## PREFACE.

IN preparing this work, I have labored more to make it useful to mankind, than to please the taste of the critic. I have endeavored to avoid technical terms as much as possible; and for the purpose of explaining such terms made use of, as may not be familiar to every one, I have inserted a short Vocabulary.

The treatment of diseases here laid down, may be relied on with confidence; it is the result of my own experience, and the experience of the most successful practitioners. Families, who have adopted this system in the treatment of their diseases, are very rarely under the necessity of calling the aid of a physician. Physicians, in constant practice, on this system, rarely loose a patient. I do not mean to say that all our patients recover, we often have patients in a confirmed consumption that we are only able to give relief. The system laid down in this work I follow in the treatment of disease in myself, my wife, and little ones.

I very well know the difficulties people labor under from early impressions. I was myself educated to believe in the popular system of medicine, and it was not till after I had suffered under disease for ten years, that I submitted to a thorough botanical treatment, when, after the operation of one thorough course, I found that relief which I had not experienced for the ten years. Dark and inscrutable are the providences of God. I hope to be of some service to my fellow men by this book, which probably would never have had existence were it not for the above circumstance.

In preparing this work, I have availed myself of the labors of most of the distinguished authors on reformed principles, and it is due in this place to give credit to Dr. Beach, now of the city of New-York, and President of the Reformed Medical Society, and Founder of the Reformed Medical Colleges of the United States; Dr. Buchan; Dr. Elisha Smith, late of the city of New-York; Hooper's Dictionary; American Dispensatory; Elias Smith, Physician; Dr. D. J. Cobb, and others.

ERRATA.—On page 81, four lines from the top, for *leaves* read *berries*. Page 177, twelve lines from the bottom, for *hot stage*, read *cold stage*. Some other typographical errors are noticed in this work, but none very important; and it is not deemed necessary to point them out, but leave it to the good sense of the reader to correct them.

# INDEX.

## OF MEDICAL BOTANY.

## INTRODUCTION.

The subject of the treatment of the diseases of the human body, is of vast importance to every individual. It was esteemed by the ancients to be the most valuable as well as the most noble study of mankind. Hippocrates says, "All men ought to be acquainted with the medical art. I believe that knowledge of medicine is the sister companion of wisdom."

Notwithstanding we are enjoying the full blaze of all that concentration of light, shed on the science of medicine for many centuries, we see the robust and the healthy seized with disease; it progresses, and terminates in the dissolution of the sick man; and the physician has not been able to control the disease, more than the mariner his ship at sea in a tempest, without helm or compass.

Most persons who have been afflicted with disease, have experienced the incompetency of the Mineral System to effect a cure.

That physician who breaks away from the unchanging laws of nature, and makes use of those medicines never designed by nature to cure the sick, must expect to be unsuccessful. The laws that govern the natural, as well as the moral world, never change. We believe it not necessary for the inhabitants of one continent, to send to another, and there excavate the bowels of the earth and bring forth minerals to be used for the purpose of curing their diseases.

Nature's wants both in sickness and health, are few and easily supplied. The vegetable remedies which the God of Nature has spread out with such richness and profusion, over every hill, and dale, and field, and forest, will supersede the use of minerals. The voice of nature speaks every where, in language that may not be misunderstood by any, who hearken to her instructions.

The whole surface of the earth, wherever designed for

the abode of man, is but one continued apothecary's shop.

Our mode of treatment on the Botanical System is, to make a direct attack upon the disorder, whilst we permit the vital energies of the system to remain in full strength to cooperate with the medicine in overcoming the disease.

The improvements in medicine, since the revival of learning, (says Buchan,) have by no means kept pace with those of the other arts. The reason is obvious. Medicine has been studied by few, except those who intended to live by it as a business. Such, either from a mistaken zeal for the honour of medicine, or to raise their own importance, have endeavoured to disguise or conceal the art. Medical authors have generally written in a foreign language; and those who are unequal to this task, have even valued themselves upon couching, at least, their prescriptions, in terms and characters unintelligible to the rest of mankind.

Medicine, however, has not, as far as I know, in any country, been reckoned a necessary part of the education of a gentleman. But surely, no sufficient reason can be assigned for this omission. No science lays open a more extensive field of useful knowledge, or affords more ample entertainment to an inquisitive mind. Anatomy, Botany, Chemistry, and the *Materia Medica*, are all branches of Natural History, and are fraught with such amusement and utility, that the man who entirely neglects them has but a sorry claim either to taste or learning. If a gentleman has a turn for observation, says an excellent and sensible writer, surely the natural history of his own species is a more interesting subject, and presents a more ample field for the exertion of genius, than the natural history of spiders and cockle-shells.

As matters stand at present, it is easier to cheat a man out of his life than of a shilling, and almost impossible to detect or punish the offender. Notwithstanding this, people still shut their eyes, and take every thing upon trust that is administered by any pretender to medicine, without daring to ask him a reason for any part of his conduct.

Implicit faith, every where else the object of ridicule, is still sacred here. Many of the Faculty are no doubt worthy of all the confidence that can be reposed in them; but as this can never be the character of every individual in any profession, it would certainly be for the safety, as well as the honor of mankind, to have some check upon the conduct of those to whom they entrust so valuable a treasure as health.

The veil of mystery, which still hangs over Medicine, renders it not only a conjectural, but even a suspicious art. This has been long ago removed from the other sciences, which induces many to believe that Medicine is a mere trick, and that it will not bear a fair and candid examination. Medicine, however, needs only to be better known, in order to secure the general esteem of mankind. Its precepts are such as every wise man would choose to observe, and it forbids nothing but what is compatible with true happiness.

Disguising Medicine not only retards its improvement as a science, but exposes the profession to ridicule, and is injurious to the true interests of society. An art, founded on observation, can never arrive at any high degree of improvement, while it is confined to a few who make a trade of it. The united observations of all the ingenious and sensible part of mankind, would do more in a few years towards the improvement of Medicine, than those of the Faculty alone in a great many. Any man can tell when a medicine gives him ease as well as a physician; and if he only knows the name and dose of the medicine, and the name of the disease, it is sufficient to perpetuate the fact. Yet the man who adds one single fact to the stock of Medical observation, does more real service to the art than he who writes a volume in support of some favorable hypothesis.

Very few of the valuable discoveries in Medicine have been made by physicians. They have in general either been the effect of chance or of necessity, and have been usually opposed by the Faculty, till every one else was

convinced of their importance. An implicit faith in the opinion of teachers, and attachment to systems and established forms, and the dread of reflections, will always operate upon those who follow Medicine as a trade. Few improvements are to be expected from a man who might ruin his character and family by even the smallest deviation from an established rule.

No argument, continues he, can be brought against laying open Medicine, which does not apply with equal, if not greater force, to religion ; yet experience has shown, that since the laity have asserted their rights of inquiry into these subjects, Theology, considered as a science, has been improved, and the interests of real religion have been promoted.

In the arrangement of this work, I have divided it into parts, as follows :

*Part First*--Contains a synopsis of the human structure.

*Part Second*—Medical Botany.

*Part Third*—Art of Healing.

*Part Fourth*—Recipes.

---

## CERTIFICATES.

The following certificate is from the Rev. LUCIUS W. CLARK, and Rev. THOMAS CONANT, both of *Plymouth, Massachusetts* :

*To all whom it may concern* :—We the undersigned, do testify, that Dr. Sanborn has been practicing on the Botanical System of medical treatment in Plymouth, and as far as our knowledge extends, has been successful. In some instances his medicines have reached, where other treatment has failed.

LUCIUS W. CLARK,  
THOMAS CONANT.

---

The following are a few of the cures performed by Dr. Sanborn's treatment.

CASE OF RHEUMATISM—*From Capt. Joseph Allen.*

*This may Certify*—That I have been visited with a violent attack of the Rheumatism. So much so, that I could not sleep nights; and for some weeks could not attend to business of any kind. I tried various medicines without producing any benefit.

I was induced to submit to a course of Dr. Sanborn's treatment, and found immediate relief. So that I was in a few days able to attend to my business as usual. Had I been treated according to the common course, I think I should have had a settled fever and required a course of attendance.

*Plymouth, 1834.*

JOSEPH ALLEN.

*To whom it may concern*:—My daughter has for a number of years been afflicted with a Cough, Scrofulous and Rheumatic complaints. She found relief by attending a course of Dr. Sanborn's medicines. I was pleased with the operation as his medicines did not weaken; for my daughter gained strength under their operation.

*Plymouth, 1835.*

MARY STURTEVANT.

*From Capt. Thomas Basset, of Plymouth.*

*This may Certify*—That I was attacked with a violent pain in my breast and side; a sense of coldness in the parts; this was followed by a pain and soreness through my breast, loins, and side, with a distressing burning and rising in my stomach and throat. Also darting pains through every part of my body. I had frequent turns of faint, sinking feelings, with a yellow appearance in the face.

My wife had frequently to get up in the night to administer something to relieve my distress. I applied to physicians in town and out of town; none of them understood my case.

Hearing of Dr. Sanborn's success in treating diseases, I was induced to call on him for advice. After following his directions, and taking his medicines a few weeks, I found so much help that I could perform a day's work, and am now able to attend to my daily business.

Dr. Sanborn's treatment in my case was as different from the mode of treatment pursued by other physicians, as was the result. For it was the only medicine that did me any

permanent good. I should think in the course of a few weeks, by following his directions, there passed from me six quarts of slimy jelly matter.

I have felt it my duty to give a description of my disease, and cure, and have requested Dr. Sanborn to make such use of it as he shall think proper. For further particulars, inquire of  
THOMAS BASSETT.

*From wife of Sampson Perkins, of Dighton.*

*This may Certify*—That I have been afflicted with the palpitation of heart for six years, and at times very severe; and for three years past I have been afflicted with a seated pain in the side. It was so severe at times that I was unable to do any labor, or even sleep nights. I employed a number of physicians of the first reputation for skill without receiving any permanent relief. I thought there was no help for me, and I had got quite discouraged. At this time, which was last May, hearing of the success of Dr. Sanborn, I was induced to submit to a course of his treatment, which, I am happy to say, had the desired effect. After following his directions for a few weeks, the pain in the side and palpitation of heart left me, and have since enjoyed a better state of health than I had for six years before.  
ALMIRA PERKINS.

*From wife of Obed Harlow, of Middleborough.*

*This may Certify*—That I had been afflicted with disease for nine months, so that I was not able to attend to business, and a great part of the time unable to sit up, with a distress across my stomach, pain in my sides and back, and soreness and inaction in my throat, and canker. During these nine months I was attended by the first physicians; but got no help and found myself gradually sinking into the grave. I think I could not have continued many weeks. At this time I put myself under the care of Dr. Sanborn, and by taking his medicines and following his directions, I began immediately to recover, and have been gaining ever since, and am now able to attend upon the wants of my family.

Middleboro', Nov. 5, 1835. EUNICE HARLOW.

A son of Mr. John Perkins, of Plymouth, Mass, of five years of age, had been subject to fits from the time that he was eighteen months old. The father called on me at the time of one of his paroxysms and wished to know if any thing could be done for him, without giving him calomel, as the physie-

ians had done previously, for he dreaded the effect of the calomel more than the disease. I visited the child, and found that it was worms that caused the difficulty. The parents said it was not, in the opinion of three different physicians who had attended him previously. After relieving the urgent symptoms, I succeeded in taking away two kinds of worms, the Teres or round and long worm, and the Ascarides or round and short worm. The child soon recovered.

Mr. Ephraim Morton, of Plymouth, Mass., was attacked with the Cholera Morbus. Succeeded in removing the difficulty in a few hours, with our vegetable emetic and other medicines.

Mrs. Deborah Kempton, eighty years of age, was seized with the influenza and difficulty of breathing; had kept her bed for nine days. Carried her through a course of medicine, she found immediate relief.

Mr. Henry Tillson, requested my attendance last spring; he was not expected to live from one week to another. I gave him the vegetable emetic, which operated so easily that he was not under the necessity of raising his head from his pillow. He had, previous to this, taken two portions of the emetic tartar without any effect, excepting distressing him. He found great relief.

The wife of Mr. Bryant, keeper of the Pilgrim House, in Plymouth, Mass., was threatened with a fever; her stomach was in a very irritable state; she could keep nothing down. Carried her through a course of medicines, the next day she was up. She informed me that she was attacked before this in a similar way, but not so violently as now. She was treated the old way, and had a regular course of fever.

Wife of Mr. Ellis Griffin, South part of Middleborough, and Mrs. Murdock in the same neighborhood, both inclining to a consumption, by taking two or three bottles each of the Compound Vegetable Syrup, are so far restored that they enjoy comfortable health.

---

\*The following recipe was accidentally omitted in its proper place.

VEGETABLE POWDERS. Take 1 pound of bayberry bark, 8 ounces of ginger, 3 ounces of cayenne, 4 ounces of hemlock bark. Mix one teaspoonful for a dose.

## DEFINITIONS.

- Abdomen. The cavity of the body below the diaphragm.
- Acute. A disease attended with an increased action of blood, and violent pain.
- Antiseptic. Against putrefaction.
- Antispasmodic. A medicine to quiet the irritation of the nerves and muscles.
- Aromatic. Spicy, strong scented.
- Articulation. Joint.
- Astringent. Binding, contracting.
- Abortion. To miscarry.
- Abscess. A collection of pus.
- Acid. Sour. [sleep.
- Anodynes. Those medicines that ease pain, and procure
- Antacids. Remedies that obviate acidity in the stomach.
- Anthelmintic. Medicine that remove worms.
- Aperitives. Medicines that restore health without any perceptible evacuation.
- Antiscarbutics. Against scurvy.
- Antiflogistic. Medicines that oppose inflammation.
- Aperient. Medicine that gently open the bowels.
- Attenuate. To make thin.
- Cataplasm. A poultice.
- Cephalic. Remedy for disease of the head
- Calculous. Stony, gritty.
- Carminatives. Medicine to dispel wind, and remove pain.
- Cathartic. Medicine to purge downward ; physic.
- Caustic. An application which consumes flesh.
- Chronic. A disease of long continuance.
- Concretion. Several parts formed into one body.
- Contagious. Taken by the breath or external union.
- Diaphragm. The Diaphragm divides the upper and lower cavities of the body. [urine.
- Diuretic. Having power to increase the discharge of
- Decoction. Any medicine boiled in water.
- Deglutition. The act of swallowing.

- Detergent. Cleansing medicine.
- Deobstruents. Medicines that remove obstruction.
- Diaforetics. Medicines that produce gentle perspiration.
- Emulsion. Soft and oily medicines.
- Epidemic. A contagious disease that attacks many people at the same time and place.
- Errhine those medicines that excite sneezing.
- Expectorants. Those medicines that increase discharge of mucus from the lungs.
- Expiration. Throwing out the breath.
- Efluvia. A stench which corrupts air.
- Emetic. Medicine which causes vomiting.
- Emmenagogue. Medicine to cause menstruation.
- Equilibrium. Equal circulation.
- Eradicate. To destroy or remove.
- Eruption. Sores or blotches on the skin.
- Excitability. Power of motion.
- Fauces. The top of the throat.
- Fœtid: Stinking, rancid.
- Flatulency. Wind in the stomach and bowels.
- Fungus. An unnatural growth of tender flesh in a sore.
- Hygeian. To be well.
- Gland. A smooth fleshy substance which serves as a strainer to separate some particular fluid from the blood.
- Inspissation. The act of making any liquid thick.
- Indication. What demonstrates in disease that which ought to be done.
- Infusion. Water poured into a vessel containing medicine
- Inspiration. Drawing air into the lungs.
- Lassitude. Weariness, fatigue.
- Laxative. Mild Physic.
- Ligament. A strong substance which unites bones.
- Maxillary. Belonging to the jaw-bone.
- Midriff. The diaphragm.
- Mucilage. A slimy substance.
- Mucus. Slime.
- Muscles. The fleshy, fibrous part of the body which causes motion.

- Nauseate. To disturb, to sicken.
- Nidus. A nest—the seat of disease.
- Nervines. Medicines that quiet the nerves.
- Narcotics. Substances that have the effect to reduce the power of the system without evacuation; produce sleep.
- Obstetric. Belonging to midwifery.
- Opiates. Medicines that procure sleep.
- Obtuse. Dull.
- Paralytic. Inclined to palsy—inactive.
- Parotid. Belonging to the glands under & behind the ear.
- Panacea. To make all well.
- Paroxysm. A fit—the aggravated stage of a disease.
- Prepuse. The fore-skin.
- Purulent. Consisting of pus.
- Pus. The matter of a well digested sore.
- Putrid. Rotten, corrupt.
- Perspiration. To sweat.
- Rectum. The straight or last great gut.
- Respiration. The act of breathing.
- Spasm. Violent and involuntary contractions.
- Saliva. Spitte. [der or other parts.
- Sphinctre. The muscle which shuts the neck of the bladder.
- Stimulant. Medicine that excites sensation.
- Styptic. Medicine that stops bleeding.
- Sudorific. A medicine that promotes sweat.
- Suppuration. The formation of pus.
- Sedatives. Medicines that reduce the animal energies of the body without taking life.
- Septic. To putrefy.
- Sialogogues. Medicines that increase saliva.
- Testicles. An organ of seed in animals.
- Thorax. The cavity above the diaphragm.
- Tonic. Strengthening medicine.
- Torpor. Dullness, numbness.
- Tumour. A swelling. [of the roots of the tongue.
- Tonsils. Tonsils are two round glands placed on the side
- Vermifuge. Medicine that destroys or expels worms.
- Virus. Matter of contagion.

## PART FIRST.

---

# HUMAN STRUCTURE.

---

THE animal frame is composed of *bones, muscles, brain, nerves, arteries, veins, cartilages, membranes, glands,*—also of *chyle, blood, milk, &c.*

### BONES

Are white, hard, brittle, and almost insensible; they support and form the stature of the body, defend its viscera, and give power to the various muscles. The number of bones in the human body is generally 240; but in some individuals, who have two additional bones in each thumb and great toe, they amount to 248.

### TEETH,

A set of bones, situated in the upper and lower jaws, for the purpose of mastication. In adults, they are 32 in number, or 16 in each jaw-bone, consisting of 4 cutting, 2 canine, and grinders.

The teeth are of various sizes, being arranged in the following order; *four* in front, termed cutting teeth, on each side of which, is a sharp pointed canine or *eye tooth*; adjoining to these are *five* grinders on each side, the last of which is denominated the *tooth of wisdom*, because it seldom appears before the 25th year. The front and eye teeth are furnished with only one root each; the two first grinders with two; and the hindermost, generally with three or four; which may, in most persons, be ascertained

by the number of small tubercles on the crowns. The tooth is divided into two principal parts; viz. the *crown*, which projects above the gums; and the *root* that is enclosed within the sockets. The crown is a hard, fine, glossy, white *enamel*, serving to defend the substance against external injury. The root is open at the bottom, where it is connected with vessels and nerves, by which it receives nourishment, life and sensation. Each tooth has a nerve, artery and vein.

## MUSCLES,

Of which, it is said, there are 416 in the human body, dissectible and describable, are parts of the animal body, destitute to move some other parts, and hence are termed the organs or instruments of motion. They are composed of flesh and tendinous fibres, and contain vessels of all kinds.

## FLESH

Is the fibrous or muscular part of the animal body; muscular flesh is composed of a great number of fibres or threads; it is commonly of a reddish or whitish color. The ancients distinguished five different kinds of flesh: but the moderns admit one only, *fleshy* and *muscular* parts being with them the same.

## SKIN

Is the general covering of the body. Though apparently a simple membrane, it consists of several parts. The outermost is the *scarf-skin*; it has no nerves, and is extended over every part of the true skin, except where the nails are; it is this skin which is raised by the application of a blister; it is thickest in those parts accustomed to labor or pressure, as the hand and foot. The *rete mucosum* is a web-like mucous substance, lying between the scarf and true skin, which chiefly gives the color to the exterior of the human body. It is black in the negro; white, brown, or yellowish in the European. The *true skin* is a very sensible membrane, extended over all parts of the body, and nerves terminating so plentifully on its surface,

that the finest needle cannot [prick it without touching some of them.

### A B S O R B E N T S

Are a set of small colorless vessels, which pervade the whole surface of the body both externally and internally. Their office is to take up whatever fluids are effused into the different cavities, and to pour out their contents for particular uses. For the purpose of absorption, they are highly irritable at their extremes, and are very replete with valve, to prevent the escape or return of their contents. Their number, when compared with other vessels, is four times greater; and they are divided into *lymphatics* and *lacteals*, according to their respective offices, the former conveying lymph, the latter chyle.

### C A R T I L A G E S ,

Or *gristles*, are smooth, solid, flexible, elastic parts, softer than bone, and seem to be of the same nature; some even become bones by time; some again are much softer, and partake of the nature of ligaments. They terminate those bones that form moveable joints, and in some instances serve to connect bones together. In the nose, ears, and eyelids are cartilages.

### A M E M B R A N E

Is a thin, white, flexible, expanded skin, formed of several sorts of fibres interwoven together. The use of membranes is to cover and wrap up the parts of the body; to strengthen them, and save them from external injuries; to preserve the natural heat; to join one part to another; to sustain small vessels, &c.

### A G L A N D

Is an organic part of the body, destined for the secretion or alteration of some peculiar fluid, and composed of blood-vessels, nerves, and absorbents. The glands are designated either according to the particular fluids which they contain, as mucous, sebaceous, lymphatic, salival, and lachrymal glands; or their structure, as simple, com-

pound, conglobate, and conglomerate glands. The vessels and nerves of glands always come from the neighboring parts, and the arteries appear to possess a higher degree of irritability. Glands appear to the eye as whitish membranous masses.

## THE BRAIN

Consists of the whole of that mass which, with its surrounding membranes and vessels, fills the greater part of the skull. It is said to be larger in man, in proportion to the nerves belonging to it, than in any other animal. It consists of the *cerebrum*, *cerebellum*, *tuber annulare*, and *medulla oblongata*; the whole weighs usually about forty-eight or fifty ounces; but its weight varies in different subjects.

### THE CEREBRUM,

Which is by far the largest portion, is contained in all the upper part of the skull; it is divided into a right and left hemisphere by a membrane termed *falx*. Each hemisphere is also again subdivided into three lobes, the two lying in the front portion of the skull being the largest. It is surrounded with membranes, and accompanied with blood-vessels.

### THE CEREBELLUM,

Or *little brain*, is situated in the back part of the skull beneath the posterior lobes of the cerebrum, from which it is separated by a membrane called the *tentorium*. It is divided by the *falx minor* into two hemispheres, which are again subdivided into lobules.

The *Tuber annulare* is of a roundish form, about an inch in length and of the same width. From the tuber annulare arises the *medulla oblongata*, which forms the beginning of the spinal marrow.

From the Brain arises *nine pairs* of NERVES; some in solid cords, others in separate threads which afterwards unite into cords. Of these some have their origin in the *cerebrum*, some in the *cerebellum*, some in the *tuber annulare*, and some in the *medulla oblongata*. From these the

nerves supplying the organs of *smell, sight, taste, hearing* and *feeling*, in part, are derived. The nerves are called pairs, not because they proceed together from the brain and spinal marrow, but because they proceed from the opposite lobes of the brain, or from opposite sides of the spinal marrow, and supply similar parts on each side of the body with nerves. And hence it often happens in paralysis, or palsy, that on one side of the body all the nerves perform their office imperfectly, while on the other side no diminution of nervous energy is evinced. A nerve is a long white medullary cord. The uses of the nerves are to convey impressions to the brain, from all parts of the body, over which they are spread, and to impart motion, by exciting the muscles, to the whole system.

### THE SPINAL MARROW,

Or *medulla spinalis*, is a continuation of the *medulla oblongata* from the head through the centre of the spine, which consists of a series of bones called *vertebrae*, supporting the body. From the spinal marrow are given out *thirty pairs* of nerves; these, in conjunction with those arising from the brain, communicate energy and feeling to the whole body; and also by their extreme sensibility convey to the brain, the mind or soul, the slightest as well as the strongest impressions made upon the different organs; hence our *pleasures* and our *pains*, our *hopes*, our *fears*, and our *affections*.

That the *Brain*, as a whole, is the organ of thought, the seat of the understanding, and the place where the emotions of the mind or soul arise, we cannot doubt; it is also the centre of *sensation* and *muscular motion*, and to which all the nerves of the body appear subservient.

### THE THORAX

Or Chest, consists of the upper portion of the trunk of the human body; it is inclosed by the ribs, having the *sternum* or breast bone in the front, and a portion of the bones of the back behind. It is separated from the liver, stomach, intestines, &c., by the *diaphragm*, or midriff.—

The thorax contains the lungs, heart, &c., and numerous blood vessels, nerves, and absorbents. It is also separated by a membrane called *mediastinum*, into a right and left portion.

### THE RESPIRATION

Is that actions of the lungs and diaphragm, consisting of the process of inspiration and expiration, by which air is received into, and expelled from the thorax or chest.—The quantity of air taken into the lungs at each natural inspiration, is supposed to be about 15 or 16 cubic inches; the number of respirations made in a minute is about 20.

### THE WINDPIPE

Is a cartilaginous and membranous canal, through which the air passes into and from the lungs. It is divided by anatomists into three parts,—the *larynx*, the *trachea*, and the *bronchia*.

The *larynx* is a hollow cartilaginous organ at the top of the trachea. The air which passes through it during respiration produces voice.

The *trachea* is that portion of the wind-pipe which extends from the larynx to the *bronchia*.

The *bronchia* is a term given to the trachea after it has entered the thorax, or chest; here it separates into two branches, one of which communicates with the right and the other with the left lung.

### THE LUNGS

Are two viscera situated in the thorax, by means of which we breathe. The lung in the right cavity of the chest, is divided into three, that in the left cavity into two lobes. They hang in the chest, attached at their superior part by means of the trachea, and are separated by a membrane called *mediastinum*. They are furnished with innumerable cells which are formed by a continuation of the trachea, the bronchial tubes of which communicate with each other; the whole appears not unlike a honey-comb.

The most important use of the lungs is for the process of respiration, by which the circulation of the blood ap-

pears to be immediately supported ; and, doubtless, by their alternate inflation and collapsing, they contribute with the diaphragm to promote the various functions of the abdominal viscera, such as digestion, &c. For the change which the blood undergoes in its passage through the lungs, see the following articles.

### THE HEART

Is a hollow, strong, muscular viscus, having the shape of a cone or pyramid reversed. Its size varies in different subjects ; it is generally about six inches long, and, at the base, four or five wide. The younger the subject the larger is the heart, in proportion to the body. It is often smaller in tall and strong men than in others. It is situated on the left side of the thorax, and is surrounded by a membrane called *pericardium* or *heart purse* ; it is also imbedded, as it were, in the left lung. Its weight, with the pericardium, is usually from ten to fifteen ounces. It is the centre of the circulation of the blood ; of course from it all the *arteries* arise, and in it all the *veins* terminate. It is divided internally into a right and left *ventricle* ; these are divided by a fleshy *septum*. Each ventricle has two orifices ; one auricular, through which the blood enters, the other arterious, through which the blood passes out. These four orifices are supplied with *valves*. There are also two cavities adhering to the base of the heart, called *auricles*. The heart has, in the living subject, an alternate motion, consisting of contraction and dilatation, called *systole* and *diastole*, by means of which the blood is circulated throughout the body. The heart is said to contract 4000 times in an hour ; hence, as each ventricle contains one ounce of blood, there passes through the heart every hour 4000 ounces, or 350 pounds of blood. The whole mass of blood is about twenty-eight pounds, so that this quantity of blood passes through the heart thirteen or fourteen times in an hour, or about once in every four or five minutes. In the whale, ten or twelve gallons of blood are thrown out of the heart at a stroke, with an immense velocity, through a tube of a foot diameter.

## AN ARTERY,

Or a pulsating blood-vessel, is a cylindrical canal conveying the blood immediately from the heart to all parts of the body, for the purposes of nutrition, preservation of life, generation of heat, and the secretion of different fluids. The motion of the blood in the arteries is called the *pulse*: it corresponds with that of the heart. The pulse may be felt in various parts of the body, but the most usual place of feeling it is at the wrist. From seventy to eighty pulsations in a minute are commonly the number which in the adult subject is considered, as far as the pulse is concerned, to constitute health. In children, however, the pulse is much quicker than this; and in old persons slower. Wounds in *arteries* are always dangerous, and very frequently mortal; hence the wisdom evinced in the structure of man: all the arteries are deeply imbedded in flesh, or other surrounding media, while the veins, a wound in which is comparatively unimportant, are plentifully scattered on the surface of the body. The blood in the arteries is of a florid red color.

## A VEIN

Is a blood-vessel, which returns the blood from the various parts of the body to the heart. The veins do not pulsate; the blood flows through them very slowly, and is conveyed to the heart by the contractility of their coats, the pressure of the blood from the arteries, the action of the muscles, and respiration; and it is prevented from going backwards in the veins by *valves*, of which there are a great number. The blood in the veins is of a much darker red than that in the arteries.

## THE BLOOD

Is a red fluid of a saltish taste, of a somewhat urinous smell, and glutinous consistence, which circulates in the heart, arteries, and veins, conveying nutrition, heat, and excitement to the whole body. The quantity of blood in the human body, is estimated to be about twenty-eight pounds in an adult. Of this, four parts are contained in

the veins and a fifth in the arteries. The blood being returned by the *veins*, of a dark red color, to the heart, is sent from that viscus into the lungs, to undergo some material change by coming in contact with atmospheric air, in the air-cells of the lungs; after which, as has been stated, it is returned to the heart again, of a much more florid color, and then impelled into the arteries, to be distributed over the body. The heat of the body is usually about ninety-eight degrees.

### THORACIC DUCT,

An important vessel, called the trunk of the absorbents. It is of a serpentine form, and about the diameter of a crowquill. It is attached to the bones of the back, and extends from the lower opening of the *midriff* or *diaphragm* (a membrane which separates the heart and lungs from the stomach, bowels, and other abdominal viscera,) to the angle formed by the union of the left subclavian and jugular veins, into which it opens and evacuates its contents, there to be mixed with the blood. These contents consist chiefly of *chyle*, a whitish or milky fluid, separated from the food by the process of digestion, and taken up by the absorbents thickly spread over the intestines, and by them conveyed to the thoracic duct.

### THE ABDOMEN

Consists of all that portion of the trunk of the human body, situated below the thorax. It contains the liver, its gall-bladder, the stomach, the spleen, the pancreas, the intestines, the mesentery, the kidneys, the urinary bladder, the omentum, &c. It has also numerous blood-vessels, nerves, and absorbents.

### THE LIVER,

Which is the largest and most ponderous viscus in the abdomen, it weighing in adults, about three pounds, is of a deep red color. It consists of a glandulous mass, interspersed with numerous blood vessels. It is situated under the diaphragm, inclining to the right side of the body, having the stomach beneath it; between which, and the liver

itself, lies the *gall-bladder*, with which it is of course intimately connected. It is divided into two principal lobes, the right of which is by far the largest. Its shape approaches that of a circle; it is attached to the diaphragm by the suspensary and other ligaments. It is larger in young animals than in old ones.

### THE BILE

Is of a yellow-green color, about the consistence of thin oil; when much agitated, it froths like soap and water. Its smell is somewhat like musk; its taste is bitter. It is, in fact, a species of soap; and like other soap, is successfully employed to remove grease from clothes, &c. The *gall bladder* in the human body is shaped like a pear, and is generally capable of containing about an ounce. It is firmly connected to the liver. In the elephant, stag, all insects and worms, this reservoir is wanting, the bile which they secrete passing at once into the intestinal canal. The real use of the bile does not even now seem to be accurately ascertained. It appears, however, to assist in separating the *chyle*, to excite the intestines to action, and to produce the healthy appearance of intestine evacuations.

### THE SPLEEN,

Or MILT, is a spongy viscus of a livid color, in form somewhat resembling a tongue, but its shape, situation and size, vary very much. It is, in a healthy subject, always on the left side, between the false ribs and the stomach. Its general length is six inches, breadth three, and one thick. It is connected by the blood vessels to the stomach and the left kidney. It is larger when the stomach is empty, and smaller when compressed or evacuated by a full stomach. The uses of the spleen, have, till lately, been considered as unknown; but by a paper of Sir E. HOME, in the Philosophical Transactions, it appears probable that this viscus is a reservoir for the superabundant serum, lymph, globules, soluble mucus, and coloring matter carried into the circulation, immediately after digestion is completed.

## THE STOMACH

Is a large receptacle, varying in its capacity from about five to eleven pints. It is situated under the left side of the diaphragm, its left side touching the spleen, and its right covered by the thin edge of the liver; its figure nearly resembling the pouch of a bag-pipe, its left edge being most capacious. The upper side is concave, the lower is convex. It has two orifices, both on its upper part; the left, through which the aliment passes from the mouth through the *gullet* or *œsophagus* to the stomach, is named *cardia*; the right, through which it is conveyed out of the stomach into the *duodenum*, is named *pyloris*, where there is a circular valve which hinders the return of the aliment from the gut, but does not at all times hinder the bile from flowing into the stomach. The stomach, like the intestinal canal, is composed of three coats or membranes.

The uses of the stomach are to excite hunger, and partly, thirst; to receive the food from the *œsophagus*, and to retain it, till, by the motion of the stomach and the admixture of various fluids, and by many other changes not exactly understood, it is rendered fit to pass the right orifice of the stomach, and afford chyle to the intestines for the nutrition of the body.

## DIGESTION.

The chief agent in this process is, beyond question, the *gastric juice*; a fluid that is secreted from certain glands in the stomach, and which possesses great solvent powers in regard to numerous animal and vegetable substances. The food being duly masticated, and blended with a considerable portion of saliva, is propelled into the stomach, where it soon undergoes a remarkable change, being converted into a pulpy mass, termed *chyme*: the chyme afterwards passes from the stomach into the small intestines; here, it is mixed with bile, and separated into two portions, one of which is as white as milk, and called *chyle*; the other passes on to the larger intestines, and is void as excrementitious matter. The chyle is absorbed by the *lacteals*, which terminate in the trunk or tube called *thoracic*

*duct* : it is there mixed with variable proportions of lymph, and, lastly, with the blood, as stated under that article.

### GASTRIC JUICE

Is said to be of so powerful a nature, that after death the stomach is occasionally eaten into holes by its action. And it is also said, that if exposed to a proper temperature, it will digest food in metal tubes.

### THE PANCREAS,

Or SWEET-BREAD, is a large gland of the salivary kind, of a long figure, compared to a dog's tongue. It lies across the upper and back part of the abdomen, under the stomach. Its use is to secrete a juice called the pancreatic juice, which appears to be similar in its properties to saliva, and, together with the bile, helps to complete the digestion of the aliment. It communicates with the duodenum.

### THE INTESTINES

Consist of that convoluted tube beginning at the right orifice of the stomach, called *pylorus*, and ending with the *sphincter recti*. The length of this canal is generally six times the length of the whole human subject. It is divided by nature into two parts. The *small intestines* begin from the stomach, and fill the middle or fore part of the abdomen, the *large intestines* occupy the sides, and both the upper and lower parts of the same cavity.

### THE KIDNEYS

Are shaped like a kidney-bean. They are situated on the lower part of the back, one on each side. They are generally surrounded with more or less fat.

### THE SENSES

Are those faculties or powers by which external objects are perceived. The *sight*, *touch* or feeling, *hearing*, *smell* and *taste*, are called the *senses*. The organs through which they operate are the following :—

#### THE EYE

Is the organ of *seeing*. The eye-ball is of a globular

figure; it is composed of various membranes; but those parts of the eye deserving the most notice, are the *iris*, the *pupil*, and the *retina*. The *iris* is that colored circular ring, situated beneath the *crystalline lens*, which surrounds the central or dark part called the *pupil*.

It is capable of expanding or contracting, which it constantly does, according to the quantity of light which is thrown upon the eye. In a very bright light the pupil is reduced by the contraction of the iris to a very narrow hole; in a dark place the pupil is so much enlarged, as to render the iris scarcely visible. The *pupil* is the dark round opening in the middle of the eye, surrounded by the iris, and through which the rays of light pass to the *retina*, which is the true organ of vision, and is formed by an expansion of the pulp of the optic nerve. Externally the globe of the eye, and the transparent *cornea* are moistened by a fluid called the *tears*, which are secreted in the lachrymal glands, one of which is situated above each inner corner of the eye. In proportion as the eye is more or less round, is the sight of a person longer or shorter.

## TOUCH,

OR FEELING, resides in every part of the body that is supplied with nerves. The sense of touch is most exquisite in the lips, the tops of the fingers, the tongue and a few other places.

## THE EAR

Is the organ of *hearing*. In man it consists of an external ear, or *auricula*, and in internal bony cavity with numerous circular and winding passages, by which the vibrations of the air are collected and concentrated, and by a peculiar mechanism conveyed to the auditory nerves. The ear is supplied with peculiar glands, which secrete an unctuous substance, called the wax of the ear. The external auditory passage proceeds in a spiral direction to the *tympanum* or drum of the ear, which forms a complete partition between this passage and the internal cavities. Beyond the *tympanum* is a hemispherical cavity which leads to the *fauces*, or opening at the back of the mouth:

this opening is of a trumpet form. The inner cavity, including the winding passage, is aptly called the *labyrinth* of the ear.

### THE NOSE

Is in man, and most of the superior animals, the organ of *smelling*. The structure of the nose has nothing in it so very peculiar that can convey any idea of a mechanical organization to aid the *sense of smelling*.

### THE TASTE.

Resides chiefly in the *tongue*, in conjunction with the palate, lips, and other parts of the mouth. The tongue is however destined to perform much more varied and important functions than that of conveying to the mind the taste of sapid bodies. It is the tongue, in conjunction with the lips, teeth, palate and throat, which produces the sounds of *language*. The tongue is partly muscular, and partly composed of membranes and cellular substance. Its upper side is covered with *papillæ*, in which the taste more immediately resides. The impression of sapid bodies on the organs of taste is modified by age, size, habit, and the more or less frequent application of strong stimulants. The state of the stomach, as well as general health, is often indicated by the state and color of the tongue. In health the tongue is always of a red color; in disease it varies from white to yellow, and sometimes is almost black. In health the tongue is always more or less moist; in disease frequently parched and dry.

### THE SEXES

The male is generally of a larger size than the female, and more robust; the male becomes frequently bald on the top of the head, the female rarely or never; the male has always more or less *beard*, the female rarely any, except as old age approaches, and then it is chiefly confined to the upper lip. The anatomical differences, besides the obvious ones, are, in the female, a larger pelvis than in the male, more delicate muscles and smaller bones.

## PART SECOND.

---

# MEDICAL BOTANY.

---

### OPINIONS OF VARIOUS AUTHORS.

“This is the æra of *calomel*. The present medical practice might well dispense with every other drug beside it. I own the *calomel* practice is both cheap and easy to the physician; for the whole extent of both theory and practice is, give *calomel*. If that will not help, give *more calomel*, and if that again proves abortive, double, treble the doses of *calomel*. If the patient recovers, “*calomel* has cured him:” if he dies, “nothing on earth could have saved him.”—*Dr. A. Hunn, of Kentucky.*

“Let truth and falsehood grapple. Whoever knew truth put to the worse in a free and open encounter.”—*Milton.*

“If employment of the lancet were abolished altogether, it would perhaps save annually a greater number of lives than in any one year the sword has ever destroyed.”—*Dr. Ring.*

“Minerals exert a pernicious and baleful influence on the system; they seldom or never cure, but often destroy the patient. Their operation is altogether uncertain, depending entirely on the state of the stomach, whether they act at all or prove injurious.”

“The whole nation is groaning under the present practice of the Medical Profession, which fosters disease more than cures it, and debases or ruins our constitutions.”—*Morison.*

“All men ought to be acquainted with the medical art. I believe that knowledge of medicine is the sister and companion of wisdom.”—*Hippocrates.*

## PLEURISY ROOT.

*Botanical Name*—ASCLEPIAS TUBEROSA.

*Vulgar Names*—*Pleurisy Root, Butterfly-Weed, Flux-Root, Wind-Root, White-Root, Silk-Weed, Canada-Root.*

Root perennial, or living longer than two years, large fleshy and white orange-colored flowers. Blossoms in July and August; very ornamental; milky; produces a soft down; has been used for beds, hats, cloth, and paper. Found throughout the United States; but more abundant in the Southern States. The root when dry is bitter.

*Medical Properties.*—Promotes moderate perspiration; assists in discharging the mucus from the lungs; increases urinary discharge; laxative; allays pain, and removes wind; anti-spasmodic or against spasms. Its action is specifically upon the lungs to assist suppressed expectoration, and to relieve difficult breathing of patients laboring under Pleurisy. It acts sometimes as a mild cathartic; suitable to the complaints of Children. In low stages of the Typhus, and other febrile diseases, it has been known to excite perspiration, when other sudorifics have failed. It is highly recommended in cases of phthisic, inflammation of the lungs, asthma, syphilis, and worms; also summer complaints of children. From the authority of Drs. Beach, Bigelow, Eberle, and Burgen.—Dose from 20 to 30 grains of the powder two or three times a day.

---

## CAMOMILE.

ANTHEMIS NOBILIS.

The color of the flower is pale green, white in the centre; is indigenous, or grows natural in the South of England: is cultivated in our gardens. Camomile, flowers in July and August. The flowers are sometimes chewed instead

of tobacco, and it would contribute greatly to the promotion of the health of multitudes, who are now spitting away their lives by the inordinate use of tobacco if they would make the exchange. Camomile flowers are good against spasms, wind, and removes pain; it is also tonic. Good to correct a derangement of the digestive organs. The flowers are useful in Hysteria, Phthisis, Pulmonalis. They have been thought by some distinguished physicians to equal in intermitants, the Peruvian bark. Excellent to assist the action of emetics, taken in large quantities (the infusion) drank warm. In small doses it is tonic. The cold infusion assists the digestion. It should not be raised to a boiling temperature. May be drank at discretion.

---

## WILD CAMOMILE.

### ANTHEMIS COTULA.

*Wild Camomile, Mayweed, Dogs-fennel, Dilly, Dihweed Fieldweed.*

It is indigenous to this country. Blossoms from June to November; found throughout the United States. The medical properties are the same as the Camomile, but weaker, and less pleasant to the taste. Dr. Beach says it may be substituted for it with safety.

---

## ALOES.

### ALOE SPICATA.

It is found in Europe, Asia, Africa, and America. The Cape Aloes is the most abundant, and universally acknowledged to be the best. It comes from the Cape of Good Hope, by way of England; there being no direct trade between the Cape and the United States. The genuine Socotrine Aloes is produced in the island of Socotora,

which lies in the straits of Babelmandel. The Hepatic Aloes are prepared in the West Indies and Spain; and is also brought from the ports of India, particularly from Bombay.—Aloes was known to the ancients. The varieties are similar in their mode of action. They are all cathartic, operating very slowly, but certainly, and have a peculiar affinity for the large intestines.

These actions seem to be directed to the muscular coats of the elementary canal, riding it of mucus and gluey substance, that may have long been attached to its surface. In a full dose they quicken the circulation, and produce general warmth. When frequently repeated, they are apt to irritate the rectum, giving rise, in some instances, to hemorrhoids, or discharge of blood.

Aloes has also a decided tendency to the uterine system. It has the power of slightly stimulating the stomach. It is therefore, an excellent remedy, in habitual costiveness, in minute doses attended with torpor of the digestive organs. Given in doses of from 5 to 15 grains; the best form of administering it is in pills combined with other articles. It enters into the composition of many noted nostrums.

---

## ARCHANGEL.

ANGELICA, ARCHANGELICA.

*Garden Archangel.*

This is not the Archangel which grows spontaneously in this country; it is cultivated in our gardens, and is indigenous to the South of France. It has a bitter taste, and very pleasant smell. It is a powerful stimulant, and is good to expel wind, and pain in the breast. It is exhibited in cases of debility of the stomach, and organs of digestion. Also in nervous headache, pain and trembling in the limbs, and hysteria; chronic catarrh of the lungs, to facilitate expectoration, and to restore tone to the mucus

membrane. It is used in the form of infusion or tea for wind, particularly adapted for children.

---

## BLACK SNAKE-ROOT.

ACTEA RACEMOSA.

*Squaw-Root, Rich-Weed, Rattle-Weed, Rattle-Snake-Root, Black Cohosh.*

The root is perennial, blackish, thick, with long fibers. It is found all over the United States, Canada and Texas; common in open woods, and sides of hills. It has a tendency to bind and contract the fibers of the body, by its astringent properties. It promotes urinary evacuations, and produces a general healthy action through the system; very serviceable in female complaints, whence the Indians call it Squaw-Root; it promotes menstrual discharge, and is peculiarly serviceable in removing pains and sickness of the stomach and heartburn in pregnant women. I have used it in such cases with astonishingly good effect. The American Indians use it for this purpose. The mode of administering it, is in a tea; take a handful, say two ounces, add a pint of boiling water, keep it where it will be warm, and drink occasionally two or three swallows at a time, through the day. It should be used in connexion with slippery-elm, before child birth, as it generally assists nature in such cases. It is excellent in bowel complaints, especially of children. A poultice with slippery-elm, is good for every kind of inflammation. Good, against bleeding, coughs, and quinsy as a gargle. The Indians make much use of it for the cure of the rheumatism. Boiling water should be poured to it, instead of cold, or moderately warm; as boiling water will make it more pleasant to the taste. It is very settling to the stomach, where persons are inclined to throw up their food.

---

## BURDOCK.

## ARCTIUM LAPPA.

This root is generally laxative, and produces gentle perspiration, without irritation. It is useful in humors of all kinds, rheumatism, gout, and venereal. It requires to be persisted in for a long time to produce a change. The seeds are good steeped to expel wind. It is an excellent alterative. The root soon becomes calky after it springs up, and its strength goes into the stock. Take the roots when young, clean and slice them up, put them into an earthen pot, add equal parts of water and molasses; cover over the pot with a crust, and bake it. Good to purify the blood.

The leaves applied to the head, and feet, are excellent in febrile cases. The seeds have been used with decided good effect in dropsies, where more powerful medicines have failed.

A gentleman informed me, that his son had been subject for many years to distressing turns of the cholic, and that he administered the strong decoction of the burdock seeds, and it gave him immediate relief, and never troubled him afterwards.

## CANADA SNAKE-ROOT.

## ASARUM CANADENSE.

*Broadleaf Asarabacca, Wild Ginger, Indian Ginger, Heart Snake-Root, Colts-Foot.*

This plant inhabits woods and shady places, from Canada to Carolina. The root is aromatic, stimulant, and tonic. Good against catarrh, and pain in the stomach; colds, coughs, and pulmonary complaints.

## DEADLY NIGHTSHADE.

## ATROPA BELLADONNA.

The Deadly Nightshade is an active poison, soon produces death if taken in large doses. It grows along the side of old walls and hedges; it flowers from June to August; fruit is ripe in September, when it is black.

This plant is used principally to discuss indolent tumors, cancers, and ill conditioned ulcers. It is held in great reputation among German practitioners, for the cure of the whooping cough in the last stages. It is said to be an effectual remedy in neuralgia. It has been used in epilepsy, hydrophobia, mania, rheumatism, gout, obstinate intermitants, dropsy, and jaundice. Dose, one or two grains for an adult twice a day, and gradually increased, till the peculiar effects of the medicine are experienced.

## FENNEL.

## ANETHUM FOENICULUM.

This plant is a native of Spain and Portugal, and is naturalized in this country; grows principally in gardens. Fennel seed is possessed of mild stimulent properties, and agreeable aromatic; used in dyspepsia, choleric in children, and difficult digestion, pain, and weakness of the breast.

## GARLIC.

## ALLIUM SATIVUM.

Garlic grows wild in Sicily, and is cultivated in our gardens. It is used principally by external application. Draughts made of Garlicks, applied to the feet at night, is good to remove feverish symptoms, and equalize the circulations. Good in all inflammatory diseases. Dr. Beach

recommends it in discussing indolent tumors, coughs, colds, and asthma. It is also recommended in the dropsy. Applied to the feet of children it quiets and produces sleep.

---

## GINGER.

### AMOMUM ZINGIBER.

This plant is a native of Hindostan, and is cultivated in all parts of India. It is also cultivated in the West Indies, whither it was transplanted from the East. It is gathered when a year old in the West Indies in January and February. Good in dyspepsia, flatulence, cholick, pain in the stomach, and extremities, it warms the stomach and is an agreeable stimulant. It promotes perspiration; is good taken in a tea in habitual coldness.

It is rarely that this article is found when pulverised in its pure state, if not, of course it is unfit for medical purposes. It enters into our vegetable powders.

---

## MYRRH.

### AMYRIS KATAF.

Good Myrrh, is of a turbed, black-red color, solid and heavy, of a peculiar smell, and bitter taste, says Dr. Beach.

The two varieties of myrrh are distinguished in market by India and the Turkey myrrh, the former imported from the East Indies, the latter from the Levant. The Turkey myrrh is the best.

The tincture of myrrh and cayenne we use in a cold state of the system and debility, it is useful in equalizing the circulations, for internal pains in any part of the visera; it will relieve sickness of the stomach, and cholick. It is anti-emetic, prevents putrefaction; used externally it re-

duces inflammation and toothache. It will cure a recent cough by adding molasses and hot water; it should be drank warm.

---

## INDIAN TURNIP.

ARUM TRIPHYLLUM.

*Three-leaved Arum, Dragon Root, Dragon Turnip, Pepper Turnip.*

Found in all parts of North America, in wet, shady land. It is too acrid to be used in a green state, it should be dried and grated. The American Dispensatory recommends the powder mixed with honey, for the sore mouth of children, by making a paste of it, and diffusing it over the mouth and throat. It is one of the best remedies for the cholic, and local irritations; for coughs, pain in the breast, chronic, rheumatism, asthma, and chronic catarrh. The fresh root is said to be good simmered in hogs lard for the scald head. It is an excellent expectorant.

---

## BITTER ROOT.

APOCYNUM CANNABINUM.

*American Ipecacuanha, Indian Hemp, Indian Physic.*

It is indigenous to the United States, and is found in low moist land. It grows about two feet high; its flowers resemble buck wheat. The root only is used, which are numerous, small, brown, and slender.

This Plant is emetic, cathartic, tonic or bracing, and diuretic, or increasing urinary discharge; it is an excellent expectorant.

It has been used with great success in dropsy. An aggravated case under the care of Dr. Joseph Parish, of

Philadelphia, was completely cured by the decoction of the plant. It is one of the best cathartics now in use. Its tonic properties prevent its prostrating the system; it is therefore valuable, combined with aromatic, and stimulant articles. In general debility, we make great use of it; we frequently use it in our vegetable powders; an heaping tea-spoonful to an ounce of the powders, is a proper quantity to act gently on the bowels. It has a surprising effect in diminishing a feverish habit: it is one of the best medicines in dyspepsia. It is said on the authority of the American Dispensatory, to operate as an emetic and cathartic in doses from fifteen to thirty grains.

---

### MALE FERN.

#### ASPIDIUM FILIX MAS.

It is perennial; is found in all parts of Great Britain, and from New-Jersey to Virginia. It is slightly tonic and astringent. It is celebrated as being the basis of the Vermifuge prepared by Madame Nouffer. This lady was the widow of a surgeon in Switzerland; she had gained a great reputation in curing the tape worm, by a secret nostrum. This secret was purchased by order of the King of France, and published. Her plan was to give an injection, and a supper of panada with butter and salt; in the morning he is directed to take while in bed two or 3 drachms of the powdered root of the male fern. The powder to be washed down with a swallow of water, in two hours after take a strong cathartic of jalap and scammany. If this does not operate in time, a dose of salts is given. If this does not expel the worm in the course of a few hours, the dose must be repeated at proper times. It has been a question in the minds of many whether the strong cathartic or the male fern expels the tape worm.

On the assurance of Dr. Peschier in the course of nine months, one hundred and fifty tape worms had been ex-

pelled by the male fern. Dr. Ebers has also found the same preparation successful in curing eight cases of the tænia.

---

## MARSH-MALLOWS.

### ALTHEA OFFICINALIS.

This plant is indigenous to England, but is found throughout the United States, in wet places. The decoction is much used in inflammation, and irritation of the mucus membrane. The roots are sometimes used as a poultice; it is emollient or soothing. It is said to be good in the inflammation of the kidneys, I have used it in this disease but have seen no good effects resulting from it.

---

## ALMOND.

### AMYGDALUS COMMUNIS.

The oil of almonds diminish the action of stimulants on the sensible solids of the body; good for an irritating cough. It acts upon the urinary organs.

---

## PARSLEY.

### APIUM PETROSELINUM.

A native of the South of Europe, and cultivated in our gardens, for culinary purposes. Good to produce urinary discharge, and in inflammations of the kidneys and dropsy: taken in tea.

## STAR GRASS.

ALETRIS FARINOSA.

*Mealy Starwort, Blazing-Star, Bitter-Grass, Unicorn-Root, Ague-root, Ague-Grass, Star-Root, Devils-Bit.*

This plant is bitter like quassia and aloes. Good in small doses as a tonic ; used for bitters.

## SPIKENARD.

ARALIA RACEMOSA.

Dr. Beach informs us, that the Indians make great use of it in all kinds of sores, and ulcers. It blossoms in July and August. Berries are ripe in September ; is found in New-England, Carolina, and Indiana ; good for colds and coughs ; may be taken in syrup and decoction.

## SILK WEED.

ASCLEPIAS SYRIACA.

*Milk Weed.*

It grows plentifully throughout the United States. The pods contain a silky down ; sometimes used instead of feathers in filling beds, pillows, and in the manufactory of hats.

On wounding the stock, a milky substance exudes out, which is a cure for warts. The decoction is good in suppression of urine and dropsies ; it also promotes menstruation.

It has been used by Dr. Richardson, with success in the asthma, and typhus fever attended with catarrh ; it promoted expectoration and relieved pain and a cough. For the dropsy boil eight ounces of the root in six quarts

of water, down to three quarts—take a gill of this decoction four times a day. This form is recommended by Dr. Beach, in powder from twenty to forty grains, three or four times a day.

---

## VIRGINIA SNAKE-ROOT.

### ARISTOLOCHIA SERPENTARIA.

This plant blossoms but seldom; found in shady woods from New-England to Florida. It was first introduced as a remedy against the snakebite; from whence it derives its name. It is a powerful stimulant; produces perspiration, and from its gentle tonic properties, it is used when more bracing articles will not do. Quantity from ten to thirty grains—say what may be taken up on a half of an inch of the handle of a teaspoon.

---

## BARBERRY.

### BERBERIS VULGARIS.

It operates against putrefaction, sores, &c. Cooling.—The berries stewed in molasses, make a very fine sauce; the bark of the root with Bayberry bark put into hard cider is good in jaundice; the berries of the barberry alone are recommended by Dr. Beach, when steeped in hard cider, for the jaundice.

It is said to be good in bilious and putrid fevers.

---

## BIRCH BARK.

### BETULA LENTA.

Tonic and astringent.

## WILD INDIGO.

## BAPTISTA TINCTORIA.

*Indigo Broom, Indigo Weed, Yellow Broom, Clover Broom, Rattle Bush, Yellow Indigo.*

This root is recommended for a sore mouth. It is said to be emetic and cathartic. It is recommended in the scarlatina, and against mortification. A very excellent ointment is made of the roots for painful obstinate ulcers, by making a strong decoction or tea, and simmer it down in hogs lard; this ointment is also good in the salt-rheum. Half an ounce of the decoction is a suitable portion internally. It is also recommended for sore throat, sore eyes, and sore nipples.

---

## COPAIBA: OR, GUM CAPEVIA.

## COPAIFERA OFFICINALIS.

This article is principally used in the Gonorrhœa, that is, an unnatural flow attended with heat on making water. It is used in the gleet. It is stimulant, produces discharge of urine. In large doses it is purgative; it is good in pain and soreness in the chest; it may be taken from twenty to thirty drops on loaf sugar two or three times a day. It operates on the urinary organs somewhat like the turpentine.

---

## CAYENNE PEPPER.

## CAPSICUM ANNUM.

This is one of the most valuable stimulents in the materia medica. It produces a gentle warmth through the whole system; it is peculiarly adapted to cold constitutions;

it warms the stomach, and equalizes the circulations. It will relieve persons troubled with cold feet and hands, by drinking a tea constantly of it and soaking the feet, every other night, in weak lye; afterwards rubbing them with the tincture of cayenne. A strong tea is one of the best remedies in case of a bad cold taken on going to bed; a heaping teaspoonful will not be found too much. Mr. Stephens administered the following formula to four hundred patients laboring under the malignant sore throat, or scarlet fever, with great success. Take three table spoonfuls of common cayenne or two of the West India, or African, add two teaspoonfuls of fine salt, pour in a pint of hot water, and strain when cold; then add an equal quantity of sharp vinegar, a table spoonful every half hour. The small green West India or African cayenne has about three times the strength of the common. We use the West India or African in making the vegetable Elixir. In assisting the operation of emetics, we use the common cayenne. A large portion of cayenne taken at once, when the body is chilled; will create extreme pain; small portions should be given at once in such cases. The body should be warmed up by degrees.

---

## CICUTA.

### CONIUM MACULATUM.

#### *Hemlock.*

This plant is indigenous to Europe, but is found in New England and middle States. The strength of the plant depends upon the climate and soil where it is found, and the time of year it is gathered.

It is famous for being the poison, that the virtuous and innocent Athenians, Socrates, and Phocion were condemned to drink of. It is seldom used as an internal remedy. It relieves spasms and produces sleep. It diminishes the energies of the body. Drs. Fisher, Jackson,

and Bigelow recommended it in jaundice. Their mode is to begin with small doses, and increase till the effects are felt in the head and stomach. The yellowness of the eyes and skin will disappear in favorable cases, in two or three days. It is used in a plaster to discuss indolent tumors.

---

## COLOCYNTH.

CUCUMIS COLOCYNTHIS.

*Bitter Cucumber.*

An annual plant native of the Levant and cultivated in our gardens. It is found in Turkey, Asia, and Africa. It is a powerful drastic; producing griping when used alone. It is sometimes used combined with other cathartics in dropsical cases, very popular medicine with some German practitioners. Dose from five to ten grains.

---

## CELADINE.

CHELIDONIUM MAJUS.

*Great Celandine.*

This juice is said to cure warts, ring-worms, and cleanse old ulcers. Good in jaundice, when steeped in water, and added to vinegar and peppermint or spearmint tea. Good in piles and salt-rheum.

---

## SPURRED RYE.

SECALE CORNUTUM.

*Horned Rye, Ergot.*

This article ground into flour often proves a deadly poison, and when distilled into whiskey it produces the same effect. Twenty thousand persons are supposed to have died principally in Vermont and New-York, by eating the flour and drinking the gin, which was highly charged with the Ergot. Meeting after meeting was held by the faculty to ascertain the cause to no purpose; the cause was finally discovered by Dr. Beach. This same poison was supposed to be the principal cause of the plague in London. The principal and almost only use that is made of the Spurred Rye is in cases where there is not action enough in the organs of the womb to produce pain sufficient to expel the child. In such cases the exhibition of this article is highly recommended by the best authorities. From thirty to forty grains in a pint of hot water; take of this a great spoonful every fifteen minutes.

---

 HORSE-RADISH.

COCHLÆRIA ARMORACIA.

Is highly stimulant; promotes secretion of urine. It is used in dropsy and general debility of the system. It promotes appetite, and invigorates digestion; it is principally used with food. Cullen found it useful in hoarseness when made into a syrup, sweetened with sugar.

---

## GOLDEN THREAD.

COPTIS TRIFOLIA.

*Yellow Root, Mouth Root.*

Tonic, promotes digestion, good in dyspepsia. It possesses nearly the same properties of quassia, it is much used in the country for the sore mouth; an ointment made of this article and camomile simmered in hogs lard is excellent for sore lips, chapped hands and chilblains.

---

## IPECACUANHA.

CALLICOCCA IPECACUANHA.

This article is found in South America. It was first employed by the natives of Brazille, as an emetic when that country was settled by the Portuguese. It was not known in Europe till 1672. This article is emetic in large doses, in smaller doses produces gentle perspiration, producing a discharge of mucus from the lungs, and still smaller, stimulant; exciting the appetite and producing digestion. It is the most mild emetic used in regular practice. Dr. Chapman recommends it very highly in cases of bleeding to the lungs and bloody urine. It is used in dyspepsia. Dr. James says that two grains taken after dinner will obviate oppression.

Ipecacuanha is proved by indubitable evidence to be one of the most efficient remedies in dysentery. In armies and ship's companies where the disease has raged with extreme malignance, the exhibition of this article has proved a sovereign remedy, as will appear in a letter published in the London Medical and Physical Journal.

Clark's mode of administering it in these cases, is to take for an adult, three drachms of the ipecacuanha boiled in a quart of water down to a pint, strain and inject at once. About thirty grains is a common portion for an emetic.

## ORANGE-PEEL.

## CITRUS AURANTIUM.

Is a gentle tonic, used chiefly to give a pleasant flavor ; it is seldom used alone. Too large a dose is injurious ; it has been known to produce death in the case of a child's eating a quantity of the pæel.

---

## LEMON.

## CITRUS MEDICA.

Is stimulant and promotes digestion ; is good united with honey or loaf sugar for a recent cough ; is recommended in jaundice and scurvy ; in irritation of the stomach, where there is constant vomiting. Lemonade is a very cooling drink in febrile diseases.

---

## PERUVIAN BARK.

## CINCHONA OFFICINALIS.

This valuable medicine, says the American Dispensatory was unknown to the civilized world till the middle of the seventeenth century ; though it is supposed, that the natives of Peru were long before acquainted with its febrifuge properties.

There are said to be three varieties of this bark, the pale, the yellow, and the red. The Peruvian bark is universally acknowledged to be the best remedy in the remittent fever. It produces action on the stomach and intestinal canal, and assists the digestive organs. Dr. Beach says in intermittents it should be given immediately after cleansing the stomach in doses of from one scruple to a drachm every second or third hour during the interval of the paroxisms. We must always avoid giving the medi-

cine during the fevers. It should be administered near the close of the fever, that the operation may be over before a return of the fever. It is sometimes administered in the form of quinia, where the stomach is so delicate that the bark will not continue long enough to produce an effect. In cases of continued fevers attended with debility it is recommended as a valuable medicine. From ten to thirty grains of the bark, is usually a sufficient quantity to commence with, in chronic cases.

---

## DOGWOOD.

### CORNUS FLORIDA.

This tree is a native of the United States, found from Massachusetts to Florida; its height is from twenty to thirty feet. The properties of dogwood are very near the same as the Peruvian bark, and is used by country physicians in its stead, many of whom testify that they have succeeded as well as with the Peruvian bark. The bark of the root is preferred. Dr. Grigg of Bristol exhibited it in intermittants and as a tonic in debility, and found it uniformly beneficial.

---

## ROSE-WILLOW.

### CORNUS SERICEA.

*Round-leaved Dogwood, Red Willow, Swamp Dogwood.*

It inhabits the United States, Canada and Florida.—Flowers in June and July. Its medical properties are almost exactly the same as the Dog-Wood; it may be administered in the same doses and given in the same manner by the authority of Dr. Walker.

## SCAMMONY.

CONVOLVULUS SCAMMONIA.

It is an energetic cathartic or physic. When given alone it produces griping. It is found in Syria. It was known to the Greek physicians; also to the Arabians, who applied it externally for the cure of diseases of the skin. When combined with aromatics, such as spearmint, peppermint, &c., it is a mild cathartic. Dose from five to ten grains.

---

## SENNA.

CASSIA SENNA.

Alexandria Senna was first used as a medicine by the Arabians. It is a safe, prompt and serviceable cathartic; suitable for febrile or feverish diseases; united with aromatic herbs it does not produce griping. Dose from an half a drachm to a drachm, or heaping teaspoonful. We do not use it in its simple state.

---

## SOLOMON'S SEAL.

CONVALLARIA MULTIFLORA.

Is good in an increased secretion of white mucus in the vagina of women, called the whites, which arises from weakness. It may be taken in tea; the quantity is left to the discretion of the patient. When applied externally as a poultice, it is good for inflammation, and the piles.

## SAFFRON.

## CROCUS SATIVUS.

On the authority of Dr. Beach, saffron, in small doses, produces perspiration ; in larger doses, it acts on the whole animal economy in the same way as stimulus. It extends its action to the uterus, allays pains that attend menstruation in females, it is useful in hysteria, and acts against spasms. It is rarely used in regular practice except to give a color to tinctures. From ten to thirty grains for a dose.

---

## LADIES' SLIPPER.

## CYPRIPEDIUM PUBESCENS.

The root of ladies' slipper has a tendency to lessen the animal energy ; good to allay nervous affections and anti-spasmodic ; it may be used in all cases instead of valerian. It promotes sleep and allays headache. Dr. Beach prefers it to opium in most cases as it has no narcotic effects. Dose—a teaspoonful in warm water with sugar. It is sometimes used with the lobelia emetic to quiet the nerves. In these cases, half a teaspoonful is sufficient with each portion of the lobelia.

---

## CAMPHOR.

## LAURUS CAMPHORA.

Camphor is stimulant, sudorific, or produces sweating ; anti-spasmodic and produces excitement. If it is taken in too large a quantity, it produces vertigo convulsions and death. Combined with opium it is said to be very serviceable in low typhus and putrid fevers. Dr. Eberle says its power of allaying delirium, and other nervous

symptoms of typhus, is I think, more decisive, than any other remedy which we possess. It is likewise good in epilepsy. Dr. Gooch considers camphor given in union with hyoscyamus, the best sudorific that we are now acquainted with. He gives ten grains of each at bed-time after tepid bath. The medium dose is from five to ten grains.

---

### WILD CARROT.

DAUCUS CAROTA.

This root acts particularly upon the urinary organs; is good in the gravel complaint, and bilboes.

---

### FOXGLOVE.

DIGITALIS PURPUREA.

The medical properties of the foxglove are diuretic i. e. it produces a discharge of urine, good in dropsy of the chest, reduces inflammation by lessening the action of the heart. It has been thought by some to have the same effect as bleeding. It reduces the frequency of the pulse. It is recommended by Dr. Beach to be applied in case of inflammation of the lungs. It is a poison, and too large a dose of it will produce spasms, vertigo and death. We make but little use of it. The dose of the powder, one grain, repeated twice or three times a day, and gradually increase till some effect is produced upon the head, stomach, pulse or kidneys.

---

## THORN APPLE.

## DATURA STRAMONIUM.

This is a wandering plant found throughout the United States. It was not known in this country until it was settled by the whites. The Indians call it the white man's plant. It is used in the regular practice in mania, epilepsy, neuralgia, cancerous sores, rheumatism and spasmodic asthma. It is bitter, used as an external application. Simmered in hogs lard, it is good for burns and piles. Some soldiers in the revolutionary war died in consequence of eating this plant (through mistake) for greens.

---

## THOROUGHWORT.

## EUPATORIUM PERFOLIATUM.

*Bone-set, Feverwort, Sweating-plant, Thorough-stem, Crosswort, Indian-sage, Ague-weed, Thorough-wax, Vegetable Antimony.*

This plant is emetic and cathartic; and produces perspiration. It has been known to produce thorough evacuation where every thing else has failed. It has been employed with success in intermittant fever instead of the Peruvian bark. There is no danger of giving too much. I have in a multitude of cases given more than a quart of strong and warm decoction of it in the course of a few hours with the lobelia emetic. It has also been successfully used in the yellow fever. For a tonic, it should be taken cold, and in small quantities. Say from ten to twenty grains in a powder. It is useful in bitters. Also for jaundice and choleric pains.

---

## CLOVES.

## EUGENIA CARYOPHYLLATA.

Cloves are the most stimulant of the aromatics. Their influence is rather local than general upon the system. The oil of cloves is good to relieve the toothache. The chief use that is made of it, is to assist other medicines, in rendering them more mild. It is used sometimes to remove nausea and vomiting; to correct flatulence and excite digestion. An infusion taken before an emetic is said to assist its operation, and cause the patient to vomit more easily.

---

## ASAFETIDA.

## FERULA ASAFETIDA.

The gum is not recommended where there is inflammation; but is good in all nervous, and spasmodic affections. Dr. Walcott states, that he cured a person of the spasmodic asthma of nine years standing with this gum. It was administered in the form of a pill of ten grains, three times a day with other attendant medicines. It is very useful in whooping-cough, croup, catarrh, measles, consumption, and all diseases of the chest.

---

## GAMBOGE.

## GARCINIA GAMBOGIA.

Is a powerful drastic; it is cathartic, but too powerful to be given alone. It is employed in dropsies, and found effectual in the expulsion of the tape-worm.

When administered it should be combined with some other mild cathartic. Dose from two to three grains of the powdered gum.

## GENTIAN.

## GENTIANA LUTEA.

This root grows in the temperate parts of Europe—blossoms in May. It is a valuable tonic, excites the appetite, invigorates the system, increases moderately the temperature of the body. It has been known as a medicine from the highest antiquity. It can be administered to advantage in all cases of debility of the digestive organs, gout, hysteria, scrofula and dyspepsy. Dose from ten to forty grains.

---

## GUAIAACUM.

## GUAIAACUM OFFICINALE.

Is a native of the West Indies. It may be found at the pump and block makers. The borings are better than the saw-dust. Both the gum and wood affect the skin by their driving properties. It is used in syrup to purify the blood; good in beer, &c. It is highly spoken of by Dr. Chapman in diseases of the eyes; also gout and chronic rheumatism. It is sometimes steeped and drank instead of tea.

---

## CRANESBILL.

## GERANIUM MACULATUM.

This herb grows along the sides of hedges in rich and moist land, in hollows that receive the wash; the top resembles crow's-foot; found in New-England. It is a powerful astringent or bracing; good boiled in milk in cases of cholera infantum; also sore throat and mouth. It is highly esteemed by the Indians in venereal; it is valuable in the Gleets. On the authority of Dr. Thatcher, it will sup-

press bleeding at the lungs, in a prompt manner; the pulverised, and sprinkled on a wound will relieve effusion of blood.

---

## LIQUORICE.

### GLYCYRRHIZA GLABRA.

Found in the South of Europe. This root is used chiefly to relieve cough, tightness of the lungs and chest; when you find a medicine too bracing, add a quantity of this root, and it will enable the patient to bear it; when otherwise, he could not. Very useful to allay irritation. The late Dr. James Malone, of London, gives the following receipt:—For a cold, a large teaspoonful of linseed oil with two penny worth of stick liquorice, a quarter of a pound of sun raisins, add two quarts of soft water, reduce it by boiling to one, then add a quarter of a pound of brown sugar candy, pounded; a table spoonful of white wine or lemon juice. Drink half a pint on going to bed, and take a little when the cough is troublesome. This is said to cure the worst of colds in two or three days. It has been known to cure colds, says Dr. Beach, that has almost been settled into a consumption in a few weeks. Dose of the root of liquorice from twelve grains to a drachm.

---

## HELLEBORE.

### HELLEBORUS NIGER.

#### *Black Hellebore.*

It was used and esteemed by Galen and Hippocrates as a valuable cathartic. It is recorded of Melampus a Greek physician, who first discovered this plant, that he acquired immense wealth and renown by restoring to reason the daughters of an Eastern monarch, who, by some unknown

cause had all of them been deprived of. The Hellebore is the only article that he employed. Powerful cathartics produce a change in the constitution in these diseases favorable to recovery.

---

## GOLDEN SEAL.

### HYDRASTIS CANADENSIS.

*Yellow-root, Ground Raspberry, Yellow Paint, Orange-Root, Indian Plant.*

It is found principally in this country beyond the Alleghanies. It has an exceedingly bitter taste. It is tonic or bracing, and cathartic, or physical, is much used by the Indians in cases of inflammation of the eyes, producing redness, difficulty in opening the eye to the light, and running from the eye. In disorders of the bile and liver we consider it invaluable. It is one of the best remedies to restore the digestive organs. The Indians use it for the dropsy, and to produce urinary discharge. I have found it useful together with bitter root to restore the bile, and relieve the stomach after eating, by adding peach-meats pounded fine, and all put to Holland gin. Dose of the powder of Golden Seal from ten to twenty grains.

---

## HYSSOP.

### HYSSOPUS OFFICINALIS.

Hyssop is a native of the continent of Europe; cultivated in our gardens. Very useful in producing expectoration, or discharge of mucus from the lungs; good in catarrhs especially in old people, and those of debilitated habit of body; useful as a gargle in sore throat. Make a tea and drink at discretion.

## HOPS.

## HUMULUS LUPULUS.

Hops are tonic, and moderately produces sleep; good in dyspepsy, and nervous tremors, weakness and tremors of drunkards. A pillow made of hops wet with rum to prevent a rustling noise is good to produce sleep, and allay nervous irritation. It is anodyne, and may be used instead of laudanum; good in after pains of women; valuable in fermentations.

---

## WITCH HAZEL.

## HAMAMELIS VIRGINICA.

*Snapping Hazelnut, Winter-bloom, Pistachæ-nut, &c.*

Grows in most parts of the United States. It is the only shrub, that blossoms in winter; the fruit when ripe explodes, making a noise, and scattering abroad the seeds. It is astringent, tonic, and useful to discuss tumors; it is highly valued by the Indians, and used by them in inflammation; bleeding at the lungs; too great a discharge of the menses, and from its astringent or contracting properties; good against falling of the bowels and womb. It may be given internally in tea; a strong decoction injected for falling down of the womb, and a wash for falling of the intestines.

---

## LIVERWORT.

## HEPATICA TRILOBA.

*Noble Liverwort.*

Liverwort may be used in fevers; liver complaints; bleeding to the lungs; it has been a popular remedy in chronic coughs, or coughs of long continuance.

## LOGWOOD.

HEMATOXYLUM CAMPECHIANUM.

Logwood is a mild astringent, or contracting to the fibers, without irritating, and well adapted to a relaxed state of the bowels; it is valuable in chronic dysentery and diarrhœa.

---

## BUTTERNUT.

JUCLANS CINEREA.

*Oilnut.*

Is a mild cathartic or physical, operating without pain or irritation, and resembling rhubarb; good in habitual costiveness. The extract should be made from the bark in May and June. Extract in doses from fifteen to thirty grains.

---

## JUNIPER.

JUNIPERUS COMMUNIS.

The berries of this shrub are the only part used, and are ripe in August. Natural to Europe, but naturalized in this country. They are stimulant, and produce a discharge of urine; an ounce of the berries may be steeped in a pint of water and drank in the course of twenty-four hours. They are principally used in dropsies; the oil is exhibited in flatulences or wind; eight or ten drops on sugar. The imported are possessed of the same medical properties as our own, except they are stronger.

---

## E L E C A M P A N E.

## INULA HELENIUM.

This plant was much used by the ancients in diseases peculiar to females, and is now considered valuable in suppression of the menses, diseases of the chest, general debility, arising from weakness in the digestive organs; useful in dropsy. One or two fluid ounces may be taken at a time of the decoction; used much in coughs, and pulmonary affections.

---

## CEDAR.

## JUNIPERUS VIRGINIANA.

This tree is found all over the United States. The red cedar is possessed of the same properties, as savin; useful in rheumatism, and suppression of the menses; the oil is useful to bathe the parts for rheumatism; the oil combined with the oil of spearmint is useful in the gravel; diseases of the kidneys, and scalding of the urine.

---

## SKUNK-CABBAGE.

## ICTODES FÆTIDA.

This is one of the most valuable native plants. It allays spasms, irritation, and promotes sleep; it purifies the blood; is an excellent expectorant or promotes discharge from the lungs; good in cough. It looses much of its strength by age; for a syrup it requires long boiling. It should be dug after the tops are dried in the fall, or early in the spring. It is a valuable nervine, very useful in the asthma, and cough of old people. It is highly recommended in the above cases by Drs. Chapman and Eberle. It may be drank in the form of syrup freely. In powder a teaspoonful is a common dose.

## SAVIN.

## JUNIPERUS SABINA.

Savine is highly stimulant or exciting to animal energy. It should never be used in pregnancy, or weakly complaints of females. It is used for the cure of warts, scald head, ulcers, worms, rheumatism, and suppressed menses.

It is a universal stimulant, particularly the organs of secretion.

## BUGLE.

## LYCOPUS VIRGINICUS.

*Sweet Bugle.*

Good in coughs, bleedings of the lungs, and phthisic; it produces sleep, and ceases pain. Drs. Pendleton and Rodgers of the city of New-York, Smith, Ives, Lawrence, Refinesque, and Beach, testify that they have cured bleeding of the lungs, and phthisic with this article; given in tea.

WHITE WOOD. *Inner bark of the Trunk and Roots.*

## LIRIODENDRON TULIPIFERA.

*White Poplar, Wild Poplar.*

This tree is called the glory of the American forest; it rises to the height of one hundred and forty feet, frequently nine feet in diameter.

The bark of this tree possesses valuable tonic and stimulant properties. It has been used in the ague and fever with good success. Dr. J. F. Young, says, that he has used the Poplar bark in cases of intermittants with equal success as the Peruvian bark. The same writer declares

that there is not a more speedy and effectual remedy for the Hysteria than the Poplar bark, combined with a little Laudanum. It is valuable in dyspepsy, phthisic, with hectic fever, night sweats and diarrhæa. Dose from half to an ounce in a pint of boiling water. The tree bears a beautiful flower, and is found in the Middle and Western States.

---

## SASSAFRAS.

### LAURUS SASSAFRAS.

The bark is stimulant ; good against all diseases of the skin, and rheumatism of long standing. Dr. Eberle says he has known a long continued use of the infusion of this article to effectually cure an inveterate case of rheumatism.

The bark, and pith of the young shoots, steeped in water make an excellent eye water for inflamed eyes.

---

## WHITE LILY.

### LILIUM CANDIDUM.

This plant is a native of Syria, and Asia Minor, but has long been cultivated in our gardens ; said to be good in dropsy. It is a mucilage, and good for poultices to reduce inflammation. Good in an ointment for the tetter or harps.

---

## LAVENDER.

### LAVANDULA SPICA.

Is found in the South of France. It is but little used as a medicine ; it is a stimulant often used as a perfume, and is often added to medicine, to make it more grateful to the stomach.

## DANDELION.

LEONTODON, TARAXACUM.

This plant is found in Europe, Asia and America; it takes its name from a French word, meaning a Lion's tooth. It is highly recommended in the cure of diseases of the liver, and for the dropsy by the most eminent physicians. This is a very valuable medicine as the Liver is so liable to become diseased. I believe that a morbid state of the Liver originates more chronic diseases, than all other of the visera. The yellow dock steeped strong, and drank at liberty daily, with occasionally a lobelia emetic, will not fail to produce a healthy action upon the liver.

## BAYBERRY.

MYRICA CERIFERA.

Is found throughout the United States; but most abundant in New England, particularly near the sea shore.

The bark of the root produces sleep, and removes pain. It braces and strengthens the fibers of the body, and frequently operates as an emetic.

Take one pound of the pulverised bark of Bayberry, four ounces of ginger, two ounces of cayenne, two ounces of rhubarb, pulverised, or four ounces of yellow dock will answer the same purpose, and two ounces hemlock bark may be added, and unite them together: this compound is very valuable in almost every disease. A heaping teaspoonful is a common portion, put it into a cup with the same quantity of sugar; fill the cup two thirds full of scalding water, stir it well, and when cool enough, drink dregs and all. This is what we call vegetable powders. They are good in colds, coughs and cholick; good to equalize circulation. It is good to take a number of portions of it previous to taking an emetic: it warms the stomach, produces gentle moisture upon the surface and

also sleep. For a bad cold, cholic and in some other cases the Elixir should be added from one to two teaspoonfuls. I have cured myself of the cholic with this medicine alone. I took two portions within about ten minutes of each other. I have also broken up a cold with the same in two nights, which usually lasted me four weeks. Dr. Beach, considers a poultice made of the Bayberry bark in connection with slippery-elm bark to be a sovereign remedy for the King's Evil or scrofula. It is excellent in dysentery and jaundice.

---

## COLOMBA ; OR, COLOMBO.

### MENISPERMUM PALMATUM.

This root is a native of Africa, Madagascar, and the East Indies. It is a very mild tonic, or has the property of strengthening the system without producing stimulant and irritating effects. It is very excellent in dyspepsy and hectic fever. The American Dispensatory recommends in bowel complaints, half an ounce of Colombo, half of an ounce of ginger, and a drachm of senna, with a pint of boiling water; give a wine glass full three times a day. Dr. Eberle gives in dyspepsy, ten or twelve grains of Colombo with two of ipecacuanha, with decided good effect.

---

## GUM ARABIC.

### MIMOSA NILOTICA.

The tree from which this gum is found, grows along the Nile of Egypt, and the sandy deserts of Africa, and Arabia, and Petraca. The Moors and Negroes live on it almost exclusively during the period of its collection, and conveyance to market. The Bushmen Hottentots in times of scarcity, support themselves upon it for days together.

Six ounces a day is said to be sufficient to sustain life in a healthy adult. It is nutritive, and sheathing to inflamed or irritated parts; it is good therefore to prevent bleeding in dysentery, hoarseness, whooping-cough, suppression of urine attended with pain. Take a handful of English barley, gum arabic, a piece as large as a walnut, with a little slippery-elm; pour a pint of boiling water upon it, steep it, and sweeten with loaf sugar. This I have found excellent where the patient had not much appetite and could not bear solid food. It will be found very serviceable to keep up the strength of the patient.

---

## HOARHOUND.

### MARRUBIUM VULGARE.

This plant is a native of Europe, but flourishes well in this country; it was formerly valued by the faculty, in many chronic diseases; but is now by them but little used. It is good in coughs, colds, and all consumptive complaints. It is a little too much of a tonic to be given alone in coughs. This may be obviated by adding to the syrup a little stick liquorice. This herb in large doses proves laxative. It also promotes menstrual discharge.

---

## PEPPERMINT.

### MENTHA PIPERITA.

This herb is a native of Great Britain, from whence it has been transplanted to the continent of Europe and to this country. It produces sweating; is good against spasms, stimulating, and warming. It is good to prevent vomiting taken in the form of tea, or the herb infusion in hot water, and applied to the pit of the stomach. It is very useful

to disguise other medicines, and make them more palatable, particularly cathartic. Good to relieve spasmodic pains of the bowels and stomach.

---

## CATNIP.

### NEPETA CATARIA.

Notwithstanding this plant is but little thought of in regular practice, it is a very valuable herb. I have succeeded in relieving pain in the bowels, where they were swollen when every thing else failed, by giving simply an injection of catnip tea made strong; for a child six years old an even teaspoonful of fine salt, three great spoonfuls of molasses, one great spoonful of sweet oil or hogs lard; put up two thirds of a tumbler full, keep it up fifteen or twenty minutes. This injection I have used with great success in case of fits caused by worms. It will bring away the superabundance of slime that has collected on the internal surface of the canal. Catnip tea is very useful in fevers, as it will produce perspiration without increasing the heat of the body; it is useful in all spasmodic affections. We have sometimes used it with the emetic instead of pennyroyal, but it is inferior for that purpose.

---

## SPEARMINT.

### MENTHA VIRIDIS.

Spearmint is said to be a native of this country, and possesses the same medical properties with the Peppermint which is a native of Europe. It is highly recommended by Dr. Beach as a diuretic, or produces of urinary discharge, and also in cases of gravel.

## WHITE-OAK BARK.

## QUERCUS ALBA.

There are said to be eighty different species of this genus, and thirty in the United States. The white oak is the most valuable for medical purposes; it is said to possess four times the strength in the spring that it does in the winter. As an external medicine it is very useful, in bad conditioned ulcers, as a wash it prevents putrefaction. A strong decoction is said to be a certain cure for sore lips. A poultice made of the powder is good against gangreen and mortification. It will contract, support and strengthen the animal fibers. It is useful in falling down of the bowels. Dr. Beach recommends a strong decoction as a gargle in the croup. I have used it in the form of syrup with success, internally, where the stomach was not disposed to receive medicine kindly, owing to its weak and relaxed state; it is strengthening, possessing somewhat the property of the Peruvian bark, but it is esteemed inferior to it.

---

 JERUSALEM OAK.

## CHENAPODIUM. ANTHELMINTICUM.

This plant is found in most parts of the United States, generally about old cellars, and rubbish. It is of a yellowish green color; it flowers from July to September. The whole herb has a strong peculiar offensive smell. It is one of the best native remedies we have for expelling worms from the intestines. A teaspoonful of the powdered herb and seed united with peppermint herb, pounded fine for a child two or three years old may be taken, night and morning before eating, for two or three days, then follow it with the common physical powders or any other brisk cathartic. The oil of the seed is perhaps the most convenient mode of administering it. The dose for a child

is from five to ten drops, and may be taken on sugar, morning and night, for two or three days, and followed by physic. A wine glass full of the decoction prepared by boiling one ounce of the herb in a pint of milk for common practice, is recommended by the American Dispensatory, with the addition of orange peel. Dr. Baylies, of Taunton, recommends the herb highly in after pains of women.

---

## TOBACCO.

### NICOTIANA TABACUM.

This plant is emetic and narcotic, or produces sleep and stimulating. It excites the mucus membrane when taken into the mouth, causing it to discharge an abundance of saliva; this is spit out by those who chew tobacco, instead, as was intended by the Creator, to moisten the mouth, and prepare the food to be swallowed, and afterwards to be digested. Therefore persons who are accustomed to chew tobacco or smoke, are troubled with a dryness of the mouth and heat, especially in the morning; faintness, with a weak trembling feeling at the stomach. It injures the digestive organs, and irritates the nervous system.

All these symptoms I know by experience; having used tobacco more or less for twenty years. It is now about four years since I abandoned it entirely; since which time the above symptoms have abandoned me. The effects of tobacco are alike, whether smoked, chewed, or snuffed up the nose; except, taken in the form of snuff, it effects the speech. The habitual use of this article is a species of intemperance, as truly as the habitual use of ardent spirits; while it is abandoned with far more difficulty. A person told me not long ago, that he found no difficulty in leaving off the use of ardent spirits; but he had made an effort to leave off chewing tobacco, and had not succeeded.

He found it far more difficult than breaking off drinking rum. Yet people are encouraged to learn to use tobacco for as simple a disease as the toothache, and as it were, spit out their lives as really as the drunkard burns out his.

---

## THYME.

### ORIGANUM MAJORANA.

This is the common garden Thyme. It is principally used in cookery. Its properties are similar to other aromatic herbs, such as sage, lavender, and is used for the same purposes. It is called good in painful and difficult menstruation and rheumatism.

---

## OLIVE OIL.

### OLEA EUROPEA.

The Olive tree flourishes in all the countries bordering on the Mediterranean. It is cultivated in Spain, South of France, Italy, and the North of Africa. It begins to bear after the second year, and flourishes for a century. Olive oil is nutritious, gently laxative, is principally used in ointments, linaments, and plasters. It is sheathing to the stomach and bowels, therefore good in dysentery, and internal inflammation, good also to destroy the effect of acid and poison taken into the stomach.

It is supposed to be a sure cure for the bite of poisonous serpents. It is recommended in the dropsy to rub on where the swelling may be. I have frequently used it in injections to soften and quiet the internal surface of the canal. A great spoonful or two, according to the age of the patient, and the quantity of matter that you inject is a common portion. For a laxative an ounce should be given.

## ALDER.

## PRINOS VERTICILLATUS.

Black alder is good in flabby, ill conditioned ulcers as a wash, while it is taken internally. It is also good in case of worms and in bleeding at the lungs. A gentleman in Weymouth, (Massachusetts,) informed me, that he had cured himself of bleeding at the lungs, by taking a teaspoonful of the pulverised bark in molasses a few times. It possesses alterative properties, that is, the power of removing disease from the system, without any perceptible evacuation. It gives tone to the muscular fibers. A dose of the powder is about an even teaspoonful.

---

## ANISEED.

## PIMPINELLA ANISUM.

Anise is a native of Egypt and the Levant ; but is cultivated in the South of Europe, Spain, Malta, and sometimes in this country. It is carminative, that is, it removes wind and pain. A little of the oil mixed with water, or the essence, I have found to be very serviceable to give to sucking infants, to start the wind. The oil imparts a very pleasant flavor to liquors. It assists to promote a discharge from the lungs. Its medical properties are the same as the Fennel.

---

## FIR-BALSAM.

## PINUS BALSAMEA.

This tree is found growing in Canada, Nova Scotia, Maine, and in other parts of the United States. It is called good for sore nipples, flour albus, fresh wounds, and weakness of the stomach. Dose from twenty to thirty drops. It may be taken internally on loaf sugar.

## DRAGON'S CLAW.

PTEROSPORA ANDROMEDA.

*Fever-Root.*

Dr. Beach says that this plant is useful in various kinds of fevers, particularly typhus. It keeps up a moisture of the skin, without producing any excitement. To a teaspoonful of the root, add about a half pint of boiling water. It may be drank freely.

---

## WHITE AND YELLOW, OR PITCH PINE.

PINUS STROBUS, AND PALUSTIS.

All the different pines possess nearly the same medical properties; their properties consist principally in their essential oils. Pills made of turpentine are good against raising blood—two, twice a day is sufficient. They are stimulant, produce copious discharges of urine, and also good to expel worms. All the turpentines boiled down to the consistency of plaster are good to strengthen the weak parts and remove pain. The inside bark of the white pine is good in cases of suppression of urine, it may be drank freely. It is good as a plaster to cleanse foul ulcers. It produces a discharge of the menses, good in rheumatism, consumption, and diseases of the kidneys. The oil of tar is recommended by Dr. Beach in pain of the breast and obstructed menses. Take ten drops of the oil of tar at a time, three or four times a day to be given in milk.

---

## WILD CHERRY.

PRUNUS VIRGINIANA.

This tree is found growing in many parts of the United States. The bark taken in small doses is considered a

tonic, invigorating the whole system. In nervous debility, it has a tendency to allay the irritability, and also debilitated state of the stomach. Dr. Eberle states that the cold infusion in copious draughts a number of times a day, followed for nearly two weeks, reduced his pulse from seventy-five to fifty strokes per minute. Good in hectic fever scroffula and consumption.

---

## HEMLOCK.

### PINUS CANADENSIS.

A decoction of the bark is a powerful astringent, that is, contracting the fibers of the body; it is good therefore to bathe the parts in case of falling of the bowels, and womb, and weak joints. In these cases there should be added one third part the best French brandy. The oil is said to produce perspiration by bathing the bottoms of the feet. The gum makes an excellent plaster for a weak back.

---

## MANDRAKE.

### PODOPHYLLUM PELTATUM.

*May Apple, Indian Apple.*

The mandrake is found growing throughout the United States. It is a sure and certain cathartic or physic. Professor Bigelow says we have hardly any native plant, which answers better the common purpose of jalap, aloes, and rhubarb, and which is more mild and soft in its operation. Dr. Beach says we have found this root very valuable in many inveterate chronic diseases; such as venereal, scrofulous, bilious dyspeptic, or chronic affections of the liver, dropsy, &c. If given in too large doses, it often produces vomiting, as well as purging. When given in small

doses, and repeated once in two or three hours, it is said to produce an influence on every part of the system, touching every gland. It is good to expel worms. Dr. Lobstein says that he has never known it to fail in suppression of wind. Take Mandrake, Cream of Tartar, Spearmint pulverised—equal parts—one teaspoonful is a dose. A small teaspoonful is a dose of the mandrake alone.

---

## GARDEN POPPY.

### PAPAVER SOMNIFERUM.

This plant is a native of Asia, and is cultivated both in Europe and America. It relieves irritation, and allays excitement, produces insensibility and sleep. It relieves nervous affections, produces tranquility. It will prevent vomiting, quiets the stomach, and intestines; useful in diarrhœa.

We make but very little use of opium, as it relieves pain by destroying sensibility; there is therefore but very little gained. I believe many persons have lost their lives by the administration of opium, especially in acute inflammatory cases attended with pain; opium has been administered, the pain relieved—stupor and death ensues, and no one mistrusted that opium killed the patient. There are cases no doubt, that this article may be used to good advantage; but in many cases it locks up the disease, and defies all other medicines to penetrate.

---

## PLANTAIN.

### PLANTAGO MAJOR.

This herb is celebrated for its virtues in expelling poisons. It is said, that a spider and a toad, had a battle; the toad, so often as he was bitten by the spider, went and eat

of the plantain, and then renewed the attack ; a person deprived him of the plant, and he soon died.

A negro at the South, obtained his freedom for discovering a nostrum that would cure the bite of snakes. It is said that a Gentleman in Virginia was bitten by a spider above the knee ; a few minutes after, he perceived a pain shooting upward from the spot, which soon reached his heart ; a quantity of plantain was immediately gathered and bruised, and a quantity of the juice squeezed out, and swallowed which stopped the progress of the posion, so that a cure of the bite was obtained immediately. Culpepper calls it the best plant in nature. An ointment made of plantain by simmering it in spirits or fresh butter, says Dr. Beach, is good in the eryscipelas, tetter and saltrheum. The negroe's mode of cure for the bite of snakes, is, take equal parts of the expressed juice of plantain, and hoarhound, take a table spoonful as often as the stomach will bear it, and apply the same to the wound.

---

## POKE.

### PHYTOLACCA DECANDRIA.

*Skoke, Garget, Coakum, Pigeonberry-root.*

It is a native of America, but is found growing spontaneously in the South of Europe and Africa. The young shoots are good, boiled for greens. The root is emetic, purgative, or physical, and produces sleep. Its operation as an emetic, is very slow, not causing the patient to vomit sometimes under two hours, and acts for a long time on the stomach and bowels ; it is apt to operate as physic. Dose for an emetic, ten or twenty grains ; when used to purify the blood and not to vomit, from one to five grains is sufficient.

In all nervous difficulties, and rheumatism, particularly inflammatory, large slices of the root warmed by the fire and applied to the bottom of the feet ; for drafts are at-

tended with very beneficial effects. I have known it to be very beneficial in hystericks, and inflammatory rheumatism; in the latter case it produced gentle perspiration all over the body. The juice of the leaves is highly esteemed for the cure of the rheumatism preserved in spirits, they are also used as an ointment for the salt-rheum. The root should be dug late in November and cut into thin slices, and dried; the berries collected when perfectly ripe.

---

## SENECA SNAKE ROOT.

POLYGALA SENEGA.

*Rattlesnake-root.*

This root was introduced by a Dr. Tenent of Virginia, it was recommended by him as a cure for the bite of the rattlesnake. It is good in asthma, cough, and catarrh. Half of an even teaspoonful is sufficient for a dose of the powder.

---

## BLACKBERRY.

RUBUS VILLOSUS.

*Raspberry, Dewberry, Cloudberry.*

The dewberry is the kind of blackberry that runs on the ground. A syrup of the roots is a celebrated remedy for bowel complaints, particularly of children. Diarrhœa, dysentery, and cholera infantum. The different species referred to, possess nearly the same medical properties—they are all restringent. I have myself proved the good effects of the blackberry syrup, on my own child. The root must be boiled a long time in order to get out the strength—after the strength is out boil in a little milk and sweeten it, and let the patient drink at liberty. Dr. Beach

says that about five hundred of the Oneida tribe of Indians were attacked at one time, with the dysentery, that all recovered by the use of this root, whilst their neighbors, the whites many of them died with the same disorder.

---

## GARDEN PEONY.

### *PÆONIA OFFICINALIS.*

Is cultivated in gardens as an ornament. It was highly esteemed by the ancients for the cure of the epilepsy; the root was used; quantity for a dose from twenty to thirty grains, or half of an even teaspoonful.

---

## CASTOR OIL : CASTOR BEAN.

### *RICINUS COMMUNIS.*

This plant is a native of the East Indies and Africa, where it attains the character of a tree, growing thirty or forty feet high. In this country and England, it is annual. It is a mild gentle physic, particularly adapted to childrens diseases, and all cases where there is inflammation in the bowels, in diarrhœa, dysentery, and piles; but it is not sufficient to evacuate the bowels of that bilious mucus substance, which often collects upon the internal surface of the canal. Common dose is an ounce; children require more in proportion than adults, as it is supposed, that they digest a greater proportion of the oil. It is very commonly resorted to by pregnant women where they are habitually costive, with much propriety. Some have recommended it to be taken in milk, others in coffee; it may be taken in whatever the patient may find the most agreeable.

## YELLOW DOCK.

## RUMEX CRISPUS.

Narrow Dock grows on high land ; the root is very yellow. There are many species of the dock ; we use none except the common narrow, or yellow dock, English dock, that is cultivated in gardens, and the asthma dock or blood dock, which is good in case of asthma ; the veins of the leaf of this dock are of a blood red color.

The common narrow or yellow dock is one of the best of our native plants. It is physical and bracing ; it will evacuate the bowels without weakening the system, as many other medicines do,—three tumblers full per day at three different times may be taken with perfect safety. There is scarcely any disease where it may not be administered to advantage. I have used it in palpitation of the heart with very visible advantage. In all bilious complaints it has never failed of giving immediate relief. In the piles it always relieves. It will allay internal heat, and promote a moisture upon the surface. I have found nothing surpass it in cases of hectic fever. In all diseases of the skin it may be administered with advantage. It is good in chronic rheumatism, as well as inflammatory. The reason that the value of this article is so little known perhaps is because the patient does not take enough of it, and does not follow it up long enough. It will purify the blood, promote the secretions and excretions, allay inflammation, and irritation, and throw out of the system acrimonious humors. It is rather cold when taken alone, it may be made palatable with sugar or molasses, and add as much cayenne to every tumbler full as you may conveniently take up upon the handle of a teaspoon, or half of a teaspoon full. It will prove gently laxative.

I have used it in bleeding at the lungs attended with a cough, with beneficial results ; in this case the powdered root should be used one teaspoonful to a cup full of milk, scalded in. It is rather difficult to get the right kind ; that which is found in wet land is white and woody, and is not

fit to use : there is no kind good but that which is yellow and fibrous. The English water dock such as is cultivated in gardens, perhaps, is the best. I have administered this article in a multitude of cases of the piles, and have never known it to fail in giving immediate relief.

---

## RHUBARB.

### RHEUM PALMATUM.

Of this herb there are three principal species, the Russian, the Chinese, and the European; the Russian is preferred. The European requires two or three times the quantity to produce the same effect as the other kinds. The rhubarb possesses properties almost peculiar to itself. The *Rumex Crispus*, or yellow dock, has nearly the same operation; but it is vastly inferior in strength. Rhubarb possess a restringent, or property of contracting the animal fibers, whilst it operates as a thorough cathartic; it therefore answers better for patients of weakly constitutions, that cannot bear more drastic physic: if there is weakness and debility, in the bowels; it is very serviceable in the piles, diarrhœa, and dysentery; it first evacuates the bowels, and then braces the relaxed fibres. In cholera, Dr. Beach, recommends adding alkali.

In small doses it will invigorate the stomach. I have given from half of a teaspoonful to three heaping teaspoonfuls at a dose, very rarely as much as three teaspoonfuls. The patient should take but a teaspoonful at a time, once in about fifteen minutes—suck a little lemon or take a little vinegar and water, sweetened, or the stomach will be liable to reject it. Rhubarb combined with aromatic herbs will prevent its griping effects, that is, those roots or herbs that possess a sweet spicy scent and agreeable pungent taste—the vegetable powders may be combined with the rhubarb in equal parts.

By roasting the rhubarb, it is said the purgative or physi-

cal properties are destroyed, leaving only the restraining. The American Dispensatory gives as a portion from twenty to thirty grains, but this is quite insufficient to remove diseases of long standing. Dr. Beach says the root of this plant is a valuable and singular cathartic, differing from all others of the materia medica. It operates first by evacuating the intestinal canal, and then gently astringing or restoring the tone of it.

---

## SUMACH.

### RHUS TYPHINUM.

The bark of the root and berries makes an agreeable cooling drink; good against canker; good to wash the mouth, and gargle the throat in ulceration of the throat and mouth. A strong tea made of the berries or bark of the root is excellent in cough, either the common or whooping cough; add about one third molasses; take care that the molasses be of a good quality.

---

## BITTERSWEET.

### SOLANUM DULCAMARA.

Found in the United States growing on rich loose rocky soil. The bark of the root simmered in hogs lard makes an excellent ointment for diseases of the skin, as well as for sores. A strong decoction may be applied to the skin whilst the same may be taken internally in quantity of from one to two fluid ounces, four times a day, and gradually increase till it produce some pain in the head.

It has been recommended in chronic rheumatism, and the liver complaint. Dose of the powders from half to a whole drachm.

## BLOOD ROOT.

## SANGUINARIA CANADENSIS.

It is found growing in low land among rocks. It grows natural in this country. It flowers in March and April. It is used externally in cleansing ulcers, and removing fungus flesh. It is very excellent to increase the discharge of mucus from the lungs and trachea, or windpipe. It is therefore good in coughs and croup. It is emetic and narcotic; it produces perspiration, and menstrual discharges; it is highly recommended in the influenza, hooping cough and phthisic. Dr. Macbride in a letter to Dr. Bigelow, speaks highly of this root. He says he has administered the tincture sixty drops in dropsy in the chest, three times a day, and increased every day till nausea followed each dose. It is good in bilious diseases, and malignant scarlet fever. It is excellent in catarrh; it is the base of our catarrh snuff. Professor Smith of New Hampshire says he has cured a number of polypus, the soft kind, by using it as a snuff. Dose for an emetic from ten to twenty grains.

---

## COMFREY.

## SYMPHITUM OFFICINALE.

Comfrey is a native of Europe, but cultivated in this country; it is a mucilage well adapted to allay irritation; good in dysentery, diarrhœa, and consumptive complaints excellent in coughs.

---

MUSTARD. *The Seed.*

## SINAPIS ALBA.

Mustard is a very valuable medicine. It is stimulant. A great spoonful of the seeds taken with molasses will

cure the cholick, and give action to the stomach; also a popular remedy in the dyspepsy.

The bruised seeds in the dose of a large teaspoonful acts as an emetic; it facilitates the action of other emetics; it has been used in dropsies. We find mustard very serviceable in all cases where a blister is necessary. Take rye meal, mix it with vinegar, cover the surface of the poultice all over with pulverised mustard, and apply it. There is not the danger from mortification in the mustard poultice, as there is in the common blister. This poultice is very useful for a pain in the side; when applied to the feet, good against spasms.

A teaspoonful of the powdered mustard, with water will expel poison from the stomach very promptly. The properties of the black and white mustard are nearly alike.

## PINK.

### SPIGELIA MARILANDICA.

Carolina Pink stands high as a cure for worms. A knowledge of its properties as a vermifuge, was communicated to a number of the faculty in Carolina, by the Cherokee Indians. It is used in this country perhaps more than any other article to destroy worms. It may be given in powder from half a teaspoonful to **two teaspoonfuls** two or three times a day, after which **give a brisk cathartic.**

## SARSAPARILLA.

### SMILAX SARSAPARILLA.

This plant is a native of South America, and was introduced into Europe by the Spaniards, about the year 1563. It was formerly very highly esteemed as a cure for the venereal disease. It is now esteemed insufficient to meet

that disorder. It is said to be the principal ingredient in the celebrated Swains Panacea. It is alterative in its properties, that is, it produces a change favorable to health, without any perceptible evacuations. It is much used in syrup for alterative purposes. I have made use of our common Sarsaparilla instead of the Spanish, and find it answers the purpose well. We use it in our alterative syrup for purifying the blood, chronic rheumatism, liver complaints, diseases of the skin.

---

## SAGE.

### SALVIA OFFICINALIS.

Sage makes a very wholesome drink ; answers the purpose of tea, and I believe it to contribute much more to the health than that article. One reason why many people do not like sage as a drink, is, because they make it too strong.

It is good made into a strong tea for children troubled with worms, and as a gargle in quinsy and canker. It is useful in colds, coughs, and fevers. One author has so high an opinion of it, that he says " why dies the man whose garden sage affords."

---

## BALSAM OF TOLU.

### TOLUIFERA BALSAMUM.

This tree grows in Spanish America. The balsam flows from incisions made in the bark of trees, during the hot season. It is found in Peru, Carthagena, New-Granada, and Tolu. This balsam is stimulating and mild, has a pleasant flavor, and is much used in coughs.

---

## TANSY.

TANACETUM VULGARE.

*Double Tansy.*

Few people perhaps are aware of the value of this herb, particularly in regulating flooding, after childbirth. From one to two tumblerfulls, of the strong tea of double tansy, and spirits, with molasses, may be taken in the course of twenty-four hours, for a number of days after the child is born. I know this to be good, having proved it. It regulates the flooding, whether it be too little or too much; it gives vigor and energy to the system. Those females, who are subject to humors, or diseases of the skin of any kind, particularly require, after delivery, something to throw it out to the surface; the debilitated state of the body in these cases give the humors advantage, and they fix upon some of the internal visera, the most weak, and frequently produce almost immediate death. I believe the free use of this herb would have saved many a woman's life. I have never administered it without seeing decidedly good effects follow.

## AMERICAN IPECACUANHA.

EUPHORBIA IPECACUANHÆ.

*Spurge.*

This plant is a native of America; found in the middle and southern States, growing in woods, bogs and sandy land. It is very much celebrated for its power to evacuate water—this it is said to do when every other agent fails. The distinguished botanical physician, Dr. Bone, of New Jersey, prescribed this medicine in a great variety of diseases. Fifteen or twenty grains may be administered a number of times a week. It operates as an emetic and physic; is also good in obstructed menses. Dr. Beach,

says it is possessed of very powerful properties ; it is an excellent hydragogue ; evacuating the water when all other agents prove abortive or useless.

---

## SLIPPERY-ELM.

### ULMUS FULVA.

Is a native tree of North America. The slippery-elm, is an excellent remedy in all inflammatory diseases, whether external or internal. It is one of the best remedies that can be prescribed in dysentery and bowel complaints ; useful in sore throat, inflammation of the lungs and coughs. For a poultice, it stands first in the vegetable kingdom ; for ulcers, tumors, swellings, gunshot wounds and chilblains. The tea is said to be much used by the Indian women, to procure easy labor, and is drank two or three months previous to their being confined. A man in the revolutionary war, lived ten days on elm bark and sassafras. The Indians resort to it as a nutriment in cases of extremity. A very valuable drink may be made of the flower of slippery-elm, which is the best form to use it ; take one heaping teaspoonful of the flower, sweeten it with loaf or brown sugar ; add a little salt, and cinnamon, mix them well together ; then add, by degrees, a pint of boiling water, put in a little milk and nutmeg. The patient may drink a gill at a time—this will keep up the tone and strength of the system where more solid food cannot be taken. For a cough, instead of using sugar put a gill of the best molasses, and the juice of two lemons, or as much vinegar.

---

## RED RASPBERRY.

## RUBUS STRIGOSUS.

A native of Great Britain, but grows spontaneously in the United States, and sometimes cultivated in gardens. It flowers in May and June; fruit ripe in August. Dr. Elias Smith recommends the leaves of this plant very highly in dysentery, diarrhœa, and to remove canker from the mouth, throat, stomach, and bowels; also a wash of the strong infusion of the leaves, for burns, sores, and diseases of the skin. He says, that children who have sore mouths ought to wash with it often.

---

 BLUE FLAG.

## IRIS VERSICOLOR.

Found throughout the United States, by the side of streams and wet places. It flowers in June—has a very handsome blue flower, rising about two feet high. The Oneida Indians, make much use of this root for the cure of rheumatism. The directions are, make a strong tincture of the blue flagroot, by putting it into spirits or alcohol. Let the patient take a teaspoonful three times a day, after eating, and increase gradually; if it should produce slight pains in the head and breast, take less. I have used this root together with cokum or garget, for the venereal taint, with decided good effect.

Dr. Beach says that Dr. Woodruff informed him, that this root is valuable in several diseases. He says, given in doses of six or eight grains, night and morning, it proves gently laxative and eradicates the most inveterate taint of the system.

Says Dr. Elisha Smith of the city of New York—"This root possesses great medicinal power; and from a long experience of its use, I am convinced that it is equally efficacious as mercury, in all the diseases in which, in the com.

mon practice, it is supposed that mercury is indicated. It serves as an alterative and sialagogue, that is, produces a flow of saliva, in small continued doses, as a powerful drastic purge, stimulant, a vermifuge a diuretic, errhine, &c. It is a complete substitute for that mineral, for any of its purposes; and, being a vegetable, I consider it far preferable, because, after having its operation and effect, it passes off, and leaves the system free; whereas, mercury fastens upon the bones and solids, and remains like a carroding canker, rendering vast numbers feeble and debilitated for life. Such is the difference between these two articles of medicine; and it would be a happy event for mankind, if physicians would, for once, divest themselves of their blind prejudices in favor of the mineral, and consent, at least, to make a trial of this vegetable substitute. Their humanity should be a sufficient inducements for this. The plea that the vegetable kingdom contains no equivalent to mercury, is no longer tenable; then why should not physicians discard the use of it at once, when it is universally acknowledged and felt, that in the aggregate it has proved a curse, a destroyer to the human race. The disuse of it, it is true, would lessen the employment of the medical profession; but the satisfaction they must feel at the proportionate decrease of suffering among their fellow beings, will, no doubt, richly compensate them for their pecuniary sacrifice."

For a cathartic the dose is about half of an even teaspoonful.

---

## NUTMEG.

### MYRISTICA MOSCHATA.

This was entirely unknown to the ancients; it is used to cover unpleasant taste in medicines. In doses of two or three drachms, it has been known to produce dangerous consequences. It removes wind and pain, and is good

in a weak debilitated state of the stomach; it gives an agreeable flavor to medicines, useful to check diarrhœa. The properties of nutmeg, are said to be contained in their volatile oil. Two or three drops of which is sufficient for a dose—about half of an even teaspoonful of the powder is a dose for a medicine.

---

## VIRGINIA SPEEDWELL.

### VERONICA VIRGINICA.

Dr. Beach gives a number of instances where cures have been effected by this article, in very bad cases of dropsy and leprosy. For the dropsy take half a pint of the strong decoction of the speedwell and drink it in the course of a few hours.

---

## WATER FENNEL.

### PIHELLANDRIUM AQUATICUM.

Dr. Beach informs us that J. F. Daniel Lobstein, M. D. in a communication to the members of the Associate Medical Society of Botanic Physicians and Surgeons of New-York, says of this herb:—I have employed this remedy in four cases of mucous consumption, in two of humored asthma; in one of chronic ulcers of the legs; in three of phthisic ulceroca, or genuine pulmonary consumption; in three of chronic catarrh, and in two cases of hæmoptisis.

CASE I.—The first case of mucous in which I prescribed this remedy, occurred in Strasburg, in France. The patient was a middle aged woman; she had taken various remedies for her complaint, before I saw her, and was, at the time I first prescribed for her, exceedingly reduced. Her cough, was at times very violent, attended

occasionally with a copious and tenacious expectoration. She was much emaciated, and effected with symptoms of dyspepsy; a slight paroxysm of fever supervened every afternoon, and the night sweats were sometimes very profuse.

On being first called to her, I ordered such remedies as I thought calculated to mitigate the cough, from which she derived temporary benefit. After having continued for a few weeks, with the use of the common demulcents and expectorants, in cases of this kind, I prescribed the *Semen Phellandrium*, or Water Fennel, in union with *Saccharum Lactis*, that is, Sugar, and, Gum Arabic, in the dose of ten grains of the former, meaning Water Fennel, the seeds, and twenty grains of the other two articles three times a day. After having used it about fourteen days, she was evidently better. The fever had almost entirely disappeared, and the cough was much less violent, and accompanied by a much easier and better expectoration.

Under the continued use of this medicine, she gradually recovered, more and more strength; her appetite became good, and in about six weeks she was so well as not to require any farther attendance.

CASE. II.—This was also a case of mucous consumption in a young woman of Strasburg, she contracted her disease from an imprudent exposure to a cold atmosphere, immediately after having over heated herself by dancing. She was at first affected by a dry cough, which she neglected, until, becoming weak and troubled with night sweats, with increased coughing. She requested my attendance.

I at first prescribed a mixture composed of Kerme's mineral, Gum Arabic and Sugar, by which the cough and expectoration were considerably improved. The expectoration, however, soon became exceedingly copious, and emaciation with great debility ensued.

I now prescribed *Semen Phellandrium*, or Water Fennel, the seeds, and had the satisfaction of seeing my patient gradually recover under its use. I have since pre-

scribed this remedy in two other cases, of this variety of pulmonary disease, and with the happiest effects.

CASE III.—The first case of phthisis pulmonalis ulcerosa, in which I employed this article was in a woman of Strasburg. She had been laboring under disease a number of years, and had undergone various treatments for her disease. She was about thirty-two years of age, and the mother of three children. I found her very emaciated with frequent and troublesome cough, attended with copious purulent expectoration; she had regular exacerbations of fever; a small tense and frequent pulse, and experienced debilitating, night sweats. Scarcely any hopes were entertained of her recovery or indeed by myself, being requested however to prescribe for her, I put her upon the use of the Phellandrium Aquaticum, or Water Fennel, and in the course of about four months, she was almost restored to her original health. When I left Strasburg, in 1818, four years had already elapsed, during which, she was free from her disease. Two similar cases I treated in Philadelphia.

CASE IV.—This was also a case of phthisis pulmonalis exhibiting the most unequivocal symptoms of the disease, expectoration was purulent, the night sweats exhausting, the cough very troublesome, and debility and emaciation were progressing; she gradually and completely recovered under the employment of the Semen Phellandrium, or Water Fennel. I treated another consumptive patient, a weaver, whose disease yielded effectually to the powers of this remedy.

CASE V.—This was a case of humored asthma, in a widow about sixty-five years old. She had suffered much from the frequent attacks of the disease, and had consulted many eminent physicians. After prescribing various remedies without any particular advantage, I determined to give her the Semen Phellandrium, she soon found herself relieved by this remedy; and was finally entirely freed from her complaint by its use.

CASE VI.—This case of asthma, occurred in a young woman at Reading, Pennsylvania. She had already suffered much from the disease, and undergone various treatments for its removal without any advantage. In this case the Semen Phellandrium was signally serviceable. She was speedily and effectually cured by it.

---

## BITTER ROOT.

APOCYNUM ANDROSEAMIFOLIUM.

*Bitter Root, Dogsbane, Fly-trap, Honey Bloom, American Ipecacuanha, Indian Hemp.*

This root is emetic and cathartic ; it is expectorant, or increases the discharge of mucus from the lungs, and increases urinary discharge. It is good to regulate the bowels when in commotion attended with fever. It is said to answer all the purposes of an emetic that the ipecacuanha does ; but it requires about one third more. It is an excellent tonic ; we use it frequently in bitters. Dr. Parish, of Philadelphia, and Dr. Knap both found it useful in the dropsy, the former gentleman cured an aggravated case of the dropsy by the decoction of this root ; it acted as a cathartic, powerfully evacuating the water.

About the bowl of a teaspoonful will vomit and purge ; for a tonic a quarter of a bowl of a teaspoonful is enough. Roots and herbs loose their virtues very much by age, so one should ascertain nearly the strength of his medicine, or he will be deceived in its operation. We frequently use the Bitter Root in the vegetable powders. It is much used by the Indians in the cure of the venereal.

---

## PRICKLY ASH.

ZANTHOXYLUM FRAXINEUM.

*Toothache Bark, Toothache-tree.*

The bark and berries of the Prickly Ash are stimulant, tonic and energetic. It has been highly esteemed as a remedy for the chronic rheumatism. It is a celebrated remedy for the toothache. It is a very common ingredient in bitters, it possesses somewhat the properties of guaiacum. By a long continuance in taking this bark, it has been said to produce salivation. The dose to be taken is from ten grains to half of a drachm to be repeated three or four times a day.

## PENNYROYAL.

HEDEOMA PULEGIOIDES.

*Thick-weed, Stinking-balm, Squaw-mint.*

Found all over the United States and in Canada. It is gently stimulant, produces universal perspiration, when taken in large quantities warm. We consider it the best drink to accompany the Lobelia emetic. In cases of sudden suppression of the menses a tumbler full of this drink with an even teaspoonful of black pepper pounded fine, sweetened, and drank warm after soaking the feet in weak lie, will rarely fail of producing the desired effect. It is useful to qualify other medicines, for sickness to the stomach, colds, &c. It may be drank at liberty.

## ELDER.

SAMBUCUS NIGER.

The roots, bark of the stalk, flowers and berries possess medical properties. The flowers are good to cure the

scurvy, taken in strong tea; they are good also in bowel complaints of children. It is gently laxative and has a tendency to purify the blood.

I have found great service from a syrup made of the berries in weakness of the bowels. The bark is often used in making an ointment for diseases of the skin, and in syrup for the dropsy. I have used the roots in alterative syrup when I could not obtain the flowers. The patient may take at liberty with safety as much as he shall choose. The young leaves and buds are said to be a thorough and useful physic.

---

## ROSE.

### ROSAGALLICA.

The flower is tonic and astringent. Dr Beach prescribes the rose water in connexion with the pith of young sassafras twigs in ophthalmia or inflammation of the eyes.

---

## HENBANE.

### HYOSCYAMUS NIGER.

Henbane is annual, a native of Europe, but grows common in this country; found by the sides of roads and among rubbish.

It somewhat resembles opium in its operation. The root possesses the same properties as the leaves, and in a higher degree. Henbane is an active poison and often proves fatal when taken in large doses; as an antidote, take a heaping teaspoonful of powdered mustard in water to evacuate the stomach, afterwards take water and vinegar, followed up with sweet oil. Black Henbane is used in various spasmodic diseases; dose of the juice of the leaves from one to two grains. It differs from opium

in as much as it does not produce costiveness. In open ulcers the powdered leaves have been recommended; it is one ingredient in the celebrated Lamott's pills for the cough.

---

## MANNA.

FRAXINUS ORNUS.

*Flowering Ash.*

The flowering ash is a native of the South of Europe, particularly of Sicily and Calabria. When first gathered it seems not to possess the physical properties that it does when it has age, as the natives of the country where it is gathered use it instead of sugar. We are informed in the American Dispensatory that Manna is a gentle laxative, usually operating pleasantly, but in some cases, producing flatulence and pain.

Though peculiarly adapted to children and pregnant women, it may be given with advantage in ordinary cases of piles from constipation or costiveness unattended with dyspeptic symptoms. It is usually, however, prescribed with other purgatives, particularly senna, rhubarb, magnesia, and the neutral salts, the taste of which it conceals while it adds to the purgative effect. The dose for an adult is from one to two ounces; for children from one to four drachms. It is usually given dissolved in water or some aromatic infusion; but the best flake manna may be conveniently administered in substance.

---

## POLYPOD.

POLYPODIUM VULGARE.

A fern belonging both to the old and new continents, found growing in old walls and trunks of trees. The roots

are used. They are about the thickness of a goosequill. It is cathartic or physical; good to expel worms. It is said to have been used with other articles successfully in expelling the tænia, or tape worm. It is stated also that a lady in South Carolina, was cured of a consumption with this herb in connexion with the Liverwort.

---

## MULLEN.

### VERBASCUM THAPSUS.

The leaves of this plant are good in dysentery and piles, good to discuss tumors. A poultice is sometimes used of the leaves and pith in white swelling, useful in cough when made into a tea, and a very good ointment may be made of the flowers simmered in hogs lard for sore nipples. It is good in cases of female obstructions, bleeding at the lungs and stomach. It is somewhat cathartic.

---

## SCULLCAP.

### SCUTELLARIA LATERIFLORA.

*Mad-Weed, Hood-Wort, Blue Pimpornell.*

The following account is from Dr. Beach :

Tonic, nervine and anti-spasmodic. It is remarkably efficacious in chorea, or, St. Vitus' dance; with the infusion I have cured a great number of cases of this disease. It has of late become quite famous as a cure for the bite of mad dogs. Its property as a medicine in this case, was first discovered by Dr. Vanderesveer, towards 1772. He used it with the utmost success, and is said to have, till 1815, at which period he died, preserved four hundred persons and one thousand cattle from becoming affected with the disease, after they were bitten by rabid animals.

It is likewise stated that his son prevented, relieved, or cured forty persons in three years, in the States of New-York and New-Jersey, by the use of this article. It is also very useful in convulsions, tetanous and tremours.

---

## BETH ROOT.

*THILLIUM LATIFOLIUM.*

*Rattlesnake Root, Wake Robin, Cough Root, Indian Balm, Ground Lily.*

This root has the power of contracting the fibers or, is bracing, ; good against diseases of the lungs and chest, and spasms. The root is employed in cases of bleeding from the kidneys or bladder, in bloody urine, in excessive menstrual evacuation, in spitting blood, hectic fever and cough. The root is esteemed highly by some practitioners for a poultice. Dr. Beach says he has used the powdered root in doses of a teaspoonful in flour albus, or whites of females with much success. Refinesque says that the poultice is a certain cure for inflamed carbuncles and ulcers. Dose a tea spoonful at a time, may be taken at liberty.

---

## WORMWOOD.

*ARTEMISIA ABSINTHIUM.*

Wormwood is a native of Europe, but raised in our gardens. Flowers in July and August.

Wormwood is a very valuable herb,—a tea of this herb will often correct the stomach and give an appetite ; it is excellent to break up a cold—make a strong tea put in a glass of Holland gin, and fill the tumbler with hot water, sweeten it with sugar, put sugar in the warming pan, warm the bed at night, and after getting into bed, take

down the above prescription ; it will be sure to break up a cold. I have taken it myself and know its efficacy by experience ; the gin may be omitted if not at hand.

The herb pounded with spirits is good to put on bruises ; also united with double tansy and hops pounded together and wet with spirits or vinegar, is excellent to apply to any external inflammation, or a pain in the side ; if you have not the three articles above named use what you have. Bitters made of this herb is very good for jaundice.

---

### INDIAN HEMP.

ASCLEPIAS INCARNATA.

*Or, Water Nerve Root.*

This is a species of the silk weed. I believe it to be one of the best remedies for the palpitation of the heart ; I have found it of great service in this complaint. It is a powerful nervine, very good in old standing nervous complaints of women. I cured a Mrs. Perkins of Dighton, Mass., with giving her an even teaspoonful of the powdered root, in molasses, three or four times a day for a few weeks with other medicines. In this difficulty we consider it almost an infallible remedy.

It will answer the purposes of opium without its constipating effects or tendency to costiveness and inaction. It will produce sleep.

---

### INDIAN POKE.

VERATRUM VIRIDE.

*Poke Root, Swamp Hellebore, American Hellebore.*

Found in the United States, says the American Dispensatory ; it may be used in the same quantities and for the

same purposes that the European Hellebore is used. The root is sometimes taken in snuff for the catarrh, combined with aromatics.

---

## BLESSED THISTLE.

### CENTANREÆ BENEDICTÆ.

Is a native of the South of Europe, and is cultivated in gardens in different parts of the world; it is naturalized in this country. A tea taken cold is good in a weak debilitated state of the stomach. A stronger infusion of it taken in bed produces copious perspiration, whilst still stronger, and taken in large quantities produces vomiting and assists the operation of emetics. Its medical properties are somewhat like that of camomile.

---

## BORAGE.

### BORAGO OFFICINALIS.

Makes a cooling drink in cases of internal inflammation, produces gentle moisture without heating the body. It is said to be much used in France; it is sometimes used in rheumatism and diseases of the skin.

---

## CLEAVERS.

### GALLIUM APARINE.

#### *Goosegrass.*

The following is from Dr. Smith's Botanic Physician: "Cleavers is one of the most valuable diuretics that our country produces. I have found it an excellent and speedy medicine in all suppressions of the urine and gravelly complaints, and is a powerful discutient.

“ It has also been found beneficial in the cure of the scurvy and spitting of blood. The expressed juice of this plant, mixed with oatmeal to the consistence of a poultice and applied cold over an indolent tumor, three times a day, keeping the bowels open in the meantime by castor oil, and taking a table spoonful of the juice every morning, will often disperse it in a few days.” A tumor is a swelling without inflammation.

Infusions of this herb should always be made in cold water—heat destroying its virtues. Three or four ounces of the dried herb to a quart of water, is sufficient; this should be drank for a common daily drink.

It is an admirable remedy in gravelly disorders, often curing them entirely, alone. It seems to possess a solvent power over the stone, or gravel, crumbling it into a sandy substance, so that it is discharged without difficulty.—When urinary obstructions proceed from a collection of cold, slimy, or muddy substance in the kidneys or bladder, this effectually clears it out in all cases.

“ In inflammatory affections of the kidneys or bladder, the cleavers infusion is peculiarly applicable, from its cooling as well as its diuretic quality. It gives great relief in the scalding of the clap.”

The cold nature of cleavers, however, renders its employment in dropsies, and other diseases of cold and debility, improper.”

---

## MASTERWORT.

HERACLEUM LANATUM.

*Cow Parsnip.*

Is found from Canada to Pennsylvania, and flowers in June. It grows from three to five feet high, and is often an inch in diameter; it resembles parsley in appearance. It is said by Dr. Bigelow to be poisonous. Dr. Thatcher, says that Dr. Orm of Salem, Mass. used it successfully in

cases of epilepsy, attended with flatulence and gastric disorder. He directed two or three drachms of the pulverised root to be taken daily, for a long time, and a strong infusion of the leaves to be drank at bed time. The root is stimulant and carminitive, or removes pain and wind.

---

## FUMITORY.

### FUMARIA OFFICINALIA.

An annual European plant, and grows in cultivated land in this country; it flowers from May to August. It is said to be useful to cure diseases of the skin. Cullen used two ounces twice a day of the expressed juice; it is said to possess an alterative property; useful in diseases of the liver.

---

## LOBELIA.

### LOBELIA INFATA.

*Indian-tobacco, Emetic-weed, Wild-tobacco, Puke-weed  
Asthma-weed.*

This plant blossoms from June to November, it has about the same medical properties let it be gathered what time it may. I think, however, August the most suitable time to collect it. It should be carefully dried, pulverised and put up close from the air.

It is found in all parts of the United States; it is most abundant along the sides of roads, in rye fields after being reapt, and sometimes in mowing fields. It grows from one to two feet high contains numerous pods, with a blue flower. It has long been known, and used by the aborigines of our country, as an emetic; but its merits were never thoroughly tested till it was unfolded by Doct. Samuel Thompson. I esteem it the most valuable of our native plants.

This herb properly administered will break up diseases of long standing that have resisted the power of every other remedy prescribed. By its action upon the great sympathetic nerve it allays irritation and inflammation, and is peculiarly adapted for the cure of cholera, hydrophobia, or bite of the mad dog, lockjaw, asthma, fits, and all spasmodic diseases.

In the hooping cough, tightness of the chest, difficulty of breathing, and all bilious affections, it is almost a sovereign remedy; and, indeed, there are but few diseases where it may not in some form be profitably employed.

I have administered the Lobelia to a multitude of patients in different diseases and to different ages from the infant at the breast, to eighty years of age with decidedly good effect.

Says Dr. Beach, President of the Reformed Medical College, of New-York: "The charge brought against it (meaning Lobelia) by some physicians, is totally false. I have used it for many years in various diseases both of men, woman and children, and in which I have never seen a single unpleasant symptom arise from its administration." Says Dr. Robinson, who is a convert from the old school, Lobelia will penetrate the system, equalize excitement, remove obstructions, cleanse the stomach and bowels, purify the blood, and remove diseases from the lungs and liver, in a manner far superior to whatever was accomplished by mercury; while it possesses this advantage that mercury never had; it acts in harmony with all the principles of life; leaving no taint, no disease, no wrecked and decayed bones, and deformed constitutions behind.

*Mode of Administering.*—A common portion is about three teaspoonfuls, given at three different times; sometimes one third of this quantity is sufficient, at other times two thirds, and again the whole three teaspoonfuls: it depends upon the constitution of the patient, and the nature of the disease. I have in some cases given four, five, and in one case six teaspoonfuls. I give oftener than any other portion, three teaspoonfuls at three different times in from

twenty to thirty minutes between each portion of the *Lobelia*. There should be added about half of an even bowl of a teaspoon of cayenne, and a little more than this quantity of skunk-cabbage; these three articles, viz. the *Lobelia*, cayenne, and skunk-cabbage together, with a teaspoonful of sugar should be put into a tea cup two thirds full of pennyroyal tea made strong, all mixed together and drank dregs and all. Take care and not put the *Lobelia* into the tea whilst it is scalding hot, as it will produce distress.—No more drink need be given to the patient till he vomits, then let him drink as much pennyroyal tea as he will—the tea may be sweetened a little.

In case you intend to give three portions, and you have given two portions, and the patient does not vomit, I generally wait an hour after giving the second. If the patient does not vomit then, give the third. I generally give from one to two quarts of pennyroyal tea during the vomiting. It makes the emetic operate easier, and renders it more efficacious. A little before the patient has done vomiting commence giving water gruel. This is very important. I have required patients to drink a quart in a short time, that had not taken so much nourishment for a number of days before. The gruel should be boiled half of an hour and skimmed.

Before giving the emetic, I give a heaping teaspoonful of vegetable powders, in a tea cup of hot water, sweetened. There should not be any rhubarb in these powders, and should be taken half or three quarters of an hour before taking the emetic. Where it is convenient, it is best to prepare the patient two or three days, by giving the pills and the vegetable powders every night before giving the emetic. We sometimes give the tincture, this is best made from the seeds. The seeds must be pounded very fine in an iron mortar; add two ounces to a pint of alcohol and a gill of water. Take a great spoonful to a dose—a teaspoonful for a child from one to two years old, once in ten minutes, till the child vomit.

The adult may take a great spoonful once in fifteen

minutes, three or four portions, taking warm tea as often as he vomits, and water gruel afterwards. It is very important to get the body warm before giving the emetic. A hot stone quenched in vinegar should always be put to the patient's feet in bed; if he complain of chills, put on more cloths, and give a teaspoonful of the elixir in warm water. If the patient should call for cold water let him have it, but not in large quantities at once. I have never found any ill effects from it. A person should never take a course of the emetic at night, after being exposed all day to the cold, the body should be warmed by degrees.

---

WOOD SORREL possesses nearly the same properties of the common sorrel. It is cooling; useful simmered in milk for a drink in febrile and inflammatory affections.

VINEGAR is cooling and produces urinary discharge; it is useful to burn in the sick room to destroy putrid effluvia, or cover an unpleasant smell. It is sometimes given as a clyster.

ACONITE was well known to the ancients as an active poison. It is rarely used in practice;—it has been employed in rheumatism, gout, scrofula, cancers, and some cutaneous diseases. From one to fifteen drops of the decoction is a dose. It is said to have been employed with success by some German practitioners.

STAR GRASS possesses tonic properties and is useful in bitters—ten grains are sufficient of the powder for a dose.

PEACH LEAVES AND TWIGS are useful in a bad cough, steeped down to a strong tea with about half of the quantity of skunk-cabbage, add the same quantity of good molasses as there is of the tea, take half of a wine glass three or four times a day. I have cured\* an obstinate cough with this medicine. Peach stones, the meats, are very useful in bitters to assist the digestive organs, and prevents

inflammation of the kidneys and bladder; the leaves and twigs have the same properties as the meats, and will answer when the meats cannot be obtained.

YARROW, it is said, purifies the blood, opens the pores, removes obstructions, stops spitting of blood, and cures the bleeding piles; good in dysentery. It may be taken in the form of tea.

WINTER GREEN. The oil is good in toothache; it is much used in syrup by the country people to purify the blood. The Indians, it is said, make great use of it as a stimulant restorative cordial. The oil is used to disguise many popular panaceas.

ICELAND MOSS possesses nearly the same properties of Gum Arabic; it is bracing and nourishing, very good in coughs.

COWAGE. It has been used in expelling the round worm; its operation is said to be merely mechanical by irritating and aiding its expulsion by wounding it without injuring the intestines. It is prepared by dipping the pods in syrup or molasses, and then with a knife scraping off the hairs along with the molasses until it forms a mixture of the consistency of honey, which is given in doses of a teaspoonful to a table spoonful, in the morning, then followed by a brisk cathartic. It is first advised, before administering this medicine to give a brisk cathartic.

GOLDEN ROD is gently laxative, the flowers have been used in removing obstructions in the urinary organs.

CENTAURY makes an excellent bitter. It is esteemed by Dr. Beach to be the most efficacious of any herb that is indigenous to the United States; two ounces of the centaury and one of the orange peel, says the same author, infused in two quarts of brandy for two weeks. One table spoonful taken before breakfast and dinner, will create an appetite; and children, who have worms, taking two teaspoonfuls or more, every morning, will effectually destroy them.

**ICE PLANT.** The root of this plant is esteemed almost an infalible remedy for fits in children. The juice diluted in water is said to be very efficacious in sore eyes. For fits, half of a teaspoonful of the powder is recommended in tea.

**WHORTLEBERRY**, vulgarly called huckleberry, is good in suppression of urine, and is said to afford immediate relief in gravel. To be taken at liberty.

**NETTLE.** The young shoots are good in the spring for greens; and especially good in scurvy; good in suppression of urine; consumption.

**MOTHER-WORT** is against spasms; produces menstruation, and is nervine; very good to settle the head and nerves of women.

**BUTTON BUST**, is a shrub growing in wet places, it bears a round flower and burr. It is very excellent to produce urinary discharges.

**CANKER ROOT.** This herb grows in low lands, about a foot high; the root only is used; it is very mucilaginous. Cold water should only be used to extract the mucilage; it is said to be almost a sovereign remedy for the canker; it may be taken at liberty.

**CHOCOLATE ROOT**; *or*, **AVENS ROOT**, is found in wet places growing about a foot and a half high, it makes a very wholesome drink; is used by the country people instead of chocolate which it very much resembles in taste. It makes a good strengthening drink for the sick, where something supporting is needed; good to make blood.

**INDIAN WICKERBY.** The root is mucilaginous and makes one of the best poultices in the world for an old sore or inflammation.

**SMART-WEED.** This herb is one of the most powerful sudorifics, or sweating; is an excellent remedy to break

up a cold, or when threatened with a fever ; it may be drank in tea at liberty.

**PIG-WEED.** The nature of this herb is perhaps known to but few. It is especially valuable in fevers to produce perspiration ; its particular property is to produce perspiration without increasing the heat of the body.

**MOUNTAIN CRANBERRY,** produces urinary evacuation, and useful in a tea for bleeding at the lungs.

**GARGET ; or, SCOKE LEAVES.** Dr. Bilson, of Taunton, has just informed me that he cured a bad case of poison by dogwood, by taking the garget leaves, smooth them out with a hot flat, put on fresh cream, and apply it to the inflamed part ; it produced copious perspiration and effected a cure immediately.

**ANGELICA.** *Alropurpurea* is found in all parts of the United States. Its medical properties are the same as the garden *Archangelica* of Europe.

**HARD-HACK—*Spiræa Tomentosa***—is tonic and astringent ; good in a weak state of the stomach ; is less apt to be rejected by that organ than most tonics ; used in diarrhœa and dysentery.

**LOVAGE—*Ligusticum Levisticum***—grows wild in the South of Europe, and is cultivated in our gardens. It possesses much the same properties as *Angelica*. A tea is used to expel urine and pain, especially in children ; it promotes menstrual discharge and sweat.

**VERVAIN—*Verbena Hastata*.** A syrup made very strong of the roots of this plant, is said to be good in intermittants and scrofula ; good in gravel ; coughs ; expels worms, &c.

**UVA URSI**—inhabits the Northern parts of Europe, Asia, and America. It is a hardy shrub ; found also in the lofty mountains of Southern Europe, such as the Pyrennees and the Alps, and in America from Hudson's bay to

as far South as New-Jersey. It bears a smooth glossy red berry. It is tonic and astringent; good in diseases of the kidneys and the bladder, gleet, &c.

**SWEET MARJORAM**—*Origanum marjorana*—cultivated in our gardens; is tonic; most used in cookery.

**SUMMER SAVORY**—*Satureja hortensis*—is an annual plant growing without cultivation in the South of Europe; is cultivated in our gardens; principally used to season food; it is stimulant, and has a tendency to remove pain and wind.

**STONE ROOT**—*Collinsonia canadensis*—is considered tonic, astringent, and good to evacuate water; used in its fresh state for the gravel and all diseases of the urinary organs.

**SPICE-BUSH; or, FEVERBUSH**—*Laurus Benzoin*—found in this country growing in wet land from four to ten feet high. All parts of the shrub have a spicy, agreeable flavor, particularly the bark and berries. The berries dried and bruised, were said to be used in the time of the revolutionary war, instead of allspice.

**SCURVY-GRASS**—*Cochlearia Officinalis*—is a native of the Southern parts of Europe. It is said to be good in chronic rheumatism; celebrated as a remedy for the sea scurvy; it may be eaten in the form of salad; it may be applied to the gums in scorbutic affections of the gums.

**VALERIAN**—*Valeriana*—is very useful in nervous complaints of long standing; make a tea, and sweeten it, and take a swallow or two occasionally.

**MUCWORT**—*Artemisia Santonica*—the seeds of this plant has been celebrated for its efficacy in expelling worms; the dose is from ten to thirty grains given every night and morning, for a number of days and then followed by a brisk physic.

## AVENS ROOT.

GEUM-VIRGINIANUM.

*Chocolate Root.*

This root rises about two feet high; found in wet places. It should be dug in April, or late in the fall, cut into slices and dried quick and bottled up tight. Dr. E. Smith, late of the city of New-York, says it is a noble medicine in all cases of beginning consumptions and debility; it is preferable to the Peruvian bark in the cure of intermittents, dysentery, chronic diarrhœa, wind, cholick, affections of the stomach, asthmatic symptoms, and cases of debility; whites, flooding, sore-throat. The continued use of it has restored to health the most shattered and enfeebled constitutions, and is probably as effectual as any one single article in arresting a consumption.

In a fever, after proper evacuations, it may be given till the fever is broken up. The doses are daily, a pint of weak decoction, or about sixty grains of the powder, divided into three doses and mixed with honey. This root has formed a principal ingredient in the popular Indian chocolate, for consumption.

---

 THOROUGHWORT.

EUPATORIUM PERFOLIATUM.

*Boneset.*

The following is from the same author as above. This plant is a valuable sudorific, tonic, alterative, anticeptic, cathartic, emetic, febrifuge, corroborant, diuretic, astringent, deobstruent and stimulant.

It was one of the most powerful remedies of the native tribes, for fevers and colds, ect.

It has been introduced extensively into practice throughout the United States, and appears to be superior to camo-

mile, as a sudorific tonic, and far preferable to bark, in the treatment of the local autumnal fevers of the country, near the streams, lakes and marshes, often curing when other tonics failed. A warm decoction of boneset taken warm, till it vomits freely, is sufficient to break up almost any fever in its commencement. It cleanses the stomach, excites all the secretions, relaxes constriction, produces a free perspiration, and of course throws off the disease. For colds it is a complete remedy; always observing to take a draught of the cold tea, after the sweat is over, which will prevent an additional cold, or exposure.

The cold preparations are powerful tonics, and do not produce vomiting, as an over dose of the warm decoction. It acts powerfully on the skin and removes obstinate cutaneous diseases. It has cured the following disorders in many instances, viz: intermittent and remittent fevers, spotted fever, malignant pleurisy; diseases of general debility, dropsies, and debility arising from intemperance; acute and chronic rheumatism; catarrh, bilious and typhus fever, particularly low typhus, incident to marshy places, and attended with a hot dry skin; influenza, late fevers, and yellow fever itself; ringworms, scalt-head, gout and syphilitic pains, dyspepsy, and complaints of the stomach, and the bites of snakes.

Boneset may be so managed as to act as a tonic, a sudorific, a laxative, or an emetic, as required.

No other tonic of equal activity can be exhibited in fevers, with less danger of increasing excitement, or producing congestion; the objection to its general use is its nauseous and disagreeable taste. But this difficulty is surmounted by preparing it in a syrup, or obtaining the extract, which preserves all its properties, and are less disagreeable to the palate. In substance, or cold decoction, and combined with aromatics, it becomes very efficient, in intermittents and dyspeptic disorders; it strengthens the viscera and restores the tone of the system. The doses of the powders are from ten to twenty grains; the decoction and infusion, from one to three ounces.

No unpleasant effects follow the cold preparations. It is particularly useful in indigestion of old people; and may be used as an auxiliary to other tonics and emetics in all cases.

---

### POPLAR BARK.

The properties of the poplar bark are tonic or bracing; good in bitters, and purifying to the blood; the bark of the root is the strongest.

---

### ASTHMATIC PILLS.

The following formula I received from Professor Briggs, formerly of Waterville College:

Take 4 oz. of the brown emetic, that is, the seeds of the Lobelia finely pulverised, 1 oz. of the African cayenne, 2 oz. bitter root, 2 oz. of nerve powder, or valerian, the Indian hemp may be substituted instead of valerian, 4 oz. of skunk cabbage, 2 oz. of bayberry bark, 2 oz. of hoarhound; take one or two pills every night. These pills are very excellent for the asthma and phthisic, also for a bad cough. The vegetable powders should be taken as often as the pills. They should be well mixed with honey or molasses.

# ART OF HEALING.

## KNOWLEDGE AND CURE OF DISEASES.

---

### PILES.

This disease is occasioned by a painful swelling of the intestinal vessels. When these vessels only swell, and discharge no blood, they are called blind piles; but when they discharge blood, they are called bleeding piles. The piles are produced by various causes: I think most frequently by much sitting; whether it be sitting at work, study, or riding. In all these cases, a costive habit is produced, which crowd the vessels, producing irritation, inflammation, and sometimes rupture, which produces bleeding. Drastic purges ought to be avoided. Some constitutions are more inclined to this disease than others; it makes its appearance usually by an uncommon itching of the anus. As soon as a person finds this to be the case, if his habits be sedintary, or sitting, he should change if possible his business; be very regular in going to stool, by observing the same hour every day; keep the bowels open with gentle purgatives; anoint the part with sweet oil and whiting, the flour of hemlock bark is better than the whiting if it can be had. In a more advanced state, use frequent injections, made of mullen and mallows, or what is called cheeses, or slippery-elm.

This disease may be easily cured in the first stages, but when it is of long standing, it is very difficult to effect it. I have used the narrow dock, or yellow dock root, sometimes called upland dock, with the greatest success. I

have never failed of curing or relieving, by administering it. In this disease it is rather cold alone; it should be combined with something stimulating and warming: cayenne answers this purpose very well. From one to three tumblers full of the strong decoction of the dock, with as much cayenne as may be taken up on the handle of a teaspoon to each tumbler full, will be sufficient. This may be taken without fear, by persons of the most delicate constitutions; it does not weaken like most other physic; while it operates gently it gives strength and tone to the animal fibers. In the advanced state of piles, it is apt to be attended with canker; the dock is peculiarly serviceable to purify the blood, and root out the canker. If the first portion of the dock should produce vomiting, which it often does, take a second dose, and so on, till you keep a portion down. When the piles are produced by a morbid state of the liver, it is then symptomatic of a diseased liver. When this is the case, I have found nothing equal to the Lobelia Emetic. These emetics, if repeated will produce a healthy action of the liver. If small tumors should appear on the end of the anus, anoint the part a number of times a day, with an ointment made of hogs-lard three parts, pulverised nut galls one part, and camphor one part, simmer them together.

I have never failed of healing up these tumors with this ointment. It should be introduced as far up the rectum as possible with the finger, as well as to anoint the out side. If bleeding be present, add to the above salve one part of Venice turpentine.

When *prolapsus ani*, or falling of the bowels takes place, take white oak bark, witch-hazel bark, upland sumach, equal parts, make a strong decoction, add a teaspoonful of pulverised alum to every pint, apply this wash from time to time, and occasionally gently press up the bowels. When the bowels are returned; take equal parts of finely pulverised hemlock bark, bark of the roots of upland sumach, white-oak bark—mix them together, and roll up troches, or long and picked pills, of suitable size to be

introduced up the anus. Let this be occasionally repeated: all the while, let the bowels be kept open with the yellow dock. The English dock is the best, such as is cultivated in gardens. Tumors are often removed by surgical operations, but they are attended with danger. As high living has in many cases produced the piles, it will be important, that the patient abstain from all rich and highly seasoned food. An injection occasionally taken, made of strong pennyroyal tea, add a great spoonful of molasses, and one of sweet oil or hogs-lard, put a heaping teaspoonful of lobelia and a sixth part as much cayenne, into a teacup half full of the pennyroyal tea blood warm, let it stand till the strength is out, then strain it through a cloth and inject a common tumbler full. This will be found to be an excellent remedy.

---

## INFLAMMATION OF THE BRAIN.

This disease generally attacks the middle aged. It is sometimes a primary disease; at others it is produced by some other disease. It is occasioned by night watching, hard study, hard drinking, anger, grief, anxiety, extreme perturbation of mind, exposure to the heat of the sun, suspension of accustomed evacuations. Sometimes it is produced by blows on the head. The symptoms are extreme pain in the head, flushed countenance, a quickness of the temporal arteries, redness of the eyes, an aversion to the light, watchfulness and delirium. It often requires a number of persons to hold the patient in bed.

*Mode of Cure.*—No time is to be lost in giving this disease a prompt and thorough treatment. As it is always attended with an uncommon flow of blood to the head, the first thing to be done will be to divert the blood from the head to the extremities, by soaking the feet in a weak lie for fifteen minutes at a time, then rub them for five minutes with a coarse towel; after which rub them

thoroughly with the elixir, let the hands be treated the same as the feet; put on poultices upon the feet at least a half of an inch thick, made of rye-meal and vinegar, on the surface of which, sprinkle over a great spoonful of mustard-seed, pulverised. If this poultice should produce soreness after six hours, soak the feet as before, and put on an onion poultice. Give a thorough portion of physic, and if the disease does not abate repeat it after two days. Give warming drinks that will produce gentle perspiration. Bathe the head frequently with the *compound Elixir*.

If this should fail, and the pain continue; make a poultice of coakum, or garget root, cut a slice from a large root, that will nearly cover the bottom of the foot, let it be a third part of an inch thick; heat it thoroughly by the fire, apply it warm to the feet. This will have a tendency to draw from the head, and produce moisture upon the surface; then scarify and cup the temples, take away blood according to discretion. This course of treatment will be found far preferable to the popular practice of shaving the head, blistering and bleeding from the arm. If it should be found necessary, bitter herbs, such as wormwood, double-tansy, hops and catnip, equal parts, after being stripped from the stock may be put into a bag, pour on hot vinegar, and apply it to the head.

A drink made of equal parts of marsh-mallows and queen of the meadow may be taken at pleasure, say take four ounces of each. If the first means laid down does not give immediate relief, apply the scarificator. It may be necessary to cup in twenty places before relief can be given.

---

### EAR INFLAMMATION.

The ear-ache often proceeds from a sudden check of perspiration, as from a current of air when the head has

been sweating. It may be occasioned by some foreign substance being lodged in the ear.

The ear should be filled up with a piece of cotton, a drop or two of sweet almond, or olive oil, should be introduced; a mustard poultice may be applied to the ear if the pain should continue severe. The feet may be soaked in weak lie. Taking blood by cuping in the neck is recommended. Take hops, wormwood, camomile and double-tansy, equal parts, if you have not all of them take a part, cut them fine, put them into a jug, pour in hot water, put the mouth of the jug to the ear; bathe around the ear with the elixir, or compound elixir. (*See Compound Elixir.*) It may be necessary in some cases to apply a mustard poultice behind the ear and on the feet at night.

If the pain in the ear proceed from a diseased tooth the patient may chew the Indian hemp-root. Care should be taken to keep the bowels open.

---

### MUMPS.

Mumps is a swelling of the glands about the throat which makes swallowing difficult. This disease is not attended with danger except the patient takes cold, or the disease is translated to the testicles.

*Treatment.*—The patient should be directed to keep from taking cold, and take warming drinks that will promote gentle perspiration. If the testicles swell they may be bathed with camphor and sweet oil. If the swelling be very severe put on a slippery-elm poultice.

---

### QUINSY.

It is truly astonishing, says Dr. Beach, that men possessing a knowledge of the science of medicine, should make use of the common practice to cure this complaint,

especially when it is well known, that this very treatment occasioned the death of General Washington, as well as thousands of others. Common practice—*bleeding, mercury, &c.*

The first thing to be administered is the lobelia emetic. This will have a tendency to relax the whole system as well as the tonsils, and reduce local as well as general inflammation. Take wormwood, hops, catnip, equal parts, put it into a common teapot, pour in hot water and inhale the steam from the snout for fifteen or twenty minutes.

Bathe the throat with the elixir. Take one ounce of pulverised blood-root, add one pint of vinegar and two ounces of honey; let the patient take a teaspoonful every half hour. Purgatives should be repeated, as they have a direct tendency to lessen the inflammation. Dr. Beach recommends *sassafras oil*, olive oil, spirits of hartshorn, each half an ounce, warmed, with a little camphor, the gum, and bathe the throat as long as the patient can bear; after which put a flannel round the neck. After the inflammation has subsided, take one part of sumach berries, and two parts of golden seal, make a gargle, add a small quantity of alum pulverised or powdered; let the throat be often gargled, let it be made strong.

A gargle made of weak lie is said to have proved very efficacious, where other means have failed, particularly where persons have been subject to this disease.

To prevent a recurrence of this disorder, it will be very important that a person should keep his neck from the cold by wearing a piece of flannel constantly loose around the neck. Keep the bowels open, and let the diet be spare. In extreme cases, it is necessary to puncture the tonsils with a lancet, after pressing down the tongue with a spoon handle, or any proper instrument, so that there shall be no danger of wounding any other part than what is intended. Mr. Jenks, of Pawtucket, informed me that this operation was performed on him as the last resort, and it succeeded in giving relief. I once cured myself of a sore throat in the first stages of it, with the vegetable powders.

## PUTRID SORE THROAT.

This disease effects the glands of the throat, while the Quinsy effects the mucous membrane. It is considered contagious. It may be produced by putrefaction, want of cleanliness, impure air, damaged provisions, &c.

This disease should be treated nearly the same as the Quinsy. When the parts appear putrid, a gargle made of yeast and milk should be used. As this disease prostrates the system, it should be supported by stimulant medicines, such as wine and the like. Dr. Thomas, speaks in the highest terms of the following composition:—Two table spoonfuls of cayenne pepper, one teaspoonful of salt, half a pint of boiling water; and half a pint of warm vinegar. Let it stand about an hour, and strain the liquor through a fine cloth. Let the patient take two table spoonfuls every half hour. A plaster made of equal parts of common soap and rosin, may be applied to the throat. Take the vegetable powders night and morning; if it be an adult, a heaping teaspoonful each time, in a cup about two thirds full of hot water, sweetened with molasses or sugar, and a teaspoonful of the elixir should be added when cool enough to drink.

Be careful to keep the bowels open. Take the canker root, infuse it in cold water, wash the mouth frequently with it, and swallow the same. If the patient cannot swallow it, take a swab and wet it. The lobelia emetic should occasionally be administered in thorough courses.

---

## INFLAMMATION OF THE WOMB.

This disease is attended with pain at the lower part of the bowels, almost an entire suspension of the menses, tightness about the parts, change of countenance, loss of flesh, great weakness, constant fever, a discharge of unnatural matter from the womb, an inclination frequently to go to stool, heat and sometimes suppression of urine,

*Treatment.*—If you have opportunity, commence with giving the vegetable powders on going to bed, and a full portion of physic; after the physic is done operating, give the lobelia emetic. (*See Lobelia.*) After the operation of the emetic, take a heaping teaspoonful of the physical powders in a teacupful of warm water, sweetened with sugar or molasses. Eat and drink that which is the most nourishing. Take nearly a wine glass full of the alterative syrup, three or four times a day. (*See Alterative Syrup in the appendix.*) The emetic may be repeated twice a week, or but once a week, just as it is convenient, till it effects a cure; physic should be taken as often as every other day. If this course be persisted in it will effect a cure in a few weeks. The directions must always be varied according to the constitution.

I cured a woman a few days ago who had been laboring under this disease for more than two years; during that time she had nothing of consequence pass according to the course of women. She told me that she had suffered more in that time than she had in having all her children, and I think she has had four or five. The very next day after taking the course she became regular, and it continued for six days in succession; her pain and tension left her, and she did not lay by her work a single day. In less than a month I gave her two more courses; the day after taking the last emetic, she came right again and continued for four days in succession. A number of different physicians had attended her, but could not remove the difficulty; one of them told her it was weakness, and he gave her tonics, which was a course directly contrary to the one that ought to have been pursued. It only increased the difficulty by shutting up the acrimonious humors which might have escaped, if a proper course of treatment had been pursued.

## INFLAMMATION OF THE BLADDER.

*Symptoms.*—Pain in the lower part of the abdomen, a constant propensity to go to stool, and void water, and a difficulty in discharging either. The same course may be pursued as in the inflammation of the womb. Fermentations of bitter herbs may be applied to the lower part of the bowels to advantage. But the most thorough and sure remedy is, first let the patient set over a tub of hot water, if he can sit up, spread a blanket or two around him, put two pieces of boards across the tub, then drop in small stones previously heated; let the patient continue this ten or fifteen minutes, and give the vegetable powders and elixir to keep up the internal heat. If the patient cannot sit up, hot stones may be applied quenched in vinegar to the bowels; if this does not relieve the pain entirely, give the lobelia emetic, and after it has done operating and the stomach settled, give a thorough portion of the physical powders. Sometimes a powerful portion will start the water when it seems as though nothing would. When the pain was extreme, I have succeeded in relieving the patient at once by cupping over the region of the pain, and bathe it well with the elixir.

My mode of cupping in such cases is, to wet the part all over where the pain is present with as warm water as the patient can bear, with a sponge or piece of flannel; then dry cup, that is, put on the cup without scarifying, and draw it along gently over the surface for some extent, the object is to produce a counter action. Then let the patient put the finger on the spot where the greatest pain is, put on the scarificator, and take away blood till you give relief. I have never failed to cure by the above process.

---

## INFLAMMATION OF THE KIDNEYS

Is caused by over exertion of the region of the kidneys, as riding on horseback or in a jolting wagon, which strains

the parts, and cold settles upon them: the kidneys become inflamed, and water of a dark bloody color comes away with sometimes a sediment somewhat thick.

It is supposed sometimes to be occasioned by small stones being lodged in the kidneys.

Take double tansy, hops and wormwood, equal parts; simmer it in vinegar and water, and apply it warm, bathe the part occasionally with the compound elixir. (*See compound Elixir.*) I have always found this to give relief. The food should be light and nutritious. By all means give the emetic, and steam as in the case above, inflammation of the bladder. It will serve to lessen the inflammation, and give a healthy action to the system: giving it energy to sympathise with the diseased part.

Take peach-meats, a handful, and poplar bark, a handful, put them into a junk bottle of best Holland's gin; after a few days, take half a wine glass full just after eating. I have found great benefit by this cordial. The patient may govern himself as to the quantity, and may dilute it and sweeten it according to his pleasure. If he cannot procure the peach-meats, peach twigs will do.

Cuping over the region of the kidneys may be serviceable. I approve of no other bleeding but local, except in very extraordinary cases. By local bleeding you make an application to the disease without weakening the whole body, as you must in taking it from the arm. A little blood taken from the inflamed part, will do more good than much more from the veins. It will be found necessary to give occasionally light portions of physic, which have a tendency to lessen inflammation. Mucilaginous nourishing drinks will be found to have a good effect such as have a tendency to excite gently the urinary organs. Such medicines as have a powerful tendency to evacuate water should be avoided. The reader is particularly referred to *Cleavers*, in this work. (*See appendix.*) A drink of the *Cleavers* should be taken daily.

---

## JAUNDICE.

This disease, says Bachan, is first observable in the white of the eye, which appears yellow: afterwards the whole skin puts on a yellow appearance.

The urine is of a saffron hue, and dyes a white cloth if put into it, of the same color. There is also a species of this disease called the Black Jaundice.

The cause of this disease, in my opinion is, an obstruction of the ducts which conveys the bile into its proper channel, and is therefore thrown into the circulations.

I have had many cases of this kind, and have never failed of making a cure, where I have attended them a sufficient time. I was once called in a case of this kind when the friends were satisfied that the family physician could do no more, and where it was doubtful whether the patient would live many days, and given immediate relief so that the patient rode out in three days. She told me a number of months after, that she believed the medicines I prescribed were the means of saving her life.

The course I pursue, when called to a patient laboring under this disease, is, first give a portion of the vegetable powders; heat stones by the fire, quench them in vinegar, wrap them up in cloths, put one to the feet, and a number around the patient in bed; and, in about half or three quarters of an hour, commence giving the lobelia emetic. Give one, two or three portions, according as you find it necessary. It is very desirable to produce copious perspiration. This course should be pursued once or twice a week, till a cure is effected.

Give the vegetable powders every night on going to bed. Much depends on keeping the bowels open: the physical powders should be taken occasionally, and occasionally a teaspoonful of rhubarb. If the patient be weak and debilitated, and has but little appetite, a tea of English barley and slippery-elm should be taken. It may be drank at liberty. The emetic will produce a healthy action upon the liver; remove the obstructions in the ducts, and throw the bile into its proper channel. If there be roughness

in the mouth and throat, take one part of blood-root, one part of slippery-elm, add hot water and molasses, a little salt and vinegar, take a teaspoonful occasionally.

Where the case is not of long standing, one course of the emetic I have found sufficient; but in other cases, it will be found necessary to follow up the courses. A tea made of wormwood is very good to take occasionally; also equal parts of the bark of bayberry and barberry, may be used for a tea.

I attended a young man a few months ago, and after carrying him through a course of emetic and sweating, which took about eight hours, he declared that he felt better to get up then, at the end of the eight hours, and go to work, than he frequently had when he went to his labor previous mornings. He went to work the next day, and has not lost a day since from sickness. The popular practice is—mercury, bleeding, gentle emetics, &c.

---

## PALPITATION OF THE HEART.

This difficulty arises from obstructions of usual evacuations, which is caused by cold. Dr. Smith, says on this disease, place a large stone in a small smooth stream, and it will cause palpitation of the water; remove the stone, and the palpitation is done.

So in the man: remove the cold, and the palpitation is cured. To do this, clear the whole man from obstructions, and this difficulty is cured. A plaster should be worn over the region of the heart; the feet should be occasionally soaked in weak lie, and rubbed with the elixir; the vegetable powders should be taken every night; and physic, every other day, if the powders should not evacuate sufficiently. The lobelia emetic should be taken once or twice a week, till a cure is performed; the body should first be warmed gently before giving the emetic. In this disease, less of the cayenne, and more of the skunk-cabbage should be given, than in common cases. Indian Hemp root, I

have found to be excellent in this difficulty. The Botanical name is *Asclepias Incarnata*—dry and make a fine powder; take an even teaspoonful three times a day.

By this very process laid down above, with cuping, I cured a woman of the palpitation of the heart in a few weeks, who had been laboring under that disease for two years. She took besides a number of bottles of the alterative syrup. I have found a syrup made of yellow dock root to be very serviceable in this disease. Take from one to two tumblers full every day—it opens the bowels, and does not weaken the patient. Great care should be taken in this disease to keep the bowels open: the dock is a little too cold alone;—a little cayenne, as much as may be taken upon the handle of a teaspoon may be put into every tumblerful of the syrup.

---

### CROUP.

Children are most subject to this disease; most prevalent in cold, wet seasons, and upon the seacoast. It is caused by a sudden cold, and generally attacks the persons by night. It is attended with cough and some fever; breathing is performed with difficulty, and attended with a peculiar kind of croaking, or quackling, or rattling noise. Those symptoms show immediate attention to be necessary—the feet should be immediately placed in warm water, to which is added ashes and salt; give an injection; place the child in a warm bath, as soon as it may be prepared. Then give an emetic, half lobelia and half bloodroot.

There is not much difficulty in curing the croup in the first stages of it, in the second stage it is considered uncertain, and in the last stage never. This emetic should be followed up at every spasm, during the first and second stages, but in the last, I think it should not be given; because, after an emetic has excited its full force, the lungs, in some degree, collapse or close, as much as they were distended, during the operation of the emetic. Hence

we frequently find that patients breath with difficulty after taken an emetic, especially the lobelia, which is no unfavorable symptom where there is no inflammation in the tracked or wind-pipe; but where this is present, there is danger of suffocation.

With the lobelia emetic and bloodroot, equal parts, given in pennyroyal tea, I have succeeded in giving decided relief. Care should be taken from the beginning to keep the bowels open, and put onion poultices on the feet, and change them every two hours. Take pigs-feet oil, skonk's grease or goose-oil, and lubricate or bathe the throat, and scatter the surface all over with common Scotch snuff; let it remain till it is done drawing. Mustard poultices may be placed between the shoulders. A teaspoonful of skonk's oil, pigs-feet or goose oil, may occasionally be given. Expecto-  
rants, such as are used in coughs, may be administered to advantage. In some instances, the patient dies in four and twenty hours; but not usually sooner than eight and forty hours. Take the juice of a lemon, loaf sugar, and slippery-elm, make it palatable, and it will be good to relieve the cough, and help to raise the phlegm. If taken in season, this disease will give way without all this formula. Inhaling the steam of vinegar is, by some, recommended. In giving the lobelia and bloodroot emetic, take a teaspoonful of each, put it into a teacupful of herb tea, or warm water, (not scalding hot,) sweeten with loaf sugar; let it stand a while, strain it through a cloth, back and forth a number of times to get out the strength, give to a child of two or three years old, a great spoonful once in ten minutes till it vomits.

---

## HOOPING-COUGH.

This cough is produced by contagion; therefore the most direct course to get rid of it is to change the place of residence, and get out of the infected air. It rarely attacks grown persons or youths but once.

The symptoms are familiar to every one, and need no description. Whatever hinders perspiration, free evacuation, and creates a morbid state of the stomach, promotes this disease; those of the contrary of this favors recovery. The bowels should be kept open by taking rhubarb, or castor oil; these may be taken in jelly or some kind of agreeable sauce or syrup, that will disguise the taste. A child a year old, may take of rhubarb, what may be taken up on the handle of a teaspoon, or a quarter part of a teaspoon even full, or from one to two teaspoonfuls of castor oil; take the vegetable powders at night. Soak the feet in weak lie, and rub them over with the elixir, and by all means give the lobelia emetic. Perhaps in no disease the good effect of this emetic is more perceptible than in this cough. Take for a child in this case, a heaping teaspoonful of the powdered lobelia, the same quantity of bayberry bark, the flour, or pounded fine, and about one third as much skonk-cabbage, fill a cup three quarters full of pennyroyal tea blood warm, let it stand a while, then strain it through a cloth and sweeten it; give a great spoonful of it once every ten minutes till it operates, and when the child begins to vomit, get down as much tea as possible, then follow up with water gruel. Onion poultice should be applied to the feet; a slice off of each end of an onion warmed by the fire and applied to the bottoms of the feet, is the best mode of applying them. The food should be light and easy of digestion. A strengthening plaster should be kept constantly between the shoulders. Change of air, is often attended with very beneficial results in diseases of children, especially those of the infectious kind. Take pearl barley, a handful, a teaspoonful of slippery-elm, a little salt and vinegar, a great spoonful or two of the roots of the Indian hemp, the same quantity skonk cabbage, pour a pint of boiling water and sweeten, and let the patient drink freely. It will assist in loosening the cough; lessen excitement; and at the same time, nourish the body.

## CATARRH: OR, INFLUENZA.

This disease is epidemic, and at the same time, effects seven-eighths of the people of almost an entire continent. "It is an increased secretion of mucus from the membrane of the nose. Fauces and brouchia, with fever, and attended with sneezing, cough, thirst, lassitude, and want of appetite. The rapidity that this disease spreads itself over the land, indicates that a current of air is impregnated with a specific poison which communicates disease to almost every man that it comes in contact with.

The last occurrence of this kind, I think, was in the latter part of 1831, and the beginning of 1832, which carried off multitudes, particularly aged persons.

In this disease take freely of the vegetable powders and elixir, and the vapor bath; if this is not convenient, go to bed, take the powders and elixir, (after soaking the feet in warm water and bathing them with the elixir,) heat stones and quench them in vinegar, wrap them in cloths, put one at the feet, and the rest all around the body. After the patient has perspired freely for three quarters of an hour, let him reduce the temperature moderately. If this does not break up the difficulty, the next day but one go through with the same process, and in addition, take the lobelia emetic. Great care should be taken, when the patient is very warm not to cool off too quick; and when there is great heat applied externally, be careful to keep up a corresponding internal heat, by giving warming drinks.—The sweating and emetic process should be continued at proper intervals till a cure is effected: but one course will generally be found sufficient.

---

COLDS AND COUGHS.

People in general think little of colds, and pay as little attention to cure them; but when we consider that they are the inlet to most of our diseases, we find it is very important—instead of paying no attention to them as is commonly the case, we endeavor to break them up as soon as

possible. People are most liable to colds in the Spring and Autumn. I used to have one at each of these seasons, that lasted me three or four weeks; but I have learned how to break them up in forty-eight hours at least. Soak the feet at night in warm water, wipe and rub them so as to produce active circulation; warm the bed, put in a little sugar in the pan on the coals, get into bed, and take a heaping teaspoonful of the vegetable powders, add a teaspoonful of the elixir; put an extra quantity of cloths on the bed, and in an hour from the taking the first dose, take another portion: this will take off the chills, and produce perspiration before morning. In the morning cool off by degrees, and when you have done sweating, you may get up. Let your food be light through the day. It is a false notion that we must stuff a cold; it obstructs the system already burdened, and has a tendency to produce a fever.

If the above treatment does not throw off the cold, repeat the same the next night; and nineteen times out of twenty, it will break up a cold, even if the person is on the verge of a settled fever. I cured myself by this very process, in two nights, of a cold which usually lasted me three or four weeks. It was attended with a sore-throat, so that it was with difficulty that I could swallow. If a cough should attend a cold and continue, take the vegetable powders, without the elixir, every night; take occasionally a teaspoonful of the elixir, two great spoonfuls of molasses, and two or three great spoonfuls of hot water, drink occasionally. If this does not cure, make a syrup of peach-tree twigs, a large handful, a fifth part as much skonk-cabbage, boil them for two hours down to half of a pint, then add the same quantity of good molasses. I have found this to be very efficacious in long standing coughs.

Persons subject to coughs from every slight cold, should never be without a flannel waistcoat summer or winter; in the summer it may be of a thinner texture than in winter.

## ASTHMA ;

Or breathing with difficulty, is produced by want of proportionate heat and energy of the lungs, with the other parts of the body. The lungs perform their functions with labor owing to its weakness under the most favorable circumstances ; but when the air is light, as it is frequently at night, and when it is cold—when foreign matter is introduced, as the dust from hay, &c. it increases the labor of breathing. When a person is sitting up, the lungs come in contact with but little of its surface. Its whole weight being suspended by its superior, there is not that chance to be obstructed. The cause in my opinion is cold, which produces a lax state of the lungs, which lessen the diameter of the air-cells, or pipes.

Those medicines that have a tendency to equalize the circulations and produce uniform warmth through the whole system, are the only medicines that will be of service in this disease. The lobelia emetic has been found to answer this purpose better than any remedy that has ever been discovered. I have never known it to fail where it has been properly administered. The feet should be soaked in warm water, wiped dry, and if they are inclined to be cold, rub them with the elixir ; put on every night an onion poultice. Take the composition powders every night and every other morning ; take care to keep the bowels open ; give one of the asthmatic pills every night, (*see Asthmatic Pills,*) and every other night or morning, a teaspoonful of the lobelia with pennyroyal tea. A full course once a week should be given of the emetic. In cases of long standing, this course must be followed up for a number of weeks, in order to effect a cure. Many persons want to get cured of a chronic difficulty that has been upon them for years ; in one day—and certainly it would be very desirable ; but people often fail of getting a cure for want of perseverance. It may require, in some cases of long standing, eight or ten thorough courses, to effect a complete cure. One course will give prompt relief, but will not generally be enough to equalize the cir-

ulation and give a healthy action to the lungs. Take salt-petre, a great spoonful, put it into as much water as it will take to dissolve it; wet brown paper in the same, and dry it thoroughly: when you go to bed at night, sit a piece on fire as large as your two hands; it will burn slowly till it is all consumed; and you will find it will give great relief and enable a person to lie down who must otherwise have sit up during the night. A gentleman informed me that he cured himself of the asthma by applying hogs melt to his feet. As soon as it was taken out, he sliced it in two, and put one half on the bottom of each foot and let it remain till it became dry.

---

### INFLAMMATION OF THE LUNGS.

This disease is always attended with danger, particularly if the patient be advanced in age, and has a flat breast, lives high, and drinks strong liquor.

In this disease, breathing is performed with difficulty, great oppression of the breast, the pulse quick, the pain is increased on coughing, and by taking a long breath.— It proceeds from the same causes as the pleurisy: viz. an obstructed perspiration from cold, wet cloths, &c. In this disease as well as the pleurisy the food ought to be exceedingly light. A syrup made of comfrey root, a little vinegar, salt and sugar, or flaxseed tea; take two ounces of pearl-barley, add a little slippery-elm, a little salt and vinegar, pour a quart of hot water, and let it steep: let the patient sup occasionally, and frequently it will give nourishment and alleviate a cough.

The bowels should be kept open by gentle physic, or clysters. The yellow dock is one of the best medicines in this case; it will keep the bowels open while the patient gains strength. From one to two tumblersful of the strong decoction, or tea, may be taken during the day.

The feet should occasionally be soaked in weak lie, and rubbed dry, afterwards bath with the elixir.

Bleeding and blistering in this disease, as is the common practice, we consider dangerous; mustard seed poultices should take the place of blistering.

Take equal quantities of the vegetable powders and yellow dock, pulverised fine, of the compound well mixed. The patient may take a spoonful every other night.

The vapor bath, will occasionally be found useful. (*See Vapor Bath.*) Be careful to give warming drinks while under the operation of the bath. Take double tansy, hoarhound, and wormwood, equal parts, divest it of the large stalks; put it into a large coffee-pot, pour in hot water, let it steep; then inhale the steam from the spout. If it be too hot, place a long tube at the snout of the coffee-pot, and inhale through it. Perspiration should by all means be promoted, as it tends to reduce all internal inflammations. An emetic should occasionally be given, say a teaspoonful of lobelia, and half a teaspoonful of skonk-cabbage; if this does not cause vomiting, in an hour, give the same quantity again. Indian-meal gruel will be found an excellent regimen in this disease as well as in all others. In order to make gruel good, it should be boiled and skimmed half an hour after the thickening is put in.

---

### PLEURISY.

The true pleurisy is an inflammation of that membrane called the pleura, which lines the inside of the breast. It proceeds from the same cause that the inflammation of the lungs does—that which obstructs perspiration. It should be treated the same as the inflammation of the lungs only in a much more prompt manner.

In the first place a thorough emetic should be given, and extra means to produce copious perspiration such as hot stones quenched in vinegar, wrapped in cloths and applied to different parts of the body, especially to the feet and side. As soon as the operation of the emetic is over,

give a thorough portion of physic, say a heaping teaspoonful of rhubarb, or the same quantity of the physical powders. (*See Physical Powders.*) If the inflammation does not subside, put on the cups, and take away blood from as many as half a dozen places, from one jill to half a pint, and more if necessary. This is perhaps the most efficient course of reducing the inflammation; but in weakly habits, blood-letting, particularly from the veins, weakens the system, so that it will require perhaps months to get up again. Therefore we prefer as little bleeding as possible. Local bleeding is not attended with the bad consequences, that general bleeding is. In bleeding from the arm, it is necessary to take much more to produce the same effect. We prefer to attack the disease rather than the constitution—apply the remedy to the diseased part, rather than to the whole body.

If all this should not succeed in relieving the inflammation, take tansey, hoarhound and wormwood, equal parts, wet it through with vinegar, heat, and apply it as hot as the patient can bear.

If, after the urgent symptoms are relieved, there should be uneasiness and difficulty in sleeping, give a teaspoonful of the Indian hemp root in molasses, three times a day, till this difficulty is removed. The pleurisy root should be drank in tea occasionally from the beginning.

By the above process, or only a part of it, I have cured in a few weeks, a pain in the side of two years standing.

The pleurisy may be cured frequently without cuping or bleeding in any way, if you have not the cuping apparatus, you will pursue thoroughly the other course laid down.

Large poultices of onions on the feet, has a powerful tendency to alleviate inflammation, and to produce perspiration. They should be applied in this case and exchanged once in four or six hours. A poultice of rye-meal and vinegar, with mustard seed sprinkled on the surface, say a great spoonful, may be occasionally exchanged for the onions. The side may occasionally be

bathed with the compound elixir. The feet should be occasionally soaked in weak lie from the commencement of treating this disease.

---

## CONSUMPTION.

A consumption is the decaying of the whole body, from an ulcer, or tubercles, a collection of pus in the cavity, or a nervous decay of the whole system. It is estimated that consumptions in our large cities make up one fifth of the bills of mortality; in the country rather less. An hundred years ago, this disease made but one tenth. This disparity may arise from various causes. People lived formerly on more simple food, than at the present day, that which was more conductive to health. Among females the pernicious fashion of lacing, is practiced to a greater extent than at that period; they go more thinly clad than formerly. Again new sedentary occupations have been introduced into this country: and besides, people of all sedentary business apply themselves far more closely to their employment, than they did an hundred years ago; and in addition to all this, the climate has changed very materially. Our summers have been so cold, as to prove in its consequences, fatal to thousands; their heat was not sufficient to withstand the cold of winter, and multitudes died formerly, of the spotted fever.

Another very prolific cause of consumption, which, in my opinion, has scourged every age for many generations, is the mode of treatment by blistering, calomel-emetic-tartar, bleeding, salivation, &c. This course will make a well man sick, and no wonder it should destroy so many persons. I have no personal ill will toward any one who practices this course, it is from duty, and a love to my species, that I bear testimony against their practice. As well might you kindle a fire with snow-balls, as to attempt to kindle up the vital spark which has begun to decline, by cold medicines and blood-letting.

A warming, nourishing, cleansing, purifying and strengthening course should be pursued in consumptions. We find in that disease the natural heat declines in all parts of the body; then, by bringing the body to a natural warmth, we assist nature; for if nature ever does overcome the disease, it will bring the body back to its natural warmth. When the feet, for instance, are cold and we warm them, we encourage the blood to flow into the feet, and thereby give them their natural warmth; blood cannot flow into a limb that is cold—it flows with difficulty, tardily, and imperfectly in a limb that is partially cold. If this principle be true, we see that bringing the body to its natural temperature, lessens the action of the heart. But no external application alone can equalize circulations.

External application prepares the way, opens the door for warming, stimulating medicines, to be received internally; which, if properly applied, will not fail, if the case be not past cure, to produce the desired effect. I have found nothing more efficacious in these cases than the lobelia emetic. I would here refer the reader to Dr. Robinson's remarks under the head of lobelia, near the latter part of the article.

By this emetic's peculiar action upon the great sympathetic nerve, it diffuses itself into every nook and corner of the system, and more especially upon that organ, if there be any, that is diseased. For particular directions in administering this emetic, the reader is referred to Lobelia, in this work.

One, two, or three portions may be administered of the emetic, as the case may seem to require, and as often as may be found necessary. If a number of courses be found necessary, it should be attended too as often as once or twice a week. The vegetable powders should be administered at night, and the alterative syrup through the day. Great care should be taken before giving the emetic to produce a gentle moisture upon the surface. If a cough be troublesome, take lemon-juice, flax-seed tea or slippery-

elm, and loaf sugar, proportion it so as to make an agreeable drink. The feet should occasionally be soaked in weak lie, ten or fifteen minutes before going to bed, and rubbed with the elixir. If they should become cold, this course will produce a gentle moisture upon the surface; and in the hollow of the hands it has a tendency to lessen the frequency of the pulse, and reduce the fever. I would refer the reader to a communication by J. F. Daniel Lobstein, M. D., under the article of Water Fennel, of the Appendix to Medical Botany, of this work.

I have not proved the water fennel, but I have much confidence in it. The food should be light and nourishing; strong coffee and tea, should be avoided.

Perhaps there is nothing more wholesome than ripe fruit of almost every kind, in the season of it; the patient should eat enough to regulate his bowels without any other physic, if he can obtain it. Journeying is beneficial to persons inclining to consumption. The best mode of riding, perhaps, is on horseback; but people generally try every other thing first, and at the last, the physician often recommends his patient to take a journey; and frequently the next you hear, this poor sick man dies among strangers: but his tale of suffering and woe is rarely told.

If there should be bleeding at the lungs, one small portion, the lobelia, emetic will be found very efficacious. I have used in such cases with much success, a teaspoonful of the pulverised bark of black-alder, taken in molasses; also, sweet bugle or common bugle may be drank at discretion.

Tonics are generally injurious, especially if there is much inflammation present, by tightening the chest and preventing expectoration.

Mucilaginous drinks will be found very serviceable, such as slippery-elm, comfrey, gum arabic, flax-seed, sarsaparilla, colts-foot and quince sauce. Simply boiling or steeping, will be all that is necessary, and it may be taken at discretion—they have a cooling, healing and nourishing operation. Milk is a very proper food where it agrees

with the patient; baked apples, blackberries, or whortleberries and milk are very proper. A drink of good cider after eating milk, will sometimes make the milk sit easy when otherwise the stomach would not bear it. A gentle emetic of lobelia will be found serviceable, though the patient may be past recovery.

I administered the emetic in a case of this kind where the patient's appetite began to fail and was not expected to live from one week to another. The emetic operated so easy that he was not under the necessity of raising his head from his pillow; his appetite returned and he lived about six months afterwards. No fears need be entertained, if during the operation of the emetic, it should produce sobbing similar to a child who has been whipped: the emetic operates through sympathy, upon the lungs.

In nervous consumptions where there is not much inflammation, tonics or bracing medicines may be necessary; but in general, nourishing food is all the tonic that is necessary. Consumption may be easily cured in the first stages by proper attention; but very difficult, and frequently not at all, if neglected too long. The immediate cause of most consumptions are produced from wet feet, damp beds, putting on wet cloths, exchanging thick garments for thin, tight lacing, sedentary business, labor that requires an unnatural position of the body, such as shoemaking, sewing, braiding straw, and the like.

Consumption seems to be in some families hereditary. This every one will admit, for we see almost whole families die in early life at about the same age. This is a subject that I have never seen fully explained; but the cause why it is so, I consider to be very important. I think it proceeds from three causes: first, a deficiency in the size of the lungs by which there is a deficiency of vital heat generated to diffuse through the system, so that when the person arrives to maturity, and is done with the elasticity and buoyancy of youth, and nature thrown upon its own resources the body soon sinks and dies. The second cause is owing to the construction of the chest; there be-

ing a want of room in the thorax; the chest being flat there is not sufficient space for the lungs to play, so if any of the surrounding viscera become inflamed the lungs are liable to be irritated and inflamed by it, and so at any slight inflammation of the lungs, it would be crowded against its neighboring viscera, and thus increase its own difficulty. The third and last case is owing to an hereditary taint or scrofulous humor, that is transmitted from one generation to another. It will frequently show itself in different parts of the body, and will finally often fix on the lungs and destroy them.

If persons of the above described cases of Northern latitudes, were to remove to a warmer climate before they become diseased, I think they would live much longer.— They should choose occupations that require much exercise in the open air.

A person of the above description, especially if he be tall and slender, should not choose the trade of a shoemaker. Every person in this climate, especially persons inclining to a consumption should wear flannel summer and winter, a thinner texture may be worn in summer than in winter. A plaster should be worn between the shoulders, should a person be attended with a constant cough. The tonic tincture, (*See Tonic tincture,*) is highly esteemed by the late Dr. Elisha Smith of the city of New York. I have never proved it; but should think it must be serviceable. In case of bleeding at the lungs I have used with decidedly good effect, a teaspoonful of the powdered root of yellow dock, a little cayenne, put into a teacup of hot milk, drank when cool.

---

## INFLAMMATION OF THE LIVER.

The liver is less liable to inflammation than most of the other viscera, owing to its circulation being slower. The principal causes of inflammation of the liver are intemperance in eating and drinking; and more especially par-

tial application of cold or wet when the body is over heated or fatigued with exercise. The symptoms vary according to the degree of the inflammation; sometimes there is an acute pain in the side, running up between the shoulders, a dry cough, &c., where the disease has been of long standing. The general symptoms are a pain and tension in the right side, under the false ribs, attended with some fever; a sense of weight and fullness in the part; difficulty of breathing; loathing of food; great thirst, with a pale or yellowish color of the skin and eyes.— Sometimes there is difficulty of lying on the left side.

It may be known from the pleurisy, from the pain being less violent and lower down, and pulse not so full. This disease is not dangerous if properly treated. A person laboring under this disease, should abstain from stimulating drinks, heats and colds, hot bread, strong tea and coffee, full meals of roasted meats, late suppers, especially of solid food highly seasoned, spirits, wines, strong beer, and the like. These will produce this disease and a multitude of others; but will never cure any. The patient laboring under this disease, must regard the above directions, if he would recover. His food should be thin and light; the body and mind kept easy.

In treating this disease, if the patient be troubled with cold feet, I direct as in almost all diseases, where that is the case, to soak the feet in weak lie; and after rubbing them thoroughly, bathe them with the elixir. This may be occasionally repeated till the feet become warm. Let the patient take equal parts of the vegetable powders and yellow dock root pounded fine, with about a great spoonful of milk; this may be repeated every night on going to bed, and the same occasionally in the morning before getting up; rub the side and wherever the pain may be, with the elixir, frequently and occasionally with the compound elixir, when the pain is most severe; make a constant drink during the day of a tea made of dandelion root; it may be sweetened and made palatable. If the pain in the side should not subside, put on a poultice of rye meal

and vinegar, sprinkle the surface over with mustard seed pulverised. A strengthening plaster should be worn on the side and between the shoulders. Take care to keep the bowels open. If the powders should not prove physical enough, take two or three of the bilious pills. It will be necessary in the first stage of the treatment of this disease, to give the lobelia emetic; it will not fail to excite the liver to a healthy action; it should be repeated occasionally. If the surface should be dry, and a want of action in the system, the vapor bath may be used. The alterative syrup will be found very serviceable, half a wine glass full three times a day.

I was called to visit a woman a few months ago who was afflicted with this disease. I found her very low.—She had a mercurial sore mouth, and had been laboring under the disease for a long time, and had many physicians; but grew worse. She told her husband before I commenced, that her present prospect was certian death, and she could but die if she empolyed another physician. I commenced with her, and followed nearly the course as laid down above, and she began immediately to recover, and is now able to take charge of the family.

---

### CHOLERA MORBUS.

The Cholera Morbus is a violent purging and vomiting of bilious matter, attended with gripes, sickness, and a constant desire to go to stool. It comes on suddenly, and is most common in the autumn. In warm climates, it is met with at all seasons of the year, and its occurrence is frequent.

*Symptoms.*—It is generally preceded by a heartburn, sour belchings, with pain in the stomach and intestines.—To these succeed nausea, excessive vomiting and purging of green, yellow, or blackish-colored bile, with a distension of the stomach, and violent griping pains. There is likewise a great thirst, with a very quick and unequal

pulse, and often a fixed acute pain about the region of the navel.

The cause of this disease is a redundancy and putrid acrimony of the bile—food that easily turns rancid, or sours on the stomach, as butter, bacon and unripe fruit. Says Dr. Buchan, I have been twice brought to the gates of death by this disease, and both times it was occasioned by eating rancid bacon.

The following treatment, says Dr. Beach, I think I may say with propriety, I have found an infallible remedy for the cholera morbus, even in the last stages of it.

Take of best Turkey rhubarb, either bruised or pulverised, half a dram. Bi-carbonate of potash half a dram. Peppermint plant, half a dram, ground together in a mortar, and put the powder into a teacup, add sufficient loaf sugar to sweeten, then add half a pint of boiling water, when nearly cold, two table-spoonsful of brandy. Of this, give two table-spoonsful every half hour, or as often as the paroxysms, or periods of vomiting and purging take place. In very severe cases I have occasionally added to every dose fifteen or twenty drops of laudanum. This must be repeated until the urgent symptoms are diminished. The effect of this medicine is truly surprising. So sudden and powerful is it, that I have often been delighted with its salutary effects. It is seldom that the patient will vomit up more than one dose of the medicine; but it rests upon the stomach, calms the irritation, checks the nausea and vomiting, passes gently through the alimentary canal, changing their contents of fæces, from the most morbid and fetid, for the most healthy state. While mercury which is now given in such cases, only aggravates. This preparation acts like a charm, and I was about to say, might be compared to the act of extinguishing fire by pouring water upon it.

The above treatment I have never proved, but from its very respectable source it is entitled to credit. I have never failed of curing by giving the lobelia emetic in this disease. It will stop the purging and vomiting as soon as

the operation of the emetic is over. After the operation, the patient should take cooling drinks; the food should be light and easy of digestion. If there should be pain about the region of the navel, he should bathe with the elixir; and, if necessary, apply bitter herbs, steeped in vinegar to the part: if the pain should still continue, apply the cups and scarificator in a number of places. Give the Indian hemp root, pulverised, an even teaspoonful two or three times a day. The patient should drink freely of mint tea, slippery-elm, and other mucilaginous drinks. An injection made of slippery-elm, steeped, half a tumblerful; of warm milk, the same quantity; molasses, also the same; sweet-oil, three great spoonsful; pearlash, or salaratus, a teaspoonful, and laudanum a teaspoonful. Mix and inject as much as you can. If there should be a dryness upon the surface, apply onion poultices to the feet; a hot stone should be applied to the feet. The patient may occasionally take for drink a tea made by toasting bread very hard and pouring boiling water upon it; gruel made of Indian meal makes a good medical drink.

It is a known fact in chemistry that an Alkali and an Acid united destroy each other. The cause of this disease is believed to proceed from acid, therefore, an Alkali is its antidote. A gentleman in New-Bedford informed me since I commenced this article that he had succeeded in curing the cholera morbus, and almost universally all bowel complaints, with a syrup made of blackberries—squeeze out the juice, boil, take off the scum, add loaf sugar and best spirits sufficient to keep it; a wineglassful two or three times a day.

---

### DIARRHŒA: OR, LOOSENESS,

Is not always a disease, but an effort of nature to throw off some disease. It ought, therefore, not to be checked, unless it produce weakness and debility. When it is produced by taking cold, warming drinks, soak the feet and

excite a gentle moisture of the surface. Where this disease proceeds from an acid state of the stomach give the *Corrector*, which is made of one teaspoonful of salaratus, one of peppermint, or spearmint finely pulverised, and one of beat Turkey rhubarb, sweetened with loaf sugar; add half a pint of boiling water, a few spoonsful of spirits, if it be at hand; for an adult, take half a wineglassful every hour till it produces a change in the stool.

In common cases of slight relax in children produced by heat and exercise, let their food be milk thickened with flour, and drink nothing except sage tea, chocolate-root, or Avens-root, a little cayenne, and milk scalded will be found serviceable. In some cases, it may be necessary to take an emetic, but I think, rarely, if the above course is properly pursued. Diarrhœa produced by extreme agitation of mind requires emetic in stead of cathartic. When looseness proceeds from worms, the stool will appear slimy, and appearances of decayed worms; when this is the case means should be taken to expel the worms. Whatever may be the cause, when it is found necessary to stop the looseness, the patient should take light food.

---

## DYSENTERY.

This disease may be distinguished from the diarrhœa, from acute pain in the bowels which it produces, and discharge of bloody matter. It is most prevalent in the spring and fall. Night air, confined and unwholesome air, bad water, leaving off flannels, wet clothes, are some of the principal causes that produce dysentery.

The symptoms are frequent griping pain in the bowels, an inclination to go often to stool, bloody discharges mixed with slime; it is attended with chills and quickness of pulse. When the patient goes to stool, he feels a bearing down as though the whole bowels were falling out. It is very important in this disease that the patient should keep clean, warm and quiet.

*Treatment.*—It may be cured in the first stages of it by milk boiled and thickened with flour. I once cured myself by this course. I was travelling, and found all the symptoms coming on; I stopped at a tavern, and for dinner called for a dish of milk, boiled and thickened with flour. It had the happiest effect. I had no more pain and nothing passed my bowels for two or three days, and then became regular.

I cured myself a few weeks ago, of the same disease, after it had assumed rather a bad form, by taking about an even teaspoonful of rhubarb, with a piece of salaratus as large as a white bean, mixed in hot water, sweetened, taken once in ten or twelve hours, for two or three times, lived light, drank two or three strong cups of tea, and found immediate relief. The thickened milk will sometimes produce pain and constipation in the bowels, owing to the sudden check which it produces: in this case, it will be necessary to take a gentle portion of physic—take a teaspoon a little more than half full of rhubarb, or six of the hygeian pills. (*See Hygeian Pills.*) After three hours, take half a pint at once of strong tea of thoroughwort, warm, and sweetened with molasses or sugar; if this does not vomit in half an hour, give as much more. I have produced an immediate cure by the above treatment, that is, by giving the thickened milk, pills and emetic; a hot stone should be placed at the feet whilst giving the emetic, to assist in producing perspiration.

A sea Captian of Plymouth, Massachusetts, informed me that he was once on a fishing voyage near the Labrador coast, and all his company, by turns, were attacked with the Dysentery, and all soon recovered, but one who was his son; he could get no relief in the ordinary treatment. His case was so obstinate that he was under the necessity of going on shore, and after finding a snitable place for his son, he met with one of the native Indians, who told him "*me cure um, sartin.*" He accordingly collected a quantity of double spruce tops and boiled them making a strong decoction, and gave him about a tea-

cupful; and in about an hour gave him a gentle portion of physic, which produced an immediate cure.

A variety of treatments are necessary to be laid down, as the same medicine will not have the same effect on every one. Injections are useful made of

Flaxseed tea; or mucilage of Slippery-elm—half a pint,  
 Milk—half a pint,  
 Sweet-oil—a wine-glassful,  
 Molasses—half a pint,  
 Fine Salt—one teaspoonful,  
 Mix, and introduce with a large syringe.

In giving injections in this disease, it is necessary to give large portions, in order to reach the inflamed part. It is very important to keep the feet and body warm; an extra garment should be worn.

The *Corrector*, as laid down in the treatment of Diarrhœa, should be used in the first stages of this disease; it has a tendency to neutralize the acidity of the stomach—the rhubarb quickens the motion of the bowels and carries it to the seat of the disease. I have found a syrup made of blackberry-roots, to be very useful in all diseases of the bowels: it should be boiled for a long time to get the strength. It should be sweetened, and milk scalded in. It makes a very agreeable syrup. It is particularly useful for children, as it is so pleasant, that they will drink it without compulsion. A syrup made of the berries answers the same purpose.

Dr. Buchan says he has known the Dysentery to be cured by a broth made of sheep's head and feet, boiled with the skin on, the hair and wool being singed off with an hot iron. It should be boiled till the broth is quite a jelly. A little cinnamon, or mace, may be added, to give it an agreeable flavor; the patient may take a little of it three or four times a day, with a little toasted bread; and a clyster may be given of it twice a day.

URINE,  
FREQUENT AND EXCESSIVE : OR,  
DIABETIS.

AND ALSO INVOLUNTARY.

The diabetes is a frequent and excessive discharge of urine. It is rarely met with in young people : but often attacks persons in the decline of life, especially such as have been hard drinkers in their youth, or been hard laborers.

*Symptoms.*—In diabetes, the urine generally exceeds in quantity all the liquid food which the patient takes. It is thin, pale, and of a sweetish taste, and agreeable smell. The patient has a continual thirst, with some degree of fever. The appetite grows less, and the flesh fails. As this disease makes its appearance on the decline of life, when the system begins to grow slack, every thing that has a tendency to relax the system and excite the urinary organs, should be avoided. The food, in particular, should be of a solid kind, with but very little drink, and that of a tonic and astringent nature, such as sweet bugle, crane's bill, a syrup made of white-oak bark ; acids for drink are better than that which is sweet, such as lemon-juice, vinegar, elixir vitriol, &c.

A gentleman told me he had been afflicted with this disease for five and twenty years, by turns, and that he found the greatest help from a syrup made of yarrow and plantain. Parched corn is recommended, golden-seal, Solomon-seal, beth-root, and black-cohash, these may be taken separate, or combined ; but they should be boiled down strong. The bowels should be kept gently open and occasionally an emetic should be taken.

There is another disease of the urinary organs called INCONTINENCY OF URINE ; but this is different from a diabetes, as the water passes off involuntarily in drops, and does not exceed the usual quantity. It attacks usually persons in the decline of life, and such as labor hard.

The course of treatment to be pursued is similar to that directed above. In both of the above diseases, the patient should not sleep on a feather bed, a matrass or straw bed is the most suitable.

---

## GRAVEL AND STONE.

When small stones are lodged in the kidneys, or discharged along with the urine, it is called the gravel. If one of these stones happen to make a lodgment in the bladder for some time, it accumulates fresh matter, and at length becomes too large to pass off with the urine. The patient is said, in this case to have the Stone.

The Stone and Gravel are produced by high living, a sedentary life, lying too warm, or too much on the back; the constant use of water impregnated with earthy or stony particles. Stones or Gravel in the kidneys, occasion fixed pain in the loins, sickness, vomiting, and sometimes bloody urine, and not unfrequently a slight suppression of urine. When the stone descends into the ureter, (or the canal which conveys the urine from the kidneys to the bladder,) and is too large to pass along with ease, all the above symptoms are increased; the pain extends towards the bladder; the thigh and leg of the affected side are benumbed; the testicles are drawn upwards, and the urine is obstructed. A stone in the bladder is known from the pain at the time, as well as before and after making water; from the frequent inclination to void the urine; from the urine coming away by drops, or stopping suddenly when it was running a full stream; by a violent pain in the neck of the bladder upon motion, especially on horse-back, or in a carriage on a rough road; or from a white-thick, copious, stinking mucous sediment in the urine; from an itching at the top of the penis.

Many remedies have been prescribed for the Stone and Gravel; but, perhaps, all that has been effected, or can be accomplished by medicine, is, to remove urgent symptoms,

and give action and tone to the organs most intimately connected with these difficulties. Those medicines that give tone and a healthy action to the kidneys, producing a free discharge of urine, are the best adapted to these diseases.

The body should be relaxed by perspiration, and stimulating diuretics should be administered, in order to expel the gravel from the system, before they shall attain to so large a size that they cannot pass off by the ordinary means. Dr. Beach recommends, particularly in violent attacks, that the patient soak his feet in warm water, and take the spirits of mint, which is made by pounding up the green herb of spearmint, and adding Holland gin; of this, take a wine glassful as often as the stomach will bear it.

If there be pain in the region, apply fermentations of bitter herbs, and by all means, produce perspiration; if there is difficulty in producing moisture on the surface, use the vapor bath.

It will be necessary to keep the bowels open; the vegetable powders will be found very applicable in this case. The patient should drink a plenty of slippery-elm tea, gum arabic, queen of the meadow, and marsh-mallows.

Many persons have found great relief from the use of Hærclem oil. I have made this oil, by adding one part of spirits of turpentine, to three parts of the balsom of sulphur, fifteen drops is a portion.

Dr. Beach informs us that he met with a man in the State of New-York, who had cured himself of the Stone in the bladder, by drinking freely of a strong decoction or tea of the wild carrot, (*Daucus Sylvestris*,) the tops and seeds; he voided forty-seven large pieces of stone by taking the medicine. The reader is directed to examine the medical properties of Cleavers as laid down in this work.

---

## HEADACHE.

Headache proceeds sometimes from a foul stomach and costiveness, when it is termed the sick headache. There are a great many people troubled with this complaint, who think they can never be cured; they have not courage enough to pursue the only course that will insure a complete cure, and therefore must drag out a life of periodical headache, and sickness at the stomach; whilst a remedy is within their reach.

The acrimonious humors have, for a long time, been bound up in the body, as will appear from a costive habit; the stomach is foul, and through sympathy effects the head; the pores are generally closed, and very little moisture on the surface.

Such persons sometimes take a little physic, and once in a great while an emetic; but not enough to do much good or hurt. They require prompt, thorough and constant treatment, for some length of time, in order to break up the deep seated disease. No one thus afflicted is willing to pay any attention to it, except to remove the very urgent symptoms when they occur.

*Treatment.*—Take a heaping teaspoonful of the physical powders, (or about that quantity,) the next day but one after, take a thorough lobelia emetic. Take every night, a portion of the vegetable powders, and enough of the bilious pills to operate on the bowels;—the number of pills will be left to the discretion of the patient; but take enough, every night when you take the powders, to operate. This course should be followed for a number of weeks, and as often as once a week, take a lobelia emetic. Make a syrup of thoroughwort, and take half a wine-glassful, twice a day. Avoid strong tea and coffee, drink occasionally through the day the mother's cordial, the food should be light and chiefly vegetable.

When the headache proceeds from a determination of blood to the head, the feet should be soaked every other night in weak lie, and rubbed with the elixir; the vegetable powders and physic should be taken. It is very impor-

tant, in order to obviate this kind of headache, to take blood from the temples, or the shoulders, by cupping. I have frequently made this application, and have never failed of giving relief. It relieves the small blood vessels, that are pressed, and has a tendency to equalize the circulation. When the headache arises from nervous affections, more particularly, the patient should be directed to take nervines: such as skonk-cabbage, valerian, Indian-hemp, &c. Application of cold water to the head every morning has sometimes cured the headache when every thing else, which was prescribed, failed.

---

### WORMS.

These are chiefly of three kinds, viz: the tænia, or tape worm; the teres, or round and long worm; and the ascariides, or round and short worm. There are many other kinds of worms found in the human body.

The tape-worm is white, very long, and full of joints. It is generally bred in the stomach, or small intestines.

The round and long worm is also bred in the small intestines, and sometimes in the stomach.

The round and short worms, commonly lodge in the rectum; or what is called the end of the gut, and occasions a disagreeable itching about the seat.

*Symptoms.*—The common symptoms of worms, are, paleness of the countenance, and at other times, an universal flushing of the face; starting, and grinding of the teeth in sleep; swelling of the upper lip; the appetite sometimes bad; at other times quite voracious; looseness; a sour or stinking breath; a hard swelled belly; great thirst; the urine frothy, and sometimes of a whitish color; griping or cholick pains; an involuntary discharge of saliva, especially when asleep; flushed cheeks; irregular pulse, and sometimes the convulsive fits. Sometimes the worms rise in the throat—they may always be carried down by drinking salt and water.

When they produce fits, administer an injection made of strong catnip tea; add one great spoonful of sweet-oil, or hogs-lard, three great spoonful of molasses, and an even teaspoonful of fine salt. Inject for a child from half to a tumblerful at once, and keep it up fifteen or twenty minutes. Soak the feet in weak lie, and put onion poultices on his feet; give from one to two ounces of the juice of onions; and, in about an hour after, give a thorough portion of the physical powders. After the operation of the physic, give a thorough course of the lobelia emetic. If the child should have a recurrence of spasms, pursue the same course again. I have pursued the very course here laid down with success. I had a case a few months ago, of fits from worms, attended with a lung fever. I succeeded in giving prompt relief, by the above course of treatment. The emetic should be administered as often as every other day, and injections after, and occasionally physic.

The bowels as well as stomach, in this disease, become very filthy and require much cleansing. The strength of the patient should be kept up; make a tea of pearl barley, put in a little gum arabic, or slippery-elm. In ordinary cases of worms, the juice of onions, and afterwards physic, as directed above, I have found to answer the purpose. Tansy, garlicks, onions and sage, are good against worms; Bitters made of wormwood, tansy, and thoroughwort, should be given two or three times a day, after the emetic. Worms will breed again if the stomach and bowels are not properly strengthened.

---

## DROPSY.

The dropsy is a preternatural swelling of the whole body, or some part of it, occasioned by a collection of watery humor. It is distinguished by different names, according to the part affected, as *anasarca*; or a collection of water under the cellular membrane: *ascites*, or a collection of

water in the belly: *hydrops pectoris*, or dropsy in the breast: *hydrocephalus*, or dropsy of the brain. Dropsy proceeds from various causes; sometimes it is hereditary; sometimes from sedentary habits; from drunkenness; excessive bleeding; purging; and salivations.

Dropsy generally begins with a swelling of the feet and ankles towards night, which, for sometime, disappears in the morning. In the evening the parts, if pressed with the finger, will pit. The swelling gradually ascends and occupies the trunk of the body, the arms, and the head. Afterwards the breathing becomes difficult, the urine is in small quantity, and the thirst great; the body is bound, and perspiration is greatly obstructed. To these, succeed torpor, heaviness, a slow waisting fever, and a troublesome cough. This last is generally a fatal symptom, as it shows that the lungs are affected.

This kind of dropsy is the most easily cured. The *hydrops pectoris*, or dropsy of the chest, the most difficult. Dropsy, means a collection of water, wherever it may be, and requires about the same kind of treatment.

In all kinds of dropsies, give thorough portions of the physical powders. I have found them very efficacious in evacuating the water. After the operation of the physic, use the vapor bath; and immediately after, a thorough course of the lobelia emetic. It is more easily cured in young persons than old. A Mr. Balcom, of Norton, sixty four years of age, was cured in one week, by the above process, after being given over by his physician, as incurable. He took four courses—one every other day. After he had taken the third, he said he was no better, but the fourth seemed to effect the cure, and he has been able to attend to his business ever since.

Warming and stimulating medicines, combined with those which produce action upon the kidneys, producing a free discharge of urine, are very important in this disease, such as mustard-seed, horseradish, cayenne, juniper-berries, elder-bark, milk-weed, bittersweet bark. These may be made into a syrup, or part of them in equal quantities;

let the patient drink of it occasionally ; a wine-glassful may be taken two or three times a day. Stimulating diet should be taken in this disease ; mustard and cayenne should be taken freely with the food. The dyspeptic bit-  
ters, may occasionally be taken through the day, to keep up the tone and strength of the system. (*See Dyspeptic Bitters.*)

---

### CANKER : OR, SORE MOUTH,

Appears in small white ulcers upon the tongue, gums, and around the mouth and palate, resembling small particles of curdled milk. When it is mild, it is confined to the mouth ; but when it is violent and of long standing, it extends the whole length of the alimentary canal, and produces flatulencies and sour purgings. The physical powders should be occasionally administered in thorough doses. A tea made of equal parts of sumach leaves, or hemlock bark, the inner meat ; raspberry leaves and bay-berry bark, should be drank a number of times every day for a gargle. Dissolve salt petre, if the case be very inveterate, and afterwards make use of a tea of slippery-elm ; another gargle may be made of white-oak bark, boiled down very strong, and brandy burnt half away ; unite them and use as a gargle, or wash, to hold in the mouth. In case of slight appearances of canker, I have cured with a little alum water, but where it assumes a malignant form, it is very difficult to eradicate. Sage tea for a constant drink is very good for persons inclined to canker. If the canker assume a malignant form, it will be necessary to give gentle emetics. The canker root should be chewed and swallowed ; if the patient be a child, soak the root in cold water, and feed the child with the mucilage.

---

## VOMITING.

If it is found necessary to stop vomiting at any time, the following articles will be found useful. A cup or two of strong tea; spearmint or peppermint tea; an onion poultice applied to the pit of the stomach. Should not this check it, give of the essence of spearmint and laudanum twenty drops of each. The common soda powders may be taken. Bathe the feet in soft warm water. Sometimes the lobelia emetic will keep the patient vomiting for a long time, and it will seem to be desirable to put a stop to it; but I have found it the best way generally to let it have its course, it will stop itself, when the emetic has operated sufficiently. Where the patient has become very much exhausted by vomiting, a little cold water will revive; commence with a teaspoonful as often as the patient wants it, and after a while take a great spoonful. I have pursued this course successfully.

---

## HICKUP.

The hickup is a spasmodic affection of the stomach and midriff, arising from any cause that irritates the nervous system. When it arises from the use of food that is hard of digestion, wine or any spirituous liquors may be used; sometimes a little vinegar will answer the purpose.

If poison be the cause the patient should take a plenty of oil and milk. When it proceeds from inflammation of the stomach, cooling drinks should be taken. Laudanum is sometimes administered: ten or fifteen drops at a time, occasionally repeated. Hops and wormwood simmered in vinegar and applied to the stomach are recommended.

---

## DYSPEPSY.

Dyspepsy is a derangement of the digestive functions, occasioning an interruption in the organs, or viscera, concerned in the process of digestion; the immediate cause of which, appears to be a diminished or increased quantity, or vitiated quality of the gastric, or the secretion of bile.

There is no disease perhaps that requires more strict attention to diet than the dyspepsy, and in general the appetite of such patients will direct them what is proper to be taken. Bread made of meal not sifted, should be used in preference to that made of flour, as the physical properties of meal is contained in the bran. Ripe fruit may be eaten, and the bowels regulated generally by the diet. Anti-dyspeptic pills may be used occasionally. A tea made of the leaves of bayberry will be found to be an excellent remedy; it should be drank daily, and the vegetable powders taken with a little milk, every night.

By all means, administer the lobelia emetic once or twice a week according as the patient can bear. This emetic is particularly adapted to the cure of this disease, as it produces a change and an action on the internal viscera, stimulating it to a healthy action, producing all the good effects which is expected from mercury, without its evil effects.

It is argued that we use this emetic for every disease; supposing we do, which, by the way, we do not; do not the faculty, with as much truth, use mercury for every disease? Stimulants should be taken along with food; such as cayenne, mustard, &c.

The body should be rubbed every day with a flesh brush and especially the stomach and bowels. Rubbing or kneading the bowels and stomach, is attended with very beneficial effects. When dyspepsy is attended with nervous affections, nervines should occasionally be used.

Particular attention should be paid to the feet, to keep them dry and warm. No exercise in this disease perhaps

is so good as walking. Riding on horseback, and in a carriage occasionally will be found serviceable. Dr. Beach recommends, in this disease, a drink made of

Golden-Seal, pulverised—one dram,  
 Whitewood bark—two drams,  
 Bitter root, or Indian Hemp, pulverised—one dram,  
 Cayenne—half a dram.  
 Sweet Mead wine—one quart.

Add these articles, pulverised or bruised, to the wine, and let them stand a few days, and it is fit for use.

Take from a quarter to half a wineglassful, three or four times a day. This excites an appetite and strengthens the system generally.

It is still there are hundreds of dollars worth of this medicine sold at two dollars per bottle.

Dyspepsy is caused, perhaps, the most often by intemperance in eating and drinking. The best rule that we can make in regard to eating, is to rise from the table with as good an appetite as we sat down, and in regard to the use of ardent spirits, to let it alone before it is meddled with. Strong tea and coffee have a tendency to bring on dispeptic habits, especially with sedentary persons.

---

### ST. VITUS' DANCE.

This disease generally attacks young people, from the eight year of their age, till the time of puberty; though it has sometimes been found to occur at a more advanced period of life. Females are more liable to it than males.

The first symptoms of this disease is a slight lameness of one leg, which the patient dreads a little, and seems to have lost the power of regulating its action. The arms next become affected, and are thrown into various contortions, which deprive persons affected with this disease of the power of feeding themselves; and these awkward

gesticulations in attempting to bring articles of food towards their mouth appear ridiculous. One side of the body is in general more affected than the other.

Give the Hygeian pills every day, with the vegetable powders for a few days; then give the emetic: if one is not sufficient to produce a cure, follow them up as often as it will agree with the constitution. One course cured a lad in Middleborough, about eight years old.

A tea made of the Indian hemp root is very good to allay nervous irritations, also valerian. The scull-cap, made into a tea and occasionally drank, is highly recommended. Dr. Beach informs us he has never known the scull-cap to fail of performing a cure. The feet should occasionally be bathed with warm water.

### ST. ANTHONY'S FIRE: OR, ERYSIPELAS.

This disease attacks persons at any period of life; but is most common between thirty and forty. It often attacks young people, and pregnant women, and such as have once been afflicted with it are most liable to have it again.

Every part of the body is liable to be attacked with the erysipelas; but it most frequently seizes the legs or face, especially the latter.

It is most common in autumn, or when hot weather is succeeded by cold and wet.

*Causes.*—Violent passions, or affections of the mind. Those which produce an internal inflammation, or an acrid humor, heats and colds, or obstruction of any accustomed evacuation: sudden exposure to cold, when the body has been greatly heated, by drinking to excess, &c.

*Symptoms.*—The St. Anthony's Fire attacks with a shivering, thirst, loss of strength, pain in the head and back, heat, restlessness, and a quick pulse; and sometimes vomiting and delirium; on the second, third, or fourth day, the part swells, becomes red, and small pustules

appear ; at which time the fever generally abates. When it seizes the foot, the parts contiguous swell ; the skin shines, and if the pain be violent, it will ascend to the leg and will not bear to be touched.

When it attacks the face, it swells, appears red, and the skin is covered with small pustules, filled with clear water. One or both eyes are generally closed with a swelling ; there is inflammation of the throat, and difficulty of breathing and swallowing. If the mouth and nostrils be dry and the patient drowsy, there is reason to suspect an inflammation of the brain. This disease is seldom dangerous ; but when the constitution is bad, the legs will swell to a prodigious size and the cure proves difficult.

It has often proved fatal to people in the decline of life, who were of a scarbotic habit.

When the erysipelas is large, deep, and effects a very sensible part of the body, the danger is great.

If the livid red color, changes into a livid black, there is danger of mortification. A poultice made of the flour of slippery-elm, milk and yeast, should be applied to prevent the mortification. Yeast has a tendency to stop mortification.

Those that die of this disease, are carried off about the seventh or eight day. The patient should be kept within doors ; should take such drinks as will produce moderate perspiration ; the bowels should be kept constantly open by very gentle physic or injections ; if the pulse be low, the patient should be supported by cordials. When the disease affects the face and brain, soak the feet in warm water ; apply onions or mustard seed poultices to the feet, to divert it from the head ; also use injections. The food should be light. The patient should never be suffered to be costive. If the stomach be foul, administer the emetic. The vapor bath seems peculiarly adapted to the cure of this disease ; it is one of those diseases that the vapor bath has the happiest effect it gives immediate relief. It is very important in this disease to have the head and face steamed as well as the rest of the body.

I have known when the erysipelas was prevalent in a place that almost all the women who were confined at that time died within eight and forty hours after their confinement. I believe in these cases, that the weak state of the bowels invite the infection, and there is not energy and power enough in the system to create a fever sufficient to throw it to the surface; and nothing being administered to the patient, to assist nature in throwing it out, the patient dies of mortification or gangrene of some of the internal viscera. Great care should be taken after confinement to strengthen the intestines and support and defend them against diseases of this kind—all diseases of the skin are liable to strike in, as it is familiarly call. I have used with great success, after confinement, the double tansy tea and spirits, sweetened, and vegetable powders. The vegetable powders should be taken every night and morning, and the tansy tea may be taken at liberty, eight or ten times in the course of four and twenty hours.

It strengthens and defends the internal parts that are weak, and directs the determining powers to the surface. I believe this course would have saved many a woman's life. If this is not sufficient, I should give sudorifics and a gentle emetic. Unless the disease can be thrown to the surface, the patient must die. If there is difficulty in producing perspiration, I should direct to bathe the surface with weak lie, or use the vapor bath.

---

## TEETHING.

Arbuthnot, states that about a tenth part of the infants die in teething, by symptoms proceeding from the irritation of the tender, nervous parts of the jaws, occasioning inflammation, fever, convulsions, gangrene, &c. These symptoms are in a great measure owing to the great delicacy and exquisite sensibility of the nervous system at this time of life, which is too often increased by an effeminate education. Hence it comes to pass that children

who are delicately brought up, always suffer most in teething, and often fall by convulsive disorders.

About the sixth or seventh month, the teeth begin to make their appearance: first, the incisors, or fore-teeth; next the canini or dog-teeth; and, lastly, the molares, or grinders. About the seventh year, there comes a new set; and about the twentieth, the two inner grinders, called *dentes septientiæ*, the teeth of wisdom.

Children about the time of cutting their teeth, salaver much, and have generally a looseness. When the teething is difficult, especially when the dog-teeth begin to make their way through the gums, the child has startings in his sleep, tumors of the gums, watching, gripes, green stools, the thrush, fever, difficult breathing and convulsions.

Difficult teething requires nearly the same treatment as an inflammatory disease. If the body be bound, it must be opened either by emollient clysters, or gentle purgatives; as senna, manna, rhubarb, &c. The food should be light, and in small quantities; the drink plentiful but weak and diluting, as infusions of balm, catnip flowers, &c. —to which a third or fourth part of milk may be added.

It is sometimes necessary to give the lobelia emetic, the tincture is the best form to administer it. Children are subject to frequent spasms, or difficulty of breathing, and suppression; in this case the emetic should be used. A plaster of Burgundy pitch, should be kept between the shoulders; onion poultices on the feet, after soaking them in weak lye.

---

### SMALL POX.

This disease, which originally came from Arabia, is, since the discovery of vaccination, not so general as heretofore; nor does it appear to be of so malignant a type. It is nevertheless, a most contagious malady; and, for many years, proved the scourge of civilized, as well as

uncivilized nations. It most generally makes its appearance in the spring.

This disease is attended with some fever. Children are inclined to appear a little dull; more inclined to drink than usual; but little appetite for solid food; complain of weariness, and on exercising inclined to perspire.— These symptoms are followed by frequent turns of chills and heat. About the third or fourth day from the time of sickening the Small Pox begins to appear. At first it very nearly resemble flea-bites, and is first discovered on the face, arms, and breast.

When it is taken by vaccination, it begins to be inflamed in about eight or nine days.

In this disease, as well as all others, we should watch its indications, and treat it accordingly; without a certain discernment to know symptoms and judgment to vary the treatment according to circumstances, a person is not fit for a nurse. The Small Pox is an infection received into the system, which may, in some cases, be expelled by the efforts of unaided nature.

All that can be done by the physician, is, to assist nature in throwing it off. When the body receives the virus or infection, the powers of nature are put in operation to throw it out upon the surface: this it attempts to perform by creating a fever. Without this fever, it could not expel it; so it is not an unfavorable symptom, and it should not be destroyed: but rather assisted.

The great danger is when the fever is raised to its greatest height, and has failed of expelling the virus matter. It then, as it is termed, strikes in. Then active and stimulating means must be adopted to bring it out. A tea of saffron and snake-root, milk punch, catnip and pig-weed tea, will be needed to assist nature in keeping the determining powers to the surface. If the eruptions should not fill as is sometimes the case, they will be needed.— When the fever is highest, let the body be bathed with warm water before and after the eruption appears. The bowels should be kept open with emollient clysters, or gen-

the physic ; the feet should occasionally be soaked. When the secondary fever appears, and the disease has fairly turned, the patient should be thoroughly purged : sometimes nature teaches this herself, by bringing on a diarrhœa. Whenever there is any appearance of putrescence, give a wine glass of yeast, three or four times a day.

There are two species of the Small Pox—the *Distinct* and *Confluent*. The *Confluent* is the most severe in its symptoms.

If there should be pain in the head, delirium, sore-throat, &c., soak the feet in warm water, and if necessary apply mustard seed poultices to the feet. The food should be light ; the patient should be kept cool ; drinks may be made of mint, catnip, balm, pigweed, lemonade, currant jelly, and toasted bread water. His nourishment should be barley water, Indian meal gruel, milk and water, roasted apples, buttermilk and water, ripe fruit, hasty-pudding and milk. The room should be aired ; but not be suffered to come in contact with the patient. If there should be appearances of sinking in the patient, in any stage of the disease, he should be supported by cordials.

---

## INFLAMMATION OF THE EYE.

Inflammation of the eye is produced by various causes, as blows, bruises, and the like. It may also proceed from dust, lime, or particles of matter coming in contact with the eye. It is also caused by drying up of accustomed evacuation, as drying up of old sores, seatons, &c.

It is often produced by humors, by the hairs of the eye lashes being turned in and injuring the eye. It is sometimes epidemic. It is often produced by hard drinking. It is sometimes handed down from one generation to another from a venereal taint ; a very poor inheritance. When it proceeds from a scrofulous habit, alterative remedies should be administered to cleanse the blood. If

any substance should get into the eye, it must be taken out; as it will create constant inflammation, so long as it remains.

The best eye water for inflamed, or sore eyes, is the elixir, diluted with a little water; the water turns it nearly the color of milk. Take a feather, dip the end of it in the elixir, and touch it to the inner corner of the eye; it will smart severely for a few minutes. As soon as that is over, it will feel cool and much relieved. I have cured sore eyes in a short time, with this eye-water. It should be repeated a number of times a day, till it is cured. The feet should be soaked at night in warm water fifteen or twenty minutes, as often as every other night, till the eyes are well.

If this does not effect a cure, scarrificate the temples, and put on the cups, take out from a wine glassful to half a pint, as it may seem necessary. In cupping, some skill and management is necessary, in order to take blood: first, in all cases, the cup should be put on before any incisions are made: this is called dry cupping. This determines whether you can make the cup hold on, and also draws the blood to the part. After you take off the cup, warm the spot again with a sponge dipped in warm water, then put on the cup lightly, after scarrificating. If the air is too much exhausted, it will draw too hard and the blood will not run freely. In addition to these means, a mustard-seed poultice may be applied to the nape of the neck and the feet.

If the patient should feel as though there was any foreign substance in the eye, that had not been taken out, take the mucilage of slippery-elm, and drop it into the inner corner of the eye; this will be likely to take out any matter that does not stick fast. If the eye should be very much swollen, put on over the eye a poultice made of the flour of slippery-elm, mixed up with milk. If there be pain or inflammation about the eye, bathe it with the compound elixir. If sore-eyes be of long standing, the hygeian pills should be taken every night, in sufficient

quantities to produce an operation every day; they will operate easily and without weakening, as many kinds do.

Where this difficulty is of long standing, emetics should be administered as often as twice a week.

The pith of the young twigs of sassafras, immersed in rose water, makes an excellent eye water. Weak eyes are sometimes produced by a retension of acrimonious humors in the system, that was not properly physiced off after some contagious disease as the measles, small pox, &c.

---

### EPILEPSY: OR, FALLING SICKNESS.

The epilepsy is a sudden deprivation of all the senses; the patient falls down suddenly and is affected with violent convulsive motions.

Children, especially those who are delicately brought up, are most subject to it. It more frequently attacks men than women, and is very difficult to cure.

Epilepsy may proceed from blows, bruises on the head, a collection of water, blood, or serious humors in the brain, excessive drinking, intense study, excess of venery, worms, teething, suppression of accustomed evacuations, violent passions or affections of the mind, as fear, joy; too great emptiness or repletion; hysteric affections, contagion received into the body, as the infection of the small pox, measles, &c.

*Symptoms.*—An epileptic fit is generally preceded by unusual weariness; pain of the head, dullness, noise in the ears, dimness of the sight, palpitation of the heart, disturbed sleep, the extremities are cold, and the patient often feels, as it were, a stream of cold air ascending towards his head. In the fit, the patient makes an unusual noise; his thumbs are drawn in towards the palm of his hands; his eyes are distorted; he starts and foams at the mouth; his extremities are bent, or twisted various ways;

he often discharges his urine and feces involuntarily, and is quite destitute of all sense and reason.

Common practice, bleeding, arsenic, mercury, lunar caustic, or nitrate of silver, oxide and sulphate of zinc, sulphate of copper, ammoniated copper, sulphate of iron, ammoniated iron, &c.

This disease is produced by obstruction in the system, retention of humors that ought to be evacuated, which deranges the operations of nature. Commence by taking every night, the hygeian pills, (*see hygeian pills,*) take four every night, increase two every night till they operate pretty thoroughly; then leave off a few days and begin with four again; take at the same time, the vegetable powders, according to directions; after two or three days, give the lobelia emetic and the vapor bath. This should be repeated two or three times a week, till a cure is effected. Says Dr. Beach, from the extensive influence of this plant on the system, (meaning lobelia,) it is better adapted to diseases of this kind, than any other kind of emetic.— It stimulates the stomach, liver, pancreas, brain, and the whole nervous system, and usually brings on more or less perspiration. The same author recommends

Garden Peony—1 oz.

Peruvian bark—1 oz.

Virginia Snake-Root— $\frac{1}{2}$  oz.

Wild Valerian, or Ladies' Slipper—1 oz.

Extract all the strength of these by repeated boilings, then strain and simmer to one quart, add a pound of loaf sugar, and half a pint of Madeira wine. Of this, the patient may take from half, to a wineglassful three or four times day.

If all these should fail, the dyspeptic bitters may be taken.

---

## HEARTBURN.

I was very much subject to this disease myself, till about fifteen years ago, when I obtained a cure, and have not had (to my recollection) a bad turn since.

At a time when the heartburn was present, I took a heaping teaspoonful of black pepper, pounded fine, put it in a wine glassful of spirit, stirred it up and drank it at one dose; it effectually cured me. It may be relied on, I think, as a certain cure. It may be taken without any fear of danger. In delicate constitutions, the patient may take a less quantity. It would not be proper in cases of pregnancy. I have given a little, however, of the black pepper in water with safety. In pregnancy for heartburn and sickness to the stomach, the mother's cordial is almost an infallible cure. (*See Mother's Cordial.*) Rhubarb and salaratus is also good against sickness to the stomach and heartburn.

---

## PUTRID, OR, MALIGNANT SORE THROAT.

Since I wrote on this disease, I have been called to attend a patient with this disorder, and for the benefit of my readers, I shall show my course of treatment and the result. The patient was a physician, who practices on the botanical principles; he had had a severe attack and got better; he had, when I was called, fallen into a relapse. He had previously given directions himself, but now fearing it was too much for his mind to have this care, he requested my attendance and said he would follow my directions. He was a man of a robust constitution and was not afraid of the medicines that he administered to others, he followed my directions fully.

I found his head to be affected, his stomach foul, his tongue badly coated, and his throat sore. He had found great relief by steaming his throat with bitter herbs, that is, by inhaling the steam, and applying the flesh side of the

skin of a cat, warm, around the neck; he had occasionally taken emetics and expectorants. It seemed now to be a critical time with him, and his case called for active treatment. I commenced by giving him a heaping teaspoonful of equal parts of lobelia and ipecacuanha, in about fifteen minutes, I gave him a heaping teaspoonful of lobelia in pennyroyal tea, with about half a teaspoonful of skonk-cabbage and about the same quantity of African cayenne, and whenever he vomited I gave him the pennyroyal tea; also a plenty of tea made of equal parts of sumach leaves, bayberry bark, and the inside of hemlock bark; in about twenty minutes, I gave him a second heaping teaspoonful of the powdered leaves of the lobelia, skonk-cabbage and cayenne, and in about half an hour more, gave him about an even teaspoonful of the clear seeds of lobelia, well pounded, accompanied with the skonk-cabbage, cayenne and tea; this portion accompanied with copious draughts of the tea above named, made of sumach leaves, hemlock bark, raspberry leaves and bayberry bark, equal parts, produced copious vomiting—it operated very thoroughly, and in an hour or two it was over, and his head and stomach were relieved; he rested comfortably that night. The next day but one, he went through another similar course. I sat up with him that night, he rested comfortably, and the next morning he was able to sit up in his bed and shave himself. He took frequently of water gruel and such other nourishment as was proper in his case; he also occasionally took a tea made of cayenne, and a tincture made of balsam Tolu, spruce balsam, and hemlock balsam, dissolved in spirits, about three ounces of each to the gallon of spirits.

---

## BLEEDING AT THE LUNGS AND STOMACH.

Discharge of blood from the lungs, is distinguished by a florid or red color, mixed with a little frothy mucons substance; whereas, blood from the stomach is not so red, and generally is thrown up in large quantities, and sometimes mixed with the contents of the stomach. They both require the same course of treatment.

Persons of a slender form and lax fibers, who have long necks and strait breasts, are most liable to this disease. It is often occasioned by excessive drinking, running, wrestling, singing, playing on wind instruments, or speaking aloud. Such as have weak lungs ought to avoid all violent exertions of that organ as they value life. They should also guard against drinking ardent spirits, violent passions, and every thing that occasions a rapid circulation of blood. It may proceed from any thing that obstructs the course of the blood in the lungs. It is often the effect of a long and violent cough; in which case it is often a forerunner of a consumption. It may be produced by sudden application of cold to the external surface of the body by extreme heat, as working about furnaces, or ascending very high mountains or in balloons; one man who ascended about five miles, said that it seemed as though his blood vessels would have bursted. Spitting of blood in a person who is not inclining to consumption is not dangerous; it is often only a symptom, and not a primary disease, and in some diseases it is not an unfavorable symptom, as in pleurisies and some other fevers. In dropsy, scurvy, or consumption, it is a bad symptom, and shows that the lungs are ulcerated. When the blood proceeds from an ulcer in the lungs, it is generally fatal.

*Treatment.*—The first thing to be observed is to equalize circulation and produce moderate perspiration. The feet should occasionally be soaked in weak lie, and afterwards rubbed with the elixir. I have used the following prescription, and succeeded in stoping the blood:—Take an even teaspoonful of lobelia, the powders, the same

quantity of bayberry-root, pulverized, to which may be added the same quantity of skonk-cabbage; put all into a cup of pennyroyal tea; add a teaspoonful of the elixir; take half at once, and the other half in the course of ten or fifteen minutes; let the patient take nothing more till he begins to vomit; let him take a plenty of water gruel. Sometimes the patient will vomit soon, again not under an hour, and at other times, not at all. This course I have found to relieve a cough, and has a tendency to equalize the circulation and relieve the crowded blood vessels, and cleanse the stomach, should there be clotted blood collected. Take the bugle tea for a drink; take, on going to bed, a heaping teaspoonful, of yellow-dock, pulverised, put it into a teacup, fill it up with milk boiling hot, sweeten it, add a little cayenne; this I have used with decided benefit;—the yellow-dock is a little too cold of itself; it requires, in all cases, something a little stimulating. The dock may also be taken occasionally in the morning, an hour before getting up, and if it should seem to agree with the patient, he may take it every morning. If this should not keep the bowels sufficiently open, give gentle purgatives or physic.

I have pursued this course where the patient had the consumption and cough, with decided good results.

The diet should be light and cool; baked apples and milk is very proper in this difficulty. Give three or four pills a day made of white-pine turpentine. The dyspeptic bitters, and alterative syrup may occasionally be taken.

---

### BLEEDING AT THE NOSE.

The blood-vessels in the nose are more slightly covered and mores liable to bleed than most parts of the body, on being ruptured, or by a determination of blood to the head. It is important, therefore, to equalize the circulation by soaking the feet and legs in weak lie; and afterwards rub them thoroughly and bathe them with the elixir;

take catnip or pennyroyal tea, and the vegetable powders to produce a gentle moisture on the surface. If this does not stop it, apply cold water to the nape of the neck and forehead. Introduce a piece of cotton wet in alun-water as far up as possible. Introduce a piece of the dry shaving of leather as far up as can be.

If all this does not stop it, take dried beef, cut it in slices, dry it hard enough to pound into a snuff; and introduce it into the nose; this has proved effectual when all other agents have failed. When the patient is very full of blood, it is well to let it bleed, it may prevent an attack from some disease more dangerous, as the epilepsy, vertigo, &c. It is only when there is danger of bleeding too much that means should be taken to stop it.

---

### DROWNED PERSONS.

Persons remaining under water for a quarter of an hour or more, there is but very little hope of their recovery; yet as we have full proof that many have been resuscitated after remaining under water for a considerable time, and appeared no otherways than dead for a considerable time after they were taken out of the water, every means should be adopted to restore life.

The body should be conveyed carefully to the house with the head a little inclining to give the water opportunity to run out; the body should not be rolled on a barrel as is sometimes practiced.

The grand object in this case is to restore a natural warmth, and this should be accomplished by the best and easiest means possible.

It should not be warmed too suddenly; it may be wrapped in hot flannels and placed in a warmed bed, the surface should be rubbed all over with hot flannel. Warm flannels should also be applied to the stomach and bowels, and hot bricks or bottles of hot water placed to the soles of the feet, and the palms of the hands. In the mean

time have water heating, if you have conveniences for using the warm bath, should you not succeed otherwise in getting the body warm. After restoration of heat, spirits of wine should be rubbed upon the back and pit of the stomach, the spirits should be previously warmed.

To restore breathing, blow into the patient's mouth with your own breath, griping the nose at the same time; when the lungs are inflated, press with your hand on the stomach and bowels, in order to expel the air; this may be done a number of times in order to imitate natural breathing. A pint of water may be injected about blood warm, with a little spirit and essence of peppermint.—Nothing should be given internally till there is symptoms of life.

Tissot, mentions an instance of a girl who was restored to life after she had been taken out of the water, swollen, bloated, and to all appearance dead, by laying her naked body upon hot ashes, covering her with other's equally hot, putting a bonnet upon her head, and a stocking round her neck, stuffed with the same, and heaping coverings over all. After she had remained half an hour in this situation, her pulse returned, she recovered speech, and cried out, "I FREEZE—I FREEZE!"—A little cherry brandy was given her, and she remained buried, as it were, under the ashes for eight hours. afterwards she was taken out and recovered.

The same author mentions another case where the patient had lain under water for six hours, and was resuscitated by the heat of a dunghill. After signs of life appear in drowned persons, they should by no means be neglected as they sometimes die after signs of life appear.

Such persons as have been deprived of all appearance of life by a blow, fall, or the like, should be treated very nearly the same as a drowned person.

A warm bath has been the means of bringing back sensibility, after it had been suspended for sometime by a blow. If ever bleeding from the vein ought to be tolerated, it will be justified in this case.

## FEVER AND AGUE.

The paroxisms of an intermittent consists of three successive stages, viz : a hot, a cold, and a sweating stage.

Sometimes there is an intermission of twenty-four hours, at other times forty-eight, and again seventy-two hours. It appears to be generally acknowledged, that marsh miasmata, or the effluvia arising from stagnant water, or marshy ground, when acted upon by heat, is the most frequent exciting cause of this fever. Sometimes, however, people living in cities and remote from marshes, are attacked by it. It is brought on by a poor watery diet, damp houses, evening dews, lying upon the damp ground, watching, fatigue, depressing passions of the mind.

When the inhabitants of a high country emigrate to a low one, they are generally seized with intermittent fevers. Whatever relaxes the solids, diminishes the perspiration, or obstructs the circulation in the capillary, or small vessels, disposes the body to agues.

*Symptoms of the Cold Stage.*—An intermittent fever begins generally with pain in the head and loins, weariness of the limbs, coldness of the extremities, stretching, yawning, with sometimes great sickness and vomiting ; to which succeed shivering and violent shaking.

*On the Cold Stage.*—After a longer or shorter continuance of shivering, the heat of the body gradually returns ; irregularly at first, and by transient flushes ; soon, however, succeeded by a steady, dry, and burning heat, considerably augmenting above the natural standard. The skin which before was pale and constricted, becomes now swollen, tense, and red ; and is remarkably sensible to the touch. The sensibility, diminished in the cold stages, is now preternaturally acute ; pains attack the head, and flying pains are felt over various parts of the body. The pulse is quick, strong, and hard ; the tongue white, the thirst is great, and the urine is high colored.

*Of the Sweating Stage.*—A moisture is at length observed to break out upon the face and neck, which soon

becomes universal and uniform. The heat falls to its ordinary standard; the pulse diminishes in frequency, and becomes full and free; the urine deposits a sediment; the bowels are no longer confined; respiration is free and full; all the functions are restored to their natural order; when, after a specific interval, the paroxysm returns, and performs the same successional evolutions. Between the paroxysms, the patient must be supported with nourishing food and drinks, it should be light and easy of digestion; such as chicken broth, gruel, a little wine, light pudding, lemons, oranges and a little weak punch; he may drink freely of bitter herbs, hoarhound tea should be drank several times a day, and the vegetable powders every night; if physic should be necessary, add a little rhubarb to the vegetable powders. Cheerfulness and exercise in pure air is very desirable. In this disease, as well as in all others, where it is produced by infection, injections are better for a general thing than physic. Injections not only evacuate the bowels, but warm the intestines, and assists nature in throwing out the difficulty; it assists the fever, that nature has kindly sent to rid the patient of his difficulty, whilst drastic physic has the contrary effects.

The first thing to be attended to, in this disease, is to give a thorough lobelia emetic, after giving the vegetable powders night and morning a few times, with a little rhubarb in them. The emetic should be given a little before the hot stage comes on, a cup of the composition, or vegetable powders should be given about half an hour or an hour before giving the emetic; the boneset or hoarhound tea may be used in this disease, instead of pennyroyal. Put a number of hot stones, quenched in vinegar in bed to the patient before giving the emetic. The emetic is very important in this disease to cleanse the stomach, and produce a change in the order of the disease; the emetic may be repeated as often as necessary.

I have been more particular on this disease, as I expect this book will fall into the hands of many that will emigrate to the West, where they will be liable to be afflicted

more or less, with this disease. I really believe that families emigrating from New-England to the West may never be effected with it, if they will strictly follow the directions laid down to prevent it. Take best

Peruvian Bark—1 oz.

Virginia Snakeroot—1 oz.

Orange-peel—1 oz.

Thoroughwort or Boneset—1 oz.

White-oak Bark—1 oz.

These may be put into a quart of sweet wine or best Holland gin. Take from half to two thirds of a wine-glassful a number of times a day, before the hot stage comes on. It may also be taken as a preventative by persons living in those sections of the country where this disease prevails, and more especially in those seasons of the year when it is the most prevalent; at the same time, take occasionally the vegetable powders at night, at such seasons. Also, as a preventative, wear woollen flannel next the skin. Guard against wet feet and night air; keep a little fire on the hearth, particularly at night; drink occasionally the thoroughwort tea, poplar bark, camomile flowers, or a tea made of the inner bark of white-oak. The Peruvian bark and Quinine, are the most popular remedies for the cure of this disease. Dr. Buchan prescribes, in this disease the

Sulphate of Quinine—12 grains.

. Good Maderia Wine  $2\frac{1}{2}$  pints.

It may be taken at liberty a number of times a day. It should be remembered that it is necessary to cleanse the stomach before giving tonics, and also they should be omitted during the paroxysms.

When the chills almost entirely cease, and a fever continues, and the patient is much debilitated, give the emetic every two or three days.

Where infants are afflicted with this disease, the following is recommended: Take

Sulphate of Quinine—16 grains.

Lemon juice—20 drops.

Loaf sugar—a suitable quantity.

Water—2 oz. Mix.

The dose is a teaspoonful every two hours, for a child between two and five years of age.

I have known the health of a family in the Swamps of Delaware, says Dr. Mease, preserved during a whole summer, while the neighbors were all afflicted by agues, by keeping a fire in the sitting rooms inornings and evenings during the damp seasons; they will be found useful in depriving the air of its unhealthy moisture, and keeping the walls dry.

---

## BILES.

Biles are the effect of an effort of Nature to rid herself of impurities in the system. The alterative syrup, the hygeian pills and the vegetable powders should be taken daily to cleanse the blood. If the bile is very painful, it may be relieved by steaming it over bitter herbs. A poultice made of a roasted onion will assist in bringing it to a head; or a poultice made of the flour of slippery-elm and flaxseed equal parts, simmered in milk or water.

---

## DEAFNESS.

The ear should be cleansed every day with warm suds made of casteel soap, and by means of a syringe injected and drawn out. Dry cupping will be found useful, especially if the patient should be troubled with a noise in the ear. The balsam of copaiba may be dropped into the ear. Onion poultices may be worn on the feet at night, and sometimes these may be exchanged for a slice of the root

of the garget, skoke, or pigeonberry, applied warm to the bottoms of the feet. Electricity is recommended.

---

### AGUE IN THE FACE.

Take a portion of the vegetable powders with a teaspoonful of the elixir, put a coat over the shoulders, sit before a fire and hold the elixir in the mouth; if this does not relieve it, take a teaspoonful of cayenne, tie it up in a thin rag, wet it with the elixir and put it between the lip and jaw, soak the feet in warm water, and after wiping them dry, rub them over with the elixir. This has cured in very desperate cases.

---

### TOOTHACHE,

Is generally the effect of cold; the circulation should be promoted by soaking the feet. I have found the compound tincture rarely to fail of relieving the toothache. I had a case where the patient had been kept awake all night with the toothache; I gave him the compound tincture and it relieved him, so that he slept that night, and the next day I filled up the decayed place, and to my knowledge it has not troubled him since. If this does not cure, however, put a little of the oil of cloves on cotton and place in the decayed tooth.

Many highly recommended preparations for cleansing the teeth are before the public, but most of them, I believe to be injurious. Nothing is better, in my opinion, to preserve the teeth, than to wash them every morning with cold water, rubbing them with the finger or a brush. If the gums be spongy, yellow dock root, pulverized, will be found good to rub them with. When tartar collects, as it often does, it is very important to have it removed in order to preserve the teeth. In cleansing teeth, I have found

chalk, rubbed on the flesh side of a narrow strip of sole-leather to answer the best purpose of any thing I have tried ; rubbing the teeth with this is merely mechanical, it has no chymical effect to injure the enamel as acids or alkalies have.

---

### MEASLES.

The measles are known by the appearance of small eruptions, somewhat resembling flea-bites, over the face and body ; but particularly about the neck and breast, not tending to suppuration—or produce pus. Many of these spots soon run into each other, and form red streaks, and give the skin an inflammatory appearance, and produces a perceptible swelling in the face ; each spot is a little above the surface. Measles somewhat resemble scarlatina, but in the measles the eruption rises more above the skin, and occasions a manifest roughness to the touch which is hardly observable in the scarlet fever, except a very little roughness sometimes in the arms. In the scarlet fever, there is seldom a severe cough ; the eyes do not run much. Measles are highly infectious, and rarely attack a second time.

It is caused by infection being received into the system. In many respects, it resembles the small-pox, and the general course of treatment should be the same. In most cases of the measles, nature will throw off the infection without any assistance, by keeping the patient comfortably warm and within doors ; but it is well, in all cases, after the measles have fairly turned, to cleanse the system with physic. In this disease, it is well to give a strong tea made of saffron and snake-root, pennyroyal, or may-weed ; in worse cases, give the vegetable powders.

If there should appear to be inflammation on the lungs, or a bad cough, or the measles appear to strike in, the lobelia emetic, should be administered. This emetic

should always be administered in bad cases, and repeated if necessary.

In most cases of measles, nature performs her work best without any assistance.

---

## PALSY.

This disease is a loss or diminution of motion, or feeling, or of both, in one or more parts of the body. When one entire side of the body, from the head downward, is affected, it is distinguished by professional men, by the name of *hemiplegia*. If one half of the body taken transversely, by the seat of the disease, it is named *paraplegia*; and when confined to a particular limb, or set of muscles, it is called a *paralysis*. It may be caused by apoplexy. It may likewise be occasioned by any thing that prevents a nervous power from the brain into the organs of motion; hence tumors, over distention, and effusions, often give rise to it. It may be occasioned by suppression of usual evacuations, drunkenness, exposure to wet and damp air, by fractures, bruises, and wounds.

Those who are constantly exposed to the fumes of poisonous metals, such as red-lead and the like, are very liable to be attacked with it.

*Mode of Cure.*—Thorough courses of the emetic and steaming should be administered a number of time a week.

Give occasionally injections, a heaping teaspoonful of lobelia, bayberry-bark, and cayenne, the same quantity, put all into a pint of strong pennyroyal tea; steep and strain: this may be given as often as the emetic. The body should be frequently rubbed with a flesh-brush, or flannel cloth. Electricity should accompany the above treatment. Make a tincture of

African cayenne—1 oz.

Alcohol—1 quart.

Mustard—1 oz.

Horseradish—1 oz.

Bathe frequently with this tincture, and take occasionally

every day, a teaspoonful, with the vegetable powders. If the injections are not enough to evacuate the bowels sufficiently, give gentle purgatives. When this disease affects the face and head, it draws the mouth one side, affects the understanding, and deranges the organs of speech.

---

## RHEUMATISM.

This disease has often a resemblance to the gout. It generally attacks the joints with exquisite pain, and is sometimes attended with inflammation and swelling. It is most common in spring and autumn. It is usually distinguished by acute and chronic: or rheumatism with and without a fever.

*Causes.*—Sudden transitions from heat to cold; ardent-spirits. I have cured slight rheumatism with the rheumatic plaster; if the pain move, put on another plaster where the pain is present: if this does not cure, in addition, soak the feet at night just before going to bed, rub them thoroughly with flannel; bathe them with the elixir; put on a plaster of poke-root, (*See Poke,*) take a portion of vegetable powders, and eight or ten of the hygeian pills: repeat this course every night; bathe the part where the pain is present with the hearlem oil. I have found this article to be very efficacious. The patient should be careful not to expose himself to take cold under the operation of medicine. I have given immediate relief in this disease by cupping; dry cup first from where the pain is, downward. By dry cupping, I mean, after wetting the part with a sponge or cloth dipped in warm water, put on the cup where the pain is, and pump out a little air enough to make the glass stick, then carry the glass downward, the glass still adhering to the flesh. After this operation is performed a few times, rub it over with alcohol or the elixir, then put on the scarificator over the place where

the pain is felt, put on the cup, and take out more or less blood according as the case may require.

If the pain should be extreme, when called to a patient, and has been of long standing, it will be necessary, if the above treatment fails, to give a thorough course of the vapor bath and emetic. The patient may be steamed in the bath house, by the steam of hot water, or by quenching hot stones in vinegar, wrapping them up in cloths and placing them around the body.

I was called to a patient a few months ago, who had been laboring under this disease, and had not been able to attend to his business for some time. I found him in bed, and exercised with extreme pain, and had not slept any the night previous.

I got him up, soaked his feet, gave him the composition powders and elixir; got him into bed again and placed hot stones quenched in vinegar around his body, and one at his feet, gave him warming medicines to take internally, and produced copious perspiration; the stones were of different sizes, the largest I placed where there was the most pain. After about three quarters of an hour, we changed his linen, and gave him a thorough lobelia emetic; after the operation of the emetic, he took some gruel; the pain left him, and he went to sleep.

He took the vegetable powders a number of days with the elixir and the physical powders, and in a few days was able to attend to his business as usual. I saw him a number of months after, and he told me he had been as free from the rheumatism as he was when a boy.

Garget, or poke plumbs and brandy makes a very valuable medicine for the rheumatism; put enough of the berries to make it somewhat thick—take half a glassful and add as much water for a dose. The compound tincture will be found very good for an external application. Cut up pitch-pine knots, or any part of the tree that is full of pitch, and put four ounces of it in one quart of gin, and half an ounce of guaiacum, the gum, add one pint of water; take a glass a number of times a day.

In inflammatory rheumatism, it should be the first object to produce perspiration; and to accomplish this, put on the feet large slices of poke-root, or garget; let them be warmed by the fire; give warming drinks, and give a thorough steaming in the vapor house; if the patient cannot be moved, put hot stones quenched in vinegar to the feet, and all around him, give the vegetable powders and the lobelia emetic; if any part swells, use the cups.—Treat the case in other respects much as the chronic rheumatism.

---

### BURNS AND SCALDS.

The best thing that I know of in this case is the elixir, or alcohol, bathe the part constantly till the fire is all out.

If the burn be deep, make a poultice of sweet oil and the flour of slippery-elm; this has performed wonderful cures in very desperate cases, an ointment of elder-bark is also good. The elixir has a tendency to prevent mortification.

A very valuable ointment for the cure of scalds and burns is made by simmering fresh balls of horse-dung in goose oil, simmer till the dung becomes a little dry, then strain it through a cloth, and when nearly cool, stir in as much snow as you can get in; the snow will not melt after it is worked in; it should be applied to the burn or scald cold.

---

### FAINING.

In this complaint, there is a diminished action of all the functions of the body, accompanied with a death like paleness.

The patient, in this difficulty, should be lain on his back or side, with the arms extended, the extremities

should be rubbed with spirits, if it be at hand, a woollen cloth or flesh-brush should be used, a little cold water may be thrown in his face, volatile salts should be applied to the nose, a warm stone or brick may be put to the feet if it be necessary, and a flannel wet with spirits put to the pit of the stomach.

---

### APOPLEXY.

Apoplexy is a sudden loss of sense and motion, during which, the patient is, to all appearance, dead; the heart and lungs, however, still continue to move. Though this disease proves often fatal, yet it may sometimes be removed by proper care. It chiefly attacks sedentary persons of a gross habit, who use a rich and plentiful diet, and indulge in strong liquors. People in the decline of life, are most subject to the apoplexy. It prevails most in winter, especially in rainy seasons.

The immediate cause of apoplexy, is a compression of the brain, occasioned by an excess of blood, or a collection of watery humors. In the treatment of this disease, the great object will be to equalize the circulation, and cause the blood to recede from the brain; and, in order to invite it into the extremities, the feet should be immersed in warm water; and after they have been there for some time, rub them thoroughly with flannel, afterwards bathe them with elixir; the neck should be free from any compression. The whole body should be bathed with a liniment of African cayenne, steeped in alcohol, and applied hot.

Take half a pint of strong catnip tea, put in a heaping teaspoonful of lobelia, milk half a pint, a wineglassful of sweet oil, a gill of molasses, and a teaspoonful of fine salt. Mix, and introduce with a syringe. This will have a tendency to relieve the head, and answer the purpose of evacuating the bowels; hot bricks wet with vinegar,

should be kept at the feet, and poke-root poultices, or mustard-seed and rye-meal, should be applied to the bottoms of the feet.

---

### COSTIVENESS.

In this difficulty, there is a retention of the excrements, attended with hardness and dryness of the evacuations, which are often difficult, and sometimes painful. Sedentary persons are subject to this disease; irregularity in going to stool is apt to produce it; eating too great a proportion of solid food. This disease is to be obviated by attention to diet;—the bread should be made of meal unsifted; the most physical part of grain is in the bran.—Dyspeptic persons should eat no other kind of bread, and indeed, it would conduce to the health of every one, if they would eat no other. Physic in this disease is injurious; apples and milk, and fruit of almost any kind is good. A regular time should always be observed in going to stool; once a day is generally about right, although some persons enjoy good health who do not go oftener than once in three days, and sometimes not oftener than a week or more. If the patient is very costive, and it does not yield to diet, take the yellow-dock syrup, or a little rhubarb.

Costiveness is sometimes brought on by sedentary business, and nothing but exercise will cure; the shoe-making business, for instance, is apt to produce it.

The bowels should be rubbed or kneaded every day, and exercise either in walking or riding.

It is well to board at a distance from business, and walk to every meal, otherwise sufficient exercise is apt to be neglected.

---

## CHOLIC.

Of this disease, there are various kinds, such as bilious, wind, hysteric, inflammatory, nervous, and stone cholic, &c.

This disease, may be treated according to the urgency of the symptoms, and not according to their names. I have cured a cholic in half an hour by giving the vegetable powders and elixir; give a portion of the powders, with two teaspoonsful of the elixir; if this does not cure in ten minutes, take another portion with three teaspoonfuls of the elixir, and soak the feet in weak lie and rub them dry, afterwards bathe them with the elixir, also bathe the bowels with the elixir. If all this should not remove the difficulty, give an injection of a heaping teaspoonful of lobelia, the same quantity of cayenne, put them into a strong tea of pennyroyal, a little more than blood warm; after it is sufficiently steeped, strain it and inject a tumblerful; give a thorough lobelia emetic. We can produce instances where this course has cured very obstinate cases of bilious cholic. Where children are troubled with wind, causing pain, rubbing the bowels with the elixir will frequently relieve them. If this does not do, a little of the essence of anise or spearmint, diluted and sweetened, will be found to give immediate relief. Children will rarely be troubled with the pain in the bowels, if the mother will keep their feet warm. Painters are subject to cholic: they should never go to work in the morning on an empty stomach; they should be careful to keep themselves from being costive.

---

  
CORNS.

These are formed by wearing shoes that are too tight. In the first place a callous is formed, which, by constant pressure, frequently extends to the bone. They are then difficult to cure. In the first place, the feet should be

soaked, the callous should be shaved down as close as the patient can bear, then in order to prevent any farther chafing, take a piece of soft buck-skin or wash-leather, put it round the toe, cut a hole in it over the corn; if the leather be thick enough it will prevent the shoe from chafing it; then put on penetrating oil that will keep the part mollient, or an onion poultice, potash, or lunar caustic.

---

### CRAMP.

For cramp in the stomach, take three or four teaspoonsful of the elixir in a little hot water. If this does not relieve, give a great spoonful more in a wineglass of hot water. Friction should be applied to the stomach, and the feet emersed in warm water and a mustard-seed poultice applied to the feet. For cramp in the feet and hands, they should be rubbed thoroughly and bathed with the elixir.

---

### NIGHT-MARE.

This occurs during sleep, and is distinguished from dreams by a sense of weight upon the chest, from which the afflicted apprehend great danger, but have not power to get away from it; they gradually wake, but still remain incapable of motion, until, at length, by repeated efforts, the system is at once restored to its former energies. At other times, they remain motionless, are sensible of all they hear, but cannot move without assistance.

The patient should abstain from hearty suppers; and lying on the right side, will oftentimes be sufficient. If not, give the vegetable powders with a teaspoonful of the elixir, at night.

---

## ITCH.

This is an eruption of the skin, which causes a constant inclination to scratch, especially when warm. It is a disease of the skin. The itch shows itself first in pimples between the fingers, on the wrists, hands, and waist.

*Cure.*—Take flour of sulphur, half an ounce, lard two ounces, melt the lard, and stir in the sulphur until it is cold. Let the parts be bathed two or three times a day with this ointment. Make a strong decoction of yellow-dock root, and drink half a pint a day, and bathe the part with the same as often.

---

## SALT-RHEUM.

There are different species of this disease; but all require about the same treatment. It is one of the most unyielding diseases that the physician meets with. The physician cannot depend on one kind of medicine to cure in all cases, it is pretty evident that it proceeds from impurities of the blood. This eruption appears on different parts of the body, but generally on the back of the hands; it causes a very great irritation, itching, and heat: Sometimes it effects the face, and at other times nearly the whole body; in this case, the vapor bath should be used. The grand object in effectually curing this disease is to cleanse the blood, and for this purpose the alterative syrup is very good.

An ointment made of equal parts of lard and tar, simmered together, I have found to be very good; it should be spread on a piece of cotton cloth, and laid on the part at night, and may, if necessary, be taken off in the morning.

An ointment made of yellow-dock root and cream, is a very cooling ointment, and will give great relief. The berries of poke (*See Poke*) simmered in hogs-lard are recommended. Take the poke leaves, iron them with a

warm flat, and put it on the part affected, and the patient will find relief. One author informs, that he has succeeded admirably in that species that affects the whole body by a wash made of

Corrosive sublimate—1 scruple.

Venice turpentine—2 drams.

Fresh butter—2 ounces.

Rub the whole in a mortar until it is well mixed; then apply a small quantity, morning and night; after which, if the hands be anointed, let the patient wear a soft pair of gloves. While this ointment is using, make a wash, and apply, of

Corrosive sublimate— $\frac{1}{2}$  scruple.

Best French brandy—8 ounces.

In this disease, the hands should never be put into water, either hot or cold; the hands may be washed in spirit, and may occasionally be bathed with the tincture of lobelia. A syrup or beer to purify the blood, may be made of part or all of the following articles:—Sarsaparilla, elder-flowers, sassafras, black-alder, winter-green, yellow-dock, berdock-roots or seeds, elecampane, dandelion guaiacum shavings, and nettles.

---

## WARTS.

A popular remedy for the cure of warts is the juice of milk-weed. If this should not succeed, they may be touched with lunar-caustic.

---

## SCROFULA : OR, KINGS-EVIL.

This disease chiefly effects the glands, especially those of the neck. Children and persons of sedentary life, are much subject to it. The inhabitants of cold, damp, and marshy countries are most liable to it. It was called Kings-evil, from an imaginary cure performed by the royal touch.

*Cause.*—Hereditary disposition, venereal taint, or a scrofulous nurse. Children born of sickly parents, are apt to be affected with the scrofula. It may proceed from the small-pox, or measles. Whatever tends to vitiate the humors or relax the solids, paves the way to scrofula; as want of exercise, too much of heat or cold, confined air, unwholesome food, bad water, &c.

At first, small knots appear under the chin, or behind the ears, which gradually increases in number and size, till they form one large hard tumor. This often continues for a long time without breaking, and when it does break, it only discharges a thin, acrid, watery humor. Other parts of the body are also liable to its attacks; as the armpits, groins, feet, hands, eyes, breast, &c. Nor are the internal parts exempt from it. It often effects the lungs, liver, spleen, prostrate glands, &c., and frequently the glands of the mesentery are greatly enlarged by it.

Those obstinate ulcers which break out upon the face and hands, with swelling, and little or no redness, are of the scrofulous kind; the white swelling of the joints seem to be of this kind.

There is not a more general symptom of scrofula than a swelling of the upper lip and nose.

The course to be pursued in the cure of this disease, is to give a regular course as often as once a week, and let the patient drink freely of yellow-dock syrup, to which may be added a little cayenne; the patient should drink half a pint every day made strong, and two or three wine glasses of the alterative syrup. I have found this to be an excellent remedy. If the part should be swelled, a

poultice may be made of wake-robbin or Indian-turnip; add slippery-elm, and apply the poultice cold; let it remain till it is dry, then renew it; let it be continued till the swelling subsides or breaks, then apply a poultice of yellow or narrow-dock, the root, and slippery-elm. Then apply a poultice made of

Slippery-elm—one part.

Bayberry-bark, pulverized fine—one part.

Crackers—one part.

Where there is a swelling, with or without pain, or an indolent tumor, a poultice of poke-root, or the berries, are recommended.

Take common tar, boil it down hard enough to form it into pills,—take four every day; it has a tendency to purify the blood.

---

### SCALT HEAD.

This disease should be treated in general the same as the salt-rheum, with this difference; in the scalt head, a cap should be worn made of cotton cloth; this cap should be infused thoroughly in a mixture of tar, say half a pint, and four ounces of mutton tallow, and one ounce of sulphur; the hair should be shaved close to the head, and a new cap prepared every week.

---

### SCURVY.

This disease prevails chiefly in cold Northern countries, especially in low, damp situations, near large marshes, or near great quantities of stagnant water. Sedentary people, of a dull, melancholy disposition, are most subject to it. It proves often fatal to sailors on long voyages, particularly in ships that are not properly ventilated, have many people on board, or where cleanliness is neglected.

What is called the land scurvy is seldom attended with those highly putrid symptoms, as appear in patients who have long been at sea. The scurvy is caused by cold moist air; by the long use of salted, smoked or dried provisions, or any kind of food that is hard of digestion, and affords little nourishment.

*Symptoms.*—Weariness, heaviness, difficulty of breathing, rottenness of the gums, which are apt to bleed on the slightest touch; a stinking breath; frequent bleeding at the nose; crackling of the joints; difficulty of walking; sometimes swelling, and at other times a falling away of the legs, on which there are lined, yellow, or violet-colored spots; the face is generally of a pale, leaden-color. In more advanced stages of the disease, rottenness of the teeth, discharge of blood from different parts of the body; foul obstinate ulcers in different parts of the body, especially about the breast; dry, scaly eruptions all over the body; hectic fever; finally dysentery, diarrhœa, dropsy, palsy, fainting fits, or a mortification of some of the bowels.

The best way to cure this disease is to pursue a directly opposite course from that which brought it on. If the course is the constant use of dry-salted provisions, the diet should be vegetables. A syrup made of yellow-dock and elder-flowers, equal parts, will be found good; if both of these articles cannot be obtained, make a syrup of one of them. Thorough courses of the emetic and steaming will be found very important. People going to sea on long voyages, should lay in a plenty of vegetables in order to prevent this disease. Cider and vinegar are good, both for cure and preventatives, and may be kept on board during a long voyage; the drinks may be sharpened with vinegar.

---

## VENEREAL DISEASE.

This disease sometimes appears in three or four days after the infection is received, and so varies in different persons from that time to fourteen day or thereabouts.

The first symptoms which is called gonorrhœa, is a discharge resembling pus or matter from the urethra, with heat of urine, &c., which often succeeds a discharge of mucus from the urethra with little or no difficulty, or pain in the discharge called a gleet. In the male, it begins with an uneasiness about the parts, such as itching, and a soreness and tinging along the whole course of the urethra; soon after which, the person perceives an appearance of whitish matter at its orifice, and also some degree of pungency upon making water. Presently the glands will put on the appearance of a ripe cherry;—the stream of urine will be smaller than usual, owing to the swelling of the internal membrane of the canal, a scalding heat will be perceived on every attempt to make water, and sometimes a discharge of blood accompanies the water. Take

Queen of the meadow—one part.

Marshmallows—one part.

White-pine bark, (inside)—one part.

Of each two ounces, add one pint of best Holland gin, and one quart of water, add the water first hot; let it steep awhile, then put in the gin, drink a gill in the course of the day. Let the diet be milk or light food, wash the part daily with casteel soap. If this should not cure in a short time, give the alterative syrup, a thorough course of the emetic, and the following syrup: Take

Blue-flagroot—6 ounces.

Poke-root or garget—3 ounces.

Holland gin, (best,)—1 quart.

Mix, and take one teaspoonful at a time, three times a day, in half a cupful of spearmint tea. The above prescription I have proved to be good. In this disease the quantity may be increased to two teaspoonsful at a time after a

few days ; and after a few days more, to three teaspoonsful at a time. If there should be sores in different parts of the body, the same means should be adopted to produce a cure as in ulcers or sores produced by other causes.

---

## DIRECTIONS TO MOTHERS ON THE MANAGEMENT OF CHILDREN.

A philosopher was once interrogated by a father on the best course to be pursued in regard to the education of his son ; he answered, " Let him learn that which will be of most service to him when he becomes a man."

Is there not utterly a defect in the education of our females at the present day? Many of them, indeed, know how to play elegantly on the piano-forte, they are well instructed in rhetoric, chemistry, painting, ancient and modern history, natural philosophy, arithmetic, and geography ;—but know not how to cook a meal of victuals, as it ought to be, or make their offspring comfortable, but let them suffer and die for want of proper nursing.

Now, while all these accomplishments are very desirable, yet a knowledge of that which concerns the practical business of every day, in domestic life, is of more importance. Whilst I would by no means discourage such an education as will make an intelligent companion, I would by all means encourage an education that cannot be developed to the husband but by its adaptation to the little domestic wants of every day. It is very rarely the case, in my opinion, that children need to die who are born healthy if the mother knows how to perform her duty. Most mothers depend on the family physician to obviate diseases in their children ; but, I would ask, who is better qualified to be the family physician than the mother, who is constantly with her offspring ; she best knows the constitution

of her child, and when disease first makes its attack, she sees the first symptoms. Frequently, the physician is called too late, the disease has been suffered to progress so far as to have the controlling power of the body. I believe that a fifth part of all the infants and children that die under ten years of age, die for the want of proper care and nursing of the mother. In this treatise, I shall give particular directions to the mother, to enable her not only to obviate urgent symptoms in her offspring, but to cure diseases—though man's bounds are set and he cannot pass beyond them, yet proper means are always necessary to accomplish appropriate ends.

Infants, till they are three months old, are apt to be troubled from flatulence, or wind, caused principally from the want of proper warmth. When people ask me what they shall do for their children to prevent their crying, I tell them to give them a plenty of milk, and keep them warm, particularly the feet. This is a very important truth, and ought to be strongly impressed upon the mind of every mother that cold feet cause most of the pain and disease of the infant, till it is three months old. I do not mean, that they should be confined from the air;—at any season of the year they may be allowed to take the fresh air, as well as other members of the family. Small bodies of any material, capable of holding heat, cool sooner than large ones. An other thing is to be considered with respect to infants. They have not opportunity of exercising as others have, who are capable of moving about, so that they require the constant watch and care of the mother to keep them in a proper temperament. Children should always wear stockings after they are three months old, if the weather be cold. They are at that age large enough to exercise, and get their feet out of their clothes. When children are troubled with wind, get them warm; if cold be the cause, give a little aniseseed steeped, or catnip, the flowers and berries, the seeds of masterwort and caraway are good; either of the above will answer the purpose. If neither of these are at hand, give a little

strong pennyroyal tea ; meanwhile the mother should jump the child on her knee, this will sometimes expel the wind.

Children should in all cases be kept dry, in order to preserve their health ; as soon as the clothes of the child are wet, they should immediately be exchanged. Mothers often suffer their children to chafe for the want of proper cleanliness, which creates foul sores, and then lay it all to bad humors. The parts that are inclined to chafe, should be washed every day, with casteel soap and soft water and wiped dry ; then sprinkle in a little fine hemlock-bark, scorched flour, powderpost, hair powder, or fine elm bark.

#### LOOSENESS OR PURGING.

This disease arises frequently from the introduction of unwholesome or improper food. Weaning children sometimes produces disorder in their bowels, with frequent watery stools, attended with gripes, and occasionally convulsions. In common cases of relax, a teaspoonful of castor-oil ;—this is a portion for a child under six months, and more according to the age. If this does not cure, give the corrector, the lobelia emetic, and a teaspoonful of the tincture once in ten minutes, till it vomits. It may be taken in warm tea of any kind. It has a very fine effect on children in such cases. Avens-root made strong, with milk, is good for a drink.

#### FITS OR CONVULSIONS.

Children are subject to fits in some instances, from the time they are born. For this difficulty, let it proceed from what cause it may, the tincture of lobelia will be found a sovereign remedy. I know this to be the case from experience and observation. Fits that attack children, caused by want of heat or stagnation of the blood, the emetic will cure immediately. It may be given every other day, for a number of times ; its bowels and stomach should be bathed in the elixir ; it should be administered as under

the head of *Looseness*. Where fits are produced from worms, I have found the emetic to operate like a charm, the child will often go directly to sleep after taking the emetic; and in such cases they should be permitted to sleep. For further particulars on fits, or convulsions, occasioned by worms, the reader is referred to an article under the head of *Worms*. (*See Index*.) When fits attack the infant at the breast the mother should always take the vegetable powders once or twice a day.

## MILK.

Many children suffer for the want of sufficient breast milk; where it is deficient, the mother should drink milk frequently between meals; if milk is not to be had, drink sage tea, avens-root; chocolate-root, as it is sometimes called; it makes a very wholesome drink; coffee also makes a good drink.

## FEVER IN CHILDREN.

Children are often attacked with symptoms of fever, most frequently at night, the skin is dry, the pulse quick, the flesh hot, the breathing quick, and perhaps the tongue coated. These symptoms may all be obviated in the course of one night, and in nineteen times out of twenty, entirely broken up, by simply putting an onion poultice on the feet on going to bed, and covering up warm; take an onion, cut a slice off of each end, heat it thoroughly through by the fire, and bind the slices on the feet as hot as the child can bear; it will produce a gentle moisture on the surface; the pulse will be less frequent, and the unusual heat will subside.

If the fever does not subside by morning, give an emetic of the tincture of lobelia; give a teaspoonful of the tincture in a great spoonful of pennyroyal, or any other herb tea, as often as once in ten minutes, till the child takes two or three doses; let the patient drink as much herb tea as you can get down, after he begins to vomit; in an

hour, give water gruel; keep the child warm while giving the emetic. The above prescription is for a child under one year old. The tincture for children should be made of the leaves, pods, and stalks. This medicine may be given without any fear by the mother. If your child is stuffed at the lungs, or has a cough, this emetic will give immediate relief; it may be repeated, if necessary, as often as every other day without any inconvenience. If a fever, after all the efforts of the mother, is not thrown off by following the above directions, they will so mitigate the symptoms that the fever will be mild.

#### CANKER IN CHILDREN.

Children and infants, are apt to be troubled with little sore spots or eruptions about the mouth, and it usually extends from the stomach to the end of the bowels. The child should take a tea every day made of sumach-berries, raspberry-leaves, bayberry-bark, and hemlock-bark; a part of these or all of them may be made into a tea, just as is convenient. This tea should be drunk daily by the child, if it be weaned; if not, it should be drunk by the mother. The spots in the infants mouth should be frequently bathed by means of a swab dipped in a little saltpetre water. Give a portion of the physical powders occasionally.

#### RUPTURE.

When the bowels come down, the child should be laid on its back, the parts relaxed with warm water, then gently pressed into its place. Make a strong decoction of white-oak bark, hemlock bark, equal parts; boil it down to one gill, add half a gill of best brandy; the parts should be frequently bathed with it, and a bandage should be worn round the body, with an extra thickness next to the part affected. The same treatment should be pursued in falling down of the bowels on going to stool.

## RICKETS.

This disease is generally caused by diseased parents, want of cleanliness, want of proper exercise, want of suitable nourishment, and sufficient warmth. It is, perhaps, brought on oftener than any way, by laying, hour after hour in their own water. As this disease is mostly brought on through the negligence and carelessness of mothers, it is obvious that a contrary course on the part of the mother is the only remedy. The child should be rubbed, frequently, all over with the warm hand of its mother; the food should be nourishing; if the child is nursing a feeble, sickly nurse, it should be weaned, or be placed with one that is healthy. The child should frequently be dipped all over in cold water and wrapped up warm, and warm tea given.

Every mother ought, if possible, to nurse her own offspring. That is a monster, and not a mother, who feels above performing this kind office for her child. The whole range of nature presents no such example. In some cases, it is highly improper, both for mother and child.

## CHOLIC.

Children are frequently subject to pain in the bowels after they are two or three years old; in this case, the mother should give two or three teaspoonsful of mustard-seed, not pounded, mixed in molasses.

## WORMS.

Children should be allowed to eat raw onions, and they should occasionally be cooked for them; they are good against worms.

Some children are subject to slight wheezing for a day or two, without interruption, and accompanied with a hoarseness; but without fever. The tincture of lobelia and gentle physic, should be given without delay as above directed. It should be remembered, that from the above

symptoms, precede the croup ; and that disease is rarely cured, except in the first stages of it, and the above directions are first to be followed, together with soaking the feet ; the warm bath ; poultices on the feet, &c.

Children are much subject to falls and bruises, as soon as they begin to go alone ; the best thing, that I have found, is, immediately to apply cold water to the place bruised ; it is a certain preventative against the blood settling.

The stomach and bowels of the new-born infant, are filled with a blackish colored matter of the consistence of syrup ; the most proper medicine for expelling it, is, the mother's milk, which is always at first, of a purgative quality. It is very desirable, both on the account of mother and child, that the infant should nurse as soon as possible ; it frequently prevents the mother from having a broken breast, and it cleanses the stomach and bowels of the child. If the milk should begin to cake, or become hard in the breast, it should be frequently bathed with the elixir.

If any substance should get into a child's throat, let him stand on his feet, a little inclining forward, and give a smart pat with the flat of the hand between the shoulders. If this should not remove it, run the fingers down the throat.

#### TEETHING.

When teething produces looseness and sickness at the stomach, the best plan is to give an emetic of the tincture of lobelia, and in a few hours after the operation of the emetic, give nearly half of a great spoonful of castor-oil, to a child six months old ; vary the quantity according to the age. The tincture of lobelia for children, may be made, by adding two or three ounces of lobelia leaves, stocks, and pods after it is dry, to half a pint of spirits, and half a pint of water ; after a few days, it will be fit for use :

one teaspoonful of this tincture, with a great spoonful of pennyroyal tea, or almost any herb tea, will answer; it may be given to a child six months old; and, in ten minutes, give the same quantity again; this is enough for one course. The child may take between vomiting, gruel, herb tea, or let it nurse. The above portions are intended for a child of a strong constitution;—if your child be weakly, take a less quantity. After this process, if the flesh be hot and dry, and the child breathes quick, put onion poultices on the feet; and continue them till the flesh becomes natural; be very careful to keep the child dry and warm. If the child will be still in the mother's lap and not play as usual, and seem to require more attention than common, the mother should indulge it with her attention; keep its arms covered up and its feet warm, and this will greatly assist nature in overcoming the difficulty. In treating children, the nurse should not be constantly forcing down medicines. The most that she can do is, to pay particular attention to her child, watch the operations of nature, and remove urgent symptoms. She should not be impatient for nature to do her own work, for she will take her own time for it.

The above treatment in teething, is not without precedent. I treated a little boy of my own, of five months and a half old, according to the above directions. He was taken in the morning with looseness and vomiting; I gave him the quantity of the tincture as above, and it operated eight or ten times thoroughly; it nursed soon after the operation, and the next day gave it a portion of oil, put slices of onions warmed on his feet, and the next day he rode with his mother a journey of fifty miles.

## GENERAL OBSERVATIONS ON FEVERS.

Perhaps there is no disease that has been more successful in demolishing human life, than fever. And I believe there is no disease so badly treated. The three greatest engines, commonly made use of, in the cure of this disease, are *Mercury*, *Bleeding* and *Blistering*. They have in my opinion, been the fruitful source of more deaths, in our country, than sword, pestilence and famine. I have reference more particularly to Mercury and general bleeding, or bleeding by the large veins.

A man informed me not long since, that his wife, a son, and two daughters, were prostrated at the same time with fevers, and that his wife, son, and one daughter, died;—but one daughter, who would not submit to any of the physician's directions whatever, recovered. "And, said he, what adds keenness to my anguish, is, that I held the bowl with my own hand, and permitted the physician to draw the life's blood from my wife, my son, and my daughter." Who of us cannot recollect a beloved friend, or dear relative, that has fallen under this practice. A respectable physician told me, that he was satisfied, that he had been the means of killing a number of patients, I think seven or eight, with mercury; and that he had entirely abandoned the use of it, since which, he had not lost a single patient in fever. Blistering is not so pernicious in its effects upon the constitution as mercury or bleeding; but we believe that mustard-seed poultices answer a better purpose. Blisters are often attended with difficulty in healing, and sometimes mortification.

All who recover from a fever, throw it off through the force of the constitution; all that can be done is to aid nature in her operations. But instead of this, by general bleeding, we destroy nature and lessen the prospect of recovery; it weakens the whole body, and diminishes its capability of sympathizing with the diseased part, and there is more lost in strength than gained in reducing the fever. One pint of blood, perhaps, taken out of the head

in a brain fever, or the side, for the pleurisy, will lessen the inflammation more than three quarts taken out of the arm.

It is said, that more than one half of the human race die of fevers; it is important, therefore, that the best mode of treating that disease be properly understood. Buchan says as a fever is only an effort of nature to free herself from an offending cause, it is the business of those that have the care of the sick, to observe with diligence, which way nature points, and endeavor to assist her operations. I shall here lay down general directions in regard to fevers. In the first place, nine times out of ten, fevers may be thrown off if attended too in season. A thorough course of emetic and sweating in the first stages of it, will break it up even if the attack be severe. In common cases where a person is threatened with a fever, soak the feet at night, take a good portion of vegetable powders with two teaspoonsful of elixir, and a portion of physic; go to bed and cover up warm, and by morning the patient will be well. Open the pores and perspire freely, and there is but little danger. Every man in health, it is estimated, throws off a number of pounds daily, by perspiration. Now in fevers the surface of the body becomes dry and hot, the pores closed, the blood recedes from the small vessels of the surface to the larger ones, creating an increased action of the blood, the pulse rises from seventy-five to one hundred and sometimes more; the retained secretions affect the internal organs, sometimes the lungs, producing the lung-fever; at other times the liver, producing the bilious fever; again the pleura causing the pleurisy fever, &c.

#### SECRETIONS AND EXCRETIONS.

Whatever is injurious to health is thrown off by urine, sweat, stool, expectoration, vomit, or some other evacuation. There is a constant tendency in our constitutions to expel disease by these evacuations, and wherever there is an obstruction, there the attention of the physician

should be directed. When the secretions and excretions are restored to a healthy action, the functions of the body become natural, and the heat equalized; the pulse falls to its natural standard; the appetite is improved, and health and strength, are re-established.

#### STOMACH.

When there is pain in the head, a thick dark coat on the tongue, especially near the roots, and sometimes, perhaps, sickness at the stomach, a thorough emetic is needed; and if those symptoms should return, the emetic should be repeated as often; and sometimes when these symptoms are not present; for the lobelia emetic not only cleanses the stomach, but opens the pores and throws off stagnant excretions, relieves the nervous system, and produces a healthy action upon the liver, lungs, and the whole internal viscera. In putrid and bilious fevers in particular, repeated vomits will be found necessary; in putrid fevers, a wineglassful of yeast, given occasionally, has been thought to have saved the patient's life. It is very important to keep the bowels clear by frequent injections or physic. In bilious fevers, half a pint of strong thoroughwort tea, taken occasionally, will be found important. It will generally vomit the patient in the course of fifteen minutes, if given warm; if it should not vomit in that time, give as much more.

#### NATURE OFTEN POINTS OUT THE COURSE OF TREATMENT.

Almost every person in a fever, calls out for cold water and complains of great thirst. This at once points out the use of water, and other cooling drinks. It will abate the heat; attenuate the humors; remove spasms and obstructions; promote perspiration; increases the quantity of urine; and, in short, produces a very salutary effect in an ardent and inflammatory fever.

The patient should be allowed to drink plentifully of

cold water ; but not too much at once ; water gruel, and other weak liquors. Formerly cold water was prohibited in common fevers. A gentleman informed me, that he was watching in company with another, with a man sick of a fever, and that he begged for cold water, and they refused him ; but finally he plead so hard, they agreed to let him have as much as he wished for, agreeing not to let it be known if it should prove unfavorable ; they accordingly did so, and it broke up his fever ; the next morning the physician wished to know what they had been doing, for he was altogether better. A tea made of pigweed is very good in fevers : it will produce moisture upon the surface without increasing the heat of the body. Smartweed has the same effect.

#### THE PORES.

Evacuations from the skin invariably lessen the force of the heart and arteries, by taking from the circulation, every agent which is useless or injurious, and returns the blood to the extreme vessels. No sooner does perspiration break out in a febrile patient, than there is a mitigation of all the symptoms. The object then should be, immediately to restore perspiration, and continue it through the whole course of the fever. If one kind of sudorifics does not produce the effect, another kind must be used. Virginia snake-root, catnip, the vegetable powders, smartweed, pigweed or hogweed, are sudorifics. The following cooling drink may be given : The

Juice of a lemon.

Cream of tartar—1 teaspoonful.

Add a pint of water.

Then sweeten with loaf sugar.

Let the patient drink freely when thirsty.

When the skin is hot and dry, it should be bathed all over with weak lie—the patient may lay in bed, wet a sponge with the lie, and bathe one side ; then let the patient turn over, and bathe the other. This may be repeated

two or three times a day, if the flesh should become hot and dry so as to require it.

#### KIDNEYS.

The body cannot be in health while the kidneys cease to perform their office, or do it imperfectly. If the urine should be scanty, drink freely of spearmint tea.

#### FOOD.

Though the patient in a fever has the greatest inclination for drink, yet he has no appetite for solid food: hence the impropriety of urging him to take victuals is evident. Much solid food in a fever is every way hurtful. It oppresses nature, and instead of nourishing the patient, serves only to feed the disease. What food the patient takes should be in small quantity, light, and easy of digestion. It ought to be chiefly of the vegetable kind, as roasted apples, gruel, and the like.

#### AIR.

Nothing is more desired by a patient in a fever, than fresh air. It not only removes his anxiety, but cools the blood, revives the spirits, and proves every way beneficial. Many patients are in a manner stifled to death in a fever, for the want of fresh air. Yet most people think as soon as a patient has a fever, he should be kept in a close chamber, where not a particle of fresh air can be admitted. Instead of this, there should be a constant stream of air into the sick person's chamber, so as to keep it moderately cool. Indeed, its degree of warmth, ought never to be greater than is agreeable to a person in perfect health. As few persons as possible should be permitted to breathe in the sick man's chamber. When the blood is inflamed, or the humors in a putrid state, air that has been breathed repeatedly, will greatly increase the disease. Such air is most pernicious to the sick. When the patient's spirits

are low in fevers, he should be supported with cordials, and means used to cheer and comfort the mind.

#### LONGINGS.

In fevers, a proper attention should be paid to the patient's longings. These are the calls of nature, and often point out what may be of real use. Patients should not be indulged with every thing their sickly appetites may crave, but it is generally right to let them have a little of what they most eagerly crave, though it may seem to be not quite right.

#### RELAPSE.

When a patient is recovering from a fever, great care is necessary to prevent a relapse. Many persons, by too soon imagining themselves well, have lost their lives, or contracted other diseases of an obstinate nature.

As the body after a fever is delicate, it is necessary to guard against taking cold. Moderate exercise in the open air will be of use; but great fatigue is by all means to be avoided. Agreeable company will also have a good effect.

The diet must be light, but nourishing. It should be taken frequently, but in small quantities. It is dangerous at such a time for the patient to eat as much as the stomach may crave.

The patient should by all means avoid, in fevers, bleeding, mercury, salts, blisters, &c.

---

## REMITTENT FEVER.

## DESCRIPTION.

By a remittent fever is to be understood that modification of fever, which abates, but does not go entirely off before a fresh attack ensues; or, in other words, where one paroxysm succeeds another so quickly that the patient is never without some degree of fever.

## CAUSE.

Remittent fevers are produced for the most part, from the same causes as intermittent fevers. Remittents, prevail mostly in very warm countries, and are generally of a putrid kind, and prove very fatal. No age, sex, nor constitution is exempt from the attacks of this fever.

## SYMPTOMS.

The first symptoms of this fever is yawning, stretching, pain, languor, and giddiness in the head, with alternate fits of heat and cold. Sometimes the patient is affected with a delirium at the very first attack. There is a pain and sometimes a swelling about the region of the stomach; the tongue is white, the eyes and skin frequently appear yellow, and the patient is often affected with bilious vomitings. The pulse is sometimes a little hard, but seldom full. Sometimes the patient is costive, and sometimes troubled with looseness.

## MEDICAL TREATMENT.

If there should be any local inflammation, we direct, as in all diseases where inflammation is present, the application of cups.

In order to bring this fever to a regular intermission, the lobelia emetic should be administered, particularly in the first stages of it. If this emetic be promptly administered occasionally, it will moderate the symptoms so that

a very simple treatment, will be sufficient. Physic or injections should follow each emetic. If the surface be dry and hot, it should be bathed with weak lie two or three times a day; and sometimes, if the heat on the surface be great, the lie may be applied to the surface cold. Sudorifics are important. The feet should be soaked in weak lie, and a tea made of pigweed, smartweed, catnip, &c. drank occasionally. Let the patient drink cold water if he shall crave it; he may drink daily of thoroughwort tea.

If there should be pain in the head, bathe the feet in warm water, apply a poultice made of rye or Indian meal mixed with vinegar; spread on the surface of the poultice one great spoonful of mustard, well pulverised, and apply to the feet. Bathe the head with the compound elixir. If this should fail of giving relief, apply the cups to the temples and nape of the neck.

When there is abundant evacuations, either by stool or vomit, the fever is called bilious. In this fever, it is said, that the thoroughwort tea made strong, has proved a sovereign remedy. It must be drank warm at night and cold through the day. For further direction in this fever, see *General Observations on Fevers*.

---

### CONTINUED FEVERS.

Fevers of this type continue for several days with nearly the same degree of violence. An inflammatory type prevails in the commencement, and nervous or typhoid in the latter stages. It is sometimes called the long fever. It is considered contagious. Cold is the most frequent cause of this, as well as of most other types of fevers. It is brought on by great bodily fatigue; too great indulgence in sensual pleasures; violent exertions; and intemperance in drinking. This fever generally terminates the third, fifth, seventh, ninth, eleventh, fourteenth, seventeenth, or twentieth.

## SYMPTOMS.

This fever is characterized by the patient's being seized with considerable degree of languor, or sense of debility, sluggishness, an aversion to motion, frequent yawning and stretching; the face and extremities at the same time becoming pale; the skin over the whole body becoming constricted; a sensation of pain in the back, passing thence over the whole frame, and there continuing to increase; tremours in the limbs, and cold shivering succeed.

With these symptoms, there is a loss of appetite, want of taste in the mouth; slight pains in the back, head, loins, and a small and frequent respiration; alternate flushes;—these cease, and are followed by great heat all over the body; the skin and tongue dry; universal restlessness prevails; and an inclination to vomit. There is great thirst, pulse quick, frequently 90, 100, or 120 a minute.—When these symptoms run high, and there is much determination of blood to the head, delirium will ensue. There is generally an increase of symptoms towards the evening as in other fevers.

The symptoms are favorable when the pulse becomes soft, moderate and approaching its natural state; the tongue becoming clear; thirst abating, the skin covered with a gentle and equal moisture.

## MEDICAL TREATMENT.

The patient should be kept quiet in bed, and treated very nearly the same as in other fevers. If there is much determination of blood to the head, cupping will be necessary. The nourishment should be gruel, barley-water, linseed-tea, lemonade and the like. For further particulars see *General Observations on Fevers*.

---

## INFLAMMATORY, ACUTE, OR ARDENT FEVER.

This fever is characterized by considerable increase of heat; a frequent, strong, and hard pulse; urine red; the animal functions but little disturbed, although at an advanced stage of it, the brain is apt to become much affected. It commonly attacks the young, or persons about the prime and vigor of life, especially such as live high, abound in blood, and whose fibers are strong and elastic. It seizes people at all seasons of the year; but is most frequent in spring and beginning of summer.

### CAUSES.

It is caused by sudden change from heat to cold; violent exercise; sleeping in the sun; drinking strong liquors; application of cold to the body, &c.

### SYMPTOMS.

A rigor or chilliness, generally ushers in this fever, which is soon succeeded by great heat; a frequent and full pulse; pain of the head; dry skin; redness of the eyes; a florid countenance; pain in the back; and loins, &c. To these succeed sickness with inclination to vomit, and difficulty of breathing. The patient complains of great thirst; has no appetite for his food; is restless; and his tongue is of a scarlet color at the sides, and furred with white in the centre.

### MEDICAL TREATMENT.

If there be pain and inflammation in the head, apply the cups, and take away blood; bathe the head with the compound elixir; if that is not at hand, give the common elixir. This kind of fever requires very active treatment at the commencement. Assist nature in her efforts to expel the morbid matter, by the same method that nature herself endeavors to throw it off, whether by vomiting, sweating, or urine.

First give the emetic as before laid down, if the symptoms require it. Give a thorough portion of physic. Take jalap, senna, cream of tartar, equal parts; take a teaspoonful in warm tea or molasses, every two hours, till free purging is produced; cathartics have a powerful tendency to reduce inflammation in the system. This will have a tendency to relieve the pain in the head. Soak the feet in weak lie, and apply mustard seed and rye meal poultices, mixed with vinegar, to the feet.

Bathe the whole surface of the body in weak lie a number of times a day, or as often as the skin becomes dry. To prevent sickness at the stomach, a little camomile tea may be taken.

Fresh killed flesh of any animal may be applied, while it is warm with natural heat, over the pit of the stomach, and to the glands, in the groins, arm-pits, &c.; and changed as often as it becomes fetid. Fowls cut open and applied, are generally the most convenient; or the skin stripped off from cats and applied. These applications of flesh extract the fever and putrescence most astonishingly, and stink with corruption in a short time. Sudorifics should be administered to produce moisture on the surface. For more particular directions, see *General Observations on Fevers*.

Take care not to give the patient nourishment of a heating nature. There is danger of a relapse, after the patient begins to recover; over loading the stomach at such times produces a relapse and often proves fatal.

---

## TYPHUS OR NERVOUS FEVER.

The word Typhus is derived from a Greek word which signifies stupor; this being the characteristic symptom of the disease. It is also called *Nervous Fever*, in consequence of the nervous system being very much affected. There are three species of this fever. The first is mild and the attack more gradual. The second species is more violent

in its attack, more malignant and more inclined to be putrid. It is sometimes called *Putrid Fever*. The third is called *Yellow Fever*, in consequence of bile and yellowness.

#### THE FIRST

Species of this fever is sometimes called slow or nervous, is distinguished from other kinds of fevers by its effect on the nervous system. It is contagious. It is characterised by a dullness, inaction, stupor and drowsiness. It principally attacks those of a weakly constitution; and is generally in jails, hospitals, prison-ships, and ill ventilated apartments.

*Medical Treatment.* In the first stages of this fever in particular, emetics should be administered every two or three days—taken in strong thoroughwort tea, instead of pennyroyal as directed in common cases—and a portion of physic every few days, according, as the patient shall require. Says a celebrated author, gentle cathartics (or physic) are exceedingly valuable through the whole course of typhus fever. The hygeian pills will answer a good purpose. The tincture of jalap, a table spoonful at a time, is recommended, taken in warm herb tea three or four times, till it operates.

Thoroughwort tea will be found of great advantage in this fever; it may be drank three or four times a day cold, to produce perspiration without heating the body. The smartweed is good, and also pigweed or hogweed. A tea of these may be taken at liberty. In an advanced stage of the disease, if there should be symptoms of sinking, give wine.

During the course of this fever, the patient may take occasionally, one part of pulverised rhubarb, and three parts of common vegetable powders; a teaspoonful at a time. It will have a tendency to produce a moisture on the surface, raise the tone of the system, allay irritability, and nervous affections, and gently evacuate the bowels.

THE SECOND SPECIES OF THIS FEVER IS PUTID, MALIGNANT, OR SPOTTED.

This fever, which takes its name from the malignancy of its nature, and the symptoms of the putrefaction, observed towards its close, may be called the pestilential fever of Europe, says Buchan, as in many of its symptoms it bears a great resemblance to that dreadful disease, the plague.

*Cause.* This fever is occasioned by foul air; from putrid animal and vegetable effluvia, &c. Long rainy and foggy weather, great inundations in wet and marshy countries, especially when they are preceded and followed by a hot and sultry season. Eating too much animal food,

*Symptoms.* The malignant fever is generally preceded by languor; a remarkable weakness, or loss of strength, without any apparent cause. This is sometimes so great that the patient can scarcely walk, or even sit up right, without being in danger of fainting away. His mind, too, is greatly dejected; he sighs, and is full of dreadful apprehensions. There is a nausea, and sometimes a vomiting of bile; a violent pain in the head, with a strong pulsation or throbbing of the temporal arteries; the eyes red, inflamed and painful; a noise in the ear; difficulty of breathing; pain in the stomach, back and loins; the tongue at first white, afterwards black and chapped; and his teeth is covered with a black crust. He sometimes passes worms; is affected with shaking, and often becomes delirious.

Spots of a pale, purple, dun, or black color often appear upon the skin, and sometimes there are violent discharges of blood from the mouth, eyes and nose.

Putrid fevers may be distinguished from inflammatory, by the smallness of the pulse, the great dejection of mind, dissolved state of the blood, the purple spots and putrid smell of the excrements. The duration of this fever is uncertain. Favorable symptoms in this fever are gentle sweats and looseness.

*Medical Treatment.*—Emetics (particularly in the first stages of this fever) will not fail to have a good effect.—The same course should be pursued in the cure of this kind of fever, as in the first species of the typhus, only with the exception of the use of antiseptics or medicines to prevent putrescence; for this purpose acids should be given in drinks—the tincture of Gum Myrrh is antiseptic. Dr. Beach and others, recommend yeast very highly in putrid fevers. A number of cases are well authenticated where persons have been immediately raised, who were expected to live but a few hours, simply by administering yeast, about a wineglassful once in two or three hours.—One author says, that he has given the yeast to above fifty persons laboring under putrid fevers; and what is singular, he had not lost one patient. When the fever subsides so that it will do, add one ounce of Peruvian bark, half an ounce of snake-root, to one quart of wine; take two or three great spoonful once in two or three hours during the intermission. Take care to follow the directions laid down under *General Observations on Fevers*. And by all means keep up a moisture on the surface.

#### THE THIRD SPECIES OF THIS FEVER IS THE YELLOW FEVER.

The yellow fever is a disease which very much resembles in its character, the highest grades of the bilious remittent fever. It is more violent in its attack, and all the symptoms are more aggravated; and there is a greater tendency to putrescency.

There are many predisposing causes of this complaint, among which may be reckoned intemperence of every kind. Almost all the victims of the yellow fever, are addicted to the use of ardent spirits, and such are the most liable to fall victims to it. The emetic should be administered in this disease, especially in the first stages of it, and active means used to promote perspiration. It will be found that the emetic will produce a healthy action

upon the liver and stomach, where the seat of the disease is. The vegetable powders may be taken a number of times a day, both before and after taking the emetic; add one fourth rhubarb to the vegetable powders, and take a heaping teaspoonful at a dose. This will allay irritation, equalize circulation, produce perspiration, and prove gently physical. Where the stomach is very irritable and excessive vomiting prevails, the following medicines are highly recommended:

Rhubarb—20 grains.

Salaratus—20 grains.

Peppermint—a teaspoonful—pulverised.

Add a gill of boiling water.

Laudanum—15 drops.

Brandy—a tablespoonful.

Mix, and sweeten with loaf sugar.

One tablespoonful of the above may be taken at a dose, and repeated every half hour until it ceases.

A tea made of boneset, or thoroughwort, is particularly serviceable in this fever; it should be taken strong and at liberty. One patient who found great help from it took two quarts in the course of a few hours; half a pint taken warm will generally produce vomiting. Soaking the feet, bathing the whole surface with weak lie, &c., as laid down under *General Observations on Fevers*.

---

### SPOTTED FEVER.

This fever was prevalent in various parts of New England, New York, and the borders of Canada, in 1810, 1812, and 1816. It generally prevailed during the cold weather. Persons were attacked variously; sometimes a pain would commence at the great toe; again in the fingers; sometimes a violent pain in the stomach, head, joints, limbs; some have a violent ague and shaking.

It is supposed to be produced by poison from the atmos-

phere being received into the circulations, and a want of sufficient animal heat in the system to resist it.

Those physicians who have been the most successful in this fever give thorough lobelia emetic; cayenne pepper to drink; immerse the whole body in water as hot as the patient can bear, or use the vapor bath, in order to open the pores and recall the blood to the surface. In addition to this, the whole surface should be bathed with a tincture of African pepper and spirits. One physician states, that all the patients that he pursued this course with recovered, whilst those who were treated differently died. Warm injections should be administered, and physic, if needed. The tincture of cayenne should be applied to the body warm, and often repeated. The patient should take abundance of warming drinks to keep up the internal heat and promote free perspiration; the vegetable powders and elixir, well charged with cayenne, may be taken as often as it may seem necessary.

---

### SCARLET FEVER.

The scarlet fever is so called on account of the color of the skin, or the large red livid blotches in it. It happens at any season of the year; but is the most common towards the end of summer and beginning of winter, at which time it often seizes whole families. Children and young persons are most subject to it. It begins like other fevers with coldness and shivering, without any violent sickness. Afterwards the skin is covered with red spots, which are broader, more florid, and less uniform than the measles. They continue two or three days and then disappear; after which the cuticle or scarf-skin falls off.

This disease in its mild form, needs but very little medical treatment. The child should be kept within doors, and care taken to prevent its striking in, as it is termed. If this should be the case, the vegetable powders, or saffron and snakeroot tea, may be given. It sometimes as-

sumes a more malignant form, in which case it requires more prompt and energetic treatment. Medicines that will produce moisture upon the surface are very serviceable, such as smartweed, pigweed, saffron, and snakeroot.

Emetics particularly, are serviceable in the first stages of this disease, and indeed they should not be neglected in any stage of it, where it seems to be needed,—say, if there should be a fullness and difficulty of breathing, emetics will be necessary. Children have not the faculty to throw up phlegm as older persons, and therefore the lobelia emetic is peculiarly favorable to children, for it will evacuate the stomach and relieve the lungs, and the child cannot suppress it. Gentle purgatives are highly recommended by some of the most experienced practitioners in this disease. There is, for this disease, perhaps, nothing better than the physical powders. A continued course of gentle cathartics is considered by Dr. Beach, to prevent dropsies which are often attendant on this disease. The same author recommends bathing the whole body with soft rain water to which is added weak lie; he says that we are possessed of no physical agent, as far as his experience has taught him, by which the functions of the animal economy are controlled with so much certainty, safety, and promptitude, as by the application of weak lie to the surface under the augmented heat of scarlatina and some other fevers.

Where the throat is sore and swollen, it should be bathed with a liniment made of spirits of turpentine one part, and sweet-oil two parts, applied warm; after which bind a flannel round the neck.

The following medicine is said to have stayed this disease very much in one of the West India islands where it had assumed a very malignant form:

Take two table spoonful of cayenne pepper; a tea-spoonful of salt; add half a pint of boiling water. In fifteen minutes after, add half a pint of vinegar. Let it stand half an hour, then strain through a fine cloth. Give

two table spoonful every half hour. Mustard seed poultices may be applied to the bottoms of the feet:

If putrid symptoms continue, the yeast may be freely given. The diet should be the same as directed in other fevers. The patient should not be exposed on recovering, as it may produce dropsy.

---

### LOCKED JAW.

This difficulty is a contraction of voluntary motion. When there is any appearance of the locked jaw, the patient should take a great spoonful of the elixir in a wine glass full of hot water. If this does not allay the symptoms, give a thorough lobelia emetic. If the jaws should become locked before the emetic is given, take tincture of lobelia made of the seeds, say half a great spoonful, fill it up with the elixir. If the mouth is closed so tight that it cannot be put between the teeth, put it in at one side of the mouth, and let it run down by the side of the cheek and teeth; and soon after it finds its way to the roots of the tongue, it will relax the muscles and the mouth will open without any force. In about fifteen minutes, give as much more; in the course of half an hour more, give a teaspoonful of the vegetable powders in a teacupful of pennyroyal tea,—all of which will cause the patient to vomit, and will give relief. If the patient should have a return of these spasms, follow the same course.

Dr. E. Smith, of Boston, says, that he has had several cases of this kind, and has always cured them in this way.

If the locked jaw is caused, as is generally the case, by some accident as running a nail into the foot or hand, let the part be soaked in weak lie, and keep it bound up till it gets well.

---

## POISON

BY DOGWOOD OR IVY, &amp;c.

Dr. Richardson, of South Reading, Massachusetts, states that he has ascertained by actual experiment, that copperas, sulphate of iron, is a perfect specific against poison by dogwood or ivy. Dissolve one fourth of an ounce in a pint of water, and wash the affected part. If the poison should create sickness at the stomach, the patient should drink a tea made of saffron and snakeroot, or take a teaspoonful of vegetable powders. A tea made of sage willow or witch-hazle, is good against this poison, as well as that called mercury; it should be used as a wash, afterwards the surface may be rubbed over with sweet-oil.

---

## MINERAL AND VEGETABLE POISONS,

TAKEN INTERNALLY.

Mineral poisons are chiefly arsenic, mercury, nitrate of silver, antimony, lead, &c. Some of the principal vegetable poisons are, cicuta, henbane, stramonium, digitalis, opium, laurel, hellebore.

When mineral or vegetable poison is taken into the stomach in so great quantity as to endanger life, it should be immediately taken out with the stomach pump. If the pump is not at hand, give the lobelia emetic; give also an injection with a heaping teaspoonful of lobelia in it; a wineglassful of sweet-oil, or if that be not at hand, take hogs-lard, the same quantity; half a pint of milk, a heaping teaspoonful of the flour of slippery-elm, or in its stead the mucilage of slippery-elm; add warm water enough to make a quart, and inject. After the operation of the emetic, let the patient take freely of milk, sweet-oil, and mucilage of slippery-elm.

## RINGWORMS.

Anoint the ringworm two or three times a day with an ointment made of two parts common tar, two parts mutton tallow, one part sulphur; they should be simmered together. A better way of applying it, perhaps, is to spread the ointment on a piece of cotton cloth, and put it on only at night; and in the day time, bathe it frequently with a decoction of yellow-dock.

This treatment should be followed up for a week; if a cure is not effected, use the ointment as laid down for the cure of the *Saltrheum*.

---

## HYDROPHOBIA: OR, CANINE MADNESS.

Hydrophobia means a dread of water, which is characteristic of persons bitten by a rabid animal.

Sometimes a person may be bitten and not produce madness, especially, if the teeth have to pass through woollen as the infection may be wiped off of the teeth before it enters the flesh. The infection may be communicated to a fresh wound without the bite of a mad dog. The symptoms are pain in the bitten part; also wandering pains, heaviness, uneasiness, disturbed sleep, frightful dreams, starting, spasms, sighing, anxiety, and love of solitude; pains shoot up from the bitten part to the throat.

The place of the bite should be cupped as soon as possible. Take physic two or three times a week. If any of the above symptoms should appear, the patient should go through with a thorough lobelia emetic, the vapor-bath and injections, which should be repeated as often as every other day, till the symptoms subside entirely.

---

## WHITES: OR, FLOUR ALBUS,

Means a thin white substance from the vagina. It is owing to a weak relaxed state of the system.

Take half a peck of the inside bark of white-oak, boil it down very strong, say to half a pint, and add to it the same quantity of the best Jamaica spirits; bathe ~~up~~ and down the back with it every day, and take the lobelia emetic once or twice a week, and the dyspeptic bitters two or three times a day till a cure is effected. The hygeian pills may be taken sufficiently to keep the bowels open. This will certainly give relief. Take care that the food be nourishing.

---

## SUPPRESSION OF THE MENSES.

Let the patient take the lobelia emetic once or twice a week, till they become regular. Take occasionally the physical powders and the alterative syrup. I have succeeded in bringing nature right with this course immediately, when it had been suspended for six months.

---

## SORES.

For any kind of sores attended with inflammation and pain, soak the part in weak lie. It will give almost instant relief. If there should be what is commonly called proud flesh, sprinkle it with bloodroot, pulverised fine. Make an ointment of equal parts of camomile and gold-thread, simmered in hogs-lard; this ointment is excellent also for chapped hands and chilblains.

---

## FELON : OR, WHITLOW.

The part affected should be immersed and soaked in weak lie, as hot as the patient can bear, for fifteen minutes at a time. The whole hand may be steamed with water containing the strength of bitter herbs, wormwood, catnip, double tansy, and the like. If this should give ease, repeat it whenever the pain is severe ; a poultice of equal parts of slippery-elm and Indian meal, mixed with weak lie, may be applied. Poultices may frequently be varied in regard to their consistency. A gentleman informed me that he found great relief from putting a leaf of tobacco round the finger, and putting an onion poultice hot over the same.

---

 DEBILITY.

Persons are many times afflicted with universal languor and debility, without being able to trace it to any particular cause. They complain of a sinking feeling after a little exercise. Sometimes it seems as though there was something, or a certain, wanting in the stomach. The feet are apt to be cold. In such cases, I have succeeded in giving relief by directing them to soak the feet in a weak lie, about every other night, and bathe them with the elixir, and take of the vegetable powders three parts, rhubarb one part. Of this compound, take a heaping teaspoonful every night on going to bed, in two-thirds of a teacupful of hot water ; if it be convenient, the cup may be nearly filled up with milk, which makes it more comfortable to take. A wineglassful or two of the alterative syrup may be given daily.

I have never failed of helping persons of the above symptoms by this process. If there is a want of appetite, inward heat, or a nervous indescribable feeling, that will run all over the patient at once, and then be gone—make a blister on the arm the bigness of a dollar, and let it re-

main only long enough to start the skin; then take off the skin and apply an ointment spread on a piece of cotton cloth, made of savin simmered in hogs-lard and a little beeswax; it should be dressed three times a day. Continue this plaster till it heals up of itself. Savin very much resembles the red cedar, it is an evergreen.

---

### SWELLING.

For external swelling and inflammation, caused by some injury and taking cold, bathe the part repeatedly with a strong decoction of wild cherry tree bark.

A lady in New Bedford, told me that one of her neighbors had an arm that was very much swollen, and the physicians could make no impression in reducing the inflammation, and the day was appointed for the physicians to meet and amputate the arm. She thought it was a pity for the man to loose his arm, and accordingly called in before the time appointed, and recommended the above wash. When the physicians came, it was proposed to them, and they postponed the operation for that time. They commenced bathing with a strong wash made of wild cherry tree bark. The swelling went down, and the arm was restored in a short time.

Cupping and soaking the affected part often, gives great relief. Slippery-elm poultice, especially when it comes to a sore, is good.

---

### WOUNDS.

Small wounds should be bound up in the blood and remain secure from the air, till they are well. If they be large, bring the edges of the wound together with a needle, or by a sticking plaster. If, what is called proud flesh appear, sprinkle it with bloodroot, finely pulverised.

If it become a sore and does not heal, make a very strong decoction of white oak bark, and wash the sore occasionally with it, and apply healing salve.

---

## CHOLERA.

The following are the symptoms of this disease as described by a superintendent of one of the N. York Cholera Hospitals, as given by the author of the New-York Cholera Reports. They are extracts from these Reports :

The malignant Cholera appears to be a violent disease of the *primæ viæ*, or stomach or intestinal canal, into which the fluids of the body are turned ; and the discharges thereof, both upward and downward, though not always attended with pain, if left unheeded, bring on that stage of the disease which has been denominated the *state of collapse* ; in which the countenance changes, the eyes express a peculiar sensation of anxiety, the pulse sinks, the extremities become cold, the fingers corrugated, a cold clammy sweat supervenes, cramps attack the extremities, the voice fails, and a cold breath and a cold tongue give indications of extreme danger, and of a speedy and fatal termination to the disease.

### PREMONITORY SYMPTOMS.

The violent forms of this disease are most usually preceded by forewarnings, or premonitory symptoms of a milder character, which, in ninety-nine cases out of a hundred, may be cured ; but if neglected, may suddenly and unexpectedly advance to a more dangerous stage of the disease, and terminate fatally. The most usual of the premonitory symptoms are simple looseness of the bowels, with or without pain, and which sometimes continues several days though at other times only a few hours, without becoming dangerous. Borborygm, or rumbling in the stomach and bowels, with pain or sickness at the

stomach, sometimes occur as premonitory of malignant Cholera; and they precede vomiting, or looseness of the bowels, or both.

#### ESSENTIAL SYMPTOMS.

The essential symptoms of the epidemic Cholera, as they occurred to the observation of the subscriber, are purging, or puking, or both. Vomiting sometimes occurs as the first symptoms, but the disease most usually commences with evacuations from the bowels. These may be, in the commencement, the natural contents of the intestines, or in vomiting, those of the stomach. But in the progress of the malady, the discharges, up and down, become copious and thin, with little or no fetor, and often without pain, looking like dirty water, or the washings of dirty rice, and containing portions of flocculent matter, as though the fibrins of the blood were separated into shreds, and floating in the watery mass. When these loose evacuations from the bowels become involuntary, the patient sinks without the hope of recovery.

The vomiting may be moderate, and yet the patient die from the copiousness of the other evacuations, and the violence of the cramps, which occur in most of the fatal cases. The irritability of the stomach is sometimes very great, attended with distress, pain, burning heat and thirst, when the desire for cold drinks is urgent, and they are rejected soon after being swallowed, with additional quantities of fluid. In such cases other drinks or medicines produce the same effect.

Cramps attend some of the milder cases, and are not necessarily fatal. They occur most usually in the extremities, sometimes in the stomach and external parts of the body. When violent, they keep the patient in agony until the strength is exhausted, and the sufferer sinks into a state of torpor and death. Some have passed into a stage of collapse and died without cramps, remaining for some time in a state of cold insensibility denominated the Cholera Asphyxia.

Premonitory symptoms are sometimes wanting, but such cases are not numerous, and the patients are attacked with violence, from the operation of some exciting cause, and the disease runs rapidly its fatal career. A few such cases have been admitted into the hospital at Carlæis Hook.

When the Cholera is left to itself, says a practitioner, or even where it is treated in the beginning with improper remedies, it is almost incredible to those who have not seen it, how rapidly it runs its course to a fatal termination; but it is equally incredible, when the disease is properly treated, how very soon it may be arrested in its rapid progress.

I have seen in some of the very worst cases, where, when a few doses of medicine could be retained in the system for a sufficient time to enter the circulation, the fatal symptoms were almost immediately arrested; and even when the collapse has commenced, after a short period, the pulse can be felt beginning to creep, animal heat begins to be evolved, and though the patients continue weak for a time, yet they gradually recover from a state of collapse.

In two of the most malignant cases which I have seen, there was no premonitory diarrhœa; and in one of them the bowels had not been open for three days previous to the attack: consequently, Cholera is not merely an excessive diarrhœa, for neither the bowel complaint, the rice-water ejections, vomiting, nor cramps, are assential to this disease; and where these symptoms do exist, they are merely accidental; but a sudden coldness of the blood, and of course of the whole body, without any obvious cause, is, perhaps, the best characteristic symptom of this disease.

In the first stage of Cholera, the ejections are, in general, passed with great force; but as the disease advances, the intestines become cold, and frequently so torpid, that hot clysters can be retained with great ease: consequently,

in such cases, there is no necessity for plugging the rectum as recommended.

We have seen that the animal heat is generated and evolved in the extreme texture all over the body; consequently, every thing that increases the action of the extreme vessels, adds to the quantity of animal heat. It is for this reason that I consider friction with hot, dry flannel, but particularly the application of large sinapisms to various parts of the body, useful.

A. SMITH.

In August of 1832, a letter was addressed by Alexander H. Stevens, M. D. of the city of New York, in behalf of the Special Medical Council, to W. Beach, M. D. Physician of the 10th Ward, Medical Station, in regard to the symptoms, success, &c. of his mode of treating the Cholera, which was prevalent in that city at that time. In answer to which Dr. Beach says: "I have to state that the treatment pursued at this station, has been attended invariably with success. The following recipe constitutes almost our only remedy for nausea, vomiting, pain in the bowels, with flatulence, and diarrhœa.

Take of rhubarb, salaratus, peppermint plant, each two scruples, mix,—add half a pint of boiling water, sweeten with loaf sugar,—then add a table spoonful of best brandy; of this, give an adult a table spoonful every hour until it acts as a laxative, or moderately upon the bowels. In the interval, diluent drinks, such as infusions of catnip and spearmint are directed to be taken. This preparation is sufficient to remove the diarrhœa. Where there is considerable pain, we have found the addition of aromatics attended with additional benefit, to the same composition is added of cinnamon and cloves, equal parts; one scruple.

We have found the administration of diaphoretic medicines very much to aid in the removal of the disease; bathing the feet, with the use of the drinks above mentioned, are, in general, sufficient to cause perspiration. In neglected and protracted cases of diarrhœa, when the

patient has complained of great pain, restlessness, want of sleep, &c., ten grains of diaphoretic powders has been directed to be given at bed time. The following tincture to be applied over the region of the abdomen.

Take Cayenne—2 table spoonsful.

Brandy—1 pint:

Simmer a few moments, and apply warm, with flannel, and repeat often.

In reply to which I have to state that the aggregate number has been, up to the present time, since the epidemic, (a period of forty days) seven hundred and eighty. In a majority of the cases of the Cholera and very generally, an attack of the disease has been preceded by diarrhœa, but not invariably so. We have fully and clearly ascertained, that some cases have no such premonitory systems; but these have been of a very malignant and fatal character to the aged and intemperate.

W. BEACH, M. D.

*Physician of the tenth Ward, Medical Station."*

I have not copied the entire letter but all that is of importance in this place.

In treating this disease we see the importance of keeping up a free perspiration, as well as to throw off the poison imbibed in the body by other evacuations. To effect this, the feet and legs should be immersed in weak lie for fifteen or twenty minutes. At the same time, the patient must take a strong tea made of peppermint plant, two large teaspoonsful of the sudorific drops may be added to a tumblerful of the tea, to be repeated every hour till perspiration takes place. One quart should be taken in as short time as possible. Let the bricks be heated, wrapped in cloths, dipped in vinegar and applied to the feet and sides.

This treatment is applicable to the confirmed stage of the Cholera. This treatment, says Dr. Beach, will assist to remove the pain and spasms of the stomach, to check the vomiting, promote a discharge of urine, allay the irri-

tation of the intestines, and of what is of inconceivable importance, to dilute the morbid fluid, and expel it through the medium of the skin by exciting a copious perspiration, while it will return the accumulated and congested blood from the centre to the surface, or in other words, will equalize the circulation, or produce reaction.

I know, says the Doctor, of no single article (an alkali and rhubarb excepted) so exceedingly valuable in the Cholera, as the simple peppermint plant. It appears to have a specific effect in the complaint, different from any other agent.

One other observes, and I think very truly, that drinks taken into the stomach, dilute and weaken the power of any irritating matter that may be in the alimentary canal, and entering the blood through the lacteal vessels, furnish the exhaling vessels of the skin, kidneys, lungs, and alimentary canal, with a vehicle to assist them to throw out, and carry off, the subtle poisonous effluvia that has been taken in by the absorbents, is mixed with the whole mass of blood, and is acting on the whole nervous system, and in a word, upon the whole body. Except the system is regularly and abundantly supplied with water, and simple drinks, the cause of disease, the noxious matters in the blood cannot be removed; no other remedies in nature can do it.

If the foregoing treatment does not remove the difficulty apply the vapor bath or warm bath and let the body be well rubbed. If perspiration cannot be promoted, dry frictions without cessation, and bathing with the tincture of cayenne, warm, should be pursued.

Frictions give great relief to the patient, and he will call for it when his pain is so severe that he is regardless of almost every thing else. The following is Dr. Beach's Choleric and anti-spasmodic mixture. Take of

Camphorated mixture, or spirits—4 ounces.

Essence of peppermint—4 ounces.

Tincture of Cayenne—1 drachm.

Syrup of ginger— $\frac{1}{2}$  oz. Mix.

Of this, let one table spoonful be taken every fifteen, thirty, or sixty minutes, according to the urgency of the symptoms—to be accompanied with the use of copious draughts of thin Indian meal gruel, in which has been dissolved a little salaratus. If this mixture does not lessen the cramps, and improve the condition of the patient, an anodyne may be given, also anodyne and mucilaginous injections, fomentations of bitter herbs applied to the stomach.

In the cold or collapsed state in particular, warm injections and hot drinks are recommended, and the former directions thoroughly pursued. We have the testimony of a number of botanic physicians in the city of New-York and to the West, who have succeeded admirably with the use of lobelia emetics, in the cure of the Cholera.

During my appointment by the Board of Health of this city, says Dr. Beach, there were treatments to over one thousand cases of Cholera, either in the premonitory, or confirmed state of the disease. In the first stage of the disease, every case was successful. In the second stage, the great proportion was cured, and nearly all, except the most malignant cases, and those to which we were called too late.

The course of treatment of the Cholera here laid down is according to the practice of the Reformed Medical Colleges of the U. States, of which Dr. Beach is founder. For more particulars in regard to this disease, the reader is referred to Beach's American Practice, Vol. 2.

The treatment of the Cholera in New-York by the regular faculty is represented by this author as little other than a series of unsuccessful experiments. The most common practice was bleeding, mercury, &c.

---

## LETHARGY.

When there is a sense of fullness in the head, giddiness, or oppression at the stomach, together with dull, heavy feelings, the patient should take about eight of the anti-dyspeptic pills, soak the feet in warm water, to which a little ashes has been added; apply onion poultices to the feet on going to bed; take a portion of the vegetable powders, with a teaspoonful of the elixir. This course may be pursued every night, till a cure is effected.

---

## TIGHT LACING.

When you have succeeded in crowding the body together so that you think you are small enough around the waist, and should feel any inconvenience from pressing of the bones, and internal viscera, the patient should go to bed and slack up; the part affected should be rubbed with the hand; warm herb tea should be given.

Multitudes of our females ruin themselves by this foolish practice: they make themselves unfit for mothers or wives. We would ask mothers to control their daughters; but alas, the mother practices the same. I have found it of no use to raise the warning voice, they will take their own course.

Desection has shown in many cases that the ribs had actually lapped over each other, and the internal organs were attached to the walls of the viscera.

---

## CANCER.

This disease, is, at first, a small swelling in the glands, or affected part, unaccompanied by pain. The tumor increases gradually in size and hardness, becomes knotty and irregular, and when the powers of the system begin to fail, it is attended with excruciating pain, as if pierced

with a sharp instrument. The tumor increases till at length the skin changes to a purple, and so continues to change, until it becomes dark, and the part is attended with much pain and a burning heat, when it breaks and discharges a thin acrimonious matter which sometimes cuts off blood vessels. In this case, blood will be discharged with the matter. If it still be neglected, the whole system becomes diseased, with symptoms that attend other diseases, and should be treated in a similar manner.

Electricity has proved a valuable application for the cure of cancers and many other local diseases. I have reason to believe that it has failed in but few instances of effecting a complete cure when it has been judiciously applied; and it is probable that a suitable application of medicine with it, might have prevented a failure in any case. When those who are afflicted with a local disease and cannot be favored with electricity, the object aimed at in administering that, should be strictly adhered to, viz: to open the pores, and keep the fluids active, so that the sharp humors may pass from the system through the pores, instead of gathering in the tumor. This should be continued till health be restored.

When it becomes necessary to remove a cancer by an external application, I consider the Indian method, much the best. They scald with hot water, as much as they wish to remove, then apply a poultice immediately, which should be continued until the scalded flesh and inflammation are removed, when, salve and ointment would be proper; ointment may be applied each time the poultice is changed, after the part is thoroughly washed, which should not be neglected. The Indians secure the adjoining flesh by winding bark around it; but I think that a thin tube, would be far preferable. This can be applied to any tumor where caustics would be proper and would do more in two or three minutes than could be done with a caustic in an hour or two; besides it has this superior advantage, it leaves no poison behind it.

The most successful practitioner that I know of is Dr. Robbins of Plymouth, Massachusetts. He has succeeded in curing this disease when all other means had failed.

I have assisted, in cupping a cancer, when there was much inflammation, and given great relief. In this disease great care should be taken to cleanse the blood.

---

### GOUT.

This disease requires much the same treatment as the rheumatism. It is caused by over stimulating the system with highly seasoned food or stimulating drinks.

---

### FEVER SORE.

Sometimes this disease is caused by a blow that affects the flesh and bone; and at other times it is produced by a general disease becoming a local one. In either case, it is important to cleanse the system of all acrimonious humors by all the evacuations that nature has provided to keep the body in a healthy state.

It makes its appearance first by a deep seated pain; at length the parts swell and a tumor forms, possessing great hardness, the skin becomes red and tender, there is an increase of heat, and other symptoms of inflammation. Dr. G. J. Cobb informs us that he has known a case cured by the application of sorril poultice for a few days, followed by washes, and other poultices, and then salves. A sore may be made below the part affected, by putting on a fly blister as large as a dollar; let it remain only long enough to start the skin; take off the skin and put on the savin salve; dress it as often as three or four times a day. If the savin salve cannot be obtained, make a salve of equal parts of plantain and camomile, simmered in hogs-lard.

## MIDWIFERY.

Our limits will not allow us to treat at length on this subject ; but we would inform our readers that these medicines favor nature, and are not injurious in any state of pregnancy, but useful where medicine is needed. The emetic may be given any time before or after delivery with safety. I have attended my own wife as well as others, with complete success, under such circumstances. No good reason can be assigned why the custom should be changed, making the physician the accoucher, instead of the midwife, except in difficult cases. Every intelligent husband may perform this office in common cases, with little study and attention. This knowledge might be particularly useful to young men emigrating to new countries. It is said that many females suffer and die in some parts of the West, for the want of medical skill and attention. We propose soon to prepare a plain practical treatise for this class of our subscribers. It may be found at our depot in Boston. The work will be furnished cheap to our subscribers.

---

**SWELLING OF THE BOWELS.**

Children, and sometimes grown persons, are troubled with a collection of slimy and white gummy substance that collects on the internal surface of the lower region the elementary canal, which physic will not reach, and causes pain and sometimes swelling. In such cases, I have drawn away great quantities of this matter, and immediately given relief, by the following process :—For an adult, take strong catnip tea, ten ounces ; sweet-oil or hog's lard, one great spoonful ; fine salt, a heaping tea-spoonful ; molasses, half a wine glassful ; inject it, and keep it up at least fifteen minutes. If the case be urgent and it seems to do good, it may be repeated once in three hours afterwards, for a number of times ; if the slime con-

tinues to come away, repeat it every other day. Sometimes, in repeating it too often, there will be appearances of blood in the stool; if this be the case, it should be suspended for a few days.

A dose for a child five or six years of age, should be about half a tumblerful for an injection.

---

### VAPOR BATH.

The easiest and best way of steaming in common cases, I think, is to put the patient to bed with additional covering, and place hot stones around him, quenched in vinegar; let the stones be as hot as they can be without scorching the cloth in which they are wrapped; from four to eight stones of different sizes may be used according to circumstances—one stone should always be placed at the feet. Be careful to keep up the internal heat by giving warm drinks, such as catnip, pennyroyal, or the vegetable powders and elixir.

The vapor house is the best, where a very thorough course is necessary.

Another easy mode of steaming is performed by sitting the patient over a tub of hot water, lay a piece of board across the tub, cover the patient over with a blanket, and put hot stones into the tub as often as the patient can bear.

Dr. Jennings's mode of steaming I have found a good one in some cases. His mode is to communicate the steam produced from burning alcohol to the body of the patient, by means of a tin tube, largest at the bottom, set over a cup filled with alcohol, and running through a foot board placed for that purpose at the foot of the bed: a light frame is constructed to keep the clothes off of the patient, so that he may turn over at his leisure.

---

## SWATHING CHILDREN.

It was formerly customary for the mother to swathe her infant with a woollen band six inches wide and about four feet long, as though there was danger of the child falling apart without this process, and the practice is kept up to some extent to the present time. Infants should be handled tenderly; but they do not require their clothes to be made to sit more closely than grown persons.

---

 COUGH.

For a cough that arises suddenly by a slight cold, creating irritation—take a teaspoonful or two of the elixir, a great spoonful of molasses, and a wineglass of hot water. This may be taken in the course of five minutes.

If a cough be of long standing, take a handful of skonk cabbage root, and twice as much of the twigs of peach trees, boil them in three quarts of water down to a pint, then add a pint of molasses; take a wine glassful three or four times a day. I have found this syrup to be very efficacious. Take also one or two of the asthmatic pills every night, and half a teaspoonful of the cough powders in hot water, sweetened with molasses. If all this does not break up the cough, the patient should take a lobelia emetic.

---

 FALLS AND BRUISES.

In these cases, where the patient is deprived of his senses by the blow, it may be well to bleed at the vein; but in other cases give the *elixir* and *vegetable powders*—first, soak the feet in warm water and bathe them with the elixir, get the patient thoroughly warm, then give the *lobelia emetic*. It will take off the tension from the blood-vessels and give relief sooner than bleeding. When a

person receives a sudden shock from a fall or blow, it checks the circulation, the extremities become cold, the excretions are retarded, and a fever follows.

I attended a patient who fell upon the edge of a stick of timber, his back striking the timber a little below the shoulder blade: about a pint and a half of blood was taken from his arm. I perceived no relief whatever; his breathing remained difficult, his pulse tense; he had no use of one arm and leg, till he took a vomit, when immediately after its operation he got up and walked into the adjoining room and back again without assistance, which he had not done before since he was hurt, at the same time he had the use of his arm.

---

## DIARRHŒA AND DYSENTERY.

### OR BOWEL COMPLAINTS.

Take the yolk of two eggs, beat them for ten or fifteen minutes, take half an ounce of castor oil, turn it into the egg very moderately, at the same time stir the egg so that the oil will completely mix; then turn in by degrees three gills of water, the same way the oil was poured in—stirring the mess with one hand and pouring in the water very moderately with the other, to prevent its curdling. Take two thirds of a cupful every two hours till it operates. This medicine is good in diarrhœa or dysentery. Where you wish it to act as physic, put in more of the oil and less of the egg—say the yellow part of one egg only, and an ounce of the oil or more. I consider this to be a valuable recipe. It is said never to fail.

# RECIPES.

---

### DIRECTIONS.

It is impossible to lay down any rule that will be a guide to the practitioner in regard to doses in all cases. We can only show what is a common portion in ordinary cases, and leave it to the judgment of the person who administers, as to the proper quantity to be given. Before you administer medicine, ascertain how medicine operates with the patient, whether easy or not. I have given an adult person one pill that has operated as thoroughly as eighteen of the same pills have on another adult. The quantity of medicine to be given depends very much on the nature of the disease and strength of the constitution. I have sometimes given a child two years old as large a portion of physic as in another case to a grown person; in one instance, it was necessary to produce thorough evacuation; in the other, the nature of the disease did not demand it. For a general rule, persons require a full dose at twenty or twenty-one; and women little less than men.

### APOTHECARIES' WEIGHT.

1 ounce,	makes	8 drams,
1 dram,	"	3 scruples,
1 scruple,	"	20 grains.

## MEASURE FOR LIQUORS.

A pint,	contains	16 ounces,
An ounce,	“	8 drachms,
A great spoonful is about		$\frac{1}{2}$ an ounce,
A teaspoonful is one fourth of a table spoonful.		
Sixty drops make one teaspoonful.		

## TIME FOR COLLECTING ROOTS AND HERBS.

Most roots should be collected late in the fall when the tops are dead, or early in the spring before they shoot up. Herbs should be gathered when in bloom and dried in the shade, or in an oven moderately hot; as soon as they are dry they should be packed close to prevent losing their strength by being exposed to the air: in this way the virtues of roots and herbs may be preserved for years. The Shakers put up their roots and herbs very neatly.

---

 PILLS.

*Pills*, is generally the most convenient form of administering physic, but they lay in the stomach a longer time before they operate than physic, given in the form of powders.

*Bilious Pills.* Take castile or common bar soap, two parts; aloes, one part; pulverise the aloes and mix them well together in a mortar or with a knife. Dose, six or eight, the size of a pea. This is a valuable pill, it will immediately remove any burden or oppression at the stomach, particularly after eating.

*Anti Dyspeptic Pills*, are made of equal parts of aloes, castile soap, colocynth, gamboge, extract of gentian. Dose one or two, morning and evening.

*Hygeian Pills.* These pills operate very similar to the

celebrated "Morrison's Hygeian Pills." Take castile or common bar soap, one part; gamboge, one part; colocynth, one part; mix. Three or four the size of a pea is a dose, taken on going to bed.

**TONIC TINCTURE.** This tincture is a favorite medicine of the late Dr. Elisha Smith, of the city of New York. In thirty-two gallons of good sound cider, infuse five pounds of the inner bark of white-oak, pulverized; eight pounds of horseradish-root, bruised; and three pounds of Seneca snakeroot, bruised; cover it, and let it stand in a warm place, or over a gentle heat, (not exceeding a blood heat,) for six days.

Then strain the liquor off into a clean cask, and add three pounds of the carbonate, or rust of iron; and two ounces of the oil of cloves, decomposed in alcohol.

Let this stand for two or three weeks, stir it occasionally, and not entirely excluding the air; it may then be bottled, or remain in the cask. To every bottle of this tincture, add half an ounce of "Turlington's Balsam of Life," shake them together and the composition is fit for use. Dose from one third to two thirds of a wine glassful, three times a day before meals. The doctor says in all cases of debility, weakness of blood, in consumptions, dropsy, long continued agues, obstructed menses, &c. the tonic tincture will be found an invaluable medicine. I should not myself recommend the *ironrust*.

**ELIXIR.** This tincture is made by adding one pound of best gum murr, pulverized, and three ounces of African cayenne, to one gallon of alcohol, or fourth proof brandy. It may be taken from a teaspoonful to a great spoonful at a time in water sweetened with molasses or sugar. It is good in almost every disease, internally and externally. It is useful in colds, coughs, consumptions pain in the stomach and bowels; for an external application, it is invaluable for rheumatism, pains or inflammation of any kind, headache, toothache, cramp, cold feet, &c.

**COMPOUND ELIXIR.** This tincture is made by adding to the above elixir, say for one quart, add an ounce of the African cayenne, an ounce of the oil of cinnamon, half an ounce of the oil of cloves, an ounce of the oil of hemlock, an ounce of the oil of spearmint, three ounces of camphor, and half an ounce of opium. This medicine is only designed for external application and may be used for all purposes externally as the elixir, when that fails; it is used for headache, toothache, all external inflammation, in pain and tightness of the chest. I have found it to give great relief by bathing the chest.

**LOBELIA TINCTURE—*for Children.*** Take spirits and water, half a pint each; lobelia, the herb, dry, six ounces; in a few days it will be fit for use. Dose for a child six months old, two teaspoonsful;—give one teaspoonful at a time, in a great spoonful of herb tea; and in ten minutes, give the other teaspoonful in the same quantity of tea. This is generally enough for one dose.

*Lobelia Tincture, No. 2,* As made by Dr. Elias Smith, for cramps, convulsion, spasms, locked jaw, poison, &c. Take one pound of the seeds of lobelia, pound them fine; add four ounces of the elixir, and two spoonsful of cayenne, shake them well together, and it is fit for use. In the above diseases, he gives about two thirds of a table spoonful; in fifteen or twenty minutes, give warm pennyroyal tea. If all this does not relieve in half an hour, give a teaspoonful of cayenne, in warm pennyroyal tea with one teaspoonful of the elixir. This he says he has never known to fail of giving relief.

**BARD'S OPODELDOC.** Take Venetian soap, two ounces; camphor gum, one ounce; brandy, one pint. The soap is to be dissolved in the brandy by a gentle heat, and after its solution, the camphor is to be added.

**HARLÆM OIL.** Take balsam of sulphur, two parts; spirits of turpentine, one part. I have found this com-

found to be one of the best remedies that ever I have applied for the rheumatism. Bathe externally, and take fifteen or twenty drops, twice a day.

**BRITISH OIL.** Take sulphurated oil, one ounce; oil of petroleum, or rock oil, half an ounce; purified oil of amber, two drams; oil of turpentine, four ounces: mix.—Dose, from fifteen to twenty drops, morning and evening.

**SYRUP OF WHITE POPPIES.** Take poppy heads, dried, sliced, and free from seeds, two pounds; boiling water, thirty pounds; refined sugar, four pounds. Macerate for twelve hours; then boil till one third of the liquor remains. Strain and again boil till one third of the liquor remains. Strain again and boil this to the consumption of one half. Lastly, add sugar, so as to form a syrup. This syrup is given to children in doses of two or three drams, answering all the intentions of opiates.

**PAREGORIC ELIXIR.** Take of flowers of benzoin, half an ounce; opium, two drams. Infuse in one pound of volatile aromatic spirit, for four or five days, frequently shaking the bottle. This is an agreeable and safe way of administering opium. It eases pains, allays tickling coughs, relieves difficult breathing, and is useful in many disorders of children, particularly whooping cough. Dose to an adult, from fifty to one hundred drops.

**ALTERATIVE SYRUP.** Take three pounds of sarsaparilla, either the common or imported; two pounds of guaiacum shavings, (they may be obtained at the "Pump and Block Makers,") the borings of guaiacum is preferable to the saw-dust: sassafras root, half a pound; elder flowers, one pound; black alderbuds, one pound; burdock seeds, one pound. Boil all these together for three hours, then turn off the liquor, and fill up again with water; boil again for the same length of time; put it together and boil down to ten or twelve quarts, or thereabouts. Add

eight pounds of loaf sugar or clarified brown sugar. Sugar may be clarified by adding half its weight of water, put in a few eggs, beat them up and boil till no scum arises. This syrup is good in the venereal disease, rheumatism, chronic inflammation of the liver, scrofula in all its different shapes, in ulcers, cutaneous diseases, white swellings, rickets: in salt-rheum, I have found it very effectual. I have sold more than an hundred bottles of this syrup and have never known it to fail of curing, or doing good. If this syrup is made when it is warm, it will be necessary to add about one quart of alcohol, in order to prevent it from souring.

**DYSPEPTIC BITTERS.** Take four ounces of goldenseal, two ounces of bitter-root; four ounces of poplar bark; four ounces of peachmeats; add two quarts of gin, and two quarts of water. Good in dyspepsy, weakness of the stomach, &c. If taken after eating, it will prevent the food from producing distress. Dose—Two thirds of a wineglassful before eating.

**COMMON BITTERS.** Take six pounds of barberry root, one pound of wormwood, and one of double tansy; boil till the strength is out; add molasses, and it is fit for use.

**MOTHER'S CORDIAL.** Take black snake root, called by the Indians, Squaw root, half a pound; pour three pints of boiling water upon it; let it steep by a gentle heat for four or five hours, making about a quart; add two tea-spoonsful of the flour of slippery-elm, and to keep it from souring, add a pound of loaf sugar. For heartburn and sickness at the stomach, take a tumblerful, in the course of a day. The patient may act his pleasure about adding sugar: be particular to add boiling water, as it will give a more pleasant taste. For sickness at the stomach and heartburn usually attendant on pregnant women, it is invaluable. Where persons are apt to vomit up their food, it is a preventative. It is good against a gnawing, sinking feeling at the stomach.

**COUGH POWDERS.** Take lobelia, one teaspoonful; flour of slippery-elm, two; skunk-cabbage, six; blood-root, one; cayenne, one; wake-robin, 3; elecampane, three; bitter-root, two teaspoonsful; mix them all together, and pass the mass through a fine sieve. Dose—From half to a teaspoonful two or three times a day. If all of the above articles cannot be obtained, some of them may be omitted.

**TURLINGTON'S BALSAM OF LIFE.** Take of balsam of Peru, half an ounce; balsam Tolu, one ounce; gum storax one ounce; gum guaiacum, one ounce; gum benzoin an ounce and a half; hepatic aloes and frankincense, each two drams; and dragon's blood, one ounce.

Let the gums be bruised and put the ingredients into a quart of proof brandy; put it in a warm place and let it be shaken, often for a few days and it is fit for use. Dose—from twenty to thirty drops, internally, to remove coughs, asthmas, and other complaints of the breast. It is used externally to heal recent wounds or bruises.

**PHYSICAL POWDERS.** Take jalap one part, peppermint plant pulverized one part, and senna two parts, unite them thoroughly. This physic operates very easily, and is pleasant to the taste; children will take it without any trouble. I have found it to be very efficacious in common cases where a cathartic is indicated.

**AGUE POULTICE.** I have known fresh cow-dung poultice applied to the face hot and changed often, to give relief, after all other means had failed.

**CORRECTOR.** Take equal parts of rhubarb, salaratus, peppermint, and cinnamon, of each a teaspoonful; add half a pint of hot water, and sufficient loaf sugar to sweeten; when cool, if it be convenient, add two great spoonsful of the best French brandy; of this give from one to three great spoonsful every hour, until the passages are changed in appearance and consistence. This is a favor-

ite prescription of Dr. Beach in dysentery and bowel complaints; and indeed, I have proved its utility myself.

**CATARRH SNUFF.** Take ten parts of bloodroot, five of skonk-cabbage, two of lobelia, three of snakeroot, six of the flour of slippery-elm, and one part of African cayenne. All these should be made fine, well mixed, and run through a sieve. I have found this very efficacious in catarrh and diseases in the head. Dose—A pinch may be taken a number of times a day.

**EXPECTORANT TINCTURE.** Take one part of bloodroot, one of lobelia, three of skonk-cabbage, two of white root or pleurisy root, pulverize, and add to spirits. Dose from one teaspoonful to a table spoonful. Good against coughs and lung complaints.

*Poultice to discuss Indolent Tumors.* Take slippery-elm and Indian meal, equal parts, mix with weak lie, in which is dissolved a little salt.

*Yellow-Dock Ointment.* Take yellow-dock, or narrow-dock, simmer it in cream. It makes a very cooling ointment for any kind of humors.

**DROPS.** Accidents more often occur from this form of medicine, perhaps, than any other; the bottles containing it should be kept corked tight and labelled.

*Black Drops.* These drops are made by taking half a pound of opium, three pints of vinegar, one ounce and half of nutmeg, half an ounce of saffron; boil awhile and then add a quarter of a pound of loaf sugar, and two table spoonful of yeast. Set the whole in a warm place, and after a few weeks, it is fit for use. Dose—from five to ten drops. This is used in cases where an anodyne is required.

*Whithwith's Drops.* Take camphor one dram; oil of origanum six drams; spirits of turpentine, half an ounce;

alcohol, one pint; alkanet root, two drams. Mix, and let it stand one week. Dose—internally, twenty-five drops in wine or sweetened water. Useful as a stimulant and may be applied externally in chronic rheumatism and other painful affections.

*Sudorific Drops by Dr. Beach.* Take ipecac, saffron, camphor, Virginia snake-root, and opium, two ounces of each; Holland gin or Jamaica spirits, three quarts. Let it stand two weeks. Dose—one teaspoonful given in a teacupful of catnip tea, every hour, till it produces perspiration.

*Use.*—This medicine is probably unsurpassed, in fulfilling the indications for which it is given, which is generally to produce a free perspiration. One or two doses, aided by warm infusions, or drinks, and bathing the feet, causes a copious perspiration. Hence, it is used in a variety of diseases. In fever, inflammation, &c., I know of no medicine so certain in its operation.

**INJECTION.** A very excellent stimulating injection is made of equal parts of lobelia, cayenne, and an ounce of pennyroyal, all made into a tea, introduce half a pint. It is good in the piles, costiveness, pain, or other cholics, and in a cold state of the system.

**ESSENCES.** Add one ounce of oil to one pint of alcohol, either peppermint or lavender, or whatever kind of essence you wish to make. An ounce of oil to a pint of alcohol, is about a right proportion.

A teaspoonful of the essence is a common dose.

A respectable gentleman informed me that he was subject to turns of the bilious cholic, and his father before him, died of it: he fell in one day with a stranger, a physician, who told him how he might cure it with certainty. He followed his directions and had cured himself immediately with the same medicine whenever he was attacked with it.

I have never administered the medicine myself; but as it may be of service to some of my readers, I will give it an insertion. Take one or two balls of horse dung, put it into a cloth, steep it in two tumblers of water, one ball is enough if the horse has been to grass; if to hay take two; take a tumblerful at a time. If one does not give relief, take the other. It generally vomits first then operates down.

**WINE TINTURE.** For the cure of fever and ague take

Peruvian bark—2 ounces,  
 Wild cherry-tree bark—1 ounce,  
 Cinnamon—1 teaspoonful,  
 Cloves—1 teaspoonful,  
 Nutmeg—1 teaspoonful,  
 Sulphur—1 ounce,  
 Wine—2 quarts.

Let it stand a while. Dose, a wineglassful every two or three hours. This mixture is said to be almost an infallible cure for intermittent fever, or fever and ague, and removes it when all other means fail.

**PLASTERS.** For a common strengthening plaster, simply hemlock gum, or balsam, is one of the best plasters. Burgundy pitch alone makes an excellent strengthening plaster.

**RHEUMATIC PLASTER.** Take sulphur and rosin, equal parts, one pound each; melt by a slow fire, then add two ounces of African cayenne, and one ounce of camphor, pulverised, stir it till it is well mixed; then temper it to about the softness of shoemakers wax, with sunfish oil. This is the best plaster for the rheumatism that I have ever used; and indeed, I use it in almost every case where a plaster is necessary. For rheumatism, put the plaster on the place where the pain is present. If the pain should move, follow it up with another plaster.

**SCROFULOUS PILLS.** Take tarr, boil it till it is hard enough to form into pills; take three or four night and morning. It is said to be a certain remedy against the scrofula.

**TONIC PILLS.** Take rhubarb and epicac, equal parts, form into pills the size of a pea; take two or three at night.

**LINIMENT FOR BRUISES.** Mix equal parts of spirits of amonia, sweet oil and spirits of turpentine. It should be thoroughly shook up before bathing.

**SYRUPS.** Syrup of lemon may be made by adding five parts of double refined sugar, to three parts of the juice of lemon after it has settled.

Syrups from the juice of other fruits may be made by the same rule; such as blackberry, elder-berries, garget plums, &c. The juice may be scalded and skimmed.

**COMPOUND TINCTURE OF LAVERDER.** Take of oil of lavender, six ounces; oil of rosemary, two ounces; cinnamon, one ounce; cloves, two drams; nutmeg, half an ounce; red sanders, in shavings, three drams; alcohol for pounds. Digest ten days and filter.

This is a grateful cordial in common use, as relieving languor and faintness. From ten to an hundred drops may be conveniently taken dropped on sugar.

**GODFREY'S CORDIAL.** Take opitum, eight grains; molasses, eight ounces; alcohol, four ounces; oil sassafras, three drops; distilled water, one pint. Digest three days. Dose two drams to an infant. This medicine is much used as an anodyne for infant children.

**TO RELIEVE COUGH.** Take an ounce and a half of liquorice root; one ounce of elecampane; half an ounce of hoarhound; two ounces of sulphur. Pulverize them, and add honey to make a conserve.

**NOURISHMENT FOR THE SICK.** Where more solid food cannot be taken in fevers and like diseases, the best nutriment that I have ever found is made by taking half an ounce of gum arabic, two ounces of pearl or English barley, two heaping teaspoonsful of the flour of slippery-elm; add two quarts of cold water, stir it up well, steep or boil it for two or three hours; add a little sugar and salt, so as to make it palatable, and it is fit for use. It may be taken at discretion. If you have not got the flour of slippery elm, the bark will answer the same purpose. This drink is very nourishing, soothing and healing, and may be taken as a common drink.

**LAUDANUM, or, Tincture of Opium.** Take of opium, two ounces; spiritous aromatic water, and mountain wine, of each ten ounces, dissolve the opium in the wine with a gentle heat, frequently stirring it; afterwards add the spirit and strain off the tincture.

As twenty-five drops of this tincture contain about a grain of opium, the common dose may be from twenty to thirty drops.

**FOR DYSENTERY—**(Dr. Perkins' last remedy, so called.) Take good vinegar, and as much salt as it will dissolve: add one table spoonful of it to four of hot water, and let it be taken by spoonful, as fast and as hot as it can be swallowed. This dose is to be continued ounce in two hours till it operates as physic. It is said to be a sovereign remedy in dysentery.
