to which the name Church government or Church polity is applied, took their rise. Another and precisely analogous example in New Testament times we find in the account given in the Acts of the Apostles of the institution of the order of deacons. The Apostles, it is related, had somewhat inconsiderately permitted themselves to be encumbered with the

direction of the secular and external affairs of the Church. But as the community of believers rapidly increased, complaints arose that the business was mismanaged and the interests of many neglected, whilst by a multiplicity of secondary cares and duties, the Apostles were diverted from their proper and more important vocation, the ministry of the Word. They therefore proceeded at once to apply the proper remedy to the evil, by separating in a great measure the pastoral from the administrative functions in the government of the Church, and selecting certain wise, experienced, and pious men, on whom the burden of external affairs might greatly devolve, whilst their own thought and time might be given without distraction to the great work of Christian instruction. "It is not reasonable," they said, "that we should leave the word of God and serve tables. Wherefore, brethren, look ye out among you seven men of honest report, full of the Holy Ghost and of wisdom, whom we may appoint over this business. But we will give ourselves continually to prayer and the ministry of the word." (Acts vi. 2-4.)

I. Now, in calling attention to these transactions in the history of the Church, the first remark I desire to make is, that in all matters of form, ritual, outward organisation and government of the Church, no fixed rule seems to be laid down in Scripture; the principle on which such arrangements were made being merely that of expediency or reasonableness. I do not believe that there is to be found in the Bible any prescribed and definite Church polity, any form of Church government rigidly and unalterably stereotyped for all future ages. I am persuaded that whilst the great truths on which the existence of the Church is based are immutable and everlasting, as the infinite mind from which they emanated, yet that the forms of worship, and arrangements of government and discipline, under which these truths are to be propagated and professed, have been by the great Head of the Church left indeterminate and flexible. So that whilst the grand verities of sin and salvation, of redemption by the blood, and sanctification by the spirit of Christ,—whilst these and the great practical duties of the Christian life are set forth with such explicitness, and enforced and reiterated with such clearness and frequency in Scripture, that he that runneth may read; in vain will any unprejudiced and simple-minded student of the Bible seek for either Episcopacy, or Presbytery, or Independency, or any one form of Church government imperatively laid down in Scripture. The simplest peasant seriously applying his mind to the study of his Bible will never fail of conviction as to the former; but it requires all the resources of learning, and all the subtlety and ingenuity of practised reasoners, to extract with any show of plausibility a recognition of any one of the latter from Scripture.

And the reason for this is very obvious. The

Church and Church arrangements do not exist for themselves; they are but means to an end. The grand design of God by his Church is to make men holy, to Christianise the world, to convert and save souls. The Church is neither more nor less than a spiritual corporation for putting down sin and making men good. Now, it is a very inferior consideration by what particular means or machinery it accomplish this end, if only it be accomplished. It is of very secondary importance by what road out of half-a-dozen I reach my journey's end, if only I get there. It is of minor consequence of what colour, texture, form, be the clothes I wear, or of what style of architecture the house I live in, if only they afford me shelter, warmth, and comfort. It matters little in what form the medicine be administered to me, if only it succeed in curing the disease. And so in the case before us. The end for which all Church ordinances and arrangements exist is, I repeat it, to Christianise and sanctify the world; and the question as to the particular means and machinery by which this end is attained is altogether secondary. Whether by the highway of Prelacy, or the foot-path of Presbytery, or the open common of Independency, I reach the presence of my Saviour, it may cost me little thought, if only I win Christ and be found in Him. Whether my spiritual home be reared with all the splendour and beauty of the noble cathedral, or with the unpretending aspect of the simplest church or chapel, that is not the main consideration; but it is this,—whether beneath its roof I shall find a shelter from the storms of temptation and trial, a sweet place of rest for my spirit, amid a world of care and sin. Whether the healing medicine for my spiritual hurt, the balm in Gilead, the divine prescription of the Great Physician of souls, shall be administered to me by bishop, priest, or presbyter, whether I shall be taught its virtues by the voice of learning and eloquence, or by rude and stammering lips,—this is a matter of comparative indifference; the infinitely momentous thing is that I do in very deed receive it into my sick and dying soul, and live. Inasmuch, then, as the end is more important than the means, it is to be expected that in the Bible we should find, as we do, much with respect to truth and holiness, and little or nothing with respect to outward forms and arrangements.

But, besides this, as the best means are those which in given circumstances best attain the end in view, and as circumstances are always changing, it is to be expected that no rigid and unalterable forms of government and ritual would be found in a religion intended for *all* nations and for *all* times. Truth and religion are suited to all lands and ages, but a mode of teaching and propagating truth, or a form of religious worship or discipline, which might be well adapted to the state of society in Jerusalem or Ephesus in the year 63, may not be the best, may need considerable modification to make it fit for England or Scotland in the year 1863. And the same sound reason and practical wisdom

which dictated the adoption of some institution in one age or country, may dictate its alteration or abandonment in another. The mode, for instance, of building houses, towns, cities, that was quite proper in an unsettled and warlike age, would be highly unsuitable in quiet and peaceable times; so that no one dreams of keeping up the strong fortifications and grim, thick walls of our ancient cities, now that safety and comfort can be procured by less impregnable but more commodious edifices. But the end in both cases is the same, not to erect houses and towns, but to afford secure and comfortable dwellings to their inhabitants. Or again, it is clear that law and government are good things for all nations and times, because all men are happier in a condition of peace, order, and security, than in a state of anarchy. But it is not equally clear that one particular kind of government is alike good for all nations and times. On the contrary, from the national temper and character, from the particular state of civilisation, from climate and other causes, what may be a good system of government for one nation, may be a very unsuitable one for another; what may be well adapted to one age, may, as new exigencies arise, and new national characteristics emerge, require great and progressive modification in other and succeeding ages. Absolute monarchy may be the only sort of rule that will maintain order in some countries and in some stages of national civilisation. Oligarchy, or limited monarchy, or democracy, or a mixed and balanced constitution, may best answer the end of government among others. And the very wisdom that suggested one plan or theory in one case, would suggest its alteration or subversion in another; because in all cases the end in view is not to plan out a theory of government for its own sake, but to promote the prosperity and happiness, the individual, civil, social welfare of a nation.

Now, in precisely the same way I would maintain that we cannot expect to find in the Bible any rigid, uniform and unalterable form of Church government; for no one unbending form would be adapted to the endless varieties of clime and character, of time and circumstance, for which the religion of the Bible is designed. That is the best style of ritual and government which is best adapted to the particular age and country in which it may be established. We are not, with narrow-minded bigotry, to endeavour to torture Scripture texts into the exclusive recognition of Episcopacy, or Presbytery, or any one form of Church polity which we may favour; or attempt to force upon others, or condemn others for not accepting, that very form, which, though it may be the best for the culture of *our* religious nature, may not be the best for theirs. I can quite well conceive that one man's mind may be so constituted as to derive more benefit from an elaborate ritual, whilst the spiritual needs of another are better supplied by a simpler form of worship. I see nothing absurd or unscriptural in the supposition that one class of minds

may be soothed and strengthened by the pathos, the beauty, the completeness of a liturgy or set form of devotion; whilst another class, from natural temper, education, old association, or other causes, may enter more heartily into, may relish and receive, greater spiritual aid from the practice of extemporaneous prayer. Far from being irrational or latitudinarian, it seems only consistent with Scripture and with those laws of human nature to which Scripture is so marvellously adapted, to suppose that, considering the national diversities of character and history, Episcopacy may be best in England, and Presbytery in Scotland. Nay, I can conceive it quite possible that in the progress of events a gradual revolution or modification might so come over the mind and character of a nation or community—there might be such an advance in education, such a change in civil, social, domestic relations, as to require a gradual and corresponding modification of the form of worship or Church government—a more or less elaborate ritual, an approach or recession from the purity of Presbyterian, or the graduated and stately order of the Episcopalian form of polity. And in such cases to insist on rigid adherence to the old platform, to stickle for every atom of the old ritual or constitution, would be as absurd as it would be to compel men to live in castles and to rear the fortified cities and strongholds of a bygone age, now, in settled times of peace. In one word, the great rule in all Church arrangements is that we adopt, modify, abandon, external forms just as they serve the great end of all such machinery—the Christianising, sanctifying, saving of our own souls and the souls of others.

It was obviously on this ground—the reasonableness and expediency of the thing, and not any direct Divine appointment—that the change in the management of the civil and ecclesiastical affairs of the Israelites, and the analogous alteration in the government of the primitive Christian Church, to which I have referred, were adopted. And it is on a similar ground, and not any dubious inference from Scripture precedents, that I would defend any existing Church institutions, or the modification and re-arrangement of such institutions amongst ourselves.

II. There is, however, another subject which the incidents to which I have referred naturally suggest to our thoughts, viz., *the duty of the laity to take part in the management and work of the Church.*

The reasons which led to the appointment of judges over the Israelites, and to the institution of the office of deacon in the Primitive Church, are precisely analogous to those for which the clergy in our day may claim the co-operation of the laity in the practical work of the Church. It is still a misconception too commonly entertained that the work of the Church is the exclusive vocation of the clergy. The duty of attending to the religious interests of others is, it is supposed, the peculiar function of their office, and one with which it cannot be expected that the laity should interfere. If amongst

the laity there are found devout and earnest-minded men who, whether by teaching in schools, or visiting the poor, or in any other capacity, interest themselves practically in the spiritual welfare of their fellow-men, the majority are disposed to regard this as a manifestation of exceptive zeal. Such men go out of their way in so acting. This semi-clerical activity is by no means a duty of common obligation, and ordinary men may be excused if they feel no vocation for it. A man of business would be going out of his province if he began to dabble in medicine, an amateur lawyer would be regarded as interfering with another man's business in attempting to draw up title deeds and conveyances of property; and in like manner, the latent or half-acknowledged notion is, that a layman who begins to care for the souls of others, is obtruding himself into another man's office. Theology is thus but too often regarded as a technical science, quite as distinctly as law or medicine, engineering or navigation. Religious zeal and energy come to be looked upon as the characteristics of a class or calling; love to the souls of men, enthusiasm for the cause of Christ, self-denying exertion for the diffusion of the truth, are regarded as the special qualifications of a profession or art, and as by no means to be looked for in ordinary men. No man dreams that he is neglecting his duty by not attending to the spiritual welfare of his neighbours and friends, any more than by not interfering with the medical man in prescribing for their bodily ailments. The common tone of thinking and talking in society is in entire consistence with this narrow view of religious exertion as appertaining to a technically sacred office. A youth who studies theology is "preparing for the Church." One who is about to be ordained is "going into the Church," as if all but clergymen were outside of the Church, and had nothing to do with theological studies and religious activities. When an oath or improper expression is blurted out in the presence of a clergyman, though all the company may be professing Christians, everybody looks as if *he* should be specially offended and a particular apology were due to him. Thus by these and many similar indications the tendency is manifested to degrade spiritual things into technicalities, to keep the Church and the world apart, and to carry on the work of Christ in the world as most men fight their country's battles, by a set of functionaries who have nothing else to do, and who are paid for the purpose.

Now, in order to correct this misconception, it is not necessary to enter on any general discussion of the idea of the Church and the relations of the clergy and laity which are involved in it. The subject may suggest one or two obvious reasons why the whole practical work of the Church should not be left to the clergy.

The first of these reasons is, that by the co-operation of Christian laymen in the practical work of the Church, *the clergy are enabled to give more time and thought to the work of public instruction.*

The burden of his manifold duties was too heavy for Moses. By a multiplicity of employment his attention and energy were withdrawn from the more peculiarly spiritual functions of his office as the divinely-appointed guide of Israel. It was therefore a most rational expedient which was suggested by Jethro, that those duties which others could discharge as well as he, he should share with others; that he should associate with him pious and prudent men drawn from among the people, who might aid him by their counsels, relieve him of much unnecessary labour and anxiety, and permit him to devote his whole energies to that peculiar part of his duties for which he alone was competent. A similar remark obviously applies to the institution of the office of deacon in the primitive Church.

Now it is obvious that some such expedient as we find recorded in these cases is not less necessary in our own times. The modern teachers of the Church need relief, as much as those of any other age, by the division of labour. In most cases the management of the religious interests of a parish by a single office-bearer is utterly impracticable. If, in addition to the studious preparation of weekly discourses, there be imposed upon the minister the sole superintendence of the moral and religious state of a large district, implying a familiar acquaintance with the character, history, necessities, trials, attainments, deficiencies, of each household, the devising of plans for the physical and moral welfare of the population, the administration of discipline, the visitation of the sick, the religious instruction of the young, with a whole host of similar duties arising out of these,—if the attempt be made to devolve all these upon the single spiritual instructor of a congregation or parish, it is quite clear that it must prove an utter failure. Either he will apply himself mainly or exclusively to one class of duties, and then all the rest will be neglected; or, in the attempt to overtake all, he will do none of them efficiently. And I need not say that in both cases the result is one greatly to be deprecated. It is never good for a man to feel either that he is neglecting a part of his duty, or discharging the whole in a superficial and perfunctory manner. Whatever a man's work be, he should feel that he is fairly master of it. Better to cultivate a patch of ground well and thoroughly than a large farm carelessly and ill. Better even to be a good and clever day-labourer than a bad physician or lawyer. A ship should never have more canvas spread to wind than the crew can manage when the gale rises. We should never kindle more fires than we can tend.

But this error will undoubtedly be committed in the instance before us—the working of a parish—if the laity do not help the clergy: for unquestionably the minister's first, most legitimate, most important office, is that of a religious instructor or teacher. Whatever be neglected, this should have the first and best of his time and thought. Now, in very many situations, if a minister give himself conscientiously to the work of preparing give weekly two such

discourses as are at all presentable before an intelligent auditory—discourses not thrown off in haste, the mere skimming of a superficial and presumptuous mind, but the careful result of thought and toil—then no one who has the least idea of what intellectual labour is, but will admit that in this work the best part of a man's weekly hours and energies must be exhausted. It is of course quite possible, without much time or trouble, to preach in a sort of way; to come, for instance, to the pulpit week after week with a hastily concocted piece of talk; to fill up two half-hours on the Sunday with a weary, rapid repetition of the same threadbare thoughts and illustrations; to take refuge in the same well-worn stock ideas and phrases of systematic theology, which everybody has heard again and again till they have become meaningless to the ear, and rouse the mind as little as the ceaseless murmuring of a stream or revolutions of a wheel. If a religious instructor can satisfy himself with serving up this sort of spiritual fare to his people, he may leave himself plenty of time—well nigh his whole time—for other avocations. But it will be at a sad expense to the interests of his people. That which ought to be a weekly feast of intellectual and spiritual nutriment they will speedily detect to be but a serving up of viands, poor, shabby, ill-cooked and ill-dressed at the first, and certainly not improved by age and keeping. Even the simplest of the people will nauseate such wretched fare, and turn away from it.

Now, it is to obviate such a result as this, to secure to the minister time for careful study, meditation, enriching his mind by all those resources of literature, learning, intellectual culture, without which the ablest mind would soon become shallow; to enable him, in short, to give his whole heart and soul, the main force of his energies and current of his thoughts, to this one chief part of a pastor's work, that the help of the laity is needed. In so far as their position and duties in life may permit, it becomes the lay members of the Church to aid the pastor in the management and supervision of its moral and religious interests. They can give him the benefit of their knowledge of the world and more intimate acquaintance with its ways, and suggest to him such modes of action as would not be likely to occur to his comparative inexperience. They can take part, if possible, in the visitation of the sick, and the instruction of the young. It is in their power, in short, to become, in some sort, eyes, ears, and hands to the minister; giving him, by their knowledge and activity, a sort of omnipresence in a parish which in no other way consistently with his higher duties could he attain. Like the elders of the people whom Moses appointed by the advice of Jethro, they can "bring every great matter unto him, but every small matter judge themselves, that so it may be easier for him, and they may bear the burden with him."

Another reason for the co-operation of the laity in the work of the Church, is that the *labours of a*

layman for the spiritual good of others are sometimes more influential than those of the clergyman, as being gratuitous and unprofessional.

Voluntary and disinterested acts of kindness are always more highly appreciated than those which come within the scope of a man's ordinary and necessary duties. The regular soldier who is paid for fighting may get some credit for courage, but never so much as the patriot who voluntarily and with disinterested bravery devotes himself to his country's cause. The paid physician or hired sick nurse may win our gratitude by the kind way in which they discharge their duties, but we prize far more highly and feel far more deeply in our hour of need the spontaneous attentions of one whose unwearied acts of kindness, whose affectionate inquiries and solicitous efforts, whose every look, and word, and deed, betoken the motive from which they spring—pure, unmingled, disinterested affection.

So, too, is it in the case before us. However unjustly, yet not unfrequently, the labours of ministers, their good advices, and serious talk, and visitations in sickness, often fail to be appreciated, from the secret feeling that it is all their trade, that they are paid for looking solemn and speaking seriously, that it is nothing more than people might expect from them. Clerical seriousness, it is to be feared, is looked upon very often as purely professional. Nobody regards it as of necessity implying much personal earnestness. It is listened to as the stock language of the profession. It excites as little surprise as to hear a farmer talk of crops, or a merchant of bills and investments, or a politician of diplomacy and affairs of state. There is a latent feeling that the clergyman is as much bound to be serious as the comedian on the stage to be merry and comic: and thus, in the way of influence and example, the piety and pains-taking efforts of a minister sometimes lose part of their natural effect.

It is different with a layman. Who has not often noticed that a serious word from a layman in common life will do more good and produce a more powerful effect than a whole sermon from a professional instructor? People feel that it can be nothing but conscientious conviction that makes him talk so. They can ascribe his words to no mixed motives, to nothing but a disinterested sense of duty and the desire to do good. And so the kindly counsels of a Christian friend in private life, the visit of a private Christian to the home of poverty, the scene of suffering, the house of mourning, the beneficent efforts of a layman to alleviate the temporal or spiritual wants and sufferings of his neighbour—these are labours of love which are at once attributed to their proper motive, and carry with them the overpowering influence of whatever flows from genuine, disinterested regard for others. The Church therefore ever acts wisely when she avails herself of this great power of voluntary and unprofessional agency, and seeks to combine with

the regular training and practised skill and energy of the clergy, the spontaneous zeal and unsuspecting labours of the laity.

The last consideration I shall adduce in illustration of the peculiar advantages of the combination of lay with clerical agency in the work of the Church, is that it *constitutes an admirable means for carrying the influence of the Church and of religion into the affairs of ordinary life.* Important as the office of the minister—the public official, teacher, and pastor—may be, there are many circumstances which limit the range of its influence. There is great need for a supplementary agency to carry the streams of Christian thought and principle in various channels from the central reservoir down into the field of common life. Public instructions, sermons, solemnities, may tend very much, by their periodic recurrence, to elevate the mind; but they only supply the theory of religion—they set before us the ideal of the Christian life. In order to the highest religious effect on men's minds, you must bring down theory to the test of practice, reduce the ideal to the actual. Show them by a life of elevated Christian piety amidst the exigencies of the world, not only that the thing ought to be done, but that it *can* be done. There is a secret feeling often in the minds of practical men that ministers do not know much of the world; and that, if they did, they would see how impossible it is to carry out all this fine talk about heavenly-mindedness and superiority to the world's vanities and pleasures amid the rough business of every-day life. Men like very well to hear all this solemn, elevated sort of discourse about piety and holiness. It is the sort of thing for the Sunday and sermons; but the feeling is, "we must make allowances for clerical ignorance of life; sermon goodness must be discounted before we can make use of it in business. We need rougher tools to work with than Sunday rhetoric supplies. The theory is a very fine one, no doubt, but it is too fine-spun for this world—it won't work."

Now, it is true that this objection might, in some measure, be met, if we who preach would live up to our preaching; if the man who propounds the theory on Sunday, would himself furnish the practical illustration and test of its excellence throughout the week. But it is to be remembered, that a minister's example would not supply all that is wanted. It is not an example of what a clergyman's life should be which men need; but of what the life of a man of business should be amidst the temptations and difficulties of common life. From the secular transactions of life, its commerce, trade, politics, its bargains, buyings, sellings, marketings, a clergyman is in a great measure shut out; and yet these are the affairs in which a religious example, the manifestation of religious principle and motive, is most needed. The world does not need so much specimens of religious ministers, as specimens of religious lawyers, and physicians, and merchants, and magistrates, and tradesmen. The

great lack is not of an exhibition of official, clerical piety, but of piety in the counting-room, the exchange, the shop, the market-place. It is in these places, and not in the comparatively safe and sheltered walk of clerical duty, that the severest and most numerous temptations occur; and, therefore, in which the restraining and impelling influences of Christian principle can most strikingly be manifested. It is not the way in which the vessel will float in the haven, or sail in the smooth and well-defined course of river or lake, that we need to see; but how, when she puts off into the wide wild ocean, amidst its perils and hardships, its winds and storms and currents, she can withstand and triumph over them. Of theoretical soldier-tacticians in the closet—men who stand apart upon a height while the battle rages, and exhort to valour—we have enough; what we want most, is men who can go down into the thick of the fight, and prove their mettle there. Every profession and calling in life has its special difficulties and duties, its special temptations to be overcome, its special opportunities of being and of doing good. The profession of the clergyman is only one among a hundred. But the Church wants illustrations, not merely of clerical goodness; it demands an exhibition not of this one narrow aspect of Christian piety only. The thing to be desired is that the Church should be able to send forth special emissaries into all the varied walks of life, Christian officials without the official stiffness, officers of the Church out of uniform; to the end that men may have irrefragable evidence afforded them that in every several walk of life it is possible to live for Christ, and the world may have everywhere brought to its very door, and forced on its notice, a specimen of what a Christian man should be.

Moreover, this also is to be considered, that the influence of a clergyman's example is greatly neutralised by the assumed air of decorum that is generally maintained in his presence. A clergyman bears about with him an atmosphere of formal propriety. He cannot make his personal influence tell for what it is worth on society, because men do not let themselves out in their intercourse with him. People are generally on their good behaviour before a minister. Habitual coarseness or impropriety of speech or conduct are for the nonce kept out of sight, and good-company manners produced for the occasion. When the minister of a parish makes his rounds, the children are smoothed into a decorous trimness of dress and demeanour, the house is swept and garnished, the Bible is brought out, and everything puts on a Sunday look till he goes away. It requires, of course, no great amount of discernment to see through and allow for much of this artless ostentation; yet it does serve in a great measure to frustrate the personal influence of the clergyman. If there be asperities to soften, bad tempers to correct, evil habits to reform, rough, selfish, sensual ways of speaking and acting in the ordinary intercourse of the family on which the power of Christian

example might be brought to bear, the clergyman is precluded from exerting it. Just as the Queen, when she goes on her progresses, can scarcely form a right estimate of the ordinary look of the country, for all before her is holiday garb, smiles and shouts, music and gay attire, and the beggary and squalor and misery are studiously kept out of sight; so in some measure the clergyman is an imperfect judge of the ordinary character and ways of men, and cannot adapt his influence to the real state of matters in society, forasmuch as very generally society hides as much as possible the moral rags and obscenity, and puts on its best looks before him. But the influence of a layman is not thus hindered. The daily inmate of the home, the companion of the workshop, the familiar acquaintance of the marketplace, the friend of the festive board, sees all things as they really are, neither better nor worse. His presence creates no occasion for concealment. No refracting medium needs to be allowed for in his view of the world. Whatever his salutary influence, he acts in the full cognisance of the evils to be remedied. In this respect, therefore, his power to do good is likely to be greater than that of the clergyman.

Not only, therefore, is the work of the Church—the Christianising of the world—a work too vast to be undertaken by any limited or official class, but it is a work in performance of which an official character in some respects narrows a man's influence. It is a work, moreover, let it be remarked finally, which can never be done by proxy. From the nature of the case it cannot be devolved by the members of Church upon any special functionaries. As a matter of order and arrangement, the public offices of religious worship may be conducted by an official personage; special training may be necessary for the adequate performance of the duties of the pulpit; and it is well that a single representative of the Church should be specially responsible for the pastoral care of a particular locality. But there is a limit beyond which, in the work of the Church, official mediation cannot go. Responsibility for the care of souls can never by any Christian man be devolved upon another. Society may commit to certain of its members the work appertaining to special trades and callings. It may leave entirely to men trained for the purpose the business of cultivating its fields and building its houses, and preparing its food and raiment. Having hired trained experts to do for it the work of the physician, the advocate, the soldier, the engineer, it may give itself no further concern about the matter than to see that the deputed work is efficiently done. But society cannot thus do its religious work by proxy. The clergymen cannot act for others as the physician or the lawyer, each in his vocation, can act for others, if for no other reason than this, that the personal influence of each individual man is an intransferable deposit. It is something lodged in

an individual, and can be used by him alone. Every one who reads these words is endowed, each for himself, with a special gift of salutary influence, a peculiar benign power, which he can no more get another to employ for him than one flower can get another to breathe forth its fragrance, or one star depute to another star its shining. Your individual character, the special mould and temper of your being, is different from that of all other beings, and God, in creating it, designed it for a particular use in His Church. Your relations to your fellow-men are peculiar to yourself, and over some minds,—some little group or circle of moral being,—you can wield an influence which it is given to no other man to wield. Your place and lot in life, too, is one which has been assigned to you alone. For no other has the same part been cast. On your particular path no other footsteps shall ever leave their print. Through that one course, winding or straight, rapid or slow, brief or long protracted, in no other course shall the stream of life flow on to the great ocean. And so to you it is given to shed blessings around you, to do good to others, to communicate, as you pass through life, to those whose moral history borders or crosses yours, a heavenly influence, which is all your own. If this power be not used by you, it will never be used. There is work in God's Church which, if not done by you, will be left undone. As no priest can mediate between you and God, so can none mediate between you and your brother. You can no more do good than you can be saved at second-hand. The true ideal, then, of the Church is that of a Christian community in which each individual member exerts his own gift of usefulness for a common end. Wherever it is realised, the province of exclusively clerical effort will be a very limited one. By their charities, their prayers, their active and unremitting exertions, their earnest, holy lives, the laity will cooperate with the more official labours of the clergy. Each individual will be a priest to his own home, a minister of God to all who come within the range of his influence. The Sunday sacredness will not cease, but it will be less distinctive; for, instead of being checked and thwarted, its influences will be perpetuated by those of week-day life. One man will no longer vainly endeavour to preach up, on one day, what on all other days multitudes are preaching down; but a thousand week-day preachers, by the all-potent eloquence of pure, earnest, self-denying, holy lives, will silently and constantly plead for God. Each man will feel a solemn obligation resting on him to do for Christ and for the world's good all the work he can. No smallest scruple of holy influence wherewith God has endued his Church shall be lost; but all Christian men, in all positions and relations in life, of all crafts and callings, of all talents and endowments, at all times and seasons, will do each his own share of Christ's work in the world.

THE PEARL OF GREAT PRICE.

THE PARABLES

READ IN THE LIGHT OF THE PRESENT DAY.

BY THOMAS GUTHRIE, D.D.

VIII.—THE PARABLE OF THE PEARL OF GREAT PRICE.

MATTHEW xiii. 45, 46.

THE costliest jewel mentioned by ancient writers is a pearl which belonged to Cleopatra, the beautiful but infamous queen of Egypt; and the strongest proof which Roman historians have to give of the wanton and boundless extravagance of some of their emperors is the fact that they dissolved pearls in vinegar, and drank them with their wine. In harmony with these passages of profane history, this and other parts of sacred Scripture prove that among jewels the highest place in former times was assigned to pearls. When our Lord, for example, warned his disciples to beware how they wasted truths of the highest value on such as could not appreciate them, he selects these as their emblem, saying, "Give not that which is holy unto dogs, neither cast ye your pearls before swine." Such place also pearls hold in the attire of the woman whom John names "Mystery, Babylon the Great, the mother of harlots and abominations of the earth, who was drunken with the blood of the saints, and with the blood of the martyrs of Jesus." In a picture, so graphic as to remind us of the memorable words of Lord Bacon,—who said that, if the descriptions of Antichrist were extracted from Scripture and put into the *Hue and Cry*, there was not a constable in all England but would apprehend the Pope,—John describes the dress as well as the deeds of this bloody persecutor. She was arrayed, he says, "in purple and scarlet colour, and decked with gold and precious stones and pearls;" and here, be it observed, while other gems, however beautiful and costly,—the flashing diamond, and burning ruby, and purple amethyst, and sea-green emerald, and sapphire with hues borrowed from the sky,—are only mentioned under the general term of precious stones, pearls, as more valuable than these, are distinctly named. From all which we are warranted to conclude that when our Lord compared "the kingdom of heaven," the blessings, in other words, of redeeming love, to "one pearl of great price," he intended to set them forth as of pre-eminent value; as in fact, amid a thousand things desirable, the one thing needful.

But, besides its money value, a pearl such as this presented a remarkable as well as beautiful emblem of salvation in other aspects—in, for instance, a colour of snowy whiteness, a purity unclouded by the slightest haze, and a form so round and polished and perfect that it was impossible to improve it. The lapidary, to whose grinding wheel the very

diamond owes much of its brilliancy and those many-coloured fires with which it shines and burns, may not touch a pearl. His art cannot add to its beauty—the polish of its snowy surface, or the perfection of its rounded form. And what an emblem, therefore, is this gem of that salvation which came perfect from the hand of God—of that righteousness of Jesus Christ which, as no guilt of ours can stain, no works of ours can improve—of that Gospel which, as revealed in the Bible, is without defect of truth or admixture of error, and which the last of the inspired writers therefore closes with this solemn warning: "If any man shall add unto these things, God shall add unto him the plagues that are written in this book: and if any man shall take away from the words of the book of this prophecy, God shall take away his part out of the book of life, and out of the holy city."

Nor does this pearl present an emblem of salvation in respect only of its incalculable price and intrinsic characters. In the hazards and sacrifices at which both were obtained, we discern, however faintly, another point of resemblance. Other gems, the diamond and ruby and emerald and sapphire, lie bedded in river-courses, or set in the solid rocks; and there men seek them without loss of health or risk of life. But pearls belong to the ocean; they are gems which she casts not up among the pebbles that strew her beach, but hides in her dangerous and darkest depths. Hence a dreadful trade is the pearl-fisher's. Weighted with stone to sink him, and inhaling a long, deep-drawn breath, he leaps from the boat's side, and, the parting waves closing above his head, descends into the depths of the sea to grope for the shelly spoils amid the dim light which faintly illuminates her slimy bed; nor rises, breathless and black in face, to the surface till on-lookers have begun to fear that he will rise no more. And not unfrequently he never does. These waters are the haunts of terrible monsters; and, marked for its prey by the swift and fierce and voracious shark, in vain the wretched man stirs the muddy bottom to raise a cloud to cover his escape. Some air-bells bubbling up, and blood that spreads crimsoning the surface of the sea, are all that is evermore seen of one who dies a sacrifice to his hazardous pursuits; and the story of the dangers which pearl-fishers have always to encounter, and the dreadful deaths they have often to endure, will recall to a reflective mind the memory of Him who,

in salvation, purchased this pearl at so great a price—giving his life for ours, and dying, the just for the unjust, that he might bring us to God.

Though it belongs to ages long gone by, I may mention another aspect of this emblem that devout men once considered peculiarly appropriate. Ere the progress of science had robbed this and other things of their wonders, they saw in the manner in which the pearl was said to be generated a figure of the mystery of our Lord's divine descent and miraculous conception. Unlike those which are found in the womb of the dead earth, this gem is formed within the shell of a living creature; and in old times it was believed that when the heavens were in a peculiar state, manifesting their activity in flashes of lightning and peals of thunder, the future parent of the pearl rose from the bottom to the surface of the sea, and, opening its shelly mouth, received something of the nature of a dewdrop from the propitious skies. From this germ, with which the shell-fish descended again into its native depths, the pearl was believed to be formed; and in this natural mystery and strange birth of the precious gem, old divines saw an emblem of our Lord's descent into the dark humiliations of this lower world, the overshadowing of the Holy Ghost, and the conception of the Virgin's womb. The researches of naturalists have taught us that the pearl has no claim to such a lofty and heavenly descent. Yet, though science has robbed that as well as many things else of the dignity which belongs to the mysterious, and pearls now-a-days have lost much of their pre-eminent value, neither the discoveries of science, nor the changes of time and fashion, have abated the value or lessened the wonders of redeeming love. Jesus is the same yesterday, to-day, and for ever: and salvation, with its blood-bought and inestimable blessings, will ever remain that "one pearl of great price" which may be found by all; and which whosoever finds should sell all he has to buy,—saying, with the apostle, "I count all things but loss that I may win Christ."

In opening up this parable let us consider

THE PERSONS REPRESENTED BY THIS MERCHANT.

Mankind present all shades of colour,—from the negro, God's image in ebony, as one said, to the fair-skinned, blue-eyed, golden-haired types of our Scandinavian ancestors,—all varieties also of disposition, from the penuriousness of Nabal to the affection embalmed by David in this immortal song: "I am distressed for thee, my brother Jonathan: very pleasant hast thou been unto me: thy love to me was wonderful, passing the love of women,"—all degrees also of sense, from the fool who, untaught by experience, though pounded in a mortar comes out the same, to those astute, far-seeing, and long-headed men, whose utterances, like the counsels of Ahitophel, are "as if a man inquired at the oracle of God,"—and all differences also of outward condition, from Lazarus covered with sores and clothed in rags nor ever enjoying one good full meal, upward

to him who, clothed in purple and fine linen, fares sumptuously every day. Yet in God's sight the whole human family is divisible into two classes, and only two—the good and bad, the chaff and wheat, the wheat and tares, the sheep and goats, the converted and the unconverted—those that, still at enmity with God, lie under condemnation, and such as, renewed in the spirit of their minds and reconciled to Him by the blood of his Son, are in a state of grace.

But, like those great orders of plants or animals which we meet with in the sciences of botany and zoology, these two classes are divisible into numerous subdivisions, differing apparently, though not radically, so much from each other that some sinners seem to stand more nearly related to saints than to many of their own class; just as, for instance, the sponge or branching coral, fixed to the rocks and belonging to the animal kingdom, looks more allied to the tangle that sways than to the fishes that swim in the flowing tide. Let no man therefore conclude that he must be converted because there are broad outward marks of difference between him and many who certainly are not. People have gone down to hell, as the Pharisee did to his house, thanking God that they are not as others. The difference between them has been more apparent than real, being no greater than that between two nights—one where the bark seems to sail in the moonshine on a silver sea, and the other so pitchy dark that her outlook can see neither coast nor reef, though he hears the roar of breakers; or between two bodies both dead—one still beautiful in death, and the other a horrid spectacle of loathsome and ghastly decay. In such circumstances how necessary it is to remember our Saviour's warning: "Take heed that ye be not deceived." What though we are seeking even goodly pearls, unless we have found the one of great price?

And there are such people. Owing to the influence of a pious education, or of something naturally elevated and refined in their disposition, or of the society in which they move, or of some more mysterious causes, there are people in the world, and of the world too, who may be said to be seeking goodly pearls. They cultivate refined enjoyments; they are pursuing patriotic and philanthropic objects; they are seeking to be good, and to do good; they feel that man's happiness cannot lie in gratifications which satisfy the brutes, or in empty gaiety, or in the common prizes of ambition, or in any amount of money, but in nobler and godlike pursuits—in purity of heart, peace of conscience, and that happy relationship to God without which there is no more rest for a human soul than there was for the wandering dove till, skimming the waters on drooping wing, she returned to her home in the ark. These are "not far from the kingdom of heaven;" and were in it, would they take but another step. Almost Christians, they are almost saved. But what avails it to have almost made the port? So did the ship whose naked timbers I once passed sticking out of the

water. Struck by a giant sea, she stove in her sides on the point of the pier, and went to pieces in the harbour's mouth; and as on entering it I passed these skeleton ribs bedded in the sand below and rising on the tide above, they had a warning look, and seemed to say, that as in that case so in the case of souls, "almost saved" was but another expression for "altogether lost."

Let it be observed that different characters, different classes of sinners, are represented as being saved in the two parables of the Hid Treasure and the Pearl of Great Price. For examples of these, let me select two remarkable men—Colonel Gardiner and John Bunyan. Gardiner's was a sudden and remarkable conversion. Previous to that, he, who afterwards proved himself as brave a soldier of the Cross as of an earthly sovereign on that fatal field where, refusing to fly, he fell beneath the Highlander's scythe, was a mere man of the world—not a lover only of pleasure, but of the basest pleasures. The eventful night which he so unexpectedly passed in prayer, he had intended to spend in the arms of sin. As he impatiently watched the finger of the clock moving slowly on to the hour of a guilty assignation, nothing was further from his thoughts than conversion; and had Death himself, throwing open the chamber door, stood before him in visible form, he had not been more startled than by the blow, dealt by an unseen hand, which laid him penitent at the feet of Jesus. In salvation Gardiner found as much as the man in the treasure which his ploughshare brought to light, what he neither sought nor expected. In Bunyan, on the other hand, we see one who had come to know that the world and its pleasures could never satisfy the cravings of his heart. He felt the need of being other than he was. As an imprisoned eagle, chained to its perch and turning its eye up to the blue heavens, feels the strivings of a native instinct, and springing upwards beats the bars of its cage with bleeding wings, Bunyan tried to rise out of his estate of sin and misery. He made vigorous efforts to keep the law of God—to live without sin—to establish a righteousness of his own—to work out a sum of merits, and thereby obtain peace and pardon, and reconcile himself to God. Seeking the pardon of sin, a purer life, and a holier heart, he had been a merchant seeking "goodly pearls." And as in his case the seeker became the finder, so shall all who, like him, listen to the voice of Jesus, saying "Turn ye, turn ye—I am the way, the truth, the life—all which your souls need and your hearts desire is found in me, 'the one pearl'—for whosoever believeth in me shall not perish, but have everlasting life."

THE PEARL OF GREAT PRICE.

Wealth in our country is measured by the amount of money which a man has lodged in bank or afloat in business, the value of his house and its furnishings, or the number of acres in his estate. It is quite different in many parts of the East. There you enter a house with walls of clay and thatch of

straw or reeds or palm-leaves, and in its tenant—who sits, simply attired and amid the scantiest furniture, cross-legged on a rug which, spread out on the naked floor, forms his seat by day and his bed by night—you find a man of enormous wealth. He has it invested in jewels—nor without reason. In countries liable, on the one hand, to sudden invasion, and on the other to sudden and violent revolutions, where bloody tyrants oppress their subjects, and wealth is the carcass that draws the eagles together, it is in the form of jewels that property is most securely because most secretly kept, and in the case of flight most easily removed. Here, for example, is a family who, with villages in flames behind them, are flying from a ruined home and wretched country. They seek safety elsewhere; and, with nothing saved but their scanty clothing, seem reduced to the greatest want. Yet stop the mother who carries one child on her breast and has another at her side, and, undoing her raven locks, shake them out, and a shower of diamonds falls at your feet. In this form, and hid in a woman's hair, fortunes have often been carried from place to place in the East; and it is only by taking this fact into account, that while with us little else than ornaments, precious stones are there a form of money, and often of immense wealth, we rise to an adequate idea of the value which Christ puts on his people in calling them his jewels; or of the full meaning of a figure that represents the blessings of his salvation, as "one pearl of great price" which all other pearls and property should be sold to buy.

As all which the merchant sought in acquiring many goodly pearls was found in one—one precious, peerless gem, Jesus teaches us that the soul finds in himself all it feels the want of, and has been seeking in other ways—peace with God and peace of conscience, a clean heart and a renewed mind, comfort in sorrow and a sweet satisfaction with all the discipline of providence, hope in death and a heaven of glory after it. Great as are these blessings in respect of their value, they are equally so in respect of their price. They cost God's only Son long years of the deepest humiliation—his bloody agony and dreadful death; and yet, alas! in being offered to sinners who despise and reject Him, how often is this pearl cast before swine? To them who believe, Christ is precious; but what can be more sad than to see the value a woman sets on trinkets, the pride with which she shows and wears her jewels, while Jesus has no preciousness in her eyes? What fools people are! They set more on some glittering bits of glass or stone than on a crown of glory!—they care more in this dying body for the perishable casket than for the immortal jewel which it holds! Can a maid forget her ornaments, or a bride her attire? Yet my people, says God, have forgotten me days without number. From such sin and folly, good Lord preserve us!

HOW THIS PEARL WAS OBTAINED.

It was not bestowed as a gift. On the contrary,

this merchantman, trading in goodly pearls, bought it at the price of all he had. If so, where, it may be asked, lies the analogy between this case and a salvation that, all of mercy and not at all of merit, is the free gift of God through Jesus Christ our Lord? In answer to that question, let it be observed that the Bible has paradoxes—things that appear contradictory, destructive as fire and water are of each other; and yet are true. We have a living one, if I may say so, in our Lord himself. He is a creature, and yet the Creator—he is the Son of man, and yet the Son of God—he is the victim of death, and yet his victor—he is the captive of the grave, and yet her spoiler—he is Lord of all, and yet, with water and towel in hand, he stoops as the lowest servant to wash his servant's feet—there on Calvary's bloody cross he suffers as a man, and yet saves as a God. And Christ's followers, like himself, present to a wondering world what seem inconsistent features, impossible combinations. Are they not, to quote Paul's words, unknown, and yet well known—dying, and behold we live—chastened, and not killed—sorrowful, yet always rejoicing—poor, yet making many rich—having nothing, and yet possessing all things? Now as—though people may ask, how can these things be?—both are true, it is as true that salvation is a free gift, and yet a thing to be bought and sold. Nay, more and stranger still, it is bought “without money and without price.” A trader without either money or credit has no footing in the markets where Mammon presides, and man is the seller as well as the buyer; but in the market which Divine Mercy opens, and over which Divine Love presides, and where “gold tried in the fire,” and robes washed in the blood of the Lamb, and celestial crowns all set with gems of glory are displayed, wealth and character offer no advantage. Here the poor get as good bargains as the rich—often better indeed; harlots and publicans enter the kingdom, while scribes and pharisees are left standing at the door.

I do not mean to disparage good works. Christians are to be careful to maintain them, and to “make their light so to shine before men that they, seeing their good works, may glorify their Father which is in heaven.” But we are on the wrong road altogether if we are attempting to earn or deserve salvation by these. No gathered sum of human merits, of virtues, prayers, or charities can, like the accumulation of money that forms the price of an estate, purchase heaven. We have to buy, no doubt, —but not after the world's fashion. The price, on the contrary, which we are required to pay is not virtues and merits, but just that we abandon all trust in these; give up in them what we may have reckoned goodly pearls; and consent to be saved as poor, lost, undone sinners—whose type is the beggar that, clad in filthy rags and knocking timidly at our door, stands before us, making no appeal but to our compassion, and urging no plea whatever but our mercy and his own great misery. Still, though we cannot, in the ordinary sense of the

term, buy salvation, no man is saved but he who gives up his sins for Christ—takes up his cross, and, denying himself daily, follows Jesus. We are not saved *in* sin, but *from* it; and, though we cannot buy salvation, we are to seek it as those who, if they could, would buy it at any price, at any pain—giving the whole world, were it theirs, for Christ; and as earnestly seeking and as highly esteeming Him as she who exclaimed: “Were I on one bank of a river and saw Jesus on the other, and that river ran burning fire, I would dash into the flames to reach Him.”

SOME LESSONS TAUGHT BY THIS FIGURE OF A MERCHANT.

When Napoleon Buonaparte, after subduing Europe, found himself unable to subdue us, and saw his armies broken on our firm front like waves which the storm launches against a rocky headland, he called us, in his impotent rage, “a nation of shopkeepers.” Owing our power and wealth more to commerce than to anything else, in a sense we are so—nor are we ashamed of being so. Trade is an honourable occupation. Like those ocean streams that temper the cold of northern climes with the heat of the tropics, and float ice-field and ice-berg southward to cool the air of the torrid zone, its currents also convey to different lands the peculiar blessings of each; and, besides thus binding country to country in the bonds of mutual advantage, it promises to be an instrument in the providence of God of diffusing the blessings of Christianity over the world. A nation of traders whose merchants are princes, and whose traffickers are the honourable of the earth, there is no figure in the Bible—neither that of a shepherd, nor of a soldier, nor of a watchman, nor of a husbandman, nor of a householder—which comes more home to us than that of a merchant. It suggests many lessons; and to select a few of them I remark that—

It teaches us to make religion our chief pursuit.—Such is to the merchant his business. To it he does not allot merely some hours stolen from the pursuits of pleasure. He rises to business every morning; it engages his entire attention during the day; nor, save during a few hours in the evening, and a few days, or weeks at most, in the year, does he ever yield himself up to the enjoyments of ease. In its pursuit he is all energy and activity. What a hold it takes of his mind?—forming the topic of his conversation at feasts, and often at funerals—intruding itself unbidden, and to a good man unwelcome, into the closet where he prays and the church where he worships!

Would God that the business of eternity had as strong a hold of our minds! But, alas! the least thing puts it out of our head. And what greater contrast than the appearance of the same people in a church and at a market—the dull worshippers of this scene and the keen traders of that—the listless looks of the Sabbath congregation and the animated

what life, what keen competitors, what watching to catch a chance!—no sleepers there, but every face turned up to him who, raised above the eager crowd, descants on the bargains to be had. Enter a church, and how different the aspect of many?—people asleep in the pews—listlessness in the countenances and weariness in the attitudes of others. Who would believe this to be a crowd of men under sentence of death, whom one is telling how to break their chains and escape the gallows—a crowd gathered on the deck and hanging over the bulwarks of a sinking ship whom one, who has brought a life-boat to the scene, is offering to rescue from the roaring waves and a dreadful doom? The danger there is that, unless you back your oars and go warily to work, the eager throng, rushing *en masse* to the side and throwing themselves headlong in, will swamp your boat; but, alas! the chances in that church are, that not one of a hundred, or of a thousand, accepts the offer. If I may use a common expression, multitudes make religion a *bye job*, and not a business,—giving it but the ends and odds of time; and many not even that. May God help us to throw our whole heart into this business; teaching us to give all diligence to make our calling and election sure—to work out our salvation with fear and trembling—to work while it is called to-day, seeing that the night cometh when no man can work!

It teaches us to guard against deception.—The money which has a suspicious look the wary trader rings on his counter; knowing what frauds are practised in business, the wise merchant often puts such goods as he receives to the test; and the utmost care is taken in such a trade especially as that of this parable to guard against mistakes or imposition. Before buying a gem, the jewel-merchant examines it with a powerful magnifier—nor without reason. The smallest speck on a diamond detracts greatly from its value: worthless bits of glass are so cut and coloured as to pass for precious stones: and by means of the brilliant scales of a small fish which inhabits a river in France, they fabricate such perfect imitations of the pearl, as to impose on ordinary, and almost to deceive the quickest, eyes. The dupes of fraud, men have paid immense sums for pearls which were found to be only paste.

But, through the deceitfulness of the heart and wiles of the devil, men have been greater dupes and suffered unspeakably greater losses. As it is not all gold that glitters, it is not all grace that seems so. There is a counterfeit peace as well as counterfeit coin—there are hopes of heaven which rest on sand as well as hopes founded on the Rock of Ages—there is a righteousness which is ours, as well as one which is Christ's—there are virtues that, like sweet wild-flowers, cling to the ruins of humanity as well as graces that are the fruit of the Holy Spirit—there are kind and generous, but merely natural, as well as holy and heavenly affections. Such being the case, no merchant needs to be more on his guard against fraud and deception than those

who may flatter themselves that they are regenerated when they are only reformed. Many, it is to be feared, fancy that they are on the way to heaven who are on the way to hell; that they are at peace with God when their only peace is that of the river which is locked in ice—the quiet and silence of a tomb where there is no disturbance just because there is death!

It teaches us to examine our accounts with God.—There is a biography called “The Successful Merchant,” and, without having read it, I will venture to affirm that Budgett—this merchant—was careful to balance his books, and apply to his business the spirit of the Apostle's precept, “Let a man examine himself.” Alas! that in the use of such a precaution the children of this world should be so much wiser than the children of light! It is a part of every merchant's education to learn that art; and it is his only safety to practise it. Neglecting to balance his books, he may launch out into expenses quite unsuitable to his circumstances; persevere in branches of business which are not to his profit, but loss; fancy he is making money when he is driving on ruin. No other fate awaits the reckless adventurer than that of the emigrant ship which some weeks ago, with hundreds on board of her, full of hopes of happiness and fortune in the New World, ran headlong on Cape Race to break in pieces, and, whelming its living freight into the devouring waves, give them a grave on the shores where they expected a happy home! They took no soundings, and so they found no safety. The wise merchant takes stock, balances his books, and, in some businesses at least, strikes a balance on every day's transactions. In this, as in the energy and toil and self-denial and resolution of worldly, how much is there worthy of the imitation of Christian, men? Why should not we, at the close of each day, recall and review its transactions to see how our accounts stand with conscience and with God—what duties had been neglected, and what done—what temptations had been resisted, and what yielded to; how far we had indulged evil passions, how far mortified them—how like or how unlike to Christ's our demeanour had been? This were a scrutiny which, though often painful and humbling, would be attended with the happiest results. How many sins would it extinguish in the spark from which Christians have afterwards to be saved by being pulled out of the roaring fire? How often would it check a deviation at the beginning which ends in our going far astray, and losing a peace which in this world we may never fully recover? In how many cases would it, by early sending us to the balm of Gilead, heal wounds that, neglected, fester into deep, running, sores? And as I have seen the workman, ere he retired to rest, throw himself into stream or sea to wash away the sweat and dust of his daily toil, from such a review the Christian would repair each evening to the fountain of Jesus' blood to be cleansed of the guilt of daily sins; and rise each morning to seek the aids of the Holy Spirit to do

his work, to keep his watch, to bear his burden, to fight his battle, better. If balancing our accounts with God, if reviewing the day's transactions, showed no progress in the divine life, what earnestness and liveliness would it impart to our evening prayers? If, on the contrary, it showed some good done, some sin crucified, some progress made, what a comfort,

as we laid our head on the pillow, to think that we were nearer heaven than when we first believed, and that, with Jesus standing by the helm, our bark, whether gliding smoothly over calm or tossed in tempestuous seas, was approaching the shores of the happy land—the home and haven of our eternal rest!

TWO CENTURIES OF GERMAN HYMNS.

THERE are some things which Englishmen have not done as well as other people, and among them is the writing of Hymns. Perhaps we could have done them better; perhaps there is a golden era of hymn-writing in store for us; it might be too daring to say that there is anything which an Englishman *cannot* do as well as another. But our deficiency is matter of history; and two or three centuries of such national life as ours, may be supposed a tolerable test of capacity. We have good, sterling hymns, of as great beauty as in any other language on earth,—hymns that linger in our memories in “linked sweetness long drawn out,” that shine like stars by having turned many to righteousness. But whoever has had the courage to plod steadily over the dead level of a popular English Hymn-book, will confess that Hymn-writing is not our business. Is there any other people that would versify a profound religious thought in such a shrewd practical way as—

“You'd better come to Jesus”?

We are intensely matter of fact in our Christian life; matter of fact and arithmetical even in our scepticism. The soil and the climate are not favourable to devout singers: they flourish among us like rare exotics, and even exchange the rich bloom of their native flowers for the sober tints of our grey skies. This may partly account for the baldness and poverty of our hymnology. This, and that most of our hymns were written during the latter half of the last century, when the fire of poetry was burning dimmest, flickering like life in death. Their writers assumed the conventional language of a hollow conventional time. The “raptures,” and “ecstasies,” and “balmy sighs” of which, in a degenerate age, lovers sung to their mistresses, were, in the same age, transferred by the sacred poets to their purer lyre. Every line is bristling with tropes and figures; every adjective comes wearily in, dragging a useless adjective behind it. We have eyes bedewed with pity's tear, musing sorrow weeping the past, smiling patience smoothing the good man's brow. Marble domes, and gilded spires, and curling clouds of incense, are packed within the compass of two lines. Congregations are supposed to address their souls as “deathless principles.” They invoke a “tremendous God.” Sleep is “a serene oblivion,” a bed is a “couch of rest,” a shower is “the diffusive rain.” The clouds ascend with a “watery treasure;” the waters over which the Spirit of God

brooded are a “liquid element.” Meaningless platitudes that have long since descended to the penny-a-liners are triumphant. Patiently and cheerfully the good men have sat down, saying, with fanciful Sir Thomas Browne,

“There will I sit like that industrious fie,
Buzzing Thy praises.”

They were right, and they meant it well, and it is often excellent to read. But this fly's buzzing is very commonplace, and may be tiresome and soporific; and it is not because the fly is out of place, but because ear and soul are meant for melody, that we could wish instead the carol of some lark when the upper sunlight is flashing off its wings.

Want of poetry is one serious defect; want of taste is another. Watts closes the fine hymn,

“Let me but hear my Saviour say,
Strength shall be equal to thy day,”

with this ludicrous doggerel—

“So Samson, when his hair was lost,
Met the Philistines to his cost;
Shook his vain limbs with sad surprise,
Made feeble fight, and lost his eyes.”

The same hymn, that has so fine a stanza as

“Our life contains a thousand springs,
And dies, if one be gone;
Strange! that a harp of thousand strings
Should keep in tune so long,”

sinks down into

“His spirit moves our heaving lungs,
Or they would breathe no more.”

What would the Apostle Paul have thought of such thanksgiving as

“Ye British Isles, who read His love
In long epistles from above,
(He hath not sent His sacred word
To every land), Praise ye the Lord”?

Most persons would feel reluctant to commence their praise with such awkward familiarity as

“Well, the Redeemer's gone
T' appear before our God.”

Now it is startling, after the tender thoughts of Cowper, to stumble on a ferocious stanza like

“Into a world of ruffians sent,
I walk on hostile ground,
While human bears, on slaughter bent,
And ravening wolves surround.”

In our solemn thoughts of the dead we shrink from such a swinging, rollicking, measure as this :

“ Ah, lovely appearance of death !
What sight upon earth is so fair ?
Not all the gay pageants that breathe,
Can with a dead body compare.”

Perhaps we shrink as much from the careless, rollicking view of life that peeps out—Anacreon Moore in cassock and bands—through

“ We'll therefore relish with content,
Whate'er kind Providence hath sent,
Nor aim beyond our power ;
And though our stock of wealth be small,
With thankful hearts we'll spend it all,
Nor lose the passing hour.”

All the skill of our poet-laureate could not soften the harshness of

“ My Zerubbabel is near,
I have not believed in vain.”

And, much as we venerate Dr. Watts, it would have been pleasant to sing some statement of the resurrection less abrupt than

“ Up to the Lord our flesh shall fly.”*

It is true that within the last thirty years a group of Hymn-writers may be noticed, chargeable with neither want of taste, nor want of a poet's heart ; but, whatever pleasure their hymns will give to individuals, it is probably too late for them to become identified with the religious thoughts of the nation. It is true also that the past has its treasures, of which few had any right conception until Sir Roundell Palmer exhibited them in his *Book of Praise*, a book by which he has performed as gallant and kindly a service for our hymns as Bishop Percy did last century for our ballads, winning a place for them against all incredulity and scorn in the literature of the country. But these hymns are not a copious nor, until recently, an influential literature. In Germany they are a literature of centuries' standing and centuries' growth. Their history is the history of the inner life and power of the German

* Dr. Watts, indeed, is a sad transgressor. He teaches us to sing :

“ Dearer than all my passions are
My limbs, my bowels, or my eyes.”

The authorised version of the Bible may be pleaded for one of the words in these disagreeable lines, but the poet is the sole authority for

“ High in the midst of all the throng
Satan, a tall archangel sat.”

In another hymn we have—

“ ‘ Go,’ saith the Lord, ‘ my Gabriel, go,
Salute the virgin's fruitful womb ;
Make haste, ye cherubs, down below,
Sing and proclaim the Saviour come.’ ”

Nor is he more fortunate among the inferior orders of creation—

“ The little ants for one poor grain
Labour, and tug, and strive ;
Yet we, who have a heaven t' obtain,
How negligent we live !”

church. For it is through Germany that the Christian hymn has descended to modern times, in Germany that it has reached its dignity and perfection. And at a time when attention is constantly drawn to our own hymns, it may not be uninteresting to glance at those that maintain an unbroken connection and sympathy with the hymns of the ancient Christian Church.

It is characteristic of any national lyric poetry, that, springing, as it commonly does, out of the tumult and struggle of national birth or change, it bears manifestly the contrasted impression of its time. The lyric lives in the present, and prophecies of the future. It may want the refinement and perfection which can only come from calm and patient art ; but it has a freshness, reality, truthfulness, and insight, which make it an invaluable, but often overlooked, aid to the understanding of history. And the hymns of Germany share largely these characteristics. Rising from the innermost heart of the people, bound up with the life of the nation, they are rich in pictures of their times ; those of the Reformation, especially, represent, in their very striving, imperfection, and confused abruptness, the conflict going on between the old and the new,—the throes of that great new birth in which the nation was heaving. Personal consciousness, personal faith, are struggling everywhere through the old Church hymns. The feelings of men were too strongly roused to be kept within the limits of a mere poetic statement of dogmas, and, with this bondage, they were ready to throw off the classic form. Often, lines of homely earnest German break in through the statelier Latin. And though the authority of the elder verse lingered on to the close of the sixteenth century in the many translations from Latin sources, yet these translations became ever more individual, less ecclesiastic, until at last, in the seventeenth century, they ceased altogether. The hymn of the Reformation reflects the progress of the struggle. The Latin is still predominant, but everywhere the German rises up against it. There is still much of the old broad statement of doctrine, retained above all in the ancient hymns of the Bohemian brethren, but it is mingled, sometimes very rudely and inharmoniously, with the deep and hard-won experience of the believer. The verses are unfinished and unequal, the thoughts are often but half expressed, there is a poverty in the language, there are quick and puzzling transitions ; no matter what the subject is, the writer has his mind on the prevailing controversies, introduces emphatic statements of the true doctrine ; but while there are these scenes of the fight, there runs through all, a brave, joyous, prophetic tone.

There were three distinct classes of hymns at this time. Those of the Bohemian brethren were the oldest in the German tongue. They were restricted in their subjects, dwelling chiefly on the glory, wisdom, and mercy of God, as manifested in crea-

tion, redemption, and sanctification; dealing little with the wants and aspirations of the human heart. They were not very rich in poetry, but they were thoroughly biblical in their statements, thoroughly doctrinal in their themes. There is one of them, which, beginning with the Advent, sets forth repentance, forgiveness, the Christian life with its helps of grace, death, the resurrection, the judgment, and eternity, in the compass of nine stanzas.* But there was seldom so much compression. Their length was as remarkable as their orthodoxy. They were sound expositors of divine truth, but unrelieved by any warm touch of feeling; they were apt to be dry, argumentative, tedious, like a rhymed handbook of the marrow of divinity. Yet they had their uses and their popularity: they were linked with gracious and blessed associations, and in many a family where Huss and Jerome were household words, they, too, had their place of household songs; they grew up in the children's hearts, with memories of their homes, and of the martyr tales they heard by the fire on stormy nights of winter; they were sung to the only music in their churches; the aged spoke them with living reverence; verses from them had been heard at the stake; soldiers had joined in them before the battle. They were at least plain honest truth of God, let the rhymes and feet be as they might; they expressed unmistakably what it concerned and rejoiced men to know; and in the same age which witnessed, every year before Lent, the solemn scourging of a top with "Hallelujah" gilded on it through a church at Paris, angels stooped down to hear the rugged ballads in which the Hussites chanted their faith—the genuine hallelujahs that were carried to heaven from all Bohemia—from lone hamlets, and the stillness of the forest—from churches and rotting dungeons, and armed bands met in wild conventicle. And here the Reformation made itself felt. The hymns grew more personal, sprang more directly from the heart: there is one as popular now as it was three centuries ago. Michael Weiss was one of the deputies sent by the brethren in 1522, to congratulate Luther on his deliverance from darkness into God's marvellous light. After his return, and when he drew near his end, he wrote a funeral hymn, which has been a favourite ever since, beginning, †—

"Now let us gently lay the dead,
Beneath God's eye, in quiet bed;
He shall arise at judgment day,
And go forth incorruptibly."

There is, too, a hymn to the Trinity, apparently of an earlier date, and which shows favourably even side by side with the later poetry: ‡—

"Father, who didst send Thy Word,
Christ-God to be our Lord,
Of His life and death the merit
Let us inherit.

* *Gottes Sohn ist kommen.*

† *Nun lasst begraben uns den Leib.*

‡ *O Vater, der Du den Heiland.*

"O Christ, God's Son,
Who from Thy throne
Didst stoop to earth, that we
Might be like Thee;
Enter our minds and hearts this day;
Dwell there for aye.

"O God, the Holy Ghost,
Comfort us when our need is uttermost;
Our hearts renew;
Make us to hold, and still keep true,
The Covenant new.
"BOHEMIAN BRETHREN."

But these hymns had never any great influence on the German people. The Bohemians never drew cordially to the Lutherans; they inclined more to the Swiss. Their sacred muse was seldom heard after the Reformation spread, and what she had already uttered retained a place in the German Church chiefly out of respect to her antiquity and outspoken simplicity.

With the Latin hymns of the middle ages and the earlier time it was different. They were just as limited in their subjects—had as little to do with the work of God's Spirit on the heart of a sinner—as the others; but the people heard in them the voice of their forefathers speaking across the centuries—they were the expression of the Church's creed—some of them could be traced back to the godly men and purer faith of old—they were instinct with poetry, often sublime in thought and language; and when Luther and his fellow-workers made them live again in the common tongue, they made them live for ever. Many of them long continued to be sung in the Latin, even those of which the Reformed Church possessed a noble translation. Many were altered, enlarged, coloured unconsciously by those who adapted them to German verse and the altered service. They were made to express more of individual feeling—to become the vehicle of Christian joy and sorrow. Even in the fifteenth century the change was beginning. The people got the hymns, sang them for themselves, made alterations, popularised them. And thus, as the hold of the priest and the Church upon them was loosened, they strengthened their hold upon the nation. Grand hymns there are among them, hymns for all time, like the "*Veni, Redemptor Gentium,*" of Ambrose, the "*Veni, Creator Spiritus,*"* of Hildebert, the "*Dies iræ, dies illa.*"† But those in favour at the Reformation were more striking for their quaint homeliness than for their poetry, and have been deservedly forgotten.

Sometimes the German crept in between the Latin, sometimes displaced it, and there was the curious anomaly of hymns in which the lines alternated irregularly between the two languages, as, for instance, in that most popular hymn of the

* "*Creator Spirit! by whose aid.*"

† Of this poem there are upwards of sixty German versions, and probably half as many English. Among the translators are Herder, Fichte, and Sir Walter Scott.

Reformation and the period preceding, "*In dulci jubilo*."*

"*O Jesu parvule,*
My soul still longs for Thee;
This troubled heart of mine,
O Puer optime,
Comfort with love of Thine;
O Princeps gloriae,
Still draw me after Thee.

"*Ubi sunt gaudia?*
Where, with Hallelujah,
Angel bands are singing
Nova cantica,
And sweet bells are ringing
In Regis curia:
Would we were there, *eya!*"

While the Latin hymn of the Church was thus becoming modified, and merging into the popular lyric, a native poetry was rapidly springing up, and, even before Luther's death, had carried the torch of Reformation from end to end of Germany. Luther was the first to give the German hymn its essential form and popularity. Before his time it had floated about in various forms, fragmentary, ill-constructed, pretending to no poetry,—pretending indeed to be little else than aid to the memory. The same masterly insight which led the Reformer to translate the Bible into the popular dialect, led him to use the hymn as a vehicle for spreading the truth. He did not seek much originality. His object at first was almost identical with that of his predecessors—to communicate the Gospel in a form that would seize fast hold on the body of the people; and much of what he wrote for this end is little above the average of doggerel rhymes, though marked often by a force and idiomatic concentration that are not doggerel. We may smile at such verses as:—

"These are the holy precepts ten
The Lord God gave us, sinful men,
Through Moses, who His servant was,
And on the Mount received these laws."

—but they did admirable service at the time; nor is there anything weak, or trifling, or mean in them: they tell their message in a direct homely way, roughly perhaps and boldly, and without much art, but with an honest reality and fervour. In form and spirit, the poetry of the better class of them is strikingly like that of the old English ballads which, in Luther's day, were popular among ourselves. They take the same high objective ground, the story moving on without being cumbered by reflections on it—here and there a touch of rare pathos, everywhere the stamp of a man who is possessed with the belief of what he says. It was the very historical character of these religious ballads which insured their success. It was not an age of self-analysis, as ours has come to be, when poets

* It was sometimes sung in an entirely German version, beginning "*Nun singet und seid fro jauchzet alle und singt so;*" and still, in remote Lutheran parishes, the last line of the first stanza strikes oddly enough on the stranger's ear, "*Du bist A und O.*"

and other people go about with a restless morbid craving to anatomise their feelings, and lay bare their hearts (a disagreeable sight at the best, and which a man had better keep between himself and God). It was an age when men's minds were yet fresh, when they cared more to live than to think, when action went before speech, when men sought to know what message God had for them, and did not stop to sift its adaptation to their mental training, and whether and why this or that effect should or should not spring from it. And when Luther sang of the Redemption, the Coming of Christ, the Love of God, there was the power of a simple story simply told, while most of the roughness and imperfect metres and unrhymed lines, which jar upon the modern ear, had a harmony of strength and nervous purpose which was all-sufficient to the ancient. To make them spread more rapidly, they were set to familiar melodies, chants which had been sung on pilgrimages, or airs of popular songs, and the new words made their way wherever the old ballad was sung. It was not till the hymn had secured its footing that he ventured to compose music for his own words. Nor was the music particularly good. All his melodies, with the exception of two or three, have long lost their hold on the people. They had graver faults than the hymns, though, in a minor degree; the same merits, gravity and earnestness, but were abrupt and wanting in variety and cadence. Still anxious to retain for the hymns a footing in old well-known forms, he translated some of the best of the Latin hymns that occurred in the Church Service. They are not naked translations, but are instinct with his own spirit—almost as much marked by his individuality as by that of their authors. He wrote for the children also; and the chief of all Christmas hymns in Germany is one which he wrote for his little boy Hans, when Hans was five years old, and which he entitled "*A Child's Christmas Song concerning the Child Jesus.*" Another, which bears the preface, "*A Child's Song to sing against the two arch enemies of Christ and His holy Church, the Papacy and the Turks,*" has had a very wide rule and influence. But the best hymns that Luther wrote are his versions of some of the Psalms, in which he has risen to the true height of manly religious poetry, and which, for their vigour and loftiness and power of kindling great and holy thoughts, have not been surpassed by any. Their very irregularities and scorn of metrical niceties are scarce faults; it seems as if the mighty flow of the verse could not pause till the soul of this dauntless man of God was poured out in his own strong words. There is no attempt at a literal rendering; the Psalm is there indeed, the same thoughts, and in the same order; but it is Luther's Psalm, the thoughts have become his own; and it is this that has made "*Ein feste Burg ist unser Gott*"* the heroic song of his countrymen, graven on their national memories, swelling

* "God is our stronghold, firm and sure."

up in days of trial from numberless hearts that grow brave and confident in singing it, the firm utterance of the national hope and steadfastness, the outburst of national feeling when it is deepest, the aspiration of it when it is feeblest, ever lifted high against all peril from without. Besides these, Luther wrote hymns suggested by the needs of the Church, and springing out of his own Christian consciousness. They are not in any way personal, but such as that for Trinity Sunday, beginning, "We all believe in one good God, maker of the earth and heaven,"* and that well-loved one, "Now joy ye all, dear Christian folk,"† seizing on the leading doctrines of the Gospel, and expressing them as simply and broadly as a child might, and with the trust and fervour of a believer,

The results proved the Reformer's wisdom. The hymns, we are told, flew from end to end of Germany as if on the wings of the wind. They spread inconceivably fast through church and school and house. Sometimes a hymn won whole towns to the evangelical faith, as if by one blow. Scarcely was it composed till it was sung before every door; if any knew it, crowds gathered round to listen, and though they heard it for the first time, they were ready to join with loud, joyful voice in the last strophe. We have a vivid picture of the marvellous popularity the hymns had reached, even in Luther's lifetime, in the preface which a pious lady of Strasburgh wrote to a little collection of spiritual songs published in 1534:—"The artisan," she says, "sings them at his work, the maid as she washes the clothes, the peasant on his furrow, the mother to the child that cries in the cradle."

Other hymns also clustered about these. Little was known of their authors, yet they kept pace with Luther's. These men were voices crying in the wilderness, heedless of themselves and of their fame, possessed with the glorious truth of God, and pouring it out of the fullness of their hearts. Not stooping down to their own private needs and mercies, they spoke only of that great common need and mercy which thrilled every heart. The writer did not separate himself from those for whom he wrote. He felt them to be one with him, their thoughts to be his thoughts, all, from remotest corners of the land, bending before the same cross. Without losing his personal feelings, he identified himself with the national feeling. And in the completeness of this happy blending lay his success; not the success of being a popular author—for that he cared nothing, but suffered his name to perish with him in the grave—but the success, vouchsafed to few, of giving his countrymen to latest generations fitting words in which to clothe the deepest and holiest thoughts that are born in the heart of man. He had no fear of reviews before his eye; there were no would-be critics to catalogue his plagiarisms from the Bible; he was not tortured with desire to

excel what had been well said already; he was unfurnished with the inversions, capitals, interjections, dashes, impossible rhymes, and the other paraphernalia which are held essential to the poet now. He had but one desire, to tell what he felt; he was in earnest, and fitting words are never wanting to an earnest man who forgets himself in his work. He had too high a conception of his work, too much distrust of himself, to add one word when his song was over. For the true poet is an earnest, working man. The mere contemplative man is but half a poet. He has the poet's insight, sees the poet's visions, wears his singing robes about him, but he is isolated, without the poet's sway; he can build up fair domes of verse, yet they are like yesterday's rainbow: the children ran to the door and gazed at it with bright wondering eyes, the merchant cast up his ledger, the artisan whistled on his bench, unheeding. Let him lay his singing robes aside, and

"carry on a stage
The work o' the world, not merely make report,
The work existed ere his time;"

let him write for the crowd of living men, and not for the withered bay of a hundred years off; let him sweep out conceits and dreams from his brain, and look clearly on those issues of life and death that are fulfilled and fulfilling around him; and if God has any message to send by him, surely that is the seemly preparation. Luther's forty-second Psalm is worth a century of "Soliloquies," and "Easter Wings," and "Soul Dissections." Meanwhile let us note three true hymns of God's true poets; the idle poets, with their reveries, and analysis, and self-conceit, come too soon. Decius, Speratus, and Schneising, were contemporaries of Luther. The first was a monk, who, coming out of his cloister, and grappling with the sore evils that met him at the very door, wrote a *Gloria in excelsis*,* that spread with incredible swiftness from north to south. There needed no friendly helps to circulation, no ingenious puffery. More than a hundred years after, the people of New Brandenburg heard a baker's boy sing a new hymn, and they listened while he sang, and learned it from him, and other towns caught it up from them, till in every household was known that beautiful and most comforting song of Neumarck, "Leave God to order all thy ways."† And this *Gloria* was the truth which was wanted, and that spread it; it was what every bursting heart in the land yearned for; it was the utterance of that unspeakable, exulting joy, which seized men who had seen the darkness rolled away, and felt their souls rising up free from under the weight of centuries.

In the other two there is the same tone. Schneising's "On Thee alone, Lord Jesus Christ,

* *Allein Gott in der Höh sei Ehr.* To Decius also belongs the authorship of the venerable hymn, *O Lamm Gottes unschuldig.*

† *Wer nur den lieben Gott lässt walten*, p. 154.

* *Wir glauben all an einem Gott.*

† *Nun freut euch lieben Christen gemein.*

my earthly hopes are set,"* the cry of a trusting soul to the Saviour for deliverance from sin, ends likewise with a *Gloria*. Speratus wrote his hymn† on grace and good works, the very turning point of the conflict between Luther with his Bible, and the Pope with his council. But it took its place with the others, and holds it to this day; for with him it was no outward conflict of ecclesiastics, but a battle fought in the soul. Mighty changes, revolutions, storm and calm, have swept over Germany since then; dark days have shadowed the Church; the sleep of death has stilled the living faith that beat in it; faithless teachers have thrown ridicule on the old simple rule;—yet through all, these hymns, and others of that age, have held the hearts of the people, maintained the sacred fire, been rallying points for the wavering and despairing, and now, when the Spirit of God has again quickened the Church, it is to these hymns she turns, in these she finds a needful watchword, singing these that the people fill once more the deserted churches. For they are true, the poetry of that inner life which is still the same, neither dogmatic nor reflective, but the real thoughts that are in any Christian man; and when schools of poetry—romantic, classical, spasmodic—shall have been forgotten, they shall remain fresh and beautiful, as when Luther gave out his own chorales from his own pulpit in Wittenberg, and Eber read over to Melancthon the verses he had written for his children.

Eber, like his contemporary hymn-writers, wrote little, but that little he left as a perpetual legacy to the Church. The hymn on death which he wrote for his children, has been translated by Miss Winkworth,‡ and may compose and strengthen the sick and dying in this country, as it has long done in its own. It is simple, and full of pathos as a child's prayer, while there is an awe in the thoughts, and a hushed, subdued tone in the words and measure, befitting the chamber and hour of death. He was a famous teacher of philosophy in his day, much absorbed in Church controversies, and a redoubtable polemic; a wasted, shrunken, dry-looking little man, familiar to all frequenters of Wittenberg University; but his heart kept fresh and warm. And it is touching to read that New Year's hymn he wrote for his children when his wife and two more had died quickly at home, and to spell out the *Helena*, by which in his learned way he commences the six stanzas, and then dies himself.

It was about the same time that, in quiet Joachimsthal, Nicholas Hermann, the good old preceptor, wrote sweet music to his own sweet hymns. Pleasant it would have been to see him, of an Easter, with his scholars clinging round him, while they learn the "spiritual song" he has just written

"for the maidens in the girls' school, concerning the joyful resurrection of our Saviour Jesus Christ;"** or, in the early Christmas morning, while the sun shines ruddily through the frosted panes, to hear him give forth his joyful carol, "Praise God, ye Christians, with one voice;"† or when the miners come to church on the Sunday morning, singing down the mountain paths as he had taught them; or when, in the summer evening, sitting at his door, his own chant is borne to him through the still balmy air, from the graveyard close by, "Now weep not, mourn not, o'er this bier."‡ Mathesius preached, and Hermann listened and wrote out the sermon in hymns—"when it was good,"—which may account for the hymns being few.

Passing with difficulty by Hans Sachs—for who does not love to loiter with that most poetical of cobblers, and kind-hearted of men, and who that has ever been in Nuremberg, lounged in the market-place, paced with slow reverend step the aisles of St. Sebald's, and lingered in the sunny old graveyard till the evening chime floated in lazy harmony over the town below, does not remember to have sought him, and, not finding him, to have turned away from the quaint city sorrowful? Passing by, and only noting the satisfaction it must give him, that if his seventeen hundred and odd dramas, and few thousand minor poems, in five folio volumes,§ have been forgotten, there is one *meister-geaung* of his, immortal,|| we come to a less known, but even more honoured name, Philip Nicolai. Nicolai was born a few years before the maidens of Joachimsthal had lost their kind old teacher, and sang his own requiem over his grave. He became pastor at Hamburg, saw heavenly visions, and died while yet in his prime. He left behind meditations on the life eternal (which few knew so well), and two hymns. Those who have heard Mendelssohn's *St. Paul*, will remember the magnificent chorale (for no lesser word will express the mighty fullness of the melody), beginning "Sleepers, wake, a voice is calling." The words are intended to represent Nicolai's.¶ But both his hymns defy translation. The metre in both is long and intricate, running through stanzas of twelve lines, and the poetry is linked inseparably with these peculiarities. Rich and marvellous poetry it is, the outpouring of a joyous heavenly spirit, that has already shaken the burden and clay of earth off its wings, and waits but till God shall set it free to soar into its true sphere.

Nicolai died at the commencement of the seventeenth century. The Church poetry was already

* *Erschienen ist der herrlich Tag.*

† *Lobt Gott, ihr Christen alle gleich.*

‡ Page 254. *Hort auf mit Trauern und mit Klage*, translated from the *Jam moesta quiesce querela* of Prudentius.

§ Lope de Vega however left 21,300,000 verses.

|| *Warum betrübst du dich, mein Herz.*

¶ *Wachet auf, ruft uns die Stimme*. His other hymn is the beautiful *Wie schön leuchtet uns der Morgenstern*.

* *Allein zu Dir, Herr Jesu Christ.*

† *Es ist das Heil uns kommen her.*

‡ *Lyra Germanica*, p. 244. Another well-known hymn of Eber's is, *Wenn wir in höchsten Nothen sein*.

losing much of the character it bore at the Reformation. There was no longer the universal thrill of a new life. The Church was settling into parties and controversy; as it spread and formed subordinate centres of activity over the land, the feeling of a common centre receded, the feeling of separation crept in. Men lost the common fellowship that made them one in time of revolution; they dwelt more on personal feelings, looked more to the fellowship between each soul and God. And as the Bible came to be more and more a hand-book, and the free exercise of judgment was brought to bear on it, abundant diversities of Christian character were developed, and, as the course of nature is, worked themselves out in abundantly diverse ways, and, when they sought expression in the Church hymns, found only what was peculiar to each. The change was now silently progressing, and before the first half of the next century was completed, the hymn had sunk down to be a mere utterance of private devotion and meditation, a point above which the English hymn has seldom risen, below which the German continued steadily to sink through sentimental rhapsodies and infidel fooleries, till, with a few feeble struggles, it almost died out. But to the early part of the sixteenth century a few hymns belong, which must rank in their character and influence with those of the preceding age. Such, for instance, as Rinkart's "Now let us all thank God with heart, and hand, and tongue,"* a hymn which is solemnly sung in every orthodox German household as the clock strikes twelve on New Year's Eve, and blown by unearthly horns from the towers of village churches. Nay, even in the height of the gay dance, when that knell for the past is tolled, the voice and the music are hushed, and an awe rests on every face, as if the spirit of the old year were passing through the room, and when the clock has finished, old and young join in the ancient chorale—with which preface the dance recommences.

With the seventeenth century the fatal storm of the Thirty Years' War swept over Germany. Everywhere there was sorrow, confusion, despair. A gloom rested on every household. Men fled from the pillage of the city to hide themselves in the quiet country, and the fiery storm bursting upon them there, drove them back to the city. Rough soldiers broke into the remotest villages, and chased the peasant from his lonely hut among the hills. No man knew where he was safe. He was fortunate if he escaped with life. The pastor saw his flock scattered, his church a barrack. He who had lived in peace, and looked for it, saw his sons brought in dead from the battle, had himself perhaps to seek a lurking-place in the woods. The quietest citizen might be forced to pass his life in perilous adventures. Suffering and danger were the common lot, and none dared to claim exemption. Yet, through all the darkness and trouble, the Christian psalmist

sang hymns to God, and there is no period so rich in Christian poetry. The very existence of the Protestant Church was in danger; the Christian organisation which had sprung up and rapidly extended since the Reformation, was suddenly overturned; the churches were desolated; the schoolhouses in ruins. But the homeless, solitary wanderer who found uneasy refuge in the camp, raised his voice confident and brave, feeling that his cause was the Lord's, and that no might could finally prevail against it.

"As true as God's own Word is true,
Not earth nor hell, with all their crew,
Against us shall prevail.
A jest and byword are they grown;
God is with us, we are His own,
Our victory cannot fail."*

Numerous, however, as are the hymns of these years, there are few that rose above the sorrows of the time, and, as from a calm and skyey height, sung only of the everlasting might and triumph of Jehovah. The most were written by men bowed down and weary with calamities, distracted with the tumult that raged around them, longing for escape from it, crying to God for help and quiet, for the old ways to be brought back, or, if nothing else, for release from a world where they were driven restlessly to and fro, like foam-flakes over an angry sea. The ties that bound them to the earth were rudely snapped. There were some who had neither home, nor wife, nor child. Their country was each year sinking deeper in ruin; the very promise of peace seemed to have fled from it. What better could they desire than to be delivered from the final woe, to be taken from the miseries which met them in fresh forms with every day, and which they were helpless to relieve? Their one thought was of the evil days on which they had fallen; their one aspiration for the rest that remaineth to the people of God. Instinctively they turned to the sufferings of the Lord, and, by dwelling upon His, found relief from the pressure of their own; while, in sympathy of suffering, they were drawn to Him the closer, and poured out their sorrows in His ear unchecked. It is a period which abounds in hymns on the passion and death of Christ; but there seems to have been scarce strength and buoyancy enough to pass on to the resurrection. There is a sighing for deliverance, but not a singing of it. For there are seasons in the Christian life when, all hope and joy being wellnigh crushed out of the soul, it is only the wail over sin and the bitter cry of pain that find expression—when, though there is felt to be a morning of joy lying in the future, it lies in the shadow of a night of weeping—when there is the timid, faintly-whispered wish for better, but not the firm, unshaken certainty of it—and without any actual doubting of God's future, it seems too bright and glorious to be dwelt on. And this was the spirit of the time. There were some

* *Nun danket alle Gott.*

* Altenburg. *Lyra Germanica*, p. 17.

indeed who found in the trouble of the world without them a reflection of the world within. In the ravages of man they saw the ravages of sin; in the fierce struggle of armies, the struggle fought daily in their own hearts. There were pangs of conscience, the anguish of the penitent sinner, still more acute than any caused by the trials of their outward lot. They could even speak of many a fair spiritual edifice of their soul laid in ruins by their besetting sins. But there is one prevalent tone—there is everywhere pervading a sense of misery and dreary emptiness, of strife and innumerable ills, that made it more desirable to die than to live. There is everywhere the longing—deep, and earnest, and ineradicable, yet rather pensive than vehement—that the Lord would take them to Himself.

The best-known hymn-writers of this period were Rist, Heermann, and Dach.

The personal individual element comes out with much greater distinctness in these hymns than in those that preceded them. The judgments of God were upon the land, but Heermann saw in them only a call to individual repentance. An elder Church poet would have recognised in them their broad national significance, and all the more naturally as a national cause, a national faith, were at stake, and the Church suffered like any of her members. The war itself, by isolating men from each other, and even from the Church, doubtless contributed to this. But there were other and more important agencies at work to produce the same result. The Reformation introduced everywhere the personal element of faith, or rather restored it to that place from which, during the corruptions of the preceding centuries, it had gradually receded, to be forgotten in the dim background of the Christian life; and the more the Reformation spread, the firmer the hold it took on men's minds, the more personal their faith became. The sense of personal sin suggested the need of personal forgiveness, of a Saviour—of men, it is true—but, above all, of the individual man. The communion, and grace, and blessings of God are common to all believers, but as each found them for himself, they were invested with an individual distinctness—associated with a mental struggle, with a personal history—and, no longer common, became peculiar. The way being alike open to God for every man, each dwelt upon his own apprehension of God in Christ, his own doubts and certainties, his own joy and sorrow, his own fight of faith, his own fall and victory, until the personal element came to overshadow every other, and, though not yet, to be as extravagant in the one direction, as the ecclesiasticism of the Middle Ages in another. On the other hand, while the individual consciousness rose into prominence, the early freshness and vivid realisation of Gospel truth which characterised the Reformation period, had by long habit worn away. What had started men like a new discovery, and kindled in them a fervour

never in any age surpassed, soon grew familiar as the knowledge of it extended, and became every man's property. When the first great shout of welcome which greeted Luther had passed, and the seed scattered far and wide by his hand had taken deep root all over Germany, when every hamlet had its Reformed church, when the children learned the Bible at their mother's knee, and the truth had been developed by its teachers, there was not only an absence of enthusiasm about it, but, as each was attracted by some phase of the truth, he dwelt upon that, singling out his particular feelings and experiences, regarding the truth in its connection with him, and losing his grasp of the whole. It was not the truth which seized upon him, and filled his soul with a thrilling joy, and forced him to utter it in its simple full entirety, just as it was revealed to him; it may be that such clear wide vision belongs only to periods of unusual excitement, of inspiration; but he seized on so much of the truth as he could make completely his own, and if he was impelled to speak, declared only the special needs it satisfied, the special desires it quickened. It was thus, in tracing the progress and influence of the truth in himself, its adaptation to his varying moods, to the habit of his mind, to the shifting circumstances of his life, that he found compensation for the absence of that novelty and grandeur which it wore when, in its majesty, it first dawned upon the nation. The earlier poets looked from the mountain over the goodly land that stretched in glorious promise away to the dim horizon; the later poet wandered in the valleys, through the level pasture lands, by the winding of the rivers, looked perhaps no farther than the circling trees about his sheltered nook, and wrote of his quiet joys, of the new and often profound experiences made by him even within his narrow range, the goodness that followed him in his daily life, the trials that befell him, the pleasures he already tasted, but which, in infinite fullness, are at God's right hand for evermore. And each thus filled up, with patient loving minuteness, some outline of the great picture.

There was danger that this minuteness would run into such detail and exclusively personal experience, as to lose its power and meaning for others. The companionship of the Lord Jesus, the fellowship of His sufferings, that union with Him by which even our lesser thoughts and actions are glorified, being touched with the divine brightness of His—these, though most blessed truths, may be altogether degraded by a too minute and daring portraiture. The habit of tracing out the truth in the sentiment it produces, degenerates into sentimentalism; the habit of judging it by one's own feelings and experiences breeds an inevitable egotism. In the intensity of personal feeling, shades of passion that chase each other over the soul may be mistaken for the enduring form of spiritual truth, while there is apt to be an exuberance of thought—thoughts that come tumbling out unconnectedly like the feathers and tea-

trays from a conjuror's bag. There are traces of all these faults from the beginning of the seventeenth century; but it was not till after the pressure of war and plague was removed, that they boldly lifted up their heads and maintained, through successive generations of hymn-writers, that, far from blemishes, they were perfections. They are just those faults which characterise a period of repose, when, in the quiet orderliness of everyday life, men have leisure patiently to sift each truth, and reflect upon the workings of it in their own minds. And from the middle of this century, the predominance of this subjective element steadily increased, and has weakened, if not altogether marred, some of the best of later hymns.

Gerhardt—the central figure of the second century of Hymn writers, as Luther is of the first—is remarkably free from error on this side; nor does he ever, like his successors, write down the parentheses of thought. There are few nobler stanzas than this:—

“Give strong and cheerful hearts, to stand
Undaunted in the wars,
That Satan's fierce and mighty band
Is waging with Thy cause.
Help us to fight as warriors brave,
That we may conquer in the field;
And not one Christian man may yield
His soul to sin a slave.”

Or this other, which Luther himself might have written:—

“The world may fail and flee,
Thou standest fast for ever;
Not fire, or sword, or plague, from Thee,
My trusting soul shall sever.

“No hunger, and no thirst—
No poverty or pain,
Let mighty princes do their worst,
Shall fright me back again.”

Gerhardt was a quiet pastor, gentle, thoughtful—zealous, indeed, and firm and daring when roused in defence of the truth he loved, but naturally modest and shrinking—of a fine poetic temperament, a deep calm piety, a scholarly man, with leisure for books, and skill to use them. There was nothing either in his inner or outer life to call forth the abrupt energy of Luther. It is true he lived during part of the Thirty Year's War, and witnessed the confusion and sorrow it brought on his country, and shared, too, some of the suffering. One of the most perfect of his hymns was composed after a night of weary anguish on the altar steps of the Church at Lübben. Trials taught him endurance, not struggle; it brought out the strength of his faith, developed in him many Christian graces, gave birth to many of his best hymns, helped very much the earnestness, and purity, and heavenliness of his poetry, gave it the value of a rich Christian experience, produced all that refining effect which trial works in a quiet nature. But there was not in him the fire and intense concentration, the gathering up of the feelings of the time in a brief rapid song, which characterises the hymns of the Reformation,

and which has made them the Christian watchword of the country.

The number of his hymns is not great—one hundred and twenty in all. They are all worthy, however, of being sung; the proportion of inferior hymns is trifling, and many of them are written with letters of gold in the spiritual life of Germany. A hymn of Gerhardt's has often been the channel by which light flowed in on a dark sinful heart; innumerable souls have found in one the turning-point in their history, and, long after, the hymn thus blessed has been cherished as the central point of their dearest memories. Stories of their influence are everywhere common. They have penetrated to every station, enchaining old and young alike. Some have died repeating them; some have been supported by them in great danger; numbers have been preserved through them from carelessness and unbelief, raised by their holy thoughts above strong temptations. Falk relates that a beggar child was kept from many sins by praying this verse from the evening hymn, “Now rest the woods again.”

“Jesus, stay Thou by me,
And let no foe come nigh me,
Safe sheltered by Thy wing;
But would the foe alarm me,
Oh, let him never harm me,
But still Thine angels round me sing!”

Schiller learned Gerhardt's hymns from his mother, and that now quoted was his especial favourite in later years. Winckelman delighted in one beginning, “I sing Thy praise with heart and tongue;”^{*} and even after he had joined the Roman Catholic Church, when he sent from Italy for a hymn-book, it vexed him grievously to find this omitted.† The hold this sacred poetry had and retains on the great thinkers and great men of Germany is remarkable. Wülffer's “Eternity, Eternity,” was a favourite of Niebuhr; Arnold's “How blest to all thy followers, Lord, the road,” was the favourite of Schelling; when Grotius lay dying he asked that Eber's “Lord Jesus Christ, true man and God,” might be repeated to him; Altenburg's “Fear not, O little flock, the foe,” was called Gustavus Adolphus's battle song. Some of Gerhardt's hymns have already taken their place among our own. “Commit thou all thy ways,” was introduced by Wesley; “See, world, upon the shameful tree,” and “How shall I meet my Saviour,” are mutilations of two beautiful originals; while of another, the most profoundly touching of Passion hymns, and which none who have heard it in Bach's noble *Passionsmusik*, can read without “thoughts that do often lie too deep for tears,” more than one translation has appeared, the best known, perhaps, that commencing, “O head so full of bruises.”

The German hymn culminates in Gerhardt, and from him falls gently away through a brilliant group of sacred poets. The sad and weary key-note

* *Ich singe Dir mit Herz und Mund.*

† See Wackernagel's Preface to Gerhardt's Hymns.

which was struck during the war is prolonged and played on, with great skill as well as tenderness.

"Let who will in thee rejoice,
O thou fair and wond'rous earth!
Ever anguish'd sorrow's voice
Pierces through thy seeming mirth."*

These words of Franck's express very fairly his view of the world—the impression the miserable disorders he witnessed had left upon a gentle spirit. Picturing every variety of earthly disquiet, he loves to set against it the perfect rest there is in Christ. But it is not so much rest from himself he seeks, as from the sin that hems him round; and, hopeless that the world's sore turmoil will ever cease, he looks forward to the future, when his union with the Saviour will be complete, longing that the angel of death might come to set him free:—

"But not yet the gates of gold
I may see nor enter in,
Nor the heavenly fields behold,
But must sit and mourning spin
Life's dark thread on earth below;
Let my thoughts then hourly go
Whither I myself would be,
Jesus, dearest Lord, with thee!"*

Scheffler, again, desires rather to be freed from sin within, from the body of this death. Looking upon himself, seeing how defaced Christ's image is in his heart, his desire is that that image may be perfected, that the love of Christ may consume his self-love. In all he wrote there is the yearning to lose himself so that again in Christ he may find himself.

"I will love Thee,—all my Treasure!
I will love Thee,—all my Strength!
I will love thee,—without measure,
And will love thee right at length

Oh, I will love Thee, Light Divine,
Till I die and find Thee mine!"†

Ulrich, Duke of Brunswick, one of those profound Christian princes of whom Germany may well be proud, found his cross rather in his rank, and the duties of his office, and the cares inseparable from his position, than in the world, either within or without. But he, too, thirsted only for the communion of God, feeling that in that lay his highest good, and turning eagerly away from the attractions and pleasures of state to enjoy quiet thoughts of God's love. Personal trials, as well as a constant struggle against the tyranny of the world, chastened and nerved his spirit, while in free sympathy he poured out to others the consolations which had been effectual to him.

And so the hymn sunk softly down, losing its higher and clearer tones, but rich and mystical, and pensive as if it were sung under night and the stars, till in Tersteegen and Zinzendorf it touched the Wesleys, finding an enthusiastic translator in John, and a congenial poet in Charles. It was about the end of German hymnology: it was about the beginning of our own. Both have flashed up again in the latter half of the last half-century. Germany has its Spitta (now alas! silent); we have our Keble and Bonar. It is not the spirit of the elder verse. Tennyson is not like Milton, nor Robert Browning like Shakespeare. But at least it is not a revival, nor laborious mimicry of the antique. It is the growth of a new era of thought, as genuine and profound, perhaps as grand in its own way, as earlier eras. And if the Christian Hymn needed a splendid tribute it would be the homage of this—the most restless and ambitious century of the world.

W. FLEMING STEVENSON.

POEMS FOR CHRISTIE.

THE NARROW LOT.

A LITTLE Flower so lowly grew,
So lonely was it left,
That Heaven look'd like an eye of blue
Down in its rocky cleft.

What could the little Flower do
In such a darksome place,
But try to reach that eye of blue,
And climb to see Heaven's face

And there's no life so lone and low
But strength may still be given,
From narrowest lot on Earth to grow
The straighter up to Heaven.

THE TWO HEAVENS.

THERE are two Heavens for natures clear
And calm as thine, my gentle love!
One Heaven but reflected here;
One Heaven that waits above:

As yonder Lake, in evening's red,
Lies smiling with the smile of Rest;
One heaven glowing overhead;
One mirror'd in its breast.

SPRINGTIDE.

WHEN First Spring-buds are starring the Spring-blue,
And leaf by leaf Earth puts her glory on,
We feel a pensive longing to renew
The youthful splendour and the glory gone:
Wait but a few more years, OUR Spring shall come
With one renewal, and eternal bloom.

† *Hymns from the Land of Luther.*

HOW IT SEEMS.

STARS in the Midnight's blue abyss
So closely smile, they seem to kiss ;
But, Christie, they are far apart,
And close not beating heart to heart :

And high in glory many a Star
Shines, lighting other worlds afar,
Whilst hiding in its breast the dearth,
The darkness of a fireless hearth.

All happy to the listener seems
The Singer, with his gracious gleams ;
His music rings, his ardours glow
Divinely ; all, we know, we know !

For all the beauty shed, we see
How bare his own poor life may be ;
He gives ambrosia, wanting bread ;
Makes balm for Hearts, with ache of head.

He finds the Laurel budding yet
From Love transfigured and tear-wet ;
They are his life-drops turned to Flowers
That make so sweet this world of ours !

IN THE NIGHT.

DARK, dark the Night, and fearfully I grope
Amidst the shadows, feeling for the way,
But cannot find it. Here's no help, no hope,
And God is very far off with His day !

Hush, hush, faint heart ! Why this may be thy
chance,
When things are at their worst to prove thy faith ;
Look up, and wait thy great Deliverance,
And trust Him at the darkest unto death.

What need of Faith, if all were visibly clear ?
'Tis for the trial time that this was given.
Though Clouds be thick, its sun is just as near,
And Faith will find Him in the heart of Heaven.

'Tis often on the last grim ridge of war
God takes His stand to aid us in our fight ;
He watched us while we rolled the tide afar,
And, beaten back, is near us in His might !

Under the wildest night the heaviest woe,
When Earth looks desolate—Heaven dark with
doom,
Faith has a fire-flash of the heart to show
The face of the Eternal in the gloom.

A MISSIONARY CHEER.

CHRIST be near thee ! Christ up-bear thee,
Over waters wide and drear ;
Thro' all dangers, amongst strangers,
With no friend or brother near !

Then the winds and waves may wrestle,
Skies may threaten, deeps may rave ;
Safely rides the labouring vessel,
When the Saviour walks the wave.

Tho' thine earnest need be sternest,
And in darkness works the storm—
Drifting lonely, where One only
Can outstretch the saving arm ;

On His breast serenely nestle ;
Winds nor waves can overwhelm ;
Straight for haven goes the vessel,
When the Saviour 's at the helm.

Clouds may lighten ! lips may whiten ;
Praying looks be dark with dread ;
Sails may shiver ! true hearts quiver
At Death going overhead !

Yet tho' winds and waters wrestle,
Masts may spring and bulwarks dip,
Safely rides the labouring vessel,
When the Saviour 's in the Ship.

GERALD MASSEY.

A MISSIONARY CHEER.

ON COMETS.

BY SIR JOHN F. W. HERSCHEL, BART.

[THE SECOND OF TWO PAPERS.]

ANOTHER brilliant comet appeared in 1682, and our countryman, Edmund Halley, following Newton's example, and employing his system of calculation, computed its orbit, assuming (which simplifies the calculation very much) that orbit to be a true parabola. He found its path to be very different from that of Newton's comet. Instead of nearly grazing the surface of the sun, its nearest approach to it was about 55 millions of miles, or about half way between the orbits of Mercury and Venus. The plane of its motion, too, was much less inclined to that of the planets' orbits or the ecliptic, viz., about $17\frac{3}{4}^{\circ}$; and its motion was not direct, as Newton's was, but retrograde.

Halley was encouraged by the good agreement of his calculations with the observed places of this comet to collect observations of former comets, and endeavour to make out their paths, or, as we now express it, to determine the elements of their orbits. With incredible labour he calculated the orbits of 24 remarkable comets, and among them he found two whose "elements" agreed in a remarkable manner with those of his first comet—both great comets—viz., one observed by Appian in 1531, and one by Kepler in 1607. And he noticed also this remarkable approximate coincidence—from 1531 to 1607 is 76 years, and from 1607 to 1682 75 years. This led him to suspect that all three were one and the same comet, returning periodically. And, guided by this idea, he was led to examine the records of history for comets of earlier date. Among them, three turned up—in the years 1305, 1380, 1456; and when all these years are arranged in a series, you see that the intervals are alternately 75 and 76 years. This confirmed him in his impression of its periodical return, and emboldened him to predict its return about the end of 1758, or beginning of 1759.

You will observe that he allowed *more* than an average length of the period (77 years) for the fulfilment of his prediction. He had a reason for this. He ascertained that in coming back it would pass near the planet Jupiter, which is a large and massive planet; and Newton's discoveries had already taught him to contemplate the possibility of some disturbance of its motion from the attraction of such a body, and even enabled him to perceive that it would act to *retard* the return or prolong the period. Such disturbances do really exist, and have often very considerable effects on the return of comets.

This very comet, in the table of its returns I have here set down,* offers some striking examples.

There occurs, for instance, 1378, A.D., and not 1380, set down for one of the epochs of its appearance, with seventy-eight years interval between that and 1456. The fact is, that Halley was mistaken in supposing the comet of 1380 to be the same with that in question. That comet really appeared in 1378; but *that fact Halley had no means of knowing*. It has very lately come to light, on searching the Chinese annals—and the same annals have informed us of no less than six other very ancient appearances of this self-same comet, the earliest in the eleventh year before our Saviour. And this, it must be allowed, greatly tends to increase our confidence in these venerable records of Chinese history. All this apparent irregularity is owing to the action mainly of Jupiter, which is a general disturber of comets, and gives a vast deal of trouble to calculators, as I shall soon explain; and Saturn is not without a finger in the pie.

This prediction of Halley's, as the time for its accomplishment drew near, created a great sensation. All the astronomers furnished up their telescopes, and all the mathematicians set to work to calculate. The mutual actions of the planets in that long interval had been well studied, and it was clearly ascertained that Halley was right in his conjecture about Jupiter, and that in fact, the return of the comet would be delayed by the attraction of that planet 518 days, and by that of Saturn 100 more, and that it would make its next closest approach to the sun within a month, one way or another, of the 13th of April, 1759.

All the astronomers of Europe were looking out for it, eager to seize it on its first coming within the range of human vision. They were all disappointed of their prize. It was carried off by a Saxon farmer, of the name of Palitzch, an astronomer of Nature's own creating, who was always watching the heavens—without telescopes—without knowledge—simply from the profound interest their aspect inspired him with. He it was who first caught sight of it on the 13th December, 1758. It was taken up by others, and regularly observed. It passed its perihelion on the 13th of March, 1759, *just within* the limit of possible uncertainty the mathematicians had allowed for their calculations.

This was certainly a very great and signal

1835. Those marked with † are the ancient Chinese dates alluded to in the text. From B.C. 11 to A.D. 451, then, we have an interval of six periods, averaging 76 years 10 months each; from A.D. 451 to 760, four periods elapsed, averaging $77\frac{1}{2}$ years; from 760 to 1378, eight periods, averaging also $77\frac{1}{2}$ years; and from 1378 to 1835, six periods, averaging 76 years 2 months. Altogether, twenty-four periods, averaging 76 years and 10 months. The next return will be in or about the year A.D. 1912.

* B.C. 11†; A.D. 65 or 66†, 141†, 218†, 295†, 373†, 451, 760, 837, 1066, 1378, 1456, 1531, 1607, 1682, 1759,

triumph. It was repeated, with every circumstance that could make it decisive or give it notoriety in the year 1835, the epoch of the next appearance of "Halley's Comet." The calculations of the planetary perturbations (as the disturbances they cause in each other's motions are called) had then been brought to great perfection. The passage through the perihelion was predicted by M. Pontecoulant to take place on the 12th of November, and by Rosenberger between the 11th and 16th. In point of fact, it happened on the 15th. And this time, too, the astronomers were not beaten by the farmers. Their telescopes were from day to day pointed right on the spot where it would be sure to appear, which was advertised all over the world in the almanacs, and it was caught at the earliest possible moment, and pursued till it faded away into a dim mist.

When lost to European astronomers (for, like that of 1858 and 1861, it ran southwards), Mr. Maclear and myself received it in the southern hemisphere; and it was fortunate we did so, for extraordinary as were the appearances it presented on its approach to the sun, they were, if possible, surpassed by those it exhibited afterwards. And the whole series of its phenomena has given us more insight into the *interior economy of a comet*, and the forces developed in it by the sun's action, than anything before or since.

When first it was seen it presented the usual aspect of a round misty spot, and by degrees threw out a tail, which was never very long or brilliant, and which, to the naked eye, or in a low-magnifying telescope, appeared like a narrow straight streak of light, terminating in a bright head, which, in a telescope of small power, appeared capped with a kind of crescent, but, in one of great power, exhibited the appearance of jets, as it were, of flame, or rather of luminous smoke, like a gas fan-light. These varied from day to day, as if wavering backwards and forwards, but always on the side towards the sun, and as if they were thrown out of particular parts of the internal nucleus or kernel, which shifted round to and fro by their recoil, *like a squib not held fast*. The bright smoke of these jets, however, never seemed to be able to get far out towards the sun, but always to be driven back and forced into the tail as if by the action of a violent wind setting against them—*always from the sun*—so as to make it clear that the tail is neither more nor less than the accumulation of this sort of luminous vapour darted off, *in the first instance*, TOWARDS the sun, as if it were something raised up, and as it were, exploded by the sun's heat out of the kernel, and then immediately and forcibly turned back and repelled from the sun.

As this comet approached the sun, its tail far from increasing, diminished, and between the middle of November and the 21st of January, strange to say, both head (that is *Coma*) and tail were altogether destroyed, or at least rendered invisible. On the 21st of January the comet was actually seen like a

small star, without any tail or any hairiness, and was only known *not* to be a star by being exactly in its calculated place, and by its not being there next night. After that its head seemed to form again round this star, and grew rapidly and visibly from night to night, putting on appearances which could not be clearly apprehended without elaborate figures. This growth of the comet was so very rapid that, in the interval of seventeen days from the time I first saw it as a round body, its real bulk had increased to seventy-four times the size it then had, and at the same rate it continued to swell out, not, however, preserving a round form, but growing longer in proportion to its breadth, as if it intended to develop a new tail. But this it never did; the dilatation or swelling out continued, and, at one time, it had exactly the appearance of a ground-glass lamp-shade; the light always becoming fainter and fainter till it at last seemed to pass away from view from mere faintness. All this while, however, there was a sort of small and much brighter *interior Comet*, visible with a tail-like appendage, which seemed to be, as it were a conducting channel by which the matter of the newly-forming head was gradually retreating back into the centre.

The discovery of the periodical return of Halley's comet forms an epoch in the history of these bodies. Since that time a great many more have been ascertained to return at regular intervals. I will mention some of the most remarkable cases of this kind.

In 1770 a comet appeared which proved rebellious to the then adopted system of calculation, which set out with assuming the orbit to be a parabola. It very soon appeared by the calculations of M. Lexell, that the real orbit was an ellipse, and that not a very eccentric one. In fact, all the observations were perfectly consistent with an ellipse, nearly coincident with the plane of the earth's orbit, of such dimensions as that the extreme excursion from the sun would carry it out a little beyond the orbit of Jupiter, and its nearest approach would bring it within that of Venus—the time of its revolution being five and a half years. Here was quite a new fact; all other comets then known had run out to limits far beyond our system; since even Halley's, with its period of seventy-six years, at its greatest distance from the sun, passed very far beyond the orbit of Saturn, the most distant planet then known, and in fact, beyond the two since discovered, Uranus and Neptune. But here we seemed to have quite a sort of tame comet, keeping within bounds, and within call. Of course its return was watched for with eagerness, but alas! it never made its appearance again. At its next return in 1776 this was well accounted for, as owing to the relative situations of the earth, sun, and comet, it could not have been visible; but at the next, in 1781, the earth was favourably situated, since five and a half years would place the earth in the *opposite* part of its orbit, but eleven years in the *same*; and the calculators for a time were puzzled. The solution of the enigma

was a very odd one. The poor comet had got bewildered. It had plunged headlong into the immediate sphere of Jupiter's attraction, — had intruded, an uninvited guest, into his family circle, actually nearer to him than his fourth satellite, and into a situation where Jupiter's attraction for it was two hundred times that of the sun. Its course was therefore for a time commanded entirely by this new centre of motion, and the comet was completely diverted from its former orbit.

So far all was clear enough. But people began to ask how within so short a period, and being a tolerably large comet, it had never been seen before? Here again Lexell called Jupiter to the rescue. As he had taken away, so it turned out he had given. Jupiter, it will be borne in mind, comes round to the same point of his orbit in eleven years and ten months; two of the comet's revolutions would occupy eleven years and three months, so thus tracing back the comet two revolutions in its ellipse, and Jupiter rather less than one in his circle from the place of their final rencontre, which took place in 1779, it is clear they could not have been far asunder in 1767, three years before it became visible; and in fact, on executing the calculations necessary, it was clearly proved that before 1767 this unhappy comet had been revolving in a totally different orbit of much greater dimensions, and had been actually seized upon then and there by Jupiter—flung as it were inwards—and then, after making two visits to the sun, again seized on and thrown off into space, into an orbit of twenty years' period, where perhaps it may be quietly circulating to this day. Jupiter, in fact, is a regular stumbling block in the way of comets.

This is a strange history, but it proved a very instructive one. The comet passed, as I have said, through the system of Jupiter's satellites. Now the motions of these bodies have been studied with a degree of care and precision quite remarkable, by reason of their furnishing one of the means for ascertaining the longitudes of places. And if the comet had been a heavy massive body, its attraction must have produced some sensible disturbance in their motions. But no, not a trace of anything of the kind was detected. One and all of them pursued their courses with the very same precision and regularity as if nothing had happened. The conclusion is irresistible. *That* comet, at least, had no sensible weight or mass; it was a mere bunch of vapours.

Another very remarkable periodical comet is that of Encke, which makes its circuit about the sun in 1200 days, or about three years and four months, in the same direction as the planets. It is but a small one, being seldom visible without a telescope. Its orbit was first computed, on its appearance in 1795 (when it was discovered by Miss C. Herschel), and again in 1805 and 1819. Upon this last occasion, M. Encke, an eminent German computist, found that its motion could not be explained without supposing it to move in an ellipse of the short period

I have mentioned; and on searching back into the records of comets, he found those two I have just named, which agreed perfectly, and proved to have been really the same.

Since that time it has been re-observed in every subsequent revolution, in 1822, 1825, 1829, 1832, 1835, 1838, 1842, 1845, 1848, 1851, 1855, and is always announced in the almanacs as a regular member of our system. Its nearest approach to the sun brings it just within the orbit of Mercury, and on one occasion that planet happened to be so very near it on its arrival, that it produced a pretty considerable disturbance of the comet. But here too, as in the case of Lexell's comet, not the smallest perceptible effect was produced *by* the comet *on* the planet; and thus two valuable pieces of information were gained: 1st, astronomers were enabled to estimate the mass or weight of that small planet, better than by any other means; and 2nd, it was proved that *this* comet also has no perceptible weight, and is also a mere puff of vapour or something as unsubstantial.

There is another remarkable fact which this comet has revealed. Its successive revolutions are each a little shorter than the last—a small fraction of a day, it is true, but still unquestionably made out. This has been held to prove that the comet is by very slow degrees approaching the sun, and will at last fall into it—as if it moved in a space not quite empty, and were, in some very slight degree, resisted in its motion. I cannot quite reconcile myself to this opinion, and I think I have perceived another explanation of the fact, which I have given elsewhere, but to state this would lead me too far, and I must now go on to relate one of the strangest and most uncouth facts of this wondrous cometic history.

On the 27th February, 1826, Professor Biela, an Austrian astronomer of Josephstadt, discovered a small comet. When its motions were carefully studied, it was found by M. Clausen, another of those indefatigable German computists, that it revolved in an elliptic orbit in a period of six years and eight months. On looking back into the lists of comets it proved to be identical with comets that had been observed in 1772, 1805, and perhaps in 1818. Its return was accordingly predicted, and the prediction verified with the most striking exactness. And this went on regularly till its appearance (also predicted) in 1846. In that year it was observed as usual, and all seemed to be going on quietly and comfortably, when behold! suddenly, on the 13th of January, it split into two distinct comets!—each with a head and coma, and a small nucleus of its own. There is some little contradiction about the exact date. Lieut. Maury, of the United States observatory of Washington, reported officially on the 15th *having* seen it double on the 13th, but Professor Wichmann, who *saw it double on the 15th*, avers that he had a good view of it on the 14th, and remarked nothing particular in its appearance. Be that as it may, the comet, from a single became

a double one. What domestic troubles caused the secession it is impossible to conjecture, but the two receded farther and farther from each other up to a certain moderate distance, with some degree of mutual communication, and a very odd interchange of light—one day one head being brighter, and another the other,—till they seem to have agreed finally to part company. The oddest part of the story, however, is yet to come. The year 1852 brought round the time for their reappearance—and behold! there they both were, at about the same distance from each other, and both visible in one telescope.

The orbit of this comet very nearly indeed intersects that of the earth, in the place which the earth occupies on the 30th of November. If ever the earth is to be swallowed up by a comet, or to swallow up one, it will be on or about that day of the year. In the year 1832 we missed it by a month. The head of the comet enveloped that point of our orbit, but this happened on the 29th of October, so that we escaped that time. Had a meeting taken place, from what we know of comets, it is most probable that no harm would have happened, and that nobody would have known anything about it.

The number of comets whose periodical return has been calculated, is pretty considerable, altogether about thirty-six, and of these there are five which revolve in periods of from seventy to eighty years, and several of the rest in short periods from three to seven years. And it is a very remarkable feature in their history that *all* the comets of short periods, and three out of the five of those of the longer ones specified, revolve in the *same* direction round the sun as the planets, and have their orbits inclined at no very large angles to the ecliptic.

Of comets not periodical, I have already mentioned that most remarkable one of 1680, but several others deserve special notice. That of 1744 was a truly wonderful object. It is described and has been depicted with six tails, spread out like an immense fan, extending 30° from the head, which is fully the extent of the tail of the comet of 1858. And the appearance of its head when viewed through a telescope exhibited the same sort of jets of luminous smoke; the same curved envelopes and arches as I have already described; showing the same kind of excitement by the sun's heat, and the same powerful action driving the vapour back into the tail and hurrying it away.

The comet of 1843 was still more remarkable. Many of my readers, I dare say, remember its immense tail, which stretched half way across the sky after sunset in March of that year. But its head as we here saw it was not worthy such a tail. Further south, however, it was seen in great splendour. I possess a picture by Mr. Piazzi Smyth, Astronomer-Royal of Edinburgh, of its appearance at the Cape of Good Hope, which represents it with an immensely long, brilliant, but very slender and *forked* tail. Of all the comets on record, this ap-

proached nearest the sun; indeed it was at first supposed that it had actually grazed the sun's surface; but it proved to have just missed doing so by an interval of not more than 80,000 miles, about a third of the distance of the moon from the earth; which, in such a matter, is a very close shave indeed to get clear off. There seems considerable reason to believe that this comet has figured as a great comet on many occasions in history, and especially in the year 1668, when just such a comet with the same remarkable peculiarity of a comparatively feeble head and an immense train was seen at the same season of the year, and in the very same situation among the stars. Thirty-five years have been assigned with considerable probability as its period of return, but it cannot be regarded as quite certain. (It will of course be understood that the return of a great comet to the neighbourhood of the sun by no means implies that it should be a conspicuous one as seen from the earth. The place of its greater development may be, and is indeed, more likely than not to be ill timed, as regards the relative situations of the earth and sun, for its exhibition as a great celestial phenomenon.)

Another great comet, which has assumed a sort of historical and political importance, is that which appeared in A.D. 1556. According to the account of Gemma it would not seem to have been a very large one, as he assigns to it a tail of only four degrees long. Its head however equalled Jupiter in brightness, and in size was estimated as about one-third or one-half of the diameter of the moon. It appeared about the end of February, and on the 16th of March is described by Ripamonte as a really terrific object. Terrific indeed it might well have been, to the mind of a Prince prepared by the most abject superstition to receive its appearance as a warning of approaching death, and as specially sent, whether in anger or in mercy, to detach his thoughts from earthly things, and fix them on his eternal interests. Such was its effect on the Emperor Charles the Fifth whose abdication of the Imperial throne is distinctly ascribed by many historians to this cause, and whose words on the occasion of his first beholding it have even been recorded:

"His ergo indicis me mea fata vocant!"

the language and the metrical form of which exclamation afford no ground for disputing its authenticity, when the habits and education of those times are fairly considered. This comet has been supposed to be periodical and to return in 291 years on the ground of the prior appearance of great comets in the years 975 and 1264 (at intervals, that is, of 289 and 292 years respectively) and the general agreement of their orbits, so far as could be made out from the imperfect records we possess of their courses, with that of the comet in question. The next return, on this supposition, would have fallen about the year 1846 or 1847. It did not however appear at that epoch, nor in any subsequent

year up to the present time, although, from some very elaborate calculations by Mr. Hind and Professor Bomme (too elaborate, it would appear, to have been bestowed on the very imperfect records we possess of its previous history), it should have been delayed by planetary perturbation for several years beyond that date, and even so late as to the year 1858 or 1860.

Accordingly, when the three great comets, whose arrival in and since the year 1858 has so surprised and delighted the astronomical world, made their successive appearance, there were few persons at all acquainted with cometary history whose first impression was not that of the return of "Hind's comet," as it had grown to be called, from the eminent calculator and mathematician who had bestowed so much pains on it. This, however, it is needless to observe, was not the case; neither of them had ever been seen before, nor can either of them ever be expected to appear again, unless to a posterity which may look back on our record of them as we do on those ancient Chinese annals already spoken of. Of these by far the most magnificent in point of mere display, as well as the most interesting, when contemplated in a physical point of view, was that of 1858 (the fifth of that year), or Donati's comet, as it is now called, from the astronomer of that name, who first observed it at Florence on the second of June, at which time it appeared only as a round misty patch or "nebula:" this was about a month after it had passed from the southern to the northern side of the plane of the earth's orbit. That of the comet being very highly inclined (63°) to the ecliptic; its perihelion lying also on the north side of that plane; its motion being retrograde, and the earth accordingly advancing to meet it; all these favourable circumstances concurring, it so happened that the nearest proximity to it occurred only six days after its "perihelion passage," or time of nearest approach to the sun, which took place on the twenty-ninth of September, and in a situation with respect to the sun every way advantageous to obtaining a good view of it. Accordingly, with the exception of the comet of Halley in 1835 no comet on record has been watched with such assiduity or been more thoroughly scrutinized. A resumé of all the observations of it has been recently published by Professor Bond, forming the third volume of the annals of the observatory of Harvard College in the United States, in which its appearance in every stage of its progress is represented in a series of engravings, which, in point of exquisite finish and beauty of delineation, leave far behind everything hitherto done in that department of astronomy.

It was not till the 14th of August, or seventy-three days after its first discovery, that it began to throw out a tail and to become a conspicuous object. Very soon after this, its first appearance, a slight but perceptible curvature was perceived in the tail, which on the 16th of September had become unmistakable, and continued to increase in amount as the latter extended in apparent

dimension, till it assumed at length that superb aigrette-like form, like a tall plume wafted by the breeze, which has never probably formed so conspicuous a feature in any previous comet. To a certain extent, it is a common enough feature in the tails of comets, and is usually regarded as conveying the idea of their moving in a resisting medium, in a space, that is to say, not quite empty, as smoke is left behind a moving torch. But this is a very gross and inadequate conception of the peculiarity in question. The resistance of the "ether," such as the phenomena of Encke's comet, already noticed, may be supposed to indicate, is far too infinitesimally small to be competent to produce any perceptible deviation from straightness. Nor is it at all necessary to resort to any such explanation of the fact. Such an appearance would naturally arise from a combination of the motion the matter of the tail had (in participation with that of the nucleus) with the impulse given it by the sun: each particle of it describing, from the moment of quitting the head, an orbit quite different from that of the latter, being under the influence of a *repulsive* force directed from the sun, a curve of the form, called by geometers an hyperbola, nearly approaching to a straight line, and having its *convexity* turned towards the sun. The visible form of the tail (be it observed) would be, not the perspective view of such an orbit, but that of the *portion of space* containing, for the time being, all those particles, each describing its own independent orbit, and each reflecting to the eye its quota of the solar light.*

A very striking feature in Professor Bond's engravings, which he describes as frequently and certainly observed in America, and which did not pass wholly unnoticed in Europe, consists in the appearance of one, and on some nights two, excessively faint, narrow, and perfectly straight rays of light or "secondary tails" starting off from the main tail on its preceding or anterior side (that towards which the comet was advancing, and which side was always the brightest, sharpest, and best defined) in the direction of tangents to its curvature at points very near the head, and extending on some nights (on the 4th, 5th, and 6th of October) to a much greater length than the primary or more luminous tail. These appearances were presented from the 28th of September to the 11th of October with more or less distinctness. They are peculiarly instructive, as they clearly indicate an *analysis of the cometic matter by the sun's repulsive action*—the matter of the secondary tails being evidently darted off with incomparably greater velocity (indicating an incomparably greater intensity of repulsive

* Some anomalous appearances in the early development of the tail in this comet, which was slightly curved even when the earth was in the plane of the orbit, can by no means be regarded as fatal to this explanation of the general phenomenon, as they might have originated in a lateral direction of projection of the caudal matter from the nucleus *in ipso motu initio*.

energy) than that which went to form the primary one. The primary tail also presented another feature, frequently, indeed almost always, observed in comets, viz., its separation, behind the head, into two main streams with comparative darkness between them. This would be a natural and necessary optical consequence of the tail consisting of a hollow, conical envelope, streaming off on all sides around from the head, and presenting to the eye, therefore, a much greater thickness of luminous matter at its edges than at its middle. But in this comet the separation, when viewed through powerful telescopes, was singularly sharp, and appeared as a clear, narrow, straight cut or dark chink, originating close to the nucleus (as, indeed, on that explanation of the fact it ought). And this brings me to treat of the appearances presented by the head and nucleus under the inspection of powerful telescopes.

All considerable comets which have been examined with anything like what would in these days be regarded as a *powerful* telescope have presented the appearance of a nucleus of more or less definable and condensed light, sometimes having a much brighter and almost stellar point in or near its centre, and at some distance, *in the direction of the sun*, a capping of light sometimes quite separated, as if some transparent atmosphere sustained it,—more frequently connected by those fan-like jets of “flame,” such as we have mentioned in the case of Halley’s comet, and putting on the aspect of a “sector” or fan, opening out into a widening arc, and bounded internally by two crescents springing from the nucleus. Donati’s comet exhibited this feature in perfection, not, however, without striking variations and individual peculiarities. There was the same appearance with *low magnifying powers* of an envelope surrounding a nucleus in the general way above described, but the connection was singularly varied, as if several jets of luminous (or illuminated) matter had been issuing from various parts of the nucleus, giving rise, by their more or less oblique presentation to the eye, to exceedingly varied appearances,—sometimes like the spokes of a wheel or the radial sticks of a fan, sometimes blotted by patches of irregular light, and sometimes interrupted by equally irregular blots of darkness. From the 24th of September to the 10th of October, however, there were seen to form no less than *three distinct* caps or envelopes in front of the nucleus, each separated from that below it by a more or less distinct comparatively dark interval. These Professor Bond appears to consider as having been thrown off in intermittent succession, as if the forces of ejection had been temporarily exhausted and again and again resumed a phase of activity, the peculiar action by which the matter of the envelopes was ultimately driven into the tail (or as we conceive it, an analysis of that matter performed by solar action, the *levitating* portion of it being hurried off, the *gravitating* remaining behind in the form of a transparent, gaseous, non-reflective medium) taking

place, not on the surface of the nucleus, but at successively higher levels. Meanwhile, and especially from the 7th to the 10th of October, that is to say, when the full effect of the perihelion action had been endured, the nucleus and its adjacent sector offered every appearance of most violent and, so to speak, angry excitement, evidenced by the complicated structure and convolutions of the jets issuing from it. From this time to its final disappearance the violence of action gradually calmed down, while the comet itself went southwards, and at length vanished from our horizon.

An idea of the actual dimensions of this comet may be formed from the measurement taken by Professor Bond on the 2nd October, which, combined with the distance of the comet from the earth at that date, affords the following results, viz. :—

Diameter of the bright internal pellet or nucleus	Miles. 1,600
Distance from its centre to the summit of the first envelope	7,500
Distance to that of the second envelope	13,200
Breadth of the brightest part of the tail where it seemed (to the naked eye) to issue from the comet	90,000

To which it may be added that the actual length of the tail when at its greatest development, would not have been less than thirty millions of miles, and those of the faint streaks or secondary tails, thirty-four or thirty-five millions.

The comet of 1861, which burst suddenly on us in its full splendour on the 30th of June in that year, (though it had been seen for several weeks before in the southern hemisphere), was considered by those who saw it at its first appearance to surpass in brightness even that of 1858, and was remarkable for the extreme breadth and diffusion of its tail when first seen, arising from the circumstance of the earth having been then situated nearly in its prolongation. Indeed it is not impossible that on that day we actually traversed some portion of it, our distance from the head being then only about 13,000,000 miles, and more than one observer having noticed and been much struck with an unusual and general brightness, like an auroral light, not confined to the neighbourhood of the comet, but spreading over the whole sky. The most remarkable peculiarity of this comet, however, consisted in the enormous length which one side of its tail attained between the 2nd and 4th of July, extending in a *perfectly straight* but feeble ray from near the star Alpha in the Great Bear to and beyond that designated by the same letter in Ophiuchus, or over 75° in angular measure, contrasting strikingly with the stunted development and *bushy* aspect of the opposite branch. Its head when viewed with good telescopes exhibited the same general phenomena of luminous jets and crescent-like emanations as its predecessor; but much less complex and varied. Owing to the great inclination of its orbit, this comet, coming to us from the southern side of the ecliptic, soared high above it on the northern side,

and remained long and conspicuously visible as a *circumpolar* object, the whole of its diurnal course being above our horizon. Not so its successor of 1862, whose orbit being but slightly inclined to our own, its motion retrograde (or meeting the earth), its perihelion distance almost exactly equal to our distance from the sun, and its passage through the perihelion occurring at a time when the earth was not very remote from that point, it passed us closely and swiftly, swelling into importance and dying away with unusual rapidity. The phenomena exhibited by its nucleus and head were on this account peculiarly interesting and instructive, it being only on very rare occasions that a comet can be closely inspected at the very crisis of its fate, so as to witness the actual effect of the sun's rays on it. In this instance the pouring forth of the cometic matter from the singularly bright and highly condensed, almost planetary nucleus took place in a single compact stream, which after attaining a short distance equal to rather less than a diameter of the nucleus itself, was so suddenly broken up and dispersed as to give, on the first inspection, the impression of a double nucleus. The direction of this jet varied considerably from day to day, but always declined more or less in one direction from the exact direction of the sun. So far as I am aware, the formation of an envelope disjoined from the head was not witnessed in this comet.

And now, I dare say, all my readers are ready to ask—After all what is the tail of a comet? Is it material substance in the first place? To this I answer unhesitatingly, Yes! Donati's comet has given a decisive proof on that point. There is a criterion by which *when it is observed* it can be positively asserted that the light by which anything is seen has been reflected from a material substance. The light reflected, when it exhibits that peculiar property in which this criterion consists is said to be *polarized*. The direct light of the sun or that of a candle is not polarized, but when reflected at a particular angle on any surface but a metallic one it is, and *if* it be polarized we may be sure that it is not direct light thrown out by the object seen, but borrowed or indirect light. No matter at present what this polarization is; all I wish to convey is, that there is a simple enough experiment which everybody who understands optics knows how to make, which, *if the result be of a certain kind*, the reflection of the light is demonstrated (the converse, be it observed, does not hold good) in an instant, by merely looking through a small instrument contrived on purpose. Now, Mr. Airy, the present Astronomer Royal, a person who is not only an excellent astronomer, but who stands very high as an authority on this especial branch of optics, applied this test to the light of the comet's tail on the 27th September and found it partially polarized. The tail then shone by reflected light; and there was also another particular indication or character of the polarization impressed, which the same trial afforded, and which enabled him to say positively that the

light had been reflected from some source of light agreeing in situation with the sun.

The tail of the comet then was material substance.* But now only conceive what must be the thinness, the almost ethereal lightness of a vapour or fog, which, occupying such an enormous space, would not extinguish the stars shining through it. Arcturus was no way dimmed when it shone through the very middle of the brightest part of the tail of that comet. But I have already stated that that part measured 90,000 miles. As this part of the tail was no doubt *round*, as thick as broad, the star's light must have shone through 90,000 miles of this mist. Now, every one must have noticed that the steam puff of a railway carriage completely obscures the sun, much more a star. You cannot see the sun through it. Well, then, there must have been less substance in the line of 90,000 miles of tail between the eye and star than in the line of a few yards of steam smoke penetrated by the eye in the other case.

If you look at a filmy cloud at sunset, though not thick enough to hide a star, you see it bright with vivid golden light by reflection from the sun. How much more then if it were much nearer to the sun, and much more strongly illuminated. The sun's rays pierce such a cloud through and through, and are reflected equally from its interior and exterior. Just so in the almost infinitely more thin texture of a comet—even in the densest part of the head it cannot be compared to the lightest cloud so far as substance goes. In Biela's comet very minute stars have been seen by myself through a part of the head at least 50,000 miles in thickness, which a fog a few yards thick would have extinguished. A solid body of a round shape would exhibit phases like the moon, and would appear sometimes as a half moon, sometimes as a crescent, and sometimes as a full moon—but the heads of comets show no such appearances. Of course I do not mean to deny that that very minute brilliant point, which some are said to have exhibited, may be a solid body; but it must be a very small one, perhaps not a tenth or a hundredth part the size of the moon; and, indeed, if there be *not* some little solid mass, it seems impossible to conceive how the observations of a loose bundle of smoke rolling and careering about could ever be represented by any calculation. Certain it is, that what appears to be the central point of a comet, is that point

* I applied the same test to the comet of 1862. There are various modes of making the trial. Mine was by looking at the comet through an achromatized doubly refracting prism, and turning the prism round in its own plane. I could perceive *no* alternate maxima and minima of brightness in the images. But in this case it is the positive result which is conclusive. Everything depends in the first instance on the relative situations of the sun, the object, and the eye. And, moreover, the light of the comet of 1862 was far inferior to that of Donati's, rendering the experiment *pro tanto* more delicate. And it is very possible that, to septuagenarian eyes, indications of *partial polarization* might escape observation.

(and no other is) which conforms rigorously to the laws of solar gravitation, and moves strictly in a parabolic or elliptic orbit.

There is a very curious feature common to all the comets which have little or no tail and which circulate about the sun in short periods, such as that of Encke, in which it has been especially observed. As they approach the sun, so far from dilating in size they contract,—I mean in their real bulk, or at least their visible bulk,—and on receding from the sun they grow again to their former size. The only possible explanation of this is, that a portion of their substance is evaporated by the heat—that is to say, converted from the state of fog or cloud into that of invisible transparent vapour. Perhaps I ought to explain what is the difference. Take the case of a light cloud in a clear sky when the sun shines on it. If you watch it attentively you will very often see it grow thinner and thinner and at last disappear altogether. It has been converted from *mist* to invisible *vapour*. The material substance, the watery particles are *there*, but they have passed into another form of existence, in which, like the air itself, they are invisible. As the comet then gets heated a portion is actually vaporized—and the vapour condenses as it cools again. The whole substance of the comet of Halley, as we have seen, was so evaporated in 1835-6, all but what I suppose must have been really its solid body: that *star* which I have already mentioned which was seen on the 22nd January, 1836, and all that curious process that went on afterwards, no doubt was that of the re-condensation of the evaporated matter and its gradual re-absorption into and close around the body.

There is still one point in the history of comets which I have not touched upon, or but slightly. Comparatively only a few of the great number of comets which have been observed, and of which the orbits have been calculated, have been seen more than once. The great majority once seen, seem lost for ever. What becomes of them, is a very natural question. The answer to this is, that the time of the periodical return of a comet depends entirely on the distance to which it may run out from the sun. Now we know of nothing to interfere with or disturb the motion of a comet, once clear of the planetary system, between the farthest planet and the nearest fixed star, and that interval is so immense, that the imagination is lost in attempting to conceive it. The farthest planet we know of is only 30 times the distance of the earth from the sun. Halley's comet in its elliptic orbit of 75 years goes only a little beyond that, or to about 36 times the earth's distance. Donati's comet, if the computists are right, will return in 2100 years, and will have gone out to a distance 238 times the earth's distance from the sun, or nearly 80 times the distance of the planet Neptune. But this is still hardly the thousandth part of the distance to the very nearest fixed star—and supposing the elliptical orbit of a comet should be so long as to carry it out only half so far to the

sphere of the fixed stars—its return to the sun would require upwards of 1,000,000 of years from its last appearance. Few of those who saw the last-mentioned comet pass over Arcturus, had any idea of the enormous distance at which the star really was behind the comet, and Arcturus is by no means the nearest star.

I think, from what I have said, you will perceive that there is in the history of comets, matter enough both to encourage inquiry and to check presumption. Looking to the amount of our positive knowledge of them—knowledge acquired by centuries of observation and by the conspiring efforts within the last two centuries of the profoundest thought and the most persevering labour of which man is capable, we may reasonably enough congratulate ourselves on what has been done, and while we can afford to look back with an indulgent smile on the unfledged and somewhat puerile attempts of the ancient mind to penetrate their secret, we may as reasonably look forward to the revelations they will afford, as time rolls on, of facts and laws of which at present we have no idea. This may and ought to inspire confidence of the powers of man to penetrate always deeper and deeper into the secrets of nature. But on the other hand, here, as on every other occasion, we find that the last and greatest discoveries only land us on the confines of a wider and more wonderfully diversified view of the universe, and have now, as we always shall have, to acknowledge ourselves baffled and bowed down by the infinite which surrounds us on every side.

Beyond all doubt, the wider and most interesting prospect of future discovery, which their study holds out to us, is that distinction between *gravitating* and *levitating* matter, that positive and unrefutable demonstration of the existence in nature of a repulsive force co-extensive with but enormously more powerful than the attractive force we call gravity, which the phenomena of their tails afford. This force cannot possibly be of the nature of magnetic force. That force is specially polar in its action between particle and particle—a magnet of indefinitely minute dimensions, so minute as the individual molecules which go to form a comet's tail, could by no possibility be either attracted or repelled, *as such*, by a body, however powerfully magnetized placed at the distance of the sun. It might have a *direction* given to its magnetic *axis*, but its centre of gravity would not be affected one way or the other. The attraction on one of its sides would precisely equal the repulsion on the other. The separation of one portion of the matter of a comet from the other by the action of the sun, which we see unmistakably operated at and near the perihelion passage (a separation which the late Sir William Herschel certainly *had* in mind, though perhaps somewhat indistinctly, when he spoke of a comet visiting our system for the first time as consisting of “unperihelioned” matter in contradistinction to those which he

considered to have lost their tails by the effort of repeated appulses, and to consist mainly of *perihelioned* matter), this separation I can only conceive, as I have ventured to express it, as an *analysis* of the materials—analogue to that analysis or rather disunion by the action of heat which St. Clair Deville has lately shown to take place between the constituents of water at high temperatures. In this case the chemical affinity is so weakened that the mere difference of difficulty in traversing an earthenware tube suffices to set them

free of one another. How much more so, then, were the one constituent of a chemical compound subject to a powerful repulsion from a centre which should attract the other, and with it by far the larger mass of the total comet? Might not, under such circumstances, the mere ordinary action of the sun's heat sufficiently weaken their bond of union, and might not the residual mass, losing at every return to the perihelion more and more of its levitating constituents, at length settle down into a quiet, sober, unexcitable denizen of our system?*

A BUNDLE OF OLD LETTERS.

FROM A WANDERER.

CROSSING THE CHANNEL—BAALBEC—THE CRIMEA.

Do you ever amuse yourself, my reader, by looking over old letters? I take it for granted you are not such a Goth as to destroy these precious repositories of old friendships and old associations. How the slumbering memory is stirred by these old dusty relics! Friends come to us again with their old familiar faces. We hear their well known accents and again enjoy their happy presence. Scenes and events pass before us as in the Prophet's dream,—here a moment, and again gone into that abyss of forgetfulness from which these half-effaced words fitfully summoned them. A mere line, a word, a name may lead the memory along a path which may end in laughter, or in silent tears.

The letters of travellers, too, have often a freshness and "verve" we miss in their more stilted "Journals," as it is especially in their communications with friends of different mental complexions that they present the many sides of the pictures daily brought before them in their wanderings, and especially the first impressions these pictures produce.

Such very natural reflections occurred to me the other evening, when, in arranging my private repositories, I came on a bundle of old letters. They were written to the members of one family circle from many distant lands, and mingled as they were together in a very incongruous association, I thought some extracts might amuse, if they did not edify,

some of the readers of *Good Words*. Passages are here given from the various letters just as they came to hand.

Crossing the Channel.

Rouen, 185—.

I have frequently crossed that vile British Channel, and it was always in a rage, as if it had no patience for that hollow "entente" which it has become so fashionable to refer to on all occasions. I consider myself a good sailor, and yet alas! I was mortal. The terrible example of some half dozen Frenchmen, and the savage custom of distributing a basin to each passenger, as you would distribute a pack of cards, at once utterly destroyed my peace. We had the usual assemblage of passengers such as one has seen a score of times, but rather above the average number of those unwashed nondescripts whose stale tobacco smoke, and aroma of old cheese, so powerfully aid in bringing about the final catastrophe. As we went on board, a sailor was pointing out to a Frenchwoman the way to the cabin, and to our great amusement we heard him say, in reply to her inquiries as to the hour of sailing, "Parlez vous français down-stairs, if you please, Madam"—with an air so complacent and self-satisfied as to lead you to the belief he thought himself quite a proficient in foreign languages.

Of all living creatures to be at-sea with, a French-

* According to the electric hypothesis advanced in my "Results of Astronomical Observations, &c., at the Cape of Good Hope," p. 409, and note thereon, it would be—not the matter, but the electricity of the comet that would undergo "analysis" by the solar action: the positive action of the sun (supposed in excess) repelling the positively excited matter emitted from the head, and driving it fairly off into space beyond recall, as we see light bodies repelled, when positively charged, by a positively electrified conductor. This would save indeed the verbal solecism (as some may think it) of a levitating form of matter. But the existence of a repulsive force, somehow exerted, would still remain uncontroverted. And a portion of the positive electricity of the comet

being once got rid of, its complementary negative portion would remain in excess, and being attracted by the positive charge of the sun would operate, through its adhesion to the nucleus, to increase, thenceforward, the total attraction of the comet to the sun, which would be, dynamically, equivalent to an increase in the intensity of gravity *pro quantitate materie*. But all this supposes a real existence of "electricity" as a thing, an *entity having force, but devoid of inertia*: which ideas if we once consent to detach from each other, we are landed in a new region of metaphysical as well as dynamical speculation, and may be led to conceive the possible existence of a *transferable cause of force* distinct alike from force and from matter.

man is, I think, the worst. The sea is to him perfect purgatory:—the postures of misery,—the utter prostration,—the noise and agony and contortions of the inevitable process. Some, with bloodless faces and dishevelled beards, clasped their basins convulsively to their bosoms as if they were their only friends,—some, with hoods drawn over their heads, and great mufflers round their hairy necks, groaned terribly as they held their splitting heads between their knees. Some lay like variegated pieces of old carpet beneath the seats, and others hung themselves over the piles of rope like wet clothes to dry. The sea spray went over them, the rain and wind beat on them, but all in vain. Mind and body were prostrate. I was once before in a gale in the Mediterranean with a regiment of French soldiers, and on another occasion I was at sea with a host of Arab pilgrims, and after mature consideration I cannot conscientiously say which scene was the more heart-rending. As to the soldiers, they came on board at Malta, gay, bright; “Sabreurs,”

“Love in their eye, war in their tread;”—

they sang operatic airs and war songs majestically—they stormed cities, and subdued states in strong choruses, till the sea rose, and then!—Here and there, along the deck they lay, heads and tails, as if forked on board. No fear of insulting them or their flag now! The pomp and circumstance had been wiped out by the first toss of old Neptune’s wet tail, and so over the prostrate forms the sailors stepped, not very daintily, and evolved their tobacco regardless of where it fell. The Mahometans were little better. They frequented the bilge-ways, lying flat on their stomachs—they were plastered on spare spars, and on the thwarts of spare boats,—sat on by the fowls, contemptuously stared at by the pig, they remained surrounded by their wet and soiled goods, hopeless, abject, miserable. The barest rock would with these men at such a moment outweigh all the Eden of Mahomet.

But after all how intensely wretched is a state of continual sea-sickness! Why has no poet figured it among the torments of Purgatory? What is the cause of this malady? Is it the brain, or the stomach, or both, which is at fault? How difficult to decide, when head, back, and limbs all take part in the horrid agony. That the brain has often much to do with it, there can be little doubt, and one story I heard from an officer’s wife during this same voyage, goes far to prove it, especially as it quite agrees with what I have heard from others. Her husband’s duty led him frequently to Paris, and she had abandoned all idea of accompanying him, in consequence of what she suffered from sea-sickness. A friend advised her to bandage her eyes before going on board, and at last she tried it. She did not suffer one moment’s uneasiness. Next time, when she had almost reached Boulogne with the same comfort, she removed the handkerchief just before reaching the port, thinking she was all safe,

and she was instantly sick. This “*experimentum crucis*” she has frequently repeated.

Binding the stomach firmly, and lying flat on the back with the eyes closed, are also efficacious; and if I were the administrator of the Transit steam-boats, I would catch every Frenchman on the pier before embarking, blindfold him, lead him cautiously on board, tie a turnip into his girdle, and lay him flat on a shelf with his pug-nose to the sky, so as to spare the crockery of the ship, and husband the energy of the creature.

But I dare say you are tired of this long yarn. I must, however, tell you of one stout red-faced and snuff-loving gentleman who was on board, and whom we christened (when we had recovered our composure) “*Theo-Sauffulus*,” from his great powers of imbibing the Irish blackguard. He had a young son with him, who got sick in the funniest way I ever saw. He ran about having nothing apparently wrong with him, till suddenly, as if he had forgotten something, he solemnly approached the taffrail with an air of care. His father, with paternal eye, surmised the wants of *Sauffculus*, and seizing him by the collar and unmentionables, fairly decanted him over the quarter. In a moment the debt was paid, and relieved from the mental load the obligation had evidently occasioned, the boy resumed his play with a brow now serene and unclouded. This ludicrous process was frequently repeated. The father never lost his gravity nor the son the exact moment to deliver.

Rouen is a most agreeable quaint old place, full of gables and queer chimney cans. The groupings of old houses are frequently very picturesque. They are often patched up in such an odd way, as if additions were made whenever a new infant made its appearance, and such addition (the room, not the infant) was just stuck on wherever it could get a place on the old house to hold on by. The church of St. Ouen, all the world knows, is the gem of the town, but I never could describe architecture, so I won’t try so tough a work as this old bit of stone-lace.

Baalbec (or Heliopolis, *i. e.*, the City of the Sun).

I sit with my pen to *try* and write you amidst the silent ruins of this mighty temple. Our tent is pitched within the circuit of its walls, and the full moon of an Eastern sky bathes the landscape in a flood of light. I require no other lamp. The huge walls and pillars of the temple of “the great God Baal” stand around and above me, their tracery marked clearly against the star-laden sky. That soft gentle “sheen” which the robust sunlight so soon dispels wraps the landscape as in a bridal garment, and that peculiar mysterious, almost oppressive silence fills the air, which brings rest to the weary eyelids of man and beast. The low whisperings of some of our attendants close by, and the fitful bark of a dog far away among the hills, only make the universal

stillness the more marked. Sometimes, too, the silver tinkle of the tiny stream beyond the ruined wall falls like music on the ear. It was a weary ride we had yesterday across the great plain of Cælo-Syria which divides the range of Lebanon, whence we came, from Anti-Lebanon, where we now are. As I look into the clear moonlight, I can discern the black masses of Lebanon far away in the distance, and the long flat plain between, melts into a silvery obscurity. Every object near at hand is sharply defined on the side next me, and sends a long dark shadow into the plain beyond.

In crossing from Lebanon yesterday, I saw the most beautiful and perfect mirage which could cheat and yet delight the eye of man. I confess that I could not persuade myself it was an unreality till I tested it. When my shoulders were baked by the fiery heat of the declining sun, and my eyes felt as if distended with liquid fire,—when the ground beneath was iron, and the sky overhead brass,—the fair vision rose before me. A great glassy lake filled the plain, a gentle ripple pulsed against the distant shore, where groves of trees and palatial buildings threw their images far over the tide. Mountains stood in the cool waters as I have seen them round a highland loch in old Scotland, little islands lay clasped in the embrace of the swelling flood, and over all the trembling air quivered and throbbled as it rose and fell with the waters. That a figment of the imagination! That a delusion of the senses! Impossible! I almost thought I could hear the ripple, and feel the fanning breeze chasing the feverish heat from my skin. With straining eyes, and mind roused from that apathy which long exposure to great heat so surely occasions, I rode towards the fair vision, intent on laying my aching brows in the refreshing water, when lo! like a scroll, it vanished; and in place of dashing, as I fondly hoped, into the splashing sea, my horse's hoofs echoed on the same hard thirsty earth which had for hours cast up upon us its torturing flames, and heat and thirst redoubled their tyranny.

As we came near the great temple, it appeared as if it were still instinct with its ancient service, and that the sun, so long worshipped there, had again descended in bodily presence and filled it with his glory. Every shaft and cornice blazed in the golden radiance. Along the sculptured capitals, and deep in the recesses of the ancient walls, the evening sun held its burning torch, till the magnificent temple stood forth overlooking the valley, and high against the green hills beyond, like a fretted casket of burnished gold. It was thus, when it was filled, as it were, with the majesty of the evening sacrifice, that we rode within the sacred precincts of its crumbling walls.

What an awe-inspiring mass this is, truly! How gigantic the scale; how delicate each detail! How curious it is to think that we know almost nothing of those who designed or executed a building which has been so long one of the wonders of the world.

Half-effaced inscriptions, and a few old coins, have done little more than hint at the solution of the problem. There stand these ruins! silent, solemn, looking out with the same grey front for long centuries in sunshine and storm across that glittering plain.

There are three temples at Baalbec—that dedicated to the sun being probably the largest in the world. Now the greater portion of the buildings is in ruins. Heaped and crushed in one great mass, the columns and friezes lie prostrate. It must have taken long years of vast labour to form such renowned monuments of the sculptor's art. The great platform on which the chief temples stand is undoubtedly Phœnician, while the temples themselves have been worshipped in, in turn, by Greek, Roman, and Christian. The whirlwind of battle has swept by and over them,—they have served the Turk as a fortress, and the artists of the West as a studio. These modern Vandals—the Turks—not being content to allow earthquake and storm to level such glorious monuments, have not scrupled to undermine some of the finest columns in order to possess themselves of the paltry piece of lead by which they were bound. I am sure you have often heard of the great stones—from which at one time the temple was named—which form part of the platform. They are over 63 feet long and 13 feet high and broad, and yet they lie in courses 20 feet from the ground. To explain how they were raised has puzzled the learned.

There is an eagle sculptured on the key-stone of the chief temple, which you may have seen in photographs. I confess I have seldom, if ever, seen a figure which surpasses this in effectiveness. In the beak it holds a garland, the ends of which are held up by two winged figures on either side. It got so rough a shake from an earthquake that it fell downwards, and has just been saved from complete destruction by being caught between the two side stones; but the grasp is so slender that you hesitate to pass beneath it. The sculptured fruit and foliage of this temple are perfectly exquisite. How annoying it is to see these almost sacred walls scribbled over by those same vulgar Smiths, Jones, and Robinsons of all nations, whose autographs you meet with on the top of Cheops, on the cedars of Lebanon, and deep in the salt mines of Bavaria. I have often wondered where the animals get the black paint they use. Perhaps the dirty creatures have only to wet their fingers—

At no great distance from us there is an encampment of Turkish troops sent up to quell some local disturbance, or, as I suppose it should be put, to see that the native tribes, who are busy cutting one another's throats, do it effectually. The commanding officer of the squad invited us "to coffee" with him, and so, seated on pillows in a great marquee, we went through the ceremony with many bows and grimaces, and fine speeches, not one word of which was understood by either party. However it did just as well, for while I asked

kindly for his mother, I really had as little interest in her welfare as he had in mine. This officer was the usual short stout oily specimen of humanity, dressed in baggy breeches and tight-fitting surtout, you see in scores in Stamboul. I am at a loss to know how a man of this cut could lead a body of such weird-like ruffians as sat bandit-fashion on the ground around the tent; but whatever might be said of the chief, I must admit that the troopers formed perfect "figurants" in a landscape. The mode in which the attendant hands your cup—and such tiny silver-cased things they are, too—is very graceful. With his left hand spread out on his breast, he presents your cup with a low obeisance. When you are done he retakes it with his left hand, and immediately covers it with the palm of his right hand, again bending to the ground.

Serpents are very numerous in this country, and very large. I always take a sly squint between the sheets before turning in, in case of going up to the knees into the cold folds of one of these slimy beasts. Last evening we saw a young boy of about fifteen do a most plucky thing. A serpent wriggled itself across the road and into a wild garden. The boy plunged into the thicket after it, and with a short supple stick killed it, and lugged it out by the neck in great triumph, its long scaly folds being, when measured, nearly five feet long. Of course we backshished and bono-johnied the boy handsomely.

I must now seek my pillow; however difficult it is to tear one's self from the contemplation of these great shadows, and that resplendent sky, yet we have a long ride over Anti-Lebanon at daylight, and already our attendants are snoring on every side. By the way, this reminds me to tell you of one of our men, "Hamed" by name, who is a perfect prince of snorers, and whose talents in that line I cannot consent to put under a bushel. He almost plays tunes on his nasal point. He never condescends to any of those low, vulgar, bass notes of your common pot-house drone, not he, but he revels in clear tenor notes,—fine-drawn quavers like the wailings of an Æolian harp. On retiring to rest (behind a convenient stone, and on an old bag) his first quarter of an hour is spent in cautious but diligent preparation. You hear at intervals indications that the proboscis is being screwed up like a fiddle, and then! what words shall describe the flood of melody! At one moment he emits slow, solemn variations on native airs, at the next, rapid, fiery, and impetuous sonatas, as some clumsy enemy tramples on his dreaming fancy. He used to sleep by the side of the tent, but I had to dislodge him, as I was in momentary dread that he and his nose were coming through the canvas. By degrees I have got him lined back to a reasonable distance, from whence the sounds come (as they do at this moment) gently floating on the night air like the tones of an accordion, and at that distance they are (as I experience momentarily) very provocative of slumber. He has an entirely original plan of arranging some passages.

After a peculiarly brilliant fugue, he suddenly ceases, as if astonished at his own performance, and then trying in vain to hit the same key, he gradually falls into the regular burden of his serenade, and goes swinging on in a mighty chorus. However, adieu. Hamed is in admirable tune to night, and I must go and take advantage of his first sleep, which is always his easiest.

Crimea, June, 1855.

This is the first moment, amidst the whirl of recent events, that I could snatch to write you. I hardly know where to begin, there is so much to tell, and yet it is so difficult to tell it well and clearly. What scenes of fearful fury and bodily and mental agony have I not witnessed since I last wrote! Yet such is glorious war! How different truly is the reality from all that mere imagination can conjecture, or pen describe! With such pictures of agony and death so vividly impressed on the brain and heart, and the groans of the wounded still in the ear, what an estimate is formed of glory! What a vain, empty word is it when weighed by the bedside of the mangled soldier!—verily it is "the shadow of a dream." I cannot but recall the well-known words of Coleridge, when he says, in speaking of the careless way we allude to such scenes,

"Terms which we trundle smoothly on our tongues,
Like mere abstractions, empty words to which
We join no feeling, and attach no form!
As if the soldier died without a wound;
As if the fibres of this God-like frame
Were gored without a pang; as if the wretch
Who fell in battle doing bloody deeds,
Passed off to heaven translated, and not killed;
As if he had no wife to pine for him,
No God to judge him!"

But I must try to give you an outline (for more it cannot be) of that terrible night of the 17th, and even more terrible morning of the 18th.

For some time before the attack there was a strange uneasiness in camp. We all knew something was going to be done, but no one, except the chiefs (and they kept it to themselves for once), were in the secret. We had observed that immense quantities of shot and shell were being collected in the trenches, and that day after day relays of cannon were being brought to the front; while the movement of French troops from the left to the right attack went on nightly. Still there is always so much stir in a great camp like this, that all these things attracted little attention. We heard all day the same ceaseless dropping cannonade, and at night suffered the usual disturbance from sorties and sudden alarms. However, we all noticed the very unusual quietness of the night of the 16th. A solitary gun on the Inkermann side appeared to be alone awake, yet all night long the hurried gallop of orderlies through the camp kept us on the "qui-vive," and gave us that most disagreeable eerie feeling which such disturbance at night in a

camp is sure to occasion. Late at night orders came to the surgeons to clear the hospitals, and prepare for a large number of wounded, and this did not tend to allay the feeling that a great crisis was at hand.

Early on the morning of the 17th, the game at long bowls began by a signal gun on the right attack, and then for miles the great cannon poured incessantly a perfect storm of shot and shell on the enemy's works, and this continued without intermission till darkness enforced some abatement. The very ground shook beneath our feet. The accuracy of the fire was very remarkable, and was loudly applauded by a large concourse of spectators who thronged the heights like the audience in the boxes of a theatre. The 17th was the Sabbath (the day of rest truly!). The sun shone out bright and clear. The distant landscape and the calm sea were gay in the happy radiance. The church parade at noon was well attended by all those who were not on duty, and as the earth and air trembled with the quick report of cannon, "the words of peace and joy and gladness" were addressed to men who were already girded for the fight.

In the evening we went to the brow of the hill overlooking the city and the advanced works. The air was heavy with a sulphurous smell. A thick dark canopy hung like a pall high in the air over the city. A strip of sea beyond was curiously lit up by a lurid light, and was seen beneath the smoke, with the combined fleet dimly shadowed on it. The air was perfectly still, as if nature held her breath in expectation. The night was momentarily lit up by the cannon as they belched out their fierce flames into the darkness, and the under surface of the dark clouds overhead was seamed in every direction by tremulously moving shells, or vividly illuminated as if by some pyrotechnic display, when "a bouquet" was exploded. The air seemed absolutely filled with the missiles of death. The heavy "thud" of the great guns, the loud sharp report of the shells, the perfect shriek of the congrève rockets which at intervals from either flank rushed out into the night with a noise like the thundering roar of a locomotive tearing the upper air on rails of iron. These rockets, followed by long beams of light, darted across the harbour, and plunged with a savage scream headlong into the enemy's works beyond. Beneath this "grand diapason," the shrill whistle of some of the projectiles, and the sing-sawing note of others filled the brief intervals.

The fierce excitement, the undefined dread of an impending catastrophe, the awe, the catch in the breath, the silent preparations, the letters to friends, the setting in order "in case anything should happen," took sleep from all, and threw a gravity and solemnity over every action, however trivial. We all knew now that a general assault was to be made, and though no one for an instant doubted its success, yet a terrible cost was universally expected. There was no bragging or hesitation, but resolution and confidence everywhere.

Would that the result had been in keeping with our hopes!

Half an hour after midnight, in silence, without sound of bugle or drum, the ranks formed, and each corps moved off to its respective station. As the party I was attached to was going to the front of the Picket house, we met one of the columns of attack. Not a word was spoken, but a silent salute was exchanged between the officers who were acquainted. The heavy tramp echoing down the hollow road firm, steady, and resolute, and the dimly, defined but stalwart forms disappearing beneath the dark cloud of night and battle, affected me as few things ever have in this world.

From where we stood the whole scene which followed unfolded itself like a game on a chess-board below the eye of a player. It was still dark when we got into position; the blaze of the cannon continually rent the darkness which shrouded the town. Column after column moved down the valleys and went silently into the trenches committed to them. At last, just before dawn, Lord Raglan came. His name went from mouth to mouth as, surrounded by his staff, he rode in deep silence to the front. As the sun rose we saw every hillock behind us covered with anxious spectators, who gazed towards the devoted city. Slowly the day dawned. Behind us in the East the grey light darted up the sky. The morning breeze carried the smoke and darkness seaward, and, as the curtain rose, the town was revealed to us lying below, white and brilliant in the morning light. The harbour appeared like a lake of quicksilver, reflecting the rays of the joyous sun, and beyond it we could make out the dark masses of the enemy standing in battle array. Rapidly the whole terrible tragedy proceeded.

"That high festival,
Where valour with his armed hand administers
The cup of death."

Soon the fire redoubled, and for hours no pen could portray the scene on which, with riveted eyes and intense excitement, we continued to gaze. War, war, what a fearful reality art thou!

Thick as hail the round shot tore the ramparts. The whole air was alive with deadly shells whose explosion was marked by little white knots of smoke. At half-past three, the assault began. The French were advancing close in front of us against the Malakoff. The Redan was soon enveloped in smoke. Rifles rattled along the line in continuous "skreeds." The brown hill of the Malakoff seemed a perfect volcano. Ere long the fleet joined the m \acute{e} l \acute{e} , and though we could only at times catch a glimpse of the ships, yet we heard their guns like the continuous roll of a great drum. The town was soon on fire in many places, and the flames and thick smoke went up to heaven as if from a great funeral pile. But it was on the deadly fight close before us that our eyes were soon fixed. Dense columns moved up the slope of the works, and were scattered as chaff, or torn in long lanes by

grape and round shot. What superhuman valour, yet how vain! Like the glittering surge of the ocean beating against a dark and rocky shore, the flashing ranks dashed on, and fell back in broken fragments. Sometimes the heaving columns would overtop the rampart, and success was for a moment promised, but a poor remnant would, alone, after a time, escape, defeated and bleeding. A perfect whirlwind of grape swept the slope, and soon darkened it with confused masses of slain. Here truly was "the confused noise of the warrior and the garment rolled in blood."

A Russian flag had been hoisted early on a staff within the work, and as it was looked on as being a sort of barometer of the fight, we watched it intently. Sometimes it was concealed by the smoke, and the word passed along, "It is down, it is down;" but no, there it was again heavily floating on the sulphurous air above the swaying battle. The excitement became perfectly sickening. With mouth parched and dusty, covered with mud and smoke, and hardly breathing, we stood and watched the horrid spectacle. Soon the wounded—the prosaic but eloquent elements of the scene—began to pass. Some on foot, smeared with blood and dust and powder, sore and exhausted, wearily crawled to the rear. Stretchers, with pale forms imperfectly covered with a blanket, came by, and too often a well-known name was whispered by one to the other. The ambulance waggons were speedily filled, and not a few, on very trivial pretexts, accompanied them to the rear. As I passed to the left attack well on in the morning, the ravines and trenches presented an appalling scene of wreck and death. The roar of the heady fight close in front filled the ear. Masses of shell fell everywhere, and the "ping" of the conical ball frequently sounded at your very ear. Crowds of dusty and fatigued men lay beneath the rocks. Dead men, ghastly and gory, disfigured and torn, lay as they fell, in every sort of attitude: some with skulls cleft, some with limbs gone or bodies cut in twain; mere "kneaded clods," their spirits gone where "beyond these voices there is peace."

The heat was most oppressive, and as the fact of a general repulse became known, what sullen despondency settled on every brow! The reaction

and collapse were, as usual, proportioned to the previous high excitement. No one knew what was to happen. It seemed as if we were given over to destruction. No one had ever contemplated such a result, and the misery of it could not be well borne. Many of the wounded could not be got at for two days, and during this interval they lay exposed to scorching sun and drenching dew. I shall not attempt to describe the hospitals! Officers and men seeking friends, and anxiously inquiring whether they were "badly hit." Many men well known in the fashionable world, and still more, the proud centres of home circles, with, alas! how many bound up with them in the bundle of life, lay on beds of anguish, to very many of whom death would have been a blessing. What a terrible wail will follow this battle! In our army there are so many men of mark in social life, that a list of casualties such as we have now had will spread sorrow far over the land. A few hours of that diabolical work have undone the labour of years. How much ardent enthusiasm, high courage, physical beauty, and mental culture has been destroyed for ever! The solicitude of years, the object of prayers, and tears, and bright hopes, swept away in an instant by a cannon ball, fired probably by an ignorant savage! The officer, however, has the reward—such as it is—of renown and honourable memorial; but few think of the common herd:—yet they too have fond friends. They for the most part die

"Unmenton'd, as the wave which forms and breaks
On undiscover'd shore."

It is a most extraordinary feature in this life we lead, how soon the most vivid impressions are effaced from the memory. Already, though only a few days have passed since such scenes as I have tried to describe have been enacted, they appear to be in a great measure forgotten, and already the old thoughtless spirit prevails, and the same careless speculations are rife, as to "when we are to go at it again." Alas! that noble heart which led is now cold. That failure killed him.

"He crown'd
A happy life with a fair death,"

amidst his men and close by the field of battle.

G. H. B.

ON THANKFULNESS AND THANKSGIVING.

BY J. R. MACDUFF, D.D.

IN these modern times we do not sufficiently prize the duty and privilege of *Thankfulness* and *Thanksgiving*. Praise is often feeble and faltering in our churches,—we do not sing heartily with the voice, just because we do not sing heartily with the life. Sermons preached and heard by us are lacking in *Thankfulness*. Doctrines are faithfully proclaimed and illustrated; the riches of the Divine

promises, or the consolations abounding to those in sorrow, are tenderly unfolded. But God's Ministers—the Heralds of "the Glad Tidings"—do not tell their people so frequently as they might, to go forth harp in hand, with joy in their hearts and melody in their lips, recounting His mercies; taking up the refrain of the old Hebrew minstrel—"O give thanks unto the Lord, for He is good, for His mercy

endureth for ever." Religion is draped not in a garb of thankfulness and joy, but of gloom. Many seem to have a chronic pleasure in seating themselves by the rivers of Babylon, with their harps on the willows, and girded with sackcloth.

Does the material world give countenance to this gloomy theology? I trow not. Day by day it is uttering the speech of joy and thankfulness. Every sunbeam writes it: every grove warbles it: the lark carols it in mid heaven: old ocean chimes it on every shore: the forests clap their hands, and the little hills rejoice! Some have ventured to aver that every sound in Nature is set on the minor key, and that every hue in Nature corresponds with it. I cannot think what eyes and ears such have. God has not made His sky of black ink, or pencilled and painted His flowers of wan and ashen colours. He has hung His heavens with curtains of blue; and when night deepens the azure, He besprinkles them with silvery stars. He has adorned with beauty and loveliness every sequestered nook and dell. He has set Æolian harps in every forest to discourse sweet music. He makes the mountain stream to sing its joyous way through copse and heather to its ocean home. He makes the fireside familiar with ringing laugh and joyous prattle.

If these be the utterances of external Nature, what are those of the inspired Volume? We have only to open our Bibles to see how the lips of God's saints overflowed with Thankfulness. Read David's Psalms—the Jubilant hymn-book of the Universal Church: they are from first to last a grand *Te Deum*:—Thankfulness is their key-note—the chord most frequently swept is that of *thankfulness*. In his preparation for the choral services of God's house, we read that "he appointed certain of the Levites to record and to *thank*, and praise the Lord God of Israel." "And on *that day*" (the day of the bringing up of the ark to Mount Zion) "David delivered first this Psalm to *thank* the Lord, into the hands of Asaph and his brethren." One of the last acts of his old age was to "appoint Levites to stand every morning to *thank and praise the Lord*, and likewise at even" (1 Chron. xxiii. 30). In his own personal history he was often a tried man;—he had his own peculiar sorrows. But even when he sings of "judgment," he must put "mercy" before it;—"I will sing of *mercy* and judgment, to Thee O Lord will I sing" (Ps. ci. 1). In his most saddened and desponding moods, he will not lay down his Psaltery till its wailing notes give place to gladdening ones:—"Thou hast turned for me my mourning into dancing, Thou hast put off my sackcloth and girded me with gladness, to the end that my glory may sing praise to Thee and not be silent, O Lord my God, I will give thanks unto Thee for ever" (Ps. xxx. 11, 12). Read St. Paul's Epistles, and see how joy and gratitude and thanksgiving come ever welling up from the depths of his *thankful* spirit. He knew little about the world's pleasures or joys; or rather, he had, in a higher consecration,

denuded himself of most of them. Stripes, imprisonment, hunger, thirst, weariness, watchings, fastings;—and what was more than all to him, cold looks and faithless friendships, these were the things with which this self-sacrificing man was familiar. And yet how buoyant! what a salient energy about his soul! his motto seems ever to be, "Sorrowful, yet *always* REJOICING." "Giving thanks *always*, for *all things*, unto God and the Father, in the name of our Lord Jesus" (Eph. v. 20).

It is my desire, in these few pages, to prolong the key-note struck on this His own two-stringed instrument by God Himself. When Nature and Revelation are thus blending their Eucharistic strains, let us not be silent. Give us, O God, "the garment of praise for a spirit of heaviness!"

Where shall we begin? Let us re-traverse in thought the past. Thankfulness commences its survey from those years which memory almost fails to recall. Even Infancy and Childhood have their parts for this life-hymn; while the morning of existence is just dawning, ere yet the busy work-day world of the future, with its wheels of labour and clank of hammers, "its loud, stunning tide of human care and crime," has awoke into life—God's mercies are strewn thick like the pearly dew-drops glistening at daybreak on blade and grass. Addison sings in his well-known, simple lines,

"When all Thy mercies, O my God,
My rising soul surveys,
Transported with the view, I'm lost
In wonder, love, and praise.

"Unnumber'd comforts to my soul
Thy tender care bestow'd,
Before my infant heart conceived,
From whom those comforts flow'd."

Think of the momentous period of youth;—the never-to-be-forgotten years, before commencing life's steep mountain-climb;—youth, like the stream in the valley, with its tortuous and wayward windings, its sunny pools and whirling eddies; its rainbow-crowned cascades and impetuous cataracts: or, stripping it of figure, youth, with its strange blendings of headstrong passion, glowing hopes, keen sensibilities, capricious will, high resolves, ardent aspirations. As it was the *green ears of corn*, in the olden Sanctuary, which were presented to the Lord,—may not memory, even yet, bring her "sacrifice of thanksgiving" from these first "gatherings" of life; as she calls to mind dangers escaped, trials mitigated; blessings innumerable bestowed; watchful and loving eyes spared to tend; or watchful and loving prayers to follow, when, perchance, the music of home voices was far away. Think of the present with its privileges and mercies, contrasted with the lot and experience of many. Some galled with poverty,—beggared by the loss of worldly substance: others, toiling in fetters—grinding in bondage: others, devoid of intellect,—reason dethroned, and memory a blank: others,

the prey of loathsome disease—pining on couches of sickness, for long weary months and years, saying, in the morning, "Would God it were evening," and in the evening, "Would God it were morning:" others, maimed and mutilated, overtaken by sudden and appalling accident, every nerve a chord of anguish; others, not long ago strong and vigorous, laid low in the grave:—"The dead praise not the Lord, neither any that go down into silence." And here are we at this hour, many of us, most of us, in circumstances of peace and comfort;—with eyes undimmed by tears, and households unshaded and unsaddened by sorrow; "the living, the living, even we shall praise thee, as we do this day!"

What shall we say of our motives and material for *spiritual* Thankfulness—thankfulness for *spiritual* mercies? Let memory again take the retrospect. How many can call to vivid recollection their rescue from early sin and ruin. Others, your companions—who sat on the same form at school, or sported in the same playground; or who at a later period shared with you the same desk in the counting-room, or matriculated at the same college, or mingled in the same friendly circle,—they are *lost*. They have been swept down by the hurricane of temptation. In the mad fever of their passions, they burst the swaddling bands of a mother's affection, trampled a father's counsels in the dust, and mocked his tears and prayers: now they are either scattered like weeds on the stormy ocean, or slumbering in the early graves to which improvidence and vice hurried them. And think what God has done for *you*,—for you, perhaps once trembling too on the edge of the precipice; your lips learning to blaspheme; your steps ready at the beck of the tempter to wander from the paths of virtue and peace. Yes! and if left to yourself, you *would* at this moment, like them, have made shipwreck of faith and of a good conscience, and with tattered sail and leaking hulk and splintered masts, have been drifting, drifting onwards, amid howling winds and wintry sea, to a dark and cheerless eternity. Oh, thanks be to God for that Word, that Sermon, that Providence which arrested you when stumbling on the very verge of destruction, "Verily but a step between you and death"—and brought you where you now are, to the feet of Christ, sitting clothed and in your right mind. Like the Cripple of old at the Beautiful Gate, you have, indeed, cause to enter day by day the Temple of *Thankfulness*, "walking, and leaping, and praising God." When, like Israel in their memorable morning of deliverance, you see all your sins like Pharaoh's hosts sunk into the depths of the sea, you may well take Miriam's harp of joy and exultation, and "Sing to the Lord." Call upon every slumbering melody of your heart to awake in thankfulness. Let your life-song be, "Lord! what shall I render unto Thee for all Thy benefits!" Restorer of this lost and ruined soul, let me never be guilty of the foul ingratitude of forgetting Thee! Great (oh, how great) is Thy

mercy towards me, Thou hast delivered my soul out of the lowest hell!

And now, as "the redeemed of the Lord, whom He hath redeemed out of the hand of the enemy," all that concerns you may be turned into matter and theme for praise. All things are working together for your good. If providential dealings be dark; if disappointments cross your wishes, or damp your hopes;—still, "Be ye thankful." It is a Father's doing, a Father's ordination. You have that peace within you which will enable you to rise above mere outward accidents: He knows you too well, and *loves* you too well, to allow anything to blight your true happiness and joy. *Thankfulness* is ever accompanied,—it goes hand in hand—with two sister-spirits—*Contentment* with the present, and *Trust* for the future. Trust God implicitly for all coming vicissitudes and exigencies. We ourselves cannot calculate on that Future, we cannot predict one turn in the highway of existence. The morrow is a blank and an enigma. We cannot point our finger to one of its hours, and say, "so and so it shall be with us." We know in our libraries where to find a book; we know in our gardens where to find a flower; we know in the mountain we have oft ascended, where to pause for the view, and to look in the distance for the blue smoke of some loved hamlet:—we know where to look in the heavens for a favourite star,—where to direct the telescope to get sight of a brilliant planet; we can with confidence predict the march of the seasons—when spring will tread on the heels of winter, and flowers appear on the earth, and the time of the singing of birds will come;—but we cannot predict or foresee the manifold changes of this manifold existence: ours is at best an April day—showers and sunshine: we never can tell when the shadows may sweep across the landscape, and the clouds gather, and the bird cease to sing, and the sun of happiness be swept from the firmament. But it is our comfort to know that He who feeds his flock like a shepherd, who marshals the sun and planets in their spheres,—*He* knows every flower of life's garden; He counts every tree of its forest, and every leaf of every tree. All that concerns us and ours is in His hands. In the peerless blessings of Redemption, He has given us the mightiest pledge which even Omnipotence could give, for the bestowment of all minor and subordinate good. "We joy in God through the Lord Jesus Christ." He is the true Marah-tree, which, cast into life's bitterest waters, makes them sweet. Yes; let our songs of thankfulness culminate in *Him*; let our themes of thankfulness revolve and constellate around *Him* as their luminous centre. "By *Him*, therefore, let us offer the sacrifice of praise continually" (Heb. xiii. 15). So wrote the great apostle, and so too did he *act*. His grateful heart seems ever lovingly to turn to Jesus, as the sunflower to the sun. He lets no opportunity slip, even when other themes are directly engaging his thoughts, to record his Thankfulness for this Gift of gifts, without which there

could not have been one unmingled note of thankfulness or joy in this sin-stricken world! Take one out of many remarkable examples. It is in his second epistle to the Corinthians, where he is speaking of a very different subject; when he is giving sundry specific directions about a secular matter,—the arrangements as to a collection for the poor Saints at Jerusalem.—The name of *Jesus* is incidentally mentioned. The sensitive chord of his soul has been touched; and he breathes the parenthetical prayer—(he cannot resist the utterance and ascription): “*Thanks be unto God for his unspeakable gift.*” Verily, we may be content to dispense with other themes of thankfulness, if we have *Him* as our “exceeding joy.” Luther used to say, “I would rather fall with Christ, than stand with Caesar;” i.e., I would rather have the poorest and meanest earthly portion *with* Christ,—buffeting, trials, humiliations,—with the assurance of His favour and love—than have the smiles of prosperity,—the riches, and honours, and ambitions of earth without Him. “Is not the gleanings of the grapes of Ephraim better than the vintage of Abiezer?” (Judges viii. 2). If you have God for your portion, you *may* have worldly cares, vexations, anxieties, but you can rise above all these in the conscious possession of this noblest of heritages! David had the “but,” in his earthly condition—the crook in his lot; to the very last. It shaded mournfully his latter days: it put a tear in his eye when he sang his death song.—But dashing the tear away, his dying words were thankful ones: and thus he weaved his closing hymn of *thankfulness*;—“Although my house be not so with God, yet hath he made with me an everlasting covenant, ordered in all things and sure, this is all my salvation and all my desire!”

Is it not too evident, however, that where there should be this full-voiced hymn of thankfulness for mercies, there is often nothing but the reverse? In the case of temporal blessings; even when our cup is overflowing with good, something has crossed us—something has smitten our gourd—and, like Jonah, we wrap ourselves up in our selfish and unreasonable grief, uttering the querulous plaint, “I do well to be angry.” How many a life becomes thus self-embittered and ruined;—no energy—no zest for work;—plodding on sick at heart—wearing out thought and brain with vain regrets. And when God’s mercies come, like birds, to the windows of our souls;—sit on the sills, singing their joyous notes, and trying to awake a responsive melody in us;—we put shutters on the windows; we draw down the blinds of unthankfulness, and the birds flee away;—we lose their sweet warbling through our own perverse ingratitude!

There are two feelings, two great hostile principles, at the bottom of this unthankfulness and peevish discontent.

There is *Pride*. Humility of mind is the parent of a thankful spirit. You never saw a proud man thankful; you always see a *humble* man so. You

would perhaps at first think that the man into whose cup and coffers God was pouring most largely, would be the man with the heart brimful of gratitude; but it is the reverse. If he be devoid of the Christian grace of humility, the chances are he will be the most unthankful of any. He will clutch all he has, and take to himself the glory of getting it; and he will fret and murmur when any portion of it is taken away! Go to many a man of wealth; one who has risen from penury; but who has had the horn of plenty poured into his lap; ask that man, “Are you thankful for all this splendid prosperity?” “No,” he will say (looking to his last speculation,—his last investment)—“No; I expected to have made a better thing of it than this. I have had a poor return: I expected thousands, I have only made hundreds; I expected talents, I have only made pounds.”

And then along with pride there is *Selfishness*—deep selfishness in the unthankful spirit. The man is absorbed in his own petty interests, plans, ambitions, gains, money-making. If he be right himself, he cares not how others fare. Now look at a truly unselfish character such as Paul. One of the main elements in his thankful spirit was this, that he made the joys of others and the happiness of others a part of his own. “Ye are partakers of my joy.” “I joy and rejoice with you all.” “I thank my God always on your behalf.” “What is our hope or joy, or crown of rejoicing? Are not even ye in the presence of our Lord Jesus Christ at his coming, for ye are our glory and our joy?” (1 Thess. ii. 19, 20.) It was with him as in the case of every truly noble Christian spirit. Even in the apparent absence of anything to be thankful for, the thankful, grateful heart was still there. A soul such as his is like the alabaster box of ointment; it gives forth most of its odour of thankfulness when it is broken and crushed. See, even when, with heavy sorrows impending, the weary prisoner found the Roman brethren meeting him at Appii Forum—see how he took this unexpected token of God’s goodness. “He thanked God, and took courage.” Thankfulness has been spoken of as the lovely shadow cast by our sorrows. And it is an undoubted truth that it is found most frequently side by side with sorrow. Sorrow is the best builder of these shrines and Ebenezers of thankfulness which crowd the believer’s pilgrim way. Were I asked to go in search of thankful hearts, I would go, not to circles of unbroken prosperity—not to those dandled on the lap of luxury—not to the man of style and equipage, of state and fashion and fame;—but I would go to some child of sickness, for years chained down to a couch of distress, shut out from the light and sunshine of a busy world, the dim midnight lamp burning in the silent chamber:—a solitary bird with broken wing, from whom, as we see it pining in its lonely cage, we might expect nothing but the wailing note of sadness. There is everything, one would suppose, to lead to repining. Yet there is oftentimes nothing but

sweet resignation—nothing but recounted mercies: the bright spots are alone seen, and the dreary are forgotten. Look at that strange Bible scene, where the same apostle, whose example we have already cited, is imprisoned with Silas at Philippi. Listen to their voices in that gloomy gaol, when their feet are fastened in the stocks, and their backs lacerated by recent scourging. Are they mourning?—complaining of their hard lot and cruel destiny? No. Songs of thankfulness and joy are on their lips; they are rejoicing at being counted worthy to suffer shame for His name!

Endeavour to have and to cultivate thankfulness as a *disposition*:—not as a thing of mere fits and starts—elicited and evoked by some large and extraordinary proofs of God's bounty. Paul would have the Christian to be on the outlook, even in *small* things for occasions of thankfulness—He does not say "Giving thanks *sometimes* for some things"—but "*always* for all things." He would have thankfulness as a continual guest, a continual feast;—a halo and sunshine emitting perpetual brightness, morning, noon, and night; like the Alpine mountain tops, the first to catch and the last to lose the sunbeams. You remember that chapter in which he crowds as many messages as he can into the close of one of his letters. He has room to say only a few brief words:—But there is one message so important, that, even though it causes him to omit others, he must say it over twice—He writes it, and then re-writes it. What is it? "*Rejoice* in the Lord always, and again I say *rejoice*." Let this oil of joy rub off the rust of unthankfulness. This rejoicing spirit is a magnet which draws all other blessings to it. It leaves no room for peevish, unavailing regrets. Its language and motto is, "I will bless the Lord at all times, His praise shall continually be in my mouth." Unutterably sad is the reverse of all this, that moping discontent which refuses to see sunshine in anything. Always looking at God's landscape, whether in the natural or moral world—not through the pure translucent glass—but through the smoke-blackened pane—colouring everything with its own sadness. Such a spirit will grow upon you! The foul fiend should without delay be driven out, or he will take up his abode and establish himself in the chambers of your hearts. Such an unthankful life will end in that saddest of all consummations, —a peevish old age. From nothing seek to be more delivered than from that:—the calm mellowed evening light which many enjoy, fretted with drizzling rain and blustering storm. The discontent and sickly melancholy of the present, growing with advancing years;—real or fancied ills magnified into undue proportions; all ending in crossness, irritability, moroseness, soured temper. "The end of these things is death!"

We must close our imperfect survey of the Temple of Thankfulness. But before doing so—before closing its golden gates—let us for a moment revisit and inspect the foundations. I have sought

to do something better than plead for the duty and delight of a mere natural emotion. And once more would I repeat, it is Religion—in other words, the heaven-implanted, joy-imparting graces of the new regenerated nature, which alone can make a man truly thankful. What is the preamble to one of the manifold injunctions of the Great Apostle regarding Thankfulness? "Let the peace of God" (that peace which alone is to be found in the cross of Christ) "rule in your hearts, to the which also ye are called in one body, and be ye thankful." Immediately after he adds, "and whatsoever ye do, in word or deed, do all *in the name of the Lord Jesus*, giving thanks to God and the Father by HIM" (Col. iii. 15-17). On the other hand, it is said of those who are without God, strangers to the transforming power of the Gospel, "They glorified Him not as God, *neither were thankful*." (Rom. i. 21). It is the Christian to whom "God our Maker giveth songs in the night." Like the nightingale, He can warble His descendant of thankfulness in the darkest night of sorrow. Amid pining herds and famished flocks, and fields blackened with death and pestilence, he can, with the prophet, rejoice in the Lord, and glory in the God of his salvation.

Let the world see how the Gospel of Christ can make you rise superior to all outward adversity. How, despite of losses in your business, breaches in your household, sickness, bereavement, death,—it can enable you to say on the retrospect with the Psalmist, "They went through the flood on foot, *there* did we rejoice in Him" (Ps. lxvi. 6). "There"—where? In the very *flood*—when the billows were highest,—"*there*," did we utter songs of gratitude and joy! If God give you prosperity, be thankful, and glorify Him in it. Take every blessing as the gift and keepsake of a Father's love. And if in this strange chequered world He send you reverses; cross your schemes, and blast your gourds;—empty the chairs in your households and fill your eyes with tears;—oh, as the thunderbolt descends, and others hold their breath while the King of Terrors is passing by, be it yours to ejaculate, in faith and trust and lowly resignation, the words once breathed by the most *Sorrowing*, yet the most *Thankful* ONE, "I thank Thee, O Father! Lord of Heaven and Earth. . . . Even so, Father! for so it seemed good in thy sight!"

One of the most beautiful specimens of true thankfulness the writer ever knew, was a lonely widow, stricken with pain, bereavement, poverty, deafness, age; but whose first quaint description of her condition embodied alike the tale of her earthly helplessness, and the secret of her heavenly peace. In answer to the query, "If she had any friends?" "None," was the reply, "*but God Almighty*." That Friend, however, put gladness into her heart more than in the time that the corn and wine of others increased. A still more striking recent instance suggests itself. It is the case of a Christian friend in a different rank of life—whose

cheeks were ploughed and furrowed with pain and long wasting disease. Tears were often found standing in these furrows. But they were not tears evoked by the intensity of bodily suffering;—they came from the opened sluices of a grateful, overflowing heart—literally, tears of *thankfulness* for all God's abounding mercies!

"These are tears of joy," were his own words when fearing lest those watching by his couch would think he was sad because he was weeping. One day, after lying for a long time in a state of stupor, he burst out, "O death, where is thy sting—O grave, where is thy victory?—but thanks—*Yes, thanks* be to God who giveth us the victory through our Lord Jesus Christ!" On New Year's morning, weeping with gratitude, he bestowed a welcome on each of his household, exclaiming as he did so, "Bless the Lord, O my soul, and all that is within me bless his holy name." He might be said to enter the gates of light, "singing and making melody in his heart unto the Lord." If the favourite song of *thankfulness* were for a moment intermitted, it was only to be resumed in brighter worlds,—the eternal sabbath of Thanksgiving—"Return unto thy rest, O my soul, for the Lord hath dealt bountifully with thee."

Those of our readers interested in the remarkable work of the Bible women in London, will recall the most picturesque and touching, perhaps, of the many cases brought to light in these strangest annals of the poor, "The Cripple of London Wall." It is so admirably photographed by her benefactress and "the succourer of many," that we cannot spoil the brief narration by attempting to alter it. We shall conclude, therefore, with the following account of a living homily on Christian Thankfulness; a striking verification, surely, of the words, that

"A lonely heart that leans on God,
Is happy anywhere!"

"Will you accompany us, reader, to learn a lesson of *thankfulness* for God's mercies? Turn under this low archway, climb these narrow winding stairs, two pair, knock at that door, and a pleasant, cheerful voice will bid you enter. The room is clean, even airy; a bright little fire burns in the grate, and in a four-post bed you will see sitting up, a woman of sixty-four years of age, with her hands folded and contracted, and her whole body crippled

and curled together, as the cholera cramped it, and rheumatism has fixed it, for eight-and-twenty years. For sixteen of these years she has not moved from her bed, or looked out of the window, or even lifted her hand to her own face, and she is in constant pain, while she cannot move a limb. But listen! 'She is so thankful that God has left her that great blessing, the use of one thumb.' Her left hand is clenched and stiff, and utterly useless; but she has a two-pronged fork fastened to a stick, with which she can take off her great old-fashioned spectacles, and put them on again with amazing effort. By the same means she can feed herself, and she can sip her tea through a tube, helping herself with this one thumb. And there is another thing she can accomplish with her fork, she can turn over the leaves of a large quarto Bible, when placed within her reach. She has never in her life seen a hayrick, a wood, or a cornfield. Two years ago, however, one friend brought her a few ears of corn, and another some acorns. The longest journey she has undertaken in one direction had been to Islington Church, and the other to St. George's in the Borough, when the sight of the water in crossing the bridge made her feel giddy. To a frame thus nurtured in the city's heart, came cholera in its primary visit to our metropolis. This victim did not die of it, but she never recovered from its collapse, and, as we have said, by pains and poor living was gradually reduced to her present condition. A recent visitor addressed her with the remark that she was 'all alone.' 'Yes,' she replied, in a peculiarly sweet and cheerful voice, 'I am alone, and yet not alone!' 'How is that?' 'I feel that the Lord is constantly with me.' 'How long have you lain there?' 'For sixteen years and four months, and for two years and four months I have not been lifted out of my bed to have it made, yet I have much to praise and bless the Lord for.' 'What is the source of your happiness?' 'The thought that my sins are forgiven, and dwelling on the great love of Jesus my Saviour. I am content to lie here as long as it shall please Him that I should stay, and to go whenever He may call me.' . . . *The string of the loving-kindness of the Lord once touched, note after note prolonged the song of praise.*"*

* "The Book and its Missions, 1860."

MARTYN WARE'S TEMPTATION.

BY THE AUTHOR OF "EAST LYNNE."

PART THE FIRST.

CHAPTER I.—THE MOTHER'S GRIEF.

THE somewhat cold and yet wintry sun threw its rays on one of earth's fair and busy scenes in the spring afternoon of a year gone by. By the side of, but not close to, a factory, which was giving forth its tokens of life and work, was a white house, built in the villa style, large enough for a gentleman's residence, pretty enough, with its artistically laid-out grounds and gardens in the midst of which it stood, to attract the attention of travellers on the proximate high road. Other factories might be seen, near and distant, most of them considerably larger than this one, and other houses, surrounded by their grounds, as well as poorer dwellings, cottages, and huts. This place, situated in the heart of England, was called Wexmoor, and the factory first mentioned was known as Wexmoor Factory. Not many years before, this was the only factory in the district, and those larger and better ones had sprung up since. Its owner was a gentleman of the name of Martyn, and the white villa, built by himself some thirty years previously, was the residence of himself and his family.

Those cold thin rays are falling on it, and especially on a young lady who is standing at its entrance-door, between the two pillars, drawing on her gloves. A charming looking girl of twenty-two, with a thoughtful face,—very thoughtful for one so young; and steady, somewhat deeply-set eyes of dark blue. She is attired quite plainly, you see: a violet-coloured merino dress, a warm, grey shawl, and a cottage straw bonnet, trimmed with ribbons to match, straw-coloured. It was long ago, I have told you, before the disfiguring fashions of these later years were invented—the bonnets perched on the back of the head, or surmounting the forehead as a crocodile's mouth; those cottage bonnets of twenty years back made a pretty face look all the prettier.

This was Miss Helen Martyn, the second daughter of the manufacturer. He had four: Elizabeth, Helen, Sophia, and a little one of fourteen, much afflicted, named Amy. He had never had a son, and his wife had died when Amy was born. Elizabeth, the eldest, acted as mistress of the house, and as a sort of mother to the rest, though she was but two years older than Helen.

Helen Martyn drew on her gloves slowly, and then paused and looked thoughtfully out before her, far into the distance. It almost seemed as if she were hesitating whether to go on, or not. At last she descended the white steps, wound round the broad gravel drive which surrounded the lawn before the house, and passed out at the front gate. In turning to the right she nearly ran against a

gentleman, who was about to enter it with a hasty step, on his way from the factory. It was Mr. Martyn; a wiry-built man, with a pale, hard face, and cold grey eyes, bearing not the least resemblance to his daughter.

"Where are you going, Helen?"

"For a walk, papa."

He went on, saying no more. But ere he had well got through the gate, Helen, in her perfect truthfulness, her natural antagonism to anything like deceit, turned and spoke—she was conscious that to take a walk was not the sole object of her leaving home this afternoon. In point of fact, it may almost be said that she was going out in disobedience, for the place she thought to visit, if not positively forbidden in words, had been tacitly interdicted to Mr. Martyn's daughters.

"Papa, I should like to see Mrs. Rutt once more before she leaves on that long voyage. I thought of calling to say good-bye to her."

"You can do as you choose," replied Mr. Martyn.

He did not speak in displeasure, but carelessly, as if the point were not worth consideration, and he hastened on towards the house as he spoke. Helen, feeling quite a weight removed from her heart, went away with a light step.

Continuing her road past the factory, she soon came to a shady green lane. Nearly half-a-mile down this lane was a low-built cottage, very pretty in summer, with its clematis-covered walls, and its rippling brook purling through its homely garden.

Ah, it was a sad tale, and Helen Martyn's heart sank as she approached the cottage with that feeling the "not liking" to enter it. Robert Rutt had been employed by Mr. Martyn for the past six or eight years. He was one of his first men—a sort of over-looker of the rest—and earned three pounds per week. About four years back he had married a widow lady from a distance. The word "lady" is really not misapplied. It was said she was a lady by birth and education, but had fallen into very poor circumstances. It was said also that she had believed Rutt, who was a well-looking and superior-mannered man, occupied a higher position in Mr. Martyn's works, to what she found he did occupy. Be this as it might, she had shown no disappointment, but had accommodated herself to her position, as the wife of a working-man, from the first hour Rutt brought her to this cottage at Wexmoor. Mr. Martyn's daughters soon made acquaintance with her, and Helen at least grew to like and respect her—to like very much her young son, then a boy of about eleven years.

Things had gone on smoothly until now; or, to speak with strict correctness, until a few months ago. Late in the month of October, the previous

autumn, a circumstance had occurred, unpleasant in itself, and grievously disastrous in the results it was to bring forth. Robert Rutt, thoroughly well-conducted in general—otherwise he would never have been retained in his post by Mr. Martyn—was betrayed one day into drinking, and went into the factory in a half mad state. The man was too well aware of the effect drink had upon him, even worse than it has upon some men, and it was so rare he transgressed that his sobriety had grown into a proverb. Still, he had been in this state before—had gone into the factory so—and his master, vexed and angry, had threatened him with dismissal did he ever so forget himself again.

As ill-luck would have it, Mr. Martyn met him on this day as he was rolling in, shouting and singing. Some sharp words ensued. The master ordered him off the premises: Rutt, with some dim idea of proving that he was not incapable, waited his opportunity and stole in afterwards, when Mr. Martyn's back was turned. He attempted to work; he meddled with the machinery, and the result was that a large quantity of work was spoilt and the machinery almost fatally injured. It was a loss that Mr. Martyn could not well bear; his business had decreased of late years, and something like embarrassed circumstances were beginning to show themselves; hence, perhaps, his anger was more implacable than it might otherwise have been. In vain Rutt, when he came to his senses, humbly expressed his contrition, begged to be taken on again, promised that he never would again so forget himself as long as his life should last. Mr. Martyn would not listen. With stinging reproaches, with scornful words, he drove the man from him, declaring that, so far from forgiving him, it was his intention to refuse him a character, and to bring him to public punishment for the damage he had done. Before the moon, then at the full, had quite completed her monthly course, Rutt was dead. In going in search of work to a neighbouring town, it was supposed he came in contact with an infectious disorder: at any rate, he was seized with it, and died in delirium.

His death did not soften the feeling of Mr. Martyn. That gentleman felt the past grievance of his loss as keenly as before, and in this his daughters shared. They sent no sympathising enquiry to the poor wife; they did not vouchsafe her a kind word. It was not perhaps that they did not feel for *her*, but the loss of their father left its bitter sting in their hearts. What with the spoilt machinery, the destroyed goods, the loss of time and incapability to fulfil orders which it entailed, Mr. Martyn's loss could not be estimated at less than a thousand pounds. A formidable sum to the imagination of these young girls, and all the more formidable because of a dim fear, which had been for some time forcing itself upon their suspicions, that their father could not afford it. Helen alone felt deeply for her. In Helen Martyn's strict sense of justice, she asked her sisters how blame could

possibly be reflected upon the wife: she pointed out that the poor wife was even more deeply injured than they were. But she did not dare to call and express this: it would have seemed like flying in the face of her father's sense of injury.

Yes, in one sense, the disastrous results fell worst on Mrs. Rutt, for she was left without a living or the means of gaining one. Rutt was a man who had lived up to every shilling of his wages. He liked to see his wife comfortable, to maintain a plentiful home; he was attached to her boy, now a fine lad of fifteen, and had yielded to her wish of keeping him at school, a good day grammar school in the neighbourhood, not yet putting him out to earn anything. It is a fact scarcely to be believed, only that there are unhappily too many such facts in the world, that when Rutt died there was not one penny of ready money in the house. Except the furniture, Mrs. Rutt was left entirely destitute: and the furniture of that small house was not of great value.

Many and many a time did Helen Martyn wonder what that poor woman would do, and how she was getting on, or would get on. Gossip spreads in a small locality, and the young ladies heard news from time to time of Mrs. Rutt. First, it was said she was living by disposing of the lighter trifles of her household; next, that her son, who had left the school at Christmas, had found a temporary place at the doctor's, to carry out the physic bottles; by which he earned his food and a shilling or two a week. And last, they heard that Mrs. Rutt and her boy were going to America.

This last news, much as it surprised Mr. Martyn's daughters, proved to be correct. Mrs. Rutt had a brother settled near Washington, a farmer; she had written to him on the occurrence of her great misfortune, and after the passing backwards and forwards of two or three letters, he had offered her an asylum with him, and to find some employment for her son in the capital. What was perhaps more to the purpose in her temporary strait, he had offered to send the passage money for one of them, hoping she would be able to find the other herself.

And this, Mrs. Rutt, as it was known, had contrived to do. The very man who had succeeded to her husband's post at the works, made arrangements with her for taking the house off her hands, and as much of the furniture as she could leave in it. That was not much. Her husband had died the first week in November, it was now the end of March, and she had had only that furniture to live upon, parting with it piecemeal. Little wonder, then, that it was with difficulty she could save sufficient money for only her own passage, let alone her boy's. She had no friends in the neighbourhood, no advisers: she had never made a friend or sought an acquaintance since she came into it; and the cause is easily explainable. Her position as Rutt's wife debarred her from associating with the superior inhabitants, and her own previous habits of gentility forbade her placing herself on a

level with the wives of such men as her husband. It is true the Miss Martyns had often gone to see her, but only as the wife of one of their father's men, in whom they took an especial interest.

All preliminaries were arranged, and she was to sail from Liverpool at the week's end; was to quit Wexmoor on the morrow. The Miss Martyns heard this; heard that the promised letter from her brother, which was to contain the remittance, had come that very morning; and Helen had determined to run down to bid her good-bye.

To let her go away for ever without a God speed, without a word of kindness to blot out the remembrance of the calamity caused by her husband, and for which *she* was in no way to blame, struck cruelly on the girl's heart. So Helen told her sisters what she should do, and put her things on; and when you saw her hesitating on the steps, she was deliberating whether to go into the factory in passing, and ask her father's consent, or whether she should go first, and confess afterwards that she had been. The meeting him decided it.

Mrs. Rutt in her widow's cap was seated in the parlour when she entered; a pretty room once, but nearly bare now; and Helen started when she saw her. Helen Martyn had seen grief in her lifetime, but scarcely such grief as this. She sat on a low seat, and was swaying herself to and fro in what looked like the extreme of human sorrow, her head bent forward, the tears slowly coursing down her colourless cheeks. It must be confessed that Helen somewhat wondered: Mrs. Rutt was leaving no ties in the place that she should grieve after them, and she had never pretended to be attached to it. She rose from her low seat at sight of Helen, and dried her eyes as well as she could; but the look of anguish remained.

"Oh, Miss Helen! Have you indeed come once again?"

"I could not let you go without saying farewell, and giving you our good wishes," was Helen's gentle answer. "My sisters have not come, but they charged me to say everything that was kind for them. I hope you and Bob will get safely to your journey's end, and find a happy home there."

The words seemed to tell upon her terribly. She burst into a renewed fit of grief, so violent that Helen was alarmed. In vain she essayed to speak; nothing came forth but sobs. Helen, feeling shy and uncomfortable, knew not what to say: she came to the conclusion that all this must be for the loss of her husband. At length the sobs grew lighter.

"Miss Helen, pray pardon me! You don't know what it is to part with your only child, to leave him alone to the mercy of the world without guide or protector, to go away from him with scarcely a prospect of ever seeing him again on earth. It is like the parting of death; it has seemed nothing less to me."

Helen could not understand. Amidst blinding tears, amidst struggles to suppress the emotion that went well-nigh to choke her, the explanation was given by Mrs. Rutt. The letter had indeed been delivered to her that morning from America, but the promised remittance was not in it. Her brother had expressed his sorrow at being unable to send it; he had a sufficiently abundant home, but ready money was scarce with him; and he hoped she would manage to find it herself.

"It is an impossibility," she gasped. "I have no means of finding it, I have no friend in the world to help me. There will be expenses, too, I hear, in embarking that I had not bargained for, and I shall have to sell some of my clothes to get away myself."

Helen felt shocked and grieved. "What will be done?" she asked.

"All that can be done is, that I must abandon my boy—it seems to me like abandoning him," was the sobbing answer. "I *must* go myself: I ought to have been out of this house on Lady-day, Miss Helen, and now it's the twenty-ninth. I must go; I have not a place to put my head in in the old country, not a bit or sup to support me: and my boy, he must stop behind and get a living as he best can. I'd sacrifice myself for my boy if I knew how to sacrifice myself; I'd almost rather part with life than part with him."

"And how much would it cost to take him?" Helen breathlessly asked.

"I had expected ten pounds," she answered: "it was what my brother said he'd send. We could have made it do, Miss Helen. Of course we go in the cheapest way: it is some years since I could afford to be fastidious. Once on the other side, I should not mind if we had nothing left. We'd find our way on foot to Washington."

It was very natural that Helen Martyn's first impulse was to wish she had the money to give: but in the next moment she remembered how entirely futile was the wish. Ready money had not been very plentiful in their home of late; and what she and her sister Sophia had been able to get from their father, or Elizabeth supply from her housekeeping necessities, had been expended for a specified purpose, of which you will soon hear further. All that she could do was to express her heartfelt sympathy, her regret that she had not the money to give; and she did it with a sincere, low voice, and the tears standing in her eyes.

Mrs. Rutt saw how genuine was the sorrow of that fair young face, how great the pain at heart, and she strove to suppress further signs of her own. But when Helen was taking leave, the sobs burst forth again uncontrolled.

"You'll say a kind word to him now and then, Miss Helen, when you get the opportunity. He'll want it, poor lad, for he'll soon be motherless. I shan't live long, parted from him."

"Does he stop in Wexmoor?" asked Helen.

"Just at present. I went to the doctor this

morning, and he'll keep him on for a bit, until something turns up for him."

"What can turn up for him?" wondered Helen.

"Nothing—unless God sends it. And where he'll get a place to sleep, or who'll give him shelter, I don't know. Miss Helen," she continued, in an altered tone, "I'd ask you, if I may dare, when the weddings are to be?"

A soft blush rose to Helen Martyn's cheek.

"In about a month," she answered. "Towards the end of April."

"May Heaven bless you both, and the gentlemen you have chosen!" aspirated Mrs. Rutt, in a low tone.

Helen was walking slowly towards home, thinking upon the poor widow's grief, upon the many sources of sorrow there seemed to be in the world, when a slim, active boy, with a pleasing face and large intelligent dark eyes, came running round the corner of the lane. It was Bob Rutt—as the boy was universally called. He had, of course, no right to the name of Rutt, but he had never been called anything else since he came into the neighbourhood: his Christian name happening to be the same as that of his step-father, Robert, had no doubt contributed to the habit. He raised his cap as he came up to Helen, far more as a gentleman would raise it than a working boy.

"I have been to see your mother, Bob," she said.

"This is sad news."

"Was she grieving much, Miss Helen?" he eagerly asked. "I could bear it for myself; but I can't bear it for her."

"But you will be sorry to be separated from her, Bob?"

"Sorry!" he echoed, swallowing down a lump in his throat, and turning his face out of sight of Helen's. "When the letter came this morning, it seemed that I could have moved heaven and earth to go with her, and—and—. But it's of no use talking of it," he added, after a broken pause. "Thank you for your sympathy, Miss Helen."

"Oh, Bob, I am sorry! Perhaps you'll get out to her sometime."

"Yes, Miss Helen, perhaps so, if she lives. But she's one to take things dreadfully to heart."

He raised his cap again and went away. And Helen Martyn looked after him with misty eyes through the fading light of the evening sky.

CHAPTER II.—HELEN'S KNIGHT-ERRANDRY.

WHAT we should all do without money it is quite impossible to conceive; but one thing appears indisputable, that, if the world could go on without it, a great many of the crosses and heartburnings we are pleased to make our own, and hug to us as if we liked them, would never occur.

When Helen Martyn entered her home, the drawing-room was lighted and the tea waited on the table. They generally dined in the middle of the day: it suited Mr. Martyn's business habits, and it suited Amy's health. Elizabeth sat before

the tea-tray, ready to make it as soon as her father came in. He often kept it waiting, and she generally provided herself with some little trifle of work, not to waste the time, as she had now. She was sewing some lace edging to a strip of thin muslin: it was for a nightcap border for one of her sisters. She looked older than her age considerably: any one might have taken her to be seven or eight and twenty, with her grave manners and her somewhat old-fashioned style of dress. The young girl, Amy, stood by her side, holding her chair: a stranger might have observed with wonder a certain peculiar twitching in this child—in her face, her arms, her whole body. She had had in her life, at long extended periods, three attacks of paralysis, the first having occurred when she was little more than an infant, and its signs never left her—as you may see by these never-ceasing twitches. A great deal of money had been spent upon her: fresh doctors, seaside visits; everything possible to be thought of was tried. She did not get much better; but the medical men thought if she could go over the next two or three years without another attack, she might probably recover.

Seated opposite Elizabeth, her elbow on the table, and her face wearing a discontented look, was Sophia. She resembled Helen much in features, but her eyes had the hard look of her father. Poor Sophia was apt to make a grievance of trifles, and she thought she had a very great grievance to be miserable over just now. Helen also shared in it, and deemed herself as hardly used as Sophy.

To explain this, it must be stated that Helen and Sophia were both engaged to be married. Helen to a gentleman in London, of the name of Ware; Sophia to the Rev. Mr. Gazebrook. You heard Helen tell Mrs. Rutt that the weddings were to be in about a month. All being well, the two sisters would be married on the same day. Neither match was particularly eligible in a pecuniary point of view. Mr. Ware was the secretary to a public company; his salary three hundred a year; and the clergyman was incumbent of a small living in Wales, worth not much more than half that sum. But Mr. Martyn had not deemed it well to refuse his consent. He believed both the gentlemen when they represented that their circumstances would be sure to grow better in time; and he told his daughters that if they chose to risk it, to live quietly until these better circumstances came, they might. Hope is strong in the human heart—very strong in those beginning life. Mr. Gazebrook looked forward to a good fat living; and Edward Ware to at least a doubled salary.

But the weddings, or rather the preparations for them, had brought forth some vexations, and Sophia was dilating upon these as she sat there with her elbow on the tea-table and her chin leaning on her hand. The sum which Mr. Martyn had allowed his two daughters for purchasing what fine people call the *trousseau*, but which I would a great deal rather call the wedding clothes, was miserably small; at

least it had proved so in the laying out. When given forth to them—and, not to make a mystery, its amount may as well be stated: thirty pounds each—Elizabeth, somewhat close in her views, pronounced it sufficient; in fact, it was Elizabeth who had suggested its amount to her father, though she did not choose to confess it: sixty pounds for the two would be ample, she said to him. But whether the young ladies had gone randomly to work, and bought too expensive things at the onset, or whether it was really inadequate to their wants, certain it was that the money was gone, and while necessaries had been laid in, most of the finery remained to be bought. Even Elizabeth had come to the conclusion that more money must be had; she helped them a little from her housekeeping allowance, but that did not do much good. They had been permitted to make their own purchases, upon the express condition that every article should be paid for when it was bought.

“We had better not have been married at all, if this is to be it,” grumbled Sophia. “I have not got a single new silk dress yet, except the wedding one; neither has Helen.”

“You have plenty of old ones,” said Elizabeth, who deemed it policy to make the best of affairs to her sisters. “One or two of them have scarcely been worn at all; they are equal to new.”

“Old ones! what are old ones?” retorted Sophia, getting crosser and more cross. “Never was such a thing heard of, as going to your new home with a heap of old things, and no new ones. Besides, I must have a lace mantle! How am I to get through the summer without a lace mantle?”

Elizabeth went on with her nightcap border, saying nothing. She had a habit of being silent when found fault with by her sisters. Sophia resumed:

“It’s a perfect disgrace! Thirty pounds for girls in our station of life. If mamma had been alive she would represent things fitly to papa, I am sure of it: You ought to, Elizabeth. I can’t make it out; papa’s not a stingy man.”

“Look at papa’s losses of late, Sophy; at the one caused by Rutt: and his business has been dwindling down and down through want of capital,” urged Elizabeth, in a low tone.

“What are we to do for gloves?” was Sophy’s answer. “We can’t have less than a dozen altogether, dark and light and white; and we have not got the money for a single pair! I wish you were going to be married yourself, Elizabeth; you’d know what it is.”

“You *may* manage with what things you have,” was Elizabeth’s answer. “I will do what I can in the matter; but if the worst comes to the worst you must—”

“Be quiet, Elizabeth! the worst can’t come to the worst. Can we be married, Helen, with what we have?”

Helen, who had sat quietly near the fire after taking off her things, looked up with the air of one

preoccupied. In comparison with the *real* need of money brought to her notice that afternoon, the present discussion jarred upon the heart as savouring of folly. “What did you say, Sophy?—Have more things? Yes, I suppose we must have them.”

“Suppose we must have them! why you know we must,” cried Sophy, angrily. “You were nearly crying over it this morning, you know you were.”

Quite true. Helen Martyn had nearly cried over her wardrobe in the morning, wondering what her husband and his friends would think of it, upon her going amongst them with so scanty a one. Scanty in comparison with the young lady’s ideas, you understand.

“Thirty pounds for the wedding outfit of Mr. Martyn’s daughters!” repeated Sophy, working herself into a fume. “We ought to have had a hundred at the very least. When Adelaide Gibson was married, her things cost two hundred pounds. Helen, we shan’t be able to afford a single evening dress.”

“And you don’t want them,” said Elizabeth to this. “Evening dresses you *do not* want: you have enough.”

“They have been worn I don’t know how many times,” shrieked Sophy.

“They *look* good, and they will be new where you are going. For the matter of that, Sophy, it is not to be expected that you will have much evening visiting in that remote and quiet place. Helen may have more in London. Amy, dear, you are shaking my chair.”

“And I shall want dresses for it,” said Helen, rousing herself from her recollections. “Oh dear! I wish I was rich!”

“I wish we could have tea!” interposed Sophy, going to another temporary trouble. “I have fifty things to do afterwards, and a long letter to write.”

“Talking of letters, did you know that papa heard from Mr. Ware to-day, Helen?” asked Elizabeth.

“No; did he?” cried Helen, eagerly.

“Papa came in for some books he wanted this afternoon, and told me then; he forgot to mention it before. Mr. Ware is coming to-morrow for a day or two.”

The pleasure which the information brought to Helen’s face soon changed to pain. This embarrassment about the wardrobe seemed all the worse from the near prospect of the presence of Mr. Ware. Elizabeth suddenly inquired whether she had seen Mrs. Rutt.

“Yes,” replied Helen. “She was in the greatest trouble; I never saw distress like it before. She has to leave Bob behind her.”

“Why?”

Helen explained. Miss Martyn did not seem to think much of it, and Sophy was too entirely absorbed in her own ill-humour to listen. They did not witness her distress, thought Helen. Just then, Mr. Martyn came in, and tea began. Sophia would touch nothing, and upon her father asking

the cause she burst into tears. "Hey-day!" cried he.

"If you would but allow us a little more for our things, papa," she sobbed. "We went over the list to-day, what we have and what we want. We have got nothing, hardly."

"I expect that you have been spending the money foolishly," said Mr. Martyn.

"No, papa. All the things that you would call foolish remain to buy yet. Papa, we ought to leave home a little decent."

He made no reply then, but when he had finished his tea, drew out his pocket-book, took from it two bank-notes, and gave one to Helen and one to Sophy.

"Now, understand me, this is all you will have. Had circumstances been with me as they have been, a score of pounds more or less would be of no moment, but that is not the case now. I am doing all I can to retrieve my position, and I believe I should have gone far to retrieve it by this time, but for the conduct of Rutt. That, with what you have had, will make forty pounds each, and if you can't buy enough finery for a wedding with forty pounds, all I can say is, that you must keep single."

He quitted the room as he spoke, and returned to the factory. Elizabeth took the note out of Helen's hand, and looked at its amount,—10*l.* "I am glad he listened to me," she observed.

"Listened to *you!*" cried Sophy.

"Yes. When papa came for those books this afternoon, I spoke to him: asking him to let you have a little more if he could, as it was difficult to spin out the thirty pounds. You may buy the gloves now, Sophy."

Sophy's eyes were sparkling. Ten pounds certainly would not purchase silk gowns, and evening gowns, and gloves, and lace mantles, and a hundred other things; but it had come unexpectedly, and she was not in the mood just then to make calculations.

And Helen? Helen took a piece of paper and a pencil, and dotted down the things she would like, and their probable cost. Upon adding up the sum total, she found it came to just nine-and-twenty pounds. So she turned the paper to the other side, and put down what she most wanted,—what she thought she could not do without,—and added up that. Fifteen pounds five shillings, this time: and there was nothing for it but to go over it again with fresh subtraction.

While doing this, one sole thought kept presenting itself to her; it worried her brain, it thumped against her conscience. To do without these things would not be a matter of life and death—and that other matter, to which she *might* apply the money, almost was such.

Presently she put the paper and pencil in her pocket, and went up-stairs to her room, and there she sat down seriously to think. Helen Martyn had strong innate conscientiousness, a powerful sense of the just and the unjust, a keen perception

of the precept: Do as you would be done by. Her conscience was aroused, and she could not lull it to rest.

Should she use this money upon herself, or should she divert it from its purpose and give it to Mrs. Rutt? For one thing, she scarcely saw how she was to do without the additional clothes, and it would certainly be a very great smart to her to do without them; for another, she scarcely knew whether it was so entirely her own property that she might give it, or be justified in giving it. On the other hand, there was the performing a good action, the helping that poor woman in her strait of need, there might be the changing of the whole current of the boy's future life. If Bob remained here, unguided, unprotected, who was to foresee what mischief he might fall into? This poor ten pounds might save him from it.

Sorely perplexed—and yet the innate conviction was upon her that she must and should give the money—Helen Martyn bowed her head upon the bed and breathed a word for guidance: she had been taught that wonderful truth, that those who consult God need no other guide. A very few minutes, and she went down-stairs again. Sophy was talking her tongue out about the fresh purchases to be made on the morrow: in that moment all was *couleur de rose* to Sophy Martyn.

"Helen, we must go out the instant breakfast's over, or we shall not be home before Mr. Ware arrives. We may leave the house at nine if we try."

"Yes," replied Helen, but her tone was a somewhat hesitating one.

"Elizabeth, I hope you'll go with us. Your judgment is so good, you know. And without you," added Sophy, ingenuously, "I may be spending nearly all my money in waste."

"I will go if I can," said Elizabeth. "But you had better make a list to night of the things you require, put down the sum you can afford for each, and not be tempted when in the shop to go beyond it."

"I'll do it now," said Sophy.

Helen meanwhile waited until her father came in. As was nearly sure to be the case (don't we all find it so?), because she wanted him to come in earlier than usual, he was considerably later. The clock had struck nine when she heard him enter, and go into a room that was chiefly used by himself. She ran down to it.

Mr. Martyn was standing with his back to the door, searching apparently for something in his bureau, the lid of which he held open. Helen advanced and stood near until he had leisure to attend to her. In a minute he turned to her with a questioning glance.

"That ten-pound note that you have given me, papa, may I spend it in any way that I please?"

"To be sure you may," replied Mr. Martyn, with a slight look of surprise.

"I mean, papa, may I lay it out in *any* way?"

she repeated. "Suppose I wished to appropriate it to something quite different from clothes—may I consider it entirely mine to do so?"

"You can do what you like with it," he said. "My private opinion is, that the money I previously gave you was sufficient without this. However, you have got it."

Helen went up-stairs, put on her bonnet and shawl, and stole quietly from the house. It was a fine moonlight night, and she had no fear of going alone. She knew that the money, to be of use, must be given that night: Mrs. Rutt had told her that she should be away on her road to Liverpool with morning light. As she was turning into the lane, she met the boy, Bob. He deemed himself perfectly alone, and he was giving vent to his emotion in loud sobs as he walked: loud and distressing they sounded in the still night.

"Bob, is it you?"

Ashamed at being caught so, Bob turned his face away, and pretended to whistle a song. Helen would not appear to have noticed it. "I want to say a few words to your mother, Bob. Is she alone?"

"Yes, she's quite alone. I'll walk with you, Miss Helen."

They went along side by side; Helen steadily, Bob rather noisily. The boy was exercising his legs and his tongue, trying to make appear that such a thing as weeping, for a bold young man like himself, was amongst the physical impossibilities.

Mrs. Rutt was up-stairs, but came down when she heard them. She was not crying, but the settled look of despair upon her face would have wrung Helen Martyn's heart, but for the secret she held within her. She was a shy, timid hand at giving, feeling quite as uncomfortable in it as Bob had felt at being caught weeping, and the explanation was given, and the ten-pound note laid down, more awkwardly than graciously.

But to see Mrs. Rutt's joy!—to see the changed countenance of poor Bob as he stood in a corner, his lips apart, his bright colour fading from his cheeks with emotion! Helen's eyes were wet, as the blessing she had given came home to her heart, and I fear Bob in that moment looked upon her as the most real angel he had ever had conception of.

But Mrs. Rutt had scruples in taking it. She feared Miss Helen Martyn had procured it at some great sacrifice or inconvenience.

"No, I will tell you the truth about it," said Helen, candidly. "It has been no inconvenience to get it, for papa gave it me unexpectedly this evening; and the parting with it will not entail much sacrifice," she added in a cheerful tone. "It was given me to buy additional things for my marriage, Mrs. Rutt, but I can do without them. It is better that I should be married with a less extensive wardrobe than I had deemed necessary, than that Bob should be left behind you."

She had no time to listen to the heartfelt thanks, to the prayers for her own welfare; she must hasten home again, lest her absence should be discovered,

and cause a commotion. Bob Rutt followed her out in silence to see her home.

And in silence they proceeded along the lane. Bob did not speak, his heart was full: and Helen was feeling, as she had never yet felt it in her life, the truth of that golden precept—It is more blessed to give than to receive. She was asking herself in wonder how she could have put, even for a moment, the question of her own finery against this good work. At the end of the lane they were in the bustle and lights of Wexmoor, and Helen stopped.

"You need not come any farther, Bob. I can run on by myself now."

"I'll go with you to your door, Miss Helen."

"No, I would rather go alone. I am all but there. Good by, Bob, I wish you all good wishes."

"Miss Helen," he said, clasping the hand that was offered him between both of his, and struggling hard to subdue all outward emotion, "I shall never forget what you have done this night. I am sure that my mother will repay you as soon—"

"No, no, Bob, I don't want to be repaid," she interrupted; "I shall be going from here almost directly, you know. I hope you will get on in the land you are going to, and that will be my repayment. Fare you well."

She hastened on, leaving the boy looking after her, his heart full, his gratitude shining through his face. Bob's first thought was to wish he was a grown-up man and a gentleman, that he might marry Miss Helen Martyn, instead of Mr. Ware. He deemed it impossible there could be two Helen Martyns in the world.

With the morning, Helen had to tell what she had done. It was quite impossible that she could suddenly decline to make any more purchases, without confessing the cause—that her money was gone; and equally impossible not to be obliged to disclose what had become of it. Elizabeth called her foolish; Sophy opened her cold grey eyes, and wondered whether Helen was mad. "The *whole* of it given!" she reiterated, "why, you can't buy one single thing more! What *will* you do?"

"I shall manage very well with what I have," was Helen's answer. "We had a very good stock of things, you know, Sophy; and I shall contrive sundry changes in my old dresses to make them look like new. I lay awake last night thinking how it could be done."

Yes, it is wonderful how different things look in contrasted aspects of mind. When Helen, like Sophy, had felt angry and mortified over the small sum allowed them, she regarded her stock of clothes with the utmost disparagement; but now that she *wished* to make them do, that she put cheerfully the best face upon the matter, they seemed really good enough and extensive enough for anything she could wish. Ah, my friends, half the worry of life would be soothed, if we could but bring our own rebellious minds into a more accommodating frame.

But Helen had to encounter worse than the re-

"The explanation was given, and the ten-pound note laid down more awkwardly than graciously."

flections of her sisters—the astonished anger of her father. Mr. Martyn was really displeased: perhaps all the more so because *the Rutts* had been the objects of Helen's bounty. But in any case he would have looked upon it in an absurdly ridiculous light: as we look upon some of the feats of chivalry of the old days of romance, and deem them unsuitable to these. He reproached Helen, telling her that money was not so plentiful with him, and that if she had no need of it she should have given it back to him.

"You told me I might use it as I pleased, papa," was Helen's deprecating answer. "I asked you if I might."

But the reminder only made Mr. Martyn more angry. In point of fact, he had not given much thought to the matter when Helen applied to him, carelessly supposing that if she did not wish to spend it upon clothes, it was only because she had set her heart upon some other sort of superfluity. Helen felt thankful that the Rutts were really gone, lest in his displeasure he might be for ordering her to reclaim the money from them.

Mr. Ware arrived in the course of the day, and the story was told to him. Without openly casting blame to her, Helen could see that he condemned her at heart, looking upon it in the same light as her father; and there was a tone of ridicule in his voice when he spoke of her "knight-errantry," which made her cheeks burn. Poor Helen shut herself in her chamber, and sobbed aloud. In that bitter moment she felt tempted to wish she had not given away the money.

PART THE SECOND.

CHAPTER I.—MR. VAVASOUR'S PROMISE.

THE sultry summer's day was drawing to its close, and the cooler air and slight breeze which came up with twilight was inexpressibly refreshing. On some of these London suburbs the heat of the crowded and close metropolis seems to reflect its rays, rendering them hotter than country places.

In a small but very pretty drawing-room, whose windows looked over the lawn to the high road, sat two ladies on this sultry evening. One of them was not doing anything; unless, anxiously watching every omnibus which came past laden with its freight of gentlemen returning home from their labours in the city, could be called anything. She is a very pleasing looking woman, graceful and ladylike; and her countenance would be even more pleasing but for the almost painfully anxious look which it wears just now. You would guess her to be perhaps eight-and-thirty: in reality she is several years more, but Time has passed lightly over her. On these fair, calm, serene countenances he does not leave his mark as he does on more stormy ones. Do you recognise her? Her eyes are dark blue, and her silky brown hair is abundant yet. She wears a pretty muslin dress, with a white collar of lace, matching the hanging lace to her

open sleeves. It is Helen Martyn: or rather Helen Ware; for she has been Mr. Ware's wife ever since you saw her last in those old days.

The lady opposite to her is little and thin, with quite a grey complexion, and a cap shading her remnant of scanty hair. She looks as much older than her age as Helen looks younger; in fact, any one would take her to be the older of the two. Only note the contrast in their hands! Helen's are small, young, delicate hands yet; those others are prematurely old and wrinkled. It is Amy Martyn. She has partially recovered the affliction of her childhood, but it has aged her before her time.

Time had wrought its changes. When Mr. Martyn died, and died an impoverished man, leaving nothing behind him, a grave question arose of what was to become of Amy. Elizabeth had died long before, and there was only Amy left. "She must come to us," Helen had said to her husband. "Yes," he replied, "I suppose she must: poor Sophy, with her cares and her children, cannot be burdened with her."

Poor Sophy, indeed! Those fond hopes of future greatness, cherished, as you may remember, by the two bridegrooms elect, had turned out but delusive ones. They often do so turn out in common life. The Reverend Mr. Gazebrook had never been remembered in his remote Welsh living, but lived there still; and poor Sophy, in her small parsonage home, with her nine children, had had her temper irretrievably soured in the struggle to bring them up, and to make both ends meet as she did it. It was clear that she could not give a refuge to Amy. Mr. Ware had not risen, either: he held the same situation at the same salary; the board would have been glad to raise it, as they told him every Christmas when they made him a present, but they could not afford it, for the company was not a rich one, and though it did not retrograde, it did not advance. Still, with Helen's good management they were tolerably at ease; in luxury, as compared to Sophy; and Amy was welcomed by them. Amy made herself as useful as she could; her hands were pretty steady, and she could manage plain sewing: she is at present, you see, hemming one of a dozen white handkerchiefs which lie neatly folded before her, and which are already marked with ink in full—"Martyn Ware."

The orange tinge of the sun in the western sky fell on Helen's features, on the smile of hope which hovered on her parted lips, parted just then with the eagerness of expectation. A city omnibus had drawn up close to the gate, and a gentleman, whom she could not yet see, was getting down from the other side of the roof.

"Here he is, Amy."

Amy Martyn glanced up by way of answer, in time to catch the bitterness of disappointment which fell like a dark cloud on her sister's face. The gentleman had come in view, and proved to be not him for whom she was looking.

"Is it not Martyn?" asked Amy.

"No. It is Mr. Ware."

But do not mistake her. Not because it was her husband who had alighted did her voice fall to faintness, her heart turn to sickness, but because she had expected some one else: some one whom she feared she *could not trust* to remain late in town as she could her husband.

A great fear had recently fallen upon Helen Ware. They had never had but one child, a son, named Martyn after his grandfather; and how she loved him no tongue could tell. It is not well; it is not well for a woman to have one only son, for he is all too apt to become her idol. I am not saying this with special reference to Mrs. Ware. She did love her boy, none save God knew how much; but she had never spoiled him, and she was more anxious for his eternal than for his temporal welfare. Only of late had the fear fallen upon her that he was in some way going wrong.

A fear that had taken hold of her very being. She dared not breathe it to others, to her husband, to Amy; she scarcely dared breathe it to her own heart. *How* Martyn was going wrong, or in what particular manner he was transgressing, she could not think, did not know; but the living fear was there.

Mr. Ware came in: a tall man, with grey hair and quiet manners. Helen rose. "I thought you expected to be very late to-night, Edward?"

"Yes; but the meeting was put off to another day. Is Martyn home?"

Helen answered quite carelessly, as she turned to ring the bell, "Not yet; I dare say he won't be long."

"It will be a difference, then, from what it has been lately," was the remark of Mr. Ware as he turned to leave the room.

Tea came in, and they sat down to it, Helen making it as usual. It had grown dusk then, and the lamp was lighted. Afterwards Mr. Ware paid a visit to a friend who lived close by, a gentleman addicted to scientific pursuits, to experiments, and Mr. Ware was fond of joining in them. But for these frequent evening absences, he might have known more of the general irregularity of Martyn's return.

Helen threw a shawl upon her shoulders, and went out to the lawn. Hot as the day had been, a damp had arisen now. Nobody saw her in the dark night, and she laid her head gently upon the iron spikes of the low gate, her breath hushed to listen for the omnibuses in the distance. With the appearance of each one her heart beat with renewed hope. All in vain. They passed; they passed in succession, one after the other. Weary and sick, she turned in as the clock struck eleven.

Amy had gone to bed; she scarcely ever sat up later than ten; her husband, she knew, would not be long, for eleven was the signal for his quitting his friend. But not of her husband, not of Amy, did Helen think; they were in safety. She threw herself into a chair with a sobbing sigh.

Just then the roll of another omnibus was heard, and she started up. "No," she said, heart-sick with the past hour and what it brought, "I will not go, it will only be another disappointment;" and she sank down again.

But it came on slowly and more slowly, and at length stopped. Mrs. Ware went to the door then, and looked from it. Yes! it was her son at last.

He came in at the gate, a gentlemanly young man of twenty-one, with a pale and somewhat gentle face, very much like what hers had used to be. Helen waited. "Martyn," she whispered, "you are late again."

"Not very late, mother. It is only eleven."

"Where did you stay?"

"I went home with Vavasour, and somehow the time slipped on."

"Martyn! you always say that!"

Martyn laughed. "Yes, I think I do very often go home with him."

Ready as the replies had been, there was a nameless something in the tone which grated on Helen's ear; a sort of evasion—as if he were not telling the whole truth. The miserable conviction was upon her—had been upon her for some time now—that he did not tell her the whole truth; that there was something to be concealed. In vain she strove to draw more from him, she never succeeded, she could come at nothing certain, but she did fear Martyn was going wrong. She might never have suspected it at all, but for the picking up of a bit of paper, a torn note in Martyn's handwriting: it appeared to be an urgent appeal to somebody about money, some money which somebody ought to have furnished, and it stated there was nothing before him but ruin, unless the somebody "came down" with it. So much she managed to make out of the torn writing. She showed it to Martyn; but he laughed it off, and said it only concerned some fellows in their house. Mrs. Ware was tolerably satisfied at the time: but the fear and the suspicion had grown upon her ever since.

"Will you take anything?" she asked him to-night.

"No, thank you. I suppose everybody's in bed."

He sat down at the table as he spoke, carelessly opening a book that was on it: and at that moment Mr. Ware's step was heard outside.

Seeing his son seated there, a book before him, it is probable Mr. Ware supposed he had been home some time. He began describing the fine experiments at which he had been assisting; he was always full of them after these evening visits. Helen listened mechanically: she heard the words, "condensed air," "syphon," "electric phenomena," and many others, without the least power of connecting them. Her attention was fixed on Martyn. At first he had responded to his father, made every show of listening eagerly, of being powerfully interested: but now a vacant look had fallen on his face, a dim scale seemed to rest on his

eyes ; his thoughts were lost in themselves, and it looked very much as if those thoughts were troublesome ones.

A very desirable situation, as was supposed, had been found for Martyn Ware in the house of Hill and Aukland, West India merchants ; and he had now been there four years. The first two years he earned nothing, the third year they had given him thirty pounds ; this year he was to have sixty ; the next year one hundred. In short, his prospects were sufficiently good, and there seemed no reason why he should not in a few years be gaining his five hundred a-year salary : other clerks were doing it. The firm lived in Mincing Lane—that is, their house of business was there. Mr. Hill was the partner in England ; Mr. Aukland resided in Jamaica, where they had a corresponding house. A great portion of Martyn's particular duties lay at the custom-house, passing entries for goods, and such like—but this won't interest the reader.

After breakfast on the following morning, Martyn and his father went to town together, as was their general custom : they had to be at business at the same hour, ten o'clock. It was striking as Martyn entered the house in Mincing Lane ; he was always punctual, always attentive to his duties. The head clerk of the room in which Martyn sat was already at his desk, and he looked over his spectacles to see which of the three under him, attached to that room, was coming in.

"I thought it was you, Mr. Ware. Don't take your hat off. This entry must be passed the first thing."

"Very well," replied Martyn. And it may as well be remarked that his civility, gentlemanly manners, and punctuality, had rendered him of good report in the house.

He stood for a moment, looking at the paper the head clerk handed him, and some one else came in. Quite a notable person this last, resplendently grand. He stood six feet high, was of very dark complexion, and might have been pronounced remarkably well dressed, but that his ornaments were profuse and shone too much. His clothes were of the best and newest, well made, entirely such as a gentleman might wear. A light kid glove was on one hand, and two rings were on the other ; his cable chain crossing his waistcoat was a double one, several trinkets dangled from it, and a great diamond pin glittered in his blue stock.

"Good morning, Mr. Mann," said he, raising his hat in a somewhat affected manner.

"Good morning," replied the clerk. "Be so good as to step round to the post office, Mr. Vavasour, and see if the letters are ready. The mail is in."

Mr. Vavasour looked thunderstruck at the order ; a little supercilious.

"I step to the post office ?" he repeated.

"If you please," said the clerk, with quiet authority. "Young Jones is not here yet this morning ; he is ill : and Mr. Ware must go at once to the custom house."

Mr. Vavasour put on his hat and went out. Martyn, who had preceded him, was waiting at the entrance-door, looking round with an eager, questioning glance.

"The West India Mail's in, Vavasour," he whispered.

"So Mann says," was the reply ; and the careless, drawling, indifferent tone with which Vavasour spoke bore a marked contrast to the anxiety of Martyn's—an anxiety that amounted to pain.

"You have not your letters yet ?"

"Is it likely ? I shall get them, I suppose, in the course of the day."

"Vavasour, I am quite sick with the suspense," was the impassioned rejoinder of Martyn Ware. "I am not fit to go about my business."

Mr. Vavasour laughed heartily.

"I can't help it, Ware," he said, in a tone of half apology. "You are such a fidget ! Never was your equal, I should think, under the sun."

"Think of the stake," said Martyn.

"Stake be ignored !" cried Mr. Vavasour, pleasantly. "My good fellow, it will be all right. Such 'stakes' are risked and got over every day."

They had been walking on together ; but now their roads lay in different directions. Martyn stayed to say another word.

"Will your letters be directed to Mincing Lane this time, or to your rooms ?"

"As if I could tell ! To Mincing Lane, most probably."

"Well, put me out of suspense, Vavasour, as soon as you can."

Vavasour nodded : and the two clerks parted.

But it is very probable that Mr. Vavasour would fire with indignation did he hear himself called a clerk. The son of a wealthy West India planter, he had been sent to Europe for his education, and had received a comprehensive one, though it may be questioned if he profited by it as greatly as he might have done. A private clergyman's first, King's College next, Germany afterwards. Then he was placed in the house of Hill and Aukland, by the desire of his father ; not with any view of his continuing in it, but simply because Mr. Vavasour the elder deemed it expedient that he should acquire some notion of business before his return to Jamaica. No salary was paid to him, and he was not looked upon in the light of a common clerk, but he had to do what was required of him.

He had entered the house the previous summer, rather more now than twelve months ago. His fame had preceded him. A rich young West Indian, coming into the house as a gentleman, not as a clerk ! No wonder a commotion of expectation was excited among the regular employés ; and the commotion was not lessened when he arrived. His tall and really fine person, his very dark skin, his purple-black hair and whiskers, shining with Rowland's oil, his expensive style of dress, his ever-perpetual new gloves of the lightest tints, and his glittering ornaments ! Of the clerks, some

laughed at him, and called him a fop; some envied him; all stared at him. There are young men in this London world who believe that a ring displayed on their own finger is the grandest sight in life: when Mr. Vavasour appeared amongst them with *two* their admiration knew no bounds. They envied him for something else—his apparently unlimited command of money. That he was supplied with money in a reprehensible degree—reprehensible considering that he was thrown on the world without control—was undoubted.

Take him for all-in-all, he was an affable, pleasant sort of man. He made himself agreeable enough to the clerks of the house, assuming no airs over them; but the only one with whom he formed an intimacy was Martyn Ware. Martyn was essentially a gentleman, and it was in Martyn's room that a place was assigned to Mr. Vavasour: hence, perhaps, the inducing causes to the close friendship that sprung up between them.

Is the word "friendship" a fit one in such a case? Scarcely: as it seems to me. That word ought to imply an intercourse, good, thoughtful, almost holy: but the intercourse of Mr. Vavasour and Martyn Ware was rather evil than good. Until Martyn met with him, he had been of unquestionably steady conduct: one of those sons for whom a mother's heart will glow in thankfulness to God, who has kept them from the temptations of the world. Not so after the intimacy was formed. The word fast—so disagreeable a word to my ears, that I can't bear to write it—might be applied in its worst signification to the manner in which Mr. Vavasour spent his evenings, sometimes his nights; and that terrible contagious thing, example, drew Martyn into the vortex.

How he hated himself! Gambling, and money spending, and singing rooms, and supper eating, may be very delightful recreations at the moment, but they *do* leave their sting upon the conscience to those who have been trained as was Martyn Ware. They leave something else generally—debt. Debt; embarrassment; despair: and they had left all these on Martyn. If Mr. Vavasour with his large allowance could not keep out of debt—and he did not—how was it possible for Martyn Ware to do so, sharing in the same amusements?

Mrs. Ware suspected, as you have seen, that all was not as it should be; she feared that Martyn was spending more than was justifiable; more, in fact, than he had to spend. She feared the habits he might be falling into; she feared the debt. Trifling debt, it may be, that her thoughts strayed to, but yet too great for Martyn and his limited means: what would she have done had she known the reality? A hundred pounds—no, nor a good deal added to it—would not clear Martyn.

Nothing weighs down a sensitive mind like debt; and when the hourly dread of exposure is added to it, the incubus is almost greater than can be borne. With parched lips and fevered brain, Martyn Ware proceeded to the custom house; scarcely capable,

as he had confessed to Vavasour, of transacting his work. Vavasour, who was good-natured in the main, had promised to help him out of his difficulties. He wrote home to his father to advance him money in excess of his allowance, and for the last three mails had been expecting the order for it. Some of it was for his own debts, but he intended honourably to keep his promise and help Martyn. Another mail was now in, and Martyn, with a sick longing, anticipated the news it had brought.

When he returned to the office, which was not until past mid-day, for he had to go to the docks, he threw his fevered eyes around the room, but Vavasour was not in it. Mr. Mann had gone to his dinner, and the junior clerk, Jones, who had now come, but looked pale and ill, was alone. "Is Vavasour out?" asked Martyn.

"He is gone," replied Jones.

"Gone!" repeated Martyn, not understanding. "Gone already?"

"Gone for good, I mean," said the junior clerk. "He has left: but I suppose he'll come to see us again before sailing. A letter came in for him by the mail, and another to the governor. I don't quite know about it, but Preston thinks Vavasour has been dipping in deep, and his father has stopped the supplies. The upshot is, that Vavasour has peremptory orders to go home by the first packet, and the governor had him up in his room, and gave him a precious good talking to, and then told him he might be off and see to his preparations.

Martyn wondered whether he was in a dream. The words "his father has stopped the supplies," fell upon him with a cruel shock, causing his brain to reel. His heart pulses stopped, only to bound on with a rush; his sight partially left him. Young Jones held out a paper.

"Mr. Mann told me to give you this if you came in before he did. You'll see what it is. He said you had better go at once to your dinner, and then come back and go over the accounts it refers to. They must be sent off by the evening's post."

What Martyn answered he never knew; something to the effect that he did not want dinner. He took the paper, and sat down in his place and put it before him on the desk, and cast his eyes upon it. All mechanically; mechanically as a machine works: utterly incapable was he just then of seeing or hearing anything. Young Jones was scratching away busily with a pen and did not observe him.

"When does Vavasour sail?" asked Martyn, when the silence had lasted some five minutes.

"Well, the mail's in before its time, and the other does not go out for three days. The governor told him if he chose he might get away by that one. Oh, Ware—I forgot to tell you! Mr. Aukland's come."

"Ah," said Martyn, with indifference. "He was expected last time, somebody said."

"He is up-stairs now with the governor. I have not seen him. Preston says he——"

The clerk dropped his words. Coming down

the stairs then, nay at the very door of their room through which they must pass for egress, were Mr. Aukland and Mr. Hill, who in the house was irreverently styled "the governor." The junior partner had arrived in town that morning from Southampton, having travelled from Jamaica by the packet which had brought the mails. It was the first visit he had made to it since his connection with the house: a report was afloat in it that he would remain for good, partially superseding Mr. Hill, who was growing old and rich, and that another partner would be taken in to reside in Jamaica.

Young Jones lifted his eyes with some curiosity. Martyn would have done the same but for the awful news just told to him, touching Vavasour. Mr. Hill came in first, a bald-headed man, very fat. Mr. Aukland next; a tall, thin, gentlemanly man of seven or eight and thirty, with dark eyes and a pleasant look. Mr. Hill halted when he reached the room, and began explaining to his partner the peculiar duties connected with it.

"Where's Mr. Mann?" he asked.

"Gone to dinner, sir," said young Jones.

"Oh—ay. What accounts are those, Mr. Ware?"

As Mr. Hill put the question he approached Martyn. The stranger followed him, and they stood close to the desk. "They are Mauresby's, sir," was Martyn's answer—and he thought himself lucky to be collected enough to answer it.

"Mauresby's? They ought to have been sent off yesterday. How was it they were not?"

Had it been to save Martyn's life, he could not have told why. A dim recollection arose to him that some particular cause hindered it, but memory seemed to fail him. The swinging open of the door saved him an answer. It was the postman who entered. He walked straight up to Martyn's desk and laid down a letter. Mr. Hill had stretched out his hand for it, but the man spoke out its address aloud:

"Mr. Martyn Ware."

More reeling of the brain for Martyn; more heart-sickness. He thrust it into his pocket, trying to conceal his whitened countenance from the notice of his master. Too well he guessed what were the contents—a peremptory demand for money, which he had not to give.

Mr. Hill suspected nothing—saw nothing: he went out with his partner, and Martyn contrived to drag through the day and its duties. The moment he was released he tore up to Westminster in a hansom cab to Vavasour's lodgings.

It was all too true. Vavasour, in his good-nature, had waited in for Martyn, who he knew would be sure to come. But he could not disguise the facts, however he might wish to soften them. No money had come for him. Mr. Aukland, a friend of his father's, had arrived armed with credentials to see Vavasour off without delay, to see his debts paid: but not a penny-piece, save for unavoidable personal expenses, was he to give Vavasour. Old Mr. Vavasour had grown frightened and cautious.

"If some one has not been writing a confounded long yarn to him about me, I'm not here!" exclaimed young Vavasour. "My asking him for a paltry three hundred extra, never could have brought forth this row. Besides, I put it upon back German expenses."

"What am I to do?" gasped Martyn, sinking in a chair.

"Do? Well, the first thing is to come along with me and have a rattling good dinner. I have had nothing all day. I shan't dislike the change for home, Ware. I have been getting tired lately of this fast London."

How sick, how tired of it Martyn had long been, he alone could tell.

"Oh, if I were but clear of it—if I were but emancipated from this horror!" had been his inward cry, day and night. Once released, not even Vavasour could have dragged him into the vortex again. But release, it seemed, was not to come, and Vavasour's light tone drove him nearly mad.

"Don't, Vavasour, for Heaven's sake! Have you no pity for me? The ruin is at hand, and I can't escape. I'd rather throw myself into the nearest pond than live to face it."

"Ware, look here!" answered Vavasour, with more impulsive feeling than he had been ever known to speak. "We are both in the same hole, and perhaps you'd never have got into it but for me. I am being helped out of it, and I swear that you shall be. The return mail that goes out of Jamaica first, after my landing in it, shall bring you the money. You may trust me, old fellow, for I swear it."

And Martyn, believing in the good faith of Vavasour, did trust him.

CHAPTER II.—THE FALL.

It was a fiery temptation. It was a temptation that I trust you, my readers, will never be exposed to, in conjunction with its exciting cause, the grievous need of yielding; and Martyn Ware, honourable though he was by nature, honestly as he had been reared, succumbed to it.

The fraud seemed so easy, and the difficulty he was in so great! Nearly a month after Vavasour sailed, that difficulty reached its climax, and the unhappy young man knew that, ere the morrow's sun should have run its course, all would be known. To be arrested for the debt was inevitable; he could not *hide* himself as some can; he must be at his post whether or no, and the sheriff's officer could choose his own hour for taking him, all leisurely and comfortably. To fall into this disgrace; to forfeit his place in the house of Hill and Aukland—for that would be the inevitable result; to prove to his good and dearly-loved mother what a worthless, deceitful scoundrel he had been—the thought of all this nearly turned the brain of Martyn Ware.

Oh, if the good ship, then bearing the help to him which Vavasour had promised, could but skim,

swift as a bird, over the waters! He reposed the blindest trust in the promised help of Vavasour; he never for a moment would allow himself to think that it could fail him; or, if the thought did dart across him, he sprang up from it and plunged into some vortex of daily business, escaping as it were from himself, for it was a contingency too frightful to think of.

Oh, if the fair ship could but make an impossible voyage and come in before her time! A week yet; two weeks yet—how did he know?—ere she could be in and bring to him salvation. In vain he tossed on his uneasy bed at night; in vain he flung himself from it, praying that some miracle might save him. The ship *could* not come in before she was due, and those relentless creditors were merciless. Only a week—two weeks it might be—to wait, and all would be smooth, and he not sacrificed! If he could but run away and hide himself in some cavern for the intervening time; if he could but drop into a prolonged sleep, as the people do in the magic tales, and wake up at the moment that the sure ship was touching land, he need not be sacrificed! But he could not; he could not! He had to deal with the hard realities of every-day life, not with imaginative fiction.

Let us give Martyn Ware his due! He dreaded the shock to his mother far more than the consequences to himself. He loved and revered his mother as I believe only those children *can* love and reverence her who have been brought up aright. From his earliest years she had striven to lead him to his duty; earnestly, gently, untringly, had she shown how God loved him, and how he might live so as to deserve this love; she had made the good path to him a pleasant path. My friends, rely upon it, it is only such mothers as these, who are loved by their children with a fond love: who are revered by them more than anything else on earth ever can be revered.

Yes, it was the thought of his mother that made the worst trouble to Martyn Ware. If he could but keep the knowledge from her! if he could but stave over this short week or two, and get the money, and relieve himself from his embarrassments, she would never know what a vile, ungrateful cast-away he had been. From henceforth he should return to good ways, to sober evenings, to rational pleasures; and it was no shallow or transient resolve, this, but the firm, fixed purpose of Martyn's mind. He had had enough of folly and sin; he had had enough of deceit; but to leap over the intervening weeks, or to soften the hearts of those who had his fate in their hands, was alike impossible.

It was at this critical juncture that the temptation came. Its precise details I would rather not relate, and you will probably deem the reserve an expedient one; it is sufficient to say that a large sum of money, 92*l.*, belonging to the firm, fell into Martyn Ware's hands. It was encompassed about with all the apparent immunity from danger that

these temptations often are encompassed with. The circumstances under which it was paid in were peculiar; the circumstances altogether attending it were unusual; and it seemed all but an impossibility that discovery could supervene before Martyn had the opportunity of replacing it by the arrival of the mail. For one thing, Mr. Hill was absent. He was taking a holiday; and until his return, which would not be until after the coming in of the mail,—unless the mail foundered at sea,—there would be really little chance of discovery. Any one else would have said so as well as Martyn.

And so—and so—Martyn Ware yielded to the temptation.

But do you think it brought him the relief he sought? Do you think such yielded-to temptations *ever* bring relief? Ah, no. From the very hour of his taking the money, a horrible fear, like unto nothing he had in his life experienced, seized hold of him. By night and by day a yawning gulf seemed before him, he on its very brink; ready to fall into it; to be annihilated for ever. He almost wished he *could* be annihilated for ever, as a less terrible fate than this living agony.

What had been the pains and perils he had escaped from, compared to those that he had invoked now? The very worst position that *debt* could have placed him in, was as nothing, as *nothing*, by the side of the consequences that might be drawn on his head by *crime*. With the proceeds of the order (for in point of fact it was not actual money he took, but an order for it: the same thing when cashed) he set himself free from debt; at least, from pressing debt; but he had increased his peril, his perplexity, his remorse, a thousand-fold. Martyn Ware had not been constituted by nature for the commission of crime: he was endowed with a strict love of justice, with lively conscientiousness; and such, should they unhappily succumb, cannot *live* under the burden it entails upon them. How willingly, oh how willingly would he have undone his work, and gone back to the lighter embarrassment from which he had been so eager to escape! To be taken by a sheriff's officer, and civilly marshalled to one of the debtors' houses, would have been enough for his mother to bear; but to be taken by a different sort of official and confined without hope or sympathy within the strong walls of a criminal prison —!

A groan escaped him as the vision rose before his mind; rose, as it seemed, with the prevision of fatality. He could not undo his work; the money was spent, and there were no possible means of recalling it. The wonder to him now was, *how* he ever could have been so mad and wicked as to have used it. Wicked he knew he had been, but he did believe that he must have been mad, or he never would have done it. Worse than all, with the taking of the money his confident hope changed, and he began to doubt the faith of Vavasour as surely as he had believed in it. He tried to hope still; he tried to do battle with his poor sinking

heart; and thus he lived on as he best could until the West Indian mail came in.

It came in, that packet; and you scarcely need to be told, I should think, that it did *not* bring the relief expected; for this kind of dependence, of expectation, proves so almost invariably a failure, that it seems superfluous to record it in this additional instance. The mail brought a letter from Vavasour, but it brought no money. He had found it difficult to appease his father, he wrote, who accused him of having been doing what he could to "go to the bad," and he found it impossible to draw money from him yet. He would try hard to get it by the departure of the next packet, and he hoped Ware would continue to "rub on" until then. Of one thing he might rest assured: that the money *should* come to him earlier or later, for he would be faithful to his promise.

Martyn Ware sat at his desk, staring at the letter. He tried to read it again deliberately, after his first rapid glance at it, but he could not; the characters were dancing before his eyes, sparkling and gleaming as if they were living fire. Discovery was inevitable: long before the next mail was in (but he had no hope now in *that*), Mr. Hill would be home, and he would find it out the first day. As he sat thus, his brain throbbing, his pulses beating, his spirit ebbing with a sick faintness, Mr. Aukland passed through the room on his way up stairs, and turned his head to Martyn.

"I want you, Mr. Ware."

He crushed the letter in his hand, and followed that gentleman to his room. Mr. Aukland, his hat off, was already seated at his desk. The clerks scarcely knew whether they liked Mr. Aukland or not. He was kindly and genial in his manner to them, but so imperative in matters of business, so entirely a man of business himself, and so uncompromising in exacting that their duties should be performed to the letter, that quite a revolution had taken place in the house. Mr. Hill, easy and lenient, rather addicted to dropping asleep at his desk after his early city dinner, had allowed things to go very much as they pleased, and the clerks to have an easy life of it; but all that was changed, now that Mr. Aukland reigned.

Mr. Aukland bent his dark eyes on Martyn. "I hear that Lovibond's account has been received and cashed, Mr. Ware. It was paid, I find, to you, but I don't see it entered."

Every drop of blood forsook Martyn's face. His heart stopped still, and then leaped onwards with a bound of agony. This was the money he had received and kept. He strove to answer, any excuse that came uppermost, something to the effect that he "would look," "would see about it;" but the words came forth in gasps from his trembling and ashy lips. It was utterly impossible but that Mr. Aukland should detect that something was wrong.

What questions he would have asked, it was impossible to say, but Martyn was spared for the moment. One of the clerks came up showing in a

stranger, and Mr. Aukland nodded to Martyn to go down.

He did not know how he got down. He did not know whether his head was on his shoulders or whether it was off; it seemed not to be himself, but somebody else—as we may have experienced ourselves in illness, in the attack of a fever-dream. He heard Mr. Mann address him as he was about to sit down to his desk, telling him there were those samples of sugar to be got from the docks, and just time enough left to do it before the gates closed, if he made haste. And Martyn put on his hat and went out.

As he walked along amidst London's bustle, steering his course mechanically, he put his hand into his pocket for the letter: he had but superficially read it before; had mastered only its broad facts, not its details. But the letter was not there.

He wondered where he had dropped it. He looked back along the narrow and crowded pavement, but could see no sign of it, and a dread came over him that he had dropped it in the office. Dread? Why, if he had; if the letter had been read by Mr. Aukland and every clerk in the place, it could not tell them half as much as must be known in a few hours' time from one end of it to the other.

He got home from the docks just before the office closed. The resident porter stood at the door, and Martyn asked him if he had seen or picked up a West Indian letter; he had lost one: but the man said he had not seen any.

"Is Mr. Aukland gone yet?" asked Martyn, as he walked in, putting the question as indifferently as he could.

"Yes, sir."

Mr. Mann was yet at his desk, and he spoke for some little time with Martyn about business matters, quite in his usual tone. It was evident that he had not seen the letter. Martyn looked about for it, but could find no trace of it, and he came to the conclusion that it had been lost in the street. What mattered it where? Ere the setting of to-morrow's sun, the whole world would know the guilty fool he had been.

He went home, and that night all was told to Helen. Believing himself alone, heavy groans had burst from him, which his mother happened to overhear. She stole to him; she sat down by him; she confessed what grievous fears had long been upon her; she prayed him to have love and confidence in her, his mother: and with her arms entwined about his neck, and his cheek drawn against hers, Martyn told her all.

What a night it was for her! She retired to rest as usual, not to excite observation; but how she lay through it, how she *bore* to lie through it, her unconscious husband sleeping by her side, none can tell. Her son, whom she had been striving to train for heaven; her darling son, of fair report in the sight of the world, to have ended thus! How fully she trusted him, how truly she knew that she

might trust him, when he said that, could this pitfall have been escaped from, he would, with God's help, never fall into another!

There appeared to be one little loophole of a chance—that Mr. Aukland would listen to her prayer for mercy, and forgive him. *Her* prayer; Helen's: who else was there to offer one up? Much as she should dislike the office, sensitively as she should shrink from it, she must, nevertheless, go through it. She must present herself before that great and dreaded man (great as her son's master, dreaded as his injured accuser), and beseech him to spare that erring son—to conceal his offence in consideration of his strong temptation, his bitter repentance, his inexperienced youth—not to blight his prospects at the very threshold of life. She would beseech it in mercy to herself; she would pray to be allowed to repay the money: and though she had it not, she would find it, even if she had to sell her clothes.

With this fixed resolution in her mind, Helen rose. She went to Martyn's room and told him. It would be productive of no good, he despairingly said; but she persisted in trying. It was necessary that she should be at the office in time to catch Mr. Aukland on his arrival, and she had to invent some plausible excuse of shopping, of wishing to get the shopping over before the heat of the day came on, for going up to town in the omnibus at the same time as her husband. Mr. Ware talked half the way up to town about Martyn's unusual dilatoriness that morning in not being ready for the omnibus. If he had but known that the dilatoriness was but assumed; that he dared not go!

Mr. Aukland was already there. With the West India mail in the previous day, and its load of business for them, he was not a man to be tardy at his post. A whole heap of papers, of letters, were before him on his desk, when a card and a message—that the lady asked to see him upon urgent business—were carried to him. He glanced at the former: "Mrs. Edward Ware."

"Desire the lady to walk up," he said in answer.

She came up the stairs. She closed the door, and threw back her veil, and disclosed a face white with an agitation it was utterly beyond her to suppress. Mr. Aukland had risen to receive her, and he courteously, with every manifestation of respect, handed her a chair.

But she was too agitated to avail herself of it. In fact it may be questioned if she so much as saw the movement in her agony of emotion, in the sick feeling of suspense that threatened to overwhelm her. She stood up and grasped the railings of the desk with one hand, and entered upon her prayer.

With a rapidity of emotion that gave him no chance of interrupting, with a wailing tone that betrayed too well the pent-up anguish, she told her tale. She told what she had come for—to beseech pardon for one who was a guilty sinner, but dear to her.

"It is the turning point in his life, sir; the crisis

of the years that have passed, of those that are to come," she breathed, hardly conscious in her trembling vehemence what she did say. "Upon your mercy depends his well-being here; perhaps that hereafter. I *know* that he will never transgress again, and if you will but allow me to refund the money privately to you, it—it—"

She could not go on: she broke down with a sound between a sob and a shriek. Mr. Aukland, still with every token of respect, took her hands in his; he smiled at her with his pleasant lips, with his friendly eyes.

"Do let me speak, Mrs. Ware. Can you suppose that I should betray *your* son? Don't you know me?"

Know him? She looked up at him in surprise. She knew him by hearsay; she had never seen him. What did he mean? Her silence spoke her bewilderment, and Mr. Aukland smiled.

"Have you forgotten Bob Rutt? I am he. Look at me, and see if you do not trace my old features. *Yours* have not altered."

Bob Rutt! Robert Aukland, that influential West India merchant, the poor Bob Rutt of the days gone by? It was even so: and she knew, she felt, that Martyn's peril was over. In her revulsion of feeling she sank down on the chair and burst into loud sobbing tears.

At that moment there came a knock at the room door. Mr. Aukland drew it open about an inch. Some one wanted him on business, and young Jones had come up to say so.

"I am engaged," was Mr. Aukland's short answer, delivered in so sharp, so imperative a tone, that Mr. Jones shot down the stairs again in consternation. But the interruption did more towards recalling Mrs. Ware to herself than anything else could have done.

"I did not even know that your name was Aukland," she said, wiping her pale face. "Or—yes, I suppose I did know it in the old days, but I had completely forgotten it: you were so universally called Rutt. Certainly I never once thought to connect you with Mr. Aukland of this house. I can hardly believe it now. I see the likeness, I recognise your face, and yet—it appears incredible."

"I did not stay long in Washington," he observed. "About a year and a half, I think; and then an opening was found for me in Jamaica, in this firm, which at that time—as perhaps you may know—was Sewell and Hill. I had been in it fifteen years, when Mr. Sewell died, and I then succeeded to a share in it. On the whole I have been very prosperous, Mrs. Ware."

"Oh yes," sobbed Helen. "And Mrs. Rutt? Is she alive?"

"She died six months ago," he answered, glancing involuntarily at the crane on his hat. "I was able to make her a good home in Jamaica: happier, I believe, than she had ever enjoyed before. I wrote once to Wexmoor for news of you: but did not obtain it. The answer received was, that Mr.

Martyn was dead, and his family had dispersed. The very first day of my arrival here I recognised your son; the name 'Martyn Ware' attracted my attention to him, and I traced in his features the strongest possible resemblance to yours. Yours," he significantly added, "had not faded from my recollection."

"And—you—will not refuse to save him?" she said, in a timid whisper.

"Refuse to whisperm! Him! Mrs. Ware, do you forget all I owe to you?" he rejoined, his own tones trembling with the earnestness of their emotion. "But for the sacrifice you made for me, I might be a poor working man now, instead of what I am: and my dear mother, wanting a home, might have sunk into the grave before her time. Were the whole of my savings—and I have saved something—necessary to extricate Martyn Ware, he should have them."

He spoke with quiet deliberation. Helen, wondering whether mercy so great had ever been shown to anybody before, asked a few questions.

"I can understand how it was," he said, "that he was seduced into the trouble and extravagance by young Vavasour. It came to my knowledge yesterday that Martyn had received this order for money and obtained the cash upon it—not obtained the cash in the regular dealings of the house, but in an irregular way. It awoke my suspicion instantly. I called him into this room, intending to get the truth from him, but before I had barely put a question we were interrupted, and he went down. In going out of the room he dropped a crumpled piece of paper, which I found to be a letter just received from Vavasour. It told me all. That with the remittances this letter was to have brought—and did not—he meant to replace the ninety-two pounds taken. Mrs. Ware," he continued, smiling at her, "I made it all right myself yesterday afternoon—at the bankers' and in the books here. It would not have been expedient for Mr. Hill to come home and find it out—and he is coming back to-day."

"How shall I ever thank you!" she murmured. "How can I ever repay you?"

"Nay—I have been saying that to myself this many a year—'How can I ever repay Miss Helen Martyn?' My mother has echoed it in my hearing many a time."

"You will—do you intend to allow him to come back here?" she questioned with great hesitation through her tears.

"Indeed yes. Send him up as soon as you get back. I have no fear of such a thing as this being repeated: it will serve as a lesson to him for life. And I will try and push Martyn on in the world, as your benevolence, my dear lady, was the means of pushing me. I should have come down to your house to see you ere this, but since my landing I have had so much to do, Mr. Hill being away. You will allow me to do so?"

Allow him to come to see her! Helen's tears fell

faster, and she held his hands in her grateful clasp. The great Robert Aukland, poor Bob Rutt of the former days, who had only presumed to address her as "Miss" Helen.

"I shall tell my husband now, and he will welcome and thank you, Mr. Aukland. I had not dared to tell him before; he would have been so implacable with Martyn. He has a perfect abhorrence of anything that savours of dishonesty: and if he had known—that Martyn—May Heaven bless you, Mr. Aukland, always and always!"

Mrs. Ware returned home. It happened that she took the same omnibus which had brought her. The same conductor stood on the foot-board; the self-same advertisements, pasted up inside, stared her in the face. With what a sick sensation of despair had her eyes rested on those advertisements in going! But now, in her changed feeling, it almost seemed as though she had been suddenly lifted into Paradise.

Martyn was not to be found when she got home. Nobody knew where he was. Amy had a faint recollection of having heard the front door slam about an hour before, and she supposed he must have gone out. Helen waited: waited with restless, joyous impatience for his return.

But he did not come in. Hour after hour passed away, afternoon after morning. Helen grew sick and uneasy with an undefined dread. Still he did not come in, and the day drew to its close. She stood at the window, stealthily watching, and could have counted the beating of her own heart. Suppose—in his despair—he—

A wild rush of terror overpowered her and drove away all consecutive thought. The inert suspense grew unbearable, and she threw on a bonnet and shawl and went out in the dusky night, some faint idea upon her of looking for Martyn, however hopeless the search appeared to be.

But it did not prove hopeless. She had bent her steps instinctively to the most lonely walk near their residence, one running alongside the canal: and there, as she came in sight of it, she saw Martyn looking down at the water. His shoes were dusty, as if he had spent the day in walking.

Was he about to do an ill deed?—one that could never be redeemed? Let us give him the benefit of the doubt. Did his mother fear it? Who can say? She gave a great cry as she sprang to him, and, clasping her arms about his neck, sobbed aloud.

"Don't, mother; don't! Your trouble is the worst of all. I can bear anything better than that."

"Martyn! Martyn! They are tears of joy, not of grief. I—I—was fearing I should never find you," she sobbed. "Martyn, I have seen Mr. Aukland. He is the Bob Rutt of my girlhood's days, a dear friend from henceforth. He will be your friend through life and will push you on. He paid the money into the bank yesterday and made it all right in the office. He knew you, and never meant to let it fall upon you. Oh Martyn, my darling, it is true! it is true!"

Martyn grasped hold of a post near him, as if for support : he felt sick with suspense lest it should *not* be true. But not long could he doubt the joy that shone in the wet eyes of his mother : and a yearning cry went up to heaven : to that heaven which had surely intervened to save him. "Lord, be with me from henceforth ! keep me, keep me from temptation !"

And Helen knew that her boy was her own once more. She linked her arm within his and they walked on in silence towards home, the home that would be again a happy one, as it had been before the ill-omened shadow of Vavasour fell on Martyn's path. Not a word was spoken. Helen's thoughts were buried in the past, and her face was turned upwards to the faint crimson light which yet

lingered in the western sky. Very, very present to her in that moment were the ways of God and His wonderful dealings. That little sacrifice which she had made so many, many years ago ; the poor ten-pound note she had given away from her necessities, her superfluities if you will, had brought forth *this*. Long and long had the recompense been smouldering—a recompense for which she had never looked or thought of looking—and now it had come, and come a thousand-fold.

Never had that beautiful promise, which you have all read as often perhaps as Helen Ware, been more directly exemplified : never had it come home with such force to her heart : "Cast thy bread upon the waters : for thou shalt find it after many days."

GOOD WORDS FOR CHILDREN.

BY THE EDITOR.

"When I was a child, I spake as a child, I understood as a child, I thought as a child."—1 Cor. xiii. 11.

No. VI.—SOME EXAMPLES OF FAITH FROM THE OLD TESTAMENT.

MY DEAR CHILDREN,—I have already explained to you what is meant by trusting God ; and tried to make you feel how right and how blessed it is thus to place your confidence in the truth, the wisdom, the power, the grace and love of the glorious God who made us, who preserves us, who gives us every good thing, who so loves us that He gave his Son to die for us, and who, in one word, is Our Father in heaven, to whom we belong, and with whom we hope to live for ever and ever.

All who know God trust Him ; but those who do not know God trust in themselves, in their own evil wills and their own evil ways, and try to be happy without God.

We read in the Bible of men who in every difficulty and trial trusted God ; and we see how strong, and peaceful, and safe they were when they did so, but how everything went wrong with them, how they got into confusion and misery, when they did not trust Him.

Let me give you a few examples of this faith in God.

Noah trusted God when he was warned by Him of coming danger, and was commanded to prepare the means for his own safety. The coming danger was the Flood, which was to destroy the wicked world, and the only means of escape was the Ark. Now such a thing as a flood had never occurred ; but Noah believed God, and therefore built the large ark year after year upon the dry land, and so he was saved, while those who did not believe God's word were lost. "By faith," says the apostle, "Noah being warned of God of things *not seen as yet*, moved with fear, prepared an ark to the saving of his house."

Thus let us be assured that God will save all who trust and obey Him. Let us *now* fly for refuge to Jesus Christ, the only ark of safety, as destruction may come in a moment to those who are so wicked as to disbelieve God, as if He was not in earnest and did not mean to do what He threatens.

Abraham trusted God, who promised to give the land of Canaan to his descendants, through one of whom (Jesus Christ) all the families of the earth would be blest. When God told this to Abraham he was wandering about as a stranger in that very land, yet he never doubted God's promise. He had no son at the time, yet he believed God's promise to give him one. Then came a great trial of his faith when God commanded him to offer up his dear son—his only son—as a sacrifice ! But Abraham never murmured—never objected—nor delayed a single day to obey God. And why ? because he loved and trusted God, and was glad to yield up everything to Him who was his Maker, his Preserver, his Father. He did not know *how* God would deliver him or his boy, or *how* He could keep his promise. He knew only God himself and his will, and so, like a little child, he obeyed his Heavenly Father. Isaac, too, obeyed in the same spirit of trust his earthly father when he was bound by him to the altar. Their faith was not put to shame ! You have read the beautiful history in the twenty-second chapter of Genesis : read it again. "By faith," says the apostle, "Abraham, when he was tried, offered up Isaac : and he that had received the promises offered up his only begotten son, Of whom it was said, That in Isaac shall thy seed be called : Accounting that God was able to raise him up, even from the dead ; from whence also he received him in a figure."

Now, dear children, always trust God that He will keep every promise made to those who believe and do His will. When you know what *is right*, that is, what is God's will, do it. You may *think* it at the time very hard, very difficult, and that it would be far better and happier to be selfish and disobedient. But *trust God*, and be sure that in the end you will see His way to be the happy way, because the right way. He will give you strength to do your duty, great peace in doing it, and greater peace when it is done. Make no excuses for disobedience, for there never can, by any possibility, be a good excuse for sinning.

Moses trusted God's power, and wisdom, and goodness, in circumstances which severely tested his faith. For he gave up all the riches and splendour of Egypt, choosing rather to suffer affliction with the people of God, than to enjoy the pleasures of sin for a season. And "seeing Him who is invisible," he braved all the wrath of Pharaoh, and marched to the Red Sea, not seeing how God could deliver him and the thousands of Israel; but God made a path through the waters. And Moses for forty years trusted God in the howling wilderness, when the people themselves so lost their faith that they "could not enter" into the Promised Land "because of unbelief." It was this Moses who centuries afterwards appeared with Christ in glory on the Mount of Transfiguration.

The God who guided and delivered Moses out of all his troubles will guide and deliver every boy and girl who will not be turned away from duty by *fear* of what other people may say or do, nor of difficulties which come before them; but will "go forward" in the right path, trusting in the Lord their God for help in their time of need. They who thus live now, will in the end be glorified with Christ and His faithful servants.

Job trusted God in the midst of the sorest afflictions ever endured by man. When he was in the enjoyment of every earthly blessing, possessed of immense wealth, and surrounded by a large and happy family of sons and daughters, he did not depend on these for his true happiness, but on his God. Satan, the wicked one, alleged that Job did not care for God himself, but only for the good things which God bestowed. So the Lord was pleased to take from him his earthly riches and his dear family, and to visit him with a loathsome disease; so that all was lost to him except God. And did Job then lose his trust in God, and think that God was no longer his father and friend? No! The old saint held fast his confidence in the darkness as well as in the light, in adversity as well as in prosperity, and said, "The Lord giveth and the Lord taketh away, blessed be the name of the Lord!" "Though he slay me, yet will I put my trust in him!"

And thus, dear children, it may be the will of your Father to send you sickness and poverty, to deprive you of those you love most on earth, and leave

you very lonely in the world; but the God whom Job trusted is still your God, and you must trust Him as Job did, and believe that He loves you and can never forget you, but will in his own way and in his own time provide for you and comfort you. "You have heard of the patience of Job and have seen the *end* of the Lord; that the Lord is very pitiful and of tender mercy."

David trusted God when, a young lad, he went to fight the giant Goliath. It was not from any trust in his own courage or skill that he did this, but from simple faith in the help of God. Hear his noble words: "Thou comest to me with a sword, and with a spear, and with a shield: but I come to thee in the name of the Lord of hosts, the God of the armies of Israel, whom thou hast defied. This day will the Lord deliver thee into mine hand; and I will smite thee, and take thine head from thee; and I will give thee the carcases of the host of the Philistines this day unto the fowls of the air, and to the wild beasts of the earth; that all the earth may know that there is a God in Israel. And all this assembly shall know that the Lord saveth not with sword and spear: for the battle is the Lord's, and he will give you into our hands."

When you feel, dear children, that you *ought* to do something which is difficult, perhaps to resist temptation, or to overcome a bad habit, never be cast down by the thought of your own weakness and the strength of sin. "If God is for you,"—and He *is* for you when you are for what is right,—it is enough! "Greater is he who is for you than all who are against you." "He will perfect his strength in your weakness." "My grace," he says, "is sufficient for you!"

Once more. Daniel trusted God when he was threatened with death if he prayed to God. Daniel had been carried captive to Babylon, and when young and in a strange land he had showed even then in many ways his love and obedience to the God of his fathers. But when he became the greatest man next to the king, and when upwards of eighty years of age, some envious and wicked people deceived the king and got a law passed by which Daniel should be cast into the den of lions if he prayed to his God. Yet Daniel prayed as he used to do. There was no one to stand by and defend him but his God. He had no church to go to in that idolatrous land; and few, if any, good people to pray with him. If he did what was right, there was no friend or companion to cheer him, while enemies watched him, and resolved to take away his life in a cruel way, unless he became a base idolater like themselves. Now Daniel did not say, "I will not be singular, but do as other people do;" or "I will worship God in secret, but not confess him before the world;" or "I will pretend to be an idolater, as the custom of the country is, but in my heart I will believe in God;" or "since they will put me to death, it is a good excuse for my not praying." No! He, the old man, the prime minister of the country, was no mean coward or hypocrite. He

trusted God and did what was right, though it should cost him his life to do this! And so he was cast into the den of hungry lions.

The foolish king was grieved indeed, but even he could not save him out of the hands of his lords and princes. "Then the king, when he heard these words, was sore displeased with himself, and set his heart on Daniel to deliver him; and he laboured till the going down of the sun to deliver him." And when Daniel was cast into the den, "Then the king went to his palace, and passed the night fasting: neither were instruments of music brought before him: and his sleep went from him." But the king somehow believed that God would save his servant, and so we read that he "rose very early in the morning, and went in haste unto the den of lions. And when he came to the den, he cried with a lamentable voice unto Daniel: and the king spake and said to Daniel, O Daniel, servant of the living God, is thy God, whom thou servest continually, able to deliver thee from the lions? Then said Daniel unto the king, O king, live for ever. My God hath sent his angel, and hath shut the lions' mouths, that they have not hurt me: forasmuch as before him innocency was found in me; and also before thee, O king, have I done no hurt. Then was the king exceedingly glad for him, and commanded that they should take Daniel up out of the den. So Daniel was taken up out of the den, and no manner of hurt was found upon him, because he believed in his God."

What a sin and shame it would be if you, my dear children, were afraid or ashamed to do what is right; to pray to God, for example, because none of your companions do this, or because they may ridicule you, or annoy you! Learn to trust the God whom Daniel trusted, alike in his youth and old age, and He will bless you and make you a blessing. Have a holy loving fear for God, and you will never have a cowardly fear for man. It is the good man alone who can have peace amidst lions. I think it very likely that you know all those true stories I have told you, as well as many others, in the Old Testament, of good men who trusted God. You will read them again for yourselves in the Bible, and I hope they will strengthen you to be "followers of God as dear children." But I will tell you another which, perhaps, may have escaped your notice.

NO. VII.—THE NEGRO SERVANT WHO TRUSTED GOD.

MY DEAR CHILDREN,—Once on a time a great army of the powerful and warlike Chaldeans invaded Judea and besieged Jerusalem. God let them do this, for all classes in the country had become very wicked. There were no people in the world who had received so many blessings as the Jews, and the greatest blessing of all was, that they had been long instructed in the knowledge of

the only living and true God. They ought, therefore, to have been better than all the nations of the earth—to have been an example to them in their conduct—thus making all countries see how truly prosperous, united, and happy a nation is which serves God, and in which justice, truth, mercy and love reign. But, instead of this, the nation became worse than other nations. The kings, princes, and rich men became oppressors of the poor. They made slaves of their brethren, and indulged in every passion, as if there was no God to see and judge them, and no difference between right and wrong. The poor also were as wicked in their own way. The very priests were as bad as the rest. God was forgotten, and his laws despised by all; while selfishness, cruelty, injustice, and sin of every kind filled the land. Still God was not willing that they should perish, but rather that they should turn from their wickedness and live. So He raised up holy men, Prophets, to rebuke, warn, and beseech them. Among these Prophets was Jeremiah. He possessed neither riches nor power from man; he had few or no friends on earth, but was all alone, his heart breaking on account of the sins of his country and the terrible punishments which he saw gathering like a storm in a dark thunder-cloud, ready to burst over the land and, as with a flood, to sweep the people away. He preached in vain. They did not believe what he told them in the name of the Lord, but hated and rejected him and his message of truth and peace, and were determined to have their own way, and care neither for God nor man, but for themselves only.

And so they at length put their only *true* friend, this one God-fearing man, Jeremiah, in prison, until year after year he suffered so much in body and soul, that the wonder is he did not die. But he was willing to suffer for the good of his sinful countrymen, because he loved them and loved his God, with whom he was a fellow-worker in seeking to save sinners. There were false prophets, too, who contradicted Jeremiah, and said that he lied when he prophesied to the king and the princes that God would send an army to destroy the city and take all the people as captives to a foreign land. Those who loved wickedness liked the false prophets, who flattered them and assured them that there was nothing to fear because of their sins; and, of course, they treated Jeremiah as an enemy, because he told them the truth, in order to save them from evil and its certain punishment. At last the great army of the Chaldeans entered the country like a swarm of locusts, spreading over every hill, and filling the valleys with horse and foot, war-chariots, archers and lancers without number, led by the king himself and all his famous generals. Town after town was taken, until they gathered round Jerusalem, and the watchmen on the walls could see nothing else than soldiers everywhere, round about the city and far away, as if every blade of grass had grown up into an enemy. Then, when Jeremiah the prophet, in the name of the Lord, told the men in power what

to do, and showed how alone they could escape with their lives, they hated him the more, and at last put him into the worst prison in the city. It was a sort of deep pit, like a well or a coal pit, with wet mud at the bottom, without light and hardly any air in that sultry climate. They gave him little food, as the city itself was almost famished, and they would not have cared had the prophet died of starvation. There he was, the noblest, truest, and most affectionate man in Israel, down at the bottom of that horrible pit!

What can he do now? He can pray, he can pour out his heart before Him who is everywhere present, and from whom nothing in the universe can separate a loving child. And so like a greater sufferer still, "being in agony he prayed the more earnestly." "I called upon thy name, O Lord, out of the low dungeon. Thou hast heard my voice: hide not thy ear at my breathing, at my cry. Thou drest near in the day that I called upon thee: thou saidst, fear not."

But is there no one in that city who thinks of the prophet? No one who will try to help him? No one who sees and feels the grievous wrong done to a man so unselfish and holy? Yes! there is one, and one only. Who is he? Is it the king, who should have done justice? or one of the princes, who should have been truly noble? or one of the priests, who should have been a lover of truth and a lover of God? or one of the people who has from infancy been instructed in the ways of righteousness? Shame upon the country! It is none of these. The only man who has the principle, the courage, the love, to trust God and do the right, is a stranger, an alien, a negro servant, *Ebed-melech, the Ethiopian*. So we read that "when Ebed-melech the Ethiopian, one of the eunuchs which was in the king's house, heard that they had put Jeremiah in the dungeon; the king then sitting in the gate of Benjamin; Ebed-melech went forth out of the king's house, and spake to the king, saying, My lord the king, these men have done evil in all that they have done to Jeremiah the prophet, whom they have cast into the dungeon; and he is like to die for hunger in the place where he is: for there is no more bread in the city." That negro servant was more royal than the king, more noble than the princes, more holy than the priests! The Lord, who had said to the prophet "fear not," blessed the petition of the negro. And so the king commanded Ebed-melech the Ethiopian, saying, "Take from hence thirty men with thee, and take up Jeremiah the prophet out of the dungeon, before he die. So Ebed-melech took the men with him, and went into the house of the king under the treasury, and took thence old cast clouts and old rotten rags, and let them down by cords into the dungeon to Jeremiah. And Ebed-melech the Ethiopian said unto Jeremiah, Put now these old cast clouts and rotten rags under thine armholes under the cords. And Jeremiah did so. So they drew up Jeremiah with cords, and took

him up out of the dungeon: and Jeremiah remained in the court of the prison."

I must bring my story to a close. God sends one last message to the rebellious city. He tells them all the desolation and destruction that are impending over it. There is not one word more of hope or of mercy, nor one message of peace. Yes, there is one! God in heaven, who sees and knows every man, and is acquainted with all our ways—to whom no one, however weak and despised, is lost in the crowd—sees one person in Jerusalem whom he singles out, and to whom he sends a special message of peace and protection. But that man was not the king, nor any of the princes, nor any of the priests: for them there is no favour, but misery, desolation and woe. The man He loves is the good and brave negro! And so God, through Jeremiah, sent to him, and to him only, this gracious message from his throne of justice and mercy in heaven:—"Go and speak to Ebed-melech the Ethiopian, saying, Thus saith the Lord of hosts, the God of Israel: Behold, I will bring my words upon this city for evil, and not for good; and they shall be accomplished in that day before thee. But I will deliver thee in that day, saith the Lord; and thou shalt not be given into the hand of the men of whom thou art afraid. For I will surely deliver thee, and thou shalt not fall by the sword, but thy life shall be for a prey unto thee: *because thou hast put thy trust in me, saith the Lord.*" And now, my dear children, pray to God, saying thus:—O God, our Father! help us by Thy grace to choose Thy ways and not our own; to believe Thy threats against evil doers, and to trust Thy guidance and protection when we seek to do well. Help us to trust Thee in the midst of sorrows, and to do our duty amidst temptations and difficulties, and rather die than forsake Thee, or follow the devices and desires of our own evil hearts. Help us by Thy Holy Spirit for the sake of Jesus Christ, Thy Son, who always trusted Thee, and died for our sins, to save our souls, and make us Thy children. Amen.

NO. VIII.—HOW JESUS CHRIST WAS TRUSTED.

MY DEAR CHILDREN,—To trust Jesus Christ is the same thing as to trust God, for He and the Father are one.

There was nothing which Jesus wished more, nothing which pleased Him more, than the trust or confidence of every one in Himself, for every good and every blessing.

It was unbelief, or want of trust, which made Him wonder, made Him angry, made Him weep! How often did He rebuke his disciples for want of faith? and express His delight when any one had such confidence in His good will and power as to cast themselves with every burthen upon Him, and

ask from Him whatever they needed, and whatever He could give.

Without this trust in Him they could not possibly receive any good from Him. Trust was like opening a door to receive Him as a friend into the heart, or opening the eye to receive Him as light into the soul. But unbelief was like shutting the door and the eye, and keeping out the friend and the light. Let me remind you, then, dear children, of one or two examples, out of many recorded in the Gospels, of trust in Jesus.

You recollect, I dare say, how mothers once brought their children to Jesus Christ that He might bless them. Well, some of the people about Him, who did not know or understand how good He was, thought that He was either too great a person, or had too much to do in preaching to men and women, and in working miracles, to care about children, and so they told those mothers not to trouble Him. But when He heard them speaking in this way, He was "sore displeased," and commanded the children to be brought to Him, and He took them into His arms, and blessed them! Thus you see how those mothers trusted their children into the hands of Christ, and trusted His love to bless them. And you see, too, how the children themselves were not afraid of Jesus, but went to Him, and looked up to His face, and felt His arms about them, and heard Him speak, and were as safe and peaceful as when in their mother's bosom! And had you been among those children, surely you would not have run away from the Saviour? or have refused to go to Him and receive His blessing? And I am sure you understand how you could have spoken to Him if you were alone with Him, and told Him all your little griefs and cares, and asked Him to bless not only yourselves but your parents, your brothers, sisters, and companions; and asked Him, too, to pardon your sins, and give you a new heart to love and serve Him. Now this, if you did it, would be trusting Christ, and He would listen to all you had to say, and the more you trusted Him, and loved Him, the more pleased He would be, and the more He would love you. But I am sure also that you would not dare to have asked Jesus to allow you to lie, or to be greedy, selfish, idle, or unkind! You could never have looked in His face without feeling that he never would be your friend if you wished to be bad, but only if you wished to be good. Now "Jesus Christ is the same yesterday, to-day, and for ever." He commands the young to come to Him now as well as then, and to trust Him *now* for all good. Dear children, go to Him, and speak to Him! He, who was himself a child, will hear you.

I will tell you another story of faith. When Jesus came down from the Mount on which He was transfigured, and where Moses and Elijah appeared with Him in glory, a crowd of people met Him. There was evidently something or other about which they were arguing and disputing; and when Jesus inquired what it was, He was told that a man had brought there a boy of his, who was very ill, in

order to be healed; that he had asked the disciples of Christ to heal him, but they could not; and that this had given rise to a dispute with the Pharisees. Jesus told them to bring the boy to Him. They did so; and He asked the father how long he had been unwell? The father said, since he was a child; and then he gave a very sad account of the mysterious disease which had seized the boy, at one time casting him into the fire and at another into the water; so that now his strength was quite worn out, and he was pining away. And then the poor father said to Jesus, "If Thou canst do anything for us, help us!" Don't you think you see the man's anxious looks as he pleads for the poor pale-faced, weak, suffering boy beside him! If that boy was your own brother, and that man your own father, would you not feel for them both as you heard the prayer to Jesus, "If Thou canst do anything for us, help us?"

But why did the father say to Jesus "*if* thou canst?" Was it not certain that He could? Yes; but that was just what the man did not believe. In other words, he had not full trust or confidence in Christ. His thoughts were, "*maybe* He can help us, but *maybe* not. If, therefore, my boy is not healed, it is because Jesus cannot or will not heal him!" Ah! you are quite wrong, poor man! You don't know Jesus, or you never would think so. Depend upon it, if He does not help you it must be your own fault, and not his. It cannot be because He is unable or unwilling to give, but because you have no faith in Him, and will not trust Him and receive the blessing. In your own heart of unbelief, not in Christ's heart of love, is your difficulty and hindrance! And this is the lesson which Jesus taught the man; for he said to him, "If thou canst believe! all things are possible to him who believeth!" "*If thou canst believe!*" The afflicted but doubting father had said to Jesus, "*If thou canst help!*" But Jesus said to him, "*If thou canst believe!*" That was a very different thing. And so, my dear children, remember that what separates us from good is not in Jesus but in ourselves. When we are tempted to say, "If thou canst help," let us hear Him saying, "I can help thee, but canst thou trust me?"

And now came a great struggle in the father's breast. He could not bring himself quite to trust Jesus to heal his boy; far less could he refuse all trust and go back with the sufferer to his home. And thus trust was drawing him to Jesus, while distrust was drawing him away. At last he burst into tears, and said, "Lord, I believe!"—but no sooner did he utter the words than he prayed, "help my unbelief!"—It was enough. Jesus heard his prayer, and healed his boy; and as they both went home that night together, where perhaps mother and sisters and brothers were anxiously waiting for them, oh! how happy was the journey and how happy the meeting! But what would you think of them, if they forgot Jesus, and if they did not love Him, or trust Him any more, not even for

SLEEP.

the eternal life of their souls which He had come into the world to obtain for them as sinners by His death, and which he would give more willingly than bodily health, because it was infinitely better!

Let this story, my dear children, strengthen your faith in Jesus, as able and willing to save *you* from

all evil, and say to Him, "Lord Jesus, I trust Thee as my only Saviour! Forgive me all my trespasses, and enable me to do Thy will. I know Thou canst do all things for me. I believe—but help my unbelief, and daily strengthen my faith in Thee, my love to Thee, and my will to serve Thee! Amen."

SLEEP.

I CAME to waken thee, but Sleep
Hath breathed about thee such a calm,—
Hath wrapt thee up in spells so deep
And soft,—I dare not break the charm;

Thy breathings do not stir the folds
That lie unmoved around thee; Rest
Hath rocked thee gently—now she holds
Thy spirit lulled upon her breast;

An imaged Stillness, by Repose
Fast locked in an enduring clasp:
A marble Silence, with the rose
Just dropping from her languid grasp:

Yet never o'er the sculptured lid
Did such a blissful slumber creep;
Its shade hath ne'er such sweetness hid—
The statue smiles not in its sleep!

And dost *Thou* smile? I know not! Night
To one serene abiding grace,
Hath wrought the quick and changeful light
That flitted o'er thy waking face:

It is not smiling, it is Peace—
All lovely things are thine at will;
Thy soul hath won a sweet release
From Earth, yet kept its gladness still!

For Sleep, a partial nurse, though kind
To all her children, yet hath prest
Some to her heart more close—we find
She ever loves the youngest best;

Because they vex her not with aches
And fever pangs to hush to rest;
They need no soothing! She but takes
Them in her arms, and they are blest!

The double portion there is given;
She binds two worlds within her chain;
And now by golden light of Heaven
Thou livest o'er the day again:

My touch must bid those bright links start
And fly asunder; yet for thee
I may not mourn—not far apart
Thy Dream and thy Reality!

Soon shall I watch within thine Eyes
The sweet light startle into morn,
And see upon thy cheek arise
The flushing of a rosy dawn:

The sunshine vainly round thee streams,
And I must rouse thee with a kiss:—
Oh! may Life never break thy dreams
With harsher summoning than this!

BITS OF GARDEN.

BY MISS MALING, Author of "Indoor Plants," &c.

EVERY ONE who wishes it can always grow some flowers. And how many thousand people would gladly prove this true! I have seen in a little garden with just a few knots of crocuses, how men and women and children have watched the outspringing flowers. It was hardly for their own beauty. It was for the things they talked of, for the fond old times they brought back, because they were dear home flowers. How many a room would grow bright with but a pot of crocuses! Indeed I am not joking, for one bright thing to look at cheers one so.

What pleasure such things have been to me, how many dull hours they have brightened, how many other people have caught the infection from me, and

with how much wonder do they find out the ease of gardening!

Now let me first speak of three of my easiest practices—a box of window plants, a hanging basket of flowers, and one of the little rustic and charming flower balconies.

For the box of window plants: a great thing is to have a box. It keeps the plants in a group, and enables their pots to be sheltered. This adds very much to the health of the plants, which in such cases grow more as if sunk in beds.

You can thus, too, use smaller flower pots; and the smaller the pot is, generally the better the flowers will be.

The spaces between the pots should be filled up

with moss or sand, and five or seven plants will mostly fill a window. Two heliotropes, two ivy geraniums, and perhaps three dwarf scarlet geraniums, are as popular as most things for growing outside a window. Stocks and mignonette also go on for half the summer.

Blue lobelias and red China roses are perfectly charming, too, and so are the pretty quick-growing fuchsias. The Duchess of Lancaster and the Princess of Prussia, for instance, are really beautiful with their white and rosy blossoms.

The Maiden's Blush rose, too, does very well, and so do the gay geraniums. These latter must be much in the open air, and in keeping through the winter must be guarded from darkness or damp as well as from frost.

The plants that I have here mentioned can be bought for a few pence each. Or, if *seeds* are bought, far cheaper supplies can be had. Candy-tufts, for instance, are very gay and pretty; mignonette is deliciously sweet, and pots of sweet peas are most popular. Musk plants and creeping jennies are really amazing favourites, and—shall I tell a secret?—there is a wonderful flower, convolvulus cantabricus stellatus rubra, or some such marvellous Latin, the seeds of which cost a shilling, but is the little hedge bindweed, the pink little starry flower that laughs up from sandy field paths.

Wild harebells, grown carefully in scraps of their own native peat, mixed largely with sand of course; little heath plants, wild geraniums, wood sorrel; these flowers are exquisite when they are grown indoors.

The many campanulas, too, are beautiful for such purposes; the bright blue garganica, and the gay carpatica, always. The little ivy snapdragon that hangs on old walls is precious; and where shall we find anything to match our wild ferns for baskets?

Begonias are not half known. They are the most easily grown of all plants, requiring merely striking from a stalk or a *leaf* placed in sand (the edge of the leaf itself very often growing), or being grown from tubers, which perhaps is the readiest method. These plants require much water, and as long as they have this, they bear a great deal of dryness, more than most plants can stand, in the air, the roots supplying quickly the leaves' evaporation.—Rex is a great favourite, Leopoldi is another.

It should be a rule in watering to give the water lukewarm; and if leaves of plants are washed often, it will improve their health amazingly.

The soil may be frequently a little worked up in the pot, keeping the surface fresh-looking, and every now and then shaking off the old and replacing it with new soil.

For baskets: they may be made of everything. Shallow wicker things have often a good effect, wirework also does well, and there are very pretty ones of imitation pinewood made in the Staffordshire ware. Anything brown does, but of a shape

small pots can fit into. I have had little ferns growing in a mere wire sieve lined with moss, upon the top of which rested a handful of "cocoa refuse," and in which a Maiden Hair grew. The little sieve was simply soaked in water every day or two.

Ferns, lobelias, the little pink wild bindweed, the wild red geraniums, heather, and harebells, answer most charmingly in these baskets, and a great many people doubtless will find room for a musk pot, keeping it well watered, and very near the light always.

For the little balcony: a mere rough deep box, if one likes, lined deeply with charcoal and moss, fitted up with such plants as may make a bed of green—a box four feet by two, looks like a handsome garden! The effect of the spreading leaves and creepers is beautiful. Clematis, sweet peas, roses and mignonette, stocks and geraniums, an arum and a fuchsia do grow fresh and lovely, and, though one or two no doubt may go out of blossom, what does that matter to us while the others gem green with flowers?

The *sole* thing here is the watering—a fair deluging night and morning—a fresh summer shower falling and leaving the plants all glittering.

This is indeed *par excellence* the plan for all town dwellers. I had it once myself when no other garden was possible—just strong wooden supports driven in, and a rough deal box nailed upon them. My box was about a foot deep, and about eighteen inches wide, and the whole affair was set off and filled one morning easily.

Of late years it has seemed as if the love of green things to tend was growing. Few are the town streets now that do not display some flowers. Few are the bits of garden in which they do not smile. But there are still, we fancy, of the "things that more might be made," the lovely and bright little patches that even those windows might look on.

There is not much to be said about it—but still a few useful hints there are. Let us take the most prominent—those that are most essential.

Perhaps the great rule of all should be to know, at first starting, what it is that you wish to do.

One learns by sad experience the *mess* and the waste of changing plans.

Now let us know, from the outset, whether we want to have flowery walls and borders with flowers round them; whether grass or gravel is to be our groundwork; what style of *show* too we aim at, for some would have gardens always full, and others are well contented if now and then they are brilliant. We will suppose that you have a small scrap of ground, perhaps fronting a house in a town. It is extremely probable that it contains *no soil*, only a heap of rubbish rammed down into a hard crust. Otherwise you find greasy soil, oozy, and black, and sticky, utterly unwholesome, full of decay, and sodden.

A thorough airing—burning if that be practicable—and a liberal dressing with lime, would be the

most likely means of making this black soil fertile. It does not want manure—much more, it requires sand.

But I am not myself a great friend to attacking the soil of a garden. If you have the place paved or gravelled, of course it does not matter; and if you have it turfed, a little sand worked in for the upper surface will most likely lighten the mass sufficiently to enable grass seeds to grow well.

My work is now with the flower-beds. Most people who have gardens know the nuisance of changing the soil. This has to be done pretty often; and in towns, the exhausting influences make it more than ever necessary.

And so what puzzles me is, why people don't make *distinct* beds—beds that they can fill and empty just like so many boxes. I know that, in what I have seen of gardening on a small scale, there is quite a wonderful difference made by this simple system. People forget too much, that on a very porous subsoil, water drains away with very great rapidity, and often carries with it the particles of soil which ought to have fed our plants. Besides this, the moisture is most often deep *below* the plant. This attracts long roots down; whereas the delicate surface roots are what mostly supply the flowers, and low and wide-mouthed flower-pots are thus of all shapes the healthiest. When our flower beds are like boxes, we can give more or less water at will—having a plug for drainage—and in this way we encourage surface roots and obtain a great show of flowers. Thus it is that hollow trees, rustic stands lined with turf or moss, common rough wooden boxes adorned with gnarled wood nailed on, pretty baskets made of pine cones, heaps too of stone and rock-work,—it is thus that plants in these thrive so.

I have mentioned the pretty plan by which a large wide box *makes* a garden. Under another plan a mere paved bed is formed, of the size and shape we require, and in the tiniest garden, a mere strip of a few feet wide, this really looks pretty. Here the bed is dug out just as a trench would be; the bottom should be rammed hardish if you do not want the water to drain off quickly, which would not be at all desirable in many dry localities. A layer of bricks and clinkers is put in, however, for drainage; and then a thick layer of *moss*, or of the cocoa refuse, appears to me invaluable for supplying the roots with moisture, which it retains in some degree.

Over this comes the soil—no matter if in a mere garden bed, or in a wooden box, or in a bricked or tiled shape, or in a rustic basket. The principle is the same—draining underneath, and then a thick store of moisture. The soil may be from a common, or from a meadow broken up, or it may be made most easily of cocoa fibre refuse, mixed with sharp silver-sand from the bed of some stream or river. It can be renewed now and then without much trouble.

Some people are fond of banks of turf or rock-

work: and these do look pretty when filled with glowing flowers. I have seen a *lovely* garden surrounded with a low bank of turf, perhaps two feet high. At the top of this bank was a wide mass of flowers backed by a rosy wall. In the centre another bed was banked with turf in the same way. And the flowers were scarlet geraniums, blue heliotropes, and petunias. I think a more bright little garden than that I have seldom seen.

But we must have flowers at all seasons. In these little gardens we must always have something going on. Even in the winter we must have our tiny evergreens, whose gay bright glossy leaves will look as cheerful then as flowers, and amidst which too some few hardy flowers will often brave the frosts and the cold of Christmas, especially if we shelter them from sharp frost and heavy rain.

Little aucubas, tiny firs, hardy rhododendrons, berberis, and many other greens, will be found to grow well in towns even.

Besides, it is not so very hard to grow plants in towns. Witness the lovely flowers seen in Spitalfields weavers' rooms; and again in Glasgow, amidst the busy looms. Where some flowers thrive so well, surely many more would grow too. The auricula, which is frequent there, is indeed no *unparticular* flower. What the plants really want is to have fresh soil often enough—at least once a year: to have as much light as possible: and to have air *by night*, when it is clearer by far than by day. Then, with good frequent washings of the soot-soiled foliage, no one need be afraid but that these town plants will grow brightly. If we leave them to grow of themselves, as they might do in the country, they may not indeed do much good, but surely for "bits of gardens" the delight of delights is tending them.

Perhaps in these sort of gardens to have mixed flowers is most pleasant, except about twice or thrice a year, when crocuses and spring bulbs, or heliotropes and geraniums, or even gay chrysanthemums, make by themselves a nosegay.

The mixed beds take in everything. The red stocks and the mignonette—the carnations and Indian pinks, which thrive so well in towns—the roses, more hard to grow—the snapdragon and the Iris; and then the bright-blue larkspur, and the old-fashioned daisies, with the scented pansies, and the many primroses and heaths and old common flowers.

On the walls we have ivy, amidst which the red Pyrus may glow—Pyracantha berries—Jasmin nudiflorum, with its winter-borne primrose flowers, that brave the frost and cold, and make our bare walls gay. In summer, white jasmine flowers and Ayrshire roses grow wildly; also the honeysuckle and the clematis, and passion flowers and vines, grow charmingly with Westarias. Syringing their foliage, and watering well with soapsuds, are the two best recipes I know of for making these climbers grow fast.

But the border, when we have one, may be enriched by all spare flowers, when once or twice a year we make our beds all one thing. In spring, however, the evergreens may well share the place of the flowers—gathered into the centre, while the spring flowers cluster round them. How lovely it is, indeed, in early spring to see the little sunny garden where masses of flowers are gleaming! The purple crocus amethysts are set in the soft green turf, golden rims run round the beds, and dazzling white flowers sparkle, where snowdrops bend low

their heads and transparent pearl cups open. Indeed, there is nothing like crocuses for making up a spring set of jewels: the squares of white and amethyst that are set in the golden bands—the ruby gleams of tulips—the turquoise blue of scillas—the bright sunshiny flowers that open each fair day anew—the hardy merry flowers that wrap themselves up so warmly, and then open out so widely, laughing out gaily to us and throwing their brightness round them—till one by one all the garden answers their early call.

CONCERNING THE RIGHT TACK;

WITH SOME THOUGHTS ON THE WRONG TACK.

NOR many days since, I was walking along a certain street, in a certain city: and there I beheld two little boys of the better sort fighting furiously. There are people, claiming to be what is vulgarly called Muscular Christians, who think that a certain amount of fighting among boys is to be very much encouraged, as a thing tending to make the little fellows manly and courageous. For myself, I believe that God's law is wise as well as right: and I do not believe that angry passion (which God's law condemns), or that vindictive efforts to do mischief to a fellow-creature (which God's law also condemns), are things which deserve to be in any way encouraged; or are things likely to develop in either man or boy the kind of character which wise and good people would wish to see. Accordingly I interposed in the fight, and sought to make peace between the little men: supporting my endeavours by some general statement to the effect that good boys ought not to be fighting in that way. They stopped at once: no doubt both had had enough of that kind of thing. For one had a bloody nose; and the other had a rudimentary black eye, which next morning would be manifest. But one of them defended himself against the charge of having done anything wrong, by saying, with the energy of one who was quite assured that he had the principles of eternal justice on his side, "I have a right to hit him, because he hit me first!"

Of course, these were suggestive words. And I could not but think to myself, walking away from the little fellows after having composed their strife, Now *there* is the principle upon which this world goes on. There is not a deeper-rooted tendency in human nature, than that which is exhibited in that saying of that fine little boy. For he *was* a fine little boy; and so was the other. The great principle on which most human beings go, in all the relations and all the doings of life, is just that which is compendiously expressed in the words, "I have the right to hit you, if you hit me first." You may trace the manifestations of that great principle in all possible walks of life, and among all sorts and conditions of men. One man or woman

says something unkind of another: the other feels quite entitled to retaliate by saying something unkind of the first. And this tendency appears early. I once heard a little boy of four years old say, with some indignation of manner: "Miss Smith said I was a troublesome monkey: if she ever says *that* again, I'll say that she is an ugly old maid!" One man says, in print, something depreciatory of another; finds fault with something the other man has said, or written, or done. Then the other man retorts in kind: pays off the first man by publishing something depreciatory of *him*. A great many of the political essays which we read in the newspapers; and a great many of the reviews of books we meet; are manifestly dictated and inspired by the purpose to revenge some personal offence; to clear off scores by hitting the man who has hit you. A sharp, clever person reads the book written by an enemy, with the determination to pick holes in it: not that the book is bad, or that he thinks it bad: but its author has given him some offence, and *that* is to be retaliated. You remember, of course, that very clever and very bitter review of Mr. Croker's edition of Boswell's *Life of Johnson*, which is contained in Lord Macaulay's selection of essays from the *Edinburgh Review*. Was there any mortal who supposed that when Macaulay's own *History of England* appeared, Mr. Croker would review it otherwise than with a determination to find faults in it? Was there any mortal surprised to find that Mr. Croker, having been hit by Macaulay, endeavoured to hit Macaulay again? And if Macaulay's *History* had been absolutely immaculate, had been a thousand times better than it is, do you suppose *that* would appreciably have affected the tone of Mr. Croker's review of it? I am far from saying that Mr. Croker deliberately made up his mind to do injustice to Lord Macaulay. It is likely enough he thought Macaulay richly deserved all the ill he said of him. A great law of mind governs even human beings who never came to a formal resolution of obeying it: as a stream never pauses to consider whether, at a certain point, it shall run downhill or up. When Sir Bulwer Lytton, in his poem of *The New Timon*,

alluded to Mr. Tennyson in disparaging terms as *Miss Alfred*, no one was surprised to read, in a few days, that terribly trenchant copy of verses in which Mr. Tennyson called Sir Bulwer a Bandbox, and showed that the true Timon was quite a different man from the Bandbox with his mane in curl-papers. And if you happen, my reader, to be acquainted with three or four men who have opportunity to carry on their quarrels in print, or by speeches in deliberative assemblies; and if you refuse to take part in the quarrels which divide them, and keep resolutely on friendly terms with all: you will be struck by the fact that the system of mutual hitting and retaliation, carried on for a while, quite incapacitates these men for doing each other anything like justice: each will occasionally caution you against his adversary as a very wicked and horrible person: while you, knowing both, are well aware that each is in the main an able and good-hearted human being, not without some salient faults, of course: and that the image of each which is present to the mind of the other is a frightful caricature: is about as like the being represented as the most awful photograph ever taken by an ingenious youthful amateur is like you, my good-looking friend. I have named deliberative assemblies. Everybody knows in how striking a fashion you will find the great principle of retaliation exhibited in such: and nowhere, I lament to say, more decidedly than in presbyteries, synods, and general assemblies, where you might naturally expect better things. I have heard a revered friend say, that only the imperative sense of duty would ever lead him to such places: and that the effect of their entire tone upon his moral and spiritual nature was the very reverse of healthful. One man, in a speech, says something sharp of another: of course, when the first man sits down, the second gets up, and says something unkind of his brother. And you will sometimes find men, with a calculating rancour; and with what Mr. Croker, speaking of Earl Russell, called "a spiteful slyness;" wait their opportunity, that they may deal the return blow at the time and place where it will be most keenly felt. Now all this, which is bad in anybody, is more evidently bad in men who on the previous Sunday were, not improbably, preaching on the duty of forgiving injuries. All clergymen have frequent occasion to repeat certain words which run to the effect, "And forgive us our trespasses, as we forgive them that trespass against us." Yet you may find a clergyman, here and there, whose reputation is high as a very hard hitter; and as one who never suffers any breath of assault to pass without keenly retaliating. If you touch such a man, however distantly: if, in the midst of a general panegyric, you venture to hint that anything he has done is wrong: he will flare up, and you will have a savage reply. You know the consequence of touching *him*, just as you know the consequence of giving a kick to a ferocious bull-dog. Now, is that a fine thing? Is it anything to boast of? I have heard a middle-aged man (not

a clergyman) state in an ostentatious manner, that he never forgot an offence: that whoever touched him would some day (as schoolboys say) *catch it*. All this struck me as tremendously small. In the case of most people who talk in that way, it is not true. They are not nearly so bad as they would like you to think them. They don't cherish resentments in that vindictive way. But if it were true, it would be nothing to be proud of. I have heard a man boast that he had never thanked anybody for anything all his life. I thought him very silly. He expected me to think him very great. I well remember how, in a certain senate, after two older members, each a wise and good man when you got him in his right mind, had spent some time in mutual recrimination, a younger member took occasion to point out that all this was very far from being right or pleasing. To which one of the good men replied, in a ferocious voice, and with a very red face, as if *that* answer settled the matter, "*But who began it?*" No doubt, the other *had* begun it: and that good man took refuge in the angry school-boy's principle, "I have a right to hit him, because he hit me!"

I have been speaking, you see, of those little offences, and those little retaliations, which we have occasion to observe daily, in the comparative trimness and restraint of modern life: and in a state of society where a certain Christian tone of feeling, and the strong hand of the law, limit the offences which can be commonly given, and the vengeance which can be commonly taken. My good friend A, who has been several times attacked in print by B, would probably kick B, if various social restraints did not prevent him. But, however open the way might be, I really don't believe that A would cut B's throat, or burn his house and children and other possessions. No: I don't think he would. Still, there is nothing I less like to do, than to talk in a dogmatic and confident fashion. If Mr. C applies to the university of D for the honorary degree of Doctor of Music, and is refused that distinction, mainly (as C believes) through the opposition of Professor E; although C may retort upon E by a malicious article in a newspaper, containing several gross falsehoods, I really believe, and I may say I hope, and even surmise, that C, even if he had the chance, would not exactly poison E with strychnine. And I may say that I firmly believe, from the little I have seen of C's writings (by which alone I know him), that nothing would induce C to poison E, if C were entirely assured that if he poisoned E, he (C) would infallibly be detected and hanged. But we are cautious now: and, through various circumstances, our claws have been cut short. It was different long ago. Of course we all know how, in the old days, insult or injury was often wiped out in blood: how it was a step in advance, even to establish the stern principle of "an eye for an eye, and a tooth for a tooth: hand for hand, foot for foot, burning for burning, wound for wound, stripe for stripe." For *that* principle made sure that the

retaliation should, at least, not exceed the first offence: while formerly, and even afterwards where that principle was not recognised, very fanciful offences, and very small injuries, sometimes resulted in the quenching of many lives: in the carrying fire and sword over great tracts of country: and in the perpetuating of bloody feuds between whole tribes for age after age. You know that there have been countries and times in which Revenge was organised into a scientific art; in which the terrible *vendetta*, proclaimed between families, was maintained through successive centuries till one or the other was utterly extinguished: and a regularly kept record preserved the story how this and the other member of the proscribed race had been ruined, or imprisoned in a hopeless dungeon, or by false testimony brought within the grasp of cruel laws, or directly murdered outright, by some one of the race to which was committed the task of vengeance. You know how the dying father has, with his latest breath, charged his son to devote himself to the destruction of the clan that lived beyond the hill or across the river, because of some old offence whose history was almost forgot: you know how the Campbell and the Macgregor, the Maxwell and the Johnstone, the Chattan and the Quhele—in Scotland—were hereditary foes; and how, in many other instances, the very infant was born into his ancestors' quarrel. You have heard how a dying man, told by the minister of religion that now he must forgive every enemy as he himself hoped to be forgiven, has said to his surviving child, "Well, I must forgive such a one; but my curse be upon you if *you* do!" I am not going to give you a historical view, or anything like a historical view, of a miserable subject: but every reader knows well that there is not a blacker nor more deplorable page in the history of human-kind, than that which tells us how faithfully, how unsparingly, how bloodily, the great principle of returning evil for evil has been carried out by human beings: the great rule, not of doing to others as you would that they should do to you, but of doing to others as they have done to you, or perhaps as you think they would do to you if they had the chance: in short, the great fundamental principle, of universal application, set out in the words of my little friend with the inchoate black eye, "I have a right to hit him, because he hit me first!"

Now, all this kind of thing is what I mean by THE WRONG TACK.

My friendly reader, there is another way of meeting injury and unkindness: and a better way. The natural thing, unquestionably, is, to return evil for evil. The Christian thing, and the better way, is to "overcome evil with good." There was a certain Great Teacher, who was infinitely more than a Great Teacher, who taught all who should be His followers till the end of time, that the right thing would always be to meet unkindness with kindness: to forgive men their trespasses, as we hope our Heavenly Father will forgive ours: to love

our enemies, bless them that curse us, do good to them that hate us, and pray for them which despitefully use us and persecute us,—if such people be. And an eminent Philosopher, whom some people would probably appreciate more highly if he had not been also an inspired Apostle, spoke not unworthily of his Divine Master when he said, "Recompense to no man evil for evil: dearly beloved, avenge not yourselves: If thine enemy hunger, feed him; if he thirst, give him drink. Be not overcome of evil, but overcome evil with good."

Now, all this kind of thing is what I mean by THE RIGHT TACK.

There is no need at all to try formally to define what is intended by the Right Tack. Every one knows all about it: and its meaning will become plainer as we go on. Of course, the general idea is, that we should try to meet unkindness with kindness: unfairness with fairness: a bad word with a good one. The general idea is this: Such a neighbour or acquaintance has spoken of you unhand-somely: has treated you unjustly. Well, you determine that *you* will not go and make yourself as bad as he is; and carry on the quarrel, and increase the bad feeling that already exists; by trying to retort in kind: by saying a bad word about *him*, or by doing *him* an unfriendly turn. No: you resolve to go upon another tack entirely. You will treat the person with scrupulous fairness. You try to think kindly of him, and to discover some excuse for his conduct towards you: and if an opportunity occurs of doing him a kind turn, you do it, frankly and heartily. Let me say, that if you try, in a fair spirit, and in a kind spirit, to discover some excuse for the bad way in which that person has treated you, or spoken of you, you will seldom have much difficulty in doing so. You will easily think of some little provocation you gave him, very likely without in the least intending it; you will easily see that your neighbour was speaking or acting under some misconception or mistake: you will easily enough think of many little things in his condition,—painful, mortifying, anxious things,—which may well be taken as some excuse for worse words and doings than ever proceeded from him concerning you. Ah, my brother, most people in these days, if you did but know all their condition, all about their families and their circumstances, have so many causes of disquiet, and anxiety and irritation, to fever the weary heart, and to shake the shaken nerves, that a wise and good man will never make them offenders for a hasty word; or even for an uncharitable suspicion or an unkind deed, very likely hardly said or done till it was bitterly repented. My friend Smith, who is one of the best of men, was one day startled, attending a meeting of a certain senatorial body, to hear Mr. Jones get up and make a speech in the nature of a most vicious attack upon Smith. Smith listened attentively to a few paragraphs: and then, turning to the man next to him, put the following question: "I say, Brown, is not that poor fellow's stomach often very much out

of order?" "He suffers from it horribly," was the true reply. "Ah that's it, poor fellow," said Smith: "I see what it is that is exacerbating his temper, and making him talk in that way." And when Jones sat down, Smith got up, with a kindly face: I don't mean with a provokingly benevolent and forgiving look: and in a simple, earnest way, justified the conduct which had been attacked, in a manner which conveyed that he was really anxious that Jones should think well of him: all this without the slightest complaint of Jones's bitterness, or the least reference to it. Smith had only done Jones justice in all this. He had done no more than allow for something which ought to be allowed for. And Jones was fairly beaten. After the meeting, he went to Smith and asked his pardon: saying that he really had been feeling so ill that he did not know very well what he was saying. Smith shook hands with poor Jones in a way that warmed Jones's heart: and they were better friends than ever from that day forward. But in the lot of many a man, there are worse things than little physical uneasinesses, for which a wise man will always allow in estimating an offence given. Yes: there are people with so much to embitter them: poor fellows so sadly disappointed: clever, sensitive men so terribly misplaced, so grievously tried: with their keenly-sensitive nature so daily rasped, so horribly blistered, by coarse, uncongenial natures and by unhappy circumstances: that I am not afraid to say that a truly good man, if such a poor fellow pitched into him ever so bitterly, or did anything short of hitting him over the head with a more than commonly thick stick, would do no more than beg the poor fellow's pardon.

But mind, too, my friend, that all this kindly way of judging your fellow-sinners and fellow-sufferers,—all this returning of good for evil,—must be a real thing, and not a pretence. It must not be a hypocritical varnishing over of a deep, angry, and bitter feeling within us. It must not be something done with the purpose of putting our neighbour still further and still more conspicuously in the wrong. And far less must it consist in mere words with no real meaning. Neither must it consist, as it sometimes in fact does, in saying of an offending neighbour, "I bear him no malice: I forgive him heartily: I make no evil return for his infamous conduct towards me:" when in truth, in the very words of forgiveness, you have said of your offending neighbour just the very worst you could say. You may remember certain lines which appeared in a London newspaper several years since, which purported to be a free translation into rhyme of a speech made in the House of Peers by an eminent bishop. In that speech the blameless prelate spoke of a certain order of men whose tastes were very offensive to him. He said they

"Were the vilest race
That ever in earth or hell had place:
He would not prejudice them—no, not he,
For his soul o'erflowed with charity.

Incarcate fiends, he would not condemn;
No, God forbid he should slander them:
Foul swine, their lordships must confess
He used them with Christian gentleness.
He hated all show of persecution,—
But why weren't they sent to execution?"

I have no doubt whatever that these lines (which form part of a considerable poem) are an extreme exaggeration of what the bishop did actually say: yet I have just as little doubt that in his speech the bishop did exhibit something of that tone. For I have known human beings not a few, who diligently endeavoured to combine the forgiving of a man with the pitching into him just as hard as they conveniently could. Now, that will not do. You must make your choice. You cannot at the same time have the satisfaction of wreaking your vengeance upon one who has injured you, and likewise the magnanimous pleasure of thinking that you have christianly forgiven him. Your returning of good for evil must be a real thing. It must be done heartily, and without reservation in your own mind: or it is nothing at all. Uriah Heep, in Mr. Dickens's beautiful story, forgave David Copperfield for striking him a blow. But Uriah Heep never did anything more vicious, more thoroughly malignant, than that hypocritical act. But it was vicious and malignant, just because it was hypocritical. In matters like this, sincerity is the touchstone.

I suppose most readers will agree with me when I say, that I know no Christian duty which is so grievously neglected by people professing to be Christians. There is no mistake whatever as to what is the gospel way of meeting an unkindness, or an unfriendly act: would to God that professing Christians had more faith in its efficiency! Would to God that we could all heartily believe, and act upon the belief, that our blessed Saviour knew which is the right and happy way of meeting a bad turn when it may be done to us, however naturally our own bad hearts may suggest a very different way! But I fear that our experience of life has convinced most of us, that this duty of returning good for evil is one that is very commonly and very thoroughly shelved. A great many people set it aside, as something all very good and proper: very fit for the Bible to recommend, setting up (as the Bible of course ought to do) a perfect ideal: but as something that *will not work*. We have all a little of that feeling latent in us. And here and there you may find a human being, perhaps a person of an exceedingly loud and ostentatious religious profession, who is so touchy, so ready to take offence, and then so vindictive and unsparing in following up the man that gave it, and in retaliating by word and deed,—by abusive speeches, and malicious writings, and ill-set demeanour generally,—that it is extremely plain, that though that man might sympathetically shake his head if he were told to "overcome evil with good," and accept that as a noble precept, still his real motto

ought rather to be that simple and compendious rule of life, "I will hit you, if you hit me!"

I am going to point out certain reasons which make me call the rule of meeting evil with good *the Right Tack*; and the rule of meeting evil with evil *the Wrong Tack*. For one thing, the Right Tack is the effectual way. What the second thing is, I don't choose to tell you till you arrive at it in the regular course of diligently reading these pages. Let there be no skipping. So, for one thing at a time, the Right Tack is the effectual thing.

Of course, the natural impulse is, to return a blow, and to resent an injury or insult. That is the first thing that we are ready to do. We do that almost instinctively: certainly with little previous reflection. And a brute does *that*, just as naturally as a man. It is nothing to boast of, that you stand on the same level as a vicious horse, or a savage bull-dog, or an angry hornet. But, then, *that* does not overcome the evil. No: it perpetuates and increases it. It provokes a rejoinder in kind; *that* provokes another: and thus the mischief grows, till from a small offence at the beginning, vast and comprehensive sin and misery have arisen. But go on the other tack: and you will soon see, from the little child at play, up to the worn man by his long experience of this world, how the soft answer turns away wrath, and the kind and good deed beats the evil! There is a beautiful little tract, called *The Man that killed his Neighbours*: which sets forth how a good man, coming to a cantankerous district, by pure force of persevering and hearty kindness, fairly killed various unfriendly neighbours, who met him with many unfriendly acts. He killed the enemy, that is: he did not kill the individual man: but the enemy was altogether annihilated: and the individual man continued to exist as a fast friend. There is something left in average human nature even yet, which makes it very hard indeed to go on doing ill to a man who goes on showing kindness to you. You may get that tract for twopence: go and pay your twopence, and (after finishing this essay) read that tract. No doubt, there is so much that is mean and unworthy in some hearts, and people so naturally judge others by themselves, that there may be found those who cannot understand this returning of good for evil: who will suspect there is something wrong lurking under it: and who will not believe that it is all sincere and hearty. And many an honest and forgiving heart has felt it as a trial to have its good intentions so misconceived. My friend Green once wrote an article in a magazine. In a certain brilliant weekly periodical there appeared a notice of that article, finding fault with it. And a week or two after, in another article in the magazine, Green, in a good-natured way, replied to the notice in the weekly periodical; and while defending himself in so far, admitted candidly that there was a good deal of truth in the strictures of the weekly periodical. Green did all that, just as bears and lions growl and fight, because it was "his nature

to:" it cost him no effort; and assuredly there was no hypocritical affectation in what he did: he felt no bitterness, and so he showed none: he was amused by the clever attack upon him, and showed that he was amused. Some time after this, I read an ill-natured notice of Green in a newspaper, in which, among his other misdoings, there was reckoned up this rejoinder to the brilliant weekly periodical. He was likened to Uriah Heep, already mentioned: he was accused of hypocrisy, of arrogant humility, and the like. Of course, it was manifest to all who knew Green, that his assailant knew as much about Green's character, as he does about the unexplored tracts of Central Africa. But a mean-spirited man cannot even understand a generous one: and the assailant could not find it in himself to believe that Green was a frank, honest man, writing out of the frankness of an unsuspecting heart. So, X and Y were once attacked in print by Z: X thereafter cut Z. Y remained on friendly terms with Z, as previously. Y pointed out to X that it is foolish to quarrel with a man for attacking you, even severely, upon properly critical grounds. Y further said, that he would never quarrel with a man who attacked him even in the most unfair way: that he would treat the attacking party with kindness, and try to show him that his unfavourable estimate was a mistaken one. "Ah," replied X, "you are scheming to get Z to puff you!" To meet evil with good, X plainly thought, is a thing that could not be done in good faith, and just because it is the right thing to do. There must be some underhand, unworthy motive. And the greatest obstacle that you are likely to find, in habitually meeting evil with good, will be the misconception of your conduct by some of the people that know you. No doubt, Uriah Heep himself, and all his relatives, will be ready to represent that you are a humbug and a sneak. Well, it is a great pity. But you cannot help *that*. Go on still on *the Right Tack*: and by-and-by it will come to be understood that you go upon it in all honesty and truth, and with no sinister nor underhand purpose. And when this comes to be understood, then the evil in almost every case will be overcome, and that effectually. No human being, unless some quite exceptionally hardened reprobate, will long go on doing ill to another who only and habitually returns good for it.

This is not an essay for Sunday reading: it is meant to be quietly read over upon the evening of any day from Monday till Saturday inclusive. But that is no reason why I should not say to you, my friend, that you and I ought to bring the whole force of our Christian life and principle to bear upon this point. Let us determine that, by the help of God's Holy Spirit, without whom we can do nothing as we ought, we shall faithfully go upon the right tack through all the little ruffles and offences of daily life. If the sharp retort comes to your lips, remember that it touches the momentous question whether you are a Christian at all, or not, that you

hold that sharp word back, and say a kind one. If Mr. A., or Miss B. (a poor old maid, soured a good deal by a tolerably bitter life), speak unkindly of you, or do you some little injustice, say a good word or do a good deed to either of them in return. Pray for God's grace to help you habitually to do all *that*. It will not be easy to do all *that* at the first; but it will always grow easier the longer you try it. It will grow easier, because the resolution to go on the right tack will gain strength by habit. And it will grow easier too, because when those around you know that you honestly take Christ's own way of returning an injury, not many will have the heart to injure you: very few will injure you twice. I have the firmest belief, that the true system of Mental Philosophy is that which is implied in the New Testament: and that there never was any one who knew so well the kind of thing that would suit the whole constitution of man, and the whole system of this universe, as He who made them both.

One case is worth many reasonings. Let me relate a true story. Not many years since there was in Mesopotamia a Christian merchant; of great wealth, and with the Right Spirit in him. A neighbouring trader, who did not know much about the Christian merchant, published a calumnious pamphlet about him. The Christian merchant read it: it was very abusive and wicked and malicious. In point of style it was something like the little document which contains the articles about *Good Words* which appeared in a newspaper called *Christian Charity*. The Christian merchant, I repeat, read the pamphlet: all he said was, that the man who wrote it would be sorry for it some day. This was told the libellous trader: who replied that he would take care that the Christian merchant should never have the chance of hurting him. But men in trade cannot always decide who their creditors shall be: and in a few months the trader became a bankrupt, and the Christian merchant was his chief creditor. The poor man sought to make some arrangement that would let him work for his children again. But every one told him that this was impossible without the consent of Mr. Grant. *That* was the Christian merchant's honoured name. "I need not go to *him*," the poor bankrupt said: "I can expect no favour from *him*." "Try him," said somebody who knew the good man better. So the bankrupt went to Mr. Grant; and told his sad story, of heavy losses, and of heartless work and sore anxiety and privation: and asked Mr. Grant's signature to a paper already signed by the others to whom he was indebted. "Give me the paper," said Mr. Grant, sitting down at his desk. It was given: and the good man, as he glanced over it, said, "You wrote a pamphlet about me once:" and without waiting a reply, handed back the paper, having written something upon it. The poor bankrupt expected to find *libeller*, or *slanderer*, or something like that written. But no: there it was, fair and plain, the signature that was needed to give him another chance in life. "I said, you would be sorry for

writing that pamphlet," the good man went on. "I did not mean it as a threat. I meant that some day you would know me better, and see that I did not deserve to be attacked in that way. And now," said the good man, "tell me all about your prospects: and especially tell me how your wife and children are faring." The poor trader told him, that to partly meet his debts he had given up everything he had in the world; and that for many days they had hardly had bread to eat. "That will never do," said the Christian merchant, putting in the poor man's hand money enough to support the pinched wife and children for many weeks. "This will do for a little, and you shall have more when it is gone: and I shall find some way to help you, and by God's blessing you will do beautifully yet. Don't lose heart: I'll stand by you!" I suppose I need not tell you that the poor man's full heart fairly overflowed, and he went away crying like a child. Yes, the Right Tack is the effectual thing! To meet evil with good, fairly beats the evil, and puts it down. The poor debtor was set on his feet again: the hungry little children were fed. And the trader never published an attack upon that good man again as long as he lived. And among the good man's multitude of friends, as he grew old among all the things that should accompany old age, there was not a truer or heartier one than the old enemy thus fairly beaten! Yes, my reader: let us go upon the Right Tack!

And now for the other reason I promised to give you why I call all this the Right Tack. It is not merely the most effectual thing: it is the happiest thing. You will feel jolly (to use a powerful and classical expression) when, in spite of strong temptation to take the other way, you resolutely go on the right tack. I suppose that when the poor trader, already named, went away with his full heart, feeling himself a different man from what he had been when he entered the merchant's room, and hastening away home to tell his wife and children that he had found God's kind angel in the shape of a white-haired old gentleman in a snuff-coloured suit, and wearing gaiters,—I suppose there would not be many happier men in this world than that truly Christian merchant prince. He was very much accustomed, indeed, to the peculiar feeling of a man who has returned good for evil: but this feeling is one which no familiarity can bring into contempt. But suppose Mr. Grant had gone on the other tack: said, "You libelled me once: it is my turn now: you shall smart for it;" I don't think any of us would envy him his malignant satisfaction. And when he went home that night to his grand house, and enjoyed all the advantages which came of his great wealth, I don't think he would relish them more for thinking of the bare home where the poor debtor had gone, with his last hopes crushed, and for thinking of the little hungry children;—of little Tom sobbing himself to sleep without any supper,—of little Mary, somewhat older, saying, with her

thin white face, that she did not want any. At least, if he *had* found happiness in all this, most human beings, with human hearts, would class him with devils, rather than with men. Give me Lucifer at once, with horns and hoofs, rather than the rancorous old villain in the snuff-coloured suit!

It causes suffering to ordinary human beings, to be involved in strife. It is a dull, rankling pain. It has a cross-influence on all you do. And reading your Bible, and praying to God, it will often come across you with a sad sense of self-accusing. You will not be able to entirely acquit yourself of blame. You will feel that all this is not very consistent with your Christian profession: with your seasons at the communion-table: with your prayers for forgiveness as you hope to be forgiven: with the remembrance that in a little while you must lay down your weary head, and die. The man who has dealt another stinging blow, in return for some injury: the man who has made an exceedingly clever and bitter retort, in speech or in writing: may feel a certain complacency, thinking how well he has done it, and what vexation he has probably caused to a fellow sinner and fellow sufferer. But he cannot be happy. He *cannot!* He cannot know the real glow of heart that you will feel, my reader, when God's blessed Spirit has helped you, with all your heart, to do something kind and good to an offending brother. Yes, it is the greatest luxury in which a human being can indulge himself, the luxury of going upon the Right Tack when you are strongly tempted to go upon the Wrong!

I must speak seriously. I cannot help it. All this is unutterably important: and I cannot leave you, my friend, with any show of lightness in speaking about it. All this is of the very essence of our religion: it goes to the great question, whether or not we have truly believed in Christ at all: it touches the very ground of our acceptance with God, and the pardon of our manifold sins. There are certain words never to be forgotten: "If ye forgive men their trespasses, your Heavenly Father will also forgive you: But if ye forgive not men their trespasses, neither will your Father forgive your trespasses." Yes: the taint of rankling malice in our hearts, when we go to God and ask for pardoning mercy, will turn our prayers into an imprecation for wrath. "Forgive us our debts, as we forgive our debtors." Forgive us our sins against Thee, just as much as we forgive other men their offences against us: that is, not at all! Think of the unforgiving man or woman who returns evil for evil, going to God with *that* prayer! I cannot say how glad and thankful I should be, if I thought that all this I have been writing would really influence some of those who may read this page, to resolve, by God's grace, that when they are daily tempted to little resentments by little offences,—and it is only by these that most Christians in actual life are tried,—they will habitually go on

the Right Tack! But remember, my friend, that nothing you have read is more real and practical,—nothing bears more directly upon the interests of the life we are daily leading, with all its little worries, trials, and cares,—than what I say now: that it is only by the help and grace of the Holy Spirit of God that you can ever thoroughly and effectually do what I mean by going upon the Right Tack. A calm and kindly temperament is good: a disposition to see what may be said in defence of such as offend you, is good: and doubtless these are helps: but something far more and higher is needed. There must be a loftier and more excellent inspiration than that of the calm head and the kind heart. You will never do anything rightly, never anything steadfastly, that goes against the grain of human nature, except by the grace of that Blessed One who makes us new creatures in Christ. There will be something that will not *ring sound* about all that meeting evil with good, which does not proceed from the new heart, and the right spirit sanctified of God.

Now, let there be no misunderstanding of all this: and no pushing it into an extreme opposed to common sense. All this that has been said, has been said concerning the little offences of daily life. As regards these, I believe that what I have called the Right Tack is the effectual thing and the happy thing. But I am no advocate of the principle of non-resistance. I am no member of the Peace Society. I have no wish to see Britain disband her armies and dismantle her navy, and lie as a helpless prey at the mercy of any tyrant or invader. No: I should wish our country's claws to be sharp and strong: *that* is the way to prevent the need for their use from arising. I should, with regret, but without conscientious scruple, shoot a burglar who intended to murder me. I heartily approve the blowing of a rebel sepoy away from a cannon. And though the punishment of death, as inflicted in this country, is a miserable necessity, still I believe it is a necessity, and a thing morally right, in almost every case in which it is inflicted. All that has been said about the returning of good for evil is to be read in the light of common sense. There are bad people whom you cannot tame or put down, except by the severe hand of Justice. And in taming them in the only possible way, you are doing nothing inconsistent with the views set forth in these pages. It would take too much time to argue the matter fully out: and it is really needless. A wrong-headed man, a member of the Peace Society, has published a pamphlet in which he frankly tells us that if he, and his wife and children, were about to be murdered by a burglar; and if there was no possibility of preventing this murdering except by killing the burglar; then it would be the duty of a Christian to die as a martyr to his principles, and peaceably allow the burglar to murder him and his family. Really there is nothing to be said in reply to such a puzzle-head, except that I would just as soon believe that black is white, as that *that* is a

Christian duty. There are exceptional human beings who are really wild beasts: and who must be treated precisely as a savage wild beast should be treated. And even in the matter of injuries of a less decided character than the murdering of yourself, your wife and children, it is as plain as need be that a wise and good man may very fitly defend himself against the aggression of a ruffian. When Mr. Macpherson threatened to thrash Dr. Johnson for expressing doubts as to the genuineness of Ossian, Dr. Johnson was quite right to provide a stick of great size and weight, and to carry it about with him for the purpose of self-defence. And

while desirous to obey the spirit of the Saviour's command, there are few things of which I feel more certain, than that if a blackguard struck my good friend Dr. A. on the right cheek, the blameless divine would not turn the other also. Nor need we make the least objection to the motto of a certain Northern country, which conveys that people had better be careful how they do that country any wrong, inasmuch as that country won't stand it. There is nothing amiss in the *Nemo me impune lacesset*. Don't meddle with us: we have not the least wish to meddle with you.

A. E. H. B.

IN THE JUNE TWILIGHT.

SUGGESTED BY NOEL PATON'S PICTURE OF "THE SILVER CORD LOOSED."

BY THE AUTHOR OF "JOHN HALIFAX, GENTLEMAN."

In the June twilight, in the soft grey twilight,
The yellow sun-glow trembling through the rainy eve,
As my love lay quiet, came the solemn fiat,
"All these things for ever—for ever—thou must leave."

My love she sank down quivering, like a pine in tempest shivering—

"I have had so little happiness as yet beneath the sun:

I have called the shadow sunshine, and the merest frosty moonshine
I have, weeping, bless'd the Lord for, as if daylight had begun;

"Till He sent a sudden angel, with a glorious sweet evangel,
Who turned all my tears to pearl-gems, and crowned me—so little worth;
Me!—and through the rainy even changed this poor earth into heaven,
Or, by wondrous revelation, brought the heavens down to earth.

"O the strangeness of the feeling!—O the infinite revealing—
To think how God must love me to have made me so content!
Though I would have served Him humbly, and patiently, and dumbly,
Without any angel standing in the pathway that I went."

In the June twilight—in the lessening twilight—
My love cried from my bosom an exceeding bitter cry:
"Lord, wait a little longer, until my soul is stronger,—
Wait till Thou hast taught me to be content to die."

Then the tender face, all woman, took a glory super-human,
And she seemed to watch for something, or see some I could not see:
From my arms she rose full statured, all transfigured, queenly featured—
"As Thy will is done in heaven, so on earth still let it be."

* * * * *

I go lonely, I go lonely, and I feel that earth is only
The vestibule of palaces whose courts we never win:
Yet I see my palace shining, where my love sits amaranths twining,
And I know the gates stand open, and I shall enter in.

ESSAYS FOR SUNDAY READING.

VIII.—THE HARVEST JOY.

BY JOHN CAIRD, D.D.

"THEY joy before Thee," writes the prophet Isaiah when depicting the happiness of the Church at the advent of its great deliverer,—“They joy before Thee according to the joy in harvest.” And the image here employed is one which we must all recognise as a most graphic one. There are probably few who would not sympathise with the cheerful emotions congenial to such a season as the present, when Nature, arrayed in all her loveliness, has again begun to pour the rich tribute of her bounty into the lap of man. As you pass through some fair and fertile district of our land, where every breeze is laden with fragrance, every field teems with fertility, every tree is covered with foliage or hangs heavy with fruit; or as you climb the hill that skirts some noble landscape where for miles on miles the broad acres are waving, a mimic sea of gold, beneath you, and survey the busy toils of the reapers and listen to the merry shouts that rise, blended with the voices of birds and streams, now faintly echoing from the far hamlet, now more distinctly heard from the nearer homestead, and as, moreover, the happy associations connected with such a scene as this come before your mind—visions of plenty and peace and comfort, of garners overflowing with goodly store, of homes and hearts made glad by nature's bounty—you cannot resist the universal sentiment of cheerfulness and gratitude, and as it steals over your mind, you feel yourself, before the great bestower of all blessings, “rejoicing with the joy in harvest.”

Let me endeavour, in further illustration of the analogy which these words suggest, to point out in what respect the joy or happiness of the individual believer as well as of the Church at large may be conceived to resemble the harvest-joy.

I. One aspect of the harvest-joy which suggests a corresponding emotion in the spiritual experience of the believer is that of a *joy which succeeds to a period of suspense and uncertainty.*

It is very obvious that the pleasure experienced from any happy or auspicious event will be more or less vivid in proportion to the degree of doubt and anxiety that preceded it. Regularity and certainty in our enjoyments in some measure diminish their intensity; rarity and suspense greatly heighten them. The longer you labour for any good thing, and the more numerous the conditions which render the result a dubious one, the greater will be your delight when all goes right at last, and the matter is brought to a successful issue.

Of this simple principle the passage to which I have referred affords us two examples: “They joy,” says the prophet, “before Thee according to the joy in harvest, and as men rejoice when they divide the

spoil.” In the latter of these we are led to contemplate the consummation of some warlike enterprise, the close of the brilliant campaign, the victorious warriors in the first flush of success, when after all the excitement, anxiety, and hazard of some mighty conflict on which vast consequences were staked, the thrilling shout of victory has been heard, and the victors are just beginning to repose amid the glory and the rapture and the rich rewards of conquest. The other example is one with which we are more immediately concerned. It is that of the husbandman, who, in the language of St. James, has “had long patience, waiting for the precious fruit of the earth until he might receive the early and latter rain.” Exercising all his skill and experience in the selection of the crop and the preparation of the soil, he has ploughed and sown and gone through all the processes of his husbandry, and then with anxious eye he has watched the course of the seasons and the progress of his work. Through the slowly rolling months, the fluctuations and uncertainties of weather and the remembrance of many past disappointments have kept him in much doubt and uncertainty as to the result. But as the season crept on, the genial influences of Nature have come forth in un-wanted benignity over the ripening fields; and at length, as he watches the busy reapers engaged in their rapid and peaceful conquests, his heart gladdens with the satisfaction of successful industry, and he “rejoices with the joy of harvest.”

Now to this sort of joy—joy after long labour and suspense—many parallels may be found in spiritual things. The successful termination of any inquiry or enterprise for our own good, or for the moral and spiritual welfare of others, would give rise to it. For instance, is it not emphatically realised in the feelings of the Christian parent when he contemplates the happy results of his watchful care over the early years of his children. No province of labour upon earth can call forth more anxious and incessant care, more thoughtful wisdom and sagacity, more forbearance, prudence, patience, than that of parental discipline and instruction. In none, I believe, will carelessness or neglect be more frequently avenged, even in this life, on those who are unfaithful to their trust, and in none on the other hand is the reward of fidelity more precious, or, in general, more sure. What soil can be compared with the soil of mind in fertility, in richness, in tractability, in the scope it presents for the most varied and skillful cultivation? Neglect it, and its very richness will be manifested in the rank vigour and abundance of the crop of weeds that will speedily overspread its surface. Tend it, study its

capacities, give yourself in good earnest to the sowing of the seed of knowledge, truth, piety, to the fostering and tending of their growth, to the eradication of the weeds of sloth and ignorance and selfishness; and, though it may cost you many a weary hour, many a day and year of untold anxieties, yet a thousand instances prove how sweet, how unspeakably precious may be your reward even in this world. One can imagine—would that it were oftener something more than imagination and theory!—the case of a wise, tender, watchful Christian parent, as he prosecutes this high and laborious work of education. Dedicating his little ones in holy baptism to the Saviour, one can conceive him seizing the earliest moments of opening consciousness to sow the first seeds of Christian knowledge and holy thought and principle,—eagerly watching the first indications of character, the first up-growth of disposition, and temper, and talent, above the yet virgin soil of mind,—cheered, it may be, by the hopeful signs of gentleness, goodness, native vigour, or pained, humiliated, and discouraged by the already too obvious germs of a stubborn, or selfish, or dull and intractable character. As years roll on, we can well suppose, even in the most fair and hopeful cases,—nay, in these more than others,—how much trembling hope and anxiety, and alternate elation and sinking of spirit, a pious and thoughtful parent must experience. When sickness visits the home, for instance, and the prattle of childhood is hushed, and the bright eye grows heavy and dull, and the fair young plant, bright with opening promise, droops and seems ready to wither away, the very beauty, and delicacy, and rare attractiveness of its unformed being will make the thought of losing it more sad, and call forth a more thrilling suspense and anxiety in the parent's mind. Or when temptations beset its path, and the auspicious progress of character threatens to be arrested, or the fond hopes and flattering promises of past years are rudely checked and disappointed by some grievous fault or failure, who can tell what poignant grief, what inexpressible heartfelt bitterness, such lapses in his child's history occasion in a good man's mind? But let us suppose, on the other hand, amidst all such occasional misgivings and anxieties, that as time slips on and the characters of their offspring become developed, the father or mother can perceive the more and more manifest proofs that their long labours have not been lost;—let us conceive them, as they look round on one and another and another member of that family circle, discerning in the innocent gentleness that beams in the countenance of one, and the manly integrity and truthfulness of another, and the gravity, and thoughtfulness, and intelligence of a third, and in the mutual love and amiableness and Christian sincerity of all, the fruit of many prayers and efforts in years bygone; or yet again, as the little group becomes thinned of its numbers and one and another goes forth to the struggle of life, let us realise the fond delight of the

parent in hearing of their advancement and honour; or, what is better still, in watching their holy and Christian lives, and finally, as the evening of life gathers on, let us imagine them cheered amid the infirmities of age by the reverence, the fond regard, the tender love and care of those over whose infant years they had watched, and looking forward to a blessed re-union with them in the loftier and purer intimacies of heaven,—oh, who can doubt that such parents would feel in all this a rich recompense for their former toils and fears, that in the fulness of their present satisfaction all their bygone anxieties would be forgotten, or remembered only to render that satisfaction the sweeter, and that in the fulfilment of their hopes and the frustration of their fears, there would be indeed to them a realisation of that text:—"They joy before Thee according to the joy in harvest."

II. The joy of harvest may be regarded as typical of the Christian's joy in this respect, that it is *a joy that is connected with active exertion.*

The mirth of the harvest-field is not a mere listless amusement. The shout that rings, or the song that rises cheerily from the reaper's lips, is the shout that inspires to effort, and the song that beguiles toil of its weariness and fatigue. When it catches your ear as you pass by the wayside, or is borne along and re-echoed from distant plain and valley and upland, it does not pain you like the vacant laugh of indolence, or the wild ribaldry that breaks forth from the tavern. It tells not of folly and reckless enjoyment, of wasted hours and wanton carousing, but of busy and strenuous toil, of profitable industry, and manly and honest exertion. It speaks not, like the sluggard's or the drunkard's merriment, of squandered substance, and squalid homes, and beggared broken-hearted families; it is the symbol rather of plenty, and peace, and comfort, of smiling faces and well-clad forms, of garners overflowing with corn, and homes where the sunshine of prosperity smiles. It conveys to us besides, the tidings not merely of labour that is profitable, but of labour that is pleasant, of toil that is pursued neither in grim silence like the work of the over-taxed mechanic, nor amid groans and curses, like the work of the slave or the felon, but with the merry and light-hearted song and jest that tell how the labourer *likes* his work.

And when it is averred that the joy of a Christian resembles the harvest-joy, may not the comparison remind us of that great law of man's nature which connects his true happiness and dignity with work? Man was not made for idleness. The world is but a great harvest-field, in which, each in his own place, we are called forth to take our part, and do our share of labour. Neither by the structure of our nature, nor by the constitution of society, is there any room for the idler, or any possibility of true enjoyment and happiness without work. If you want to be truly happy, to attain in any measure to the real use and enjoyment of life, work of some kind you must have.

There ought to be no play without work. No man is entitled to enjoyment who does not purchase it by labour. The sweetest holiday is that which we have earned by strenuous application. God has so made us that we must find our pleasure either *in working*, or as the *reward of working*. It is quite true that we may set a man to work for which he is not adapted, and which, therefore, will not be pleasant, but irksome and disagreeable; or we may so overburden him, even with work of the right kind, as to exhaust and break down his strength of body and vigour of mind. If God has endowed a man with high mental gifts, and you set him—weak, it may be, in physical strength, and utterly deficient in manual dexterity—to a trade or handicraft, where little or nothing of his intellectual power is called forth; or if, on the other hand, God has bestowed upon a man a sturdy frame and strong hand, and instead of setting him to the plough, or the saw, or the trowel, you must needs make a student and scholar of him,—no wonder such men are unhappy, no wonder they drag on, ill at ease, out of place and proportion, as would be a cart-horse on the race-course, or a high-mettled steed harnessed to the hay-waggon. But in no such case is the unhappiness any disproof of the law in question, that man's true joy is in labour. The only conclusion to be drawn from it is that every man must be put into his own peculiar sphere of labour,—set to do his own work. Or again, if you put a man even into the sort of place for which his talents are adapted, and yet goad and drive him on to incessant application, make his life all work and no play, till the jaded faculties, whether of mind or body, lose their elasticity, till the wheels of energy and buoyancy roll off, and the frame-work of life, like Pharaoh's chariots, drives heavily, no wonder such a man feels work to be no pleasure, and sighs for emancipation from its bondage and misery. Overwork we admit is bad, but that does not prove that no work is good. In this, as in many other cases, happiness is to be found in the medium between extremes. God has created you with a nature made for work, and whatever be your peculiar sphere of duty, your own happiness and that of society at large will be found in doing your work to the best of your ability. Do not say that this is not a topic for the Christian teacher, that religion has nothing to do with this. Religion, I assert, has to do with everything that affects man's duty and happiness. It goes with you, or should go, to the shop, the plough, the anvil, and takes cognisance of what passes there; and the idle servant, the dawning, trifling workman, the man who wastes his time and hangs listlessly over his work, sins against religion just as certainly as the man who neglects prayer or seldom opens his Bible. Constituted as human nature and human society are, there is something holy, something divine in work. "My Father worketh hitherto," said Jesus, "and I work." Angels are happy beings, for they are working beings. They continually "do God's command-

ments, hearkening to the voice of His word." Civilization, progress, goodness, have sprung from work. The world has reached its present height of intellectual and social greatness because it is a busy and working world. And as with society at large, so with individuals. Nobody in the world is so contemptible, next to the profligate man, as the mere idler; and between profligacy and idleness there is a close connection. A man who has nothing to do but enjoy himself, will never know what real enjoyment is. The hardest of all work is doing nothing. The mere man of pleasure, the hanger-on upon life who sets before him no duty, no distinct object and aim, no definite work in short, is of all others the man who is least likely to extract true enjoyment out of life. If men are born without the necessity of toil, exempted from labour for daily bread, the true course for them,—that which wisdom, prudence, even selfishness, as well as Christian principle points out,—is to devise some path of active duty, to consider what work they can do in God's world, and strenuously to set themselves to do it. For not only will you look back on your working hours with greatest comfort, not only is it true that those parts of our lives which we remember with most pleasure are always the busiest parts of it, not only will relaxation and amusement be far sweeter and more intense after hard work, than if we spent our whole life in the pursuit of pleasure and amusement; but, I repeat, when the first difficulties of labour are over, and habit has smoothed away the roughness of toil, no man but will find that there is happiness in the very putting forth of his energies in some congenial sphere. Whether it be in the toil of the hand, or the trouble of the brain, the true joy of life is in working, with a sense of God and of duty upon us, as well and as hard as we can. No one who has tried it but must feel that in thorough and earnest occupation there is a buoyancy of spirit, a lightness of mind, an ease of conscience, a superiority to petty cares and troubles, an elasticity and animation diffused throughout a man's whole being, which the listless and idle can never know. The world is but a great field of duty in which they who labour the hardest may not only reap the richest results, but in their very labouring rejoice the most.

But upon this point I would remark still further, that the comparison of the Christian's to the harvest-joy may teach us that the Christian is one who does God's will because he loves it; or, in other words, that the true motive to Christian obedience is not fear of punishment, or desire of reward, but love. If I am a true Christian, the reason why I do my duty is not because I would escape hell or gain heaven, but because I love to do it. A man may begin an outwardly religious life from inferior motives, and may indeed feel for many a day that to do one's duty, to avoid sin and obey God's will is a hard and difficult task. Nor would we discourage any from attempting a life of duty because they feel no love to it. On the contrary, we would warmly

encourage those who have been roused, from whatever cause, to serious thought, instantly to renounce their sinful and selfish ways, and to begin at once, however hard and irksome it may be, to try to please Christ, in the assurance that sooner or later duty will grow, first easy, then pleasant, then delightful, and at last that the service of Christ will become perfect freedom. When a man is learning a trade or profession, or beginning a new branch of study, the first attempts are almost always hard, blundering, uneasy efforts. The endeavour to construct or utter a sentence in a new tongue is invariably sad and rugged work. You cannot catch the right accent, the grammatical rules are laboriously followed, and a thousand niceties escape you. But be not discouraged, only persevere; and the difficulties will gradually vanish, the efforts will become less and less formal and elaborate, till at last, by dint of regular and constant practice, you will learn to talk and write with fluency, elegance, and ease. Or to take another case: when an artist first takes the pencil in his hand, what sad work often does he make of it! Even in his earliest efforts, indeed, there may be detected amid all the rude scratches some signs of incipient taste or genius. But the power of expression for long will be operose and feeble. Yet on he works; and with work and perseverance, facility grows. The eye and hand become quicker, more delicate, more powerful, till by degrees the labour vanishes, the difficulties are forgotten, and at last there will come such a pleasure and fascination in the work, that it becomes the most delightful pursuit of life.

It is the same, I believe, with the grandest of all pursuits, the service of God in Christ Jesus. Hard and stern and laborious at the first, yet to him who perseveres, in the strength of grace and in the consciousness of duty, it will infallibly grow lightsome and easy in the end. Self-denial, temperance, purity, truthfulness, strict integrity in thought and word and deed, the giving up of our own ease and pleasure for the good of others and to please God; prayer, self-examination, the reading of God's word, realisation of God's presence in the active duties and intercourses of life; these duties may be difficult and severe to observe at first, may often impose on a man an almost intolerable yoke; so that in the weariness of effort and amid the heart-sickening sense of frequent failure, many a one may be, and has been, tempted at the very outset to abandon a religious life in despair. But if only, in reliance on the Holy Spirit's aid and in dependence on the Saviour's cheering promises, the attempt is persevered in, sooner or later a sweet sense of freedom and ease in duty will begin to dawn on the soul. Love to Jesus will increase, and what we do for him will lose the feeling of hardness and effort. Spiritual employments will assume an attractiveness and gather around them a pleasure we knew not before, till by degrees we shall reach that condition in which the Psalmist's language will not be strange to our minds: "Oh, how I love thy

law; it is my study all the day:" "My soul fainteth for the longing that it hath to thy judgments at all times:" "I have longed for thy salvation, O Lord, and thy law is my delight." In the daily round of duty such a man may come to feel free, happy, and rejoicing as a bird on the wing. What is hard to others will be to him "a yoke which is easy and a burden which is light." Obstacles and efforts that formerly seemed insuperable will yield before him as gently as the dungeon doors before the angel-guided apostle of old. A sweet sense of heavenly companionship and love will gather round his daily toils. He will go forth to his appointed duties with the light of holy love to cheer him, as when the reaper goes forth amid the bright beams and free air of the autumnal morn. In the fulness of his love and devotion to his Lord, he will feel that, amid all hardships and labours and even sufferings, there is for him a secret blessedness, and that beneath the eye of his heavenly Master, it is given to him ever to "joy according to the joy in harvest."

III. I name one other obvious point of analogy between the joyful labours of the harvest-field and those of the Christian, that they are in both cases the labours of those who *combine to help and cheer each other on in their work*. Work, as every one knows, is always more efficient, more hearty, more energetic, when men combine and work together, than when each man works by himself. When men labour together they can divide the work better, and each take the place and do the portion of the work for which he is best adapted. When men work together, again, they can help each other, and two can often do together four, ten, twenty times the work of men working separately and apart. When men work together they not only help, but they cheer and instigate each other; sympathy brings out a new power of exertion, emulation quickens energy, the cheering voice of a brother sends new alacrity through the frame, an electric chain of fellow-feeling binds each to all the rest; in the sense of community, toil loses its irksomeness and fatigue is forgotten; a generous rivalry stimulates the powers, and the sluggish and indolent, stirred up by the example of the energetic and ashamed to lag behind the rest, feel themselves possessed of energies and putting forth powers and performing feats that astonish themselves as much as others.

Now so it is very strikingly in the two cases already referred to—that of warfare, and that of husbandry. An army is just a little community in which each has his own place and station and work allotted to him, and in which all cheer and help each other on. It would not do for all to be generals, colonels, captains; there must be those who execute as well as those who devise and issue orders. It would not do for all to be infantry, or all to be cavalry. There is needed alike the steadiness and compactness of the one, and the more active and impetuous movements of the other. And so, when the hour of battle comes, all in their place,

and all under strict command and discipline, they move rank and file, shoulder to shoulder, a vast assemblage, yet with the concentration and quickness of an individual will. The command is issued from the central authority, it flies from rank to rank, and from company to company; a common sympathy binds heart to heart and hand to hand, so that every heart beats high and every hand grasps the weapon with a firmer and steadier hold; in the sight of his fellows and with the memory of home and country rising in his soul, each feels the common impulse to brave all perils and do valiant deeds; and when the shout of battle rises, there is a tremendous power called forth by common action with which the mightiest individual and separate achievements could never cope.

Now turn for a moment to the more peaceful illustration, to that quieter scene which is not less graphically illustrative of the principle in question: for where more vividly than on the harvest-field are you taught of the power of sympathy, combination, common action, and mutual helpfulness? Here is a little company each at his own work and all cheering, encouraging, urging each other on. There is perhaps the farmer who superintends and watches the progress of the work; there are those who cut, and those who bind, and those who glean, and those who load the cart or lumbering wain and bear away the result of the common toil. And as the reapers nimbly ply the sickle, and each band or individual strains every nerve and pushes on that he may not be surpassed by others, and as the cheering word, or shout, or merry song rises up in the clear bright air over the scene of blithe and busy toil, one perceives again a most striking proof of the increased power of common work and mutual helpfulness. Now so it is, or should be, in that noblest of all communities, bound together for the grandest of all works—the Church of Christ, the company of Christ's true soldiers and faithful workmen on earth. Religion is not a solitary thing, a thing with which each man has to do exclusively in the hidden solitude of his own heart. It must begin there, and in many of its deepest exercises it must be carried on there; and without the private intercourse of the soul with God, the private discipline and governance of a man's own secret heart, all other religion would be vain. But, on the other hand, as little will it do to make religion altogether an individual and secret thing. In many of its highest privileges, exercises, and engagements it is social; and one of its most momentous duties is that of mutual sympathy, encouragement, and helpfulness. If you are a sincere Christian, you

ought to feel that all you have and all you are, your wealth, time, talents, power, influence, your penitence, faith, virtue, Christian experience and wisdom, all your blessings and privileges temporal and spiritual, have been bestowed upon you, not for your own use alone, but for the common benefit of that holy family, that household and brotherhood of God's redeemed to which you profess to belong. Your portion of meat God has given you not to hasten away to devour it like a greedy child in secret, but to share it with all your brethren in Christ. Your light was not kindled that it might be hidden for ever underground, illuminating only the walls of your own tomb-like solitude. You are to "let your light shine before men," and not only by your example, but by your active exertions and sympathies, you are bound to help on the work and the workmen in Christ's Church. No member of Christ's Church but can do something to promote the cause of religion, and by his kindly aid, his visits of sympathy, his soothing charities, his cheering encouragements, his recountal of his own experience, be of some use to his fellow Christians. What a happy state of things would it be if each parish in our land were as the dwelling-place of a band of brothers enlisted in some noble and heaven-blessed enterprise, fighting for home and country, in the cause of freedom, truth, and justice! What a happy scene would that be in which the wise and experienced were ever ready with their advice and aid to help the untried and ignorant, in which the powerful aided the weak, and the weak in turn were ready to bless, honour, and stand true to the strong; in which by the head or by the hand, by endurance, forbearance, courage, zeal, self-devotion, all were ready to act together in the work of putting down sin and winning the world to Christ! What a parish that in which the scene that is now enacted on many a bright summer field were but a symbol and representation of our work in the nobler field of Christ's Church; where from year to year all of us together, and each in his own place, were straining every nerve to be and to do good, to help and encourage each other in the work of the Lord, to prepare for the great harvest-home of eternity! Then, indeed, might our Sabbath song of praise be a prelude of that glorious song in which we all hope to join, in which the thousand times ten thousand voices, but one mighty heart of the redeemed in glory, shall celebrate the praises of the great Husbandman, affording the noblest, most glorious fulfilment of that text, "They joy before Thee according to the joy in harvest."

THE LOST PIECE OF SILVER.

THE PARABLES

READ IN THE LIGHT OF THE PRESENT DAY.

BY THOMAS GUTHRIE, D.D.

IX.—THE PARABLE OF THE LOST PIECE OF MONEY.

LUKE xv. 8—10.

It is a grand sight, lion-hunters tell us, to see the forest-king at bay. Driven from his bloody lair, and pursued by men and dogs till further flight is useless, he turns round to face his foes; and when he confronts them,—lashing his sides with his tail, his shaggy mane bristling all erect, fire flashing from his terrible eyes, and thunder roaring from his throat,—the coward crowd fall back; there is death in the spring for which he is bending, and only the bravest stand. Here the Lion of the tribe of Judah is brought to bay. Jesus stands face to face with his enemies; but how different the spectacle, and the passions which it expresses! For the purpose of blackening his reputation, the Scribes and Pharisees, his malignant and implacable foes, resort to the basest insinuations; and the Son of God has to stand on his defence. He might have said, and with more reason than Jonah, "I do well to be angry," and, turning with indignation on His accusers, covered these whited sepulchres with confusion and with shame. But how meek and gentle his bearing, and how triumphant his defence! When one reads it in these beautiful stories of the poor wandering sheep, of the lost money, and of the erring but repentant and forgiven prodigal, how does this apology, this justification of himself for associating with sinners, recall to our recollection the words,—

"Not to condemn the sons of men,
The Son of God appeared;
No weapons in His hand are seen,
Nor voice of terror heard!"

When suffering from calumny, it is usually the wisest plan to follow John Wesley's practice, and, without reply from either tongue or pen, to let our life refute it, as he said, "to live it down." The lie, the foul and false insinuation, which bad men use to destroy the reputation of the good, is like mud. While it is wet, it sticks; but, since to attempt to wash it out often only spreads the stain, it is best to leave it alone; and drying, in a short while it falls off of itself. It is not uncommon for those who cannot refute, to revile; but a man who has confidence in the goodness of his cause, and walking in his integrity, is conscious of the purity of his motives, is a polished mirror, from whose face, though awhile obscured, the breath of scandal shall vanish, nor leave a stain behind.

When the interests of a great cause however are at stake, and attempts are made to stab it through

the sides of its advocate, to destroy it by destroying his reputation, he may find it necessary, much as he might prefer quietly to bear wrong, to act in self-defence. Such, in his judgment, appear to have been the circumstances in which our Lord was placed. His enemies, for the purpose of bringing discredit on his cause, had attempted to injure his character; and that by the most insidious of all ways; by insinuation, more than by a bold and open attack. "This man," said they, "receiveth sinners, and eateth with them." Looking at that remark in the light of the adage, "Tell me your company, and I will tell you your character," it is easy to see what they meant. It was saying, in other words, He keeps low company; if like draws to like, and birds of a feather flock together, this Jesus is no better than he should be; if he were a man of pure mind and virtuous life, would he accept invitations to the tables of people of infamous character?—would he outrage public decency and obliterate the difference between good and bad men, virtue and vice, by eating and drinking with publicans and sinners? I can fancy them using even Scripture to feather the poisoned arrow; and, as they pointed to Jesus breathing words of hope into the ear of some poor fallen woman, or kindly trying to raise a publican from his degradation, I can imagine them asking, with the sneer of a fiend and the tongue of a serpent, Can that be David's son?—the son of him who said, Blessed is the man that standeth not in the way of sinners! I am a companion of all them that fear Thee. I have not sat with vain persons, neither will I go in with dissemblers; I have hated the congregation of evil-doers, and will not sit with the wicked?

It was the purest love which drew our Lord to sinners. He was among them, but holy, harmless, and undefiled—separate, as oil among the water it swims in, or as the sunbeam which, lighting up the dun and dusty air, passes through it without contracting the slightest stain. Yet with such vile aspersions was Jesus rewarded for leaving the bosom of his Father, and the society of angels, to save the lost! A physician, suddenly summoned to the bed of poverty and disease, leaves his home to face the pelting, midnight storm, and spend the hours others give to rest endeavouring, with all tenderness and highest skill, to alleviate the agony and save the life of some miserable wretch who, as she quaffed

the cup of vice, has reached its lowest, bitterest dregs; and foul-tongued slanderers take occasion, from this act of pure, self-denying, and unrewarded benevolence, to cast reflections on his habits or his heart. Though nothing is more painful than to have kind and good and noble and generous actions imputed to the basest motives, yet the followers of Christ need not wonder, or be deterred from doing good by having that wrong to suffer. As this case shows, their Lord himself was not exempt from it. He was tried in all points like as we are; and when his people find, by a similar experience, that the servant is no better off than his Master, nor the disciple than his Lord, would God they were able to copy his pattern—to copy it as faithfully as a warrior did on a late battle-field! Riding over the ground when the fight was done, he came, as he picked his steps among the dead, to a body which, stirring, showed some signs of life. The bleeding form wore the dress of a foe. Regardless of that, he said to his attendant, "Give him a draught of wine;" and, as the officer stooped down to do so, the wounded soldier, discovering, through the mists that were gathering on his dying eye, in this good Samaritan the general of the troops against which he had been fighting, raised himself on his elbow, drew a pistol, and with deadly hate, fired it at his benefactor's head. Happily, the bullet missed its mark; and the general, so soon as he recovered from his surprise, with a forgiveness truly magnanimous said, "Give it him all the same!" But the attack made on our Lord's character under cover of the remark, This man receiveth sinners, did more than present Him with an opportunity of patiently bearing wrong, and generously forgiving the wrong-doer. Though we have not to thank his enemies for the vile aspersion, we have to thank God that he permitted it. In the words of Joseph, God meant it unto good. To this attack we owe our Lord's noble and unanswerable defence,—those three beautiful and blessed parables which, explaining why he did not shun but rather sought the company of sinners, have kindled hope in the bosom of despair, and encouraged thousands, like the poor prodigal, to return to their Father's house and cast themselves on his boundless mercy. To crush some plants, is to bring out their poisonous juices and their offensive odours; but Jesus—and, to some extent, all true Christians resemble him—resembled the sweetbriar and rosemary, the lowly thyme and the ever-green myrtle, which smell the sweetest when they are hardest crushed,—bathing with fragrance the hands that bruise them.

Before directing our attention specially to the parable before us, and the woman who, with lighted candle and broom in hand, is sweeping her dusty floor, I may remark—

First, that all these three parables are told for the same purpose; and that, though to cursory readers they may appear the same in their matter as in their object, they are not so. They are not, like the reverberations of thunder, mere echoes of one peal;

nor, in following up the first parable with the second and the second with the third, is our Lord, to borrow a figure from his old trade, like a carpenter who seeks by repeated blows of the same hammer to drive a nail in to the head. These parables were all told to show why Christ sought sinners, and to encourage sinners to seek Him. But there are sinners of different shades of character; and these, that none might despair, are described under three different figures:—that stupid, senseless wanderer, the lost sheep; that piece of money which, devoid of sensibility and unconscious of its fall, lies in the dust, and feels no desire whatever to be otherwise; and that wretched prodigal—born in happy circumstances, well and kindly and piously reared—who acts from his own bad will, with wicked determination resists a father's authority, and, sinning against light and conscience, leaves home to plunge overhead into the foulest depths of vice.

Secondly, I remark, in regard to these parables, that by itself none of the three gives a complete picture of the method of Salvation. To see God aright as saving man, and man as saved by God, we must, if I may say so, dovetail them into each other, and make one picture of the three. For example, beautiful, touching, and instructive as is the story of the prodigal, still it gives no adequate idea of the part which God acts in our salvation. No doubt the father, so soon as he catches sight of the penitent yet a great way off, runs to meet him, and, ere the words of confession have left his lips, folds him to his bosom in the embraces of a free, full, flowing, overflowing forgiveness. But he does not send for him. No kind letters full of tender entreaties, no servant from the father's house, ever reaches the miserable swineherd; far less are the household amazed to see the father himself, or by his other and elder son, go forth, leaving home and its pleasures all behind, to seek the poor prodigal in the far country to which his steps have carried him, and amid the misery in which his sins have plunged him. There is an elder brother here; but how unlike ours! Careless of a brother's fate, he stays at home at ease; nor thinks of seeking him whose infant steps he had guided, and with whom, when the day's play was over, he had slept on one couch, the arms of the two boys entwined around each other's necks. He neither regrets his absence, nor rejoices at his return. Selfish and sulky, angry and jealous, that elder brother is a foil to ours. Instructive picture as this is of a sinner's misery and a penitent's heart, and of the joyous welcome given to the worst who repent and return, it is the other parables more than this that present a picture of God,—how he feels toward sinners, and what he does to save them. In these we see God seeking our salvation; not waiting till we go to him, but coming to us—to seek and to save the lost. The heart of man beats in the story of the prodigal; but in this the heart of God. There we see man saved; here we see God saving. Such is the meaning of the parable, where a woman, having ten pieces of silver and losing one of them, lights a

candle, sweeps the house, and seeks diligently till she find it.

WHAT BEFELL THIS WOMAN ?

She had ten pieces of silver, and of these she lost one. But one out of the ten coins was lost ; but one out of the hundred sheep went astray ; but one member of the "certain man's" family became a prodigal ; although the numbers of those not lost in these parables differ, only *one* in each case was lost. Are we to infer from that circumstance, that ours is the only world which has been cursed by sin ? We are certain that there are many worlds besides our own ; and that—with all the twinkling stars we see, and millions we do not see, suns around which there probably roll worlds corresponding to the planets of our solar system—this earth bears no more proportion to creation than one quivering leaf to the foliage of a giant tree, it may be to all the leaves of a boundless forest ; than a single grain of sand to all the sands that form the shores or strew the bed of ocean. Why should not we hope that Satan has never winged his way to those bright realms, nor set foot on them ; and that, like the one lost sheep of the flock, the one lost piece of money, the one prodigal of the family, ours is the only world that, leaving its orbit, has wandered into darkness and away from God ? It adds much to the glory of the starry firmament, to look up and believe that those spheres are the abodes of innocence ;—not prisons of suffering, but palaces of pure delights, with virtues brilliant as their light, and inhabitants, whatever be their form, as loyal to their God as are the worlds they inhabit to the suns round which they roll ; and that, had we ears as we have eyes to reach them, from those beautiful stars we should hear as they rolled nightly over us, when the lark has dropped into her dewy nest and the busy city has sunk to slumber, and the din of the world is hushed, voices in the sky, such as John heard like the sound of many waters, or the shepherds when they listened to the angels singing.

But, whoever may be meant by the nine pieces of silver which were not lost, it is man's soul which is certainly meant by the one which was ; nor, in some respects, could any figure so well express our naturally depraved, degraded, and undone condition. We were not always, not once, not at first, what we are now. On its issue from the mint, this foul, defaced, dusty, and dishonoured coin was bright ; stamped with the image and superscription of a king. Even so man was originally made in the likeness of God : on the pure, untarnished metal of his soul God impressed his own holy image. And still in reason, in conscience, in a sense of right and wrong, in noble aspirations after immortality and in many things else which distinguish him from the brutes that perish, there remain such traces of his original state as we see of its ancient glory in the hoary battlements of an old ruin ; or, according to the figure of this parable, as we see in a foul, worn, rusted coin, with here a letter, and there a muti-

lated feature of its original image and superscription. But sin, deforming man's soul more than death his body, has defaced this likeness, and, till God seeks and his Spirit renews us, has left us buried amid the foulness and dust of corruption ; so that one might fancy that it was over not Abraham's, but all Adam's race, the bearded prophet stood, and raised, as he contemplated their miserable ruin, this lamentable cry, "How is the gold become dim ! how is the most fine gold changed ! the stones of the sanctuary are poured out in the top of every street. The precious sons of Zion, comparable to fine gold, how are they esteemed as earthen pitchers, the work of the hands of the potter !"

Not only this parable but all Scripture represents us as lost. Yet there is hope in the very circumstances in which we are lost. The case is bad, but not so bad as we can imagine it to have been. It is unfortunate to lose a piece of money in the house, but much more so in a field, or on a moor. Lost in the mountain fills a mother with alarm for her child ; but lost at sea strikes her down with despair. Be it money or a living man, whatever, falling overboard and disappearing beneath the wave, is borne by its weight down and down to the bottom of the deep, is certainly, for ever, lost ; and therefore God employs this figure to set forth his full and everlasting forgiveness of his people's sins. Enraptured with the thought, "Who," exclaims Micah, "is a God like unto thee, that pardoneth iniquity and passeth by the transgression of the remnant of his heritage ? He retaineth not his anger for ever, because he delighteth in mercy. He will turn again ; he will have compassion upon us ; he will subdue our iniquities : and thou wilt cast all their sins into the depths of the sea." Sins forgiven are lost in the sea ; but souls under condemnation of the law and in danger of hell, are lost in the house. Though deformed by sin and defiled by corruption, yet, being within the house, thank God, they are within the region of hope and the reach of mercy. And with infinite love in Jesus Christ, and infinite mercy in the bosom of God, and infinite grace in the Holy Spirit, I despair of none being redeemed, any more than of the coin being recovered, though it had rolled into the darkest nook of the house, now that the woman has lighted her candle and swept the floor and cleared out every corner with her broom, and, stooping down, is turning the dust-heap over and over—seeking till the lost be found. So Jesus came, and so he comes, to seek and to save the lost.

WHAT THIS WOMAN DID TO FIND THE MONEY.

She did everything proper in the circumstances. Indeed she could not do more than she did,—image, though faint, of that work, the wonder of astonished heavens and the highest subject of angels' praise, of which, pointing to his Son, the bleeding victim of the accursed tree, God asks, "What could have been done more for my vineyard, that I have not done in it ?" In regard to the steps which she took, we are, in judging of their propriety and necessity, to

remember that Eastern houses are not constructed on the style of ours—pierced as they are with many windows to admit the welcome sunlight. In climates where comfort lies rather in excluding than admitting the rays of a burning sun, the houses are built of dead walls; and the rooms in consequence are dark even in the daytime. Therefore this woman lights a candle to see with, and search the house. In point of condition as well as construction, houses in the East differ from ours. The habits of the people are not cleanly; and the floors, being formed of dried mud, are dusty as well as the rooms dark; the fitter emblem such houses' of our natural state—a darkened head and a polluted heart. Besides lighting a candle, therefore, the woman seizes a broom, and bending eager to her task, with candle lowered to the ground, she sweeps it; nor, breathing the choking air and moving in a cloud of dust, ceases till the coin, swept up, rings on the floor, or the light flashes on its silver edges; and, gladly seizing it, she holds it aloft, and rushing out in the fulness of her joy, calls her neighbours to rejoice in her success.

We might like to know with certainty what character the woman here represents on the stage. But, though that point were as obscure as was her person amid the cloud of dust her broom had raised in the dark and dirty house, the candle shining in her hand is undoubtedly the Bible, God's revealed Word. Assuming that she symbolises the Spirit of God, it is when He takes that heavenly light, and, carrying it into the recesses of a man's soul, reveals its foulness and danger and misery, that the sinner discovers his loss; and, feeling his need of a Saviour, cries, What shall I do to be saved?—Create in me a clean heart, O God! As to the sweeping, which disturbs the house and reveals a foulness that so long as it lay unstirred was perhaps never suspected, that may indicate the convictions, the alarms, the dread discoveries, the searchings and agitations of heart, which not unfrequently accompany conversion. It is not till the glassy pool is stirred that the mud at the bottom rises to light; it is when storms sweep the sea that what it hides in its depths is thrown up on the shore; it is when brooms sweep walls and floor that the sunbeams, struggling through a cloud of dust, reveal the foulness of the house; and it is agitations and perturbations of the heart which reveal its corruption, and are preludes to the purity and peace that sooner or later follow on conversion. That money was not recovered without a great disturbance within the house; nor are souls, especially such as have been long and deeply sunk in sin, commonly converted without great trials, agitations, and searchings of heart. But, be their seat a diseased body or a troubled mind, how welcome should we make the sufferings which bring us to Christ, and end in our salvation—humbling us in the dust—weaning our affections from earth and wedding them to heaven!

This scene, though expressing the general truth that God has done everything to save lost souls

which even He could do, conveys no idea whatever of the price of our salvation—at what an incalculable ransom we were redeemed. The curtain rises, and the stage shows us the interior of a house, and a woman, dimly seen through a cloud of dust, who is quietly, though carefully, sweeping the floor. There is no dying, no dreadful deed of violence, no mortal struggle, here; no blood bespatters the walls, or creeps in red stream over the floor; no passer-by starts and listens, and thinks he hears blows and groans issuing from within. There is nothing indicative of Christ having sacrificed his life for ours. The nature of the parable does not admit of it; yet we are never to forget that it was through suffering as well as seeking that we were saved; and that, to redeem us, God spared not even his own Son—commending his love to us in that, while we were sinners, Christ died for us.

THE WOMAN'S JOY AT FINDING THE PIECE OF SILVER.

There is a peculiar pleasure felt in recovering what we have lost; or in having anything placed beyond the reach of danger which we were afraid of losing. A group of children with health blooming on their rosy cheeks, joy ringing in their merry laughter, vigour bounding in their frames as they chase the butterfly or each other over the flowery lawn, is a sight to gladden any, but especially a parent's eye; yet it is a deeper joy to look on the pallid face and languid form of the child who, propped up on pillows and an object still of care and trouble never grudged, has been plucked from the jaws of death—brought back from the very gates of the grave. No boat making the harbour over a glassy sea, its snowy canvas filled by the gentle breeze and shining on the blue waters like a sea-bird's wing, is watched with such interest, or, as with sail flapping on the mast it grates on the shingle, is welcomed with such joy, as one which, leaving the wreck on the thundering reef, comes through the roaring tempest, boldly breasts the billows, and bringing off the half-drowned, half-dead survivors, shoots within the harbour amid flowing tears and cheers that, bursting from the happy crowd, rise above the rage and din of elements. No gathering of an unbroken, happy, prosperous family in their old home on the return of a birthday, or at Christmas time, ever filled a father's heart with such gratitude and gladness, as was felt in the house where, while the prodigal sat encircled by his father's arm, each happier than the other, the music that filled the air, the wine that flowed in bowls, the floor that shook to the dancers' feet, but feebly expressed the deep though silent joy which welled up in the old man's heart. By such scenes a gracious God, accommodating his language to our ideas, expresses his joy in saving sinners, and in seeing sinners saved. To entertain any other idea of him is to do injustice to his gracious character and to endanger our own souls. "As I live," saith the Lord, "I have no pleasure in the

death of the wicked."—"What," he asks, "could have been done more for my vineyard, that I have not done in it?" To the edge of the grave, to the brink of perdition, I see him following the most obstinate and headstrong and perverse and wretched sinner, with this earnest and most affectionate entreaty, Turn ye, turn ye, why will ye die? Some wretched and heart-broken creature, the flower which has been trodden on the street where the villain hand that plucked had thrown it when its freshness and bloom were gone—one polluted in body and in mind—one lost to virtue and shunned by decency—one for whom none cared but a mother, who clung to hope, and with love burning in its ashes, wept and prayed in secret for her she never named, is converted; and think of God in heaven feeling more joy than the mother who on a wild winter's night has opened her door to the wanderer's moaning cry; and while she hastens to tell the glad tidings to humble and sympathising neighbours, think of Him telling them to his angels, and calling them to rejoice with him that the dead is alive again and the lost is found; and think of the joyful alacrity with which those happy, holy,

spirits haste, if so employed, to do the Saviour's bidding—prepare another mansion and weave another crown.

What value belongs to these souls of ours, when the repentance and salvation even of one sinner is thought worthy of being published in heaven and sung to the music of angels' harps? We may be assured that it is from a dreadful doom the soul is saved; and that it was over a fearful abyss it hung when Jesus plucked it from the wreck. Angels had not otherwise turned an eager gaze from heaven on earth, and looked down from their lofty realms to watch the issue with breathless interest, and feel such joy at the result; and as I have seen a man when the wave, bearing the boat on its foaming crest, brought it up to the ship's side, seize the happy moment and with one great bound leap in, so should sinners, perilously hanging on the brink of ruin, over perdition, the hell that yawns below, seize the opportunity to be saved. Willing and eager to save, Christ stretches out his arms to receive us. Let us throw ourselves on his mercy, crying, Save now, Lord—Lord save me, I perish!

RECRUITING.

BY AN ARMY CHAPLAIN.

THE British army is the only one in Europe the ranks of which are replenished by voluntary enlistment. In every other country military service is to a certain extent compulsory, and the system of conscription more or less prevalent. It might be inferred from this fact that we are the most warlike of all nations, inasmuch as the military ardour of the people is sufficient to recruit the ranks of the army. This inference, however, would be somewhat premature: few enter the army in this country because they prefer the profession of arms to every other kind of employment. We have conversed with a great many recruits, and we have met with only two or three young enthusiasts who had taken the shilling from the pure love of defending their Queen and country. A variety of motives had induced the others to enlist. The British army is much the same sort of rendezvous at the present day as the cave of Adullam in the old Jewish times; it may be said of the recruiting sergeant as of David, "Every one that is in distress, and every one that is in debt, and every one that is discontented, gather themselves unto him." Distress, or, in other words, want of employment, is the most frequent cause of enlistment. There is an old and time-honoured joke, which we introduce merely from the light it reflects on this part of our subject:—"It was not for want that I took the shilling," is often repeated with a grim smile; "I had enough and to spare of that before." During a severe winter, when many are thrown out of employment, the supply of re-

ruits is greater than the demand, and none but the most promising are selected. On the other hand, when the price of labour is high both in town and country, it is difficult to find a sufficient number, and cases of desertion become much more frequent. The supply of recruits for the army is thus affected by all the fluctuations of trade and agriculture. In periods of depression the supply exceeds the demand, and the recruiting sergeant can pick and choose; on the other hand, when the price of labour is high, he must take what he can get. But poverty is not the only cause of enlistment. A drunken husband quarrels with his wife, and, by way of revenge, goes and takes the shilling (concealing, of course, the fact of his marriage); a son grows weary of the restraints of home, and foolishly imagines that he will enjoy a greater amount of liberty in the army. It was only recently that a weeping mother spoke to us about her son who had enlisted:—"You see, sir, we were a little too strict with him. He was fond of going to the theatre, and when we found that he would not give it up by gentle means, we told him the next time he went out at night he would find the door shut on his return. This soon happened; so he enlisted, and we knew nothing about it till it was too late." They paid 20*l.* to buy him off—a foolish investment, as he is almost certain to enlist again. Those who are bought off after a few weeks' service almost invariably do so; it is far better to allow the foolish youths to remain a year or two in the army. In the course of that time they will

come to know their own minds, and perhaps be more disposed to submit to the restraints of parental authority. Debt, dishonesty, drunkenness, immorality, and a desire to escape from its consequences, are also frequent causes of enlistment. There is another cause of a more substantial character which ought not to be overlooked: we mean, disappointment in love. How many a poor lad has thought that he would find a cure for an aching heart in the galvanic power of the sergeant's shilling, or sought revenge on his inconstant or obdurate sweetheart by donning the soldier's tunic! We do not believe in broken hearts in the army: the drill-sergeant's ratan and the intricacies of the goose-step are sufficient to prevent the most sentimental recruit from brooding too much over his disappointment, and after a time he learns to care for none of these things. It is among young soldiers that the tender passion is most prevalent, and sometimes it crops out very unexpectedly. The other day we were visiting the wards of one of our military hospitals, and in going our rounds we observed a young soldier whose expression of face was far more depressed than his slight illness was sufficient to account for. We entered into conversation with him, and found that he was from a part of the North which we knew. If you want to have a firm gripe over a soldier's heart, talk to him of his native village: the whole nature of the man expands, and the hidden fountains of feeling begin to well over at the thought of home. You may make almost anything of such a man, and he will cleave to you with the loving trustfulness of a child. It was so in this case; we were soon the best of friends. He was a tall, powerful young fellow, and a skilful workman; so we felt a desire to know the cause of his enlistment. We suggested several, but in vain; at last a happy idea occurred to us. "Ah! John," we said, "you have been quarrelling with your sweetheart." "Well, sir," said John, with a blush that made his face redder even than his own intensely auburn hair, "I am thinking it was something of that sort."

While the ranks of our army are filled up by voluntary enlistment, it would be a mistake to suppose that the recruits come forward of their own accord to enlist. It does, indeed, occasionally happen that a young man, incited by some of those causes to which we have alluded, will go in search of the recruiting sergeant, but, as a general rule, the recruiting sergeant has to go in search of him. Employers of labour may safely take it for granted that, without any direct effort on their part, the supply will always be equal to the demand; but it is not so in the army. It requires a certain amount of rhetoric to persuade a man that it is to his advantage to allow himself to be shot at for a shilling a day. The Government are aware of this fact, and have provided accordingly. The whole of the United Kingdom is divided into recruiting districts, each of which is under the charge of an inspecting field officer, and subdivided into smaller districts, under the superintendence of officers of inferior rank.

Each of these subalterns has parties of non-commissioned officers and men employed under him, over whom he exercises a general control. As all the real work of recruiting is done by the sergeants and the men under them, the commanding officer of a regiment is always very careful in the selection of them. It would be difficult to specify the exact qualities desiderated in such men. There are obvious reasons why they should not be married, and, so far as we know, none but single men are chosen. It is not necessary that they should be good men, and a good man will not accept such a field of labour unless it be forced upon him. It is the most demoralizing species of military duty on which any soldier can be employed. We have heard more than one declare, with bitter regret, that they would have been wiser and better men if they had not been corrupted by being employed in recruiting. We had no reason to question their sincerity: a man cannot touch pitch without being defiled; a soldier cannot beat up the haunts of vice for recruits without becoming to a certain extent vicious himself. It is not necessary that he should be a good soldier; the commanding officer is always unwilling to send such men on detached duty. The great desideratum in the case of a soldier sent to recruit is, that he should be a clever, shrewd, good-looking fellow, gifted with that rude and ready eloquence which tells at once on the masses. If practicable, he is usually sent to his native district: he left it an uncouth, unshapely lout; he returns to it a smart, active, handsome soldier, envied by all his former comrades, and admired by all their female acquaintances. He seems to have nothing to do, and an unlimited supply of money. While they are toiling hard, he seems to live only for enjoyment. His bright uniform is to be seen at every country fair and village merrymaking; his voice is law even to those who once despised him. And he, of course, will do nothing to weaken this favourable impression; on the contrary, he will do everything to strengthen it. Though a private, he has usually the stripes and the titular rank of corporal, which he has to lay aside when he rejoins his regiment. As the additional pay of fourpence a day which he receives while recruiting would be insufficient to meet his expenditure, he has an intelligible motive for exertion. He usually puts up at some public-house, and there is a perfect understanding between him and the landlord. They deal with one another on the principle of reciprocity. The soldier undertakes to bring as much custom as he can to the landlord; and if he causes a reasonable quantity of drink to be consumed on the premises (rarely at his own expense), he usually receives his board and lodging for nothing. There are always numbers of foolish lads who, without any idea of enlisting, think it manly to cultivate the society of the recruiting sergeant, and to treat him to drink. In the long run they usually find their military friend a dangerous acquaintance. He has constantly an eye to business, and has visions of the more likely

amongst them marching along with him to headquarters. He does all that in him lies to make this vision a reality. He will drink with them, sing them his best songs, and tell them his best stories. His glowing imagination paints the life of a soldier in its most seductive colours; it matters little that the groundwork of truth is altogether wanting. The man who cannot lie without a blush will never do for the recruiting service. In this case the end is held to justify the means, and the recruiting sergeant will tell the most fearful lies without a blush. It is true that he is usually warned by the adjutant or commanding officer not to give too loose reins to his imagination; but, with the prospect of 15s. for every sound recruit he can enlist, what is there he will not say? Ah! if there is an Elysium on earth, it is a barrack-room: the life the most enviable of all others is that of a soldier. There is nothing which the heart of man can desire that is not within his reach. Plenty to eat and drink, a handsome uniform, liberal pay, and the disposal of your own time, who is there that would not prefer such a life to that of the rustic clothopper?

Nor is the sergeant the only one who indulges in this peculiar style of eloquence while descanting on the pleasures of a soldier's life. There are others higher in rank, superior in education, who stoop to practise the same kind of deception. We may insert in proof of this the following unique production, the impudent humour of which might excite a smile, if it were not for the unblushing effrontery of its falsehood. It is stamped with the impress of a higher order of intellect than that of the recruiting sergeant, and is invested with an official character by being surmounted with the arms of England.

“Stop!—Take notice!

“Fine young single men have now a splendid opportunity of joining the ——. They must measure 5 feet 7 inches, and be between 17 and 25 years of age. They will all receive the same liberal

“Bounty of £5 15s. 6d.

“On their arrival at —— they will be taught the art of riding, driving, fencing, gunnery, and mechanics, whereby guns are moved with the same facility as a penny whistle; the use and manufacture of gunpowder, sky rockets, and other beautiful fireworks. They are also lodged in the finest barracks in the world, have light work and good pay! the best beef and mutton that —— can afford; and a comfortable place in the barracks, called ‘the canteen,’ set apart for them to see their friends in, and take a cheerful glass, also an excellent,

“Library and Reading Room;

“A Park and Pleasure Ground,

with a select number of horses kept for their instruction, health, and amusement.

“After their education is completed, an opportunity will be equally and without favour afforded to all to travel in foreign countries, where they

may drink their wine at two pence a bottle! by the new tariff, and return to their friends with money, manners and experience, with a

“Liberal Provision for Old Age.

“As the number of men required for this service will soon be completed, young men desirous of availing themselves of these unequalled advantages, are earnestly advised to apply without loss of time to the recruiting party at ——.

“GOD SAVE THE QUEEN.”

It is impossible to read this without a smile, but many a credulous youth may have believed it, and found out his mistake when too late. What a charming picture of a soldier's life. It recalls to our memory the words of the famous French song,

“Ah! quel plaisir d'être soldat!”

It may be said that this placard is a mere *jeu d'esprit*, which will deceive no one; but we doubt this; it would be difficult to set any bounds to the all but infinite vastness of human credulity.

But to return to our friend the recruiting sergeant. On leaving the regiment, he and his men are usually provided with a book of printed instructions for their guidance, and also a copy of the Mutiny Act, which contains several clauses about the mode of enlistment. As soon as he arrives at his station, he has to report himself to the commanding officer of the troops there, whom he is bound to obey in all things. If he receives any orders tending to defeat the object he has in view, he is bound to report the case to the regiment, in order that he may obtain redress. He must always appear in uniform, and move about his station in a smart and soldier-like manner. By this he understands that he must walk some ten or twenty miles every day backwards and forwards on the sunny side of the street, flourishing his cane, and critically examining every man or woman who passes. He has to pay all the men who are stationed in country districts, and to inspect their kits once a month. He receives special instructions not to enlist any recruit unless he be straight made, upright, with broad shoulders, raised chest, good legs, not inkneed, free from all appearance of sore legs, scurvy, rupture, or any other infirmity. A cast in the eye is sufficient to cast the most promising recruit. If any recruit is labouring under any of these infirmities, and wilfully conceals them at the moment of enlistment, he is liable to be tried by court-martial, but this regulation is practically set at nought, as no recruit need confess that he has been guilty of wilful deception. Certain classes, such as sailors, miners, and navigators are deemed ineligible as soldiers, and any recruiting sergeant who wilfully or carelessly enlists a married man, is liable to be recalled and severely punished. The same rule applies also to apprentices. No master, however, can reclaim an apprentice: the only redress he can obtain is the payment of such part of his apprentice's bounty money as he may not have received.

The average height is 5 feet 4 inches for regiments of the line, and 5 feet 8 or 9 inches for the foot guards. The tall gigantic life-guardsmen are all picked men: the enlistment of one of these is often a serious affair. Men are rarely to be found possessing all the physical and moral qualities requisite in this branch of the service; when one is discovered, every effort is made to induce him to enlist. We have known cases where the adjutant of one of these regiments has laid aside his dignity so far as to travel several hundred miles to try the effect of his eloquence on some young giant of whom he has heard a favourable report. As a general rule, however, all the work is done by the recruiting sergeant, who is better fitted for it than his superior officers. There is an old rule of the service, that no recruit is to be accepted unless he be provided with a certificate of moral character from the clergyman of his parish, or some local magistrate or other notable; but the recruiting sergeant, who can tell human nature at a glance, has now learned to dispense with this obsolete rule. The truth is, the test of morality must not be too strictly applied, or the ranks of our army would soon be thinned. It was otherwise in former days, when it was esteemed an honour to be admitted into the army, and officers received their commissions, not for a certain sum of money, but for the number of picked men they brought with them from their paternal estates. We have heard the son of a Highland chief, whose forefather, about a century ago, joined the Pretender with 500 men, say that, with all his influence, he could only induce one of his clansmen to enlist, and he was the greatest blackguard in the parish; so entire is the change that has been effected of late years in the relations between landlord and tenant in the north: the old feudal feeling has disappeared, and the tie that exists between them is the same as in any other commercial transaction. We question whether the beautiful Duchess of Gordon, who raised the 92nd Highlanders for her son, the Marquis of Huntly, and gained many a likely recruit by placing a sovereign between her coral lips, and inviting him to take it in the approved fashion, would be able, if she were now alive, to raise twenty men by the adoption of a recruiting trick which was then found to be irresistible. Landlords in the north have higher rent-rolls and more extensive deer-parks, but where are the men? True wealth does not always consist in the abundance of that which a man hath. Human flesh may not be such a marketable article as venison, but perhaps it is more precious in the long run. Deer will not defend our shores, or fight as the brave Highlanders fought when they followed their chiefs to the field.

As a general rule, regiments have recruiting parties in the counties where they were originally raised. In most cases, however, they are not able thus to obtain a sufficient number of men to keep up their strength, and are obliged to have recourse to the large manufacturing towns to supply the deficit. It is not unusual for the Highland regi-

ments to recruit in London, and Englishmen show no particular aversion to the kilt or trews. A fair sprinkling of Scotchmen is also to be found in the English regiments: they find more rapid promotion there than in regiments composed chiefly of their own countrymen, and, therefore, as highly educated as themselves. We have heard several assign this as the cause of their preference. Irishmen are to be found in abundance in every branch of the service except the Foot Guards, for which natives of England and Scotland only are to be enlisted, unless special permission is given to the contrary. Such permission, so far as we are aware, never has been given, and yet, notwithstanding this formal intimation that "No Irish need apply," the brogue is occasionally to be heard in the ranks of the Foot Guards as elsewhere. Some regiments have only an accidental connection with the places by which they are known. The Coldstream Guards, for example, are not and never were a Scotch regiment; their only connection with the small village of Coldstream, in Berwickshire, is that they marched from it under Monk to assist in the restoration of Charles II. It is somewhat singular, however, that they have always recruited a little there, and that there are some five or six men in the regiment to justify the name by which it is honourably known.

Agricultural labourers are always the most promising recruits, and invariably make the best soldiers. They are soon licked into shape, and have usually more strength and stamina than those who have been bred in large towns. They are also superior to the latter in every soldierly virtue, and are less saturated with vice. Most of the non-commissioned officers in the army have been selected from this class. We have under our eye at this moment a list of forty-four sergeants belonging to one of the most distinguished regiments in the service, and we find that forty of them were brought up in the country and engaged in agricultural labour before their enlistment. The reader, therefore, will be prepared to learn that the recruiting sergeant will never offer the shilling to a town-bred lad if he can find a country one. There is less chance also of the latter being rejected; but of this more anon. The popular belief is, that the acceptance of a shilling from the hand of a recruiting serjeant constitutes enlistment; but it is not so. In terms of the Mutiny Act, he is bound to obtain from the recruit satisfactory answers to the following questions:—"Are you an apprentice?" "Are you married?" "Do you belong to the Militia or to the Naval Coast Volunteers, or to any portion of her Majesty's land or sea forces?" "Did you ever serve in the army or navy before?" "Are you marked with the letter D?" "Have you ever been rejected as unfit for her Majesty's service on any previous enlistment?" While the recruit is answering all these questions in the negative, the sergeant is supposed to be holding the shilling neatly suspended between his finger and thumb, ready to drop it into his palm as soon as the last "No" has issued from

his lips, and to say, "Then I enlist you for Her Majesty's—Regiment of the Line." The sergeant, we say, is supposed to do all this, but old Macwhirter, who has enlisted more recruits than any other man in the service, tells us, with a knowing wink of his wicked old eye, that he has enlisted six or eight men in one night without asking a single question or parting with a single shilling. "But how was that?" we ask, incredulously. "Why, sir," says Mac, without even the semblance of a blush on his old wrinkled face, "I made them all dead drunk over-night, and swore next morning that they had all taken the shilling. They couldn't prove that they had not taken it, so they had no help for it but to pay the smart-money, or to be attested." Such proceedings were winked at formerly, and perhaps even secretly encouraged; but any sergeant guilty of such deception now would, if detected, be recalled, and reduced to the ranks. The period of enlistment is ten years for the Infantry and twelve for the Cavalry or Artillery or other Ordnance Corps, if the person enlisted is of the age of eighteen years or upwards; but if under that age, then the difference between his age and eighteen is to be added to such ten or twelve years, as the case may be. At the close of ten or twelve years' service, the soldier is at liberty to take his discharge, unless he should be stationed abroad, and the commanding officer require his service, in which case he is bound to serve for a further period not exceeding two years. He may take his discharge, but he is not entitled to any pension unless he serves for a period of twenty-one years. By a recent regulation, a soldier who takes his discharge after ten years' service, is allowed a breathing time of six months: if he decides to give up soldiering, he becomes an unpensioned civilian, but if he re-enlists before the six months have expired, his ten years' service count in his favour, and he may retire with a pension after eleven years. If he foolishly allows the six months to glide away before he has finally decided to re-enlist, he loses the benefit of his previous service, and enters the army on the same footing as any other recruit.

We are not to suppose that the whole ceremony of enlistment is over when the magic shilling has dropped into the extended hand of the recruit. The sergeant produces from his pocket-book the following notice, and proceeds leisurely to fill it up:—

"John Brown,

"Take notice, that you enlisted with me at 10 o'clock, P.M., on the 1st of April, 1863, for the 999th Regiment, and if you do not come to Takem Inn at the hour here fixed, for the purpose of being taken before a justice, either to be attested or to release yourself from your engagement by repaying the enlisting shilling, and any pay you may have received as a recruit, and by paying twenty shillings as smart-money, you will be liable to be punished as a rogue and vagabond. You are hereby also

warned that you will be liable to the same punishment if you make any wilfully false representation at the time of attestation.

"J. KITE, Sergt. 999th Regt."

The enlistment is not legal, unless the recruit has been served with this notice along with the shilling on some lawful day. From twelve o'clock on Saturday night to twelve o'clock on Sunday night, Sergeant Kite's occupation is gone: he must rest on his oars during that interval, however strong the temptation may be to distribute an occasional shilling. He is reduced to the same compulsory idleness on Christmas-day and Good Friday; no recruits are enlisted for the army on either of these two days. Many a rascally recruit decamps on receiving the shilling, taking what is called French leave, and nothing more is heard of him, unless he be seized as a deserter. But we shall suppose that John Brown appears at the time and place indicated by Sergeant Kite. There he has to be examined as to his physical fitness by an army medical officer, when there is one quartered at or near the place of enlistment, or failing that, by some local medical practitioner. This examination is technically known as "the Primary Inspection;" the object of it is to guard against the approval of ineligible recruits. The external characteristics of a sound constitution and efficient limbs, are summarily stated for the guidance of the examiner—viz., a due proportion between the trunk and the members of the body, a countenance expressive of health, with a lively eye, skin firm and elastic, lips red, teeth sound, voice strong, chest capacious and well formed, belly lank, limbs muscular, feet arched and of a moderate length, hands large rather than small. A Tom Thumb or a Goliath would be equally excluded from the British army: there is one towering form well known in Rotten Row, and not unknown in the literary world, the owner of which has been condemned to civil life on account of his gigantic stature. We had recently an opportunity of witnessing one of these primary inspections. We had called on the chief medical officer at a certain station, and were directed to his office, where we had to wait in a small ante-chamber where we could see all that was passing. Suddenly two young men in a state of perfect nudity, entered the room, and began walking backward and forward at a pace which Deerfoot might have envied. Our friend then made them halt and stand in the position of a soldier under arms, when he examined them thoroughly from head to foot. He then made them extend their arms at right angles with the trunks of their bodies, touch their shoulders with their fingers, and place the backs of their hands above their heads. While in this defenceless position, he suddenly struck one of them a stunning blow in the chest, which sent him reeling against the wall; then rushing up to him he applied his ear to his chest, and listened for a minute or so with rapt attention. He gave a nod of satisfaction, but the ordeal was not

yet over; he made him hop on one leg round and round the room till he could scarcely retain his gravity. He was pronounced eligible, and dismissed. The other recruit did not fare so well. Our friend looked him sternly in the face till he quailed beneath his eye. "You scoundrel," he said, "you enlisted six months ago in the — Hussars, and I rejected you as blind of the right eye." The fellow attempted at first to deny this, but soon admitted his guilt, and was given into custody. He was one of a numerous class, known in the army as "bounty lifters," who live by defrauding recruiting parties. Occasionally they deceive the doctors, and receive the bounty-money, with which they make off, and enlist somewhere else. We know of one case of a man who, by his own confession, had received forty-five bounties, and had never done a single day's duty in the army. Bounty lifting is as much a profession as pocket-picking, and there are more than a thousand men in this country who have no other means of subsistence. As the civil medical practitioner receives only a fee of 2s. 6d., his examination is seldom very strict, and thus there is an ample door for deception. But we shall suppose that John Brown is not a bounty lifter, but an honest young fellow, willing to serve his country. We shall suppose, further, that he has passed the ordeal of the primary inspection, and that it is twenty-four hours since Kite dropped the shilling into his hand. During that interval he has made no effort to raise a sovereign of smart-money, so he is brought into the presence of a magistrate (who must not be an officer in the army), before whom he swears that he will be faithful, and bear true allegiance to her Majesty, her heirs and successors; and that he will, as in duty bound, honestly and faithfully defend her Majesty, her heirs and successors, in person, crown, and dignity, against all enemies, and will observe and obey all orders of her Majesty, her heirs and successors, and of the generals and officers set over him. When Brown has thus been attested, Kite begins to smile upon him and to have golden visions of 15s. dropping into his own pocket. From that day the young recruit begins to draw his pay, which is 1s. 1d. for the line, and 4d. a day for lodging money. In certain cases he receives 2s. 6d. as the earnest of his bounty money, but Kite being of a suspicious temperament, this is not always done. In former days recruits were billeted on private individuals in the town where they were enlisted. Old soldiers still speak with a sigh of regret of those days; an ingenious and unscrupulous recruit, acting in concert with Kite, could always get himself bought off for something handsome, and then report to the billet master that there was some contagious disease in the house. This he continued to do till he found a landlord who would pay nothing, in which case he took up his abode in his house, and made himself generally disagreeable. All this has been done away with now, and the recruit must rest content with his limited allowance of lodging money, or with such limited accommodation as the

recruiting sergeant can provide for him till he joins his regiment. It is not unusual for some twenty or thirty recruits to be huddled together in one room, and the man of superior education is obliged to associate with tramps, thieves, and other outcasts, who have been deemed worthy of serving her Majesty.

Here the process of corruption begins, and as a period of six weeks often elapses before the recruit joins his regiment, if untainted before, he is soon initiated into vice, and has often to suffer its consequences in hospital. In some regiments he receives the half of his bounty money after being attested; this sum is no real boon to him, as it is usually spent in debauchery. The bounty money varies in amount according to the demand for men. In former days it rarely covered the expense of the kit, and the young soldier often found himself in debt. This cannot occur now, as he is always provided with a free kit, and a certain sum which is entirely at his own disposal. During the Crimean war, it rose as high as 5l. or 6l., a larger sum than most of the recruits had ever possessed before. At Croydon, where some 500 recruits for the Foot Guards were assembled, the possession of such a large sum of money led to fearful scenes of debauchery and riot, and many deserted, again to take the shilling, and to repeat the same scenes elsewhere. At present the bounty money for the Guards is 1l. and a free kit; after joining his regiment, the recruit usually receives this sum at the rate of 6d. a-day. This is far better than paying him the whole sum at once, and it were desirable that the same arrangement were adopted in every branch of the service. The recruiting-sergeant receives 15s. for every recruit who passes the final examination; if two have taken part in his enlistment, the money is divided between them. The recruit, if he be of an enterprising character, may make a little money by inducing some comrade to enlist; he receives 7s. 6d. as the reward of his enterprise. Sometimes a whole batch of men are enlisted, though it is well known that some of them are unfit for the service; the sergeant allows the smaller fry to escape through the meshes of his net, and brings the others safely to land. He takes care never to lose sight of them till he has brought them to the head-quarters of the regiment, where, after passing a second medical examination and being approved of by the colonel, they are handed over to the pay or colour-sergeant of the company they are posted to. Every recruit must bring with him to head-quarters one shirt and one pair of socks or stockings, clean and ready to be put on when he gets into barracks. For the modest sum of 8s. he is provided with a uniform which has belonged to some other man; the tunic costs 5s., the trousers 3s. After a few days the regimental tailor hands over to him his own uniform, for which he pays nothing, and his kit is served out to him. It consists of the knapsack and straps, two straps for binding his greatcoat to the knapsack, three shirts, three pairs of socks, two towels, two pairs of boots,

one pair of leather leggings, one pair of winter trousers and one pair of summer trousers, a tunic, a shell jacket, one pair of braces, two shoe brushes, a clothes-brush, a box of blacking, a razor and case, a comb, a shaving-brush, a knife, a fork, and a spoon. This is a handsome outfit for men most of whom may be safely placed in the category of the great unwashed, and the Government takes care that if any of these articles are lost, or destroyed, or made away with, they shall be replaced at the expense of the soldier. We may now leave the recruit in the hands of the drill-sergeant, comforting him with the assurance that, if he does not carry the baton of a field-marshal in his knapsack, as every French soldier is presumed to do, he may, by good conduct and soldierly smartness, attain the rank of sergeant, and retire from the service with a pension of 2s. a-day.

There are four recruiting districts in England, the head-quarters of which are at London, Bristol, Liverpool, and York; two in Scotland, head-quarters Glasgow and Edinburgh; and three in Ireland, head-quarters Belfast, Dublin, and Cork. In 1860, there were 27,853 recruits examined at head-quarters, and more than one-fourth of these were rejected as unfit for military service. As a proof of the negligence with which recruits are passed by medical practitioners who have no connection with the service, it may be mentioned that the proportion rejected on secondary inspection of those approved by civilians, was exactly double that of those who had been examined in the first instance by army surgeons. A heavy loss was thus entailed upon the country, as these recruits were supported at the public expense during the interval between their enlistment and final rejection. It is somewhat singular that in France, where the conscription comprehends all classes and the army represents the whole community, the number of rejections in 1859 was almost exactly the same as at our primary inspections in 1860, being at the rate of 317 per 1000. The largest number of recruits were rejected at Glasgow and Belfast; London comes next, and Bristol stands highest in the list. The proportion of rejections in Scotland is greater than elsewhere; this is owing to the fact that the great majority of Scottish recruits belong to the large manufacturing towns. Of every 1000 men inspected, England and Wales contributed 566, Scotland 107, Ireland 321, the colonies and foreign countries six. One-half of the recruits are returned as being between eighteen and twenty-one years of age, but there is reason to believe that many of them antedated their births, as service under eighteen years of age is not allowed to count for pension. The proportion of men above 5 ft. 8 in. is considerably greater in the Scotch recruiting districts than in the English or Irish, while the proportion of men under 5 ft. 5 in. is nearly one-fourth higher in Ireland than in Great Britain. There is thus no foundation for the fallacious belief that Irishmen are taller than the Scots or English;

the truth lies in the opposite direction. The reader may perhaps wish to know something of the occupations of our recruits, and the amount of education they had received before entering the army. We find that 9420 were labourers, husbandmen, and servants, 2783 manufacturing artisans, 4863 mechanics, 2051 shopmen and clerks, 108 professional men or students, and 142 boys enlisted as drummers. Thus it appears that one-half of the recruits are obtained from the class of labourers, husbandmen, and servants, and one-fourth of them from the mechanical trades. Ireland furnishes much above the average proportion of labourers; Scotland, of manufacturing artisans and mechanics; and England, of shopmen and clerks. The highest proportion of rejections took place among the mechanics employed in occupations favourable to physical development, while the lowest was among students and professional men, and next to these among shopmen and clerks. As regards education, we find that of every 1000 English recruits, 247 were unable to read or write, 51 could read only, and 702 could both read and write. Of every 1000 Scotch recruits, 163 could neither read nor write, 156 could read only, and 681 could both read and write. Of every 1000 Irish recruits, 321 could neither read nor write, 145 could read only, and 534 could both read and write. The reader will thus perceive that the proportion of recruits wholly without education was highest in Ireland, and lowest in Scotland, but the proportion of those who could write was higher in England than in Scotland,—a result scarcely to be anticipated among the natives of a land where John Knox established a school in every parish.

We know that we are treading on delicate ground, but we cannot close this article without expressing our conviction that our whole system of recruiting is radically wrong. Apart from all other demoralizing influences, we may find in it alone the cause of much of the debauchery that prevails among our soldiers. It tends alike to corrupt the recruiters and the recruited, by familiarising both with vice. We know that it is far easier to point out an evil than to suggest a remedy. The continental system will never do in this country; the nation which has abolished the press-gang will not readily adopt the conscription. A higher class of men should be employed in the recruiting service; the 15s. per man, which is practically an inducement to enlist the worst men, because the worst men are always readiest to enlist, should be abolished: and the promise of a commission given to every recruiting sergeant who shall raise a certain fixed number of good men. Let their goodness be tested by their after-conduct. The sergeant would thus have no inducement to frequent the haunts of vice, or to initiate the recruit into the mysteries of low debauchery. Again, why should the recruit be six weeks before he joins his regiment? Why should he be condemned to frequent low public-houses, to associate with outcasts, to occupy the

same room, perhaps to sleep in the same bed, with filthy tramps and other unsavoury vagabonds? Why should he be subjected to this degrading ordeal, which must strip him of all self-respect, and reduce him to the same moral degradation as the outcasts around him? It is a false economy which detains him in such haunts till the sergeant has completed his batch of recruits; how false may be learned from the statistics of our military hospitals. And when he joins his regiment, why should he receive his bounty money all at once? There are old scoundrels of soldiers watching and waiting for the moment he touches it, ready to share in the foul orgies to which they lure him on: why should it not be paid to him at a small fixed daily allowance, as in the case already mentioned; or better still, why should we not adopt the French system? The French conscript is credited, on joining his regiment, with forty francs of bounty money, known as "*la masse individuelle*," but he never touches it so long as he remains in the service; it is kept as a reserve fund: if he sells or makes away with his kit, it serves to supply him with a fresh one, and his pay of two sous a-day is stopped till "*la masse*" is raised to the original amount. He receives the

whole of this sum on quitting the service, so that he is never altogether destitute; it gives the authorities a hold over him, and tends to repress two crimes, the two perhaps most prevalent in our army: desertion and selling kits. The adoption of this principle would, we are convinced, be a benefit to the soldier and the country at large: it has, in fact, been partially recognised in the following regulations, which have been made known in garrison-orders at Woolwich, and which, we hope, will soon be extended to every branch of the service,—viz.: That the practice of conferring a sum of money on enlistment by way of Royal Bounty shall be abolished: that the recruits shall be provided with thorough outfit as heretofore, and shall be entered as of the first class on joining the reserves. If at the termination of the first period of three years they are returned as "of good behaviour," they will be rewarded with a badge entitling them to an addition of 1*d.* per day above the ordinary pay; and as a further inducement, at the expiration of each succeeding three years, the same rewards will be conferred, so that during a service of twenty-one years a well-behaved man will be entitled to seven badges and a pay of 2*s.* 2½*d.* per day.

THE SOUTHERN MINISTER AND HIS SLAVE-CONVERT.

A DIALOGUE.

BY J. M. LUDLOW.

"The South has done more than any people on earth for the Christianisation of the African race."—*Address to Christians throughout the World, by the Clergy of the Confederate States of America.*

Convert. Mister Shearer, I'se greatly troubled in mind.

Minister. What about, Cæsar? "Let not your heart be troubled," you know.

Convert. Jiss so, Mister Shearer, jiss so. But I'se troubled 'bout many tings. 'Mongst oders, I'se troubled by dat word you read last Sabbath, 'bout de sin of whoseber sall put 'way his wife, 'cept she go wrong, and de sin of him dat marrieth her which is put 'way.

Minister. Well, Cæsar, what is your trouble?

Convert. Yersee, Mister Shearer, I'se had tree wife, 'sides my Sally dat now is, and nebber none of dem go wrong 'gainst me; and Sally's had four husbands.

Minister. Why did you put away your former wives, Cæsar?

Convert. Fust wife,—dat was Phoebe,—she were bery good and help me much, but she hev no chil'rn. So Massa say to me, Cæsar, I'se want plenty young piccanniny, no good your keepin to dis gal, you choose 'noder wife. I'se allers good nigger, Mister Shearer, so do as Massa tell me; get Nan for wife. Nan bear Massa two, tree, four, six piccanniny. But her temper so bad, last I'se not stand it; so go to Massa and say, "Massa, can't live wid Nan." Massa he laugh, and say, "All right, Cæsar, she good strong gal, I sell her down

South. I've jiss anoder wife to gif yer." So he gif me Yeller Nell, dat were young Massa Tom's—Massa Tom he den 'way. Time he come back, he find Yeller Nell my wife. He angry like mad, and flog me wid horsewhip, and take back Nell. Den I marry Sall.

Minister. Well, Cæsar, you may set your conscience at rest on this point. The Scripture says, that he who puts away his wife and marries another commits adultery; it does not say that he whose wife is taken from him and marries another does so. Now you seem never to have put away any of your wives to marry another, since even your second wife Nan was sold off by your master, though your own conscience must tell you what your intentions were in complaining of her to him. Anyhow, it was your duty to marry again when your master bade you. "Servants," it is written, "be obedient to your masters."

Convert. Den servant may marry ten, twenty wife if him Massa bid him?

Minister. I hope such a case has never occurred; but, anyhow, it is not the servant's sin.

Convert. Massa's sin den, Mister Shearer, if him servant marry more dan one wife?

Minister. Not unless he bids it, or at least formally allows it.

Convert. Bress de Lord! if dis be so, poor Massa e'mit heap adultries for him servants! 'Pears to me, ebry man hev sin 'nuff for hisself, widout bearin' oders' sin. Tink you Massa go to heaven, Mister Shearer?

Minister. Cæsar, that is a most improper and uncharitable question. Think of your prosperous and happy condition,—of the food and drink and shelter and clothing which are provided for you, without your having the trouble to do so yourself, of the kind care you receive in sickness, of the many gifts which are bestowed upon you, of the many occasions of enjoyment allowed you. Think, above all, of the blessed Gospel which you are privileged to hear, and which would never have been preached to you if you had remained in Africa a benighted savage. The more you consider these things, the more you will learn to make allowance for the few unfortunate incidents that are attached to the peculiar but patriarchal institution under which you live, and to appreciate its benefits.

Convert. Bery true, Mister Shearer, I'se much for to tank de Lord. I know my Saviour, know He died for me. But I'se troubled in mind all same, Mister Shearer. What for Jesus say, "What God hath jined togeder, let no man put 'sunder," if Massa hev power to put wife 'sunder from husban', and husban' from wife, and parent from chil'rn, and chil'rn from parent? Dat 'cordin' to Jesus' law, Mister Shearer?

Minister. Cæsar, you are contentious. If you have such scruples, I do not know how you are to get through life. If you are ordered to do anything which you feel to be clearly wrong, you may on your own responsibility abstain from doing it, just as the Apostles did, when they were scourged like so many poor slaves for persisting to preach Christ, because they felt they "ought to obey God rather than man."

Convert. I'se known one, two, tree niggers flogged for preachin' Christ, Mister Shearer. Dey was right den, Mister Shearer, was dey, in not obeyin' dere Massas?

Minister. I cannot say. My dear Cæsar, it is not every man that wishes to preach Christ who is called to do so. The probability is, that their masters knew much better than they whether they were likely to have a call or not.

Convert. Jim Buckley, he flogged two, tree time for preachin', when Mister Buckley forbid him. Dat call 'nuff, Mister Shearer?

Minister. Cæsar, I am not here to argue, but to save souls. Always bear in mind the text, "Be obedient to your masters in fear and trembling." Remember, therefore, that in any but the plainest cases it must be safer for you before God to obey. That is your clear duty anyhow, however doubtful your course may be in other respects.

Convert. 'Pears to me de Apostles tink oder-wise.

Minister. Don't be so presumptuous as to compare inspired Apostles with ignorant African slaves.

Convert. Bery true, Mister Shearer. I'se awful ig'rant. Want learn, want learn bery much.

Minister. A very proper feeling, Cæsar. Being so ignorant, you ought therefore to listen to those who are wiser than you, and who are set over you for your pastors and teachers, and who have searched the Scriptures through and through to instruct others.

Convert. Ah, Mister Shearer, I'se much troubled 'bout 'noder ting. Text say, "Search de Srip-ters." What for I not 'lowed search? What for I not 'lowed read God's Word?

Minister. Because you are not fit to understand it by yourself. Do you remember what I read to you one day from the Acts of the Apostles, how the Ethiopian eunuch, who was a very great man under Queen Candace, asked of Philip, "How can I understand God's Word, except some man should guide me?" And can you expect to understand Scripture without a guide, even if taught to read it?

Convert. I'se like to try, Mister Shearer. I lub de word of de Lord. Ebry nigger no hev Philip de Deacon to help him. P'raps if him taught read, de blessed Spirit Hissell might teach de poor nigger some. You know John Guinea-coast, Mister Shearer? Him of de "Wanderer"?

Minister. I know the man you mean. A native African, full-blood.

Convert. He say dat on Guinea coast Mish'ry teach de African niggers read de Scriptor in dere own tongue. Dat true, Mister Shearer?

Minister. I believe it is, Cæsar.

Convert. Dat right, Mister Shearer?

Minister. I suppose it is.

Convert. What for de African nigger taught read de Scriptor, and de Amer'can nigger not taught read? Dey less ig'rant dan us, Mister Shearer?

Minister. Less ignorant! poor degraded heathen savages, full of the most barbarous superstitions and vices! Ah! Cæsar, you should indeed thank God for having in His divine Providence brought your race to this Christian country!

Convert. If dey more ig'rant and 'graded dan us, and us too 'graded and ig'rant to read Scriptors, what for Mish'rics teach dem, Mister Shearer?

Minister. Cæsar, you must overcome this disputations, almost rebellious temper of yours. It is no business of yours whether the Missionaries on the coast of Africa do right or wrong in teaching the heathen natives to read the Scriptures. If it be right, it does not follow that it would be right here; if it be wrong, it is not for you to judge them. Do your duty in the station of life wherein it has pleased God to call you; pray God to give you grace to obey your masters according to the flesh, to love your wife, and to bring up your children in the nurture and admonition of the Lord.

Convert. Ah, Mister Shearer, dat 'noder trouble. I'se tried to bring up de chil'rn right way, Mister

* A celebrated slaver, which landed Africans on the Southern coast in defiance of the law.

Shearer. I'se had thirteen chil'rn. Six die small piccaninny, praise de Lord. One taken from me by Massa when piccaninny, for to gif young Massa Tom. Yer know Massa Tom, Mister Shearer. He teach my Joe to cuss and to swear and to drink; he flog him for noting, and make shockin' bad liar. Joe now rascal nigger, quite,—sure he go to hell. Den Susy,—she pretty, she good, like little angel. Massa Smith, de overseer dat is dead, he see her, he tak her 'way. I'se half mad dat time, Mister Shearer. I go to Massa and 'plain. He laugh; Massa Smith, he flog me. Massa Smith, he bad man; make my Susy bad woman. I'se afeerd she go to hell too, Mister Shearer. Den, to spite me, when I go 'plain to Massa 'bout cross Nan, Massa Smith he sell off to South de tree next piccaninny, wid Nan, and I'se left widout chil'rn 'cept de two rep'bates. Since den, I'se two more chil'rn, one white nigger gal, dat is Flory, by yellor Nell (she no my own chile, but I lub her all same like de fruit of my loins, and poor Nell dead now, yer know); and de oder day, I hear ole Rose—Massa's Rose,—she allers hated Nell,—I hear her say to Massa, dat Flory fetch good price in town; and de Lord help her den, Mister Shearer! And my youngest boy Bill,—what sall I do if him taken too, Mister Shearer?

Minister. Let us hope that he will not be, Cæsar.

Convert. Yer see, Mister Shearer, 'noder ting allers trouble me. De blessed Jesus he say, "Whatsoever ye would dat men do unto you, so do to dem." Now Massa, he keep Missus to hisself, he keep him buckra chil'rn till some years, den 'caus dey is ig'rant, he send dem to school. But de nigger men, de nigger women, de nigger piccaninny, he sell dem South when him want money. He no send nigger piccaninny to school, do dey be neber so ig'rant; if ole nigger try go school, he flog him. Massa no would like dat hisself, or Missus, if de young Massas was sold, or dat de young Massas was flogged 'cause dey want learn. What for he no do to niggers as him be done by? Jesus' law no hold good for Massas, Mister Shearer?

Minister. Cæsar, have you always done to others as you would be done by?

Convert. No, Mister Shearer, de Lord forgib me! But I'se tried to, many a time. I teach de young Massas all dat poor nigger know; teach dem fish, and shoot wid arrow, and make net, and find honey and 'possum. Time 'as young Massa Tom lost, I'se out tree days searchin' in swamp, and last bring him back. I bring back young Massa Tom—what for ole Massa seil my piccaninny?

Minister. Cæsar, remember the word, "Judge not, that ye be not judged." Any how, surely it must be matter of thankfulness to you to have brought up your children, as you say, in the fear of God, whatever may happen to them.

Convert. Ah! Mister Shearer, I no care so much for de boys, I care for de gals. God forgif me; 'pears to me if gal forced to be bad woman in bad

house down South, she better headen altogeder. Don't de Scriptor say, "De servant dat know not Lord's will and c'mit tings wordy stripes sall be beaten wid few stripes?" Tink it right dat Massa hev power to force poor nigger gal to 'come bad woman, Mister Shearer?

Minister. Come, Cæsar, don't be always tormenting your poor brain with questions which are too deep for you.

Convert. Ah! Mister Shearer, if dat pretty Missie Ad'line of yours forced by Massa to 'come bad woman down South, you no help axing queshuns. Dere be many queshuns to ax in dis bad world, Mister Shearer.

Minister. My poor Cæsar, that is all the greater reason for fixing your heart upon a better one. "Set your affections on things that are above," you know.

Convert. Jiss so, Mister Shearer, bress de Lord. Dere be massas and slaves in heav'n, Mister Shearer?

Minister. No;—no more slavery there, Cæsar.

Convert. Dey all massas dere, Mister Shearer, or all slaves?

Minister. Neither masters nor slaves, Cæsar; all free.

Convert. Den freedom heav'nly ting, Mister Shearer?

Minister. You are getting out of your depth again, Cæsar.

Convert. P'raps de Lord may teach me swim in deep waters, bressed be His name. Don't de Lord Jesus say, "De truth sall make you free?" If de truth make free, den de lies make slave.

Minister. How now, Cæsar? Has some fanatical abolitionist been poisoning your mind?

Convert. Bress de Lord, no. I'se neber seen ab'litionist. De Lord Jehovah, He my ab'litionist. He bring Him people Israel out of de land of Egypt, out of de house of bondage. De Lord Jesus Christ my ab'litionist. He sent to preach de Gospel to de poor, to preach deliverance to de captives, to set at liberty dem dat are bound. De Holy Ghost my ab'litionist, for where de Spirit of de Lord is, dere is lib'ty. De Lord hev great black people in dis country, Mister Shearer. Dey cry to Him dis long time in bondage. Dey 'xpec' He come soon, bery soon, to break dere chains.

Minister. Cæsar, what do you mean by this revolutionary talk? What would your master say if I were to tell him of it?

Convert. Quench not de spirit, Mister Shearer. S'pose Massa flog me or kill me, I tell truth all de same.

Minister. For this once, I will not inform against you. But I warn you that you are an ungrateful, discontented fellow, who ought never to have been received to church membership, and I certainly shall not admit you to the Lord's supper till you show signs of a better mind.

Convert. Bress de Lord! P'raps He gif me better c'mmunion, Him and me togeder.

REMINISCENCES OF A HIGHLAND PARISH.

BY THE EDITOR.

CHAPTER XVI.—THE SPIRIT OF ELD.*

In the olden time, there lived at the back of Beinn nan Sian, a goat-herd, named Gorla of the Flocks, who had three sons and one daughter. The herding of the kids was entrusted to her, the Darling of the Golden Hair. On one of the days when she was on the breast of the hill herding the kids, a fleecy wreath of mist, white as the snow one night old, twined round the shoulder of the hill, encircled the solitary darling, and she was seen no more.

At the end of a year and a day, Ardan, the eldest son of the herdsman spoke, saying :

“A year past to-day, my sister, the Darling of the Golden Hair, departed, and it is a vow and a word to me that I will not rest, or stay, by night or by day, until I trace her out, or share her lot.”

“If thou hast so vowed, my son,” says the father, “I will not hinder thee; but it would have been becoming, ere the word had gone forth from thy mouth, to have asked thy father’s consent. Arise, wife; prepare a cake for thy eldest son. He is going on a long journey.”

His mother arose, and baked two cakes, a large and a small one.

“Now, my son,” says she, “whether wilt thou have the large cake with thy mother’s displeasure for going away without leave, or the small one with her blessing?”

* Mr. Campbell, in his very able preface to his interesting collection of popular Highland Tales, says, p. 20: “Dr. M’Leod, the best of living Gaelic scholars, printed one old tale somewhat altered with a moral added in his ‘Leabhar nan Cnoc,’ in 1834; but even his efforts to preserve and use this lore were unsuccessful;” and at p. 28 the same accomplished writer says: “The old spirit of popular romance is surely not an evil spirit to be exorcised, but rather a good genius to be controlled and directed.” Surely stories in which a mother’s blessing, well earned, leads to success; in which the poor rise to be princes, and the weak and courageous overcome giants, in which wisdom excels brute force—surely even such frivolities as these are better pastime than a solitary whisky bottle, or sleep in grim silence.

The following tale is that referred to in the above words. It is not an actual transcript of any individual tale, but it embodies “the spirit of romance,” and presents an example of the general tone and teaching of the old Highland tale, most faithfully and vividly. In Gaelic it possesses all the freshness and gracefulness which the late Dr. M’Leod’s intimate knowledge of the Highland character, or rather his own thoroughly Celtic heart and imagination, along with complete mastery of the language, enabled him to give. Very much of its life-like character is necessarily lost in the translation to a foreign tongue; but imperfect as it is, it may prove interesting to the thinking English reader, as a specimen of the style of teaching which served to nourish and strengthen among the Highlanders those qualities which, even their enemies being judges, they possessed in a very eminent degree—reverence for parents, hospitality, fidelity, and fearlessness.

“Mine be the large cake,” said he, “and keep the smaller one with thy blessing for those who prefer it.”

He departed, and in the winking of an eye he was out of sight of his father’s house. He plashed through every pool, strode over every knoll. He travelled swiftly without sparing of limb, or thigh, or sinew. He would catch the swift March wind which was before; but the swift March wind which was after him could not catch him. At length hunger seized him. He sat on a gray stone to eat the large cake, and the black raven of the wilderness sat on a snout of rock above him.

“A bit, a bit for me, Son of Gorla of the Flocks,” says the raven.

“Nor bit, nor sup shalt thou have from me, thou ugly, black, grim-eyed beast. It is little enough for myself,” says the Son of Gorla.

When this was over the edge of his chest, he again stretched his limbs. The swift March wind before him he would catch, but the swift March wind after him could not catch him. The moss shook as he drew near it. The dew fell off the branchy brown heath. The moor-cock flew to his most distant retreat. The evening was beginning to darken. The black gloomy clouds of night were coming, and the soft silken clouds of day were departing. The little bright-coloured birds were seeking rest, at the foot of each bush, or in the top of each branch, amid the most sheltered nooks which they could find; but not so was the Son of Gorla.

At length he saw afar off a little house of light; but though it was a long way off, he was not long in reaching it. When he entered, he saw a powerful-looking, stout, old gray-headed man stretched on a long bench on one side of the fire, and on the other a handsome maiden combing her waving tresses of golden hair.

“Come forward, youngster,” says the old man. “Thou art welcome: often has my bright lamp attracted the traveller of the mountains. Come forward. Warmth, and shelter, and whatever comfort is in the dwelling on the hill, are thine. Sit down, and, if it be thy pleasure, let thy news be heard.”

“I am a fellow in search of employment,” says the herdsman’s eldest son. “The bright lamp of thy dwelling drew me to seek warmth and shelter for the night.”

“If thou remain with me for a twelvemonth to herd my three dun hornless cows thou’lt receive thy reward, and shalt have no reason to complain.”

“I would not so advise him,” says the maiden.

“Advice unsought was never esteemed,” says the Son of Gorla. “I accept thine offer, sir: in the dawn of the morning I am thy servant.”

Before the belling of the deer in the forest the Maiden of the Golden Hair and the silver comb milked the three dun hornless cows. "There they are to thee," says the old man; "take charge of them, follow them, do not turn or hinder them. They will seek their own pasture; allow them to travel as they choose; keep thou behind them, and whatever comes in thy way do not part with them. Let thine eye be on them, on them alone: and whatever else thou seest or hearest, give not an eye to it. This is thy duty; be faithful, be diligent, and trust my word; thy diligence shall not be without reward." He went in charge of the cattle, but he was not long away when he saw a golden cock and a silver hen running on the ground before him. He chased them: but though every now and then they were almost in his grasp, it defied him to lay hold of them. He returned from the vain pursuit, reached the place where the three dun cows were feeding, and began again to herd them; but he was not long after them when he saw a wand of gold, and a wand of silver, twisting and turning on the plain before him, and he immediately set off after them. "It cannot be but that these are easier to catch than were the birds which deceived me," he said; but though he were chasing them, still he could not catch them. He betook himself again to the herding, and saw a grove of trees on which grew every kind of fruit that he had ever seen, and twelve kinds which he had never seen. He began to fill himself with the fruits. The dun cows set their faces homewards, and he followed them.

The Maid of the Golden Hair milked them; but instead of milk there came only a thin watery ooze. The old man understood how the case stood.

"False and faithless fellow," said he, "thou hast broken thy promise." He raised his magic club, struck the young man, and made a stone pillar of him, which stood three days and three years in the dwelling of the hill as a memorial of breaking the word and covenant of engagement.

When another day and another year had passed, red *Ruais*, Gorla's second son said, "There are two days and two years since my lovely sister departed, and a day and a year since my big brother went off. 'Tis a vow and a word to me to go in search of them, and to share their lot. Like as it happened to the elder brother it happened in every respect to the second, and a stone pillar he is in the end of the dwelling on the hill, as a memorial of falsehood and failure in covenant.

A year and a day after this, the youngest son, brown-haired, pleasant Covan, spoke:

"There are now three days and three years since we lost my beautiful sister. My beloved brothers have gone in search of her. Now, father, if it please thee, permit me to go after them, and to share their lot, and let not my mother prevent me. I pray for your consent. Do not refuse me."

"My consent and my blessing thou shalt have, Covan; and thy mother will not hinder thee."

"Shall I," said the mother, "prepare the large

cake without my blessing, or the small cake, with the wish of my heart, and the yearning of my soul?"

"Thy blessing, mother, give thou unto me, and much or little as may be given along with it, I am content. The possession of the whole world would be a poor inheritance with thy curse upon it. A mother's blessing 'tis I who will not dispise."

Brown-haired Covan, the son of Gorla, departed, and as his father and mother were disappearing in the mist, his heart was full. He travelled with speed; he reached the wood of roes. He sat under a tree to eat of the cake which his gentle mother had baked for him.

"A bit, a bit for me," says the black raven of the wilderness. "Covan, give me a bit, for I am faint."

"Thou'lt get a bit, poor bird," says Covan. "It is likely thou art more needful than I. It will suffice for us both. There is a mother's blessing along with it."

He arose and went on his way. He took shelter with the old man, and went to herd the three dun cows. He saw the golden cock and the silver hen, but he turned away his eyes; he followed the cattle. He saw the wand of gold and the wand of silver; but he remembered his promise, and did not go after them. He reached the grove, and saw the fruit that was so fair to the eye; but he did not taste of it. The three dun cows passed the wood. They reached a wide moor where the heather was burning. They went towards it. The flames were spreading, threatening to consume them all; but the cows entered into the midst of them. He did not attempt to prevent them, for such was his promise. He followed them through the fire, and not one of the hairs of his head was singed. He saw after this a large river which was swollen with the flood of the mountains. Across it went the dun cows, after them fearlessly went Covan. A short while after this, on a green plain was seen a beautiful house of worship, sheltered from the wind, brightened by the sun, from which was heard the melody of sweet songs and of holy hymns. The cattle lay down on the ground, and brown-haired Covan went in to hear the tidings of good. He was not long listening to the message of gladness, when there rushed in a light youth with raised look and panting breath to tell him that the dun cows were in the corn field, and to order him to drive them out.

"Depart from me," says Covan. "It were easier for you, my good fellow, to drive them out yourself, than to run thus with panting breath to tell me. I will listen to the pleasant words."

A very short time after this the same youth came back, excitement and wildness in his eye, his chest panting.

"Out, out, Son of Gorla of the Flocks, our dogs are chasing thy cows. If thou be not out immediately thou shalt not get another sight of them."

"Away, good fellow," said brown-haired Covan.

"He followed them through the fire, and not one of the hairs of his head was singed."

"It were easier for thee to stop thy dogs than to come thus panting to tell the tale to me."

When the worship was over, brown-haired Covan went out, and found the three dun cows reposing in the very place where he had left them. They rose, went on their journey homewards, and Covan followed them. He had not gone far when he came to a plain so bare that he could see the smallest pin on the very ground, and he noticed a mare with a young frisking foal pasturing there, both as fat as the seal of the great ocean. "This is wonderful," says brown-haired Covan. Very shortly after this he saw another plain, with rich abundant grass, where were a mare and a foal so very lean that a shoemaker's awl would not stand in their backs. After this was seen a fresh-water lake, to the upper end of which was travelling a numerous band of youths, bright and buoyant, fair and happy. They were going with joyful songs to the land of the Sun, to dwell under the shade of trees whose leaves were most fragrant. He heard the murmur of the brooks that flowed in the land of the Sun—the songs of the birds—the melody of strings which he knew not, and of musical instruments of which he had never heard. He perceived other bands of miserable persons, going to the lower end of the lake—to the land of Darkness. Horrible was the scream that they raised, woful was the sad wringing of their hands. Mist and dark clouds were over the land to which they were travelling, and Covan heard the muttering of thunder. "This is truly wonderful," he said; but he followed the three dun cows.

The night now threatened to be stormy, and he knew not of house or of shelter where to pass it. But there met him the Dog of *Maol-mòr*, and no sooner met, than this liberal giver of food invited him, not churlishly or grudgingly, but hospitably and heartily, to lay aside three-thirds of his weariness, and to pass the whole night with him. He was well and carefully tended by the Dog of *Maol-mòr* in a warm cave, where no water from above or below came near them,—if this would suffice him with sweet flesh of lamb, and of kid, without stint or scant, and in the morning abundance for the day's journey.

"Now farewell to thee, Covan," says his host. "Success to thee; wherever thou goest may happiness be always thy companion. I offered hospitality, and thou didst not spurn it. Thou didst pleasantly and cheerfully accept what I offered; thou didst pass the night in my cave; thou didst trust in me; thou hast made fast my friendship, and thou shalt not be deceived. Now attend to my words: if ever difficulty or danger overtake thee, whenever speed of foot and resolute action may deliver thee, think of the Dog of *Maol-mòr*, wish for him, and I will be by thy side."

He met with the like friendship and liberality on the following night from the renowned giver of food, the active, far-travelling black raven of *Corri-nan-creag*, on whom sleep never settled, nor

sun ever rose, until he had provided what was enough for himself and for him who came and went. Short-hopping, wing-clapping, he led the way for Covan through the goats' track to a hollow under a dry snout of rock, where he asked him to lay aside three-thirds of his weariness, and to pass the whole night with him. He was well cared for that night, if mutton and venison would suffice; and on going away in the morning, he said to him, "Covan, son of Gorla of the Flocks, take with thee what thou needest. The stranger's portion I never missed, and remember my words. If ever you happen to be in peril or hardship, where a strong wing, and courage which fails not, will avail thee, remember me. Warm is thy breast, kind is thine eye. Thou didst confide in me; thou hast ere this fed the black raven of the wilderness. I am thy friend—trust in me."

On the third night he met with companionship and hospitality as good from the *Doran-donn*, the sharp-eyed, the skilful, active seeker, who would not be without food for man or boy while it was to be found either on sea or land. Though in his den were heard the mewing of wild cats and the snarling of badgers, he led Covan—without awe, or fear, or starting—firmly, steadily, straightly to the mouth of a cairn, where he asked him to lay aside three-thirds of his weariness, and to pass the whole night with him. Well was he entertained that night by *Doran-donn* of the stream—the constant traveller—if fish of every kind better than another would suffice, and a bed—dry, comfortable, and soft—of the cast-wave of the highest spring-tide, and of the *dilse* of the farthest out shore.

"Rest for the night, Covan," said he. "Thou art most heartily welcome. Sleep soundly; the *Doran-donn* is a wakeful guard."

When day came Doran escorted Covan for a part of the way.

"Farewell Covan," said he. "Thou hast made me thy friend; and if ever difficulty or danger overtake thee, in which he who can swim the stream and dive under the wave will avail thee, think of me,—I will be at thy side."

Covan went forward and found the three dun cows in the hollow where he had left them, and by the close of that same evening he and they reached the dwelling on the hill safe and sound. Welcome and kindness awaited him in the house when he entered, and he was entertained without stint or grudge. The aged man asked how it had fared with him since his departure, and he began to declare it. He praised him for not having meddled with anything which he had seen until he reached the house of the sweet hymns, because those were only a vain show to deceive him.

"I will, after this, open to thee the mystery of the matter, and explain the meaning of the sights which caused thy great wonder," says the old man. "Meantime, ask thy reward, and thou shalt have it."

"That will not be heavy on thee, I hope," says

Covan, "and it will be abundant for me. Restore to me in life and health—as they were when they left my father's house—my beloved sister and brothers, and piece of gold or coin of silver Covan wishes not."

"High is thy demand, young man," said the aged. "There are difficulties between thee and thy request above what thou canst surmount."

"Name them," says Covan, "and let me encounter them as I best may."

"Hearken, then. In that lofty mountain there is a fleet roe of slenderest limb. Her like there is not. White-footed, side-spotted she is, and her antlers like the antlers of the deer. On the beautiful lake near the land of the Sun, there is a duck surpassing every duck—the green duck of the golden neck. In the dark pook of *Corri-Buy*, there is a salmon white-bellied, red-gilled, and his side like the silver of purest hue. So, bring home hither the spotted white-footed roe of the mountain, the beautiful duck of the golden neck, and the salmon which can be distinguished from every salmon,—then will I tell thee of the sister and brothers of thy love."

Off went brown-haired Covan. The Maid of the Golden Hair and the Silver Comb followed him.

"Take courage, Covan," says she; "thou hast the blessing of thy mother and the blessing of the poor. Thou hast stood to thy promise; thou hast rendered honour to the house of sweet hymns. Go, and remember my parting words. Never despair."

He sought the mountain; the roe was seen—her like was not on the mountain; but when he was on one summit the roe was on another, and it was as well for him to try to catch the restless clouds of the sky. He was on the point of despair when he remembered the words of the Maid of the Golden Hair: "Oh, that I now had the fleet-footed Dog of *Maol-mòr*," said he. He no sooner spoke the word than the good dog was by his side, and after taking a turn or two around the hill, he laid the spotted roe of the mountain at his feet.

Covan now betook himself to the lake, and saw the green duck of the golden neck flying above him. "Oh, that now I had the black raven of the wilderness, swiftest of wing, and sharpest of eye," says he. No sooner had he spoken thus, than he saw the black raven of the wilderness approaching the lake, and quickly he left the green duck of the golden neck by his side.

Then he reached the dark deep pool, and saw the silvery, beautiful salmon, swimming from bank to bank. "Oh, that I now had the *Doran-down* that swims the streams and dives under the wave," says Covan. In the winking of an eye, who was sitting on the banks of the river, but *Doran-down*? He looked in Covan's face with kindness—he quickly went out of sight, and from the dark deep pool he took the white-bellied salmon of brightest hue and laid it at his feet. Covan now turned homewards, and left the roe, the duck, and the

salmon on the threshold of the dwelling on the hill.

"Success and gladness be with thee," said the aged man. "He never put his shoulder to it who did not throw the difficulty over. Come in, Covan; and when the Maid of the Golden Hair has milked the three dun cows, I will open the mystery of the matter to thee, and we will draw wisdom from the history, and the journey of Covan."

THE MYSTERY OF THE TALE OPENED.

"Thou didst not leave the house of thy father and of thy mother without their consent. The blessing of father and mother was with thee, Covan. Thou didst not refuse a morsel to the hungry in his need. The blessing of the poor was with thee, Covan. Thou didst make an engagement: thou didst promise, and didst fulfil, and the reward of the true is with thee. Thou didst see the golden cock and the silver hen—the *glamour* which gold and silver cast on the sight. Thou didst remember thy promise, and didst walk on the path of duty. Happiness attended thee, Covan. The tempter tried thee again with the wand of gold, and the wand of silver which appeared easier to grasp. Thou didst remember thy promise and didst follow the cattle. When he failed to lead thee astray by gold and silver, he tried to deceive thee with the fair fruit of the grove. He set before thee every fruit ever seen by thee, and twelve which had not been seen, but thou didst turn away from them. He then tried thy courage by means of the fire and the flood; but thou didst pass through them on the path of duty, and didst find that they were as nothing. Thou didst hear the voice of the holy hymns, and the sound of the sweet songs. Thou didst go in, doing well. But even thither the tempter followed thee. Good was thy answer to him. 'I will listen to thee truth.' Thou didst see the bare pasture with the high bounding steed and the frisking foal, glad in the midst of it. Thus often, Covan, is it in the world. There is scarcity in the house of hospitality; but peace, gladness, and increase are along with it. Thou didst see the abundant pasture, and every four-footed creature on it near dying from leanness. Thus, in the world, is the house of the penurious churl. There is abundance in it; but he has not the heart to use it; there is want in the midst of plenty. There is a worm gnawing every root, and every flower is withered. Thou didst see the beautiful lake, and didst hear the glad notes of the happy bands who were travelling to the land of the Sun. These are they who attended to my counsel, and were wise in their day. Thou didst hear the painful wailing of those who were going to the land of Darkness. These were the people without understanding or wisdom, without truth or faithfulness, who made light of every warning, and now they lament miserably. Thou didst not despise the kindness or hospitality of the poor. Thou receivedst frankly what was offered thee in friendship. Thou didst not shame the

needy. Thus thou didst bind their attachment to thee. Thou didst stand to thy promise. Thou didst follow the cattle. Thou hast earned thy reward. I trusted to thy courage. Difficulties did not deter thee. Putting thy shoulder to them, thou didst overcome them. Thou didst never despair. Thou didst also find that the Dog of *Maol-mòr*, the Black Raven of the Wilderness, and the Brown Doran of the Stream, were not without value.

"And now, Covan, son of Gorla of the Flocks, hearken to me: 'Restore to me,' thou sayest, 'my beautiful sister and beloved brothers, whom thou hast under the power of witchcraft!' What is witchcraft, Covan? The false contrivance of the deceiver—the vain excuse of the coward—the bugbear of fools—the terror of the faint-hearted. What never was, is, nor will be. Against the dutiful and the upright there is neither witchcraft nor wile. Thy sister, the Darling of the Golden Hair, thou shalt get home with thee; but thy brothers, though they are alive, laziness and unfaithfulness have made wanderers without home or friend. Go thou to thy father's house, Covan, and treasure in thy heart what thou hast seen and heard."

"And who art thou that addressest me?" said Covan.

"I am the Spirit of Eld—the Voice of Age," says the old man. "Fare thee well, Covan. The blessing of the aged go ever with thee."

CHAPTER XVII.—STAFFA TOURISTS FORTY YEARS AGO.

UNTIL within the last forty years the West Highlands was a land of mystery to the London summer tourist. Dr. Johnson had indeed penetrated those fastnesses, and returned in safety to London, not only without having been robbed, or obliged to wear a kilt and live on whisky and oatmeal porridge, but with a most flattering account of the people, and describing the clergy and gentry as polite, educated, and hospitable. Sir Joseph Banks and Mr. Pennant had brought into notice, and admirably delineated, the marvellous Island of Staffa, not far from Inchn Kenneth and Iona, both of which islands were visited by Johnson, and excited his enthusiasm,—the one for its Laird, and the other for its memories of early piety. But when Scott adopted the Highlands as the subject of romantic story and song, investing its scenery, its feudal history, its chiefs, clans, old traditions, and wild superstitions, with all the charm of his genius, then began a new era of centered comfort in every spot which his magic wand had touched. The Lord of the Isles, and the Lady of the Lake, became the pioneers of the tourist. Good roads took the place of the old bridle-paths winding among the heather. Coaches-and-four bowled through wild passes where savage clans used to meet in deadly combat. Steamers foamed on every Loch and banished the water kelpies. Telescopes were substituted for second sight. Waiters with white neckcloths and white towels received the travellers, where red deer used to

sleep undisturbed. The eagles were banished from the mountains, and "Boots" reigned in the valleys.

Forty years ago steamers had not mingled their smoke with the mists of the hills, and the Highlands had not become common as Vauxhall to the Londoners. It was then a land of distance and darkness. No part of Europe is so unknown now to the fireside traveller as the Hebrides were then. With the "Foreign Bradshaw" and "Murray," any man now can so arrange his journey as to fix the day on which he will arrive, and the hour at which he will dine in any town from the Baltic to the Mediterranean. As he sits in his club in London, he notes the minute when his train will arrive at Moscow or Milan, and almost the day when his steamer will land him at New York, and when he can reach the Prairies of the far West, or gaze on the Falls of Niagara or St. Anthony.* The Hebrides are therefore now at his door. He dines one day in London, and sups the next beneath the shadow of Ben Lomond or Ben Cruachan. But at the time I speak of, the journey northward to Glasgow by coach or post-horses was tedious, tiresome, and expensive. When the Highlands proper were entered upon, at Dumbarton or Callander, then, between bad roads and peat-reeked pothouses, rude boats without comfort, and a crew innocent of English, with all the uncertainties of tides, squalls, heavy seas, and heavy rain, a tour among the islands of Scotland was far more hazardous than one now to India or America.

The continent of Europe was then still more difficult of access, and during the wars of Napoleon, was well nigh inaccessible. Accordingly such persons as loved adventure and had time and money at their command, and who, above all, could obtain good letters of introduction, selected a Highland journey, with Staffa as its grand termination.

Alas! for the hospitable Highland mansion which happened to be situated at a convenient resting-place for the tourist *en route* to some spot of interest! There was then prevalent among southern tourists a sort of romantic idea of the unlimited extent of Highland hospitality, and of the means at its command. It was no unusual occurrence for the traveller to land at any hour of the day or night which winds, tides, or boatmen might determine; to walk up to the house of the Highland

* Even while we write, the following paragraph appears in a London paper:—"Think of an excursion party which is to start from Plymouth on board a luxuriously appointed steamer, and which is to visit Lisbon, Gibraltar, Naples, Palermo, Malta, Athens, Constantinople, Balaklava, Sidon, Alexandria, Algiers, and Tangiers, before returning to the port of departure! All this is to be accomplished in two months. The time of putting in at each new port, and the length of stay to be made there, are set out in the advertisement as specifically and formally as the arrivals and the stations on a railway time-table. Every luxury, we learn, is to be provided for the travelling company, and they are not supposed to be under any expense while on shore, as the steamer is to be their floating hotel all the time."

gentleman; to get a dinner, supper, and all, plentiful and comfortable; to retire to bed, without a thought where the family had packed themselves (so that the travelling party might have accommodation); and finally to obtain next day, or, if it rained, days after, carts, horses, boats, men with baskets of provisions, crammed with roast fowls, cold lamb (salt never forgot), cold salmon, grouse, milk, brandy, sherry, and bottles of whisky. The potato digging, the hay cutting, or the reaping of crops might be put a stop to; what of that? they are so hospitable in the Highlands! And then these summer visitants bade farewell with shaking of hands, and waving of handkerchiefs, and with the usual stereotyped hope expressed that, "should they ever come to England and visit Land's End, how glad, &c."—But the reception was nevertheless all put down to a *habit* of the country, a thing called Highland hospitality, something like speaking Gaelic, smoking tobacco, or wearing the kilt.

And I am compelled to acknowledge that the families who thus received and entertained strangers never looked on their doing so in that "light of common day" in which I cannot help placing these transactions. "What *can* the travellers do?" I remember well the lady of one of those hospitable houses saying when a large party of strangers had departed after a stay of several days, "There are no inns where they can put up, but those wretched holes. And then the travellers are so nice! It is truly delightful to meet with such well-bred, intelligent ladies and gentlemen—I would put myself to much more trouble to enjoy their society." And the young ladies of the family would chime in and declare that they had "never met sweeter girls than those Smiths, especially Caroline, and that they were so vexed when they went away,—and as for the young men of the party!" Here all the ladies were unanimous. The host was equally friendly—"I don't grudge my wine a bit," he would say to Mr. Smith. "I never met a better educated, scholarly man, nor one better informed." This is really a true picture of the feelings at the time with which those English travellers were received; for very few penetrated those recesses except the higher classes, or "well to do gentry," who had time and money at their disposal, and who had sufficient culture to love scenery for its own sake, and to appreciate the manners of the country, and cheerfully to accommodate themselves to its inconveniences.

One may be surprised to know how comforts were extemporised in those out-of-the-way places. The process was a very simple one. Large stores of groceries, and all the materials required for every after-dinner luxury except the dessert, were obtained periodically from Greenock or Glasgow. Bread was the chief difficulty; as baking wheat bread, strange to say, was an art never practised by Highland families. But they had all sorts of delicious hot *scones* made of flour, or barley-meal, in addition to crisp oatmeal cakes, while a loaf was

brought from Oban by Her Majesty's Post once or twice a week. Every other kind of food was abundant. As a Highland farmer once remarked, in pointing to his plentiful board, "We grewed all that on our own selves!"

As the tourist voyages through the Sound of Mull he can hardly fail to notice Aros Castle—unless he be reading, as some do, amidst the noblest scenery, a green or yellow-backed shilling novel. Aros was the landing-place in those old days for parties going to visit Staffa. A narrow isthmus of two or three miles of road here connects the Sound with an inland arm of the sea, on the other side of Mull, which leads out past Inchkeneth and Ulva, to the islands of Staffa and Iona. When these famous localities had to be approached by boats from Oban, it was necessary to take the safe and sheltered passage of the Sound, rather than to run the risk, whether from dead calm or wild storm, of attempting to sail outside of Mull with a bare rock only as the termination of the voyage. And here I am reminded—for all gossips like Mrs. Quickly are ever tempted to digress in the telling of their story—of the "tricks upon travellers" which those Highland boatmen were sometimes tempted to perpetrate. Between Oban and Mull there are several bad "tideways" which, in certain combinations of wind and tide, are apt to produce a heavy sea of a most dangerous kind to all except very skilled boatmen; sometimes putting even their skill to the severest test. One of the pilots of those famous wherries was nicknamed "Daring Calum," on account of the almost reckless boldness with which he undertook to steer his boat on the wildest days, when others, more prudent, would not venture to cross the stormy ferry to Mull. One of the fierce tideways on this passage was called "the dirks," from the figure of the waves which rose on every side, tossing their sharp heads in the sky. On one occasion when Calum was piloting a Staffa party through this wild and foaming tide, the spray of the waves flew over the bow and wet the passengers. A rival of Calum on board remarked to a companion, loud enough to be heard by Calum, "Bad steering that!" "Bad steering!" echoed Calum, with an angry growl. "There is no man living could carry a boat so dry through that wild sea; and if you think *you* can do it, come here and take the helm and try it!" The rival pilot thus challenged took the helm, and ordering the boat to be put about—after passing all the danger!—once more crossed the roaring tideway, which had thus necessarily to be crossed a third time before the boat could resume her voyage in the right direction! The poor passengers were of course ignorant of the cause of their prolonged misery amidst the salt sea foam. Nemesis at last overtook poor Calum;—for though he proved his superiority as a steersman on the occasion referred to, and survived his triumph thirty years, he was drowned at last.

Choosing the comparative safety of the inner passage, the travellers landed at Aros, crossed to the

opposite side, and there took a boat—with four stout rowers, or a sail, in case of wind—for Staffa, which was thus reached in five or six hours.

The first time we visited the famous island was by this route; and though we have gone to it by steamer several times since then, yet the impression made by the first visit remains, and can never more be obliterated—neither, alas! can the fear be renewed. We had time and quiet to enjoy the scene, without the screaming of steam-whistles or the impatient wrath of steam-engines, threatening to burst unless passengers rush on board at the fixed hour.

It was a glorious summer morning. We started about daybreak, with four Highland boatmen, capital rowers, capital singers of boat songs, and crack men when sail had to be carried, and when

“The wind blew loud, and the lift grew dark,
And gurlly grew the sea.”

We swept along the shore, and had full time to see and enjoy all the glories of the beach, its huge boulders, its deep black water shadowed by the beetling cliffs—with all the magnificent outlines of bold rugged headlands, fantastic rocks, and ever-varying “giant snouted crags;” with echoing caves, and secluded bays—until we at last glode into the great ocean, with its skyline broken by the Treshinish isles, the Dutchman’s cap, and the more distant Tyree. A long glassy swell heaved in from the Atlantic; flocks of all kinds of birds swam and dived, and screamed around us. At length came Staffa in solemn silence, revealing its own stately grandeur of pillared cave and precipice. Alone and undisturbed we listened to the music of the ocean in that marvellous temple not built with hands. There were no human beings there but the boatmen, and they seemed as natural to the island as the limpets on its rocks, or the brown tangle which waved among the waters that laved its sides. To see Staffa thus was like visiting a great cathedral for worship;—to see it with a steamboat company is like visiting the same cathedral desecrated by a public meeting!

But to return to Staffa tourists before steamboat days. There were four “Hospitable Houses” situated in this Mull transit, where persons with letters of introduction always put up. One was Mr. Maxwell’s, “the factor” or “chamberlain” for the Duke of Argyll, his house being close to the old Castle of Aros. The other, about a mile off, was Mr. Stewart’s, the kind-hearted proprietor of Achadashenaig—a title which no Englishman ever pretended to pronounce correctly. On the other side of Mull, and beneath Benmore, was Colonel Campbell’s, of Knock—himself a brave and distinguished old officer; and then, six miles nearer Staffa, was the most frequented of all, Ulva House, the residence of Mr. M’Donald, the laird of Staffa—the very impersonation of Highland hospitality.

There was one small inn on the Sound, “the Shore House,” which received all extras, including the

servants of those who were accommodated at Aros, and the neighbouring house of Acha—&c. When the travelling season commenced, the telescopes of these houses were busy in reconnoitring the white sails of boats coming from Oban. There were three well-known “wherries,” the “Iona,” “Staffa,” and “Fingal,” whose rig was familiar from afar. “I think that is a Staffa party!” was a remark which roused the household, and caused a group to gather round the telescope, as the distant white speck was observed advancing towards the bay. By-and-by a flag was discovered fluttering from the peak. It was the sign of a party; but coming to which house? Aros, Acha &c., or the inn?—or to cross the isthmus to Knock or Ulva? It was necessary to prepare for a possible invasion! The larder of Aros was therefore examined *in case*: bedrooms were put in order; innocent chickens, geese, ducks, or turkey poults killed; and preparations for every comfort set a-going. Mutton, lamb, fish, or game, were always ready. But the destination of the party could not possibly be discovered until at the door of Aros, which was nearest the point where all landed. Suddenly a group is seen approaching the door, near the old Castle; paterfamilias and his wife leading; sons, daughters, and servants following; with the luggage borne on the shoulders of four boatmen. Then the official rap at the door. Nancy, the girl, is dressed in her best, and “looks both neat and comely.” Host and hostess, backed by the young ladies of the family, are prepared with bow and curtesy, smile and welcome, to read the letter from the Duke of Argyll recommending Sir John This, or my friend Lord That, to the kind attention of his Grace’s viceroy; and soon all are settled down in comfort to rest for a few days ere they begin the voyage to Staffa under their host’s direction.

A pleasing remembrance of many of these visitors remained for life in the memories of their hosts, and in cases not a few, the visitors retained a grateful and equally long remembrance of their Highland friends. I remember well how the “factor” at Aros, who lived opposite the old mause—and with whom, as my maternal grandfather, I spent a part of my happy holidays for many a year—used to enumerate the names of those who had impressed him by their manners, their knowledge, their scholarship, or their wit. He was himself an excellent classic (to my grief when I wished to enjoy an idle holiday), and the visit of an Oxford or Cambridge man was always a delight to him. He had stories of many then beginning their travels, whose names have since become famous in the world. But he frankly confessed that Tom Sheridan, who accompanied the Lord Lorne of the day, was out of sight the pleasantest fellow he had ever met with. The visit was memorable from the number of bottles of old port which were consumed, and the late hours which for a series of nights were spent amidst songs and shouts of laughter. The factor declared that he could not have survived another

week of Tom, whose stories and witticisms became a large literary property to him in after years, and were often told after dinner to his guests.

When Walter Scott was expected to visit Mull, an intense anxiety was felt as to which of the houses would have the privilege of entertaining him. Scott was then known as the poet, not as the novelist; and was touring it in the Highlands with his young and most engaging wife. The factor, who was an enthusiast in ballad poetry, was sorely grieved when he saw the party pass his door on their way to Ulva House. But on Scott's return the factor had the happiness of having him under his roof for an evening. "Ha!" exclaimed Scott, on their meeting, "what puts a Maxwell and a Scott in this part of the world? We should meet, lad, on the Border!" That evening was also memorable in the history of Staffa parties.

I must not omit to record in passing the lines written by Scott, in the album of Ulva, on the Laird of Staffa—or "Staffa," as he was always called:—

"Staffa! king of all good fellows,
Well betide thy hills and valleys;
Lakes and inlets, steeps and shallows;
Mountains which the grey mist covers,
Where the chieftain spirit hovers,
Pausing as its pinions quiver,
Stretched to quit this land for ever!
May all kind influence rest above thee,
On all thou lov'st, and all who love thee:
For warmer heart twixt this and Jaffa,
Beats not than in the breast of Staffa!"

I quote from memory. But whoever possesses now that Ulva album must be able to select from its pages some memorial lines which would have some interest.*

Occasionally some rare specimens of the Cockney make their appearance in those parts. One instance of the credulity of the species may be mentioned, although to believe it seems to demand an almost

* The Ettrick Shepherd also left a memento in the album, but one less complimentary to the island than Scott's.

"I've roamed 'mong the peaks and the headlands of Mull,
Her fields are neglected, uncultured, and weedy,
Her bosom is dark, and her heaven is dull,—
Her sons *may* be brave, but they're horribly (?) greedy."

An indignant native thus replies—

"O Shepherd of Ettrick, why sorely complain,
Tho' the boatmen were greedy of grog?
The beauties of Staffa by this you proclaim
Were but pearls thrown away on a *Hogg*."

equal amount of credulity in the reader. A London citizen presented himself at Aros. On entering the room where the family were assembled, he paused, and looked with an expression of wonder around him; then, apologising for his intrusion, he begged permission to return with his travelling companion, just for five minutes, to see the house. The landlady of "The Shore House," the small inn where the astonished visitor "put up," heard him say to his friend as he addressed him in breathless haste, "I say, Dick, you must come with me instantly. I have got permission to bring you. We are quite mistaken about the people here, I assure you,—confoundedly mistaken! You will not believe me until you see it with your own eyes, but I was in a regular well-built gentleman's house, with carpets, furniture, a pianoforte, actually, and the girls dressed in nice white gowns!" It is a fact that these same travellers had brought red cloth, beads, and several articles of cutlery, to barter with the natives! They seemed to have consulted Cook's voyages as the only reliable book for informing them how to deal with savages.*

I have often to crave the reader's indulgence for inflicting my "auld lang syne" gossip on him. But these old travelling days belong to a past never to return; and those old kind-hearted hosts who made the tour easy and agreeable to many a happy family, and to many an invalid in search of health, have all passed away, and have left no representatives in their once hospitable homes. I like to record their names even in the most evanescent form.

* This reminiscence suggests an illustration of another kind of credulity which occurred in a Highland steamer a few years ago, and which is perhaps worth telling. A quiet man, very busy discussing a plentiful breakfast while passing Jura, was much bored by a London citizen, who asked questions without end on the most commonplace and uninteresting points connected with his journey. Just as our quiet friend was engaged upon some fresh herring, the citizen consulted him to explain the cause of the whirlpool which he was told was near Jura. "The whirlpool," replied his tormented informer, "is a great mystery. Even Sir Walter Scott was puzzled by it. Some people account for it by the arrangement of the rocks under water, some by the meeting of the tides, and others by the shoals of herrings. But I have heard scientific men affirm that it is chiefly owing to the suction of the hills called the Paps of Jura, and if you go on deck you may perhaps observe the phenomenon now; and I strongly advise you to go." "Really!" said the astonished citizen. "Ah—very odd—but—but, I don't see, at this moment, how what you say is possible. But I shall go on deck, and tell you the result of my observations." "Do, and please don't leave till I join you." "Thank you very much. I shall remain till you come."

MEDITATIONS ON PROVIDENCE.

BY THE DEAN OF CANTERBURY.

I.

WE speak and we write evermore of God's PROVIDENCE. We regard Him as ruling over the world and shaping all things after the counsel of His own will. This is our belief. But at the same time, we speak and we write evermore also of *man* as the moving cause of events and results in this world. If we do, or abstain from doing, this or that, we regard certain consequences, as sure to follow. And in common life we ordinarily act as if there were no power superior to ourselves to interfere with the course and the products of human actions. This is our practice. Now this belief on the one hand, and this practice on the other, are common to all orders and kinds of men in our Christian land: to the most devoutly religious, as well as to those whose religion sits most loosely upon them. We ordinarily speak and write, in our more serious moods, as if God were down on earth, walking among us, arranging and ordering everything: we ordinarily speak, write, and act, in the common affairs of life, I will not say, as if there were no God, but certainly as if He were at a distance from us, and did not meddle in human affairs.

The occurrence of such a diversity between men at one time and the same men at another, a diversity so universally found prevailing, and taken so much as a matter of course, naturally sets one thinking as to whether any reasonable account can be given of it, or whether it is quite unreasonable and blameable. And it is plain that this train of thought, if followed out, will take us over some considerable space, and cost us no little trouble. We shall find ourselves compelled to trace up some of those ideas, which we usually accept without inquiry, even to their very sources: and to give an account of some ways of speech and habits of action, which seem to us almost as instincts, born with us, and always found in us.

Notwithstanding, it does appear to me important, that such an inquiry should be undertaken. We live in days when many and many a talent is folded round and round with napkins, and buried deep in the earth: when many holy words, which ought to be full of stirring significance, have been sounding so long on the air, that they have become but as tinkling noises: when, to take another figure, every portion of our spiritual armour wants separately looking up, and burnishing, and oiling afresh, if it is ever to be used to any purpose.

Let us then meditate awhile on God's providence: on our ideas of it, as connected with the actions of men, and with our own course in life. And may His Spirit guide us aright.

It seems first requisite, that we should give some

account of our idea of God Himself, with reference to our main subject. We are apt to take for granted, that all is clear about the infinite power and capacity of God, without considering what a strange and wonderful thing it is that we are believing. The common, and the true idea of God is, that He knows and orders all things. But let us follow this out in our thoughts. All that we can conceive about a mind, and its knowledge, is derived from what we observe about our own minds, and the minds of other men. Now what is your knowledge, and what is mine? The merest imperfect fragment of what is to be known about even that little which falls under our own observation. When we take into account, on the one hand, our ignorance, our forgetfulness, our misapprehensions, —and on the other the number of things which we might know, but which escape us, and the number which, to make our knowledge worth anything, we ought to know, but cannot attain to, and then reflect, that of the sons of men, he who knows most is equally liable to these imperfections with him who knows least,—truly we must see that every thing we can conceive about an all-extensive and a perfect knowledge, must be delusive indeed, and short of any even the least adequate idea. God, we believe, knows all things. Now, let us try to realise such a kind of knowledge even within small limits. Suppose, to begin with very little, that any of us could retain in his mind, perfectly, and without fail, every thing that had come under his observation for a whole month, or week, or day. What an amazing mass of knowledge it would be. All the shifting thoughts that fitted through the mind—all the insignificant objects that passed before the eye—all the looks, and words, and doings, of his fellow men. And yet this is perfection only in one department of knowledge,—only in the power of retaining in the memory: and even this would be enough to weigh down and overbear the powers of any human mind. In the presence of such a supposition, we congratulate ourselves on our power of forgetting, and look on it as one of the best safeguards of our health and peace of mind. Yet in thinking of God, we are imagining to ourselves a Being in whose knowledge are absolutely abiding all things that ever were in this world, and, for aught we can tell, in myriads of worlds besides.

But again, let us vary our supposition, and try to conceive what it would be if any one of us knew every thing present around him. What would it be, for instance, if I knew all that was passing in that limited space which is before my eyes at this moment? Only try to realise such a thought, and it utterly baffles our conception. Take even one minutest portion of that space: it is filled with

air, whose composition it surpasses human science thoroughly to describe and account for: that portion of atmosphere is peopled perhaps with life so minute as to escape the subtlest instruments by which our eyes are assisted; or it is occupied by solid material, wood or stone, whose very texture is a mystery, in the one case of the special organised vegetable growth, in the other of the deposition of strata older than the system of nature under which we live. Or, for our supposition must extend even to this in order to be complete, the portion of space on which we look may contain that greatest of all mysteries for man to behold, the countenance of man: and then we must be able to read every one of its expressions, and to declare all the thoughts of which they are the signs. It seems to me that for any one man thoroughly and entirely to know the recesses of the mind of another, would be a weight of knowledge and anxiety sufficient to drive reason from its seat, and destroy the power of knowledge altogether. And yet when we conceive of God, we imagine a Being who knows absolutely all things that are: who penetrates every mystery, and before whom no secrets are hid: who knows the thoughts of all hearts: whose field of view is not one small portion of space, but the whole universe. If it would be more than man could bear, to be admitted into the recesses of another mind besides his own, what would it be to hold at once in knowledge the hidden thoughts of a whole family—a whole city—a whole nation—all mankind—the inhabitants, it may be, of millions of worlds? Yet this, and no less than this, must be true of God. No less, but much more than this: for to all this we must add the absolute knowledge of all things to come—the entire guidance and ordering of all things, from the greatest down to the most minute, in every place, and at every time.

Now I say these things about the knowledge of God, that I may make it appear, not how vast it is, far passing in comprehension anything of which we can form an idea (for this is not my present object), but that it is something, in its very kind and nature, different from that which we call knowledge. It is absolute and all-including. Not only all existing things, but also all sources and reasons of things, and all the issues and ends of things, are taken in by it. And again, it is not knowledge, as ours is, of that which is outside and independent of Himself. Whatever God knows, He also is Himself concerned with, and has the absolute disposal of. He is the centre of life, and of power: in Him all things live, and move, and have their being.

Now it must be evident, if we give thought to the matter, that we cannot expect to comprehend the sort of interference which knowledge like this exercises in human affairs. The whole subject is too vast for our grasp. We have no faculties with which to approach its consideration. It is totally unlike any case in our own matters, which one might at first sight be disposed to compare with it. Let us take one, and we shall see this. If a man

claims what we call previous knowledge of the way in which a course of events will turn out, it can only be from long exercise of his observation on similar occurrences; and thus is but a conjecture after all, more or less to be relied on, according to the amount of his experience, and the accurate exercise of his judgment. And after all, he is obliged to allow for all sorts of unlooked-for contingencies, which may throw out his calculation. In fact, such a claim, on such grounds, does not properly belong to man at all; still less does any control over those who act in any course of events. We may be, in some sense, controlled by other men: yet it is not because we are compelled to be obedient to their will, but, however far compulsion may seem to extend, it is, really, and ultimately, because we choose to be: because we see the necessity for so being obedient. Even the man whose power of action is most completely taken from him by the will of another,—even the prisoner in the dungeon, may die, when his tyrant would have him live: even the victim on the scaffold, over whom outward circumstances seem all-powerful, so that he must die, may rise in will and in word above them. It is plain, that we cannot compare for a moment such knowledge, or such power, with that all-embracing sovereignty of God, concerning which we are now treating. And what is the inference from that which has been said? Clearly, it seems to me, this: that we have no right to think of God's foreknowledge, and control of our ways and course of life, as we would think of the same in a fellow-creature: because the two are totally different in the most essential points. God's foreknowledge and control embraces all things at once. Every law which affects His creatures, and every capacity of choice and action on the part of any of His creatures, is included in that His foreknowledge and control, just as completely as the results of those laws and capacities. Our free will is just as much His appointment, as anything else which belongs to us: as our power, for instance, of breathing or walking. He knows beforehand how we shall exert it: but that foreknowledge of His does not fetter its exertion. We know that we do exert it, hour by hour; we feel that courses of action or inaction lie open to our choice. Nothing can ever rob us of this conviction. If we are constrained to do this, or not to do that, it is not, we know it is not, a power above us which forces us, but it is the guidance of our own judgment, the verdict of our own deliberation, the sense of our own interest, the appreciation of circumstances known and taken into account by ourselves: God being the appointer of those circumstances, and the appointer also of our being set to choose among them. It has ever seemed to me one of the most astonishing things, that any thinking persons should be found who deny the free will of man. For of all facts open and undeniable, this appears to me the most conspicuous, and the least able to be controverted. And hence it is, that, as I said in the beginning,

we ever speak and act, in ordinary life, on the full assumption of the exercise of this free will. All human affairs proceed on it. Without it, there would be no moral responsibility at all. No man would be accountable in the slightest degree for acts or words which were totally independent of his own choice. Without freedom of the human will, our teaching would be vain, and our faith would be vain also. What are the words of Scripture exhortation? "Behold I set before you this day life and death: therefore choose life, that it may be well with thee." Did not the Redeemer stand and invite all weary and heavy-laden to come to Him? Did He not, on the other hand, charge the Jews, as a fault, that they were not willing to come unto Him that they might have life? And when St. Paul used the strongest term he could use, and said, "The love of Christ constraineth us," did he not make this very constraint the result of our own deliberate judgment, and say, "The love of Christ constraineth us, because we thus judge, that if one died for all, then all died"? And we might go further, and say, If man were not free to be affected this or that way by considerations presented to him, why has the Spirit of God pleaded all these ages with sinful men? Why all this exhibition of God's love in order to move our love? We love Him, not because He compels us to love Him, not because we cannot help it, which would take all the reality out of love, but because He first loved us. He draws us with the cords of a man, His heart to our heart, for our good, and for His glory in our good. And the same thing which is true in our determinations about the most solemn things, is true also in all the ordinary matters of life. We act, and we are expected to act, as being free to choose our course of action. Hence comes, and hence properly and legitimately comes, that which we mentioned in the beginning, the universal habit of men, religious as well as irreligious, of going on in life and speaking and acting from day to day, as possessing this freedom, and, within certain limits, guiding themselves by it. If they did not, they would not be fit for the world's business, or the world's duties: they would in fact cease to be rational beings at all.

But we must not leave the matter here. We have, I think, to the minds of reasonable men, made clear one point; that, our own free will being a plain fact, and as matter of fact not hindered from moment to moment by special interference from above, we are meant to act as being free, and to be invested with a responsibility which depends on that freedom.

And we have further shown, I trust, that the undeniable foreknowledge and sovereignty of God, being a matter so far passing our comprehension, and so far removed from anything which we know of in practical life, cannot be, and ought not to be, brought in as a disturbing element in our ordinary reasonings and conclusions on matters presented to us in life.

I said, we must not stop here. For, if we did,

there might appear to be some danger of our being understood to mean, that we ought to go our way in life without thinking of God, or acknowledging His guiding and superintending hand. And this would be the very contrary of that which we really do intend: having undertaken the consideration of this matter, in order that, if it may be, we may show how the recognition of God should be our constant safeguard and guide in life, and our greatest comfort in all that befalls us. "Man's goings," says the scripture, "are of the Lord: how then can he understand his own way?" (Prov. xx. 24.) These words contain the whole matter. God's foreknowledge, God's superintending Providence, enwraps us all round. It is like the space through which our globe revolves: like the air which we breathe as we move about on it. It is a necessary condition of our living, and moving, and having our being. As we cannot think of material objects, without space being presupposed for them to be situated in,—as we cannot think of a succession of events, without presupposing time for them to happen in, so neither can we conceive of a world at all, or of ourselves as existing in that world, without presupposing the foreknowledge and sovereignty of God, who created and who upholds it. Man's goings are of the Lord. If this be not so, God is not the King of all: God is not God. This is a fact incontrovertible, and not to be shaken: necessary from our very idea of a God at all. And now comes the inference: "Man's goings are of the Lord: how then can he understand his own way?" How can we expect to be able to bring down the surpassing vastness of God's foreknowledge and power, and to fit it on to the petty details of our individual lives? We cannot do it: we shall err grievously if we attempt to do it. What is the lesson, then? the lesson which good sense and scripture alike teach us? why this;—not to attempt it: to recognise to the full *both* the great facts,—God's sovereignty, and man's free will,—and to go no further. We can see these two clearly. Their lines are plainly marked, running on side by side through our lives, and through the lifetime of our world. But to trace them up into one, the human eye fails. Bring them ever so near by reasoning or by illustration, yet the point where they join is lost in the light inaccessible, which no man hath seen nor can see. Many have tried to gaze on it; many are trying now:—but the result is ever the same; the presumptuous eye is dazzled, the over-bold inquirer strays into error, and the mystery remains where it was. Let us rather keep our thoughts intent on the work in life which God our Father hath given us to do; it will require all our energy to carry it on, and all our penetration to discern what His will is in it respecting us. In it, apportioned by His good providence who has created both the shoulder and the burden, will be found our most healthy and our wisest employ; there shall we meet with Him who can give us strength, and whose presence alone can cheer the journey through life. We cannot

understand our own way, it is true: but for this very reason, that our goings are of Him. He is about our path, and about our bed, and spieth out all our ways. He has taken care that our whole lives should be full of Him, and of the thought of Him. His blessed Son has lived our life, has felt our sorrow, has died our death. Wherever we are in the world, the tracks of His footsteps are visible before us. God's knowledge may be too vast for us to imagine: His power and sovereignty may be elements too weighty to enter into our daily thought of the details of our lives: but Jesus our Lord hath manifested Him to us, and in our Redeemer's presence we can look on God, and live. The evident freedom of our will, then, is no excuse for forgetting God. They who acknowledge not Him in their goings, use not that freedom aright. Rather let us adore the mystery of His loving kindness, who has so wonderfully made us, that, while we are in His hands, as clay in those of the potter, He has yet left each of us in the free use of those powers and faculties which *He* has given us, who, in the great conflict between good and evil, has overcome our evil with His good—being the Father of lights, from whom is every good and perfect gift,—ever waiting to be gracious to us—ever offering us the help of His free Spirit. Rather let us strive, each in his place, to seek after Him and feel His hand leading us; and thus, though we may not understand our own way in life, we shall be guided on by Him who doeth all things well, from faith, to the sight of Him:—from a limited and imperfect existence, to the liberty of the glory of the sons of God.

II.

In our last meditation on the Providence of God, we endeavoured to show that His foreknowledge and power were matters so infinitely surpassing our comprehension, that while we are certain that all our ways are ordered by Him, we cannot understand our own path, nor the manner in which His will foreordains it; that consequently we cannot, and in fact no man does, take into account, in the details of our daily life, that foreknowledge and power as a disturbing element. It envelops us, and is all about us; but, at the same time, our will is free to choose and to refuse courses of action proposed to us; and if it were not, we should no longer be accountable beings.

We will now look at the same great subject from another side. We will inquire respecting the tender and constant care with which God, ever present and ever watchful, upholds and provides for us. If it be true, that we have no right to regard Him, in ordinary cases, as interfering with the exercise of our own free will in choosing between courses of action, are we justified in assuming that His Providence watches over us for good, and guides our feet into the way of peace? In other words, is there, I will not say any inconsistency, but any blameable inconsistency, any inconsistency

that we can help, in refusing to think of God as an obstacle to our freedom of action, and yet claiming to think of Him as the constant witness of all that we do, and our never-wearied Benefactor and Upholder?

The answer to this question will somewhat depend on some things which were said in our last meditation. The reason why we cannot regard God as interfering with the exercise of our own free will is, that His foreknowledge and power are too vast for our comprehension, are matters which we cannot by any possibility bring down and apply to the details of our ordinary life, without the danger of continually going wrong. Man's goings are of the Lord: and therefore he cannot understand his own way. On the other hand, we know and are sure, that we have the free choice between courses of action. And it is not for us to misinterpret, and to mar the healthy conditions of, a portion of our being, whose wholesome exercise, in accordance with the divine will, is our very secret of moral happiness, by mixing it up with another high and mysterious matter which we cannot comprehend. This was our argument. How does it apply here? God is to us the author of all that is good. Whenever comfort comes, whenever preservation comes, whenever body or soul is benefited, the gift is of Him, and not of man, nor of ourselves, in the first degree. Thus much is perfectly clear. In a given case, perhaps, we chose the good and refused the evil. But it was He who put it into our hearts to choose the good; it was He who gave us strength, when we had chosen it, to follow up our inclination and resolve; it was He who moved obstacles out of our way; it was He who turned even our evil into His good, and shaped and moulded men and events so that we might attain unto that good. And all this was not by forcing us into accord with Him and His will, but by gentle persuasion, and by putting opportunities in our way, and by the pleadings of His blessed indwelling Spirit. The bad man may refuse to hear God, and go his way, and act independently; the good man may partially listen to Him, and may sometimes prefer his own inclination to the prompting of the Spirit for his good: but the great truth remains the same: that it is God who is striving for the welfare, and providing for the necessity, and upholding the life, temporal and spiritual, of us all. If there be an inconsistency here, it is at least one bound up with our very first conditions of thought and feeling. It is at least one which we, in our present imperfect state, cannot help, and are even bound to submit to. Where we cannot see God's way clear, nor understand how He shapes our course, we proceed on the known fact of our own free will, and regard ourselves as responsible, and in some measure as the pilots of our own way; but where we can see Him, and all is clear, we love to acknowledge His hand and to praise His goodness, and to trace His beneficent interference in warding off evil, and in procuring us good. There is, in fact, no more incon-

sistency here, than in the seaman, who, while the sky is clear and the sun and stars visible, takes his observations direct from them, and steers accordingly; but when they become overcast, has recourse to his books and his instruments, and shapes his course as he best may. The one guidance may be surer than the other: but both are in compliance with the laws of the same world, and both are with a view to the same end. And if it be most true, that God is about us when we do not see Him, and girds us when we know Him not, the very acknowledgment of this fact ought to show us, that it is in vain for us to attempt to recognise all the ways by which He leads us, but that we must be content to appear very often to be left to ourselves; while at the same time we must none the less for this be tracing Him where we can, and attributing to Him at least all those portions of our course which seem to bear traces of His good and merciful guidance.

Let us now strengthen this position by the direct testimony of Holy Scripture. I said before, that it is the practice of the word of God, in the case of great truths which may seem to our minds to be inconsistent with each other, not, as we do, to trim and compromise between them, but to state both sides broadly and plainly, and leave us to infer that the putting both together surpasses our powers. In no case is this more evident, than in the statements of Scripture respecting God's providence and man's free will. The statement of the latter truth engaged us in our former meditation. We quoted words which offered to man the choice of life and death, and we might have quoted questions, which imply that the death of the sinner was his own act and not that of God. But the assertions respecting God's watchful providence, and universal foreknowledge, and unresisted sovereignty,—are as plain and undoubted. Take that of our Lord, where He says that two sparrows are sold for a farthing, and yet that, without the knowledge of God, and His permission, not one of these shall perish;—and He goes on to say, that the very hairs of our heads are all numbered: meaning that nothing befalls us unknown to, unwatched by, unpermitted by, our heavenly Father. Take any portion of Holy Scripture,—either history or prophecy, or the confessions of any of the servants of God with regard to their personal life and experience,—and it is ever the same. God is seen everywhere. He girds them to war. He blesses them with peace. He brought them from the womb, and cared for them when they hanged yet on their mothers' breasts. From youth up until now—even to hoar hairs and the day of death, He carries them. They are safe under the shadow of His wings, and His ministering messengers bear them up in their hands, lest at any time they should dash their foot against a stone. Such has ever been the expressed belief, such have been the motives for courage and confidence and resignation, of all the servants of God: from the first days of the dawning promise, until the full light of the Sun of Righteousness arose upon the church. Such was the feeling of Moses,

and of Joshua, and of David, and of Elijah, and of Hezekiah, and of Nehemiah, and of the prophets: such was the conviction of St. Paul, and of St. Peter, and of all the holy men who wrought and suffered for Christ. And such, above all, was ever the mind and the confession of Him, who is our pattern as well as our propitiation. The Lord Jesus, in His course on earth,—yea, more, in His course through glory to perfection in heaven,—ever regarded Himself as in the watchful care of the Father, sent upon earth to do His will, not alone even in the hour of dark desertion and bitter suffering, because the Father was with Him. There can be no doubt that the tendency of all Scripture teaching and example as well as of its direct command, is to induce us to see God in all our ways, and acknowledge Him in all our paths,—that it is to lead us to do this, infinitely more than we are disposed to do it. Our tendency is to forget God, and to look too much to ourselves and to men around us; but the man who reads his Bible will evermore find this tendency counteracted by the assertion of God's presence, and God's working, and God's crossing his path at every turn.

And let us come, as usual in these meditations, from the more general consideration of our state as believers in God, to that of our more particular condition as believers in the Son of God. If, in the former capacity, we are bound by God's word to see Him ever about us, surely in the latter we are much more bound. For consider what He has done to assert more strongly His presence with us, and His care over us. He has entered into our nature; and become, not merely what He was to the ancient Church, a covenant God, but, according to His promise, God manifest in our flesh: dwelling and abiding among us as one of ourselves. The Son of God is no God at a distance, removed from our yearnings and our sympathies. Are we tempted? He has been tempted in like manner. Are we in pain? He has suffered likewise. Are we deserted, in bereavement, and in sorrow? So was He: it was the very form which He took on Him and the very character by which He was pleased to be known. Of old, it was obvious to the mind of God's servants to see Him about them in prosperity, but difficult to trace Him in adversity. All they could attain to was a general confidence that He would provide well, and a resolve to leave all to Him. "Cast thy burden upon the Lord and He shall sustain thee." "I have been young and now am old, and yet never saw I the righteous forsaken, nor his seed begging their bread." Even to us now, such pious sayings are most touching, and full of comfort: but it is mainly by the light shed on them since the Man of Sorrows has gone up into His glory. Now, it is not a vague confidence that all things will be well which upholds us: it is no mere result of a life-long experience that all will be well with the righteous. Ours is a far higher and a far more blessed faith and persuasion. Suffering and sorrow, contradiction and desertion, persecution and death,

these were the appointed and the chosen path of Him who loved us and washed us from our sins in His blood. Through these dark and dreary valleys, sparkles the track of those footsteps which are now lost in the light unapproachable. Blessed are they who follow Him anywhere:—twice blessed they who are made partakers of His sufferings—most blessed of all, they who drink deepest of that cup, round which is inscribed in letters of light, “Not my will, but thine be done.” We suffer, we mourn, with no mere vague persuasion that all will be well: with no regard to the dealings of a God at a distance, moving and working in the history of those we have known: such thoughts may tend to uphold our weakness, may be sometimes the highest we can reach; but O they are not our birthright, they are not the extent of our high privilege. We have rights in Christ extending far beyond these. We are the sheep of Christ following their Shepherd: none can pluck us out of His hand: if we be found in the path in which He went before, not mere resignation—but triumph and holy joy, should be our mind.

Such thoughts as these lead me to conclude with one or two remarks, both respecting the blessedness of the Christian who thus sees God about his path, and respecting the wise and sober limits within which such blessedness is found.

There is no surer way to real happiness, than a constant sense of God’s upholding and providing care. For one who earnestly believes that which is said of him in Scripture and the offices of the Church, life may indeed be, as it is to other men, full of difficulty and of dark places; but there hath arisen a light in his darkness. There can be no gloom on his path, though there may be shade. There can be no distressing doubt, though there may be uncertainty. There can be no despair, though there may be necessity for entire resignation into his Father’s hand. He need not be afraid of any evil tidings, for his heart standeth fast, trusting in the Lord. He may be left alone, but his Father is with him. None may uphold him in his path of chosen duty, but the witness of the Spirit is more to him than the applause of the multitude. Listen to the language of such an one in old time, “The Lord is my Shepherd; I shall not want. He maketh me to lie down in green pastures: He leadeth me beside the still waters. He restoreth my soul: He leadeth me in the paths of righteousness for his name’s sake. Yea, though I walk through the valley of the shadow of death, I will not fear; for thou art with me; thy rod and thy staff they comfort me. Surely goodness and mercy shall follow me all the days of my life: and I will dwell in the house of the Lord for ever.”

Words like these bring us to our last consideration, and lead us to say, that the true enjoyment of this abiding feeling of God’s gracious and loving guidance is to be gained, not by an unbridled fancy, nor by a superstitious magnifying of ordinary circumstances into extraordinary, but by the combined

exercise of earnest piety with sound discretion. On the one hand, let us never think that we ourselves alone are the objects of God’s care; on the other hand, let us never fail to acknowledge that care keeping watch over us. The best rule for a sober judgment in this matter will be derived from the considerations which have been already before us in these meditations. No sober-minded Christian will ever see God acting as fettering or hindering his way, but will choose according to his heavenly Father’s will, in a free and loyal spirit. Again, no wise man will trouble himself with dispensations of God’s providence which we cannot possibly understand. Such thoughts frequently perplex and distress men beyond measure, but surely not those men who give sober consideration to the subject. What are called special providences may be difficult to recognise, and dangerous to press on the mind as such: but in fact they are all around us, and universal. The ship goes its way with its freight and its passengers, and is overwhelmed in the storm. He who hastened to set sail in her, and was too late, is on all hands acknowledged to have been the subject of God’s providential and special care. But are we to say that no such special providence kept watch over those who perished in her? God forbid! every one of them was just as much in the mind of our heavenly Father, as he who was saved. His course was continued, theirs was brought to an end; but the same loving-kindness was over both, and the same infinite wisdom shown in the lot apportioned to each. The man in health and vigour praises God for the lengthened time of his service, and the continued power of active good; are we to suppose on this account that the poor invalid, whose life is confined to the walls of his chamber, is forgotten by God? No indeed; he may praise Him just as much, and as heartily, for his hour of calm slumber, for his interval of rest from pain, and sweet meditation. The aged servant of God looks back on a long career, and glorifies Him for the mercies of years: but his mercies to the youth or the maiden cut down in the flower of life are just as great in their kind, just as worthy of praise. Let each trace God about his own path: there he may see in abundance the power of the Father, the love and sympathy of the Son, the inner pleading and witness of the Spirit. The course of others, and some parts of his own, may be dark and perplexing to him: concerning these let him not be troubled. Enough is revealed, enough is quite clear, for continual thanks and praise: enough, to prompt ever-growing trust and ever-increased resignation.

Let us live close and closer to Him—ever feeling for His hand to guide—ever looking for His light on our path, and then we shall be safe in life, safe in death, and blessed for ever.

III.

In the course of meditating on the providence of God, our attention is naturally drawn to the evidence furnished by the moral state of things around

us. On which side does this tell? Does it appear, when we take it into account, as if things drifted onward by blind chance? does it seem as if man unassisted shaped his own course? or does it seem as if an unseen hand were guiding? To employ our time in answering this question, may seem like taking superfluous trouble, seeing that it is abundantly answered for us in Holy Scripture, and to entertain any doubt on it would be so far to get aside the great verities of our Christian faith. Yet it is profitable sometimes (and this is especially the case in days like our own, when the foundations of the faith are assailed) to derive confirmation for our faith, by looking at matters around us just as any mere observer must look at them: and to endeavour to lift up the unbelieving or the doubting to us, by for a while seeming to come down to their level, and to speak as they do.

Well then, let us begin with a general survey of the state of things around us with regard to good and evil. It is, I suppose, pretty plain to all, that our natural tendency, if left entirely to ourselves, is to evil. One need but look at the state of the heathen nations—one need but observe the course of any person growing up without educational training, to be convinced of this. And I do not know that any reasonable person seriously questions it. We sometimes hear rash expressions of a contrary opinion thrown out, but it is generally by men of a peculiar stamp, fond of maintaining singular views: and I have generally observed, that they who thus speak, do nevertheless in their actions, and in the business of life, just as much take for granted a general tendency to evil as the rest of mankind. Well then, this being so,—man being generally prone to evil,—when we look about over the world and the face of society, one question at once meets us: How is it that the world is not worse than it is? Take the state of the very lowest and most depraved among the heathen tribes,—and why is not that the state of us all? Why has not every nation, through its successive generations, gravitated constantly downward? To this question there may be two answers. The downward tendency must have been checked either by some influence within man, arising from himself, or by some influence without him, arising from some one not himself. Let us consider each of these in turn. If the salutary influence is to be attributable to upward and nobler instincts in man, how is it that these have acted in some cases, and have been altogether dormant in others? It may be said, that this has been according as they have met with favourable or unfavourable circumstances of situation or climate. But it is easily answered, that this is remarkably otherwise. The fairest portions of the earth have sometimes witnessed the most appalling degradation of our race, as is now the case in many places under the tropical climates: while at the same time some of those fairest portions have seen the most remarkable development of the moral conscience and of the intellectual power of man; as

for instance the land of Promise of old, and the lovely shores and valleys of ancient Greece. And on the other hand, the hardest and most ungenial climates have not prevented human progress to good, as neither can they be said to have always promoted it. We have examples of some of the best of nations struggling with disadvantages of soil and sky, and of some of the worst succumbing under them. It would seem as if we were especially cautioned by facts, not to fall into the mistake of imagining that man is made, or unmade, by outward circumstances. For the very same situations and climates have been the scenes, at different times, of the most widely various phenomena in the history of mankind. The land where all Israel once dwelt peaceably under David and Solomon is now well nigh desolate, and the traveller goes in peril of the plundering Arab. This country of ours, now teeming with inhabitants peaceful and loyal, was once the war-ground of savages; and where our churches now rise, human sacrifices were offered. If we look again at mere situation, the same advantages which at one time may seem to have made a nation of busy and successful traders, have at another reared a nest of pirates and marauders.

Nor again can it be said that influences for good have been implanted in some races of men, while others have been without them. Vast as the difference really is between the races of men as we now find them, such a view seems to me wholly to misrepresent it. It is one not so much of good and evil, as of comparative power for both. The superior race is not superior in good alone, but in evil also. Its advances in true civilization and social purity, are ever counterbalanced by corresponding fearful advances in the other direction. New facilities for gaining wealth and for self-enjoyment ever stimulate not only the better, but also the worse propensities of our nature. Knowledge is power for evil, as well as for good. The leading race of men may do something towards the civilising and teaching of the inferior races: but it generally has been found in history to have done more towards demoralising and exterminating them. Its evil habits are greedily adopted, and carried on without limit or shame: its excesses become inveterate and suicidal; and its very diseases assume a more virulent and deadly type. And if it be answered that though such may be the influence of a highly advanced civilisation over one less advanced, yet in itself a leading race of men possesses power of continual advance in good,—the rejoinder to this may, I believe, be furnished by the history of such races as have from time to time taken the lead in the world. For has it not been found that, though for a time they have seemed the sources of blessing to our species, yet when tried by the only sure test, the test of time, they have themselves degenerated, and their place has been taken by others? If an example in our own time were wanted, we could not point to one more remarkable than that which we are now witnessing on the other side of the Atlantic with

regard to our own, the vaunted Anglo-Saxon race. What can be more signal than its present degradation, as we see it shown in a return to all the unreasoning ferocity of the savage tribes, in the use of names and profession of motives sacred to the Christian and the man of peace, in justification of deeds their very opposites;—in total disregard of truth, public and private? Truly the lesson is there being taught us, if ever it was taught, that it is not by the influence of mere race that evil is kept in check among men: it is not because the blood of some races is better and purer than that of others, that more good has been predominant in one place and at one time, than elsewhere and at another time.

Nay, let us look back over what we have just been saying, and, if I am not mistaken, quite a different thought rises in our minds. With the height of civilisation and of knowledge, as we have seen, evil tendencies are also developed to their height, and the dangers to social and moral well-being become greater. The better man becomes, the worse he becomes. And this is no paradox. The more light is shed abroad, the worse becomes the sin of those who prefer darkness to that increased light. The more men's hearts are penetrated and softened by good, from wheresoever arising, the more utterly lost to right feeling and humane affection must that influence be, which would supersede that softening by a new and more impenetrable hardening. And as connected with this thought, it is instructive to observe the precise way in which, though the good and the evil thus run on, so to speak, together, the whole result is for good and not for evil. The precise way, I say: for it is commonly not as we might expect, but far otherwise. The particular good which was in conflict with the evil is commonly overborne and destroyed by it. When, in a nation, good and evil influences are at issue with one another, the ordinary course is that the mischief prevails, and national ruin ensues. It has been so with all the great nations of antiquity; even with the specially favoured people of Israel. But the thing to be remarked is this: that when the good has been borne down and the evil has prevailed, then there arises to mankind out of the result a new and unlooked for good, far greater than that which has been lost. Through various great revolutions and catastrophes, all of them instances of the prevalence and victory of evil over good, our race has been brought forward in a way which no human skill could have devised; from good to good. To call this accident, would be merely to confess ourselves unable to render a reason for it: would be simply to refuse to allow the same inference in this case, which we should be compelled to allow in any similar one. And that inference, which the progress of our argument is now ripe for stating, is, and must surely be, this: that watching over the destinies of man, unseen by us, working in ways mysterious to us, checking and tempering the evil tendencies of men,

and bringing good out of them, is a superior and all-wise Being, who is an enemy to evil and a friend to good.

This is the very least, surely, that any fair and reasonable mind can gather from the phenomena which we have been considering. And it is something, that this has been ever the general feeling of mankind—of the savage, as well as the civilised, of the ignorant as well as the learned. All have concurred in feeling at the bottom of their hearts, that the influence which guides the helm of this world's affairs is not man himself, is not blind accident, but is a Power above man, and exercised continually over and in spite of man, with a wisdom and goodness which man cannot penetrate nor foresee. This I say is something. Compared with what we believe and know, it may be no very great thing: still it is enough to make the unbeliever and sceptic distrust his own view, when he finds all mankind against him.

But let us advance further. This Great Being, who does good and loves the good, and whose face is against them that do evil,—do we know any more about Him, or is His existence and working only the inference of thinking minds from what they observe around them? Because, if so, it would seem after all, as if man himself were the cause of God doing any positive conscious good to the mind of man. If God is altogether dependent for recognition among men on man's finding Him out for himself, and if He has never personally interfered in the manifestation of Himself, it leaves us, though not exactly where we were, yet hardly, for any worthy purpose, at all advanced. Our next question then is, Has this Great Being, who thus mysteriously rules the destinies of man for good, ever manifested Himself to man? Has He ever deigned to look forth from the darkness which enwraps His counsels? Obviously this is a question which must be answered with extreme caution. Men are timid—are superstitious. They may mistake the workings of nature for His personal presence, or the ravings of madness for His prophetic voice, or the gathered wisdom of the shrewd or the aged among themselves for revelations from Him. We must look well to this, and must make our answer safe from being misled by these mistakes of men. Our answer then must be this, situated as we are, and believing what we do:—It is our belief, that this Being who rules over us for our good, and hates and averts our evil, has manifested Himself to us: has interfered personally in the affairs of the world, and uttered His voice to us. And this our belief rests not on any such insecure foundations as those just now disclaimed—not on mistakes which may have been made by the timid and superstitious, but on the fact and character of a permanent record being in existence of God's manifestation of Himself to men, which to our minds carries evidence of truth with it, and when looked at in itself, and compared with facts around us, proves to us that he has so manifested Himself.

But it may be said, though the Bible may not be the product of timidity or of mere superstition, how do we know that it has not been imposed upon us by designing persons, who have made God speak that which they would have Him say? Or, again, how do we know that we have not in it merely the old stories and legends of a particular nation gathered together by some wise and able hand, and imposed on the world as being what we suppose it to be? The great and final answer to all such questions must be found in that which I just now mentioned, the comparison of the Bible with facts around us. If on doing this it appear that it is totally unlike any other book on earth, and most of all unlike any books which have either set up for divine, or have recorded the primitive legends of the nations: if it appear that it is the only book in the world which tells us what the world is, and why it is, then it is at least matter for our serious consideration, whether it may not be that which it professes to be, a voice from One who is above the world and guides the world. If, again, it be found that it is the only book in the world whose depths it is impossible to exhaust: that whereas every saying of human wisdom has an end and a circumference, may be seen through and surpassed, but the simplest saying of this book is inexhaustible by man, and enters on ground higher than he can attain unto, it may be worth our while to ask whether this be not evidence, that a wiser mind than any among the sons of men was at work in the writers of the Bible. Again,—and this is immediately to our present subject,—if we find on examining this book, that He who professes to speak in it agrees in character with this same mighty, and good, and wise Being, who brings His good out of man's evil, it certainly would look to reasonable men as if the two, the Author of the Bible and the Ruler and Guide of mankind for good, were one and the same. But yet again: if we find that this is the only book in the world which speaks direct to the conscience and spirit of man: that all good, and all good men, have ever been found among those who value and believe in this book; and that when a man begins to doubt respecting it, when he surrenders his faith in it, when he allows human guidance to supersede it, from that time his moral being is affected for the worse,—we may well conclude that the book belongs to, and comes from, Him who is on the side of all good against all evil; in other words, that it is bound up with God, and God's rule among men, and the revelation of God's character to men.

To carry this argument no further, as not being our main one at present, God does in this book, which we have all reason to believe is His manifestation of Himself to us men, plainly declare the truth which we have been gathering from the aspect of the moral world around us,—that He is the upholder of the good man against the evil man.

“The eyes of the Lord are over the righteous, and His ears are open to his prayers: but the face of the Lord is against them that do evil.” In all earthly matters we may take this for granted, that good is stronger than evil, and in the end shall prevail, because it has God on its side. Things shall not become worse and worse in the world taken as a whole; but even the apparent prevalence of evil in some portions, due to man's own depravity, shall be overruled by God for ultimate good. This is an immense comfort to every one who will look on it aright. It inspires courage in our efforts for good: it shows us that the issue is not always as we suppose it to be, but that very often there is good doing where we least know and suspect it.

And here again, passing from the mere general consideration of a belief in an overruling God, to our belief in the God and Father of our Lord Jesus Christ, we shall find our grounds of comfort immensely strengthened, and our vision exceedingly cleared. During this present time, our ascended and glorified Saviour is waiting till all things are put under His feet. The whole moral world is by degrees being subdued to Him. By various dispensations of God's Providence, the good is prevailing, the evil is being defeated and put out. Now, if ever, is it true, that the good man is God's especial care, and that all scope is given for all the best and highest graces of humanity to expand and flourish. The perfect pattern of the Redeemer is before us—the witnessing Spirit is within us—the many mansions are being prepared for us, by Him who will return to take us thither. He that will love life and see good days, is not dependent on promises of earthly prosperity. His life is hid with Christ in God,—his good days are to come in that place whither his Saviour Christ has gone before.

What a comfort it is for us to feel, in the midst of dark and perplexing circumstances, that the mighty and all-wise Being who is overruling all things for His glory, and bringing good out of man's evil, is our own God, that His covenanted mercies are ours—that in Christ Jesus all His promises are for ever ratified to each one, even the least and most helpless among us. What a powerful motive does it furnish to all good, what a discouragement from all evil; to remember that we have now no mere general assurance that God is on the side of good, but a positive promise, that all power in heaven and earth is given to Him, who laid down His life for the truth—and that one day, all who have followed Him in the paths of truth and holiness shall be like Him—partakers of His victory—changed into His spotless purity—inheritors of the new heaven and earth, wherein dwelleth righteousness; which He hath purchased for them and wherein they shall reign with Him, when truth shall finally have been established, and all evil shall for ever have been put down.

CHILDHOOD.

ONCE in a garden bounded by many a lofty wall,
 Where quaint old sentinels, in stone, kept watch and ward o'er all,
 There was a little lake, and there an island, and a boat
 That lay mid shining water-flags and lily-leaves afloat ;
 Smooth as the swards around them clipt, swept only by the wing
 Of gauzy dragon-fly, that dipt in many a mazy ring,
 Were those still waters ; all unstirred the rose's leaf would lie,
 Blown there by summer winds ; the bird skim, lightly glancing by.
 This was the Haunt of Childhood ; once there I seemed to grow
 Among the flowers, and with the fruits to change and ripen slow ;
 I watched them through all changes, there upon the grass I lay
 Snowed over by the blossoms light that fell so thick in May ;
 I watched the peach's sunny cheek turn slowly on the wall,
 And with no guess at Nature's laws saw many an apple fall ;
 Gold-tinted, rosy-tinged, their hues were mine, and I as they,—
 The purple bloom was on my life, the down unbrushed away ;
 My world was then like His that first a happy garden knew,
 Unworn, and fresh, and glistening bright with shining spheres of dew ;
 My soul was full of light that passed as through a tintured pane
 In warm and vermil hues, and cast on all its gorgeous stain ;
 The dial on its grassy mound that silent marked the hours
 (Time's footfall then awoke no sound that only trod on flowers),
 The sun-flowers and the moon-flowers (these were lilies white and tall),
 The ancient griffins that looked down upon me from the wall ;
 These were for tokens unto me and signs, they seemed to pass
 Into my life as then I lay at noon-day on the grass,
 And twined a wondrous history, slow twisting, branch and stem,
 My garlands, binding all the while my Being up with them ;
 And I knew that in the wild wood 'mong the meadows, on the hill,
 Were flowers, but unto childhood the best were nearest still ;
 And I sometimes thought, " Out yonder I will seek for blossoms too,"
 But turned again the fonder to those that round me grew.
 Soon told were childhood's treasures—the childish world was small,
 But its wonders and its pleasures were its own—it held them ALL !

Once, in a mansion, looking upon that garden fair,
 Was a wide and pleasant parlour, and an eastward bedroom ; there
 As on my little bed I lay before my half-shut eyes
 Danced dreams of pleasure, that the morn was sure to realise ;
 When the sun knocked at my window, and to give him entrance free
 I sprung, because he never came without some gift for me !
 My Evening and my Morning then made up one perfect Day
 Of joy, and round the parlour fire my winter garden lay ;
 I played beside it till I saw the deepening shadows fall,
 And through the twilight come and go the pictures on the wall ;
 This was the hour for stories and wondrous tales, that drew
 My spirit after them to lands where all was strange and new ;
 And I listened, and I wondered, then hastened to resume
 My journey (broken oft by falls that harmed not) round the room.
 This was the Home of Childhood ; as in a fairy ring
 Within the circle of its hearth was drawn each cherished thing.
 I had no Future then, no Past ; my life was unto me
 But one bright *Now*—the happiness that has no History !
 Still hath my heart a hearth, but now its circle is so wide
 That those it burns for, never meet around it side by side ;
 They are severed, they are scattered, and now the twilight's fall
 Too often only comes to me with shadows on the wall.
 Soon filled was childhood's measure, the childish heart was small,
 Yet they that made its treasure were its own—it held them ALL !

SYBIL'S ORDEAL

I.—ON THE HILLS.

A low range of undulating hills—their tops standing out sharply against the deep blue sky—clefts softened by bosky foliage, marking their sides into many folded outlines, and, in some places, where the declivity is too steep for vegetation, bare rifts of rocky surface, reflect the rays of the setting sun.

In the foreground stand a youth and a maiden. He, earnest, pleading, and impassioned. There is no mistaking the sincerity of his words. Eyes fixed with a resolute tenderness seem as if they would compel as well as implore an answer, while the curves and well-defined corners of the mouth attest the sincerity and accuracy of his disposition: altogether it is a face of power, betokening energy of character, and resoluteness of will to fight against giant impossibilities, and to perish, if need be, in the conflict.

Trusting and confiding, accrediting others with the same truthfulness that characterised himself, you feel that here was one who must suffer loss in the struggle for life, as it was impossible for him to understand a double purpose, or to suspect an unworthy motive—two characteristics that made their possessor loveable, but laid him open to many an assault and hidden snare—while his large-hearted lovingkindness towards his fellowmen exposed him to many a disappointment escaped by those who do not throw out roots far into the neighbouring soil.

His companion, who listened with a hurried, half-absent manner, was a girl of seventeen, whose extreme beauty was lessened by the look of weakness and indecision that characterised the mouth. With her youthful appearance, and the trusting gentleness of her violet eyes, perhaps the soft feebleness of her rosy mouth might be overlooked, especially as a well-developed chin gave promise of innate strength of will when circumstances should occur to bring it out.

"Sybil, is this all you can say to me,—the only answer you can give to my long, long love? You know that my affection for you is a part of my nature now, and can never be rooted out. I love you very dearly, and can never change, and will you say nothing but that you have a warm regard for me, and that you wish me well?"

Such was the purport of the youth's words, uttered in broken sentences, too earnest to be well considered, welling up from too deep a source to flow in smooth channels, but tossed up from the fulness of his heart.

It was the old, old tale,—older even than those hills, to which local geologists gave an ante-diluvian origin,—what need then to tell it in any but the simplest and homeliest of language?

"Harold," and this time it was the maiden who spoke, "You know I have no power to say anything. My mother says we are too poor to marry ;

and besides," she added with a petulant, half-defiant air, "I do not want to be married; I do very well as I am."

He looked at Sybil as if he did not quite understand her, and then said gravely. "I do not wish to bind you yet for many a year, but if you would give me the hope that I might think myself more to you than others are, it would give me that strength and happiness without which I shall enter on my work with but half a heart."

The girl looked up at the blue sky, on which a few clouds had begun to take up their positions, then at the green hill-sides flooded with golden light, as if she wished to escape from the difficulty of giving an answer. The youth continued: "You know that in a few weeks, perhaps sooner, I shall be far away on the waters, every moment increasing the distance between us, till I reach that distant colony where I am to make a new home for a time, while trying to make a fortune. I do not complain of this—it is no more than most men have to do in fields more or less near home, and more or less rough and uphill. I feel I have that in me which will think little of hardships, and which cannot easily be daunted or depressed. I like the thoughts of battling with difficulties, and think that, God helping me, I shall come off victorious. I do not speak in a boastful spirit when I say that He who permits my poverty, also endowed me with a spirit of indomitable resolution to try my power to the utmost, and to delight in the obstacles that only test its amount: but equally strong is my love for you, and the two have grown and must perish together, the one helping and supporting the other. If you kill my love, I shall work still, for none but a coward or an idiot should live upon this earth without exercising all his powers to their utmost capability; but, Sybil, I should have no aim to point my efforts, and no motives to consecrate them. I could not live to accumulate money, and my heart having died out of me I should be nothing else but an empty mask, a cold and callous man. Sybil, speak to me again, and give me hope."

The breeze swept past them up the hill, and the shadows crept higher and higher. The summit alone, clothed by the heather in imperial purple, shot back a glowing acknowledgment to the waning sun. The distance was already fading into twilight, and the horizon towards the north and east was dappled with the cold shadows of evening.

A look of irresolution passed across Sybil's face as she gazed on the gathering clouds, and then, as if glad of an unexpected relief, she exclaimed, "Why, here are Theodore and the girls, and Sir Robert Buckingham is with them; see, they are winding round that jutting crag, and will soon be with us; we are late, and must return."

"No, Sybil, it is my last opportunity, my last evening at home for many weeks. Is this all your answer? May I not carry with me one thought that you care for me?"

"As a friend I do care, most sincerely, Harold; but indeed you will not be going away so soon."

"As a friend, and nothing more?" he urged.

"As a friend, and nothing more," she replied, the deep blush mantling in her face as her heart took its revenge for her insincerity.

The clouds were now coming up in vast battalions, one grand Alp rearing its snowy peak far above the highest hilltop, with all the semblance of strength and purity, yet shifting and ready to dissolve like a character not based on truth: it may collect into a shape of fair and majestic proportions, and take on the outward form of beauty, but if we try to grasp it, or trust to its following a fixed law, it collapses and defies our pursuit. The shadows were rapidly deepening over the hills,—a lonely plover ranged like a lost spirit round and round, uttering its wailing melancholy cry. A distant clock struck the hour, twinkling lights began to appear from cottage casements far below, the quiet sounds which cannot make themselves heard by the busy ear during the day, now began to rise on the air borne upward by the evening breeze. Gentle rustlings among the small life of nature, as a timid hare bounded forth from the fern, or birds dropped down to a lower bough to warble to their mates, the deep booming of the beetle, or the sharp chirp of the hedge cricket, these and many more such sounds struck acutely on the ear of those two after the words of dreary import that had passed between them.

Long afterwards, on the wide sea, amidst the noise of rushing waters, those slight sounds, with all the associations of that moment, came back to one of them, while to the other they became haunting memories, full of bitterness and remorse, until they had done their work of healing discipline, when Time the beneficent laid his hand upon her heart, "Gently, not smiting it, but as a harper lays his open palm upon his harp, to deaden its vibrations."

"We have had such a jolly campaign this evening," burst forth Theodore the Eton boy, who, tired of Sir Robert Buckingham's injunctions to follow the winding sheep paths, had broken loose with Sybil's two young sisters, and now the three came charging breathlessly up the hill. "Sing pæans! we've taken the Capitol after a tremendous onslaught with heavy loss. Peggy has left one of her shoes in a rabbit-hole, and Sir Robert's umbrella is among the casualties. If you had only had some geese up here instead of these stupid sheep, we should never have got in and surprised you. We crept closely under your walls, so that I thought you must hear us, at last I put myself at the head of a forlorn hope, and we stormed the last crag, and charged bravely up the hill. But where is Harold retreating, without laying down his arms? Most noble Roman, I demand instant surrender. O Conscript Fathers, the barbarian bows before you, daz-

zled by the splendour of your hoary dignity, but you must yield to necessity and brute force, and surrender calmly to might divine!"

Thus the boy rattled on, while Sir Robert Buckingham, propelling himself upward by the aid of his usual adjunct, the umbrella, reached the level on which Sybil stood, and began to deliver a course of conversational platitudes. He hoped she was not suffering from fatigue, or the chillness of the evening air. Would she allow him to unfurl his umbrella? it might, he really believed it would, keep off some of the freshness of the breeze. No?—would she really rather not? The air at that altitude was fresh, certainly fresh, not to say cold. He could not see the advantage of going up hills when there were excellent roads to take exercise upon. For his part, he thought hills were a mistake, and extensive views a delusion; in fact, he rather disliked a fine view than otherwise, upon his honour he did. He had the misfortune to live in close proximity to a fine view in what he believed he might call a commanding position; he feared it might appear pre-suming so to speak of his little eyrie, but it really was built on a very high hill, and people came for miles to look at his view, and the first remark strangers made to him at dinner was invariably What a grand view you have, Sir Robert; indeed, a royal duke had said Windsor Castle had a view, but it could not command the prospect from Buckingham House;—with a great deal more in the same strain.

Thus the baronet discoursed on, in an even flow of conventional small-talk, a possession upon which he prided himself, and which nature had lavished on him abundantly. The minimum of thought, diluted with the maximum of words, linked together just sufficiently to keep the conversation almost entirely in his own hands, composed Sir Robert's usual flow of talk, and he had a way of maintaining his ground, and keeping all but the most determined out, just as a child's daisy-chain may serve as a sufficient barricade against those who are too tender willingly to crush it.

His is but a shadowy character, with little of solid about him except his temporalities, and in this respect he is a man of very great substance indeed.

Rank, money, respectability, and a long-descended name, he has all these. Fathers of families think him a thoroughly sensible fellow, a man who knows what he is about, as if very few possessed that knowledge: "talks a little too much about himself, perhaps, but that will soon be knocked out of him;" and then, is he not Sir Robert Buckingham of Buckingham House, an unencumbered baronet, with a clear rent-roll of fabulous thousands a year?—and whence should glory emanate, if not from a star of such magnitude? Mothers hang upon his words with attentive eagerness, and listen with rapt interest to his opinions upon female education and woman's work.

It is true, their sons speak irreverently of him as a long-backed prig, good for tea-fights and croquet, and the daughters prudently reserved their opinion.

Characters like his are usually taken at their own estimate, and it is probable that Sir Robert made a favourable impression on the daughters also, but if so they forbore to express it; they contented themselves with aiming at his croquet balls, and getting him to score their shots, with a confiding trust no one else was privileged to share.

The mothers looked on complacently, and hoped if Sir Robert returned from the pic-nic in the dog-cart that he would see that dear Clarissa put an extra shawl on. The evenings were getting cool, or the damp was likely to rise, and her dear child was so incautious, and after what he had been telling her about the fall of dew—such instructive information, she could not think how he remembered all he read—really she should never be comfortable after sunset again, unless she adopted all his wise and salutary precautions. Or was he going back by water? and would Sir Robert promise to steer the boat? She should not know a moment's peace unless he promised, for Maria and Wilhelmina had such high spirits, dear girls, she should fancy all sorts of things; still if Sir Robert were going in the boat, she should feel perfectly at ease, such confidence she had in his power of managing everything;—and so on, as silly women will, when they have an end in view, and hope to gain it by hiding their point with flattery.

Sir Robert received it as the homage due to his high standing as a remarkable young baronet of irreproachable good sense. His chin rose higher, and he carried his long back with greater majesty than before, or supported it by his umbrella in a newer and more graceful attitude. We must redeem him from the shadows by trying to give him a personality. Add to the long-limbed figure, thrown back with a strut of conscious importance, an inexpressive, though well-featured face, whose regularity of form was marred by the smile of self-satisfaction that played about the thin vacillating lips; let a smooth polished hat sit with dignity upon a head of neatly arranged hair, whose straight lines the very winds seemed to respect, and never discompose; then clothe the body to match, in a suit of the best fitting black, and you have as much of Sir Robert Buckingham as is needful for our purpose. You feel that it would have been an act of levity on the part of his tailor to invest him with any article of dress that was either light, rough, or becoming.

"Well, good people, are we going to stay here all night? Sir Robert, I will get your umbrella mended for you to-morrow. Come, Sybil, you used to be afraid of a dark hour among the hills, let us see who will be at the bottom first." So saying, Theodore challenged his sisters to a race; but Sybil had now recovered herself, and was listening with a pleased look to Sir Robert's talk, and evidently flattered by his tender attentions. As she turned to answer her brother, she perceived that one of the little girls had lingered behind with Harold, and as she looked, his tall figure bent down to kiss the

child, and with a parting wave of the hand, he disappeared by another path. As Sybil called out sharply to the child not to linger behind, a keen pang passed through her, and she was conscious of a feeling of soreness and disappointment that seemed unaccountable. The child too appeared unwilling to quicken her pace, but gravely and with slow steps followed them, and when her sister looked down at her bright eyes, they were filled with tears.

"Oh Sybil, he is really going away. I don't think we shall ever see him again. Dear Harold, what shall we do without him?"

"Is young Mr. Forsyth about to sail for New Zealand?" inquired Sir Robert. "I was anxious, that is, I intended to have furnished him with some letters which I am sure would have facilitated his movements. I have two servants settled in Australia, and several farm labourers have emigrated from my estate; indeed I know they have quite succeeded, and are very well off now, and they might have been useful on landing, to assist Mr. Forsyth in carrying his boxes. Ah, true, Australia is not New Zealand, still it is on the way, and he might possibly stop there."

While Theodore and Peggy ventured to attack Sir Robert's geographical knowledge, and Sybil said it was perfectly natural to confuse two places so often set together in people's minds, the descent of the hill had been rapidly accomplished, and the young party threaded their way through a garden thickly planted with flowers, whose fragrance hung heavily on the air, and entered through the windows of a brightly lighted drawing-room, where a tall commanding woman was seated with her work beside a well spread tea-table. Sybil hastily ran up-stairs, and once in the darkness of her own room, she seated herself in a chair opposite the open window and began to think. "What have I done? Can it be wrong to love him the best whom I have known so long? Yes, it is a sin, my mother says it is; what can he ever be to me? I should ruin his prospects, and he would ever afterwards regret it, and I should feel that if I had only conquered a weak fancy, he might have prospered. Yet he said I should help him to work better, and be a guiding-star to direct his efforts. Well, he will forget me, and I shall know that I have done my duty; and that they say is the only approach to happiness one must ever expect on earth. Yet, Oh Harold, Harold!"

At this moment voices broke in upon her thoughts.

The nursery door was near her own, and stood open, and the housemaid was informing old nurse that Sir Robert had come in to tea again with the young ladies, and was he not a beautiful man, and to think of one of their dear young ladies being a grand Lady Buckingham. Sure she deserved it, bless her sweet face; when nurse cut her short with, "You know nothing about it, Susan, and it's my belief you had better say nothing till you know. Sir Robert's very well, but it's not the gilded

pitcher that lasts like the red clay. Show-jars for the mantelpiece look fine, but they get to crack, and want a deal of care, and vex one's spirit when the handles come off. Still, I am not going to say Sir Robert's not a fine match for any young lady. Miss Sybil will be true to her own heart, I hope; that's all I care for, and then she won't have much trouble."

The last sentence was all Sybil heard, and she was about to question herself as to what was meant by being true to one's own heart in cases where duty seemed to render deafness to the heart's pleadings imperative, when a light appeared upon the staircase, and in another minute, the tall commanding lady whom we left at the tea-table, entered the room, and desired Sybil to go down-stairs directly. Sybil looked wistfully for a moment at the calm, collected expression, and severe beauty of her features, and then, as if a sudden impulse seized her, she exclaimed, "Oh mamma, I believe he is going away without taking leave of us. Harold I mean. I think he has gone, and I am so sorry. He left us this evening." "So much the better, my love. I am glad to find the young man has acted in every way so becomingly. He is quite right. And you too, my love, have acted very well and discreetly, quite as I would wish you. These little trials are painful, dear Sybil, but we must not be weak and suffer them to overcome our fortitude. You will conquer, and look back with joy to the struggle when you have attained the prize; and believe me, a well regulated mind has no greater joy than a retrospect which shows triumphs like these, and you will learn to despise a transient emotion for which you would have sacrificed a life's success."

Thus spoke Sybil's mother, well and wisely, had the premisses been true on which she founded her plausible argument. Her deductions were sound, but were based on a false assumption. Desirous of deceiving herself and her child, she applied the principle of fighting against evil, to the desire she had formed of crushing any attachment between her daughter and a poor man, and she worked upon Sybil's high-souled and mistaken sense of duty, in order to bend her to her will. When the mother and daughter reached the tea-room, they found the twins had been carried off to bed, Theodore retired to his turning lathe in the back kitchen, and Sir Robert had left his compliments, and he begged to be excused taking leave of the ladies, as he had a long ride before him, and he had left a note on the drawing-room table which would explain his intentions. A faint smile overspread the elder lady's features, and after a prolonged perusal of the missive, she desired her daughter to sit down by her and read it, as well as an inclosure directed to herself.

The baronet's letter ran thus—

"MY DEAR FRIEND,

"It can scarcely have escaped your penetrating powers of observation, that I am greatly

interested in a member of your family, whom circumstances of proximity as well as suitability point out as in every way what I should most admire, seek for, and wish to obtain as the companion of my life. By suitability I wish to imply that your fair daughter is in all respects that which I consider myself bound to select in beauty, manner, and education, for the future mistress of Buckingham House. She has had every advantage of training from her admirable mother; and believe me, dear madam, when I receive the young and tender plant into my hands, it shall be my care to foster what you have so carefully trained, and to bend the pliable branch rather than to break it with the rude efforts of force. I allude to the future development of the female character, which, as you have rightly conceived, can be fully completed only by the wise counsels of the husband, who should be also the friend. With every prayer for your dear child's welfare,

"I remain sincerely yours,

"ROBERT ARCHIBALD BUCKINGTON."

As a lover's letter is a somewhat rare document to obtain, we subjoin Sir Robert's declaration of affection.

"MY DEAR YOUNG FRIEND,

"You will receive from your mother's hands this announcement which I am about to make to you, that I feel myself inspired by feelings of the profoundest regard, and I may say of affection, towards you, her lovely and accomplished daughter, and from whom can such a communication be more fitly received than from the parent who has watched over and trained you with more than a mother's eye? Her opinions and mine wholly coincide on all matters relative to the position and relation of woman with regard to her husband, in the various capacities of wife, companion, and as the mistress of his house, and I feel sure that in fixing my choice on you, I shall be following the wise dictates of an enlightened mind, as well as fulfilling the duties I owe to the station it has pleased Providence I should occupy. Together we shall be enabled to prove good stewards of the inheritance placed in my hands for something higher than selfish purposes, and in each other's society we shall find that solace which even the most devoted philanthropists have not scorned to seek.

"That you may be guided to a right decision is the prayer of your affectionate friend and admirer,

"ROBERT ARCHIBALD BUCKINGTON."

Not a word of entreaty—no question of whether she could return his affection—not one mention of love. Yet, strange to say, a letter so framed had more power over Sybil than the most passionate strain that ever covered a lover's letter. Such would have been too like Harold's, and being devoid of power to touch her heart, his words would have alienated her for ever.

But these high-flown sentiments about the wise disposal of his wealth appeared to hold out to her a sphere of self-denying work, and promised her opportunities of doing good which it seemed plainly her duty to accept.

It seems strange that with Harold's words still ringing in her ears, she should have been able to delude herself in the course she was now pursuing; but it is certain that temptations are strongest which assail the weakest points, and the want of straightforwardness, and the moral timidity of Sybil's character, laid her open both to the perplexity which involves any deviation from strict simplicity of conduct, and also to the danger of seeking shelter in the judgment of another, more especially when she could throw over it the disguise of duty.

She listened to her mother's commendations of this high-principled young man, and acquiesced in the duty that lay before her of thankfully accepting the great blessings which must accrue to her from such lofty companionship and guidance, and before she returned to her room that night she had written a little note to accompany her mother's more lengthy epistle, in which she stated her willingness to try to be all he seemed to think she was. She feared she was very ignorant, and he would find her wanting in many things, but she hoped he would be gentle with her, and be her friend and guide, for she knew she was not strong enough to stand alone, and she prayed she might be helped to do her duty, and was glad to think she had such an adviser in him, &c. &c. The poor little letter was just what commended itself to Sir Robert's overweening sensibility. It touched his own sense of importance, and as he smiled to himself with secret exultation, his thoughts took the direction of realising the position of preceptor-husband, and his breakfast hour passed pleasantly in reveries as he thought of that bright young face sitting figuratively at his feet, listening to his discourse with reverent awe.

The next day, when Sir Robert rode over to the Lawn, his engagement with Sybil was formally ratified and declared. Theodore declaring it was quite time she should marry, as he did not think it a good thing she should be an old maid always, and though Sir Robert was not nearly such a brick as old Harold, yet of course he should like him if he were his brother-in-law. The twins received the news with half-shy, half-pleased looks, and might they wear their pink sashes to go to church when Sybil was married?

The wedding, however, was not to take place for a twelvemonth, when the days of mourning for Sybil's father would be completed.

Sybil Gray was the eldest of four children whose father had devoted the best years of his life to the inventing and perfecting a mechanism to be attached to steam-pumps and other great mechanical agencies for the increase of power, and the diminution of risk to human life.

With the usual fortune that awaits those whose

thoughts are beyond the age in which they find themselves, or from the extreme indifference with which the waste of life is regarded, when it does not personally affect the individuals with whom lies the duty of protecting the immediate sufferers, Mr. Gray's patent was suffered to lie neglected, and proved a source of constant expense to himself; nor was it until some years after his death that an enterprising man of capital carried out, under less costly outlay, the improvement on which poor Gray had expended what should have been his children's inheritance. He was at rest now, as we have said, and Sybil and Sir Robert were to wait till the time had expired, of ceremonious mourning.

II.—ON THE WATERS.

Nothing to break the sky-line but a vast surface of tumbling waters, through which a sturdy merchant-ship is vigorously ploughing her way. Night has fallen, and the sky is somewhat cloudy, and only here and there a star breaks the dull canopy overhead.

The officer of the watch pacing the quarter-deck with one other companion, their voices sounding hushed and low as they walk to the end, look over into the night, pause, and turn back to resume their slow sentinel pace—the man at the wheel gazing ahead, with his bronzed face and eagle eye that tell of many a day and night's battle with the elements—these three are the sole objects visible on board the labouring ship, whose whistling shrouds and flapping cordage alone represent the busy tumult that usually stirs her by day. She carries hundreds of living souls in her bosom, now stretched at length in their narrow berths, as they will one day lie in their coffins.

Nay, is not the wide sea round them? There are no graves, no holy churchyard. Why think of coffins?

Yet to many perhaps, as they lay there unable to sleep, in their new and unfamiliar circumstances, and listened with strange fascination to the lapping sound of the waters rolling up against the ship's side, to many such thoughts would present themselves. What if those fathomless waters were to refuse to bear them up on their surface, and they were to sink slowly and slowly down, deep down, in the swirling waves, which would close over them and hide them for ever from the light of the sun? It needed but a touch from some sharp unknown rock piercing the gallant ship from below, or a spark of fire left by some incautious hand, and this excellently contrived sailing-vessel A 1, with her living freight of two hundred souls, would settle down like a heavy stone in the midst of those hungering waters, and leave not a trace behind.

"How brightly that planet shines in these latitudes," exclaimed Harold to his companion of the watch.

"Do you see it hanging low on the horizon? I never saw Venus look so large before. Don't look so dreamy, Jack, my man, but mind you don't steer

right into that star;" as he spoke he came up closer to the helmsman, and hastily uttered the words, "he's in a fit," when the man slowly fell forwards, and became rigid and unconscious.

The two young men tried to move him from his dangerous position, and with some difficulty succeeded in lifting him between them, and laying him down upon the deck, untying his loose muffler which he wore to protect his throat from the night air. "I must go and report to the Captain," said the young officer who was kneeling at the feet of the fainting man, and who did not perceive what broke upon Harold with an appalling sense of horror, which almost took from him the power of action, as the full sense of their fearful position came upon him.

"God be merciful, look at the star!" was all he said, and instantly gathering up all his forces of mind and body, he cleared the form of the prostrate pilot at a leap, rushed down to the captain's door, and in the deep tones which suppressed feeling give, briefly told him that the pilot was incapacitated, and a ship in full sail bearing right down upon them.

Not a moment stayed the captain for questions or for dress. He leaped on deck with the firm concentrated look of one accustomed to have his resources taxed to the utmost, and of whose power to deal with a tremendous possibility none could doubt. He had stood by his vessel to the last before now, and had remained lashed to a spar after watching the gallant ship go down. In many an emergency his courage and tried nerve had been the means of saving others who were too unmanly to help themselves. But in all his experiences of those dangerous perils of the deep, it had never fallen to his lot to encounter death in all the appalling suddenness and swift destruction of collision at sea. All that was seen was a half frantic effort to alter the ship's course, and then, for an instant, the whole scene of the impending catastrophe flashed before the eyes of the doomed voyagers. The approaching ship, with all her sails, rigging, and terrified crew, seemed with horrible distinctness to be upon them, and then amid the shrieks and agonised utterance of the few who had reached the deck of the ill-fated "Bucephalus," a crash—a shock—as her timbers shivered and rent asunder, and in the next moment the mutilated ship had been trodden under water, as it were, by the vessel that had run her down, and the yawning waves seemed to suck her into their green and foaming depths, carrying with her into one grave the bodies of those two hundred souls that had passed by a moment of brief agony into eternity.

* * * * *

A short paragraph in English newspapers announced that the sailing-vessel "Bucephalus," Captain Home, bound for Canterbury, New Zealand, was run down by the Donna Luisa, Portuguese man-of-war, all hands, passengers and officers lost. A

leading article appeared in a prominent metropolitan journal, calling attention to the fact of but one man being at the helm on this fatal occasion, eliciting a swarm of angry replies, confirmatory facts, and suggestions and propositions more or less cogent; and the story sank into oblivion and was forgotten, its claims on public attention falling flat in the presence of a great will case, and two undiscovered murders.

III.—IN THE FIRE.

The Lawn looks much as it did on the morning after the announcement was made that Sir Robert Buckington had chosen the pretty Sybil to be his own.

The garden plot on which the dining-room windows opened was gay with a kaleidoscopic arrangement of coloured flower-beds, which every year seemed to encroach more upon the velvet greensward which promised eventually to lose its right to confer its name upon the place.

The Lawn, sheltered in parts by the sweeping branches of cedar and catalpa or tulip-tree, disappeared near the house in a dazzling blaze of colour, which the girls took care should be maintained till the first frosts of November conquered them.

The sun shines brightly down upon it now, bringing out the gorgeous tints of crimson and yellow, and where its rays are intercepted by masses of thick foliage, the light plays through the fluttering leaves in delicate shadows.

There is nothing to foretel the coming of a great sorrow. One would expect the approach of a crushing grief would announce itself by some gathering signs of warning; and those who live in dread of such visitations try to ward off the impending blow by rehearsing it beforehand, on the principle that nothing ever happens exactly as we expect, and so they cheat themselves into the belief that they are prepared for all that may come upon them.

But nothing in the quiet household on that bright morning of early autumn indicated to Sybil the chasm about to open at her feet, rudely tearing up the course of a life that had hitherto flowed on in a very ordinary channel, and swallowing up all that was hollow and false in her present position.

The post-bag had been opened as the family sat at the breakfast table, and its contents distributed among those who were fortunate enough to have correspondence on that particular morning. The newspaper was reserved to the last, and when Sybil's mother broke the silence with a well-constructed paragraph, which she intended should perform that most difficult, if not impossible, of tasks, breaking the news, even her well-disciplined and controlled voice faltered for an instant, and slightly shook, as she told her children gravely that a very sad accident had happened—an accident at sea—poor Harold's ship; and not noticing Sybil's stony look, and blanched face, she proceeded to read the paragraph announcing its loss, with the comments upon it of some of the daily journals.

The little girls were at once in tears, weeping and sobbing as only children can, and even their self-composed mother forgot to reprove them, while she thought over the last interview she had had with that bright-eyed youth whose dark brown locks were now pillowed on the ocean bed. For a moment she dwelt on how she had fulfilled his mother's trust, who on her death-bed had committed Harold to her sole and exclusive charge, as the dearest pledge she could give of her long and constant affection. "Be his mother," the dying woman had said, "and bring him up as you would your own child." Had not thoughts of ambition for Sybil steeled her heart against the noble qualities of her ward? and had not pride and vanity made her shut her eyes to the growing attachment between them, until she had been led on to use her power over Sybil's timid character to influence her in the decision that banished from her life the man she had grown up to love, and that had united her future with a comparative stranger?

These reflections lasted but during their instantaneous passage through the brain.

Conscience has her moments of self-assertion; but the natural bent of the mind, or that which habit has conventionally made such, soon resumes its sway; and after about a quarter of an hour's occupation with her letters, she said something about seeing what Sybil was doing; for if she should distress herself much about this news, she would have to account for it to Sir Robert Buckingham, who would naturally be hurt if he found his betrothed with reddened eyes because she happened to know one of the drowned passengers on board the "Bucephalus."

On reaching Sybil's room, and calling to her without receiving an answer, she opened the door, and there she discovered the poor girl, who seemed to have been overtaken by a sudden fainting fit, as she had evidently fallen against the side of the bed, against which she now leaned, rigid and unconscious.

A low moan, as of almost intolerable pain, was the only sign she gave of life. They laid her on her bed, and the doctors said a great shock had been sustained; that the nervous system was paralysed; and they feared for the brain. Nothing could be done; they must wait and watch, and hope much from her youth, but it was a serious case.

And so that little household was brought face to face with a dread reality; and though little was said on the subject, yet all seemed to feel that somehow Sir Robert's frequent visits were out of place, and that perhaps it would never be the same for him, as for others, any more.

The mother felt it, as she sat in Sybil's room watching that poor vacant face, and those restless hands, or listened to the unceasing moan which alone betrayed her suffering. She knew that she should have to tell Sir Robert that he had been deceived; that Harold, and not himself, had been the choice of her daughter's heart; and would it be possible for him to overlook the deception she had practised

on him, when she had assured him Sybil's affections were as yet to be won? She could not tell; she could only shelter herself from the dreaded disclosure by making Sybil's state an excuse for scarcely seeing him.

About ten days had elapsed when the country doctor, who had at last confessed his inability to do more for the patient, professed his willingness to act under the directions of any London physician whom they approved; and his suggestions being acted upon, an eminent physician was telegraphed for, who, after due examination, pronounced that an external injury had been inflicted on the brain when the fall occurred, which was rapidly producing further mischief, and keeping up congestion; that an operation was necessary, which would relieve the worst symptoms, but that it would still remain a very grave question how far the system had power to rally from the shock it had received, and the severe remedy it was further necessary to apply. He desired that everything might be in readiness for the operation to be performed on the following day, when he would return with a skilful surgeon, in whose hands he should leave the case; and with a few directions as to necessary preparations, the London doctor departed.

Anxiety and secret grief, and the strong command she placed over her feelings, had quite undermined Sybil's mother; and she felt that it was impossible for her to remain in the room with the doctors while they were performing an operation on which her child's life depended.

She paid the penalty which constraining our natural feelings usually exacts, of being unfit to control herself in any great emergency; and she went about the house bewailing her sad lot, and almost inclined to ask Sir Robert Buckingham if he would stay in the room with dear Sybil.

She encountered, at the garden door, the pale, sweet face of Mary Graham—Sybil's chief friend, and one who loved her with the devoted affection that women lavish on each other, when they have been deprived by adverse circumstances of the natural outlet for a woman's love. Mary Graham had a story of her own, which it is not necessary here to relate. It was all over now; her hopes, and almost her wishes that it might be otherwise. She had attained middle life; and knew that, humanly speaking, nothing was ever likely to alter the monotonous current of her life, and she tried to make interests in her brother's parish, and to find work in training his children, which by filling up her heart should leave no room for the entrance of a vain regret.

Still she had a necessity of loving, being endowed with a large and liberal heart that could take in all the pattern people in the parish, and make room for a good many of the wilder sort also, who were by no means models of their kind.

Sybil, however, had contrived to creep into her heart, and maintain her supremacy over all others; and daily, and hourly, were Mary's visits to her

sick-bed continued, while she thus gave the mother opportunity to seek rest and fresh air.

She almost led Mary into the pretty drawing-room before letting her go up-stairs, and told her the physician's verdict, which gave to Mary's younger spirit more of hope than anything she had heard yet. Surely it was well to know there was some local cause for this long-continued unconsciousness, and the removal of it would be the first step towards recovery. She thought that anything was better than that hopeless course of doing nothing, which the former doctor had carried out to an extent that might have cost Sybil's life. She added an earnest request that she might be allowed to be with Sybil when her hour of trial came—a request which fell in too well with the mother's wishes to be rejected; and, as her services would be more and more required, it was arranged that Mary should come into the house that same evening, and take up her abode there as head nurse.

The morning came. The doctors had made their final preparations: poor Sybil lay gazing vacantly at the sight. Her mother had been led, pale and almost fainting, from the room by the old nurse, who consigned her to the charge of the little twins, telling them that if they let their mamma come up-stairs Miss Sybil would certainly die; the London doctor said shortly to Mary Graham, "You had better go too;" a command which her pale face and shaking hand suggested to him.

"I intend to be with her, sir, and you need not fear for me," she said with a firmness he was not disposed to dispute. Supported in Mary's arms, the operation commenced; all that the most consummate skill of hand and eye could do to render it successful was brought to bear upon it. It was one of formidable difficulty, and any failure on the part of the operator would have induced fatal results. No less did it require firm self-control on the part of those who assisted him; and so little did the skilful surgeon trust the power of women to bear the sight of pain, that he desired Mary to keep her eyes fixed on Sybil's face, and on no account to watch what he was doing. The London physician held her pulse between his fingers; and the old nurse stood by, handing the different articles required.

At the deepest incision a sharp cry issued from the poor patient, but Mary only pressed her lips with a long kiss upon the sufferer, and soothed her with fond loving words and caresses. She did not know how far she was understood, but her voice and her caressing tones seemed to have a calming effect, and while she held a cold sponge, as she was told, to the lips and hands of her charge, and bent over her with loving expressions of the yearning love she had always felt for her, she forgot the presence of those two sharp intellects whose fame in the ways of science had spread over the continent of Europe.

"Lay her down," said the physician; and as the surgeon assisted to place the head in the least un-

favourable position, Mary knew that the operation was over, and that her Sybil had no more to endure from that terrible knife, whose glimmer she could not help seeing as the surgeon manipulated with its cold cruel blade.

She thought she felt a slight return to the pressure of her hand, as though consciousness were beginning to dawn, now the oppression on the brain was removed.

"You have behaved well," said the surgeon, quietly, as he held a glass of wine to her lips: he saw she could not have held it herself, for she was beginning to feel as if the room were going round, and as if she were not quite sure whether there were two doctors or twenty flitting about it. She soon recovered herself after this timely administration of wine, and forcing back with a strong effort the sobs which seemed as if they must come, she sat waiting patiently in her chair till she should be told what to do next.

The doctors were darkening the room, and had already removed every trace of their recent work.

The shortest and sharpest-looking of the two, who seemed like one before whom it would be impossible to give way, came, stood before her, and looked steadily at her: "Here, take another glass; there, now you'll do. Listen to what I've got to tell you, and mind and do all that I say. That old fool has gone to have her cry out with the mamma, down-stairs; well, we can't have two of you; so just listen, and remember my directions."

That sharp-spoken doctor had wiped his own eyes, and used his handkerchief audibly, after it was all over and Sybil laid down again in her bed; but he knew the power of a non-sympathetic manner to check nervous excitement, and it was his custom to assume a hard, unfeeling address, in order to stop the outflow of excited feeling, whenever that flow of feeling would be hurtful to his patient. He needed Mary's calm possession of herself, that she might be fitted to understand and carry out his further orders; and if he had allowed her to give way at that moment there would have been no one else on whom he could depend with confidence.

We pass over the tedious weeks and months that elapsed, during which it seemed a doubtful contest in which Sybil's life hung in the balance.

At first there was the danger of fever supervening, from the nature of the operation to which she had been subjected; and when this peril was surmounted, a new cause for fear arose from the excessive weakness and prostration that set in, while over all hung the dark shadow of a great grief which they could not doubt she was well aware of, and knew perfectly its nature, yet none of her nurses ventured to speak upon the subject, lest it should irritate the delicate tissues of the injured brain.

One night, or rather towards morning, when Mary Graham was keeping her prolonged vigil by her bed, Sybil suddenly opened her eyes, and asked if it were Mary watching there, and would she

come and lie down by her side, for she must say something to her which she could not tell to every one.

The first impulse of her watchful nurse was to try and make her forget it, and to soothe her to sleep, but as she looked at the eager expression of the anxious eyes into which consciousness had long ere this returned, she merely administered a few spoonfuls of the cordial she was directed to give, to assist any voluntary effort the patient might make, and then placing herself by Sybil's side and taking her hands tenderly in hers, she said gently that she would let her talk until nurse came in to take her place. "Mary, I shall not be here much longer; I shall soon be with poor Harold. Do you know I am glad not to have to stay longer in this world. I don't think I could bear to live with a broken heart."

"Yes, you could, Sybil. Sorrow does not kill; or the gravedigger would have no rest from his work. If you are to die, it will be God's will, which I dare not gainsay. But if it be His will that you should recover, I think that you will not shrink from your future life merely because it has missed its sunshine, and that you will at last thankfully acknowledge the power and the divinity of suffering."

"But I shall never be the same again, Mary."

"Perhaps not. I would say I hope not. I should not like to think that one could pass through a great sorrow and not show any visible effects proportionate to the work it was sent to do."

"But, Mary, sorrow is sent as a punishment, is it not?"

Mary hesitated for a moment, and then said gently, "I think we can generally trace a connection between our trials and some tendency of a wrong kind which they were sent to check; but I believe we ought to avoid looking at them as a penal measure only, for this is a strong temptation to most natures, and we should consider these trials as rather corrective in their character than penal, for then only the true end and purpose of chastisement is carried out. But now I cannot let you talk any more; if you are not the worse for it, we will resume it at another time,—and here is nurse, she shall bring you some coffee."

Later in the day, Sybil had been moved from her bed to a couch by the window, that she might see for the first time the beauty of the garden, which still retained some of its brilliant hues by the help of china-asters, marigolds, and chrysanthemums, and other gorgeously-arrayed flowers, whose colours gain them admittance when sweeter blossoms have long since left the field. Mary was sitting at work, and presently Sybil asked: "Mary, do you think I am a very false character?"

Sybil had asked the same question of her mother, and had been abruptly stopped with "Pray don't take such thoughts into your head. I should hope no child of mine was ever false, or ever will be," she added, as the thought of a possible rupture with

Sir Robert passed through her mind. "My dear child, your illness makes you morbid. I consider you remarkably truthful. I am sure you never told me an untruth in your life;" and then Mrs. Gray had left the room, for she never felt she could cope with what she considered Sybil's questions of casuistry.

Mary went on with the little frock she was making for a village *protégée*, and while intently examining the little sleeve that she might fit it with due nicety into the main garment, she replied—"You mean, I think, that you are sometimes inclined to follow a line of conduct which you wish to think accords with your natural character, while in reality you are forced to constrain your feelings and do violence to your disposition in order to reconcile your outward conduct with your inner feelings. You have an external standard which you desire to conform to, and to do this, you must warp and strain your real disposition."

"Mary, I will tell you what weighs on my mind, and occupies it day and night, whenever I am able to think, and even shuts out sometimes that horrid, horrid scene, that ship, and those drowning men. No, my dear Mary, I am not going to excite myself. I know that if I would ever recover a healthful mind, and have power over my own spirit, I must control the harrowing thoughts which rise unbidden and surge over my brain, till I am obliged to put a strong force upon them, and vehemently resist their encroaching power. I try earnestly, but it is hard, and at night when the trees are swaying their tops in the wind, it sounds so like the rushing waters that closed over *him*, that I can see the cruel green waves with their foaming crests, and hear the death shrieks of those poor dying men. But it was not of this I was going to speak. I was going to tell you that I mistook my own power when I thought I could marry Sir Robert Buckingham. I did not act sincerely when I accepted him; and although I fancied I was actuated by a strong sense of duty and not by any motives of ambition, yet Mary, I fear that these, too, had their part in my decision, and that when I found I must not be allowed to love poor Harold, I felt pleased and flattered at the prospect of a position of much importance and estimation in the eyes of others. I have been punished severely for my fault, but it is a valuable lesson, which my whole future life will be the better for having learnt, even at so costly a price."

Mary Graham put aside her work, and kneeling beside the poor wasted girl, on whose colourless cheeks a bright spot of red began to appear, as she spoke of herself, that faithful friend took both her hands in hers, and with eyes filled with tears, she said, "Sybil, you will conquer, and come out strengthened and purified by these fiery trials. Have you more to tell me?"

"Yes, Mary; you have guessed perhaps that my engagement must be put an end to. Yes," she added, as Mary bowed her face to hers, and made no answer, but by a long fond kiss, which told all

of sympathy and more than words would do. "Yes, Mary, I am not saying this in order to obtain a salve for my conscience for my past mistake, nor with the hope of stopping its pricks by making a great sacrifice to its suggestions. It is simply a question of plain honesty and truth. I ought not to have promised to be Sir Robert's wife, because I loved Harold; the same reason holds good still, although *he* is lost to me for ever. I see the truth now, which my eyes were too blinded to perceive—the veil has been torn from them, and though by a sharp, rough touch, yet I am glad to be able to see its grand clear outline at whatever cost of pain. And now, Mary, I wish you to make this statement to my mother. I think I am not cowardly in delegating the task to you. It is not that I fear for my own constancy in adhering to the course I see to be right; but I know it will be a painful disclosure to her, and I shrink from the arguments I know she will use to shake my resolution. In my present weak state, I should not be able to answer them, and she might mistake my inability to reply for acquiescence in her views. Will you, Mary, undertake this? I will see Sir Robert myself when I am stronger."

The task imposed upon Mary Graham was certainly no slight one. She knew she must expect a severe reprimand for the sympathy she had shown for Sybil's feelings, instead of treating them as the sickly fancies of an invalid. She dreaded the cold politeness of her manner, and the freezing sentences in which Mrs. Gray would deprecate any interference between herself and her children; and she almost feared for Sybil, as she thought of the impossibility of breaking through the artificial veneering of that cold worldly woman and reaching her from the side of truth and real feeling.

The prospect was not by any means bright, nor was it free from heavy clouds on the horizon, when she thought of Sybil's future. Would she never look back on her rupture with Sir Robert with regret, when Time should have softened the bitter recollection of her lover's death. Would Sybil be able to endure solitude and a lonely life, after the hopes that had been hers, and the bright thoughts with which she had surrounded her married home? How would it be in the future, when youth should be passing away, and the brief stormy grief that from its very excess could not be lasting, should be laid asleep for ever? Would she then not regret the love that might have been hers, and think with pain that in her impatient agony she had tossed it away? But Mary Graham was not one who allowed herself to look to consequences when a plain duty was set before her; nor did she confuse her ideas of right and wrong by considering the expediency of any course of action, after her conscience had plainly acknowledged it to be right. She had as much of that irresolution in deciding the preponderating amount of right over wrong in any question brought before her as is said to be a characteristic of the Teutonic race; but with this susceptibility to see both sides, she had so schooled her judgment to

follow the truth at all risks, that she was saved from much unnecessary perplexity, and enabled to recognise it with unerring precision.

The difficulties she had anticipated, in laying before Mrs. Gray poor Sybil's troubles, were not unfounded, nor were the expected results exaggerated.

There was no violent outburst of angry feeling: Mrs. Gray was too refined and polished, possibly too contemptuous towards those who ventured into collision with her, to give way to any expression of uncontrolled or unmeasured anger. Anything approximating to what is vulgarly known as a scolding was as removed from this high-bred and self-possessed woman as the low habits and speech of the class furthest from her in the social scale.

She thanked Miss Graham for the communication she had thought proper to make. Doubtless she had not intended to mistake her duty, nor to overstep her sphere, when she had obtruded herself in a matter of such extreme delicacy, which Mrs. Gray begged to decline discussing with a young person whose peculiar position rendered her exceedingly unfitted to give advice on such matters.

Poor Mary bore this and a great deal more of cold sarcastic bitterness, of which we give only an epitome; but although her love for Sybil supported her through it, she felt as if under the fascination of some beautiful but noxious creature, whose power it seemed hopeless to resist; with the final sting, however, her woman's spirit was roused, and she exclaimed, with a burning flush of indignation: "Mrs. Gray, if you would preserve your child from the lot that has overtaken me, you will not force her into a marriage where her heart is not engaged. I warn you—and perhaps I am as fitted in this respect to warn you, as if I had stooped to make a mercenary marriage."

Mary Graham did not know that she had pointed her arrow with truth. She had only intended to refer to her own lot, and her choice of a single life, rather than incur the guilt of marrying without affection. The shaft told, however; innocent as was its aim, it pierced deep into the consciousness of that scheming and unfeeling woman; and instead of making any reply she left the room, nor did she appear again until the evening meal, when she scrupulously avoided any direct conversation with Mary, and behaved towards her with studious politeness, from which Mary knew not whether to gather that she had given mortal offence, or that these were to be the terms on which her future intercourse at the Lawr was to be carried on.

Mary did not report at once to Sybil the result of her mission. The efforts of the day had been more than she could bear, and she lay in a state of exhaustion, followed by a restless night, which was not compensated for until a refreshing sleep of some hours on the following day restored her to the same state as before her conversation with her friend.

Weeks passed away, and Sybil's strength was

gradually returning. Her mother had made no allusion to the subject of Mary Graham's communication, and sometimes the latter fancied that she intended to ignore it altogether, and to carry her point by that passionless immobility which seemed to have such terrible power.

One morning, when Sybil had been brought down into the drawing-room soon after breakfast, and had been dressed for the first time in her usual attire, she begged to be allowed to sit in an easy chair, instead of being laid on the couch, a step towards recovery which gladdened Mary's heart, though with the innate tact which guided all her dealings with an invalid, and which made her method so successful, she forbore to take any notice of it.

Very lovely Sybil looked, with her rich dark brown locks simply braided back and confined in a transparent net. A quiet grey dress, ornamented with a little bright blue ribbon, set off the clear delicate rose tints of her complexion, and her large violet eyes were softened with an expression of patient resignation, very touching to see.

She had begged to be allowed to wear mourning for poor Harold, but had been sharply rebuked, and desired not to think of anything so preposterous. Mrs. Gray wondered what girls would think of next, engaged to one man, and then wearing mourning for another who wished to be in his place. She could not have thought it of a child of hers. On this particular morning, Mrs. Gray had looked with gratified satisfaction and pride, on the arrangement of the grey dress in the arm-chair, and remarked that next time Sir Robert called, she thought Sybil would be quite well enough to see him.

Sybil knew the moment for taking her stand had come, and without hesitation she replied gently, yet with a quivering in her voice that showed what it cost her.

"When I see Sir Robert again, mamma, it will be to tell him what I begged Mary to say to you, that I cannot be with his wife, and that all must be at an end between us."

The expression of Mrs. Gray's face was fearful in its intensity of anger, and even hate. It seemed as if her natural affection for her child had given place to hatred. Her whole heart had been set on this marriage. Her long indulgence of pride and ambition had rooted the desire for it so deeply into her very existence, that it seemed like tearing out the principle of life itself to give it up, while the thought of being resisted, nay thwarted, by her own child, whom she had always found so yielding, and for whose aggrandisement she had thus plotted and manoeuvred, struck a blow at the proud woman's power, which she resented as rebellion against her authority. A painful scene followed, during which Mary was leaving the room, till an imploring entreaty from poor Sybil made her resume her occupation at the further end of the room. The result of a stormy conversation, during which Mrs. Gray poured out the pent-up anger and dis-

appointment which were surging through her heart, was to leave Sybil lying back exhausted with pain and excitement, while Mrs. Gray swept haughtily out of the room, bestowing a Parthian shot on Mary as she passed her, saying, "I have to thank you for this childish exhibition of folly, cant, and disobedience. But for your influence, Sybil would have learned to show more deference to her mother's views, and more regard to her feelings." "Mary, come to me," was all poor Sybil could say, and as she raised the poor stricken girl in her arms, kissed and fondly caressed her, she prayed that she might have strength to go through what she had begun, and eventually find peace.

The friends passed an hour in quiet restful talk. At length Sybil begged to have her desk brought to her, for she said, "no further delay should prevent my doing what I know to be right. I have told my mother that I intend to write, to set myself free, since she will not allow me to see Sir Robert for that purpose, and perhaps a letter will be the least painful means for us both."

The letter was written and despatched, and Sybil seemed more relieved and quiet than she had been for some time, though as the evening approached, when she might look for an answer, she grew restless and put off going to bed until there was evidently no prospect of a letter being sent off from Buckingham House that night. Days passed by, weeks followed, and still nothing to break the silence from Buckingham House.

Sybil wondered, but her spirit seemed to have regained its elasticity, and she almost fancied she should have no further notice taken of her note, when at the end of the fifth week, a letter in the well-known handwriting of Sir Robert was found in the post-bag, addressed to Mrs. Gray, and bearing the Brighton postmark. The document was couched in the best epistolary style, written in the third person; and it set forth that Sir Robert had been very much surprised at the contents of a letter from a member of Mrs. Gray's family, that he was at a loss to comprehend the extraordinary nature of such a communication from so very young a lady; that he begged he might in no way inflict any further annoyance upon her by any future renewal of their social intercourse, and with respect to the wound his feelings might naturally be supposed to have received, he wished to state that when he had the honour to address Miss Gray, she was not the only lady who had favoured him with distinct proofs that his attentions were not disagreeable to her, and that he had readily found in other quarters that appreciation of himself, and that reciprocation of his sentiments, which he had been falsely led to expect from a member of Mrs. Gray's family.

Sir Robert Buckingham had been so fortunate as to secure the hand of the Lady Araminta Vyvyan, the eldest daughter of the Earl of Mountarlington, and the marriage would take place at Brighton, as soon as the necessary settlements, which would be

on a princely scale, could be completed by the legal advisers of the two families.

Mrs. Gray's surprise on reading this characteristic letter was too unfeigned and overpowering to permit her to resort to her usual system of breaking the news.

"There, Sybil; Sir Robert will not break his heart for you, but has already engaged himself to another girl."

Sybil took the letter, and read it carefully through from beginning to end; more than once or twice, as if she wished to take in the full meaning of every word; then she asked if Mary Graham might see the letter, and, on receiving an affirmative nod, the great man's dignified missive was passed to her friend, who read it rapidly, and then exclaimed—"I knew he was no gentleman. Would any man of delicate feeling have written such a letter under any circumstances whatever? How much less under those that elicited this reply. How could he dare write to your mother in the third person? and then to send no answer to your letter, and yet to take the liberty of writing weeks afterwards, in such a strain to your mother, who had never addressed him at all on the subject. And then his hint that his settlements on his bride are to be princely! That seems to be the climax of his gross want of all refined feeling, and sets the stamp of vulgarity upon the whole man."

"You are right, Mary; he is no gentleman," agreed Mrs. Gray, and from this morning dated a better understanding between her and Mary Graham. The insult to herself which Mary had pointed out in the style of Sir Robert's letter, had perhaps something to do with it, and anger against the writer helped to lessen the regrets she felt at the loss of "the princely settlements" that might have been Sybil's.

From this time the subject was dropped amongst them, and seemed by a tacit understanding to be regarded as a topic that had better die a natural death. So many feelings gathered round its discussion, which made it impossible to submit it to dispassionate consideration, that all parties felt the necessity of preserving a strict neutrality, and carrying out the principle of non-intervention, which saves families as well as nations from embroiling themselves in useless strife.

IV.—UNDER THE TREES.

The further end of the Lawn domain dropped abruptly down a slope of considerable declivity, too steep to be cultivated, and therefore left to its natural growth of trees and underwood. A pretty wild bit it was, broken into jutting masses of stone, feathered with fern, and with overhanging festoons of briony and wild clematis. Here the first primroses were sure to be found, and here the wild blue-bells made a carpet of bright blue, "as 'twere the heavens up-breaking through the earth." At the bottom of this wooded slope a little brook wound its course among the weeds and meadow flowers.

It was a favourite play-place of the twins, and as the brook divided them from corn-fields through which there was no right of way, it was considered a perfectly safe spot for the children, and here they passed a great deal of their time, making mud dykes, and other triumphs of engineering skill, catching minnows, or playing at Robinson Crusoe. There was a sort of path, however, leading by a short cut to the village nearest to Buckingham House, and as Sir Robert used to be in the habit of leaving his horse at the smithy there, a distance of two miles from the Lawn, it was a path frequently used by him or any other visitor from the Buckingham domain.

A year had almost passed since Sybil's acceptance of Sir Robert's hand, on the evening of that memorable excursion to the hills, when she and Harold had stood together for the last time.

Sybil was beginning to regain her former strength, although she was still unable to walk far, and as she was ordered to be out in the air as much as possible, and her mother's means did not permit of horse or carriage exercise, she was accustomed to sit out a great deal under those trees we have mentioned in the shaded nook of the Lawn garden.

She was resting there, in the warm sunshine of a June afternoon, reading a book of travels, and wishing that she too could be transported to foreign countries, to see new and strange varieties of men and things.

How she longed to see those grand primeval forests whose silence has never been broken by the voice of men, and which must still seem ringing with those exulting hallelujahs that filled the new-created world, when all the sons of God shouted for joy. Or what would she not give to be able to visit the perishing remains of human ambition and human thought: to see Rome, Athens; even Jerusalem, and perhaps the buried cities of Assyria, whose ruins speak in such startling language of a force and an intelligence, and a polity, that has wholly passed away; even the inarticulate mounds of the American continent, that can scarcely utter so much as the names by which they were known: how it would fill her mind and change the current of her thoughts, to bring these fresh and powerful influences to bear upon it.

Sybil was beginning to feel the want of an absorbing interest, and the re-action consequent upon the excitement of the previous year.

She struggled vainly against the lassitude she felt, which was partly physical, and the weariness and distaste for all her usual occupations, which was the result of the shock her nervous system had received, and a too great strain of mind and body.

Meantime the twins played below in the wooded hollow, and set their paper boats on the streamlet, and wished Sybil could join their sport.

At Buckingham House there were great preparations being made. Sir Robert and Lady Araminta were still in Italy, whither they had gone in the spring that followed their marriage; but they were

to return in about three weeks, and the house was undergoing a complete renovation and beautification preparatory to receiving Sir Robert and his bride. In the grounds a new drive had been cut and planted, and, of course, a new lodge and entrance-gates had been put up, and were now receiving their final adornment of paint and ornamental ironwork. The village artist, who let himself out with accommodating liberality to paint gates and door-posts per foot, or striking portraits of the Duke of Wellington, or the Pied Bull, at so much per job, was busily engaged at his work, surrounded by a little gathering of admirers, who looked on with awe at his progress, or lingered for a chat and to obtain the news. Some were labourers from a distance, stopping to hear of the latest improvements at the great house before returning to their own villages; some were wayfarers, proceeding by the high road to the nearest town.

"And when is the master to come back?" asked one of the group, a labouring man, who looked with some interest to the village *fete* that was to greet his arrival.

"They tell me that Sir Robert and my lady are expected before the month is out," replied the painter, applying a judicious stroke of his brush, and standing back to judge of the effect.

"Ah, you've got a lady at the great house, now," chimed in another. "I wonder how you'll like her."

"Is Sir Robert already married?" asked another, of a different class, tall, slight, and bronzed with exposure to all weathers, yet with a sickly look that deepened the intensity of his deep brown eyes.

"Ah, that he be," replied the labouring man; "and they do say that she'll take the pride out of him."

An impatient movement from the tall speaker made him add, "She's a fine one to look at, I'll not deny; but if she isn't a temper why I never saw one. Stuck up and airified, she'll have to come down in her pride one of these days, or else he must. There won't be room enough for both of them, and he, with his long talks, must have the last word." As the painter gathered up his pot and brushes, the group dispersed, and soon the tall youth was alone, pursuing his way across the short cut we have described.

After rapidly crossing several fields without once stopping to look for a path, and walking with the air of one who knows the locality familiarly, a sudden turn brought him full in view of the range of low hills which we described in a former page. Here a sudden impulse caused him to stop, and resting himself against an ash tree that overhung the brook, he exclaimed, "Oh Sybil, Sybil! and is this the end of your marriage? Is this what your bright young nature has come to? He must have soured you, or you could not have changed thus. Well, my last hope is over; I was a fool to entertain it, or to suppose for a moment that having never cared for me—except as a friend, and *nothing*

more—she should change and learn to love me after having chosen deliberately another man. Farewell, bright hope of my youth! Now I know the worst, I can go back and try again in life's battle, which at present has not been very successful with me.

"I may as well go and see them, though; if Sybil is in Italy there can be no reason why I should not. I have so yearned to see this spot again; and when once I have said good-by to them, I will start again with a bold heart for New Zealand. I do wonder they never wrote to me at Lisbou; I suppose they were too busy with this wedding. Oh Sybil, Sybil!"

A few steps further brought him to the spot where the two children were engrossed in making a cave for Robinson Crusoe, and Peggy had remarked to Annette that they ought to go out presently and find a footprint on the shore, and perhaps discover a cannibal, to which Annette objected that there could be no cannibal now Sir Robert never came, and the two little sisters were trying to think how they could make believe the marks of savages, for which Sir Robert's Parisian boots had so unconsciously done duty, when the two held their breath and exclaimed, "Here is a savage—a real one—oh, what shall we do?"

"Peggy and Annette, dear ones, don't you know me?" said a deep familiar voice that had not broken on their ears for many a month, and he held out both his hands to them with the old well-known gesture. The little girls looked puzzled, half shy, half frightened, then, as certainty displaced doubt, Peggy exclaimed, "It is our own dear Harold, I know it is!" while little Annette clung to him with delight, and then quickly shrinking to Peggy's side, she looked up wonderingly and said, "But Sybil says you are a holy angel in the sky, and that you would never come back any more."

"Annette, don't you see it is really Harold, and he is not dead, but he is alive, and has come back; and now Sybil will get well, and we shall all be so happy once more."

"Is your sister ill?" asked Harold, in a changed voice.

"Ah, she very nearly died when she heard you were drowned. The doctors said it almost killed her, and no one thought she would get well again. Even now she is so weak, and can hardly walk at all except in the garden. And do you know—" and then Peggy stopped abruptly, for she was old enough to feel there was some awkwardness in explaining to him the reason of Sir Robert's dismissal. But little Annette, who was much younger in mind, saw no difficulties, and gladly contributed her mite to the conversation, and informed him that Sybil would not marry Sir Robert because she liked Harold best, she heard old nurse tell Susan all about it, and that Susan had said that Miss Sybil would break her heart, and die like a young lady in a story book. "But Sybil did not die, Harold, and Sir Robert has got another wife, a grand lady, somebody with a fine long name."

Harold had turned aside during this unexpected communication. He tried to collect his thoughts and realise his position. His first impulse was to kneel and offer thanks for his deliverance from a great grief, but he contented himself with removing his cap from his forehead and simply murmuring the words, "Blessed be the God of my fathers!" in the fervent tone of real feeling, and after a pause of a few moments, he asked, as if he dreaded to hear the reply, "Is Sybil not in Italy then?"

"No, indeed. I wish she were, for I think it would do her good to go somewhere for change; but she cannot bear the sea, since—since that storm, you know, and the wreck of the 'Bucephalus.' She is sitting in the shrubbery at the top there, under the trees."

So near! so near to him too! Only a few minutes ago and he believed a far wider and impassable gulf separated them than the sea and half the continent.

And now, was he in a dream—could it be true? But if Sybil loved him, and for his sake had suffered so much, how was she to be told that he still lived, that the sea had given up her dead, and that he had returned unchanged to claim her for his own?

"Peggy and Annette," he said, laying a hand on each of their golden heads, "you see Sybil must be told that I am not drowned, and that I am here."

"Oh, yes, yes! How pleased she will be, and how surprised too. Do you know she wanted to wear a black dress, but mamma would not let her. She will be so surprised."

"So much so that I am afraid of frightening her if she sees me suddenly without being prepared. You know Annette thought I was a ghost. Now, dear ones, I want you to go quietly up to her and tell her you have heard some good news, news of a friend; try to make her guess who it can be. For the rest," he murmured to himself, "God must take care of her, for none other can. Now then, run away; and mind you do not tell her too quickly."

A way darted the children, hand in hand as usual, pleased at being charged with so important a commission. No thought of the difficulties attached to such a task disturbed them, till they had run themselves out of breath, and stood panting by Sybil's chair, who was just then engaged in a discussion with Mary Graham as to the relative merits of two of their favourite historic characters.

"Oh Sybil!" the twins began, "what do you think? Who do you think has come back from the sea? I mean, we have heard such good news, news of a friend, and he says we are to make you guess who he is." Sybil had turned pale and red by turns during this impetuous outburst. She pressed her hand violently to her heart to force back the impossible thought that would assert its right to come forth.

Then as the sickening revulsion of feeling at its utter impossibility came over her, she lay back, and said, faintly, "I am very silly, Mary, and can-

not even bear this." Mary desired one of the children to fetch some water, and while Sybil lay back in a state of faintness and exhaustion, she admonished the child for coming upon her sister so hastily, and especially for asking her to guess who had come back. "Of course, dear, it made her think at once of Harold Forsyth."

"Well, and it is Harold," replied the child, eager to exculpate herself, and unable to comprehend the want of success of her mission; "it is dear old Harold himself. He is not dead; and therefore he never could have been drowned, and he is down below, by the brook among the bushes."

Sybil looked wildly round her, and then as Mary soothed and caressed her, she said, sadly, "Who says Harold has come back. Has he come to fetch me?"

Poor Mary longed to know how far she might build on this improbable tale, and allow the truth to dawn gradually on Sybil's mind. She could not leave her charge; but having succeeded in restoring her to consciousness, and promising that she would return with nurse, she flew to the house, desired nurse would at once take her place by her young lady, and hurried down the slope, and was soon face to face with the returned wanderer.

"Harold," and one long grasp, told all the welcome she would convey to that long-wept friend, who would now restore joy and gladness to her Sybil.

There was not a moment's hesitation in her recognition of him. It was indeed Harold Forsyth, whom they had all given up as lost, whom they supposed to be then lying in "his vast and wandering grave" until the sea should give up her dead.

"May I see her?" he asked eagerly.

"Not yet," she replied; "the shock has been too much for her. Now I know it is you, and not an idle fancy of the children's, I will break your presence to her, and persuade her of its reality. Do not attempt to approach till I send you word."

So saying, Mary Graham hastily withdrew, and was soon out of sight among the thick bushes, working her way painfully up the hill, which had never before seemed so steep to climb.

She resumed her place by Sybil's side, and bending over and kissing her fondly, she said, "Sybil, God has been very good to you." Then, as Sybil gazed intently at her, she resumed, "Do you think you could bear a great joy? Could you bear to learn that your long sorrow is accepted, and the punishment you thought your due is about to be remitted, and full and perfect happiness to be restored to you, as far as one can hope for it here? Try to realise that in the great storm that wrecked so many hopes, and blighted the hearts of hundreds, some few, perhaps one only, were saved. Can you believe this? It is true. The sea did not swallow up our Harold—try, dear, to take in this thought."

In a calm, dry, dispassionate way, Mary continued her narrative as one would tell a story to a sick child. She knew that as sorrow does not kill,

joy certainly would not, but she feared the mischief that might be done, if it were communicated in an excited tone of voice or manner, and therefore conveyed her facts in the most measured unconcerned way she could assume, that strangely belied the violent emotion she was feeling inwardly.

She gained her purpose, however.

Sybil caught her calmness, and endeavouring to compose the tumult of her thoughts, asked simply what had she done that God had been so good to her; and then, with a deep blush suffusing her pallid cheeks, she asked if he were near, and would he come to the Lawn again, and might she see him; and then reading in the eager looks of the little ones how near he was, she said, "Do let him come to me at once. I cannot bear to wait. Beg him to come, to forgive me."

Harold had found it impossible to restrain his impatience below, and had long ere this strode up the wooded slope, and now stood behind the bushes, waiting for the promised message from Mary. He heard the voice he had never hoped to hear again on earth, imploring him to come to her, and regardless of Mary's injunctions, and a vigorous course of signals by which she endeavoured to telegraph her disapproval, he cleared the distance between them at a bound, and in a moment he was kneeling beside poor Sybil's chair, supporting her in his arms, and calling her his own, his darling, never to be taken from him any more.

We pass over the explanations of that interview; it is sufficient that they were considered satisfactory by both parties; and when Mrs. Gray returned from an afternoon's employment in her district, she was met by Mary Graham at the garden-gate with the extraordinary revelation of the drowned man's return.

That evening Harold told his story to a circle of breathless listeners. He narrated how he had clasped his life belt round him when he saw that collision was inevitable; how he knew nothing more, being struck by some falling spar which rendered him unconscious; how his belt floated him on the surface when the ship went down, and he was picked up by the boats of the Donna Luisa, Several bodies had been found, and the humane captain of the Portuguese vessel had taken care to have them decently wrapped in hammocks, and their shotted shrouds committed to the deep with the last marks of outward respect he could pay them. On finding that life was not extinct in Harold, he was consigned to the care of the ship's surgeon, but on the whole of the remaining voyage he was tossing in a brain fever, which lasted while the Portuguese was taken prisoner by an American privateer, and detained for several months until their respective governments could adjust the matter. He had been unable to hold a pen during the first

months of their detention, nor could he even explain his name, or obtain an English or American doctor to come to his help. All these circumstances were told him afterwards. He only knew that when he recovered from brain fever he was on his way to Portugal in the Donna Luisa, and on his arrival in Lisbon he was seized with small-pox, which prostrated him for many weeks. At length he had been able to write to England, and to obtain remittances by which he was able to cancel the money part of the debt, which indeed was but a small part of the obligations he owed to the humane Portuguese, who had proved himself a true Christian gentleman. "I also wrote to you," he added, turning to Mrs. Gray, "and begged for a few lines in reply, but none ever came."

"Indeed," she replied, "we never received your letter, or any intimation whatever that you were not among those two hundred souls that perished."

"My resolution was taken," continued Harold, "to return to England to refit once more, and again to try my fortune at the antipodes; but I felt I must say good-by here first, or at least look once more on the old spot. Now, Sybil, will you wish me well once more?"

For answer, Sybil put her hand in his.

Her mother answered for her. "No, Harold, since you have been so strangely brought back again to Sybil, nothing further must part you and her."

And so it was settled. Mrs. Gray had now no object in banishing Harold to the antipodes, and readily acquiesced in a plan for investing his capital in the purchase of a farm not twenty miles from Sybil's old home; and here in the pretty old-turreted homestead that was once a conventual establishment, but is now the substantial residence of the gentleman farmer, Sybil Forsyth is the loved and cherished bride of the prosperous and rising capitalist.

He prospers because he seeks God's blessing on all he undertakes, and walks straight on in the simple course of truth and uprightness.

Sybil's one desire is to love the truth, and to practise sincerity in every thought and action. Her mother allows that Harold makes a better husband than Sir Robert: "and he is, as you say, Mary, a thorough gentleman." She has given up ambitious schemes for the present,—until Peggy and Annette are old enough to be the subject of them,—and Mary Graham is an inmate in her household as the instructor and guide of the twins, and as the one person she allows to have any influence over herself.

So we take leave of the Lawn, and of the Abbey Farm, in the hope that we may have indicated—however feebly—the beauty and the nobility of truth and sincerity of character.

C. THACKERAY.

PLAIN THOUGHTS ON THE CHRISTIAN SABBATH.

BY THE REV. A. W. THOROLD, M.A.

THE Christian Sabbath is¹ one of those subjects which should be defined before it is enforced—in justice as much as in prudence. When you tell a busy man, whose time is his capital, that it is his paramount duty for one day in seven to close his shop, to lay aside his profession, and to forego many of his accustomed pleasures, the first thing he asks is—“By what authority sayest thou this thing, and who gave thee this authority?” And who will blame him? There is a very appreciable difference between the advice of one who would persuade us to what is expedient, and the authority of one who bids us to what is commanded. No doubt the Church has “power to decree rites or ceremonies;” but there are differences of opinion as to what is the Church, and a vast number of persons feel quite at liberty to discuss what she decrees, and to differ from her when it suits them. Unhappily a great many among us fear neither God nor man, and treat the Fourth Commandment with no greater disrespect than they treat the other nine. Nevertheless, we must not shut our eyes to the fact, that there are also very many who, happily for society as well as themselves, do recognise the external restraints of Divine Law, and who, while they turn Good Friday into a reckless holiday, have a kind of respect for the Lord’s Day, because they believe it to be of the Lord.

For obvious reasons, a clergyman feels this more than any one. He must indeed sternly resist the temptation of using doctrine as a weapon of rhetoric, or of quietly assuming the very point of a controversy, because it gives him better vantage ground for his argument. Still, if conscientious inquiry satisfies him that any particular institution or ordinance is Divine, he has undoubtedly all the advantage, with those who hear him, that is represented by the difference between the infallibility of God and the infirmity of men. For the conscience is penetrated much sooner than the reason; and while men sleep or wander under sermons on the power of the keys or the authority of tradition, they are pricked to the heart when some one speaks to them on “righteousness, temperance, and judgment to come.”

On the meaning and obligation of the Christian Sabbath there is a wide difference of opinion. It so happens, indeed, that on each side of the question (for, as has been well observed, there are only two tenable views) there is about an equal number of devout and able men; and that whichever side we take, we need not be ashamed of our company. Still both views cannot be right; and as it seems well in the present paper to take a definite position with regard to this question, we will proceed, in the language of writers—most of whom are familiar to the readers of *Good Words*, each of whom repre-

sents a distinct school of religious thought, and all of whom are men of learning and ability—to state what appear to be Scriptural and reasonable opinions on one of the most practical questions of the day.

On the moral necessity for the Lord’s Day, let us listen to Dr. James Hessey, whose candour and research it is impossible not to recognise, and whose words we quote the more willingly because we are unable to adopt all his conclusions:—

“The day, which in our foolishness we fancy we have adopted from expediency, or utility, or on political or sanitary grounds, or the like, but which we really owe to our moral wants, and to our moral sense, our moral wants discovered to us, our moral sense guided and directed to a particular issue, by the Holy Spirit speaking in Scripture, and by the Apostles.”—“Bampton Lectures on Sunday,” p. 342.

Mr. Llewellyn Davies is a teacher, who has never yet been accused of swimming with the stream, and a theologian, who is not commonly suspected of Judaizing.

On the relation of the Christian Sabbath to the Jewish he has written as follows:—

“One remark now, as to the relation of the Jewish Sabbath to our own. Imagine any reader entering with real sympathy into this (58th) chapter of Isaiah, kindling with the noble warmth of his words, seeing their reasonableness—and suppose yourselves to be told that Christianity or Christ had abolished the Sabbath Day; would you not feel as if mankind must have incurred, then, a terrible loss? But when you look round on Christendom, and observe that Christianity has not, as a matter of fact, purged the week of its Sabbath, but has encircled the Day of Rest with a peculiar glory, will it not seem to you idle to say, that our Sabbath has nothing to do with the Jewish, and rests upon quite another ground? Will you not exclaim in your hearts, that at any rate both seem to be founded on the wise love of God, and that whatever has that foundation need not seek for a better one.”—“The Worship of God,” pp. 106, 7.

On the existence of the Sabbath as a Divine ordinance before the time of Moses, Dr. Vaughan has pronounced with great distinctness in a manual of confirmation for the use of Harrow School:—

“It is a mistake to speak of the Sabbath as a Jewish institution; see Genesis ii. 2, 3; Exodus xvi. 23—30 (before the law was given). The law of Moses adopted the Sabbath (of which the principle is a *periodical religious rest*) and clothed it with circumstances of austerity and prohibition not essential to it, nor designed to be permanent, but suitable to the character and object of that dispensation, which was a schoolmaster to bring us to Christ (Gal. iii. 24, 25). When these circumstances were abolished, it did not follow that the primeval

institution of man's holy rest was abolished with them."—"Vaughan on Confirmation," p. 28.

On the evidence of the Divine character of the Sabbath that exists independently of external authority in the shrine of a man's own heart, let us hearken to the blessed voice of one, who being dead, yet speaketh :—

"But we rather waive for the present all these considerations, and would rest the perpetuity of the Sabbath law on this affirmation, that while a day of unmeaning drudgery to the formalist it is to every real Christian a day of holy and heavenly delight—that he loves the law, and so has it graven on the tablet of his heart—that wherever there is a true principle of religion the consecration of the Sabbath is felt not as a bondage, but is felt to be the very beatitude of the soul: and that therefore the keeping of it, instead of it being to be viewed as a slavish exaction on the time and services of the outer man, is the direct and genuine fruit of a spiritual impulse on the best affections of the inner man."—"Thomas Chalmers' Works," vol. iv., p. 665.

And now let us bow before One, as much greater than these His servants, as the heavens are higher than the earth, and Who, in His own observance of the Sabbath, did not destroy the law, but fulfilled it :—

"The Sabbath was made for man, and not man for the Sabbath. Therefore the Son of Man is Lord also of the Sabbath."

The first of these sentences evidently implies that the Sabbath is of God, and that its intention is mercy. The Sabbath was made for man, by Him who made man, and knew what he needed, and knew that he would always need it, till the Eternal Sabbath should begin. The second teaches us, that He who made the Sabbath has power to alter it, as it pleases Him, because He is its Lord; that He can change the day of its observance, and relax its strictness, and elevate its blessedness, and widen its meaning. Not, however, as Son of God, but as Son of Man, Himself a child of toil, earning His bread of carefulness, and resting on His Sabbath day from His own labours, touched with our infirmities, and claiming our rights.

Thus the Christian Sabbath is not the modern arrangement of some National Board of Health, nor is it merely a venerable tradition of Church authority; it is the expression of the immutable will, the gift of the unchanging love of the Living God. It is now the first day of the week, instead of the last, because the Lord of the Sabbath, having power to alter it, did alter it through His Apostles. All His acts with reference to it were intended to free it from bondage and weariness, and to make it once more a delight and a blessing; and in appointing it to be the weekly memorial of His own Resurrection, as well as of the Descent of the Comforter, He raised it to a more excellent glory, and endowed it with a more abundant promise.

"The Sabbath was made for man," *that he might rest from bodily labour.* A weekly rest is a

physical necessity; and if we are reminded that a great proportion of mankind know nothing of a seventh-day Sabbath, the answer is that they have more than their compensation in a multitude of superfluous holidays. Only unnecessary work is forbidden by the Fourth Commandment, and each person must settle with his own conscience what is unnecessary. The priests in the Temple profaned the Sabbath, and were blameless. The feast to which Jesus sat down on the Sabbath day had most probably been prepared that morning, and yet He had nothing to say about Sabbath breaking. Nay, while to some it cannot be all rest, to others it cannot be any. Servants have their work, for the Lord's day must not be a day of household disorder. The physician goes from house to house on his errand of mercy, though he will be careful to spare himself unnecessary visiting, and may perhaps put the Sunday fees into his charity purse. Sunday-school teachers have often a hard time of it, and to the faithful minister, though it be charged with blessing, it can never be a day of repose. Still, so far as possible, it is to be a rest-day: not only for ourselves, but for others. We must not, through selfishness or thoughtlessness, give our servants needless trouble; and, especially, we must let the tradesman rest. There would be no selling on Sunday if there was no buying. The buyers make the sellers. If tradesmen are wrong in selling, the public are yet more in the wrong in tempting them to sell. Yet the struggling shopkeeper who sells because every one selling round him seems to compel him to sell, is far more excusable than the wealthy tradesman, who keeps his shop open for the sale of luxuries. And Lazarus, who in the sultry days of summer buys his Sunday dinner on Sunday morning, because if kept through the night in the air of a crowded room it would become unfit for food, is not half so blamable as Dives, who expects his dainties to be sent in on the Sabbath morning, and will not be at the trouble of ordering them the day before.

"The Sabbath was made for man," *for his relaxation and enjoyment.* In quiet repose, and in the bosom of the family the Lord's day is to be spent. Sunday is the holy day which a parent should delight to pass with his wife and children, when for a little while he can shake off the cares of business, when happy voices and bright faces anoint his heart with fresh oil, when they all go to the House of God in company, when the simple meal is like a king's feast, because they are all there to enjoy it together, when there is no worry of incessant letters, and the very door bell is at peace. And then, in the intervals of service, do you think it profanes the day for the united family to take a quiet walk together in the fields or in the park? I trow not. If indeed a man's conscience forbids it him, let him abstain from it. If it permits it, let him do it rather. Innocently to refresh the body is indirectly to invigorate the soul. Surely it is as easy (perhaps easier) to think and speak of God in

the sweet fresh air as in a close dull room. Nay, one reason why Sunday bands in the London parks are so severely to be reprobated is, that they are an unjust invasion on the common rights of citizens: and that religious men cannot use their own property, nor enjoy what they pay for, on almost the only day when they are capable of enjoying it, without having music forced on them, which they do not wish for, and their happiness spoiled through the dishonour done to God.

"The Sabbath was made for man," for his special instruction in those Divine truths, which, but for a day such as this, would be in danger of being entirely forgotten. Even with educated and well-disposed persons, on other days of the week, a pre-occupied mind, and weariness of the flesh leave but a scanty leisure for the world to come. While to hundreds of thousands the public teaching in Church or the instruction of the Sunday School is the only opportunity of hearing the Word of Life, and of learning what they must do to be saved. Then on this day, a little time may surely be spared for a few bright, and yet holy words from a father to his children about the Love and the Law of the Father in Heaven. A child is not a toy to play with, but a trust for eternity. The mother has six days for her family. The father, often, but one. Not that it is to be a day of long tasks to be learned by heart, and distinguished from other days only by the lessons being of a different kind. If we overdo it, Sunday will be secretly hated, and we shall lay the foundation of future Sabbath-breaking. Still let it in some measure be consecrated to the home worship of the "God of all the families of Israel," and to hearing of the "rest which remaineth for the People of God."

Once more, "The Sabbath was made for man," that he might worship God. Sunday is blessed to us, just so far as we try to live it in a spirit of prayer. It would not be wise to urge that it is to be entirely spent in prayer. Dr. Hessey has prudently hesitated about Bishop Horsley's rule, "that the same proportion of this day should be devoted to religious exercises, public, and private, as every man would spend of any other day in his ordinary business." "Let each man be fully persuaded in his own mind." But surely we may say, that it ought to be pervaded by the spirit of prayer, that we should avoid everything that is inconsistent with that spirit, and that all the day through we should ask for a spirit of devoutness! Oh for more devoutness, for more devoutness! "Blessed are they which do hunger and thirst after righteousness, for they shall be filled." Oh to confess sin, as those who feel it to be a curse and a burden! Oh to sing as those who have good news to sing about, and who know in whom they have believed. Oh to pray as those who long for heart communion with Christ! Oh that as the hart panteth after the water-brooks, so our inmost souls may pant after Him!

We also read, "and not man for the Sabbath."

The Sabbath is good, but man is better, for the

end is better than the means. The Sabbath is of God, yet it is only for a time, but man is for ever. Thus, if the letter of the ordinance should happen to interfere with the good of him for whose benefit it was intended, the letter must go and the spirit must prevail.

Carriages and horses, as a rule, ought not to be used on Sunday; yet clearly there are cases in which it may even be a duty to use them. There is a curious passage in the Old Testament (2 Kings iv. 22, 23) where the Shunamite woman said to her husband, "Send one of the young men, and one of the asses, that I may run to the man of God, and come again," and he said, "Wherefore wilt thou go to him to day, it is neither new moon, nor Sabbath?" From which we infer, that if the day had been a Sabbath, he would have assented as a matter of course.

Where sickness or infirmity makes it impossible to walk to church, then ride. All that is required in such cases is, that the servants be not deprived of their church privileges, and that the cattle be not used more than necessary. A man is worth more than a horse. A servant must sometimes expect to be inconvenienced for the sake of his master, because this is one of the things that he is paid for. If it was lawful even for Jews under the law of Moses to lead an ox or an ass to water on the Sabbath day to preserve the animal life of a brute, surely it may sometimes be lawful, that an ass or a horse should take Christian people to the house of God, to drink of the water of life. Once more, if inclement weather come on, and we cannot reach home without perilous exposure, and exposure means, for us, not only discomfort, and inconvenience, but sickness, and even death—which are we to think most of—the letter or the spirit? The life is more than meat, and the body than raiment. Spare the life for usefulness, go home in the first conveyance you can find, and have a good answer in your conscience before God.

Sunday, again, is not a day for visiting. It should be a day of still and sober happiness, and as free as may be from the intrusion even of friends. Yet surely there are cases where such a thing is even a duty, and where God blesses the hours spent in social intercourse, as much as those passed in His House of Prayer. Think how many sufferers there are in our great city hospitals, and what a joy it is for them to see those they love. Sunday afternoon is to many the only time possible for such visiting, and does that break the Sabbath? Nay, verily, it halloweth it. He who asked "Is it lawful to do good on the Sabbath day, or to do evil," will never frown on the true love that spends a Sabbath hour in making a friend happy, and in showing the way of Salvation.

Or to take one more instance. Some of us may have an aged parent, or a sick relative, or an afflicted friend, whom at other times we are unable to see, whom during the leisure of Sunday we can see. The very walk does us good, and the mere

sight of us does them good; and is this Sabbath breaking? Let us remember Him who rebuked the Pharisees for making the word of God of none effect through their tradition. "God is love; and he that dwelleth in love, dwelleth in God, and God in him."

Sunday, once more, is not a day for travelling. We must not give place for an hour to the mistaken philanthropy, which persuades itself that huge Sabbath railway excursions give much rest to jaded operatives, or that it can ever be fair, for the pleasure of some and the gain of others, to deprive a large body of public servants of their day of rest. The best way of ascertaining how far such arrangements really answer the end they aim at is to do what Hugh Miller tells us he did—watch some Sunday evening one of those excursion parties come home, fagged and out of temper, filling the public-houses on their way home, and often quite unfit for work next day.

Besides, no plea of mere expediency can ever justify a breach of the law of God: "Remember the Sabbath day to keep it holy." And it is wonderful that the working classes do not see how to let go the Sabbath would be an act of suicide. The Sabbath is not a restriction on joy, but an outwork against worldliness. It is to be the rich man's protection against his own covetousness, lest he make haste to be rich. It is the poor man's best safeguard against the selfishness of his employer.

Yet here also there are exceptions. A brother clergyman is ill, and he wants me to help him: and were I to walk, I should totally unfit myself for duty, and might as well stay at home. So I use a conveyance, not one whit ashamed of it: and if my neighbour judges me, I am sorry for him, but I am not in the least sorry for myself.

Or I am a medical man, and my patients are scattered, and unless I use a carriage they must wait wearily for me, and I shall lose my hour at the House of God. I ride, and I appeal to Christ's judgment seat within my own conscience. To my own Master I stand or fall.

Or, one whom I dearly love falls mortally ill, and sends to me to come instantly. Shall I refuse, because it is the Sabbath day; or shall I go with a willing heart, in the assurance of faith that Christ goes with me? I will fear, not man, but God. I will stand fast in the liberty wherewith Christ hath made me free, and will not be entangled in a yoke of bondage.

A few closing remarks will complete the subject: and with God's good blessing may be helpful for our comfort and His praise.

Nothing is so necessary in this case as a *robust good sense*. Good sense in morals is the faculty which distinguishes the essential from the non-essential, and which in assisting us in the application of fixed principles to cases as they arise, preserves us from the tyranny of rules. And yet this is often the last thing we find, even where we most look for it. I remember one good man, who at dinner on Sundays never changed his plate, and was

much gratified when his guests forgot to change theirs, his object being to save the servants trouble. Nothing could ever persuade him that, as the plates were not washed till Monday morning, a little more comfort on a day, which surely we do not keep by uselessly making ourselves uncomfortable, could not possibly infringe on the kitchenmaid's Sabbath. Another man I know, one of the excellent of the earth, who on Sunday night always occupies a fresh bed-room, to save the necessity of making the bed in which he slept on Saturday. I have heard another man say in public, that though he considered it wrong to hire a cab out of the streets on the Sabbath day, it might be a lawful thing to take a brougham out of a livery-stable. *Surely, it is no kindness to give servants on the Sunday too much time to themselves.* Being only partially educated, they are unable to read for long together: and to allow them a leisure which they cannot put to good purpose, is really to lead them into temptation. Servants are not made religious by living in religious families, though, indeed, that is a great advantage for them. Books are not always read, because they are lent. Let us be wise with our kindness. Let us remember that idle hours are always more or less sinful hours. Not a few heads of Christian families have found out before now to their keen disappointment that they have put themselves and their guests to real inconvenience, only that the maids might have more time to compare their wardrobes, and the men have a longer smoke in the harness-room.

Again, the Lord's day may correctly be called the Christian Sabbath, yet the Apostle has warned us against looking on it as a Jewish Sabbath. The Christian compared with the Jew is the heir come of age compared with the heir under tutors and governors. We are solemnly warned against permitting other men to judge us. Simeon, who has discussed the whole question with admirable sagacity (see cap. 30 of his Life), considers that the *spiritual* observance of the Sabbath is as strict as ever, but the *ritual* observance is not. We are free; let us use our freedom. Let us walk in "newness of spirit, not in the oldness of the letter."

For this very reason, however, we should be very *considerate* of the feelings of those who may seem to be over-sensitive on this subject, while we should also be careful not lightly to accuse or condemn those who use more liberty than we may feel safe. In some cases it may be our manifest duty to say, "Why is my liberty judged of another man's conscience;" but it will more frequently happen, that in love to our neighbour we must forego many things that we may think innocent, lest we put a stumbling block in his way, and cause our good to be evil spoken of.

On the other hand, if we see persons doing things which we may not like to do ourselves, but which cannot strictly be called violations of the Sabbath, we must not hastily set them down as godless, or take it for granted that it is either in ignorance or

contempt. We may prefer to have nothing to do with letter writing or letter reading on Sunday: but it is quite intelligible that it may seem to some even a duty at least to open letters; and as that excellent man Bishop Cotton openly recommended his pupils at Marlborough to write home on this day, it would be a bold thing to affirm in the face of such an authority that all letter writing is Sabbath breaking. Others, again, read newspapers and secular literature, who would never dream of playing billiards or taking their horses out of the stable; and they defend themselves on the ground that what people speak about they may read about, and that it is impossible all day long to be absorbed in sacred things. In such cases, I say, let us be on our guard against hasty misconstruction. While we maintain our own independence, let us remember the respect that is due to our neighbour. While we are entirely justified in resisting any conduct that interferes with our own liberty, and in protesting against evident scandals, we must be mindful of the great latitude of opinion that undoubtedly prevails on this subject, even among Christians; and we should aim at winning men over by meekness of wisdom rather than by sharpness of rebuke.

Children, again, should be most tenderly and wisely treated if the Sabbath day is to be made the Lord's Day. Be sure to make it holy. Be equally sure to make it happy. No doubt there ought to be a difference made between this and other days, but this need not be made into a real misery; and a moderate restriction on their ordinary habits will act beneficially as a discipline on self-will. Let such rules as are put in force be carefully explained, when the children are past the age of blind obedience. If they are forbidden some things, let them be permitted others. Let us be at the pains to find them fitting substitutes for the enjoyments we take away. Sunday is a feast day. While we are careful to steep it in an atmosphere of religion, let that atmosphere be sunny as with the Love of God. In a word, if we would neither make them rebels nor hypocrites, let us not lay on them a yoke which they are unable to bear.

Lastly, let us see clearly wherein the real hope lies of a better observance of this day.

The time is not yet come—if, indeed, it ever ought to come—when the Sabbath can be enforced by Acts of Parliament. Here, almost more than anywhere, Lord Stanley's remark holds good, that legislation too much in advance of public opinion only succeeds in provoking a strong reaction, and the apparent victory is turned into a humiliating defeat for many and tedious years. However impatient we may be for a result which all good men equally wish for, let us avoid trying to reach it by short cuts. By the inculcation of Christian principles in the minds of children, by the circulation of the Word of God among the homes of the poor, by diminution of the hours of week-day labour, by promoting healthy recreation on "lawful days," by setting in our own lives a good example, in the devout and yet cheerful use of it, and by earnest prayer for God's Holy Spirit, we may hope to win in a cause which, being in itself spiritual, must be promoted by spiritual agencies.

The Church is to be the salt of the earth. In the school, in the pulpit, in the family, we must endeavour to set forth Jesus Christ, the Friend of Sinners, as the only rest and solace for the weary in heart. The true Sabbath on this side Heaven is the Presence of the Saviour.

The time, indeed, is past for considering the hardness of men's hearts. Therefore we must not abate one jot or tittle of that we honestly believe to be the Divine Law. But we are to consider the infirmities of the weak; and we will not put new wine into old bottles, nor sew new cloth on old garments.

While we protect our own rights, we will labour with diligence, we will wait with patience, until our brethren, less blessed than we, come to claim them and to use them with us.

To win souls into the Love of God is the only sure way of making the Sabbath honourable.

"If any man be in Christ, he is a new creature."

"We, which have believed, do enter into rest."

THE UNDEVELOPED FIBRES OF INDIA.

BY G. BIDIE, M.B., Medical Officer, H. M. Farm in Mysore.

WE know few more amusing sights to a stranger than an Indian bazaar, with its noisy groups of people in all the varieties and brilliant hues of Eastern costume, and the little shops quite open in front, exhibiting for sale grains, spices, fruits, dyes, drugs, fibres, cloths, &c., in profusion sufficient to make the fortune of any ordinary colony. Indeed, no country under the sun is richer in raw materials than India, and yet but very little has been done to develop her vast resources. There are several reasons for this neglect. The poorer classes of

natives are generally too ignorant to understand the value of anything that does not come within the sphere of their own limited wants, while caste prejudice, apathy, &c., prevent the wealthy or educated from taking any real interest in such matters. What do Ramasawrny or Rungiah know or care about a substitute for cotton or flax, the discovery of new paper material, or the value of a drug? while to speak even to our friends Lingam Puntalu or Kistna Rau of tan and dye stuffs, raw hides or fish oil, would be considered excessively

rude! The Hindu faith, too, puts its ban on everything bearing the resemblance of novelty, whether in dress, social habits, art or science; and the Hindu mind is like the knife blade moving on its pin, motion without progress. *As you were*, is the essence of its philosophy, so that the Brahmin and his children must stick to their religious duties, the writer and his *belongings* to their pen, the farmer and his *loons* to their bullocks, the shoemaker and his *brats* to their last and *lap-stone*, and the very *gangrel body* and his *weans* to their wallet dirt and rags throughout all time. When a native wants a rope he collects some plants from which his people have always had rope made, and takes them to the village rope-maker, whose fathers have made ropes from time immemorial, and nothing would persuade him that any other plant would yield a cheaper or more suitable fibre, or that a man of any other caste could make his rope. So it is with everything else in India.

On the other hand, an uncongenial climate, and various adverse circumstances, forbid the influx to any extent of our enterprising countrymen; and the Englishmen now in India are chiefly employed as the military or civil servants of Government, who have neither time nor inducement to experiment in new productions, or to invent machines to thresh corn, clean fibre, or raise water. Indeed, it is at present somewhat difficult to conceive how the dormant resources of India can ever be brought to account. The only feasible plan seems to be, that men of capital in England, who are engaged in manufacture and desirous to obtain new materials, should send out energetic agents to encourage, by pecuniary advances, fair prices, and prompt payments, the production of the desired articles.

Of no substances does India display a greater wealth or variety than of fibres; and we purpose to devote the present paper to the consideration of some of the most valuable of these. Indeed, so prodigal has nature been of her gifts in this favoured land, that it would be impossible to place a man having a slender knowledge of the vegetable kingdom in a situation where he could not speedily procure an abundance of fibrous plants. Down on the sun-beaten sandy coast, there are the strong rough fibres of the Palmyra tree frond; and Coir, the curious wrapping of the cocoa-nut. All over the dreary thirsty plains we find numerous annuals, valuable on account of their fibres; and up on table lands, like the Deccan or Mysore, they are still more abundant. Indeed in some districts nature has been so careful regarding the wants of the denizens of the forests, that she has supplied them with ready-made sacks. These are obtained from the inner bark of a large tree (*Antiaris Saccilora*), which is beaten until it loses its attachment to the wood; just as Scotch boys beat and remove the bark from a green twig of alder to make a whistle. When removed from the tree the outer bark is rubbed off, and the inner, which consists of reticulated fibres, is sown up at the bottom to complete

the bag. From time to time enthusiasts have written of all this wealth, and specimens of the fibres have been sent to England, but as yet, with the exception of *Jute* and *Coir*, but very few are in demand there. This is not because they were not approved of, but because a certain supply could not be guaranteed, or oftener still from the supply having proved vastly inferior to the sample. The fact is, specimens of fibres for the English market have almost invariably been prepared under European superintendence, and therefore with greater skill and care than the native, if left to himself, can or will bestow. All fibres are prepared by natives by prolonged maceration in water, and are not considered fit for cleaning until the non-fibrous parts of the plants have become a foetid pulp, which can be removed by simple washing. Such treatment is very prejudicial, rendering the fibre weak, dark-coloured, stiff, harsh, and unable to bear damp or exposure. Indeed, fibre thus prepared is in England considered unfit for anything, except the manufacture of brown paper. In preparing fibres, therefore, in India for the English market, maceration must be abandoned, for under a tropical sun decomposition advances so rapidly, that no watchfulness will obviate its evil effects on the fibres. It is not very difficult, however, to separate and clean fibre from the recent plant, by first bruising the bark or stem with a mallet, and then removing impurities by scraping with a piece of iron hoop, and repeated washing. Such a process, however, though simple and efficient, is too tedious and expensive to be employed on the large scale, and what we want is some cheap and simple machine capable of doing such work.

Of all the productions of India, not one has attracted more attention than Cotton. Strictly speaking, cotton is not a fibre, but a species of vegetable hair, which envelops the seeds of the plant. Somewhat similar hairs are found in various other plants: thus we have the *cotton-grasses* of the Scotch bogs, the *silk cotton tree* of South America, and the *Asclepiads* and *silk cotton trees* of India; but in none of these do the hairs possess all the qualities that render cotton so valuable for the manufacture of cloth. True fibres are found in the inner bark of plants, or woody tissue of the *liber*, and we have familiar examples of such in Hemp and Flax. Notwithstanding this scientific distinction, however, we have considered it necessary to give a brief notice of cotton here.

COTTON belongs to the natural order of Mallow-worts (*Malvaceæ*), of which the Hollyhock and Marsh-mallow are common examples. Four species of cotton are met with in India; and of these three are indigenous.* The most common is the *Indian cotton* plant, which yields the cotton known in England as *Surats*, and of which there is a variety yielding the yellowish-brown *Nankin cotton*. The

* The three indigenous species are *Gossypium indicum*, *G. acuminatum*, and *G. arboreum*.

next common is the *Bourbon cotton* plant, so called because introduced from the Mauritius, and of which the American *New Orleans*, *Sea Island*, and *Georgian* plants are mere varieties. All the species of cotton are as handsome as they are useful, and in any country where they were less common, would be highly prized as ornamental plants. Let us look at a plant of the *Bourbon cotton*. It is a shrub from four to ten feet in height, with numerous wide spreading branches. The stem is round, smooth, and deep green, and the branches are covered with many large from three to five lobed leaves, which are smooth and of a beautiful deep green above. The calyx or envelope of the flower is double, there being an outer pretty light green involucre of three leaflets, deeply scalloped on the upper edge, and somewhat resembling as many clam-shells. The inner or true calyx is cup-shaped. The corolla is large, consisting of five petals of a brilliant yellow, and united into a solid ring at their base. The stamens are united into a large showy pencil-shaped column, which is tubular and contains the pistil. The fruit is a capsule. When mature, it is about the size of a pigeon's egg with the larger end down, and of the same shape, except that the upper small end tapers away into a point. It is made up of three oval pieces or valves inserted on the peduncle, and which, during the green state of the capsule, are attached to each other along their edges. From the middle of each valve there stretches a thin partition inwards towards the centre of the capsule, where the three meet, and thus make three separate cells. So soon as the seeds are ripe, the valves, commencing from above, begin to separate, and curving backwards expose to view three snowy little bundles of closely packed cotton. Let us remove one of these and examine it. It is exactly the shape of the cell, and the seeds, which are arranged in two rows, are completely covered and held together by the cotton, which is folded down on them, so as to economise space, in a way that no human skill could imitate. Each seed has its own beautiful little fleece, which may however, with a very slight force, be so completely separated as not to leave a trace of its attachment. Rats are very destructive when they take up their abode in a cotton field, as they eat the seeds, cut the cotton to get at them, and carry off much of it to line their nests. Before the capsules are ripe they do not touch them, being probably deterred by a fragrant oil that abounds in the outer covering, which they would have to cut to get at the interior; but as soon as they are ripe and fairly open, they climb up at night and carry off their contents.

Cotton seeds are highly esteemed in India as food for cattle, and are thought to increase largely the flow of milk in cows. They yield, on pressure, about two gallons to the hundredweight of a very pure oil. Cotton should be carefully collected and sorted daily, as the capsules open, and before their contents fall on the ground, where they contract dirt, become rotten, or get destroyed by insects. In

India these things are rarely attended to, the field being completely cleared at once, according to the convenience of the owner, and with little regard to the state of the crop; so that ripe and unripe capsules, good and bad, clean and dirty cotton, are all mixed up indiscriminately. When all collected, the capsules, bits of leaves and stalks, &c., are separated from the little bundles of cotton which we have described, and these are then subjected to the gin to remove and separate the cotton from the seeds. The native gin is a very simple machine, consisting of two small rollers turned by a crank-handle, and placed a little apart in a frame, so as to leave room for the cotton to pass through between them, but not for the seeds.

A great deal has been said regarding the quantity of cotton that India is capable of producing. So far as my own observation enables me to judge, after having visited the chief cotton-producing districts in Bombay, Hyderabad, and Madras, I have no hesitation in saying that, under the stimulus of Englishmen on the spot ready to purchase it at liberal prices, India, with the land now under cultivation, could produce five times as much cotton as England wants. The same remark applies to the quality of Indian cotton; for until the cultivator is taught the sort of article in demand in England, and sees really that it is for his own interest to supply such, no improvement need be expected. It is all in vain for manufacturers, merchants, and politicians, to talk of these things in England, for not even the faintest echo of their words ever reaches the far-off Indian ryot, and never will they be able to influence him, except through the medium of agents sent out to tell their wants, and show that they are in earnest. I have little faith in the efficacy of the present system of rewards offered by Government to encourage the cultivation of cotton, as these will in general be secured by some English planter or other enterprising individual, who enters on the cultivation *pro tempore*, merely to gain the large prize. Supposing, however, that the rewards were secured by regular cultivators of cotton, they would effect no permanent good; for in the shows of agricultural produce and stock instituted by Government, it has been found that prizes are like stones cast into the bosom of some sluggish stream, which for a moment excite a little commotion, but do not in the slightest degree increase the velocity of the current.

It has of late been the fashion to blame the bad roads for the small amount of cotton produced in India, and there can be no doubt that in some remote districts, such as Nagpore, they may to a small extent have had such an influence. Indeed, there is no denying that in most cotton districts, owing to the nature of the soil, &c., the roads are very bad, only equalled by those leading to the peat mosses in the north of Scotland. On the other hand, we must remember that the native cart is suited to them, and that the ryot and his cattle are accustomed to them; and so out of one rut

into another they jog along, slowly but safely, and as happy as possible, to the *ding dong* of the bullocks' bells.

Cotton is brought down from the interior in two ways, viz., on carts, or on the backs of bullocks. Each cart is drawn by a pair of bullocks, and the wheels are in general so low, that when they get into ruts, the load is either jolted against the side of the road, or dabbled in the mud. As to the bullocks with back loads, they in general belong to what might be called the *Indian Carrying Company*, viz., the *Brinjaries*, an extraordinary nomadic race with distinct physical and other characteristics, and found everywhere from Cape Comorin to the far Himalaya, their lodging being the lee side of some friendly hillock or bush, and their roof-tree the blue sky. They always travel in tribes, like our friends of early days the *Cairds*, carrying down linseed, cotton, &c., to the coast, and returning with salt, &c. The cotton is done up in small bales, which are slung one on each side of a bullock. They are quite independent of regular roads, but passing through the dreadful thorny scrub jungle, the matting of the little bales gets torn, and each thorn along the path, like a greedy thief, takes a *rise* out of the passing load. A band of *Brinjaries*, on the move in the early morning, is a strange and picturesque sight. The little heavily laden bullocks, with sweet toned bells, and strings of cowries and other ornaments about their necks, jostling each other, and raising a trailing cloud of dust, foot it nimbly in front; the men, weather-beaten, sinewy, and wild looking, with ferocious dogs, stalk immediately behind; while a host of *toddling wee things*, and masculine-like wives, dressed in brilliant checked petticoats and jackets, and with wrists and ankles loaded with brass or silver ornaments, bring up the rear.

Of the four species of cotton plant found in India, there cannot be a doubt that the exotic *Bourbon*, or some variety of it, yields the finest cotton. Doubtless, careful husbandry will greatly increase the vigour of the native plant, and improve the quality of its produce, but it is perfectly hopeless to expect that any treatment will ever cause it to bear cotton equal to that of the American varieties. It is, however, satisfactory to know, that the American plants may with facility be cultivated on both the black or cotton, and the red soils of India. Indeed the *Bourbon* has long been a favourite in many parts of the country; and the *New Orleans* and *Georgian* plants thrive well, both on the plains, and on the table-lands of the Deccan and Mysore. The *Sea-Island* variety also grows luxuriantly, but unfortunately it is subject to the attacks of an insect, by which nearly one-third of the capsules are destroyed. Foreign plants require somewhat more attention than the native ones, as to preparing the soil, season of sowing &c., but any extra care is well repaid by the larger return and superior quality of the cotton. This the native cultivator does not at present fully appreciate, but

should the existing demand for cotton from India continue, measures will doubtless be adopted to cause him to see, that it will be greatly for his own interest to raise foreign varieties, and bestow the necessary care in cultivation and cleaning. Labour too is so cheap in India, that I should not be surprised to see, in a few years, Indian-grown cotton, quite equal in quality to American, sold in England at a much cheaper rate.

Taking a walk in Southern India, on an autumn morning, through the fields waving with yellow grain, the eye is sure to be attracted by parallel rows intersecting them of a stiff rod-like plant with large yellow flowers, disposed like those of the hollyhock. This is *Deccane Hemp*, the *Ambaree* of natives and *Hibiscus cannabinus* of botanists, which yields a true fibre, and, like cotton, belongs to the order of *Mallow-worts*. It is cultivated on account of its fibrous bark and acidulous leaves, which are eaten by natives. In general appearance the *Ambaree* is very like the hollyhock, and although a stiff plant is very pretty when in flower. Its stem is herbaceous, strong, prickly, and straight. The leaves are commonly five-parted, like a spread hand, the fingers being lance-shaped, and with saw-like teeth all along their edges. As in cotton, the calyx is double, consisting of an outward involucre of nine awl-shaped leaflets, most ferociously armed with sharp rigid bristles, and an inner or true calyx, divided into sharp narrow segments. The corolla consists of spreading petals of a pale sulphur colour, with a deep purple centre. The fruit or capsule is nearly globose, but acuminated at its upper end, and completely covered with sharp stiff hairs. It is constructed on exactly the same plan as the cotton capsule, only it has five valves and cells instead of three, and the seeds have no fleecy covering like the cotton. The *Ambaree* may be grown in almost any ground, but prefers a rich loose soil, and requires about three months to arrive at maturity. When ripe, the plants are pulled up by the roots, and the seeds beaten out. The stems are then placed in water, where they are allowed to remain until the bark peels off easily, and its cellular portions can be removed by washing and stripping through the fingers. By this process the fibres are much impaired in value. Still, however, they are long, stronger than any common Indian fibre, have a beautiful silky gloss, and are admirably adapted for making fine rope or twine. If prepared by any of the improved processes practised in England, the *Ambaree* fibre would be pure white, soft, silky, and long, and would form an excellent substitute for flax. The plant is a very hardy one, and so remarkably like the hollyhock, which was brought to England from China, that I feel sure it also might be successfully introduced and profitably cultivated both in England and Scotland. If sown early in May, it would be ready for pulling by the end of August. It would probably be found to thrive best in dry loose ground, prepared as for *green crops*, and should be

sown thick to cause the plants to grow tall and slender, when they will be found to yield a longer and finer fibre than if sown far apart. So many species of *Hibiscus*, more or less remarkable for the tenacity of their fibres, abound in India, that it would be tiresome to enumerate them all. The *Roselle* or *Hibiscus Sabdariffa* however deserves a passing notice. It is cultivated in most gardens for the sake of the calyxes or envelopes of its fruit, which, when ripe, become fleshy and pleasantly acid, and make excellent tarts or jelly. As the *Roselle* is easy of cultivation and very productive, the calyxes might be preserved in large quantity in common treacle or syrup, and supplied to ships, as they would, from the large amount of acid they contain, form a good substitute for lime-juice, and be a very pleasant addition to Jack's *plum-dough*. The *Roselle* is cultivated in some districts for the sake of its fibre, which is long, strong, uniform, white, and silky.

But I must now speak of plants of a different order, viz., the Milkweeds or Asclepiads, a numerous tropical family. In India, none of the plants of this order are cultivated, the majority inhabiting the wild jungle, and being climbers; sometimes covering the deformity of a decaying stump, now stunting or strangling a young tree, and anon, by some stream, covering a clump of low shrubs with a perfect profusion of gay blossoms. One of the rarest and largest of the order is the *MARSDENIA TENACISSIMA*, from the strong fibres of which the Rajmahal mountaineers make bow-strings. It is a climber of extraordinary vigour, running up to the tops of tall trees, or sprawling for long distances over the dense underwood. We first met with it in a clump of moist lofty jungle, sacred to the splendid Jungle-fowl and gorgeous Peacock, and near which we one morning met a tiger leisurely returning from his nocturnal rambles. The stems of the *Marsdenia* are perennial, and vary in thickness from that of a quill to that of a finger. The leaves, broader than the palm of a large hand, are exactly the shape of the heart that the schoolboy paints in his valentine, and covered with dense short hairs that render them soft as velvet. The flowers are small, greenish yellow, and arranged in large clusters like those of the common elder. When wounded the stem yields a thick milky fluid, which thickens into an elastic substance that obliterates pencil marks, and is otherwise very like true India-rubber. When smoke-dried on pieces of tiles, the resemblance is more complete, and there is no doubt that this juice could be manufactured into a very useful species of Caoutchouc. The bark of the tender shoots contains a large proportion of fibre, which may be prepared by gently beating the bark with a mallet, scraping away the cellular portions with a piece of iron hoop, and repeated washing. The fibre must be dried in the shade, as the sun's rays discolour it. When carefully prepared it is, perhaps without exception, the strongest fibre in India, being also white, fine, elastic, and silky. It

is but little affected by moisture, and would prove excellent material for making fishing-lines.

The next of the Asclepiads that we have to notice is the *YERCUM* or *Mudar* of natives, the *Calotropis gigantea* of botanists, which, like the English nettle, delights to grow amongst rubbish and ruins in the neighbourhood of man. It is a hardy shrub, very common throughout the peninsula, and at one time received some attention in England, as it was expected that its milky juice, which has long been famous as a drug in India, would prove a valuable medicinal agent. It contains a principle, discovered by the late Dr. Duncan, of Edinburgh, called *Mudarine*, which has the singular property of coagulating by heat, and becoming fluid by cold! The root is prized for making charcoal for gunpowder, and the juice formed an ingredient of the once famous *Tanjore-pill*, which was considered a perfect antidote for snake-bite. *Mudar* is a perennial shrub from four to six feet in height, with oblong, egg-shaped, fleshy leaves, embracing the stem, and bearded at their base. Both leaves and young shoots are covered with a woolly down, and all parts of the plant, when slightly pressed, have a strong, and by no means agreeable smell. The flowers are very curious. The calyx is small and five-cleft, and the corolla consists of five reflexed segments, with their edges rolled back, and are of a rose colour mixed with purple. Instead of the usual thread-like stamens and pistils in the centre of the flower, we have a massive body of somewhat intricate structure, but great beauty. Let us examine it, carefully dissecting as we go, for our cuttings do not cause any pain; and, when done, the only evil is, that there is one object less of beauty in the world. In the centre of the flower, then, we see a column formed of the united filaments of the stamens, and crowned with a capital presenting five angles, which is the fleshy stigma. Surrounding the column, and as if to lend it beauty and strength, are arranged five brackets, curved on their outer free edge like the sound-hole of a fiddle, and of a brilliant rose colour. Just below each angle of the capital there will, on careful dissection, be found two little cells or sacks, each lodging a yellow waxy body, which is attached by a small process to the angle of the stigma. These waxy bodies are the pollen, by which fertilization is accomplished, and which in all other orders of plants is found in the shape of a fine powder. Removing brackets and column, we find that the latter is tubular, and contains two small columns, slender as a thread above, but club-shaped at their bases, which are hollow and form the ovary. The ovary in time becomes developed into the follicle or fruit.

The follicle is a small leathern bag, one-valved, just as if a leaf had been neatly folded over on the seeds and united along its edges. When the seeds are ripe, this bag opens at the suture or seam, disclosing a large number of seeds overlapping each other like the scales of a fish. On removing a seed, it is found to have attached to one extremity a tuft

of long beautiful hair, giving it somewhat the appearance of a shuttle-cock. The hair or coma, which has been called *Yercum cotton*, wafts the seed in the air like a parachute, and facilitates its dispersion by the winds. It is a beautiful flossy material, not very strong, but pliable, and extremely fine, smooth, soft and glossy; much more resembling silk than cotton. The natives have long been accustomed to make from it a kind of soft thread, and it has also been woven into shawls. Of late years the attention of various English manufacturers has been attracted to it; and Thresher and Glenny, of the Strand, London, have been testing its capabilities for the manufacture of cloth. It is rather short in the staple, and so smooth and tapering that it is somewhat difficult to spin alone, but is easily manipulated, and forms a very beautiful fabric with the admixture of a fifth part or so of silk or cotton. Probably a judicious system of cultivation, for the plant is at present only seen in the wild state, would much improve the quality of the *Yercum cotton*. Beautiful as this material is, however, it is equalled in appearance and far surpassed in value by a fabric which abounds in the bark of the same plant, and may be prepared in much the same manner as the fibre of the *Marsdenia*. It has long been prized by natives for making bird-nets, tiger-traps, and fishing-lines. Somewhat resembling Belgian flax, it is far too valuable for ordinary cordage, and would probably fetch from 30l. to 40l. per ton in England, as material for warp yarns. It will resist moisture longer than any other fibre known, and, with the exception of the *Marsdenia* fibre, is perhaps the strongest in India, being also long, silky, white, smooth, pliant, uniform, and elastic. The *Yercum* has never as yet been regularly cultivated, but might easily be so to any extent, as it grows luxuriantly in the driest and most barren soil, throughout the whole of Southern India. The milky juice of the *Yercum* may also be made into a kind of Caoutchouc, which is soluble in oil of turpentine, and becomes soft in hot water and hard in cold. This also may in time become a valuable article of commerce.

The next plant we have to notice is a species of NETTLE, the *Urtica heterophylla*. It is said to be very common on the Neilgherry hills, and that the natives there have long been accustomed to make thread from its fibre. It was lately found by me, growing abundantly in the old fort of Periapatam, in Mysore, at an elevation of 3000 feet above the sea-level. I visited that place late in October, 1862, riding out on the "Fairy," in the early morning. Presume not, however, gentle reader, from that name, that we enjoy in these remote regions the luxury of an omnibus, coach, or canal boat; for our "Fairy" was but a barbaric elephant, to which the extravagant Hindu fancy had applied that airy appellation. Long before cock-crow, we were aroused by the "Fairy's" attendants, and found the beast ready, and swinging its trunk and head from side to side with an air of great impatience. At

the magical order *bite, bite*, from the mahout or driver seated on the elephant's neck, it knelt flat on the ground, with evident reluctance, giving forth, from the depths of its huge chest, various rumbling sounds, like the mutterings of distant thunder. Disdaining the aid of a proffered ladder, I made a long stretch to the iron railing of the seat, and, having scrambled up, away we went at the rate of five miles an hour. Most elephants have for the first few miles, on starting, a peculiar sideling, scared way of walking, as if afraid of something in the rear, which is very disagreeable and even alarming to those unacquainted with the peculiarities of the beast. The motion of even the best trained elephant at a quick pace is very tiresome, since, to prevent jolting, it necessitates a constant swaying of the body backwards and forwards. At first so dark was it, that the white bungalows of the station could hardly be discerned, but, as we got a few miles to the west—out on an eminence—day began to break. First came a faint streak of red on the verge of the horizon, and then the whole eastern quarter of the heavens began to glow, like the sky at dark night, radiant with the light of blazing mosses and moors. Just at this time, a light breeze sprang up and the air became quite chill, as if night were yielding up its last breath in a deep-drawn sigh. Then the dead silence was broken by the shrill combative chirrup of the gallant male partridge, warning rivals to keep at a distance, and by the wild scream of the peacock, welcoming the morn. In a little the sun, dull, red, and hazy, was up above the low eastern hills, and morning broke as if the darkness had been gathered up like a veil. The surface of the country was beautifully undulating, and almost completely covered with low scrub jungle, dressed in all the mellow tints of the declining year. Far away, faint blue, dream-like, and pillaring the sky to the south-east, towered a chain of mountains, the Neilgherries, while nearer and to the west rose various irregular hills, the outposts of the kingdom of Coorg, a mountain of land perched at an elevation of 4000 feet above the sea. Ere we had got over half the road, the sun became blazing hot, and so, to refresh herself, the "Fairy" commenced to squirt saliva over the mahout and me, until warned by sundry probes with the driving hook, that such attentions were far from agreeable. As we approached Periapatam, the country became more open and cultivated, and at last we entered a beautiful vale, where the dry slopes were covered with trim crops of tobacco in full bloom, and the lower grounds with rich fields of rice interspersed with cocoa-nut and betel-nut gardens. Prattling streams of crystal water, that looked so cool and sparkling in the bright sunshine, ran down by the side of the road, emptying themselves into the beautiful fresh green rice-fields, and a winding tank, fringed with tall reeds, and half covered with the great leaves and nymph-like flowers of the white water-lily, filled the basin of the valley.

At last we reached the Fort, which had at one time been the stronghold of a formidable Hindu rajah and robber chief. It is surrounded with a lofty stone wall, still in good preservation, and a deep ditch, now dry. Inside there is a large number of dwellings disposed, as in all Indian villages, without any regard to order, ventilation, or drainage. Nearly all were without windows and built of mud, and, like the whited sepulchre, glittered with whitewash in front, while heaps of dirt were festering and fuming in the rear. Turning the corner of a lane, I suddenly came upon a number of tall plants, that any one who had ever seen a nettle, would at once have pronounced to belong to that genus. They were certainly the most ferocious-looking of their kind that I had ever seen, and I stood knife in hand for at least half a minute, looking at them before I dared to approach them. At length, hooking down a plant with the crook of my trusty stick, I managed to divide its stem with impunity, but then the business was to get it safely into the vasculum. It requires some courage to handle a nettle, and the more pluck one displays, the less chance is there of getting stung. Placing the vasculum on the ground I tried to poke the plant into it with my elbow, but an unruly branch springing up stung the edge of my hand. The pain was rather sharp for a few minutes, being not unlike that caused by a drop of burning sealing-wax. The root of this nettle is perennial, but the stem annual, erect, channelled, and of a dark green colour with white spots, from which arise, pointing in all directions, the slender but stiff, sharp stings. The leaves are alternate, long-stalked, lobed, serrated, and armed with stings like the stem. The flowers are small and green. Natives, as already remarked, have long been in the habit of using the fibre of this nettle, and of late it has been cultivated on a small scale in the Government Gardens, Ostacamund, and been brought to the notice of both the local and home governments. It thrives best in moist alluvial soil, and yields two crops in the year, the average produce for each crop being from 450 to 700 lbs. of clean fibre per acre. The fibre is white, and glossy, and remarkable for its extreme tenacity, combined with length and strength. It is not unlike flax, but finer and more silky. I have no doubt the *Urtica heterophylla* might be successfully cultivated in the south of England, and prove a most remunerative crop.

Another plant yielding a beautiful fibre is the PINE-APPLE, or *Ananassa sativa*. It has long been cultivated with artificial heat in England on account of its fruit, and we hardly know anything more pleasant on a sharp cold morning than a walk through a pinery, with its warm air loaded with the delicious, tantalising perfume of the luscious fruit. The pine-apple is a native of America, and was introduced into Asia by the Portuguese; where, finding a suitable climate, it has multiplied so fast, and become so common, that some botanists have doubted whether it is not a native of the East.

It is a perennial, with long, fleshy, tough, sword-like leaves, armed along their edges with sharp, hooked spines. The flowers are small, of a blue colour, and always abortive in the cultivated plant. The fruit is a mass of flowers, the calyxes and bracts of which have become large and fleshy, and grown together to form a solid head. They are arranged around a branch, which is always prolonged beyond the fruit, forming what is called its *crown*. The plant is easily propagated by suckers, branches, or crowns, and is very hardy; so much so, that in a moist climate it will live suspended in the air. The leaves contain a beautiful soft fibre, which is easily extracted when they are green. In Singapore a large trade in this fibre is carried on with China. As a substitute for flax it has, perhaps, no equal amongst Indian fibres, as it can be manufactured in the same way, and with the same machinery. The fibre is white, soft, silky, long, strong, and durable. During the process of bleaching, the adhesion between the fibres is destroyed, and they become remarkably fine and pliant. They are said to bear immersion in water without sustaining any injury, and when tanned to be equal in this respect to the best horse-hair. From the ease with which the plant can be cultivated, the fibres of the pine-apple might, if we had a simple machine to clean them, be sold in England at a much cheaper rate than flax.

The next plant that invites notice belongs to the family of *Lilyworts*, most of which have flowers remarkable for their splendour and fragrance. Representatives of this order have been the theme of poets in many a sweet song.

“Relies on ye of Eden’s bowers,
As pure, as fragrant, and as fair
As when ye crowned the sunshine hours
Of happy wanderers there.”

Lilyworts are decidedly most abundant in temperate climates, and rare in India, while in Australia they form a distinctly marked feature of the vegetation. They are altogether an important order, yielding articles of food, drugs, fibres, &c. The delicious scented flowers of the Tuberose are made into garlands by the Hindus, and used to adorn their gods, or to present to their superiors when paying a visit of ceremony. The plant of this order of which we have now to speak is well known in India under the names of MAROOL, *Moorva*, and *Moorgalie*, and is the *Sansevieria Zeylanica* of botanists. It is a low, stunted perennial, with dagger-like, radical leaves from one to four feet long, grooved on the upper side, somewhat striated, and terminating in a sharp point. The flowers form a raceme, and are of a greenish-white colour. It is easily propagated by cuttings, and thrives in any sort of soil, and with moderate irrigation would prove a very remunerative crop. The leaves may be cut twice a year, and about 40 lbs. of green leaves yield 1 lb. of clean fibre. It has long been used by the natives for making bow-strings, fine twine, paper, &c., and is white, soft, long, silky, and pliant. A cord made

of this fibre bore a weight of 120 lbs., while one of the same size made of Russian hemp broke with 105 lbs. It would be found a very suitable material for making muslin, paper, twine, or rope.

We have thus endeavoured to give a brief sketch of a very few of the more important fibrous plants of India, in the hope that the attention of the English manufacturer may be permanently directed to the

East for a supply of cotton and fibres. So rich is the field, that it would not be difficult to fill a large volume on the "undeveloped fibres of India:" but we only aspire to the humble office of the pioneer; and having placed before our readers specimens of the wealth of the far country, and indicated the path that must be pursued to take possession, we have completed our task.

GOOD WORDS FOR CHILDREN.

BY THE EDITOR.

"When I was a child, I spake as a child, I understood as a child, I thought as a child."—1 Cor. xiii. 11.

No. IX.—SELFISHNESS.

MY DEAR CHILDREN,—There is no sin which comes more naturally to us, or which begins so soon and lasts so long as selfishness; nor is there any which produces so much misery to ourselves and other people. Selfishness is indeed so bad that it may be called sin itself—the evil heart—the corrupt tree which brings forth all manner of bad fruit—the fountain of poison from which no end of poisonous and deadly streams flow.

Selfishness is not a mere caring for ourselves, or a desire to have what is pleasing to ourselves, but it is the not caring for other people,—the loving of our own selves to their loss. Selfishness is the sin of always thinking of ourselves, and never of others. It is the wishing to get every thing to ourselves, and to gratify ourselves at the expense of others. Selfish boys or girls will tease and torment others, even their very parents, should they not give them their own way in whatever they ask. Selfish boys or girls in wishing constantly to please themselves do not care what trouble or annoyance they give to servants, teachers, brothers, sisters, or parents; nay, they sometimes like to revenge themselves when thwarted, by annoying others, who oppose them, by speaking irritating words, by doing disagreeable things and by being thoroughly unamiable. They will make a noise perhaps in the house when a child—maybe a sick child!—is asleep, or when they know that others wish to be quiet. They won't put themselves to any trouble to be obliging or to please others; nor will they cheerfully resign what they like even when by so doing they would make others happy. But they expect every one else to be thinking of them, to put up with them, to sacrifice themselves for them. Self, self, is their one constant thought—in the school-room or in the family, at their food or at their play, with old people or with companions, all must admire, amuse, coax, flatter, please, obey, and yield everything to *self*! I think you now understand pretty well what I mean by a selfish person; and you will agree with me in thinking that there is no character less loveable, or more mean and contemptible. I am sure you would not admire

such a spirit in another, and I hope, my dear children, you will detest it, and fly from it in yourselves.

This selfish spirit leads, as I have already said, to all other sins. It breeds, you see, envy and jealousy of the good of others, even of the good of brothers and sisters; stirs up a cruel disregard of other people's feelings; and leads to quarrelling and angry words, and unhappy divisions among those who should be dearest upon earth. It even tempts people to do that horrid thing, tell a lie—or basely to conceal the truth—in order to screen their own faults, to escape what is disagreeable, or to gain their own ends. While you cannot but condemn such a spirit as this, I am sure that, on the other hand, you could not help admiring any boy or girl who tried to make you and others happy; who shared what they had with you, and grudged not to see you have what they had not; who avoided giving pain to your feelings; who were considerate, obliging, and generous-hearted—who, in one word, *thought about you as well as about themselves*. If they honestly *tried* to do this, and if they even did wrong to-day, but tried to do better to-morrow, you could not help liking them as your friends and companions. Well, if you would wish others to act thus to you, try you and act thus to others, and you will in this way gain their love. By giving love to others you will get love from others; but by loving yourself only, you will lose another's love. Is it not so? Think!

You have often, I dare say, read stories of brave-hearted, unselfish people, who sacrificed money, and endured fatigue, suffered many trials, or even gave up their lives, in order to save others from pain, poverty, sorrow, or death; and as you read those stories I am sure your hearts have beat with love for such heroes, and your eyes have filled with tears of admiration for their noble conduct. But if the story was about mean, cruel, hard-hearted, jealous, greedy, selfish persons, then I am certain that though they were persons of rank, or were rich, or powerful, or were even kings and queens, you despised them, and never wished to be like them!

Now, dear children, it is God who puts these right thoughts in your heart, for there is nothing He

hates more than selfishness, and nothing He likes more to see in us, whether old or young, than unselfish good-will with loving words and actions towards all.

For God's Name, you know, is Love. And see how He thinks about every person, about every thing, small and great. He feeds every creature that lives, opening His hand liberally to supply their wants. He makes His sun to shine on the evil and the good, and is merciful to the unthankful. He tells us how He knows all about the very birds that are of least value to man. Of the sparrows He says, "Not one of them is forgotten before God." He thinks always about you and every one; and though the whole world was sinful, and did not care for him, yet He was so loving that he *spared not* His own son, but gave him up to death for us all.

You would then expect that Jesus Christ, God's own Son, would be unselfish and loving like His Father. So He was. In this, as in everything else, He and the Father are one.

I will, therefore, tell you something about the unselfishness of Jesus, that you may, by the help of your loving Father, love the Saviour and try to be like Him, and this will be the greatest blessing and happiness that God himself can give you.

No. X.—THE UNSELFISHNESS OF JESUS.

MY DEAR CHILDREN,—It would be indeed very strange and very selfish, if men did not care to know about Jesus Christ. For He knows you, and cares for you, and thinks of you, and loves you more than all the world does; and it is the will of Jesus that He, and He alone, should guide you, provide for you, and keep you all your life from childhood to old age, if you will only treat him as your Saviour. You know also that He alone can save your souls from sin, from eternal death, and make you good and happy, and far greater and more glorious than any one can conceive of, for ever and ever. Besides all who are saved, whether it be your father or mother, brother or sister, owe salvation alone to Jesus; and they know this, and love him with all their hearts:—and would they not think it strange and dreadful if *you* did not care for him who is their Saviour, and who rejoices to be yours? Oh! pray to God to deliver you from such wickedness!

Well, then, dear children, I wish to tell you, as I have said, about the unselfishness of Jesus.

Was it not unselfish and wonderful love in Him to come to this world at all? to leave the glory and blessedness of Heaven—to become a child—a poor man—to live among us—and to devote His whole life, and every thought, and every action to make others good and happy.

Was it not unselfish love in Him to go about doing good, and healing all manner of diseases, without ever once speaking an unkind word or doing one unkind action, but helping the poor, the

needy, the ignorant, and afflicted who came to Him? Was it not wonderful and unselfish love in Him to submit to be spit upon, scourged, crowned with thorns, and finally to die on the cross, and to give up His very life in order to save our souls from death, and to make us children of God? Yet all this Jesus did, and much more than you or any one can understand.

Therefore had you met or known Jesus when He was a boy, you would never have found Him speak one untrue, unkind, or selfish word; you would never have seen Him do ungenerous, unjust, or selfish actions. In all His ways you would have found Him perfect in his love to you. What a friend He would have been! Neither you nor I, nor any one can in this world be so unselfish as He was. But do not let this discourage you. If we are Christians we will always try to be like Him, and by God's grace, we will be coming near it. And if so, then, one day, thank God, we shall be perfectly like Him.

But let me give you a few instances from the life of Jesus, to show you how He was always thinking about other people and doing them good. I shall take these instances from the last week of His life, when everyone turned against Him with awful wickedness and hate.

You remember reading about Jesus riding into Jerusalem. That one day was, indeed, the only day of triumph in His life. The people gave Him a wonderful welcome, and wished to make Him their king. The very children in the Temple shouted for joy. But Jesus knew quite well that because He would not agree to their vain and foolish wishes, they would turn against Him and crucify Him. And he knew what would befall their city and nation in consequence of this. And so in the midst of all this procession, with its Hallelujahs and praise, when He saw Jerusalem, Gethsemane, and Calvary, He was thinking of others, of the city, and the fate of its people, and He burst into tears and cried, "O Jerusalem, Jerusalem, which killest the prophets, and stonest them that are sent unto thee; how often would I have gathered thy children together, as a hen gathereth her brood under her wings, and ye would not! Behold, your house is left unto you desolate: and verily I say unto you, Ye shall not see me, until the time come when ye shall say, Blessed is he that cometh in the name of the Lord." Was this not unselfish?

The night before He suffered He sat down at the passover with his disciples, "for having loved his own he loved them to the end." Oh! how full His heart was on that last night with thoughts of love for His disciples. He does not think of himself, or ask them to comfort Him, but every minute is occupied in speaking to them for their good, and in comforting them. "Let not your hearts be troubled, neither let them be afraid," "I will not leave you comfortless, I will come again unto you." He thinks of Judas, and warns him of his sin, and His soul is vexed for the traitor. He

thinks of Peter, and warns him also, and prays for him. He thinks of them all, and washes their feet as a sign of His unselfish love. And before they leave that room, He offers such a prayer as had never been heard before from the lips of man. Was not all this unselfish?

See again, dear children, how He thinks of others even in the midst of his own agony that night in the garden of Gethsemane. He thinks of the good of His disciples and says, "Pray that ye enter not into temptation." "Simon," He says to the careless apostle Peter, " sleepest thou?" When His enemies came to secure him, He thinks first of the safety of His disciples, and begs the soldiers not to touch them, saying, "Let them go away." When Peter wounds Malchus, the servant of the High Priest, Jesus thinks of the sufferer, and amidst the crowd and darkness finds him out and heals the wounds of this enemy. Was not all this unselfish?

When Jesus was standing before the High Priest, and when He was bruised, wounded, and bleeding, He thought of Peter, who in terror for his life was denying his master, saying, "I know not the man." "The Lord turned and looked on Peter," for the Lord *did* know him, and loved him still, and would not deny *him*, and that look broke the disciple's heart with repentance, and brought him back to truth and to God. Was not that remembrance of His sinful disciple unselfish?

When Jesus journeys to Calvary, a few hours later, carrying His cross after a sleepless night of pain, the women of Jerusalem crowd around Him, full of sympathy and tears for the sufferings of Him who had been their best friend. But He thinks of them and the coming destruction of their city, and says, "Weep not for me, but weep for yourselves." Was not that unselfish?

Behold Jesus on the cross! His hands and feet pierced with the cruel nails; His head lacerated with thorns; His body in agony; His soul full of unutterable woe; bleeding, dying for hours! Can He think of others, then? Why is He there? For others—for us! But never was His heart more full of considerate love for all around Him than in that dreadful hour. He saw His poor broken-hearted mother at the foot of the cross, and He thought of her, and provided a home for her: "Woman, behold thy son!" He said, as he gave her in charge to His beloved apostle John. "Son, behold thy mother!" He heard the penitent thief by His side cry, "Remember me when thou comest to thy kingdom!" and He said, "This day thou shalt be with me in Paradise!" And then He thought of all the miserable sinners who were putting Him to death, mocking Him in His agony, and He prayed, saying: "Father, forgive them; they know not what they do!" Can you conceive more unselfish love than that?

And that, my dear children, was not all. For on Sunday morning, when He rose from the dead, very early, He appeared to strengthen and comfort His disciples; and though three days before they had all

forsaken Him, and Peter had denied Him, yet to Peter He sent the first message through the angel who said, "Tell his disciples and Peter, that he goeth before you to Galilee." That very day He appeared twice again to them—in the evening when two of them were going to Emmaus, and calmly walked with them, conversed with them, explained the Scriptures to them, and ate with them; and later that same night, He entered the room where they were assembled, and banished their fears, saying, "Why are ye troubled? and why do thoughts arise in your hearts? behold my hands and my feet, that it is I myself!" and "He showed them his hands and his feet," with the marks of the nails! Was not that unselfish love?

Once more. Jesus, you might naturally think, would not leave the blessed Heaven of peace and love into which His soul had entered, and return to the sinful, ungrateful, wicked world which had rejected and crucified Him. But He who had come in love to seek and to save the lost, with unselfish love returned to finish His work for others, and during forty days dwelt on earth instructing His disciples in the things pertaining to His kingdom. And then He took them to Bethany—so full of memories of His love! and from thence He ascended to God, but He did so stretching out His wounded hands in love, blessing His disciples and the world!

Think, my dear children, of all this, and then ask, was not that unselfish love? Was not that the love that seeketh not her own, which is not easily provoked, and which thinketh no evil? Do you wonder the apostle Paul should say, "*Even Christ pleased not himself!*" Or that Christ's own glorious words should be, "*It is more blessed to give than to receive!*"

Be thankful, dear children, that it is God's will that you should be made like Jesus Christ! God could not give you a more glorious gift than this, "the mind of Christ!" May you try to be like Him, for the more you are so, the more you will find it to be blessedness in youth and in old age. And in the end you will be received into that happy Home where there is no envy, no jealousy, no covetousness, no quarrelling or disputing; but where perfect peace reigns, and perfect joy is possessed.

Therefore, pray thus: "O God! our Father, who hath loved us, and hath given thy Son to live and die for us, in order that we might be made like Thyself. Pardon, we beseech thee, for Christ's sake, all the selfish words we have spoken, and the selfish things we have done to our parents, our teachers, our brothers, sisters, companions, and friends. O Father! grant to us that Holy Spirit of love, which dwelt in Jesus Christ, and which Thou hast promised to all who ask, that He may give us new loving hearts, and also strengthen us to resist and overcome all selfish desires. Shed abroad Thy love in our hearts, that we, like Jesus, may not please ourselves, but think of others, and so please Thee as Thy dear children. Amen."

THE OCEAN OVERHEAD.

THAT there is an ocean above us as well as beneath us, is philosophically as well as metaphorically true;—for as the waters of the sea cover a vast depth of rocks, and fill up immense intervening spaces, so the atmosphere in the opposite direction covers the sea and the land, spreads itself between and above mountains and hills, and fills up a vast space with air as completely as the sea does with water. There are, moreover, points of likeness in condition, for the air has its numerous currents as well as the ocean; its waves likewise, although they do not appear to the eye; and its tides, which may be traced to the influence of the sun and the moon. But there are few points of similarity in constitution. In this respect we can only notice contrasts; for while water can be changed by heat from its liquid state into vapour, as we see every hour, air cannot be correspondingly converted into a liquid by any amount of cold or pressure as yet known. Furthermore, while water can be compressed into any shape without resistance, air is a highly and permanently elastic gas, which although compressed and confined in any vessel, yet when it is again liberated, has a tendency to expand at the least diminution of pressure, and expands itself on all sides, and becomes lighter, bulk for bulk, in proportion to its expansion.

Both oceans are limited in depth, as is easily conceivable of the sea, which we know must have a bottom;—and this if we take the average depth of great oceans, has been calculated at about five miles. But it is not so natural to assume that the atmosphere has a very limited height. Hence, some have thought that it extends upwards indefinitely, an opinion, however, which is quite untenable; for it is highly probable that the aerial ocean has a height as defined as the depth of the aqueous one; a height which is not, indeed, materially bounded, but is a limit above which there is no air, no moisture, no clouds, and where any amount of air elevated from below would not expand indefinitely and continually, but would finally (however dilated for a time), fall down upon the upper surface of the atmosphere, and then mingle with the inferior mass, as water lifted up from the surface of the sea finally falls down again upon it.

What may be the actual height of the aerial ocean it is impossible to say. Some have supposed it to be fifty miles, and others twenty miles, but mountain travellers and aeronauts have ascertained that the air in which man can breathe does not reach to ten miles, and probably not to eight, from the level of the sea. In accordance with recent experience of Mr. Glaisher and his companion, who in their balloon ascent of Sept. 5, 1862, may have attained to seven miles, that height appears to be nearly the limit of human vitality, and probably death would be the consequence of greatly exceeding it. Certainly

there can be no such air as a man could breathe at about ten miles high,—although a very light gas may float there. But without aeronautic experience, simple reasoning would conduct us to a similar conclusion; for the barometer supplies a direct measure of the rate of diminution in the quantity of air as we ascend from a given level, and thereby becomes a useful instrument for measuring the heights of mountains. When we ascend one thousand feet in height, we leave beneath us about a thirtieth of the whole mass of the atmosphere. Upon attaining ten thousand six hundred feet (rather less than the height of Mount *Ætna*, which is 10,872 feet), we leave about one third of the mass beneath; and at the height of eighteen thousand feet (nearly that of *Cotopaxi*), we should have passed through about one-half of the ponderable body of air weighing upon the surface of our earth. At the lesser and more familiar height of the summit of *Mont Blanc*, which is 15,784 feet, the sensations of mountaineers are very painful owing to the levity of the air;—the head is oppressed as though with a heavy weight, and respiration becomes difficult, while the faces of many become livid; and the danger of being frost-bitten is not slight,—owing to the decrease of temperature in proportion to elevation.

PRESSURE AND WEIGHT OF AIR.

We should dread instant death by being placed under the weight of the aqueous ocean, which, as we know, crushes in the sides of any collapsible body; but we seldom reflect that we do really live at the bottom of an aerial ocean, the weight of which must be immense. Doubtless our bodies would be crushed in by it, as hollow vessels collapse when sunk deep in the ocean, were it not that the elasticity of the air is an effectual and perpetual counterpoise to its pressure. And it seems probable that the weight of the superior ocean acts conservatively upon the surface of the inferior one, so that the pressure of the atmosphere prevents the too rapid evaporation of the waters of the sea. This pressure, too, is the cause of the liquid state of certain bodies, which, apart from it, would have only a gaseous existence. Not only, therefore, do we walk safely, and breathe freely on the bottom of an aerial ocean which is ever exerting a great pressure upon us, but that very pressure is the condition of our existence, and the cause of certain conditions of existence in other bodies.

What is the actual pressure and weight of the air, and how do we ascertain it?

The height of the barometer is nearly 30 inches (29·95 at London), and there is reason to believe that this is the mean pressure of air over the surface of the globe. In another form of expression, the weight of a column of air extending upwards to the

extreme limit of the atmosphere, exactly equals the weight of the column of mercury in the tube of a perfect barometer. Therefore the weight of the entire atmosphere is equal to a sea of mercury which should cover the surface of the globe to the depth of about 30 inches. Hence, the pressure of the air upon each square inch, is equal to nearly 14.6 lbs. avoirdupois, or 58,611,548,160 lbs. upon every square mile. From this, we estimate the pressure of the air at about 8 ounces avoirdupois for every inch of mercurial elevation in the tube of the barometer. With these data we shall find little difficulty in calculating the absolute weight of our entire atmosphere, which, after Pascal's computation, may be given as equal, in English notation, to about *eleven trillions of pounds*; a sum which the mind cannot possibly grasp. The only popular and appreciable form of computation is that of Dr. Cotes, by which the weight of the whole mass of air is equivalent to the weight of a globe of lead sixty miles in diameter. How few know, or reflect, that we live underneath such a weight of air! Let us only remember that every minute we are breathing in and under a load, which, when reduced to and expressed in figures, passes our comprehension.

AERIAL CURRENTS AND WINDS.

If the mass of our atmosphere remained at all times in what is theoretically conceived to be its normal condition, namely, a perfect balance of its parts (statical equilibrium), there would prevail a dead aerial, as there often is a dead oceanic calm. But a series and succession of disturbing causes prevent such a calm. The chief of these is solar heat, which acts daily and strongly through our atmosphere while the earth revolves; and to this powerful agency, in combination with its negation, or cold, and also with gravitation and electricity, may be ascribed most of the atmospheric changes of which we are aware. It is probable that more is due to electricity than we have been hitherto accustomed to acknowledge,—and much also to the influence of the moon; but at present we may refer to solar heat as the principal disturbing agent in the mobile and expandible body of air around and above us.

Currents in the sea, as we have hinted, have their equivalents in the currents and winds of the atmosphere. Every disturbance of the balance existing in neighbouring masses of air, whether it arise from an increase of density, and consequently of pressure on the one side, or from a diminution of density and of pressure on the other, immediately occasions a movement from the heavier air in the direction of the lighter; in the same way as water is put in motion when it suffers a greater pressure on one side than on the other. Unequal heating is the commonest cause of disturbance of aerial balance. The air takes its heat chiefly from the surface of the earth, and as the warmed and expanded air rises therefrom, the heat of the soil is spread over the higher regions of the atmosphere. That which rises most rapidly over the warmest

spots, is replaced by air rushing in from cooler places, and thereby those movements are set up which are generally found on the borders of forests, in the shadow of trees, and at the openings of shaded mountain glens, as well as in valleys, on the banks of rivers and lakes, and on the sea-shore.

But let us view similar operations on a large scale. Conceive the torrid zone of our globe to be considerably heated, while the polar regions are cold, and thereupon a process ensues like that of the boiling of water. First the heated portions of the water rise, while the colder portions take their place. The former which are now chilled, though previously warmed, again descend as they find their way, and thus a circular rather than a vertical course ensues. In like manner the warmed mass of air at the torrid zone, which is vastly greater than the cold mass at the poles, is set in motion and necessarily proceeds. Probably a very considerable portion of the air near the equator descends just beyond the tropics, and there makes its way between opposing polar currents, or else under or over them towards the north and east, while another portion turns southward in the calm variable latitudes, and contributes to the perennial *trade-winds* which may not be sufficiently maintained from the comparatively small polar regions. The polar current having gained force after an interval, approaches, either suddenly with a great conflict, occasioning storms, or lightning or hail, or more gradually, causing only a change from south-west through west to north-west, and afterwards again by north to east.

The course of such currents will enable us to understand the origin of powerful winds. The *trade-winds*, the direction of which is never changed; the *monsoons*, whose direction is changed periodically, and the so-called *variable winds* of higher latitudes, have all been referred, by the help of what Professor Dove calls the "Law of Gyration," to one common general principle, and it is therefore not unreasonable to suppose that in the more violent disturbances of the atmosphere certain general conditions exist which are common to all these winds, both as relates to their origin and to their subsequent course,—even while they present many varieties in appearance.

The ordinary condition of our atmosphere seems to be that of a mixture of currents between half a mile and five miles upwards from the surface of the earth, and these currents vary in temperature, tension, electricity, direction, force, and moisture. Heat from near our earth probably does not reach upward beyond the range of tropical currents, which may range from two or three miles in general to three or four miles less frequently. Above, below, or between those warmer currents, there may be cold or cool polar winds; and above all these there may exist excessively cold space, with proportionate electrical tension.

When we experience the cheerful warmth of the sun, it is difficult for us to imagine that by ascend-

ing higher *towards* him, we should be not warmer but *frozen*. Yet such would be the consequence of attaining the extreme coldness of lofty space. The last registration which was made during Mr. Glaisher's balloon ascent on the 5th of September last year, just before he lost his consciousness, was ten inches, and this was in the extreme cold of *fifty-seven degrees below freezing point*.

CLOUDS, FOG, RAIN, ETC.

To the heating of air and its consequences in currents must be attributed many of those atmospheric phenomena with which we are most familiar. Clouds are merely condensed vapour held between lower and higher temperatures. They are never stationary, although they often appear to be so. Sometimes in Alpine excursions, we are disappointed to see an apparently moveless cloud wrapping the summit of a lofty mountain, and remaining upon it as many days as we remain in annoyance below it. In reality, however, every particle of such a cloud is in ceaseless motion, and there is a continual succession of atoms, which may be observed through a good telescope, while to the ordinary observer the cloud seems unchanged.

Clouds float sometimes in one current, and at other times in another. Occasionally also they remain between two currents. Were it not for crossing currents, with changes of temperature and of their electric conditions, only one kind or form of clouds (*stratus*) would appear. It was hence found by the aeronautic observations of Welsh and Glaisher that depths or masses of cloud may exceed two thousand feet, or a third of a mile continuously, without the presence of any other cloud above this thickness. No trace of a cloud has been observed at a greater height than seven miles.

Fog is the moisture of warm earth evaporating into cold air. It resembles the steam of warm water greatly magnified, surrounded by air too moist and cool to permit further evaporation, but not cold enough to cause it to become condensed in rain. Different effects follow from varying degrees of heat and condensation. Heat radiated upwards, and cold air in the higher regions cause the suspension of vapour in the air until one predominates, and greater or less precipitation follows. The clouds that hang over us pile upon pile, the fog that throws its impenetrable veil over a town or a city, the mist that overspreads the course of a long river, or the lighter mist that floats over a green meadow, are all vapour more or less condensed, and in chemical constitution are identical.

Greater or more rapid condensation of vapour results in rain, snow, or hail. Dew also is simply the vapour of air condensed by contact with a body colder than itself. At sunset the earth's surface becomes so cold by radiation of its previous heat, that the warm vapour of the air is chilled, condensed, and descends in dew. In rain the drops fall from a considerable height, while in dew the condensation takes place near the earth's surface.

HAIL.

It may appear difficult to account for the formation of hail and large hailstones in such a body as the atmosphere, but Professor Dove has suggested that a grain of sleet first formed at a great height in the air, may make several revolutions in an inclined whirlwind, and during its passage through cold and hot strata alternately, obtain that shell of ice which covers the grain of sleet, like a grain of snow, in the centre, until it becomes so heavy that at last it falls to the earth. This seems a probable theory, and would account for the noise which generally precedes a heavy hailstorm, and which is due to the rotating motion of the hailstones before they fall. "Such hailstorms," says Dove, "and many severe thunderstorms, present the striking appearance of a long, almost horizontal column of clouds, which is rolling on, and when projected on the sky appears more or less bent. At times the dark bank of clouds covers itself with a number of brighter stripes of greyish clouds, which envelop it, as a waterfall does the cliff over which it falls. The edges of the whirlwind seem to favour the formation of hail, in consequence of the fact that the circles described by the hailstones are largest, and consequently the difference of temperature which they have to pass through is greatest. It has been very often observed that the district where hail fell, whose breadth is never great, has been double, with a district in the middle where it has only rained. The reference of the formation of hail to the whirlwind explains the fact that the boundaries of the hail district are very often clearly marked."

The most destructive hailstorms seem to be of great length but little breadth, and quite in accordance with Dove's view was the great hailstorm which passed across France on July 13th, 1788. It marked two parallel tracts respectively of 175 and 200 leagues in length. Yet these were in breadth only four leagues in the one case and two in the other. In the separating breadth of five leagues only rain fell.

The size of the larger hailstones varies greatly, and although some of considerable dimensions occasionally fall in England, nevertheless those which fall in India are (according to Dr. Buist) from five to twenty times larger, and often weigh from six ounces to a pound. It is difficult for Englishmen to credit Dr. Buist when he adds that these stones are seldom less than walnuts and often as large as oranges and pumpkins! When these fall the storms are almost always accompanied by violent wind and rain, and by thunder and lightning.

Some hailstorms in our own country have been very remarkable. In April, 1697, one passed over Cheshire and Lancashire, the course of which was two miles broad and sixty miles long, and which sent down hailstones weighing eight ounces, and measuring nine inches round. On the 4th of May of the same year a shower of hail fell in Hertford-

shire, after a thunderstorm, the hailstones measuring fourteen inches in circumference, and killing several persons. It is curious that on the 4th of May, 1797, that is, exactly a century afterwards, another hailstone was seen in Hertfordshire which measured fourteen inches in circumference.

There is reason to think that hailstones may be forced together so as to form aggregates, which should be regarded as masses of ice rather than single stones. Thus a hailstone which measured six inches in diameter fell near Birmingham in June, 1811, and it resembled a congeries of masses, about the size of pigeon's eggs, agglutinated together. In the summer of 1815 during a thunderstorm at Malvern in Worcestershire, hailstones fell as large as walnuts, and in some places to the depth of several inches. In August, 1828, pieces of ice fell at Horsley in Staffordshire, some of which were three inches long and one broad. In 1826, a mass fell in Candeish which must have weighed more than one hundred-weight, and which was some days in melting. In 1832 a lump fell in Hungary of no less than a yard in length and nearly two feet in thickness, and if we can credit the account printed in the *Ross-shire Advertiser*, there fell in August, 1849, a block "of irregular shape, nearly twenty feet in circumference," on the estate of Mr. Moffat of Ord, immediately after an extraordinary loud peal of thunder. This mass is said to have been composed of lozenge-shaped pieces from one to three inches in size, and firmly congealed together. We may perhaps attribute the formation of such large masses of ice in the atmosphere to the reassociation of fragments upon a principle which has been expounded to philosophers under the name of *regelation*, and which resembles a welding together of pieces of ice under considerable pressure.

The destructive force of hailstones is owing to the height from which they fall, and probably to the whirling momentum imparted by the rotatory storms which accompany them. We all remember particular instances of their injurious effects. One of the most appalling storms on record was that of August 1st, 1846, when hailstones weighing from one to two ounces fell in London, and destroyed a great amount of property in Buckingham Palace, Westminster Hall and other buildings, while the loss suffered exclusively by gardeners was estimated at 15,000*l.* Large hailstones do not however fall so frequently in this country as in India, North America, and the South of Europe. In mathematical form, Sir John Leslie calculated the destructive force of a hailstone as equal to the fourth power of its diameter.

LIGHTNING.

The accumulated electricity which is discharged from meeting clouds is commonly recognised as lightning, and thunder is the noise caused by the successive discharges of such accumulated electricity, or the concussion of the air when it reunites after having been divided by a flash of lightning.

We are all so familiar with the ordinary appearances and effects of lightning, that to dwell upon them would be superfluous, while to enter into minute details on the questions of scientific interest connected with them would carry us far beyond our present limits. In this country the month in which these pages appear is frequently marked by thunderstorms, and we are visited by them at intervals during most years; but in the high latitudes of the northern and southern hemispheres, thunderstorms are almost wholly unknown, and it is believed that they are of very rare occurrence over the ocean in the middle latitudes when distant from continents. On the other hand, there are localities where, during certain months of the year, thunderstorms are periodical phenomena of daily occurrence. For example, in the Port Royal Mountains, in Jamaica, such storms occur every day about the hour of noon, from the middle of November to the middle of April.

A flash of lightning differs only from the spark obtained from an electrical machine in the amount of its force. Its course is uncertain, but it chiefly seeks such things as are good conductors of electricity, as metals and water, avoiding non-conductors. When a flash has passed through a body which is not a perfect conductor, the smallest possible hole or mark is made visible; although in other parts of its course the same flash may have shivered a tall tree or the mast of a ship. A good conductor must be so placed as to rise high above the highest point of the building, and must run down in unbroken metallic connection to the earth, or to running water, presenting to these the greatest possible number of points, so as to favour the escape of electric fluid. When the metallic conductor is of sufficient thickness and properly placed, lightning will not quit it, though the conductor may lie directly upon wood or stone, or may pass through water, or even if a man should grasp it with his hand; for the stroke passes through a perfect conductor without leaving a trace of its passage. Even though gunpowder may be placed around a metallic conducting rod, the passing lightning will not kindle it. Hence good conductors are perfect protectors of powder magazines.

The apparent interval between the flash of lightning and the commencement of thunder has been known to vary, in different cases, from less than a single second to between forty and fifty seconds; on very rare occasions it has exceeded fifty seconds.

Forked lightning is perhaps divided by its approach to particular terrestrial objects, and a zig-zag flash takes place when the lightning adopts the course of least resistance. In rare cases zig-zag lightning forks or returns upwards.

Globular lightning, or balls of fire, present remarkable appearances, which should be carefully noted by observers. They are known to be of the nature of lightning from the damage they have inflicted on ships or buildings struck by them; but they differ from ordinary lightning not only in their shape, but by their slow motion and the length of

time during which they are visible. Sometimes they occur, as has been reported, without the accompaniment of a storm, and even under a perfectly serene sky.

WHIRLWINDS.

While in Britain during the month of August we are basking in the heat of an often cloudless sun, and luxuriating in a calm atmosphere, the inhabitants of the West Indies are particularly liable to hurricanes, which have most frequently desolated those islands in August, their principal seasons for hurricanes extending from August to October. In the Indian ocean, on the other hand, these visitations are most common from December to April.

We may advert to the special character which during recent years has been found to appertain to many, if not all hurricanes, namely, that they are revolving storms, or literally *whirlwinds*. The same meaning is expressed by the term *cyclone* (Greek), now generally applied to them. We cannot venture to assign a producing cause to cyclones.

Whirlwinds advance towards the poles obliquely, but blow in opposite directions in the two hemispheres, although they maintain a determinate course in each of them. The manner in which they move onward is not simple, nor easily described without diagrams, for a double motion marks them in both hemispheres. The speed at which they advance is the mean velocity of the progress and rotation of which their motion is compounded. Such speed is sometimes very high, as in the case of the first hurricane of August 1830 in the West Indies, which advanced at the rate of 500 miles a-day. The storm of 1831, at Barbadoes, rolled at the rate of 383 miles a-day over a space of 2300 miles. The Rodriguez hurricane of 1843 advanced at the rate of about 220 miles near the equator, but only at 50 miles as it approached the tropic of Capricorn. A tempest in our own country in November 25th, 1838, swept on at the rate of about 20 miles an hour.

The rotatory, regarded as distinct from the onward motion, is subject, as already said, to ascertained laws. The main principle of the course of a revolving gale must always be remembered to be this: The direction of the wind in the northern hemisphere is from east by north to west, and from west by south to east, or contrary to the movements of the hands of a watch. On the contrary, in the southern hemisphere the rotation is from east by south to west, and from west by north to east.

The rotation of such storms is not strictly circular, but rather cycloidal, and thus the word *cyclone* exactly designates it. A diagram would show it to be what is familiarly known as an eddying or corkscrew motion. The gyrating axis, or axis of revolution of a hurricane is supposed to be inclined forwards in the direction of its motion, the lower part being retarded by the resistance of the surface of the earth. The lulls and gusts which alternate in the vortex of the storm may arise from an oscilla-

tion of this axis. The diameter of a revolving hurricane varies greatly. The largest diameter of a hurricane in the northern part of the Indian Ocean is estimated (by Thom) at six hundred miles.

Different observers describe differently the frightful noises heard at the centre of cyclones. "An awful silence," says one, "was followed by an awfully hollow and distant rumbling noise." Biden states that the gusts which succeed it are "like to successive and violent discharges of artillery, or the roaring of wild beasts;" and Cattermole notes "a continuous roar in the air." Piddington observes that the usual expressions for waterspouts are "rumbling and hissing," while for cyclones they are "roaring, thundering, yelling, and screaming."

Two notable storms which raged on October 25-26 and November 1, in 1859, and which, from the loss of a large vessel of that name, are known as the "Royal Charter Storms," were the result of a cyclone.

It is supposed that on this memorable occasion, the central area of a great cyclone passed over the middle of the British Islands. On the morning of the day (26th October) upon which the Royal Charter was driven against the north coast of Anglesea, the cyclone advanced from near the entrance of the channel, where it had raged on the previous morning; and on the following day (the 27th) its circuitous sweep affected the North Sea, having crossed Lincolnshire. It was still traceable after the 27th, though less determinately, towards Norway and the Baltic, gradually widening and thereby diminishing in power. This most violent cyclone, one of the most violent indeed which has passed across these Islands, has thus been very carefully traced from its first indications through its rotation during three days and nights.

GENERAL REFLECTIONS.

Even such a limited account as we have now given of the ocean overhead must impress the reader with the astonishing evidences which it displays of Power, Design, Adaptation to man's condition, and Benevolence upon the part of that Almighty Being who sits enthroned in the highest heavens, while the clouds are the dust of His feet; who is encompassed by obedient winds, veiled by awful lightnings, and unmoved by fiercest storms! That all these are the messengers of His will and instruments of His power is a familiar thought; but there are other kindred thoughts by no means so familiar. All these elements and phenomena are, through His contrivance and benevolence, also made subservient to the comforts and necessities of man, and in this light the wonders of the ocean overhead are even greater than those of the ocean below us.

Consider only the conveniences, compensations, and skilful adjustments of the conditions of our atmosphere, to say nothing of its chemical constitution. Over us lies an enormously heavy mass, whose perpetual pressure is rendered nearly insensible to us, and we know it not until we contrive

THE SHEEP AND THE GOAT.

to measure it. Through it winds blow from all quarters and in all degrees. A zephyr fans us, a gust purifies us, a gale sweeps a whole country clean; sea-breezes invigorate us, strong winds fill our sails and promote our commerce, and equatorial and polar currents keep up interchanges in accordance with discovered laws. In this vast aerial body nothing stagnates, nothing is useless, everything circulates, temperature is equalised, warm air is transferred to colder regions and cold to warmer ones. Mobile, permeable, and elastic, it is open to the sunbeams, free to heat, unimpaired by cold, receptive of moisture, the store-house of rains, and the gentle deposer of softening dews. It is a groundwork for the gorgeous mountains of cloud-land, a stage for the display of the most varied and swiftly shifting scenery of sunlit vapours, and a pure medium for the inimitable and ever-admirable rainbow.

Though apparently the subject of all kinds of caprices in wind and weather, yet the more we study it the more do these caprices diminish, and laws take their place. "As uncertain as the wind" is a proverbial saying, yet in this respect few things are more certain than some winds, and nothing is more advantageously regulated. The great trade wind circulates round the globe where the ocean is widest, and then lays out, as it were, upon the

waters a great highway for communication between the most distant places. Where it is needed there it is always to be found, while the steadiness of its declinations from the fundamental course renders it not less serviceable in the same parts. Within the range of these winds, and through their assistance, the navigator can accomplish nearly all he requires; and when they become fugitive, the very shores which he desires to sail along or reach begin to act upon them and to produce variable and local winds to aid him.

To discover design in organised existences is now an ordinary result of study, but who thinks of discovering it in atmospheric phenomena in the clouds and in the winds? Yet one of the oldest of religious observers of nature, had true philosophy enough to make such a discovery, when he exclaimed in language not less correct than sublime, "Out of the south cometh the whirlwind: and cold out of the north. By the breath of God frost is given: and the breadth of the waters is straitened. Also by watering he wearieth the thick cloud: he scattereth his bright cloud: and it is turned round about by his counsels: that they may do whatsoever he commandeth them upon the face of the world in the earth."*

J. R. LEIFCHILD, A.M.

* Book of Job, xxxvii. 9-12.

THE SHEEP AND THE GOAT.

Nor all the streets that London builds
Can hide the sky and sun,
Shut out the winds from o'er the fields,
Or hide the scent the hay-swath yields,
All night, when work is done.

And here and there an open spot
Lies bare to light and dark;
Where grass receives the wanderer hot,
Where trees are growing, houses not;—
One is the Regent's Park.

Soft creatures, with ungentle guides,
God's sheep from hill and plain,
Are gathered here in living tides,
Lie panting on their woolly sides,
Or crop the grass amain.

And from the lane and court and den,
In ragged skirts and coats,
Come hither tiny sons of men,
Wild things, untaught of book or pen,
The little human goats.

One hot and cloudless summer day,
A poor o'er-driven sheep
Had come a long and dusty way:
Throbbing with thirst the creature lay—
A panting, helpless heap.

But help is nearer than we know
For ills of every name:
Ragged enough to scare the crow,
But with a heart that pitied woe,
A quick-eyed urchin came.

His heart to him the medicine told:
He took his little cap,
His only cup for water cold;
He knew a little it would hold—
It had no holes, good hap!

And to the fountain fast he went,
And filled it high and deep.
Before he came the half was spent;
But half was left—life-element—
To save God's thirsty sheep.

O little goat, born, bred in ill,
Unfed, unwashed, unshorn!
Thou meet'st the sheep from breezy hill,
Apostle of thy Saviour's will,
In London wastes forlorn.

And let men say the thing they please,
My faith, though very dim,
Thinks He will say, who always sees,
In doing it to one of these,
Thou didst it unto Him.

GEORGE MAC DONALD.

ESSAYS FOR SUNDAY READING.

IX.—THE DAY OF DEATH BETTER THAN THE DAY OF BIRTH.

BY JOHN CAIRD, D.D.

“A GOOD name,” it is written, “is better than precious ointment, and the day of death than the day of one's birth.” The idea in the first clause of this verse may be, that the love and honour that follow departed worth are a better embalming than all the preparations and perfumes that steal the body from decay. The latter succeed only in preserving for a little what is at best a ghastly semblance of the outward form of the man. The former seizes hold of the spirit or essence of his inward being, the central principle of his life, and suffuses that with the fragrance of sweet and tender memories, the preservative of human respect and love. It is well, when Death has claimed his own, to let him do his worst to that which alone it is in his power to touch; enough for us to feel that there is an immortality which love confers on which he cannot lay his destroying hand. When we have looked our last on the dear old face, calm with the changeless peace of death; or when the great or good man, at the close of an honoured life, is carried to the grave, true affection shrinks from any miserable attempt to confer a spectral show of life on that which is our friend no more. But embalm him in the heart. Let the idea of his life rest in the sanctuary of imagination. Open for him in the inmost shrine of the living temple a place where the name and memory of our noblest and dearest are treasured; and gather round him there the myrrh and frankincense, the sweet spices and fragrant ointment of loving thoughts and tender recollections, of sympathy and reverence for all in him that was noble, and honourable and good;—so will you obtain a better triumph over death, and more truly arrest the progress of decay; for “a good name is better than precious ointment.”

But how shall we understand the words that follow, and for which I wish specially to claim the reader's thoughts,—“and the day of death (is better) than the day of one's birth?” Surely it is only within very narrow limits that the truth of this assertion can be maintained; at any rate, it is directly opposed to the common sentiments and usages, which treat birth as the joyous, and death as the sad and deplorable event. There are few homes where there is no joy that “a man-child is born into the world,” perhaps fewer still where there is no heart made sad when another place is left vacant. In many cases how eager the welcome, how loud the congratulations and rejoicings, that wait the entrance of a new life into the world! The mother clasps her firstborn to her heart, bends over its feebleness with the strange delight of a new affection, and feels as if a fresh interest had been lent to all the future of her life. The rich man's heir, the in-

heritor of a noble name, the destined occupant of a throne,—when the first feeble wail of an infant born to such destinies is heard, is it not the signal for widespread festivity and joy? and in all ranks, down to that of the humblest peasant or labourer, are there not many who can trace much that is sweetest and gentlest and happiest in their life to the hour when the infant's voice first woke the echoes beneath their roof?

On the other hand, I need scarcely go on to say, to common thought and feeling, the day of man's death is never a joyful day to think of. Philosophy and religion may in a few minds induce exceptive states of thought and feeling; and men may school themselves into an artificial indifference, or even an unnatural elation and rapture, at the approach of death. Yet for most natures the real ills of death are too palpable to permit the dread of them to be put to flight either by reason or faith. Though Christianity may discipline the bereaved heart into resignation, still its involuntary utterance is, that of all dark days, the blackest in its history was that when death came and left it bleeding; and as youth and hope and joyous activity, nay, as even age and penury and misery look forward to the future, there is no day on which the thoughts love less to linger than the inevitable one when death shall come. Thus, in many ways it seems false to the common sentiment of humanity to say, that “the day of death is better than the day of one's birth.” Granting, then, that there is expressed in these words what is only a partial truth, it may be worth while to reflect a little longer on some of the exceptions to it, before we consider, in the second place, in what sense it must be admitted as beyond question true, that “the day of death is better than the day of one's birth.”

I. Even to the holiest and best of men, though hovering on the verge of eternal blessedness, the day of death is not in all respects the brighter of the two. Much less can this be averred of him to whom that day is the termination of a worthless or wicked life, the last of a long series that have been spent in selfishness and sin.

To take the latter case first: is not the beginning of an evil life less mournful to contemplate, in many respects, than its close? The birthday of the worst of men, though it ushered a new agent of evil into existence, though it was a day fraught with more disastrous results to the world than the day in which the pestilence began to creep over the nations, or the blight to fasten on the food of man, or any other physical evil to enter on a career destined to spread terror and misery over the world;—the day when the vilest of humanity first saw the light,

might yet in some aspects of it be regarded as better than the day of his death. For, to take only one view of it, when life commenced, the problem of good or evil to which death has brought so terrible a solution, was, in his case, as yet unsolved. The page of human history which he was to write was yet unwritten, and to that day belonged, at all events, the advantage of the uncertainty whether it was to be blurred and blotted, or written fair and clean. The battle was yet unfought, the campaign only just entered on: who could prognosticate whether victory, a drawn conflict, or shameful defeat and ruin, should be the result? There was at least the possibility of hoping and auguring the happier issue. Life, even in the most unfavourable circumstances, has ever some faint gleams of hope to brighten its outset. The simplicity, the tenderness, the unconscious refinement that more or less characterise infancy, even among the lowest and rudest, soon indeed pass away, and give place to the coarseness of an unideaed, if not the animal repulsiveness of a sensual or sinful life. But at least at the beginning, for a little while, there is something in the seeming innocence, the brightness, the unworldliness, the unworn freshness of childhood, that gives hope room to work. Nay, is not the divine plan of life, for every human being that enters on existence, a noble and glorious one? Is there not, for every child, not in the dreams of parental fondness only, but in reality and in God's idea, the possibility of a noble future? The history of each new-born soul is surely in God's plan and intention a bright and blessed one. For the vilest miscreant that was ever hounded out of life in dishonour and wretchedness, there was, in the mind of the All-Good a divine ideal, a glorious possibility of excellence, which might have been made a reality. When, therefore, in any case opportunity has been wasted, and this heavenly birthright bartered for meanest joys, is it possible to echo the judgment of the wise man? Look on this picture and on that: *this*, the day when the new object of love, and hope, and tenderness entered on an unstained existence; *that*, the day when a ruined life reached its consummation. *Here*, you contemplate what the man was; *there*, what he has made himself to be: *here*, the simple, smiling face, with all the softness and roundness, the wonderful simplicity and confidingness of infancy; *there*, a countenance stamped with the unmistakable traces of a life of selfishness, if not darkened and deformed by grosser vices and crimes: *here*, though it grew by the lowliest paths, amidst the most desolate wastes of life, a weed or wild-flower that had yet some vernal sweetness in it; *there*, perchance, a broken, withered, fetid waif, trodden under feet of men, fit only to be flung out of sight. And say, if this contrast ever be realised—if there be those over whose cradle there were rejoicings, and over whose bier those most terrible words in all Holy Writ may be pronounced—"It had been better for this man if he had never been born"—say if there are not cases in which it is im-

possible to assent to the averment, that "the day of death is better than the day of one's birth."

Nor, again, can it be maintained that this saying is unconditionally applicable even to the holiest and best of men. Are there not considerations to make us pause ere we pronounce that the day even of a Christian's death is better than that of his birth? To name only two of these,—the day of death severs the ties, and it terminates the salutary personal influence, which the day of birth originates. Death is the going away from much that is dear to every man—dearest to the best. It is the breaking up of the pleasant associations that from the day of a man's birth have been silently gathering round him; and nothing can ever make that severance in itself a desirable or happy thing. Religion does not make the heart less susceptible of attachment to the world and life. Superiority to the world, indeed, a Christian acquires; but it is not a superiority which implies disdain or insensibility towards all in it that is innocent, or noble, or beautiful, but only repugnance to that which is evil, or becomes so by detaching the heart from God. We do not need to love our earthly friends less that we love God more; but forasmuch as religion stirs new springs of benignity and tenderness in the breast, and forasmuch as it gathers round our earthly relationships the significance and pathos of that eternity to which we are hastening, all the more intense do the universal human affections become in the Christian heart. Moreover the things which interest a cultivated mind—literature, science, art, the pursuits of the scholar, the philosopher, the man of refined and liberal tastes—do not lose their zest, but rather gain fresh interest when prosecuted in a Christian spirit and with a religious aim. The very world in which we live,—the visible material world,—becomes more attractive to the man who has learnt to trace a Father's wisdom in its structure and laws; and whose appreciation of material beauty has been quickened by the love of Him of whom all created loveliness is but the faint reflection. For the religious man, therefore, in proportion to the very depth and fervour of his piety, it must be not easier, but harder to part with all that he has known and loved so well. It may, indeed, be better for him—a thing infinitely desirable—to depart in order to be with Christ; but the act of departure in itself has no pleasure in it. Even if faith be strong enough to communicate an air of reality to that unseen world to which he goes, what man, however saintly and seraphic the spirit of his piety, but would feel some heart-string break with a nameless pang, if called, in the suddenness of an unanticipated summons, to look his last on all he loves on earth? The very thought that we must go, lends often a new and tenderer interest to the scenes and objects we are about to leave. There have been those to whom, as they felt the day of their departure drawing near, even the familiar scenes and aspects of nature have gained a new

though more pensive beauty; and the morning freshness, the summer noontide, the evening stillness, the old hills and meadows and streams, have seemed lovelier than ever to the eye that was soon to cast the last look upon them. But it is not the severment of local associations that makes the moment of departure so painful; it is to touch the dear hand—to look with yearning fondness on the familiar face—to hear the voice, tremulous with love and anguish, name our name once more as the shadow gathers over us—and then never, never again in all the ages, to see or hear them more. No; if to come is better than to go, to meet than to part—if the beginning of love and friendship and happy intercourse be better than the end—death, even with heaven in prospect, is not all brightness; nor “the day of death better than the day of one’s birth.”

Moreover, to a Christian, the day of death is that on which his active personal usefulness in the world terminates, and the interruption or cessation of a benign activity cannot be regarded as better than its commencement. In so far as a good man’s influence depends on his personal presence and agency, it terminates at death. The extinction of a noble life is the stopping of a machine that had worked long and profitably for society. It is the drying up of a spring by which many a faint and weary step had paused, at which many a parched lip had found refreshment. It is the quenching of an altar fire before which many a heart had gained fervour and inspiration. It is true, indeed, that the good or evil we do lives after us. The moral influence of a life is not arrested by death. Not one great or good man ever left the world without leaving behind him an indestructible impression of his character and life, to spread and propagate its salutary power so long as society exists. We may be able only partially to trace this influence, but in innumerable lines of action and interaction it is working amongst us—hallowing, purifying, ennobling mankind. And perhaps, if cognisance of earthly things be granted to those who have passed into the invisible world, it may constitute no slight element of their happiness to watch the undying influence of their words and deeds, to feel that they are still the unseen benefactors of mankind, and that though their voice is heard no more by mortal ear, yet in the undying moral power of their character and life there is a silent language more touching, more persuasive, appealing more irresistibly to men’s hearts, than any words that fall from living lips. And yet, admitting all this, it is not the less true that one kind of salutary influence—that which is implicated with the personal presence of the agent—is for ever terminated by death. The old impulse may be propagated by action and reaction, but no new force from the same centre of power can ever again be generated. The words formerly spoken may be echoed and re-echoed far and wide, but the voice is for ever still from which they emanated. We may reproduce

indefinitely fresh copies of the great master’s works; but no new production, glowing with the inexhaustible power and versatility of genius, shall ever reach us from that master’s hand. And forasmuch as in this respect it interrupts the continuity of a noble and benignant influence, the day of death cannot be regarded as better than “the day of one’s birth.”

II. Passing now to the positive side of the subject, I go on to point out in what sense it may indeed be averred, that “the day of death is better than the day of one’s birth.”

The idea of the writer, if we connect these words with the preceding clause of the text, “a good name is better than precious ointment,” may be, that a good and wise man is richer at death, by all that has won for him a good name, by all that has gained for him true glory, than he was on the day of his birth. Whatsoever the condition and circumstances in which a man enters life,—though he be born to wealth, rank, hereditary honour, and greatness, there is one thing which at birth he cannot have. The only honour that is truly valuable, is that which cannot be arbitrarily conferred, but which each man for himself must earn. Of true greatness, it may be averred that none can be born to it, none can have it thrust upon them, that he who would possess it must achieve it. The babe may bear an ancient name which time has rendered venerable, around which are clustered the associations of great deeds done in the old time when it first became historical, and which has gathered accumulated fame from the successive generations that have borne it. But though at the very day and hour of birth such a name and lineage may shed some glory on the child who inherits them, this, after all, is but a borrowed lustre; and if he can claim no more than this when life’s course is run, his is but a worthless honour. Even in this world’s annals of greatness, none can be included amongst the illustrious dead save those who have earned renown by noble deeds. The poet’s, philosopher’s, statesman’s, warrior’s fame, no fate or fortune can bestow. To the pinnacle of conventional rank the accident of birth may raise you, but would you gain a place amongst the few whom the world delights to honour, you must “climb the steep whence fame’s proud temple shines afar.” In this sense we can call no man happy before his death, for not till then can we know all that it was in him to accomplish. And when his work at length is done,—when the grave closes over the wise, the brave, the true,—over the wisdom that has grown ever riper with the years, or the genius that has been gaining fresh laurels to the last, or the heroism which no failure has ever tarnished, and which falls at last laden with a weight of accumulated honours,—surely in so far as the acquisition of true greatness is concerned, it must be pronounced that “the day of that man’s death is better than the day of his birth.”

And in the highest sense in which the words “a

good name" can be understood, the same thing is true. Whatever the conditions of birth in a religious point of view, whatever the Christian privileges, the advantages of education, or church, or home, there is one blessing they can never confer upon us. There is one thing which, as a mere gift, no power on earth can bestow, which by no arbitrary act of favouritism could Heaven itself confer. Goodness, moral excellence, Christian perfection,—that which these words denote is, according to the very conception of it, what cannot be given. It is not the boon of beneficence, but the result of effort. Through the struggles and self-denials, the long toils and sacrifices, the earnest, single-minded devotion of a Christian life, this prize by each Christian soul for itself must be won. There is indeed a love which we can never merit, a forgiving mercy which human effort has done nothing to gain, and yet which on us the undeserving, through Jesus Christ has been freely bestowed. Yet it is not the less true that God saves no man, confers heaven on no man, apart from the concurrence of his own will and energy. And, just as the social advantages to which a man is born do not of themselves ensure the attainment of great success in life, nay, may rather, by contrast with inherent weakness, provoke contempt, or by the missing of the great opportunities which they present, brand the idle or worthless with a deeper disgrace; so, all that infinite love and mercy have done for us, all that inheritance to which, as born in Christ's church and baptized in Christ's name, we succeed, may, if neglected or squandered, only serve, by increasing our responsibility, to darken our doom. No, in the church as in the world, in the roll of saintly as of earthly greatness, "a good name" must by earnest effort be won. And when it has been won, when, setting before himself a glorious ideal of excellence, a man through life with calm determination has pursued it, when baptized into the spirit of the cross, rising superior to the lures of ease or pleasure, the attractions of wealth, or the rarer charms of fame or power, that betray often the nobler natures to their ruin,—he has yielded up his life to the happiness of others, to the world's good, to the true progress of humanity,—when each year as it closes finds him riper in wisdom and richer in goodness,—nay, when no day passes without adding some new deed of nobleness to the sum of life's services, some fresh touch to the growing beauty and completeness of a Christ-like life,—when the last year, the last day of life finds him wiser, happier, better than all that went before, and into the garner of death the grand result of all the years is gathered—a nature true and tried, a fair and perfect soul,—what mourner, bending over the closing grave, even in the bitterness of irreparable bereavement, can refuse to say with the wise man, "The day of death is better than the day of one's birth?"

I remark, finally, that the day of a Christian's death is better than that of his birth, because, rightly viewed, his death-day is but a better birth-

day. It is the day of his entrance with a nobler nature into a grander world. "Our birth," it has been said in well-known words,

"is but a sleep and a forgetting;
The soul that rises with us, our life's star,
Hath elsewhere had its setting,
And cometh from afar:
Not in entire forgetfulness,
And not in utter nakedness,
But trailing clouds of glory do we come
From God, who is our home."

But that which a poetical imagination sees in the infant's birth, the eye of faith and hope discerns more truly in the Christian's death. What, seen from one side of death, is the setting, from the other, is but the rising of the soul on a world more glorious far than this. Nor does it pass in forgetfulness or nakedness to Him who is its eternal home. He who has lived nobly, loses not in death any one of the best results of life. The treasures of learning with which years of study and thought have enriched the mind, the wisdom and experience gained by long converse with men and things, the ripe judgment, the cultured taste, the exquisite susceptibility to all that is beautiful and noble in nature and life, the affections and sympathies expanding and deepening, growing in tenderness and purity to the last, above all, the high qualities that give dignity and greatness to man's moral nature—generosity, truthfulness, unselfishness, gentleness, humility, reverence, piety—nothing of all this is lost in the transition from time to eternity. Rich with all this accumulated spiritual wealth, does the soul enter on its new career. God has uses for it all. It is all precious to Him. He will not suffer one atom of it to be lost when he recalls the spirit to Himself.

The sentimentalist may sigh over the brevity and vanity of human existence, and speak of all that is great and noble in man and in human life as created only to become the prey of death. Struck by some instance of what we call untimely death, the premature extinction of some great and gifted mind, we are disposed sometimes to wonder at this strange squandering of what is so rare and invaluable. All this learning and experience, all this acuteness and polish of intellect, this slowly gathered wisdom, this ardour for truth and goodness, from which the world might so much have benefited—how sad and unaccountable that by one seemingly arbitrary stroke it should be destroyed! What mockery of human exertions that man should toil passionately and painfully for long years to gain that which, ere it has well begun to be used or enjoyed, is in one instant wantonly swept away! But does not this so common moralising betray after all a miserable narrowness and impiety? Why should we talk as if our little world were co-extensive with the universe, as if there might not be other and grander spheres of effort, other and greater work to be done in regions and worlds unknown, to which our Father, when He has need of them, calls our best and bravest-hearted away? Important though the world's work may be, do we not greatly exaggerate

when we speak as if in the measureless order of the universe, in the carrying on of the affairs and destinies of His boundless government, God might not have, for the highest minds, places of trust to be filled, plans and schemes to be developed, high and holy achievements to be performed, work to be done affording wider, grander scope for wisdom and energy and ardour, than this world's most momentous business and affairs? There is no waste of power when an able and gifted man is called from some obscure sphere to a position of dignity and responsibility. So, surely, there is no waste, no annihilation of what is most precious, no frustration of the long education of life, when, in the very midst of their years and their usefulness, God calls away the best and wisest of the sons of men to play their part on a wider, grander stage. The very fact that they are the best and wisest, may be the reason why they are earliest called. God cannot spare them longer from the greater destinies that await them. So, not seldom "the good die young, while they whose hearts are dry as summer's dust, burn to the socket." And even the hour in which we mourn over their untimely fall, is that in which they have attained their grandest exaltation,—while we talk of their sun as having gone down when it was yet day, already they have begun to shine as the stars for ever and ever. Death here is birth into immortality.

Compare, then, the two days spoken of, and

say which is the "better." The day when a great and good man dies is like the day of his birth, that on which he enters on a new existence. But the first birth was in feebleness, and unconsciousness, and ignorance; the second is in the noble maturity of powers ripened by the discipline of years. The first was the birth of a nature possessed at best of the negative innocence and guilelessness of infancy; the second is that of a nature purified by trial, strong with the strength of conquest, attired in raiment that has been "washed and made white by the blood of the Lamb." The former birthday beheld a weeping child clinging in blind instinct to the mother's breast, the latter witnesses a redeemed and glorified spirit, enfolded, in the ineffable consciousness of love and life, in the everlasting arms. An earthly home and a little circle of earthly friends welcomed at the first the new entrant on life: the glorious society of heaven, angels and spirits of the just made perfect, hail the coming of another brother born to immortality. The first birth was into a world whose beauty has been marred by sin and strife and care and crime; the second ushers the soul into the home of eternal purity,—a world on which the faintest shadow of evil can never rest,—the new heavens and earth wherein dwelleth righteousness. Who, then, if all this be so, can doubt that "the day of a man's death" may be "better than the day of his birth?"

TO THE EDITOR OF "GOOD WORDS."

MY DEAR SIR,—I have to request that you will allow me to set myself right with your readers, in a matter connected with my last "Plea for the Queen's English."

Mr. Moon has published a second rejoinder, written in a spirit, which, as I have no desire to imitate it, I shall refrain from characterising. The gravamen of his feeling against me consists in his having applied to himself certain expressions which I had used with an entirely different reference. It will, I think, be evident to any one that the epithets of which he complains are intended to describe, not himself, but the hypothetical reader whom he supposes capable of the misapprehensions which he adduces. Those who know me, will not want assuring that I am quite incapable of the discourtesies which he lays to my charge.

The worst I have said of Mr. Moon is, that he is no very formidable judge of pure English: an opinion which this his second rejoinder has strongly confirmed.

I am, my dear Sir,

Most truly yours,

HENRY ALFORD.

August 3, 1863.

THE PARABLE OF THE SOWER.

THE PARABLES

READ IN THE LIGHT OF THE PRESENT DAY.

BY THOMAS GUTHRIE, D.D.

X.—THE PARABLE OF THE SOWER.

MATTHEW xiii. 3—23.

THE first snowdrop, the first green leaf on naked hedges, the first few notes that sounding from bush or tree break the long, dreary silence—still more the first smile that lights up an infant's face, its first gleam of intelligence, its first broken word, possess an interest and yield a pleasure peculiar to themselves. With more interest still—did the world hold such treasures—would we look on the first stanzas of Homer's muse; the first attempt of Archimedes' skill; the first oration of Demosthenes; the first sermon of Chrysostom; the first sketch of Rubens; though we could hope to see nothing in these but the dawn of talents, which, at maturity, produced their splendid works, and won them immortal fame. What gives the interest to these things, gives a peculiar interest to this parable. Others may be as instructive and as beautiful, but of all those parables that he strung like pearls on the thread of his discourses, this is the first Jesus ever spake. As peculiarly befitting him who came to sow saving truths broadcast on the world, no subject could form a more suitable introduction; and with the divine skill with which he chooses, Jesus handles the topic. For though his first, this parable bears no trace of the feebleness and imperfections that mark other, the greatest, men's earliest efforts—another illustration this of the words "He spake as never man spake," as with his foot on the waves, He walked as never man walked.

The circumstances in which our Lord was placed while—in addition to his look and voice—imparting to this discourse an impressiveness and liveliness which it loses within the dull walls either of church or room, very probably gave it its colour and form. A crowd eager to catch every word that fell from his blessed lips, surging and pressing forward, besieged the house, where, now answering the cavils of the Pharisees, and now expounding the mysteries of the Gospel, he talked to the people. Kind and considerate, our Lord—since faith cometh by hearing, and hearing by the Word of God—that all might hear left the house; and, followed by a rushing, gathering throng, takes his way to the shores of the neighbouring lake. There is room enough for all there. On reaching it he enters a boat, converting it into a pulpit; and when by a few strokes of the oars in John's or Peter's hands, the boat is shot a short way out, he turns to address the multitude who throng the shore—sitting or standing, tier above tier, on its shelving sides.

Lighted by the sun, its roof heaven's own lofty dome, its walls the hills that girdled the lake, which, shining like a silver mirror, lay still and quiet at its Maker's feet, what edifice of man's ever offered preacher such a noble temple? The preacher was in keeping with the temple; no Barnabas, or Boanerges among the sons of the mighty to be likened to him who then and there, from the rude pulpit of a fishing-boat, consecrated shores, and fields, and hillsides for worship—teaching his servants to sow beside all waters; to be instant in season and out of season; and with all respect to the ordinary places and forms of divine service, to seize, without much regard either to time or place, every opportunity of preaching the blessed Gospel, and of saving them that are ready to perish. To fancy aright this scene, we must remember that the hills of Galilee, unlike those by some of our wild Highland lochs, do not descend right into the lake; nor, coming down steep and rocky, leave but a narrow footpath on the margin of the water. On the contrary, and especially on the western shores, between the feet of these hills and the lake, lies a broad belt of land, sloping gently down to the beach; and in our Lord's days, when the country teemed with inhabitants, and the shores all around were studded with towns and villages, this was cultivated by busy husbandmen, and rewarded their labour with abundant harvests. Now, it was on one of these fields which rose behind the throng, that our Lord's eye caught the object which suggested this parable. A man, very probably, like Martha, cumbered about many things, with a large family to support, with a heavy rent to meet, who thought he had no time, and perhaps had no inclination to drop work and join the crowd, comes forth from his house to sow. Jesus seizes the incident as the text for a sermon, a groundwork for instruction; and waving his hand so as to turn the eyes of the assembly on the husbandman, He begins the parable, saying, "Behold, a sower went forth to sow."

This man, let it be observed, was not sowing a field like those around this city, where with hedge or wall the farmer fences his field from wandering feet; and by breaking up the rough parts of the ground, carefully weeding the foul, and feeding the bare and barren, gives a uniform aspect to the whole. Agriculture, stimulated by trade or the pressure of population on the means of subsistence, has made

great progress since our Lord's days—rising from a comparatively rude art to the position of a science. And to enter fully into the scene of this parable and the meaning of its different parts, we must therefore leave these fat and fertile plains, to transport ourselves to those remote districts of the country where old customs linger, and the natural features of the landscape resemble those of the shores of Galilee. We find what we want in many of our Highland glens—the shores of their lakes presenting a counterpart of the field whose different features are woven into this parable. There, leading to a well, or to the nook where the boat lies moored, or to a neighbour's cottage, or to the parish church, we may see an old pathway skirting the borders of the field, or running right across it—in those places where the plough has rolled or rains have washed it down, the soil lies deep—elsewhere, on gravel or rocky knolls, it is poor and shallow—while here and there springing from cairns of stones, or parts imperfectly cleared and cultivated, whin and broom, the wild rose, ferns, birches and dwarf-willows, lend a beauty to the field which is more picturesque than profitable. In the corresponding features of that field which lay in sight of his floating pulpit, Jesus saw striking emblems of the hearers of his own, and also of every other, congregation. As such he uses them; and bringing to his task the unrivalled skill which turned birds into teachers, drew the noblest truths out of the meanest subjects, and found in common things fresh texts for uncommon sermons, he reaped a harvest from this field other and better far than sickles had ever done. Its owner had never cultivated it to such purpose as the Great Husbandman. The preacher makes more of it than the plough; no part lies barren in Jesus' hands; no golden crops that bowed their heads to the winds which swept the lake of Galilee like the truths he drew from its different soils!—in solemn and salutary warnings, in the revelation of his work, of his character, and of his gospel, making it yield a perpetual harvest of the bread of life, for the use of his own and all future ages.

THE SOWER.

Sheltered from the winds that played on the breezy summits of the mountains, the lake of Galilee reflected the face and form of Jesus—his image was mirrored in its glassy depths. And such a mirror is this parable; presenting in the sower a true emblem and image of Christ himself. Of that there can be no doubt, though he does not say so in as many words; saying, in his explanation of the parable, I am the Sower, as, pointing on one occasion to a vine clasping in its arms a rock, which it clothed with broad leaves and hung with purple clusters, he said, I am the Vine; or, on another occasion, pointing to the sun, as rolling out of the shadow of a cloud, or springing up from behind a hill, it bathed the whole landscape in golden glory, he said, I am the light of the world. With that kind and tender love which should touch and win our

hearts, Jesus, leaving his Father's bosom, descended on our world not only to procure, but to preach salvation; with his own hand to sow, in the furrows that repentance had made, the seeds of eternal life. With this end in view he sent the Baptist to proclaim his advent, and prepare his way. In the order of things ploughing goes before sowing. The soil must be broken up, and, stirring it to its depths, the iron must enter its bosom, that verdure in summer may clothe, and tall sheaves in autumn crowd the field. Now, what the man with the plough is to his fellow who, with a sowing sheet around him, casts the grain into the open furrows, John Baptist, denouncing vice, unmasking hypocrites, sparing neither prince nor peasant, priests nor people, but calling all to repentance, was to Jesus Christ. He went sternly through the land, like an iron ploughshare,—breaking up the fallow ground, and preparing men to receive the tidings of salvation which Christ came to preach. Sovereigns do sometimes grant pardons; but, so far as I know, they never bring them. Little affected by the miseries of the wretch whose sighs and groans confined within stone walls never penetrate the palace to disturb the sleep or dash the pleasures of the court, kings content themselves with sending pardons through servants and cold officials; and such a thing as one leaving his palace, bending his steps to the prison, flying on wings of love, with his own lips to announce the tidings, and hear with his own ears, sound sweeter than finest music, the cry of joy from one plucked from the jaws of death, is untold in history. But Christ so loved us that he came himself with the good news. He who at a great price procured liberty to the captive also proclaimed it; and he who made this earth stood on it a preacher of salvation. No wonder Paul magnified his office, considering who had filled it; and no doubt it was the pleasure Jesus felt in the good news he preached which so glowed in his countenance, and lent such tenderness, and power, and pathos to his oratory, that a woman who heard him cried, Blessed is the womb that bare thee,—and his very enemies confessed, Never man spake like that man. Thus he sowed. Would that all his servants caught his spirit, and came to the pulpit wearing his mantle!

They are sowers also. Every preacher of the Gospel is a sower of the seed: and though the whole scene of this parable is now changed, and Galilee's lake lies among her silent hills, still a beautiful, but now a lonely sheet of water—though her shores are furrowed by no plough, and her sea by no fisherman's keel—though her cities live only in the pages of history, and have no place but on the geographer's map—though the traveller finds little there to remind him of Jesus but the waves that sustained his form, and the storms that as they sweep and vex the lake recall the memorable night when, waked from deep and dreamless slumbers, he rose to bid winds and waves be still—though eighteen hundred long years are gone, still I may make use of the words with which Jesus

began his first public discourse, when, having read a passage from Isaiah, he closed the book and lifted up his head to say, This day is this Scripture fulfilled in your ears. When bells have rung out, and the congregation, whether coming from hamlets and farms along sweet country roads, or from their houses through dry and dusty streets, are assembled, and, as they wait in silence, a man enters the pulpit in robe of office or in ordinary attire, it may be said, as truly as on the day when Christ was the preacher and a boat the pulpit, Behold, a sower went forth to sow. It is the same seed we sow; and, in their hearts, congregations still present the same varieties of soil; but what a difference between this sower and his successors; his skill and our rudeness; his power and our weakness; his love and our cold affections; his burning zeal and our feeble fires; the light of the world and the flame of a taper—ay, the brightest star that ever shone in the firmament of the Church! Well may we say with Paul, "Brethren, pray for us!"

"Except the Lord do build the house
The builders lose their pain,
Except the Lord the city keep
The watchmen watch in vain."

The Spirit in Christ's day, not yet given in showers, or otherwise than in scattered drops, even he himself sowed to little purpose; a few hundred converts—the whole result of his labours, and of such labours, how little the joy, how scant the harvest? What, then, can sustain the preacher in his study or his pulpit, but faith in the promises, in God's own word that, by his own Spirit, he will with the foolish things of the world so confound the wise, and with the weak things of the world so confound the things that are mighty, that "he who goeth forth and weepeth, bearing precious seed, shall doubtless come again with rejoicing, bringing his sheaves with him."

THE SEED.

This, as Christ explains, is "the word of the Kingdom,"—those saving, Bible truths of which Paul speaks, saying, Woe be unto me if I preach not the Gospel. His kingdom, it is "*the kingdom*" by way of excellence, there being no other of which, having seen the rise, it shall not see also the fall—*the kingdom*, in contradistinction to those which rivers, shores, or mountains bound—many of which founded in injustice, and maintained by oppression, have tyrants for their rulers, and for their subjects slaves; and all of which, if I may judge the future by the past, have this course to run—born, they grow, arrive at maturity, flourish for a longer or shorter period, then begin to decay; and, sinking under the infirmities of age, or falling by the hands of violence, at length expire—their palaces a heap of ruins, their kings a handful of dust.

As different from these in its character as in its duration, the kingdom here is that over which Jesus reigns—justice his law, love his rule, mercy

his sceptre, peace his government, and the only weapon he employs to conquer his enemies and govern his subjects, the Bible. By that he rules; on that his kingdom rests—God's inspired Word, true without any mixture of error, and suffering as little from the assaults of sceptics, secret or avowed, as yon castle rock from the storms which, raving and howling around its solid crags, have blown, but not blown it away.

In regard to the figure here. None—not leaven with its assimilating power, nor light with its illuminating rays, nor bread with its nutritious elements, nor water as it springs sparkling from a mossy fountain to parched and thirsty lips—none sets forth the word of God better than this of seed. For example:—

There is life in Seed.—Dry and dead as it seems, let a seed be planted with a stone-flashing diamond, or burning ruby; and while that in the richest soil remains a stone, this awakes and, bursting its husky shell, rises from the ground to adorn the earth with beauty, perfume the air with fragrance, or enrich men with its fruit. Such life there is in all, but especially in Gospel, truth. It lives when we die—as the old martyr exclaimed, when he stood bound to the fiery stake, Me you may kill; the truth you cannot! This is the incorruptible and immortal seed; and though ornaments, polish, illustrations, eloquence in sermons may help the end in view, as feathers do the arrow's flight, or their wings the thistle-downs, as they float, sailing through the air, to distant fields, it is to the truth of God's Word, blessed by God's Spirit, that sinners owe their conversion, and saints their quickening and comfort in the house of God. The patient is healed by the medicine, not by what gilds it: the hungry are fed by the meat, not by what garnishes it; these fields crowded with joyous reapers and covered with golden sheaves show the life that was in the seed, not in the sower, or in the soil; and conversions being due not to the human talent but to the divine truths in the sermon, the greatest as well as the feeblest preachers have to say, Not unto us, not unto us; but unto thee, O Lord, be all the glory!

There is force in Seed.—Buried in the ground a seed does not remain inert,—lie there in a living tomb. It forces its way upward, and with a power quite remarkable in a soft, green, feeble blade, pushes aside the dull clods that cover it. Wafted by winds or dropped by passing bird into the fissure of a crag, from weak beginnings the acorn grows into an oak—growing till by the forth-putting of a silent but continuous force, it heaves the stony table from its bed, rending the rock in pieces. But what so worthy to be called the power as well as the wisdom of God as that Word which, lodged in the mind, and accompanied by the divine blessing, fed by showers from heaven, rends hearts, harder than the rocks, in pieces? "He that hath my word," says God, "let him speak my word faithfully. What is the chaff to the wheat, saith the Lord!

Is not my word like as a fire, and like a hammer that breaketh the rock in pieces?"

There is a power of propagation in Seed.—Thus a single grain of corn would, were the produce of each season sown again, so spread from field to field, from country to country, from continent to continent, as in the course of a few years to cover the whole surface of the earth with one wide harvest,—employing all the sickles, filling all the barns, and feeding all the mouths in the world. Such an event, indeed, could not happen in nature, because each latitude has its own productions, and there is no plant formed to grow alike under the sun of Africa, and amid the snows of Greenland. It is the glory of the Gospel, and one of the evidences of its divine origin that it can: and, unless prophecy fail, that it shall. There is not a shore which shall not be sown with this seed; not a land but shall yield harvests of glory to God and of souls for heaven. By revolutions that are overturning all things, by war's rude and bloody share, and otherwise, God is breaking up the fallow ground, and ploughing the earth for a glorious seed time. The seed that sprang up in Bethlehem shall wave over arctic snows and desert sands: and as every shore is washed by one sea, and every land that lies between the poles is girdled by one atmosphere, and every drop of blood that flows in human veins belongs to one great family of brothers, so in God's set time men of every colour and tongue shall cherish a common faith, and trust in a common Saviour. It was of that, and of this seed time, the Psalmist spoke, when standing on the heights of prophecy, and looking along the vista of distant ages, he said, "There shall be a handful of corn in the earth on the top of the mountains; the fruit thereof shall shake like Lebanon." "His name,"—referring to Christ—"His name shall endure for ever; men shall be blessed in him, and all nations shall call him blessed." Thus the seer spake; and while we echo his devout "Amen and Amen," let us pray, Even so come, Lord Jesus, come quickly!

THE SOIL.

Hearers represented by the Wayside.—"When he sowed, some seeds fell by the wayside, and the fowls came and devoured them up." Nothing more likely to happen! No care, with broad cast sowing, could prevent some seed falling on the pathway where, as that was beaten hard by the feet of passengers, it lay exposed to birds which, as all know, in spring, ere buds have burst, or sunny skies tempted insects forth, or genial showers called worms from their holes, often suffer from want of food. Made bold by hunger, our birds, some from the woods sailing on raven's wing, others with snowy plumage from neighbouring shores, attend the ploughman as he turns up the furrows and their food; so yonder in the fields of Galilee they watch the motions of the husbandmen, and sweep down from rock or tree to pick up the grains that lie on the beaten road.

The explanation of this scene Jesus gives in these words; "When any one heareth the word of the kingdom, and understandeth it not, then cometh the wicked one, and catcheth away that which was sown in his heart; this is he which received seed by the wayside"—Mark says, "Satan cometh immediately, and taketh away the word"—Luke says, "Then cometh the devil, and taketh away the word out of their hearts, lest they should believe and be saved." Again I say, nothing more likely to happen. Some who carefully cultivate their fields, or their gardens, or their business, or their minds, take no pains whatever to cultivate their hearts. The Bible neglected, prayer, unless as a mere form, a plough passed over the surface, unused, no serious thought given from week's end to week's end to another world and their precious souls, their hearts are like ground ploughshare has never entered. Worse still, in a worse state than an uncultivated waste, the world with its many, hurrying, heavy feet has been trampling over their poor hearts the whole week through—day by day, year by year, from early childhood, perhaps, to grey old age; till under the ceaseless tread and tramp and traffic of worldly thoughts, unholly desires, selfish and evil passions, they have grown harder with time, and become as unimpressible and impenetrable almost as a stone. They are without God in the world. He is in the sky above and in the earth beneath them, in the air they inhale and in the bread they eat, by their side when they walk and by their bed when they sleep, everywhere but where most of all he should be: he is not in all their thoughts; and bringing to his house hearts as hard as the flags they walk on, no wonder that their hearing and our preaching is vain!

The case as painted in this parable, and in truth,—for this is no fiction,—is worse still. So bad, indeed, that but for the mercy that pities the poorest sinners, and the might that can turn a heart of stone into one of flesh, we could cherish no hope of doing them any good. Wherever there is a preacher in the pulpit, there is a devil among the pews,—busy, watching the words that fall from the speaker's lips to catch them away, and, by the idle, worldly, evil thoughts—the birds that pick up the seed—which he intrudes on them, to prevent the word making an impression or remove any it happens to make. What an illustration of this the speech which a dying, despairing man addressed to one under whose ministry he had sat for twenty years! I have never, he cried, heard a single sermon! The minister, to whom his face was quite familiar, who had known him for years as a regular attendant at church, looked astonished—fancied that he was raving under the delirium of his approaching end. No, not at all! The man was in his sad and sober senses. I attended church, he explained, but my habit was, so soon as you began the sermon, to begin a review of last week's trade, and to anticipate and arrange the business of the next. Now, in like manner, to a greater or less extent, Satan deals

with thousands who occupy pews in the church. Doing so, distracting their attention, playing with their fancy, carrying away their minds to outside scenes of business or pleasure, "lest they should believe and be saved." Thus he destroys souls, not in his own devilish haunts, but in the very house of God; wrecking them at the very mouth of the harbour; slaying them on the very steps of the altar; turning their attendance on ordinances into a means of hardening their hearts and aggravating their final, dreadful doom, he, if I may say so, seethes the kid in its mother's milk. Since Christ's own presence did not scare the fiend from the room where the disciples had met for the Church's greatest and most solemn rite; since, stealing into the chamber, he entered into Judas when his hand was dipped into the same dish with Christ's, how should we watch, keep our hearts and keep our feet when we enter the house of God,—in the words of Peter, Be sober, be vigilant, because our adversary, the Devil, as a roaring lion, walketh about seeking whom he may devour.

Hearers represented by the Stony Ground.—In Spring, before the growth hides the ground, I have seen fields sown out with corn so thick of stones that they seemed the substitutes for soil. I have heard people wonder what could induce any man in his senses to cultivate such land; yet they would wonder more to see the crops such soil, where the roots wind round the stones and bore away down in search of food, yields to the reaper's sickle. It is not such ground, though misunderstanding the term *stony ground* some may suppose so, which is described here; but that which, while the other parts of the field are green and healthy is marked in summer by a yellow, sickly hue. There the soil lies shallow—spread like a skin on bones of rock: and so, though a braird soon appears with fair and early promise of an abundant crop, the plants, having no depth of earth, are scorched by the sun; and, drawing no nourishment from the rock which their roots embrace, soon wither away.

In explanation of this part of the parable, our Lord says, "He that received the seed into stony places, the same is he that heareth the word, and anon with joy receiveth it; yet hath he not root in himself, but dureth for a while; for when tribulation or persecution ariseth because of the word, by and by he is offended," or, as it is given by Luke, "They on the rock are they, which, when they hear, receive the word with joy; and these have no root, which for a while believe, and in time of temptation fall away." These are alarming words. The matter is more serious than it was, since other than wayside hearers miss heaven. What have we here? the word listened to with attention; with more, much more than attention; with such feelings as a man under sentence of death hears the news of his pardon, or men on a wreck, lashed to the mast, hanging on the shrouds, hear the cry, the joyful cry, A boat! a life boat! People count on heaven to whom the Sabbath is a weariness, and a sermon

dulness; yet here are those who, though they receive the word, according to one Evangelist, with "joy," and according to another with "gladness," come short of eternal life. Nor is the impression the truth produces a mere feeling, a passing emotion; vanishing with the tears it brings to their eyes; going down like the sea-swell when winds are hushed; dying away like some sweet strain of music when the hand is removed that struck the trembling strings. On the contrary the impression passes out into expression; they move out of the passive into the active state—making a good profession, and entering on the practice of religion. More, and more marked still, as the braird on shallow ground rises sooner than that which springs from deeper soil, the conversion (as it is supposed to be) of stony ground hearers is often marked by precocious piety, and a forward, flaming zeal. I have known most melancholy instances of that; and in all such cases, as some have fearfully illustrated, the last state of such persons is worse than the first. Let all of us take warning; let each prove his own work—whether he has in true, saving faith what is the root of the matter.

Paul had such hearers, whom he addresses, saying, "Ye did run well, what did hinder you?" John Baptist had many such, and in Herod a distinguished one—the only king, so far as I know, who felt such interest in religion as to break through established routine and leave his court chaplains to listen to a street preacher. His conduct in this matter, the pleasure he felt in the ministry of the fearless and faithful Baptist, the many things he did at John's bidding and advice, were full of promise—never soil was covered with a greener braird—never sky was lighted with a brighter dawn. He dured for a while; then fell away—and what a fall!—quenching the hopes, which God's people had begun to cherish of a pious king, in the blood of the martyred, murdered preacher. Not Paul, or the Baptist only, but our Lord himself had many such hearers. Crowds followed him; tracked his steps from city to city, from shore to shore—hanging on his lips, thronging the streets through which he passed, and besieging the houses where he lodged. The day was once when ten thousand tongues would have spoken and ten thousand swords would have flashed in his defence; and the day arrived when, during for a while, they fell away; and of the crowds that swelled his jubilant train, all, all deserted him—the only voice lifted up in his behalf coming from the cross of a dying thief.

The explanation of these, and of all cases where religion disappears and dies out under the influence either of temptation or of persecution lies here—they had no root, no true faith. Convictions were mistaken for conversion; admiration of the servant for attachment to his master; an appreciation of the moral beauties of the gospel for an appreciation of its holiness; the pleasures of emotion, or such gratification as taste enjoys in a beautiful discourse, for the pleasures of piety. Beneath such promising

appearances there lies a stony heart; and so when the tests of suffering or of temptation are applied, they fall away, like the multitude who, offended at Jesus' saying, walked no more with him.

Where however there is true faith, his people, thank God, need not much dread such trials. Resting firmly on the Rock of Ages, they are as Mount Zion which cannot be moved. To borrow the figure here, the hotter the sun, if the heavens send it showers, and the earth give it soil, the plant grows the taller and the stronger—grace growing in converted hearts like corn in strong, deep, rich, well watered soils. The warmer the summer, the richer the harvest.

Those represented by the Ground with Thorns.—Of the seed our Lord says "Some fell among thorns, and the thorns sprang up and choked them;" explaining it thus, "He also that receiveth seed among the thorns is he that heareth the word, and the care of this world, and the deceitfulness of riches, and," as Mark adds, "the lusts of other things entering in, choke the word, and it becometh unfruitful."

The regions which lie mid-way between the equator and the poles are proved by experience to be most favourable to life and its enjoyments; and so those conditions which lie mid-way between the opposite extremes of poverty and riches, are found most conducive to man's spiritual welfare. The proof of that which this parable, as well as many other passages of Scripture, presents, should warn both rich and poor of their peculiar dangers; and teach contentment to such of us as are fortunate enough to be neither harassed with the cares of poverty, nor tempted by the deceitfulness of riches. The danger and deceitful influence of riches, their tendency to turn our thoughts away from another world, and drown such concern for the soul as providences or preachers may have awakened, in the cup of pleasure, is awfully expressed in the saying of our Lord, "It is easier for a camel to go through the eye of a needle, than for a rich man to enter into the kingdom of God." Dr. Johnson put the point well when, on Garrick showing him his beautiful mansion and grounds, the great moralist and good man laid his hand kindly on the player's shoulder, and said, "Ah! David, David, these are the things which make a death-bed terrible!"

The equally dangerous and deadly influence of great poverty I may illustrate by a scene which I have not forgotten, nor can forget. Alone, in the garret of a dilapidated house, within a wretched room, stretched on a pallet of straw, covered only by some scanty, filthy rags, with no fire in the empty chimney, and the winter wind blowing in cold and fitful gusts through the broken, battered window, an old woman lay, feeble, wasted, grey. She had passed the eleventh hour; the hand was creeping on to the twelfth. Had she been called? It was important to turn to the best account the few remaining sands of life; so I spoke to her of her soul, told her of a Saviour—urging her to prepare for that other world on whose awful border

her spirit was hovering. She looked; she stared; and raising herself on her elbow, with chattering teeth, and ravenous look, muttered "I am cold and hungry." Promising help, I at the same time warned her that there was something worse than cold and hunger. Whereupon, stretching out a naked and skinny arm, with an answer which if it did not satisfy the reason touched the feelings, she said, "If you were as cold and as hungry as I am, you could think of nothing else." The cares of the world were choking the word.

And so may, what Mark calls, "the lusts of other things" do—in such as are placed in the happy medium between wealth and want, strangling good thoughts in their very birth; destroying the fairest promises of conversion. Let me illustrate this also by an example. Robert Burns, who had times of serious reflection, in one of which, as recorded by his own pen, he beautifully compares himself, in the review of his past life, to a lonely man walking amid the ruins of a noble temple, where pillars stand dismantled of their capitals, and elaborate works of purest marble lie on the ground, overgrown by tall, foul, rank weeds—was once brought, as I have heard, under deep convictions. He was in great alarm. The seed of the word had begun to grow. He sought counsel from one called a minister of the Gospel. Alas, that in that crisis of his history he should have trusted the helm to the hands of such a pilot! This so-called minister laughed at the poet's fears—bade him dance them away at balls, drown them in bowls of wine, fly from these phantoms to the arms of pleasure. Fatal, too pleasant advice! He followed it: and "the lusts of other things" entering in, choked the word.

Now, be it woman's household cares or the anxieties and annoyances of man's business, the harassments of poverty or the enticements of wealth, the pursuit of fame or power, or pleasure, whatever in short it be that engrosses our attention, and, stealing our thoughts from God, and our hearts from heaven, counteracts the holy influences of Bibles, churches, sermons, Sabbaths, it is choking the word. We need to be on our guard. It is not the green and tender corn only which is smothered. I have seen the stately tree, with roots struck deep in the soil, and giant arms that had battled with the tempest, fall a prey to a low and ignoble creeper; fastening on it, rising on it, twining its pliant branches around the massive trunk, binding it more and more closely in its fatal embraces, the weak thing strangled the strong—to death. What but God's great grace and mercy, the timely interposition of Heaven, in his peril and extremity saved King David from becoming a ruin, a wreck as great as Demas the apostate, or Judas the traitor? The devil's hand was fastened on his throat, when Nathan appeared to loose it. Watch, therefore, and pray, that ye enter not into temptation—Let him that thinketh he standeth take heed lest he fall.

Those represented by the Good Ground.—"He,"

says our Lord, "that received seed into the good ground is he that heareth the word and understandeth [Mark says "receiveth"] it: which also beareth fruit, and bringeth forth, in some an hundred fold, some sixty, some thirty;" or, as it is given by Luke, "The good ground are they which in an honest and good heart, having heard the word, keep it, and bring forth fruit with patience." In these words we are presented with certain salient, distinctive points of character,—touchstones, by which each man may, and should, try himself. In doing little else than indicating these, I remark of true Christians,

First, *They receive the Word.* In their case it does not, so to speak, go in at the one ear, and come out at the other. It does not fall on their minds to run off like water from a stone; it falls, but it is as seed into a furrow, to lodge itself in their hearts. They do not reject, but receive it.

Secondly, *They understand it,*—appreciate its value; feel its power; and "comprehend with all saints what is the breadth, and length, and depth, and height of the love of Christ, which passeth knowledge." But "the darkness," as the apostle John says, "comprehendeth it not." Did others comprehend, understand the truth in the highest sense of the term, would they act as they do? No! no more than a man, even a child, who understood the nature of fire, would walk into the burning flames. Did yonder savage know, or even dream of, its value, would he give a handful of gold to purchase a few worthless beads, a looking-glass, some fragile, infant's toy? Still less would yonder sinner, did he rightly understand the meaning of God's wrath, of God's love, of the cross of Calvary, of eternity, pawn his soul and peril its salvation for pleasures which perish in the using.

Thirdly, *They keep the Word:* as—in contradistinction to soils that puffed up by winter frosts throw out, or others that starve, their plants—good ground keeps the corn. Esteemed a treasure more precious than gold, yea than much fine gold, they lay the word in their hearts, locking it up there.—Its effect on others is temporary, as truths written on sands within the tide-mark where waves roll in, nor leave a letter there. On them its effects are permanent, not passing; deep, not shallow; the work of God's Spirit, not of man's powers of persuasion; such as Job wished: "Oh that my words were written! oh that they were printed in a book! that they were graven with an iron pen in the rock for ever!" With hearts where the tenderness of flesh is associated with the tenaciousness of stone, as granite keeps the letters of its inscription, so they "keep the Word."

Fourthly, *They bring forth Fruit.*—In the form of good works, of unselfish, gentle, and heavenly dispositions, of useful, noble, holy, and Christian lives, they bring forth fruit—some much; some little; but all some. "Neither barren nor unfruitful in the knowledge of our Lord Jesus Christ," they prove their faith by their works. So living, within a wide or narrow circle, when they die they are missed: and their memory, while "the name of the wicked shall rot," embalmed in their virtues and long preserved from decay, remains fragrant,—as withered rose-leaves in a vase of spices.

Such are some of the points which distinguish real Christians from those who, however fair, are mere professors. The key to all lies here—they have, what is meant by the "good ground," a good heart,—what Luke calls "an honest and good heart,"—in other words a true and a new heart. Implanted at conversion, entailed on no heir, the natural inheritance of no man, this heart is found in those only who, born again of the Holy Ghost, have received the truth in the love of it. Its presence or absence explains what is otherwise inexplicable—in the same family, some reprobate and others religious; among disciples of the same Master, a Judas and a John; hanging one on each side of the same cross, an impenitent and a penitent thief; leaving the same church after listening to the same sermon, one sinner converted and another hardened. How important,—the term is too feeble,—how indispensable, absolutely indispensable, would men be saved, nor go to hell with a Bible hung like a millstone round their neck, this new heart! God can give it. He has given it wherever it has been got. There is nothing in the grains of corn to change bad ground into good; but this seed has the wondrous power of changing the nature of the soil. Blessed of God, the truth sanctifies. What therefore though the heart by nature is like a stone? The finest soils of earth were once stone; and He who by the action of stormy waves and stupendous icebergs ground down the rocks which reared their naked, rugged heads above the waste of waters into soil where now the ploughman draws his furrows and flashing sickles reap their richest harvests, can work such changes on hearts of stone. And he will, if we ask him. "If a son," says our Lord, "shall ask bread of any of you that is a father, will he give him a stone? or if he ask a fish, will he for a fish give him a serpent? or if he shall ask an egg, will he offer him a scorpion? If ye then, being evil, know how to give good gifts unto your children, how much more shall your heavenly Father give the Holy Spirit to them that ask him?"

NEEDLEWOMEN.

THERE may be some few occupations followed by women whose hardships have escaped notice, but needlework is certainly not amongst the number. In its various forms, from the stitching of a coal-sack, or a pair of fustian trousers in Shoreditch, to the construction of a gauzy court dress as large as a balloon in May-fair, it has received every attention from poets, journalists, and philanthropists. No branch of women's labour has given birth to so many poetic wails, so many parliamentary investigations, so many letters in the newspapers, and so many suggestions by individuals and private committees.

A quarter of a century has glided by since its most painful features were dragged into the light, and still it continues fruitful of public scandals. If a young woman commits suicide by throwing herself into the river, if a middle-aged woman is found starved to death in a garret or a cellar, if another young woman—more delicately nurtured—is found dead, poisoned by bad air, over-work, and overcrowding in a West-end sleeping loft, the world is never astonished to hear that they were all needlewomen. The name of sempstress is so associated with misery, poverty, and oppression, that such an end is nearly always expected from such an employment.

As usual where very low wages necessarily prevail—the result of the market being thoroughly glutted with labourers—the employers are abused for not doing impossibilities. It is so easy for a mass of clamorous and indignant people to ask somebody to benefit somebody else, that the request is always loudly made. Most “charitable suggestions” which appear in the public prints at a time of great popular excitement on some social question have this peculiarity, and it is therefore hardly surprising that they are seldom attended to. Some of these suggestions or demands—such as calling upon a particular employer to pay a sentimental rate of wages for the production of some article of universal consumption—are made with the most wonderful obstinacy, stupidity, and regularity. Though it may be shown, over and over again, that the employer is utterly helpless in such a case—that he has no more power to raise the rate of wages than to raise the tide six hours before its time—he is still asked and expected to do it. Because he remains passive, he is abused and pelted with hard names; is called an oppressor and grinder-down of the poor, and is pointed at in every way as a fit object to be sacrificed to popular indignation. In some cases he is driven to withdraw his capital from the hateful business, which diminishes the fund that finds employment for the workpeople; in others he is driven to encourage the invention of machinery which largely displaces labour. Since the “*Song of the Shirt*” created its nine days’ sensation, and the hundreds of articles based upon it

did all they could to cause a mutual hatred between employers and employed, the sewing machine has been perfected and adopted in every needlework establishment. Like all machinery, it has benefited the general public by cheapening the cost of production, and, in doing this, has rudely but wholesomely compelled thousands of half-starved needlewomen to seek other employments. It has enabled one active worker to stitch, hem, fell, bind, cord, gather, and embroider with a speed equal to ten ordinary sempstresses on materials varying from the thinnest muslin to the thickest cloth.

Public attention, however, is not so much drawn at the present moment to the miserable needlework slavery of the East-end, as to the condition of the dressmakers and milliners at the West-end of London. The recent death of a young dressmaker at one of the most fashionable court milliners, has caused so much public excitement and discussion, that the whole vexed needlework question has been re-opened, and a royal commission has been appointed to collect evidence and make a report. The readiness with which these commissions are now granted, contrasts strongly with the obstructive policy formerly adopted by Governments. Very little action, however, is now taken on the recommendation of such commissions, and they seem to be granted with a view of shelving troublesome subjects. If they ever answer the purpose of their promoters, it is by the publicity which they gain for their collected evidence and reports in the various newspapers. In 1842 one of these royal commissions disclosed the hardships and sufferings which thousands of young women and girls were then enduring from overwork and overcrowding in dressmaking establishments. The evidence then taken led to the formation of an “*Association for the Aid and Benefit of Dressmakers and Milliners*,” which still exists at New Bond Street, under the management of Miss Newton. The president of this Society is the Earl of Shaftesbury, and amongst the vice-presidents is the Right Hon. W. Cowper, M.P. The committee of ladies still includes, amongst many others, the Dowager Duchess of Sutherland, the Duchess of Argyle, Viscountess Sydney, Viscountess Jocelyn, Lady Ebury, and Miss Burdett Coutts. The chief objects of the Association are—to establish a provident fund and a registry of workwomen and employers; to afford skilful medical attendance to the young women at a very trifling expense; to promote an improved system of ventilation in the workrooms; to induce ladies to allow sufficient time for the execution of orders; to afford pecuniary assistance to deserving young persons in cases of temporary distress or difficulty; to induce the principals of dressmaking and millinery establishments to limit the periods of actual work to twelve hours each day, and to

abolish, in all cases, working on Sundays. The abolition of Sunday work has been chiefly due to the exertions of this Association, but long hours of employment are still customary, and the "season" is still as exacting as ever. In 1855, a bill was introduced into the House of Lords by Lord Shaftesbury, for limiting and regulating the hours of work in the London millinery establishments, but this was very wisely rejected by a committee of the House, who reported against it after taking evidence. It was felt that a short-hour bill to limit the time-contracts between full-grown, thinking young women and their employers, would be a well-meaning but mischievous and ridiculously inoperative piece of legislation. The principle of the Factory Act, on which this bill appeared to be based, was not to prevent men and women working overtime, but to prevent them selling the excessive labour of their children. As an attempt will probably be made next Session to revive this bill, it is as well at once to state this honest objection to it.

The needlewomen of London, if we include all those who are partly as well as wholly dependent upon needlework for support, number at least one hundred thousand: the acknowledged sempstresses form nearly fifty thousand of this total, and twenty thousand of this fifty thousand may be classed under the head of milliners and dressmakers. Out of this last twenty thousand, not more than one-tenth, or two thousand, indoor needlewomen are spread amongst the employers in the West-end and the circle round it. These workpeople may be divided into assistants, improvers, and apprentices, and they are distributed in the average proportion of about five residents to each house of business. The very centre of the fashionable circle, however, where the cream of the cream of "court milliners" is found, is far more thickly planted with these "young people." Twenty, thirty, forty, and even sixty indoor needlewomen are found in each of these leading establishments, and here it is that the root of the overwork evil really lies. The area is remarkably small compared with the whole field of needleworkers. The houses may number about twenty, the workers may number about five or six hundred. We are not prepared to assert that no instances of overwork and consequent physical suffering can be found outside this narrow circle, nor that millinery and dressmaking is the most healthy of all female sedentary employments.

Overwork is too common in all businesses where the rate of wages is low, and the results of prolonged sedentary occupation are too notorious, to warrant such an assertion; but inasmuch as the whole trade of millinery and dressmaking is not now upon its trial, we may be pardoned for merely looking at what is immediately before us. The recent lamentable death of a young needlewoman at the West-end occurred in one of the most fashionable houses of business, and the outcry that has been raised has been about the system pursued in

those few houses. That system is soon explained. "The girls in the large London houses"—(so says an address lately issued by the Committee of the Ladies' Sanitary Association)—"are, with a few exceptions, thoroughly respectable. Character is required by the managers, and is maintained in their establishments. This is a great point, for many of them [the young women] are orphans, often well-educated and well-conducted, to whom character is dearer than life. In a good house of business they are able to secure protection. A girl is usually sent to the business at the age of thirteen or fourteen, and bound for about three years. A premium of from twenty pounds to fifty pounds is paid on entrance, and she receives board and lodging during the time of her apprenticeship. At the end of that time she becomes an 'improver' for one year or more, receives her board and lodging, but is still dependent on her own resources for her other wants. By this time her little capital is generally exhausted, and she begins to earn a salary varying according to her abilities from twelve pounds to fifty pounds a year." This is a fair statement of this part of the case. "Talent," as it is called by the employers—that is, extraordinary taste, judgment, or power of forcing sales, is of course paid for much more liberally, and salaries varying from sixty pounds to one hundred and fifty pounds a-year, with board and lodging, are frequently given to these valuable "hands." The in-door workers are paid just as much during the slack time, from September to March inclusive, as they are for the busy time, or "Season," from April to August inclusive. They are allowed holidays varying from a fortnight to three months, during which time they receive their salaries, though of course they board with their friends. Much importance is attached, and perhaps justly, to the family protection given to these in-door workers, but the fact is overlooked that uncontrolled liberty is allowed them every Sunday.

The out-door workers, who, it may be unjustly, are regarded as a lower moral class, either take the work away to their lodgings, or work for stated hours in the house each day, coming in the morning, and going away at night, like clerks or warehousemen. Their average wages may be twelve or fourteen shillings a-week, and they are generally stronger than the in-door workers, probably because they work for shorter periods and get more exercise.

During the "Season"—from April to August, in the area we have named, that is, in the houses of the twenty chief "Court milliners,"—it may be taken for granted that the in-door workers, not always including the younger apprentices, are kept at close labour for fourteen or sixteen hours a-day for many days together. "Taking the year round" (says a fashionable Court milliner, who gave evidence before a Committee of the House of Lords, touching the system pursued in her own establishment), "I should think the young people work twelve hours a-day, because I give three months',

or six weeks', or a month's holiday to every one. To show that ours is a business solely for the season, I am glad to give holidays, because I have nothing for the young people to do out of the season. The nature of our business is different to any other; being a business of high fashion, the whole of that business must be transacted in five months, and we have to keep the establishment the rest of the year without paying our expenses. If it were a question of ten or twelve hours' labour a-day all the year round, that would answer our purpose much better than the present arrangement, because everybody would live out of the house, and we should have no one to keep when we have no work to do. As it now is, we pay enormously for talent, as much as sixty, eighty, and a hundred pounds a-year for the first talent, and keep it six months without doing anything scarcely, in order that we may have it when we want it. It is impossible to say exactly the number of hours we work: at times the young people come into the work-rooms at nine, and leave at four or five; at other times they come at seven and leave at ten. From seven to eleven are the longest hours that any one works in my house, except on the occasion of a Queen's drawing-room, a funeral, or a marriage-order, when we are compelled to work until it is done. I could not refuse work which will support my establishment the remaining time of the year: I must do it when it is offered to me: I cannot get it at other times. If the ladies could order their Court dresses, and their dresses for the Queen's balls, and their toilets for the Spring, during our leisure-time, we should make it a very profitable business indeed; but that cannot be done, inasmuch as the mode is not named for the season, nor are the fabrics ready. The Queen gives very short notices very often. Ladies come to me as late as four o'clock in the afternoon, and say: 'I want a head-dress; I am going by the four o'clock train to Windsor to-morrow,' and I am obliged to get it ready. Then I have a great many things to get done for the mail-train on the next night, perhaps for a wedding in the north of England, or for a funeral in the west: we dare not refuse these orders, because, if we did, the ladies would go to another house and get served, and we should lose their custom for ever."

This is a statement of the mistress's side of the case, made by a competent and confident witness, who was evidently free from any pressure or fear of philanthropic or other patrons. On the other hand, those who plead the cause of the workwomen state that the pressure of the "Season's" work is generally too much for the young people in the fashionable houses. They believe that the system could not be kept up but for the constant succession of fresh workers who come from the country to supply the places of those who break down under the exertion. They assert (without stating on what evidence, if any) that not one in a hundred passes through this ordeal with unimpaired health. "In

the first place" (say the Ladies' Sanitary Association, before quoted), "the most moderate amount of sedentary labour would be unhealthy if relieved by no exercise whatever. The apprentices seldom cross the threshold, except on Sundays. The rooms in which they work are nearly always badly ventilated; the rooms in which they sleep are worse. Add to this a yearly strain of four months' duration, when all the bodily powers are daily and systematically overtaken, when sixteen hours' daily labour are demanded from these victims of fashion,—sitting all these hours in close rooms, or, still worse, standing over some delicate material which must not be injured by a touch, no wonder that they frequently faint at their task; indeed, this is so common, that little or no notice is taken of it. Constant headache and pains in the back, loss of sight and loss of appetite, ending in complete prostration and consumption, are the results. We have the evidence of dressmakers who have married or gone into business, to prove that permanent injury is done to the health even of the strongest. Among the former we have numerous instances of distressing weakness from functional derangement, clearly traceable to the work, entailing great debility upon the sufferers, and without doubt upon their children."

The evils resulting from bad ventilation in crowded workrooms, and from overcrowding in sleeping-rooms, can hardly be overrated, and any agitation or even interference that will lessen these evils will be thoroughly welcome. Most of the great millinery houses are either in old-fashioned back streets where the rooms are small and dark—as in many parts of May-fair—or in a fashionable thoroughfare, like Regent Street, where rents are enormously high. Of course the best rooms are reserved for show and reception-rooms, and no one who has seen the space which a single court-dress, in all its virgin glory, will occupy, can wonder that the largest apartments are secured to display such products of the milliner's art. The dining-room is often a cheerless apartment on the basement; the workrooms, the low-roofed second and third floors, with extensions, and the sleeping-rooms, the garrets at the top of the house, and a few stray side rooms and lumber closets. Arrangements of this kind, in some measure inevitable, are undoubtedly bad; but we have no evidence to show that there is any anxiety to get into houses where the accommodation is far superior. There are many firms—chiefly amongst the large draper-milliners and dressmakers—where the sanitary regulations are almost perfect, but the managers have no more the pick of the market than other less thoughtful employers, and have to pay precisely the same wages. These employers are undoubtedly acting right in the course they pursue, but it would be more satisfactory to see a more unmistakable demand for good ventilation and sleeping accommodation coming direct from the girls, than from philanthropic committees acting as their mouthpiece.

With regard to the vexed question of food, we may safely conclude that the meals provided in the chief houses are wholesome and substantial. It is so easy to get up frivolous complaints about stale bread, salt butter, boiled mutton, roast mutton, tough beef, salt beef, thin milk, stale eggs, or any eatables, that little attention need be paid to such schoolgirl grumbings. Allowances may be made for occasional ill-health and over-fatigue when a fretful impatience of food of any kind may be natural, but, as a rule, such complaints may be regarded as the commonplace criticisms which are met with at all houses where meals are supplied by contract. From the dining-table of a first-class boarding-house, to the eating-hall of a workhouse, such half-fanciful complaints are constantly made, and it is therefore not surprising to find them in millinery establishments.

The great evil, then, that we have to contend with now, is overwork during the "season," or five months in the year, at about twenty court milliners', who employ about five or six hundred needlewomen. "The co-operation of ladies," again says the Ladies' Sanitary Association, "is a necessary element in the social reform to be achieved. They may ascertain with little difficulty the character of the house they employ, and whether its workpeople are treated with consideration. They may refrain from unreasonable demands as to the execution of their orders. They can pay their bills, a duty which has a still more important bearing on the question. Employers with large capital may not care about early payment—indeed, ladies have sometimes to complain that their bills are not sent in, and they do well to complain, for the interest lost by late payments must be made up by large profits, so that they pay for delay, and suffer from the temptation to carelessness and extravagance induced by the habit of keeping a running account." [An article headed "Peacockism," in *Good Words*, for April, 1861, has fully exposed this long-credit system.] "To the smaller capitalist the system of long credit often leads to ruin. One employer stated to us that he had above five thousand pounds due to him, and was thereby brought to the verge of bankruptcy; and this is neither a rare nor an extreme instance. Besides this, the long-credit system keeps the business in the hands of a few capitalists. If ladies paid their bills quarterly, a greater number of workwomen would be able to become principals in the business, and this would lead to a fairer division of the profits by making it easier for the employer to increase the number of workers."

The spreading of the business during the height of the "season," and, indeed, all the year round, would materially relieve those who are overworked without receiving the usual benefit of working overtime. "It has been proved," continues the same address, "that no overwork is really profitable,—that the worker, when freshness and vigour are maintained by sufficient rest, does more and better work than when exhausted and harassed by fatigue.

By securing sufficient out-door assistance in the early part of the season, so as to avoid beginning the late-hour system, the skilled inmates would be kept up to their highest pitch of energy and efficiency, and the result would, we believe, be found equally if not more profitable in the long run. A wholesome atmosphere would also powerfully conduce to the same end."

We are glad to see that this address, which is more sensible than most philanthropic documents, concludes by advising the workwomen to combine as much as possible to protect their own interests. The good done by the "Association for the Aid and Benefit of Dressmakers and Milliners," is an encouragement to those who feel inclined to act on this suggestion. Anything that will infuse more self-reliance into this class cannot fail to do good. Well-meaning as that paternal system may be which professes to guard the conduct of the in-door workers with a watchful eye, it is questionable whether the young women would not make better members of society if they were taught to protect themselves, and to feel that they are responsible for their own actions. A great deal of bad, maudlin sentimentality is uttered about temptations which it is assumed cannot be resisted; but these young women, like all young women, ought to understand that the duty really rests upon them of being their own guardians.

The millinery and dressmaking business, like too many female employments, suffers much from a want of earnestness in those who enter it as apprentices. It is only taken up as a make-shift, a pastime, a temporary occupation, and not as a handicraft which must be practised till death. There are few old milliners and dressmakers, and few married ones, and yet the young people fulfil their destiny and marry like other ladies. It is this matrimonial prospect—this release from the work-room, so certain to come, that creates a difficulty. It is almost impossible to obtain a sound organisation for a trade which is supported chiefly by young and marriageable girls, who enter it merely to leave it.

The profits of general needlework would be much greater than they are, if there was less of what we may call amateur work in private families; and they would be greater still, if stitching was not universally held to be so very domestic and feminine.

A middle-class family circle, consisting chiefly of ladies, would doubtless be considered remarkably ill-regulated if the needle and the accompanying work-box were almost unknown within its precincts. If none of the ladies were able to trim a common bonnet, or make a common dress; if they were clumsy hands at hemming a pocket-handkerchief, or at darning a stocking; if they were wholly incapable of making a shirt, and even somewhat careless about stitching on shirt-buttons, it is not difficult to conceive the remarks that would be levelled at them by acquaintances. They would be spoken of as idle, lounging, unfeminine persons—as

readers of worthless novels—as would-be fine ladies. And yet if these girls, with their mother at their head, were to quietly practise some handicraft that kept them from needlework or ornamental education; if instead of the eternal spinning of crochet anti-macassars, or the practising of show-pieces on the piano, they were to thoroughly master some mechanical art requiring taste and delicacy of touch, they would be doing all the practical good in their power towards making a better market for the needlewomen. It might seem strange at first that the tutor ushered in came to teach the ladies watch-making, engraving on metal, artistic wood-cutting, inlaying wood-work, or one of a dozen other similar handicrafts; but this strangeness would wear off after a few visits. The handicraft would grow in interest day by day, as most mechanical employments do, and would soon be considered less tedious than needlework, or the struggle with sonatas.

If all families of ladies who are dependent upon uncertain or slender incomes earned by husbands, fathers, sons, and brothers, were thus resolutely to turn their backs upon the needle, and to provide themselves with a more marketable accomplish-

ment, they would be far better prepared for those reverses which unfortunately fall to the lot of so many of them. By keeping out of a market already glutted with female labour, they would benefit those poor workwomen already in the market, and, at the same time, benefit themselves. They could hardly prepare themselves for any occupation that is not more productive than needlework, that is not more "genteel," or held in better estimation. Few employments at present sought after by women—especially young women—are, unfortunately, free from a taint of suspicion, the taint being all the stronger if the average rate of wages is very low. It is uncharitably assumed that poverty and vice must necessarily go together, and as needlewomen are, in the main, the lowest paid of nearly all human hand-workers, temptation is supposed to dog them in every conceivable shape, and to find them with little principle and power of resistance. To avoid entering a labour-market from which at present little profit and less honour is to be derived, can surely require very little strength of mind and judgment on the part of those who have to choose an occupation.

JOHN CROSSWAITHE.

THE LIFE-BOAT AND ITS WORK.

BY SIR DAVID BREWSTER.

ONE of the noblest characteristics of modern civilisation, is its sympathy with human life, whether lavished on the battlefield, or doomed to the scaffold, or sacrificed on the altar of daily duty, or perilled under the countless ills, "which flesh is heir to." In the various forms under which the dread enemy grapples with his prey, he often warns us to make ready for the change. Even amid the hazards of war, the hero is hardly taken by surprise, and under the scourge of pestilence and famine the lingering spirit has time to bequeath a blessing, or to breathe a prayer; but in the perils of the sea, when the life-freighted vessel founders in mid-ocean, or is dashed upon the reef, or wrecked upon the shore, the interests of the future disappear in the terrors of the present;—the cry for help from man is louder and more earnest than that for mercy from heaven, and while the body perishes in the wild embrace of the waves, the soul is hurried unshriven to its eternal home.

This peculiar phrase of sudden death has impressed itself upon the Christian philanthropist and called forth his noblest efforts. If the prayer of faith cannot make its appeal amid the discord of creaking timbers, and rending canvas, and despairing cries, the beacon light may be made to shine from every headland: the Life-boat may be ready to be plunged into the gulf of waters, and the rope of mercy to be thrown over the sinking ark, to rescue the mass of life which stands imploring upon its deck, or clings convulsively to its floating spars.

The social obligations to save the life which we so highly prize, is, under such circumstances, the highest and holiest of our duties. The value of the soul becomes an element of grave significance, and we are urged by the weightiest of all motives to rescue from sudden death, the life that is untrained for eternity.

Hallowed as these duties are in their social and individual aspects, and important even in their national bearing, it is only within the memory of living men, that any real attempts have been made to protect the life and property that is risked at sea. The Governments of the day, ever ready to encourage inventions to destroy life, never offered rewards to save it. Feeble coal-fires, flickering lights, and tinkling bells were the only guides to the seafaring stranger that approached our shores, and it was through the ill-requited labours of art and science, and the generous sympathy of individuals, that the Life-boat, the Lighthouse, and the Lightning conductor became the guardians of life, and the efficient safeguards of our royal and commercial navy.

The honour of inventing, constructing and using a Life-boat, has, as in the case of all valuable inventions, been claimed for different individuals. It has been generally believed that Mr. Henry Greathead of South Shields was the inventor of the Life-boat; but this is a mistake arising from the fact that he received a public reward for his improvements on Life-boats, and for his services in intro-

ducing them into practical use. The undoubted inventor is Mr. Lionel Lukin, a coach-builder in London, who took out a patent for "an unimmovable boat," on the 2nd November, 1785. Not being resident in a seaport, he had learned "that by the oversetting and sinking of both sailing and rowing boats many valuable lives had been lost," and was thus induced to turn his attention to the subject in 1784. The Prince of Wales (George IV.) who knew Lukin personally, not only encouraged him to test his invention experimentally, but liberally offered to pay the whole expense of his experiments. Having purchased a Norway yawl, Lukin added to it a projecting gunwale of cork, tapering from nine inches in the middle to the head and stern, and, in addition to this, he formed within the boat from the top to the floor a hollow water-tight enclosure which gave the buoyancy that was required. In order to give it weight, or ballast sufficient to keep it upright, the patentee added a false iron keel, and he increased the buoyancy of the boat by two water-tight inclosures, one at its head, and another at its stern. Upon these principles several Life-boats were constructed, and found "to be strictly unimmovable." The Rev. Dr. Shaip of Bamborough, hearing of the invention, and having charge of a charity for saving life and property at sea, sent a Coble to Mr. Lukin to be made unimmovable. This was the first Life-boat that was launched on a stormy shore, and in the course of the first year of its use it was the means of saving many valuable lives.

Although the Prince of Wales had been the liberal patron of Mr. Lukin, yet even his influence was not sufficient to bring the Life-boat into notice; and so great was the indifference of public men to inventions for saving the shipwrecked seaman, that Mr. Lukin appealed in vain to the First Lord of the Admiralty, to the Deputy Master of the Trinity House, to the Dukes of Northumberland and Portland, and to various admirals and captains of the navy. With the exception of the Bamborough Coble, not a single Life-boat was placed at any of the dangerous localities of the East Coast of England; and Mr. Lukin, who had gained nothing by his invention, found it more profitable to build coaches for princes and cabinet-ministers, than to construct boats for saving life and property at sea.

We must ask our readers to ponder over this singular chapter in the history of national benefactors. The real inventor of the Life-boat secures an interest in his invention by an expensive patent. He constructs Life-boats for public use, and one of them saves many lives in the first year of its employment. In vain he submits his invention to the Admiralty and Trinity Boards, who were bound by the highest principles of duty to save life and property at sea. Eleven years after the date of his patent, when other inventors, or plagiarists of his invention, had taken his place, he published an account of his "unimmovable boat," in a letter addressed to the Prince of Wales, but notwith-

standing this indirect appeal to the honour of the nation, the undoubted inventor of the Life-boat went to his grave without any reward or mark of honour,—and without even the monumental stone which England so liberally gives to the benefactors whom she has starved.*

During the five long years which followed the invention of the Life-boat, the children of the storm were allowed to perish on our shores, in the sight and amid the lamentations of friends who were powerless to save them. Our Naval Boards stared at these death-scenes with a criminal indifference, and threw upon individuals those duties of mercy which they had neither the feeling nor the wisdom to discharge. From this apathy for the shipwrecked seaman, the public were not roused till September, 1789, when the "Adventure," of Newcastle was wrecked at the entrance of the Tyne. In the midst of tremendous breakers, and within three hundred yards of the shore, the crew of this ill-fated vessel "dropped off one by one from her rigging," in the presence of thousands, not one of whom could be bribed to save them. Under the excitement of this disaster, the inhabitants of South Shields met to deplore it; and, more humane than the official friends of the sailor, they offered premiums for the best models of a Life-boat "calculated to brave the dangers of the sea, particularly those of broken water."

Mr. Nicholas Fairles, was chairman of this committee, whose names we regret our inability to record. They subscribed the necessary funds, and out of the plans submitted to them, two were selected as the best—one by Mr. William Wouldhave, a painter, and the other by Mr. Henry Greathead, a boat-builder in Shields. Mr. Wouldhave sent in a model which was rendered buoyant by cork, and Mr. Greathead seems to have done nothing more than to have suggested the substitution of a curved for a straight keel. Having been asked to assist a woman to put a "skeel" of water on her head, Mr. Wouldhave noticed that she had a piece of a broken wooden dish lying in the water, which floated with the points upwards, and turning it over several times, he found that it always righted itself. This observation suggested to him the construction of his model, but he does not seem to have done more than construct a boat which was long known at Shields by the name of *Wouldhave's Cork boat*.†

* Mr. Lukin retired from business in 1824, and settled at Hythe in Kent, where he died in 1834. Having expressed a desire that the fact of his being the inventor of the Life-boat should be inscribed on his tombstone, the following inscription was adopted: "This Lionel Lukin was the first who built a Life-boat, and was the original inventor of that principle of safety by which many lives, and much property, have been saved from shipwreck; and he obtained the King's patent in 1785."

† Mr. Wouldhave died at South Shields in 1821. His invention is commemorated in the parish church of St. Hilda, South Shields, on a tombstone which is headed by a good model of a life-boat, and bears the following inscription:—

From the models submitted to the committee, their chairman and Mr. Rockwood constructed a model in clay which was given to Mr. Greathead as the type of a boat he was to build, and which embodied his own suggestion of a curved keel.

Although this boat was finished in 1789 it did no work till the year 1791, when it saved the crew of three vessels, the "Parthenius," the "Peggy," and a Sunderland brig stranded at the mouth of the Tyne. In 1796 it saved the crew of "The Countess of Errol;" and in the following year, the crew of a Leith vessel, and that of the "Planter" from London, in which 15 lives would otherwise have been lost.

These humane efforts of the South Shields Committee were followed by those of the Duke of Northumberland, a name which borne by two noble brothers will take a high place among the benefactors of the nation and of the age. In 1798, the Duke not only commissioned Mr. Greathead to build a Life-boat at his own expense, but bequeathed a sum for preserving it. It was stationed at North Shields, and it was the means of saving the crew of the sloop "Edinburgh," of the brig "Clio," and of the "Quintilian" from St. Petersburg. In 1800, the Duke of Northumberland ordered a Life-boat for Oporto; and in the same year Mr. Cathcart Dempster had one made for St. Andrews, when in 1803 it saved the crew, 12 in number, of the "Meanwell" of Scarborough. On this occasion the sea ran so high that the fishermen refused to enter the boat till Mr. Dempster, Major Horsburgh, and Mr. David Stewart, a shipmaster, volunteered their services. The value of the Life-boat was now everywhere recognised, and before the close of 1803, Mr. Greathead had built 31 boats, 18 for England, 5 for Scotland, and 8 for foreign countries.

Mr. Greathead's name being thus generally associated with the first construction of Life-boats, and his suggestion of a peculiar curvature for the keel, being a very important part of their structure, he has been generally, though unjustly, regarded as its inventor. In 1803, after 200 lives had been saved at the entrance of the Tyne alone, he applied to Parliament for a national reward. A committee of the House of Commons reported favourably on the value of his services, and 1200*l.* was voted to him by the House. Sums of 1500*l.*, and 2000*l.* were proposed by different members; but as he was merely an extensive builder, and a slight improver of Lukin's Life-boat, he was scarcely entitled to a larger sum than he received.*

"Heaven genius scientific gave,
Surpassing vulgar board, yet he from soil
So rich no golden harvest reap'd—no wreath
Of laurel glean'd. None but the sailor's heart,
Nor that ingrate of palm unfading this,
Till shipwrecks cease, or life-boats cease to save."

* The Trinity-House presented Greathead with 105*l.*, Lloyd's with the same sum, the Society of Arts presented him with 52*l.* 10*s.*, and the Emperor of Russia, with a diamond ring.

Notwithstanding this public recognition of the value of Life-boats, and the important services which they performed, their number increased less rapidly than might have been expected. With the exception of the sum presented to Greathead, the Trinity House felt no further interest in Life-boats; and neither the Admiralty nor the Scottish Lighthouse Board, nor the Ballast Board in Dublin took any steps in establishing Life-boats in dangerous localities, or in rewarding the heroism of individuals who risked their lives either in the Life-boat or on the shore. Providence, however, raised up large-hearted individuals to perform the work which might have been expected from our naval and lighthouse authorities. Sir William Hillary, Bart., a name which must ever occupy a high place in the list of philanthropists, had frequently witnessed the horrors of shipwreck, from his residence in the Isle of Man. In 1822, he had assisted in saving the crew of the Government cutter the "Vigilant," and other vessels that had been wrecked in Douglas Bay, and in the same year he was present at the total wreck of His Majesty's brig "Racehorse," on Langness point. Afflicted with the harrowing scenes which he had witnessed, he called the attention of the public to the subject of shipwrecks in 1822, and he boldly charged them with quietly looking on and seeing hundreds of their fellow creatures annually perishing on their shores, when the means of rescue were within their reach. To this appeal the public generously responded, two members of Parliament, Mr. Thomas Wilson, and Mr. George Hibbert, entered warmly into the views of Sir William Hillary. They convened a public meeting in the London Tavern on the 4th of March, 1824; and at this meeting, numerous attended and presided over by Dr. Manners Sutton, Archbishop of Canterbury, THE ROYAL NATIONAL INSTITUTION FOR THE PRESERVATION OF LIFE FROM SHIPWRECK, was founded.

Returning to the Isle of Man, Sir William Hillary established in 1826, a District Life-boat Association, by which four Life-boats were placed at different parts of the coast, between the years 1826 and 1829; one in Douglas Bay in 1826, one at Castletown in 1826, one at Peel in 1828, and a fourth at Ramsey in 1829. In 1825, Sir William, aided by his veteran coxswain Isaac Vondy, assisted in saving 62 lives on board the "City of Glasgow," which was stranded in Douglas Bay; and in the same year they saved 11 men from the brig "Leopard," and 9 from the sloop "Fancy," which became a total wreck. Between 1807 and 1830, Sir William, accompanied by his son, saved many other lives; but he particularly distinguished himself by saving in the Life-boat the whole crew, 22 in number, of the mail steamer "St. George" which had become a total wreck upon St. Mary's Rock on the 20th of November, 1830. Along with three other persons he was washed overboard among the wreck, and after having six of his ribs fractured, his life was with difficulty saved. With such deeds of danger

and of mercy the heroism of the battle-field can hardly be compared. In the world's estimate, indeed the honour of saving life is less than the glory of destroying it, and the names of the patriot and the philanthropist stand low in the lists of fame. Sir William Hillary is doubtless held in grateful remembrance among the people whose grandsires he rescued from a watery grave, but his services as the hero of the shore have been unappreciated, if not forgotten by his country. No inscription in Westminster Abbey enumerates his noble deeds; and no obelisk on our rock-bound coast reminds the seaman of his friend and benefactor. The title of rank which recognised an act of military service has become extinct in the third generation, and his fame has thus been as transient as the waves which he breasted, or the surf which he braved.

“The Royal National Institution for the Preservation of Life from Shipwreck,” thus auspiciously launched by Sir William Hillary and others, began its work of mercy in 1824; but in order to know what its work has been and still is, we must have some idea of the number of ships of commerce that annually leave or reach our shores, and the amount of property and the number of lives which are thus exposed to the perils of the sea.

It appears from the Register (published annually by the Board of Trade) of the wrecks and casualties on the coast of the United Kingdom, that the number of vessels which traded in 1862 from its different ports was 268,462, which were probably manned by 1,600,000 men and boys. This enormous amount of property, and upwards of a million and a half of valuable lives, were exposed to all the dangers of the sea. Of these vessels, 1827, or 1 in every 147, were wrecked in 1862; the average number wrecked during the last eleven years being 1 in every 201. Of the million and a half lives exposed during the year in these vessels, 690 were lost; but 4039 were saved by Life-boats, life-preserving apparatus, the ships' own boats, and other means. In the last seven years no fewer than 20,158 persons have by the same means been rescued from a watery grave.

In considering these interesting facts we are desirous to learn the character, and size, and object of the ships which have suffered most severely from the storms and other ocean dangers, and also the causes of the different shipwrecks, the localities of the accident, and the kind of weather in which they took place. The Register of the Board of Trade furnishes us with this important information.

The 1827 wrecked ships consisted of—

	No.
Ships sailing over sea	620
Coasting ships not colliers	506
Colliers	470
Steamers	99
Unknown	132

Of these ships, laden with the following cargo, the numbers wrecked were as follows:—

	No.
In ballast, not colliers	165
Coal-laden	593
Colliers in ballast	128
Cotton	2
Fishing-smacks	84
Fish or oil	19
Grain or provisions	109
General cargo	93
Iron and other ores	113
Manure, kelp, or oil-cake	31
Passengers	55
Potatoes and fruit	13
Salt	25
Sugar, coffee, spices, tea, molasses	9
Stone, slate, lime, or bricks, and clay	100
Timber or bark	89
Various or unknown	199

The vessels lost were of the following size:—

	No.
Vessels under 50 tons	341
51 and under 100 tons	441
101 ” 300 ”	784
301 ” 600 ”	186
601 ” 900 ”	44
901 ” 1200 ”	20
1200 and upwards	11

The following number of wrecks took place at the localities in the table:—

	No.
East Coast—Dungeness to Pentland Firth	765
West Coast—Land's End to Greenock	335
South Coast—Land's End to Dungeness	146
Irish Coast	150
Silly Islands	5
Lundy Island	10
Isle of Man	11
Northern Isles—Orkney, Shetland, &c.	66

The following table shows the number of vessels lost or damaged from different causes, irrespective of 677 vessels which came into collision:—

	No.
Stress of weather	628
Want of lights or buoys	3
Inattention, carelessness, or neglect	187
Want of pilot	11
Defects in ships or equipments	67
Striking a sunken wreck	14
Accidental	44
Cause unknown	28
Various causes	163

Hence we find that 268 were totally lost or stranded from errors in seamanship, or causes which might have been prevented.

We find also that 13 vessels foundered from being unseaworthy. To this sad list we must add the number of vessels improperly found, and totally lost or stranded from that cause:—

	No.
From defective compasses	15
From defective charts or construction, &c.	17
From being overladen	6
From leakage	16

From these details it is evident how many ships are wrecked from oversight, ignorance, neglect, and false economy.

The following interesting table shows the nature of the weather in which the shipwrecks took place, and establishes the truth of the preceding observation:—

	Casualties.
Dead calm	23
Light air and light steering way	28

	Casualties.
Light breezes of 1 to 2 knots	56
Gentle breezes of 3 to 4 knots	43
Moderate breezes of 5 to 6 knots	110
Fresh breezes with royals	187
Strong breezes with single reef and top-gallant-sail	195
Moderate gale with double reefs and jib	75
Fresh gale with triple reefs	170
Strong gale, with close reefs and courses	199
Whole gale, close-reefed maintop-sail and reefed fore-sail	218
Storm under storm stay-sail	63
Hurricane under bare poles	69

Hence it appears that out of 1488 ships, only 350 were lost in a whole gale, storm, or hurricane, and only 132 by the conjoint agency of the two latter.

Of the 4039 lives saved from shipwreck last year on our coasts by the mercy of God and the help of man, the brave and noble action was performed as follows:—

	No.
By the Life-boats of the Royal Life-boat Institution and other boats, and by rocket and mortar apparatus	637
By luggers, Coast-guard boats, small craft, and ships' own boats	1895
By ships and steam-vessels	1082
Individual exertion of a meritorious character	13
Other means	412

Such is the work which has been performed, and which must continue to be performed every year, by the Royal Life-boat Institution. In pleading its cause, and in aiding it to perform the great work of mercy which it has undertaken, we have no hesitation in pronouncing it to be the noblest and the holiest of our charities, and one that especially claims the liberality of the Christian philanthropist. Upon those who know the value of that better part it is hardly necessary to urge the duty of providing for the safety of the sailor returning from his voyage—the soldier from his duty—the traveller from his researches—and the emigrant from his exile—who become the sudden victims of those disasters at sea which science alone can prevent or alleviate. A duty like this appeals to the conscience as well as to the feelings, and we are bold to say that the faith of those who culpably neglect it is without works and dead.

But while Christian sympathy is pre-eminently summoned to every work of mercy, there are other parties on whom the obligation presses with a different force, and assumes a different form of responsibility. The public institutions that are entrusted with the duty of protecting the life and property that are risked at sea—the Lighthouse as well as the Life-boat Boards are officially bound to its diligent discharge, and, if provided with adequate means, that duty is not well performed till the most improved sealights shine from every dangerous headland, and the best constructed Life-boats lie ready in every frequented harbour. To the paid responsibility of office, Religion adds her sterner and holier obligation, and the individual or the Board who do not feel themselves amenable to this double

tribunal, must stand convicted of the gravest of crimes. Responsible for the lives that might have been saved, and the souls that may have been lost, the widows and the orphans will arraign them at the Inquest of Death, and at the great assize of the Judgment Day, the spirits of the lost will be their accusers.

Motives such as these transcending the warmest impulses of benevolence must have actuated the generous individuals who established the Life-boat Institution, who have directed its labours, or who have contributed to its treasury.

The "Royal National Institution for the Preservation of Life from Shipwreck," founded as we have stated by Sir William Hillary and others in 1824, was liberally supported during the first years of its existence. In 1825 Mr. Hecker of Finsbury Square, gave to it a donation of 1000*l.*, Mr. W. Prior of Herne Hill, Camberwell, 1827*l.*, and in 1832 Mrs. Duppa of Homerton, Middlesex, subscribed 1000*l.*

By the aid of these and numerous donations of smaller sums, the objects of the Institution were quietly and unostentatiously carried on. Life-boats, and life-preserving apparatus were provided at various parts of the coast; and sums of money and honorary rewards were liberally granted to all who assisted in the preservation of shipwrecked lives. The objects of the Institution, however, were not generally made known, and it did not receive that public support to which it was so well entitled.

Previous to the year 1851 it was the only Institution for the benefit of shipwrecked seamen, whose sphere of action extended over the whole of the coasts of the United Kingdom; but in that year another national and valuable Institution was established under the name of "The Shipwrecked Fishermen and Mariners' Benevolent Society."

When the shipwrecked seaman is brought alive to the shore, without his little property, and perchance even without his clothes, he is an object of the deepest sympathy. At a distance from his family or his friends, or it may be his country, he is thrown upon the benevolence of a few who may not have the means of giving him shelter, or of supplying his most urgent wants. Dependent on his little earnings, his family and perhaps himself must appeal to the charity of the workhouse, and even if his health has borne the rude shock of a shipwreck, his social condition has been lowered, and his future prospects, at least, temporarily blighted. The poor fisherman who has escaped with the loss of his boat and his fishing tackle, often too at a distance from his home, has equal, if not stronger claims upon the sympathy and benevolence of the public. But when these children of the storm have perished in the wreck, the wail of the widow and the orphan make a more urgent and distressing appeal to our feelings. The objects, therefore, of this new Institution are to board, clothe, and forward to their homes all seamen, soldiers, and other persons that have been saved from shipwreck,—to enable seamen and fishermen to replace their boats, clothes and nets

Drawn by E. W. Cooke.

The Rescue of the Spanish brig "Samaritano," by the Ramsgate Lifeboat, 12th February, 1864.

Engraved by Dalziel Brothers.

when lost in a storm, and to relieve the widows and orphans of those that had perished.*

Such were the original objects of this excellent Institution, but having found that the existing means of saving life from shipwreck were imperfect as well as deficient, its directors resolved, in 1851, to supply these deficiencies, by establishing Life-boats at new stations, and bestowing remuneration, and honorary rewards on those who had been most active in the saving of life. This new object was so successfully pursued, that before one year had expired, the Institution had established seven or eight Life-boats, with all the necessary apparatus and arrangements for putting them to sea.

The Life-boat Institution of Sir William Hillary thus found an active rival in the new society. After his death, the public had been less generous, and its agents less zealous than before, and hence the Life-boat system, which had begun so auspiciously, had fallen into an unsatisfactory state. At the commencement of 1851 the number of Life-boats were comparatively few. On a seaboard of 1500 miles, there were, in Scotland, only *eight* Life-boats, some of which were unfit for service; and not one of them in Orkney or Shetland. In England and Wales, with a sea-coast extending 2000 miles, there were only *seventy-five* Life-boats, many of which were inefficient; and in Ireland, with a dangerous seaboard of 1400 miles, there were only *eight* very inefficient Life-boats. In the Isle of Man there was not a single Life-boat, the four established by Sir William Hillary having been suffered to decay.

Some of the Local Associations even had become extinct. Many of the Life-boats had been allowed to fall into decay, and in places where shipwrecks were very rare, the boats had remained many months out of water, so that when wrecks did occur the boatmen had no confidence in them, and preferred going off in their own. Funds too were often wanting to pay these brave men for their services, and the whole system was in such a state that among all the boats in the United Kingdom there were perhaps not a dozen really efficient. The National Institution had been exciting less interest from year to year, and its funds rapidly diminishing, while an increase of trade was occasioning an increased number of casualties at sea.

From this culpable apathy the public were suddenly roused by the loss of the Shields Life-boat in 1849, in which a crew of 22 brave men had perished. The effect of this accident was to give new energy to the Life-boat Institution, and to induce the "Shipwrecked Fishermen and Mariners' Society" to extend the objects of their Institution.

These deficiencies in the means of saving life had been long seen and felt by the directors of the original Life-boat Institution, but it was not till

1851, when the Duke of Northumberland had accepted of its presidency, that it began to carry on its work with renewed vigour, replacing old Life-boats with new ones, stationing boats in new localities, and making a warmer and more active appeal to the benevolence of the public.

Although two rival Institutions, pursuing the same objects, may be regarded as better than one, each striving to surpass the other, yet this is not the case with charitable Institutions where money is the only or the principal element of success. The one Institution is frequently mistaken for the other, and the difficulty of determining which is most deserving of support, is used as a reason for contributing to neither. Under these circumstances attempts were made in 1853 to confine each of the two Institutions to their original objects; and with this view the Shipwrecked Fishermen and Mariners' Society offered to hand over to the Life-boat Institution its Life-boat establishments, with the funds raised for their special support, provided the latter would alter their title, so as to prevent any misconception of their respective duties. The Life-boat Institution was unwilling to abandon the prestige attached to its original name, and nothing was done till the passing of the Merchant Shipping Act in 1854. In this act the Board of Trade was authorised to give valuable assistance in establishing and maintaining Life-boats, and generally "in preserving life from shipwreck;" and as it was desirable to give this aid through one central agency in London, "The Royal National Institution for the Preservation of Life from Shipwreck," agreed to alter its title to that of "The Royal National Life-boat Institution, founded in 1824 for the Preservation of Life from Shipwreck;" the other Society, therefore, confined itself to its original objects, and made over to its former rival the whole of its Life-boat establishments* and Life-boat funds. The two Institutions consequently have, since 1854, worked nobly together, the one in saving life, and the other in feeding, clothing, and fostering it when saved.

The Life-boat Institution, which had received a new impulse under the presidency of the Duke of Northumberland, entered upon a fresh career of activity and success. His Grace had, in 1851, offered a prize of 100*l.* for the best model or design of a life-boat. In consequence of this offer, 280 models and plans were submitted for examination. They were deposited in Somerset House, and were severely tested by an able committee, presided over by Captain Washington, R.N. The prize was awarded by the Committee to Mr. James Beeching, boat-builder, at Great Yarmouth.

Upon the design thus selected, a large boat, 36 feet long, and with 12 oars, was built by Mr. Beeching. It was the first self-righting boat ever constructed. It was purchased by the Ramsgate

* In the year 1862, 7250 persons were thus forwarded to their homes, and 3687 were otherwise assisted and relieved, at an expense of 11,536*l.*, obtained from legacies, donations, and annual contributions.

* Namely, 9 life-boats, 7 boat-houses, and 5 life-boat carriages.

Harbour Commissioners, and has since performed many "gallant exploits." On the same plan Mr. Beeching built several other boats, but not properly securing their water ballast, three of them were upset when imprudently carrying large sails in a heavy sea. Other faults having been found in Mr. Beeching's model, the Committee appointed by the Duke of Northumberland requested Mr. Peake, of their Committee, assistant master shipwright in her Majesty's dockyard at Woolwich, to give new plans for a Life-boat, which should in his opinion combine all the good qualities of the best of the competing designs. Mr. Peake performed the task assigned to him with great success; and a boat upon his plan was built at Woolwich for the Duke of Northumberland, at the expense of Government, and was subsequently by him presented to the Life-boat Institution.

A trial of this boat took place at Brighton, on the 3rd of February, 1852, in a strong S.W. breeze, and a high surf, in the presence of the Duke of Northumberland, Sir Baldwin Walker, Captain Washington, R.N., &c., and a large body of the fishermen and boatmen of the place. The boat was manned by Coast-Guardmen of the Brighton district, and was commanded by Captain Ward, R.N., Inspector of Life-boats, who volunteered his services.

Life-boats of this construction, with boat-houses, carriages, buoys, life-belts for the crew, and every requisite fitting, were built at the expense of the Duke of Northumberland, and placed at four dangerous localities on the Northumbrian coast. The only conditions exacted by his Grace, were that the Local Committees should, in conjunction with the Life-boat Institution, keep the boats in efficient working order, and exercise the crews regularly once a quarter.

During the last ten years, no fewer than 160 of these self-righting Life-boats have been built by Messrs. Forrest of Limehouse, builders to the Royal Life-boat Institution, and of these about 40 have been constructed for foreign governments, or for our colonial and foreign possessions.

The following table shows the number of Life-boats belonging to, or in connection with the Life-boat Institution in the eleven years from April, 1852, to April, 1863.

Years.	Number of Boats.	Years.	Number of Boats.
1852	30	1858	70
1853	34	1859	81
1854	35	1860	90
1855	43	1861	110
1856	50	1862	120
1857	57	1863	124

In order to maintain in an efficient condition such a complete establishment of Life-boats, a large permanent income is required. The cost of the boat itself is a small part of the expense of a single Life-boat establishment. In equipping her for

work she must be provided with the following articles:—an anchor and a cable, short knotted life lines, hanging over the side in festoons, so as to enable any one in the water to enter the boat as with a stirrup; strong but light lines carrying grappling irons, at the bow and stern, which when thrown into the rigging, or upon the wreck, fasten themselves to the ship, and retain the boat without any other aid; a life-buoy, an anchor and cable, a good lantern for night work, and numerous other articles which on many occasions are indispensable.

The most important of these equipments is a supply of life-belts, or life-jackets, for the use of the crew. As some of the safest boats have been upset in very tempestuous seas, it was found necessary to provide the means of saving the crew in such a disaster. When the Southwold Life-boat was upset in February, 1853, her crew of 15 men, all having on their life-belts, were saved, while three gentlemen, who had gone as amateurs and who had refused to put on life-belts, were drowned, though one of them was a good swimmer. On another occasion, when one of the crew of the Whitby Life-boat, unable to swim, had on a good life-belt, he alone was saved, while twelve who had on inferior belts, were drowned. To the construction of a safe life-belt, Capt. Ward, R.N., Inspector of Life-boats, devoted much time and attention. After many experiments he constructed a life-belt with a number of narrow uncovered pieces of cork, each of which is sewed on to a strong linen or duck belt, covering the body from the arm-pits to below the hips. These pieces of cork are arranged in two rows, those of a larger size being above the waist, and those of a smaller size below it. The belt is tied round the waist by strings, and secured by braces passing over the shoulders. Their buoyancy is from 24 to 27 lbs., even after an hour's immersion. These belts are manufactured at a very cheap rate, in consequence of the inventor declining to make any profit on them, in order that every person might be provided with one, who exposes himself to the dangers of the sea. Nearly 4000 of these belts have been issued, and about one-half of the number for the crews of the Life-boat Institution.

One of the most important adjuncts to the Life-boat is the *Launching or Transporting Carriage*. However completely the Life-boat may be equipped, and however bravely manned, she is of no use unless she can be transported quickly to the ship which is wrecked or in danger. The unfortunate vessel may be several miles from the Life-boat station, and it may be difficult or impossible to reach it through such a distance of broken water. The boat must therefore be carried by land, and for this purpose various forms of carriages have been designed, the best of which are so constructed as not only to serve for transportation, but also to facilitate the difficult process of launching through a heavy surf. It would be impossible to describe

the distinctive characteristics of these vehicles without the aid of diagrams. The carriage now almost universally adopted is a four-wheeled one, designed expressly for the Institution, and which has been found to answer admirably in every respect.

The Life-boat with her crew being now carried to the most favourable position, it has often been found difficult, and sometimes impossible, to launch her in a high surf, the sea throwing her back broadside to the shore. In such cases it is necessary to launch the boat from her carriage, which is done in the following manner. "The Life-boat is drawn to the water's edge, where the carriage is turned round, so that its rear end, from which the boat is launched, shall face to seaward. The crew then take their seats in the boat, each rower in his place with his oar over the side, and the coxswain at the helm, or with his steering-oar in hand. The carriage is then backed by men or horses, or both, sufficiently far into the water to ensure the boat being afloat when she is run off the carriage. Or, if the ground be very soft, or sufficient help unobtainable, the carriage is first backed far enough into the water before the crew get into the boat. Self-detaching ropes, termed launching ropes, previously hooked to each side of the boat's stern-post, and rove through sheaves at the rear end of the carriage, are led up the beach, and either manned by assistants, or have one or more horses attached to them. When all is ready, the coxswain, watching a favourable moment, gives the word, and the boat, the keel of which rests on small iron rollers, is run off rapidly into the water, with her bow facing the surf. The oarsmen then give way, even before her stern has left the carriage, and she is at once under command ere the sea has time to throw her back broadside to the shore."

The boats of the Life-boat Institution, with their carriages and all their equipments, are kept in conveniently situated boat-houses, about 40 feet long and 17 wide, and they are all ready for immediate service at any hour of the day or night.

The expense of a Life-boat establishment is as follows:—

The expense of a first-class life-boat . . .	£250
Equipment of boat, including life-belts } for the crew }	40
Boat-house	120
Transporting and launching carriage . . .	90
Total	£500

Since the Life-boat Institution was founded, it has expended on its establishments the sum of £75,380. The income for 1862 was £14,825, and its expenditure £12,178.

Such is a brief notice of the important machinery which human genius has contrived, and human sympathy provided, for saving the life and property confided to the waves; but valuable as it is, something more is necessary to make it available in

shipwreck. Courage as well as genius is required to put it in action. The appalling dangers to which the crew of a Life-boat are exposed, entitle those who encounter them to pecuniary and honorary rewards. Each Life-boat has attached to it a superintending coxswain, a second coxswain, and a crew of rowers. In case of exigencies, twice as many men are enrolled as are required for one crew. The men who are enrolled consist of sailors, fishermen, and Coast-Guardmen, and all of these men are volunteers, except the coxswain, who has a salary of 8*l.* per annum for taking charge of the boat and stores, and having it always ready for its work. When sent to a wreck, each man receives 10*s.* in the day, and 1*l.* in the night, and in cases of extraordinary risk, these sums are doubled. In the quarterly exercise of the Life-boat, the men receive 3*s.* each in calm weather, and 5*s.* in rough weather.

In addition to these regular payments, the Life-boat Institution gives honorary and pecuniary rewards for distinguished service, and these are liberally granted to all those who may have exerted themselves in saving life from shipwreck. These rewards have been so highly appreciated, that public meetings have been held in different localities in order to present the Institution's medals to the brave men who have merited them. Since the Institution was founded in 1824, it has voted 82 gold, and 733 silver medals for saving life, beside pecuniary awards amounting together to £17,200.

By the agencies which we have thus imperfectly described, the Life-boat Institution has done much valuable work. The following table will show the number of lives saved from shipwrecks from the time of its establishment in 1824 to the present year, either by its own Life-boats, or by special exertions, for which it has granted rewards.

In the Year.	No. of Lives saved.	In the Year.	No. of Lives saved.
1824	124	1845	235
1825	218	1846	134
1826	175	1847	157
1827	163	1848	123
1828	301	1849	209
1829	463	1850	470
1830	372	1851	230
1831	287	1852	773
1832	310	1853	678
1833	449	1854	355
1834	214	1855	406
1835	364	1856	473
1836	225	1857	374
1837	272	1858	427
1838	456	1859	499
1839	279	1860	455
1840	353	1861	424
1841	128	1862	574
1842	276		
1843	236		
1844	193		
		Total	12,854

Seeing that so many lives have been saved from shipwrecks, we cannot doubt that as many have been lost. It would be desirable, therefore, to know how

many lives and how much property is annually lost at sea in those cases in which no human aid could help, as well as in those where the want of lighthouses or Life-boats has been the cause of the loss. It would be very difficult to gratify this desire, but the Board of Trade has endeavoured to supply this information to a certain extent, by an annual register of shipwrecks on the coasts and in the seas of the United Kingdom, comprising total wrecks, vessels foundered or sunk through leak or collision, abandoned, stranded or damaged so as to require to discharge their cargo. These Registers began in 1851, and were accompanied with engraved Wreck Charts of the British Island, compiled from the Admiralty Register, and showing the present Life-boat stations, the spots at or near which the accident occurred, and the port to which the damaged vessel returned for repairs. Certain marks show where the vessel was totally lost by stranding or otherwise, those in the open sea denoting vessels that had foundered or were missing; other marks indicating vessels that were so seriously damaged as to discharge their cargo,—vessels in collision with serious damage, and vessels in collision with total loss. These interesting and instructive charts exhibit to the eye a frightful picture of disasters, occurring chiefly between the Firth of Forth and Dover, and on both sides of the Irish Channel. The east coast of Scotland and the west coast of Ireland are but slightly darkened with the black spots and crosses which indicate these calamities at sea.

The following table shows the number of shipwrecks and of lives lost in the twelve years between 1850 and 1862:—

Years.	No. of Wrecks.	Lives Lost.	Years.	No. of Wrecks.	Lives Lost.
1850	692	780	1858	1170	343
1851	701	750	1859	1649	1646
1852	1115	990	1860	1379	536
1853	800	584	1861	1494	884
1854	987	1549			
1855	1141	469	Total	14,421	9484
1856	1153	521	in 12		
1857	1140	532	Years		

In deploring the loss of life shown in the preceding table, it is gratifying to find that in the same twelve years no fewer than 6624 lives have been saved. And yet this result, important though it be, gives us no idea of the actual services performed every year by the Life-boats of the Institution. It is only from the annual statement of these services, as published in the interesting journal called "The Life-boat," that we can form any idea of their number and value.

In this statement we find a record of the site of the wreck, the state of wind and weather, the name of the vessel in danger or wrecked, the Life-boat station, the nature of the service, and the cost at

which it was performed. From the statement of 1862 we learn that—

The number of services performed was	113
The number of lives rescued by life-boats	358
The number of lives saved by shore-boats	216
The rewards to life-boat crews	£915 18s. 1d.
The rewards to shore-boat crews	£209 10s. 0d.
The silver medals awarded	13
The votes of thanks on vellum awarded	14

A closer inspection of this register discloses curious and affecting facts. Opposite each service is placed the expense incurred in the performance of it. On the 2nd of April, when the barque "Cedarine," of Bermuda, was wrecked at Brighstone Grange, the Life-boat at that station saved 134 lives, at the expense of 17l. 11s. On the 10th of December, when the ship "James Browne," of Philadelphia, was wrecked in a heavy surf on the Boulder Sands Bank, Rye, the Rye Life-boat saved 18 men and the vessel, at the expense of 7l. 2s. 6d. In some cases, the crew were only assembled, in obedience to a signal of distress. In many cases the boats put off to assist, when their services were not required, but in numerous cases both lives and vessels were saved.

In many of these annual statements we find that lives were saved by Life-boats presented to the Institution by one or more individuals, and we doubt not that our readers will envy the feelings of those benevolent persons who have thus directly contributed to save a soul from sudden death, and a family, perchance, from poverty and mourning.

Such of our readers as have been much at sea, may, if they have not seen a shipwreck, form some idea of the scene; and those who have never left the shore, may contemplate a shipwreck in the touching pictures which are occasionally given in "The Life-boat." In one of these we see the rescue of "The Lovely Nelly," of Seaham, by the "Percy" Life-boat of Cullercoats, when she was wrecked on the Whitley Sands, on the 1st of January, 1860. In another, which accompanies this article, is represented the rescue of the Spanish brig "Samaritano," when wrecked on the Goodwin Sands, by the Ramsgate Life-boat, on the 12th of February, 1860.

In these pictures we see only the hapless vessel and the struggling Life-boat, at one instant of their fate. It would require a thousand pictures to delineate the successive events of the awful night in which lives are lost and saved. We may however form some conception of them without the help of the imagination; but even with its aid it is impossible to exaggerate them. The sun sets in a peaceful sky, throwing its radiance over hill and dale, lighting up the unruffled ocean with its gorgeous beams, and inviting man and beast to their happy rest. The hero of the Life-boat is perchance at his evening meal—with his wife and children it may be, stooping over the sacred volume, or breathing a tender prayer over those they love. The silence of the night is broken by some distant sound: the aspen

leaf twitters on its stalk. The woods send forth their gentle murmur, and the sea its harsher note. The winds and the waves rise in fury upon the deep, and with their mingled vengeance lash the cliffs and the beach. A signal of distress rouses the coxswain and his men,—crowds rush in curiosity to the cliffs, or line the shore, heedless of the driving rain or the blinding sleet. Barrels of tar are lighted on the coast, and the signal gun and the fiery rocket make a fresh appeal to the brave. The boat-house is unlocked, and the Life-boat with her crew is dragged hurriedly to the shore. The storm rages wildly, and the mountains of surf and sea appall the stoutest hearts. The gallant men look dubiously at the work before them, and fathers and mothers and wives and children implore them to desist from a hopeless enterprise. The voice of the coxswain, however, prevails. The Life-boat is launched among the breakers, cutting bravely through the foaming mass,—now buried under the swelling billows, or pinned on its summit,—now dashed against the hapless wreck still instinct with life,—now driven from it by a mountain wave,—now embarking its living freight, and carrying them through storm and danger and darkness to a blessed shore. Would that this were the normal issue of a Life-boat service. The boat that adventures to a wreck is itself occasionally lost; and in the war of the elements its gallant crew have sometimes been the first of its victims.

The Life-boat Institution whose establishment and labours we have attempted to describe, has been liberally supported by the public and by its noble President,* and its affairs admirably conducted under the general superintendence of its Committee of Management, by its Secretary, Richard Lewis, and by Captain Ward, R.N., the Inspector of its Life-boats. At the head of its benefactors, we place the name of one of its Vice-Presidents, Captain Hamilton Fitzgerald, R.N., who in 1856, bequeathed to it the munificent legacy of £10,000. Another Vice-President, Mr. Foster, contributed £1000. In 1854, Mr. Lowe of Shadwell gave the same sum; and in 1861, Mrs. Shedden Watson of Berwick bequeathed £500 to its funds. Many sums of £100 and upwards have been sent into its treasury, and numerous contributions of various amounts have been made by all classes of the community. The Queen and the late Prince Consort, the Prince of Wales, the Emperors of France and Austria, the President of the United States, and the Maritime Insurance Company of Finland, have evinced by their contributions the deep interest which they take in an Institution that confers its blessings upon the shipwrecked of every nation.

But though the Life-boat Institution possesses a fleet of nearly 130 boats, and there are nearly 50 others provided and supported by local generosity,

* The Duke of Northumberland.

and although numerous mortar and rocket stations have been active and successful in saving life, yet it is a melancholy fact that about 800 lives are annually lost on our own shores. In what proportion these losses arise from the small number of our lighthouses, our Life-boats, and our rocket stations, it is difficult to ascertain; but it is obvious that all these establishments have failed in doing the work which humanity so loudly demands, and that no exertions should be spared in increasing the number of our lighthouses, our Life-boats, and our rocket and mortar stations if necessary, and in placing on board our merchant and our steam vessels every kind of apparatus by which their crews and their passengers can, in the case of shipwreck, be brought safely to the shore. Every ship should have its Life-boat, its mortar and rocket apparatus, and the Life-kite of Lieutenant Nares; and every individual of their crew, and every passenger on board, should be provided with the valuable life-belt of Captain Ward.

In order to enable the Life-boat Institution to maintain their existing life fleet in a state of efficiency, and to place a Life-boat on every dangerous shore, the Christian public must add liberally to its funds. There is not a family in the land that has not a relative or a friend exposed to the dangers of the sea; and, hence, there is not a family or an individual that can escape from the obligation of contributing to the grandest and holiest of our charitable institutions. If it is a high privilege, and a still higher duty, to feed the hungry, to clothe the naked, to heal the sick, and to teach the ignorant, it is surely a higher privilege and a higher duty still, to save from sudden death, lives that have long to live, and that are to live for ever. If it is a Christian duty to convert the Jew, and reclaim the heathen, to frank the missionary to his field of labour, and to turn the wicked from the evil of their ways, it is doubtless an equal privilege and a higher duty to rescue the unconverted from a watery grave, and lead them from the brink of destruction to that mercy-seat to which they have been often and so unsuccessfully invited to appeal. We therefore beseech the Government to establish new and improved lighthouses on every dangerous headland, and to assist in providing new Life-boats on every rugged shore. We call upon our Protestant and Catholic bishops to order an annual collection in their churches to increase the funds of the Life-boat Institution. We invite all the reformed churches in the land, to add to their noble schemes one equally noble—to save from sudden death lives that are precious, and souls that are more precious still.

In admiration of the Life-boat Institution, in gratitude to its generous benefactors, and with a warm appreciation of the unwearied labours of its office-bearers, we have in these pages proffered in its cause a few "good words;" and we look for many "good deeds" from the generosity of our readers.

DISCIPLESHIP.

I.

"Lord, I have cried to Thee, hear my prayer."

THOU perfect Brother, perfect Son,
Who died below and liv'st above,
To pardon, cleanse, and make us one,
As Thou art one with God in love;

To us Thy Spirit, Lord, impart,
And from His fulness, shed abroad
Upon the cold and selfish heart,
Thy love to man and love to God!

Impart to us Thy steadfast faith,
Thy meekness, patience, constant peace,
Thy will obedient unto death,
That chose dependence, not release;—

Thy tender sympathy, that felt
For every kind of human woe;
Thy grand humility that knelt
To wash the feet of friend and foe.

We long this life of life to share,
That God in us Thyself may see;
For this is heaven everywhere
In everything to be like Thee!

II.

"Out of the depths!"

O LORD, I tremble while I pray;
And from Thy grace such glory seek;
I fear to think of all I say,
The spirit wills, but flesh is weak!

I fear, because Thy ways I know,
And seeking, tremble lest I find
That discipline by which we grow,
And mind is moulded after mind;—

I know the flesh with Thee must die,
Before the soul with Thee can live;
I know that in Thy grave must lie
The old man, ere the new revive.

To die to live—to live to die—
To enter dark Gethsemane—
To follow Thee to Calvary—
There crucified to be!

Is this my calling—this my lot,
Thy life of suffering love to share!—
O pitying Christ, forsake me not,
Or I'll forsake Thee in despair!

Ah, Lord! I know not what I ask,
In asking to be made like Thee;
My prayer I fear is but a mask
To hide the heart's hypocrisy!

III.

"In Thee do I hope!"

FORSAKE Thee, Lord! forgive the thought!
Forgive those torturing doubts and fears,
O Thou who hast with darkness fought,
And prayed with crying strong and tears.

Forsake Thee, Lord! then whither flee?
Where find repose beneath the sky?
For o'er the deep and shoreless sea
One ark alone I can descry.

I know 'tis love that died for sin,
That bids me die to sin and live;
Love bids me run, itself to win,
For love no more than love can give.

Nay, Lord, Thy wondrous love hath said
That God's own strength which dwelt in Thee
Is in our weakness perfect made,
So that the weakest strong may be.

O love divine! that never fails,
But ever gives sufficient grace
For life, for death, till it unveils
Thyself to gaze on face to face.

Now strong in Thee, I breathe the prayer
To be like Thee whate'er betide;
On Thee I cast my every care,
On Thee I rest, in Thee abide!

N. MACLEOD.

A BUNDLE OF OLD LETTERS.

FROM A WANDERER.

II.—TUNIS. THE CEDARS OF LEBANON. THE BOSPHORUS.

Tunis.

We have spent a few most pleasant days close to Old Carthage, and now we sail merrily before a "topsail breeze" for Sicily, where I hope to post this letter. Our stay in this neighbourhood has been rendered "piquant" by an adventure to which we propose to give a place in history under the designation of "the Kelb (or dog) affair," for reasons to be immediately stated. It looks best in retrospect, however, after dinner over nuts and wine, but I assure you it was not pleasant at the time. But of this by and by.

Two days ago we entered the Gulf of Tunis. The port is about forty miles from the entrance. The gulf is a long narrow arm of the sea, not unlike a Highland loch, with fine purple mountains at the head and high land along the shores.

A very beautiful effect was produced by the reflection of the strong sun on the shallow water of the gulf. The sea was striped by a series of belts of different tints of colour, the one shading into the other, but yet each very distinct and well contrasted with the rest. These zones passed entirely across the gulf, and had a very curious and striking effect. I have seen the same thing in the Bay of Naples. In sailing up to the port you pass the Utica of Cato, now a favourite summer residence, where the "swells" of Tunis come to cool themselves in the glorious sea-breeze which fans this coast. The ruins of Carthage lie a little beyond on the borders, and to a considerable extent beneath the waters of a shallow lake which intervenes between the sea-shore and the hills on which the modern Tunis is built. On the spit of sand which divides the lake and the sea, the Goletta or fortified port is placed, and there we landed.

No destruction can be more complete than that which has overtaken Carthage. Few traces of this once mighty city now remain: the very configuration of the land has been in a great measure changed by the river which flows close by. Great tumuli of rubbish; a few broken shafts and capitols; a fragment of coarse mosaic occurring at long intervals, and the mined arches of an aqueduct spanning the plain, comprise all the evidences we saw of the "Queen of the South." An air of complete desolation reigns, and if it were not for the beauty of the purple hills which gird it round, the blue sparkling sea, and the transparent air, which combined would give a charm to any spot however waste, there would be little beyond the teeming thoughts which the place suggests to give an interest to the site of "Magna Carthago." It was indeed difficult to realise what such a place had been when some 700,000 inhabitants filled its streets, and 300 cities

owed it allegiance. An older city than Rome, her armies had rudely thundered at the very gate of the Mistress of the World, and now hardly one stone stands upon another to mark the site of her palaces. Verily "He has stretched out upon it the line of confusion and the stones of emptiness."

Tunis is as dirty and ricketty a city as exists on the face of the earth. It is a very favourite abode, as we soon discovered, for fleas, *et hoc genus omne*, and I believe a charming place for artists in search of the picturesque. By those who value a whole skin and have a weakness for cleanliness it should, however, be eschewed.

Its streets are perfectly stuffed with men of many unsavoury races, turbaned and haqued in every imaginable hue, all of whom, however, are much more provocative of admiration when viewed from a distance, than when brought into close contact. The rude jostling in the narrow lanes, which here represent streets, was anything but pleasant, from the fact that these gaudy individuals had a most unpleasant flavour of garlic and assafœtida. These their favourite condiments had, from long use, evidently sank deep into their bodily composition, and rendered their presence between you and the wind anything but agreeable.

We of course visited the tobacco and fez manufactories, which are the sights of the place. In the former, sundry rows of men sat grinding tobacco in mortars in a very peculiar manner. I shall tell you what appearance they presented, and I dare say you will have suggested to you the same idea as to their parentage that came into my mind. They were negroes of many shades of blackness, as if they had been removed from the fire at different stages of preparation. Some were as highly polished as if Day and Martin had long practised upon them with brush and blacking,—others resembled singed sheep's-head more than anything else, being of a dull brownish black. With a trifling exception, their garments were quite imaginary. Their heads were all shaved but at the crown. There a solitary "scalping lock" hung dependent. They sat along the edge of a platform on their heels, their great splay feet spread out below them; and with a leer which lit up their black faces and showed their white teeth and red gums, they ground savaging in their mortars. I could not but think that the frightful nostrums of the middle ages,—the mummies' brains and infants' skulls,—would have been more fit materials than tobacco for their preparation.

The Tunisian soldiers are vexatious ruffians. "All tatters and dirt," as a British soldier described them, "with a dash of steel across their stomachs,"

they look neither gallant nor savoury. We saw a regiment of their Guards (!) at drill. The sun was intensely hot, and as they were all clothed from head to heel in bright scarlet, and whirled and roared in the sand, they looked very like great Salamanders out for a day's amusement. An English officer told us he had seen a sentry at the chief gate of the city divide his attention between a vegetable stall, of which he was the sole proprietor, and his military duties. He sold his leeks craftily, till some military swell came in sight, when he abandoned his mercantile pursuit, shouldered his musket, presented arms (all the time, however, having one eye on his customer), replaced the rusty weapon in its corner by the wall, and returned to take up the thread of his discourse touching the early turnips. There is a plan for you of rendering an army self-supporting!

There is excellent shooting all round Tunis. Wild boar (oh! if you only tasted his tender flesh!) on the hills, and abundant snipe, partridge, hare, and quail on the low ground. There are many flamingoes on the lake, and they are certainly the most magnificent birds I ever beheld. They are as large as geese, and when they fly the effect is very striking. Their red bills and red legs are stretched out "fore and aft," as the sailors said, while the pure white body is flanked by snow-white wings tipped with flaming red.

We saw several of the celebrated "Marabouts," or holy men of Tunis, who, from being supposed (like the fools of old in Scotland) to be under the special protection of God, are held in great reverence. They are all either mad or pretend to be. They are allowed to help themselves to what food they wish at any shop, and the proprietor takes such attention as a compliment! Several of these gentry were very fierce-looking, having long matted hair, rolling eyes, and beards begrimed with filth. Their clothes hung in tatters from their gaunt limbs, and the scallop-shell of the pilgrim was attached to their shoulders. You may be sure we were careful to imitate the natives, who obsequiously made way for these impostors as they strode about gesticulating wildly apparently at nothing.

But I am sure you are impatient to hear about the "kelb" business: so here it is. In walking over the plain of Carthage, and far away from any aid, we came to some Arab tents,—the well-known *black* tents of the Bedouin,—and as we passed we were savagely attacked by a crowd of ugly dogs. Such brutes always lie about these encampments, and are very fierce and powerful. To save his legs, my friend fired, and so utterly destroyed the countenance of the foremost dog that the tip of the snout alone remained to serve for his identification. Some of the pellets rebounded from the hard ground, and passing through one of the tents, broke the arm of a woman. Then the row began in earnest. Great hulking fellows hitherto invisible poured out of every tent, and surrounding us began to menace with formidable-looking clubs and stones. While

the men tried to wrest the guns from us, the women and children danced round outside, and screamed in chorus. Two against a host had little chance, and as we were miles from aid, and night was coming on, our situation was, as you may believe, not agreeable. Money, threats, and palaver were of no avail; and to keep our loaded guns from their possession, and "dodge" the women, who tried to get at us with stones, was the most we could accomplish. Whenever there was a lull in the storm the wounded woman held up her bleeding arm like a war flag, and then rolled in the sand with the wildest yells. This always resulted in a fiercer renewal of the attack. When we were much exhausted, but had received no further harm, a carriage providentially came in sight, containing the French Consul and his Dragoman. The scene now changed, as the last-named official was able to speak their language, and having authority, soon brought them to their senses. One old villain, who though now bearing the meekest of miens had been before very wild in the attack, was ordered by the Dragoman to give up the plunder he had possessed himself of when our hands were engaged. The hoary ruffian strenuously denied having been near us at all; and when the Dragoman struck him a ringing blow on the cheek he let himself go flop on the sand with his legs straight out like a harlequin, and putting his hands up on either side of his head bellowed mightily. This punishment had a very soothing effect on his companions. We accompanied the Consul into Goletta, followed by about thirty Arabs bearing the woman and the dead dog. It turned out to be a very serious offence to shoot such a dog, not to speak of injuring the woman. So leaving money with the Consul to mend the arm and bury the dog, we went on board the yacht; and as we sailed before a favouring breeze we saw the howling procession enter the gates of the fortress, and felt very thankful we had been relieved from their company, and had a snug cabin and a good dinner to cheer us after our "kelb" adventure.

Below the Cedars.

I have been climbing all day, sometimes on horse-back, oftener on foot, up to this eyry on the side of Lebanon, and now we have our tent spread in the shadow of these great patriarchs of the forest, whose dark foliage we caught distant blinks of since early morning. The cedars stand very high, crowning like a diadem the bald forehead of the mountain. At this moment, a few feet above my head, their giant arms wave heavily in the breeze, and the oblique rays of the setting sun send long shafts of brilliant light through their branches. It is getting very cold as the sun goes down, and the influence of the near-lying snow comes to be felt. We are several thousand feet above the shore we left two days ago, and which we now see far below hemming round the waters of the "great

sea." Above us the highest peaks of Lebanon tower encrusted with snow, and down their sides a cold breeze blows which stirs the leaves and branches and cramps the hand. It is a very severe climb up here. The path is frequently a mere groove in the rock with beetling crags and terrible holes on either side. It was very nervous work, I assure you, riding the awkward shuffling in-toed mules over rocks smoothed and polished by ice and water, or rudely out in great steps strewn with loose stones. The cedars grow on a rocky knoll lying in the embrace of a great semicircular basin in the mountain side. They stand alone, as best befits them, without any other tree near. About 400 of them remain, but only a few of these heard the sound of Herman and his axe-bearing host. If these few had been more accessible, I believe the modern Hermans would soon have demolished them. They all stand within a very small circuit, and the seven oldest are called "the Apostles." These seven alone are believed to be real ancients, *i.e.*, to date from a time before "the kings of Israel, mighty wise and strong." They stand in the centre of the whole group, surrounded and guarded by their descendants and kinsfolk. The natives almost worship these trees, and ascribe to them a sentient existence. They hold an annual festival beneath their branches, which being now near at hand, we have been strongly persuaded by the chief of a neighbouring village to stay and witness. All the world and his wife comes up to it; and the feast, though nominally a religious one, is said to lead to a good deal of irregularity. So it is now, as of old, when the Prophet accused the people of "asking counsel of stocks," "they sacrifice upon the tops of the mountains, and burn incense upon the hills, under oaks, and poplars, and elms, because the shadow thereof is good." It is, however, a glorious place for solemn worship,—truly a temple not made with hands,—in the bosom of the great hills and beneath the shade of trees pregnant with solemn associations of the past, for, as Bryant says,—

"The groves were God's first temples. Ere man learned
To hew the shaft, or lay the architrave,
And spread the roof above them—ere he framed,
The lofty vault to gather and roll back
The sound of anthems; then, in darkling wood,
Amid the cool and silence, he knelt down
And offered to the Mightiest solemn thanks
And supplications."

One of the finest of the old trees was nearly destroyed by a dirty old monk, who took it into his head to dig a hole for his ugly carcase in the bole, about twenty feet from the ground. The wolves snuffed him out, and in winter, when the snow was too deep for assistance to reach him, they danced round him day and night, wetting their glancing teeth, and rubbing their backs against the trunk. For weeks they gloated over his downfall, with tearful eyes and gaping chaps, for they were sufficiently hungry to have a longing for even that dirty bundle of clothes; but poor scratch-back held

on in a hole, hardly big enough to keep him from being spilt out, doubtless sleeping little, and making the vow he has since religiously kept, of returning for ever to less lively quarters, so soon as the enemy retired. How cheery his wakenings from sleep must have been, poor fellow! However, the wolves did a service in saving the tree.

From the blazing sun of mid-day, you dive into the deep shadow of these noble trees, as into a river of cool water. The huge boles, some of them measuring between forty and fifty feet in circumference, send forth to a great distance their fantastically twisted branches, laden with mighty cones. The lofty tops shoot high up towards heaven, and when in their august presence we imagine the whole mountain covered as it once was by such giants, we can well comprehend how the Cedars of Lebanon should be so often used in Scripture as emblems of strength, and majesty, and glory. What a long lapse of ages,—what great revolutions and events have they not outlived; and there silently, as of yore, like great sentries guarding the mountain, they still look out over the dark valleys, and away to the shining strand of the great sea beyond, whose purple waves still glow in the beams of the setting sun.

Therapia, on the Bosphorus,

August, 1855.

Here I am, some hundred miles of cool sea dividing me, thank Providence, from that dust-burdened camp, with its smells and fever. What a contrast between that poisonous place and this Elysium! There, every blade of grass is withered and burned to ashes; the very hills are charred and ground to a dull snuff colour, and clouds of dust, set in motion by the slightest breeze, fill your tent, and give a twang of grit to your meat and drink. Then the smells! There is nothing doing, moreover, in front to break the constant monotony of the batter, batter, day and night, at these old brown mud mounds, which seem to grow the more they are knocked into dust by the guns. The very charm of "shaves" has departed, and if it were not for the daily tale from the hospitals, one might suppose the war was over, and the discontented occupants of the camp represented its half-used-up leavings. Add to this the tiresome, never-varying routine of the food,—the dry, tasteless biscuits, and stringy meat. The half-boiled water has a sad taste of dust and ashes, and is visibly animated by shoals of animalcules. Your body dirty and detestable even to yourself,—your "linen" represented by a few old flannel buttonless shirts,—your garments seedy and of as many colours as Joseph's coat, though by a poetical fiction supposed to be Her Majesty's uniform,—add this up, and you have a notion of the state of the "sons of Glory" in front, and an idea why it is so much the fashion at present to be seized by fever. A man certainly makes a sorry figure with his hair cut short, making his head look like

a well-worn broom, and his beard so long that you are apt to suppose all his growth has gone into it. Men's features, too, but too clearly express the lassitude and depression which constantly overburdens them. I took fever like the rest, and lay half dead in a hut, through whose tarry roof a hot sun constantly streamed on my head. My "medical comforts," though the best which could be had, consisted of such things as an athletic ostrich might have innocently partaken of, but of this fact I cannot speak with confidence. So there I lay, and tossed, and dreamed of home with its comforts and its familiar faces, and its kind cool hands. How home haunts you at such a time! I was very nearly becoming a permanent resident of the dusty plateau, but just when my friends thought "it was all over but the shouting," I was, thank God, carried on board ship, and soon came right again. I remember very well, as I was being taken up the side of the ship, feeling like a bundle of old rags tacked together by sensient strings which ached horribly. My old friend the sea nursed me gently on his heaving bosom, and fanned me in his own rough hearty way, so that I was soon restored to comparative health. The place I write from is perhaps the most perfectly enchanted spot on the earth. It is not altogether because I have come to it from the horrid hole I have been speaking of above that I am so enamoured of its charms, but chiefly because of its own intrinsic and incomparable loveliness. I shall try to convey to you an idea of it, though I cannot throw into the description anything of that deep-felt joy which returning health and strength imparts to everything seen and done. Mere existence here is the sweetest luxury.

I will describe as accurately as I can the scene spread before me as I write. My room is built over the sea. From a window jealously latticed I look down into the very depths of the rushing current twenty feet below, which always speeds from the Euxine to the Sea of Marmora. As I look far into the swirling eddies among streaming sea-weed and glancing stones, I see little gleaming fish dart like rays of light in and out of the tangle in their gay timorous sports. I am never weary of this flashing, surging stream. By day it reflects as from a prism the dancing sunbeams in a thousand brilliant rays. At night its voice gently sings me to sleep as it throbs in the crannies of the wall, or gushes along in sportive wavelets. A constant cool balmy breeze fills my room, laden with the frankincense of flowers from the clustering hills or of fresh sea-weed from the brown rocks. It is just strong enough to rustle my curtains without disturbing my repose. It gives a tiny curl to the waves, weaves the branches of the trees which crown the headlands and festoon the rocks into endless fantastic patterns, and makes the very leaves clap their little hands with joy. How delicious sleep is here! So dreamless and refreshing. Sometimes a boatful of glee singers or a company of guitar players pass along after nightfall, and send a throb of joy through

your very soul as you waken and remember where you are, and whence you came. Then the milk, and fruit, and dainty food! Grapes, figs bursting their green jackets with very lusciousness, and pure wine which makes the heart glad, and leaves the brain scathless. In the morning the glorious "header" into the crystal current; the walks afterwards by shady paths flickered over by the sunbeams; the ever-varied glimpses of a matchless landscape of hill and valley, wood and garden; the straits alive with graceful caiques whose very motion is poetry, and the great war ships lined with troops fresh from home going up with cheers and music to feed the insatiable monster of war who lives beyond those sparkling waters, whose gleaming bow is sharp strung against the northern sky. I must add as among the greatest of my enjoyments a feeling of cleanliness, and a substitution of a white shirt and shooting coat for rags and belts and stripes and botheration. Now you have both sides of the medallion, and can any contrast be greater than that which exists between my life *last week and this*. My present consciousness of happiness is so great that I know that I laugh immoderately at trifles like an hysterical woman, and feel astonished at the grave, cool propriety of men here on their way to the "front," who have just come from England clothed in purple and fine linen. They cannot sympathise with one till they too have gone through the mill and get their hides roughened a bit.

There is no wonder that the Bosphorus is to many a type of Paradise. It is to my mind incomparable. A lover of the beautiful in nature is constantly in the frame of mind alluded to by Wordsworth:—

"Here you stand,
Adore and worship when you know it not;
Pious beyond the intention of your thought;
Devout above the meaning of your will."

True, the stir caused by the war has given an unwonted animation to the scene, but the Bosphorus is in itself beyond description exquisite. I lately drifted, during a long summer's day, from near the Cyanean rocks by the shore of the Pontus to the Golden Horn on the verge of the Propontus, a distance of some eighteen miles, and I was ravished by the constantly varied scenes which met me, each if possible excelling the other. New combinations of the same general features occur at every turn, like the changes in a kaleidoscope. The stream flows on beneath the bright sun like a river of molten gold *peopled* by boats. It is said that 80,000 caiques ply on its waters. Many of these are gay with awnings and flags, and vary in size from the humble "one pair" up to the imperial thirty-two oared. Curious high-sterned ships, carved and gilt like the vessels in Claud's pictures, lie in bays, or raise their quaint spars and sails to the wind. On either side bold headlands project into the tide and fret it into foam. They stand festooned with wood, or crowned with the hoary walls of some castle "famed in

story," or bristling with some of the thousand cannon which guard the strait. Graceful bays intervene, and give a footing to brown-roofed fantastic villages, whose houses are painted with many bright colours, which contrast charmingly with sea and wood. Palace succeeds palace (the Sultan alone has about forty on these shores), presenting long ranges of pillars and handsome porticoes, and flights of steps descending into the water. In little clefts of the rock there are such odd tumble-down houses that look as if they had been drifted in by the tide and cast carelessly away, being altogether too crazy for modern habitation. As you pass along you catch fitful peeps of terraced gardens filled with flowers of the brightest colours, and of groves of trees pierced by the trembling sunbeams. Sometimes near the shore you stumble across such funny "roosts," where perched on the top of high rickety poles a sun-burned native, girt in his fisherman's coat, looks wistfully down on his brown nets swaying in the current below. Often little valleys lead up from the shore towards the purple hills, and in the quiet depths of their cypress shade stand the gilded tombstones of the faithful, or the cool fountain, each the favourite lounge of many veiled females, swathed in bright yellow, blue, white, or red vestments loosely streaming to their feet, similar to the clothing of the ten virgins as seen in old prints. Groups of revellers sit on every convenient spot drinking or gambling, and in dress and posture are admirably "posed" for effect. Music, too, often lends its charm; while over all, and filling all, a golden atmosphere, transparent up to the nether

heaven, gives a brilliancy, a life, and a colour to everything. It is in these climes that the magic power of the sun is daily seen. It plays joyfully through the trees, gilds the lichen on the rocks, quivers along the curling waves, and throws a mantle of glory over sea and land. In the Bosphorus, also, there are so many historical associations to add interest to its beauties. Each castle (and there are many) has its stirring story of siege and battle; many palaces have their half-whispered mysterious secrets to reveal; the moss-covered monument of Barbarossa the Corsair,

"Of Barbary the glory and Christendom the dread,"

stands by the shore; and the site is pointed out of that pillar on which Daniel, the Stylite, is said to have passed twenty-eight precious years, making himself a wonder of sanctity to his contemporaries, and a wonder of folly to his successors. We cannot but take an interest in the rock from which the proud Darius saw his mighty host cross to Europe; and perhaps before all we regard that little bay where the Crusaders embarked; or that other cove where old Dandolo, "the blind," he who

"Survived to ninety summers
To vanquish empires and refuse their crown,"

and his strong Venetian sailors gained many a sturdy fight.

I fear, however, that you will think that the beauties of the place have turned my head and that I am raving, so I will say no more at present but "Felice notte."

G. H. B.

THE SECOND MRS. AUCHTERLONIE.

CHAPTER I.

"THIS is a horrible degradation of my father's Davie! What could possess the old man to be guilty of such folly, such a piece of cruelty to Katie!"

"I suppose he could do what he liked, Sandy; but its horrible bad taste, that's all."

The two speakers were young men, strong, broad-shouldered, and independent for their two-and-twenty and nineteen summers. They were as like each other as brothers could be, with a dogged bushiness of eyebrow and wilfulness of nether lip sufficient to prove them sons of him who in his grey old age had committed what was looked upon as a glaring imprudence. Sandy, the younger and firmer of the two, wore the half uniform of what was then the East India Company's Navy. He was very robust, and very arrogant; and his greatest exhibitions of strength and temper were shown in steam-vessels somewhere about the Red Sea and Bay of Bengal. His elder and slightly more placable brother Davie, a young solicitor spending his short vacation, had a general crustiness of disposition, and a great devotion to his employer.

The young men were the only sons of an old gentleman and scholar, living on his inherited means in his own country house, and, till very recently, as much honoured as a highly informed, but rather sarcastic country gentleman is wont to be. By his first marriage, Mr. Auchterlonie had also one daughter, about whose future her brothers were now resentfully anxious.

"There is one thing," declared the young giant Sandy, slapping whatever came in his way with his brawny arm, "Katie shall not remain in such company. How could the lassie be so tame and mean-spirited as to propose such a thing!"

"Some woman's nonsense about standing by my father if no one else should, and helping him to bear the consequences of his infatuation," growled Davie, the more wrathful the more he thought over the matter.

"I shall try to bring Katie to reason, and remove her to my lodgings in Edinburgh."

"She shall go with you whether she is willing or not," Sandy vowed with a red inflamed face, "or else I will not put a foot on board. It is our duty to see after Katie in this mess. My sister is not to

be lost for my father's madness. When will you be ready to start for Whiteford, Davie?"

Of course! how should Katie Auchterlonie know what was right for her to do? How should her woman's generosity and meekness, under her frank fearless temper, guide her in a mortifying perplexity? Accordingly Davie the quill-driver, and Sandy the navigator, set off home to see justice done to her, to wrest the child from the parent, to speak to their father violent, insolent words, never to be unspoken—perhaps to fling, nothing loth, a firebrand, to smoulder and blaze up in disaster and ruin at no distant day.

The fact was, Mr. Auchterlonie, of Whiteford, had committed, in mature years, a grievous *mésalliance*. He had on a moment's notice married again, after his sons and daughter were grown up, a woman thirty years younger than himself, yet still no girl—a woman without rank or wealth or even beauty—a woman of the homeliest education and antecedents—a ruddy, stout, mature woman, his first wife's housemaid, whom he took as much by surprise as everybody else when he removed her from her state of servitude and placed her at the head of his establishment. What whim or spell had possessed Mr. Auchterlonie no one knew, or was likely to know, for he was a retired taciturn man. If ever well-endowed elderly gentleman deserved to be put under restraint for an outrageous act, it was Mr. Auchterlonie. But as there is no law to tie up elderly gentlemen who meditate unaccountable marriages, this marriage was accomplished, the only member of the family on the spot to have petitioned and entered interdicts being his daughter Katie. Mr. Auchterlonie had formally informed his sons of his purpose, without giving any explanation; indeed, he had not been accustomed to tell his children of his motives to this or that. He had taken care that the step should be taken when both the young men were abroad,—Davie spending a vacation with Sandy in the rare delights of an Eastern expedition. Thus the lads had no opportunity to walk in and overturn their father's matrimonial arrangements; there was only Katie to prevent it. Poor Katie! But she was not to be pitied after all, even under this heavy trial, she was so healthy and happy. The family temperament might be said to have taken a new turn, so that the force which came out so rugged in the father and sons, was in her a purely sweet and sunny temper, sensible, full of enjoyment, and affectionate, without morbidness and without moodiness, possessing a large amount of moral courage and an endurance of character which might wear out strong savage men.

For all that, Katie half cried her eyes out the night her father told her, in half-a-dozen abrupt sentences, that he was going to marry Beenie Tosh. She began to look out and pack up her effects, and to wander about taking farewell of her dear old home of Whiteford; for her father had said that she might go and live with her mother's relations.

"You may go if you like, Katie; only remember, if you do go, it is for good and all."
