## THE

# POLITICAL SURVEY <br> $\$$ <br> GREA•T BRITAIN. 

## B O O K II.

## CIAPTERI.

The Extent of Territory in Great Britain and Ireland.
THE gencral Facts laid down in tbe formir Book morc difinutly confulered in this. A competent Notion of the Extent of this Country, the frim 4 Point to be eflubljlwed. No Objection to this, that as Iflaids their Bourds 6. are unalterably fived by Nature. Dedur?ions of this Kind no new Dictrine in tbe political Science a gimetrical Deficript on of tbe World publijh'd by Girard Mulines at the Be: inning of the lait Cintury. Come putation :f the Extent of Eligland, by Dr.E Emnud Hully. Tbe Sup. rfacies of Britain and Irclond from Mr. Trmpleman's Sjjficm. Tbefi, thourb
Vol. II.
B
they HE general Fxcellence, the many natural Advantages, and the pecular Privileges and Prerogatives, which through the Bounty of Providence are the Portion of Baitain, have been in fome Degree proved, as well as pointed out in the former Book a. In order to hew the numercus Additions that may be fill made to the Security, Grandeur, and Profiperity of this already powerfin Empire, we mean in this to be more diatin't and explicit, by entering into a fuccinct $\mathrm{D}_{\mathrm{E}}$ tail of thofe Powers or rather Faculties of this Country, at all Times and unalienably in her Poffefion, and which for this Purpofe have been and hereafter may be gradually exerted ${ }^{\mathrm{h}}$. This we are the more inclined to do, that at the fame Time they illutrate and confirin the Scope and Importance of this Doctrine, they nay ferve alfo as fo many Proofs to fupport thote already fuggeftcd, and thereby to eltablifh its Veracity, in fuch a Mamner as to render it inconteflibly manifeft, that our afferting it not did arife out of what might be efteemed, even in a moral Senfe, an excufable, or, confidered in a national View, as a laudable Partiality c ; but that it actually Howed from frrious Enguiry, and meny Obfervations, which it is hoped will lead the attentive Reader to a clear Conviction, at lafin in regard to moft of the Points that we have advanced, as there is nothing in which we have been more careful, than that all our Argaments fhould at the Time they were advanced be united with a futlicient Weight of Evidenced.

We will begin with endeavouring to afeertain to a competent Degree, in refpect at leaft to political Speculations, the Extent of the feveral Part, and of the Whole of BRI'TAIN, in Conjustion with JRELANI), which, for many Reatons, it is of the greateft Inportance thould be clearly and diftincily underllood". Fer without this we can form no rational or fulid

[^0]
## of GREAT BRITAIN.

Judgment of our Condition either at Home or Abroad; for we cannot otherwife difeern what may be ftill wanting to compleat our national Confiftence, or how this is to be brought about, by firmly combining thefc natural Parts iato one political Wisole, and thereby uniting our two great Inlands, toget:er with all the leffer Illes dependant upon them, into what may be loo! ec! upon as onc Country, or, to fecak with greater Propricty, as one Commonwcalth f. Whisen, however, this is once effectually accomplifhed, we hall be able to gain a difinif Idea of our internal Strength or Power in regard to our Neighbears, and of courfe be thereby freed from the Danger of falling into what mizht iec indeed iatal, an overwecning Prefumption of car own Abilitice, or of finking a: any Time, which would be no lets fatal, under ill-founded Apurchenlions of our Weaknefs 5 . For in reference to the State of Nations, as well as to the Eftates of private Men, the only Means of dificovering what with Reafon we may hope, or what in Prudence we ought to decline, is to gain as ferfect a kinowlecige as is polfible of our Condition !.

Bur there is yct another, and it may be fill a more important Reafon, for our paging the fteictelt Attention to this Inquiry. Great Britain is iow beone the wat and Cunter of a very extentive Empire, confidered in which Puint of Vicw, to many and fuch different Circumftances arifc, as demard, in cirder to $0^{\circ}$ c.me at this, the utmoft Circumfection and the greateit Penetration i. It is indeed true, that the Extent of any Country being ace throughly known, the Thing is for ever fixed, more efpecially in rew. 1 to lllands; the Bounds of which being affigned by Providence, camot .ither by Fore or Indultry be extendedk. Reafon however thews, and Experience very fully proves, that in virtue of Situation, Commerce, and Policy, the Pcople inhabiting a Cuuntry of a very moderate Capacity may improve it, and their own Condition therein, to a Degree of Security, Wealth, and Force much fuperior in all thele Circumtt.nnces to thofe feated in Countries of far more extended Eounds; and we have fpent our 'Time and Pains very ill, if we have net lhewn, path all Doubt,

[^1]that in every one of thefe refpects Inands are of all Countries the nont improveable'. Yet fill unalterable and impaffable as theie our natural Limits are, the attaining a precife Notion of the Sizes refpectively and colleatively of all our Iflands, remains for the Reafons that have been before given, and for many more of equal Coniequence which might be eafily afjigned, a Matter of the greateft Weight and Importance, and which ought thercfore to be carefully laid down as the only proper Batis of all political. Reatoning ${ }^{m}$.

As this Pofition was fimple, natural, and i:deed at all Times obvious to any judicious Obferver, fo whatever fome modern Authors may be pleafed to fay, it was very carly introduced by fach as meant to enquire methodically into the relative Proportions of 'lerritory in the Fofiellion of the feveral Powers of Europe n. If they had fewer Lights, worle Maps, and lefs autheatic Informations in general than are within our Reach, it no Way affects the End and Defign of their Deductions, though it may in fome Degree the Truth of their Computations. Yet cren in Reference to thefe, we fhall upon Examination find they were not near fie crroneous as we might imagine, and therefone the fmall Ditierence betwen their Calculations and ours feems to give an Air of unexpected Credit to both; more efpecially when it is confidered, that with the Help of fome few, and thofe likewife very renfunable Qualifications, thefe ${ }^{\bullet}$ Differences, even trivial as they are, might be wholly taken away ${ }^{\circ}$.

It is now about a Century and a IIalf fince Gerard Malines pubiifiod, though for a Mercantile Purpoie, fuch an Analyis of the habitable World p; and that it might be the better underfteod by its being unembarralfed with different Meafures, he reduced the Whole to Acres. Affigning to England Teucnty nine millions Five hundered Sixy-cight thoutand; to Scotland F'surtecn milions y Four loundred Thirety-two thoufand; to Ireland Jighticon millions; making the Whole of the Brition Deminions, Sixty-two millions of Acres $r$. In confequence of this, he makes the Proportion between the

[^2]Brililh.

## of GREAT BRITAIN.

Britifh Dominions and thofe of the Crown of France as fix to cight nearly, and in reference to thote of Spain as fix to fomewhat lefs than feven; and by the Obfervations joined to this Table, he very clearly points out the various Ufics to which, as he conccived, it might be applied s.

The very judicious and accurate Dr. Edmund Halley, to comply with the earneft Detire of his induftrious and inquifitive Friend Mr. Houghtcin t, made a molt elahorate Calculation in refpect to the Centents of England and Wales, which he found to contain in the Gross; that is, taking the Whole from a fingle Map, Thbirty-cight millions Six busdred und Sisty thoufand Acres"; and upin a ftrict Computation of the feveral Countics, each feparately examined, he fixed the total to be Thir:y-nine millions, Ninc bundred Thirty-righe thoufand Fier bundred Acres; and from the fimall Difference between thefe two Numbers, he very ration.lly concluded that neitiker of then could be very wide from the Truthw. He farther afiims, that in his Judgment, this Country, that is England, might be citeemed the Tijrac themididel) Part of the whole Globe of the Earth, and the Pifternts bundeadis Part of the inhabited World $x$.

To make this Mater perectly clear and intelligible, and at the fame Time to cbviate what might otherwife ap;ear contraditory Affertions in diberent Parts of this Work, it is necelfiry to obferve, that it was in order to bring the Superficics of all Counties under one Denomination, that they might be more readily compared with each other, Malines found it requifite to reduce them into Acres. Dr. Halley has likewife given the Meafure of England, and of cach of the Countries therein undir the fame Denomimation. Sat both regulate themielves by the geographical Mile as had down in the Maps they ufed, which fior the Purpole they had in view was very proper ; and confidered in that Light, was, as w ihall pretintly thew, futticicatly c.act. But fuperficial, and indeed all other Mealures, dificu nut only i: dificuent Countries, but even in the fame Country, though the Name he preferved. Thus an Arpent is not of the fame Dinanlions in all the Provinces of France, ard in like Manner the Ase is nut the fane

[^3]
## 6 The POLITICAL SURVEY

in all Parts of England; and in Scotland and Ireland they compute by Acres of their own. In confequence of thefe Differences it became abfolutely neceflary, that for the Sake of giving a Rule for the regulating private Property, the Law fhould interpoic, as in this Country it hath, and defined what fhall be efteemed a Statute Mile, and the Number of Acres which are to be comprized in a Mile Square 9 . But thete are not the Miles or Acres by which Malines or Halley compute. Dr. Nehemiah Grew indeed took the Pains of making a vcry accurate Calculation in this Way, and has geometrically demonftrited that South Britain contains Sceenty-two thoufand Statute Miles, and confequently Forty-/ix millions and Eighty thonfand Statute Acres z. This it mult be allowed is Mister of ercat and material Information, to which Attention is to be fhewn when icr we fipeak of Agriculture, or the Produce of particular Places. But notwithftanding this, it does by no Means deftroy the Cradit, or lefinn in any Degree the Utility of the other Computations, as they have refpect to Miles common to all Nations, or at leaft commonly ufed in the Maps made of all Countries. It is therefore by their Means that we attain a common Meature, by which the Extents of different Countrics are afeertained in fuch a Manner as enables us to compare them with each other; and it is for this Reafon that having the fame Purpoic in View, fubfequent Authors have thought it beft to follow the fame Method, that they might reafon in the fame Way, and not fatiguc themfelves or their Readers with a Multitude of Ca'culations, which after all could not have led to more Precifion.

Upon thefe Principles, long confidered, and thoroughly digefted, the very ingenious and indefatigable Mr. Thomas Templeman of Bury, compofed with great Induftry and Care a regular and compleat Syilem, for which the Publick is much obliged to him, and in his Caition and Accuracy we may in general very fafcly confide ${ }^{3}$. He tells us that England contains Fortynine thoufand Four bundred and Fitity Square Miles, or Thirty-sne millions Six bundred Forty-eight thoufand Acres; Scutland, Tizinty-fioun thoutiand Seven buadred Nincty-four Square Miles, or Serenteen millions Sirzi il butna'red Eigbty-aigbt thouland One bundied and Sixfy Acres; Ireland, Tawnty-fiven thouland Four hundred Fifity-feren Square Miles, or Serentecn millions Five

[^4]
## of GREAT BRITAIN.

bundred Serenty-two thoufand Four bundred and Eigbty Acres b. The Whole of the Britifh Dominions therefore may in round Numbers be ftated at One bundred and Five thoufand Miles, or Sixty-feven millions and $T_{\text {wo }}$ bundred thoufand of Square Acres e. They may therefore, proceeding fill upon wis Computations, be efteemed the $T_{\text {rwo }}$ bundred and Ninety.jecond Part of the habitable World d, about the Tiwenty-feventb of Europe e, One fourth lefis in Size than France f, equal unto full $\Gamma$ rwo-thirds of the Spaninh Dominions a, containing more than half the Quantity of Land in Germany ${ }^{b}$, -near a Third larger than Italy $i$, and to be.full Ten Times the Bignefs of all the Territorics belonging to the States Gencral of the United Provinces $k$.

It has been, as indecd it ought to be confeffed, that thefe Proportions, or rather thefe feveral Dimentions, may not be precifly exact, the obtaining which would te in Truth impoffible, and of very little or no Ufe confidercod in a political Light, even if it was poffible l. We know how much Pains, and how much Expence have been employed for fettling the exact Meafure of a Degrec ; and yet we alfo know, that upon this Point, though fo frequently and io maturely confidered, there are ftill fome Doubts remaining m. We know too, that the very bett Maps of all the Countries in Europe are plainly incertain, becaufe they differ, though not very widely, from each other"; and if we examine the old and new Maps of our refpec-

[^5]
## 8 <br> The POLITICAL SURVEY

tive Counties, we fhall find the fame Thing. With all thefe allowed, and bitherto irremediable Incertaintics in the Materials, it is, as we have faid, impofible, or at leaft next to impoffible, to be exact in combining them ${ }^{\circ}$. Yet if after all this was practicable, it would be but of very little if of any Service, becaufe the Ends propofed, though in themfelves very weighty and of great Conlequence, require no fuch Precifion, and it would therefore be unreafonable to expect it ; which Affertion, as to many Readers it may may appear fomewhat ftrange, it is fit for the Illuftration of the Subject, and their entire Satisfaction it Mould be proved p.

IT is in finall Things only in which minute Differences are either difcerned or confidered. A Drachm would be an Olyiect in the Weight of a Pound or two ot Silk; but we Chould not hefitate in aniirming, or at leaft allowing two large Bales of that Commedity to be equal, though there might be a few Ounces Difference between them, more cipecially if the Bales were not weighed in the fame Scales. There is in like Manner a wide Diftinction in private and political Eitimates; in regard to thofe we are minutely correct, becaufe we have refpeet to Property ; in reference to thefe we are lefs fcrupulous, as we look chiefly to the Proportion 9 . If we fay, that one Country is twice or thrice as large as another, it matters very little, though there fhould be an Excefs or a Defect of fome Miles or even of fome Scores of Miles. The Reafon of this is, that the Affertion, though in itfelf not frictly true, yet by no Means conveys a falle Idea; and even when we come to be informed of this flight Differcnce, the Notion we had before: conceived, inftad of being refuted, is confirmed by it; and in all political Reffections of this Kind, the larger the Objects are, the lefs thefe incontiderable Differences whatever they be will affect them ${ }^{\text {r }}$.

What ferves very much to fortify and confirm thefe Obfervations, is, the near Appreach of the abo:cmentioned Culculations one to another, though made, as we have already flewn, by different Perfons at different

[^6]
## of GREAT BRITAIN.

Times, and in very different Methodss. We may befides take Notice of the Concurrence of forcign Muthors, in regard to the Proporticns befure laid down between this and other Countries; and we might particularly note the Correfpondence on this Head of a celebrated and much efteemed Geographer ${ }^{\text {r }}$. But there is a Circumftance that furpaffes all Authorities whatever, which arifes from the Manner in which the beft and moft accurate Maps of Europe are laid down, inafinuch as they owe all the Con. formity that we find between them to their Authors adhering upon their own Principles to thefe Proportions, from whence a fufficient Accuracy may be inferred, grounded on the Truth and Certainty of modern Geography, which has been fo affiduoully cultivated, and fo wonderfully improved ib this laft Century ${ }^{\text {u }}$.

In regard to the manifold Utility of thefe Speculations, fome Obfervavations may be requifite, with which we fhall therefore conclude this Chapter. Let it then in the firf Place be remarked, that they give us by thefe relative Proportions a clearcr, more diftinct, and much more fable Idia of Countries than we can any otherwife attain w. Next, that they open by this very Means a new, more certain, and much more perfpicuous Method of Reafoning on thefe inftructive and important Subjects. They in the third Place afford a plainer, ftronger, and by far more conclufive Notion, than by any other Method we gould reach, of the high Importance of uniting in the firmeft, cloieft, and moft effectual Manner all the Parts of the Britilh Territories, as being at once the only natural and certain Means of eflablinhing the Grandcur, procuring the Safety, and fixing the Permanency of the Britill Empirex. They enable us likewife to compute our own, and all

[^7]
## 10 The POLITICAL SURVEY

the Parts and Diftricts of our own with foreign Countries, and the Parts or Provinces of which they are compofed y; and of the Ufefulnefs of this, wetruft the Reader will recollect many Inftances that have been given in the former Volume. Laftly, they ferve to imprefs all thefe neceffary and inftructive Points of Science in the moft forcible Manner, and fo to rivet them in the Mind, as that they may be at all Times applied, and befarce ever effaced or forgotten z . Thefe are Circumftances, which themore they are meditated and confidered, the more their Weight and Significance will appear.; and from a frequent Exercife of fuch Speculations, we Chall gain a deeper Infight into the true State of Countries than withsut it we can acquire by any other Kind of Information. This therefore made it requifite to open this Book of the Political Survey with a competent Account of the real Extent of the Britifh Inlands, their relative Proportions in refpect to each other, and alfo to the principal Countrics in: Europe.
proved, towards which it has and will be fhewn to have all and more than all the natural Advantages of Holland, may be rendered ten Times as opulent and potent as that great Republick, heretofore a formidable Rival, and now our natural Ally.
y To give an Inftance from York/hire, it is more than half the Size of Normandy, little lefs than what is called the Ille of France, near twice as large as the Dutchy of Lorrain, equal to the Kingdom of Navarre, thrice as big as that of Algarve, equal to the Dominions of the EleCtor Palatiac, and much of the fame Size as the Dutchies of Mecklenburgh and Courland
$z$ The Truth of this will be foon cviaced by Experience, as this will be attended by numerous, and thofe too valuable Acquifitions.

## CHAPTERI.

## The Productions of Great Britain. The Contents of the Soil.

T'IIE truc Cbaraizer of a Cisuntry can be only (fimatcd from its Productions. But thefe, as they may bi improved by Indulfiy, fo they may be lefeined by Indelence, or through Sgnerance be totally neglitited. This, bowever, does not binder the Bleflings of Nature from being the folid Principles of national Grandeur. Our Afpuence the Effects of our native Commodities improved bypincisifry, and difiufed by Commerci. Our Foffils an inexbauftible Fund of yetional W'ralios. Fullers Ear:b is a peculiar and perpetual Treafure. Tobacco Pipe Claj of greal Utility in main Respects. Thts great Variety of Clays bighly advantageous
advantageous in Point of Manufactures as well as Asriculture. The zionderful Progrefs made in Eartben and in Stone Ware. A fuccinct Hifory of the feveral Attempts towards making Porcelain. It is exceeding probable: that we may in Procefs of Time carry tbis to Perfection. Value and great: Abundance of our Ocbres, Allum, Copperas, छic. The manifeft Advantages. tbat arije from tbefe to the Public. Tbefe national Advantages fet in a fill fronger Point of Ligbt. Stones for all UJes, togetber witb Plenty of Limec and Slate. Wc bave alfo Variety of fine Marbles, Alabafer and Granite. The Manner in and the Extent to wbich all tbefe bave proved beneficial to tbe Nation. The Confiquences that would attend the Lofs or tbe Want of tbem confidered. Salt of all Sorts in immenfe Quantities made as well confumed in the Britijl) Dominious. National Alviantages arijing froin tbence, and tbat may be derived from tbis Plenty. The Mutivials from zubich Glafs is manufatiured plentifully produced in all Parts of the Britijb Tcrritories. The numerous Benefits that refult to the Nation from thencie. Coul of differcnt Kinds found througb all Parts of the Britijls Tirritories T'be 这uantitits of Coals confunted in London at difierent Periods. 4 general Fiew of the national Alvantages arifng from this Commodity. This Subject mori lurgely explained and fartber purfiued. An Accuunt of Antimony, its Villue and Ufis. The fame in regard to that curious Mineral Bjifinutb. Làpis Cillaminaris or Calamine, its Nature, Value, and Propertiss. Coballt, a Minicral of cury grest Valuc, of which a Mine bas been difcovered in Cornsu:th. TRi' Nithure and LJis of Black Lead, fo peculiur to tbis Country as to hi filid ly Foricisncrs, when made into Pencils, Crayons d'Angleterre. The Iljlory of Tin, that antiont and primitive Staple of this Country. An Account of its Vilue, and the numerous Ufes. to which it is applied. Iron in all the difficiest Parts of the Britijb Dominions. Nsitaithitanding this, mu:b Iron is inforted. Copper in great. Abundance in Britain and in Irelwaid. The Nitherc, Ufis, and Vailue of this Metal. Improvements that
 situt t'arity in the Alppearunue of Leail Ores. Thofe Ores of feecral Na-
 ficm Leal. Mercury or Quis:-filuer, though not bitberto, may probably be
 Silv:r Mincs Lerr. Gohl found in compiderable Quantities in Britain and Jreland. Ouv Mincorals nuy probathy become of musb more Value tban at
 from the proper Mactigecmsi: of our Meitals. New Difioserviss may be mad: "in refpect to tbem, and new and better Mettods introduced in tbe Working of' our Mines: Some jartiar Remarks on tbis Subjcict. Tibe Conidujion of tb: cbäpter.

## 12 <br> The POLITICAL SURVEY

THE real Value, the intrinfic Merit, the comparative Excellency of any Country can never be thoroughly known but by attentively confidering its Productions ${ }^{2}$. Thus Sweden is diftinguifhed for its Iron, Copper, and naval Stores; Norway for the Abundance of its Timber; Poland for Wheat and other Sorts of Grain; France for Wine, Brandy, Salt, Linnen, Brocades; Spain and Italy for Fruit, Oil, and Silk b. By.this wife Diftribution Providence has benevolently given 2 Proportion of good Things unto every particular Region, and by the Intervention of Commerce, which this Diftribution has rendered abfolutely requifite, beftows them upon all :. Amongtt thefe natural Benefits, fome are looked upon as richer in Quality, as Wine, Oil, and Silk ; but at the fame Time it muft be allowed that Timber and Iron are of greater Utility, and that Corn is an indifpenfible Neceffary of Life, fo that Things being confidered in this Light the Balance is again reftored. For though Articles of Luxury and Splendor may at fome Seafons bring a very high Price, yet fuch Commodities as are of real Benefit or general Utility, and thofe with the Want of which Men cannot difpenfe, are always fure of finding a Market, and of being vended for what they are worth d.

All natural Commodities are capable of being augmented, multiplied, and improved by human Induftry, and the Ufe or Neglect of this makes a wide Difference in Countries that Nature had masce equal. As from the Ufe or Neglect of this likewife, the fame Country may in feveral Periods differ very widely from itfelf. Thus China, the moft flourinhing Country we know, owes at leaft one half of its Significance to the Skill and Labour employed in its Cultivation e. Egypt from the Lofs of Induftry in its Inhabitants is at this Day in fome Degree a Defart, that is, in Comparıfon to what it once was !. Poland, diftinguihed by Fertility as well as confiderable for its Extent, does not yield one fifth of what, under a better

[^8]Government, it might be made to produce g. Attention, Sagacity, anti Diligence will, as we have often obferved before, in a great mealure fupply the Defects of Nature. Genoa is not only a very fmall, but alfo in pisint of Soil the worft Country in Italy ; yet at the fame Time is for its Size the richeft, and makes the beft Figure $h$. This is fill more evident in Switzerland, and moft of all in Holland, where, though hardly any Thing grows, almoft every Thing is to be found $i$. Thefe are Inftances, it muft be confefied, which have already been reprefented to the Reader's View, and confidered nearly in this very Light; but at the fame Time thefe are Inftinces, which, for their Importance, we cannot too frequently rec ollect, or $\mathbf{t}$ om their Utility contemplate with too much Attentions. The, are how culd Examples that may naturally lead us into a very wide Field of politicai Difquifitions; and it imports us, in fuch a Labyrinth of Speculations, that we may not bewilder ourfelves, to make Ufe of a proper Method, the only Clue by which we can be fafely conducted I.

However capable the Art, Attention, and Diligence of Man may be, either to improve or to fupply the Bleffings of Nature, this no way leif.ns, but upon a juft Compariion heightens their Value, as wherever thece are found, and found in Perfection, they are found alfo without Toil. It is evident, that a Merchant or a Manufacturer would find inexpreffible or inexhauftible Refources tather in carrying on his Bufinefs, who befides his Capital in Trade, inherited a good Eftate that he could not either mortgage or fell ; it is no lefs apparent, that a Nation poffeffing many valuable Commodities from the free Gift of Nature, or, to fpeak with greater Propriety, fromthe Bounty of divine Providence, has innumerable Advantages over any other Nation, whatever her Policy may be, that is deficient in thofe unacquired and unalienable Funds. In refpect to the firtt, the has a fettled. Property, which being duly and affiduoully improved, gives her a conftant Support that cannot be taken from her ; while the later collects the Materials of her Induftry and Trade, which are the Sources of all her Wealth,

[^9]Strength,

## 14 The POLITICAL SURVEY

Strength, and Splendour from other Nations; and it is eafy to difiern how wide, in point of Certainty as well as Stability, the Difference is between a Staple and a Magazine m . Again, the former is nationally an abfolute Gainer of the whole Produce of her Commodities and Manufactures from them, when employed in Commerce; whereas the Profit only, after deducting the prime Coft, is all that can refult to the latter n . Befides, this owes her Subfiftence in a great Degree to the Indolence or Ignorance of her Neighbours, and of Courfe mult fuffer from their applying their Thoughts and Endeavours to Improvements; which, on the contrary, turn to the Advantage of the other, as they are rendered able from their thriving to take greater Quantities of her Productions 0 .

In the former Book we treated in general of the diftinguilhed Advantages of Great Britain, as well in refpect to her native Productions, as to the Benefits the receives from her happy Situation, and other peculiar Prerogatives. It is our prefent Bufinefs to thew that we have, more efpecially of late Years, availed ourfelves of all thefe, and that too in a very high Degrec. This has not only turned extremely to the Emolument of Individuals, but alfo to that of the Public p. This clearly proves, that the prefent affluent Condition of the Nation, in Comparifon of paft Times, does by no means proceed as fome of our envious Neighbours would have it underftood, from an artificial Credit, a vaft Paper, ©e: zalation, and refined Strokes of political Management; but from the moft folid and permanent Funds of national Improvements, from the Increale of internal Induftry,
$m$ In the 28 th of Edward III. when we exported barely our own Staples, it appears by a Roll in the Exchequer, that the Balance that Year in our Favour amounted to upwards of $\mathcal{E} \cdot 2,20,000$ which is equal to $£ .625,000$ of our prefent Money. This fhews, that even when Arts and Commerce were in their Infancy, our natural Riches were very grear.
${ }^{n}$ Sir William 'Temple in his Obfervations on the Netherlands, p. 219 . judicioully renarks, that Plenty of Corn in moft Parts of Europe for fereral Years together was a great Blow to the Dutch Commerce, not only as they thereby lont their ufual Markets for that Commodity ; but as it leffencd the Sale of Spices in the Northern Cuantrics, wlich reduced their ufual Dalance in refpect to the Ealt Indies.

- Thus, fince not only we, but the French, the Swedes, and the Norwegians, have frruck into the Herring Finhery, that of the Dutch hath greatly failed; but fince the Portuguefe have difcovered Gold Mines in Brazil, our Exports to Lilbon have much encreafed. But perhaps this will be moft effectually explaincd by obferving, that the Durch talie inmmenfe Quantities of Commodities and Manufactures from us, which to the Natien is clear Cain, and when refold by them, what they paid us being deducted, the Kemainder is their Profit. This Point cannot be too maturely weighed and confidered. The Balance being againft the Dutch, we are certainly Gainers; and as they do not purchafe to coufume, but to fell again, they are alfo Cainers, though not in the fume Degree,
P It is on all Hands allowed that there may be a Commerce carricd on lucrative to private Men, and yet highly detrimental to the Nation ; indeed Smuggling is fuch a Commerce, and the more gainful to private Perfons the more ruinous to the Nation. But where Commerce is greatly diffufed, as is the Cafe at prefent in Britain, it is impoffible that Individuals Should thrive and the Nation grov poor without its becoming notorioufly evident.

## 的 GREAT BRITAIN.

and the Augmentation thereby of our foreign Evports 1 . Thefe interefting Affertionshall, from the Evidence of incontrovertible Facts, bemade as clearly appear as Points of fuch Importance deferve. By this Means the attentive Reader will be freed from every Doubt on this Head, and the Honour of the Nation be completely vindicated from the mean and malignant Infinuation thrown out by fome affuming Writers in other Countries r .

Ir has been already obferved, that there are no Countries in Europe abound more in Foffils, thofe concealed but not the leaft valuable of national Poffeffions, or in the moft ufeful, and of courfe efteemed Kinds of Foffils, than the Britifh Dominionss. This Affertion would have been at all Times true, but in former Ages would have appeared of far lefs Significance than at prefent. For within the Compals of thefe two laft Centuries, we have not only gradually brought to View, but alfo turned thefe hidden Sources of Wealth to prodigious Advantage, in confequence of our applying the Lights of Science to the Direction of Labour and Induftry '. This will very clearly be feen from a few Specimens, as this Work will by no means admit of an exact Enumeration.

Fullers Earth is a Gift, or with greater Propriety may be ftiled a rich as well as a real Treafure beftowed upon us by Nature $u$, which is found in very great Abundapeenfdifferent Colours, and of various Kinds, in different

[^10]
## 16 The POLITICAL SURVEY

Parts of the Kingdom w. It is therefore juftly confidered as a fingular Proof of the Excellence of our Productions, in Comparifon of thofe in the Pofleffion of our Neighbours $x$; for which Reafon, and becaufe of its great Service in the Woollen Manufacture, feveral fevere but very neceffary Laws s have been made to prevent its Exportation, which it is hoped prove effectual.

Tobacco Pipe Clay, which is alfo of feveral Colours, and of very different Qualities, is found in many Places 2 , and if carefully fought for might be found in many more. This likewife is of wonderful Utility, not barely in making thole Pipes from which it takes its Nam:-, though that has been a lafting and is ftill a growing Manufacture a, but for its ferving many other valuable Purpofes. It fupplies an admirable Varnilh for the finer Sorts of our Earthen Ware, is the principal Material from which the Pots for Glafs Houfes are made, which refift the fierceft Fires for many Weeke, is mixed with coarfer Clays for various Manufactures $b$, and is perhaps, after all, not yet applied to one half of the Ulies of which it is capable; and therefore with very great Reafon the Exportation of this valuable Commodity is likewife prohibited under the fevereft Penalties e.

Avery able, inquifitive, and accurate Naturalifthas diftinguithed two-andtwenty Sorts of Clay d that fell under his own Obser......in in Britain, moft of which are applicable, exclufive of their Ufes in Agriculture, to many valiaable Purpofes. Tiles, of which there are many different Sorts, were, as the Law e made for regulating the Time of digging the Larth; and the Manner of making them, manifently thews, a very ancient Manufacture in this Country. Yet the finer Kinds were even to the Beginning of the prefent Centary imported hither from foreign Parts I: There are alfo more than twenty

[^11]
## of GREAT BRITAIN. ... 7

different Sorts of Bricks, which though in ufe from Time immeimerial $g$, were imported hither from Denmark, Germany, and Holland within the Space of a Century in very large Quantities h , though now made in mont Parts, and might be made in every Part of this Country. The Ufe of them through the great Increafe of Buildings is become CQ immenfe of late Years, that there feems, comparatively fpeaking, to be as much Earth above as below the Surface i. Their Sizes, and the Manper of making them, have beex regulated not only by one but by many Statutes $k$. There was formerly a Duty on Exportation, but they mayy be now exported free ; and in confequence of this, prodigious Quantitics are anamally fent abroad, more efpecially to the Weft Indies 1 .

The Art of making Earthen Ware, feems to have been infroduced; or at leaft revived in the laft Agem. Before that Time we brought it from other Countries, and that too in confiderable Quantities n. We have it now of various Colours, Red, Yellow, and Brown in many, and might have it in moft Counties 0 . Befides the coarfer, we have likewife many finer Sorts of this, and feveral of Stone Ware, which of late is made to fo great Perfection, and is in itfelf to light, fo neat, fo ftrong, ferving likewife for fuch a vaft Variety of Purpofes, that it is already grown, and is daily growing into the higheft Credit, and of courfe is alfo daily improving P. We may therefore very rontinatisy expect, that in Procefs of Time all thefe Arts and Manufactures may be carried to a much greater Height, it may be to 2 Degree beyond our prefent Conception, and confequently increafe alike in their Confumption, and in their Value; at lealt this has been the Cafe in moft
s As to the Bricks made by the Romans who were our Mafters ia this Art, fee Philolophical Tranfactions, No. 149, p. 238. Ne. 171, P. 1017. No. 222, p. 319. - It is not the Scarcity of Potters Earth that hinders fuch Manufactures from beiag fet up in aub County, or kceps them where they are; but i Concurrence of other Circumftances, fuch as Cheapnefs of Labour, of Subfifence, of Fucl, \&c. When with thefe Affitances they are once thoroughly eftablinhed, Experience, the Dexterity of the Workmen, and their being able to anderfell new Beginners, fixes them to certian Spits.
- Agreeable to what has been fuid in the former Note, the Stone Ware, now of fach Importance, has been confined to the Village: of Burdem, Hanley Green, and Stoke, in Seafordohire

# 18 The POLITICAL SURVEY 

other Mannufatureer to which we have applied ourfelves with Vigour, and hath been hitherto tise Cafe of this within the Memery of many who are now liviag 4 .

We may with the more Probability hope this, from the Succefs that has attended our Endeavours to make Porcelain, or what is called China
 Earthen Ware that was in uff tefore that Attempt was made s. Befides being batilt on a true 'Principle; it hatb in its' Progrefs been very confiderably fapproved t. The Warcefter Manufaiture hath a fine Texture, Strength, and Beauty, is already free from fome of thofe Defects that were thought infuperable, and is growing better and better every Year u. Chelfea China equals that of Drefden, or einy other foreign Porcelain in refpect to the Elegence 'of ite Form; the Beauty of its Paintings, and the Splendour of its Colours, falling very litele flort in refpect to its Subftance even of the Oriental, which was its Model w. If we reflect on the thort Space of Time in whinh thofe'feveral Attempts have been made, and how far they have already advanced, notwithftanding the capital Obftacle in their Way, by which I mean the moterate Price of the true China, and the Neceffity impofedthereby offelling eheap in order to force a Market x. If at the fame "Time we remember that thefe Difficulties were encountered in the very Infancy of there feveral Manufatures; which, however, were carried on without any of thiofe public Encouragements which were given to like Eftablifmentsin other Countries $y$; we need not furely defpair of feeing a fuccefffullifive to this important, and now promifing Undertaking z .

[^12]Tilese

These Notions will probably appear lefs fanguine, and more ftrongly founded in reafon, if we take into our feriout Confideration; that this Coustry of ours produces, and that too in the greateft Plenty, all the Mpterials, cven to the moft fcarce and valuable, of which this curious and elegant Compofition is made ; that we are likewife in Pofticfion of the Materials of thofe beautiful and vivid Colours that give it fó much Elegance and Luftre's and that the incomparable footy $V$ arnith, which is the moft effeptial Article in the whole Manufacture, is allfo mown to ut, and the Means of making it in our Hands b. With all thefe Advariages, where is the Extravagance in fuppofing, that with the Penetration and Sagacity, the Stendinefs and Perfeverance for which this Natióa is defervedly diftinguifted. we may come, and that too in no long Space of Time, to furpals 211 our Ri; vals, and reach the ultimate Perfection in making Porcelain before any other Nation in Europe? more efpecially if we reffet, thit. this Manifacture never hath, or in all Probability will be attempted, Jint by 'Men of treag Science and liberal Sentiments, who will profecite, with Skill and Diligenee. the Object of which they are in purfuit, and thereby owe their Difcovery, whenever it Chall happen, to a wife and well direeted Inyuiry $c_{\text {, }}$ and mot to. Chance.

We have alfo in many Placos, and in great A buindarice, moft of thofe Earths which affein ufe with Painteris, and thefe of differtent Colours, different Qualities, and $\phi$ ifferent Values d, fuch as yellow, andred Cowrei, Terre Verte, Lambert's Blue, and Come fine ted Earth, no Way inferior to what is brought from the Eait Indies, though we-arẹ very:feldgen let into the Secret that this is a Britth Commodity $\mathrm{C}_{\text {. . We aboutd lilgowife with }}$ thofe Materials which are abfolutely neceflary to the Dyers. Alum is a.

- In refpent to the Materials, what has been alrendy done, particularly in the Chelfea China, evinces all this to be true, and that Succefs would enfue ij the Expence:coild be reduted.
- Dr. Woodward in his Hifory of Fofils, tom. i. P. 6. mentlofis the Soap Rock at the Lizard Point, and the Seratites in other Places, as moft likely $\$ 0$ make China. It feeme to be in Truth the Hoach, which is a gieat Ingredient in the modern Ching." tifed alone by the Chinefe, it makes 2 fine and beautiful, but at the fame time a tender and brittle Ware. But it anfwers admirably as a Varnifh, and would do fo with us.
- It can be only by a fcientific Attention chat Porcelain can be brought to abfolute Perfection. But this once done, and the Art rendered complete, by adjaftingithe Praportions of the feveral Materials, directing the grinding, mixing, and compounding them, prefcribing the Method of moulding, drying, and painting them, fettling the Form, Size, and Comitructiod of the Ovens, an.J affigning the Degrees of Heat requifite in all the Operationg, it weuld become a Manufacture, and might then like other Manufactures be trufted in ordinary Hands.

mineral Salt, which is found here in a dark grey or blueilh coloured Stone $f$. It was firt difcovered; or at leaif firf wrought to any Degree of Perfection, by Sir Thomas Chaloser, who was. Tutor to Henry Yrince of Wales, as hath been hinted in the former Book g. Some Time clapfed after the Difcovery bofore they fell into the right Method of managing it, but fince that hath been attaiaed, it has been made in great Quantities, and with very confiderable Profit ${ }^{h}$. After, the Reftoration there wars fo large a Demand for Alum, that the Duty ftill fabfifting of one Shilling on every hundred Weight, was haid on the Expantetioni. It is indeed a Commodity of which there is a conftant and very larre Confumption ; for befides being abfolutely necefiary in Dyeing $k$, of which Some have ftiled it the Soul, as ferving tounite the Subftance and the Colour, to which laft it alfo adds Solidity, Viva-city, and Permanency, it is highly mefful to Paper-makers, Goldfmiths, and; Book-binders, and alpin feveral other Manufactures, as well as in Phyfic. The Preparation of Aluma employs a great: Number of Hands in very different Kinds of Labour 1. The-Stone, orAliun Rock as it is called, from whichit is made, is found vers plentifully in Yorkshire and Lancafhire; and if the. Quantitics made there did not amply fupply the Market, there would be no Difficulty in finding Alum Rocks elfewhere $m$. To this rich and valuableSalt we may likewiferadd Copperas and Vitriol, made in great Plenty, and in the higheft Perfection, from the Pyrites, commonly called Gold Stonesz, found in great Abundance, and alfo in very great Pexpesionj; on the Coafts. of the IThe of Sheppey, and elfewheren. Both Copperas and Vitriol are not'

[^13]
## of GREAT BRITAIN. 22

 only ufed in very large Quantities by the Dyers, and by the Hatters, and other Manufacturers at Homés bus there are hikewife very confiderableQuantities of both exported ${ }^{\circ}$.It may very poffibly be faid, that feparately aken, none of thefe can beregarded in the Light of great national Staples, or that their Exporta-tion, even collectively, produces Profits which amount to valt Sums p. But: on the other Hand, it is to be obrerved, that we derive them from theBenevolence of Nature, and that in this Refpect they are our inherentProperty, they are for this Reafon very well worthy Notice. They are likewife an inconteftible Proof of what from an Increafe of Knowledge. and Attention may be done with Thinge long.overlooked and neglected $\tau$. . They are, as now. ufed, Sources of innumerable and-inpepreffible Advantages to Individuals, fome of whom in the Managenant of them acquire ample Fortunes, while many Thoufands draw from them a comfortable Subfiftence for themfelves and their Familios; which however they cannot: do without benefiting others, who are employed in raifing that Subfiftence they labour to purchafe. By this Means many Villages and even Towns have been eftablithed, Eftates improved, and a Confumption of variousCommodities and Manufactures promoted r. The Defult of thefe no Doubtmay be very juftly confidered as public. Emolamente.
a

But is this all ? No, certainly. The Public is in minn otiet Refpects a confiderable, and, which is more to be regarded, 2 conftant Gainer. She faves, and let us maturely weigh to how much this may Amount, whatever thefe Connmodities would have coft, if brought, as many of them for-merly were, from other Countries s. She has the entire Profit, be thatwhat it will, of whatever is exported. She is benefited by the Navigation,

[^14]
## 22 The POEITICAL SURVEY

 and in many other Inftances; frequently by the Returns for thefe Goods in raw Commodities, which .after being mannfactured here are again exported.. There were feveral important Reafons for ftating fully, and explaining clearly thefe Points, fo as to make them thoroughly underfood. Firft, bectufe it does Homeur or rather Juftice to the Excellence of our Country; and finee Skill and Labour were exerted, and their Effects properly confidered, to the Ingenuity; Induftry, end indefatigable Perfeverance of our Coutntryment: It iwis in the next Place expedient, becaufe even fince the Revobation thefe Benefits were fo little regarded, and the Produce of them fo little confidered, as not to be admitted either in Whole or in Part into the Computation of our national Income u. Thirdy, because it moft clearly fhews, how in various Cafes this Country has been, and of courfe fill may be tmproved; and ' in' this Refpect admirably illultrates, as well as plainly dememftrete, what we have fo frequently inculcated, that Induftry, and Indufty folely; *conflitutes the Riches of a Nation, and that Gold, Silver, and other attbitrary Signs of what Induftry hath acquired, is only the Wealth of Individuals or private Men w.We have in this Country an amazing Quantity, and no lefs furprizing Variety of Sroves fit formort all Ufes. For fcouring and polilhing of Metals $x$, for grinding and giving an Edge to all Sorts of Inftruments), Mill Stones of every Kind z, Fire Stone from Ryegan,"Fiornhain, Bath, and other Places, excellent for the ConAtruction of Hearths, Ovens, and other

* Whbewer reads Carew's Survey of Cornwall, Kiqg's Vale Royal of England, and Harifon's Defcription of Britain, will fee the Truth, and feel the Propriety of this Obfervation. The native Refources of this Counsfy were then the fame as at prefent, but the Condition of the Inhibitants very different." This Difference arifés from Skill and Labour (excited by a milder and more fettled Government) calling thefe Refources to our Aid, and thereby raifing us to what we are at prefent.
"At that Period many of thefe were beeome Things of fome Confequence, but not enough to be looked upon as national Advantages, fo that it was from this Time they gradunlly grew into Importance, and from ehence we may diferre, that thofe fill in their Infanc:y will in a reafonable Space become as confidermble. An Idea which excites a Pleafure fuperior to the Poffefion of Wealth in the Bofom of every true Lover of his Country.
- This is a Propofition that cannot be controverted, if it be but underfood. Muney, or whatever has the Effects of Money, can operate only as a common Meafure. In this Senfe Money is faid to anfwer all Things. As the Meafure, there muft be fume Thing or Subftance to which it may be applied, and thereby make known its Value. Induftry produccs Subanance; Idlenefs produces nothing; therefore Money meafures the Fraits of Indufty; and where thef: are not, Money is ufelefs. Whatever multiplies Subftance incricafes what Money is to meafure, or, in othier Words, augments the Number of thofe Things of which Money declurcs the Value; but as Worth belongs to Subftance, and as this flows from Induftry, here is the Source of national Wealth which Individuals meafure by Money, that is, the Means of obtnining them.
: Thefe are Tripelas, and found in the Counties of Derby, Devon, Middlefex, Northampton, Salop, Somerfet, Stafford, Suffex, and Wilts.
${ }^{1} 1 \mathrm{I}$ Cumberland, DerbyChire, Northumberland. and otlier Places.
Thefe are principally found ir Anglefe?, Dethyीire, Flinthire, and Lancalhire.

#### Abstract

* of GREAT BRITAIN.

Whorks of a like Nature a. Stones for paving and making of Floors; we have alfo many that ferve for building, fuch as Free Stone, Rag Stone, Ketton Stone b, improperly called Kettering Stone, fer there is really no Stone at all at this laft mentioned Place; and feveral very durable and beautiful Sorts from the inexhautible Quarsies of Purbeck and Portland e. We abound alfo in a Variety of Materials for tho beft Lime, which befides - its great Ufe in building, is ferviceable in tanning and ocher Manufactures d. Add to thefe, the Plenty we have of fubftantial and elegent Slates, which ferve for many Purpofes as well as for covering Houta, ir which the beft Sorts will laft not only for Years but for Ages e. ..:

Ir is no Diminution of this national. Wealth, no Impeachment of the Doctrine which we mean to deduce from its that fome other Countries have finer, more beautiful, more folid, and of couflamove veluable: Stones than we, fince Commerce puts even thefe alfo into our Pofefion f: Bat if our Prepofieffions thould abate, as froman Increafe of Sciencethoy gradually muft, we fhould fpeedily be convinced, that in regard to : wefe. Necefitity has no great Share in their Importation. What we are pleafod to call by the Name of Derbyfhire Stone, would in Italy be eftotemed Marble, and if brought from thence hither, would be held a very-fine Marble; and as fuch fetch a very high Price s. Befides this, have alfo different $\mathrm{CO}_{-}$ loured Marbles, fante in.:ly veined, others fpetted, and thefe not in fmall. Quantities, or in remote Corners, but in every Part of the-Britifh Territories h . We have likewife very fine Alabafter, and it may be both Porphyry.

[^15]
## 24 The POLITICAL SURVEY

phyry and Granite, little if at all inferior to the Oriental i. It is of ne great Confequence, that Curiofities made of thefe are not acknowledyed to be Britih Commodities when produced for Sale, but are extolled as foreign Rarities. This, I fay, is of no great Confequence, becaufe fuch Impotitions cannot long daft, and whenever difcovered are fure to bring the Commodity into full Credit $\mathrm{k}^{\text {. In }}$ Truth, the leading us to fuch Enquiries has been in many Inftances the Means of bringing us acquainted with our own Riches, which is the beft Apology, or rather is the true political Reafon - for indulging, though under high Duties, the Importation of thele foreign Luxuries, as by this Expedient 2 temporary Expence produces a certain, folid, and permanent national Advantage 1 .

In regard to theife, Slates excepted, there is but little exported, and yet infinite Benefit refults from them to the Nation. Multitudes are employed in digging, burning, hewing, and other Labours in the Places from whence thefe Materials are brought m. The Land and Water Carriage of there bulky Commodities is very expenfive, that is, in other Words, contributes to the Subfiftence of many more induftrious Perfons. The coafting Navigation is in that Refpect yet more confiderable n. When brought to the Place where they are ufed, they fall into the Hands of a new and numerous Set of Artifts, who exert their Skill in the Conftruction of thofe Works, public or private, for which they are intendedrat as all Buildings, and more efpecially thofe of Stone, are very lafting and valuable, fo when finifhed, they conftitute real Wealth, and add so much to the public Gtock ${ }^{\circ}$.
fetfhire, of a light Brown; in Suffex, a groy Ground with a Caft of Green; in Wales, a fine Black. See Woodward's Hiftory of Foffils, tom. i. p. 20, 21. tom. ii. p. 6. 6G. In many Parts alfo of North Britain and Ireland.
i Harifon's Defcription of Britain, B. iii. chap. xv. Plot's Staffordhire, p. 173, 174. Woodward's Hiftory of Foflils, tom. ii. p. 6. Hill, p. 493. In Staffordgire Plenty; in Cornwall as fine as the Oriental.
k Borlace's Hiftory of Cornwall, P.97-ro1, called Moor Stone, but is truely Granite. Porphyry, which is only a clofer grained Granite, is found (though hitherto in fmall Pisces only) in Cornwall, and in the Northern Counties.
${ }^{1}$ Byy a judicious railing the Dury on Importation, without having Recourfe to a Prohibition, our own Commodities may, when their Natures, Quantities, and Qualities are once afcestaimed, be eafily introduced.
${ }^{2}$ Such as are thus employed become a robuft, active, and vigorous Race of Men, are retained with their Pofterity in sheir own Countries, into which from Labour they draw a confiderable and confant Supply of Money ; and as this circulates in procuring Neceffaries of every Kind, it thereby encourages Agriculture, Manufacturcs, and Inland Trade.
n Thefe Coafting Veffels furnifh a continual Supply of able Seamen for our Merchantmen and Ships of War.

- This is not only agrceable to common Senfe, but is fupported by the Computations of all the Folitical Arithmeticians.

## of GREAT BRITAIN.

There is indeed (as has been before obferved) another Method by which we may be led to form a juft Idea of the Emoluments arifing from thefe fubterraneous Riches; which is, by confidering what would be the Confequences of our wanting fuch Refources. We muft then import them as fome of them we formerly did from abroad, which would fupport the Induftry of other Countries and impoverifh this. We muft lofe feveral of our Manufactures; and after all have but a very finall Properticn of Houfes, and none of the mort valuable of thofe we actually have at prefent $p$. All this will appear in the ftrongeft Light, not a gratuitous Suppofition, but a juf Reprefentation of Facts, if we reflect on the State Things were in about three Centuries ago. For though undoubtedly our Anceftors were well acquainted with our Quarries, and wrought admirably well in Stone, yet they confined themfelves to Cathedrals, Colleges, Churches, Caftles, Bridges, Reyal Palaces, and a few Noblemens Manor-houfes q. As for all the Reft they were built of Timber; fo that our Villages, and ceen our Towns, were in point of Beauty, Neatnefs, and Splendour, as much below as they are at prefent fuperior to thofe in moft other Countrics r.

We will now proceed to Things of more immediate, or at leaft of more apparent Benefit. S.alts of almoft all Sorts are made in Britain, and of fume Sort or other in almolt every Part of Britain. If we remember that this is a daily was well as an indifpenfable Necefiary of Life, we muft look upon it as a nery great, and whenever we reflect on the frequent and manifuld Ufes thereof, even in domeftic Occonomy, it muft appear to be a very extenfive Bleffings. But if we farther enlarge our View, and advert to the great Utility of Salt in the preferving fuch Provifion: as are to be long laid up in Magazines, to be exported into diftant Countries, or to be ipent on board Ships, the Bounds feem to be exceedingly enlarged, or rather all Bounds ate removed, and its Ufes may be friled infinite almoni

P (har Chose would be then reftraned to the Alternative of one of thefe Wants, of Money if we purchafat the Mataiat: from abroad, or of commodions Dwellings by avoiding that Expence. By an Appljation of Shill and Labour ; that is, the Abilities of Body and Mind to the Improvenenr of the Cifts of Providence, we aroid both. It would be weli it in other Cafes we had Recourfe to the fame Meafure.
'Harifon's Deicription of Britain, 1557 . folio. Stowe's Survey of London, 1 60?, 4to. King's Vale Royal of England.
: With the Author's cited in the laft Note, the Reader may confult the Defeription of fmall Towns and Villages in Leland's Itimerary, Fincs Morrifon's Travel. As alfo Camdeni Britan. p. 673.
s Iccording to a Computation which I have feen, and which appeared to be very moderate, this Confumption in South Bitain was rated at upwards of Seventy thoufand Pounds a Year, cifimating Salt at no more than cight Pence a Buhell, and confined to our own Salt. There is no cafon to doubt our domeftic Confumption is fince increafed.

## 26 The POLITICAL SURVEY

without a Figure t. From this immenfe and continual Confumption of Salt, we may form fome Idea of the Number of Families maintained by the making, tranfporting, and vending of this valuable Article. It may be faid, and indeed it has been more than once admitted, that this hath been for Ages one of the known Commodities of this Country, though by the way it is not quite a Century fince Rock Salt was difcovered ". But the great Benefit arifes from the Confumption, which within this laft Century has increafed amazingly, and is itill increafing, as manifeftly appears by the public Revenue arifing from it w.

Ir may be alfo faid, and faid with Truth, that other Nations have Plenty of Salt as well as we, nay better Salt than we; and, which is Atill more, that, with all our boafted Abundance, we purchafe, and are obliged to purchafe much of this Commodity from our Neighbours x. Upon this fome Remarks may be made which will fet this Matter in a clearer Light. In the firft Place, this being chiefly ued in the Curing of Fill, it never can or ever could be looked upon as a dead Lofs to the Ñation, but as a Diminution of her Profits in Trade. In the next Place, this very Circumftance only is a demonftrative Proof of the prodigious Benefit we receive from the Plenty of it beftowed upon us by Naturc, as it manifefly fhews what a prodigious Saving this enables us to make, fince the Expence would have been infupportable if we had purchafed the Whole, or exenthe greaten Part of what is neceffary for our extenfive Confumptions. In the laft Place, we muft take Notice, that whatever this might be formerly it is now an unneceflary Tribute; for we have not barely the Means, and all the Conseni-
: We learn from the accurate Dr. Haics, that in curing, Becf for Sea Scrvice (Pichic include:) there is ufed half a Bumell and half a Gallon of White, and one Gallon and a Quarter of bay Sat?, that is forty Pounds and fomeshat more, to a hundred Weight of Fiefh; fromitheme we may form fome Conception of the prodigions Quantity of this Commodity amually (averided.
"In 1670, in the Lands of William Madbury, Efq; of Madbury in Chefhice, there have bing fince many more Works wrought by other Proprictors, who have moft of them jomed in acompany for that Purpofe. This Rock Salt is fent to Liverpool and inany other Piaces, where bop boiling it in Sea Water they Produce a fune white Salr, which ther con fonctiancs afford at twhey Shillings a Ton, exclufive of the Duty, and eaport it to the Plantations.

* According to the beft Accounts I have been able to pronuie, the ciofs Dury in Salk madz in South Britait amounts annually to Seven hunared thomfand Pomads.
$\times$ About fixty Years ago this Importation amounted to Onc hundred thoufand Bufhells. Dr. Brownrig tells us, p. 19x. that Bay Salt fells at London for four Shitlings and four Pence a Bufhell exclufive of Excife; which thews at ho:v high a Rate we purchafe, and how valt an Expence we muft be at, if we were lefs happy in this Refpeft than we are; and it affo flews how very much it imports us :o remove fo heavy a Burthen.
$y$ We may frem the Circumfances mentioned in the former Note acquire a tolcrable Conception of this Matter, taking in the Diffirnce of Price between foreign Salt and ours. It i, andoubtedly a wife Poley to grant a Drawbact on forcign Salt employed in the Fighery. But foreign Salt, and at a mudurate Pice?

## of GREAT BRITAIN.

encies for making Bay, and all other Kinds of Salt equal for all Purpofes to any that we can purchafe from abroad, but it is alfo known that we are able to make them cheaper ${ }^{2}$.

Glass is a Compofition of the Salts of Plants, and of Sand, Pebbles, or Stone reduced to Powder. As it is thus compofed of vegetable and terrene Subflances, it may be confidered under either IIead; and as all the Materials of which this valuable Commodity is made are found throughout the Britilh Dominions, it is of no great Confequence under which Head it is coafidered. Glafs, that is, the ordinary or coarfer Kinds of it, were made in England more than Two hundred Years ago b: But the finer Kinds, particularly Flint and Plate Glafs, not more than half that Time c. We have lince made many and great Improvements; fo that our Glafs is in general fuperior to that in molt, and hardly, if at all, inferior to what is made in any Countryd: If we remember the Conflituent Parts of this uleful and admirable Subftance, viz. Afhes and Sand, and reflect again on the Value to which by the Skill and Induftry of Men they are raifed: If we contemplate the numerous families to whom in a Variety of Ways it gives a plentiful Subfitence, and to fome large Fortunes $c$ : If we call to Mind how far as a Manufacture it has extended, that it is fill extending, and may yot extend through all the Britioh Ifles: If we confider, that, though cexported without any Duty, it yields upon Iome Confumption a very large Revenue to the Crownt; we may, taking all this together, form a competent Notion of the Advantages we draw from this Manufacture, of
${ }^{2}$ Dr. Brownig's Ait of mahing Salt, p. 211 -216. where this is made as cvident as a Thing of this Nature c.as be made till ruified trom Fats.
(harm 'S', Fuctiary of P!ilofophy', chap. i. Stowe's Annals, p. 1040. Harifon's Defcrip-

Plots Oxthdhace p. 2 -58. Houghton's Collections, vol. ii. p. 43. Plate Glafs at the Expence of the Du!.e of Bucks, and Flint Glats by Mr. Ravenfuroft.
"As fiwa : A the true Principles of making filats were hnown through the Labours of Nen, Manct, and kuachei, it beane evident, that no Country in the World abuanded more with all the Matcriais requifire to this Manutacture, viz. white Sand, Flint, Pebles, Cuartz, Marble Duft, Edp, Fernathes (Bamillia might be had) atad Manganefe. We need not wonder therefore at our Sitecefs, and we have as little Reafon t. Sear we fall decline.

- It requires a great Fortune to cmbath in making Plate Glafs; a warnace is fix Years in huilding, and colts Three thoufand Five hondred Pounds betore .ny Bulinefs can be done. The Burfing of a Pot of Gilafs in the Fire is the I.ofs of Two hunded and Fifty Pounds. The Profiss mutt needs be large to anliver fuch Hazard aid Expence : and buth Potits and Expence are clear (aain to the Nation, which is a Circumance of great Weight in agard to the Importance of this Manufacture.
' Stat 19 . Geur. II. cap. 12. § 1 -30. a Tuty was impofed of nine Shillines and four Pence on every hundred Weight of Materials cmployed in making Cronn, Flint, and Phate Glafs, and two Shillings and four Pence on the Materials for Green Glals; which Duty of Excile produced in 1702 Screnty-one thoufand Seven hundred Forty-nine Pounds, and is a groving Duts.
which we fend very large Quantities into other Countries, and even into fome of thofe from whichwe formerly received it s.

In regard to this as well as the former Atticle, we flall comprehend the Matter fill more clearly, if we fuffier ourfelves to fpeculate on the prodigious Sums that muft have gone out of this Country, in order to have furnifhed ourfelves with the neat, curious, and elegant $V$ effels that are made of this Subftance, if Providence had not furnifhed us fo abundantly with the Materials, and the Mcans of making it in the utmoft Plenty, and in the higheft Beauty and Perfection h. This is faid in regard to the pretent State of this Manufacture here and through all the Reft of Europe i. But it is far from being improbable, and much lefs is it impoffible, that it may receive farther Improvements, not fimply in Fahion, in cutting, and other Ornaments, for fuch it receives already every Day, but in refpect to its Texture, Solidity, and other effential Qualities, of which it is flill capable, as many and ingenious and judicious Authors have remarked k. A thing not at all unlikely, conlidering the numerous Advantages we have, juined to our Experience and Succels, the enterprizing Spirit of the prcfent Age, and the immenfe Profits that would accruc, if Ways and Means can be found to improve, and thereby perhaps to enlarge the Confumption of Glafs as much in the next as it has been in the current Century !

Coars, though not an exclufive, yet may with great Propriety be filed a peculiar Bleffing to Britain, from their great Plenty, their achnowledged Excellence, and from their being found in fuch Places as are conveniently difpofed for Exportation. It is certain, that they are not, as fome have

[^16] imagined, the Lapis Obfidianus of Pliny m , or the Gagates, Jet, or as fome affect to call it Black Amber $n$; though, by the way, of this we have finer and in greater Abundance than in any other Country in the World. At Wirtembergh, where Jet is likewife found in confiderable Quantities, they make many pretty Toys of it, which turn to no inconfiderable Amount ${ }^{\circ}$. It is however highly probable, that our Cannel Coal is the Lapis Ampelitis p, or Vine Stone: It is common in feveral Counties q, and if lefs common would probably turn to better Account ; for it is fmooth, folid, of a beautiful hining Black, is turned into Snuff-boxes, Salt-fellers, fmall Plates, and other Uteniils; but the far greatef Part is burnt, and is in all Refpects an excellent Fucl r. Befides this, there are in general three Kinds of Coal, firtt, what paffes commonly under the Name of Scots Coal, though improperly as being found in many Placess: It is fmooth, fplits eafily, burns brifkly, with a white Flane, and confumes entirely into white Ahhes. The fecond is ufually filed Welch Coal, which is more lafting, burns with little Smoak, and turns to Cinders r . The third is a frong heavy Coal; which makes an excellent Fire, and is the common Newcattle or Sea-coal, of which there is alio great Variety, as there are above Iorty different Sorts brought to London $u$. This uleful Commodity is found not only in the
in Natural. Hiftor. lib. xxxvi. cap. 26. Great Difputes have been about this Subfance, of which Augurtus placed the Statues of four Elephants in the Temple of Concord.

Some have taken Jet fir the Lapis Obfidianus, but the Lightnefs and Texture fhew plainly it is not cirine Stome or Coal. It isfound frequently on the Sea Coafts, and in the Clifts of the Rocks abour Whitby, as alfo on the Coafts of Norfolk. It is confantly bought up and fent to Lumbn, and is here no Doubt wrought into Toys of fome Kind or other.
n Selcita Phyfico Oeconimina, vol. i. P +12. They make Bracelets, Necklaces, Pendants, \& . which we formerty imported toom Itolland.
"Plin. Nit. Hiit. lib. axxvi. cap. 1t. It is called the Yine Stone from its fuppofed Property of dettroing Worms which infelt Vines, and is ftill ufed either in Subftance or in Afhes in the Phtinate as the fitectl Manure for Vineyads. It does not appear that the Ahes of Cannel (o.l, for ir produces no Cineters, were erer ufed for this Purpofe in Britain. The Trial is howes er eafy and ought certainly tw be made.

4 The learned Dr. Da: ies in his Dictionury fays, it receives its Name from Canwyll, which in the wh Bitim Lanouge dgnifes a Cindle, the Want of which the bight Flame of this Coal fupplies. It is chisity found in Chethise, Comberland, Lancathire (efteemed the fineft) and in Staffordibirc. It is faid by Camden, Britin. p. 6 o. to be found in the Pifhoprick of Durham.
r Camdeni Rritan. p 600. Plot's Staffordhire, p. 125, 126. Houghton's Collections, vol. ii p. 151. Chidrcy's Britama Baconica, p. i17. Wow tward's Hiftory of Foffle, vol. i. p. 165. ii. p. 17. Hill's Hiflory of Foflils, p. 416. Mincralogie de Vamont-Bomare, tom. ii. p. $251,252$.
s Particularly about Lemmington in Warwick fhire, and not as fome fay in Hamphire ; in fuch Abundance as to be known in that Part of the Country by the Name of Lemmington Coal.
t'This Property of Burning without Smoak renders them fit for making Malt, even without charring or making them into Coaks.
u Thefe Denominations are taken from the Collerics, and the Reader may fee a Lift of them in Hunter's Complete View of the Coal Trade, p. 186.

Eaft, but on the Weft Coaft of England and Wales, and there are alfo very confiderable Mines of it in Scotland and in Ireland w.

Coals, though employed in feveral Manufactures for fome hundredYears, were not brought into common Ufe till the Reign of Charles theFirtt, and were then fold here for about feventeen Shillings a Chaldron $x$. In fome Years after the Reftoration there were about Two hundred thoufand Chaldron burned in this Metropolis $y$. In 1670 about Two hundred and Seventy thoufand Chaldron 2; at the Revolution upwards of Three hundred thoufand Chaldron a ; at prefent between Five and Six hundred thouland Chaldren, or perhaps full Six hundred thoufand are annually confumed here b. There is befides an immenfe Confumption in different Parts of Great Britain and - Ireland c. In foreign Countries our Coals are alfo not only known and eiteemed, but purchafed likewife and contumed, and this to a very large Amount d. Neither is this in any Danger of being even lefiened by the feveral Duties that have been laid upon them e; for this foreign Confumption being founded in Neceffity with regard to Manufactures, and in Occonomy where they are ufed for'Convenience, Wood and Turf being dearer than Coals with the Duty, we need therefore be in no Fear of the Markets declining ${ }^{6}$. There is juft as little Room to be alarmed from the Apprchention of their being exhaufted, as the prefent Works are capable of fupplying us for a long Series of Years, and there are many other Mines ready to be opened when

[^17]
## of GREAT BRITAIN.

any of thefe fhall fails. Befides, there are known to be Coals in many Parts of the three Kingdoms which hitherto they have had no Encouragement to work. We have had feveral Occafions of fpeaking on this Subject before, and have infifted pretty largely on the local Benefits derived from thence ${ }^{\text {b }}$; which however ought not to preclude us from giving a fuccinct and fummary View of the numerous national Advantages refulting from this valuable Commodity.

They are in many Refpects, and in a very high Degrec, ufeful to the landed Intereft, not only by raifing exceedingly the real Value, and of courfe the Purchafe of thofe Lands in which Coals are found, and thofe through which it is neceffary to pafs from the Works to the Places wherethey are embarked ${ }^{\text {i }}$, but from the general Improvements they have occafioned ; fe that very few Counties are now better cultivated than Not chumberland, and the fame Effects they have had in a greater or lgss Degree in other Placesk. Thoufands of laborious People are maintained in and about the Mines, thoufands more in conveying them to the Peefs and on board the Ships; to fay nothing of thofe that draw their Subfiftence from the Carriage of them by Land. There are alfo great Numbers that live in a faperior Station, as Stewards, Directors, Factors, Agents, Book-keepers, \&c. To thefe we may add the extraordinary Encouragement given to ingenious Artifts who have invented, and the numerous Workmen continually employed about thore feveral curious and coftly Machines, which for a Variety of Purpofes are in continual Ufe, and of courfe in continual Wear 1. We nay join to thefe the Multitudes that obtain their Living from the many Manufactures in which they are employed, and which could not be carried on but by the Help and Cheapneis of Coals. Thefe taken toyther flew how wery ferviceable they have been in that inportant Article of Population "'.

[^18]We have more than once celebrated their fingular Utility in reference to the increafing our Seamen, and augmenting our Navigation; as to which we may very fafely and truly affirm, that the Number of Men, and Tonnage of the Veffels employed in this Trade alone, is at this Time confiderably more than the Nation could boaft of employing in cvery Kind of Trade Two hundred Years ago $n$. The Produce of Coals exported, which amounts to a very confiderable Sum, befides being profitable to the Owners, Merchants, and Mariners, is fo much clear Gain to the Nation; and is in fact the very fame Thing, or fomewhat better, than if by fome myfterious Art they could be converted upon the Spot where they are raifed into the Silver for which they fell ${ }^{\circ}$. The Duties levied on thofe confumed at Home, pro--duce an annual public Revenue, not much inferior to the Produce of a Land Tas af one Shilling in the Poundp. But in regard to this, as in the former Cafes. th: fureft as well as the fhorteft Way of framing a true Notion of the Worth it what in this Refpect we poffers $q$, is to weigh ferioully what the Confequeí ces would be in all thofe Refpects which we have mentioned, if we veree without this Bleffing, and were compelled either to fetch Coals from other Countries, or to fupply the Defcet as well as we could by Timber and Turfr.

We will next take Notice of fome few, and thofe the mof remarkable of our Minerals, intending to conclude thefe Refearches into the fubterranean Riches of Britain with a fuccinct Detall of thoie to which hitherto that Title has been chiefly given, viz. Metals.

[^19]
## of GREAT BRITAIN.

Antimony is a mineral Subftance frequently found in other Mines, and there are alfo Mines of Antimony in Cornwall from which any Quantities of it may be procured s. It is very eafily feparated from its Ore, and is then ftiled Crude Antimony, as being free from all the heterogencous Matter which adhered to it in the Mine, and which give feveral, and thofe verydifferent Appearances to its Ore. Crude Antimony is compofed of ful--phureous and reguline Subftances. The former differs in nothing from Sulphur or Brimftone, the latter has a bright Chining metallic Appearance, is fufible, indeed, runs the thinneft of any Subflance of this Kind, but is never malleable t. It is highly ufeful in many Refpects. It is the Bafis of a great Variety of efficacious Medicines. The Chemifts ufe it to facilitate the Fufion of other Metals, in which Refpects it would be fill more ufefar if it did not render them brittle u. The Refiners employ it to redace Gold to its utmoft Purity. It is ufed by the Opticians in grinding the ferlaffes; it is of Service to the Pewterers in giving Hardnefs to theif Metal. The Bell Founders employ it for the fame Purpofe, and to redAer their Compofition more fonorous. The Letter Founders find it for great Utility in making their Types w. It is alfo in great Demand with the Dyers, and it was in their Favour that the Duty of twenty Shillings on every hundred Weight inported was repealed $x$.

Bismutit, is a Mineral of a fparkling white Appearance, very ponderous, hard, and fonorous, but which is incapable of receiving any Degree of Malleability $y$. It is found in feveral Parts, and in confiderable Quantities in moit of the Mine Counties in England, where it is commonly ftiled by the Workmen Tin-Glass. It is feparated from its Ore by a very gentle Heat; and the Earth left behind, when reduced into the Form of a Regulus bcing melted with the Powder of calcined Flints, becomes that beau-

[^20]tiful and valuable blue Glafs which is called Smalt z. It has many fingular and furprizing Qualities that are known, and very probably polieffes many more that we not yet difcovered. It is of Ufe in making other metalline Subitances flow with eafe; but then, like Antimony, it readers them brittle. It hardens and adds a Silver Luftre to Tin. It facilitates in a very remarkable Manner the Amalgamation of all Metals with Mercury ${ }^{\text {a }}$. As to the Ufes to which it has been hitherto applied, the making of Smalt excepted, they are not very numerous, or of any great Importance. The Magiftery of Bifmuth is a famous, though not by any means an innocent Cofmetic ; it is celebrated alfo for making a fecret and invifible Ink, which is rendered legible by holding it to the Fire, and becomes indifcernable ágain as foon as it grows Cold b. The Pewterers and the Letter Founders make fofire ufe of it. There is however very little Reafon to doubt, that in fo inquiliti, :- n Age as this, a Mineral with fuch uncommon Qualities will be fudioufly ${ }_{a}$ d d critically examined, and when, in confequence of this, all its Properties ari thoroughly known, will be applied to more beneficial Purpoles c.

Calamine, Lapis Calaminaris, or Cadmia Foffilis, is found plentifully in Britain d. It is indeed true, that other Countries have it alfo in perhaps as great Abundance; but our Calamine is richer, and of a fuperior Quality to any that comes from Abroad, as from Experiments the belt Judges allow e. It is a fpongy cavernous Body, of a greenifh-grey Colour as it comes from the Mine, and fometimes contains in it a little Lead. It is firf baked or torrified, then ground fmall, and frequently walhed before it is fit for Ufe. It makes when cemented with Copper (for the Calamine never melts) the fineft Brafs; and the Proof of the Richnefs of the Calamine arifes from the Quantity that is taken up by the Copper f. Though we have always had this

[^21]Commodity,

## of GREAT BRITAIN.

Commodity, yet we have not made Brals long before the Commencement of the prefent Century g. It is alfo ufed for other Purpofes, particularly in Medicine, as a great Deficcative, more efpecially in the Inflammation and other Difeafes of the Eyes ${ }^{\text {b. . But the Credit, if not the Value of Calamine, }}$ is vory much raifed fince an ingenious Countryman of ours difcovered that was/the true Mine of Zink ${ }^{1}$. This Mineral was indeed known before to our Miners by the Name of Spelter ; but they knew not that Speiter was - Zink, or that it could be extracted from Lapis Calaminaris $k$, much leis had they any Conception, tiaut this Spelter, which they defpifed as an Incumbrance, was in reality the fame $\mathbf{T h i n}_{5}$ as that boafted Metal from China, fo highly efteemed under the founding Appcilation of Tutenag ${ }^{1}$. Thicfic however are indubitable Facts, which certainly do Honour is the Enquiries of the prefent Age, and fuch as will turn highly to the Advantages of Ages that are to come. But even at prefent they fill within our Plan, as they are appaient Evidences of the naturat end innerent Riches of this Country ${ }^{m}$.

Cobalt, is a denfe, ponderous, bright, ftriated, Mining Mineral, mucniä fembling fome of the Ores of Antimony n. It is from this Mineral that White Arfenic is produced, as from a Mixture of this with Sulphur proceed Yellow and Red Arfenics. But the great Value of Cobalt does not arife from being the Matrix of thefe Poifons, though even thefe have their Ufes and their Price ${ }^{\circ}$. It is from this Mineral that the fineft Blues for enamelling,

[^22]painting, colouring China, and many other Purpofes, not to mention wafling and ftarching, which, however, are very confiderable Articles, are drawn p. It was from hence that the worthy Suciety for the Encourage. ment of Arts and Commerce, confidering the large Sums which went ainnually out of thefe Kingdoms for fuch neceffiry Commodities in dail, and conftant Ufe, were prompted to offer, as they very prudently did, a Prenium for the difeovering a Cobalt Mine in South Britain, which was claimed fome Years ago by a Gentleman in Cornwall, whe apon due Proof received it 9 . This Mine however might be as well called a Mine of Bifmuth, there being as great Quantities of one Mineral found thercin as of the other, and which is fo far from being a Difparagement, that it is an Advantage, both Minerals yielding a blue Colour r. Cobalt, being firt freed from the Arfenic $\mathrm{s}^{+}$, contains, is then fo treated in Furnaces properly contrived for the Purpofe, a that being melted with a Quantity of powdered Fints, and then fprinkled mas Water, it forms a hard fony Subfance called Zaffre or Azure Stodes. The fame Mineral being mixed with Pot-afh and Sand in proper C anitities makes $\mathrm{Smalt}^{\mathrm{t}}$; this being beaten fmall becomes Powder Blue; and that fifted very fine, and divided according to the different Height of its Colours, the deepeft and fineft of thefe is what is ftiled Enamel Blue u. The Richnefs of the Cobalt is determined by the Quantity of the other Ingredients it abforbs, which is at leaft equal and never exceeds four Times its Quantity w.

P Dictionaire de Chymic, tom. i. p. 269. Mineralogie, tom. ii. p. 36. Encyciopedic Purtative, tom. i. p. 323.

9 The Premium, which was thirty Guineas promifed in 1754 , and claimed in December the fame Year, came to Francis Beauchamp, Eff; in whole Lands at Gwenap it was difcovered. We have little Reafon to doubt, that on a careful Infpection other Cobalt Mines might be difcoverad in the fame County, and in other Parts of Britain.
${ }^{\text {r }}$ Neuman's Chemical Works, p. 152, 153. Hill's Hiftory of Foffils, p. 625 . Borlace's Nataral Hiftory of Cornwall, p. 130, 131.
s It may be doubted whether this Subftance be melted or only mixed with the Powder of calcined Flints and Water. It comes in Barrels, and takes the Shape of them, being very hard and firm, and thence called Azure Stone. Formerly this Name was given to Lapis Lazuli, and the blue Colour prepared from thence Ultramarine, but now it is confined to this Subltance; and much of the Colour prepared from it being made in Hulland, it is fomsrimes fliled Dutch Ultramarine.
' As this is the capital Article, and may be made equally well from Bifinuth and Cobalt, it would be a nationa! Advantage to eftablifh, which is certainly practicable, the Manufacture of it in Cornwall. The Importance of this will more clearly appeir in a fubfequent Note, in which we Chall mention the great Advantages arifing from the Mine of Cobalt the only one wrought) in Saxony.

- It is the great Excellence of this Colour, that it does not fuffer by Fire, which occafions a great Conlumption in ruinting earthen Ware and Porcelain.
whoerhaave's Chemiftry, vol. i. p. 116. Neuman's Chemical Works, p. 151, 152, 153. Macquer's Elements of Chemiftry, vol. ii. p. 74, 75, 76.

Black Lead is what fome have fuppofed with very little Reafon to be the Molybdena or Galena of Pliny x ; others . Atile it Plumbago. Our ju:Xicious Camden in whofe Days it was a new. Thing, would not venture to give it a Latin Name, but calls it a metallic Earth, or hard Chining fony Subftace; which whether it was the Pnigitis or Melanteria of Diofcorides, or an Ochre burned to Blacknefs in the Earth, and fo unknown to the Ansients, he left others to enquire $y$. Dr. Merret, from the Ufe to which it was firft applied, named it Nigrica Fabrilis ${ }^{2}$. The learned Boyle is of Opinion that it has not any Thing metallic in its Nature a; relying upon which, we have ventured to give it a Place here. It is indeed a very fingular Subftance, but being very common, and confequently very well known, it would be needlefs to defcribe it. It is found, but in very trivial Quantities, in feveral Mines here, and it may be alfo in other Countries b. But he fole Mine in which it is found by ittelf is on Barrowdale, about fix brise from Kefwick, in the County of Cumberland c. It is there ;inled Wadd, and thofe who are beft acquainted with it, ftile it a olack, pinguid, fhining Earth, which they fuppofe to be impregnatedy with Lead and Antimuny d .

When it was firf difcovered the People ufed it to mark their Sheepe. It was afterwards introduced into Medicine, and taken in Powder for the Cure of the Cholic and the Gravel; but it has been fince applied to many other P'urpofes. It ferves to fcour, to clean, and to give a Luftre to wrought Iron, and to defend it from Ruft; it is applied in the varnifhing Crucibles, and other carthen Veffels that are to be expofed to the fierceft Fire, which end it anfwers effectually $f$. But after all, the great Confumption of it is

[^23]in two Articles, in Dyeing, to fix Blues fo as that they may never change their Colour ; and in Pencils E ; and the being confined to this Country is fo well known and fo univerfally allowed, that they are from thence filed abreid Crayons d'Angleterre h. It arifes from hence, that the Nature of thir subftance is little known to Foreigners, the moft learned of whom fpeak of it very confuredly, and with much Incertainty i. Thefe farther Particulars we may venture to affirm concerning it, without any Danger of mifleading our Readers; That the Mine before mentioned is private Property, is opened but once in Seven Years, and the Quantity known to be equal to the Confumption in that Space fold at once; and as it is ufed without any Preparation, it is more valuable than the Ore of any Metal found in this Illand. But there is nothing improbable, and much lefs impoffible, in fuppolintsthat other, and it may be many other Ufes will be difcovered in Medieind Painting, Dyeing, Varnißing or Pottery, which would certainly contribute to raife the Value of a Mineral peculiar to this Country, and with the Natu-e of which, though fo long in our Poffefion, we are ftill fo imperfectly acquainted.

It is very natural in fpeaking of our Metals to give the Prefcrence to Tin, which certainly made it firft known, and as fome very learned Men think, gave its Appellation to this Ifland $n$. Mines of Tin firft rendered the Scilly Illes, then Devonfhire and Cornwall, famous; to which laft County they are now, as we have elfewhere hewn, chiefly confined ${ }^{\circ}$. Tin, though in itfelf the lighteft, in its Ore is the heavieft of Metals. It is very feldom if ever found pure, and the Appearances of its Ore are very different p. The fineit and richeft are filed Tin-Grains, or Corns of Tin, being Cryftals of a black Colour of different Sizes q. It is alfo found in a heavy black Stone, fometimes in a more porous yellow coloured Stone, and is

[^24]
## of GREAT BRITAIN.

 Metal it is white, mining, melts with a gentle Heat; ductile, fo as to fprbed under the Hammer into Leaf, which Iron and Copper will not do; but ye cannot be drawn into Wire as thore Metals may s. It is not fonorous in lifflf, and yet makes other Metals fo, when mixed with them $t$. In point of Gravity, it is as Seven to One in refpect to Water, and as Seven to Nineteeen in regard to Gold u. Tin Mines are generally found on the Sides of Hills, though Veins fumetimes pafs through Vallies or Brooks between two Hills, a:d are followed to the oppofite Hill w. They work with infinite Difliculty through hard Rocks, to the Depth of from three to feventy Fathoms; and it is no lef troublefome than dangurou,, where the Earth is loofe and apt to crumble $x$. Great Quantities of Timber are confumed in thefe fubterrancous Works, which are freed from Water by the Helgoff Fire Engines, and other Contrivances. The Veins are of incertainmencinefs from three Inches to three Feetr. Tin Grains, or Corns of Tin, yield Five Parts in Eight of Metal; whereas Tin Stones yield on ly from One in thirty, to One in Sixty, and to One in a Hundred and twe:fy, for even thefe are wrought to fome fmall Profit $\%$. The Ore when collected is broke, warhed, itamped by Mills, and otherwife treated to fit it for the MeltingIIfufe, which is called Dreffing ; except the Tin Grains, which need no fuch Preparation. After mclting it is called Black Tin; but before it can be expofed to Sale it is carried to one of the five coinage Towns, where after Examination of a Piece that is broke from a Corner of the Block, the[^25]
## 40 The POLITICAL SURVEY

Arms of the Dutchy of Cornwall are impreffed with a Hammer, and then it is called White Tina. The Duty on Coinage, which is four Shillings. on the Hundred-weight, belongs to the Prince of Wales as Duke of Coriwall, and produces a Revenue of upwards of Ten thoufand Pounds per Annum.

- The Ufes of Tin are many; it is fometimes given in Medicine; Prer parations from thence are employed as Cofmetics; it is ufed in varnilhing Earthen Ware; in Conjunction with Mercury it makes the Foliage fpread on the Back of Looking-glaffes; amalgamated with Quickfilver, Sulphur, and Sal ammoniac, it produces the Molaic Gold $c$; the Calx polifhes Glats, Steel, \&cc. the compound Calx is what we call Putty d; it is alfo ufed in Soldet a. Another Manner in which it is ufed in this and in other Countries, rionght is called Tinning, or as the French file it Etamage, by which Coppt: Veffels are rendered neater in Appearance, and fafer in Ufe. When applied on thin Plates of Iron, which we did not practife here till the Beginning of the prefent Century, it becomes fit for many Ufes, and furnihhes a Variety of neat and wholefome Utenfils ; it enters into the Compofition of Bell-metal, of Printers Types, and to it we owe the Elegance, Hardnefs, and Beauty of our Pewter, of which at Home and Abroad there is io great Confumptionf. Before we difmiifs this Subject, we muft obferve, that the deep ruby Colour extracted from Gold ufed by Painters in Enamel, is made by precipitating the Solution of that Metal in Aqua Regia, with Calx of Tin, and in this Refipect it is highly ufeful in friking all Scarlet Dyes g . This Metal has been at all Times one of our Staple Commodities, and very profitable. At prefent there are good Grounds to believe the Mines in Cornwall produce of this Metal to the Amount of Two hundred thoufand Pounds per Annum, which is about four Times as much as they did at the Beginning of the laft Century h . Tin is found in Saxony and

[^26]Bohemia
in Sweden and Bohemia, but in fmall Quantitieei, and muchinferiorin Quality to ours, as Fureigners who are the moft proper and impartial Judges unanimounly allow $k$. In confequence of this there is a conftant and confiderable Eiportation both of wrought and unwrought Tin 1. On the latter there is a Duty of three Shillings on every Hundred-weight; but the former is, as it ought to be, exported free m . It is more than probable, that by proper Attention, and a few neceffary Regulations, the Exportation of this Metal might be rendered more beneficial to the Nation ${ }^{0}$.

Iron, the moft ufeful, and through the wife Diftribution of Providence, the moft common of all Metals, is plentifully found in all Parts of the Britifh Dominions o. The Romans wrought, and it is probable were the firft who wrought our Mines, as appears from their Medals found in the Heaps of Slags and Cinders, which are the only Monuments remaining of their Induftry in this Particular ${ }^{p}$. The Ore hath many different $\%$ ppearances. Some is ftiled Bru/b Ore, as being compofed of Threads growing on a red Kind of Earth, or hanging from the Tops of Caves or olf Works. Some in Stones of a reddin, blueih, or grey Colours, fometumes in a Sort of
${ }^{1}$ There were Tin Mines in Spain: Thofe in Saxony were difcovered in the thirteenth Centuryby an Eoglifhman who fled from Cornwall, who taught the Saxons how to work their Mines and drefs their Metal. It is found in Siam and in the Peninfula of Malacea in the Eaft Indies, and in Japan. There are Tin Mines alfo in Spanilh America, as Alonzo Barba informs ux, biut Bieing in the Vicinity of richer Metals are feldom wrought.
k The Tinners in Cornwall have great-Advantages, fuch as the Number of their Mines, the great Quantities of Metal in their Ores, the Facility (in Comparifon of others) with which it is wrought; and, which ought to be the greateß of all, the Superiority of their Metal authenticated by the Coinage Mark. But this avails us little, fince, as Dr. Neuman obferves, p. 89. there is not a Tin-founder in Holland who has not Englifh Stamps, by the Help of which he paffes his Compofition, be it what it may, and come it from where it will, for Corninh Block Tin. There cannot be a clcarer or more convincing Proof than this of the Excellency of our Englin' Tin, or a betteit Ground for hoping we fhall continue in Poffefion of this Staple.
${ }^{1}$ The Subftances that enter into the Compofition of wrought Tin or Pewter are, Martial Régulus of Antimony, Zink, Bifmuth, Copper, Iron, Princes-metal ; of two or three of thefe (for every Pewterer has his particular Method of compounding) they put two or three Pounds to at Hundred-weight of Tin, and by this Means make an hard, fonorous, filver-ike Metal. When foreign Writers mention Englifh Tin they often mean Pewter, as appears by their Defcriptions.
m Stat. 8 \& 9 . William III. cap. xxxiv, § 1 . and wrought Tin was declared free by 8 Geo. I. cap. xv.
" Borlafe's Hiftory of Cornwall, .p. 183.

- Iron is found in Cornwall, Cumberland, Derbyhire, DevonMhire, Durham, GloucefterMire, Hampfhire, Kent, Lancaßhire, Monmouthhire, Shrophhire, Somerfethire; Staffordhhire, Suffex, Warwickhire, Wilthire, YorkMire, and in many Paits of North Britain, Ireland, and in North America.
${ }^{p}$ See O.Walker's Greek and Roman Hiftory, illuftrated by Coins and Medals, in the Dedication to William Charleton, Elq; Richardfon's Account of Antiquities in YorkMire, preferved by Hearne in Leland's Itincrary, tom. i. p. 14I. Remarks of the Rev. Mr. Frapocis Brokehby, is his Travels through diffirent Parts of England, in Leland's Itiperary, tom. vi. p. 95.
ftiff unctuous Clay, and fometimes in a black Sand 9 . When free from * its Ore, the Metal is clofe; hard, fufible, ductile into Wire, fonorous, and elaftic $r$. In refpect to Weight, it is in regard to Water as Seventy-eight to Ten, but to Gold as Seventy.eight to One hundred Ninety-fix. The Mines are from Twelve to Fifty, and very rarely are more than Sixty Feet deep. The Veins or, Loads, like thofe of Tin, are of very different Dimenfions, and their Contents of very different Natures, which rather than their Size determine their Value. It is however found by Experience, that mixing together Ores of very different Qualities hath very good Effects s. It is wrought fo as to render it fit for Uies, with much. Trouble and at no. fmall Expence.

Some Ore is roafted before it can be fmelted. This laft Operation is performed in a large open Furnace, the Fuel and Ore being mixed, and the Fire kept to the greateft Height by two Pair of large Bellows, moved by a Wheel driven by Water ${ }^{\text {. }}$. When the Metal is melted, it is let out of the Receivers into a Bed of Sand, which hath one large and feveral fmall Divifions, in which it lies and cools. The Iron in the large Divifion is called a Sow, and in the fmaller Pios u. When the Furnace is once charged they keep it continually fupplied with Ore and Fuel, and as Occafion requires let out the Metal for feveral Months. In the Foreft of Dean, the richert Ore produces an hard brittle Iron, but by mixing Slag and Cinders therewith, it becomes the tongheft and beft we have w. Pig Iron, though Metal, and fit for fome Ufes, is not malleable'x. In order to give the Me-

[^27]tal that neceflary Quality, it is carried to the Forges, and there heat ${ }^{\text {d }}$ and hammered in every Direction, till the heterogeneous Matter being expelled, it is thoroughly incorporated, united, and as.the Workmen call it welded together $\because$. After this it is divided at the fitting Mills, and then it is ftiled bar Iron ${ }^{2}$. The Ufes of this moft valuable Metal are by far too many to admit, and too well known to require an Explanation here a.

- Steel is made from Iron by Cementation, and employed in all the finer Manufactures, in fome of which by the Skill and Induftry of the Artificers it is raifed to a very high Value b. There is no Room to doubt, that in every one of the three Kingdoms there may be enough Iron found to fupply all the Britifh Dominions, and yet we import very large Quantities from the North, from Spain, and from America $c$. The-Reafon of this is, becaufe the Inhabitants of thofe Countries can make it cheaper. For Iron being fmelted in an open Fire, and hitherto in general with Charcoal only, the Oil of which is fuppofed to be ufeful in making the Metal tough;-whereas Pit Coal, as is commonly thought, makes it hard and brittle, we cannot, except in fome Places, afford that Expence d. It is therefore earneftly to be wifled, that as it has been often propofed and promifed, the Ufe of Pit Coal could be genemally introduced, fo as to anfwer in all Refpects as well as Chatcoal, which would be of very great Service, and be very much to the Advantage of the Nation e. But before we conclude this Article it is very neceflary to obferve, that the Importation of foreign Iron turns highly to our

[^28]Advantage, for we import it in our own Bottoms, much of it from our own Colonies, and, except from thefe, under a Duty t ; and when manufactured here, in which a vaft Number of Hands in different Parts of the Inand are continually employed; it furnifhes an immenife Exportation, and no fmall Part of this to the very Countries where the Iron was produced 3.

Copprer is plentifully found in all the Britih Territories h. Yet though known long before, our Mines have not been wrought above Two hundred Years, and not to any great Purpofe till within the prefent Century i. This Metal is fometimes found pure, orvery nearly fo, and that in fo large Piecos as to make it neceffary to break them in the Mine before they can be conveniently raifed $k$. But in general, like other Metals, involved in ftony Crufts of all Colours ', and even many of thefe are beautifully blended together, whence the Ore receives the Name of the Peacock's Taill m. This ftony Ore is fo intimately mixed with, and adheres fo clofely to the Metal, that it is extremely difficult to \{eparate them, which is one principal Caufe of the Dearnefs of Copper. This Metal is of a bright orange-Red, clofe, hard, malleable, ductile into Wire, fonorous, and elaftic ; and is not only wrought on by all Solvents, but even by Water, which makes it very apt to ruft $n$. In point of Gravity, it is as Nine to One in refpect to Water, and in regard to Gold as Nine to Ninetecn ${ }^{\circ}$. The

[^29]
## of GREAT BRITAIN.

Mines are wrought to a great Depth, fometimes to more than a hundred Fathom, often through a very hard Rook, and confequently with much Labour and at a vaft Expence p. The Veins or Loads are much wider, thicker, and richer than thofe of either Tin or Iron; fo that on the firft opening of a Mine in Cornwall, it threw up, that is the Miners Term, as much Copper in a Fortnight as fold for Five thoufand Seven hundred Pounds, and in the next three Weeks and two Days as much more as came to Nine thoufand Six hundred Pounds 4 . But this was a very extraordinary Cafe, and what is not often to be expected r.,

The feparating the Metal from the Ore is a very arduous and intricate Opcration; for firt it is broken to Pieces in the Mine, then raifed, ranged according to its Sizes, wathed, picked, ftamped, and forteds. When brought to the Melting-houfe, it is firf roafted, next ftamped again, and then molted, when it is ftiled Red Copper ${ }^{\mathrm{t}}$, and having fill hêterogeneeus Subftances mixed with it, melted over again perhaps more than once, and then ${ }^{\circ}$ it is ftiled Black Copper $u$; if it is fufpected to hold Silver, as it frequently does, it is returned to the Furnace, where a Proportion of Lead is added, and then it is expofed only to fuch a Degree of Heat as is fufficient to melt the Lead, which attracts and carries away the Silver, lcaving the Block of Copper honey-combed $w$. This is afterwards melted, and becomes at laft what is called Rose Copper, that is, perfectly fine and. pure x . The Ufes of this Metal, like thofe of Iron, are too numerous to be inlifted on here; it may be fufficient to obferve, that its Malleability, Flexibility, Ductility, and Elafticity, render it fit almoft for every Thing to

[^30]which Metal can be appliedy. Befides we are to remember, that from Copper Brafs is made, and from thence all the numberlefs Articles that are manufactured for public and private Ufe, from our heavy Artillery down to the Furniture of our Kitchens, and which Occafions ro fimall Confumption drawn into Wire for Pins ${ }^{2}$.

Verdigrise might be alfo made in this as well as in other Countries, and it is really amazing that we have hitherto neglected fo obvious and at the fame Time fo valuable an Improvementa. Yet the not making any Ufe of Waters highly impregnated with Metal from the Copper Mines, after the immenfe Profit that has been made by throwing old Iron into them in Ireland $b$, is ftill more amazing, efpecially as very gine blue Vitriol hath been obtained from thofe Waters in Cornwall, and is a Thing not attempted any where elfe c. In reference to the Value of our Copper Mines we can only form Conjectures, and thefe may very eafily deceive us. We are told that the Copper Ore raifed in Cornwall produces Two hundred thoufand Pounds per Annum ${ }^{\text {d }}$; and fome have guefled, with what Accuracy I cannot pretend to fay; that the Cornifh Mines do not yield more than a fifth of what is produced in Britain. It is alfo very certain, that there are many Veins of Copper well known, that are not wrought on account of the great Expences attending fuch Undertakings, more efpecially at the be-

7 The Ancients furpaffed us in giving a Temper and an Edge to Copper. M. de Caylus, having communicated his Sentiments on this Subject to Mr. Geoffroy the younger, that ingenious Chemift undertook and accomplifhed the Diffovery or Revival of this loft Art. We are told this by the Count de Caylus himfelf, to whom the World is indebted for fo many learred Works.
$z$ Thefe little Implements are made of Brafs Wire blanched. The Manufacture is curious, and gives Bread to Multitudes; fince from the Wire to the Pin there are twenty-five Hands employed.

- It is faid fome Trials have been made with fo great Succefs, as that Verdigrife made here was equal to any imported.
b Political Survey of Great Britain, vol. i. p. 118. where the Facts are rclated from indifpu mble Authority, and are indeed of publick Nutoriety.
- Borlafe's Natural Hiflory of Cornwall, p. 207. where he informs us that this was difcovered by Mr. Rouby at Plymouth, and in confequence of this a Vitriol Manufacture fet up at Redruth in Cornwall. It is from hence this ingenious Gentleman, to whom his native County flands fo much indebted, takes Occafion to recommend the Method of procuring Copper by diffolving Iron in vitrioiick Waters.
${ }^{4}$ Id. ibid. p. 207. where he fays it has produced to Cornwall 160,000 Pounds annually for ten Years pait. But whoever reads and confiders the Method in which the Ore is fold accurding to his Account, will not think the Copper of Cornwall overvalued at $\mathcal{L} .200,000$, more efpecia!ly if he reflects on the Price of fine Copper at Amfterdam. Political Survey of Great Britain, vol. i. p. 345 . There is a Miftake as to Coals paying Duty ; for the Copper as well as Tin Works enjoy the Bencfit of a Drawback in: virtue of the Statutes, 9 Ann. cap. 6. § 54. and 14 Geo. II. cap. 41 . § 3 . We export annnally to different Parts of the World and our own Colonies about 21,000 Cwt. of this Metal annually.

## of GREAT BRITAIN.

ginning e. In Procefs of Time, however, it is more than probable they will be opened as more Markets fhall be found for their Produce.

Lead is a Metal for which this Illand was always famous. Our Mines were very probably wrought by the Britons, but certainly by the Romans; and one of their moft learned Writers hath affured us, that the Produce was fo great as to render it neceffary to fix the Quantity that fhould be raifed f. The Saxons followed their Example,' and indeed our Lead Mines were in all Ages amongft the acknowledged Sources of our national Wealth, and fo they fill remain. This Metal is very abundant in South Britaing, North Britain, Ireland, and the adjacent Ines. The Ore appears in many different Forms, and from thence receives feveral Names b. Sometimes from its Colour, it is ftiled Grey, Blue, or White Ore; fometimes from its Texture, it is called fpringy, feel grained, and crofs grained Ore ; and fometimes from its Pofition, flat, plated, or bellied Ore. But the moft common, is the diced, cubic, or teffelated Ore i. In fome Places it has been found fo free from Spar, or other heterogeneous Matter, as to be almoft pure, and this is called Naked Ore, and is very rich k. Lead when refined is the fofteft of all Metals, fmooth, ductile, and little if at all fonorous or elaftic. It is in reference to Water as Eleven to One, and in refpect to Gold as Eleven to Nineteen 1. . Mines of Lead are commonly on theDeclivity of Hills, and thofe in this Country are wrought from Ten to Seventy Fathom deep, cut with much Labour and with no finall Charge. The Vcins are very irregular, fometimes a few Inches only, and fometimes. feveral Feet in Extent kI . The Ore is alfo fometimes forced out of the Lead, and found loofe in pretty confiderable Quantities, and at fome Diftance.

[^31]
## 48 The POLITICAL SURVEY

Tue Operation of feparating the Metal from the Ore is likewife attended with Trouble and Expence, though with lefs in both than Tin, Iron, or Copper n. In the firt Place it is broke and beat to Pieces, next wahhed in a running Stream, then paffed through Iron Sieves, and lafly cariied to the Furnace 0 . This is placed on a Hearth of Clay or Iron Stone, on which a Fire is made with Charcoal, and maintained with fmall Wood. The Ore is thrown on this Fire, and as the Metal melts it runs down into a Receptacle prepared for it; thence, while liquid, it is lifted out in an Iron Ladle red-hot, and being caft into a Bed of Sand it becomes, when cold, what they call a Pig of Lead ${ }^{\text {P }}$. There is a wide Difference in the Nature and Value of Ores, for fome yield but thirty-five and others eighty Pound of Metal from One hundred of Ore q. But if they yield lefs than tbirty-five they are not thought worth the Working, that is, unlefs the Ore is alio known to hold Silver: In fact, all our Lead, or at leaft almolt all, holds Silver more or lefs; but the Term of holding Silver implies, that it holds a fufficient Quantity to defray the Expence of extracting it with Profit; fome Lead yields thirty Ounces of Silver in a Ton, fome eighteen, and fome only four Ounces ${ }^{\text {r }}$. The Ores richeft in Lead hold none at all; that is, none that is worth extractings.

The Ufes to which this Metal is applied, either manufaCtured by itfelf, or in Compofition with other Metals, would require and deferve a particular Treatife, which would be in many Refpects, curious, entertaining, and inftructivet. All that we flall fay farther here is, that from Lead
${ }^{n}$ Harifon's Defcription of Britain, B. iii. ch. 8vini. Fuller's Worthies in DerbyRire, p. 229, 230. Somerferfire,*p. 17.

- This is the general Method; and though the Metal is eafily obtained, set Plenty making it cheap, none but rich Ores are fmelted at prefent.

## of GREAT BRITAIN.

fome other Subitances are produced, which from the large Confumption of them may be regarded as Things of great Value. Ceruse, or White Lefad, which is made by expofing thin Plates of this Metal to the Fumes of Vinegar, which is the Bafis of feveral Kinds of Paint, ferves for many other Purpofes, and is alfo of fome Ufe in Surgery, though not in Medicinc $u$. There is likewife a very beautiful Colour made from the Calx of Lead, which paffes commonly under the Name of Yellow Ochre w. Add to thefe Minium or Red Lead, which is obtained by giving and continuing a certain high Degree of Heat to the Calx of Lead in a reverberatory Furnace $x$. It is in great Ufe as a fine red Pigment, enters into the Compofition of deficcative Plaifters; and is a capital Article in the Commerce of the Venetians in the Levant $\%$. It is very difficult, if not impoffible, to form any probable Gucfs, at the Value of the Lead raifed from our Mines ${ }^{2}$. But to balance this, we are very certain of the following Particulars, that within this laft Century we have wrought many more of there Mines than formerly, that we ftill continue to work many of the old Mines to greater Profit than in paft Times, that our Knowledge in all Things regarding Metals is very highly improved, that moft of the Impediments which retarded fuch Works are removed, by rendering the Property in them certain and fecure, and that our Lead is the very beft in the World, which is not to be underfood, as if there was any real Difference in Lead, when rendered thoroughly pure and fine, but that this is done with greater Eafe, and that our Metal yields more in Proportion than in other Countries ${ }^{2}$.

[^32]It feems' equally ftranget that our old Writers fhould pofitively affert, that there was Pleaty of Cuickfilver and Cinnabar in England b, and that: the mott judicious and inquifitive of our modern Naturalifts fhould be as politive that there is neither ; and indeed there is no reafon to doubt the Truth of what they fay. It is not however impofiible or even improbable, thate though none is found or believed to be in this Inand, yet if diligently: fought they might be met with d, at leaft in Quantities fufficient for our, own Confumption '; for though Cinnabar is the principal Ore of Mercury, and muft have been long fince diftinguifhed if we had it, yet Mercury is alfo found in Stones of a black or faffron Colour, and alio in Clays or foft Earth, out of which the Mercury is obtained with very little Trouble f. It is therefore judicioully recommended by the Cornilh Antiquary to his Countrymen, to examine carefully the Contents of their Mines with the View, that amongft fo many mineral and metallic Subftances as daily occur in them, under different Appearances, this, if it be there, may be detected g. But after all, the moft likely Method of finding it, is to offer a confiderable Reward to the firft Difcoverer.. Experience having fhewn, that in all Enquiries of this Nature Intereft affords the frongeft Light.

There are few Things that could be made clearer, if we depended only on Authority, than that there have been many rich Silver Mines in England; fince we have not only credible Hiftories $h$, but authentic Records alfo which atteft the Fact i. Yet if we admit thefe, we muft take this Term in a general Senfe, for Mines affording Silver, and not in the ufual. refrained Signification of Mines producing Silver Ore k. This Ambiguity

${ }^{1}$ Fuller's Worthies, De:onflire, p. 245. where extraEts from the Records are produced in refpect to Comb-martin, which was a Lead Mine after all.
k Something may be faid in Favour of the old Acceptation, if, as fome fkilful Perfons (on thcir ewn Knowledge) have afferted, feveral of our Lead Mines are realty richer in Silver than moft
was introduced by the State of our Conftitution in former Times; for then all Mines holding either Gold or Silver, which might be extracted to Profit, were allowed to be Mines Royal, and paft in a common, or rather in a legal Acceptation for Gold or Silver Mines 1. It was in confequence of this, and of the Methods taken to fupport the Prerogative of the Crown, that our Mines were in thofe Times fo indifferently known, and fo little wrought, as, by the removing of thefe Impediments, they have been within lefs than a Century fo much improved; fo that at this Time we have actually more Silver extracted from our Lead than ever, though we hear nothing more of Silver Mines $m$. It is however indifputably true, that fome Pieces of pure Silver are now-and-then found in our Copper, Lead, and Tin Mines. But notwithftanding this, and the fuperior Skill of our Artifts in aflaying, we have not hitherto difcovered any fuch Thing as Silver Ore, which is what properly conftitutes a Silver Mine n. But this by no means prove, there are none in the Ifland, or ought to difcourage a Search for them.

IT is pretty much the fame with regard to Gold Mines. We have Reports, and thofe too with fome, though no great Foundation, that fuch were formerly, and even within our Memory difcovered. For Inftance, about fourfiore Years ago fuch a Mine was fuppofed to be found in Bedfordfhire, at a Place called Pullock's Hill, within two Miles of Wreft ; and another at Little Tawnton in Glouceftethire, both of which were immediately, as Royal Mines, feized for the Crown, and let upon feparate Leafes; in confequence of which they were wrought for a little Time, and then quitted, their Produce under the Management of the Leffees (though we know not the

Silver Nincs. Malines, p. 182. fpeaks of large Quantities of Ore brought from Scotland, fome of which himfelf fent abroad to avkilful Perfon, who extracted forty-two Ounces of Silver from an Hundred-weight, which is feventy Pounds from a Ton.
${ }^{1}$ In purfaance of this Principle, and by a legal Proceeding, Queen Elizabeth difpoffefed the Eall of Northumberland of his rich Copper Mines at Kefwick, and thereby raifed a Ditfidence, which impeded the working of Mines, except in Cornwall and Derby'hire, for more than a Century. Towards the Clofe of the laft, on an Attempt to difpofefs Sir Carberry Price of bis Lead Mine, notwithftanding the Statute I W. and M. cap. 30. §4. a new Liw was made 5 W. and M. cap. vi. $\$ 2$, to which all future Improvements have been owing.
${ }^{m}$ It may poffibly deferve to be confidered whether the Provifo at the Cloie of this Ast, whicis referves to the Crown the Preemption of all Copper Ore at fixteen Pounds a Ton, of Tin and Iron at forty Shillings, and of Lead at nine Pounds, which never has been beneficial thereto, fhould not be repealed, as it may have a Tendency to prevent the extracting Culd or Silver from thefe Metals, which by difcovering the Value mult render the Property precarious.
in The wife Lord:Verulam exceedingly regretted the Exportation of Lead and of Lead Ore to foreign Parts, or eventlig being confumed at Home, without extracting the Silver, and with tor much Reafon. In his Time the annual Produce of our Lead Mines was Eight thoufand Tons, which at the moderate Computation of twenty Ounces in a Ton, would, in the Space of a Century, even fuppofing we had raifed no more than we then did, have fupplied us with four Millions of our own Specic.

Caufe) turning to no Profito. We have in another Place cited an Author, indefatigable in his Refearches, well fkilled in Ores and Metals, and from thele Circumftances of eftablifhed Credit, who affirms, and that too of his own Knowledge, that there is more Gold and Silver found in England than is commonly imagined p. It is indeed certain, that the Tinners in Cornwall pick up confiderable Quantities of Gold in very finall Grains in their Works, and have done fo for above a Century, perhaps for many Centuries paft, and that, fome larger Pieces have been found in the Crufts of their Tin Ore, and alfo in their Brooks q. Still greater Quantities were found in Crawford Moor in Clydfdale $r$, and fome Gold Duft in a River in Dourneffe in Caithnefs s, and in fome of the Ilands dependant on North Britain ${ }^{\text {t }}$. In Ireland, if there be any Credit due to their molt ancient Hiftories, fome of their Streams were very rich in this Metal u, and modern Accounts likewife mention fmall Quantities of Gold Duft that have been found there w.

These, taken together, are but a very fmall Specimen of Britinh Foffils, fince our learned Naturalifts have not only diftinguifhed but defcribed fome thoufands x . We are not writing a Natural but a Political Hiftory, and therefore a fuccinct Account of fuch of thefe as were immediately and confiderably ufeful, or might probably become fo, were all that entered

[^33]
## of GREAT BRITAIN.

into our Plan. It may however be very proper to remark, and what we have faid of Bifmuth, Cobalt, and Zink, will at once both juftify and explain it, that Multitudes of our Spars, Pyrites, and Marcafites, \&c. may hereafter in a Variety of Inftances come to be great Sources of national Profit, and in this View they are even now to be regarded as fo many latent Treafures, which the Skill, the Induftry, and the inquifitive Nature of Man will be daily calling out to Ufey. We muft likewife remember that the Spirit of Difcovery prevails, and that very ftrongly, in many other Parts of Europe, and that from the amazing Plenty of all Kinds of Foffils through the three Kingdoms, whatever hall be produced from thence will ultimately become beneficial to us. All imaginable Means were ufed in Saxony to conceal the Manner of making Zaffer and Smalt; and the carrying Cobalt out of that Electorate was upon Principles of Policy prohibitedunder Pain of Death 7 . But none of thefe Precautions could hinder the finding a Mine of Cobalt in Cornwall; and it is much to be regretted that fome public fpirited Perfons have not proiecuted that Difcovery with Effect a. There is no Doubt that feveral private People have lucrative Secrets, as well in working mineral Subftances that are not commonly wrought, as in making confiderable Profit by the peculiar Management of mineral Ores that are in every Body's Hands b. But if thefe Secrets were publickly known, they would, as new Sources of Induftry, become a public Benefit, and thofe to whom they belong at prefent would have a Right to a Reward from the Public for difclofing them ${ }^{c}$.

In refpect to Metals, it hath been thewn how long a Time it was before we came to make thofe Ufes of them for which they were at all Times fit ; and the many and great Advantages that have fince been de-

[^34] there want not good Grounds to believe that they may be ftill very much extended. It is not impofible that there may be fome Relics yet remaining of the oll Reftraints; and from thence it may arife, that fome Mines ftill continue unwrought, to the Prejudice of thofe in whofe Lands they lie, and to the much greater Detriment of the Public ${ }^{\text {e }}$. Thefe Lars, of whatever Kind they be, ought certainly to be removed, and all pofible Li-, berty given for the improving to the utmoft thefe Gifts of Nature for the Benefit of Society ${ }^{\text {. }}$. The two excellent Laws pafied foon after the Revolution feem to breathe this Spirit, and the Confequences that have attended them cannot but be allowed frongly to recommend itg. Indeed the Tin Mines in Cornwall, the Mines of all Sorts in the Peak of Derby, and thofe in Mendip Hills in Somerfethhire, which were all carried on when little of this Kind was done in other Places, owed this Dittinction to their Immunities, and the Succefs with which they were carried on to the equitable Provifion, that a proportionable Share of the Profits hoould fall to thofe by whofe Labour they were procured b. It is not altogether impro. bable, that if Mines of Gold and Silver were put on a Level with other Mines, we fhould, if we have any fuch, fpeedily hear of them again ${ }^{i}$, at leaft there would be no Reafon left why they hould be concealed. We know of nonc of either at prefent, and we know of no Method fo like to bring them to Light as this k . If it hould be objected that this Conceffion might give too much Wealth to Individuals, let us confider the Numbers that muft be employed in working fuch Mines, and of courfe derive a Maintenance from thence ${ }^{\text {, }}$, and let us alfo remember, that what ever Quantities of thefe precious Metals hould be thus acquired, would enter into our Circulation m , and it will then clearly appear, that the Public, without
،

[^35]
## of GREAT.BRITAIN.

without running any Rik, or being at any Expence, would be at length the greateft Gainers.

We may hope, in regard to Metals as well as in regard to Minerals, that the great Progrefs the prefent Age hath made, and is daily making in ufeful and experimental Knowledge, may lead us to confiderable Difcoveries, and in confequence of them to various profitable Improvements $n$. It is not at all improbable, that among the numerous, fplendid, and ponderous Subftances that are at prefent looked on as the Incumbrance: of our Mines, fome new Ores might be diftinguifhed and wrought to very valuable Purpofes, the rather as Experiment does not feem at all repugnant to this Notion ${ }^{\circ}$. We may fill farther propofe without Fear of deviating into Abfurdity, that we may poffibly difcover new Metals, at leaft Metals new to us, and which hitherto have not made any Part of ciar Treafurcs p . The Gifts of Nature are innumerable, and though we alrcady poffefs very many, yet affiduous Enquiries, which helped us to fome of thefe, may in Time reward our Diligence with more. The mechanical Part of this particular kind of Mining, though wonderfully improved, has never been reduced into a regular Syftem, or the Principles of it laid down and explained like other Branches of Science, which if once it was brought into Order, and fuch a Plan well executed, would no doubt prove of no fmall Utility 4. There are iome Reafons to fulipect that the common Methods of refining Ores and Metals are not yet become abiolutely perfect, and that if they were fuch as are now efteemed poor Mines might be wrought to Protit; and even the rich to greater Profit than they are at prefentr. It has been

Provifoe ought to take Place if 'Gold and Silver Mines are ever allowed to become the Property of the Subject. This would be but a proper Acknowledgment for fuch a Conceifion, and become at the fame Time a Regiter of its good Eftcets.
n In earlicr Timesall that was done in Mines was by mere Dint of Labour; but Science has mitigated that, and incieafed our l'rotits; and no doubt as Seience enlages, and becomes more diffuled, its Effects will be greater and more confpicuous. What has been done within thefe few Iears in refpect to Coal'Mines, the curious Machines intro:Iuced into the Silk Traje, and the admirable Engines daily invented for raifing Water, leave us no Reafon to queftion it.

- That Lapis Calaminaris is the Ore of Zink is a Diicovery of no long! Staiading ; about twelve Years ago a Foreigner firft taught them in Cormwall to diftinguifh Bifinuth, which till then they threw away; as they had done formerly a certain Kind of Copper Ore, which :lyy caied Poder, i. e. Duft or Ycllow Mundic, now fold for twenty Pounds a Ton, and yieids a finc Metal.
$P$ Platina is a new Metal inconteftibly, but it does not follow that it is the only one that remains to be difcovered
q An ingenious and ${ }^{2}$ gular-bred Engineer might render a lafting Service to his Country, and eftablith his own Reputation, by fuch a Work.

5 We know that anciextly they committed great Errors in melting, leaving their Slag and Ginders to rich as to be melted again with Protit, which induced an Opiuion that Metals grew. In guarding againft this, we may err alfo by railing our Fires too high. Beffes, in flamping
alfo thought, that Methods might be fallen upon for reducing the Quantity, and thereby the Expence of Fuel; and this appears fo much the more probable, as the Ufe of Pit Coal hath been gradually introduced into many Operations, for which through a long Series of Years it was held utterly unfit s. Experience is very truly regarded as the Teft of Reafon, and repeated Experiments ferve to correct thofe Errors that we may have been led into by too hafty Conclufions from Experience itielf.

The Apprehenfions that have been entertained from the Reports that in Countries abounding with the richeft Mines the People in general, and more efpecially the common Sort, are very poor and miferable, ought by no means to intimidate us in our Refearches. In the Spanih Mines they employ Slaves whom at dear Rates they purchafe from Foreigners, and thofe Wretches are truly miferable, not fo much from their Work as from their Condition. In Friuli and Hungary the Cafe is very little better, as many, if not moft of the Miners are Criminals, and compelled to labour for a poor Subfiftence. In thefe Countries there is alfo another Circumftance that renders their Situation without Remedy; which is, that many of thefe Mines produce fo little, that if they were wrought by any other People than thefe they would yield no Profit at all'. But in Countries where Freemen are invited to work, from the Confideration of adequate Wages, the Opening of Mines muft have very different Effects. For fuch Men, when thus employed, there muft be Towns to lodge, and Lands cultivated to afford them Subfiftence. They muft have Cloaths, Tools, and domeftic Utenfils, which can only be fupplied from Manufactures, and thefe will confequently prove more and more confiderable in Propngtion to the Value of the Mines, and the Numbers employed therein, and maintained by them u. Thus Reafon teaches us, that in fuch Cjuntries, more efpecially if they have a great Commerce, and the Means thereby of exporting their Produce, Mines muft be highly beneficial to the Community as certain

Ores to Powder, and expofing them to the Action of Water and then of Fire, may not much Metal be loft: Inquiries into the Proceedings in foreign Mines would foon determine this.
: In Places where Turf is to be had, might it not be ufed with Wood? Might not charred Turf or Dutch Turf, that is, made and dried as the Dutch Turf is, fupply, where neither can be had, the Place of Wood or Coal? Dutch Turf has been ufed by Silverfoiths here. Would not Culm mixed in the making Dutch Turf produce a ftrong Fire? Has the charring Pit-coal been properly attended to, or its Effects fufficiently examined?
tHeton's Account of Mines, p. 67-71. Nothing can fhew more clearly than this, that with us Mines are a national Advantage.
"All thefe Articles would be furnifhed by Labour only in this Country in confequence of a Mine's being wrought, and thereby a conftant and regular Courfe of Circuition eftablifhed. This is not a fimple Speculation. What has been already faid in relation to Cot Mines and their Confequences prove it incontefibly a Fac. None who fubfif purely by Labour live better than thefe People.

Sources of various and extenfive Improvements w. Upon thefe Grounds fome have thought, that where Mines were too expenfive for private Purfes, or produced but a flender or precarious Profit, it might prove Oeconomy in the Public to indemnify the Proprietors on account of the Advantages, which, whether lucrative to them or not, the State is fure to receive $x^{\text {. }}$ This Doctrine of the Benefit of Mines, when wrought under fuch Circumftances, being fully juftified by Experience, we ought certainly to encourage and protect fuch Enterprizes as much as poffible $\%$. We have now executed entirely the Defign of this Chapter; and we truft have therein fully fhewn, that the internal Riches of the Britifh Dominions are truly immenfer; that from various Caufes which have been explained, thefe were for many Ages much neglected; that in the two laft Centuries we have in a fignal Manner availed ourfelves of thefe Refources; that with the Affiftance of Labour only, we draw from thefe annually an amazing Revenue; and that inftead of having any Grounds to apprehend the fmalleft Diminution of this Income, we have the ftrongef Motives to expect, that new Advantages will continually arife, and thofe derived from the prefent Funds continue at the fame Time to increafe.

[^36]
## CHAPTER III.

## Of the Productions of Great Britain as arifing out of the Soil.

IHE natural and artificial Caufes of Fertility in different Countries. In the earlieft Writers we find Commachdations of the Corn Harvefts in Britain. The Country and the Inbabitants equally improved while under the Dominion. of the Romans. The Saxons, when once they became fully Mafters, were in this Refpect alfo very induftriots. In confequence of this they carried on a large and lucrative Commerce with their Neigbbours. How tbis State of Things came to be altered, the People impoveribbed, and the Country ruined. TIbe untoward State of Cultivation, and the Lofs of Markets under the Normans. In the Reigns of Henry the Seventh, Henry the Eighth, and Edtacurd the Sixth, Grazing generally preferred to Tillage. Various unfuccidsfill Attempts under Elizabeth and the Juccecding Reigns to correct this Error. Methods taken by Parliament in the Reign of Clbarles the Sicond for more effictually encouraging the Cultivation of Corn. The Bounties on the fievra! Species of Corn revived and thorougbly fettled after the Revolution. A juccinct Account of Wheat, and its many Ufis in Food, and in other ReJpetts. Benefits which in various Ways refult from thence to Grat Britair: The like in regard to Rye, and the Ufes to which it is applied. Ppafrowhy more Attention flould be Jbewn to the Culture of this kiv? 'af Corn. The Hifory of Barley and Malt, with an Account of the E殳, 火antitics annually produced of both. The Benefits that arife from benie to Individuals and the Community. Thbe Cultivation, Produce, and Nature of Oats, rcith the jeveral Ufes of that Grain briefly flated. Remarks on the increafed and increafing Confumption, and the Means of fupplying it. The different Sorts of Peas, their Ufes, and the fingular Advantages ariing from them. A like Account of Beans, Tares, Lentils, and the Emoluments that refuit from thefe Productions. Why they are worthy of Notice though no exact Eiftimate can be formed of the Quantities raijed and confumed. Thbe Means by which our Knowledge in Agriculture came to be extended and improved. Clover introduced here from Flanders, at what Time, and in what Manner. The Metbod of cultivating it as an intermidiate Crop, and the great Importance of that Cultivalion; an. Idea of the Profits that bave aryfen from this valuable Improvement. Tibe Field Culture of Turnips brought likerwife into this Country from Flanders. The extenfive Progrefs and immenfe Ad-. vantages derived from this new Hußbandry. Ibis has excited not the Admiration
miration barcly, but the Emulation alfo of otber Nations. An Account of Carrots from the Time that they were brougbt amongft us by the Flemings. Tbe Extenfion and Manner of their Cultivation for the Ufe of Gattle. The Produce and great Benefits that are like to follow from this Improvement. Parfneps propofed in tbe fame Intention with Probability. The Prudence Jbewn in the encouraging. Jucb kind of Attempts for the public Good. The Hiftory of Hops, and tbeir Cultivation in different Places. The many fignal Emoluments that bave arifen from this Improvement. The Culture of Hemp, and the Capacity of this Country to produce it in the bigheft Perfietion. The Produce and inconteffable Benefits that flow, and that migbt flow from its Cultivation. Flax groves in every Refpect tbrougb all the Britijb Ijles as wcll as in any Part of Europe. The many Advantages that are, and may be derived from thence to the Landbolders, the induffrious Poor, and the Community in general. Rape and Cole Seeds fingular and fubfantial Improvements; the Emoluments arijing from thefe and other Cultivations of the fame Nature. $A$ ficcinct Account of the extenfive Culture of Potatoes, and the Benefits derived from them. Seeds and Roots cullivatedfor tbeir Ufes in Medicine. The Manner of planting, and the great Profit derived from Liquorice. The Nature, Cultivation and Value of Saffron. Teafles, their Ufes, and the Advantares arijing from tbsir Proparation. The Hiftory and Culture of Madd'er, with the Emoluments expected from tbence. Saflower fown in fome Pluces, and for zebat Purpofes. The Culture of Weld or Dyers Weed; its Ufis, and the Profits ari/ngr from it. The culrious Metbod of cultivating Woad, and the Binefits attending it. Of Meadows and Pafures, and the Tryewederent State of them in paft and in prefent Times. Tbe Hifory of Saint Foin ; its Cumsse and Produce: The fanne woith regard to Lucerne, of Burnet, and various otber nfw Improvemcnts. Obfervations on the Benefits arifing from :be Application of Prilofopplic Principles in conducting and improving the Arts. 'Tbe prefent State of Timber in thefe IIlands, and the more obvious Caufis of its Decay. Remarks thercupon, and jome Hints as to the Remedies that may be appliced. A retrofpective View of the Contents of this Cbapter.

THE Excellence of Soil and Climate are Bleffings beftowed by Providence; but like all other Bleffings, as we have often obferved before, are capable of being augmented or impaired, according as they are either neglected or improved. In fome Countries, where Humidity and Heat exceedingly abound, we ftill fee a luxurious and fpontaneous Vegetation, refembling at leaft, to a certain Degree, the Fictions of the Golden Age, when Nature fupplying the whole Expence, Men lived without Toil, and relying folely upon her Bounty, enjoyed all Things in com-

## 60 The POLITICAL SURVEY

mon *. But there is another, and yet more general Principle of Fertility, which is the Application of Man, by which many, if not moft of thefe beneficial Productions which naturally fpring up in one Country, may be tranf. ported into, and cultivated with Succefs in another h . Indeed if this had not been ever the Cafe, Mankind could not have fpread over the Face of the Earth, but the far greater Part of the World would have remained in a State of Nature, void of Improvement and of Cultivation. It is true, that this Power hath its Limits, infomuch that fome Spices, Trees, and. medicinal Plants are not to be removed out of certain Climates c. But Things of more general Utility may, and this in fuch a Meafure as to excite a Doubt whether Countries, naturally of exuberant Fertility, are fuch as from thence ase capable of being rendered the mort populous d. Be this as it will, it admits of no Difpute, that the Capacity of producing, when direCted by Skill, and fupported by Labour, extends the Bounties of Providence, and that in fuch a Manner, as that both Soils and Climates may in Procefs of Time be beneficially altered by a vigorous and affiduous Attention to their Improvement ${ }^{c}$.

We may with more Probability therefore admit, that Britain was very early known to the Phœnicians, fince in the firit Accounts we have from, the Greeks, who derived their Knowledge from them, it is celebrated for its Fertility, a certain Proof that it had been long inhabited t. Julius Cafar

[^37]
## of GREATBRITAIN.

allows, that in the maritime Provinces of this our Inle, the People were well furnifhed with Corn; but at the fame Time afferts, that in the interior Countries they lived chiefly on Flefh and Milk g. The firft he undoubtedly might know with Certainty, but the fecond he could only learn from Report. Cornelius Tacitus, a cautious and corsect Author, from the Information of his Father-in-law Julius Agricola, than whom no Man of his. Time knew this Country fo well, or could defcribe it better, acknowledges the Mildnefs of the Climate, and the Richnefs of the Soil, which except the Olive, the Vine, and other Plants, which he judged to be peculiar to warmer Countries, produced every Thing elfe in the greateft Plenty. He alfo obferved, that though the Springs were forward, yet that the Grain ripened flowly h. This he attributed to frequent Rains, and the Humidity of the Air and Soil. We fee no Reafon to doubt cither of the Truth of the Reprefentation, or of the Juftice of the Remark i. The Britons were but juft beginning to learn the true Principles of Agriculture. Their own Skilt, fuch as it was, enabled them to provide fufficiently for their own Subfiftence in the Manner in which they lived, and hitherto they had looked no farther.

By the Romans, who continued here the greateft Part of five Centuries, the Britons were well inftructed in all the Arts requifite to civil Life. They taught them to confruct Roads, to open Canals, to work Mines, to improve their Ports, and, above all, to cultivate their Country in the beft
[anner, by which they rendered it a Region of exquifite Beauty and flowing 1 bundance, while themfelves were not only an elegant and polite, but at the fame Trme an active, induftrious, and opulent People. Britain was. in thofe Days anotner Sicily to the Empire; and as the former fupplied Italy, fo the latter furn lhed the Roman Armies in Germany and in Gaul with Corn and other Provifionsk. It was this rendered our Mland of fo great Confequence to, and fo much confidered by, thefe Sovereigns of the World. It was this put it in the 「ower of Caraufius, himfelf a Briton, to conftrain Maximinian and Dioclefian to allow his affuming the imperial: Titlel. It was this that induced the Panegyrifts to compliment Conftan-

[^38]
## 62 The POLITICAL SURVEY

tius Chlorus, and his Son Conftantine the Great, in fuch fwelling and pompous Terms on their recovering Britain, and thereby providing for the Subfiftence and the Security of the Frontier Provinces m.

On the coming of Julian, with the Title of Cæfar into Gaul, when he found thofe Provinces in the utmoft Diftrefs, as well as in the greateft Danger, his firft Care was to fettle the Peace, and reftore the Coinmerce of Britain, from whence he drew more than once Eight hundred Ship Loads of Corn, without which he could never have extricated himfelf from the Difficulties he was in, or attained fuch a Degree of Power as lifted him to the Empire n. New Troubles arifing, and new Emperors being fet up, fome of them here, the whole Strength of the Ifland, after numerous Armies raifed in, and frequently when tranfported abroad recruited and reinforced from hence, was at length totally exhaufted, and the Country fo depopulated, as inftead of affording, as formerly, a continual Support to, it became a Burthen on a declining Empire ; in which State the Romans gradually and unwillingly abandoned it ${ }^{\circ}$. The continual Irruptions of the barbarous Nations into the Roman Provinces in Britain, quickly completed their Ruin, fo that it was not only fpoiled and rendered defart, but the very People, and with them the Arts they had acquired, were in a great meafure exterminated and extinguihed r .

IT was more than a Century before thefe Troubles totally fubfided, and the Saxons, who were invited as Auxiliaries, becoming more cruel Enemies than the Piets and Scots, fixed themfelves fully in their refpective Prios yanities, and then in the firft Intervals of Peace began to improve them 9 . But when they once fet about this, and more efpecially fafter they embraced the Chriftian Religion, they made a great Progrefs, alld foon revived the Credit of this Country for Plenty and Hofpitality. The Excellence of their Conftitution, the Juftice of their Laws, their regular Plan of Policy, but above all, their equal Diftribution of Land, not only produced but fecured a general, conftant, and thorough Cultivation r. We preferve more certain Pronfs of this than even the moft authentic Hiflories could afford, in the

[^39]
## of GREAT BRITAIN.

Number of Cities and great Towns, and the almoft innumerable Villages: raifed, and many of them named, by thefe intelligent andinduftrious Peoples. In the Cathedrals, Colleges, and Monafteries, which they erected and endowed with Lands, which their Ecclefiaftics took care to improve to the utmoft ${ }^{t}$. In the Syftem of their rural Oeconomy, which they eftablifhed, and which ftill in a great meafure fubfifts, and in the Terms made ufe of in all Things relative to Hufbandry, which moft of them, at leaft, are retained amongft us to this Day u.

We have alfo furficient Evidence to convince us, that though this Country was then fully peopled, our Harvefts not only fufficed to feed them plentifully, but fupplied alfo a very large Exportation w. Hence it was the Emperor Charles the Great called Britain the Granary of the Weftern World x. This Commerce cnabled the renowned King Edgar to form thofe numerous Fleets that were at once the Guard and Glory of his Dominions y. In fucceeding and lefs happy Times the Wealth accumulated by this lucrative Trade, for Riches, or rather the Signs of Riches, that is ${ }_{3}$ Gold and Silver, could be brought hither no other Way, enabled his Succeffors to procure fome temporary Reliefs to their Subjects by thofe Subfidies which bore the Title of Dancgeld z .

It is now neceffary to relate how this State of 'Things came to be altered, and that too in fuch a Degree as almoft induced a Doubt, as to the Capacity Of, this Country to produce fo much Grain, and made it a Queftion whether the ififtories of the amazing Plenty in Britain in ancient Times were not

- Confult Spelman's Viifia.: or Lambard's Dictionary, or Dr. Gibfon late Bifhop of Lundon's: Map, entitled Britannia Saxonicy.
' See Camden's Pieface to his Britannia, Sir William Dugdale's Monafticon, and Bifhop' Tanner's learned and curious Preface to his Notitia.
" Somncr's, Junius's, Spelman's, and other Gloflaries. Thefe derive in Truth their great Utility from this very Circumftance.
w Our old Hiftorians are very deficient in what regards Commerce. Lambard has preferved a: Law by which it was honoured and encouraged. King Alfred, in his Saxon Tranfation of Orofius, has iccorded a very exact Account of the remoteft Countries in the North, by Perfons whom. he fent to difcover a Paflage that Way to the Indies. He fent Alms to the diftreffed Chriftians; in the Eaft, and received Prefents from them. W. Malmelb. de Geff. Pontiff. lib. ii.
x This induced him to live in the fricteft Friendhip with Offa King of Mercia, to whom he: wrote with cqual Kindnefs and Refpect. Will. Malmelb. de Geft. Reg. Angl. lib. i. p. 32
${ }^{\text {y }}$ Chron. Saxon. p. 122. Chron. de Mailros, p. 1 50. Will. Malmelb. de Geft. Reg. Angl. lib.. ii. p. 57. and many other Authorities that might be cited.
${ }^{2}$ This Tax was raifed for different Purpofes, fometimes to engage the Danes to retire, fometimes to raife Forces againft them, and at Length as an ordinary Revenue. The Rate alfo was different. Originally Two, afterwards Four, and even Six Shillings on every Hide or Plow-land: in the KingJom. It is for this I cite it, to thew that the Saxons relied on their Land and its Protuce. The Reader who would be better informed may confult Mr. Webb's learned: Difcourfe on Dancgeld.

## 64 The POLITICAL SURVEY

much exaggerated, if not entirely fabulous ${ }^{\text {a }}$. Under the Saxons this Country, as we have already obferved, was fully peopled, and fully cultivated, the Nation in general rich, happy, and in fome Degree luxurious b. This tempted the Danes, who made a Profeffion of Piracy, to make Defcents on different Parts of the Sea Coafts in order to plunder. Encouraged by Succets, they invaded and made themfelves Maflers of leveral Spots in the Maritime Countries, and from thence harraffed, depopulated, and in a great meafure deftroyed the Whole c . Thefe Diftractions with little Intermiffion continued for three Centuries, and had fuch an Effect on the Country as well as on the People, that, tugether with the great Changes in the Genius and Spirit of the Government, by the coming in firft of the Dancs, and then cf the Normans, as in the Midft of an impoveriflied and defolated Nation, left a bitter Remembrance of paft Plenty and Profperity, with faarce any Prolpect of future Recoveryd. We have a very fingular and decifive Inftance of the Truth of this, in the Satisfaction and Admiration expreffed by a judicious Author in thofe Times on the Defcription of a Saxon Monaflery, and the Country round it, which from the Peculiarity of its Situation had efcaped the almoft univerfal Ruin e.

Apter the Norman Government became fomewhat more fettled, Agriculture was either to little encouraged, or fo indifferently underftood, that what from the Variation of Seatons, from the Frequency of civil Commotions, and repeated foreign Wars, there was a continual Fluctuation between great, but very tranfient Pcriods of Plenty and extreme Scarcity,

[^40]nay, fometimes downright Famine $x_{;}$, and as an Inftance of this, in the fhort Space of fourteen Years, Wheat was once at Thitteen Shillings and Four Pence, twice at Sixteen Shillings, and once at Twenty-four Shillings a Quarter, though once within that Space fo low as Two Shillings y. Neither were thofe before-mentioned the higheft Prices, for in twelve Years after this Period, Wheat was Four Pounds Sixteen Shillings a Quarter, and at fome Times and in fome Places it went even higher ${ }^{2}$. In thefe Circumflances they had not only a Notion of importing to relieve their Neceftities, but of exporting alfo to keep up the Price of their own Grain. But both being fubject to Licences and other Incumbrances they neither of them anfwered any general or public Purpofe a. The fame may be truly faid of a Law that promifed better, by fixing a Price at which Grain might be imported from abroad, which looked like declaring what was then regarded as the flandard and moderate Price of the Commodity b.

In the Time of Henry the Seventh a Notion began to prevail amongf the Nobility and Gentry, then by far the principal Land-owners in the Kingdom, that their Eftates might be rendered much more valuable to them by being employed in Grazing than in Tillage e. This Humour continued to fpread during the two fucceeding Reigns, though vifibly contrary to the public Intereft; and in the Days of Edward the Sixth excited a Rebellion, in which the common People, who were expofed to all the Hardhips without haring in the Profits, flarpened by Indigence and Opprefion, demolifhed in many Counties the greatef Part of the Inclofures d.

[^41]This however did not remove the Evil any more than the Laws had done which were made againft Foreftallers and Ingroffers ${ }^{\text {e }}$

In the Reign of Elizabeth fomewhat more was attempted, but little or nothing accomplifhed by the Acts for promoting and encouraging Tillage, which were warmly fupported on Principles of true, rational, and confikent Policy by the wife Sir Francis Bacon, and as vehemently oppoted on very plandible Grounds of Expericnce and Obfervation by the able Sir Walter Kalegh, who really thought it was impoflible to render Grain a Staple Commodity in this Country. In this Opinion, as flange as it may now feem, that great Man was by no means tingulart. Under the two next Reigns Proclamations and Laws were not wanting to encourage both Importation and Exportation, but with little Effect 3. During the civil War, and under Cromwell, there was much actual Scarcity $h$, though a true Spirit of Indaftry and Agriculture began then to rife, which afterwards had fuch happy Confequences. But there fill wanted fome judicious, folid, and permancht Regulation, which might give a Spring and Support to contant Cultivation, in order thereby to eftablifh certain, fettled, and fuitable Maricits '.

Immediately after the Return of Charles the Second, when the Principles of our domeftic Intereft, and the truc Nature of foreign Commerce, through the indefatigable Labours of many intelligent and public firited

[^42]
## of GREAT BRITAIN.

Perfons, came to be better and more clearly underftood $k$, there were feveral well intended Statutes made relative to this important Point. By the Firf of thefe, the Exportation of Wheat was permitted under certain Dutiss till it came to be Forty Shillings a Quarter 1. By the Second, Exportation was allowed till it was Forty-eight Shillings, with fome Alteration upon the Rates on Importation m. By the Third, it was permitted to export even when above Forty-eight Shillings, paying the Cuftom n. But the Fourth, though a temporary Act, continuing in Force only for the Space of three Years, was the moft remarkable, fince by this a Bounty was given on Grain at a certain Price when exported ${ }^{\circ}$.. This Indulgence is in the Body of the Act exprefsly faid to be on account of the low Rate at which Corn then fold abroad, had a very good Effect, and was confidered by the moft intelligent Perfons in thofe Days as an Experiment, which having anfwered fọ well deferved to be followed $p$.

In the next Reign there was a Law paffed, which has been fince on mature Deliberation more than once confirmed, for regulating the Manner of eftablihing the Prices, according to which Cuftoms were to be paid on Importation 4 . Immediately after the Revolution the Bounties on the feveral Specics of Corn were eftablifhed (as except when for the public Security the $P_{0}$ ver of Parliament interferes) they ftill fubfift $r$. Such have been the Acts of the Legillature with an Intent, by encouraging the Cultivation, to increafe the Quantity of Grain, and thereby, as far as human Policy can, contributing to preferve Plenty. Let us now fee what have been the Confequences; that in the Courfe of upwards of Seventy Years thele Laws have produced.

Whrat, as it affords in various Ways the moft general and neceflary Sribfiftence to the Human Race, fo through the peculiar Bereficence of Di-

[^43]vine Providence we find it capable, with proper Skill and Induftry, of being: raifed and cultivated in molt Soils and Climates through the four Quarters of the Globe s. Befides thofe different Uies to which it is applied in Food, it is fometimes malted, and in that Form enters largely. into the Compofition of feveral Liquors, and more particularly of Mum t . The Diftillers alfo make Ufe of confiderable Quantities, as they find that it yields great Plenty of a fine ftrong Spirit u. Starch, of which in different Ways there is a conftant and large Confumption, is likewife manufactured from it, and this to a very great Value w. The Bran, of which there are feveral Sorts feparated from the Flour, when Ground, ferves feveral Purpofes in Manufactures as well as in Medicine, and is afterwards found by Experience to be a very profitable Manure x .

In thefe our Britih Iflands, exclufive of that unceafing Attention it deferves as an indifpenfable Neceffary of Life, it is in a national Senfe of very great Confequence in affording conftant Employment, and of Courfe Maintenance to Multitudes, in its Cultivationy; and in that Refpect as well as in many others, it may be confidered as a Manufacture, and the Bafis of other Manufactures 7. It is become now, notwithftanding the Opinion entertained

[^44]tertained by our Anceftors, a very valuable and much envied Article in foreign: Cominerce, and confidered in that Light hath brought within the Compafs of a few Years immenfe Sums into the Nation 2. About the Time the Bounty was effcctually eftablifhed, Mr. Gregory King's very curious and accurate Calculations were made public, which fhew what at that Period was the Produce of England in this Grain, which, fo foon were the good Effects of the Leaw either felt or forefeen, "began even then to be confidered as a Staple b. We have the Satisfaction however to fee, that from that Time we have gone on increafing in the Culture and Production of this valuable Grain, and at prefent produce a far. greater Quantity; fo that of courfe the Nation is in this Refpect fo much richer, larger Tracts of Land have been brought into Tillage c ; and we have, and may certainly continue to have, a more: extenlive Exportation. It is true, that there fill fometimes happens Seafons of Scarcity, but thefe fall out much feldomer, and in Refpect to Severity are in no Degree comparable to what were felt in former Times d. Betides even thefe have their Utility, inafmuch as they ferve to inform us, that there is yet fufficient Room for Improvement, and not the leaft Ground to doubt, that Markets may and will be found for the increafed Produce, even if it hould be carried, which furely is far from being impoffible, much beyond its prefent State.

Rye is a Kind of farinaceous Grain, which grows very tall, on a thin, dry, and gravelly Soil, and will, generally fpeaking, fucceed where other
fasturec, ae it fupplies confant Employment, and though moderate yet competent Wages, which: the Fruit of their Labour always fupports, as Corn is an Article never fuffers from Fafhion.
a Tracts on the Corn Trade, p. 136. It appears that in Nineteen Years from A. D. 1746 to-$1-05$, deducting the V:lue of Wheat imported within that Space, we exported in that Grain to the Amuunt of $£ \cdot 10,365$, , 06 , which at an Average is $£ \cdot 545,55^{8}$ per Aunum. All in our own Shipping, which is another and very great Advantage.
b. Publithed by Dr. Davenant in his Eflay upon the probable Means of making a People Gainers in the balance of Trade, London, 1699, p. 7 I. He flates the Praduce of Wheat at $14,000,000$ of Dufhcls.

- The Vouchers for this are taken from the Collections of the accurate, ingenious, and induftrious Author of the Tracts on the Corn Trade. He makes the annual Growth of Wheat 32,372,824 Buthels. Of this he computes there is fpent in Bread $30,000,000$, for other Ufes he allows 720,000 , and fixes the Exportation at 1,652,824 Buhhels. In regard to Weight, a Bufhel contiins fion Fifty-fix to Sixty Pounds. In the Counties where they meafure nine Gallons to the Bufhel, as for Inftance, in Staffordfhire, they reckon from Seventy to Seventy-five Pounds a Bufhel. The Mealmen who choofe to buy rather by Weight than Meafure agree, that a Sack (which hould contain threc Rufhels) hall weigh two hundred and twenty Pounds.
d Dr. Davenant in the Book above-mentioned, p. 8 r . Kays, that in Edward III s Reign, Corn cuce rofe to thirteen Timcs the common Value. If we call Four Shillings a Buthel the common Value of Wheat, then we may truly affirm, that in Sixty Years it never role to double the Value, and not ahove once came near it. In fome Jarts of England this may be contradicted from Exprience; but enquining into, and comparing Mcafures will re-eftablih the Fact.

Corn would not $<$. It is next in Price to Wheat, which, though inferior to it in many Refpeas, in fome others it very much refembles f. In feveral Places this Grain with an early Kind of Wheat are fown and reaped together g. The general Uie of Ryc is for Bread, of which there was much inore formerly eaten than at prefent, and yet there is fill more of it confumed in this Way than of Barley h. Rye-bread in the Opinion of good Judges, is rather unwholefome than unpleafant. It is conceived to be of very difficult Digeftion, and therefore only fit for hard-working.and laborious People ${ }^{\text {. }}$. Belides this, it is black, heavy, and by no Means pleafing to thofe who are not ufed to it ; but, as appears from their continuing in the Ufe of it, very acceptable, and agrees well with fuch as have been accuftomed to it from their Youth $k$. But this Grain being mixed with Wheat, is thought from its Clamminefs to contribute to keep the Bread made of it long moift, to give it an agreeable Flavour, and to make it go farther, and to fave the Trouble of frequent baking 1. It yields a great deal of fine and flrong Spirit,-and fome Ufe is made of it by the Tanners $m$.

Upon the Whole, as the chief Confumption of Rye was in Brcad, and as for more than Half a Century paft this has been continually diminifhing, fo we at prefent grow lefs of it than in Times paft, though we export more of it

[^45]
## of GREAT BRITAIN.

than we formerly didn. It may however deferve fome Cunfideration, whether for feveral weighty Reafrns the Culture of this Grain fhould not be more attended to and encouraged, and, anrongt others, for thefe that follow. Becaufe it will grow almolt every where, and on any Sail, not only with little Trouble, but, which is a Circumftance not unworthy of Notice, with lefs Danger of failing than alinoft any other Crop ${ }^{\circ}$. Becaufe though fefs eaten here than in fo - Times, yet it is fill in great Ef feem abrcad, more efpecially in the Northern Parts of Europe, where the Confumption of it is latge, and it fells at a confiderable Price p. Laftly, becaute our Rye is thought wholefome, and much lefs if indeed at all expofed to that drcadful and deplorable Malady the French call Ergot 4, which frequently renders the eating it very dangerous and deftructive, not to Man only, but to all Animals, and of courfe our Rye from this fortunate Circumftance will preferve a Preference in foreign Markets.
B.ariey is faid to have been the firf Grain introduced for the Suftenance of Maiz, the Cultivation of which was taught by the Goddefs Isiss to the Asgyptians, according to the mon ancient Hiftories of that Nation r. It grows on worfe Land than Wheat, and the different Kinds thereof agreeing with various Soils, we find moft Surts of it rafed with great Succefs, more efpecially within the Space of the current Century throughout all the Britidh Illands; to the Inhabitants of which it is a Grain highly valuable, on account of the many and iyportant Ufes to which it is converted s. It was anciently made into Bread, and much efteemed in many Countries. It was fo even in this. and though now Wheat-Bread very much, as well as very gemerally prevails, yet it is ftill the common Food of at leaf the ordinary Sort of Pcople in feveral Counties, where Experience fhews it to be very
$n$ The French very wifly and fuccefsfully practife a Hufbandry which they learned from us (Dictionais: Univerfelle d'liftuire Naturelle, toin. v. p. 200.) they fplit the Ridges of Wheat.ftubble, and fow it with Rye, which in April and Myy they cut for their Black Cattle (whereas we feedSheep an 1 Lumbs); and if the Weather proves favournble they mow it three Tines, which at that Saton is hes!ity beneficial.
$0 \cdot 1$ ? does well in mountamoss Countries, and ripens almoft without fecing the Sun in light fanly Soils, and alfo in tolerably gond Ciround thrives wonderfully.
"Olien above, and very fellom under a Guinea a Qinarter, ufually at a higher Price than Barley, and about two Thirds the Price of Wheat.
i Pinitufuphical Tranfactions, $\mathrm{N}^{\circ}$. cxxx. p. 758. It is a moft horrid Diftemper, ending fac quent!y in an iacurable Gangrenc.
: Di, dor. Sisel lib. i. F. g. Plutarch. de Ifid. \& Ofirid. Reimm. Id. Antiquit. Egypt. § 23, p: 54. It defores fome Confideration what this Invention was. It appears from the firf cifed AuBior, that Lis found the ilints of Barley and Wheat growing in the Woods, and that fhe tanght Mun how to colient, fow, and cultivate them, fo as to increafe the Quantity, and at the fame Time to melionte the Grain.
: The Produce of Barley, as fated by Mr. King, was 27,000,000 of Buffels. At prefent the the anuual Produce is $38,826,176$ liafhels in a common Year.

## 72 The POLITICAL SURVEY

wholefome, hearty, and nourifhing t . There is particularly a certain Sore of it ftiled Naked or Wheat Barley, the Flour of which anfwers better than any other for that Purpofe u. But Barley in general, on account of its being more incumbered with Bran, is now chiefly employed for the making Malt, which is a very ufeful, extenfive, and curious Manufacture, by which Multitudes are maintained w. Malt is brewed into Beer and Ale of different Kinds, the Ufe of which is as giral in refpect to Drink, as that of Wheat in regard to Bread $x$, and from hence arifes great Profit to Individuals, and a very large Revenue to the Public y. Befides this there is a very large Confumption of Malt by the Diftillers, who draw from thence amazing Quantities of Spirits, on which likewife there are very confiderable Duties 2.

In fome Countries in Europe Barley is ufed as Oats are with us in feeding Horfes ${ }^{\text {a }}$. It ferves alfo admirably well for fatting Hogs, Poultry, and other Animals b. We export, after fupplying our own large Demands of all thefe different Kinds, both in Grain and Malt, to a very confiderable Amount c . We grow at prefent about one Fourth of this Grain more than we did at

[^46]
## of GREAT BRITAIN.

the Beginning of the current Century c ; that is, in South Britain; and it may be ftill more in Proportion in North Britain and Ireland; in both which Countries it thrives exceedingly well, and it has been of late Years, as we have before obferved, very affiduoully cultivated d. As the Bran of Wheat, fo the Duif of Malt, is found by Experience to be a moft excellent Manure ; and indeed the Grains and the very Lees of Malt Liquors are converted to profitable Ufes e. *

Oats are of different Kinds, diftinguifhed commonly from their Colours into black, grey, red, and white Oats; and as a very ufeful and profitable Grain, cultivated throughout all the Britinh Inands f. In the County of Cornwall, and in the Bilhoprick of Durham, it may be alfo in other Counties, there is a Sort of naked Oats, which very much refembles Wheat, and is faid to fell almoft as dear, as we have already mentioned elfewhere s. This Grain is ftill ufed in making Bread in Wales, over the greateft Part of Scotland, and in the North of Ireland, and the People who eat it are frong, active, and healthy li. It ferves in other Rcfpects as a neceffary and falubrious Article both in Food and in Phyfic to the Iohabitants of the whole Inland, and great Quantities of it are continually ufed at Sea $i$. But the principal Confumption, more efpecially of late Ycars, and particularly in South Britain, hath been for the Feeding of Horfes, being from Experience found the wholefomeft and fitteft for that Ufe;

[^47]and in regard to this, it is at prefent become a very confiderable Object $k$. Oats are likewife very much ufed for the Fatting of Poultry and other Animals, and were formerly preferred to all other Grain for this Purpofe. They may be, and in Times part were frequently malted, and made a very good, pleafant, and wholefome Drink, yielding likewife a very fine Spirit !.

In the Opinion of fome it is not at all impoffible that their Hulls might be employed as the Bran of Wheat is in making Starch ${ }^{\circ}$. As there was no Bounty allowed upon the Exportation of this Grain in the firft Statutes, the Defect was afterwards fupplied n . But notwithftanding this, it has been thought by the beft Judges, that there ftill remain fome Defects which ought to be remedied, and this itis conceived might be eafily done, by putting Oats on a proper Proportion with other Grain, which would very much facilitate the free Circulation both of the Corn and Meal here at Home, and thereby prevent a Monopoly of fome Parts of the Kingdom againft the Reft, and might alfo promote a farther Cultivation ${ }^{\circ}$; which feems to be a Thing extremely neceffary, fince though we grow at prefent more than double the Quantity that we did about Sixty Years ago P , yet the Demand is fo much increafed as to occafion frequent and large Importations, and this too (which deferves Notice) at a Price fo high as to be vifibly inconfiftent with the public Intereft $q$, and which by the Amendments above propofed might very probably be prevented.

Brsides thefe different Kinds of Grain, there are feveral Sorts of Pulfe that are fet or fown for intermediate Crops in what is filed Arable

[^48]
## of GREAT BRITAIN.

Land, from an ancient, well founded, and ftill prevailing Opinion, that inftead of impoverifhing or exhaufting, they nourih and improve the Soil r, turning alfo in their own Produce to very confiderable Advantage. Amongft thefe we may in the firft Place very juftly reckon Pease, that is Field Peafe, of which in the common Eftimation there are a great many Kinds, denominated fometimes from their different Colours, and fometimes from the -Places in which from their fucceeding beft they are moft efteemed. But a very able Writer of our own Country very judicioully obferves, that they may be all reduced to two Sorts, diftinguifhed by their Size, the leffer and the largers. They are likewife held to be very ticklifh, and incertain in their Succefs, for which the fame Author affigns very probable Reafonst: However of fome Sort or other they are univerfally cultivated, and ferve for a great Variety of Ufes. Large Quantities in a Diverfity of Ways are confumed annually in our Kitchens, ftill larger in Sea Provifions, and much more than both thefe taken together in the Fattening of Hogs, which creates a conftant, confiderable, and continual Demand u.

Next to thefe we may reckon Beans, which ferve likewife for much the fame Purpofes $w$, are exported for the Food of the Negroes in our Plantations, employed in feeding Horfes at Home; fo that altogether they are in daily Ufe, and moft certainly turn to a very confiderable Amount $x$. Vficines or Tares of various Denominations are likewife fown for the Sake of yiclding early Fodder for Cattle while green, and when ripe afford excellent Food for Pigeons 5; as Lentils, which the common People call

[^49]Tills, do both for Pigeons and for Calves, and therefore in fome Counties are in great Requeft 7 . All thefe are raifed with very little Trouble, grow when Seafons are favourable luxuriantly, yield confequently quick and large Returns, and, when brought to Market, are one with another fold as dear or dearer than Barley, which makes them no inconfiderable Object to the Farmer, in Addition to his other Grain ${ }^{2}$.

If is on this Principle they find a Place here by Way of Appendix to the Produce of Corn Lands. It is not poffible, however, from any Inquiries, or indeed from the Nature of the Sabjects themfelves, to enter into fo much as a probable Calculation of their refpective or comparative Values ${ }^{b}$. Yet we may venture to affert, without Fear of injuring Truth, that in Proportion to the greater Extent of our Corn Lands, and the Increafe of all Sorts of Animals that are nourihed for Food, the Quantities of all Kinds of Pulfe muft have been gradually very confiderably augmented.

All thefe have an apparent Relation to the ancient Stile in Agriculture, and no fmall Part might poffibly be preferved, by what feems to have been the Law of Farmers, a conftant Tradition from the Times when our Lands were fo fuccefsfully cultivated by, or at leaft under the Direction of the Romans, who as their learned and judicious Writings plainly fhew, were very ftudious in, and had a juft Reverence and Efteem for, this moft ufeful and profitable Science c. In fucceeding Ages there is no Queftion, that in confequence of the Travels of our obferving and public-fpirited Countrymen, and the Knowledge they obtained from their frequent Expeditions into foreign Countries, we borrowed new Lights from fome of the moft intelligent of our Neighbours, and more épecially from the Flemings ${ }^{d}$, who for a long Time were very highly and very defervediy famous for being one of the moft ingenious, as well as one of the moft induftrious Nations in Europe, and with whom in different Periods we had very clofe Connections e.

[^50]IT was from them forlewhat more than a Century ago, as near as can be collected, that we learned the Nature, Value, and the Culture of Clover f. But it was notwithftanding a great many Years after it had been thus introduced, that we came to make Ufe of this very valuable Acquifition, as an intermediate Crop, which occafions the Mention of it here g. In this View it is fown about the Beginning of the Month of April, to the Quantity of Ten or rather of Twelve Pounds of Seed, though fome fay Twenty Pounds, upon an Acre h , in Land naturally rich and warm, or on Lands that have been highly manured with Dung, Lime, or Marli. About the End of May it will be fit for mowing, or, which is held better or more advantageous, may be then employed in feeding Cattle; and notwithftanding this it will feed fometime in the Month of June, fooner at fometimes and ir fome Places than in others, according to the Nature of the Soil, and Benignity or Backwardnefs of Seafons; and then being again mowed, it is even after that, more efpecially if the Weather is favourable, fill of fome Value in feeding $k$.

Ir is often luxuriant in its Growth, and proves confequently a very profitable, but is ever an incertain and precarious Crop. It may, and fometimes does yield five Bufhels of Seed; but three on an Acre is more common, and even then all the Advantages derived from it being computed and confidered, it is not thought inferior in the Value of its Produce to Wheat ${ }^{1}$. The Seed is threfhed out of the Hay with no finall Trouble about March, and is always a faleable Commodity, though fometimes at a

[^51]higher, fometimes at a lower Price m. Both by growing and feeding it fc improves the Soil, that the Farmer feldom fails with due Care and Culture of reaping a good Crop of Wheat from the fame Land the next Year $n$; ane this Circumftance, as in Juftice it ought, is a ftrong Recommendation; and therefore Clover is very likely to maintain that Credit in which in this Refpect it has fo long ftood amongtt thofe who are its only proper Judges; that is, the judicious and experienced Practitioners of Hubandry o. . Thefe are now much increafed in Number, which is an Event equally favourable to the Art and to the Nation.

We owe to the fame Country, and to the fame Neighbours, another Improvement of the fame Kind in refpect to Turneps. The Value of them, even in the Manner in which we ufe them, though looked on as a new Species of Hufbandry, was however very far from being unknown to the Ancients, for Columella and Pliny both fay, that they were generally efteemed next in point of Value to Corn in their Produce; and the former affures us, that they fed their Cattle with them in Gaul in his Time p. But certain it is, that the firft Notion of what has been fince fo generally and fo fuccefsfully practifed by us, came, as we have faid, from-Flanders at the fame Time with Clover q. But at firft, which has been too frequently the Cafe in Things of this Nature, it feems to have been overlooked, and even neglected for many Years r, and then again propofed, explained, and recommended with better Succefss. For it 'fo fell out, which proved the
m. When Clover was firf introduced, and we had our Sced from abroad, it was fometimes extravagantly dear, and, which was worfe, feldom to be depended upon. But fince we found out that our own was the beft, it has fold (accurding to the Scarcity or Plenty) at or from One to Four Pounds a Buthel ; the beft is of a greenifh Yellow, and when fpoiled becomes Black.
${ }^{n}$ Clover may be fown after any Crop, it will feed many more Catile than common Grafs, and when mowed for Seed the Crop is removed in good Time.

- Experience is the Farmer's only Guide, and yet he can fcldom fpare Time or Money to make Experiments. The Society by their Premiums have removed, aty leaft, in a great meafure this Difficulty. In doing this they have dothe more than was ever done towards promoting the Progrefs of Agriculture, and thereby meric highly of their Country.

## of GREAT BRITAIN.

 principal Caure of its fucceeding Progrefs, that the firft effectual Trial of this enlarged Cultivation was made in a Country the fitteft of all others for the Reception of fuch an Improvement, where it fucceeded as well as could be wifhed; and yet, notwithftanding this was fo well known and much admired, fo backward were People in thofe Days in Things of this Nature, that it was fome Time before it travelled out of Norfolk into the next County, Suffolk, and from thence into Effex ${ }^{\text {t. }}$. In the fame Proportion as the Turnep Culture prevailed, it was rendered more and more ufeful, by correcting feveral Inconveniencies with which at its firft Introduction it was attended $u$. But for many Years paft it has been continually fpreading, not only into moft Parts of South, but alfo into North Britain and Ireland, where its Utility is fo apparent that it continues to extend itfelf every Day w.Turners carefully cultivated, more efpecially according to the new Hublandry ${ }^{x}$, grow to a large Size, many of them from Six to Fourteen Pounds a Turnep, or more $y$. We may the lefs wonder at this, fince Pliny fpeaks of Forty Pounds, and other Writers mention Turneps of far greater Weight 2. It is not however their Size only, but the Quantity of Turneps which render the Crops of them fo highly beneficial. Fifty or even Sixty of thefe large Roots are in the new Hufbandry frequent on a fquare Perch,

[^52]which amounts to about Eighty Quarters on an Acre a. In moft Soils, with due Attention, Turneps do remarkably well, but molt fo in light, warm, gravelly Grounds, and in Sand, where they are thought to meliorate the Soil b. The great Profit that almoft conftantly accrues from them, ailes from thcir being excellent Food for all Sorts of Cattle. Eiwes, Lambs, Sheep, Oxen, and even Hogs, are not only fed but fattened by them, properly managed, and with the Addition of a very little dry Food c.

Tie very great and continued Succefs attending this Hufbandry hath, as will be prefently explained, opened a Field to farther Improvements of a like Nature d. It may be, that even in regard to thefe already valuable Roots in this inquifitive Age, and when fo great Attention is thewn to cvery Thing of this Nature, fome farther Progrefis may be ftill made e. But even as Things now itand, there is no one Branch of Englifh Hufbandry that hath been more admired and efteemed by Foreigners than this, and in which they have teflified a greater Inclination to imitate us, more efpecially in Germany and in France ${ }^{\text {t. }}$

Carrots feem to be as early if not earlier brought into this Country than Turneps, for, as in another Place we have already obferved, the Flemings, who fled hither in the Reign of Queen Elizabeth, finding the Soil

[^53]remarkally fit for them, introduced them about Sandwich3. They grew quickly into Efteem as an edible Root, and, confidered as fuch, were propagated through, and carefully cultivated in not farts of the Illand b. They weic afterwards fown in Fields, and chithy employed in the Fattening of Swine and Geefe. But the principal Ohect aimed at ty this enlarged Cultivation was their Seed, which bure a eat Price, and for which there was a conftant Market i. This was practiled in the laft Century, particulary in Northamptonfhire, where the fandy Soll agrecing well with the Root, proved favourable for this Improvement, and confequently diffufed the Practice confiderably. At length, in the Eaftern Part of Suffiolk, encouraged by the Succeis of the Norfolk Farmers in regard to Turneps, they began to grow Carrots, for which their Soil was better adapted, and applying them to the fame Purpofes met with like Succefs $k$. In this County they might have continued long unheeded, and been looked upon as a mere local Improvement, if the Society for the Encouragement of Agriculture and Arts had not, by the Promife of a Premium ', called the extenfive Cultivation of this ufeful Root into a Point of public View, and have thereby excited thereto a Atronger Degree of Attention.

Ir was in confequence of this that an active, fenfible, and induftrious Furmer in Norfolk, after making a few leading Experiments, ventured to fow upwards of Thirty Acres, and which was equally ferviceable to the Puilic, gave a clear, plain, and diftinct Account of his whole Management in the Courfe of this Undertaking, which gave much Satisfaction $m$. Car-
\& Political Surver of Creat Britain, vol. i. P. 398, from which Sandrich Carrots are fill f:mons, as in the laft Age weac Sandwich Peafe.

i The Aarkets diatuated fom Fire to Twelve Ponds an Hundred. M. Mortimer informs us, that a Farmer in Filfex grtibed an ()rohad of a fingle Acre, dug it up, fowed it with Carrote, which produced Ten Ilundred-weight of Seed, which he fold at London for Ten Pounds an Hundral.
${ }^{k}$ This Culture prevailed chicfly about Woodoridge, where the Soil is moftly Sand with a fmall Plisture of Loam. Carrots grew there to a very large Size, and they had commonly Twenty Londs or more upon an Acre. They ufed them chicfly for Feeding their Horfes, and fometimes when they had wery large Crops fent confiderable Quantities by Sea to London.

1 The Society promife Three Premiums of Twenty, Fifteen, and Ten Pounds for the greateft Quantities of Land fowed with Carrots, not lefs than Ten, Fight, and Six Acres, to obtain thele Premiums refpectively, and promife a Gold Medal for the beft Account that thall be gircu of the mofl profitable Method of cultivating them, which Premiums are extended to North Britain, Ireland, and the Colonies in North America.
$"$ The Title of this little Piese is, "An Account of the Culture of Carrots, and their great Lie in fee ling and fattening Cathe, by Robert Billing, Farmer, at Wrafenham in Norfolk, London,

## 82 The. POLITICAL SURVEY

rots affect a light, warm, fandy Soil, and the nearer the Land on which they are cultivated approaches to this fo much the better. If it hath borne a Crop of Turneps the preceding Year it is ploughed twice, otherwife thrice at leaft, and muft be alfo properly dunged. The firft ploughing early, that is about November, in a nlight Manner, but the fecond as deep as the Staple of the Earth will allow $n$. The Seed being finall and very apt to cling together, it is firft preffed through a fine Chaff Sieve, and then carefully fown, about Four Pounds upon an Acre. Sometimes immediately after Lady Day, but always in the Courle of the Month of April. In about Three Weeks the Carrots begin to appear, and in Six or Seven are fit for the Hoe. In the Space of a Fortnight after, they are harrowed, and if the Weather he rainy, the hocing and harrowing mutt be repeated ${ }^{\circ}$. Towards the Clofe of October the Carrots are drawn either with a fourtined Fcrk, or a narrow fhared Wheel Plough guing flowly, followed by a Boy who picks up the Carrots, and lays them in Heaps. The hoeitec, harrowing, and drawing, as we have intimated already, are attended with a confiderable Charge p.

The Produce is from Ten to Seventecn, to Twenty, to Twenty-two, and even Twenty-four Loads of Carrots on an Acre g. In regarl to the Ules of this Improvement, they are numerous and of fome Configuence. Cows feeding on them give much Milk, from whence excellent Biatter is made, well tatted, and of a fine Colour. Calves thrive admiably o:

 Coblections, and thereby the Hillory of this Inprovement extenfively dith:id.

 one toilowing the ceice in the fanc lurrow, and the latter loniming the Enth, a fort and an 11 ta deep. Others, inftead of the iecond Plough, have a Man followins the fint Phent with a Spat.
"The firfe Hoeing Mr. Bilhing fuys coft him Ten or Twelve, the lecond Five shailings an Aure. This with the Harrowing makes the Culture expenfive. Lut as Carros arest enpolc: like TurDeps to the Fly or to the Caterpillar, which make the a mone cortan, and in their Natu: hay
 plain, and with regard to the Public the nore porr leople who are eapleycd bo meth he betce.
 abie Dificuly. But we ought alfo to condider, that as this Improwment advances thele Cobicerions will be emoved. As People are more ufed to Hocing, they will do it quicker and cheaper; add to this, that Farmers themfelves will fall upon Methols of Leffeuing the 'lrouble which na:tarally, indecd neceffarily, attends any new Uudertakin?
$q$ Mr. Billing gives a very diftinct and clear Acount of his Crop. On Thirty Acres and an Hall, he affures us he had Five hundred and Ten Loads of Carrots, many of them 'Two Fect in Length, and from Ten, to Twelve, to Founteen, and even to Sixteen Inches in Circumference at the Fop. This he judges to have been equal to One thouiad Lond of Turneps, and went as far as Thrce hundred Lead of Hay, which was, as be alfo talls es, at that Time worth One Pound Five Shillinge a Load.

## of GREAT BRITAIN.

there Roots, and Bullocks fatten upon them expeditioully. They agree equally well with Sheep. Horfes will perform all ordinary Work without any other Suftenance. Swine cat them readily, increafe in Flefh, and require only a few Buhhels of Peafe to harden their Fat, and are therebe made fit cither for Pork or Bacon r. They ferve alfo wonderfully well for Poultry. They are ftrongly recommended for Dogs, and in hard Winters they have been found highly ferviceable in preferving Deers. But after -mentioning thefe Advantages, it is but juft to allow, that the Cultivation of Carrots is attended with fome Inconveniencies. All Lands that bear Turneps will not ferve for Carrots, thcir Culture, for the Reafons before affigned, is more expenfive, and in cafe of Froft they are with great Difficulty drawn out of the Ground '. On the other Hand, they are allowed to be a more certain, and a more profitable Crop. They keep better, and the Method of railing them out of the Earth by the Plough, beffides other Advantages, prepares the Soil for any other Crop, which in cafe of their being followed by lanley particulariy, hath been remarkably plentiful u. Upon the Whole, this is certainly a valuable Acquifition, as it affords us a new and cheap Suftenance for Animals, and at the fame Time furnihes an admirable Precedent for future Improvements w.

[^54]
## 84 The POLITICAL SURVEY

Parsneps, as they have a great Refemblance to Carrots, have like them been many Years in our Kitchen Gardens, and efteemed equally pleafant and nutritive as Foodx. But hitherto no Trials have been made how far they might be acceptable to Animals. On the Knowledge, however, that in this View they had been cultivated in the neighbouring Country of Bretagne with fome Degree of Succefs :, the Society for Encouraging Arts, Manufactures, and Commerce, very generounly gave a Premium to facilitate the Culture of thefe Roots for the like Purpofe here. How far this will fucceed Time muft determine. It fuems however certain, that being inferior in point of Profit to Carrots, they are by no Means likely to fupplant them. But if what a very intelligent and judicious Writer afferts, that they thrive beft in a Soil directly oppofite to that which is moft proper for Carrots ${ }^{7}$, hhould be found a Fact, they may then be cultivated in fome Places where the Land is unfit for Carrots to confiderable Advantage. At all Events the Conduct of the Society merits much from the Public, as by their Interpofition a Trial will probably be made, from which the Poflibility of this Culture in this Country will be afcertained, and the real Value of it rendered apparent ${ }^{\text {a }}$.

Upon the fame judicious Principle they have in like Manner given Encouragement to feveralother Attempts, fuch as the Sowing of Parfley in Ficlds for the Feeding of Sheep, which is faid to have beentried many lears ago, and not without Succefs, in Hamphire b, and befides is a Thing very reafonable

${ }^{y}$ Corps d'Obfervations de la Socicte d'Agriculture, de Commerce, et des Arts etahlic par lis Etats de Bretagne, p. 141. The Society were acquained with this Hulnoniry iny M. Ie Brigam, who fays the Seed is fown in February or March, raifed out of the (iromm in ()étoher, wat:r in November. He fays that Cattle and Hogs thrive equaliy well on thefe Rusts, and that Honlus would eat them, but that they render them dull, and ruin their Eycs and their Limbs.
$z$ The ingenious Mr. Litle fays, that Carrots and Parfneps delight in different Soils, viz. Canrots in fanty and the lighteft Grounds, Parfneps in the ftrongref Iand. In fupport of this he. cites the learned Mr. Ray, who ufes the fame Terms. One might conclute from hence, that one or other of thefe Improvements may be introduced in moft Places. The great loiut is whether buth are alike wholefome, and this muft be decided from Experience.
${ }^{2}$ Before we part with this Subject abfolutely it may not be improper to remark, that Mr. Houghton in his Colleftions, vol. ii. p. 46a, acquaints us that a Patent was obtained for difilling Spinits from Carrots an I Parfneps, but that the Spirits from Parfneps came neateft French Bramly. Mr. Hartiib and Mr. Mortimer both fay, that Peafe jield Plenty of a ftrong and fine Spirit, more than two Cullons ont of a Buhhel; the Procefs may be found in the Art of Hufbandry, vol. i. p. 355.
i This Trial was made in the Neighbourhood of Portfmouth, and fands reported by Mr. Honghton in his Collections, vol. iv. p. 142, where many Reafons are given in Favour of this
in itfelf, and which may very probably be attended with various Advantages when once it thall be brought into public Notice, as the Flefh of Sheep fed upon this Herb is faid to derive from thence a very agreeable Flavour c. Theie pecuniary Encouragements muft neceffarily be productive of many beneficial Confequences in the introducing and eftablinhing thofe new Hufhandries, and thofe only which are found practicable and profitable; and which is of no lets Utility in detecting fpecious but deceitful Projects, which have frequently a fair Appearance on Paper, but which fail notwithitanding in the Exccution. Befides, which is no inconfflerable Advantage, the ? ivine, what was never done before, an Opportunity to cvery knowing and iagenious l'erfon to propofe his Thoughts in refpect to this ufeful Science, and to bring his Notions to the Tet of Experiment. By Means like thefe Agriculture will be gradually reduced to certain and ftable Principles, and as this molt ufeful Art extends national Plenty and Profperity will of courfe extend with it.

We come now to fpeak of Things that are in their Produce of far greater Value, which for that Reafon are raifed, not as intermediate Crops but by themflics. The Hop came like our other Improvements from Flanders, and was introduced into this Country about Two Centuries and a Half ago ", and hath been from that Time cultivated, and of late Years more efpecially, with equal Alfiduity and Succefs c. There are feveral Kinds of Hops; but notwithflanding this we find, generally fpeaking, Two Kinds only that are at preient cultivated in our Grounds, which are diftinguifhed

Cultuce. Mortimer in his Huthandry, vol. i. p. 62, mentions it as practifed in Buckinghamfire :0 picture their sheep from the Rot. He alfo relates that a Farmer in Effex made a great Impooment by fowing fome Lands with Muftard Seed for the fame Purpofe.

It i impumbe to !alde ia fuch Cafes with any Degree of Certainty otherwife than by a Trial. 'inin $\therefore$ then wish litte is expeited have produced extraordinary Effeets, and others of much
 Chmatu Carolima towads the Clofe of the laft Century, and in the Beginning of the prefent we impated form thence feveral Hundred Tons. A fruitlefs Experiment leads fometimes to ano: "ir that fas's the Coft of both.
" Howhton's Collétions, vol. ii. p. 457, where he fays he was informed from Maidfone (in the Pembibourhood of which ai the Clofe of the laft Century they retumed $f .200,000$ a Year for If p: ficey were introlucul. A. D. $15^{24}$, the Fifteenth of Henry VIIf. which agrees with our ohd Chruides, but they weie known and afed long before. In a Statute in the Reign of Folward W. Ielating to hachtures, an Exception is made in favour of Hop Grounds. We frill continned iaperting the sreatelt Part of the Hops we confumed, and were fo ill ufed in this Commodity, that in the Fiatt of hing, Jumes 1. at Law was made for preventing Frauds in the lackage of Hops, in which it is i..id, that Two thirds of what was brought over were Sticks, Stones, and Dirt, fo thit the Nation was ammally cheated of more than $L \cdot 20,000$.

by the Names of the Long White and the Oval Hop, and are commonly mixed together f. This Plant pierces very deep into the Earth, fometimes, as we are told, Four or Five Yards, which is very neceffary to obtain that copious Supply of Juices requifite for its Growth g. In different Counties, for the Culture of it is now very widely fpread, they employ very different Soils; but it is commonly allowed, that Land inclining to a South Expofition, low and warm, defended from the Fury of the Winds, either by Hills or Trees, of a deep Soil, and where Water may be commanded in the Summer, is the propereft for a Hop Garden ${ }^{h}$. The Culture of this Vegetable, than which none requires greater Care or more conftant Attention, proves frequently beneficial in a very confiderable Degree to Individuals, and is always fo to the Community.

A very confiderable Number of Perfons, and thefe in different Ways, are employed in the Management of a Hop-Plantation, and almof at all Scafons in fetting, weeding, dreffing, polling, picking, drying, and bagging of Hops. All of thefe are in themfelves very nice and curious Oferations, on the exact and accurate Performance of which, independent of Seafons, which are alfo of great Confequence, the Succefs of the Hop Planter in a great meafure depends i . The Benefits derived from them are fubject to great Incertainty, no Plant being more expofed to Accidents, and independent of this too great Fertility is to the induftrious Owner fometimes as fatal as too flender a Crop. But thofe who have Money, and of courfe are able to wait for a Market, avail themfelves of both k . It hath been computed by thofe who

[^55]are efteemed the beft Judges, that in an Acre of Hops, producing to the Value of Thirty Pounds, one Moiety goes clear into the Pocket of the Proprietor, and that the other Moiety of it goes in difcharge of the Rent, Tythe, and all other Expences ', except the Duty by Excife, which is however drawn back on Exportation ${ }^{n \prime}$; and the Duties on Hops imported are fo high as to prevent their coming in, except in a Time of extreme Scarcity, when the Brewery might be otherwife injured; and in many other Refpects Provifions have been made by Law to render the Proprietors of 50 precarious. a Commodity as fafe as poffible ${ }^{n}$.

Hemp is a Plant fo generally known, and has been fo long and univerfally employed in a Variety of Ways for the Service of Mankind, that it is. unneceffary to enter into any Defcription of it ${ }^{\circ}$. As it is every where of Ufe, fo it grows or at leaft would grow in moft Climates. It feems to thrive, rife higher and ftronger in the Northern Parts of the World ; but is fairer and finer in Southern Countries. However in refpect to this, very much depends upon Cultivation, and on the primary Manufacture P .

[^56]
## 88 The POLITICAL SURVEY

It delights certainly in a deep, rich, and warm Soil ; but Experience Shews, that with due Care and proper Manure there are few Soils in which it may not be raifed to Profit. The Land employed for this Purpofe mult be ploughed as often, and rendered as fine as for Barley q. It is fown in the Month of April, fooner or later as the Seafon directs, about Three Buihels upon an Acre. It rifes fpeedily out of the Earth, and by its own Strength defends itfelf pretty well from Weeds, notwithftanding which in fome Places they hee it carefully, and it thrives the better for it r . It is liable to Accidents as well as other Crops, but fuffers moft from a very dry Seafon. The Sexes of this Plant are fo obvious as to have been always diftinguiihed, which. however, has not hindered their being commonly miftakens. The Summer Hemp, as it is commonly called, is pulled about the Beginning of Auguft; but the ftronger Hemp not till towards Michaelmas, and great Care is to be taken in he firft pulling ${ }^{t}$ not to injure what is left ftanding.

As no Country confumes more of the Manufactures made of Hemp than our own, fo perhaps there is not any Soil or Climate that agrees better with it, or where it may be, or indeed is raifed in greater Perfection ". In the Northern Parts of Great Britain it rifes as high, and is as frong and tough as that from Riga, and in the South we have it as fine as in France. We will not Speak here of the particular Places, as having already pointed them

[^57]out in this Work. But nothing is more certain than the Facts that have been advanced, fo that it feems not a little ftrange that we hould import annually fuch large Quantities w, unlefs it be the giving Bounties for the Production of it in our diftant Colonies, when with a fmall Degree of Atrention we might fupply even our large and conftant Confumption from the Growth of this Plant at Home $x$. It is, confidered in this Light, and indeed in many others, a Thing that well deferves the Notice and Encouragement of Governmenty. The Harveft being late affords Employment for many poor People at a Scafon when they ftand moft in need of it; for though it demands no great Attention while growing, yct the pulling, watering, beating, fivingling, and hockling makes it pais through many Hands, to whom it furnifhes a comfortable Subfitence, and the Produce of an Acre, when it has paffed through thefe Operations, is very feldom lefs than Ten Pounds z . The Seed alfo is of great Value; but where this is principally regarded, the Plants thould be fuffered to grow at a greater Diftance from each other, and be alfo allowed to fand till they are thoroughly ripe.

Flax

${ }^{w}$ Mr. Houghton tells ws, we imported in A. D. 1695,3573 Tons and 14 Cwt. In A. D. 7763, we reccived from Rulfia as I have been informed, $76_{4}, 874$ Pouds of this Commodity, which makes about 12140 Tons, which fhews the great Increafe of our Manufactures, and the immenfe Saving that would arife if we could grow this, or the greater Part of it in the Britifh Illes; which their Extent, and the prefent Condition of many of them maturely confidered, cannot be thought impracticable.
$x$ The Two capital Objections to our growing Hemp in grent Quantities, are, r . That it requires the very beft Land, which, as we have already obferved, is not true. At Holme, in Spalding Muor, in the Eaft Riding of Yorknire, the Soil is barren Sand, yet with proper Care and Culture it produces the fincli Hemp in England, and large Crops of Flax alfo. 2. That it impoverifhes the Land, fis that it muft reft long before it can bear another Crop. This is bent anfwered by a Fact. At Crowle in Ixholm, there is one of the largen Fields in the whole Illand, which hath not been fillowed 'lime inmemorial. The Method purfued there is this; they manure their Barley Stublle in the Sping with frefh Horfe or Cow Dung, or both, and plough it under, then they fow their Hemp Seed, and harrow it in with a hort-touthed light Harrow, and if the Seafon be favourable hase a root Crop. Hemp deftroys all Vegetables, and leaving the Ground free from Weeds, it is by a'piatialiow rendered fit for Flax in the Spring. As foon as the Fins is pulled they prepare he Ground for Wheat or Rye. After the Corn is got in they Pin-fallow ir, and in the Spring fow Bark'je Upon the Batey Stubble they manure and fow Hemp as before. Thus they have Four Crops, and manure dinence, and the Field which is a mere Sand never lies fallow. This Huf, 'rdry is not confined to Crowle, but is practifed in other Parts of the Inand. Sce Mr. Gee's Chiervations on the Culture of Hemp and Flax, p. r2.
y If athatively confiderad, the Expediency of fuch a Mexdure"witl he very apparent. It would be a Mans of improving Jand; it would employ nanber of 数nds; it would be animmediate and immenfe Saviag to the Nation. Befides, there cmarife tio doubt as to its being practicable. It lem; prodnced from Lands now in Cultivation had a Preference at the King's lards, and a imall bounty siven on fuch as grev on Land brought into Cultivation for that Purpafe, we Could foon cie the Fffects. .
${ }^{2}$ W ith fuch Encouragement, it might afford full Subfintence to fmall Farmers and their Families. Manv: fmprovements would be quickly made in the Management, and particularly in the Dreffing this Commodity. M. Murcadier, a isfagltrate of Bourges, has wrote an excellent little Piece on this subject, of which we have an accurate Tran@ation; intituled, A Trentife on Hemp, London,

Vol. II.

FlaX is a Vegetable well known, affiduoufly cultivated, and in the higheft Efteem from all Antiquity, being celebrated as one of the great Staples of Egypt, and from the Manufacture of which arofe one of the moft lucrative Branches of her Commerce a. It is thought to require a very deep, rich, and warm Land; but we know from Experience, that with proper Skill and Attention it will thrive exceedingly well on almoft every Soil throughout the Britih Iflands. It is indeed true, that the Ground which is to produce Flax ought to be feveral Times carefully ploughed, fo as to render it perfectly fine, and muft then be laid as fmooth and even as poffible b. It may be fown about Three Burhels on an Acre, in the firft warm Weather after the Middle of March, and if Rain fucceeds it muft be kept free from Weeds till it rifes about Two Inches high c. In fome Places they have ventured in this State to feed it with Sheep, and this without Prejudice. It is ripe fomewhat later than Hemp, and when ripe is to be pulled as expeditioully as poffible, and then laid in fmall Parcels evenly with the Head towards the South that it may dry conveniently. It affords after this a great deal of Employment in watering, pilling, breaking, \&cc. which is certainly an Advantage, as it fupplies Labour, and of courfe Subfiftence to many poor People, and when all this is done the Profit is feldom lefs than Ten Pounds an Acte d. But when we confider the Benefits that arife from this Commodity when it comes into the Hands of the Manufacturers, and the Multitudes that get their Bread in fpinning, weaving, and bleaching it, it muft appear to be a national Object of the ,greateft Importance, and the more fo, as there is not a Probability only, but, a Certainty that with pro-

[^58]
## of GREAT BRITAIN.

per Encouragement it might be made as much a Britifh Staple as Wool e. On this Account it deferves, and furely the Time is not far diftant when it will meet with the utmoft Attention, the only Thing requifite to put it effectually in our Poffeffion.

It is owing chiefly to fome ill-founded Prejudices that it is not already fo, and a greater Service could not be rendered to the Public than by removing thefe Prejudices, not fimply by Arguments, but by Experiments, which would put the Fact entirely out of Doubt f . The Dutch, who underfand both the Culture and Manufacture of Flax better than any other Nation in the World, prefer their own Seed raifed on the ftiff Clays of Zealand to any that they receive from the Northern Parts of Europe, though they alfo drive a very great Trade in this. But the Flax employed in theit Manufactures grows on a light, warm, gravelly Soil, and owes its Beauty and Finenefs to their fedulous Care in manuring, cultivating, making it properly in the Field, and in the Drefing it afterwards g. They likewife carefully guard againft an Error into which we frequently fall, which is the pulling the Flax too green, by which in the firt Place the Seed is loft, and if preferved is of little Value in refpect to the producing another Crop. The Occafion of this Error was the fairer Appearance of Flax when thus pulled than when fuffered to ftand longer. But this Advantage was fimply in Appearance, fince the green Flax lofes more in the Dreffing, and has never that Strength in the Thread, which it would have if pulled in a more mature State b . We have the fame Diverfity of Lands, and much
more

[^59]more of them than the Dutch, and therefore if we took equal Pains there is no reafon to doubt that we might fucceed as well as they ; and that by changing our own Seeds, we might be releafed from the Necefity of importing them as well as Flax for our own Ufe, and when the Confequences of this Chall be duly confidered, there is very little room to fear that every Obftacle may not be overcome i. In our Sifter Illand this has been made an Object of national Attention; and the Succefs, which has followed that Attention, and which is daily increafing, ought to recommed it to our Notice, and alro. to our Imitation k.

Rape and Cole Seed, the Practice of Sowing which was brought to us from Flanders by thofe Germans and Dutchmen who drained our Fens, and a very great and very profitable Improvement it is. We have already taken Notice, how highly advantageous this hath been, and fill is in Lincolnlhire, in the Ine of Ely, and in general through the Fens1. An Opinion has prevailed from hence, that it will fucceed only in fuch deep miry Soils, but this however is no better than a popular Miftake. In preparing the Land which is to receive it, Care muft be taken to plough it in May, and again about Midfummer, making the Ground as fine, and laying it as fmooth and even as poffible. It is to be fown the very Day of the laft Ploughing about a
is of no fmall Confequence) will, by the Advance in the Price of the Commodity, be quickly loft. Here then is an Argument of Neceffity, which joined to raifing our Rents, encrcafing our People; relieving our Poor, and faving perhaps a Million a. Year to, the Nation, is felfely fufficient to fupport a Meafure to which no lolid Objection can be raifed.
${ }^{1}$ In A. D, 1695 , according to. Mr. Houghton we imported 495 Ton of Flax. In A. D. 1763 , from Ruffia 161,756 Pouds or Poods, which make about 2576 . Tons. Ow Flax as well as our Hemp is fuperiour in Worth as well as in Price to what we import, and is equally fit for all the different Manufactures coarfe and fine, in which it either is or can be applied. The Perfection to which fome of them arealready artived, may well plead for the Notice requifite to bring forward the Ref.
EIn Irefand they faw clearly that to geip and preferve the Linnen Manufacture it was necelary to grow Fhix, and to bring this about they gave a Bounty of Five Shillings a Barrel on the Importation of Flax or Hemp Seed ; they gave this gratis to fuch as would fow their Lands therewith; they gave Bounties of Ten Shillings, Eight Shillings, and Six Shillings on every Hundred weight of Thirty-five, Thirty, and Twenty Shillisgs nin Hundred in Valuc; they gave their Freedom in Country Corporations to all Hemp and Flax Dreffers; and they held out a Prcniinm on every Buifiel of Seed, when at Five Stillings a Büfhel; which thould be exported. As to. the Premiums and Encouragements given for the Support of the Linnen Manufieturc, an Account of them would require a Treatife.

I This is one, amongt many others, of che Improvements introduced into this Country by Foreigatrs; the Defcendants of fome of them itmain fill in Lincolnhire and in Yorkfhire, feated on thofe Lands their Ancefiors resơvered Khid gebdered habitable. Between Spalding and Crowland, there is a large Tract of Country, thewhich Cole; and Rape Seed have been cultivated, with intermedinte Crops of Oats, for a iong Series of Years. They have many Oil Mills drivcn by Sails, which ferve allo for draining their Landis:-

Salton upon an Acre m . 'This Seed need not be"defcribed, fince it is better known than almont any other, being that which is: commonly ufed for feeding Birds. In the Months of January, February; and March, it affords very good Food for Cattle, and will whea cut fprout again; and prove very excellent Nourighment for Sheep. After all, if not too clofely fed, it will the next Year bear Seed in July n. In ordinary Land it will do alf this, and from thence it came to be confidered, more efpecially before inteimediate Crops were known to us, as: a very fingular Benefit ; for at a Seafon when all other Sorts of Fodder were fcarce, fuch a Supply as this, obtained at a very fnall Expence, could not but be exceedingly acceptable, independent of any farther Expectations ${ }^{\circ}$. But after all, the great Importance of this Improvement muft be allowed to lie in the Seed, becaufe from thence the principal Profit is derived.

When Rape or Cole is cultivated folely with this View, it ought to be fown on deep ftrong Land, but without the Trouble or Coft of Danging; and muft be fuffered to ftand thereor till at leaft One Hatf of the Seeds are turned bHown, which according to the Seafons will be fometimes fooner and fometimes laterp. In this State it is to be cut in the fame Manner, and with the fame Care as Wheat, and every Handful as it is cut is to be. regularly ranged on Sheets, that it may dry leifurely in the Sun, which
${ }^{m}$ Plin. Hift. Nat. lib. xix. cap. v. Raii Hift.j Plant. lib, xvi. § c. cap. xiv. p. 802.. Merretti Pinax Rerum Naturalium lritanaicaruth, p. 103. Dictionaire d'Hiftoire Naturelle, tom. ${ }^{*} \mathrm{iii}$. pous71.
${ }^{n}$ It is not at all Itrange, that this Improvement continued fo long confined to the Fen Countries, in which it was at firft introduced. It has been the Cafe of mof Improvements, and fromthe common Opinion (founded only on feeing them in. one Place) that they muft be local, they actually become fo. As they throve in a deep niry foil. it was concluded they would growno, where elfe, and that they mult be great Peelers or Impoverifhers of Land, both which Notions, Facts have refuted.

- In refpect to this, as well as Clover and other rich Food, fome Caution is requifite (more efpecially in regard to Sheep) till Cattle are ufed to it, as it is apt at firt to fwel! them. But that it is notwithftanding this very wholefome and nutritive, appears from the very large Size of Lincolnfhire Beafts. It was therefore exccedingly beneficial in. keeping up the Flefh of thefe valaable Catrle in the Spring before thofe Holps were found; which now in other Counties are ufed: for the fame Purpofe.
" The Flemings are fill as attentive as ever to this" Fiflibadry, they tranfplant with great Advantage in the Month of October, in order to incieafe the Quantity and Size of their Seed, and this with fo good Effect, that in the Diftrict of Lifle, which is about Nine Leagues Square, they make annually from Ten to Twelve thoufand Tuns of Rape Oil. In Jike Manner moft of the Produce of our Fens, either in Seed or in Oil, is tranforted to Wifbech; and from thence as the Demands for this Commodity.require.
one Root ${ }^{1}$. The Eare with which they are propagated, their growing upon various Sorts of very indifferent Land, and their requiring but two or three Hoeings, renders this' in its immediate and diftant Confequences a very valuable Improyement.

In fome Places where they fucceed remarkably well, and the Situation is favourable for that Purpofe, the Demand for them has been fuch as to occafion a confiderable Exportation." The new, that is the Horfe-hoeing Hufbandry, if we may credit fome very refpectable Witneffes both at Home and Abroad; hath not facceeded either more certainly or more confpicuounly in any Inftance than in the Culture of Potatoes b. It is afferted, that not only feveral Crops have been by this Method raifed from the fame Ground, but that from being originally very pcur, it hath folely by this Cultivation been fo much improved as to render it fit for other Crops c. That thefe Roots yield a cheap, wholefome, and palatable Food, calily and fpeedily prepared, has been their principal Reconmendation, and contributed to their freading through all the Three Kingdoms, more efpecially of late Years d. But whether, after all, we have been fufficiently attentive to the Ules that might be made of them in the Nourihment of Animals, is a Point that perhaps may be worthy of Confideration e.

[^60]In refpect to Medicine, whichigives very defervedly a high Value to fuch Vegetables as. from their known Virtues are generally efteemed therein, we want not fome as excellent, and of as conifderable Price, as in other Countries. But the far larger Number of thefe do not properly belong to a Work of this Nature. Such however as are cultivated in a more extenfive Degree, and fo as to become an Objeet of Commerce, fall for that Reafon within our Plan, and therefore of the moft remarkable of thefe we thall give a fuccinct Account. In treating of them we fhall begin firft with Seeds, though of thefe we have no great Number.

Annise is an Herb well known and much commended by ancient Authors, the Seeds and the Oil drawn from them are in common Ufe, and in great Efteem throughout all Europef. They were for this Reafon cultivated here in much larger Quantities formerly than at prefent. They chiefly affect a rich mellow Soil, which is ploughed about Michaelmas, and again in $\mathrm{Fe}-$ bruary, when the Seeds are fown, and a little frelh Horfe Dung firewed over the Field to preferve them from the Froft s. They muft be carefully hoed to preferve them from Weeds, and about the Middle or the latter End of Auguft they become fipe, and the Seed is fit to be gathered. As this Cultivation is much declined, there is Reafon to fuppofe that it fcarce afforded a fufficient Profit. But notwithftanding this, we are well affured, that Annifeeds, which they call Cumine dulce or Sweet Cumin, are the ftaple Commodity of the little Illand of Malta, and produce annually large Sums to its Inhabitants b.

Swine, and Poultry at firt boiled, and in a little Thme raw: It deferves fome Inquiry whether the Stalk or Plant might not be converted to Ufe, being tough and Arong, and its Fibres eafily divided.
© Diofc. lib. iii. c. 56. Plin. Hif. Nat. Hib. xx."capexvii. Raii Hif. Plant. lib. fx. § itr cap. vii. p. 449, and many more that might be cited. 'It appears that the Ancients efteemed the Seeds from Candia to be the beft, and next to thefe thole ceniningrom Egypt. We may from hence difcern, that there is nothing abfurd or improvable in propofing the attempting to introduce Vegetables from remote Climates, fince our Anife Seeds geew to great Perfection, but did not prodise fufficient Profit.
8 Worlidge's Syftem of Agriculture, p. 164. Mortimer's Art of Hufbandry, B. v. chap. xxv. p. 203. Bradley s Survey of Ancient Hufbandry, p. 229. Neuman's Chemical Works, p. 393,394Hill's Hiftory of Plants, 348, 349. Dietionnaire de Commerce; tom. i. col. 137, 138. Dietionnaise d'Hiftoire Naturelle; tom. i. po: $44 ; 145$. They diftil great Quantities of Oil about Mage deburgh, and though a Pound of Seeds yields but Hall in Ounce, mix it fo as to be able to fell it cheap.

The growing or the not growing of Anife, it is confeffed cante of litte or no Confequence to
 Culture confined to Guernfey': Jerfey, or the Ifte of wight, atid when to a Condition to fupply our Confumption, a proper, sthat is; an higher Duty lid on anife Seeds finported. Would not this give fuch an Inand a Revenue, and thereby enable iti, Enhabitants to purchafe more of our Coanmodities and Manafactures?

Carranays, in fome Places called Meadow ${ }^{*}$ Cumin, are Natives of this Country, growing wild in fome rich Meadows in Lincolnfhire, and in Yorkthire, more efpecially in the Neighbourhood of Hull, where they are in fuch Plenty as to be gathered in the Fields for Sale i. They are huwever cultivated for the fame Purpofe in Effex and in other Counties, with cqual Care and Succefs. The Carum or Carraway is a biennial Plant, fown and fpringing up the firft Year, but not bearing till the fecond. By fowing them in the Autumn, very foon after they are gathered and dried, they will flower the next Seafon, by which a Summer is gained k. They are, as every Body knows, a Seed of which there is a very copious and conftant Confumption in Food, in Sweet-meats, and in Phyfic; and it is this that makes them in fome Degree an Object of Profit, which, as we fhall fec. is augmented by the ufual Method of their Cultivation.

Coriander, which like the Carraway, is as much ufed in the Kitcicin as in the Shops, grows with us freely, and to great Perfection, though originally it is a Native of Egypt, and very much ufed and efteemed thcre 1 . In fome Places they fprinkle them amongft their Bread before it is baked, from an Opinion that it helps Digeftion; and it is alfo made into Comfits by the Confectioners. In Efex, where this Hubbandry is chiefly, and has been long practifed, they mix Eight Pound of this Seed with as many Pound of Carraways, and Half a Peck of Teafils. Thefe they fow altogether on mellow rich Ground, that has been well tilled, and hoeing them twice at leaft to keep them free from Weeds.' They cut the Teafils and the Coriander in the Autumn, and leave the Carraways ftanding, that they may fower and feed the next Year \%r. By this Means they have a very profitable

[^61]
## of GREAT BRITAIN.

profitable Crop; and it is farther faid, that by the Help of this Management the Carraways remain and produce Seed for Three or Four Years". We alfo raife Phalaris, or as we call it Canary Seed, becaufe it was originally brought to us from the Canary Iflands ${ }^{\circ}$; and there is little Reafon to duubs that fome other foreign Seeds, perhaps of more Value, might be thus naturalized with a little Diligence and Attention.

## - Liquorice is a Plant famous for its medicinal Virtues, the Cultivation

 of which is very profitable, and has been long practifed in this Country with fuch succefs as to be reputed at leaft as good as any in Europe p. The Root pierces deep into the Earth, and from thence arife ftrong herbaceous. Stalls, which grow to Four or Five Feet in Height, and are ornamented with winged Leaves. The Flowers rife from the Top of the Stalks, are of a pale blue"Colour, and are fucceeded by compreffed 'Pods, each containing Two or Three Kidney-fhaped Seeds, which ripen with us only in very hot Summers q. The Soil intended for the Culture of this Plant hould be loofe, light, and fandy, at leaft Three Feet deep. It muft be well ploughed, and dunged the Year before it is planted that the Dung may be thoroughly rotted. Immediately before the Setting of the Plants it mut be dug Three Spades deep, and laid as light, even, and fmooth as pofible.ever invented, it feems to be an ingenions Method, and worthy in that Light of Notice, ant it may be of Imiturion. If I reanember right, the judicious Mr. Stillisinfeet mentions, that in fome Part of Glouceflomine, they are in the Practice of Sowing the common Vetch, fecding them by Horfes in fo grod Thime, as in lave a Crop of Turnips the fame Year.
$n$ It is cot improbable that the high Duties on Carraway and Coriander Seeds imported, may have contrisured in no farall Degrce to our preferving the Cultivation of thefe Plarts, which ought to le a Leflon on chis Head, as it thews, in cafe by Skill and Indufrywe could acquire and propigate Veputables of more Importance, how they may be preferved, and to much Noney as their Five amounts to faved to the Nation.

- 'Ihis the Grects, and from them the Romans, call Phalatis; the Sceds are fmooth, oval, and of a mining yellow Colour, bigser than Millet, and sefs than Lintfeed. It delights in light mellow Suil, mutt he fown in the Spring; the Stalk rifes about a Foot and a Half high, is jointed, hath a round chaffy Top, which looks yellow when in Flower, rind contains the riced: Befides this, there is the oriental peremial C Canary Grafs, which grows twice as high, and is a hill greater Improvement.

The Ground being thus prepared, frefh Shoots are to be taken from the Heads and. Sides of the old Roots, in each of which there muft be feveral Buds or Eyes. They are then to be regularly fet by a Line, a full Foot or more afunder, and with the Space of Two Feet between the Rows r. This Planting is to be performed in the latter End of February or the Beginning of the Month of March, and to defray, or at leaft to leffen the Expence, a thin Crop of Onions may be fown with them, as théfe do not Itrike deep into the Earth, and the Liquorice Roots draw but a moderate degree of Nourihment during the firlt Years. Befides, the Hoeing of the Onions will not only keep the Ground free from Weeds, bit alfo by ftirring it affift the Roots in piercing into the Soil. When the Crop of Onions is taken up the Ground muft be again thoroughly cleared from Weeds. In O\{tober following a little rotten Dung may be frewed on the Ground between the Rows, and in the fucceeding Month of March it thould be fightly dug with the fame View of deftroying the Weeds; and affording freh Nutriment to the Roots ${ }^{\text {t. . After they have }}$ remained Three Summers from the. Time of their Planting, they will be fit in. the Month of November or December to be taken up, as being then full of Juice and weighty, which is the great Point aimed at by thofe who cultivate Liquorice ${ }^{\text {i. }}$.

[^62]
## of GREAT BRITAIN

Saffron is another Production of this Country, which is univerfally acknowledged to be fuperior in its medicinal Qualities to any that is raifed elfewhere, and of courfe is more valued atid efteemed. It is fomewhat incertain from whence and at what Time it was originally brought hither; but there is no Doubt that it has Hourihed here for feveral Ages, and thereby. rendered famous the Place of its principat Growth $w$. It is a fmall bulbous Root, about the Size of a Nutmeg, covered with a coarfe, brown, net-work Skin. The Flowers fpring from the upper Part of the Root with the Leaves, the Tops of which only appear. The Tube of the Flower is very long, fpringing from the Bulb withoutany Foot-Stalk; divided into Six equal obtufe Segments of a purple blue Colour. In the Bottom of the Tube is a round Germen, fupporting a flender Style, not more than Half the Height of the Petal, furmounted by Three oblong golden Stigmas, which are properly the Saffron, the only ufeful Part of the Plant, and for the Sake of which it is fo carefully cultivated $x$. In refpect to the Soil, a dry hazle Mould upona Chalk Bottom is efteemed the beft. But Experience fhews, that with proper Tillage it will grow very well in any loofe fandy Ground. They always plant it on a Fallow, and about the Clofe of March or the Beginning of the Month of April. The Soil defigned for its Reception, whatever it be, is well ploughed, that is, both clofer and deeper than for any Sort of Corn. In the fucceeding Month of May, the ufual Practice is to lay Twenty or Thirty Loads of rotten Dung on an Acre, and to plough it well in, that it may be thoroughly mixed with the Moulds: At Midfummer they plough for the

third Time, and at the Diftance of every Perch leave a deep Furrow open to receive the Weeds. The Land is then fenced with what the People in Cambridgethire call a dead Hedge, that is, with Hurdles, to keep oul all Kinds of Beafts, and efpecially Hares.

When Things are thus prepared, a Man with a Spit-Shorcl cuts a Trench aboat Three Inches decp, and is followed by Two Women, who det the Bulbs flat on their Bottoms, about Three Inches one from another till the Whole is complete 7 . The Man then opens a fecond Trench at a fmall Diftance, and with the Earth that comes out of it covers the Routs in the firt, and in this Manner they proceed till the whole Spot is planted. The Quantity of Roots required for this Purpofe may be Sixteen Quarters for an Acrea. About the Beginning of September they with a flarp Hoe pa:e the Ground between the Ridges, and bury the Weeds in the deep Furrow before-mentioned. In the Month of October, when the Flowers appear, they employ a fufficient Number of Hands in different Parts of the Field in pulling and putting them into Bakets. This is perfurmed early in a Morning, and their Work is commonly over before Tea of the Clock b. Thefe Balkets being carried Home with the greatef Expedition, they very carcfully pick out from the Flower the Filaments and Part of the Style, which when they have collefted into a fufficient Quantity is immediatcly dried on a finall Kiln prepared for the Purpofe. This is a very nice Operation, as on the accurate Performance of that the. Excellence of the Saffron in a great
only fupports this Practice againf Reafon, and that Experience had taught him frefh Earth, a little light, with a Staple of Six Iaches, with a tolerable Bottom, will do better than any lants forced by Dungs. He adds farther, that he has feen it thrive very well on conmon heathy Land, mixed with Sand and fmall Roots. Thefe are Arguments and Facts that dulerve to be sonlidered.
z Blith's Englidh Improver Improved, chap. xxxviii. p. 248, 249. Philofophical Tranfafions of the Rogal Society, $\mathrm{N}^{\prime}$. cxxxviii. p. 945, by Mr. Charles Howard, ibid. $\mathrm{N}^{3}$. cedxxx. p. 441, and $\mathrm{N}^{\circ}$. cecev. p. 566, both by Dr. James Douglas. See alfo Bradley's Improvements in Huf. bandry and Gardening, and Miller's Gardiner's Dictionary under Crocus. Thefe will fufficiently inftruct thofe who are defirous to raife this valuable Flower.
a This maises One hurdred Twenty eight Bufhels, and, according to the accurate Dr. Donglais Computation, 392,040 Routs. It is to be obferved, that in Planting, though Three Inches be the middle Diftance, yet they plate the finaller Ronts clofer, and the larger farther one from the cther. Some Roots are Marp at both Ends, thefe they call Spickets, and never plant then becaufe they do not flower. The Roots vary much in their Price, but are feldom very dear.
i In France they purfue the faine Merhod, except that fometimes in the very Height of the Safon they pull them in the Evening as well as Mrning. A very hot Sunmer with foft mild Showers is the mof favourable for thefe Plants. But the great Point here and there, is the Soil, which thould be light, loofe, and Sandy. Yct a ftiff Clay encreafes the Number of Roots, aud their Size, but the Roots in fuch Countrics feldom bear Flowers, and of courfe are not in much Efteem.

Meafure dependsc. The Harvert, that is, the Pulling of the Flowers Morning after Morning, lafts about a Month, during which the fame Labours with the fame Diligence are conftantly repeated. They have Three Crops from the fame Spot, that is, a Crop in each for Three fucceffive Summers, the firft much fmaller in Comparifon with the Two laft. When the Three Crops have been taken, the Roots are to be raifed out of the Ground, and having lain Three Weeks, are ready to be fold or tranfplanted the next Seafon into another Piece of Ground, as they never plant them twice without an Interval of fome Years upon the fame. But as foon as conveniently they can, they fow Barley after the Saffron, and have very great Crops c. At Walden they feldom fow lefs than One, or more than Three Acres of Saffron in One Field. .

In refpect to the Pivits attending this Culture, the very high Price that this Commodity. fometmes bears, hath made it, gencrally fpeaking, overrated. It is indeed very sifficult, if not abfolutely impoffible, to come at what might be filed an e a: Calculation of the Expences and the Produce. A probable Compuzatio", bowever futficient for our Purpoie of reprefenting the Benefit ar ing is.m wis Culture, may be, and has been obtained. The annual $V_{a}, \underset{\sim}{a}$ an faleable Saffion upon an Acre, which is taken by dividing th mat of all the Crops by Three, amounts to about Thirteen Pounds. (: which about Eight go towards the Difcharge of Rent and the Reveral Expences that necegfarily attend the Crop, and the other Five comes into the Pocket of the Proprietorf. It is evident from the fore-

- The Kiln, which requires a long Defcription, is accurately explained by Dr. Douglas. If the: Fi:e be two ftrong the Cakes are often burned, and if too weak the Saffron is apt to mould. In either Cafe the Commodity lofes a fixth, or perhaps a third Part of the Value. When properly' curcd, the Saffion appears of a rich orange Colour, is moilt tothe Tguch, has an odoriferous Smell, and a quick pungent Tafte, which dwells long upoi the Palate.
"The firft Crop is very incertain, but it is efteemed the fineft Saffron, fometimes it may amount to Ten Pounds of wet Saffion. The fecond in a gond Seafon will yield Fifty or Sixty, the third Seventy, Eiglity, or fonctimes more. In the firf Three Weeks, Five Pounds of net will produce One of dry, but during the lalt Week it will require Six. Thus in a month's Time the Tromble, except Hoeing the Ground, is entirely over till the next Year.
e The Seed of this Plant feldom or never can come to Perfection with us, but this Defect isfupplied by the Multiplication of the Roots. They are raifed out of the Ground by a Plough or by a forked Hoc called a Pattock, after which the Field is harrowed, Fourteen or Twenty Perfonspicking up the Bulbs as they rife. Afrer they are wathed, picked, and fuch as are bruifed or cot, or otherwife injured, taken away, the:e commonly remains Twenty-four Quarters of found Roots. Though it is, and has been long the Practice at Saffron Walden to break up their Grounds after Three Crops, yet we know it was formerly the Cuftom in Norfolk to let them remain Six and even Seven Years in the Ground, Hocing then carefully twice every Year, and this without Prejudice to the Salfiron.
t This Incount is thus made up. The firf Year Ten Pounds of wet, which will make Two Pounds dry, the fecond about Fen, and the third abone Fourteen Pounds of dry Saffron. In all Twenty-fix Pounds in Thrce Years. In regard to the Price, ir fluctuates betwen One Pound

## 104

going Hiftory, that Saffron might be planted in many Places, though perhaps in fmaller Spots, and this through the whole Extent of Great Britain, as it has long:flourihed in the mof Northern Part of the Inland. As it employs a great many People, though but for a hort Space of Time, a Perfon who had a fmall Plantation, and a large Family, would hire but few Hands, and thereby teffen the Expence, which probably might alfo be done in other Refpects s; and if our Saffron was not to dear, and greater Quantities of it raifed, the univerfal Preference given to it Abroad would render it more profitable to the Nation ${ }^{\mathrm{b}}$.

Whatever is of great and conftant Ufe in any Manufacture, even though not a Material, is notwithftanding an Object well worthy of Cultivation, more efpecially in fuch Places as are in the Vicinity of thofe where fach a Manufacture flourihes. This is the Cafe in regard to Teafles, Teafils, Teazils, or Fullers Thiftles i. They are a Kind of Thiftles growing

Four or Five at mont. At the more equal and middle Price of Thirts Shillings, this comes to Thirty-nine Pounds or Thirteen Pounds each Year, and the whole Expences from the firf Ploughing to the lati, at breaking up may amount to near Twenty:four, and fo leave Fifteen Pounds for the Three Years Profits. In Years when the Commodity yields a good Price, it may produce confiderably more, but let Seafons run as they may, an Acre will fcarce ever yield lefs.

* It is evident that the high Price of pur Saffron is a great Bar to its Confumption, as well as a Temptation to the adulterating with Spanith Saffron; which may be bought at a low Rate. This, as was long fince obferved, could not be prevented by impofing a high Duty, becaufe it would then be fmuggled, as is the Cafe in refpect to the Juice of Liquorice. The only Remedy feems to be eacreafing the Quantity raifed, and abating the Price, without prejudice to the Quality of the Saffren. If as Conveniency offered it was cultivated in any light Land in Spots of an Acre or lefs, an Abatement in the Rent, the Dung, \&c. might probabily made of One third at leaft of the Expence, and in fmall Quantities, thensaffron would be better picked, more carefully dried, and from the Emulation which muft necelfarily arife amoingt a Nümber of Competitors for the Sale of their refpective Proporvions of ple fame Commodity, be continually improving- in every Refpect, while from the Rednetion of Expences, the Profits to Individuals would be as great or greater, even if the middle Price was but Twenty-five Shillings.
${ }^{n}$ The Confumption of Saffron in Food as well as Phyfick is very great in the North, in Poland, and in Germany. "It is faid to grow in great Pcrfection, and with farce any Culture on the Borders of the Cafpian Sea, and in the ancient Media: It is alfo cultivated in fome Parts of the Kingdom of Naples. We may add about Touloufe, Angeuleme, in the Principality of Orange, near Avignon, and in Normandy. But the beft Saffron in France comes from Boifine in Gatinois, where the Country is a mere Sand, At Amfterdam the middle Price of Englifh Saffron is Eighteen Florins, of French Ten, and of Spanilh Six for a Pound. This laft is commonly mixed with Oil to make it keep, and though not efteemed abroad is much ufed in Cookery over all that Country. In France the Roots are liable to many Maladies unknown here: It is therefore highly probable, that if the Cultivation of this Plant fpread into many different Parts of the Inand, as has been before-mentioned, it would be attended with many beneficial Confequences. The Dublin Society, by promifing and paying large Premiums for fmali (uantities, have introduced it effectually in Ireland.
i Befides the Names mentioned in the Text, it may not be amifs to take Notice of fome others, as they explain the Nature of the Plant. The Romans following the Greeks called it Dipfacus, and alfo Labrum Veneris, i. c. the Bafic of Venus, becaulc the Leaves rifing upright round the
wild in this and many other Countries, and which are fown and brought into regular Culture on account of their fingular Utility to Clothworkers, Baymakers, and other Woollen Manufacturers in raiiing the Nap on their reIpective Goods, by the. Means of certain hard, Charp, and crooked Points which grow out of their numerous Heads, and are aumirably fuited to that Purpore k. A ftiff Clay is efteemed the beft Soil for thefe Rlants, which muft be thoroughly well dug with a Spade, or double furrowed with a Plough fome Time in the Month of December. In the fucceeding February or March, the Seed is to be fown to the Quantity of about a Peck upon an Acre; they muft be carefully hoed once or twice in the Spring, and will be fit to cut in Auguft following. The Plant rifes to the Height of Three or Four Feet, the Stalks are jointed, and at thefe Joints fmaller Stalks come forth, which bear roundifh Heads of the Size of an Egg, armed with thofe hort Marp Hooks that have been mentioned. Thefo Heads are at firft green, but turn white as they become ripe. They flower either in juine or in July, and are ufually cut fome Time in the Month of Auguft. They are then tied up in Bundles or Faggots, which the Country People call Staves, and of thefe there are ufually about. Eight Score upon an Acre, which feldom fell for lefs than a Shilling a Stave, and confequently the Produce may be from Seven to Eight Pounds an Acre 1. We will now proceed to thofe Vegetables that are particularly cultivated for the Ufe made of them in Dyeing, and which confequently are of the greateft Service to our Woollen, Linnen, Silk, Cotton, and other Manufactures.

Stalk, retain the Dew and Rain as in a Cup. Thiswater is held to be a great Cofmetic, and the Country People employ it againf. Warts. Some foreign Rhyfieians commend the Plant highly in fcrophulous Cafes, and in Confumptions. There is a wild Sort rifes pretty high, which is called Virga Paftoris, i. e: Shepherd's Rod; and is wat whemenemultrated Tenfil is not to be had. the Root being efteemed in the Cure of Fiftulas.:
$k$ Plin. Hift. Nat. Jib. xxv. cap, xiij. lib. xxvii, cap. ix. सthintiat. Plant. Anct. lib. viii. cap. ii. p. 382. Mereti Pinax Rerum Naturalium Britan, p: 33. Maifon Ruatique, lib. ii. chap. Ivii. ${ }^{1}$ The Ufe of Teafils in the Woollen Manufacture feems to be of very antient ftanding both in this and in other Countries. They are cultivated with much Affiduity in Languedoc, Normandy, and Picardy, thofe of the laf Province are efteemed the belt that 突ow in France. According to the Trades in which they are principally ufed; they diltinguilh them into Chardon Bonnetier; Chardon Drapier, Chardon Foulon, in general Chardon Saniere, and the fmaller Sorts are called Tetes des Linotes, i. e. Linnet's Heads. They commonly tranfplant their Teafls in France to improve their Heads, and have alfo made fome Trials of the Horfe-hoeing Method, and with a verygood Eftect. They look upon Teafils as Plants fo effentially neceffary in the Manufacture of Wool, that the Exportation of them is prohibited except by Licence. This Expedient is well imagined : for if the Harveft be very Copions, the Price would fah fo low as to injure the future Cultivation. In this Cafe Licences are eafly obtained, and thus Expertation ferves to fecure domeftic Plenty.

## 105 The POLITICAL SURVEY

Madper is a Plant, the Ures of which were well known to the Ancients, both in refpect to Manufactures and Phyfic m. With their Roots they dyed Wool and Leather, and from there and other Parts of the Plant they formed a Variety of Medicines, to which great Virtues were attributed by their ableft Phyficians. They had it likewife both wild and cultivated, the beft Sort of the latter growing in the Time of Pliny in the Neighbourhood of Rome $n_{*}$ As Madder is a very valuable Commodity, fo the raifing and curing it in Perfection is a Work of much Time, Trouble, and Expence, for all which it pays abundantly at laft. The Soil beft fuited to this Plant is a foft fandy Lonm, which muft be properly prepared by repeated and deep Ploughings, fo as to render it perfectly even and fine. The young Shoots, for the cultivated Madder is not propagated by Seed, are to be plantedin the Courfe of the Month of April upon Ridges at Three-Feet Diftance, and the Plants themfelves at a Foot and a Foot and an half Diftance from each other. They remain Three Summers in the Ground, and during that Space are to be catifully hoed, kept clean from Weeds, and properly earthed up. They are drawn about the Month of September, and mult be then conveyed immediately to the drying Houfe, built like thofe ufed by the Tanners for their Skins, except that Hurdles are ufed in them inftead of Floors, that the Airmay have free Accefs to the Roots every Way. After remaining there Four or. Five Days, and the Earth perfectly cleared from them, they are carried to the cold Stove, where they are farther but very flowly dried by the Help of Flues placed in the Sides of the Building. This being done, the Madder is carried next to the Floor, where itw ithrefhed from its Bark or outward Rind, which however is fwept together, barrelled up, and is what the Dutch call Mule, which foppetimes. fells for Eight Pounds a Ton, and thereby commonly defrays thetExperige of drying. The Root thus cleared are then conveyed to the Wime Stove, where the drying is gradually compleated. From thence they are rent to the Mill, and there ground, forted,
m The Greek Authors eall this Plant Erythrodanum from Erythroficed. The Latins on the fame Principle Rubea or Rubia; in modern Writers it is often fildet Rubia-Tinctorum, from the Ufe made of it in Dyeing. Diofcorides and Galen do not iofft upesits finging Quality. But the former defcribes, and both fo explain its medicinal Virtues as to teave no Doubt as to the Plant. Plity, who commonly agrees with Diofcorides, mentions both its: Ufes, but in different Bocks of his Hiftory. In refpett to its medical Qualities, they are followed by latter Authors; but the Na ture of the Colour extracted from ittrooots was left to fuch as wrote the Fiftory of the Arts. Some mention feveral Sonts, Linnaus redures them to Two, the cultivated Madder having Six Leaves, and the wild with Fonf:

## of GREAT BRITAIN.

packed up in Cafks fit for Sale' of there reveral Operations which muft be all performed with much Care and Exactnefs, the Commodity lofes fo much of its Weight, that Seven or Eight hundred of the Green will feldom make more than One hundred of the dry. Madder $P$.

The Dutch are at prefent poffeffed of an almoft abfolute Monopoly of this valuable Commodity, the Cultivation of which they were taught by the Flemings, who, perfecuted for their Religion, long fince took Shelter amongft them. In Times palt we imported Madder by the Way of Hamburgh from Silefia, and alfo from Flanders, whereas now we have it only from Holland q. This, that People have brought about by their unwearied Induftry, their careful Management, and indefatigable Attention. It is in a particular Manner the great Staple of Zealand, where in the fmall Ifle of Schowen they raife annually a Thoufand Tons, for the Curing of which there are about Twenty Stoves, each provided with a proper Number of $\mathrm{F}_{\mathrm{t}}$, t : Workmen, by whom every Thing is accurately and excellently performed at a fettled and very moderate Price, and under the moft prudent and equitable Regulations r . When the Work is finimed, the Madder is, according to its

- Blith's Englih Improver Improved, chap. xxxvi. p. 235. Sir W. Petty's Account of Dycing in Sprat's Hiftory of the Royal Society, p. 293. Houghton's Collections, vol. ii. p. 369-373. Worlidge's Syttem of Agriculture, p. 1 58. Mortimer's Art of Hulbandry, B. v. ch. xv. pi 160. Bradley's Survey of Ancient Hulbandry, p. 223-277. Hill's Hiftory of Plants, 231. Foreiga Effays on Agriculture and Arts, p. 41-50. Miller's Gardiner's Dictionary under Rubia.
${ }^{p}$ The Time, Trouble, and Expence attending the Cultivation of Madder in this Method have induced fome, particularly the French, as we fhall fee hereafter, to endeavour to find fome Expedients to Morten the Procefs, and by ridding themfelves of:Stoves and Mills toleffen the Charge. It is certainly right to examine and to confider their Attempts. Eat on the other Hand, there is with all its Prolixity and Labour fomething very worthy Atiention in'this Mode of the Duich. The Dyers ufe Madder in different Ways and for different Purpofes, which are all fuited by the fevcral Divifions of the Madder by which all is fold, each fetcies its juft Price, and ihe Dyers find fome or other of thefe Sorts adapted to every Intention, which is a great and apparent Conveniency.

9 It feems evident from the Growing of this PLes in different Parts of different Countries, that it is not conined to any particular Soil. This hath been fufficiently cleared by Experiments. made in Frauce in Lands of very different Kinds, Class, Sands, Marfhes lately drained, and in others. If i: was not fo, how Thould every Kitchen Gardiner in fome of the Durch Inands have his little Clofe or Plot of Madder? This shews that Culture does much, and poffibly fupplies Defect in Soil, cven there. For all is done, if not by the Owner's Hand, at leaft under his Eye; which is fiach an Advantage, as in an Affair. of this Nature mult have wonderful Effects. In regard to Land therefore in Britain there cannot be cither Doubt or Difficulty.
$r$ As the Culture was beft provided for by being in a Number of Hands, all equally ftimulated by Attention to their own Interefts, fo the Curing, which is of equal Importance, is as prudently regulated, Such as grow only a fmall Quantity of this Commodity could zor fpare Money to ereet, or the Time requifite to attend a Stove. This therefore is afigned to another Set of People to whom Practice gives a Facility in this difficult Bufints; aitheir conftant Employment therein procures them a comfortable Subfiftence. Befides the Will meationed in the Text, they diftinguith what paffes the Sieve on the firft pounding by the Name of Gemeens, the next pounded, which is the beft, Krap; and if thefe Two Sorts are blended it is fited Onberoofd; i. e. Undivided.

## 108 The POLITICAL SURVEY

Finenefs, divided into feveral Sorts, and after being infpected by Perfons deputed by the Magiftrates, each. Sort is put up in Cafks with Marks declaring its Nature, and the Arms of the Town of Zirikzee painted on them, which authenticates their Contents wherever they are exporteds. This Plant is alfo cultivated not only in the other Inlands which compofe that Province, but likewife in different Parts of the Dominions of the United Provinces, from whence it is fent in immenfe Quantities over all Europe.

In Proportion as Induftry, Arts, and Commerce came to prevail, and ta be underfood here, it was very clearly difcerned that our Dependance upon another Nation, for an Article fo neceffary to the Progref's of feveral Ma.nufactures, was pregnant with many Inconveniencies, befides the conftant Drain of Money, not only for the Benefit, but even at the Will of Strangers, who fet what Prices they pleared on what could not be wanted. In the Reign of Charles the Firft, a Patent was granted to Mr. Shipman the King's Gardener for Planting and Curing of Madder, which he did; and brought it to very great Perfection, till ruined by the Confufion of the Times, he was conftrained to part with his Stock, and give over the Tradet. It was again attempted by Sir Nicholas Crifpe, a Man of extraordinary Abilities, and of great Public Spirit, as alfo. by Perfons well fkilled therein at Wibech, who, notwithftanding many Obitacles that were thrown in thein Way, would certainly have fucceeded, had not the Dutch reduced, and for a Time kept the Price fo low, that for Want of Support they were conftrained to give up the making of Madder. This had fo bad an Effect, that notwithftanding the Growing of this Plant for phyfical Ufes, and for Cu riofity in many private Gardens, no Thoughts were entertained of cultivating it to a large Extent, and for the Purpoles of Dyeing, till within thefe few Years. It then appeared fa reafonable in itfelf, and of fuch manifeft Pub-

[^63]
## of GREATBRITAIN. 109

 lic Utility, that an Act of Parliament was obtained to facilitate the Defign, which Act hath been fince continued, and many other Marks have been given of public Approbation u. It may be confidered therefore at prefent as in a State of Progreffion, and there is very little Room to doubt, that as Experience in the Management of it increafes, this important Enterprize will move fafter till it reaches the Point of Perfection.Ir certainly imports us both in Honour and in Interet to profecute this Improvement, now it is begun, with Vigour. We have all the Advantages we can reafonably wilh to prompt our Endeavours, as we have a great Variety of Soils as fit for the Cultivation of this Plant as any in Zealand or Flanders, and are in no Danger of being confined in point of Room w. In Reference to Induftry our People are not inferior to any, and in refpect to Dexterity and Difpatch fuperior to moft, as from a Multitude of Inftances, if it was necefiary, might be proved. Something alfo may be trufted to the Genius of the Nation, which has been ever famous for improving, whatcver Inventions came into their Hands. We may add to all this, that there are Three very puiffant Motives which ought to ftimulate our Efforts in this Affair. In the firf Place, we know very well that the Thing is practicable, that Madder will grow, and grow in as great Perfection here as any where elfe. In the next Place, if we either defift or are remifs in profecuting this Improvement, we may, and indeed we muft expect to have the Price raifed upon us in Rafentment for our having made the Attempt. Cafly, we have all the Reafon that can be to expect, whatever Encouragement it is in the Power of Government to give, fince no Duty is laid upon

[^64]Madder imported, that no additional Weight might be thereby thrown on our Manufactures $x$.

Besides, we find in other Countries People are bent on the fame Meafure, particularly the French, who have made and publifhed a Variety of Experiments that feem to throw new Light upon the Subject ), and to promife, if due Attention be paid to them, not only equalling the Dutch in their Cultivation, but even the Eaftern Nations, who have been hitherto held inimitable in their Method of dyeing Cotton\%. On the Whole, we ought certainly to be attentive to thefe Difcoveries, and even to the Experiments that have been made elfewhere in a Point that fo nearly regards our own Interefts, and the Benefits of which are clearly as much in our Power as in theirs?.

[^65]It was to fet this in a frong Light, that fo much Pains have been beftowed on this, and will be likewife employed in fubfequent Articles; for there cannot be any political Truth more certain than this, that to leffen the Expence of our Manufactures is the fureft.Method of promoting their Sale, and confequently of promoting Induftry, the-only laudable Means of enriching this Nation.
$\mathcal{S}_{\text {afflower, }}$ Saflore, ftiled by the Botanifts Cnicus five Carthamus Sativus, in fome Places called from its Ule the Scarlet Flower; is a Plant. originally from Egypt, and which was not cultivated in Italy till after the Reign of the Emperor Vefpafian b. The Root does not penetrate deep into the Earth, being an annual Plant. It fhoots up a fiff Woody Stalk, Two aad fometimes Three Feet in Height, dividing upwards into many Branches adurned with oval Leaves entire, but dightly ferrated on their Edges, each ,f the Points terminated by a Spine, not very ftrong or fharp. The Flowers. Hrow fingle at the End of cach Branch; their Heads are large, inclofed in a icaly Empulement, each of the Scales broad at the Bafe, refembling in other Rupects the Leaf of the Plant, and terminating in a harp Thorn. The l-wer Part of the Empalement fpreads open, but the upper Scales embracetac Florcts which ftand out near an Inch above the Empalement. Thefe are if a bright, orient, Siaffron Colour c. When ripe it produces Seeds which: relong, of a whitilh chining Colour, and have a fweetih bitter Tafte, and a furgative Quality.

Alighr warm Soil is the mott proper for this Plant, which has been. cuhtivated in the Vale of Evehham, and about Burton and Afton in Oxinthired. The Ground notuld be prepared as for Barley, with an additional. Harrowing
effly have the Sceds, and diftinguin by riaing them, if the Plant be the cultivated, the wild: Aidder, or diftinct from both.

"The Hiftory of the firt Plantation is contained in a Letter from Henry Hall, Efi; to Mr. Houghtun, datelnow. 14, 1isu. He fays, the Land on which thefe Seeds were fown was mixed
Sand, worth about Fifteen Sbillings an Acre; but this being a new Improvement, and fuppufed grealy to cxhauft the Soil, a Spot of I'wenty-five Acres was let to the Adventurers at Twentyfive Pounds an Acre. By this Undertaking, thongh in all Refpects very ill managed, they cleared Thirty Shillings an Acre, all Charges (the Price of Seed excepted) deducted, by the Sale of the Flowers ou:y. It was eftimated the whole Crop might yield about 140 bufhels, from under 40. that were fova. He dhews the Errors in their Conduct, how eafily they might be avided, and

## 112 The POLITICAL SURVEY

Harrowing to lay it fmooth and even. The moft material Point is the affording it a proper Expofition, for it will not endure any Shade. The Seeds thould be fown in Drills as early in the Spring as the Seaion will admit, about the Beginning of March, though fome fay it may be done in February, in Rows at Two Feet or rather at Two Feet and a Half Diftance. It may be fown moderately, thick, din a Month's Time after the Plants will begin to appear. A Month after this they muft be carefully hoed and thinned, fo that they may ftand at about Six Inches Dittance. After a proper Interval they are to be hoed again, and thinned toa Foot Diftance ${ }^{e}$. If after this the Weeds mould rife afrefh they muft be hoed a third Time. It flowers in July, and the Florets are then feparated with a fhort Knife, not all at once, but as they become ripe, fo that this may take up a Week's Time or more, and the Work may be performed by Women and Children. They are next to be cautioully dried upon a Kiln, and are then fit for Sale. Such Stalks as are intended for Seed, hould be left ftanding, and fuffered to grow fully ripe, when the Seed will be as good as any we receive from Germany. It is true, that they will grow to their full Size, and appear as fair when left in the Flower that is cut, but upon opening them they will be found hollow, black, and empty ${ }^{\text {f. }}$

The Ufe of thefe Flowers is to dye Silk of a Pink, Rofe, and other red Colours; and for this Purpofe we import annually great Quantities from the Levant and from Germany, where they grow plentifully on the Banks of the Rhine, more efpocially about Straflurgh. It has been propofed to raife them in Carolina, where without Doubt they might be cultivated in great Perfection; but as they have been formerly, fo no Doubt they may again be raifed in Britain, whereby fo much as we pay for them
from Experiments made by himfelf; declares it an Improvement certainly and cafily to be introduced. Dr. Plot affures us Colonel Vernon brought it into Oxfordßire, in which County it is mentiened alfo by Mr. Mortimer.
e The Reafon why thefe Plants are allowed at Length fo mueli Room, is, that they may be able to nourifh and perfect their Flowers, of which they bear from Seven to Ten or a Dozen on one Stalk." Bint as the Seed fometimes fails, and the Plants may die by other Accidents, they are thercfore thinned at twice, that this Space may, be occupied only by thriving Plants. The great Space between the Rows is to facilitate the Hocing, as the Succefs of this Improvement munt depend on kepping the Ground free from Weeds, ftirring the Earth about the Roots, and providing as much as poffible, that the Plants may enjoy the free Air and warm refrefhing Light of the Sun.
f In this and indeed in all Cafes where the Seed has its Value as well as the Plant or the Flower, it is prepofterous to expect both in Perfection, if cut at the fame Time. It is therefore always fafeft and beft to allow fome of the healthicft and ftouteft Plants both Room and Time to perfect their Seed, which will be alfo found the greateft Oeconomy. It was, as has been oblerved, the Cafe of our Clover Seed. Mr. Hall aftures us he fowed. in February and March, and that the Flowers were ripe and gathered by the Twentienth of July. The former were not fo fine as the latter, which he afcribes not to their too early fowing, but to their growing in the Shade. Ncither Flowers or Seed, though he thinks his Garden Ground richer, were equal to thole that grew in the Vale, owing to their having more Air and Sun:

## of GREAT BRITAIN.

would be clearly faved to this Nation 3 . They were heretofore much ufed in Medicine. The Seeds are exceedingly agreeable to Turkies, Geefe, and other Poultry. It may not perhaps be amifs to remark, that it is not only ufed in dyeing Feathers, but that from theie Flowers, properly prepared, we have that famous Fucus, which is filed Portugal Red, and with which the Ladies improve, fhall we fay, or fpoil, their Complexions s :

- Weld, Wold, or Dyers Weed ${ }^{i}$, which from its producing a yellow Colour the Ancients called Luteum, Lutum, Luteola, or Lutea, is a Na tive of this Country, to be found growing wild on dry Banks, old Walls, and other fuch like Places in many Farts of this Kingdom $k$. It is chiefly cultitivated for Sale at prefent, as it has long been in the Neighbourhood of Canterbury. This Plant, or rather Species, the Followers of Tournefort's Syltem call Refeda, and diftinguifh them into feveral different Kinds. But that growing with us is a biennial Plant, the Root of which is compofed of ligncous libres; it throws out Leaves near the Ground, four Inches long, and about half an Inch broad. The Stalks rife to about Three Feet in Height, with Leaves, finaller in Size, but in other Refpects very like thofe at the Bottom. The Tops or Points of the Stems are terminated by long loofe Spikes of yellowith coloured Flowers, which appear about the latter End of June, and the Seed is commonly ripe in September ${ }^{1}$. It hath been hitherto
g As we are now for much improved in the Arts of Cultivation, and have fo juft Notions of the Nuture and Value of Improvements beneficial to our Manufactures, an Attempr not fo properly to iatroduce as to recover this, cannet but be acceptable to the judicious Perufer. All the Objection:, that can be formed agraint it, are very fairly fated, and as fully anfwered, by Mr. Hall; and we may thesffure hope, thit when next undertaken it will be effectually executed.
'This Plant is cultiated in Italy, Spain, and in fome Parts of France. The French however, who confume a great deal, bring much from other Countries, and diftinguihit by different Names. That from the Levant they call Sofranum, that from the Rhine Safron d'Allemagne ant that of theil own Growth Safron batard, or baflard Saffion. The Seed from the Ufe they male of it they flile G :aine de lerroquet; which confirms the Obfarvations made here.
i 'has laft Appellation, though commonly given to this, fems more properly to belong to another Plant, viz. (ienilit Tinctoria, Djers Broom, Green-wood, Wild Would, Wood-waxen, and fometimes Dyers Weed. It grows fpontanconfy in many Places, and will grow any where with wery little Crouble. The fand yellow Flowers produced hy this broom are chiefy ufed in Dyeing coarfe Clowths Yellow, and in Conjunction with Woad it dyes Gieen. It fetches but a low Price, the Colour being dull and but little cfteemed. However, fome have thought it might be improved by fowing the Sceds in tolerable Ground, keeping it fiom Weals, and beftowing a little Pains in gathering and curing it. The French call it Geneftrole, and ufe it much in the fame Manner that we do.
* An Opinion has been entertained, founded on the Circumftance of this Plant being natural to our Country, that it mutt have been with this, rather than Woad, that the ancient Britons dyed their Skins, on a Principle either of friking Terror, or of Ornament. But to this, as we fall hereafter fee, there are many Objections. Befides, the Luteola was fo common and to well known in Italy, that it is not to be conceived the Romans fhould be miltaken about it.

## 116. The POLITICAL SURVEY

the moft refpectable, as well as the moft authentic Writers r. It was, as they inform us, employed by the antient Britons of both S xxes in painting their Bodies, or at leaft their Faces; which fhews that they had then this Vegetable, and knew by fome Means or other how to extract its Colour s. Woad is a biennial Plant, the lower Leaves of which are of an oval Figure, with obtufe Points, entire on their Edges, and of a very lively Green. The Stalk rifes to the Height of about Four Feet, dividing into feven ${ }^{1}$ Branches, adorned with arrow-flaped Leaves. Thefe Branches are terminated by Clufters of fmall yellow Flowers, fucceeded by Pods, which when ripe turn black, and in each Pod is contained a fingle Seed t. The Growers of Woad in this Country hire Land, generally fpeaking, in fome of the Midland Counties, or wherever they can find it fit for their Purpofe, and give a good Rent for Two Years, as they feldom occupy it longer.

This Land is commonly the deepeft and fatteft they can meet with, neither too moift or too dry, and free from Stones or Gravel; a gentle hazle Mould is of all others the beft u. They are very careful in ploughing it, and crofs-ploughing of it in high Ridges, that the Froft may render the - Earth mellow. They likewife by frequent Harrowings deftroy the Weeds; and if there are any hard Lumps or Clods of Earth, they are beaten to Pieces, that there may be nothing to obftruct the Defcent of the Roots w.

When

[^66]When the Soil is thus prepared, they fow or plant the Woad, allowing Four Buhhels to an Acre. This is done about the Middle of March, though in fome Places earlier, and in others later; and they are very attentive in keeping it free from Weeds, by repeated Hocings in dry Weather. As foon as the Leaves come to their due Size and Colour, which is that of a very bright Green, they begin to cut, and fo continue through the Summer, making Three, Four, and fometimes Five Crops x. But the Two firft, which they ufually mix together, are by much the beft; the laft however will fometimes fetch Seven or Eight Pounds a Ton. A very hot Summer makes the beft Woad in point of Quality; a moift One produces the greateft Quantity. When cut, it is carried as foon as may be to the Mill, where it is ground very fmall ; after which it is made up in Balls. Thefe are expofed to the Sun on Hurdles till they become dry, and are then carried again to the Mill, where they are ground to a Powder. This Powder is jpread upon a Floor, where it is well watered, fuffered to ferment, and is frequently turned till it becomes dry, and of a greyih white Colour, which they call Silvering. After all this long and chargeable Preparation, it is put up in Bags of Two hundred Weight each, and fo fent to the Dyers, who then make a Trial of the Colour, according to which they fit the Price $y$. Some Plants are however left for Seed, and fuffered toIf and till that is ripe $\%$. It would certainly be better if only the firft, or at modt the ficond Crop were taken from thefe Plants, and the other Leaves left to nourifh and fupport them, by which the Seed would be rendered more valuable. An Acre in antolerable Year will yicld a Ton; and if the

Which may be then done with Eafe, and willexceedingly nourifh the Roots, on which the Vigour an! Prodice of the Plant depend. This is apparent in the Leaves, which when the Plants are thin trated grow larger, have more Subftance, and of courfe yield better than they otherwife: would do.
$\times$ The Numbcr of Crops depends chicily on the Weather. Rains bring it forward; but they choofe a warn and dry Day to cut it, and are very carcful to do this when the Leaves are in their prime. The Plants hould be hoed after every cutting, to refrefh and ftrengthea the Roots. Fire Crops are very feldom taken here, it is more common to take but Three, and even then, if the lift be mixed with the Two former, it would fooil all, by diminifing their Body, and weakening the Colour.
$y$ It is the Quality of the Woad that flould be principally regarded, and this perhaps would be n: Dimination of the Profits, for the third Crop will always fupply a fufficient Quantity of low priced Woad, and thoCare and Cof beftowad in the Culture and Curing the Two firlt Sorts, would efabilifh their Valuc. What Mr. Miller from his own Judgment and Experience hath advanced, flews fufficiently, that notwithtanding our having had the Culture of this Plant fo long, it may be flill improved.
z. When fuil ripe, the Sceds become black; the Plants fhould be then cut or reaped like Whear, and laid in Rows to dry, which they will do in Four or Five Days. They are then to be threthed, and the Seeds will be grod in their Kind, and in large Quantities. As the Seed Phats fland the Winter, fome let the Sheep eat their Leaves; but this feems to be falfe Oeconomy, as ir weakens the Plants, and theeeby prejudices the Seed both in Quantity and Quality. New sced aufiecis beft.

## 118 The POLITICAL SURVEY

Summer is very favourable a Ton and a Half. The Price of a Ton is about.Eighteen Pounds, fometimes Twenty, and èven Thirty; fo that notwithitanding there is a great deal of Trouble, and no fmall Expence in growing and curing it, yet the Profit is very confiderable; more efpecially as it is not a perifhing Commodity, but grows better by keeping ${ }^{\text {a }}$.

Woad not only affords a lafting and fubftantial Blue, which, according to the Scale of the Dyers, may be reduced into many different Shades, but is alfo of great Ufe in dyeing and fixing many other Colours. But notwithftanding this, and its being a Commodity of our own, the Ufe of it is very much declined fince the Introduction of Indigo; for the Purchafe of which large Sums go annually out of the Nation b. The Reafon of this is, that Indigo affords a more lively and pleafing Colour, is managed with more Eafe by the Dyers, and does their Bufinels more expeditioufly. Yet with all thefe Advantages it is univerfally acknowledged, that the Colour which Indigo affords is inferior to that of Woad in many Refpects, and particularly in Permanency; for which Reafon they are frequently ufed in Conjunction c. But the worft Confequence that has attended the Ufe of Indigo, is not barely leffening the Confumption, but abating the Price, and depreciating the intrinfic Value of Woad; fo that lefs Care is taken in the Management of it ; to which in a great Meafure the Inferiority of its $\mathrm{Cq}_{\mathbf{g}}$ lour, at leaft in fome Places, is at prefent owing d. The Declenfion in its

[^67]Confumption

Confumption is not the Cafe here only, but alfo in other Countries; for it was once the great Staple of Languedoc, and was cultivated alfo in Normandy, and in other Provinces of France e. As it alro is in Spain, Portugal, the Azores and Canary Illands, Switzerland, in the Neighbourhood of Geneva, in different Parts of Germany, and in Sweden. Our own Woad was allowed to be fuperior to any that we imported; and yet before Indigo had fo great an Afcendant, it was thought neceflary to lay high Duties upon foreign Woad, for the Encouragement of the growing and manufacturing it here; which Duties fill fublift. If we confider, that this is a Commodity in which Agriculture is as much interefted as our Manufacturers, one cannot well doubt that the preferving and reftoring it deferves great Attention here, as well as in other Countries in Europe, where the Support of it has been very ferioully confidered, from the bad Effects that have attended its Decline f. An Idea has been entertained, that by an Alteration in the Manner of Curing it, the Inconveniencies that are fuppofed to attend the Ufe of it, might be removed, and that Woad might be brought to anfwer all the Purpofes of Indigo; which if it could be accomplithed, would be moft certainly a great Advantage, and an Advantage which every true Lover of his Country would wifh fhould take Place here, rather than any where elfe g.

Encyclopedie Portative, tom. ii. p. 301 303.

In France this Plant is called Pafcl, Gucfle, and in Normandy, Voude or Woudc. The beftgrows in Upper Langueduc, partienlarly in the Dicale of Alby, where the Culture and Curing difitirs not much from our:. Whar we file a Ball, they call Cocagne; and fuch a Source of We.ith was this Commodity in thamer Times, that Pa's de Cocagne is fill a French Phrale for a County of Abundance, a Land of Guhen, as Languedoc in thole Days really was. For it was then exeicelingly fertile in Gisin, but Tlings are now cotirely altered. When by the Decreafe of the Demand at home and abront, the Culture of Panel declined, the People raifed Tobacco and Millet; by which their Lands became fo exhautcat, as to be incapable of bearing Pancl or vorn. This Matter is thus esphaned. Woad recuisel evtraordinary and cxpenfive Culture, and brought a: fuitable Return, 'eaving the Soil in the intelt State for Grain; thas it was a true Principle of Plenty; and by the Lofs of it Languedue is no longer in any Senfe, a Pais de Coragne.

- The Author of the Natural Hiftory of Languedoc, who has given an excellent Account of the Pattel, and patherically laments its Decay, fuggefts that Woad, if cured in the fame Alanner as Indigo, might produce as lively a Colour; and adds, that from fome Fxpetinents made lig himedt, he is convinced the Method would effictually andwer. The celebrated Mr. DuHamed du Moncenu informs us, that having propofed to Mr. Fontenclle, a Phyffita in Louviliana, ibe caltivating the Paftel there in the Manner of ladigo, that Centenan acquainted bin, that ty trat:ng Indico after the Manrer of Pattel, he had obtained a very beantiful Green; bat he did not diy. whetior it was a folid and permanent as well as a lively Colour.

## The POLITTCAL SURVEY

It appears from this very fuccinct Hiftory, that Providence has beftowed upon us the primary Colours, or at leaft the Materials from which they are produced, in as great a Degree of Perfection as moft of our European Neighbours. It therefore imports us, to endeavour by every Means to render them of the utmoft pofibible Utility. By fudying and practifing every Method of meliorating them by Culture ; by improving the feveral Methods of Curing them ; or, if it fhall be found practicable, inventing new ones; by endeavouring to add to our prefent Stock; by diligent Inquiries into tite Nature of other Roots, Leaves, and Flowers than thofe, the Properties of which have been already afcertained ; by tranfplanting either into this, or fome of our adjacent Inands, what are at prefent only the Produce of other Countries; or, if found impracticable to do it here, then to make the like Trials in our Colonies, in fome or other of which there is the highef Probability, that they might be raifed in very great Perfection's. Thefe are Points, not only of very great Importance towards promoting the Excellence and Cheapnefs of our Manufactures; but, as has been fully thewn, of no fmall Importance in regard to Agriculture, as the growing them here renders our Land of fo much greater Value; and this attended with a Circumftance directly contrary to the vulgar Notion, which is, that inftead of impoverifhing or wearing out the Soil, they contribute to the improving and rendering it fitter for the Production of other Grains and Vegetablesi.

The Improvement of our Meadows and Paftures hath been attended to, as well as that of our arable Lands, more efpecially, for between the Space of Two and Three hundred Years; within which Pcriod Mens Attentions have been according to the State of the Times, and of our Conftitution, more or lefs fixed on thefe important Objects $k$. The Fertility and wide Extent

[^68]
## of GREAT BRITAIN.

Extent of our natural Paftures, which is a Benefit beftowed by Providence, as being folely derived from our Soil and Situation, excited a Delin of rendering Grounds accidentally inferior to them of equal Value. This introduced Inclofures, that there Lands might lie Cheltered and wam, mis that thofe who for that Purpofe were at the Expence of fencing might have the entire Advantage of them '. The Situation and Expofition of Paftures came likewife to be confidered, as alfo the different Methods by which they might be benefited. Next the correcting of natural Defeets, fuch as the fpontaneous growing of Ruhes, Broom, and Heath, grew to be a Matter of great Confequence, and a Variety of Ways and Means were devifed for removing thefe Defects, and bringing thofe Lands into a State fit for grazing ${ }^{m}$. The draining of low Grounds, and thereby converting Marlhes into Meadows, was affiduoufly attended to ; as was alio the availing themfelves of Salt Marihes $n$. On the other Hand, the apparent Benefits received by the overflowing of fuch Meads as lay by the Side of great Rivers, fuggefted the gaining the fame Advantage by Art, and the Flooding of Grounds, by turning Water upon them; which by altering the Courfe of fome Rivulet, or previoully raifing Water for that Purpofe, was in many Places very profitably effected ${ }^{\circ}$.

1 Fitzherbert, the Father of our Hufbandry, recommends Inclofures, as faving Money to the Owner, improving the Land, kceping four Times the Number of Bcafts, and protecting the poor Man's Property trom the Cattle of his rich Neighbour. Thomas Tuffer, who though he wrote in Verfe, now almolt unintelligible, was a very honeft, and a very fenfible Man, a great Friend to Inclofures, and for this Reafon quoted by Blith and others, in fupport of their concurring Sentiments on the Subject.
m There are many Chapters in Fitzherbert's Book of Surveying on this Head, copied with no, very confiderable Additions by many ficceeding Writers, and yet but few of thede had feen lis Books. They ftole at ficond Hand from one who had; and it is really wonderful how his Books were fo long concealed, and thofe of his Cotemporarics and Difciples in thefe Studics (for fuch there really were) abfolutely ftifled and buried in Oblivion, as appars by the bong Interval in which little or nothing was written on this Subject.
n This, as has been already thewn in refpest to Kent, Somerfethire, and the Fens in Lincoln, Cambridge, and Huntingdonfhires, was principally profecuted by the Clergy and the Monks, who having in thofe Times an equal Afcendancy in Knowledge and in Riches, and having befides permanent Eifutes, were able to undertake and execute flupenduous and moll contly Works of this Kind, and which before Property was more equally and better divided, few private Perfons coul: 1 at: mp .

- We find this Mode of melionating Lands fuggefted and explained by almoft every Writer on Agriculture, from Fitzherbert to Worlidge. It is indeed aa Imitation of Nature, and the clofer it Vol. II.

## 122 The POLITICAL SURVEY

Besides thefe, and a Variety of other Methods, Recourfe was had to Manures of different Kinds, fuited to the Nature of the Soils, and the Ufes to which they were to be employed ${ }^{p}$. All thefe were gradually and partially introduced; that is to fay, they came in by Degrees as Mens Lights increafed, and were purfued and practifed in different Parts of the Inland, till their Utility being confirmed by Experience, moft of them at length univerfally prevailed 4. By thefe Methods very great Changes were made, and many wonderful Alterations, wrought in the Face of Things; fo that Land became much more valuable, by being in its Productions rendered much more profitable than it had been before, or than it could be conceived poffible to render it in former Times r . Yet the greateft Improvement had not yet taken Place, which was accomplifhed, though very flowly, by the Sowing of new Seeds, and bringing in thofe of foreign Countries, by which prodigious Advantages were gained, and immenfe Multitudes of Animals of different Kinds raifed, fupported, and fattened, in confequence of thefe additional Labours and new Productions. We have already given a Specimen of this in refpect to Clover, though confidered in another Light, and as an intermediate Crop, which however may ferve to throw Light upon this Subjeet s; but to render the Matter perfectly intelligible, it will be neceffary to take Notice of fome other Inftances.
is kept to the Courfe of Nature the more effectual. The Water muft be of a fat Kind, enriched with Soil, Mud, or Slime, not of a poor, hard, hungry Nature, or impregnated with any Sort of Mineral. The Land mult have a proper Pofition, be fiooded at the right Seafon, and fo long only as is neceffary.

F Thefe multiplied by Degrees into a great Variety of Articles, fuch as Ahes, Chalk, Clay, Dungs of different Kinds, Ditch Scourings, Fullers Earth, Lime, Malt-duft, Marl, Rags, Sei-find, Soap-afhes, Soot, Street-dirt, Turf-afhes, Sea-weeds, Wreck, or Ore. Mr. Atwell fays of his uwn Knowledge, that Lands may be improved to more than double in their Productions, by One of thefe Manures well chofen, and judicioully and fteadily applied.
$q$ The Progrefs of Improvements is naturally Now, a Thing much to be regretted, but not enflly remedied, as our beft Authors on Agriculture unanimoully agree, and of which they grievoully complain. But in regard to this, we are certainly mending. Hufbandry was formerig left entirely to Farmers, and mof of them indigent and ignorant ; it is not fo now, Agriculture is grown into general Efteem, and many of our Farmers are in good Circumftances, intelligent and induftrious.
r When the Father of our modern Improvements, Fitzherbert, fhewed that by inclofing, One Acre might be rendered as valuable as Two, be thought, and very juftly, that this was doing a great deal. When by Culture, Lands, wafte and unprofitable before, were rendered equal to thefe, it was doing more. But the Application of Manures caceeded all this. In Mortimer, vol. i. p. $10 I_{5}$ we have an Infance of Land raifed to Twelve Times its Income, by laying One bad Soil on another.
s This Sowing of Grafs was an Improvement Eorrowed from the Flemings, who had got the Start of us in Hulhandry. But if we had adverted to the Utility of this Method, we might have found many of thefe Graffes in our own Grounds. What is filed the White Dutch Trefoil, bes caufe brought to us from Flanders by the Way of Holland, and is very jufly eftecmed, grows naturally and to. Perfestion here, though till imported perhaps never attended to.

## of GREAT BRITAIN.

Saintroin or Efparcette is a Vegetable; the Ufe of which we borrowed from the French, though it is a Native of this Ifland, and grows plentifully upon the pooreft chalk Grounds near Royfton t. It is fomewhat more than a Century fince the Cultivation of it was introduced about Gravefend, where the Soil agreeing with it, it produced confiderable Profit. It may perhaps pafs for an Argument in its Favour, that it is no where in greater Efteem, or more affiducully cultivated, than in that Neighbourhood at this Day. The Roots of this Plant are large, ftringy, and run deep into the Earth. The Stalks rife Two Feet, and fometimes much higher, furnifhed at the Bottom with winged Leaves, but naked towards the Top, which is terminated by Spikes of foft red Flowers, like thofe of the French Honey Suckle, but imaller u. It fucceeds wonderfully upon chalky Hills, if there be a Surface only of Six or Eight Inches; and will likewife grow very well on a dry gravelly Soil. The Ground that is to receive it chould be well ploughed and made very fine. If fown in Rows, there fhould be about Eightcen Inches afunder, and about an Inch deep. It may be fown pretty thick, and thinned, by removing the lefs thriving Plants when hoed, to as to leave the Plants Eight Inches afunderw. In the common Hufe bandry, as it is a large Seed, they allow Four Buhhels, and formerly more, te an Acre, but three is from Experience thought by very judicious Perfons to be fufficient, and Half that Quantity will do in Drillsx. The Time molt proper for fowing it is the Beginning or Middle of April ; but it muf be done in dry Weather, becaufe the Seeds are apt to burft when moift. I

- The proper Name of this Plant is Sain Foin, Sanum Focnum, i. e. Wholefome Hay. Some c our old Writers flile it Freach Grafs, becaufe we borrowed the Ufe of it from them. It thrive as well in Bitain as in Italy, and continues longer than in France, whence it is in fome Place known by the Name of Everlafing Cirafs. This hews how much Soil and Climate may be affife by Care and Culture.
u Plin. Hift. Nat. lib. xxiv. cap. xvi. Raii Hift. Plant. lib. xviii. § i. cap. vi. p. gi4. Merct Pinax Rerum Naturalium Britannicarum, p. 84, 85. Hartlib's Legacy, p. 1. Blith's Engli Improver improved, chap. xxvii. p. 186. Saintfoin improved, Chewing the Benefit England me receive by the Grafs fo called, 1674. Tull's Horfehocing Hufbandry, chap. vii. p. 157-19 Elemens d'Agriculture, liv. ix. ch. ii. Dictionnaire d'Hiftoire Naturelle, tom. v. p. 69.
* The Advantages arifing from this Vegetable were well known, univerfally allowed, and warr recommended long before Mr. Tull publifhed any Thing on the Subject, Lat the Culture of $t$. Plant being particularly his Study, and reafoning about it from Experience as well as Theos perhaps his Chapter on this Improvement in our Hulbandry is not inferior to auy Thing he es wrote. It ferves more efpecially to fhew, that Freedom of Thought is as requifite in Agricult: as in any other Science.
$\times$ It was the general Doctrine before Mr. Tull's Time, that Saintfoin could fcarce be fown thick, and the Reafons affigned were, that it was a large Seed, that by this Means it got the bettet natural Grafs and Weeds, and came fooner to yield a great Profit. On the other Side, Mr. T obferves this Plant hath a tap Root, which pierces many Feet into the Earth, fo that it reccives N Parts in Ten of its Nourihment from below the Staple of the Ground; therefore, when thick for thefe Roots ftarve each other ; for the fame Reafon, this Plant produces on pnor Soil Forty Tis a larger Crop than its own natural Grafs or Turf; and from this Caufe alfo (when thin fo and properly hoed) its Longevity; infomuch, that a Plant of Saintfoin hath been fcarce kne to die a natural Death.

## 124. The POLITICAL SURVEY

muft not be fed the firf Year, but it may be mowed towards the End of July. The next Year it may be mowed in May, and the fooner the Hay is removed the better, for it quickly rifes again, and may be fed with Sheep till September 5 .

Saintroin is generally allowed to be one of the greateft Improvementeever practifed here, as by the Help of it many dairy Farms have been fet up in Places where it would otherwife have been abfolutely impracticable $\mathrm{z}_{\text {。 }}$ The Hay, when properly made, and the Seafon favourable, is equally wholefome, acceptable, and nutritive to Black Cattle and to Horfes, is made with more Eafe, is liable to fewer Accidents, and affords a larger Quantity than moft other Kinds of Grafs ${ }^{\text {a }}$. Some for this Reafon mow it twice; but in the Opinion of good Judges, it is better to take One Crop only, and. then to feed it cautiounly and feafonably with Sheep, which are fpeedily fattened thereby, and at the fame Time improve the Land. When it is left for Seed it hould not be fed at all. It is then to be cut in September, when the Seed is fully ripe, and afterwards very carefully threlhed b. In France, they feed their Horres with this Seed inftead of Oats, and Expcrience hath taught them that it will go much farther. It is alfo very ferviceable in feeding Hogs c. It is evident from thefe Circumftances, that it muft be exceedingly profitable, more efpecially as it does not wear out like

[^69]Clover, but will laft with very little Manure for Twenty Years; and if fowed in Rows, and properly hoed, more than twice that Timed. Befides, inftead of impoverihhing, it greatly enriches the Soil, fo that the Land when broke up, and thoroughly ploughed, is fo manured by the large Roots of this Plant, as to be fit for any Kind of Corn, and when a convenient Number of Crops have been taken, may be laid down and fown with Saintfoin again ${ }^{\text {c }}$. Though it is true, that it grows, and with great Profit, upon the worft Lands, even upon thofe that are flaty, and makes them better, yet it is acknowledged, that the greateft Crops are, as might be naturally expected, reaped from the beft Soils; fo that in this Light, of being equally adapted to poor and rich Soils, it may be confidered as a general Improvement, and it has accordingly been cultivated with Succefs in moft Countries $f$, and is ftill diffufing itfelf in Proportion as Hubandry is more ftudied, and as its Principles become better known.

Lucerne, Luferne, or Luzerne, is the only Vegetable held to be fuperior in its Kind to Saintfoin. It is the Medica of the Ancients, fo called becaufe it came originally from Media, and fpreading through Perfia, became at length known to the Greeks, who cultivated it affiduounly, and commended it highly s. From Greece it was transferred to Italy, before the Time of Cato or Virgil, was in the higheft Credit with the Romans, who from the Benefits they received by it, were led to treat the Culture of

[^70]
## 126 The POLITICAL SURVEY

it with all pofirble Induftry and Attention ${ }^{h}$. It flourifhed with them fo long as their Empire flourifhed; but when that was over-run by the barbarous Nations from the North, it is no wonder that a Thing which required, or as their Writings ihew, was thought to require fo much Skill and Diligence, fell gradually into Diffuetude and Oblivion. It had been before this Time carried into Spain, where it was preferved, and fpread itfelf efpecially in Andalufia i. When the Arts revived, it returned from thence into Naples, and by Degrees came again into feveral Parts of Italy. It made its way from thence into the Southern Provinces of France, and from the Place where it was firft or principally cultivated, it was called Grand Trefle, Trefle, ou Foin de Bourgogne ${ }^{k}$; that is Great Trefoil, Burgundy Hay, or Burgundy Trefoil. About Two hundred Years ago it came into the Palatinate, and fome other Parts of Germany, where it did not continue long before the Fame of it reached hither 1 .

But it was the Fame only, depending on the Teftimonies of ancient Authors, as to its Worth and Excellence, and the Relation of foreign Writers, that this valuable Vegetable ftill fublifted, and was cultivated in other Countries. But notwithftanding this, and notwithftanding our Tafte for Hubbandry revived, yet for many Years nothing more was heard of the Medica, owing very probably to an Opinion, that it would fcarce be reconciled to our Soil and Climate m . As foon indeed as Saintfoin was intro.duced

Virg. Georg. lib. i. p. 21 5. Varro de Re Ruftica, lib. i. cap. xli. Columel. lib. ii. cap xi. Plin. Hift. Nat. lib. xviii. cap. xvi. Pallad. lib. iii. tit. 6. \& lib. v. Menf. April. tit. I. Ilidor. Origin. lib. xvii. cap. iv. Raii Hift. Plant. lib. xviii. \$ v. cap. viii. p. 960. Columella and Palladius agree, that Medica, properly cultitated, would laft Ten Years. Pliny extends this Period to Thirty. We have not had fufficient Experience to determine the Point in refpect to Bitain.
i Mathiol. in Diofcorid. p. 330. where he tells us, it is called by the Spaniards Alfalfa It was in high Efteem amongt the Moors, who were great Farmers, and in that Refpect their Expulfion was a fatal Blow to Spain. They have alfo an excellent Kind of Saintfoin, which from thence was brought into the Franche Compte and into Burgundy. . The French are fill defirous of procuring the Seed of both Saintfoin and Lucern from Spain, thourgh their own is very good.
k Harduoin, in his Notes, upon Pliny fays, that the Medica of the Ancients is Lucern, vulgarly called Saintfoin. Thefe Plants indeed, were formerly, even by able Witers, frequently confounded. A. Speed fpeaks of Saintfoin, which might be cut Seven or Eight Times in a Year, required a very rich Soil, and was not to be fed by Cattle. 'Shis muft be Lucern, of which he had heard, and calls it Luccran; but was not able to diftinguifh it, having never perhaps feen it.

1 It was brought into the Lower Palatinate in A. D. 1573 , or thereabouts. The Baron Conrad Herefbach mentions this, and fays the Germans called it Welfholken. Mr. Googe tranflated his Four Books of Hufbandry foon after they were publifhed, and thus it became known to us. Bue known no farther than it might have been from Columella, Pliny, and Palladius; which, how well foever their Directions might fuit Italy, would by no Means anfwer in Britain.
${ }^{m}$ Googe's Whole Art of Hulbandry, fol. 35, 36. Hartib's Legacy, p. 4. 112-118. Blith's Englifh Improver improved, chap. xxvii. p. 188. Adam Speed's Adam ont of Eden, 1659, 12 mo . chap. v. Worlidge's Syftem of Hulbandry, p. 30. Mortimer's Art of Hufbandry, B. i. chap. iv.
duced a Complaint arofe, that Lucern, by which Name the Medica was now known, had been too much neglected. We began then to have better and more diftinct Accounts of it, and the Manner in which it was cultivated in France. It does not however appear, that even after this Revival of its Reputation, there were any Efforts made to introduce it into this Country. When it was firft made known, it was confidered as a Curiofity, and when at length the introducing the Cultivation of it came to be looked upon as an Improvement, the Trials that were made of it were by noMeans attended with Succefs, or at leaft not with that Degree of Succefs requifite to gain it Credit with the Public n. It is in truth but very lately; and chiefly in confequence of repeated Accounts of Benefits derived from it in the Southern Provinces of France, that we came to confider in Earneft the Poffibility of bringing it into Britain ${ }^{\circ}$. When thus confidered, it ftill met with many Difficulties. For though the ingenious Mr. Tull had a very high Opinion of it, confeffed its Superiority to Saintfoin, and believed. he had found the only Method by which it could be cultivated here to Profit, yet he flill profeffed he had his Doubts, how far, confidering the Difficulty of finding proper Lands for its Reception, it could ever become a general Improvement p . Notwithftanding this, fome ingenious and enterprizing Perfons, having the Honour of their Country, the Credit of Agriculture, and the national Profits that might arife from it at Heart, were far from defpairing. It is to their Spirit, Perfeverance, and Sagacity we owe the Profpect we have, that Lucern may, at no very diftant Period of Time, be added to the Lift of our namerous modern Improvements. Whenever
p. 39. Bradley's Survey of Ancient Hufbandy, p. 112. 173. 201. Tull's Horfehoeing Hufbandry, chap. xiii. Miller's Gardener's Dictionary, under Medica. Dr. W. Harte's Eflays on Hufbandry. E/fay ii. containing an Account of the Culture of Lucern.
${ }^{n}$ From perufing and confidering the Authors cited in the former Note, the Account given in the Text was taken. As Things have been fince explained, it appears no way ftrange that our firft: Expcriments gave us no fivourable Impreffions of this valuable Vegetable. But it does great Honour to thofe ingenious Perfons, who from meditating on the Circumfances attending them, traced out the Errors committed, and thence directed a new and effectual Method.
${ }^{-}$It was, confidering Things in thins Point of View, no great national Lofs that thefe firf Attempts were not profitable in any great Degree. Becaufe by this Means the Cuitivation of Lucern was configned to the Conduct of thofe who had Leifure, Abilitics, and, which was equally neceflary, were in Circumftances that cnabled them to purfue their own Schemes, however tedious and expenfive in the Outfet, however precarious or incertain in their Iflue.
${ }^{9}$ According to his Notions, moft of our Lands were too poor, too rich, or too cold for Lucorn maunged in the Way of the common Hufbandry. But being fet in Rows at proper Diftances, fo as to admit Horfe-hoeing in the Intervals, and Hand-hoeing about the Plants, he affirmed they would be as healthy and vigorous, bear cutting as ofren, and laft as long, or even longer in Britain, than either in lrance or Italy, provided the Soil was agrecable ; in which he did not go beyond Truth.

## 128 The POLITICAL SURVEY.

this fhall happen, the fuccinct Hiftory we have given will be read with foume Degree of Profit as well as Satisfaction 9.

That Kind of the Medica, which is known to us by the Name of Lucern, hath a perennial Root, and an annual Stalk, which in very good Land will rife Four Feet high, flooting out Three Leaves at each Joint, fhaped like Spears, and ferrated at their Tops. The Flowers grow in Spikes, to near Three Inches in Length, ftanding upon naked Foot Stalks. rifing from the Wings of the Stalk, are of the Buttertly Kind, of a fine Purple Colour, which are fucceeded by Lunar or Screw-like Pods, containing feveral Kidney-fhaped Seeds r. Lucern has been cultivated with us. n Three very different Manners. The firft was in the Broad-caft or common Mode of Hubbandry, and this either with or without Corn, neither of which anfwered. In refpect to the firf, the Corn drew from it fo much of its neceffary Nourifhment, that it hardly recovered it, and in the other, though it did fomewhat better, Weeds and natural Grafs generally choaked it in a Couple of Years, fo as to take away all Hopes of a future Crops. Mr. Tull, as hath been already obferved, thought thefe Difficulties might be in a great Meafure removed, as in truth they were, by drilling the Plants in Rows, and by frequent Horfe and Hand-hoeing them, which was the fecond Method. This indeed fucceeded incomparably better than the former, and where the Land is very rich may produce large and latting Crops ${ }^{5}$ : But the third Method, though in the Beginning more troublefome and more expenfive, bids by much the, faireft, as there is no Necef-

[^71]
## : of GREAT BRITAIN.

 rity of being extremely Nice in the Choice of the Soil. The beft is allowed to be a rich loomy Earth, but except moift marhy Lands and fiff Clays, none need to be excluded ${ }^{\text {u }}$.The third Method confifts in chufing a proper Spot for a Nurfery, in which the Lucern may be fown towards the End of March, and by the Middle of Auguft the Stalks will be about Eighteen Inches high. They are then to be very carefully raifed out of the Earth, when both the Plant and the Root are to be amputated with a Pair of Sciffars, leaving the former about Five Inches above the Crown, and the latter from Eight to Ten Inches in Length, and immediately after this Clipping they are to be thrown into a Tub of Water. They are next to be planted with a Dibble or Setting-ftick the fame Day, in a Piece of Ground which hath been previoufly properly prepared, ploughed, and reduced as fine as poifible. They are to be planted after the Manner introduced, by what is called the New Hufbandry, leaving the Plants about a Foot afunder, and with Intervals about Forty Inches, to make Room for Horfe-hoeing of the latter, and Hand-hoeing of the former, which keeps them in perfect Health, and allows every Plant the Space requifite to live and thrive w. Lucern thus tranflanted will not reach its full Perfection till the third Year. It is true, it may be cut thrice the firft, and Five Times the fecond Year; but the Quantity arifing from thefe Cuttings will by no Means equal thofe in fucreeding Years, when if the Seafon be very favourable, it may be cut even Six Times, and yield largely every cutting $x$. The trouble and Expence attending this Method, which it mutt be acknowledged are very confiderable, are only neceffary during the firft Two Years; and as Lucern will

[^72]$l_{\text {aft }}$ Ten Years, and with proper Management perhaps longer, it will anfwer very well, as the Advantages refulting from it are fingularly great $s$. To fay nothing of its Beauty and agrecable Appearance when thus regularly cultivated, it is much earlier fit for cutting than Meadows, which is a Circumftance of no fmall Confequence ${ }^{2}$. It is valuable alfo in refpect to its Certainty, for though the firt and the laft Cutting depend upon the Seafon, yet the intermediate are very regular, and in that refpect highly ferviceable. It yields very large Crops, to the Amount fometimes of Five Tons upon an Acre a. It is generally computed that Four Pounds Weight of green Lucern will make one Pound of Hay, and both the Grafs and Hay are in the higheft Efteem. For with proper Caution in the Diftribution, it is held the moft wholefome and nutritive of any Vegetable whatever, which is the lefs to be difputed, fince it has maintained its Reputation in this Refpect, in fo many different Countries, and for fo many fucceflive Centuries. It is of general Utility; for though commonly commended for its Excellence with refpect to Horfes, yet Experience Chews, that it is equally acceptable, and anfivers as well in the Feeding of Cattle and other Animalsb. It is impoffible to fay, till the Culture of Lucern is better and more fully eftablinhed, what the Profits arifing from it may be. An Author remarkably careful in his Calculations, feems to be certain that it will reach Five Pounds an Acre, all Expences deducted c; and that One Acre of this Ve-

[^73]
## of GREAT BRITAIN.

 be of equal Value to feveral Acres of inclofed Meadow, as each Acre of that is efteemed to be worth Four of common Downs ${ }^{d}$.It was neceffary to infift more largely upon this Article, as being not only of fingular Importance, but alfo becaufe it has not reached yet to its full Perfection, a Thing greatly to be defired, and therefore ought to be 'affiduoully endeavoured e. This new Method, which Promifes fo fair, is indced of foreign Invention, and firft practifed by a worthy Magiftrate of Geneva ${ }^{\text {r }}$, transferred from thence into France, and adapted to our Soil and Climate with great Care, Induftry, and Application, by a Perfon of admirable Abilities, from the nobleft of all Motives, that of true public Spirit, a Defire of enriching his Country, and of adding this to the numerous Acquifitions in Agriculture which have been made in this laft Century. From his excellent Writings this fuccinct View of what may be expected from Lucern has been taken; and where-ever it appears obfcure or imperfect, the inquifitive Perufer may from thofe Writings meet with all the Information that he can reafonably defire, and meet likewife with a Fund of curious, rational, and learned Entertainment, which from fuch a Subject he could hardly expect g . This Improvement, by the fedulous Application of a worthy Gentleman of Family and Fortune, has been happily in-

[^74]${ }^{\text {t }}$ roduced into Ireland, and hath made fome Progrefs alfo in North Britains, as well as in feveral Parts of the South, and this in all the three different Methods that have been mentioned.

There are other Difcoveries and Improvements of this Kind which certainly merit, and are in due Time very likely to meet with Notice and Attention. Such particularly as the introducing of Burnet, and fome Grafles from America ${ }^{\text {h }}$. But as thefe have not hitherto been brought into general Ufe, the Advantages frowing from them have not been fo fully afcertained by Experiment, as to come within the Plan of this Work, farther than being mentioned as Things which may become hereafter of fignal Utility. Whatever hath this Tendency hath an undoubted Right to Confideration; for the Improvement of Land, is, in fact, an Acquifition of Territory, a Kind of civil Conqueft made by Science inftead of Arms, highly beneficial to us, and yet no Way injurious to our Neighbours. Thefe Improvements are beneficial alfo in another Senfe, as every Inftance of this Kind ferves to inculcate the great Principle of ftudying and following Nature, which is the Morteft, moft certain, and effectual Method of perfecting Agriculture ${ }^{i}$. But before we quit this Subject, we moft congratulate our Country on a very ingenious, and yet limple Propofal, which Points at fomething fill more extenfive than even thefe Improvements, and which, if duly profecuted, may become of infinite and perpetual Confequence to the whole Nation $k$. This Propofal confifts in firft carefully collecting the

[^75]
## of GREAT BRITAIN.

 Seeds of thofe natural Graffes, which Experience hath fhewn to be moft valuable; and then as carefully fewing them on Ground properly prepared; due Regard being had to the Nature of the Soil, and to the Nature allo of the Cattle that are intended to be fed thereon 1. An Overture fo apparently beneficial in its Confequences, and fo obvioufly practicable in its Execution, one would be tempted to think, needed very little Perfuafion to bring it to a fair Trial. Yet it muft notwithftanding be acknowledged, that as.nothing could be more laudable, fo nothing at the fame Time could be more neceffary, than the Interpofition of the Society for the Improvement of Arts, to excite and fupport fo falutary an Experiment m. An Experiment calculated to render all our common Paftures both fertile in their Produce, and excellent in their Quality, and thereby conducive to the great End of rural Oeconomy, the procuring all Sorts of Cattle, the moft palatable, wholefome, and nutritive Food, altogether unincumbered with Weeds, and this too for a long Space of Time, and with very little Trouble or Expence.Turs fuccinct Hiftory of our national Improvements, evinces fufficiently how much they have been accelerated and promoted by the Increafe of true Science, and the Influence of philofophic Principles, built on the folid Bafis of Reafon, and confirmed by the Teftimony of Experience. Thefe have acted chiefly, by banifhing feveral Kinds of Superftition with which the old Hufbandry was over-run $n$; by exploding groundlefs Notions, that
were eaten, and what refufud by Oxen, Horfes, Goats, Sheep, and Swine, of the former were s.i28, and of the latter 886, making rogether 2314. Linnai Amoenitat. Academ, vol. ii. p. 203.
${ }^{1}$ The truly worthy and accurate Mr. Stillingfleet has trannated the Swedish Pan. Mifcellaneous Tracts, p. 341, and fubjoined Obfervations on Graffes, p. 365-391, in which this Doctrine is admirably accommodated to this Country, and the Way thereby opened to have large Tracts of fine unmixed Graffes fuited to all Kinds of Cattle; a Thing not otherwife to be obtained, and which from its manifef Advantages muft be always defired. The common Practice is to fow Grafs Sceds as they come from the Hay-rick, which as Mr. Stillingfleet obferves, is not more abfurd than if a Man fhould fow Wheat, Barley, Oats, Rye, Peas, Beans, Vetches, Buck-wheat, Turnips, and Weeds of all Sorts together. If any Advantage is to be gained by mixing Seeds, it may: be more probably expected, if made by Choice than if left to Chance.
m The judicions Propofer of this Method of having the fineft Grafs and Hay, endeavours to obviate the ftrongeft Objection that could be made, from the Difficulty of procuring fuch Seed in fufficient Quantities, by obferving that a little Boy in Three Quarters of an Hour, by a Road Side, collceled as much of the pure Seed of crefted Dog-tail as weighed a ©uarter of a Pound Averdupois. But the Society conceiving rightly the Nature and Importance of the Propofal, and of how great Confequence it muft be to the Publick the bringing it to a fair Trial, have not only encouraged this liberally, but very judicioully in different Manners, fo that there is good Reafon. to hope, foume or other of them will take Effect to the Honour of the Society, the Increafe of ufefiul Knowledge, and the Emolument of the Nation.
${ }^{n}$ We fee phinly in the ancient Writers on Hubandry, and in Pliny who collected from many that are now lof, innumerable Inflances of this. The Truth of the Matter is, that in all Cona-

## 134 The POLITICALSURVEY

that prevailed in a Manner univerfally for Want of their being examined by tracing the Origin of old Cuftoms, and enquiring into their Confequences; by leffening the Authority of vulgar Traditions; and by admitting for the Sake of new Advantages new Methods of Cultivation ${ }^{\circ}$. By Means like'thefe, the Foundation was gradually laid, grounded on clear intelligible Principles, confirmed, as we have faid, by proper and repoated Experiments. From hence arofe ftrict Inquiries into the real, that is the natural Caufes of Fertility and Barrennefs, the Food or Nutriment of Vegetablus, the Variety and Nature of Soils deduced from their component Parts, the Means of altering and meliorating them by the Affiftance of proper Manure and Culture, the introducing foreign Seeds, and adopting from the Nations whence they were borrowed their Methods of improving themp. By fuch Steps, feadily purfued, our beft Lands have produced much more than formerly, and thofe that had been long confidered in quite another Light, were by a fuitable and judicious Treatment made equally rich and valabble q. By a judicious Alteration in the Courfe of Crops, many Benefits were obtained; by fpreading, though flowly, new Improvements from one County into another, the Practice of rational Agriculture was extended, and the real Value of our Soil and Climate refcued from vulgar Errors, and fet in a true Point of Lightr. Old Prejudices, which would hardly have given Way to Reafon, were by Degrees eradicated and effectually eradicated by
tries the Mafs of the People, and more efpecially of country People, are naturally fuperfitious. A Difpofition, which though highly detrimental, is hat dly to be eradicated, however weak and abfurd, becaufe till Mens Minds are enlarged, the acting contrary to fuch Notions has an Air of Impiety.

0 When for Want of Method and Inquiry the true Caufes of Things were not known, fictitious or conjectural Caufes were affigned productive of numerous Errors. Cuftoms which, it may be, were founded on juft Motives, continued to fubfift after thofe Motives ceafed, and even when they were no longer remembercd. Tradition was a blind Guide, ruling prefent Things according to Lights paft, and was therefore properly corrected by more recent Obfervations.
${ }^{p}$ It is indeed true, that thefe Subjects are not even now either thoroughly or certainly underftood. But they are undoubtedly much better known than they were in virtue of the great Improvements made in Natural Philofophy and Chemiftry; and from their being better known, we are become greater Proficients in Agriculture; we now enter with more Certainty into the Connection between Caufes and Effects, leave lefs to Chance, and improve frequently by our Difappointments.

9 Inflances of this have been given in the raifing Hemp and Flax on Soils fuppofed to be incapable of bearing them, and the Land being improved Inftead of being impoverifhed thereby. The fame bath been hewn in regard to Woad both here and in France. Still more evidently in refpect to Saintfoin. It is highly probable the fame Effects may follow from Luceru and Burnet, whenever the Culture is thoroughly underftood, and widely extended.
$r$ When we refiect that Saffron, Liquorice, and Hops are better here than in moft Parts of Europe ; that Saintfoin continues longer here than in France; and that Lucern hath been as often cut here as in Italy; it Chould in a great Meafure remove all Diffidence as to. Suil and Climate. We have attempted few Things where we have purfued right Methods, and neadily perfevered, in which we have not fucceeded, and fome there are, and thofe too of great Importance, in which we may fill fucceed.

Experience, and Men, by feeing what had been done, grew into a Confidence of being able to do more.

In the fame Proportion, that fuch clofer and ftricter Enquiries have been made, new Lights have been gained, and as Mens Minds have been turned from abftrufe, unavailing, and fruitlefs Speculations, to thofe ufeful, national, and important Studies, the Progrefs of our Improvements, and the Advantages neceffarily attending them, have been both quicker and greaters. In confequence of this, it may be truly faid, that the Face of the Country in no fmall Part of this Ifland hath been entirely changed. The Value of our Lands, independent of other Caufes, from their intrinfic Worth, hath been gradually raifed. The Number of our Productions wonderfully multiplied. Many new Materials for Manufactures have from thence been. introdiced t . The Means of foreign Commerce have been thereby fupplied, and the Circumflances of all Ranks and Degrees of People rendered very much better than they were u. As many of the Undertakings from which there Benefits were derived had their Rife from Men of fingular Parts and. Abilities, fo from the very Nature and Circumftances of thofe Undertakings they very happily fell more immediately under the Care of Perfons of Fortune, liberal Sentiments, and fedulous Application, who in purfuing them, purfued at once their.own and their Country's Intereft, and of Courfe could not either be more wifely or more worthily employed w. But though:
s The Detail of thefe Improvements, compared with their Extent, and the Times in which they were made, make this fufficiently manifeft. We may add, that as the Science of Hufbandry is now in great Eftcem; as many elegant as well as excellent Books have been publifhed thercon; as Encouragements are given to promote it in all its Branches in Britain and in Ireland; and as the I egiflature countenances whatever may promote it, we may very reafonably hope it will hereattur advance with greater Celerity.
' As an Illuftration of this Matter, it will be very expedient to mention, that the Bounty on the Scots Linnen commenced, A. D. 1728. By which we are enabled to compute the Progrefs of that Manufacture; for in that Year the Quantity amounted to $2,183,975$ Yards, and in value to 103,3121. and in A. D. 1766, the Quantity was 13,242,557 Yards, and the Value amounted to 637,3461 . It is generally underfood, that the Englinh Linnen Manufacture is pretty nearly of the fame Value. We may from hence difcern the great Importance of gaining full Poffeffion of the primary Material.
" Mr. William Harrifon, who publifhed his Defeription of Britain, A. D: 1577 , fays, that old Pople remarked to him Three remarkable Changes that had happened in their Times. (1.) That every Houle had Chimnies, whereas in their Youth there were not above Tivo Chimies in an uphad 'Town. (2.) That whereas they had Beds, Sheets, Bolters, and Pillow's, when young they liept on Straw, and the Mafter of a Farm Houfe thought himfelf well to pais, if he had a Flock Hed to lie on, with a Log to reft his Head upon. (3.) That Platters were exchanged for Pewter, and Wooden Spoons for Tin, and even for Silver. He alfo mentions in thofe Days a Farm let at Four Pounds a Year, which in his Time was let at Forty, and yet the Farmers lived better, and faved more fince they paid Forty than when they paid Four. . Defeription of Britaine, B. ii. chap. x .
whis is a Point of very great Importance, for our principal Improvers, as well as thefe amongh the Romans and Grecks, have becn Men of Rank and Learning, fuch as Fibherbere,

## 36 The POLITICAL SURVEY

by thefe Steps we are more efpecially within a Century paft, far, indeed very far advanced, yet are we fill undoubtedly very diftant from Perfection. For not only new and ufeful Defigns may ftill be ftruck out, but even thofe that have been profecuted with the -utmoft Diligence, may by the Continuance of it, be carried much greater Lengths, as the Profpect continues, notwithftanding the Progrefs we have made ftill expanding before us $x$. Towards the extending thefe national and falutary Views, the chief Things requifite are Indultry, Frugality, and public Spirit 9 . The firtt may derive much Affiftance from Laws; the fecond can be only brought about by Example; and if the Two firft were once generally diffured and firmly eftablihed, the third would follow of Courfe. For as Idlenefs and Diffipation are the Sources of Corruption, fo Induftry and Frugality naturally produce public Spirit, as the Voice of Reafon teaches, and as Experience hath in all Countries often verified z .

There are fill fome Points, which though they have been incidentally touched already, require to be mentioned again before we clofe this Chapter. The modern Manner of laying out our Grounds for Pleafure is incomparably better than in former Times, becaufe more natural, and having in it alfo more of Utility. The prefent Tafte for Shrubs is very pleafing and elegant in refpect to their Colours and Odours; but perhaps, without leffening this, fome Regard might alfo be had to the introducing

Googe, Vifcount St. Albans, Sir R. Wefton (by whofedfmall Treatife this Nation is fiid to have ghed Millions) Sir Hugh Plat, Dr. Beal, Mr. Evelyn, Sir William Temple, Mr. Worlidge, Mr. Timothy Nourfe, Mr. Tull, Mr. Lille, Dr. W. Harte, and many others who have merited highly of their Country.
$\times$ If we reflect on the great Space that intervened betwecn the firft Miention of fome of our great Improvements, and their being brought into common Ufe, this will not appear at all improbable. Above, One hundred Years ago, the Practicability of fupporting Horfes on Carrots was not only known, bat publifhed, and overlooked. The fame may be faid as to Potatoes. An Hundred Years hence, thefe Roots may be applied to a Variety of othcr Purpofes which at prefent are fcarce in Contemplation.
y It is a weighty Obfervation of a judicious Writer, "Nature has beftowed Mines on feveral " Parts of the World; but their Riches are only for the Induftrious and the Frngil. Whom"ever elfe they vifit, it is with the Diligent and Sober only they flay." Locke's Works, vol. ii. p . 35. Let Wealth be acquired by Induftry, and there is great Probability that Frugality will keep it ; for swhat is gotten flowly and affiduouny, it is not in the Nature of Man haftily to lavifh away.
${ }^{2}$ In the early Ages of the Roman Commonwealth, when their Dictators were taken from the Plough, all thefe Virtues were not only conficuous but common. It was the fame in the iofant State of the United Provinces ; J. de Witt, who had the Power, had alfo the Prudence of thofe Dictators ; and we know what Effects his Example had upun the Manners of his Countrymen. As by Induftry, we do not mean fimply Labour, but the Application of the beft Part of a Perfon's Time, according to his Condition, unto ufeful Purpofes; fo we defire to difinguif from Sordidnefs, that Frugality we applaud; which is fuch a Regulation of Expence, as Age, Rank, and Circumfances may prefribe. Avarice, the dirtieft of Vices, is the Parent of Narrownefs; . Fut Frugality is the Offspring of Decorumu.

## of GREAT BRITAIN.

fach as might bring us Ufe and Profit as well as Amufement a. Our Kitchen Gardens may be juflly ftiled fuperior to any in Europe, for the great Variety and Excellence of efculent Plants. Our Flower Gardens alfo contain whatever may content the Sight or delight the Smell, and fufficiently demonftrate that our Soil and Climate will admit of Improvements that would have appeared utterly incredible to our Anceftors b. What cannot be reconciled to thefe, I mean our Soil and Climate, are to be found E. our Greenhoufes and Confervatories, where, by an equal Exertion of Skill, Induftry, and Expence, we poffers in a Manner the vegetable Treafures of the whole Earth. Our Orchards and Fruit Gardens abound with better chofen, and greater Variety of fine Trees, than in the Age immediately preceding this c , though fome very great Men then made their Improvement their peculiar Study d. In planting for Shew and Ornament, we have likewife far outdone our Predeceffors, by introducing many and fome of them very ufeful Trees from the moft diftant Parts of the Globe, and naturalizing them in both Iflands e: A Thing highly laudable, confidering them only as they were intended, in the Light of Curiofities and Ornaments; but which would certainly turn to a far better Account, if they were planted in much larger Numbers, and with a View to the public Benefit, as in Procefs of Time we have great Reafon to expect they will.
${ }^{2}$ We may be induced to give fome Attention to this, if we reflect that the Pcople of Arabia, neglecting all the rich Commodities, for trading in which, they were famous in the moft early Ages, confine themfelves to the Culture of the Coffee Buß. The Sugar Cane commands in like Manner the Attention of the Pcople in the Weft Indies. Here; that humble Plant the Ofier produces Ten Pounds an Acre, fometimes more, with very little Trouble, and as little Expence.
${ }^{6}$ The Art of Gardening is not above a Century old in the Manner it is now practifed. When Guineas were firft coined, one would fearce purchafe a Couple of Caulifowers; we now produce che beft, and by far the greatelt Quantities of any Country in Europe, and even export them annually to Holland, from whence we originally received them. This furely is a demonftrative Proof of what Skill and Labour will do in this Soil, and under this variable Climate.
e But to the Honour of the Improvers of thofe Days, they feemed very attentive to the promoting Cyder, Perry, Mend, and other Englifh Liquors, which they wifely judged capable of being rendered as acceptable, and confequently as faleable abroad as foreign wines are here. On this Subject Dr. Beal, Mr. Evelyn, Sir Jonas Moor, Mr. Worlidge, and Mr. Mortimer have reported many facts that ought to be remembered, and made many Obfervations which well deferve to be confidered.
d It may be, that in Time we may have Vineyards again in this Country, as we had formerly, towards which Perfeverance is as neceffary as Soil or Situation. One dares not be fo pofitive as to Ulives, though they have borne Fuit at Kenfington and in Devonfhirc. A Nobleman, who was an cxcellent Judge, thought they would do as well in the IMe of Wight as in Italy. White Mulberries grow here as well as any where, and it is faid where-ever they grow Silk may be introduced.

- As for Inftance, Ccdars from Lebanon and from Ameriea, which grow freely, and to a large Size. The Cyprefs, fo much eflcemed in carly Ages. The Plane tree of tupendous Bulk. Firs of many different Kinds, the Silver, the Norway, the American Spruce, the Newfoundland, and the Hemlock; in lihe Mamer all the numerous Families of the Pines, fuch as the Pineafter or wild Pine, the Tartarian, the Siberian, the Wrymouth, the Virginia, the North American Red and White lines, \&e.

Vol. II.

## 138 The POLITICAL SURVEY

Yet in the Midft of thefe truly noble Attempts, which feem to breathe fuch a vigorous Spirit of Improvement, wehear a general Complaint, that there is an evident, and even dangerous Decay of Timber, both in Britain and in Ireland, and this notwithftanding our natural Advantages, which in this Refpect are very great; fince no Country is more proper for the Production of this valuable, and confidered as a commercial People, neceffary Treafure f. We have in common with other Regions, Heaths, Moors, Mountains, Moraffes, and other wafte Grounds, which, though dreary, inhofpitable, and ufelefs in their prefent State, would be very profitable if planted. But we have allo Forefts, Chaces, and Parks, exceedingly well adapted to, and which were originally appropriated for, the raifing all Kinds of ufeful Timber 3. To this we may add, that if Indolence, and the narrow Spirit of looking to ourfelves only, and not forward to Pofterity, would give us leave to fee it, there cannot be in proper Places a more profitable Improvement than might by this Means be attained ${ }^{\text {h. }}$ But as the Fact, in reference to this Declenfion of Ship-timber, and the moft ufeful Kinds of Wood, cannot be controverted, we ought certainly, the Thing being fo much, and withal fo manifeftly in our Power, to turn our Thoughts, and bend our Endeavours to the proper Remedy, and this for a Variety of Reafons.

[^76]
## of GREAT BRITAIN.

In the firft Place it is to be confidered, that the very fame Complaint is at prefent made in moft of the Countries of Europe, even in thofe from whence we at prefent draw our largeft Supplies; in confequence of which the Commodity rifes in Price, whereas by a due Exertion of our own Powers all this Money might be faved to the Nation i. . We ought next to advert, that there is not perhaps in the World, a Country where there is either a more copious or a more conftant Demand for Timber, and every Kind of Wood; fo that if this growing Evil Chould proceed, as it is very likely to do, to a much greater Height, it muft be attended with very great and very manifeft Inconveniencies $k$. To this we may add, that whenever we fhall come to fee it in its proper Light, and in confequence of this refolve to fet about an Amendment in Earneft, even this muft in its very Nature be a Work of Time, which is a Point that deferves the moft mature Attention '. Suppofing therefore that our Apprehenfions on this Head may be a little too ftrong at prefent, and that confiderable Supplies of Timber may be ftill found in Hamphire, Suffex, Walcs, and fome few other Places, yet this, inftead of diminifhing, ought rather to excite our Care, as fhewing, that if we go about it inmediately, there may be ftill fome reafonable Hopes of preventing. a Mifchief, that may otherwife become in many Refpects extremfely fatal.

The Laws, which through a long Courfe of Years have been enacted with a View to the Prefervation of Timber, fufficiently fhew the Senfe of the Legillature upon this important Subject $m$. In the preceding Book we have

[^77]have ventured to give fome Hints for promoting the fame valuable Purpofes. But a Matter of fuch national Concern, ought not to be left to incertain Meafures n. It calls for`immediate, vigorous, and effectual Remedies, which if they can be pointed out there is no Reafon to diftruft the Willingnefs of the Legiflature to interpofe its farther and moft effectual Affiftance for the Welfare of the Publick. In the firf Place, a frict Survey ought to be taken of all Forefts, Chaces, \&cc. and an authentic Report made of the State in which they are at prefent, and what Supplies of Timber, and in what Space of Time, might under proper Management be expected from them ". It fhould feem realonable on renewing all Royal Grants. of Lands, that a Referve of Trees for the Ufe of the Navy in Proportion to the Extent of the Grant fhould be required in the Nature of a Quit-rent, and the State of fuch referved Trees hhould be properly certified upon every fubfequent Renewal ${ }^{\text {P }}$. Befides the Laws upon this Subject ought to be carefully reviewed, fuch Parts of them as are become obfelete or improper repealed, Rewards and Penaltics clearly and with Propriety affigned; but above all, fome Methods fhould be purfued by Prefentments at the Summer and Lent Affizes, to carry thefe Laws, thus amended, into frict and conflant Exeoution 9. In refpect to private Perfons, they may be wrought on
to which Hints have been already given. But if Parifhes or Counties could be induced to raile Plantations of Oaks, by granting them Annuities towards the Relief of their Poor, from the Time the Trees were of a certain. Age, till cut for the Ufe of the Royal Yards, it might prov ${ }^{\text {e }}$ an effectual Means of fecuring them.
${ }^{n}$ We have from Experience (for it is now more than a Hundred Years fince Mr. Evelyn publifhed his Sylva) learned, that Perfuafion and Argument will do little. We muft (though I am rarely an Advocate for that) look up to Authority. There is certainly in this Ifland a great deal of Ship-timber of Twenty Years Growth or more, which if, without Injury, or rather with Emolument to the Proprietors, it could be preferved for the Ufe of the Navy, might have many good Confequences.

- The original Defign of Forefts was for the Conveniency of Hunting, when this was cfteened the mobleft of royal Diverfions. As the Nation grew more civilized, many of thefe artificial Deferts: were disforefled, and Towns and Villages admitted in the reft. Bnt the fingle Emolument anifing to the Publick, was the Growth of Timber, of which (as Things now ftand) it is very expedient the Publick mould have a diftinet Account. This was an Agc ago recommended to Charles II. by Mr. Evelyn, who thought that a due Regulation of the Forefts and Chaces might amply fupply the Royal Yards with Timber. If ever thefe large Tracts of Land are converted intoFarms, the referved Rents might be at the fame Time converted into an Obligation of plauting and preferving a certain Number of Timbeferees in proportion to the Extent of fuch. Farms.
${ }^{p}$ In France, no Man, Jet his Fortune or his Rank be what it will, can cut Timber on his own: Fifate, but under the Infpection, and under the Regulations of the King's Surveyors. In thatKingdom the Fourth Part of Woods in the Hands of Ecclefiafics, or others holding in Mortmain, is referved for a Supply of fervicable Timber, by an Ordinance in A. D. 1573 , cunfirmted in A. D. 1597, but never executed till A. D. 1669 . Such Regulations benefit the Publick. without Injury to private Perfons.
${ }^{9} \mathrm{It}$ is fomething worfe than Folly to enact wife Laws, and take no Care to fec them executed. Yot this is the Cale here and in France, to fay nothing of orher Countries. In Bilcay (the freeft

## of GREATBRITAIN:

to contribute to this falutary End, by different Methods. A few publick fpirited Improvers of fuperior Quality might quickly bring this Kind of Planting into Fafhion r. The firft Attempts of this Sort would be attended with very great Advantages, by exciting Emulation, prodacing Experience which we very much want, and in a very thort Time demonftrating from Facts, what has been fo often hinted from Reaion, that this is a very folid, certain, and confiderable Mode of Impiovements. The Society for promoting Commerce, Manufactures, and Arts, feeing Things already in this Light, have very laudably and judicioully contributed their Affiftance. The fame Thing has been done in Ireland $t$; and we have great Reafon to expect, that the rifing Generation, induced by Principles of true Oeconomy, and encouraged by thefe Examples, will entirely remove this Reproach, and rultore $t^{\prime}$ ) thefe Iflands fuch a Provifion, not of Timber only, but alfo of every ufeful Kind of Wood, as may fully fupply the Demands of their induftrious Inhabitants ${ }^{\text {a }}$.

Province in Spain) they have great Iron-works, and much Ship-building; but their Lawz being well inade, and punctually obejed, they have conftant Supplies of Wood and Timber for beth. the Preamble of the new Lasv well penned, and the Utility of it fully explained in the Judges Charges, would foon relieve us from all Apprehenfions.
$r$ Fuhtion is the only Law that enforces its Dictates without Officers and without Penalties. We fee it has innoduced Planting for Pleafure; why then hould it want the Power of diffufing the Difjoiftion of Planting for Profit? In the laft Age, many Gentlemen in the Wiftern Counties, were ambitisus of preterving their Names in Apples brought by them into Ule, and to their inde-fatigable linins and Experiments we owe our moft excellent Kinds of Cyder. In the fame Mannor Jurd licemoth hath fixed his on the New England Pine.

- It is: Thing of the greatelt national Confequence to put this Matter by fome known and mexceptionable Experiments besond all Difpute. The ableft Writers on, and the beft. Judges of the Subject, are clear and unanimous in their: Opinions, and fome of thom have given us very ingenious, and, very probably, accurate Calculations. But it is unt Opinions or Calculations of which we fland in need, but of Facks. Thefe would filence all Doubts, thefe would anfwer all Objecitions, thefe would add Authority to Opinion, thefe would give decifive Evidence to Calculations: In a Word, thefe would infpire a Defie of Flanting; and whoever fets the Example, by a Platation of an Hundred Acres of Oaks, will do an inexpreffible Service to this Country.
t The Method parfued by the Sucicty here, is the propoling for Two Years together Gold and Silver Medals for the raifing in different Proportions Oaks, Chefnuts, Elms, Scots Fir, and the Weymouth Pine. This Attention fhews a Regard to national Good, and the Rewards are fuitahly adjufted to thofe from whom fuch Improvements can only be expected, riz. Perfons of Diftinction and of Landed Property. The Dublin Society have for feveral Years puflucd the fame Method for planting and peferving Trees; in fome Cafes, there is a Medal afligned to each Province; in others, a Medal is aitigned to every County, in order to extend fo noble, and fo. beneficent a Spirit into all Farts of the Illand. It allo appears by their annual Accuants of their Premiums beltowed, that their latable intentions have produced very good Effeers.
"Whoever confiders the great Imporiance of our Navy, which is, in truth (under Divine Pro. vilence) the Glory and the Support of the Bitioh Empire, mult be fully convinced how necelfary it is, that we fhould not be dependent on other Nations for thofe Supplies of 1 imber that it annually reguices. At the fame Time it mult appear a Work of great Difficulty to procure thefe. Supplies in Jitisin, when we are told the Navy requires at prefent Four if not Five. Times the Quantity of Timber that wonld have anfwered its Demands about a. Century ago. Bcfidea, we:

## 342 The POLITICAL SURVEY

Ir is hoped, that in the Courfe of this long Chapter, the Principles we have fo often laid down, in relation to the natural Fertility of this Country, have been clearly explained and inconteftibly proved, not by Affertions grounded onky on probable Arguments, but from that Evidence which is ever requifite in fuch Cafes, the Teftimony of Facts. We have likewife endeavoured to trace the gradual. Acceffions that have been made to the national Income, by the Affiftance of an improved and extended Agricul: ture. For the fame Reafon we have ftated the true Grounds upon which our Expectations are founded, that they may be carried fill farther, and that in fucceeding Times fucceffive Improvements may be made, fome of them perhaps as important as any of thofe we at prefent happily poffefsw. It would not have been difficult to have made this ftill more ftriking, and in Appearance more certain, by having Recourfe to Calculations. But as the fe, though made with the greateft Care, and conducted with all poffible Moderation, might from their very Nature have been liable to Cavil and Controverfy, we chofe to leave them to the Confideration of the intelligent Reader, who may perhaps be furnifhed with better and clewrer Lights, at leaft in many Inftances, though we have not failed to give him fuch as we had, and upon which we thought he might fafely depend. A Proceeding that feemed lefs liable to Error, as, in regard to the material and fundamental Points, there can be no Doubts raifed by any who confider the prefent, and reffect on the paft State of Things.

We have more than once obferved, and the Subject at prefent obliges $u$ s to repeat it once more, that it is the Capacity for a Variety of ufeful Productions which conftitutes the real and intrinfic Excellence of any Country. . Thefe form its interior Strength, and comparative Power in refpect to other Countries. Thefe are the true fubftantial Refources from whence arife national Independence $x$. It is thercfore from having juft and ade-
munt at the fame Period addert to the wonderful Increafe of our Merchantmen, and in confequence of that the prodigious Augmentation of our Small Craft in all our Ports, and upon all our Rivers, iwhich are alfo multiplying every Day, and of cuarfe beighten the Demand.
w If the Improvements now made hid been flated as Things certain, or even probable, a Century ago, how little Credit would they have met with? How many plaufible Arguments would have been adduced to foew they deferved little Credit? But if it had or could have been fo stated, would it have been at all lefs certain, that we aetually poffefs and onjoy them now? If fo, this Country bad always the fame innate Power of producing; and Skill and Induftry have developed this by Effects. It is clear then that Skill and Indultry are the Infruments that have produced this great and häppy Change. But the Country having ftill the fame Principle of Fecundity, and thefe Infruments being as much as ever in our Power, what fronger Argument can be brought to thew the Probability of our making future Improvements?
$\times$ What hath been faid at the Beginniag of the Chapter, in this Paragraph of the Text, and in the preceding Note; might be fufficient on this Head. But the Utility of it is fo great, that it may not be amifs to remark, that every new and ufeful Product we acquire adds to the Balance of our Trade the Sum we formerly expended thercon, befides fumewhat to our Indultry, and a great deal more if capable of being manufacturcd. In all Refpects to our national Income and Indepe:adincy.

## of GREAT: B*RITAIN. 143

 quate Ideas of thefe, that we gain a certain and a diftinct Notion of the Worth or Value of any Region whatever ; and it its for want of having fuch Ideas, that we take up. fanciful Partialities for fome, and entertain groundefs Prejudices againft other Countries, till at length Matters of Fact awake us from our Dreams, and force us to perceive the Truthy. It is from a due, though not a very early Attention to this Capacity for different Productions, and the calling them forth by an affiduous Application to the Arts of Culture, that we have rendered this Ifland in its Appearance fo very different from what it was a few Ages ago. It is from thefe Caufes that we, the Inhabitants of it, are at this Day an active, induftrious, commercial, opulent, and potent People, incomparably more fo than within a Century paft. 'It will be due to our Adherence to thefe falutary Principles, that we Thall preferve and extend our Importance ; and thercfore the keeping conflantly. our Duty in this Refpect in our View, is our firf and great political Concern ${ }^{2}$. If notwithftanding all that has been faid, the Reader chould retain any Doubts or Scruples, any Difficulties or Sufpicions, thefe will be: fully removed in the next Chapter, in which we chall confider more at large the Effects, the Confequences, and the Advantages that flow from our numerous Improvements.Yet however we may be pleafed with the various and beneficial Sources of Profit, which are to be flated in the fucceeding Chapter, let us always confider them as fecondary Emoluments naturally arifing from, and neceffarily connected with, thode Improvements that have been already explained, and without which they can no mofe furvive and flourin than Plants when torn from their Roots. This I fay we muft conftantly remember, for Agriculture and Manufactures are Thins, and muft always wax or wane with each other. The Produce conflitutes the Worth of any

[^78]T44 The POLITICAL SURVEY
Country. Plenty of Provifions is the Subftance, the Wealth, the Patrimony of the common People, other Riches belong to thofe of a fuperior Rank. But it is uponthe Abundance and Cheapnefs of the former, that the Induftry of the Many, and of Courfe the Happinefs of Society, the Peace and Welfare of a Nation, muft always depend. It is therefore an Obligation upon, and at the fame Time the Intereft of Government, to take every poffible Method to prevent their Dearnefs, and dear they muft be if they are fcarce. It is acknowledged that Manufactures and Commercè produce a Part, and a great Part of our Wealth; but in order that they may produce, it is requifite, abfolutely requifite, that Manufacturers fhould be able to live. Men work in order to eat, and if their Labour will not procure them a comfortable Subfiftence, they will either become idle and indigent here, or remove elfewhere. If our Manufactures cannot be made at a reafonable Rate, they cannot long remain Materials for foreign Commerce. It ought therefore to be equally the Object both of the Landed and Trading Interefts to encourage Agriculture, taken in the moft extentenfive Senfe, as the Mother and Support of Arts, as the great and permanent Principle of our domeftic Policy, on which our Attention muft be invariably fixed, if we mean to preferve that Felicity to which the Beneficence of Providence has given us, as this Chapter fully hews, an inconteftible, and if we are not wanting to ourfelves, an indefeafible Title.

Of the feveral Sorts of Deer, and the Advantages accruing from them. Swine of all Kinds, and frome diffircnt Climates, live and tbrive bere. The great Utility, and the Variety of Emoluments that are derived from them. Horjes of every Kind, and excellent in their refpective Kinds, bred in Britain. The many Ufes tbat are made of tbenn, and many Advantages arijing from them candidly and impartially confidered. Afies thrive as well, and live as long bere as in moft Countries in Eiurope: Hardy, bealtby, patient, laborious, ufeful in many Refpects, and migbt be made fo in many more. Mules lefs frequent nowo than in former Times, yet might be rendered exceedingly ferviceable in feveral Ways. Of Jome other Animals, that are for jeveral Purpofes ufeful to Mankind. Tame, wild, and water Fowl, with the Benefits that accrue to us from them. Bees, their Jignal Utility; togetber with fome Thoughts on the Poffibility of increafing and inproving the Advantages obtained from them. Of Fijh, and the Profits that are and might be drawn from them. How far it is prasticable or expedient to increafe the Number of our Animals, by introducing new Species of them, from other Countries. Concluffve Confiderations, drawn from the Contents of the Tbree laft Cbapters.

TH E Productions of the Earth not only nourih, and yield many other Conveniencies for Man, but are alfo ferviceable in the fame Refpects to other Animals, of which there are alfo many Kinds exceedingly ufeful and beneficial to the human Species a. Some of them afford him both Food and Phyfic, nay, and cloathing alfo, by which he is defended from the Inclemency of the Weather. Some again are employed in bearing Burthens, in carrying him from Place to Place, in drawing Carts, Waggons, and Coaches. There are many that fupply very ufeful and profitable Manufactures, and others that adminifter both to his Subfiftence and to his Pleaiure from the
${ }^{2}$ Animals, through the Will and Wifdom of the Omniporent and Omnifcient Creator, are joint Tenants with Men of this terraqueous Globe. The fame Power hath provided for their Subfiftence, as well as ours, and regulated whatever regards their Oeconomy with admirable Policy. They have their proper Places affigned them, to which their Nature and Faculties are exactly adapted. Their Appetites are alfo reftrained, fome eat one Sort, fome another Sort of Food, fo that all have enough, and all have Varicty. Their Numbers alfo are perfectly balanced, by the very different Periods of their Lives, by the feveral Meafures of their Prolificacy, by carnivorous Animals that prey upon, and thereby limit the Increafe of others: Points of divine Sipience, extremely worthy of our deepeft and moft ferious Meditations, as well as our fincereft Praifes.

## 146 The POLITICAL SURVEY

Qualities with which they are endowed by Nature, and of which he is enabled by the Superiority of his Reafon to make Uie for his own Bencfit and Advantage ${ }^{\text {b }}$. It is therefore juftly efteemed a very fingular Happinefs for any Country to be plentifully ftocked with a Varicty of ufeful Animals, and no fmall Privilege to be exempted from thofe that are noxious to the human Race, or to other Animals, by their Rapacity or Venom. There are very few Countries confidered in this Light, that ftand more amply or more manifeftly indebted to Providence than the Britilh Illes, which abound with Creatures cvery way fuited to fupply our Wants, and to anfwer other beneficial Purpofes, at the fame Time that we are very little expofed tothofe Ravages and Inconveniencies that arife from Beafts of Prey, deftructive Vermin, or poifonous Reptiles c. It is to fet the numerous and tranfcendant Advantages, which in this Refpect we enjoy, in a clear and confpicuous Point of Light, that this Chapter is deftined, and in which fo much only of natural Hiftory is introduced as feemed requifite to render: there Benefits intelligible and inconteftible.

In order to anfwer this Purpofe cffectually, we will begin with that Animal, which, as Varro tells us, was the firft that Man took under his peculiar Care and Protection, and which indeed feems to want, and to deferve it more than any other. This is the Sheep, the tament, the moft inoffenfive, the moft gregarious, the eafieft fupported, and, in the Opinion. of many, the moft ufeful and beneficial of all. Animals d. It is probably

[^79]for this Reafon that Providence has given them fuch a Nature, that they are able to thrive in almoft all Countries and Climates, fo as to be the Companions of Men, and the Objects of their Care, not only in mild and temperate Regions, but alfo in the torrid and frigid Zones, which perhaps we thould hardly believe, if we were not convinced of it by unqueftionable Experience ${ }^{c}$. At the fame time that they are thus generally fpread over the Face of the whole habitable Earth, we may neverthecefs truly affert, that there is no Part of it more fitly adapted to the Nourihment and Improvement of thefe gentle and beneficial Creatures than the Illands of Great Britain and Ireland f. In thefe the Soil fupplies the moft pleafing, wholefone, and luxuriant Pastures, the Climate too is peculiarly agreeable to them, as being not fo fultry, even in the warmeft Summers, as to affeit their tender Frames, which frequently happens elfewhere, or fo inclement cven in our hardent Winters, as to prove any way prejudicial to them, or at lealt $b$ t very feldom. It is not therefore at all wonderful, that this Nation thould have been in all Ages extremely attentive to its Flocks, more eipecially at thefe were at all Times pregnant Sources of its Wculthn:, neither ought it to be any great Motive of Surprize, that in confequence of this, we have at certain Times, in which commercial or indeed civil Policy was but indifferently underftood, fuffered our Partiality

"The Scriptures feak at large of the Shecp in Syria, Paiciline, and the adjacent Counties. In the Empire of Indoftan and in Perfia they have Shee, with Wool foft and hining as Silk. In Egypt and Ethiopia they have immenfe Flocks. In Barbary they have Two Kinds, oue having coarfe and hary, the other clofe and fine Woal. In fome Parts of Africa they have Sheep with large Tails. In Spain and Portugal they have beon always famous for an excellent Breed. They have fine Sheep in Italy, more efperially in fome Parts of the Kingdom of Naples. France, Flanders, and Germany abound in Sheep of varions Sizes, and their Wool of different Qualities. In the King.lom of Norway they bave many Sheep, and much Wool. In the Ifles of Feroe and in Iceland the principal Subftance of the Inhabitants conlifts in Sheep, and they cloath themfelves with their Wool.
${ }^{f}$ There is an amazing Plenty of Sheep, not only in Creat Britain and Ireland, through their whole Extent, but in all the fmall Inands alfo dependant upon them. In Jerfey there were Sheep with Four and even with Six Horns, as there are ftill in Feroe and Iceland. In Wight an excellent Breed both for Fleh and Flecce. In many of the Weftern Ines there are as fine natural Palfures as any. In a Word, there is not a Spot in which the Inhabitants cannot from theit Flocks derive Fuod and Cloathing.

8 Onr Laws fhew that we had Plenty of Sheep a Thoufand Years ago. One of our Sason Kings, Edward the Elder, A. D. 925 , marricd a Shepherd's Daughter. Under our Norman Kings, Wool was our great national Staple; and A. D. 1354, 28 Edward III. we exported in Wool, and in woollen Manufactures, to the Amount of more than Seven hundred Thirty-feven thoufand Pounds, according to the Value of our Money at this Day.
for Sheep, or rather for the Advantages arifing from them, to carry us bem yond the Meafures that Reafon dictated to us, in refpect to our general Interefts b .

The Male of thefe Creatures, which is by us called the Ram, is held from Experience to be the principal Source of a good Breed, as the Lambs propagated by him have the fame coloured Wool with his Fleece and Skin, and therefore a fine ftout Ram fells at a very high Price ${ }^{\mathrm{i}}$. Thefe Rams kept for Breed are chofen with great Care from among the He-Lambs, and the reft that are bred up are cut, and then called Weathers. The Females or Ewes bring Lambs ufually till they, are Seven Years of Age, though they would live and breed to Twelve, and as fome fay to Twenty, but are feldom fuffered to furvive Half that Timek. Sheep love open Fields and Light, but are very impatient of Heat, and for that Reafon always in the Middle of the Summer Days affect the Shade. They are of a humid, tender, and delicate Conftitution, very fubject to the Rot, to the Dropfy, and in general to many more Difeafes than any other Animals, except Men and Horfes 1. They thrive beft in dry Paftures, are endangered by moit Grounds and wet Weather, except only in Salt Marfhes, where they do very well. Indeed, nothing contributes to their Prefervation more than their having Recourfe, if inciifpofed, to falt, hot, and bitter Herbs, fuch as Broom, Parfley, Muflard, Thyme, and Scurvy Grafs. They are thally Shorn with us, fometime in the Month of June, before which they are carefully wafhed, that the Wool may be as clean as poffible. Their Age

[^80]is known by their Teeth; when a Sheep is one Shear, as they call its they have Two broad Teeth before; when Two Shear, Four; when Three, Six; when Four, Eight; after which their Mouths begin to break m. They begin to bear Lambs at 'Two Years old, and hive feldom more than One at a Time, fometimes 'Two, very feldom Three. The third Lamb, that is, the Third a Ewe brings, is held to be the foutelt, and commonly proves the beft Breeder. In rich fat Paftures the Sheep are tall, ftrait, and of a large Size. Where they feed on Hills and Mort Grafs they are fmaller, but are ftout and fquare. In all dry Soils, whether rich or poor, they do well, but are thought to thrive beft upon Land that is nowly broken up ${ }^{n}$.

Ir has been already faid, that Sheep are very ufeful to Men, and indeed they are not fo only living and dead, but alfo every Part of them has its Ules. Their Flefh affords a pleafant, light, and wholefome Nutriment, infomuch that People eat good Mutton oftener, and with lefs Satiety than any other Kind of Mieat. Their Milk is much ufed in other Countries both for Butter and Cheefe, and mixed with Cows Milk, is thought to give an excellent Flavour to the latter. It is alio efteemed vory filutary, more efpecially in Difeafes of the Breaft. The Skin when tanned or tawed, which is dreffing them white, makes good Leather, and that is applied 'to a great Variety of Utes. It is fo drefled, in France efpecially, as to refemble shamoy. Befides this, it is made with much Skill and Pains into Parchment p. The Suet br Tallow is alfo a Commodity of great and general

[^81]general Utility, fo that what is annually confumed, efpecially at its prefent Price, amounts to a great Sum. Several Toys and other Utenfils are made of the Bones. The very Dung is efteemed the beft of all others, more efpecially for cold Clays. It is for this Purpofe that they are kept in Folds upon the Land, which by this Means is enriched by the Urine as well as the Dung, and the more if the Ground be ploughed immediately after the Sheep are removed, fo that the Salts are lefs exhaled \%. But the beft Improvement is made in Flanders by the Help of a covered Fold, in which their Urine and Dung is mixed with Earth, Sand, \&c. and this is afterwards fpread upon the Land, which Method is alfo in fome Places practifed here. The vaft Advantages which in this Refpect are derived from thefe Animals, may by mature Meditation be clearly conceived, though it could not be eafily reduced to Calculation r. The Swedes have endeavoured to exprefs it in a Proverb; "Sheep, "lay they"" have golden "Feet, and where-ever the Print of them appears the Soil is turned into * Gold."

Their Wool however, as the great Source of Profit, hath always been efteemed the principal Thing to be regarded in Shecp, and by which their Excellence was to be diftinguinhed and determineds. In this Light our Wool has been very highly contidered for a long Serics of Ages abroad as well as at home, and as fuch hath bcen a continual and a copious Source of Induftry and Wealth to this Nation. A Subjcet, which as our Plan requires, we mall endeavour fuccinctly to $e_{x}^{\prime}$ plain. It cannot be doubted, that as the Inhabitants of Britain and Ireland, fo the Sheep alfo came origi-

Lime, the Epidermis or upper Tegument of the Sheep-Rin, which prepared in a particular Manner is called Cuir de Poule, and the Gloves made of it Chicken Gloves. The Value of Sheep and Lamblkins is very confiderable.

9 There is fcarce any Article refpectitig Agriculture in which Authors, ancient and modern, fo clarly agree, as in prefering this to all other Dungs, which Unanimity can only be founded in Experience Mr. Lifle obferves, the Virtue of Sheep's Dung varies according to the Food of the Animal. He fays alfo, that the Dung of Ewes is preferable to that of Weathers. It is not only their Dung, but the very treading ind lying of Sheep upon the Ground that warms and improves it.
r In fome Parts of England they give Twelve Pence a Night for the Tails (as they Phrafe it) of an Hundred Shecp, that is for folding them One Night on the Ground. By this, fome Guefs might be formed of the Advantage derived this Way from Shecp. But it will be fill clearcr, if we recollect what in the former Chapter hath been cited from. Sir Richard Wefton, who affirms by the Method mentioned in the Texi, the fandy Heaths in Biabant were brought to produce twice, nay, thrice as much as the belt natural Lands in the Province.

- Sheep are the only creatares that, ftriftly fpeaking, bear Wool, and the French file them very properly Betes a Laise. This Subftance, which is compofed of very fine Threads, twifted in a particular Manner, arifes from the moin lax Conftitution of the Animal, the peculiar Texture of the Skin, and the Nature of its Fupd. If the Reader is inclined to fee a very fuccinct as well as fcientific Hiftory of the Sheep, he may coufolt the Syttema Naturx of the learned and accurate Lipazus, vol. i. p. 70. Edit. xma.

## of GREAT BRITAFN.

nally hither from fome other Country, and moft probably, for many Reafons that might be affigned, from Spain ${ }^{t}$. But as to what is reported of Henry the Gecond, or fome other of our Princes, fending for Rams or Sheep from thence, in order to improve our Breed, it feems to be equally abfurd and fabulous u. Our Wcol continued a ftaple Commodity for many Ages after we had the Manufacture; and at what Time this was firft introduced, is, in which there is nothing flrange, very far from being diftinct or clear. But that we had it, at leatt in fome Degree, about the Eeginning of the Twelfth Century is very certain ": Though it mult be acknowledged the Introduction of it is. commonly placed much lower, even by very intelligent Writers. There feems to be but fmall if any Foundation for the Tale of Edward the Fourth fending ovcr fome Englifh Sheep from Cotfwold, from whence the excellent Breed of Sheep in Spain are fuppofed to be derived $x$. What: the Spaniards themfelves fay, that their Wool. was much improved by the Care of Cardinal Ximenes, in bringing over Rams from Africa; that, is Rams bred by the Arabians there, is much more probable, and a practice by no: means new in Spain, where the Management and Improvement of their Flocks hath been always the favoured Point of their Oeconomy y.

[^82]
## 152 The POLIPICAL SURVEY

As. Wool and woollen Manufactures continued for many Ages the principal Commodities of this Country, fo we need not wonder, that during this Space they were both of them the conftant Objects of Government 2 . Our Kings drew a very large Revenue from the Cuftom upon Wool exported, a great Part of which, though not all, went into the Low Countries, where it was manufactured in great Perfection, to the no fmall Enolument of the Inhabitants, who while they could be plentifully fupplied by us, did not give themfelves much Concern about procuring Wool from other Countries ${ }^{\text {a }}$. As our Manufacture alfo became confiderable, and much of our woollen Cloth was exporte.1, many Regulations were thought necelfary for fixing the Reputation of it, by afcertaining the Finenefs and Meafure of the refpective Kinds of Cluth at home, and the afligning certain Ports both here and in foreign Parts from which, and to which only, they fhould be exported, and thefe were ftiled Staples which, according to the fluctuating Politics of thofe Times, were frequently changed b. From the fame Cauie arofe the Privileges granted at different Times, with refpect to the Company of foreign Merchants of the Steel-yard, and the Englifh Company of Merchant Adventurers, with Reftraints upon the Reft of the Subjects from exporting Cloths, which though they appear to us very ftrange, and utterly incompatible with the publick Intereft, were not feen in that Light then, at leaft by thofe who were intrufted with

[^83]Power c. In point of Fact however, very great Exportations were made, which could not but be very advantageous to this Nation, and at the fame Time the Wealth of thefe Corporations enabled them to make great Loans, and to be in other Refpects very ferviceable to Government, which, gencrally fpeaking, preferved them againf the Complaints that from time to time were very naturally raifed againff fuch Monopoliesd. But in Procels of Time, as Commerce became better underftood, and a Spirit of Fieedom gradually prevailed, the firf of thefe Companies gave way, though the latter ftill enaintained its Ground, as being compofed of Englifh Merchants, whofe Gains, whatevcr they were, naturally and neceffarily centered in this Country, which made their Monopoly, though fill a Monopoly, more tolerable, and at the fame Time the great Riches they acquired, gave them a very extenfive Influence, and procured them very confiderable Supporte.

In the glorious Reign of Queen Elizabeth, many wife Laws were enacted for promoting our foreign Trade, feveral of which were in many Refpects very favourable to this important Manufacture. Befides, many new Channels were opened and feveral of thefe left free, by which in a Courfe of Years, the Exportation of Woollen Cloths of different Sorts was fo increafed, as to amount to a Million and a Half annually f. It does not how-

[^84]
## 154 The POLI.TICAL SURVEY

ever appear that there was any Prohibition by Law againft the exporting of Wool, of which however there was probably no great Quantity fent abroad, by reafon of the great Demands of our Manufacturers at home. Thefe Circumftances being duly and candidly confidered, forcign Hiltorians, and particularly the learned Grotius, and the judicious Prefident de Thou, are very excufable, in fuppofing that our Woollen Manufacture was eftablifhed in this, or at the higheft in King Edward's Reign, though it imports us very much to know, that in this Refpect they were certainly very much miftakeng. In the fucceeding Reign the Exportation of Wool was forbidden by Proclamation, but was neverthelefs probably permitted under Licences h. At length, Anno Domini 1614, a very plaufible Propofal was made, and met with the Approbation of the Crown, which was for reAtraining the Exportation of white Cloths, and fuffering only fuch to be fent abroad as were dreffed and dyed at home. It is very evident, that if the End, which by this Meafure was propofed, could have been compaffed, as in fome Degree it might poffibly have been, if the Dreffing and Dyeing, in or der to their being one as cheap as poffible, had been left free, it would in a national Light have been very beneficial, by increafing the Number of Hands employed in the Manufacture at home i. But as it was managed it proved highly detrimental. For as hitherto Foreigners, and efpecially the People of the Low Countries, having participated in the Profit by Dreffing and Dyeing our white Cloths, this intercfted them in extending their Sale; upon the depriving them of that Advantage they revolted againft this Scheme, and being no longer fupplied with our Wool as they

E Grot. de Rebus Belg. lib. vii. afferts, that in former Times Commerce was wholly in the Hands of the trading Cities in Germany, who had an Eftablifhenent at London; the Englifh in thofe Days balanced in a great Meafure with other Nations from the Produce of their Paftures, exporting nothing but raw Weol till in the Reign of Edward banifhed Perfons from the Low Countries taught them how to manufacture their own Wool, which cuabled them to get rid of the Merchants of the Stilyard. Thuan Hift. fui Tempoiis, lib. xlvi. after giving a moft pathetic Detail of the Cruelties of the Duke of Alva and their Confequences, alfures us, that it was from the Hlemifh Fugitives who fled hither from his Severities, that we learned all our Manufactures, having no Arts amongft us before, except Agriculture and Ciardening, alding a Lift of Towns with Norwich at their Head, which being decajed and deferted, were repaired and inhabited by thefe in: duftrious Refugecs.
A There are many Inflatices almoft in every Reign of prohibiting or reftraining the Exportation of Wool, fometimes under the fever ft Ponaltics, which were abways looked on as Grievances, becatle the intention was not to ber $p$ Wool at home, but to extort Money beyond the Subfidy (thourg that "as very large) for a difpenfing. Licence, which was not refufed if well paid for. Undur this Reign the Prohibition was a popular Meafure, Wool being dear, and the Licences were necanional Refources for the Supply of a neceffitous Trcafury.

- This was by no Means a new Thought, tor there had been a Statute made 27 Herry VIII. probiniting the Exportation of white Cloths above the Value of Four Pounds a Cloth. But afier fome I'cars Experience the Merchant Adventurers reprefented this as highly prejudicial to Iiade, and Q. Elizabeth granted them a Licence to export white Cloths, non ohitantc this Stat:!. By this they recovered the Trade io as to vend 80,000 Cloths annually, all other Merchants. reaniuig bound by that Statute.

## of GREAT BRITAIN.

had been formerly, began to look out for other Markets, and to frike more generally into the Manufacture than they had done, in both which their Example was followed in Germany, which proved fo manifefly injurious to our Trade, that in Two Years this Project was given upk. This palliated but did not cure the Wound. We have dwelt the longer upen this as it is by much the moft remarkable Circumftance in the Hitory of the Woollen Manufactory.

Charles the Fiift, after the Example of his Father, prohibited the Exportation of Wool by Proclamation, as a Thing, on account of the Dearnefs of Wool, generally acceptable to the People '. Some Regulations were allo made in the fame Reign in refpect to the Company of Merchant Adventurers, which however, becaufe they ftill left it a Monopoly, were nut fatisfactory. When the Parliament affumed the Power, Application was made to them on that Subject ; but the Compnny advancing a Sum of Money for their Service, were allowed to retain their Privileges. In 1647, the Exportation of Wool, as agreeable to the Senfe of the Publick, was prohibited by an Ordinance of both IIoufes, and after the Reforation this Prohibition was renewed by more than One Law under the fevereft Penalties si. Whef M. Colbert entercd on his fo much celebrated Plan for fettling Manufac-
k It was the great Sale of the Merchant Adventurers which produced this Overture from Atderman Cuckain and his Affociates, who procured a latunt for Dreffing and Dyeing Cloths. They whe oppofed by the old Company at fome, their Cioths were prohibited abroad, which prodiced an ablofote Stagnation of Trade, which intimisated the new Conpany. The Confequences nata,it have been, and indeed were foon difcerned, and by. an immediate Recall ot the Patent might have beca in a great Meafure pevented. Hut according to the procraftinating Humour of the Times, and out of too geat Deference for fome powerful Perfuns who patronized the Project, it was over and over canvalfed in Council, and not cancelled at laft till voted a Monopoly by the Itoufe of Commons. See Lord Bacon's Works, 1765 , pto. vol. iii. p. 327, 328. Cole's Detection of the Four latt Reigns, p. 43.
${ }^{1}$ There was ever in this a great Jealoufy of other Nations depriving us of our Whol. At firt it was app chended foom carrying abroad live Rems and Shcep, which was forbid by Proclamation fo early as A. D. $133^{8}$, by Edward III. and agin by a Law, A. E. 1424 , in the Reign of Henry VI. The Practice however continued, which occufo:ed the fevere Stature 8 Eliz. cap. iii. by which for the firlt Offence the Criminal was to forfit ail his Guods, fuffer Imprifonment for a Year, and Lofs of the Left Hand whe naled up in the $m$ 'ft confpicuuus Part of the Market Place where the Punimment was inllicted, and the fecond Offence was declared Fileny. This Law has been oficn faid to be againtt exporting Wool. Bat no fuch Law palfed duing that or the Two fucceeding Reigns, it was only prohibited by King James's Prochamaion, A. D. 1604, and again by this of King Charles in A. D. 1G30. Rymer's Fodera, tom. xix, I. 155.
${ }^{m}$ Sice the Three Statutes of the 12 th ; 13 th, and 14 th of Charles II. In the Pramble to the Firft, the Defign of the Act is declared to be, finding Fmployment fufficient tor the Poor, and that the whole Benefit derivable from the native Commodities of this Realm may redound to, and be fulcly enjoyed by its Subjects. It alfo enacts, that if any Perfou Chall tranfpurt, or as Traders caufe to be tranforted, Sheep, Wool, se. and be convicted thereof, they ihall be dilabled from requiring any Debt or Accuunt from any Facturs or Debiors, without tahing away tie heavier Penalty in the ACt before mentioned.

## 156 The POLITICAL SURVEY

tures in France, that of Wool was one of the firft undertaken, and profecuted with the greateft Effect, which, as it excited much Jealoufy, fo it occafioned many, and thofe not ineffectual Precautions, to be taken for the Security of this valuable Branch of Induftry and Commerce here $n$. Soon after the Revolution, the Woollen Trade, in point of Exportation, a Thing ardently and univerfally withed, was fet entirely free, and from that lime, in every Reign, the Legiflature hath hewn all poffible Attention to its Encouragement and Support ${ }^{\circ}$. With this View many new Laws have been made to prevent by every polfible Method the clandeftine Exportation of Wool, either from Britain or Ireland, and for regulating the Trade of the latter, as we flall hereafter fee, fo as to prevent its becoming injurious to the former. By removing thofe Impolitions, which, however tolerable while we had fewer Rivals, were now no longer to be fuftained; by providing as far as Laws can provide for the due making and manufacturing of Cloth, and other Kinds of Drapery, that the Reputation of our Woollen Goods might not fuffer in foreign Parts, through any Frauds in the making; by fecuring the Journeymen from any Injuftice or Oppreffion from the Avarice of their Maters, and by every other Means that appeared to have a rational Tendency to the preferving this important Ob ject, and which cught to be confidered as none of the leaft Marks of Kinduets and Attention, altering, amending, and repealing ${ }^{p}$ fuch of theie Laws as fiom Experience were difcovered, from a Change of Circumftances or any other Caules, to be ineffectual or injurious.

[^85]IT is not to be doubted, that we have throughout thefe Inands very. great natural Advantiges in refpect both to this valuable Material and its: Manufacture, and fuch as in regard to either cannot be taken from us $q$. For we have Sheep of very different Sizes, and their Woul is alfo of very different Qualities, yet all of them ferviceable to fome Purpofe or other, and confequently all of fome, though not of the fame Worthr. The Spanih. -Wools that we import are only thofe of thair firft and fineft Sort, fince we have enough of our own, equal if not fuperior to the Reft. And with regard to thofe fine Spanifh Wools, they are equally neceffary for the Ufes: to which we apply them to the French, the Dutch, and all other Nations s. We have been able therefore to enter into every Branch of the Cloth and Stuff Manufactures, known in our Statute Books by the Name of Old and New Draperies, and to carry them to the higheft Perfection. Befides entering into the Fabric of thefe, Wool is employed in a vaft Variety of Ways, in the making of Caps, Gloves, Stockings, and a long \&cc. of other Articles, fo that the very Lift of them, and of thofe to whom they give Subfirtence, though ever fo briefly fet down and explained, would fwell to a confiderable freatie t. It is therefore much cafier to conceive than it would be to compute, the prodigious Multitudes that are employed by them, and the fie too Perions of all Ages and Sexes, fo that nothing can extend farther
$\eta$ In refecit to the Excellency of Wool, the firf Point is the Breed, and it is well known that we have as fine Rans as any in Europe. The next is the Pafture, and our Downs are as good nutural fieding Crounds as are to be filund in molt Countries. The laft Thing is the Care and Management, whin is facilitated by the Midenefs of our Climate, more faitable to Sheep than that of Italy. Add to this, our being entirely exempt from Wolves, and in a great Degree from-
 :..yners, is now fo mach improved by Lxperience, that our very Rivals recommend their Goods by havir, they are of the Enolith Make, or relemble Cloths from London. In this Situation it is evident we have but one Ditficuity to orercome, which is the Dearnefs of our Labour.
$r$ Our fmallett Sheep weigh from under Five to Seven Stone, allowing Eight Pounds to a Stone. Thife commonly bear fine Wool, and wheras in Come Northern Countries fuch Sheep feldom carry moc than One Pound, ours carry at leaft five Pounds. Our middle fized weigh from: Fight to Eldeen Stone. Our largelt Sheep from Eighteen to Twenty Stone. Our Ewes comnoonly bear Twelve Pounds, and our large Weathers from Fourteen to Fighteen Puunds of Wool, which by due Attention is rendered both long and fine.
"The judicious and accuate Mr. Litle tells us, that the Clothiers complaised in his Time that Spanin Wool was not fo fine as formerly, and that they faid the fame with regard to our Herefordhire Wool. He lihewite acquaints us, that anoongf the Spanik Wool there is ofren found! a Bur, which being fattered on the Ground produced a Sort of Medica, the Feeding on which: he fuppofes to have an Fiffect on the Wool, but can by no Means determine (which however deferves to be inquired into) whether it contributes to Finenefs or Coarfenefs.
' It has been pofitivily afferted, that from the Wool-grower to the Coniumer, a liece of Broad: Cloth pafee through Onic hundred different Hands. It is as certain there are near the fame Number of Trades dependent on the Woollen Manufacture, though not actually concerned in it: But if we add to the le the numerous Trades employed in the feveral beneficial Commodities arifing from Sheep, exclufive of Wool, fuch as Tallow, Skins, Catgut, \&c. and the Retailers of thefe when manufuctured, it will render the following Calculation more intelligible.

## 158 The PoOLITICAL SURVEY

cr wider than the Produce of Wool in the Benefits derived from it to the whole Community u. Add to all this, that though the Crown no longer receives any Subfidy on Wool exported, or any Duties on moft Branches of its Manufacture, yet it may be juftly conlidered as contributing much more to the fublick Revenue than in former Times, if we reflect on the amazing Confumption conftantly and neceffarily made by the Multitude of Perions employed therein of all excifeable Commodities w. Yet nowithftanding that already fo much hath been done, there is no Doubt that much more may and will be done, in refpect as well to the Material as the Manufacture. Our Wools, though in their prefent State fcarce inferior to any, may ftill be confiderably and generally improvedx; and without Qucttion there are a vaft Variety of different Kinds of Woollen Goods that may be invented and wrought, which hitherto have never appeared in our Market ; and as from the Ingeruity and Dexterity of our Manufacturers; fo much has been cffected in this Age, Pofterity inftructed by their Example, will, from a Principle of Emulation, undoubtedly carry it farther.

There is no Queftion, that in North as well as in South Britain, fince it was originally peopled, there have been always Sheep and Wool, and theie were formerly manufastured, not barely for the Ufe of the Natives,

[^86]Sut even, and that in no inconfiderable Quantities, for Exportation y. But as from a Variety of Circumftances, the People of England came in Procefsof Time to excel all other Nations in every Species of Drapery, it is no great Wonder, that the Trade, and in confequence of that, the Manufacture of Scotland declined; and that thofe who could afford it, chofe rather to purchafe fine Cloths from their next Neighbours than to wear coarfe ones made at home ${ }^{\prime}$. However, before the Union, when the Nations were upon ill Terms with each other, fome Attempts were made for reviving the Woollen Manufacture in this Part of the Ifland, and thefe Efforts were attended, though not with very great, yet with fome Degree of Succefs a. For the Wools of the Sheep in Lammer Moor, which is a very great Diftrict in the Shire of Berwick, and in the feveral Shires of Roxburgh, Sclkirk, Tweedale, Galloway, Carrick, Stirling, Dunbarton, and Fife, arc ftill for a Variety of Purpofes in good Repute ; neither are the Wools of Aberdeen, Sutherland, and Rofffhire contemptible. But fince that happy Event, the beft of the South Country Wools have been fold to their Neighbours, and the People here have in general contented themfelves with making a few Species of coarfe Goods for the Wear of the common I'cople, more efpecially fince the Year One thoufand Seven hundred and Twenty-feven, when the Linnen Manufacture came to be encouraged by the Public b. In the Weftern and Northern Ifles indeed, they fill continue to cloath themfelves with their own Produce. But if Induftry and Commerce come to take Place amongtt them, there is little Reafon to doubt, that they will follow
y Antient Hiftorics in North as well as South Britain record little relative to Manufactures and Commerce. Yet this is no Proof againft their Exiftence. The Scots, whatever might be the Cafe of the Piets, were always cluathed, and probably with their own Wool. In the Reign of their Kirg James III. A. D. 1486, we find an Act of Parliament for the juft Meafuring of Cloth. In A. D. 1511, they exported into the Deminions of the Emperor Maximilian Cloth to about Half the Value of what was at that Time exported from England.
z This, before the Junction of the Two Kingdoms, was a favourite Trade wih the Englih, becaufe it confined chiclly in fine Goods; this was an open Trade, not included in the Charter of the Merchant Adventurers ; and becaufe by the Help of the Scots Merchants confiderable Quanti:ics were exported into the Low Countries and other Places, to which thefe unincorporated Engith Merchants could not carry on a direct Commerce, this Trade therefore in fome Meafure cuntinuedseyen when the Peace betwcen the Two Nations was interrupted.
, in the latter End of the Reign of Charles II. and when his Brother the Duke of Yuk was Wiffioner in this Country, that they fet about reviving the W wollen Manufacture, and this Sparit fubfifted for fome Years. In this Space they made as fine Cloths, and fome wher Species of Goods not inferior to thofe made in England, but with a Lols of 25 per Cent. notwithfanding the Support of their Government, which with thefe Manufaktures were determined by the Union.
b Advantages of promoting Manufatories, Edinburgh, 1683 . Spruel's Account Curent between England and Scotland, 1705. Intereft of Scothard contidered, Edinburgh, 1733. The lat Author had the Intereft of his Country very much at Heart, and undertood it well. He hat no Idea of eftabliming the Woollen Manufacture there, from their Want of Skill in the Management, their Want of Money to raife and fupport it, and their total Want of Ifleans to refidt the Jealoufy which fuch an Attempt would excite.

## 160 The POLITICAL SURVEY

the Example of their Countrymen on the Continent, and affect to wear good Cloaths as foon as they find themfelves in a Condition to pay for them, which in that Cafe would be a great Benefit to this Country, and no Prejudice at all to them $c$.

Ireland hath alfo always had a guvu drecu of Sheep, and the ExcelIence of their Wool for mott Sorts of Manufactures is not to be difputed, though for a long Series of Years, through the continual Wars and Difturbances in that Country, much overlooked and neglected d. But after the Prohibition of fending over their Black Cattle hither, A. D. 1666, they were in a Manner compelled to do what they could to repair that Lofs, by working up their Wool, in which they foon became very fucceffful, more efpecially in Frizes and fome other Kinds of Goods, which they made in great Perfectione. But the Country being again plunged in a civil War, this and every Species of Induftry was interrupted, and which was ftill worie, prodigious Quantities of their Sheep were deftroyed f. In a few Years

[^87] Manufacturs many different Ways. The Places where they were eftablifhed fuffered by the Military Operations. Some who were at the Head of them returned to England. Numbers of the inferior Sorts fled into other Countries. The fupplying Camps, the maintaining Garrifons, and the Depredations of the Soldiers and the native Irih, deftroyed valt Numbers of Sheep. but as foon as the Nation was quiet, and the Manufactures re-eftablifhed, the Spirit of Jealoufy revived here, and thewed itfelf in feveral Inftances, fome of which will be hereafter mentioned, all pointing to that Mepfuce which was thought to be the only effertual Remedy which was propoled, in A. D. 1 bide, in an Addrefs to the Crown, and paffed into a Law the Year fulbowing.

## of GREAT BRITAIN.

however after the Revolution, when Things were once more reduced into Order, the Woollen Manufactory began again to lift up its Head, and in a hort Time became to Hourilhing as to excite Apprehenfions here, on it Point of all uthers as to which with great Reafon this Nation was moft jualous; and thercfore as the publick Tranquillity in Ireland had been reftored at a great Expence of Engiih Blood and Treafure, it was thouglt neceffary, the rather because the Cheapness of Lahour would have given great - Auvantares to the People there, to reftrain by Law the Exportation of Wool and Woollen Manufatiures from Ireland, except to England; and cica this Leportation was confined to particular Ports in both Inands s.

But to foften this as much as poffible, the Linnen Manufacture was fet on foot, and all !oinble Encouragement given to it by the Publick; and by this Micans, as fome of the mott intelligent Perfons in that Country ackusemblese, they had a very full Equivalent by the fubftituting as eafy, as corian, and at the fame Time a more profitable and advantageous Mode of emphying their Labour ${ }^{\mathrm{n}}$. Y'et this, and all the Care that in other Refpects could or can be talien, hath never prevented there, any more than here, the Smuggling of Wool, or the clandeltine Exportation of Manufacture:; from thence. In order however to effect this, or at leaft to leffen and abate the Evil as much as potiible, feveral legal Indulgencies have been granted; fuch as the opening all the Ports in both Illands, removing the Duties upon Itih Woollen Yarn imported into England, and whatever elfe might contribute towards reconciling the Interefts of the Two Nations i.

## $\mathbf{1 6 2}$ The POLITICAL SURVEY

This Article, however long, it is hoped will not appear tedious to the intelligent Reader, as it proceeds from an earneft Defire of affording him a comprehenfive View of a Subject, that might, and indeed hath employed many Volumes. A Subject of the greateft Importance, as regarding the moft ancient, and beyond Comparifon the moft valuable of all our Manufactures, and by the treating of which fo fally it may be allowed to be more concife in refpect to the Reft $k$.

We come next to Speak of another Kind of Creatures nearly allied to Sheep, which are Goats. The Ancients were much more attentive to thefs than we are, for which fome probable Cautes may be affigned, and more ofpecially this, that in hot Countries their Flefh is more juicy, fweeter, and better tafted, efpecially that of Kids, which in the Regions of the Liat hath been always, and is flill accounted a Delicacy ${ }^{1}$. The Goat is naturally more docile and fagacious than the theep, and withal fronger, bolder, more active, and more lively. They are indeed conflitutionally brik, wanton, capricious, roving, and impatient of Reftraint; but notwithttanding thefe Qualities, they are eafily temed, grow familiar with Men, and even fond of them. In point of Colour, they are fometimes black, fometimes white, but more commonly thefe Colours are intermised, and they are frequently fpotted with what we call Fallow. The He-Goat is dirtinguifhed by his Beard, which is fometimes Nine Inches long, wreathed Horns, full Eyes, and very fately in his Walk. They are capable of brceding very young, the Male at a Year, the She-Goat at Seven Months;
home (as much as ia us lies) we keep the Naterial low; while the Reft of Europe, being in Com:parifon with us in a State of Want, give a higher Price for our Wonl than it will fetch at home; and this, in Spite of all our penal Statutes, they by this advanced Price obtain; and it is to be feared will always obtain, till by an Augmentation of our Inhabitants, and the Extenfion of our Conmerce, we ourfelves are coabled to work it all up; which ought therefuce to be the conftur and affiduous Objecr of our Councils, and our Endeavours.
:- TheHiltory of Wool and the Woolen Manufarture in one Period, an I in one Point of View, is the Inifory of our puolick Pevente. In a fucceding Puiced it Lecotice the capital Object of our Commere. It grew from thace die janomant Subidit of our political Councils. The preferv-

 Country, have occaried our abielt Satefmen for more than a Century palt. Whocver defires to Le more circumftantialy informed in any or all of thef jaticulars, may mect wih Satisfaction by confulting that acomate and laborionis Work publiface by the ingenious and indefatigable Mr. Smith, in Two large Volumes, intituled, Menoins of Wool.

but the proper Time of matching them is when the Male is $\mathbf{T w o}$, and the Female Three Years old m . The former is ferviceable till he is Five, the latter to Scven Years, and they feldom live, or rather are fuffered to live, beyond Eight. But this is by no Means their ufual Term of Life in a State of Nature ${ }^{n}$. They carry their Young like Sheep about Five Nionths, bring fometimes One, fometimes Two, rarely Three Kids; though in Egypt and in the Eaft Indies they have frequently Four.

Tin. $Y$ love rocky, mountainous, fhrubby Grounds, where they live on any Thing they can find, affecting a Variety, though at the fame Time they are very fickle in their Food ${ }^{\circ}$. They are beft kept in fmall Herds of about Fitity, for which one Male is fufficient. 'They are fubject, at leati with us, to fewer Difeafes than Sheep; and if they are allowed full Liberty, feldom fail of finding Remedics for their own Diftempers. It is eafy to difeern even from this hort Account of thefe Creatures, that they are by no Mcans fit for, and indeed they by no Means thrive in, level, rich, or well cultivated Countries. But thcy are more efpecially hurful where there are any Nurieries or Plantations of young Trees, where they can get into any Gardens, efpecially Kitchen Gardens, in which they make great Devaftation, or even into common or Corn Fields, where they defroy whatever they find. But in Places that are proper for ${ }^{p}$ them, they are or might be made
on The Ilc-Goat frould be of a large Size, his Neck Gort, his Head long and thin, his Ears pendant, his Thighs itout, his Le:g hirm, his Hair thick, foft, and lleek, and his Beard full-fized and buhy. The female ailo thond be harge and plamp, ofpecially behind, her Thighs feny, her Huad light, her Udace fur!, her Teats long, with thid, fut, fhiming Hair. Virgil, who foke fevin his own Experience, highly commends thefe Animals in his Third Gcorgic, and even phaces them on a Level with Sheep.
" If any one had conjectured the Cecatures might reach to the Age of hetween Thirty and Forty luers, and cren then retained their Strength, he would farce have geined Credir. Yet this
 in the Souh Scas, hang foot fevenal Goats which had the atark of . Weander Selhink, who lived there a long dine alone, and bad loen diverel fon thace Thity-iwo lears before. Thefe Guats living will, weac fwect and well tafled lite Voniom. The Spaniads, to deprive their Enemies of the Sulfiftence :afinded by thefe conats, had fince Selkioh's 'lime put Doges of diferent Rinds upon the lhand to dithoy them; and in this they fo far fuceceded as to diminith their Numbers verymah, and to drite the Remminder into Paces fo itecp and full of Piccipices, as to be inaterfible watlother Aumals.

- It appears fiom the PAN SCECUS, that Gouts cat more diffent Herbs than any uther Cattie,
 thounh to moft whe Animals it is Poibon. Lat they delight pariculaty in browfing on the tender
 evereren Prict, the Aibutas vi Sumberry Tice, and the Cytifus or flrub Trefoil.
p There are many Phes in the Weft and Nonth even of South Rritain, as well as Wales, North Bitsin, and tise Mamed depen lent theron, exicediegly adaptel to the Support of thefe Animals, and in fone of which they ane very common, but in none of them much cflemed, or the keping, them turned to fo much lrofit is they might, and as they actuanly do in other Countries, where they are intwion in all Refpects to ours, and confequenty there is nothing wanting but a little Altemion to acnuct them as ufful here. It may not be amifs to remark, that in Places

## 164 The POLITICAL SURVEY

very beneficial; for they will thrive very well where other Cattle woudd flarve, are very hardy, never incommoded, as Sheep fometimes are, by the Heat of this Country, nor much by the Cold; though in rainy and very fevere Weather they are the better for being houred, provided the Floors of the Places where they lie be well pitched with Flints or paved with Tiles, $f_{0}$ that they may be eafily wafhed and kept clean, fince in this Refpect there are few Animals more nice or more eafily injured by Filth of any Kind. It is a general Opinion that the fimell of them is very falutary to Horfes; for which Reafon, evcn in great Cities, thcy are commonly kept in. Stables 8.

In Countries where they have Abundance of Sheep and Black Cattle, as they have no need of Goats, fo they are little regarded. But in Phaces where thofe are lefs common, and in which, from their Nature and Situation, thefe laft mentioned Crcatures can be much more commodioufly kept, they may with very little Pains taken about them be rendered very profitable, more efpecially if they are of a good Kind, as ours are in the Opinion of our Neighbours, who in this Refpect are the beft Judges r. Goats give more Milk than Sheep, and in fome Places it is very highly efteemed, as being lefs heavy than Cows, and not fo aqueous as that of Alles. The Cheefe produced from it, or at leaft from a Mixture of this with our Cows Milk, when well made, proves very goods. As for the Whey, it is thought preferable to any other, as being aperient, abfringent, attenuating, and laxative; for which, as well as the Milk, it is excecdingly commended
where they are moft common, the Inhabitants have frequently need enough of Refources for adding to the Means of their Subfiftence, and are not like to be difpleafed with any Informations that may advance, or are even offered with an Intention of advancing, fo laudable an End.
${ }^{9}$ We find this mentioned in very antient Authors, who fpeak of it as an old Cuftum. It is not eafy to conccive how this Practice, which ftill generally prevai's, could have kept its Ground, if not fupported by Experience. Yet it is this Rankncts, whih is chiefly in the Skin, that hath created a Prejudice againft Goats. It is plobable that the keeping them in Parks, and hunting them, as Giles Markham fays, was the common Method in the Azores, freed them from this ftrong Scent.
${ }^{r}$ Father Chomel in his Dietiontaire Oiconomique, aferts, "Chevres d'Angleterre trois fois plus. "utiles que celies de Fratace," i. e. the fonts of Eigland are thrice as wfeful as thofe of France. Not fatisfied with making us this Compliment, he adds, we had the Wiidom to bring orer this fine Breed from Barbary and the Indiest and the Prudence to diftribute them through all the barren, rocky, and mouatainons Parts of the illand. Other French Writers fay the fame Thing as to the Superiority of our fioats.
s Dr. Cheyne, an able Phyfician, and a moft worthy well-meaning Man, obferved that Goats. feeding in pure Air, on high Places, on the moft tender, light, and aromatic Plants, muft communicate a Spirit, Balfam, and Sweetnefs to their Milk and Whey. He wondered that the amazing and indifputable Cures done by this caíy Remedy in Wales, Scotland, and Ireland, did not more recommend it ; and laments, that tismoft bencficial and fanative Things are lighted and: orcrlooked, while new, furcign, conly, aid complicated ones are admired.

## of GREAT BRITAIN.

 for the Recovery of confumptive and emaciated Perfons ${ }^{t}$. Some Ufe is made of our Goats Hair, particularly by the Dyers u. But as ours are believed to be of the fame Species with thofe in Afia, fo there is little Reafon to doubt that the Breed might be improved in fuch a Manner, as to furnifh us at home with that long, fhining, foft, and filky Hair, that we at prefent import from the Levant, and from which many Kinds of Goods are made which bear a confiderable Pricew. The Skins both of Goats and of Kids are made into Leather of different Sorts, fome refembling Shamoy, which is indced only the Skin of the Alpine Goat. They likewife are dreffed white, efpeciaily thofe of the Kids, and are employed in making Gloves, and for other Purpofes $x$. It has been alre:idy hinted, that the Suet or Tallow of this Animal is the hardeft, and, if we exceft that of Deer, the bett of any, and makes Candles clofe and white, very little inferior to Wax. In other Countries thefe Productions turn to great Account, more cfpecially the laft ; and with a View to this, they not only cut the old. He-Goats, but alio many of the Kids, which with the She-Goats when paft breeding they fatten with dry Food, and drive a conliderable Trade[^89] the Breeding of Goats in any Part of the Britilh Dominions where they are not to be found at prefent; but in Places where they already are, the making the moft of them is a Point that deferves to be confidered ${ }^{2}$. It may poffibly deferve alfo to be attempted.

In refpect to Black Cattle in general, thefe Inands have been always, and wery defervedly, famous. We have, and have always had, Animals of this Kind of very different Sizes, according to the Richnefs or Poverty of the Soil, rather than the Climate where they were bred. But we have been for about a Century paft very fuccefsful, in many Places where this hath been particularly attended to, in the Improvement of our Breed, and in rendering them better, and more profitable in all Refpects then formerly ${ }^{\text {a }}$. The Bull is with us of a ftout, ftrong Body, and of a very fierce Countenance and Nature, with fhort fmooth Horns, and not arriving at his full Growth until between Two and Three Years Old. They are fit for propagating thcir Species before that Time, and are of very little Value in that Refpect when they are above Four or at moft Five. Bateing them was formerly a Diverfion, and fuppofed to render their Flefh more tender, but it is al-
y The Number of Ufes to which this Commodity (exclufive of making Candles) is now applied, fuch as the Compounding Soap, Dreffing of Leather, Caulking the Bottoms of Ships, \& hath much increafed the Demand for, and of courfe raifed the Price of, Tallow. In confequence of this, Exportation is prohibited under fevere Penalties, and vaft Quantities are imported. It fhould feem therefore a Natter of fome Importance to augment our Stoch, efpecially fince tor medicipal Ufes this is preferable to any.
$z$ The moft fertile Countries have their barren Spots. Italy hath its Aips and its Appenincs ; and fo, as Camden long fince obferved, hath England. On thefe the Goats are the Cattle placed by Nature. In fuch rude Corners where Nature feems to have taken the leaft, Men deftined to live in them muft take the moft, Pains. Sagacity and Induftry muft fupply all Defects, and if they will have Plenty they muft earnit. There cannot confequently be a more honeft or humane Action, than to endeavour at leaft towards contributing to fuch Mens Felicity. This in the prefenr, and in many other Cafes, hath been my fincere Aim ; in which if I meet with any Succef, it will add to that Sat faction which the Intention gives me.

Large Cows are moft efteemed, more efpecially if their Udders be large allo; they carry their Young Nine Months, and calve in the Beginning of the Tenth, bring. fometimes Two, and fometimes Three Calves, are looked on as in their Prime between the Age of Five and Eight, and fall off about Ten. Yet they will live to twice that Age, though they are generally fatted and killed much fooner. They make good Beef, the Heifer efpecially c. Our - Oxen are in many Places of a very large Size, remarkably fair and bcautiful, their Flefh, when grifs-fcd, very fweet and wholefome if eaten frefh; but they muft be ftall-fcd to take Salt well, and if their Flefh be then properly cured it will kecp perfectly iweet for full Two Years c. They are ficldom kept beyond Seven Years old. Our Calves are large, and our Veal remarkably white and fine. There are fcw Calves reared in the Neighbourhood of London, not only from the Vicinity of fo great as well as fo good a Market, but becaufe the Land, generally fpeaking, lets too dear toadmit the raifing them with Profit ". Black Cattle are fubject to feveral

[^90]168 The POLITICAL SURVEY
Difeafes, and yet not near fo many as Sheep ; but are, like them, liable fomerimes to Infection, or, as it is called, the Murrain, which carries them off in great Numbers, creating a Scarcity not fpeedily to be repaired $f$.

We not only receive moft wholefome and fubftantial Nourifhment from the Fleth of thefe Animals, but they likewife render Mankind very effential Services while living. It is for this Reafon they have been very highly, as well as very juftly, celebrated by the ancient Writers on Hufbandry $g_{3}$ and if they appear lefs ufeful, or rather lefs neceffary in thefe Times, it is our Fault, fince undoubtedly they are ftill as fit for the Labour of the Plough as ever. We may alter our Cuftoms, but Nature will remain the fame. Bulls, though it feldom happens, may be thus employed; but then they are to be yoked as Horfes are in a Line, and not in Pairsh. Oxen however are generally ufed for this Purpofe, to which they feem admirably fuited, by their Size, their Strength, the Make of their Body, and their Temper, which is naturally patient. They are to be trained, or, as the Country Phrafe is, broke to it at a proper Age, that is about three Years old, when they have attained their full Growth, and while they are fill docile and manageable ${ }^{i}$. They are then duly fed, very gently ufed, and never urged beyond their accuftomed Hours. The old and awkard Method of faftening their Harnefs to their Horns hath been long laid afide, for that which enables them to exert their Force more equally, and with greater Eafe; in which it is not impoffible however that lome farther Im-

[^91]
## of GREAT BRITAIN.

provement might be made. "They are alfo cued, that is, thoed properly, and great Care is taken to keep them dry while wrought, and to afford them proper Nourifhment in the Winter. They are wrought till about Ten or Eleven Years old, and are then fatted for the Shambles $k$.

Oxen are fitteft for Ploughing in a deep, heavy, or clayey Soil, for they do not fo well on Gravel, and ftill worfe on Chalk, which very foon beats and ruins their Fect. They are cheaper than Horfes in many Refpects, particularly in their Food, as they require no Oats, ftill more in their Shoes and Harnels, and in their being lefs Subject to, and confequently lefs expenfive from their Difenfes !. But what makes the greateft Difference, is their not becoming either ufelefs or of no Value in cafe of Lamenefs, or when paft Service, fince they are then fatted, and that too in a fhort Time, and brought to a good Market, as their Fleh is in every Refpect. as tender and wholefome as that of younger Beafts.m. There is therefore Reafon to wonder, that the Uie of Oxen, in this material Part of Hufbandry, is to much declined. It muft however be admitted, that even fo early as the Days of Fitzherbert, it was held problematical whether Horfes or Oxen

[^92]
## 170 The POLFTECALSURVEY

were the fitteft for this Labour $n$; and perhaps the Solution of this Queftion may depend on the Difference of Soils. But allowing the difure of $\mathbf{O x}$ Teams to be, as indeed it feems to be, an Error, it will be beft reniedied. by gentle Methods, by having Recourfe to convincing Experiments, and by Gentlemens fetting Examples of reviving the old Method, where they hold any Quantity of Ground in their own Hands ${ }^{\circ}$. It may be proper to remark before we quit this Subject, that the barren Cow, called by the Country People a Free Martin, has almoft as much Strength, and is nearly as fit for this Labour, as the $\mathbf{O x}$, and proves afterwards alfo as good. Meat ${ }^{\mathrm{P}}$.

If the Labour of the $\mathbf{O x}$ be of fuch Confequence in the Cultivation of arable Land, from whence we are fupplied with Grain, we may with the fricteft Juftice affirm, that an equal Tribute of Praife is due to the Cow for the Support of our Dairies. Thefe are unqueftionably of great Importance in many. Countries, but in none more than in this, where their annual Produce is amazingly large in Quantity, and at the fame Time no Hefs excellent in Quality. The Ancients were very exact in their Defcriptions of the Marks of a good Cow, and entered fo thoroughly into the Characteriftics eftablifhed by Nature, that they are acknowledged as the fureft Rules at this Day q. Varro ranges the Colours of Kine in this Order,

[^93]
## of GREATBRITAIN

Order, firf the Black, next the Red, then the Dun; after that the White; and laftly the Black and White, though of this Virgil feems to have had fomewhat a better Opinion. A Notion prevails amongft us, founded as it is faid upon Experience, that a Red Cow gives the beft, and a White the moft Milk, but that the Black produces the beft Calves r. The prodigious Extent, the natural Fertility, and the modern Improvements which have been introduced into our Pantures, enable our Farmers to furnik from them immenie Supplies both of Butter and Cheefe, which partly from the different Methods in making, and partly from the peculiar Qualities of the Soils where the Cattle are fed, afford mach Diverfity of Flavour, and thereby gratify all Taftes, fo that thero is a reciprocal Demand for the feveral Sorts of both in almoft all Parts of the Ifland. From thence arifes the Expediency of eftablifhing numerous Fairs and Marts, where thefe are expofed to Sale at ftated Times s. Hence alfo arifes much Land Carriage, befides what is fent on our navigable Rivers by Water; and in Coafting Veffels, to the no finall Emolument of Thoufands of Families, that derive a Subfiftence from this Trade in a great Variety of Ways t.

IT would be very difficult, if not altogether impoffible, to form an exact Calculation of the Value of thefe Articles; but from a very mature and impartial Confideration of a Variety of Circumftances, we are led to believe;
infifts on an open well fpread Fore-head, fmooth mining Hornis of a deep Brown, large full black Eyes, a capacious Belly, frrait Legs, and fmall Feet.. Yet Pliny remarks, that Catile may be very good although unfightly, which feems to be verified in the Normandy and Alderney Cows compared to ours.
r. Mr. Lifle, who is very exact, informs us, that Six Cows may be milked in an Hour, and fome Women have milked Eight. In the Ile of Wight they reckoned their Cows one with another gave Two Gallons of Milk a Day, which would make Four Pounds of Butter in a Week. He mentions the common Opinion to be, that a Quart of Cream will make a Pound of Butter, but he thinks it requires Three Pints. A Cow was let at the Beginining of this Century for Forty-five Shillings; the annual Profits of a Cow are cflimated now at double that Sum.

- If we confider the Difference between Chedder,' Chefhire, Cottenham, Gloucefter, Stilton, Wilthire Cheefes, and how commonly moft of them are to be met with in all Parts of the Inand, the Truth of what is faid in the Text will moft evidently appear. In regard to the great Fairs and Marts, thofe who live near them in the Country, and even thofe who have feen them only occafionally, know, that Cheefe is.a very confiderable Article in them all, and in fome of them the moft confiderable of any.
' This is a Point always deferving Attention ; for whatever creates Labour, creates alfo the Means of Subfiftence, and the Faftors, the Seamen, the Waggoners, the Porters, the Clicefemongers, are as much maintained by the Dairy as the Farmer; as for laflance, they fend great Quantities of Chenire Cheefe into Wales, into the Midland and Northern Counties by Land-carriage, to London, to Scotland, and Ireland by Sea, to the Amount, as fome have computed, fee Atlas Maritimus, p . 1 y , in the Whole of Thirty thoufand Tuns annually. It is poffible this may fomewhat excted the Truth, but moof certainly a very great Quantity is fent by all thefe different Conveyances, and the Charge of the Carriage is included in the Price.

## 172 The POLITICAL SURVEY

that there is no Exaggeration in affirming, that the total Amount of the Produce of the Dairies in South Britain, in refpect to Home Confumption only, exclufive of a large Exportation of Cheefe efpecially, amounts annually to many Millions Sterling u. It will in fome Degree abate the Wonder, that at firft Sight may arife from fuch an Affertion, if we reflect, that all Ranks, Sexes, and Ages are in a Manner equally Partakers of their vasious Productions. For it is evident, that at the fame Time they furnifh Delicacies to the Rich, they compofe a great Part of the daily Food, and of courfe effentially contribute to the Subfitence of the Poor, entering alfo generally in fome Form or other into every Regimen of Diet preferibed by the Phyfician. It is therefore at once a very obvious, and no lefs it:1pendous Bleffing, that Things of fuch necemary, fuch conftant, and fuch extenfive Ufe, are every where throughout thefe happy Illands fo cheap, and fo common. But this prodigious Plenty inftead of leffening may be be raid in fome Meafure to encreale their Value, by putting it into the Power of all Perfons to procure them, which is the plain Source of fo amazing a Confumption w.

The principal Reafon why Black Cattle are foon killed, is from the Profits that are drawn from almoft all Parts of them, exclufive of the general Advantage arifing from the Flefh, which has been already mentioned. It would be a very long and difficult, though by no Means an ufelefs or air

[^94]
## of GREAT BRITAIN.

 unpleafant Tafk, to give an accurate and diftinct Detail of thefe, and to thew their fignal Benefit and Importance with regard to the public Welfare, and the Number of Families to whom they afford conftant Employment, and comfortable Subfiftence x . But for all thefe we have not Room, and therefore we flall content ourfelves with infifting only on a few of the moft remarkable, briefly pointing out fome of the Reft. At the fame Time recommending it to our Readers, to inform themfelves farther, as Opportunities offer, on all thefe Heads, that they may acquire juft Notions of the numerous bencficial Confequences, which fow continually from our national Adrantages, and derive from thence a diftinct and proper Senfe of our Independency, and of the intrinfic Riches of this great Country; for Want of Attention to which, we are too frequently led into falfe Sentiments on a Subject, which, if we reflect on our Honour and Happinefs as Natives. of Britain, ought of all others to be the mof thoroughly underftoods.But to return to the Point from which we digreffed.
To begin then with their Horns, which ferve for an Infinity of Ufes, after they have been properly prepared by thofe who exercife that Trade, and are from thence filed Horners, and whofe fole Bufinefs it is, by a great Varicty of very ingenious Methods, to render them fit for the feveral Purpofes to which they are applied r . When thus prepared, they pafs into
: Pris is the great Point; for whatever produces Labour, in this Country more cípecially, Furl: $x$ a Living. We do not fufficiently advert to another plain Propofition, that Perfons of Il Remis iive upon Labour, that is, either their own or other Peoples Labour. In every Country thes who live on their own Labour, be that what it will, contribute fomething to the publick Stack, whereas thefe whuneter Labour at all contribute norhing. It is upon a juft Proportionwetwece thefe different Sorts of Pcople, both neccifary in a Community, that the Jelfare of it deacnds, to which nothing can be more conducive than the having a Number of Methods in which Mens Incuftry may exert iffelf on the natural Produce of the Country. In this Cefe Confumption, whatever it be, is a Saving, and Commerce, to whatever it amounts, is fo much clear Gain.
y Upon the Principles explained in the forceoing Note, Egypt in former Times, and China at. n. efent, have been celcbrated as the finett Countrics in the World. Yet without any Tincture of Partality it may be ailimed, this Country is or may be made in this Refpect equal to either, as in : notiou it may bu truly faid to excel them both. For the antient Egyptians, and the modern Chinefe, affeet to fhew their Independency by declining an ctive and extenfive Navigation. This, to producing Ignorance and Timadiy, eaervated Mens Minds, and deftroyed all natural Courage, the only permancut Support of Independency, which by a contrary Conduct we have always maintaincd. The mative Riches of Britain fuppoit her Commerce, and to her Commerce the owes hor Naval Power. To diftinguifh the infeprable Connexion between thefe, which can only be done by mauty examining the Jroductions of this Countay, and how they contribute to the Subsillence of the Inhabitants, is an cficetual Method to evince our Independency, and to render tis icafible at th: "ume Time, that it camot be cither Saken or fapped, but by the general Prevalence of Folly, Indolesic, and Comuption.
${ }^{2}$ The Horncrs were a very- ancient and confiderable Fraternity in the City of London fome Itundred Years ago. In the Rcign of Edward IV. they complained to Variament, that by Fomreigneas as Comb-makers, Cutlers, Makers of Spectacles, and feveral mote, to all of whon they fupply the Means of Subfiftence; and are befides ufed in making of Tubacio and Snuff Boxes, Ink-horns, Piowder Flafhs, Blowing Horns, Shoeing Horns, dinking Cups, artificial lowers, and a vaft Variety of other Things, but more efpecially when fplitinto Plates or Leaves, are put into Lanterns, and various Contrivances to admit Light, for which in this Shape they are peculiarly fit, as being lefs fragil, though at the fame Time leis tranfparent than Glafs. But independent of theic, the very fmalleft Fregments, and even the Duft and Filings of Horn, are found very ferviceable in manuring cold Lands.a. Befides the great Confumption, which is continually made of them at Home, there is a very large Exportation both in Leaves and Manufacturcs, from their Superiority to other Horns in Size and other Qualities b.

The Harr hath alfo its Value, and is employed in many different Ways. The long Hair of the Tail is frequently mixed with Horle Hair fpun into Ropes, and fometimes wove. The fhort Hair ferves to fuff Saddles, Scats of feveral Kinds, Mattreffes, and Chairs. The Refuie is a good Manure, and operates more fpeedily than the Horns c. The Teguments, Cartilages,
reigners buying up our Horns they were in Danger of being ruined, and this Bufinefs lof to the Nation; and thereupon was made the Statute, 4 Edward IV. by which the Sale of Hons to Fureigners (except fuch as the faid Horners refufed) was prohibited, and the Wardens had power give: them to fearch all Markets in London, and 24 Miles round, and to infpect Sturbridge and Fly Fairs, to prevent fuch Practices, and to purchafe Horns at fated Prices. But on plaufible Pretences this Law was repealed, Stat. I. Jac. I. calp. xxv. and thereupon the cld Evil revived. The Horners again applied to Parliament, and by Stat. vii. Jac. I. cap. xiv. the ACt of A. D. 1464 was renewed (except as to the Infpection of the Fairs, and the old Prices) and remains in torce. The prefent Company were incorporated, Jan. 12th $163 \%, 13$ th of Charles I. confifting of a Mafler, Two Wardens, and Nine Affiltants, without Livery or Hall. They have a Warehoufe in Spitalfields, to which the Horns are fent as brought fiom Town and Country Markets, and thence regularly divided, the Widows and Orphans of deceafed Members having equal Shares.
a The Matter lying within, en which the Horn is formed, is called the Slough, and when dry is ufed in making Walls or Fences, in which covered from wet it will laft a long Time. It is alfo moft admirable in mending Roadi, where the Soil is fott and fpewy; for diffolving it becones a glutinous fubfance, that binds amazingly with Gravel. As a Manure they allow between Two and Three Quarter Sacks to an Acre. Horn Saw-Duft with Mould is an excellent Compolt for Flowers. It is alfo of Ufe in the hardening, and giving what is called a proper Temper to Mctals.
b It has been fhewn in a former Note how defirous Foreigners were of having our Horns niwrought, which is wifely prohibited, as is alfo the Importation of unwrought Horns into this Country. In A. D. 1750 , we exported to Holland only of Lantern Leaves 514,500 , befides Powder Flafks, \&c. There was formerly a Duty of Twenty Shillings a Thoufind, under which Duty we exported, A. D. 1683 , in the Whole 76,650 . But by Stat. 8 Geo. I. cap. xv. thefe, anil all other Mannfactures made of Horns, may be exported free.
${ }^{\text {c }}$ Some of the Ufes to which this Material is applied have been mentioned in the Text, and others might be mentioned here, which howcver would not'apprize the Reader of its Value

## of GREAT, BRITAIN.

and Griftles for the indifferent ; and for the finer, all the Cuttings, Parings, and Scraps of Hides are boiled in Water, till the gelatinous Parts of them are thoroughly diffolved; the Mals being properly dried in the Sun or by the Wind becomes Glue, which, while ioft, is cut into Tablets or fquare Pieces, which hardened become tranfparent, but having a greenifh Caft, and when ufed is diffolved again in hot Water. The older the Beaft, the bettet the Glue, more efpecially if made from a Bull's Hide. The Confimption of this Commodity by the numerous Artilicers to whom it is of iadiipenfible Utility is prodigious, and of courfe the Value of it is very crminderable. Of this likewiic there is a very Ghe is univerfally allowed to be the beft in E., rope, partly from the Excullency of the Materials, and partly from the Skill of the Manufactu rers ' ${ }^{2}$.

Tur Sinfws are prepared fo as to become a Kind of Thread or fmall Cord, ufed in fewing Saddles, in making Racquets, and other Things of a like Nature. The Bones, thoroughly bums, are reduced to a fine Powder, and become then of a beautilul and glofly black, which is ufed by the Painters. All of thele Articles which have been fuccinctly treated are of fome, and feveral yicld a good Price ${ }^{c}$. Many more might be added to thefe Intances without any Danger of exhaufting the Subject $f$; but we
or Confoquences, which however is not inconfiderable. Scrving as it does for a Variety of Pur-* poler, it is in conftant Demand, and is not woithlefs when decayd. For when it hath loft its bulticity in Mattrefles, Cuhions, \&c. it is pulled out and wore; and won out in this Shape, is toin for Manure. It pays Two Shillings an Hundred on Exportation.
"Innurnetable Ufe's are made of this Subftance, by the Multitude of Artificers to whom it is receflary, fo that there is a conftant and regutar, as well as very large and quick Sale for all that can be made. Experience however news that Glue is much better for kecping. Our Gluc buars a high lrice abroad, and the Glue made in Flanders is next in Valae. In buth it is made by the Tanners from Fragments of good Skins, dried with much Care. In France it is a feparateTiade, and the Glue-makers pick up their Materials as they can, trom the teveral Dealers in Skins, and bsiing dicfe with Cow Heels make their Giue, which as they purchate every Thing muft render it dear, as well as of inferior Quality. The Duty on Exportation is Tin Pence, and on Impotation Three Slillings and Ten Pence on an Hundred Weight.
e It is achowledged that all thefe Accounts (though riach Pains were taken about tlem) are very imper'cct, and therefore we ought, as Occations occur, to aim at obtaining a more cimoct Notion of each of thicfe Articles. As to Bones we fee the Rag.gatherers carefully pioh them up (large nofes cfpecially) in the Streets. Thefe make certain Ringes, Tobacco Stoppers, foxcs, and who knows how many Things befides? Ox Bones are alfo exported. In the Fook of Rates, the thourand is valocd at Six Shillings and Eight Pence. A. D. 1754, we exported Thirty two Thouland to Holland. It is a theological Maxim of the judicious Lord Verulam, "That what-
 taught u: by Expelience, that there is farce any Thing fo feemingly defpicable out of inimin hat man Inluthy camot extract a Living.
${ }^{1}$ Whatever is of Ule hath its Value. The Hools of Oxen are employed in Cafe-hardenins Tron, and alfo as a Manure. The Gall, from its faponaceous Noture, is of great Service to Djers, and
will content ourfelves with adding only Two great and important Manufactures.

The firt of thefe is Leather, the Benefits arifing from which put the Capacity to the Stretch, and furpafs our Powers of Calculation. It may feem flrange that this fhould be afferted of the Skins of Bulls, Cows, and Oxen, for which the only Apology that can be made is, that in Point of Fact it is frictly true, and that it may be faid farther, which ought to reconcile us to a frict Attention to the homely Subject, that all theic Benefits accrue to the Britih Nationg. Hides pafs from the Butcher to the Tanner, and from him to the Currier, and by their Labour thefe are converted into Leather, and are immediately after configned to fuch a vaft Variety of Tradefmen, as are exceeded only by the Number of thofe employed in the Woollen Manufacture h . In order to be convinced of this we need barely to make ufe of our Eyes. If we look abroad on the Inftruments of Hubbandry, on the Implements ufed in moft mechanic Trades, on the Structure of a Multitude of Engines and Machines, or if we contemplate at Home the neceffary Parts of our Cloathing, Breeches, Shoes, Boots, Gloves, or the Furniture of our Houfes, the Books on our Shelves, the Harncfs of our Horfes, and even the Subftance of our Carringes; what do we fec but Inftances of human Induftry exerted upon Leather? What an Aptitude hath. this fingle Material in a Variety of Circumftances for the Relicf of on: Neceffities, and fupplying Conveniencies in every State and Stage of Life ?
others, for cleanfing, fcouring, and other Purpofis. Blood is ufed in fume Places in boiling Silr, as a Compoft for Fruit Trees, and is a capital Ingredient in making Pruffian Blue. Madacrs are in daily Demand for their Cheapnefs and Utility. The Guts of Oxen are put to many Ufes, exported, nay, and re inported as a Cevering to Bologna Saufages. The thin Mcmbrane of the Rectum or Strcight-Gut is by a very curious Procefs made into what is called Cold-Beaters Skin. From the Feet of Oyen is extracted Neats Foot Oil, which is in common Ufe, and hath this fingular Prriperty, that it will not frecec. True it is, that none of thefe are of confiderable Worth; but it is as true, that they are all in every Eealt that is killed.
g The Size of the Skin depends on the Size of the Beaft, as i: felf-evident. But the Vilue (f the Skin is computed by its Weight ; and it fhould feem that in Proportion to the Weight of the: Beaf, the fmallcr Skins arc heavicft. In an Ox of Sceen hunded Eighty-four Fomuls the shin was Eighty four, that is nearly a Ninth. In an Ox of One hundred and Seventy Stene the Stin was Twelve Stone, narly a Fourteenth. In Sir William Bagot's great Ox of 2696 lb . the Skin was 155 lb . which is but a Seventeenth.
n Befides thofe mentioned above, there are other confiderable Dealers ia Leather as a Commomodity. Such as the Leather Cutter, the Leather Drefer, the Leather Dyer, the Leather Grounder, and the Leather Seller. All of thefe are very great and gainful Trades, and require large Capitals, becaufe moft of thein purchafe with ready Money, and fell on Credit. Some of them are very ingenious, and at the fame Time laborious Employments, fo that to their Shill aud laduntry the Superionty of our Leather is in fome Mcafure owing.

Without it, or even without it in the Plenty we have it, to what Difficulties fhould we be expofed i?

Arter thus anfwering almoft innumerable Purpofes, the very Rags, Relicks, and Recrements are not ufelefs, as we have already feen. In order to form fome Idea of the mighty Importance of this Article, we muft attend to the very great Number of Perfons maintained by its different Ma-- nufactures, and by the Vending and Difpofing of them in very different Manners k . We muit next recollect how large a Revenue the Publick reaps from theExcife on this Commodity, which hews the Extenfivenefs of Home Confumption 1. We mult alfo advert to the conftant and prodigious Exportation of tanned Hides and manufactured Leather, the whole Amount of which is fo much clear Gain to the Nation. Laftly, we ought to recollect, how well this leneficial Trade has been from time to time preferved and protected, by a Diverfity of Laws cnacted, altered, or repealed, as the publick Intereft directed; and which Laws fill requiring frequent Revifions, oblige the Legillature to an uninterrupted Attention to what contributes fo much to the Welfare of private Perfons, and thereby to the Welfare and Happinefs of Society ${ }^{\mathrm{m}}$.
${ }^{1}$ It is underfood, that a Cow Hide is the bert; and the French have a Senfible Proverb, which turns upon this, A la Boucherie les Vaches font Boufs, et à la Tanneric les Bœufs font Vaches. In the Narket Cuws are Oxen, at the Tannery Oxen are Cows. In this Country the Addrefs of there who prepare our Leather is fo great, and they know how to manage the Materials fo whil, that every Manufacturer is not only readily fupplied with Leather, but alfo with the particuiut Sort of Leather fittelt for his Ufe.
$k$ There is no better Method, at lcaft that I can devife to give fome Notion of this Matter, than to give a Lift of fucli Trades, exclufive of thofe alrcady mentioned, as principally work on I.cather. Such as Bellows-makers, Book-binders, Breeches-makers, Bridle-cutters, Buff Belt-makers, Cap-makers, Clog-makers, Conch-makers, Collar-makers, Cordwainers, Engine-makers, Fellmangers, Glovers, Harnefs-makers, Itulter Cafe-makers, Jeather-bottom Chair-makers, Leather Bodice-makers, Lea-ler Bucket and Pipe-makers, Leather Cate-makers, Lenther-Gilders, Pattenmakers, Powder-machine-naxicrs, Pump-makers, Sadlers, Screen-Makers, Sedan-makers, Shavingttrap makers, Skinatis, Sword-cutlers, Truak-makers, Trufsmakers, Vellom and Parchmentmakers, Whip and Thong-makers.

1 The Excife on Leather was originally impoled by Stat. 9 Ann cap. xi. $\$ 2$. and cxtends to all Specics of Leather tamed, tawed, or dselfed in Oil. But the Expence of the War againft France made it neceffary to lay additional Buties, by Stat. 10 Aun. cap. xxvi. § 2. both for Thirty-two Years. Thefe Duties and additional Dutics were made perpetnal, and Part of the General Fund by Stat. 3 Gico. I. cap. vii. By the Siatutes of Queen Anne befone mentioned a Drawhack was allowed on all manufatured Leather exported of Two thirds of the Excife, which by a fublequent Statute in the fane Reiga was altered to Three Halfp-nce on every Pound-weight. This Excife Luty on all Sorts of Leather, Vellom, and Parchment, produced, A, D. 1760, 204,291 \%. A. D. 1761. 211,483 l. A. D. 1762. 218,7001.
${ }^{m}$ Whoever perufes thefe Laws, as they lie in our Stature Bouks, with Attent:on, and confiders them candidly, will be convinced of the Truth of what is alfited in the Tcxt. For thefe Stantes provide againf the Exportation of raw llides, which by 13 and 14 Car. II. cap. vii. is declared a common Nuifance; for the proventing Butchers from Cutting, Gadhing, or otherwife in-

## 178 The POLITICAL SURVEY

But before we abfolutely part with this Subject, it may not be improper to fay fomewhat with refpect to Calves. Thefe, though they yield no Profit living, become notwithftanding very valuable when killed, not only in refpect to their Flefh but their Skins, which are ferviceable in a Variety of Ways, and of Courfe fupply Materials to a Variety of Trades n. The Superiority of the Leather made from them occafioned a great Exportation, efpecially to France. The high Duty impofed upon them, rendered the Commodity to them very dear. But what was ftill more grievous to the French than the Duty, was the abfolute Prohibition of exporting any Skin weighing more than Four Pounds. It was this induced Mr. Colbert to countenance an Undertaking in the Suburb of St. Marcell at Paris for Dreffing Calve Skins façon d'Angleterre', and very great Expectations were formed upon this Project. Yet, after the expending great Suans, this Scheme was dropped; the Undertaker declaring, that the Englifh Animal was ftronger when calved than the French when a Fortnight old, were afterwards better fed and managed; and that in confequence of this, their Skins were of a fuperior Nature, and not to be imitated by any Manner of Dreifing ${ }^{\circ}$. The French were howewer great Gainers by the very Attempt, though, as we fee, it had utterly mifcarried. For the Apprehenfions we were under of lofing fo valuable a Trade as that then was, induced us to remove the Limitation, and to take fome other Methods for its Prefervation, by which at the Time it happened both Parties were pleafed. Certain it is, that our Calve Skins, whether tawed or otherwife dreffed, continue ftill to preferve their Superiority, and, in confequence of that, their Price ${ }^{p}$. But this
jaring Skins; for the Tanning and otherwife Dreffing them properly; for the pieventing Differences and Difputes amonght the feveral Trades deali:g in and manutacturing of Leather; and for committing the Infpection of the Commodity to the piaxepa! Perfions in the Trades moft interefted in feeing thofe Laws.frictly executed. By thefe Mcans, as the Sublance of our Skins is remarkably good, fo the Leather is moft admirabiy dreffed for anfwering cecry Purpofe.
©Calve Skins are made into Leather every Way; that is, they are tunned, tawed, and dreffed in Oil, and thus preparcd, they may become the Material of many Manula.'turers, as Cordwainers, Book-binders, Sadters, \&c. the thin fanall Skins anfwer beft for fume Purpofes, thofe that are thicher and flronger for others. The thinneft of all, and $\mathrm{a}^{\prime}$ 'e Skins of abortive Culves, are made into Vellom. The Hair arfo is applied to the fame Purpolis with that of ("xen and Cows, and is therefore commonly mixed and fold with then.

- This Fact may be found in Dictionnaire de Conrmerce, tom. iii. col. r142, 1143, but is confirmed by our Statute Book. By the Aft, 12 Car. II. the high Dety and Pruitibition of exporting large Skins were impofed. By Stat. 20 Car. ii. cap. v, thefe Reftra:nts ware removed, and a Duty of One Shilling an Huadred-weight fetted. It is remarkable, that it is frid in the Preamble of this Law, that the furmer Act, by difcouraging Exportation, had abated the Price of Skins. to the Detriment of the Landed Intereft.

P By the Act of the Ninth of Queen Anne there Skins tanned are charged with an Excife of Three Half pence a Pound-weight, and the like Duty on Skins tawed or dreffed. By the ACt of the Tenth, with an additional Duty of Two Pence a Pound on tarned, and Thrce Half-pence a Pound on tawed. If exported, there is a Drawback allowed as fetticd by thofe Aćts. By the Firft et thare Afts a Duty of One Shilling a Dozen, and by the Second Fcur Shillings a Dozcn is im:

## of GREAT BRITAIN.

 this Trade is not now fo great an Object, becaufe our Home Confumption is very much increafed fince that Period.The Second capital Article in refpect to Profit, that we derive from Black Cattle, is TAllow, which on a fuperficial View may, to vulgar Apprehenfions, feem as fordid, if not more fo than Skins; but to the Eyes of the Confiderate, will appear what it really is, a Thing of very confiderable Value, arifing from its extenfive Utility. In all the Beafts that ruminate or chew the Cud, there is a particular Kind of Fat, which fixes and becomes hard of itfelf, which is called Suet, and this when cleaned, melted, and refined for Ufe, is what we ftile Tallow q. The Confumption of this is equally large and indifpenfable, particularly in Candles and Soap, Things of neceflary and continual Ufe; and it is likewife employed in moft Branches of the Leather Manafacture, by Plumbers, and a Multitude of other Artificers, in a Variety of domeftick Services, and in Phyfickr. It is evident therefore, that fo conftant, fo copious, and we may trucly add encreafing an Expence of a Commodity, which though in tianli Quantities of little Value, and therefore more freely ufed, muft accumulate to an immenfe Confumption. To attempt however the affigning its total Value with any Pretence to Exactnefs, would be very weak and abiurd, as it is altogether impoffible to cotlect the Materials requifite for making fuch a Calculation. The only Means of helping the Reader to form a tolerable Notion of this Matter, is to mention the Produce of the
pufed on Vellom. The Difadvantages that might arife from all thefe Duties upon Leather were whecen, and were confequently laid (the additional Duties efpecially) by the Houfe of Comm: :3s with much lifficulty and Reluchance; fo that nothing but a vifible Necefity could have in:'used their Comfent. They have been continued from the finse Neceflity for the Support of publick Cuedit.
i In an Ox that weighed Seven hundred and Fighty Puonds, the Tallow weighed Eighty. In One that weighed One hondred and Seventy Stone, the Tallow weighed Nineteen. In an Ox weighing Two hunded seventy-fiven Stone the Tallow weighed only Twenty-one Stone. In Sir Wahce Waghate Bagot's geat Ox, which weighed wo lefs than Two thoufand Six hundred and Eightr-fix Pounds, bic Tallow weighed Two handred and Twenty-fux Pounds, which is fomewhat more than a Twelth Pat, wheres in the fmallen of thefe it was between a Ninth and a demh.

Leomomy, ben in comocree, and at hat ia Poibo. This will Excule that Scricufnels with which
Tallow is lecated ia the Text. For upoa thete Dinaples it was, that fo carly as the Firt of
IWabeh it was made felony to expurt Tallow chandefinely. This Law was indeed repeaket;
bat by Stat. 19 Eliz. cap. v, the Pbhivition is reaswal undor very heary Penalties, confimed
Liy Statue $1 ;$ and 14 Car. II. cap. wii. §5. The Imporation of Tallow from orher Comn-
tis sis alo allowed, but under fuch a Duts as not to interlere with our own Commodity. By
podient this Durs may be reduced or furpended.

## 180 The POLITICAL SURVEY

Tax upon Candless, a Moiety of which only belongs to the Head that we are now treating, and the other Moiety to Sheeps Tallow. As to the Confumption in Soap, upon which there is alfo a Tax, that is fill lefs conclufive, as it is compofed of a Variety of Ingredients, of which this is only One, and that but in fome Kinds of Soap t. We mult therefore truft to the Obvioufnefs of the Facts that have been before ftated, and leave them. to the Reader's Confideration.

In regard to Deer, the Hiftory of them as Animals belongs to the Na turalifts, as Beafts of Chace to thofe Authers who have wrote on Ilunting, all that comes within our Hlan is to fhew their Utility u. No Country in Europe, in the Opinion of Foreigners as well as our own, is in all Refpects fitter for them than this, or breeds them of a larger Size. In our Forefts and Chaces we have Plenty of Red Defr, the Male of which is called a Stag or Hart, the Female a Hind, and the young One a Fawn. The Hart is a noble Creature, tall, admirably thaped, and remarkable for Strength, Swiftnefs, and Beauty. His Head is adorned with ftately Horns, which, after he comes to his full Size, he cafts annually. The Hind wantsthefe, but in all other Refpects is as fine a Creature as the Stag w. The.

[^95]
## of GREAT BRITAIN.

Fallow Derr are moftly kept in Parks, of which it is faid we have more in this Illand than in all the Reft of Europe. The Male of thefe is ftiled the Buck, and the Female the Doe. In point of Size, they are inferior to the Red Deer, yet are juftly efteemed for their exquifite Beauty, refembling. thofe in moft other Refpects, notwithftanding which they never herd or mingle with them. Of the Fallow Deer there are many Varieties, fome finely marked, fome mottled, but commonly of a red fandy Colour, which from them is called Fallow *. They are at prefent kept for Sport, Pleafure, and Grandeur, though by no means in fuch Numbers as heretofore, many Parks being turned into Farms.

Tine Red Deer live moftly by browfing on the green Boughs in Summer, and on the Bark of Trees in Winter ; but the chief Food of the Fallow Deer is Grafs, though they will alfo browfe on the tender Shoots. Both the Hind and the Doe carry their Young between Eight and Nine Months, they bring generally One, and very rarely Two Fawns at a Time, which they educate with great Tendernefs, and teach them to avoid the Purfuit of the Dogs, to which they readily expofe themfelves for their Prefervation: The Hart or Stag was anciently fuppofed to be a very long-lived Animal; and to have often exceeded the Tcrm of a Hundred Years, but of late this has been controverted; and it is now held, how juftly I pretend not to fay, that they do not reach to more than Forty, and the Buck but to Thirty y. There were formerly in this Country Abundance of Roebucks, though there are few or none of them now. Thefe ftill remain in North Britain,. in the Highlands efpecially; but they are gradually wearing out even there. Thefe Animals, though much fmaller than even the Fallow Deer, are certainly of the fame Kind, very bcautiful and very fprightly, delighting to live in rough Countries, exceedingly wild ; but their Flefh is efteemed excellent Venifon\%.
the Croifade through Wales, they were hofpitably entertained at a Nobleman's Houfe, whofe Wife regaled them with Checfe made of Hinds Milk, the Proluce of her own Dairy.
$x$ The great Difference next to Size, between the Stag and the Fuck, is in the Horps, thofe of the latter being flat and broad at the Top, fpreading out like an Hand, wheuce it is called Cervus palmatus, five, patyceros. The Skin is fotter, the Flefh finer, and the Creature in all Rerpects more delicate than the Stag. The Fallow Deer feem to be confined to temperate Climates, feldom found in the bleak Forrclls of the North, and of a diminutive Size in the warmer Regions of the South. In Spain, the Bucks are however alinoft as large as Stags.
y If Antiquity could derive any.juft Credit to upinion, the long Life of Stags could fcarce be called in Queftion, being firlt alferted by Heitol, and fiepported fince by general Afent. It is indeed true, that the noble Verulam (Hift. Virz et Murtis, Art. iii. §8.) drew this old Notion into Sufpicion, from the Time this Animal arrives at its full Growth, which he fixes at Five Years. Morlern Aphors have pofitively de ich the Longevity of Stags on this Suggeftion, and framed thercuporisakw Term of Lile. Wut after all, this is a Point which Facts, well atrefted, can only determine.
$z^{2}$ The Rnctuck, in Latin Caprochlus, an:1 by the French called Chevreit, is andoubtedly of the Deer Kind, refembling in. Some Puperties the Stag, in ohbers the Buck, yet in fome Refreens

## $\mathbf{8 2}$ The POLITICAL SURVEY

It is to the Idea of Pleafure, Amufement, and Magnificence, connected with the Poffeffion of Deer, that we owe the fill numerous Forefts and Chaces, and the very many extenfive and beautiful Parks that adorn this Ifland, which in their prefent State are of confiderable, and might be made of much more confiderable Utility ${ }^{2}$. But exclufive of thefe, Deer, confi dered in themfelves, though principally Objects of Delight, are not altogether unattended with Profit. In refpect to their Flefh, that of the Eitag is but coarfe, neither is the Hind much commended; but the Fawn, wheil fat, and in the proper Seafon, is very fine. The Fallow Deer are in this Country the Venifon moft efteemed, and fupply the Tables of the Great and Rich with excellent Food, both in Summer and in Winter." The Horns both of the Stag and Buck furnifh a great Variety of Medicines, which though more regarded heretofore than at prefent, are notwithftanding ftill in fome Form or other in general and common Ure b. They are likewife employed by the Cutlers, and in the making fome Sort of Toys. The Hair when taken from the Skins is held rather better than any other Sort,
different from both. In Cotrage, Fiercenefs, and Activity, at leaft cqual to the Hart, fuller of cunning, and harder to be taken; in Coloar, Shape, and Look, nearer the Buck; but neater, and hath brighter Eyes. It is eafier to mark the Differenecs that effectually difinguilh this Species. The Horns are ftrong, and have feldom more than five Tines, they are fhed in Autumn, not in the Spring like the Stag. The Doe brings her Joung in the Middle of the Sixth Aionth, ard hath Two Fawns, a Male and a Femalc. The Roebuck is conftant to his Doc; they do not live like the Fallow Deer, but in Families. They are hardly ever tamed, cannot be well kept in Parks, and are ufually killed by a Shot. The Fieh, Horns, Skin, \&c. anfwer the fame Purpoles as thofe of other Deer.
${ }^{2}$ Parks are of greater Antiquity in this Country than Forefts, for thefe were introduced by our Norman Princes, whereas Parks were in Ufe amongh the Saxons, as appears by Doumfday. In their Parks, our Ancefors preferved and bred foreign Animals, remarkable for Beauty or Ufe, and this was no Doubt a Point of Prudence not moworthy Imitation. Mr. Anfon, at his Seat of Shugborough in Staffordihire, hath Two of the Muffoli, a Kind of Corfican Stag, with Horns turning back like Rams, and their Sjin almoft impenetrable. Thefe were alfo, and fome fill are Nurferies of fately and ufeful Timber, and in all of them Corners might be fond phanted and fenced, where fome Hundred of Oak, Afh, and Elm might rife unheeded to Puticetion. Thus the Park fpringing from the lride of one Generation may become a Source of l'rofit to the next. In thefe alfo exotic Trees may be, and in feveral are alrealy reconci'ed to our Suil and Climate. Thus, near a Century fince, the Ancellor of the Earl of Moyra, caufed amany colinus Trees and Plants to be brought from Ianaica, which fill live and furnifh at his Seat in the County of Down, in: our Sifer Inten of homat. Paks fecm lidewile to be Places execodion!y proper for the man? Efry might be here prachifed very comonotionnt at a finall Expence, would ar onec afford :a mtional Amufement, and prove a mont effentin Sereice to this Conntry, by readering the Scieno of Cultation refpectable, and giving every new Impuvenatat the faireft Chance, bjp putting it int: the moft proper Hands.

- It is almoff fuilicient to mention the Word HARTSHORN to juflify all that $\mathrm{i}:$ fiid in the Text. Shavings of Hathorn boiled become a Jdy, whis: lath been thought ftectgetamint, nourifhing, and firting Light on the Stor. . W. Catined liarthorn is afed to flop floxes. The Spirit of Harthorn is in common Ufe, and the (hil is generally applicd externally, the volatile Sale is by many beld a moft mole and clfaciosis Mcelicin:- Willout atoming iate their Merits, there is a large and conitant Confumption or all, and lume of then buar a good Pifice. The Marrow is very rich and high flavoured, fuppofed to have many medicinal Virtues, and in France is melted, then caft into little Cakes, which are fold at a pretty good Price. The Suct is eftuemed the beft of any, is very conollicnt, fubtile, and penetrating, and mof of it is ufed in Phyfick $c$. But thefe are all of little Value in comparign of the Skin, which is clofe, foft; warm, and very beautiful. It is irefl is every Way that Leather can be drefied, and is held preferahle ro:s. her for a Multitude of Purpoie, fuch as the making Gloves, Biecil i iselts, and many other Things d. It is alfo in Credit with the Furicremso make it into Muffs with the Hair on. We have more of thefe Cretures, as is on all Hands allowed, than in any of the $n$ ighbouring Counties, and yet their-Skins would farce fuffice for our Home Confumption. It is therefore not at all wonderful, that we fhould annually import, effer.lly from our own Colonies, very large Quantities of Deer Skins of diffcrest Sinds. Thefe become the Objects of the Skill and Induttry of our Artificers, by whom they are wrought up into differeat Articles, and furnifh a very plentiful as well as a lucrative Exportation -

Swine, though never efteemed for, their Beauty, in their Nature rather diryrecable, and affording little either of Profit or Pleafure while living, from their almoft inexprefible Utility, when once deprived of Life, have been always contidered as exceedingly beneficial to Mankind. On this Account we find them highly celebrated by the Ancients, to whom the Modans foud much obliged for the beft and moft fenfible Precepts that can

[^96]
## 184 The POLITICAL SURVEY

be given for their right Choice, and the proper Management of them ${ }^{f}$; Precepts founded in Reafon and Nature, and confirmed by the Experience of later Writers, who knew not that they had been publimed by them before. As thefe Creatures are of fuch general Advantage, we find them almoft univerfally fpread over the Face of the Globe. By the benevolent Hand of Providence they have been placed in Europe, in Afia, and in Africa, and by the affiduous Care of the Spaniards and Portuguefe, in many of the Ilands, and on both the Northern and Southern Continenis of America; where they have fince run wildg. In the Southern and warmer Climates their Flefh is finer, their Juices are richer, and their Tafte better; but they are more regarded, and much great. Attention is fhewn to them in temperate and colder Countries, efpecially in the North, where they thrive exceedingly, and yield the People in return for their Care no inconfiderable Part of their Subfiftence $b$. There is however perhaps no Country in which Swine:have been more happily managed, and in confequence of this in no Country do they turn to more Benefit or produce a larger Profit, than in Britain. This however is by no means to be reckoned amongft the Number of new Acquifitions; on the contrary, for this our Inand hatl been always famous. It is notwithftanding a Point of Juftice to acknowledge, that all our Writers on rural Occonomy have paid a proper and a conftant Regard to this Subject, and fpared no Pains to fupport, and even to augment that Reputation, which in this Refpect we had fo long Time fince attained i.

[^97]The Male of thefe Creatures is called a Boar, an Animal of an uncouta Afpect, dull in the Senfes of Tafting and Feeling, but exceedingly quick in his Sight, his Hearing, and his Scent ; chofen with great Care when kept for the Propagation of his Species, and thus employed from the Age of Two to Five Years, and then either fold or fatted $k$. The Males not allotted to this Ule are caftrated, fometimes at the Age of Six Weeks, and fometimes when they are Six Months old, and then fed to a Size either for Sale or for the Ufe of the Family. Sows are kept for Breed generally from One Year old to Seven, and are then fpayed and fatted. They have commonly more Greafe on their Inteftines thale Hogs, thefe being fatteft on their Backs 1. As to the Age of thefe Animals, we know nothing of it with any Certainty; fome of the Moderns fay, they will live Thirty Years, but the older they are, the more difficult it is to make them fat, and therefore they feldom reach to the Tenth Part of their natural Age, being killed for Pork at Nine, and for Bacon at Fourteen or Eighteen Months m. As thefe Creatures have very large Stomachs, they are exceedingly voracious, infomuch that Sows often eat their Pigs. But as they will feed almoft on any Thing, they are bred and kept every where, and are quickly and cheaply fatted n. The Sow farrows in Sixteen Weeks or a little more, and cont fequently
k It is obferved by Columelli, that in Swine, as in other Quadrupedes, much depends on the sight Chore of the Male. A Boar ought to be of a large Size, but rather fquare and compact. than either long or round. His Belly capacious and depending, his Flanks ftout and hefhy, his Lecg; not over long, his Hoofs proportionable, his Nuck thick and fturdy, his Snout fhurt and ruming lip. The Sow fhould be of a longer Make, in other Refpects the liker the Boar the better, Varru beiides thefe Marks bids us remark the Nature, the Kind, and the Country from which the Buar is brought. "Columella fays, that in a cold Country the Herd foould have exceeding ftiong, thick, black Briftles. In warmer Climates they may be of $i$ lighter Colour, in fome they are not the worfe for being fmonth and white. With us they differ in their Colour and their Size; but our Farmers know very well how to make them, of whatever Size they are, turn to Account, and how, if they think it neecffary, to mend the Brecd. This appears from the Difference of the Pork expofed to Saie, which is commonly between Ten and Twenty Stone, or Twenty five Stone at moft. Hogs however may be and have been fed up to no lefs than Fourfore Stone, or Six hundred and Forty lounds.

1 Fitzherbert, the Parent of our Hufbandry, though he highly commends Swine, is by no Means a Friend to Hogs. "Sse, fays he, how many Swine thou art able to keep; let them be all Baars " and Sows and no Hogs." His Reafoning in Support of this, might have Weight in his owi Times. A Boar is as cheap kept, adds he, as a Hog, affords more and better Meat at any Time, either eaten fieth or foufed. A Sow pays for her Kecping by her ligs. Since we have no longer the fame Tafte for Boar's Flefh it is no Wonder our Oeconomy in this Refpet Chould alter.
${ }^{m}$ It may feem frange that we Mould not kinnwathe natual Term of thefe Creatures Lives that are fo very common. But a truc and it is hoped a fatisfactory Realon is given in the Text, viz. that it is inconfiftent with our Interelt to know it. Arifotle fays, they may reach'Twenty Loid Verulam, from Fifteen to Tweaty; fome French Authors extend their Age to Twenty five or 'Thirty; and this, thongh not eftablifhed by any pofitive Fact, is neverthelefs vory likely to be true, and polfibly wild Swine may live longer.
"Swine are fit for all Countries, and if they eat much, will ent aifo whatever cap be eat, and what no Animals belides would cat, and this conititutes One great Part cr their Value. In miry Vol. 11.

## 186 <br> The POLITICAL SURVEY

fequently may, though they rarely have Three Litters of Pigs in a Year. They have at moft but Twelve Teats, and confequently cannot bring up more Pigs, though there have been Inftances of their having Twenty at a Litter ${ }^{\circ}$. Thefe Animals in different Counties are of very different Sizes. In Leicefterfhire, Northamptonfhire, and Pembrokefhire they are very large. In Hamphire, Wiltfhire, and where-ever they can run in the Woods, and feed on Maft and Acorns, their Flefh is firmer and better. They are fubject to many Difeafes, proceeding moftly from their foul Feeding. Their Sicknefs is more eafily difcovered than cured, and is beft prevented by the kecping them, as the Ancients ftrongly recommended, veryclean in their Sties, thllowing them. Air, Exercife, and I'lenty of Water'p. Many Improvements have been made of late Years in their Management, fo that we feed them cheaper, keep them fweeter, and Cure their Fleht much better than formerly. There are till, fome of the wild Breed, and formerly many more were preferved in Chaces. Thefe are not fo large or fo fat as the tame; but their Flefh is whiter, more delicate and firmer. The Chinefe Breed are common; they are finaller, blacker, and their Legs horter than ours, fo that when fat their Bellies.
and in marfly Grounds (to which they are not averfe) they dcvour Worms, Frogs, Fcrn, Rufh, and Sedge Roots. In drier and in woody Countries, they feed on Hips, Haws, Sloes, Crab: Maft, Chefnuts, Acorns, \&c. and on this Food they will grow flefhy, and fat. They are a Kind of natural Scavengers, will thrive on the Tranh of an Orchard, the Out-calts of the Kitchen, the Sweepings of Barns and Granaries, the Offals of a Market, and moft richly on the Refufe of a Dairy. If near the Sca they will fearch the Shores for Shell Fing; in the Fichls they cat Ginfs, and in Cities and great Towns they are kept in great Numbers, and fupported chiclly by Grains. It is evident that the Facility of Feeding them every where at a fmall Expence is a national beme. fit; more efpecially in a Country where the Pcople are accuftomed to cat Fleft daily, and coull not perhaps perform their daily Labour if they did not." It is no lefs obferveable, that notwithftanding this Facility of Feeding, and the Multitudes of Swine maintaized, they feddom fail of cominer to a good Market.

- The great Fecundity of thefe Animals is not fimply an Inftance, but a Proof of their Utility' ; for in the Occonomy of Providence, Beafts of Prey have few, Beaits of Profir mimy Young. lit the prefent Inftance, the wild Sow farrows but once, the tame One commonly twice, in April and in October, and may rear Sixteen to Eighteen Pigs. Mr. Life obfurves (it is prubable with Truth) that Gentlemen feldom gain as Farmers do by breeding Swiae, bat the N.ation gains in . both Cafes.

PIn no Part of Eurcpe is the Mangement of thefe Creatures better undernood than in this Country. The Time of Farrowing is adjulteci to the Nature of the Farm, the Food it can Supply; and the Number of Pigs foid and kept are in like Manner adjufled. New Kinds of Food, more wholefome and nutritive than what wore ufed formerly, have been introducud; fuch as Turnips, Carrots, Clovet, ©c. They are ia moft Places regularly managed, and clofely attended.. Tuffer many Ycars fince affumed from his own Experience, that a Sow might bring as much Profit as a Cow, In fome Countics (if I am not mifinformed) a Sow dependant on a Dairy bath produced, all Expences deducted, about Ten Pounds in the Space of a Ycar. It may be fome Satisfaction to the Reader to know, that on a nice Calculation, the annual Profits of a Sow in France are found to be between Fifty and Sixty Livres. .

## of GREAT BRITAIN.

literally touch the Ground. They thrive exceedingly well with us, are very prolifick, and their Flefh admirably fine and well tafted 9.

In treating of the Advantages derived from thefe Creatures, it is to beobferved, that the Fleh of all their different Kinds, and at all Ages, is looked upon as a very wholefome, fubftantial, and agreeable Aliment, and of Courfe, in their proper Seafons, the different Sorts of Provifions this fupplies are all of them very falcable.' The wild Boar was efteemed a prime Delicacy amongit the Romans, and the Fleht of the tame was much more in Favour with our Anceftors than with us, though Brawn has itill many Admirers, is made in the greatelt Perfection, and confidered as a Rarity peculiar to this Country'. Pork, though it might be wifely prohibited in fome warm Countries, is found by Experience equally nutritive and falutary here. As fiech it furnifhes a very large Proportion of that Food which is vended in on Narkets, and the Confumption of it is prodigious when pickled or filted, more cfpecially in our foreign Garrions, and in the Sea Service s. Our Bacon is differently cured, fo as to render it acceptable to all Palates, and our Fiams not at all inferior to thofe of other Countriest. The Entrails of other Anima's are of little Value, but thofe of Swine are fo acceptable in themfelves, and fo diverified in their Preparations, as to be deierredly contidered in another Light ". Lard, which is the firmer Fat of thefe
${ }^{2}$ Thefe are the fane Kind with thofe of Siam and through the Eaf Indies, coming nearer in a!! R:fp. At io the wild bred than ours. The Bamians abltain from all Flem; the Moors abhor Suir: Flefh; but the. Chincfe piefer it to ali Kinds of Food, and thofe who can afford it have Hhy Meat of fome Surt or other at the Tables every Day. The Chinefe are great farmers and cxcellenc ()economills, fet an high Value on Swine, keep many of them, and at fo fmall an Exjuce, that they are alwas at a reafonable price.
${ }^{1}$ Pliny tulls us, l'. Scrvillius Rullus was the firft who brought a whole Boar roafted to Table; but that i , his own Time it was not uncommon to have Two or Three ferved up Whole at one Fealt. In Qucen Elizaleeth's Time, the Head, the Fleh of the Neck called Collars, the Shoulders filed Shichds, and the Ribs were dign:fied with the Title of Brawn, the Reft, from the Liquid in which it was kept, and which was offen changed to prevent its becoming four, had the Name of Sowfe, and was eaten by the Servants and meaner People.
s Small labouring Familics in the Country feldom ante any Fleh but that of their Pig, which if ticey could not heep almofl for nothing they would farce tafte Flefh at all. As they are fupporicd by, they are alfo the great Support, in point of Profit, of our Dairies. Hogs are a principal Commodity in moft of oar confiderable Fairs. In a Word, the breeding, feeding, managing, curring to pruper Markets, busing and feling them, forms a great Object, maintains Multitudes, and is a Trade daily encreafing.

- In this we have made great Improvements within thefe laft Fifty Years; fo that in Hamphire, Herkthire, and in feveral other Comnties, it is prepared and enred in the utmof Perfection, which i not on!y a Benefit to the original Proprictors, but to the Waggoners who carry, and the Cheefemongers who read it ; to fay nothing of the immenfe Confumption it occafious of Greens, Roots, \&e. for the Production of which we have Thirty Thoufand Acres of Garden Grounds well let in the Vicinity ot this great Metropolis.
- This is undoubtedly a Fact. The IIcads, Ears, Feet, Chitterlings, \&c. are all fold; the Inmeat oumpofes Stufiges, black and white Puddings, \&re. It is true, thefe are fmall Matters, all of them

## 188 The POLTTICAE SURVEY

thefe Animals, ferves for fuch a Variety of Ufes as renders it 'even dearer: than Suet. That which is fofter, and is commonly filed Hog's Greafe, hath likewife its Ufes, and confequently its Value. The Skin is peculiarly: fit when dreffed for feveral Purpoles w. The Briftes are alfo employed in various Ways, and in different. Manufactures. The Dung of Swine is reputed next in Value to that of Sheep, and is of excellent Ufe in Vineyards, and as a Manure in general to Fruit Trees x . It is from this fuccinct Reprefentation of Particulars, that the Value of Swifte muft be rendered very confpicuous to every intelligent Reader; and to what Height this Value arifes, might be rendered equally evident, if we could come at any exact Calculation of the Confumption. But though this is by no Means in ourPower, yet it is fufficiently known to be very great here at Home; and for the Encouragement of Exportation therc is a Bounty allowed of Five Shillings on each Barrel of falted Pork $\%$.

After fpeaking fuccinctly to fuch Animals as fupply us with Subfittence, Cloathing, and are otherwife of Ufe, we come next to thofe which, though not in thefe, are ferviceable in Carriage, Draught, and in many other Refpects. The Horse claims the firf Place amongft thofe for his Spirit, Strength, and Sagacity, all which in a Variety of Ways render this Creature-
very fmall Matters : But fmall as they are, Labour, Skill, and Induftry raife them into fuch a: Value as furnifhes Subfiftence to Numbers, and thereby creates Circulation. What, except in a greater Degree, can the richeft Commodities do more? Thefe Appurtenances have been computed at Ten Shillings; if fo, thefe fmall Matters even in this Town will produce in a Year Seventy. thoufand Pounds.
w. The firm Fat before melted is much ufed in the Kivaien, though not near fo much as in France. So alfo is the Lard, which is alfo of Ufe in Phyficky and in various Manufactures ; the fuftar. is employed by Woolcombers, \&xc. Of the Skin they make Collars for large Dogs and Sieves; and of the Boars Skin, with the Hair on, Covers for Trunks. Of the Brifles, which the French call Soye de Porc, are made feveral different Kinds of Brufhes, as alfo fome Sorts of Pepcils. They, are likewife ufed by Sadlers, Shoemakers, \&c. in fewing their Work.
$\times$ Mr. Worlidge (Survey of Hubandry, p. 172) propoles. that Swine. Should bic turned into a. Clofe, well paled, and planted with Greens, Pulfe, and Roots, on which they may feed, and by. their trampling and their. Dung raife a great Quantity of excellent Soil. Mr. Mortimer affures us (Art of Hulbandry, vol. i. p. 117.) that fome, on poor light fhallow Land in Staffurdßire, fow a. fmall white Pea, which they never reap, but turn in fo many Hogs to eat them as they think they. will fat, and there they lie Day and Night, and their Dung will fo enrich the Land, that it will. bring a good Sward upon it, and will graze many Years afterwards. Our old Hufbandmen had an ill Opinion of this Dung, as fuppofing it bred Weeds, which any Dung will do that abcunds in: Salts. In fome Places they wafh with Hogs Dung for want- of Soap, which anfwers tolerably well, if the Linnen hangs long enough in the Air to become thoroughly fweet:

It is exceedingly difficult to come at any competent Knowledge of the Number of Hogs Spent. in London in a. Year. Yct without this no diftinet Notion can be formed on a Subject lo much laboured. After comparing carefully feveral Accounts taken in different Methods, it feems cer: tain that there are at leaft One hundred and Fifty thoufand Hogs brought annually, hither, about. Yifty thoufand more in Bacon, and upwards of Sixty thoufand Pigs, accurate, as well as moft elegant Defcriptions of this Animal, and entered. very amply into the proper Methods of managing Horfes according to the feveral Ways in which they were then employed z . The Moderns alfo, fince the Revival of true Science, have written very largely on the fame Subject, and many of thein with great Skill and Judgment, as on a Matterof puch Importance, and of the moft extenfive Ufe ${ }^{\text {a }}$. Some Perfons of diftinguifhed Rank have likewife in different Ages treated of Horfes and their Management with equal Science and Perficicuity b. The generous: Stred, to fay the Truth, is fo peculiarly adapted to the Occafions of theRich and Great, and fo ufeful to them efpecially, both for Service and Sport, that we need not at all wonder at his becoming the particular. Object of their Attention.

Tue Horfe in his Nature is as gentle and docile, as in Appearance heis a noble, majeltic, and well-proportioned Animal, but his peculiar Excell lencies are determined by the Service for which he is defigned c. A Stonehorfe intended for the Covering of Mares is called a Stallion, and. is chofen for that Reafon with great Caution, as perfect in all Refpects as. poffible, and may ferve for this Purpofe from Three or Four to Seventeen or

Dietionnaire Univerfel d'Hiftoire Naturelle, tom. i. p. 592-613. Beaufobre Introduction a l'Etude de la Politique, des Finançes, et du Commerce, tom. i. § xxi. p. 64, 65 .
b Among the Ancients, Xenophon, one of the greateft Gencials, one of the mont learnce SichoJars, and one of the moft elegant Writers of Greece, hath left Two Books on the Hippiatric Art, which have been ever in high and juft Efteem. William Cavendifi, Marquis and Eart, afterwards Duke of Newcaftle, publifhed a new Art of Horfemanhip, in which he appears both as an Author and Inventor with univerfal Applaufe. The prefcec Earl of Pembroke hath alfo given the Public an inftructive Treatife on this Subject:
c We have already feen, in treating of Oxen, that the Ancients ufed thofe Cattle, and not Horfes, for the Plough. Thefe laft were referved for the Saddle, the Chariot, and the Race. The Deferiptions therefore of Varro, Virgil, and Columella, though accurate and admirable in them-. felves, belong only to a particular Kind of Horfe. We require Horfes for various Purpofes, and, to fuit the le they muth have various Properties, indeed fo various, that what ane-regarded as zacellencies in fousc, wauld be Defects in others. As to the Age of thefe Animals, the Moderns mention very pofitively Thirty, the Ancients, and amongft them Ariftotle, perhaps with more Truth, Fifty Years, as the utmoft Pcriod of their Lives i. Their Food, if we except Grais and Hay, is different in different Climates. In Southern Countries they feed them with Barley, efteeming it to have a cooling Quality, whereas in Northern Regions, befides Hay and Straw, they give them Oats, Beans, Peas, \&c. 3. Yet after all, the Excellency and the Utility of this moft vaJuable Creature, as it contributes to the Service, fo it arifes from the Skill, Induftry, and Addrefs of Men, in nothing more confpicuous than in the Management of thefe Animals. It is very probable, that with the many and great Advantages derived from thence, it may fubject Horfes to more
${ }^{d}$ It hath becu the conftant Practice (fince we have hewn a juft Atention to this Matter) to form Studs, for railing with the greateft Care and at no fmall Expence a regular Succellion of what are filed Bred Horfes. In this there is great Sagacity, decp Judgment, and much Application requifite; and we have in this, as in moft other Purfuits depending on Knowledge, Method, and Perfcerance, fuccceded in the Opinion, and by the Teftimony of Foreigners, beyond any other Nation in Europe. But therc being fill much of Accident and Incutainty in this Bufacfis many young Horfes prove unfit for the Race, which yet are very valuable as Hunters, Saddle Horfes, remounting our Cavalry, and when palt Service in thefe are deftined to many other Uies, fo that for all Purpofes we have a confant and regular Supply of excellent Cattle.
${ }^{6}$ It is allowed this Operation diminifhes their Spirit, Strength, and Conrage, but it renders them more gentle, docile, and manageabie. Pliny lays, lib. xi. cup. 37. they did not lofe their Sucking, or as we call them, Yoal Teeth, which thews the Ancients caftrated carly. It is a Practice not ufd in the Eaft, except in China. We have alwass bad a Reputation for this hind ot Horfes. Sir Thomas Chaloner, in the Reign of Henry VIIf. carried a Number of them throngh France over the Pirennees into Spain, where they arrived freth, found, and fit for Service.
${ }^{1}$ The finf Speculation in refpect to the Duration of the Lives of Animals, was its being in Proportion to the Time of their Geflation. When this appeared inconfiftent with Facts, in this Inftane particular!y, it was then fid to be Screa Times the Space of their Growth. I.ord Verulam fays a Horfe grows to Six, and may (though it feldom happens) live to Forty. The French Philofuphers fix his Growth to Four, and reduce his Age to Thirty. Pliny fays (Atifotle had heard the fame) it was rcported a Horfe had lived to See cuty-five. Rut he Term he affigns them is Fifty, and this from his own Knowledge. At Twenty, be fays, a Horfe quitted the Circus, ferved as a Stallion to Thirty-three, and was then difmifled. In the Iflands of Shetland, Horfes of Fonte are not at all uncommon. Dr. Plet found Thece of this Agc or above in Oxfordfhire ouly. Upon a flrict Inquiry no doubt as many might be found in feveral other Counties.
g We have a great Superiority over our Neighbours, as they themfelves confefs; in the protigions Plenty and excellent Qualities of our Green and diy Provender. No Paftures are morc kindly luxuriant, or better diverfified than ours, no where more or finer Hay, fivecter Oats, fairer Beans and Peas, frefher Straw, Chaff, and Bran, all occafionally ncceffiry for the Support of thefe Creatues. It is true, that at fometimes, and in fome Places, their Keeping is dear ; but this is commonily in Iroportion to their Labuisa and coofequently repaid by it. Obfervation as old, perhaps older than the Days of Ariftotle.

Whoever were the firf Inhabitants of this Inand, and from whatever Country they came, it was very natural for them to bring over with them, or to procure as foon as they could, the moft c.feful Animals, and amongft thefe we may very well fuppofe Horfes might be included i. But this happily does not, though it might very well reft upon Suppofition. The Fact is, that when Julius Ceffar came over hither he found the People not only well provided with Horfes, but, which is very remarkable, thefe: Horles were fo excellently well-difciplined as to exite both the Terror and the Admiration of the Romans k. When they became the peaceable Poffeffors of this Country, we find, that among other Precautions taken for fecuring: it, they had many Pofts of Cavalry in different Parts, efpecially on the Coalts; nor is it at all improbable, that for maintaining thefe they brought over not only foreign Troops but foreign Horfes. The Saxons alfo had them in great Numbers, and efteemed them very much; as evidently ap-
h Mr. Fitzherbert fays, that in his Time there were Three principa! Dealers in Horfes. 1. The Hor 攵 Mafter, who bought wild unbacked Horfes, of which he broke and fold fome, and fome he Fold as he bought them. 2. Horfe Courfers, who dealt only in fuch as were trained, broken, or sitted for fone Kind of Service. 3. The Horfe Leche, or, as we now file him, the Farrier, who andertook the Cure of their Difeafes of all Kinds. To thefe, fays he, if you add an Apoth cary, jou will have Fuar, the beft of whom it would be hard to truft.

 The POLITICAL SURVEY pears from thei: Laws'. The Danes likewife employed Numbers of light Cavalry in their Incurfons:2.But after the Norman Conquefts, the Value of our own Horfes feems to have declined, which may be reafonably afcribed to the Difficulty found in tranforting them, at leaft in Numbers, for Service in their Wars upon the Continent; which Circumfance made it cheaper to purchafe Horfes bred for the Wars in thofe, or in the adjacent Countrics, whence ours were very foldom trained, but were left for domeftic Ufes. The Saddle Horfes, in thofe Days filied Paifreys, were chiefiy ufed for Grandeur and Parade. Asfor the Reft, though they anfwered common Occafions very well, yet, as well as the former, they were much inferior in Price to foreign Steeds kept by we: Princes and Nobility r. Henry the Seventh, who had very juft Notions of whatever might contribute in any Degree to the improving his Dominions. made the firlt Laws that are to be found on this Head in our Statute Buoks; in which he was followed by his Succeffors ${ }^{\text {o }}$. Thefe Law's had chietly

[^98]Two Poiuts in View; the mending the Breeds by raining the Sizc of our Horfes, 触d preventing their being fent into foreign Countries p . Thele Statutcs edat not effectually anfwer the Purpofes for which they were intended, fince wre are told that One of the principal Motives which inftigated the Spanifh Invafion in me Reign of his Grand-daughter, was the Knowledge they had of our Weaternefs in refpect to Cavalry. In regard to this, when-they made the Attempt, the Arrangements made by Authority, for rofirting them, put the Truth of thcir Intelligence beyond all Difpure 9.

The Ilorfes on board their Armada, when it was defeated and difperfed, carne on Shore on Galloway and in other Parts of Scutland, by which their Breed was very much improved. It is not at all improbable that fome of thefe Spanifh Horfes were carried into the Northern Countics of England, for in them it appears thicy firft began to flew a proper Attention to this Matter, and their Application therein was no doubt encouraged by their finding it attended with extraordinary Profit r. The civil Wars

## 194 The POLITICAL SURVEY

thewed the Ufe of a fuperior Race of Horfes, and put Men upon contriving: how to procure them, and on inquiring into the State and Management of thefe Animals in other Countries. The peaceable 'Times that followed. gave many Opportunities for, and afforded at the fame Time much Affiftance to, the compleating fuch Enquiries; and the fpeedy Progrefs of numerous Improvements, moft of which occafioned new Demands for Horfes, contributed not a little to quicken Peoples Attention in this Refpect, by opening an extenfive Markets.

Ber though in general this is as juft an Account as in fo narrow a Compafs we could give, yet it may, and indeed muft admit of fome Exceptions, in regard to a few of our ancient Nobility, who by bringing in forcign, and more efpecially Spanih Horfes, fought to raife an excellent Breed here for the Purpofes of War and Hunting ${ }^{t}$. It is allo true, that at the very Entrance of the laft Century our Gentry had fome Notions of Racing. Yet this did not extend far, and was at the fame Time attended with fuch an Espence os put it out of the Reach of Imitation. A little before the Reftoration, we begun to have clearer and more enlarged Ideas, as to many Points of domeftic Oeconomy, which after that Event influenced our pubhic Conduct, as appears by the permitting our Horfes to be exported, though under very high Duties, and the giving Plates to encourage Races u. As

[^99] our Horfes grew, in confequence of there Meafures, both numerous and valuable, a very worthy and intelligent Patriot fuggefted, that a free F.x.. portation would be very advantageous, and bring large Sums of Moncy ino this from other Countries. The Propofal feemed fo reafonable, that it was in a fhort Space adopted, and the Sum paid on Exportation io reduced, as to become rather a Regifter than a Dutyw. This was very quickly attended with very good Effects, fine Studs were eftablifhed in tioft Parry of the Kingdom, which fupplied bred Horfes, not only for the Courfe, but for the Mounting of our Cavalry, and the Saddle, and this too in Plenty.

As this fingular Improvement was chiefly accomplifhed by the Intcrpofition of Perlons of fuperior Rank and Fortune, no Expence was fpared in procuring Stallions from the moft diftant Countries, and fuch Pains were taken in all other Refpects, as had quickly very vilible Effects, and thereby attracted the Notice, and gradually raifed the Reputation of our Horfes with all our Neighbours $\times$. As a Spirit of Emulation is natural to the Inhabitants of this Illand, fo in the fame Proportion that this firf Rate Race of Horfes grew better in their Kind, other Sorts of Horfes were likewiic improved with great, if not equal Affiduityy. The Advantages a:tending
allowed to be exportel, the Rater gave little Encouragement; a Stome INore was rated at 661. $13: 4 \mathrm{~A}$. a Cichling at 201. to the Plantations at 101 . and a Mare at 1201.1 is. 4 d . The Royal Plater a: Newmarket in Cambridgefhire, atdat black Iambledon in Yorkhire, were given with an Iutention, aud under fuch Regulations, as might promote an Emulation amongh Perfons of Rank and Fortune in breeding fine Ilurfes, which it was forefeen would become a national Advantage, as, notwithflanding fome Inconvenicncies attendirg this Practice, it has certainly been.
"The latriot referred to in the Text is Mr. Samucl Fortrey, who, A. D. $16 \sigma_{3}$, addreffed to King ©harkes II. a finall Treatife, intituled, "England's Interct confidered in the Ausancement of the Trade of this Kingdom." In p. 22, he fays, "There is not any One of fo great Prolit as the Fxporfation of ionfic, which of all Commodities is raifed at the leaft Charge ar Home, and is of the greatelt Vilue Abroad." He alfo very fainly fates, and fully anfwers Ofjections. In confequence of this The J.aw betore mentioned watered; and, by Stat. 22. Car. II. cap. 13. ©8. crery Perton may est pert into any Conntry in Anaty with Great Britain any Hoff, hare, or Gelding, paying the Suca oniy of Five stailings. This liberty took Place at Mdfummer, A. D. $16-0$, midin Twelve I ears

$x$ It is evident, the true or ftandard Value of our Horfes is bett colisital tr a the ir Prices wisa bought by Stangers, who ac maj be fane with ut give more than the are wath. His tiac, that
 thefe Improvements. Whence could this arife: No from the Excellene; for in pite of the e for staning, and the Laws tor improving their Sire, we were indipuraby vely law in this Refpes in the Days of Elizaberh; but phanly for their Cheapnchs, and inded they wore two whe or as to get any Thing by felling them. Lut lince our Improvements, we no hinger dell cheap but fiae Honfes, and thefe at a high Price, which mult be very benefinial to this Country, as Horle coil: nothing but the Kecping, and in that Refpect a worthlefs Horfe cotts very near as much as the beit.
$y$ It is to this emulating Spirit, joined to the Sagacity and Perfeverance of the miduling Ranik of Feople, that we are to attribute thofe flately and valuable Teams, we fee not only in the Neigh: boushood of London, bat in fome of the moft diftunt Countie.: Cur Wigarus carry immenfe

## 196 The POLITICAL SURVEY

tending fo general a Regard to there Animals were fo many, and withal fo manifert, that in Conjunction with the Amendment of our Roads, which might alfo be efteemed a Confequence, have in a Manner entirely changed the Appearance, and perhaps it will be no trefpafs on Truth to fay the Circumftances alfo, of the better Part of this Mland. It is therefore by no Means furprizing, that this being fo evidently the Cafe, thefe Creatures fhould become both much more numerous, and much more valuable $\%$ Neither ought it to be efteemed extriordinary, that as the natural Confequence of this, our Exportation hould gradually increafe, or that both thefe fhould in the Judgment of many be looked upon as national Advantages a. Yet fo it is, that Doubts have of late arifen, and much hath been very ferioully advanced, to thew, that taking all Things into our View, it may very poffibly appear, that we have already too many of the fe Animals, and that for the Sake of the publick Wclfare, and out of Regard more efpecially to the Poor, fome Mieans ought to be employed rather to diminith than to increafe them. This no Queftion, if it can be clearly and effectually made out to the Satisfaction of the Leginature, by the Light of Evidence as well as Force of Argumen's, will meet with that Attention which, when thus maturely and impartially confidered, it dhall be found to deferve !.

Loads by the amazing Strength of their Horfes. The Pack Horfes move fingly each under a probligious Burthen, and this through the worf Roads. Miliers Horfes carry yet heavier Louds. All Kinds of Work that require Horfes fird them here of a fit Age and Size, and find them with Certainty and Eafe; Hunters, Roas, and Poft Horfes, fuch as no Country befides can boalt for Steadiunfs, Strength, and Spirit. As to the quick Draught, from the Chaife to the heavich Couch or Berlin, ear Horfes are no where excelled, cither for Shew or Speed.
$z$ It is extremely difficule to form any near, or fo much as probable, much !efs certain or exadt, Computation of the Horfes in South Britain. Mr. King, whefe Calculations are mont eftemed, indged they amounted at the Clofe of the laft Centary to One Million ' F wo hundred Thoufand, and fappofing them worth one with another Two Pounds Ten Shillings a Horfe, fixes their Valac at the Sum of Theee Millions. There is no doubt they are much increafed hoth in Number and Value fince that Time, but then there is no finall Reafon to queftion the Certainty of this Computation. In the Time of the l.f War, the Number of Horfes within the Rills of Montiliry were found to be between Twenty-three and Twenty-five thoufand, about a Fiftieh Pat of this Sum. Reut fup. pofe we have now a Milion, and thefe worth Five Pounds one with another, this is a wat Article in aur national account.

* Dr. Davenant, from whom we have Mr. King's Account, to which he gave entire Cre.Bit, was fof from being alamed thereby, that he wihes we could breed double the Number, for the Sake of Exportation. At this Time, which: faews how highly and mivel fally they are eftecmed, we export Horfes to Denmark, Jorway, the Faft Country, Flanlers, France, Gemany, Ibll:ud, Ireland, Madeiras, Pormgal, Ruffia, Sweden, Guernfey, Jerfey, and our American Colonies on the Continent and the llam!s. In the Y'ear 1706 , the Total was One thoufand Nime hundred Sixtyfeven, and in the Year $17^{\prime}, 7$ (butis in profound Puact) One thoufand Six hundred Sixy-three. Vely confiderable no Doubr, lut much inferior to what hath been pablifled by common Report. It Shews indeed, that the Syfiem formed for amending our ibreed hath operated very extcofively as well as effectualis.
b It is with a View to facilitate this that fo much Pains have been taken with the prefont Article. We have endeavoured to point out the Period in which, and to unce out the Caufe where-

of GREAT:BRITAIN.

Those who efpoufe thefe Sentiments maintain them by many Reafons, which feem to borrow no fmall Weight, from their declaring the fole Object of their Endeavours to be the promoting publick Good. They exclaim againft Horfe Races, as the moft deftructive Species of Gaming, productive only of pernicious Confequences, attended with immenfe Charges, and which ferve no other Purpole than to raife a Breed of Horfes that are confeffed to be too good for Ufe. Pofitions which can hardly be controverted; and theretore, as they conceive, this ought to be efteemed a Practice, that inftead of being at all countenanced, hould be difcouraged and fuppreffed $c$. They infiit on the prodigious Increafe of Chaifes, Coaches, and Saddle Horfes, as to many glaring Inftances of the moft enormous Luxury, and which ought therefore no longer to be indulged d. They reprefent the Expence of maintaining thefe Creảtures as prodigious in itfelf, far exceeding their real Utility, and of courfe an unneceffary Diminution of
by, our Hurfes were depreciated. The Fact is fairly fated in the Preamble to Henry VII Statute; but it was then alcribed to the fending Abroad our beft Horfes, for which the proper Cure no Doubt was a Prohibition to export. This not anfiwering, bis Son made coercive Lavs, which, except difpleafing the People, had no Effect. At length it was perceiied, that the true Remedy contifted in folluwing, the Cultom of oher Nations, and that bringing over foreign Stalliuns, attending to the Breed, allowing all Ranks of Men cntire Liberty in this Retpect, enc uadeng a Love for and a Pride in groal catte, were the only Means. Whether we may not goton tar in fo pleafant a Readi is a now Queftion, and hard to be difcufled. We fee how flangely our Aneeftors miftook the Rould when they attempted to raife a Breed, and by what Steps, when once in the right bath, ther, from being interior to mofl, came in this Refpect to be fupeion to all other Nations. But we wanot look with the fame Cortainty into lintuity, or decide on the Confequenes that ony attend the giving a Chock to this Spirit.
' That Races are Sources of many and great Inconveniencies muft be allowed. That however, the Pafin for thic Sport, wifely managei, gave us a Beed of Horfs of which we were in the
 thin it. We hno $v$ likewice, it keeps up the Repatation of our Horfes Abroad. It may be, that thefe were anomerg the Confiderations which induced the Leginatere to iepeal Stat. I 3 Geo. II. $\therefore$ Ip. 19. which cmasted no Races should be run but at Newmanket or Blak Hambleton, b" itat.
 tice formur Aet') prodeded the Prize be of the Value of Fifty Puands or upwards. It canot be doubted, this Mintir, thus canvalfed, flewed the true State of Things, and that fome Inconveniencics had arifen fiom than Reftraint, which was now removed. It hould be rememberd too, then this is a Spert peculiar to this Country, retains many who are addifted to it ar Hone, is eminently fer viceable to very many Places, and that all the Money won or lof at Races ftill remains here.
"There are Perfons howeter who fee this in a different Light. They think, that Intinny frombl be encouraged to acquire, and then, what Dien have acipuired, they fhould have libe: y ti) fpent. They oberve, that thefe opalent and luxurious Pcople only keep. but do not make ar dive Conches, weither do they harnefs, drefs, or feed their Horfes, but have all thefe done for them; fos hat how luxurina foever they may be, they are ceatainly the l'aymatters, if Patrons fhoud we thought too good a Word, of Labour and Induftry in othei Men. Thefe, thus maintained, fpeial an excifeable Commodities, whit brings to the Revenue Five Times as much as would arife frem iaxing llofers; and therfors, fo far as fach a Tax operated in fupprefing Lexuy, juft fo, tar: whald it go in tuming homed, indultrious, hard working-People out of their Livings.
the national Stocke. They attribute to this unfenfomable, and therefore needicfs Multiplication of thefe Animals, the prefent high Rent of Grafs Farms, which might have been otherwife employe! to Purpofes more uleful, that is, more beneficial in refpect to the Community $f$.

Tury amign to the fame Caufe the Derreafe of Black Cattle, and the great Scarcity and Dearnefs of all Kinds of Antmal Provifions, fo feverely jelt by all Ranks of People, and more efipecially grievous to the Poors. They are diflatisfied likewife with Exportatic:1, as it ferves apparently to aflift Strungers with better Horfes than their own Countries can produce, may in fome Degree promote their Indutry ;a Time of Peace, arai in cate of a War ferve to remount the Cavalry of our moft inveterate Enemies ". All
e All the World are not in this Sentiment, otherwife there would be no need of a Tax to check the breeding Horfes. The Feeding them would be a Tax heal y mough to produce that Effect. They are kept in grat Citics for Profit, or for Pomp; if the former, their keepirg \{though certainly expenfive) is paid for by their Labour, or they would not be kept; if the littec, thete is no more Hurt donc to the Community that in buying Pictures, Plate, or China. In the Country it is quite another Cafe. For Mr. Lifle. who was tur) obter ing a Fanmer to be deceived, and a Gentleman of too much Veracity (effecially tpeaking from his own Experience) not to be believed, fays expreliy, that a Brace of Saddle Geldings, which would con Fify Pounds kecping in London, may be kept by a Gentleman in the Countay, having Land in his own Ilands, for Nothing, and this he proves. Olbervations in Hufbailry, tol ii. p. 230.

In refpect to Crafs Land, great Improveneats have certainly been made in them of late Years, with regard to the Increafe of their Produce. Upon this Accunar, it is highly probable thacir Rents have rifen, and this is not orily natural but reafriable. Horfes no Doubt ext cirafs and Hay, which confltutc Iart of the Produce, and by fo deing give Value to both. But it may be well fuppofed, that their giving this Value was no fanall Induement to the makihg thefe Improvements; and if an Increafe of forf:s hath occulioned an Increafe of that Proluce on which they fubfift, they are clearly bancifina cwa in this Refpeet : Nore efpecially if what Mir. Lifle fays be true, that a Horfe in the Country, by his Dung (independent of Labour) pays not only for the Crafs and Hay, but for the Corn alfo that he conlumes

5 In the Northern Connties, where they breed the mof and beft Horfes, they alfu breed the larget Horn Cattle. In thefe Counties they do not plough with Oxen, bacaufc, as they think, it ftims them in their Growth. About Thirty Years ago Maithand fpeates of the Increafe of Horfes, and yet complains of the Cheapnefs of Provifions in London, which flews their Confiftence with each other pomfible. When the Markets were highelt the Commiffoners of the Victualling Office tound no Diffics!ly in complenting their Contracts, and this too at reafomable Prices. In fome Plares, particularly in Yurl:hire, the Country in fome Parts is extremely fit for brecding Horles, and in others equa!ly proper for fecting Catilc. Ihe Inh.abitants atail themfelves of both, being utt to judge of their own Intercfl ; and this free Choice, with the Ability of purfuing it, is, as Lixperience fhews, the fareft Source of miverfal ilenty.
h The Superiority of our Holes erifes fiom the-Ufe of foreign Stallions, the Plenty and Excellence of our grea $n$ and diry I'rovender, and the Judgment of our Breeders. That they have a Sur perio:ity appears iny Straneres giving a ligh Price for a perifhable Commodity. But this is no more than both they and we do, in regard to lforfes of fill greater Value. All Nations on Earth, even the Arabs, who hae the beft Honfes, and are the fondef of their Horfes, will part with them notwithtanding if you come up to their Pice. Ours are bought for the Sadule, principally for Intuting, many of them Geldings, and are guickly worn out. As for Dragoon Horfes, the French infe thir own, and remount their Horfe from Cermany, and are furnimed with Baggage and
which, ass they farther alledge, only contributes to fill the Pockets of a Race of Men, who have in every Age been reproached with attending folely totheir own Intereft, and who are negligent of any Confequences of their Tranfactions in this Trade, provided they find a Way to accumulate Wealth to themfelves $i$. It will however require fome Conlideration, whether thefe Suggeftions, though ftrongly urged, fhould not be very frictly examined, before any Step whatever be taken to diminifh, or even to difcredit the - keeping or breeding of Horfes, which makes fo valuable a Part of our national Property, more efpecially if there is any Appearance that this Reduction may probably be brought about gradually, and in the natural Courfe of Things 5 , without the Introduction of a new Tax, which certainly ought not to be impofed without a clear and inconteftibie Neceflity.

The Impartance of this Article, which hath often employed the Wifdom and Attention of the Legiflature, made it requifite to infift upon it more fully, and to enter into a larger Detail, than in fpeaking of fome other Animals. Yet many Things remain unfaid which might have becu mentioned upon fo copious a Subject, and of fuch extenfive Comfequence ${ }^{1}$. But
I)raught Horfes from Swifferland. In a Word, all Nations breed, and all Nations fell, as well as we, In the Comntics of Holhein, Eaft Friczland, Oldenburgh, Hanover, Wurtemburgh, Anfpach, Famberg, and Wuraburgh, they breed for Saic, and draw vaft Profits from this Trade without any Fea if ill Confegbences. The Dutch purfue the fame Practice, and our declining this Commarce would only rife their Prices.
i We may howerer have leave to fay in Favour of thefe, that they are not the only Dealers whe confult their owin laterelt without reanding Confequences. But whatever they may be, they are moft certainly Britifh Subjects, a numerons Race of Nen, who maintain themfelves and their lamilies by what hath heen hitherto looked on as a very ufeful Employment. But it is not thefe only wherill te afficted, but the Inhabitants alfo of all the Cumbies in which Forfes are bred, and thofe who breed them. It will falt upon the Fairs and Marts, which for a Century paft have been fubfifted by the repular Refort of Perfons to buy or fell thefe Creatures. It will be felt by all the Towns on the Roads, great or finall, and Iniluence all Kind of Land-Carriage, fo effential to, or rather which is the fule Inftrument of, the intern:l Commerce and Correfpondence through the ifland.
$k$ The great Increafe of Horfes of late Years hath been owing to the Increafe of Demands. Such as furnithing our Cavalry abrond during the War, the Growth and lextenfon of our domeftic ' Prade, the amazing Enlargement of this Capital, and other Caufes. But as fome of thefe were temporary, they hove coafed to act, and othens muy do the fame. The very Outcry againft thefe Animals, and lropofitions for reftrining them, will have this Effeit. So muft the Reviving the del Cuthon of Pioughing end Drawing with Oxcu, it by Fample and Encouragement it can be brought about. But more feedily and cifistually, by the sucit Spirit hewn in making Communications by Water, which by reducing the Pise of Cainge, and facilitating that of buing Commodities, will, as in Holland and in China, sury juchiy gain the Preference of Carts and Waggons.

In the Courfe of this Article the principal Puint in View ha:h beta to exhibit to the Reader Facts for his Intormation, and fuch Notices as might flimulate his own lnguinies into a Matter always held to be a great national Concern. It fecmeal for this Reafon neceffiry to fate, as dearly as might be, the Suggedtions on both Sides, learing him on Kallection to form his own Judguenr.
before we conclude, it may not be improper to remark, that the forfe after fpending his Life in the Service of Man is not totally ufelefs to him afterDeath, though not in the fame Degree with fome other Creatures. For not to mention phytical Ufes, which are now little confidered m, we Mall take Notice of bis Hair, particularly that of the Mane and Tail, which is applied to a great Variety of Ufes, efpecially of late Years, gives Employment, and of Courfe affords Subfiftence to many, and is upon the Whole of no inconfiderable Value. The other Hair, when taken from the Skins, is mixed witin that of Cows, and ufed for the fame Purpoles n. The Skins are alfo tanned and dreffed, chiefly for the Service of the Sadlers; but when Leather is dear and fcarce, is made to anfwer other Ends, and is therefore fubjected to a Duty ${ }^{\circ}$.

It may be however not amifs to add, that the ableft Perfons in this Nation, A. D. 1588, were under the $m \backsim f$ ferious Apprehenfions, from our confeffed Deficiency in Horfe; and that we have moft effectually redreffed that Evil, our Cavalry being at this Time confeffedly the belt in Europe. In cale of any new Invafion in future, our Refources (under the Protection of the ALMIGITY) are the Numbers of Horfe fit for Service, our Regulars and Militin, together with our Fleet.
m The Ancients were by no Means fo nice or fqueamilh as we are in the Choice of their Medicines, and it may be alfo a little too credulons. Notwithftanding this, the mont nanfeous and difgufting Remedy taken from this Animal is almoft the only One that is ever ufed. This is the expreffed Juice of trefh Stone Horfe Dung, in Pleurifies and Inflammations, and in Obftructions of the Breaft. It hath alfo (if we may believe Quincy) reliered in Afthmas and Difficulties in Breathing, when cleanlier and more contly Prefcriptions have failed. It is then exhibited in Decoitinn made with Hyfop and Penny-royal Waters frained. Mares Milk was formerly eftecmed a fovereign Remedy in a Confumption, and though now no longer in high Repute, will be futnd to have loft nothing of its Efficacy, by fuch as have Occafion, and at the fame 1 ime an Opportuity of uling it.
${ }^{n}$ In France this Article is ufed by Traders of different Occupations, who do not inturfere with each other. But fill larger Quantities are confumed here, and in full as gucat a Variety of Manufactures. Thus it is made into Fifhing lines, Sptinges, and Suares, by thofe who deal in that Kind of Tackle. Mufical Inftrument-makers employ it in the Bows for their Fiddles. In the Toy-fhops we meet with it in Comb-brufhes and many other Things. In the Tumers we find Hair-lines, \&c. When prepared, it comes into the Hands of the Peruke-makers. But all this is trifling in Comparifon of what is ufed in the Bottoms of Sieves, wrought up iuto Buttons, and wove into Cloths, of which Upholfterers make Seats for Chairs, Settecs, \&c. and of which they have made Waifcoats, and are contriving daily to make it anfwer other Purpofcs. This Hair cloth may be exported free, whereas Horle-hair unmanufactured is rated at Six Pounds an Hundred. weight, and pays Six Shillings on Exportation. On the other Hand there is a Duty of fomewhat more than Seven Pence a Pound-weight on this Article when imported. The French procure great Quantities from Ireland.

- It is not here only that the Skins of Hories are made into Leather. For by the Two Act: of Queen Anne, which have been fo frequently cited, thefe Hides, if imported tanned, pay Three Pence Half-penny a Pound-weight, and Two Shillings and Five pence for every Hide; if taweds Two Shillings an Hide, and befides a Dury of Four Shillings and Nine Pence in every Twenty Shillings Value. The fame A气ts regulate the Excife on Horfes Hides tanned or tawed at Home, In other Countries and perhaps io this, fome trifing Things, fuch as Spectacle Rings are made ouf of the Hoofs. In France the Enamellers ufe an Oil made from the Fat of IIorfes which aftords a clear Atrong Light with very little Smoke.

## of GREAT BRITAIN.

Thil Ass, like all other Animals, came originally from the Eaft, where it is fill very highly efteemed, more efpecially in Arabia, Perfia, and Egypt, where thefe Animals are larger, better haped, and more active than with us p. It is believed they came from Egypt into Greece, where they were very common, but the Breed of Arcadia was the moft efteemed. The Romans alfo made great Ufe of them, infomuch that an Afs was fometimes fold at a very high Price; and, which muft appear very ftrange to us, they accounted the Flefh of a young Aifs Colt a very great Delicacy q. At prefent Spain is celebrated for having the fineft Breed of thefe Animals in Europe, and from thence they are carried to other Countries, though procured with Difficulty, and purchafed at a very dear Rater. They are faid to bear Cold worfe than any other Beaft; to which is afcribed their becoming finaller in Northern Countries. But this deferves to be frictly examined before it is received as a Thing certain.

The afs was undoubtedly common, and much employed in very early Times in this Country, though it feems to have been difufed, if not loft, in the Days of Elizabeth. At prefent this Creature is, too well known to need a particular Defcription. It is lefs in Size than a Horfe, but fronger in Proprrtion to that Size; flow in its Pace, but very fure footed; patient, hardy, indefatigable ; equally fit for Carriage and for Draught, đ̀s far as his Strength will hlow, living on 'Thiftes, Leaves, and any Sort of coarfe Grafs, requiring little or no Carein Dreffing, and alike free from Difeafes and Vermin s.

Part. liv. iii. chap. 4. L'Agronome, tom. i. p. 3I. Dićtionaaire Univerdel d'Hitoire Naturelle, tom. i. p. $12 \pi-130$.
"Pliny tells us, that Q. Axins, a Senator, gave Four hundred Thoufand Soferees for an Ars. In the Eaft, and in Perfia particularly, a wild Afs Colt was eftemed a Royad Dainty. It was no lefs admied in Italy, till Mecanas preferred the Fleft of the tame Afs Coir. which however matntained a Supcriority at great Tables no longer than he lived. Thofe who lave talad it diy it is, very infipid, and fone of the bef ancient thyficians cenfared it as unwholiome.
r In Spain the Roads are very indifferent, and it is this makes Afes and Nifules fo much cheemed in a Country where they have or might have the fineft Horles in Furope. As they are thus eflecmed, they are better fed and better treated than in other llaces; in confeguence of wisch they are more gentle, active, and docile than with us. A baree flout He Als, though a beary, dul!, ill-forking Creature, will fell for Sixy Guineas on the Spot; and if to be cantied out of the Country will be parted with for nothing lefs than One hundred.

* All thefe good Qualitics are unverfally allowed them, and this buing the Cofe, it ought to prosure them mote Attention and bettor Ufage. This feems all that is requifite to our having as buatiful and as fpinted Affes as in Spain, or cren in the Eaft. In Auvergne, where the Coht is

Vol. Il.

Affes are very long lived, and breed as long as they live, though very feldom having more than One Foal at a Time. It is furprifing, that this Animal already fo ufeful, and which might be made in fo many other Ways ufeful, is notwithftanding fo very little confidered t. This feems fill the more extraordinary, when we refleet that their Milk retains its Credit. The Ancients were well acquainted with its falubrious Qualities, and availed themfelves of them much more than we do, by taking great Care to maintain their Milch Affes with proper Food, and directing their Milk to be taken in large Quantities, rather as a Diet than by Dofes, its Operations becoming thereby more fpeedy and more effectual u. They alieribed medicinal Virtues to feveral Parts of this Creature, which are nuw with Propriety difregarded. The Skin is fumetines is timned, as to cumtericit Shagreen, the true being made from the Skin of the Wild Af w.

Thi Mule is a fpurious Animal produced between the Mheric and the Afs. But though Mules are of different Sexes, they are incaprabe of Procreation. Of thefe Creatures there are Two Sorts, one frem the He Ais and the Mare, the other fiom the Horfe and the she-Als. We call them indifferently Mules, but the Romans ditinguifhed them by proper $A_{\text {ppect- }}$
felt as much as in any Province of Frace, thy have harge and hioh-prical ARs. In all Putson
 and would in at la fousts do as well with prom Mameremen.

 are comanoly wel thdrat the Phege.

of GREAT BRITAIN.

lations $x$. The firf Kind are the beft and moft efteemed, as being larger, ftronger, and having leaft of the Afs in their Temper. The largeft and foutelf Alfes, and the faireft and fineft Mares, are chofen in thofe Countries where the Ce Cratures are moft in Ufe, as in. Spain, Italy, and Flanders. In the latt, cfpecially, they fucceeded in having very fately Mules, from the Size of their Marss, fome of them Sixteen and fome Seventeen Hands high, which were very ferviceable as Sumpter Mules in the Army. But fince the Low Countries are no longer under the Dominion of Spain, the Flemings bred fewer Mules:. Thefe Creatures are very much commended for their being flomger, furer footed, going catier, being more cheaply maintained, and lating mach longer thin Ilortio. They are commonly of a black Brown or quat Black, with that fhining Lift along the Back and erof the shoulders which daftinguilhes ARes:

Ir is certain they were much more common in this Country in former Times than they are at prefent, being often brought over hither in the Days of Popery by the ltalian Prelates. They continued longeft in the Scivice of Mlliers, and are yet in UE among them in fome Places, on account of the: great Loads they are able to carry. As they are capable of being trained for Riding, bearing Burthens, and for Draught, there is no Doubt that they might be uiffully cmployed in many different Scrvices 7 .

[^100]
## 204 The POLITICAL SURVEY

But they are commonly found to be vicious, fubborn, and obftinate to a Proverb; which whether it occafions, or is, produced by, the ill Ufage they meet with, is a Point not eafily fettled. Whatever may be the Cafe of Afies, it is allowed that Mules are larger, fairer, and more ferviceable in mild than in warm Climates. In our American Colonies, both on the Continent and in the Iflands, but efpecially in the latter, they are much ufed and efteemed; fo that they are frequently fent to them from hence, fuffer lefs in the Paffage, and die much feldomer than Horfes, and commonly. yield when they arrive no inconfiderable Profit.

Wr have already fpoken in general of the Excellence of our Dogs ${ }^{7}$, we mean here to be a little, and but a little, more particular, that it may appear the Superiority we enjoy in this Refpect, is not a fanciful but a real mational. Advantage. Dogs are a Kind of Animals connected with Man (if we may fo fpeak) by a reciprocal Communication of Benefits. We feed and kecp them, they in return contribute to our Safety, our Support, and our Amufement. They guard our Houfes, our Gardens, our Flocks, and our Herds in the Fields with Spirit and Vigilance. We avail ourfeles of their Strength and Courage, in the hunting and fubduing wild Beatis; we ferve ourfelves of their Scent and Speed, in purfuing and taking all the different Species of Venifon and Game for our Subliftence; and we likewife employ their Help to defend and to free us from all noxious Vormin b. We diftinguifh, and we improve their natural Qualities of Sagacity, Dociiity, an: Swiftnefs for our own Emolument, and the fe grateful Creatures repay that Attention with the firmeft Fidelity, and the tendereft Affection. If thete their many and known Services thould not be futticient to ettablith a Senfe of their Utility, let us confider the Confequences that would attend the ftriking them out of the Chain of Beings, and what an irreparable Lofs this woald be found to Mankind :.

Bu:

[^101] Animals

But if they have every where fuch various Merits to recommend them, we may truly afiirm, that no Country in the World can boaft either of having more different Sorts, or fincr in every Sort than this, for which Britain hath been famous, ever fince Britain was known to other Countries, and this Fame the 1till retains d. Indeed it may be truly ftiled a natural Prerogative of this Inand, fince we know that almoft every Kind of our Dogs degonerate in a hort Space, when removed from hence; which however is not obferved, in refpect to forcign Animals of the fame Species brought hither, if the Breed be preferved ummixed e. The Female hath Ten Paps, Four of which are on the Braft. She carries her Young Sixty-three Days, and brings from Four to Eight at a Litter. The Male Puppics ufually reCumbling their Sire, and the Females their Dam. Dogs are fubject to many Diteales, but more efpecially to Madnefs, from whence the moft dreadful and dangerous Confequences follow; and this, together with the Humour of keeping too great Numbers of thefe Animals of the moft. ufelefs Kind, hath occafioned very general and juft Complaints, and for which it would be well if an adequate Remedy was provided $f$.

The

Animain forve to draw Sleds, and are alfo employed to carry Burthens. It is from a contemplarive View of their refpetive Services, form the Shepherd's Dog down to the Turnfpit, that we are to colicit a jutt Nanon of the Utility of the canine Species, and not from the Multitude of yelping akide Cus that difir..ee the Streets of Cities and great Towns, through the Folly and Carelefseff of thele who bouglt them thither.
a ill the Nativis: in Eurupe do Juftice to our Dogs, adopt our Terms and Names into their Ianerages, recive them thankilly as Piefents, and when they have an Opportunity purchafe them at a dear Rate: More efpecially our Hounds, and in particular that fately and noble Animal, now monn vory furce cven with us, the Irifh Wolf Dog, or, as it is called from its Shape by the learned kay, the fiifh (irej-llound, and by him declared to be the higheft Dog he crer faw.

## 208 The POLITICAL SURVEY

Ifland, particularly in Northamptonflire, that little Animal called the ERmine, which yields a delicate and valuable white Fur. This Creature is of the Weafel Kind, and when of a brown red Colour is called the Stoat n . The Fox is much more common than any of thefe, and much more noxious; for this Reafon he is not only purfued by Dogs for Sport, but deftroyed every where and by every Method that can be devifed. He hath a very rank fetid Smcll; and yet for this very Reafon fome of them are fpared and kept tame. The Skin is a very good Fur, and when brought from other Countries fells very dear $0_{\text {. }}$. The Martin is the moft elegant, fprightly, and cleanly of all our wild Animals, having a pleafant mufky Smell. It is however very deftructive; and though harmlefs and inoffenfive when taken young, can but very feldom be rendered thoroughly tame. It meets therefore with little or no Favour, and its Fur being of fome Value, makes it more an Object of Difcovery and Chace. The Yellow or Wood Martin is common in North Britain, and fometimes found in Wales; is of 2 fimaller Size; and has a richer Fur ${ }^{\text {P }}$.

The Otter, though in fome Refpects it refembles, is notwithfanding of a different Species from, the Beaver, of which, if our Books give us true Information, there were fome formerly in Walcs. The moft remarkable Difference between thefe Two Creatures is, that the Otter hath Web Fect both before and behind, and yet is not amphibious like the Beaver. The former is fo cruel and fo voracious, as to deftroy many more Fith thin it can devour, which excites an extraordinary Diligence in fearching for and deftroying it, wherever this can be done; notwithftanding which the Species

[^102]
## of GREAT BRITAIN.

is far enough from being exterminated. In Popifh Countries the Fleh of them is permitted to be eaten on Fifh Days; but whatever might be the Cafe in the Days of our Anceftors, certain it is, that Nobody will now tafte them here. Indeed, where they are eaten they are faid to be unfavoury and unwholefome Meat. The Skin, but efpecially the Fur of the Otter, is of fome, and might be of more Ufe, if, as fome affirm, the latter is very near as fit as that of the Beaver for making Hats; which however feems - to be very problematical q. Several other Inftances might poffibly be added to there, if on this Head we had not already faid enough; in the Opinion of fome of our Readers it may be too much. Let it however be obferved, that little Articles claim a Place in every Inventory, as well as great ones. It is indeed very true, that what arifes from all thefe Inftances will amount to very fmall Profit, yet when confidered in another Point of View this will appear a great one. For how comes it to be very fmall? From the Jecay and Deftruction of thefe noxious Animals; which fhews how much better this Country is cultivated than many others, efpecially thofe from which, in the Shape of Furs and Peltry, the Spoils of thefe Creatures are reccived; or even than this Country formerly was, when Authority interpoled, to excite a Spirit of leffening their Numbers r. But fmall as the Profit may be, it operates, in Conjunction with the Pleafures of the Chace, to the profecuting their Deftruction. Befides it fully illuftrates and proves the Truth of what has been before faid of Dogs, for by their Affiftance Bealts of Prey have been brought thus low, and they are ftill in fome Degree necellary to keep them in their prefent depreffed State.

We are next to treat, though but very fuccinctly, of the feathered Race that naturally belong, or have been gradually introduced and rendered Inhabitants of this Country. In regard to tame or domeftick Fowl, which

[^103] in as much Plenty, in as great Variety, and in as full Perfection as any other in Europe. As the Management of thefe makes no fmall Part of the Farmer's Care, fo they likewife turn to a Part, and no inconfiderable Part likewife, of his Profit. It is very vifible, that of late Years, that is, within the Space of Memory, as in every other, fo in this Branch of rural Oeconomy, many and fingular Improvements have been made, not only in the increafing of our Stock, but, which is of more Importance, rendering. every Species of thefe Fowl better in their Kind, and of courfe more valuable. It may however merit fome Confideration, whether by fome fmall Alteration in the Management it may not be fo ordered as to become of more general Utility, which of courfe would occation a more extenfive Confumption, and thereby on the Whole a larger national Advantage in this Article. A Circumftance of fo much the more Confequence, as, if it could. be effected, it would contribute likewife to the Support of many Families, or at leaft to their better Support, by an Increafe of Indusirys.

We do not wait for the Death of thefe Creatures to find our Account in keeping them; for, on the contrary, they yield continually fome Compenfation for the Pains and Expence beftowed upon them. In the firf Place, their Breed deferve Notice, for their Young become very quickly faleable, or contribute as fpeedily, if that is found more eligible, to augment, and thereby increafe the Advantages arifing from, the Stock. In the next Place, by their EgGs, of which there is a neceffary, conftant, and very large Confumption ; which however trifling it may appear in Detail, accumulates to an immenfe Value, and which is therefore an Object by no Means unworthy of our Regard t. In Lincolnhhire, and poffibly in other Counties, they

[^104]
## of GREAT' BRITAIN.

pluck their Geefe once, and fometimes twice in a Seafon for the Sake of their Down, and are alfo conliderable Gainers by their Quills, which from their cheap Manner of feeding prodigious Numbers of thefe Fowls on their very extenfive Commons, produce confiderable Sums, fo that this alfo is an Article of much more Confequence than it is generally citeemed u. The Feathers have likewife their Value, and that, confidered in the Light of a Commodity, by no means defpicable. For thefe, as well as for the Two former Articles, there is fuch a conftant, continual, and increafing Demand, that we are obiiged to fupply it by a large Importation, and that under no very light Duty, which might with duc Attention be prevented, or at leaft greatly reduced ". Befides what are commonly called Feathers, there is a fofter, finer, more delicate, and of courfe more coftly Subftance plucked from the Necks and Brcalts of thefe Fowls, particularly of Geefe and Swans, which is fliled Jown, and of which allo, without any real Neceifity, we import very confuderable Quantities; though cven the Eider Down, which of all others, and defervedly, is moft eftecmed, might be had, as we have before thewn, from moft of the fmall Ines from Barra to the Inand of Lewis, and other Places, without any other Trouble than the collecting it, and this to what Amount we pleafex. Add to all thefe, what is indeed the primary Ubjett in feeding and breeding domentic Fowl, their Utility as Food,

#### Abstract

${ }^{\text {u }}$ There are many Sorts of Quills in Ufe for making Pens, fuch as Swan, Goofe, Turkey, Raven, and Crow (Quills, but the princinal Confumption is of Goofe Quills, and this, as may be very eafily conceiva, i: very large. Hulland was and ftill is the principal Market, not becaufe they have the wolt Quills of their own, but that in this as in many other Things they employ much Pains, and are exce lingly dextrous in the Management of them. It is true, their Method hath been introcuced both fere and in France; but the Terms ufed in both, viz. Dutche! Quills and Hollandeis, Shew fuflicient! who were our Mafters. We import great Quantities from Hudfon's Bay and from the Nuthem larts of Earope, under a Duty of about Four Pence Halfpenny a Thoufand. Swan Quill: are ufed tor Fucets in talting Wines, for Fining-foate, and other Purpofes; and thofe of t: R : wens for the fopping Spinncts, which raifos the ir Price. "It is cheily from wir common Poultry that the Feathers ufed for Bads, Bohfers, and Pillows are ta'sun ; and as thai Vaine arifes trom their being carcfully picked, forted, and dried, which laft is : vey nice Opration, and is beft petomed without Fire, fo many common People in the Comtry, either not liking the Tronble or not underfanding the Manner of deing it, or, which is more treguently the Cafe, not knowing where to vend them, throw them on the Dunghill. But if they kow hat Feathers ingood Oider would ferch fo mach a Pound as here in London, from Ten Pence to lialf a Crown, this would be guikly corredted. As to Feathers imported, the Duty is  the od or now, Seven Shillings and kight Peace. ${ }^{x}$ Mlinv (llith. Nat. lib) x. cip 2.2 coinplaius loully of the Luxury then lately introduced of Down Bels. We hant: fiom him they plucked it from their Geefe, that the beft came from Germany, and was venth Five Denarii or Three Shillings and Three Pence a Pound. That taken from Ducks is lant eftemed. The pulling it is no Hart to the Fowl, for they are careful not to pull it till lipe and ready to fall of itfiff, bectule if forced from the Shin with the Blood at the Roots, it fpectily compts and fpoils. Eren that which is pulled after the Fowl is dead is in Compaifon of the other of litile V:lue. The Fider Duck or Colk, as they call it in North Britain, bath inProportion to its Size more than any other Fowl, and finer, as it is pulled by the Bird for its Neit. Down imported pays a Duty of fonewhat more than Four Pence a Pound.

## 212. The POLITICALSUREY

making at all Times and in all Seafons a Part of our Provisions, for which we never want a Market. There is yet wanting to compleat the Account of our Profits, what from its Utility deierves to be exempted from Silence, their Dung y, which hath the fame Title to Value with other Things, fince when fold it fetches a Price, and that not arifing from Fancy, but flowing from Experience.

As of tame or domeftick, fo likewife of wild and water Fowl, we have almoft infinite Variety, as well as very great Abundance. The Plenty of tame Fowl may be confidered as the Effects of Induftry, but the Numbers of our wild and water Fowl are the abfolute Gifts of Providence. Thefe are, generally fpeaking, the Inhabitants of Places, which in other Refpects are of little Benefit to Mankind, fuch as Heaths, Mountains, Thickets, Moors, Marfhes, and Fens, each having its peculiar feathered Tribe, either as conftant Inmates, or as annual Vifitants in their regular and proper Seafons 2 . In rude, remote, and lefs cultivated Places, the taking of them is the Employment and Support of Numbers, and in many of our Ilands is not only a laborious but a dangerous Occupation. In other Parts, where Nature and Culture have introduced Opulence, thefe Fowls, or at leaft many Kinds of them, are efteemed Delicacies, and are in this Light, as far as may be, prelerved and protected 2 for Sport and Amufement, the Modes of which, like all other Modes, have varied very much in different Ages, and thereby given Occafion to many fingular and ingenious Inventions. In fome of thefe, the Affiftance of Animals of different Kinds have been ufed in feveral Ways

[^105] that do Honour to the Skill and Induftry of Man b. In one of thefe efpecially we fee this converted into a Species of Oeconomy, and fo employed as to turn to no inconfiderable Account $c$.

Yet after all it muft be allowed, that the Profits arifing from thefe are by no Means to be compared with thofe that, as we have already fiewn, are derived from the former Clafs. A few, and but a few of their Eggs are efteémed delicious Meat, but moft of them are only eaten from abfolute $\dot{\text { Neceflity. }}$. The Feathers of the far greateft Part of Water Fowl are, from their unctuous Quality, the Provifion made by Nature for their Eafe and Safety in that Element in which they live, unfit for thofe Ufes to which the Feathers of other Fowl are applied. The very fame Thing may be faid in general of their Quills, of which we make little or no Advantage. Upon the Whole therefore, exclufive of their Utility in the univerfal Oeconomy of Nature, by their feeding on and deftroying Infects, the principal Benefit they produce to Man is from their Fleh, which furnifies in many Inftances

[^106]
## 214 The POLITICALSURVEY

a pleafant and wholefome Food d, and the various Diverfions that the Taking them for this Purpofe continually affords e.

Bees have been through a Series of Ages carcfully cherifhed and much efteemed by the Inhabitants of thefe Inands, whenever their Circumftances allowed them to cultivate the Arts of Peace. In this thcy followed the Example of the wifeft and politeft Nations of Antiquity, who though they had very dark and erroneous Notions in Reference to their natural Hiftory, were very fkilful and affiduous in the Managenent of them ${ }^{\text {f }}$. They beftowed on them alfo very liberal Commendations, in which they have been. followed by our beft Writers on rural Oeconony. From Facts, as well as from their Authority, it may be afferted; that thefe induftrious Infects, though they coft little, and are very eafily provided for, are notwithftanding very profitable; and, which ought to make them fill more our Care, are not a local Improvement, but may be univerfally introduced where-ever Induftry and Attention are to be found s. It was a very old, though a very harfh and injurious

[^107] injurious Cuftom to deftroy thefe laborious Animals, at the fame Time that we defpoiled them of the Treafures they had acquired. A Thing no way requifite, and which in fome Countries where they profpered beft was never practifed ${ }^{\text {b }}$. In Procefs of Time, and after repeated Efforts, a Method hath been found out and perfected of obtaining the beft Part of the Fruit of their Labours without deftroying thefe ufeful Creatures; for the Encouragement of which a Premium hath been given, which hath been -allo attended with fome Effect, fo that in Time we may hope to fee this barbarous Ufage utterly abolihed. The Quantities of Honey, and the much greater Quantitics of Wax, imported hither from different Parts of the World, clearly flew that there is abundant Room for extending this eafy, cheap, and at the fame Time lucrative Species of Improvement $i$. It is more than probable, that to the opulent Farmer this may be no friking Object, but to many others it may be ufeful, and to the poor Cottager efpe-

Mr. Wohidge hath taken much Pains on this Head, and deferves the more Praife, as he hath given us a very fair Detection of feveral fanciful, and at the fame Time fallacious Improvements propofed by other Authors, deferving the more Credit, as be ingenuoully relates feveral fruitlefs Attempts and unfuccefsful Expciments of his own. At the fame Time he acknowledges, that managed in the common Manner, they prove, with duc Care, exceedingly advantageous. Inftead of meationing our other Writers on this curious and interefting Subject, who are very numerous, it may be fufficient to refer the inquifitive Reader to a very fucciact, perfpicuous, and methodical Treatife, very lately publimed, intituled, "An Effay on the Management of Bees, by John Mills, F. R. S."
h We have already mentioned how well the Ancients underfood the Conduct of Bees. Whoever perufes the Niath Book of Columella, will be convinced of it. It is commonly believed that Virgil drew his Lights from Arinotle. But befides Virgil, Columella made ufe of Hyginus and Cclius, who had wiote large Works on this Subject in Profe. In general, the Ancients ufed Sinoke as well as we in driving out the Bees; but they were fenfible of the Inconvenieicies attending this Method, and therefore vaiued highly unfmoaked Honey. This they had from Mount Hymertus, 'Three Miles from Athens, fuppofed to be the lirth Place of Bees, and where there is fill the fincef Honcy in the World. The Combs are taken there, at what Tine and in what Quantities they pleate, withont Prejudice to the Inhabitants of the Hive. Of this we are informed by our Countryman Sir George Whecler, who in his Travels, p. 412, hath given a Plate, by which the Mo thod, the molt ealy and fimple, is fo clearly explained as to be conceived at Sight. Of this our Nerghbours the French have prudently availed themfelves, fee Mills's Effay, p. 77-86. But they have not followed him exactly, which is very practicable, and might be introduced here without Trouble or Expence.

- The Profit derived from Bees arifes from Honey and Wax. It is piobable the former might be more valuable before the Introduction of. Sugar. However the Confuaption in Food, in Metheglin, and in Medicine, is ftill fo great, as to exceed our Produce. Honey from Candia, Narbonne, and Minorca is in high Eftecn. The Duty on this Commodity is Seven Shillinge and Eight Pence a Rarrel, containing Forty-two Gallons. A. D. 1767, we imported Thirty-two Barrels. Way is an Article of more Importance; for. befites the Quantities ufed by the WaxChandiers and Apothecaries, which is very confiderable, it is emploged inm Variety of Trades and Manufaftures. Tate Duty upon it is Nine Shillings per Hundred; and in the fame Ycar we imported One thoufand Four hundred and Thirty feven Hundred-weight. If therefore, in confequence of attending to Bees, we could not only fupply ourfelves, but, as the other Northern Nations do, and is certainly in our Power, could come to export this Cummodit $j$, we aced be in nu Fear of a Market, as Frauce imports at leaft Seven Times as much as we do.

## 216 The POLITICAL SURVEY

cially, it may prove a very practicable and no inconfiderable Relief k. But there may be filll more in this Matter to be done. In very many, and particularly in our fmaller remote Illands, Bees were never feen; and yet perhaps there are very few of them in which they would not thrive with very little Attention better than in any other Situation 1. For thefe little Creatures naturally delight in a Salt Air and in Salt Water, and for this very Reafon are obferved to fucceed beft in the Neighbourhood of the Sca. It is poffible, that to many this will appear a Thing of little Confequence; but to fuch as hall confider that nothing hath been faid that arifes from Fancy or Speculation, but, on the contrary, refts entirely upon Facts, it munt furely wear another Face; and one may venture to promife, that where-ever it is attended to, it will fpeak by its Effects for itfelf, and thereby juftify the publick Spirit of thofe who thall make the firf Attempt.

In regard to Fish, no Countries can be more, and indeed there are very few that are fo commodioully fituated as the Illands of Great Britain and Ireland ; and if any could enter into Competition with them on this Head, it muft be fome of the larger Islands that are dependant upon them. This will inconteftably appear, if we reflect upon what has been before faid, as to the Sinuofities of our refpective Shores, the Number of our Lakes and Pools, the much greater Number of our Rivers and Rivulets, the Plenty of the finny Tribes they contain, the Conveniency of our Bays, and the Seas furrounding us abounding with all the different Sorts that either Epicurifm or Avarice could demand. But it is and hath been long a Complaint, that thefe natural and obvious Benefits are and have been for a Series of Years Chamefully neglected; that the Fifhing Towns on our Coafts are very many of them decayed; that we are at no Pains to reftore them; and that Foreigners extract annually immenfe Treafures from our Seas with Impunity.

[^108]
## of GREAT BRITAIN.

Complaints which it muft be owned are not totally without Foundation. But it may be, if we look clofely into the principal Caufe of this, we fhall find that it arifes from our eating much lefs Filh than formerly; and without a large, indeed a very large and very conftant domeftic Confumption, great Numbers of fifhing Towns cannot be fupported, at leaft in a flourifhing Condition ${ }^{m}$. In another Point of View poffibly the Confequences of this may feem lefs alarming. For the finaller Quantity of Fih that is eaten the more Flefh muft come to Market, and to fupply this more Stock muft be reared, of courfe more Land muft be cultivated, and more People employed, and employed to better Account. This is not an artificial Apology for our Indolence or Negligence, but an actual Detail of Facts. Our Difregard to Fifh, the Progrefs of Agriculture, and the Increafe of Induftry and Manufactures, were all of them the happy Effects of the Reformation; fince which we have been in all thefe Refpects a growing and profperous Nation.

Yet it ought to be confidered and confeffed, that on the other Hand, though we eat lefs we ftill eat Fiih, of which there is every where a confiderable Home Confumption, and many Towns fubfift thereby at this Day; neither are our Fifheries fo few or of fo fimall Confequence as we fometimes find them reprefented. We have a Pilchard Fihery on the Coafts of Cornwall, Devonfhire, and Dorfethhire, and of thefe Fifh we fend yearly great Quantities to Spain, Italy, and the Levant. The taking Mackrel annually on our own Coafts employs a great Number of Hands, and at the fame Time fupplies many Mouths, though little is fent Abroad n. The Oyfter
$m$ This Change in our Food had very important Confequences. In the Popifh Times (including Lent) the People lived One third of the Year upon Fifh, or, which is the fame Thing, Fifland not Flefh made One third of their Provifion. On this Account they eat Porpoifes, Seals, and other Kinds of Food, which no Body will now touch, and this at the bett Tables. In confegidnce of this, all Kinds of Meat were cheap. Lent had itill a farther Effect, for few Cattle being then killed, the rifing Stock was preferved. It was the Confideration of this that produced long after the Reformation Proclamations for keeping Lent, but Habit prevaiked over Policy, and Filh was no longer eaten but from Necellity or Choice. It happened valy fortunately for the Dutch; they increaled, as we relixed in Attention to Herring, concerning which we had made many Laws : They acted very wifely, for they not only conformed tbeir Manner of Living to this Fifhery, but even moulded it into their Religion and Conltitution, making publick Prayers for its Profperity, and affording it continually all poffible Encouragement and Protection. That truc Patriot and confunmate Statefman John de Witt, fays, the Manufacturers live chiefly on Herring:, Mianufactures employ the Merchants, Merchants promote Commerce, and the Commerce and Fifherics arc Suurces of Navigation and naval Puwer, the principal Supports of a maritime State. He fays this to fhew how the feveral Interefts of the Subjects of that Republick are interwoven, and Kow by this Means the Succefs of the feveral Parts contribute to the Welfare and Security of the Whole.
a The Mackrel come fometimes on our Coaffs in fuch prodigious Quantities, that it is faid in the Weft they have dunged their Grounds with them. It is to be, and indeed hath been long regretted, that a Method hath not hitherto been found for preferving and exporting them. The French have Two Ways of doing this, they cram the Belly of the Fifh with Salt, aud then lay them in the Barrel,

Oyfter Fihery is in that Refpect much more confiderable, is carried on in different Parts of the Britih Territories, and due Attention hath been paid thereto o. We have alfo a Fighery of flat Finh, particularly on the Coaft of Suffolk, and Endeavours have been ufed to fecure to us the Turbot Fifhery, which probably will in Time be attended with Effect, as this is a Thing vifibly in our Power. Lobfters are caught all along our Coafts, fo that every Part of our Illands may be fupplied with them in Plenty, and that without going fo far to feek them as the Coafts of Norway.

Besides our important Fihery atNewfoundland and on the adjacent Banks, we catch much Cod and Ling in our own Seas by Veffels from all the Three Kingdoms, and might catch many more, the promoting of which would effentially benefit the Public. The Salmon Fifhery is an Object of great Confequence, particularly to Great Britain and Ireland, from whence there is a conftant and no inconfiderable Exportation. The Herring likewife pay no fmall annual Tribute to all the Members of the Britifh Empire. It is a fortunate Circumftance in refpect to thefe our feveral Fifheries, that moft of them in Point of Time follow each other regularly and in Succeffion, fo that many pafs from one to another, and find thereby conftant Employment, which breeds a great Number of active and robuft Hands for the
ftrowing Salt over them, then another Layer of Fifh with Salt upon thgm, and fo on till the Barrel is full, or they pickle them in a frong Brine, in which they remain Twelve Days, then take them out, pack them as before, except the Salt between, prefs them down very tight, with a Layer of Salt on the 'Top. A Barrel contains about Three hundred Fih, or if the Fih be very large it may be fewer. The Sale however is not very confiderable, and monly in the inland Provinces of the Kingdorm. It might be expedient to inquire into the Method of curing Tunny, to which in its Flefh the Mackrel hath great Refemblance, for certainly if we could fucceed in preferving them, it would render this Fifhery of much more Importance.

- It is allowed, that though moft maritime Countries have Oyfters, yet nono have been in all Ages more famous for them than Britain. Their Plenty is no lefs remarkable than their Excellence, for we have them on both Sides, indeed in all Parts of the IMand. Colchefler is diftinguifhed for the green finned (Hiftory of the Royal Society, P. 307) Oyfters ; they imitate thefe at Dieppe and in the Marfhes of Xaintonge, but the French themfelves admit that ours are better. At Feverfham, in Kent, the Dutch fend annually many Veffels to load with Oyfters. Protfmouth, Pool, the Ine of Wight, and many other Places, are celebrated for them. This Fifhery is under the Direction of Courts of Admiralty intrufted with great Powers for regulating whatever concerns it. In May the Oyfters calk their Spawn, or Spat as it is called, which ficks to Stones, Pieces of rotten Timber, \&c. called Cultch ; the Perfons who in that Month drag thefe out of the Sea are called Dredgers; the Cultch is thrown back, the Spat depofited in proper Beds, where, though the young Fry acquire Shells in Twenty-four Hours, they do not become faleable in lefs than Two or Three Years. After Spatting, the Oyfters are fick in June and July, but rccover in Auguft : When of a good Sort well pickied, they are very delicate; but it would be more advantageous if we could retrieve the Art of the Roman Epicure Apicius, who is faid to have fent the Emperor Tra jan Oyfters from Italy into Perfia, which when eaten there were as freh as the Day that they were taken. It may not perhaps be amifs to remark, before we difmifs this Subject, that their Shells calcined to Whitenefs in the Sun, and powdered, is found by Expericace a better Medicine than Pearls, Corals, or other contly Drugs

## of GREAT BRITAIN.

Service of our Navy. The Encouragement and Protection afforded to our Whale Fißhing hath been likewife attended with Succefs. Upon the Whole therefore, comparing the prefent with paft Times, it will appear that we have gradually wrought ourfelves, in refpect to this important Concern, into 2 better Situation; and though we make but fmall Account of them when we look upon them fingly, yet we cannot but acknowledge, that when taken together, thefe Fihheries are of no light Value, and would feem to us .very confiderable, if in the Hands of any other Nationp.

This Subject however deferves, and to fpeak the Truth demands, fome further Difcuffion. For whatever the Profits of our Fifheries may or might be, the Nation hath always entertained an Idea, that they could be rendered much more extenfive, and of courfe much more advantageous. An Idea not either lately or lightly taken up, but warmly and uniformly maintained, efpecially fince the Union of the Two Crowns, by the ableft and moft public-fpirited Writers $q$. This they demonftrated from Facts fo plainly, and thewed the public Intereft therein oo inconteftibly, that in different Periods different Attempts were made to vindicate the Right of the Nation to the Fihheries in her own Scas, and to put her in Poffeffion of all the Profits that could be drawn from them. It is indeed too true, that not one of thefe Attempts was attended with Succefs, but as all of them failed for Want of Perfeverance, they were fo far from injuring this Notion, that

[^109]
## 220 The POLITICAL SURVEY

in the Sentiments of the beft Judges they confirmed it r. Reafon and Experience feem now to prove, that the moft fecure and the leaft expenfive Method of effecting this defirable End, would be by putting the Fifheries into the Hands of the Inhabitants of our Weftern and Northern Inands. For by this, we fhall gain at once, all and even more than all the natural Advantages that the Dutch poffefs, and in virtue of which they at firft acquired and fo long preferved the Fifhery.

The celebrated John de Witt makes it a great Prerogative of Holland, that it is fo fituated, as that its Inhabitants may draw a great Part of their Subfiftence ouy of the Sea. But our Iflands are feated in the Sea. He mentions as a Circumftance of great Weight the Numbers who live on Fifh. Our Iflanders eat little elfc. The Dutch Frugality is taught our People by their Neceffity. He fays that they make all the Implements and Utenfils proper for this Bulinefs, fuch as Lines, Nets, Cordage, Sail Cloth, and Cafks. So may our Inanders, for they have it full as much in their Power. He adds, that they build their own Veffels likewife. It muft be allowed that our-Iflanders want Timber for this Purpole, but fo do the Dutch, and the former can have it as eafily and as cheap as the latter. Befides all this, the Dutch make their own Salt, and fo may our People with equal Facility. With all their natural Advantageo, and with all their Encouragements and wife Regulations, the Dutch mult come to thefe very Inands for their Filh, which may be caught by our People at their own Doors. They take our Herring once a Year, fo do we; and all the Year long we can take white Fiih, flat Fith, Sharks, Seals, Porpoifes, and Whales of different Sizes in our own Seas s. If the Quetion fhould be put, Where are we to find Mar-
an intelligible Method of Meafuring their Confequence, and thercby provoke us to attain at leaft a Part of thole 'Tieafures which Induftry may extract fiom them.
$r$ The filf of thefe Attempts was by James 1. Befonc his Acceffion to the Throne of Fingland, and as we have fac wn, was overfet by the Fciocity of the Natives, or ather of their Cheiftans. The next was by Charies I. upon found Principles; and in condequence of proper Inguirjes, Storehoufts for Sait, and all other Requifites for Fifhing, were to be erected in feveral llaces, and we Natives employed by a Company of Englifh Merchars. The Civil War put an End to this ; but the Ruins itill iemaining, flew their Stations were judicisully chofen, and the Magazines very fubAtantial and fatcly Works. The third was in the Reign of Chales II. by the Company of the Royal Fifhery of Fughand they were very fucceistul in raking and curing their Fifh, to as to fell at a fupcrior Price in forcign Markets: liut as Hobghton tells us, Collections vol. iii. 321. the French in Time of War, miftabing their Doggers with many Seamen of that Nation on board Eor Dutch, deftroyed their Elect. Martin. Hiftery of the Weftern Illes, p. 341 . fays, the King withdiew his Nome, which difonliging the Meicinante, brought on the Downfal of that Company, and the Defign for which it was incorporated.
s In what Manner and by what his: this may be effected, the Fifhery for ever fecured as well as retrieved, many Thoufands, who ne now farie connected, rendered ufeful and beneficial Subjects so Bitain, hath been, at caft to the bef of my Puwer, in its proper Place very fully explained. It might indeed have been referred to without going at all into the Sabject here, but then the Ac-

## of GREAT BRITAIN.

kets for all this Fin? The Anfwer will not be difficult or hard to comprehend ; the Herring we may fell where the Foreigners now fell theirs, which they ftill annually catch in thefe Seas, and alfo in our Colonies. The white Fifh in the Mediterranean, and the Oil here at Home. This therefore will be an additional Commerce no way interfering with the Fifheries that we now have, the Profits of which will arife from other Nations, and be expended for Neceffaries and Conveniencies, as they ought to be, in our own.

The bringing ufeful Animals into an Ifland, and taking all poffible Care of them when brought, is a Precaution that, as we have already obferved, mult neceffarily occur to thofe who fettled it for their own Subfiftence and Convenience. The great Attention of the primitive Inhabitants of our Inlands, as it ftands recorded in the earlieft Accounts we have of them, deferves our Gratitude as well as our ferious Confideration $t$. It is highly probable that large Improvements were made, and various Novelties introduced by the Romans in this as well as other Refpects. The Prudence of their Succeffors is alfo to be ca mended in rooting out fuch noxious Creatures (however they came here) as were prejudicial to domeftic Oeconomy. A Tafk
not
count of our Fifh might have feemed lame and imperfect. As it is, I have avoided all Repetition as much as it is ponfible; and I the rather hope the Reader's Indulgence, becanfe, though this Mater hath been for more than a Century paft confidered as of very high Importance, it is become much more fo now, as the glcat Acceifion of 'rerritory we have acquirct in Amcrica, makes it indifpenfibly neceffary to ufe every Merthod poflible towards augmenting the fucce, iucrcafing the Commeree, and promoting the naval Power of this Ithand, which is the Centre of our Eimpire.
t It is no caly Matter to penetrate fo far through the Gloom of Antiquiiy, ats to difeern any Thing ditan'tly on this Head. Catar shen he rame hither (De Bel. (ial. v. 1o.) found Mlack Catnic, Shep, aral Hofes in Abundance, as alfo Hares, domeftic Fowls, and Geefe, which they caclully nourith d, though they abltaned from cating them. As the Phoenicians und Carthaginians had a regular Intercourt here long before his Time, night we not have fome of thefe trom them? In particular, might they not bring us Sheep from Spain, where the Carthaginians were fettled? As to their breving Crentures they did not cat, might it not be a political Maxim not to flaughter any Animals till the Country was fully focked with them? Howel Dda, Prince of all Wales, near a Thoufand Years after Ceffar, publifhed a Law for the Protestion and Prefervation of that ufeful. Animal the Cat (Leges Wallicar, p. 247.) which from the 'Tunor of it plainly fhews this Creature was then but litely introduced into his Dominions.
"We had unqueftionably feveral Sorts of wild Beafts in this Inand", which as well as Wolves: were exterminated by our Anceftors. There were Bears in. Caledonia and in Wales. Bifons in. the Woods of Scotland, white, with flowing Manes, in other Répects refembling Bulls, exceedingly furious. If any of this Kind fill remain in any Pamt of Europe, it is in Lithuania. The wild Boar was in Wales before, and in England after, the Conqueft, as the I.aws in both Countries fhew, and was accounted Game. Boethius fpeaks of Blue Sheep in the Inand of Rena, but they and the very Memoy of them have been long ago loft, if in Truth they were ever there. He alf, tells us of a ftill franger Kind of Sheep in Hirta, which is the Illand now called St. Kilda. Thefe be fays were taller than Guats, and had Horns as big as thofe of Oxen. We mult remember, that our Author lived in a Conatry where the Horns of their Black Cattle are but fimall. Such a Kind of Sheep is ltill tound in Tartary and in Siberia. But which is more to the Purpofe, the Sheep

## 22 The POLITICAL SURVEY

not eafily done in, and not to be effectually accomplihed but in an Inlandu The continuing to enrich this Country, by bringing over what might con tribute thereto from others, and even from the molt diftant Regions, hath been wifely and fuccefsfully practifed in later Times, though but fuperficially ${ }_{z}$ and often not very correctly mentioned in our Hiftories, where however many Things are to be found that do us far lefs Credit. Whether in regare to Animals, any Thing may yet be left in our Power, is a Point that Exc perience only can determine.

In fome of ourlarge Iflands where there is much marhy Land, a Trial might poffibly be made of Buffaloes, which are known to thrive much better than Black Cattle in fuch Places. It is more probable that a Breed of Cattle from Jutland might be advantageoully, as well as eafily introduced into North Britain. An Experiment might with Facility be attempted of bringing the Dutch Sheep, fo famous for their Fertility, into fome of our Ifles; and though with more Difficulty, the like might be alfo found practicable in reference to the Angora and Chamois Goatsw. Moft of thefe Inftances have been already mentioned, and are therefore barely recapitulated here, as the Subject feems to require it. In refpect to Fowls, fince the Secret hath been found of keeping their Eggs, and confequently of bringing them from any Diftance, nothing can be eafier wherever it fhall be thought expedient. As to Lake Fih, we have Chewn that there is no Difficulty in having any Sort that can be defired for Profit or Pleafure. We have alfo hinted the Poffibility of having Salt as well as frefh Water Ponds, which might prove of
now in St. Kilda have very large Horns, and many of them Four Horns, which thews we had thefe Animals anciently of different Kinds from different Countries. Let me add fill further, the St. Kilda Sheep are very prolifick. A hte very accurate Obferver informs us, that in Thirteen Months One Sheep added to the Flock Nine, yeaning berfelf twice Three, and her firf Three, bringing each of them a Lamb in that Space. But thefe Sheep are fmall, and their Wool coarfe. The Dutch Texel Sheep (originally as is faid from the Eaft Indies) are very large, and their Wool fo fine as to be fold for Englifh, bringing alfo commonly Two Lambs at once. Might not thefe be tried in One of the fmall IMands dependant on St. Kilda, with a reafonable Expectation they would preferve both their Fertility and their Fleece?
w Where-ever any Thing of this Kind hath been propofed, the Realons have been given which induced fuch Propofals, and the Advantages that might be expected from them. But it may be proper to mention here the Motives for recommending thefe Experiments to be made in fome or other of our numerous Illands; and they were principally thefe: Firft, that in their prefent Condition they feem to ftand mon in need of fuch Improvements, if they fhould prove faccefsful. Next, that of all Places they are fuch as would bring the Expcriment to the Teft becaufe, in any of them any Kind of A nimals might be kept feparate till their Value and Increafe were certainly known. Lafly, in cafe upon Trial any Inconvenience appeared, it might be both eafily and effectually removed without Poflibility of its fpreading or reviving. To this I may add, that if one fortunate Attempt was made, it would bid fair for improving all the Reft, by kinding the Fire of public Spirit from this Spark of private Succels.

## of GREAT BRITAIN.

 fingular Utility. But the public Attention being now thoroughly antakened to this Point, there is no Reafon to doubt that Pofterity will fee many, and thefe too more important Improvements, than our flender Abilities will enable us to fuggert.We have now concluded a chort and very imperfect Inventory of the Foffil, Yegetable, and Animal Riches of thefe Illands, with fome Obfervations intended to illuftrate their Nature and Importance. A Tafk fo difficult and yet fo neceffary, that an Attempt to execute it, if it does not amount to a Degree of Merit, affords at leaft a Clain to Indulgence.

Such as it is, it moft certainly proves, that our Commodities and Manufactures are very numerous, fubitantial, and of great Value, equally neceffary to other Countries, and permanent as well as apparent Sources of Induftry in our own. So that we may with great Juftice affume, even in: our prefent State, a Claim to national Independency, as having all Things requifite, not only to Eafe and Convenience, but alfo to Strength, to Wcalth, and to Power, either immediately within our Reach, or which furnifh us amply with the Means of obtaining them. A very great Part of this, though always through the Bounty of Providence, in our own Hands, hath been, as is likewife fully fhewn, by a gradual Exercife of Skill and Labour, brought into our actual Poffeffion, and very much ftill left to be as certainly acquired by the fame Methods. For after all our numberlefs Difcoveries and Improvements, we have no juft Grounds to affirm, that any One of our many national Advantages hath been abfolutely exhaufted or carried to the utmoft Point of Perfection of which it is capable. On the contrary, it very vilibly appears, that our Pofterity, by their Induftry and Application, affifted by the Lights received from $u s$, and which from the future Progrefs of Science they may ftrike out for themfelves, may be very well able to leave us as far behind as we have done our Anceftors x. It is admitted, that if we look back on paft Times, the Progrefs made feems to be prodigious, but if we carry cur View forward, the Profpect becomes bound-

[^110]We have drawn the far greater Part of our Inftances from South Britain, not only becaufe therein they are moft confpicuous, but as there and there alone they have been properly recorded. But North Britain and Ireland are likewife improved, very confiderably improved $y$ to what they formerly were, and are poffibly at this Day not in a worfe State than England was in 2 Century paft, and both Countries may very probably be raifed to a Situation not inferior to that in which the now ftands, and even when that Thall happen, find themfelves as far behind her as they are at prefent. The numerous natural Advantages which from the Bounty of Nature fhe poffeffes, as well as her being the Seat of Government, will ever preferve the Superiority to South Britain, not barely without Prejudice, but with eminent Benefit to them. In fome Refpects there may be a fignal Facility of improving vifible in one or other of them, and then it ought to be cherifhed and fupported for the common Good. This was clearly the Cafe in reference to England's encouraging the Linnen Manufacture in Ireland, that Induftry might flourim there. North Britain very prudently defifted from the Woollen Manufacture, in which he had made fome Progrefs on the Union of the Two Kingdoms, from a Conviction that it might be better, cheaper, and more for the general Advantage carried on here. The Parliament of Great Britain have affifted the Linnen Manufactory and the Fifheries in that Country, and will no doubt continue to aid, to regulate, and to protect them z .
y In reference to North Britain, as the hath obtained many Advantages by the Uuion, fo the hath undoubtedly availed herfelf of them in a very great Degree, though poflibly not to the Extent fhe might have done. The Face of the Country, the Condition of the People, thew this. Their Lands are better cultivated, many Improvements have been introduced, Induftry and Mannfactures are increafed ; in confequence of all which, Things are grown dearer, Rents are raifed, and Lands fell now at twice the Price they then did. Thefe are no equivocal Marks of a Country's Thriving. All this, but in a higher Degree, may be affirmed of, Ireland, of which the Reader may be convinced by reading the Treatifes witten by Sir William Petty, Mr. Lawrence, and Mr. Dobbs, Men of great Abilitics, and perfectly acquainted with the Subject. Indeed no Country hath been more happy than this in breeding truc Patriots, Men who fudied the real Interefts, and pointed out the molt effectual Means of cultivating and improving their Lands, their Manafactures, and their Commerce, in which their laudable Views have been effectually fcconded by the legiflature and the Dublin Suciety.
$z$ The Superiority of South Britain arifes from the wide Extent and great fertility of the Country, the Number of its navigable Rivers, the Exccllency of its Situation, the Value and Variety of its native Commodities, and the Number, Skill, and Induftry of the Inhabitants. Thefe Sonrces of her Opulence enable her to fuftain the numerous Impofitions of different Kinds which compore the publick Revenue, this fupports the Civil, Military, and naval Effablithmentz mequifite to maintain the Dignity and Power of Government, the Influcuce of which invigomes our whole Dominicns Every Province therefore of the Britih Empire, however diftant or remote, hath Reafon to rejoice in her Profperity, as their own arifes from and depends apon her Protection.

## of GREAT BRITAIN.

Agriculture in its utmof Extent is the common Intereft of both Inands, and muft contribute to their common Felicity, by fecuring Plenty, and augmenting the Number of their Inhabitants. Manufactures and Commerce reft fafely, and can only reft fafely upon this Bafis, and muft be always extenfive and advantageous when Provifions of all Kinds and in ald Places are cheap. The Efforts of Induftry muft be regulated for the common Profit by the public Policy. The natural Difpofition of our Commodities being the furef Rule; the rewarding Knowledge and Labour, the ftigmatizing Ignorance and Idleneis, the moft effectual Means; and to directing thele as to make the Welfare of the Empire the continual Object of our combined Endeavours.

By this Method the noble Spirit of Improvement proceeding from its proper Center, and diffufing itfelf on every Side, Induftry finding through all the wide Extent of the Britih Territories perpetual Materials for its Operations, muft by Degrees act upon the Whole, and being directed by this excellent Principle, all the Efforts of Individuals, will by the wife Conduct of Government, terminate in the general Happinefs of its Subjects. For Mr. Houghton's Maxim will for ever hold true, that a triple League amongt our Three Kingdoms, is the only One of which we ftand in need, the Sccurity, Stability, and Profperity of this great State, requiring, under the Protection of Divine Providence, no other Support than a firm Junction of its Parts; and when thoroughly underftood, it will be found that their feparate Interefts afford the ftrongef Motives to this Union.

## C $\quad \mathrm{H} \quad \mathrm{A} \quad \mathrm{P} . \quad \mathrm{V}$.

The artificial Advantages in refpect to different Kinds of Improvements, that are at prefent in our Power, enumerated, and their Confequences explained.

ARTIFICIAL Expedients, for facilitating the Progrefs of national Improvements, of infinite Utility. The Invention of thefe, though difficult, yet is generally found to be mucb lefs fo than the bringing them into common Ufe. 'The ligal Diffolution of the old Tenures, the great Bafis of modern Improvements. Eftabli/bing private Property in full Security, anotber Point of the greateft Confequence. The rcgulating the Intereft of Money, feewn to be of the utmof Importance, in re/pect to the public Welfare. Tbis fully evinced from the Confideration of the Confequences that bave jollowed it. The Hiftory of the Dificultics that occurred in the Introduction of foreign Exchange, fet in its true Ligbt. The Deliverance of the State from foreign Loans, and the Vol. 11.

## 226 The POLITICALSURVEY

Birth of public Credit, due to Sir Richard and Sir Tbomas Grefbam. A Detail of the numerous Train of public Advantages, that bave been gradually derived from thence. The Wijdom of the Legighature in rendering this the Source of anuzing Abundance. Tbe Bank of England, of infinite Utility in many Redpits to the Public. The great Conveniency arifing from the giving a lega' Support to private Crcdit. Circulation promotes Induftry, the Fruits of which are real and permancnt Riches. Tbis, notwitbfanding its apparent good Conjequences, bath been thougbt liable to many Objections. Tbe firft Objection, that it facilitates the Exportation of our Coin, confidered. The Second, that it contributis to render Tbings dearer, examined and refutcd. The T'bird, that it is the Caufe of a Variety of Frauds and Forgeries, Shewn to be mucb exaggerated, and of little Confequence in comparifon of the Benefits derived from it. The Nature of Bounties, and the Advantages arijing from tbem to Agriculture, Manufactures, and Commerce. Tbis Point farther illuftrated, and the Expediency of them fully vindicated. Drawebacks fiewn to be of much Utility, and of abfolute Necefity in many Cafes. The Effects of thofe well-contrived Expedients, not only proves their Utility, but lead themfelves to fartber Advantages. Great Improvements bave been made in all the different Sorts of Communication, fuch as Cauficuays, Roads, Bridges, Ecc. The Conveniency of public Pofts, bath been prodigioufly extenditd in our Times. Numbers of Rivers bave been made Navigable to the grat Addantage of Trade; as well as of the landed Intereft. Still bigher Bencfits are expecied from the inland Navigations that are nove executing. Numisous Metbods and Macbines bave been invented for facilitating the $/ \bar{e}$, and awich of courfe will prove ufiful in other public Undertakings. The Quantities of wafte Land bave been very mucb leffened witbin this laft Century. The Fins, Morafles, and Molfes, in different Parts of thele Iflands, bave. ben much improved within the fame Period. Immenfe Tracts of Common have beenin the fame Space inclofed and brougbt into Cultivation. The conflant Readinefs of the Legillature to amend or repeal old Liaws, and to enact new Ones for the Furtbering and Support of every Species of Improvement, is a great national Advantage. Practical Remarks on the Conclufion of this. Chapter and Book.

TH E real Value and natural Excellence of any Country, depends, as we have frequently obferved, on the Favour of Providence, on the Gifts beftowed thereby, and which can be no otherwife acquired. But the Improvement of thefe, muft flow from the Sagacity and from the Labour of its Inhabitants. The former is employed in procuring the Means, and the latter in applying them with Efficct. Thefe when united can accomplifh almof every Thing, but their Force is much weakened if divided. The Truth is, that theie artificial Means or Inftruments of Improvement, are of infinite
infinite Confequence; they muft be difcovered by Wifdom, profecuted with Caution, perfected by Perfeverance, and maintained and fupported in that State, by an affiduous and unremitted Attention?. It was owing to the Want of thefe, that the ample Materials which our noble Iflands furnifh, and would have always furninied, were in a great Meafure fuffered to remain, fome of them wholly unemployed, others imperfectly, and all of them in a Degree much inferior to that Capacity of contributing to our Happincfs which they derived from Nature ${ }^{\text {b }}$. This Want of artificial Means, this Indigence in refpect to the neceffary. Inftruments for Melioration, was very early diferned, and the Ufe of them warmly recommended by thofe publick fpirited Authors, who fhewed at once their own Penetration and laudable Zeal for national Profperity, by pointing out fuch of them as they thought requifite, reprefenting their Nature and Tendency, and difplaying the Effects that had been produced by them in other Places, as an Encouragement to the introducing them here c.

Bur, though there is undoubtedly great Merit in difcerning and demonAtrating to the Publick the Rectitude and Efficacy of fuch Meafures, yet this is much more eafy than the bringing them, when thus difcovered, into

[^111]
## 230 The, POLITICAL SURVEY

rendered certain, and every Species of Poffeffion was clearly and intelligibly defined, it gave Spirit and Courage to improve, which could not reafonably be expected, and which indeed had never appeared before. In confequence of this, Lands very quickly increafed in their Value, not from any partial Conceit, but becaufe being now capable of various Methods of Cultivation, they were really become of more Worth. It was in effect an Acquifition of Territory, or even fomething better, as no new Supply of People was required, and of courfe thofe who poffeffed them, lived more at their Eafe and became rich ${ }^{1}$. Befides, Improvements multiplied as well as increafed, for it was rationally concluded, though every Kind of Land would not produce all Things, yet moft Lands, when the Nature of them was thoroughly underftood, might through the Effects of Skill and Labour be made to produce fomething for Ufe and Profit, which with the Certainty of a quiet Poffieffion, made an Object fufficient to excite Endeavours, the Succefs of which propagated a Spirit of Induftry. This Abolition therefore of Feudal Tenures, and all their Confequences, may be regarded as the corner Stone of our Improvements $m$, as to which, if any Doubts could arife, the Hiftory already given of the Progrefs of thofe Improvements of every Kind muft be fully fufficient to remove them, and place this Point in its proper Light.

The Cultivation of our Lands producing Materials, thefe in Procefs of Time brought in a Variety of Manufactures, for the Support of which it grew abfolutely requifite to give by Law the moft ample Security to every

Reign ; and Sir Edward Coke hath preferved (iv Inft. ch. xxxv.) the Heads of the.Plan then in Contemplation, to which he was an ardent Well-wifher. But though it mifcarried at that Time, yer the Sentiments of the wife!t Men continued Sill the fame, till, by Stat. 12 Car. II. cap, xxiv. the whole Sytem was completely abolifhed.
${ }^{1}$ At the Time this Law was enafted, a general Spirit of Improvement prevailed. Men $f_{2} w$ from Experience, that War ferved only to impoverihh and to deftroy, while the Country remained in many Parts wafte, ill peopled and worfe cultivated. Agriculture began to be confidered as a Science. Foreign Grafes were introduced, and many other Improvements were attempted, though not till long afterwards brought to any tolcrable Degree of Perfection. Thefe however fhewed the Temper and Difpofition of that Age, and with how much Alacrity they embraced this Deliverance. In confequence of this, and of the Hopes excited, many excellent Treatifes were publihed, to Shew what natural Sources of Wealth this Country afforded, fuch as Webfter's Hinory of Metals, Evclyn's Sylva, Worlidge's Syftema Agriculturx, and many others.
m 'The former Qualifications of thefe feudal Tenures, had been only partial and imperfect Remedies, and yet to thefe, fuch as they were, many beneficial Coinfequences werc owing. But now all the remaining, and thofe too much the heatieft Evils, fuch as Wards, Liveries, premier Seifins, $\& \mathrm{cc}$. wcre taken away effectually, and for ever. As the Crown relinquifhed thefe Rights that bore hard upon thofe who held Lands immediately therefrom, fo the fame Powers which they exercifed over their Tenants were in like Manner extingnifhed. By this Means all the Owners of Lands and their Families were fet at full Liberty, and left to att as they judged mof expedient for their own Interefts, without any Apprehenfion of having any of their own Conveyauces queftioned, or Fear of their Settlements or Devifes being fet afide.

Species of private Property, which, from the apparent Expediency of the Thing, was gradually and effectually done. This was another great Inftrument in promoting Induftry and encouraging Application. In earlier Times there were numerous Obftacles to the introducing new Employments, the Exercife of Mechanic Trades was very much embarraffed, the Recovery of Debrs had many Difficulties, and feveral other Points there were in a State of Incertainty, which are Things rarely confidered by the Legiflature, except in a commercial State, fuch as every Inand ought to be ${ }^{1}$. Thefe have in this Country, been fo well, fo wifely, and fo precifely regulated, that in ordinary Cafes every Man knows his Right, knows how to fecure it, and knows alio how to vindicate or to recover it in cafe he is difpofieffed of it. By thefe Laws refpecting Property, Mankind were placed fo much upon a Level as to be equally free from Fraud and Oppreffion, at leaft with Lmpunity; all thefe Laws having, as they ought to have, a free Courfe in their Oper ations, without refpect of Perfons, which is far from being the Cafe in many other Nations ". The Security of the Subject refting on fo firm and permanent a Bafis, hath very naturally introduced a Degree of Confidence, exceedingly beneficial in all Kinds of Tranfactions, more efpecially in what regards Trade and Manufactures, which are therefore carried on with the utmoft Spirit and Alacrity, which nothing but this could infpire?.

[^112]
## 232 The POLITICALSURVEY

Hence arifes the confant Diligence, the laudable Affiduity, the indefatigable Perfeverance in thofe engaged in Occupations that refpect the collecting and vending the Commodities and Manufactures of this Country, in which they are amongt the mof ufeful Citizens, as they enrich the Publick by that very Attention which is exerted in acquiring Fortunes for themfelves and their Families. To this what ftronger, what more certain Inducement, than that they are firmly perfuaded they thall freely enioy the Fruits of their Induftry while living, and difpefe as freely of them to their Pofterity, or having none, according to thair Inclinations at their Demifeq? Circumftances that excite, and at the fame Time fupport, a Difpofition to Improvements of all Sorts, which infenfibly diffufe the like Spirit on every Side, and whereever they come carry Invention, Penetration, and Emulation with them.

The innumerable Advantages flowing from the Improvement of Land, and the Increafe of Induftry even in th iir earlieft State, and when they were but proceeding to that Degree of Perfection which they have fince gained, produced an Increafe of Specie, and this made Way for regulating Intercth, a Thing of the laft Importance to the publick Welfare. It was a long Time before this Matter was even tolerably underftoodr. The Jews firtt, and the Lombards after them, lent Money at a moft exorbitant Rate, and their Practice was but too much followeds, though vehemently cenfurad

- Thefe folid and incontenible Benefits, which are cxactly fuited to the found Senfe and Ataly Ten per of the Englifh Nation, produces that Application and Perfeverance by which great and difficuit Undertalitugs are brought to Perfection. They know that Independence is a Kind of natural Nobility, to which Indultry is the fureft Road. To this therefore they gencrally afpise, iather than follow thofe Phantons that delude Pcople of warmer Imagimations. Hence it happar, that ample Fortunes raifed by Commerce, Jift their Poffeffors in a few Succeffons to Tilic, and hence the younger Branches of noble Families often embark in Commerce. Thefe Inflances ferre to preforve and fupport that Efteem for thofe Occupations, which contribute to eftablith private Men in eaff Circumftances, and to increafe mational Opulence at the fane Time, and by the fame Menns.

In the Law of Mofes, Exod. xxii. 25. and iadeed in other Places, Ufury was exptefy firbidden to the Ifraclites, that is, they were not to exadt it from each other, and foom hence many zealous Divines infilled it was diredty prohibited by the Jaw of GOD. This nj Juubt it was to this Nation in their own Country, for which the political Code of Mofes was calculared. Uliay was repugnant to its Principles, every Man had fuch an indefeafible Right to lis Laduds, is prevented Mortgages, and they were precluded from Commerce, as tending to an Intercoufe with Idolaters. But from Strangers, having the Sanstion of another exprefs Statute, they might and did take Ufury, underflanding their own Law in $t$ is Senfe. The Romans, and other wife Governments put it under the Reftriction of Laws, $t$, which their Chrifian Subjects, as well as others, fubmitted, whitout any Scruple, even in the earlieft and purelt Times.
: According to the whole Stream of our ancient Laws, from the 'Time of Edward the Confeffor, Ufury was not only branded with the fouleft Epithets, but puninhed with the moft grievous Pemalies, as may be feen in Coke's iii lnft. chap. Ixx. which Laws he highly commends. But the Jews were fuffered to practife it from the Reign of William I. to the Beginning of Edurard I. for conviving at which our Monarchs exacted from them large Sums; in the laft Seven Years Four huñdred

Divines as a Thing directly repugnant to the Principles of Religion, and this more efpecially after the Reformation. Infomuch, that in the Reign of Edward the Sixth, a Statute, which had been paffed in the Time of his Father, allowing Ten per Cent. to be taken, was repealed, and all Ufury forbidden under the fevereft Penalties. But this did much more Harm than Good; for as no Law could be made that would take away Neceffity, fuch as were conftrained to borrow paid afterwards Twenty and Thirty per Cent. with an Addition of other Inconveniencies t . At length it was found -requifite to relax in this Point, and to follow the Example of the wife Emperor Juftinian, who could find no Remedy fo effectual for fuppreffing Ufury, as allowing thofe who had Money to lend it to thofe who could employ it, at moderate Interef. The Confequences fhewed the Propriety of this Meafure; which however, like all other Steps tending to publick Utility, had been very warmly controverted.

But when thofe Altercations fubfided, and the Practice was firmly eftablifhed, its Effects demonftrated the Rectitude of the Principle; for in confequence of this Method of obtaining Money on moderate Terms, the Value of Lands was raifed, Agriculture was encouraged, Manufactures were promoted, Commerce extended, and every Species of Induftry was enlivened and fupported. If any Doubt could have remained in reafonable Minds, it muft have been removed by the like Confequences in a ftill higher Degree, following on repeated Reductions, which Mewed there could be no
hundred and Twenty thoufand Pounds. At length they were totally banifhed on a great Tumult raifed from their taking more than their accuftomed Rate of Two Pence for the Loan of Twenty Shillings for a Week. But the Expulfion of the Jews did not put an End to Ufury, the 1talians here made Profit of their Money; but they afted with more Addrefs, and the Convenience of Borrowing brought others, though it was fill loudly and univerfally decried, into the fame PraCtice.
I In the Roman Empire, as able Critics allow, Twelve per Cent. was the common Intereft, which was fomewhat leffened by Juftiaian. This made a real Diftinction, for what was beyond this, was, in Conftruction of Law and Reafon, oppreffive and ufurious. Our Ncighbours faw fooner than we the Rectitude of this Diftinction, and that the Rate of Money was, in Truth, rather a political than a theological Queftion. At length, by Stat. 37 Henry VIII. cap. ix. Intereft was fixed at Ten per Cent. Ufury declared unlawful, and punifhed with very fevere Penalties. Our Reformers in their great Zeal (contrary to the Sentiments of Calvin) procured this Law to be repealed by Stat. 5 Ed. VI. cap, xx. which abfolutely forbids the caking any Profit for the Loan of Money. Dr. Wilfon, Mafter of Requefts, and afterwards Secretary of State to Queen Elizabeth, publifhed, A.D. 1572, a very claborate Treatife in fupport of this Notion, though he owns that inftead of Ten, People paid Twenty and Thirty per Cent. However, by Stat. 13 Elizabeth, cap. viii. the Statute of Edward VI. is repealed, and that of Henry VIII. revived, which did not put an End to the Difpute. The warm Clergy continued to maintain, aud quoted this very Act of Parliament to prove it, that all Ufury was directly contrary to the Law of GOD, and therefore finful and deteftable. It was neceffary to treat this Point fo largely, that it might appear with how much Difficulty pernicious Notions (efpecially fupported by the Pretence of Rcligion) are owercome, though the removing them is ever fo manifeflly for the publick Good.

## 234 The POLITICALSURVEY

Error in refpect to the Firf Caufe u. It muft however be acknowledged that we only copied the good Example fet us by our Neighbours the Dutch, who had long enjoyed the beneficial Fruits of fo judicious and fo beneficial a Policy, to which they had Recourfe in the very Dawn of the Republick, and to which they have ever fteadily adhered w. Thofe who underftand this Matter beft, who have confidered it moft maturely, and who have reflected, that the Party who from Self-intereft oppofed it, were ftrongly feconded by deep-rooted and vulgar Prcjudices x, I fay, thore who have duly weighed all this, cannot but contemplate our Acquifition of this powerful Inftrument of national Profperity, with equal Wonder and Pleafure.

As Money became more plenty, fell into more Hands, and paffed frequently from one to another, this furnihed more Employment to thole who made the procuring this neceffary Medium in all Tranfactions their particular Bufinefs. At firft thefe were the Italians, who exercifing the fame Occupation in different Parts of Europe, facilitated thereby foreign Exchanges, till by flow Degrees our own Countrymen gained both Wealth and Skill enough to manage this Traffick, and to extend it y. Hence arofe Goldfmiths

[^113]
## of REAT BRITAIN.

Goldfmiths and Bankers, who by their Negotiations became exceedingly ufeful in whatever regarded the making Payments requifite in a commercial Intercourfe with the moft diftant Places. This, however falutary, was a Work that proceeded very gradually, as being incumbered with many Difficulties. In old Times, an exprefs Licence from the Crown was required for remitting Money by Exchange, to difcharge a private Debt contracted in foreign Parts z. When the Publick had Occafion for Loans, thefe were fupplied on very hard Terms by Foreigners, grown opulent by this very Species of Commerce, before it was introduced here, in confequence of their falling earlier into a Knowledge of thofe Methods of circulating Money, which, by Dint of Obfervation, Experience, and paying frequently and dearly for their Affiftance, we were enabled to adopt at laft.

In refpect to this Alteration, which hath produced fuch fignal Advantages to this Country, we fland chiefly indebted to the diftinguilhed Abilities and laudable publick Spirit of Two private Gentlemen of the fame Family, the Firft of thefe was Sir Richard Gretham, who was the King's Merchant and Agent at Antwerp in the Reign of Henry the Eighth; who merited fo much from him by his Services, and with whom he had fo great Credit, as to convince him that it was equally detrimental to the Publick, to fuffer the important Bufinefs of Excliange to be ingroffed by the Italians, which was the former Method; or to be, as was the next Expedient, monopolized by the King's Merchant, which Place he then held; or to be granted to particular Perfons by Patent, as was the Mode at that Time; and which, for the Eafe and Benefit of Commerce, ought to be entirely free a. Upon his Motion it was accordingly declared fo by Proclamation.
who were moft rapacious Ufurers. Fuller's Church Hiftory, B. iii. p. 59-61. The Longobards had their Dwelling in the City, in what from them is called Lombard Street, and there the Merchants met till Sir Thomas Greham built the Royal Exchange. The Guelphs or Pope's Party, being many of then dijven out of Italy, fettled at Avignon and other Places, which facilitated their holding a general Correfpondence, more efpccially after the Italian Republicks became commercial States; and, as with the other Northern Nations in Europe, grew to have a confiderable Traffick here, which was managed chielly by themfelves on both Sides the Water.
z It is certainly frange in Appearance, and yet it is inconteftibly a Fakt, that for feveral Ages moft of our ftaple Cominodities were exported by the Merchants of the Steel Yard, and our Muney Affiirs tranfacted by the Italians, and afterwards by the Flemings, as we have mote than once had.Occafion to remark. Bur in the Reign of King Henry VII. when the Commons began to acquire Property, they began alfo to look into Manufactures, and to afpire to the carrying on their own Commerce. But this was not eafily or haittly to be effected. They proceeded to make long Voyages, the Merchant Adventurers encreafed their Numbers, and extended their Trade. Add to all this, that the King's Agents in foreign Parts looked affiduounly into the Management of Mercantile and Money Affairs, in order that by the Lights they acquired Abroad they might on their Return be fer wiceable at Home.

- This Affair of Exchange, which Sir Richard Greham in his.Memorial to Sir Thomas Audley, Lord Keeper, iffirmed was as neceffary to Merchants as Water for the Navigation of Ships, $\mathrm{H}_{\mathrm{H}} 2$

## 236 The POLITICALSURVEY

He likewife projected the Royal Exchange for the daily Meeting of Merchants, that therein they might regulate their own Remittances, fo that no new Monopoly might ever take Place.

The other was his Son, the juftly celebrated Sir Thomas Grefham, who was the Crown Agent at Antwerp for Edward the Sixth, Queen Mary, and Queen Elizabeth, where he managed the troublefome Affairs of liquidating old Debts, negotiating new Loans, and difcharging Intereft as. it became due upon both, with Fidelity, Dexterity, and Succefs b. At his Return home, befides many other important Services, he undertook and executed, though not without the utmoft Difficulty, the arduous Tafk of Borrowing, for the Ufe of Queen Elizabeth, a Sum of Money from our own Merchantsc; and, by repeated Inftances of the fame Kind, at length convinced them how much more honourable, as well as how much more profitable, thefe domeftic Loans were, both for the Prince and People d. This gave a new

Face
was not then or indeed for a Century after generally underfood. But this no Way impenches the Rectitude of this Gentleman's Propofition, from which, on fpecious Pretences, though there were fome temporary Departures, yet by Experience they were conflantly driven back to it again. It does him therefore great Credit to have emancipated this Branch of Commerce, fointimately counected with all the Ref, by pointing out the only effectual Means of redreffing. thore Nifchiefs, which really happened from Mifmanagement in this Bufinefs, and which bad been only aggravated by pretended Remedies.
${ }^{b}$ At the Time he became King Edward's Agent, the Interef paid by that Monarch amounted to Forty thoufand Pounds a Year. This Intereft, when loweft, was Ten per Cent. and if through Want of Money the King was defirous of continuing, befides the Intereat, he was canftained to buy Jewels at a high Price. Befides, through the Preffare of this Debt and Interefts. the Exchange funk to Sixteen Shiliings Flemih for a Pound Sterling. In the Space of TwoYears, Sir Thomas refided at Antwerp, he gradually difcharged the whole Debt, and brought up the Exchange to Twenty-two Shillings. Whereas, if Things had gone on in the old Way, as he told Queen Mary in a Memorial from which thefe Facts were taken, fhe might have found herfelf in the Beginning of her Reign involved in a foreign Debt of One Million and an Half.
c Queen Elizabeth, like her Predeceffors, was obliged to borrow large Sums abrond at high Intereft and with unpleafing Circumftances. In A. D. 1569. Sir Thomas prevailed on Secretary Cecil to let him try the rich Company of Merchant Adventurers, and accordingly propofed a fmall Loan to the principal Perfons amongft them, who for their own Security moved the Matter in Common Hatl, where it met with a flat Negative. The Privy Council wrote them a mof fenfible. and judicious Leater upon it (Stowe's Survey, Book i. p. 287.) which had fo good an Effect, that Fourteen of them agreed to lend Sixteen thoufand Pounds for Six Months at Six per Cear. for which they had feparate Bonds, and a general One to indemnify thern from the Statute of Ufurs (repealed Two Years after) which Bonds when due werc continued for Six Months more at the fame Rate.
${ }^{d}$ The Grefhams, Father and Son, had this very long in their Mirds, as knowing the Circumfances of the Merchants, the Condition of our Trade, and the Mifchiefs attending thefe foreign. Loans, much better than Minifters could do. But they could not prevail to alter the oftablifhed Method; however, what Reafon could fearce have perfuaded, Accident quickly effected. The: Duke of Alva prohibited all Intercourfe hetween England and the Low Countries. No more: Money confequently could be then borrowed at Antwerp or Bruffels. Sir Thomas, fecondedt by Necefily, vas heard, and by his Mode of raifing Money the Honour of the Crown and.

Face to Affairs, raifed the Credit of the Crown and Nation with all Europe, and demonftrated that we had acquired an abfolute Independency in a Point of fuch high Confequence to the public Welfare. He alfo executed his Father's great Defign, by building at his own Expence the Royal Exchange, which he left a noble Monument to his own Glory, and that of his Country e.

- On this broad and firm Foundation," publick and private Credit advanced, and gradually expanded in a Manner totally unknown before; and in the long Period of Peace which followed the Reign of Queen Elizabeth, rendered the Country floürihing, and wonderfully extended Commerce, in comparifon of the State of both in former Ages. The Progrefs was indeed not a little impeded by the Civil War; but the Seed of our Improvements had previouny taken fuch deep Root, that as foon as this Check was removed, they recovered and quickly produced freh Signs of Vigour. After the Reftoration, the Goldfmiths affifted the Government with very large Sums, till an End was put to all Confidence therein by the infamous Tranfaction of fhutting up the Exchequer on the breaking out of the Second Dutch War F.

This however did not hinder our able Statefmen from perceiving, that the greateft Benefit might refult to the Publick, by attracting the Confidence

Nation was refcued from the humiliating Method of Pawning the Credit of the City of London, as well as of the Sovereign, to a foreign Banker, an enormous Expence in Premiums, Interelt, Continuations, \&cc. wholly faved, the Lofs by Exchange prevented, the Merchants (which was a great Thing at the-fime) provided with a fafe Means of making Intereft, Circulation contiderably encreafed, and our political and commercial Concerns fo interwoven, as that Minifters werecompelled to be alike attentive to both. Prodigious Benefits ariling from one Man's Prudeoce and Sagacity!

- It is by looking back to paft Times, and comparing them with the prefent, that we come toform true Nutions of both. It muft appear frange to us, that a great Nation thould ever have been embarraffed for fuch fmall Sums. It ought however to appear fill Aranger, that a Nation thus embarraffed fhould perform fuch great Things. But in good Roads, and usder the Conduct of able Guides, publick and private Affiars advance apace. In lefs than Twest, Years, the City of London was fo fenfible of the Bencfits derived from this Atiention of Guvirnment, that, in A. D. 1588 , they not only lifiened to that Queen's Requef, but even granted her double the Affifance the demanded. A Fact that does equal Honour to their Loyaly and her AdminiStration.
f According to the Earl of Clhrendon, this Method of raifing Money was, from his own Experience in. Holland, fuggefted to Charles II. by Sir George Downing, and was exceedingly iifliked by that wife Minifter, who probably forefaw its Confequences. The Bankers (who befere borrowed at Four) now to acquire large Sums gave Six per Cent. and lent to the Crown at Eit, ht, Ten, and Twelve. In the Beginning of A. D. 1672 , the King ftopped, the Payments on thefe Lejl:s ae the Exchequer, by which upwards of One million Three hundred thoufand Pounds of th. sabjects Money was detained; and though afterwards Six per Cent. Intereft was allowed, the Capital remained unpaid, and after the Revolution was confidered and fettled (though with fome Modifications) as a Debt due from the Rublick.

## 23 The POLITICAL SURVEY

of the Subject, and thereby drawing from the Coffers of Individuals, fuch Supplies, however large, as were requifite for the Support of national Mcafures s. This great Undertaking was accomplifhed foon after the Revolution by the Interpofition of the Legiflature; and Parliament thereby acquired a Power of raifing fuch immenfe Sums as have defrayed feveral expentive Wars, which have terminated equally to the Glory and Advantage of Great Britain. Sums far beyond the Conception of our Anceftors, and at which the lateft Pofterity will be aftonifhed h. The Bleffing of Divine Providence on our Councils, and the ftrict and punctual Obfervance of publick Faith, have atchieved this political Miracle, in the Performance of which, fome Inltrumerits were neceflarily employed; which, befides facilitating that great End, have been in other Refpects extremely advantageous to the Community.

Amongst thefe there was one which contributed particularly to this Intention, and hath indeed promoted, what we very properly and emphatically call Circulation, in a very wonderful legree, and this to the inexpreffible Eafe and Benefit of the Publick. This is the Company of the Bank of England, which, in point of Stability, Regularity, and univerfal Credit, is inferior to none ; in point of gencral Utility fupurior to any. Yet was this great Eftablifhment fixed at the Beginning with Difficulty ${ }^{i}$,

8 It is evident that Brench of Faith ruined this Scheme in the Firf Infance, and while fubject to fuch Mifchances would have ruined it for ever: But eren this heavy Misfortune fhewed how much the Circumflances of the Nation were changed, how much Weath was in private Hands, and the Poffibility there was of the Publick's availing itfelf of this Alteration. Upon thefe Grounds, the Condition of publick Affirs alfo requiring it, this Mode of raifing Money by Lowns was atisuin adopted; but in a better Method, and on a much more folid Foundation. Ne:v Frads were affigned for the Security of thofe who lent their Money, and inflead of the Promite of tite Prince, the publick Faith became plighted to fuch as trufted their Property in the Hands of the Fublick, together with other Circumftances of Advantage.

- Sir Jofiah Child faw and difapproved the Conduct of the Bankers in lending at fuch high Intereft to Charles II. chiefy becaufe he thought it hindered a farther legal Resuction of the Rate of Intereft, giving it as his Opiuion, that whenever legal Inteeft fell to Four, Guvernment might be able to borrow at Six. His Notion was confirmed by the high Ratcs at uhich Money was borrowed after the Revolution, and the high Preminums given to procure it even at thefe high Rates. But we have feen an exact Obfervance of Tcims, and a puactual Payment of Interelt, operate in fuch a Manner as to raife the Credit of publick above that of private Securities. This thath been done by bringing immenfe Sums into Circulation, which otherwife being hoarded up, would produce an apparent Scarcity of Money, and of Courfe an high Rate of Interen.
${ }^{1}$ The Cunpany of the Bank of England was inftituted A. D. 1694 , their Capital was $\mathbf{1 , 2 0 0 , 0 0}$ /. at Eight per Cent. and 4000 l. for Charges of Management, that is a clear Annuity of $100,0 \% 1$. in the Whole. This fhews the State of publick Credit at that Time. The Bank, through the wife and feady Conduct of their Direftors, weathered many Difficultier; and, as they gathered Strength, rendered from time to time frefh Services to, and in confequence of thele received frefh Marks of Favour and Support from the Legilature down to 1764, when upon Conditions advautagcous to the Publick their Term was prolonged, fo as not wo determine buton
and hath attained to its prefent flourihing Condition, purely by a fteady and uniform Courfe of cautious and prudent Management, by which the Company hath equally conciliated the Favour of the State and of the Subject k , and have in feveral critical Conjunctures rendered the higheft Service to both.

In the fame Proportion this Circulation extended, the good Effects of it were feen, felt, and confeffed, which at length made Way for a Regulation in refpect to private Credit, which had been long defired, becaufe the beneficial Confequences or it were forefen, and their being confirmed by Experience in another Country, left no Room to doubt that, whenever introduced, they would be attended with the like Succefs here !. This was no more thangiving a legal Right for the affigning Promiffory Notes, and putting them on the fame Foot with Inland Bills of Exchange, which though it could not beftow, enabled them to acquire a Currency that is exceedingly commodious, and in a great Meafure takes away the Inconvenience of long Credit, which is ever detrimental to Trade, by enhancing the Price of Commodities m. The Benefits arifing from this univerfal Circulation are much

One Years Notice after Firft of Auguft 1787. In the Courfe of the laft expenfive War the Bank did every Thing that could le expected to maintain the Credit of this Nation, and by their Prodence. and Firmnefs fuppoted that of all Furope after the Peace.
k In many of the yrat Citiz: of Earope there are Banks, as at Venice, which is allowed Precedence as bing the cikft, at Genoa the Baak of St. George, at Nurembergh, at Hamburgh, and elfewherc, but cfecially at Amfedinn, which is fuppofed to be the richeft of any. But whoever fhall confider the Ginhlutimand Regulations of thefe Banks, and compares them with thofe of our own, will be cenvinced, inat it is iufinitely preferable. By this I mean, it is much better adapted to sur Contitution and Circumfancee, and hath thereby operated regularly and fuccefffilit for the Burfit of the community, and is indeed the great Wheel which gives and preferves that equal and dondy Motion wour extenfive Circulation, which renders it the Source of Indultry, tle Suppu:t of Manufictures, the Life of domeftick Tiade, and the very Sual of foreign Commerce.

I In Conntios where they have few ftaple Com nodities, and where Traders live chiefly by. Frciglat, Fithing, Manofacturcs, Sc. Neceflity pointed out early to them Mcthods of affiting by fich Tranfactions as thefe the Piogefs of Commerce, and the Srate well knowing the great Imponance of Traffic, gave acadily their Sanction to all fuch Inventions as foon as defired. By a. Variety of fuch artificial Expedients, they qualified matural Defieiencies, and ame to be more confpicuous, and indeed mone abie and devtrous in their Dealings, than their Neightoma, and acyuired defervedly an high character for mercantile Abilities. Thefe Methods, when practifed, were however obvions, and this, particularly with all is advantageons Confequences, was ciearly ftated and ftrenuoully recommended Half a Cuniury at leaft beline it was adopted here.
$m$ There were Notes of Hand given long before the law which made them of fubloneral Utility as they now are. But they were rnt negotiable, and no Action could be mainained on them as they were not Specialties. Hy the Statutes of the 3d and 4 th of Qneen Anne, this being tecited, they, for the Benefit of Trade, are made as aflignable and valid as Inlind biils of Exchange, fubject in point of Time to the Statute of Limitation; and upon Expcrience of its good Effects, this Law was made perpetual by another Statute of the Seventh of the fame Reign. This hath been of inexpreffible Advantage in the Light mentioned in the Text, by giving a Currency to
much more eafily conceived than expreffed; becaufe thofe who are acquainted with them, have a Senfe of them fuperior to any Conviction, that even the ftrongeft Arguments could produce; whereas, fuch as from their Situation in Life (which are now however but very few in comparifon of what they were formerly) find it very difficult to apprehend, though ever fo clearly explained, the Fruits of an Expedient they have never tried, and the Operations of which have never fallen within the Sphere of their Obfervation n . But to Men of Penctration and Attention, its great Utility will be even in a theoretic Light, by no Means a Thing inexplicable, and much lefs unintelligible.

We have frequently afferted, and we hope in the Courfe of this Work have very fully thewn, that the Fruits of Induftry conftitute the true and permanent Riches of a Nation'; whatever therefore excites, promotes, and facilitates Induftry, muft neceffarily contribute to render a Nation opulent. A quick and conftant Circulation of Credit produces, and, which is more, fupports Induftry with better, and even greater Effect than Money; becaufe the Tendernefs of Credit requires an unremitting Affiduity and Application, as on the Succefs which thefe produce its future Exiftence muft depend ${ }^{\circ}$. But befides this there are other, which, though not more conclufive, may prove as intelligible Arguments of the fame Thing. We fee, that where this Circulation is moft extenfive there is moft Induftry, and
the Bills of private Men of known Probity and Punctuality, and thereby rendering extenfive Undertakings practicable by Perfons of fmall Fortunes.
${ }^{n}$ We find this Obfervation fully juftified, by the Repugnancy fhewn for fo long a Time to fo eafy and fo expeditious a Means of converting a heavy, and in moft Refpects a dead Credit, into a transferable Security, nearly as ferviceable (in the Courfe of Trade efpecially) as ready Money. Yet all this was judicioully explained, and every popular Objection to it anfwered, by fo great a Man as Sir Jofiah Child, foon after the Reftoration. This Neglect of a Thing of fuch Utility could only proceed from its not being attended to, and of Courfe not being clearly underftood by fuch as had the Power of carrying it into Execution. But the Lofs of the Nation by this Jelay muft have been very great, as it fell out in that Juncture when our rifing Manufactures food in moft Need of it.

- This is a Point that deferves to be well confidered. When Men once embark their Credit, not only their Fortune but their Characters are at Stake, and this in every Tranfaction in which they are concerned, This Situation makes them cautious, attentive, indefatigable. Hence more immenfe Eitates have been acquired by Men who began with fmall, than by thofe who at fettiug out were poffeffed of midling or even of great Fortunes. Thofe Qualities which Neceffity produced, ftrengthened by Experience into Habits, and thefe were confirmed by Succefs. Such Men, in their Beginnings particularly, are exceedingly folicitous that their Goods fhould be well made, that they may have a certain and a fpeedy Sale, to fecure which, in order to comply with their Engagements, they fell at fmall Profit. Thefe are very confiderable Advantages to Trade if viewed in a national Light. Add to this, that through the Experience gained by fuch as are bred under thefe Manufacturers and Dealers, they become enabled to purfue the fame Plan, and by calling Affiduity, Frugality, and a ftrict Regard to Reputation, to the Affiftance of a fmalt Capital, procure not only a comfortable Subfitence for themfelves and Families, butafford Ema ployinemt and Bread to mayy others. that where it is unknown there is little or no Induftry at all. Where it can be introduced, it enlivens the fmalleft Sparks of Induftry, and this once done, they thrive and encreafe together, which is apparently the Cafe in other Countries as well as our own. In paft Times, when we had very little of it, our Induftry was much confined; as it expanded, that was enlarged ${ }^{p}$. All this was forefeen and foretold, and therefore the Exiftence of the Fact demonftrates the Certainty of the Principle. We may therefore juftly conclude, that on this Point we have all the Evidence that in a Matter of this Nature can be reafonably fought or delired.

But it may be faid, that in fite of all thefe Arguments this Benefit from Paper Credit hath been, and fill is very warmly difputed by fome. What is there fo certain that fome Men will not difpute? Let us however hear and impartially confider their mof material Objections. It is faid, that in confequence of this continual Circulation, our Gold and Silver Specie are imperceptibly exported, which occafions a great Ecarcity of what thofe who make this Objection are pleafed to call true Riches 9 . This Charge however admits, what is undoubtedly true, that Circulation anfwers in many Refpects the Ends, and fupplies the Defects of Specie. But it by no Means fhews, that it hath any Thing to do with what is the proper Object of this Complaint, the Exportation of our Gold and Silver. The Truth of the Matter is, that in Time of War, Gold, for the Sake of its lying in a narrow Compass, is fometimes fent abroad to aniwer Military and other neceflary Expences. But our Silver more commonly leaves us

[^114]
## 242 The POLITICAL SURVEY

from the thirft of Lucre, becaufe its Value increafes by its being converted into Bullion. All that Circulation does, is to make this Evil lefs felt, by preventing a Stagnation, till by the Courfe of our Commerce the Malady is removed r .

Another Objection arifes from hence, that this Circulation (though but of Paper) hath the Effect of what are ftiled real Riches, in raifing the Price of Houfes, Provifions, and Labour, which is in many Refpects detrimental to the Community s. This Affertion again admits, that Circulation anfwers the fame End with Specie. Yet, after all, there is, notwithftanding this feeming Similarity in their Effects, a very wide Difference between Circulation and Money. Circulation depends upon Credit, that Credit again refts upon Induftry, for the Fruits of Induftry are Things worth Money; and, in this Senfe, Circulation may be faid to produce them. But if, inftead of this Circulation, which, managed with Caution and Difcretion, maintains and ever will maintain its Credit, we had a like Quantity of Gold and Silver Coin current, it would certainly produce not Induftry but Idlenefs, and this would continue till fuch Time as the Money was exported for the Payment, at firf, of foreign Luxuries, after that Neceffaries; for little would be done while it circulated, till at length it failed, and then perhaps our People might be again induced to labour $t$.

[^115]Ir hath been farther objected, that, by Means of this boafted Circulation, many have fuffered by their Credulity, and that this Paper Credit gives daily great Occafion to Forgeries and Frauds. It may give Occafion, but it certainly does not give Birth to them, for both were practifed long before we had any fuch Thing, and, if attended with fuch Inconveniences, they arife to a very inconfiderable Amount, are by no means peculiar to this K ind of Credit, and, after all, affect Individuals only; fo that though the F ict cannot be abfolutely denied, the Confequences may be with Truth formach extenuated as to render them fcarce difcernible, in compariion of tice aeparent and innumerable Advantages that flow from it, and that daty recommend it, where-ever Induftry is recently introduced, and wherc, when firmly eftablifhed, it is found to be effentially requifite to its Supprott $u$.

All Undertakings, in refpect either to mercantile Euterprizes, or in the Eftablifhment of Manufactures, are weak and feeble in their Beyimnings, and, if unfuccefsful, either fink intirely, or at leaft are feldom revived in the fame Age. Accidents of this Nature are not only deftructive to private Perfons, but exceedingly detrimental to the publick Intereft. On this Principle, more efpecially fince Trade, for which Providence defigned us, hath been attended to, fuch Attempts have been thought deferving, and hive been frequently favoured with Publick Support. This in former Times ufually flowed from the Crown, in the Form of Letters Patent, Charters, or other Grants of Privileges, which, however requiite they might be,

[^116] wete notwithitanding very frequently Objecti of Cenfure m. If ficly obtained them failed in their Endeavours, they were reputed Projectors. If, on the other Hand, they fucceeded, they were confidered as Monopolizers. In later Times, and in Concerns of Moment, a much better Method hath been adopted, as often as it hath been found practicable, by rejecting private or particular Intereft, and propofing the defigned Advantages: to fuch as fhould perform the Stipulations on which they are granted. Thefe Bounties, as they are paid by the Public, fo they are folely calculated for the Benefit of the Public. They are fometimes given to encourage Induftry and Application in raifing a necellary Commodity, whicin was intended by the Bounty on exporting Corn $x$. Sometimes for promoting Manufactures, as in the Cafe of thofe made of Silky. Sometimes, to fupport a new Manufacture, againt Foreigners already in Poffeffion of it, as in making Linen and Sail-cloth \%. Such Affiftances, however, are never beftowed

[^117]betowed but upon mature Deliberation, in virtue of ftrong Proofs, and with a moral Certainty of national Benefit. The great Intention of Bounties is, to place the Britifh Trader on fuch Ground, as to render his Commerce beneficial to his Country.' In order to this fome Profit muft accrue to himfelf, otherwife he would not embark therein; but this ${ }_{x}$ whatever it be, muft prove inconfiderable in comparifon of what refults to the Pyblick. For if, by the Help of fuch a Bounty, one or many Traders export to the Value of a Thoufand, Ten thoufand, or a Hundred thoufand Pounds worth of Commodities or Manufactures, whatever his or their Profit or Lofs (for the latter, through Avidity and overloading the Market, fometimes happens) may be, the Nation gains the Thoufand, Ten thbufand, or Hundred thoufand Pounds, which was the Object of the Legiflature is granting the Bounty ${ }^{\text {a }}$.

Ir is indeed true, that on whatever Account, or to whatever Amount, this Reward is given, the Publick feem to pay, and private Perfons feem: to reccive. But thefe private Perfons receive it as the Hire from the Publick, for performing a Service which otherwife they would not perform, the Benefit of which accrues to the Publick; that can therefore very well afford to pay that Reward in reality, which, as we have ftated it, the only feems to do. For, looking a little clofer, we cannot help difcerning, that the Bounty is paid to Individuals, who, as fuch, make a Part of the Publick. But the Commodities or Manufactures exported are fold to Foreigners, and the whole Produce of them, be it what it will, comes into the Purfe of the Publick, in one Corner of which the original Bounty was left, andin another will lie the Merchants Profit ${ }^{b}$. It was neceflary to flate this Point
ference to that of Strangers, more efpecially in the Royal Navy. By Stat. 12 Aunx, Cap, 16. 3. 2. a Bounty was given of One Penny per Ell on all that was exported for a Term, and contiuued by fubfequent statut's. By 4 Geo. II. Cap. 27. §. 4. an additional Bounty of another Penny an Ell is granted. Thefe Bounties were to be paid out of an additional Duty on im ported Sail-cloth. By the fame Statute, every Ship built in Great Britain or in the Plantations i. under the lenalty of Fifty Pounds, to be furnifhed with a complete Suit of Sails of Britila Manufacturc. The Amount of thefe Bounties mark the Progrefs of the Manafacture, which is alfo affifted by the Fund on which the layment is affigned.
a Upon this Conlideration, that the intire Produce of what is exported accrves to the Nation. the Legillature, when an Alteration of Circumfances required it, have made no Scruple of ausmenting a Bounty, as in the Cafe of refweal Sugar exported, from Thrce to Nine Shillings per Hundred Weight. In like Manner, the ouginal Bounty of One Pound per Ton, in Favour of Veffels employed in the Whale Fifhing, hath been doubled, and many new Regulations made, in order to render this Fihery more advantageous to the Publick. As a Bounty is given on Malt, when allowed to be exported, fo an Equivalent of Thirty Shillings per Ton hath been granted on all Britifh made Malt Spirits when exported, which is a common Benefit to Land, Nanufature, and Cominerce.
b On a due Attention to this felf-evident Doctrine, every reafonable, every publick-fpirital Man will be reconciled to Bounties, efpecially if at the fame time he refects, how mudy fooner.

246 The POLITICALSURVEY
Poínt at large, becaufe many Miftakes have been made about it; to obviate which for the future, let thefe Three Circumftances be continually borne in Mind, in refpect to this Mode of affifting Agriculture, Manufactures, and Commerce c. Firft, that no Bounty can be defired, but on the Plea of national Utility, which always deferves Notice, and cannot eafily be miftaken. It muft be likewife alledged and proved, that this is the only Means by which the national Benefit can be obtained. In the Secọnd Place, the Sums iffued on, this Account not only thew the clear Expence. of the Bounty, but alfo indicate the Profit gained by the Publick ; for, as the one cannot exift without the other, that Amount muft be the inconteftable Index of both. Laftly, let it be remembered (and of this too fome Inftances might be given) if Bounties fhould be improperly beftowed, they will of courfe prove ineffectual, and, after a few fruitlefs Trials, will remain unclaimed, confequently produce no Expence d. To thefe Remarks we may add, that Bounties are ufually granted but for a limited Time, and then expire, are always liable to be fufpended, and of courfe can never be the Caufe of any great national Lofse.
many of our capital Manufacturcs might have been acquired, if this Method had been in carlier Ufe, and how many valuable Acquifitions may flill be raade by their Afiftance. Amonght tiefe, we may reckon Timber, Hemp, Flax, Madder, and upon good Grounds I will venture to add Silk, all which, by national Bometies, wifcly proportioned and Actadidy applied, might be gradually intruduced, and without Quettion in Gyeat Britain, Ircland, and our other Iles, Heare is Land fufficient for them all. We may alfo add, that it thefc Lands were thus employed, there need not be an idle Hand in all our Dominions.
c We have occafionally given various Inltances of the open, generous, and liberal Spirit of the Britifh Legilature, and this is in nothing more confpicuous than in the Point of Bounties, by swhich not only the Fifh and Linen of North Britain have been promoted, but alfo an exprels Bounty of Twenty Shillings a Ton given for all Timber fit for Mafts, Yards, or BowSprits imported from thence into South Britain. In like Manner Atteution hath been hewn to more diftant Provinces of the Britim Empire, by giving Bounties on the fame Things, as alfo upon other naval Stores, fuch as Hemp, Pitch, Tar, and Turpentine, likewife Silk, Indigo, \&re. of the Growth of our American Plantations, to fupport a Spirit of Induftry amongt the People. there, and to frengthen the Connection and Correfpondence between the Britih Colonies and their Parent Country.
${ }^{4}$ It is true, that befides the Objection we have endeavoured to refute in the Text, there is another often urged againft Bounties. This is grounded upon the Frauds to which they are fupfofed to be liable, and particularly the re-landing the Goods on which the Bounty hath been faid, and thereby deceiving and cheating the Publick. But whoerer perules the Laws made on this Head, and attentively congders the numerous I'recautions taken in fix every Circumftance re-数ive to the obtaining the Bounty, the Checks on the Phipping the Goods, the Securities taken for their due Exportation, the Certif.cites required to afcertain their being actually delisered and fold in a foreign Market, to difcharge thofe Securitics, and the bavy Perralties on the Detection of any Fraud; whoever, I fay, that reficets on thefe, will be conviaced that fuch 2 Thing is at Leaft extremely difficult, if not altogether impracticable.
a There is no doubt that, exclufive of Frauds, the immodcrate Thinf of Gain may tempt interefted Mtin to aim at converting what was calculated for publick Bencfit to its Detriment, for she: t priyju Advantage. 'Ihus, on a Profpect of mort Crops in othcr Countries, Men may take

## of GREAT BRITAIN.

In like Manner, Drawbacks are ufeful in many Refpects, efpecially in preferving our Commodities and Manufactures from lying on our Hands, in confequence of the Duties the Legillature may have found it requifite to impofe upon them for the Support of publick Meafures. In feveral Inftances, it would be abfolutely impoffible to export them thus incumbered, and therefore the Load is very prudently removed, or, as the Term inplies, the Duty drawn back. But in fome Cafes this Eafe is given only in Part, where Neceffity makes it practicable to vend them with a proportionable Weight of the Duties f. Indeed, Impofitions of all Kinds, though frequently injurious, may under certain Circumftances be rendered falutary and ufeful. As for Example, in repreffing an unreafonable Appetite for forcign Luxuries, by obliging fuch as will gratify their Humour in this Refpect to pay roundly for fuch Indulgence, by which the Nation draws a Benefit that could not be obtained from an abfolute Prohibition g. Thefe Expedients.

Meafures within the Letter, but directly againft the Spirit of the Law, to fend fo much of our Corn abroad, as to endanger Famine at home. For this the Wifdom of Parliament provides, not barcly by fufpending the Bounty, but by prohibiting Exportation, and opening the Ports for foreign Supplies, and from our own Colonies. We cannot with any Shadow of Juftice afcribe Scarcity to the Bounty or the Exportation. If this was the Cafe, Sufpenfions would be frequent, whereas there have been but Five in a Courfe of Seventy Years. If the Bounty had any Share, the larger the Exportation, the greater would be the Scarcity. In A. D. 1750 we exportedmore than One fifth of our Growth of Wheat, which was notwithflanding but at Four Shillings a"Bufhel, whereas a Century before, A. D. 1650, when we had not either Bounty or Exportation, Wheat was at Nine Shillings and Six Pence a Bufhel. What then is the Caufe of Scarcity? Unkindly Seafons, which though human Policy cannot prevent, yet their fad Effects have been evidently leffened, by our increafed Growth, fince the taking place of Bounty and Exportation.
${ }^{\prime}$ All that is intended in the Text, is, to give a general Idea of thefe Mitigaticns of Duties, their Utility, and the beneficial Confequences that attend them. We have already had Occafion to mention many of them, and have not Room to run over the reft here. It may not however be improper, having this Opportunity, to remark, that in Reference to thefe, Time and Accidents have great and fingular Operations. As for Inftance, the Demand for Leather and Manufactures made of Leather is at prefent fo great and growing, that perhaps it is requifite to change our Menfures, however prudent when adopted, and not only to difcontinue the Drawbacks on Exportation, but alfo to take off the Duties, or perhaps cren to give a Bounty, on the Importation of raw Hides, at leaft from Ircland. In order to judge the better in a Matter of fuch Importance, I have inquired as to the Amount of both, and upon a Medium of Ten Years ( $\because s 1$ am informed) the annual Amount of the Drawback on the Exportation of Leather hath been 10,5601. and the Duty on raw Hides imported 14821 .
(B Abfolute Prohibitions are not agreeable to the Temper of a free, and by no means fuitabie to the Notions of a cominercial People. For this Reafon (how heavy foever the Penalties) they. can hardly be carried into Exccution.. Befides, as the Superfluities of one Country are in anco ther confidered as Luxurics, it is a Kind of Breach of the Law of Nations, produces counter Prohibitions, and gradually railes a Spirit of Rancour, equally repugaant to found Reaton and true Religion. But high Duties, frictly levieci, prevent a dangerous Fxcef, and at the fane time furuilh an uncnvied Revenuc. In no Country hath this Refource been practifed with more Addrefs than in our own, where it would not be difficult to mention, if it was not cafier to

## 248 The POLITICAL SURVEY

pedients for alleviating Difficulties, and procuring Advantages in refpect to foreign Commerce, contribute ultimately to the augmenting the Value of our Lands, for out of them thofe Commodities arife, and from what they yield the Manufactures are produced which we export. This though it was always the Fact, yet hath not been always fo well underfood as it is at prefent. From hence it comes, that of late Years fo many Statutcs have been made for promoting the joint Interefts of both, and thereby eradicating that groundlefs Notion, that there was a real Difference between them $b$. We might add to thefe, many other Inftances of a fimilar Nature, fuch as Companies of Affurance, which, by diminifhing the Rifque, fupport a Spirit of Induftry, encourage Enterprize, by fecuring to Men the Fruits of their Skill and Labour, againft fuch Accidents as Prudence could not forefee, or Diligence avoid i. The general Tendency of thefe, and of all other Contrivances of the like Kind, though they feem primarily calculated for the Benefit of Individuals, and thereby to prevent their fuffering from their honeft Endeavours to improve their Property, yet terminate finally in the Welfare of Society, to which the Endeavours of Individuals, and the Profits arifing from them, muft ever redound $k$. On this Account they become the proper
guefs, the Induigerce of a prevailing Tafte, hath fupplied a productive Tax, which, without murmuring, could have been obtained no other Way.
${ }^{n}$ We know from Experience, that its bcing abfurd is not always a Bar to an Opinion's gaining Credit. If it had, the diftinction between the landed and trading Interch had neveripeen mentioned. Wife and diceaning Men eaflly faw and clearly demonfrated the Fallhood of this Notinn upon the Principles of Reafon. We have alfo Mewn, in the Courfe of the Work, ncarly the fame Thing from the Evidence of Facts. . As Land was better cultivated, Trade improved, and as the Prolits of Trade increafed, it fupplied both the Jights and the Means by which Cultivation hath been exceedingly diverfified and extended. Before we conclude this Chapter (which indecd led to this Remark) we fhall have Occafion to fhew this in a ftill flronger Point of View, from the amazirg Improvements of Land for the Purpofes of Commerce only.

- The Practice of Infuring is of great Antiquity, and appears to have been in Ufe here in the Reign of Queen Elizabeth ; but does not feem to have been carried to any grat Extent till towards the End of the laft, and Beginning of the current Century, when feveral Societies were formed tor: jaiuring Houles, Goods, Merchandizes, \&c. againft the Danger of Fire, and thefe fill fubfift in ful Eiteeni and Credit. The Royal Exchange and London Affurance Companies were each of them cttablimed by I wo Ruyal Charters, the firft in June 1720 , impowering them to infure Ships, Guods, and Merchandize, againtt the Danger of the Seas, and to lend Moncy at llottomry; the Second in April A. D. 1721, allowing them allo to alfure Lives; which Charters the Crown was impowered to grant by Act of Parliament. Befides, private Perfons infure likcwife, by urderwriting of Policies. This, leaving fo much Liberty, leeps them all in a State of Emulation, prevents raifing the Premium to an exorbitant Height, and affords at the fame Time a large Field for Application and Induftry. In confequence of this, though Infurances are well known in other Countries, ours are fuperior in Credit to any in Europe.
$k$ All Mcthods that can be devifed for giving Eafe and Security to Individuals, by diminihing Hazard, or removing Apprchenfione, opcrate for the publick Benefit by encouraging Induftry. Whare this is upon the Principle either of publick Spirit, as is the Cafe of Hofpitals and Infirmarites fuppoited by Sublcsiption, or from a l'rofpect of very moderate Gains, with which many Sosistics, whole Managers ferve graid, are well enough content, there is no Need of obtruding Authority.

## of GREAT BRITAIN.

proper Object of the Legiflature's Attention, and very juftly merit its Sanction for their Stability and Support. In truth, no Laws can be more deferving of Praife in their Intention, becaufe none in their Operations refpecting the Publick can be more beneficial.

These accumulated Advantages, in a Chort Period of Time, made great Alterations not only in the Appearance of the Country, and in the Circum-- ftances of the People, but alfo, as was very natural, in their Temper and Manners, which Alteration was productive of Atill more falutary Changes. When Men faw, or rather felt, as hath been already obferved, the genuine Effects of Induftry, were convinced that Science and Application would certainly lead to Eate and Independence, and that whatever a Man acquired by thefe he might fecurely enjoy, it quickened their Apprehenfions, and led them to look out for new Means of exercifing their Talents for Improvements. Impelled by this generous Spirit, they applied themfelves freely to Works of vifible publick Utility, and in which private Emolument was only a fecondary Confideration. Thefe Undertakings were fuch as could not have been attempted while our Lands yielded little, and our Manufactures were not far advanced; and which never would have been executed, if Experience had not pointed out their Neceffity, in order to carry both to the higheft Degree of Perfection!. The Senfe of this was fufficient to awaken the Spirit of the Nation; and Succefs manifefly attending their firf Endeavours, excited a Refolution of profecuting them with Steadinefs and Vigour. We have faid enough to explain in general the Nature of thefe extenfive Enterprizes, and will now defcend into fome Particulars, from which it muft appear, that we have truly defcribed them, and that though they may be already, indeed are in themfelves, of very great Utility and Importance, yet they are ftill likely to become much more confiderable in their Confequences.

Authority. But where ever it does interfere, the Confidence repofed in Authority Mould never be deceived. In this Light, the Satisfaction given to the Sufferers by the Charitable Corporation, and the regulating the Concerns of the Mercers.Company in refpect to their Amnuitants, were noble Inftances of national Equity.

1 There is a vilible Progrcfion in Improvements; Induftry, like Fame, gathers Strength by Motion, and, having gained one Advantage, grafps imnediately at another. The Caufe of this is, that every Acquifition brings with it a Scnfe of frefh Wants, and this finulates to farther Efforts. By degrees, after many Benefits gradually gained, an intelligent Nation extends its Views, and, perceiving that Aill greater Things not only remain unattained, but lie alfo beyond their Reach, through the Defedt of Means, they thenfulpend their Enteavours, till cither Accidont, that is, fome unforefeen Change of Circumftances, or, which is the catholick Inftrument in all national Improvements, an Augmentation of Wealth, removes the Defect, and, reviving their former Intentions, puts alfo the fuccefsful Profecution of them in their Power.

## 250 The POLITICAL SURVEY

The commodious Communication between the feveral Parts of a Country by means of publick Roads, Caufeways where neceffary, and Bridges over intervening Rivers, is of general Convenience to the Inhabitants, a conftant Source of Opulence, and a fignal Proof of found Policy. The Romans were diftinguifhed by their Attention to the Straitnefs, Solidity, and admirable Difpofition of their larger and their leffer Roads, which, though ufed for other Purpofes, were chiefly intended for military Ways; and this wife Occonomy of theirs was carried through all the Provinces of their extenfive Empire $m$. It is however remarkable, that farce in any of the Countries they poffeffed there are ftill remaining more authentic Monuments of thefe ufeful and ftupendous Works than in Great Britain, which with indefatigable Fains and molt extenfive Learning have been ftudioully traced, accurately defcribed, and the Stations on them.with as much Certainty as might be pointed out by our induftrious and laborious Antiquaries n.

- The Romen Ronds, while yet in a great Meafure intire, appenred of fuch amazing Grandeur and Solidity, manifefted fuch a wonderful Sagacity in the Defign, and fuch prodigious Labour and Expence in the Execution, that it is no Wonder, in the barbarous Ages fucceeding the Ruin of that Empire, we find thefe noble and ftately Works confidently. alcribed to Giants and Art magic. The Intention of thefe military Ways was worthy of the Genius, and expreflive of the Policy, of that wife and potent People. They were fo many Links or Lincs uniting the Provinces to the Scat of Empire. They extended therefore from Rome to the Limits (howercr remote) of her Dominions. To form fome Idea of them, the lhorteft and furef Method is to confult the I'entingerian Tables. It is evident from hence, that they were very numerous, and the Certainty of this is confirmed by the Remains which are fill to be feen in many Countries. In our own, as Camden obferves, they are moft vifible, or, in other Words, beft preferved, and the Manner of their Conftruction (by which they have lafted more than Twelre Conturies) moft apparent in wild Eleaths, over which they were carried, becaule near Towns and Villages they were pulled to Pieces for the Materials. In the Itinerary afcribed to Antoninus there are Fifteen Roads, with the Stations marked upon them, and the Diftances between them in Miles, which, taken all together, make a Total of Two thoufand Five hundred and Seventy-nine Miles, the Conftruction of which muft have neceflarily confumed much Time, required much Toil, and demanded immenfe Treafures.
n Jeffiry of Monmouth who tranflated, and thofe who give any Credit to the old Britih Hiftory, afcribe thele Roads to the Kings Molmutius and Belinus, who governed here fome Ages (as they fay; before the Coming of J. Cafar. But our moft ancient and authentick Authors, fuch as Gildas and Beda, affirm, that they were made by the Romans, and they have been vesy juftly fellowed by the Learned. Ranulph Higden gives us an Account of the Four great Roads, which are alfo mentioned in our old Chronicles in Verie as well 2s Profe. Richard of Cirencefter, a Monk of Weftminfter, who died about A. D. 1400, though his Work hath been but lately publithed, gave another and more capious Itinerary, in which he removes the Caftra Alata from Edinburgh to Invernefs, which gives a Colour to the old Notion, that a Roman Road once went from Cornwall to Caithnefs. Our ableft Authors on our Antiquities, viz. Leland, Camden, Somner, \& c. have incidentally treated this Subject. Others have written exprefs Commentaries on the Itinerary of Antoninus, as Robert Talbot, William Burton, Dr. Thomas Gale, Dcan of York, and Salmon's New Survey of England is a Book of the fame Naturc. The Itinerary was firft printed at Florence A. D. $1519,8 \mathrm{vo}$. So much as regards Brituin was publimed by Harrifon at the Clofe of his Defcription of Britain, A. D. 1587. from MSS, and upon this Edition Burton wrote his Commentary A. D. 1658 . F. Jerom Surita publifhed his correct Edition of the whole Itincrary, with his. learned Annotations thereon. Col. Agrip. A. D. $1600.8 v o$.

of GREAT BRITAIN.

The Saxons, when they became Mafters of the Southern Parts of this Ine, Shewed very great Refpect to thefe ancient Roads, as plainly appears by the Names they beftowed upon them, and which are indeed the only Names that they are now known by to us, and very probably they were not themfelves wanting, in their flourihing State, in providing in this refpect for the publick Convenience ${ }^{0}$. But the Inroads of the Danes, which occafioned fuch general Defolation, had no doubt dreadful Effects on thefe. After that, the Norman Conqueft feems to have been attended with no more favourable Confequences in refpect to the Trade, than with regard to the Agriculture of this Country. It may be, however, that even down to this Period fome of the principal Roads were in tolerable Condition, which might make the People lefs anxious about repairing them, or providing new. But the long Continuance of our Civil Wars were attended with fill more fatal Effects; and when the Nation had Time to breathe, we fird fome Laws were made refpecting a Point at all Times of fuch apparent Utility, and which at that Period were become of indifpenfible Neceffity ${ }^{p}$.

When the intcrior Peace of this Country was reftored, and, in confequence of that, fome Attention Rhewin to the Encouragement of Induftry, the Parent of our domeftick Trade, as this began to extend, it from thence became requifite to take more fable Methods for a conftant and regular Communication, and this at length produced, in respect to Roads, a Kind of Syltem, which hath been altered in many Particulars, as the Changes in the Times and in the Circumftances of the Pcople rendered it necefPary. I. Yet this Syftem and thefe Changes by no means anfwering the Ends

[^118]Ends of a growing Commerce, a new Mode was introduced towards the Middle of the laft Century, which hath been generally followed in this, by applying to the Legiflature to eftablih Tolls for amending old and making new Roads, fo that by a gradual Extenfion of thefe, which are called Turnpike Ways, the whole Kingdom is become much more pervious than it was in former Times; an Advantage flowing chiefly from thefe Taxes, impofed indeed by Parliament, but impofed on a juft Fore. fight of the Benefits they would produce at the Solicitation of thore by whom they were to be paid r. It was in confequence of this judicious, tho' expenfive Arrangement, that our Roads became fafe, fpacious, and have generally fpeaking been kept in good Order ; and by the perfifting in this Mode, thus recommended by its good Effects, the Land-Carringe of this Country correfponds at prefent in a great Degree with its Commerce, and as Plenty obeys the Call of Induftry, we find both fpread by this means into almoft every Corner of the Illand. The Benefits arifing from thefe Improvements are equally numerous and obvicus, though more admired perhaps, at leaft more confidered, by Foreigners than by ourfelves. For to fay nothing of the Appearance of the Country, to which thefe beautiful and commodious Roads add no fmall Elegance as well as Convenience, Land-Carriage, which arifes folely from them, is a Matter of prodigious Importance, if we confider the Amount of the Sums it cofts, and at the fame time advert to the Circumftances connected with its. Let us, for Example,
gers and Carriages. For the Remedy of this, it is enacted, that in every Parifh, Surveyons af the Highways shall be annually chofen, and the Inhabitants obliged, according to their icferetive Properties, to find Labourers and Carriages, for a certain Number of Days, to work thercon. This Law was in almoft every fubfequent Reign reviewed, altered, varied, added to, or amemied, that, to furm a juft Notion of the Subject, required no fmall Time, 1'rtience, and Application, as the Reader will perceive, who confults the Title of Highways in Bunn's Juftice. But all the'e Acts, for the Edfe and Bencit of the Nation, are repealed, and the Substance of them all red:ced into a fingle Sratute.
$r$ As the great Object of the Romans, in their ftupendous Roads and Caufeways, was the fafe and fpeedy March of their Armiss, and preferving a certain and confant Communication betwecn their Stations, fo the principal End of ours is, the promoting Trade, and both I prefume to be equaily well calculated for the obtaining their refpective Enc!s. If the Syffem, which hath been fated in the former Nute, had anfwered, there had been no Need of Turnpikes, and it is only from the good Effects that they have produced we have feen them fprcad. The Attention thewn by the Legiflature, in regulating the Commiffioners and other Officers; the Size, Extent, and othor Circumfances of the Roads, the Number of Honfes, the Weight of Carriages, the Breadth of Whecls, as well as the Rate of Tolls, with a Multitude of other Paticulars, pioves an Intention of approacheng at leaft to Perfiction in the Plan. If this is lefs vilible in the Execution, it is to be iniputed to the common Fiailijes of Men. Be this as it will, the compatative Excelleme of thefe Roads, and the coninual Advantages flowing from them, incontettibly prove the Fruth of what has been advancedin the Text.

- That the $P_{\text {i }}$ oduce of Land Cariagge, conftant and extearive as it is, munamount in the Whole to a prodigrous Sum, is as eafy to comprehend as it would be difficult to calculate. But it is aevershelefs certain, and which is of $m$ ore Cunfequease to the Community, is cont omaily

## of GREAT BRITAIN.

Example, contemplate the Size and Burthen of thofe numerous British Caravans, if the Expreffion may be permitted, I mean our Stage Waga gons, which are in conftant, continual, and regular Motion from one great Town to another, and from all of them to the Metropolis. Thefe are Machines of confiderable Price, and are attended with almoft daily Expence in regard to Repairs. Let us lik ewiic tae into View the valu.ble Cattle by which they are drawn, and which are alfo maintained with Care and Coft, fupplying from their Employment a very comfortable Subfiftence to Multitudes of honeft and induffrious Familics t. Let us to thefe join the numerous, commodious, I had almoft taid magnificent Inns, on all thefe fpacious well-frequented Roads, which we may truly fay peculiarly diftinguif this Country, and which at the fame time maintain and fupport Numbers in different Stations u. To thefe let us add thofe great Towns that are become fo either purely or principally from their Situation on, and the Benefits which they derive from, the Roads that pals hard-by or directly through them w. Neither muft we forget the Rife of Arts, from the in-
creafed
increafing. As Convenience directs, they in fome Places employ Pack-horfes, fome of which carry near a Quanter of a Ton; in others, Carts. Stage Coaches, exclutive of Paffengers, carry a great dcal, fo do many new-invented Machines for carrying Fifh, \&c. Our Stage Waggons' are reftrained by Law to Six Horfes, and to a Ladiog of Three Tons, which fhews they could carry more. Of all thefe Conveyances ncar Sixteen hundred fet out from, and of courfe return: to Lunton, fome Six Times, fome Three, many Twise, and almoft all of them Once a Week. All this, or at leaft the far greaten Patt of this regular and beneficial Intercourfe between the mont diftant Parts of this Illand has arifen within the Compals of a Century.
In Cafes of this Nature, Inftances only can make Things plain. On this Head, Two honourable Perfons have obligingly put it in my Power to give the following authentick Particulars. A frone complete Stage Wangon (Wond and Iron W'ork ircluded) may coft fiom Fifty to Seventy Pounds. The annual Repairs of fuch a Waggon may amount from Fourteen ti) Twenty Pounds. The firft Coft of Eight Horfes, One hundred ind Sixy Pountis; One and fometimes Two die in a Year. Harnefs tor thefe Horfes from Sixteen to Twenty Pounds. Annual Repairs at louft Three looncis. A Waggon, that is, the Bed or Body of it, may laft fome Yeais: if in conltant Work the Expence in Shoeing, Fieding, Inns, Turnpikes, and Drivers Wages, cone to Twe.ty Pounds a Wick. It will be evident, from the Confideration of thefe Circumfances, that all which hath been faid in the Text ic well founded, and that Land Carriage encourages Inc:aftry, promotes Circulation, and give: Bread to many Thoufinds.
"It is a juth Obfervation, that nothing, can afford a clearer ludication of we trate State of a Country and its Inhabitants, than the publick Inss. In fome of the chirf Cities in Germany and the low Countrics they are highly commended; palfable in France, cellebrated at I. yons, plentiful and cheap in Swifferland, indiferent in Itals, worfe in Spain, an: still worfe in Poinad. In this Country thy wate nut furmeriy what they now are. Butincis and lieafure fepport them, and confant Fmulation hath made them, in melf, commodious, in fome Places fpleudid. In Lonton fome Inns are a Sort of Magazines and Warchoufes, where Commodities and Manufactures are depolited till fold. In both Town and Country they are harge coftly Buildings, pay: high Rents, and, befides their Owners and their Familics, maintaia a very large Number of Servants and Depridents.
w The Adrantages arifing from fpacious and well-ordered Roads produced an Application for Twinpikes, the very Expence of which is an inconteftable Proof of their real and permanent Uii-

## 254 The POLITICALSURVEY

creafed Cultivation of Lands, rendered eafy as well as requifite by their Means, as the different Condition in which they now are, to that in which they actually were a Century paft, fufficiently and inconteftably prove $x$. All thefe Circumfances, duly weighed and maturely meditated upon, fully demonftrate the Rectitude of that Principle on which thefe flupendous Improvements were undertaken, and which do fo much Honour to the Activity, Vigour, and Steadinefs, with which in fo fhort a Space of Time they have been and are fill carricd on, with fuch evident Advantages to Individuals and fuch general Credit to the Nation.

Amonsg the almoft innumerable Benefits that have arifen to us from the great and gradual Improvement of our publick Roads, there is one that deferves more diftinet and deliberate Notice, which is the prodigious Convenience it affords, for the conttant and regular, as well as quick and certain Correfpondence by the Post y. This Manner of conveying Intelli-
lity. The conftant Facility of Carriage hath produced Manufactures where there were none before, or probably ever would have been, but from this Circumflance. By this and other Benetits feveral- Villages have, even within our Memory, grown into fubftantial Towns. Muit of the larger Towns are likewife increafed, as is evident from new Houfes and additional Buiidings. A regular Communication always effees this; we fee it in the Territories of the United Piovinces; and the Accounts we have of China will feem lefs wonderful, if we reffeft that in England and Wales we have fome Hundreds of Towns on our grcat Roads.

- The Facts afferted in the foregoing Note will fcarce be difputed, but the Inference in the Text poffibly may. Many think the great Increafe of Towns, and the reigning Inclination of Jeopie to refide in them, hath a vifible Tendency to depopulate the Country, and therely leffe: its Trodice. But whence does this Defire of living in Towns proceed? Becaufe Induftry ca:bles People in Towns to live better. Numbers living better, muft create an increafe:l Conrumption. But of what? Moft clearly of the Produce of the Cuuntry. If therefore the Confumption be intarged, the Cultivation muft be augmented inproportion, and thofe employed therein be confequentiy bencfited thereby? The Voice of Reafon feems lowd, but the Language of Facts is ftil !conder. Ail the Lands in the Neighbourhood of thefe Towns, from which Lands, the Inbabitanis, occafiomal Vifitants, and Paffengers, are fupplied with Milk, Butter, Cheefe, Lamb, Maton, Veal, and Beef, are much raifed in their Value, and not a lithe improved by Plemy ot Manure, which Towns confantly fupply. It may be faid, this regards only lafturage. It wound le fuid with Trath, if thefe People ate no Bread. But by the Help of their Turnpike Roads tiacy.may receive Corn and flow from even diflant Maikets.
y We find the Invention of Pofls attibuted by Herodotus to Cyrus the Great ; and his Succeffors in the Empire of Perfia appointed One handred and Elenen Royal Stations or Font-houfes, to convey their Edicts from, and Intelligence to their capital City of Suza. The Cructs and Romans adopted this Perfian Infitution. The noble Roats of the latter conabied them to give this ufeful Defign the moft regular Eftablifhment. They liad Inns at proper Diftances, and intermediate Stares for Honfes, and dferwards Carringes. Charlemagne fettled Poofts as Emperor thro' all his Demniaions. Lewis XI. revived them in France. All thefe were clicffy, if not wholly, for the Service of the Pritice, and not calculated for publick Bencfit. It was fo when firf introduce: here, and the Ufe made of Poon-houres was only to furnifh Horfes, the Rate of which were in the Rcign of Edward VI. fixed at One Penny a Mile. In Queen Flizabeth's Time, Mr. Randulph was chief Pofl-maftcr. The foreign Merchants, however, chofe their own, till falling our amongh themfelves, the City defired that Queen to appoint one. For fome time after the Ma-

## of GREAT BRITAIN.

gence was adopted many Ages ago in other Countries, and even in our own, but in a very rude and imperfect State, till the Long Parliament in the Reign of Charles the Firft reduced into foms Order what. had been befure a Thing of little Confequence, and, by giving it a regular and uniform Eftablifhment, may be faid to have ftruck out the Rudiments of what it now is z . This was much improved and legally fettled by Parliament foon after the Reftoration ; and the feveral Branches of it, foreign as well . as domeftick, very judicioully regulated, and the Rates of Poftage adjufted on moderate Terms. This Method was attended with fuch beneficial Confequences, that in the Reign of Queen Anne this Plan, with a few Alterations, was very prudently extended to all the Britifh Dominicns in America as well as Europe, the Authority of the Poft-mafter General in directing the Opcrations of fo vaft a Correfpondence, according to the Directions of that Law, being judged effential to the Unity of the Eritifh Empire, and is confidered, in that Light, as one of the moft memorable Acts in our Statute Book a.

In virtue of this well-confidered and.judicious Eftablifhment, the Object of this important Inftrument of publick Utility was fo effectually promoted, that it received continual Augmentations, efpecially by the Introduction of Crofs Pofts; and by a Law in his prefent Majefty's Reign fome new Regulations were made for rendering the Carriage of Letters cheaper
nagement of Correfpondence was in the Hands of private Perfons, who carried it on at their own Expence, and for their own Advantage.
= In the Rcign of Charles I. this Point came to be confidered in a proper Light, as a Thing that might be renderad bencficial to the Crown, and of infinite Utility to the Nation. A. D. 1635 he publifhed a Jroclamation (Foctera, xix. p. 649.) regulating the Rates of Poftage, forlidding private Pofts, and pointing out what we filie the North and Weft Roads, to that probably if the Troubles had not broke out foon a mer, the Poft-Office might have been graducliy brought into good Order. A. D. 1644. the Parfiament, having this Matter under their Conffderation, beftowed the Foreign Office on the Earl of Warwick, and the Inland on Edmund Prideaux, Efquire, an cminent Lawyer, who made great Savings, and introduced a regular and excellent Eftablifhment. About Nine Years afterwards it was farmed to Mr. John Manly, and when Cromwd was Protector he made his Secretary Joln Thurloe Poft-mafter.
a By Statute 12 th Car. II. Cap. 35. the Pofl-Office is completely and moft difinely regulated in reference to the Rates as well of Foreign as Inland Letters, the Revenue ariling from it given to the King, and all private Pofts (except the Letter:Carriers to the Univerfitics) abfoluteiy fuppreffed. By Stat. 15 Car. II. Cap. 14. the Wine-Litence and Poll-Office are both fetted on Jumes Duke of York. By Stat. 9 Annx, Cap. 10. the former Laws in reference to Poots are an of them repealed, and a new Syften effablined through the whole Extent of the Britilh Empire, This is put under a Poft-Mafter General, who is anthorized to appoint Poft-Mafters at Edinburgh, Dublin, New York, \&c. and through all the Provinces on the Continent, and in all the Briifa Ines in America. Rates are fettled for Letters Foreign and Inland; and in all Parts of Scothand, Ireland, and America, and by Autbority of the Paniliament of Great Rritain, the fame Powirs reguifite to the Execution of his Office in England are vefted in him and his Deputies in all thefe Comatries.

## The POLITICAL SURVEY

and morc commodious, the Prudence of which has been vifible in its Confequences, and in the amazing Increafe of Correfpondence b. The Revenue ariling from the Pott, the Confideration of which is not our preient Concern, though in itfelf very confiderable, is of all others the moft chearfully paid, on account of the fingular Bencfits that attend it. The Amount of this Reventue ferves as an Index to thofe prodigious Advantages that from it are derived to the Community, and is an inconteftable Demonftretion of the otherwife inconceivable Intercourfe carried on with the utmoft Facility, Celerity, and Security, through the wide Expanfe of the Britilh Dominions $c$. By this alfo, which is an additional Emolument to Society, a very large Number of Perfuns in very different Situations of Life find full Employment, and, according to their different Stations, derive from thence a conftant and fuitable Subfiftence. We may alio from the State of the Poft Office in feveral Periods, which we can eafily and certainly know, collect a tolerable Notion of the comparative Progreis of our Induftry and Commerce d. A Thing of fingular Utility in iticlf, and which perhaps,
b By Stat. 3 Geo. I. Cap. 7. a Claufe in the laftmentinned Act, directing Seven hundred Pounds a Week to be paid every Tuediay out of the Poft-Office Revenue into the lexchequer, for Thirty-two Years, is made perpetual, and carried to the General Fund. The Privilege of franking, or exempting their Letters from the Charge of Poftage, had been allowed to Members of both Houfes of Parliament, from the legal Eftablifhment of the Pof Office by Warrants from the Crown; but was allowed, and put under proper Regulations, b; Stat. 4. Gco. III. Cap. 24. In the fucceeding Year this important Eftablifhment was again revieved, and improved by Stat. 5 Geo. III. Cap. 25. This ACt, procceding op the Balis of Queen Annes Law, extends the Bounds of the Poft Oifice in America, reduces and regulates anew the Rates of Poftage, provides for the Security of all Letters and Packets intrufted to this Conveyauce, and makes many neceffary and proper Amendments.
c The Romans, improving on the Perfian Model, not only looked upon their Capital as Miftrefs of the World, to the very Limits of which (according to their Apprehentions) their Ronds had been fretched. They went yet farther ; they held their whole Dominions to be an Extenfiono:ly of their City, and thefe prodigious military Ways, no mure than fo many lengthened Strects of Rome. With at leaft equal Propriety may this Idea be adapted to our own Country. By the Valour of our People, the Wifdom of our Counfels, and the Bleffing of Provinence on both, our Empire is as extenfive as we need wih, through which the Directions of Government and the Applications of Subjects circulate with regular Facility; the Correfpondance of all who are concerned in Commerce is carried on with uniform Frecdum and Certainty; and, whenever difpofed to return from her moft diftant Dominions, the Mother Country communicates to her Children all the Rights of Citizens. Britain therefore is truly, in refpect to her Provinces, the Seat of Empire, the Center of Commerce, and the Haven of Repofe.
d The Convenience of a regular Correfpondence was abfolutaly reçuifite to Trade, and from shence the Condition of the one indicates in a great Degree the State of the other. Sume Hints on this Head Mall be given; but the Accounts of the Poft-Office, which would fet the Point in a clear Light, are not in a private Perfon's Power. When Mr. Edmund Prideaux was Inland Poftmafter, A. D. 1644. he was fuppofed to colleft about Five thoufand Pounds per Annum. The Parliament farmed the Pofts, A. D. 1654. to Mr. Manley (Scobell. 358.) at 10,0001 . After the Reftauration, A. D. 1664 . Daniel ()Neale, Efq; farmed them (Stat. I 5 Car. II. Cap. 14.) at Fwenty-one thoufand Five hundred Pounds. In A. D. 1674 they were let (Chamberlayne's

## of GREAT BRITAIN.

with the fame Clearnefs of Evidence, can farce be accomplimed any other Way.

As fafe and fpacious Roads by Land are in many refpects highly cemmodious, fo thofe Conveyances, which the Chinefe call emphatically Water-Ways, are of equal Utility and Convenience, and are even fuperior in Point of Cheapnets and Facility. The Three famous navigable Rivers in South Britain, Thanes, Severn, and Trent, afforded in all Ages fuch apparent Proofs of this, and the Benefits derived from them were fo numerous and fo obvious, that thro' a long Series of Years they were confidered as abfolutely perfect in their natural State, fo that no farther Attention was paid to them, than was requifite to keep them free from Incumbrances, and for the Prefervation of their Fih. But when the Eyes of the Nation came to be gradually opened in refpect to Commerce, it was difcerned that, fine, pleafant, and profitable as thefe Rivers were, they might be made ftill more fo by the removing fome Defeetse. This being done with Succefs, occafioned a ferious Confideration of the Condition which other Rivers were in, from Shallows in fome Places, the Rifing of their Beds from injudicious Cuts, their being incumbered with Rocks, Stones, or Rubbin, and other natural or accidental Impediments, by which they were rendered unfit for Navigation.

Tue Confequeace of this was, the forming many Projects for removing theic Inconvenicncies, as manifeftly appears by various Conceffions from

Prefent State) at Forty-three thoufand Pounds. "At the Acceffion of King James, A. D. 1685 , the Pofts were cftimated (Stat. I Jac. II. Cap. 12.) at Sixty-five thoufand Pounds. All thefe feem to be the net Producc. At the Revolution, A. D. 1688, the grofs Amount was Seventy-fix thoufand Three hundred and Eighteen Pounds. In A. D. 1697 it was, aceording to Dr. Davenant, Ninety thoufand Five hundred and Fiveu Pounds. In A. D. 1710 the Stat. 9 Annæ fays they were One hundred and Eleven thoufand Four hundred and Sixty-one Puunds. In A. D. 1715 the grofs Amonnt of the Inland Office came to One hundred and Forty-five thoufand Two hundied and Twenty-feren Pounds. In A. D. 174.4 the lame amounted to One hundred and Ninety cight thoufand Two hunded and Twenty-fix Pounds. But the total grofs Amount of both Inland and Forcign Offices (which can alone demonflate the Extention of our Correfpondcace) was isat Year Tiwo hundred and Thirts five thoufand Four hunded and Ninety two Pounds; and Twenty Years after, vir. A. D. 1764, the grofs Amount was Four hundred and Thirty-two thoufand and Forty-cight Pounds.

- Lh order to fet this in a proper Light, it will befufficient to remark, the n:ble River of Thames was navigable from Lechlade to Oxford; and from Bercot, Seven Miles below Oxford, to London. In the Tlime of James l. the removing this Stop in the Navigation from Oxford to Eercot, which the growing Communication by the River rendered vary troublefome, came to be confidered as a Thing of Importance. After much Deliberation on the Means, a Law was obtained for this Purpofe, which however was not carried into Execution. But the great Utility of the Meafure remaining as obvious as cver, the Attempt was renewed, and the Navigation of thefe Seven Miles gained in virtuc of the Powers granted by Stiot. 21 Jac. I. Cap. 32 . which hath proved highly benencial, by bringing the Produce of feveral Counties to this Metropolis, and making them Returns of various Nereffarits from hence.
the Crown, in order to facilitate fuch Defigns; which however, from a Variety of Caufes, were attended in general with little Effect f . In Procefs of Time Applications of the fame Sort (for the Idea of their Expediency ftilldubfifted) were made to the Legiflature, and feveral Laws paffed, and large Powers were given, for this excellent Purpofe. But even thefe were attended with rather lefs Succefs than might have been expected, from a Concurrence of tinifter Accidents, to fome or other of which many of thefe well intended Undertakings were found in their Progrefs to be unluckily expofed g. But however iome of them happily fucceeded, which, by the local Advantages they produced, abundantly proved the wonderful Utility of fuch Endeavours, and were in many other refpects attended with the moft beneficial Effects h. As, upon reviewing them, it feems highly probable that feveral Attempts of this Kind mifcarried, from their being prematurely undertaken, before there was a fufficient Fund of Wealth for the Support of fuch expenive Improvements, the Profits of which were in fome Degree contingent, and perhaps alfo before domeftick Correfpondence
'There are many Inftances of thefe in the 1 th Tome of Rymer's Fodera, particularly one in p. 686, impowering Commifioners to render the River Wey navigable to its Fall into the Thames. It is evident from the Commiffion, that this River had bcen navigable in former Times (which might be the Cafe with others) but was grown foul and choaked at this time, which Impediments the Commiffioners were directed to remove. This was effectually done thro" the Care and Induftry of that eminent and worthy Patriot Sir Richard Wefton of Sutton Place, whom we have already celebrated for his cxcellent Treatife on Brabant Hubbandry, which Samuel Hartlib pubiifhed. This hath been exceedingly beneficial to Surry, and to fome Parts of the adjacent Counties, but more efpecially to the ancient Town of Guildford, and this contributed to keep up the Defire of improving Rivers, notwithftanding tome Attempts failed.

8 We may collect this from various renewed Aets, and others for enlarging the Powers formerly granted. Indeed nothing can be more difficult than to calculate the Expence which may be requifite in fuch Undertakings, in proportion to which the Duty or Tonage paid the Proprictor or Proprictors is fixed. The Conftruction of Locks is tronblefome, and at the fame time chargeable, fubject to continual Repairs, and, from a Variety of Caufes, often incertain. From hence it hath fometimes happened, that, after an Act obtained, it hath been many Years before the Works have been cominenced for carrying it into Execution. In the Cafe of Worley Brook in Lancainire, for making which navigable an Act paffed 10 Geo. II. Cap. 9. nothing was done at all till the Duke of Bridgewater's Canal was undertaken, and then this Circumftance being ftated in the Preamble of the Act, Powers are granted for applying the Water of this and fome other Brooks for making and fupporting his Grace's then intended Canal from Worlley to Salford.
${ }^{\text {b }}$ In the Firf Place, we ought to name the River Lea, commonly called Ware River, which falls into the Thames at Blackwall, and in this Point of Light was the firf River diftinguifhed by the Care of the Legiflature. Sce Stat. 13 Eliz. Cap. 18. Bclides this, there are Twelve other navigable Streans that fwell this noble River, and it may be half as many more, which Art and Expence might alfo render navigable. Inftances of the fame Kind occur in other Parts of the Kingdom, as of the Avon in the South, which falls into the Sea at Chrift Church in Hamphire. The Lugg and Wye in the Well, which fall into the Severn. The Aire and Calder in the North, which, after their Junction, fall into the Oufe, and with it into the Humber, by which Rivers (fince they were rendered navigable) the Manafactures of Leeds, Wakefcild, \&c. find a fpeedy, fafe, and hoit Paflage to the Port of Hull.

## of GREATBRITAIN.

had acquired fuch a Confiftency, as to make Plans of this Nature appehr evidently of fuch Importance as they really were. It is therefore not at all unlikely that feveral of them may be again refumed and carried into Execution, more efpecially if we reflect how much better thefe Things are now underfood, and how many new-invented Methods have been of late Years introduced, which may be applied to bring them to Perfection, or at leaft to that Degree of Perfection of which they are capable.

But, befides thefe, there are other Conveyances by Water, that in the Light in which they are here confidered certainly deferve Notice. It hath been frequently and very truly obferved, that South Britain may be fo interfected in Seven or perhaps more Places, by the Junction of Rivers, as to produce a regular inland navigable Correfpondence between the Ports upon the Eaft and Weit Seas. A Thing of fuch vifible Importance and Utility, and at the fame time fo apparently practicable, that we may juftly wonder it hath continued fo long in Contemplation, without being carried into Execution i. In North Britain, fince this Work hath been in the Prefs, the Junction of the Clyde and Forth is actually and effectually undertaken; and the Interfection of that Part of the Ifland between Inverlochy and Invernefs is fo apparcntly feafible, that, as hath been already fhewn, it might with little Labour and at no great Expence be at any time accomplifhed k. In
i The Correfpondence between London and Briftol being very expenlive by Land, and tediors ly Sa , it was natural to endeavour at finding tome Means of leffening at leaft, if not removing thefe Inconvenicucics. In order to this, it was propofed to make ufe of the Avon which runs to Brifol, and the Kennet which falls into the Thames; but it does not appear this ever went farther than Specu'ation. In the Reign of Charles II. a Bill was brought into the Houle of Commons, to unite, by a new Cut from Lechlade, the Thames with the Avon that paifes through Bath. Cap: in : $:$ manton propofed the fame Thing, by uniting the Thames by the Charwell, to the Avon ly whe $S$ :our, and fo to the Severn, with only Eight Miles of Land Carriage. It feem'd necelfary is mention thefe, becaufe it may become requifite to review and fix on fome one of them, in a inture Seafou, when, in confequence of a Method to be hereafter explained, a Communication flu!l be actomplifhed between Hill, Liverpool, and Briftol. For, in that Cafe, fome fuch Communication by Watcr will be necellary to maintain that Intercourfe between the midland Counties and the Capital, which is of lo great Confequence to both.
${ }^{k}$ It is not in be doubted that thefe direst Canals between the Two Seas will be of great and general Ufe. That which is now carrying on between the Forth and Ciyde will, in its Progrels, as well as when liniihed, evince this. The Number of People employed in the Work muft occalion a great Confumption, and of courfe encourage the raifing Provifions, to the no fimall Emolument of the Lamdholders. They will receive a Confideration for cuting through their Lands; In ouher Words, a Premium for fuffeing their Eftates to be improved. By the very Cutting, the varions Strata will be made known, and probably feveral valuable Foffils dificovered that otherwife would never have been difelofed. Many who come as Labourers, will fettle there and be. cone Tnhabitants; and the Sums of Money which this great Work will coft muft be fpent in and gradnally circulate through this Country, which will have a verx vifible as well as beneficial Eiffect on the Lands and the People by that time it is finifhed. A Circumftance of prodigious Coalequence confidered in a national Light, as it will put it immediately and effectually in theis puwer to improve all the local Advantages this Canal muft necelfarily produce.
reference to artificial Canals, there have been feveral, and thofe too very confiderable in this Country, made at different Times, for different Purpofes, and by different Nations. As for Inftance, Cardike or Caer Dike by the Romans; moft probably in the Days of Agricola, Forty Miles in Extent, connecting the Rivers Nyne and Witham, which the Remains of it, ftill vifible, fhew to have been Twenty Yards in Breadth, and which ferved for conveying Corn and other Provifions between their Stations in Northamertonfhire and Lincolnhhire I. Offdike or Offa's Dike, made by the Saxons from Briftol to Chefter, of which there are alfo fome Remains, generally fuppofed to have been for Defence againft the Britons, but which poffibly might ferve for other Purpofes affo. Foffdike, cut in the Reign of Henry the Firft (if in truth it was not Part of the Cardike) for the opening a Communication between Lincoln and York, by the Trent and Humber, which Canal, now filed a River, is about Seven Miles in Extent m.

Add to thefe, as we may very jufly, the more modern Navigations through the Fens, which are large, commodions, and extenfive, of the lame Kind with thofe in Holland, of fome Canals in France, and even of thofe in China, though inferior more efpecially to the laft, the greateft Part of the Traffick of that mighty Empire being carried on, and that too with much Facility and Safety, by thefe Water Roads n. If therefore we

1 What is foid of this noble Canal, which does fo much Ilonour to the Romans, in the Text, is from Moretun's Natural Hiftory of Northamptonhire, p. 513-515. But the very ingenious Dr. Stukeley, in his Medallic Hiftory of Caraufius, p. $123,125,138,149,100,168,188,198$, 202, gives a much larger, and which fcems to be no improbable, Account of this Roman Canal, which he thinks derives its Name from Caraufas, not from his making, but repairing, formring, and enlarging it According to this Gentleman, he founded the City of Granta, wut of which Cambridge arofe, and, beginning a Canal from thence, joined it to this, and bronght down thereby prodigious Quantitics of Grain, from the fertile Corn Counties, for luppiying the Garifons. He alfo mriatains, that he continucd it on from Lincoin to 'orkfay, where falling into the Trent, the Natigation was carried to the very Extremity of the Roman Province. Though the greatef Part of this Canal be either filled or grown up, yet in fome Places it is ftill vifible and full of Water, the raifed Road running by it is alfo very apparent. This Affair, to which our old Antiquaries were Strangers, deferves to be more exactly inquircd into.
$m$ It did not feem neceffary $t$, take Notice, in the T'ext, of thofe artificial Crecks made by Cuts into Rivers, as an Bevericy in Yorkfine, becaufe of this we have already fooken, Vol. I. p. 174, 175. or of that at Chichefter, which is exceedingly convenient to this fmall ncat City, which carries on a very great Trade in Grain, and in fome Years hath ceported Thirty thouland Quarters. I will take this $O_{\text {p }}$ portonity of adding, that a Propofition was once made th the City of York, of veftroing its ancient Honour as a Sca Port, by cutting a ftrait add capacious Canal into - the Humber, through which Veffels of contiderable Size might have come up from the Sea directly, which muft iave been highly advantageous in many ictpeets to this anci-ut, famous, and well feated City, which eertainly deferves to be embellifhed and improved, as well as refected and admired.
${ }^{n}$ As our great Roads over all Europe came in the Place of military Whys made by the Romans, fo their Camals foved as Mode's for Ours, Suciocius (in Claudio, Cap. i.) fpeaks in Ad:

## of GREAT BRITAIN. 26I

have been later in more generally adopting this Mode, it may be afcribed to a Variety of Caufes; fuch as our having many other Ways of Communication, lefs adapted to thofe Regions, our Country being not of fo latge Extent as to render this Method indifpenfably neceffary, and the cutting fuch Paffages through the Lands of private Perfons being lefs agreeable to the $\mathrm{Na}-$ ture and Spirit of our Government. But when, through an Alteration in the State of our Trade, our Manufactures, and our Circumftances, fuch Communications appeared to be really neceffary, there could no reafonable Doubt be entertained of their being found exceedingly practicable, as vety few Imprevements have been made in other Parts of Europe, which, under pröper Management, fupported by fteady Perfeverance, we have not been able to introduce here, and this very often with fuperior Advantages to thofe which were our Models. A Circumftance that ought to be ever remembered as a juft and rational Encouragement to new Undertakings of every Kind, provided they are of national Utility ${ }^{\circ}$.

These Obfervations are exceedingly material to the forming diftinct and accurate Notions of our lateft Improvements, which can never be obtained
miration of the Canal made by Drufus, which diverted the Waters of the Rhine into the Yffel. The Junction of the Menfe and REine, by a Canal Twenty-three Miles in Length, was made by Curbalo (Tacit. Anmal. Lib. xi.) to avoid a Paffege by Sea, and at the fame time to employ the Troops. Hence thefe Water Communications have been fo much eftemed and praftifed in the Low Countries and the United Provinces, where the Making and Management of them is pertertly well undertond. In France the Canal of Briare unites the Loire and the Seine. It is Thinty-threce Mifes in Extent, and is of great Utility in facilitaring the Correfpondence of the Capital with the Provinces, to their mutual Benefit. It was begun in the Reign of Henry IV. and finifhed under the Direction of Cardinal Richelien. It hath Forty-two Locks, for paffing each of which the Proprictors reccive a finall Duty, which is doubled or civen trebled in Exigencies of State, and the advanced Duties let to Farm for the Bencfit of the Crown. The Canal of Orleans joins the fame Rivers, but it is fhorter, and hath only Twenty Locks. Almoft every City and freat Town in China, not immedintely feated on a Lake, a River, or a Canal, hath a navigable Cut into one or other of them, by which they are plentifully fupplied with Fifh and all Kinds of Water Fowl, and have a cheap and conflant Communication with their Neighbours. The grand Canal which paffes from Canton to Pchin in a ftrait Line is upwards of Eight hundred Miles in lergth, havings Seventy-five Locks, and Forty-one finc Cities on its Banks. 'The Emperor lath near Ten thoufand Veffels thereon, for madpring Provifions, Nanufacture, and the Tributes of the Provinces to his Courts. Kirchai Chin. Mhoft: lib. v. Navaret. lib. i. Cap. Ig. Le Comte, tom. i. p. ${ }^{50}$. Gemelli Carreri, lib. i. c. 5. Du Halde, tom. ii. p. 186.

- Imumerable Inftances might he produced in Support of this fropofition In refpect to Mi nerals, a Premium brought to Lieht Cobalt, which, without a Premium, hath been alfo difoveredin North Eritain. It was a Reproach calt on this Country, that it would not fodnow Il es or Corn in Plenty. Experience thews, whout Comfe. It was find a Century and an that aro, that we cotht have no good Horles; we have now as fine a Beed as any in Eurofe. la the former Note we have enumerated mot Sorts of Water Communication, and in the Courte of this Chapter it will manifully appear that we have already many, and may have them a! fo far as is expedient for the Size and Condition of this Country. It is inded trac, that Canals for carryigg on luland Navigation are new and lately introduced, fo as not to warrant great Comanendations, but the Profpect is fair, and why fhould we not enjoy it?

## $26_{2}$. The POLITICAL SURVEY

but by confidering maturely the Natures of them refpectively, the Time wherein, and the Circumftances under which, they were entered upon or accomplifhed; for thefe will fet many Things in a clear and true Point of Light, which muft have teen otherwife left in Obicurity, for want of Room to enter into long Difcuffions, by this means rendered unneceflary, becaufe every Reader's own Reflection will point out fuch Caufes as mult effectually anfwer that Endr. The Superiority of Water over Land Carriage, where the former is intirely free and perfect in its Nature, is fo great, that it was never difputed; and to the Advantages arifing from this alone, feveral Places owe that flourinhing State in which they are and have been for Ages, the Ufe of this Navigation being at all times felf-evident. But the transferring thefe Benefits, though in fomewhat an inferior Degree, to Rivers not navigable in a State of Nature, could be no otherwife effected than by the Interpofition of Art, invited thereto from the Views of Utility and Profit 4. The Fen Navigations were in a gecat meafure the Refult of Situation, and perhaps from that Circumftance beld to be impracticable in any other. We have however of late feen, as hath happened indeed in other Cafes, that this was not a well-founded Conclufion $r$.

P It hath been already remarked, that one Kind of Indunfy, and one Specics of Improvement, makes Way for another. When Property was readered fecure, Agriculture bocame an Art, which was a Drudgery before. When Intereft took Place of Ufury, Trade reared its Head. As the Rate of Intereft was reduced, it began to cxpand. As Wealth diffufed, Manmfactures were every-where introduced; but they continucd only to crecp, till Cicdit gave them Wings. Commerce fpread abroad, Plantutions were fettled, Britain took the Lead. She defended the Liberties of Europe, the Nations confided in her publick Faith; her Empire grew, her Traflick extended with it. Induftry increafing, required frefh Aids. New Ports were opened, old ones inproved, thefe demanded new Roads; and national Vigour fill fivelling, Inland Narigations are become necellary to promote univerfal Connection through the Syftem.

9 Thefe cannot be always intimately and efiectually united. When a River is rendered fo far navigable, as that Veffels laden can pafs through it, and the Freight and Lock Duties are confiderably inferior in their Amount to Land Carriage, Proprictors foldom incline to fpend more Money to render the Paflage (even where that is practicable) fill more commodious, which would be neverthelefs admantagcous to the Pubiick. This, as Things fand at prefent, is an Evil that farce admits of Remedy. On the other side, publick Bencfit is fo much the Object of the Legirlature, that the Duties are ofen fo limitcd, as to confrain the Proprictor not to cary his Improvements beyond what thofe Dutics will bear, and from one or other of thefe many of thofe Defects arife, which are, though very unjufty, charged in gencial upon River Navigations.
r In China they have a Tradition, that in very early Ages their whele Country was overfowed, drained by Dint of Labour, a great Part of the Water either confined to Lahes, or cartied into the Sea, and the reft difpofed in the Canals which interfect that Empire. In the United Provinces the fame Caufe hath produced the faine Fiffects, in refpect to Dikes and Canals. In Ircland thev alfo have a Tradition, that the Marhes arofe there from an Extravafation of Rivers, which renders Improvements of this Kind very enfy in that Ifland. This being vifibly the Cafe likewife in our Fens, might very well cflabling an Opinion, that only fuch a Soil was capable of fuch Communications; and this cuce prevailing, prevented any Attempts in our Inland Counties to procure Conveniences, of the Want of which their luhabitants were however fufficiently fenfible.

## of GREAT BRITAIN.

A Nobleman of the Firft Rank formed a Defign of making a Canal from Worlley Bridge to Manchefter, in the County of Lancafter, for the carrying thither his Coals; which not being barely for his own, but alfo for the publick Benefi', an Act of Parliament paffed in Anno Domini 1759, to enable him to undertake this Work, with all the proper Cliufes for fecuring the Advantages that had been propofed to the Community. After the Canal was actually begun, it was thought practicable to carry it over the River Irwell upon Arches, and fo over Trafford Mufs to Longford Bridge, which made another Act neceflary; and fuch a Law being obtained, this ftupendous Work was carried into effectual Executions. The Value of this Mode of Navigution came from thence to be better underftood, and the very extenfive Ufes to which it might be applied were more clearly comprehended. In confequence of thefe Difcoveries it was determined to carry the Duke of Bridgewater's Canal over the Rivers Merfey and Bolland, and to continue it to that Part of the River Merfcy, overagaint the Hemp Stones, in the County of Chefter, where that River is naturally navigable, and the Paffage confequently open to Liverpool. The Powers requifite for the Performance of this made a Third Act neceffary, which, upon the Petition of the Inhabitants of the Country through which the propofed Canal was to pafs, and who were to be benefited by it, was likewife obtained, the Duke taking upon himfelf the whole Expence, and this without demanding any Augmentation of Tonage '.

[^119]
## 266 The POLITICAL SURVEY

through which thoy are to pafs, and not barely one or two, but reveral Counties that are to Thare the Benefit of them, with this remarkable Circumftance in their Favour, that in no Part of this noble Inand colld fuch a Communication be of more Ufe, the Number confidered of large, and many of them manufacturing Towns, in its Vicinityy. All Kinds of Provifions, but more efpecially Grain, will by their means be rendered cheaper, and kept to a more equal Price. For by furnilhing Manure from great Diftances at a low Rate, and giving a quick Carriage even to remote Markets, the Canal will excite an active Spirit of Cultivation, and the Certainty of obtaining a fpeedy Supply at a fmall Expence will render an unreafonable Rife of Corn, where it has been in Times paft frequently and fatally experienced, for the future in a great meafure impracticable. Many bulky, but at the fame time very ufeful Commodities, fuch as Flint, Free, Lime, Mill, Grinding, and Paving Stones, Marl, Slate, Coals of different Kinds, Marble, Alabafter, Iron Ore, will find a much eafier and cheaper Paffage, and of courfe reach many more and thofe too better Markets, than they can be carried to, circumftanced as they are at prefent.

Frequent Additions will probably be made to thefe natural Riches from the Difcoveries that muft arife from the cutting through a Variety of Soils in the Progrefs of this great Work, fome Inftances of which have occurred alrcady. Befides, the Staples of thefe feveral Counties may be carried farther, in greater Quantities, and be notwithftanding afforded at lower Rates, luch as Timber from different Parts of Lancahire, the Salt and Cheefe
either End foremoft. As to Fquipage, 2 Man, a Boy, and 2 Horfe, are to belong to cach Boat ; and as the Canal will be fupplied only with Water fufficient for the Navigation, held up by Locks, and without Stream, the Hurfe will without Difficulty draw a Boat, and occafionally Trwo or Thrce of them. From this Account, the real Advantages which will attend this new Mode of Convejance, more efperially for heavy, cumbrous, and yet cheap Commoditics, is fufficiently apparent.
y The Account of thefe Canals in the Text will not convey a proper Idea of their Utility, without taking in the Feafibility and Facility of their Extenfion, upon which it in a great meafure depends. In order to comprehend this clearly, we muft recollect the grand Canal of China, the nobleft Model of Inland Navigation in the World. The primary Object of that is, connecting Canton with the Capital ; but what renders it of univerfal Benefit are, the Cuts made into it from every City and great Torrn. Our Canals, as defcribed in the Text, thew that their primary Object of opening an inland navigable Communication between Briftol, Liverpool, and Hull, fo long wifhed and fo little expected but Forty Years ago, will, when they hall be completed, be abfoIntely attained. A Thing no doubt of very fignal and national Importance, which will, notwithftanding, be in its Value very much enhanced by the Canals joining thefe from numerous tradeing and manufacturing Towns, fome of which are mentioned above, all of them ftanding in nced of fuch a Conveyance to onc or more of thefe Ports, and which muft receive infinite Bencfit by fo cheap, fo eafy, fo commodious, fo certain, and fo regular a Correfpondence with each other. With great Reafon, thereforc, have the Gentlemen of Staffordhise called their Canal the Trunk, in Allufion to the numerous Branches that are expefted to fpring from it. But, helides thefe, may we not, without pretending to fee far into Futurity, conjecture that this Spirie of improving by Inland Canals will fpread into feveral other Parts of this Inland?

# I of GREAT BRITAIN. 

of Cherhire, Earthen-ware from Staffordhire, numerous Articles from Birmingham, and all the various Manufactures from Manchenter and other Places; will be relieved from a Variety of Impediments under which they. have hitherto laboured. Raw Materials of every Sort will be conveyed with much more Eafe and Expedition to the feveral Towns where they are wrought up, and, when manufactured, will with like Facility be carried to the Ports from which they are ufually hipped, either Coaft-ways to different Parts of this, or into other Countries. Thus Agriculture, Manufactures, domeftic Trade, foreign Commerce, and every Species of Induftry fubfervient to all thefe, will be evidently and in a high Degree promoted by this Inland Navigation, to fay nothing of the Numbers who will live and be comfortably fubfifted by it. It mult however be acknowleged, that fome Objections have been made againft, and fome Sufpicions fuggefted, as to Inconveniencies with which it may be attended z . It is but Juftice to obferve, that thefe are in their Nature far more incertain, and at the fame time of much lefs Confequence, than the Benefits that have been before ftated, nor would it be at all impoffible to find Remedies for them even if they hould happen.

In the Profecution of thofe numerous Improvements that have been made in the Two laft Centuries, new Inftruments and a vaft Variety of Machines became neceffary, and many fuch have been invented which have

[^120]
## 268 The POLITICAL'SURVEY

been here and elfewhere employed with fo much Succefs, as to raife the Character of our Artifts to the greateft Height over all Europe. Our Implements in Agriculture are not more ingenious in their Conftruction, than ftrong, neat, and accurate in their Execution, fo as to be admired and imitated by Foreigners, where-ever that Science, of fuch general Utility, is encouraged and efteemed a. What is now ftiled the new Hurbandry, and which has exercifed the Thoughts and Pens of the ableft Authors abroad, was the Invention of a practical Farmer here. In regard to Carriages alfo, we at leaft equal other Nations in the Beauty, Lightnefs, and Convenience of fome, in the Strength, Utility, and fkilful Contrivance of others, fuited for all the Purpofes in which they can be ufed either for Pleafure or Profit. In regard to thofe Machines which act by circular Motion, it is thought the Dutch excel in fome Kind of Wind Mills; but in reference to thofe moved by Water, for preparing Metals which are to be ufed in different Manufactures, as well as in fuch as are ufed in thofe Manufactures of different Sorts, we fucceed better than moft of our Neighbours by their own Confeffion b. In the feveral curious and arduous Contrivances requifite in the Management of Mines, we have little Reafon to envy them, though thefe are allowed to be Things in their own Nature of the utmoft Difficulty, and where there is the greateft Neceflity for abridging Labour, which

[^121]in moft other Cafes is unpopular with usc. The Dexterity fhewn in adapting Machines to a Variety of Intentions, which have been introduced in many new Undertakings, that might otherwife have proved impracticable, does great Honour as well to this Country, as to the prefent Age.

In nothing hath this been more confpicuous, than in the laft-mentioned of our Improvements, that is, the navigable Canals, which have been chiefly conducted by one original Genius, fo fertile in Refources, that hi-- therto no Obftacles, hawever formidable, have put a Stop to his Defigns. He was prepared for his Operations above, by his Knowledge in conducting thofe under Ground, in the Coal Mines at Worley, fo that the Difficulties which occurred in the Progrefs of the Canal, though they appeared new, or rather were fo in the Sight of others; were not beheld in the fame Light by him ; for his Acquaintance with the Mechanic Powers, and what Experience had taught him of their Effects, produced a Confidence which was held for Temerity till the Event lhewed it was well founded d. But his Works being publickly carried on, their Principles were quickly underftood, his Refources became known, and he readily contribuing both his

[^122]
## 270 The POLITICAL SURVEY

Advice and his Affiftance, we fee thenrextended under his Direction with equal Spirit and Succefs. There is little Doubt to be made, that whenever: thefe great Works fhall be completed, and their Confequences evidently difplayed, they will be imitated in many Places. As little Reafon is there to queftion, that though this, like moft new Undertakings, appeared fingular and furpriling, yet, when thoroughly inveftigated, it may be difcovered, that thefe Water Conveyances e, or at leaft fome of the new Machines employed about them, are capable of being applied to other advantageous Ends, efpecially in fo inquifitive'and enterpriling an Age as this, when every Attempt to promote publick Utility is not only fure of meeting with favourable Notice, but likewife, in proportion as it appears to be practicable, of Encouragement and Support,

With all thefe pregnant Advantages, there cannot furely be the leaft Doubt made, that we have from the Commencement of the prefent Century rendered this noble Country much better than it was, and brought large Quantities of Land, which is the bef Proof of national Improvement, into Cultivation. At that Period, if we may credit the beft Judges, it was computed that One Quarter of it was almoft abfolutely wafte, and near Half as much more but in a little better Condition $f$. If this Kingdom was then in that State, the other two were certainly in a much worfe, though all of them, even then, in a State of Improvement, in comparifon to what they had been in the Courfe of the preceding Century, during which however confiderable Efforts had been made. Of the Truth of all this, there wanted not fufficient Evidence to convince any candid and confiderate Inquirer. From the fame Kind of Evidence, that is, from the Income and

- It is not improbable, that by the Help of fuch Canals running on the Sides of Hills, an:I thereby intercepting the Waters of Springs which difcharge on the lower Grounds, confiderable Tracts of marfhy Lands might be converted into fine Meadows. By diverting fuch Springs, and taking fome inconfiderable Streams into fuch Canals, poffibly a Remedy might be found for that Deficiency of Water, which is the chief Caufe of the Difficulties occurring in Rivers rendered navigable by Art, or at leaft the Number of Locks in them might by this means be diminifhed. The Junction of navigable Rivers by the Intervention of fuch Canals hath been long efteemed practicable, and one may with a Degree of Probabiiity conjecturc, that in no great Space of Time fomething of this Kind will be undertaken, for the Expediency of which many Reafons might be offered.
$f$ In the Computations by Mr. King, referred to in the Text, the Number of Acres in England is fixed at Thirty-ninc willions, and no more than Tiventy-one Millions allowed for both Arable and Pafture Lands. Half a Million is affigned for High Roads, Foot-paths, and ufelefs Waftes; Ten Millions for Heaths, Moors, and barren Lands, valued at Twelve Pence an Acre; and Three Miilions more for Forefts, Parks, and Commons This Gentleman had great Opporrunities of making and of correfting his Calculations, by having recourfe to the publick Accounts of Hearth Money and other Taxes, which now no longer fubfin. Dr. Davenant, and other political Writers, reafon upin his Computations, and declare them, as far as they could difcern, to be very confiftent and exact ; hut this muft be underfood with a Degree of Latitude, as precife Exactmels is not to be hoped for in fuch Computations.

## of GREAT.BRITAIN.

Produce of Eftates, the general Face of the Country, the apparent Condition and Ciicumftances of all Ranks of People, together with the Income and Expences of the Publick, it is inconteftable that numerous and great Improvements have been made, though it would be no eafy Matter to bring thefe under any fatisfactory Form of Calculation 8.
-Bur this wonderful Improvement hath been effected in different Ways, for of what was then cultivated there was much capable of Melioration; there were more Forefts, Woods, Coppices, than there are now, befides wide Tracts of Land that have been brought to yield both Grafs and Corn, which were then underftood to be ufelefs and barren. The fame; though in a lefs Degree, hath unqueftionably happened in North Britain and Ireland, as the Marks before-mentioned appear vifibly in both Countries, and thofe Marks are fuch as cannot poffibly deceive us h . Itno-way derogates from the Truth of this Affertion, that there are ftill very large and confiderable Spaces of wild and wate Grounds, and feveral Hills, Mountains, and Moors, that are very fufceptible of Cultivation; for thefe, whatever their Extent, are but the Remains of what formerly were much more frequent, and ferve to put us in Mind of what muft have been the Cafe when even this beft cultivated Part of the Inand was in the State before-mentioned i, There

6 The ingenious Author of the Eflays on Hußbandry, P. i. p. 85. computes, that (exclufive of Scotlind and Wales) England contains Thirty-four Millions of Acres, and of thefe he conceives there may be Fifteen Millions of Arable Land, and thinks we cannot hope to bring above One Million of Acres more into Cultivation. But if, throwing Wales into the Calculation, we have actually Fificen Millions of Arable Land, we thould in proportion have Twenty Millions of Meadows and Panures, for furelyzing Oxen, Sheep, and Horfes are evidently increafed as much as the Produce of our Arable La ad, if fo, we flould not have Five Millions of unimproved Acres in all England and Wale int whoever conliders the Forent, Heaths, Moors, Commons, and Mountains, flill vifible in different Parts of the Country, will probably think they amount to more. Thefe Differcinces may be very well accounted for, if, inflead of eflimated or common, we have recourfe to fquare Statute Miles and Acres, for, according to Dr. Nehemiah Grew's Calculation (fee Vol. II. p. 6.) there are of fuch Acres upwards of Forty-fix Millions in South Britain. After all, there will be much of Conjceture in Things of this Nature; yet from Facts, our having made very large Improvements, as is alferted in the Text, is not at all. lefs certain.
h In reference to North Britain, we need only to look into the Intereft of Scotland confidered, which was written by Mr. Lindfay, Provoft of Edinburgh (particularly P. 45. 46, 47.) to be informed of the almoft invincible Bars to the Improvement of Agriculture in that Country in former Times, and the Caufes of that Dilatorinefs which appeared in Cultivation, even when thofe Caufes were happily removed In regard to Jreland, confult, A Collection of Tracts relating to the prefent State of that Illand, printed for T. Woodward, A. D. 1729, 8vo. In thefe may be feen how this Country recovered from a deplorable State of Poverty and Indolence, and with what Vigour and Succefs Improvements of every Kind were purfued. See alfo the Hiftorics of feveral Counries in Irekiand, that have been poblifhed. Improvements began there A. D. 1690 , is North Britain, about the Commencement of the current Century.

- To form fome difinct Notion of this Matter, let us for a Moment confider a particular Infancc. The Weald, that is, the Will, Forcfl, or Chace, extended from Winchelfea in Suffex to

Thefe Remains ferve likewife to encourage that active Spirit of Induftry which produces publick Emolument, by Shewing that there is ftill abundant Room for its Exertion. It may not be amifs to remark, that at this Juncture thefe unpleafant Scenes ftrike us more forcibly from the Confido ration of the highly cultivated Lands in their Vicinity, which not a little deepen the Gloominefs of the Profpect, by feeming to reproach our Indolence k. I fay feeming, becaufe all Things cannot be done at once; atid that, notwithitanding this, Things are really in that improved State which we have afferted them to be, will admit of fome farther. Teftimonies, which it may be proper therefore to produce.

There are Two Sorts of Lands, that appear particularly to have been within this Period rendered in a fuperior Degree beneficial to the Community, from the fingular Attention that hath been Shewn to their Improvement. The Firft Sort are fuch as have been either wholly or in Part overwhelmed by falt or by frefh Waters, fo as to be more or lefs unprofitable till by Art and Induftry recovered. The latter, fuch as from their Situation and Circumftances had for a long Series of Years been in a lefs advantageous State of Cultivation than that of which they were naturally capable,

Rivers Hill in Kent, a valt Tract of Land above One hundred Miles in Length, and about Thirty in Breadth, comprehending nearly Two Millions of Acres. This the Britons called, as the Saxon Chronicle informs us, Andrede, i. e. Marvellous; or Coide Andsedc, i. c. The Mighty Wood, and the Saxons the Wyeld. It was a rude, uncultivated Wafte, overgrown with Wood; for reclaiming which, the Saxons laid Parcels of it to the Farms in the Neighbourhood, for fecding their Tenants Hogs, being efteemed unfit either for Arable or Pafture. Many of thefe Divifions, being Vallies, they filed Denes, and thofe who brought them into fome Cultivation gave them their own Names, as Halden, Ten\&\&en, Malden, \&c.. In Procels of Time, and in confequence of the Cufom of Gavelkind, thefe Dens are become by Divifion and Subdive parifon of what they were. The Soil of this whole Tract is much of the Nature, and hath been chiefly improved by Marl, of which they have feveral Kinds, and of winfent Colours. The inquifitive Reader may find full Information, in regard to this Subject, in a Treatife, intituled, "The Inrichment of the Wcald of Kent," publificd, but not written, by the famous Gervale Markham.
$\mathbf{k}$ As rich, beautiful, and fertile as many of the Lands about this Merropolis at prefent are, the County of Middlefex was formerly over-run with Heath and Wood. Of this, there want not pregnant Proofs at this Day. On the Eaft lies Epping or Waltham Foreft ; in the Reign of Henry VII. Hackney was in the Forcit. Stepney, or Stebonheath, thews in its Name what once it was. If we crofs the River Le:a, we come to Tottenham and Edmonton, Places detached from that great Wafte, of which Eufield Chace is the Remains. Cane Wood, Hornfey, Highgate, and Finchley Common, ftretch towards the Woods of Northaw and Southaw, and fhew what they once were, even in their prefent Condition. The Weft Side of the County is compofed of the Hundieds of Elthorn and Spelthorn ; in the former of thete lie the Parifhes of Northolt and Southolt, in the Saxon Language North and South Woods; the latter comprehends Houndow Heath, and the Warren of Staines. In the Time of Henry V. St. Ciles's Fields were' a Wood, in which the Lollards affembled. Thefe Facts, at the fame time they explain and juftify what is advanced in the Text, may alfo ferve to convince us, that in Procefs of Time all thefe Heaths, Woods, and Waftes now left, will gradually fall into fome Kind or other of Cultivation,
and to which within this Space of Time they have been happily reftored, as hath been demonftrated from the Confequences attending the Change in their Condition. Of both there we hall treat fuccinctly, as they are direct and pregnant Inftances of the Truth of what we have afierted I. The former are fuch as we ufually diftinguif by the Name of Fens, Marhes, Bogs, \&cc. of which thcre are confiderable Quantities both in Great Britain and Ireland. Romney Marh forms, as we have already fhewn, and therefore we thall not infilt upon it here, a very confiderable and a very profitable Tract of Meadow and Pafture ${ }^{\mathrm{m}}$. The wide. fpread Fens in the Counties of Northampton, Lincoln, Norfolk, Suffolk, Cambridge, Huntingdon, and the Inle of Ely, make a very large Diftrict. Thofe in Somerlethlire, of which we have likewife fpoken already $n$, when added to thefe, may be truly faid, more efpecially if we take in leffer Spots of the fame Kind in different Parts of the Kingdom, to be equal in Extent to one of our midling Shires, which renders them in the fricteft Senfe a national Object.

[^123]Ir is. in this Light that the middle Diftrict, that is, the Moraffes in Northamptonhhire, \&c. ufually filed the Fens, have been confidered fromi the Time of their original Draining under the Aufpise of Government ${ }^{\circ}$. The Direction and Seperintendence of this important Work has been efpecially committed to a Corporation, who have had the Powers given them by the Crown confirmed, and all their Concerns regulated, as to them feem moft expedient, and at their own Requeft, by Authority of Parliament. This publick Attention hath within thefe few Years been extended to an entire Review of their Syftem, making the requifite Alterations therein, conciliating the proper Methods for Draining and Navigation, which was a Point of equal Difficulty and Importance ; giving them Powers to borrow Money, for making their Improvements, to a certain Amount, and with fingular Advantages; affigning the necefliary Funds for difcharging thofe Loans, and in all refpects affording them whatever Helps and Afliflances they thought fit to demand p. By thefe Means, and their conflant Confidence

- Thefe Fens are frequently mentioned by our antient Civil and Ecclefiantical Iliftorians. It Ghould feem, from their Accounts, that they were mantained in tole able good Order under the Direction and Patronage of the Clergy and Monks. For in thofe Days they had many rich and potent rdigious Houfes feattered through them, fuch as Peterborough, Ely, Ramey, Cuoyland, Thomey, de. But after thefe were difolved, the Eftates belonging to them comins into pivate Hands, the Dikes and Drains fell into Deeay, and the Country coniequently was overflowed, and reduced gradualy into a wetched Condition. It feemed then necoflary that the Legiflame fhould interpole, as at length it did by Stat. 43. Fliz. Cap. xi. in the Title of which it is fiad, fome Hentred thoudad Acres wae its Object; this however was not carried into Exccution, many, and amoreft them fome fenfibic Perfons, fuch as Camden, Biitan. p. $3^{\text {oit }}$, thinking they ought whe kift as they were. King fanes I. who palfed Two Laws in favour of Draining, manifented however his good Intentions in this refpert, but proceeded no tarther. Charles I. by his Charter dated soth May, in the $3^{\text {th }}$ I'ar of his Reign, incorporated the Undertakes for draning the Creat Level, with Francis Earl of Bedfow at their Head. The Troubles having inturupted this gend Work, when there were Thoughts of refuming it, A. D. 1653 , the Oppotition, which was never filent, alledged, that the Fens produced as much in Reeds and sedge as by expenfive Drainingo In Anfwer to this, an Account was taken that Year, by which it appeacd, that Wheat, Burley, Cate, Hemp, Flax, Esc. on 28.000 Acics of drained Land, yielded in 3. (co I. After the Reftoration, the Corporation for draining Bedford Level was legally fettled by the wife and woll-weighed Stutute 15 Car. II. Cap. 17. on which fulid Bafis this important Undertahing bath wfted cree fince. Ihy Stat. 20 Car. II. Cap. 8. the Maner of taxing Lands for the Mantamace of the Works is fixed in the mof equitable Dianer. The difelicfs occafoned by dividag Commons vas remedied by Star. 1 J.c. IL.

F The Ditinition of North, South, and Middle Level; fecms to have been introduced, with no bad Litation, at the Clufe of the laft contury, viz. A. D. 1697 , but in Procels of Time was Froduetive of great Inconveniencis. A Debt was contractel of near 50,0001 . which bore particulaly hat on the Noth Level, which owed new ig, osol. the the Duhe of Bedford and the
 Bebs dete to brom was remittel, the other Debse baciated, the North levedexanted from the Dents of the Two othot, and they from thofe of the North Level. By Stat. a 7 (ico. II. Cap.

## of GREAT BR1奮AIN.

fidence in the Protection of the Legiflature, theifffairs within this Period have been brought into a very thriving and flourifiting Condition. In Proof of this we may fafely appeal to the advanced Inceme of their Lands, the Growth and Improvement of their Towns, the conftderable Inereafe of their People, the Augmentation of Trade, and the repairing old and makeing new Roads and other publick Conveniences. Evidences conclufive in alt Cafes, but particularly fo in this, as the Contraft between their paft and prefent Condition is not only very confpicuous, but, which does not always happen, is within Memory likewife. We may add to thefe, the feveral Applications made within thefe few Years to Parliament, and Afts procured thereby for feparate Drainings, which flews the increafing Vigour of this generous Spirit, and a Refolution in private Perfons to rifque very large Sums for profecuting fuch Improvements, by which many Thoufand Acres have been, and many more will be, rendered firm Land and fit for Cultivation q. It cannot be doubted but this Succefs will excite other Applications of a like Kind in reference to the Morafies fcattered through the reft of this Kingdom r.

In North Britain, from the Extravafation of Rivers, Overflowing of Lochs, the Redundance of Springs, and other Caufes, there are many. Marlhes, or, as they ufually ftile them, Mofies, in almoft every Part of

Debts of the South and Middle Levels, amounting to $27,440 \mathrm{l}$. Bonds given are to be affigned without Stamps. Credit refraincd for the future to 5000 . for the North Level, and 32,0001. for the other Two.

4 It is of Importance, to fhew the Truth of wint is fail in the Text, to remark, that the Grate level of the Fens contans Six hundred thoufand Acres; that a very large Quanity of thefe nate been dreined and rendered firm and dry Land, to the great Benefit of their refpective Ow:(1:, and hat there are (iometimes intermined with thefe) confiderable Trakts not yet fo comepiectiy dranced as they might be. The Owners of thefe, fecing the Regard hewn to the Corporation, have applied to Parlameat for the lowers requifie for Draining at their own Expence. In the Sctions in the 20th Year of his late Najefty's Reign, Two fikh Acts were obtained, in the aoth Four, in the 3 aft Tivo, in the 32 d One, and in the $33 \mathbf{3}$ Onc, by which many Thoufand deres were to be recovered and preferred. This anaifenty proves, that the Improvements in this Way are very great ; that they ane increafing; and that in the midit of an expe:five War our People had Spint and Fortunc: to parfue rina.in.
r It may not be improper to reamk, that though, from the great Fxtent and Confuntence of the Fous in the Gicat Level, bey occupied fo much of the publici Concon, other Places in a like State were by no meand neghe?e. This appars not only from Sir William Dagdates etawnate Tratife, butalfo from feveral Statutes, fach as 3: Hen. Vill. Cap. 11. 7 fic. 1. Cap. 2016817 Car. II. Cap. 11. 1o SiI W. III. Cap. 26. 11 Geo. II. Cup. 30. This demenftrates the Coatinance and Extent of this improving Spirit, fo finguhty honficial to ladivisaals and to the Publick. As to funtler Iarcets of wet and marthy fironende, of which there formerly were confiderable Quanticis in almolt every County, the greatelt Pat of ham (owatt where refervel for Peat, which in fome Places turns to great Prolit) have bee rembered diy and improved by their Owners, which alfo are fo many Acquintions to the Community, and very iap.riant too, if, as fome have computed, crery Ten thonfand Acres of Lanđ completsly drained adds a Million to the common Steck.

## 276 The POLITICAL SURVEY

the Country, which, fince a laudable Attention to the augmenting natural Advantages and removing natural Defects hath prevailed, have in a great Variety of Inftances been drained, or otherwife turned to beneficial Purpofes. As this nobte and publick-fíited Difpofition vifibly increafes, we may reafonably hope that a continual Progrefs will be made in fo falutary a Works. In our Sifter Ine of Ireland, through the frequent Calamities of Civil and Foreign Wars, by which Induftry through a Series of Ages was repeatedly interrupted, joined to the natural Caufes that have been be-fore-mentioned, this Country hath been more obnoxious to thefe Evils than almoft any other. Such Moraffes, Moffes, or Bogs, are there not only common, but alfo of large Extent, confequently detrimental, fo as to become the ftanding Reproach of One of the fineft Iflands in Europe. Yet fince publick Tranquility hath been effectually reftored, the Number of Inhabitants increafed, and Induftry and Science began to flourifh as they do now, the People in general have every-where more or lefs applied to Draining; and this with fuch Succefs, as to change many of thefe miry Plains into as rich and fertile Meadows as are any-where to be feen t. It muft however be confeffed, that, notwithftanding thefe fuccersfiul Attempts, there are yet remaining very confiderable Tracts of unprofitable Marhies. But the Means of reclaiming them are now fo well underftood, the Advantages from Draining fo generally known, the Circumftances of the Nation fo happily altered for the better, the Value of Lands fo much raifed,

[^124]and the publick Encouragement to noble and neceffary Undertakings fo judicioully given and to conftanty applied, that without being fanguine we may venture to predift, that all thefe fenny Bugs will be gradually recovered in every Price, to the Ornament, Honour, and Profit of that fpa.cious, beautiful, and fertile Illand.

Lv refpect to the Second Sort of Lands, which, though in themfelves never totally ufelefs or abfolutely uncultivated, were notwithitanding generally efteemed to be in a great meafure unprofitable, as well with refpect to ludividuals as to the Community, though the Ben. fits derived from bringing them into perfect Order may not have been larger than thofe arifing from the former Clafs, yet the Qiantities of Ground thas improved have been certainly more confyicuous u. For through the Courfe of the current Century it may be affirmed, that there hath feldom been a Seffions of Parliament in which one or more Laws have not pafied for the Dividing and Incloting of Commons, and this in almoft every Part of the Kingdom. The Method of obtaining fuch Acts of the Leginature, when that is neceffary, is by Petition from the far greater Part of the Perfons interefted, reprifenting that what they defire is for the publick Beneit, as well as for theit private Advantage w. The Act, when it is obtained, prowides that the Divition thall be made with general Confent, by Commiffioners converfant in the Natrure and Value of the Lands, who are impowered to give a Recompence fuitable to the Claim of every Individual who hath any Property

[^125]
## 278 The POLITICAL SURVEY

in the Commons intènded to be thus inclofed. As all thefe Tranfactions are in them?clves of the moit publick Nature, it fhould feem that every poffible Precaution is taken to prevent Surprize in the Firft Inftance, and to guard againt any Fraud or private Injuftice in the fucceeding Steps, as well as any Impofition on the Legiflature $x$. Yet it cannot be diffembled that very loud, and, what is more to be regarded, fome very ferious and in Appearance weighty Objections have been made to thefe Proceedings, tending to queftion titeir Confiflency with the Maxims of found Policy, and that Reverence which fhould be always paid to the publick Good. The chicf of thefe Suggeftions are, that Inclofing of Commons occafions Depopulation; that it alfo lefiens Tillage, which is the principal Support of the State; and that in many refpects it bears exceedingly hard on the indigent and at the fame time indultrious Part of the People. If thefe Points, or indeed any One of them, could be clearly proved, it would be decifive; but being allt dged only as fimple Suggeftions, many apprehend they have received atatisfactory Anfwers 8.

[^126]What feems more conclufive on this Head than any Anfwer, is the Continuance of the Practice for fo long a Courfe of Time, and after being fo frequently canvaffed in fucceffive Parliaments, to the Notice of which fuch flagrant, fuch fatal, and fuch evident Evils as thofe before-mentioncd, had they really exifted, muft have come, and would certainly not have been overlooked. It may be, that an accurate Enquiry by Authority into the Confequences which have actually attended the Divifion of Commons in one or more Counties, might fet this Matter in fuch a Light, as wholly to remove thefe Sufpicions, which however, with thofe with whom in reafon they ought to have had the moft, have had evidently very little Weight \% At all Events, taking Things as they ftand at prefent, Commons inclofed being on all Hands allowed to increafe in the Profits ariing from their l'roduce, fall manifenly under this Arrangement of Improverments. Indeed if it was otherwife, or Experience did not put the Fact beyond all Dippute, there would be no Inducement whatever to inclofe; and the very aiming at Improving in this Way, had the Error been but ence clearly detected, Applications of this Sort would have been long ago difcontinued. In North Britain, as anciently the Cuftoms of both Countrics were much the fame, they had and fill have many Commons, which are ufed in the fame Manner as here, and have been found liable to the fame Inconveniencies. To obviate thefe, a Law pafied not long after the Revolution, by which any Perfon, who hath a Right to the Enjoyment of a Common, may, by a flort legal Procefs, compel the Aflignment to him of an Equivalent for fuch his Right in Severalty ${ }^{n}$. In Ireland they have likewife Commons, which they confider as watte Grounds, incapable of being ren-

[^127]
## 280 The POLITICAL SURVEY

dered of the leaft $\mathbf{U}$ tility, otherwife than from Inclofures, by which alonc. and without any Cultivation, they are fpeedily brought into good Pafture.

We come now to the laft Head that enters into this Part of our Defign, which in truth hath been the folid Foundation of moft of the paft, and muft continue to be the perpetual Bafis and Support of all future Imprquements. This is the fupreme Power and continual Protection of Parliament, to which in all Times the Nation hath ftood alike indebted for her Welfare and her Safety b. The Authority of the one, and the Profperity of the other, have conttantly and uniformly advanced together. In more remote 'Times the Wifdom of Parliament, according to the then State of Things, was contpicuous in thofe Occurrences which were conducive to publick Benefit. In the Reigns after the Conqueft, they were very careful of our native Commodities, and conftantly ftruggled to preferve the Profits of them to the People of this Country; they repreffed the Encroachments of the great Men; they frequently affifted Induitry; they delivered thofe who exercifed it from Oppreflion; and if Improvements were but few and weak, it was principally owing to them that we had anyc. As Times mended, and Mankind grew more enlightened, we meet with fronger Proofs of their Attention and more vifible Indications of their publick Spirit. The Conftitution growing more perfect, thefe falutary Effects were more frequently felt, and became continually more and more confpicuous. When National Advantages were to be acquired, or Obflacles to publick Happinefs were to be removed, we find them the great and indeed the

[^128]sonly effectual Inftruments of fuch Meafures d. The Interefts of the Community, the Concerns of particular Bodies of Men, and even the Wants of Individuals, when any-way connected with publick Utility, were reprefented to them. The necefiary Points of Information weete generally, if not always, within their Reach, from their extenfive Means of Inquiry, and the diftinguinhing Marks of Truth arifing from the Freedom of Debate, in which the natural Diverfity of Men's Sentiments, and fometimes of their Interefts, making them exceedingly quick-fighted, became in a great meafure certain, more efpecially from the Forms of their Proceeding, every thing being fubject not to a Gingle, but to feveral and repeated Difcuffions, againft which Falhood or Fallacy are rarcly Proof e. But if even in any Inftance this Chould happen, or from Caufes unobferved or unforefeen, or, which is fill more frequently the Cafe, from the Vicifitudes to which all Events are liable, what was formerly well and wifely enacted comes to ftand in a different Point of Light, our Laws are not or ever were immutable, but may be altered, and this too in a Variety of Methods, according to the Nature of the Cafe. For befides a direct Repeal, where from its Confequences a Statute is difcerned to be either noxious or ufelefs, it is perceived to be improper only in Part, or capable of being ehanged for the better; this, according to the Ulage of our Legillature, may be done, what is injurious removed, and what is beneficial retained $f$.

Neither

[^129]
## 282 The POLITICAL SURVEY

Neither are thefe Applications for Affiftance or for Redrefs, in our Dayø at leaft, at all difficult or dilatory. Petitions may be prefented to the Parliament when fitting; and this in modern Times being annual, whatever can contribute to the Emolument or Eafe of the Whole or any Part of the Britih' Empire, more efpecially in regard to Agriculture, Manufactures, and Conmmerce, may be eafily, fpeedily, and certainly brought to their Cognizance, and fubmitted to their Examination. - In Matters of a very high high Nature and very extenfive Operation, Laws have been framed of a very comprehenfive Nature, and thefe fo well confidered, and made with fuch confiummate Prudence, as to regulate the moft weighty Objects, for a long Series of Years, with very few if any Alterations, conciliating thereby univerfal Efteem and Refpect E. If, after weighing well all there Circumflances (as furely they well deferve) we at the fame time advert to the Force and Plenitude of Parliamentary Authority, which extends to all Things, and to all Perfons Civil, Ecclefiatical, and Military, within the wide Limits of the Britifh Dominions, and that ready and chearful Submiffion which. their Decifions and Regulations meet with, we cannot help difcerning and being convinced, that the fpeculative Idea of living under the happieft political Eftabliinment, that of an abfolute Power, conftantly directed by the
cal Views even of the beft informed and beft intentioned Senates fo liable to fall fhort of the Putpofes they were defigned to reach, that fcance any law can be framed with fo great Prudence, or grounded on fuch folid Principles, as not from a Change of Circumntances to become the Source of at leaft temporary Inconveniences. For this, our l'arliements have a specdy, fuitable, and effectual Remedy, by fufpending fuch Claufes of a Law as cleate the Inconvenience, and this for the Space of Time this Inconvenierce may be fuppofed to fubfift. Thus in refpect to Cochineal, - magy Sufpenfions of the Aft of Navigation have taken place, on account of the Ufe of it in our Manufactures, that it might be imported (for a limited Time) from any Place, and on board Shipsof any Nation. Britifh-made Gunpowder, though to a certain Price exported with a Bounty, yet in vittue of Two Statutes may be at any Time prohibited by Royal Proclamation, or an Order in Council. In like Manner the Corn Law may be and hath been fufpended, and Exportation: for a time prohibited.
g We have already mentioned many of thefe wife and well-confidered Laws in the Courfe of this Chapter, and many more (if we had Room) might be mentioned, that come fully up to this Point, both as to the prudent Grounds on which they were made, and the beneficial Conlequencee with which they have been atrended. Such as the Act of Navigation, which hath been juftiy efteemel, the maritime and commercial Charter of Great Britain. The Act of Jonage and Poundage, the Metits of which, in refpect to Methed and Perfpicuity, are dearly pointed out by the ingenious Mr. Saxby, in his Preface to the Bitifh Cuftoms. The Aहts for recoining our Silver Money, by which the Nation was refored fiom inevitable Rnin by the Widdom, Steadinefs, and Authority of Parliament, by which, in the Space of a Year, all thofe Obitacks were overcome which fome very wife Men thought almoft infumountable. . The Statutes of the Third and" Fourth of Wm. and Mary, Chap. 8. and Eleventh and Tweifth of Wm III. (hap 20. freed many of our native Commodities and Manufactures from ail Duties on Expontation; and this falutary Meafure was farther promoted by that of the Eighth of Gco. I. Chap. 15. and by the fame Act' and a former of the Third and Fourth of Queen Atme, the' Duties ou many Drugs imported for Dyers Ufe (being duly entered) are taken away, to the great benefit of many of our Manufac.如號.

Dietates of Wifdom; Moderation, and Jütice, is, as far as human Contrivance can give it Confiftence, vifible in the Britifh Conftitution b, from which the Liberty; the Power, the Independency, the Splendour, and Profperity, of all its Subjects are, and may they ever continue to be derived!

In the Three former Chapters of this fecond Book, a fuceinct Account - hath been attempted, of the native Commodities, the copious Poffeffions, and genuine Funds of Wealth, which belong to the Britilh Ines. In the Introduction to this Chapter, the Propriety, and even Neceflity, of providing convenient and effectual Inftruments for the rendering thefe profitable, at leaft in any confiderable Degree, hath been fully explained. It hath likewife been hewn, that, through the Want of thefe for a long ${ }^{\text {S Series of Years, }}$ we were hindered from availing ourfelves of our numerous natural Advantages, which, if the Expreffion may be allowed, kept us indigent in the Midft of unemployed Riches i. Thefe Inftruments, we have rendered it evident, were gradually and fometimes but very llowly introduced, becaufe, however ufeful, they were not always, merely on account of their Novelty, pleafing or acceptable. It arofe from hence that, till Prejudices could be overcome by Experience, their Courfe was much impeded, in comparifon of that rapid Progrets with which they procecded when once, from a Senfe of their beneficial Confequences, they were fully eftablifhed. For, this being effected, they fpeedily made, as we have had frequent Occafion to

[^130]
## 284 The POLITECAL SURVEY

remark, a very perceptible Alteration in the Appearance of the Country ${ }_{2}$ and in the Condition of its Inhabitants $k$.

These fucceffive Improvements, by mutually affifting each other, enlarged on every Side, and fpread their benign Influences where-ever thev came. In confequence of this, the Produce of our Lands are become muchs fiperior to what they were herctofore, though our Soil and Climate remain nearly the fame. Inftead of exporting, as formerly we did, the greateft Part of our grofs Commodities, to be wrought up by Foreigners, and fometimes re-imported when fo wrought up, to be conlumed by ourfelves, wenow reap from them, together with their intrinfick Value, the full Profit of all that our own Induftry in manufacturing them can beftow, and, which is fill more, we import immenfe Quantitics of raw Materials from many: different and fome very diftant Countries, which we allo manufacture, and this not fimply to ferve ourfelves, but alfo for the Supply of other Nations, of which, if it was at all neceffary, innumerable Inftances might be given '.
k We have, in the former Chapters, according to the Extent of our Abilities, and the bef of our Informations, given the Reader a comparative View of our paft and prefent Condition in many Inftances, which it would be equally needlefs and tedious to recapitulate here. It may not however be improper to remark, that in the Reiga of Queen Elizabeth, when Cornwall had fiarce. any Refource but in her Tin Mines, we raifed from them to the Value annually of forty thoufand Pounds at moft, whereas we have raifed for many Years paft annually to Five 'Times that Value, though the County now hath feveral other and thofe too very confiterable Refources. We have before had Occafion to mention a Record in the Exchequer, 28 E.b.v. III. A. D. 1354 . in which the Exports from this Country are computed at 294,088 J. 14 s .8 d . which hath been lield (ihe Diference of the Coin confidered) to be equivalent to 737,0211. 19s. 11 d. of our prefent Money. It is true that Tin and Lead are omitted in this. Account, which would have fwelded it confiderably higher. To this we fall oppofe a fingle Article, of which we had then no Exporta-. tion, viz. Grain, and by this for Ninctcen Years, that is, from A. D. 174 万, to 1765 , there was. annually gained to this Nation, that is, exported and faved on the Home Confumption, after deducting the Bounty and the Price of all Corn imported within that Period, 947,954 1. 9 s. 7 d . which is a Proof not only of the Superiority of our prefent Circumfances to what they were Four hundred Years ago, but alfo, which is more to be confidered, of the valt Importance of our: Agricalture, of which this is a pregnant and indifputable Inftance.

1 To treat this Subject fully and fairly would require, as it moft certainly deferves, an ample Volume, which would do equal Honour to our Commerce and our Manufaftures. At prefent out of innumerable Articles, three only thall beiecommended to then camid Reader's ferious Confideran tion, viz. Flax, Coton, and Silk. For the Numbers of ufeful Hands cinployed in, and the Profirs thereby accruing from the firf, we may refor to the Liven Manufatures in North Britain and. Ireland, and to feveral Kinds of it alfo-in South Britain, which, though lefs in publick Fame, might, upon lafpection, be found not inferior to cither. The fecond we import in great Quantities from the Ealt Iodics, the Levant, and the Weft Indies. The Manufactures made from thence are very numerous and very valuable, giving. full Employment to many Thoufand induftrious Perfons of both Sexes. The fame may be faid with equal Truth of the Third, parsicularly vifible at Canterbury and in Spital Fields. Befides, the Mistures of them with each. other and with Wool conftitute a Varicty of Manufatures, and are thereby the Support of feveral of our moft populous and opulent Towas, too phany indeed, and at the fame time too welh

## of GREAT BRITAIN.

By the fe happy Fruits of Skill and Induftry, where-ever they reach, our Soil is highly cultivated, our Rents confiderably raifed, our Peoplelaproperly employed in a Variety of uffeful Occupations, our Trade increated, our Commerve extended, our Navigation and of courfe our Naval Strength augmented. Thefe Facts we have not barely ftated, but at the fame time have fupported them by Evidence, and illuftrated them by Inftances, that they night tee rendered clearer and more fatisfactory to the Reader.

Let us here then take a View of our prefent national Situation, and, as far as the Strength of human Penetration will permit, open our Eyes to the Profiect of what may be our future Condition, from the vigorous Purfiiit of our true Intereits with that Steadinefs and Perfeverance they deferve, and that Prclability of Succefs which ought to encourage at the fame time that it fo vifibly invites us. We have in our Hands all the rich Patrimony beftowed upon us by Providence, the fingular Prerogatives belonging to thefe Illands, and the immenfe Treafures of our numerous natural Productions. We have likewife the feveral excellent Iffrtruments invented by the Sagacity of our Anceftors, and, together with them, 'we have all their Acquifitions as well as their Example. But great as thefe are, and to the moit capable Judges they will furely appear very great ! thefe give us no Titce to be idle. We muft proceed if we intend to preferve, for we have not yet arrived any Thing near the poffible Summit of our Grandeur. With all thefe mighty and manifold Improvements, we may find Means to meliorate, and that in a high Degrec, what is thus fo happily improved already; and we have ftill, it eamot be repeated too often, very large Tracts of Land utterly unimproved. Thefe Iflands are unqueftionably capable of maintaining more than twice the Number of their prefent Inhabitants, and, which is more to the Purpofe, the very flourilhing Condition in which we: are, demands, for this very Reafen, the utmoft Exertion of our Abilities n.
known, to be enumerated here. It might be thought an Omiftion, if, before we concluded this Note, we did not obferve, that of the Fint Commodity we raife great Quantitics, excellent inits Kind, in different Parts of both In.inds. Of the laft, as excellent to the full as in any Part of the World; in fmall Quantities it is true, but enough to they that more might be raifed with Enfe and Certainty; the Sceond we chiefly import from our Territories abroad.
mall the great Empires the World hath feen have gradtailly grown to an unwieldy Bulk, and then as gractually decined, form internal Principles of Corruptiva. Moft of the fice Guveraments Hiftories record, though conftituted with nuch Wifdom, and for a Time conducted with great Virtue and publick Spirit, have in the End been fwallowed up. by Defpotifm, or crumbled to pieces by Factions. Ours is become an extentive and puiffint Empire, and is a free Government withal; and with this peculiar Privilege, that we have a permanent liticiple of Ficfervation arifing from our Power fpringing from Commerce, and this founded in wivus Species of Induftry, which. duly cultivated and properly attended to, wiil fuppore us tu: Ages jet to mme. We have Grandeur and we have Wealth, but we are not arived to fuch a Ditch, as that we may indulge ourflues in Loxury and Lazine $f_{s}$; I mean as a. Nation; for ia civery opulent free Coun-

286 The POLITICALSURVEY, \&c.
The Powers of this Country, that is, of the Two Britifh Inles, mun be augmented in proportion to their additional Dominions, or, to exprefs myfelf figuratively, to avoid much Circumlocution, but at the fame time Idope not unintelligibly. The Denfity of the Center of our Syftem muft be fo increafed, that the Force of its Attraction may be equally felt through the wide Expanfe of its Dependencies. The Means we have hewn to be clearly in our Pofieffion; and the Capacity of ufing them will never decay, while the great political Principle of Motion, our excellent Constitution; continues inviolate.
try there will be many lazy and luxurious Men. But the Bulk of this Nation fubfints, and muft crer fubfift, by a clofe and vigorousApplication to Hufbandry, Manufactures, and Trade; upon thefe our Pienty and our Power are founded, and by thefe our feemingly disjointed Dominiuns are firmly conncital. It muft be confeffed, that, in comparifon of former limes, all Ranks of Ieople live incomparably better. What then? Shall we grudge them the Fruits of thcir Freedom and Induftry. But will not this excite the Jealoufy of our Neighbours? Yes, cortainly. Rut it will kcep us alfo upon our Guard, and confequently always in Safety. But, with all this Parade of Induftry, and its glorious Effects, we have Multitudes of idle and indigent Peifons amongt us, the Maintenance ot whom is One of the heavieft of our Taxes. It maly be fo; but it it is, we from thence difern the Neceffity and the Facility of breaking up freh Lands, introducing new Manufuctures, and thereby enlarging our Trade, that thefe People may maintain themfelves and their Pofterity without either difturbing or diminifing the Induftry of others. I am fenfible that I have touched fome of thefe Points before, particularly at the Clofe of the former Volume. But, befides that the Importance of the Subject might atone in fome Degrec for the Repetition, I will very freciy own, nothing affords me fo much Pleafure as contemplating continually the Idea, that as its Limits are already, fo the Duration alfo of the Britin Empire may catend to the fame Period with the Globe.

## THE

## POLITICAL SURVEY

OF

## GREAT BRITAIN.

## B OO K III.

## C HAP. I.

Of the Condition of this Country in the Time of the Britons, as well before as after the Coming of the Romans.

THE Scope and Design of this Book fated and explained. The bet Way of "thanking a dijitinct Idea of the Confitution is, to trace the Progress of it from the cariujft Times. Very different and even contrary Accounts have bet giver: of the Firft Inbubitunts of there Ills. The Truth in this, as in mol other Cafes, firms to lie between the Extremes. An Attempt to form a probable Ac cunt of the State Things were in before the Coming of Safar. He found, at bis Arrival, an eflabliflued Form of Government amongst the Britons. They bad a Religion, Priefts, Ceremonies, and Sacrifices: As alpo a numerous Militia, Prong Towns, and other Places of Define. Probable;

## 238 The POLITICAL SURVEY

bable, thougb not certain, that they bad likezvife a maritime Force. The Druids the fole Magitrates, fudges, and Pbilofophers amongst thefe People. No Proof that they were abfolutcly without Arts, becaufe zee find none of thefe mentioned by Cafar. Thby bad botb a Domeftic Trade amongst tbemfelves, and a Commercial Intercourfe with foreign Nations, at and bifore this Period. Tibe Conftruction of their Fifbing Veflels or finall Craft very fingular and ingenious. The Emperor Claudius firft reduced Part of Britain into the Form of a Province. The Romans at great Pains to extend and to improve their Cionquefts: Found it neceffary to extirpate the Druids, and in grat Aranger from a general Infurrection. Julius Agricola effectually eftabliflecd the Roman Power and the Roman Form of Government in Britain. Carried their Arns and Trophies of Viezory farther than any of their-fucceeding Generals. The Britons adopt the Cuftioms and Manners, and fubmit to the Laws, of the Romans. Become very ferviceable to that Empire, and froms tbence are very bighly confidered. The Emperor Severus came over bitber, and ended bis Days at Kork. A fuccinct Account of Afjairs bere till the Time of Conftantine the Great. This Account continued to the Reign of the Emperor Iulian. Maximus afumes the Purple, and, in Sufport of his Title and Power, exbaufts in a great meafure the Force of Britain. Tije Romans, on the Decline of their Empire, at lengtb abandon this Country. Some Remarks upon the foregoing Hiftory. The Benefits and Adriantages derived to Britain from the Refidence of the Romans bere. Some Mifchicts and-Inconveniences occafioned by their Dominion. The diftrefled and diftructicd Condition of the Britons at and after their Departure. Form of Government adopted by them after their Retreat into Wales. Conclufire Obfervations on the Contents of this Cbapter.

THE proper Object of this Work was not by any means to add to the Number either of the Defcriptions or Hiftories of the Brition Dominions, but to apply fuch Materials as could be found in them, or in our Laws, to explain what hath been already, or what hereafter may be done, for the Improvement of thefe Ines, and the Emolument of their Inhabitants. In Profecution of this Undertaking, we have had frequent Occafions of mentioning the very different Circumftances in which they have been in different Pcriods of Time, and fometimes to mention the Caufes; but this hath been done as briefiy as might be, intending to give in this Book, as fuccinctly as poffible, an Account of the feveral Nations that have borne Rule in this Country, and the Policies they introcuced a. This feemed to be indifpenfably neceflary, to obviate what might otherwife

[^131]
## of GREAT BRITAIN.

otherwife be taken for Inconfiftences, to vindicate fome Affertions that may appear but lightly grounded, and more efpecially to do that Juftice it certainly merits, to our excellent Conftitution, to which our paft and prefent Happinefs hath been owing, and upon which it muft always depend. This, it is conceived, can never be fo perfpicuoully performed, as by fuch a regular Deduction, from which the Spirit, Genius, and Manners of our refpective Anceftors will be beft difcerned, the Influence of Government on the Temper and Condition of the People rendered evident, and from thence the various Viciffitudes thefe Countries have undergone, from better to worfe and from worfe to better again, may be fo clearly accounted for, and io fully explained, as to give the candid Reader that Satisfaction which he muft maturally wifh to have in refpect to fo interefing and fo important a Subject ${ }^{\text {b }}$.

Ir will appear from fuch a Deduction, that the Inhabitants of thefe Inles, even in the earlieft Ages, when their Actions firft furnifhed Materials for Hiftory, breathed a true Spirit of Freedom, had a juft Notion of its Advantages, and of the Miferies attending Subjection to defpotic Porver. Upon this Principle, therefore, they always Itudied to acquire and to preferve the former, and never failed, when they were fo unhappy as to fall under the latter, to continuc ftruggling againft, till the Yoke was removed. But at the fame time they were zealous for Liberty, it was a rational, practicable, and piofitable liberty they fought. They judged rightly, that Form of Rule muRt be the beft which enabled the greateft Number of People to live independently by their Induitry, and to draw their Subfiftence from the Fruits of their own Labour. They faw very clearly that this was not to de obtained,
produce national Prefulices. If there be any Thing in Nature certain, it is, that Manhind are Ciceadat mon the fanc souck; no is there any Thing more incertain, than the Origin of the Inlithituse of the feweral Countrics of which the Vord confifts. It is therefore to vary little Puppofe to examine what hath been written on fo very obfeure a Subject. But it is quite otherwife in refecit to thole Times, however early, of whica any probable Hinfury can be had. In regard to our nwn, we can nace it for upwards of Two thonfand Yuars, with at leatt as much Affurance of Truth as any Nation in Europe; and this is folly fufficient to anfwer ali the Ends of uffefill luformation, which is all we can expect or defire.

1. It is a Matter out of :all Douls, that the Beauty and cven the Fertility of Countries depend on the Policy, that is, on the Nature of the Government to which their Ini abitants are fubject. The Syftem of the Hebrew Republick rendered Paleftine the moft fruitul Region in the Eaft, now thinly peopled, and, in comparifon of what it was, a Defert. Spain, when inhabited by the Moors, was a pelfect Garden, a great Part of which at this Day lics wihd and wafte. The French Refugees, fetuled under the liotection of the Dutch at the Cape of Gcod Hope, raife on a finall Spot more, and mure valuable Productions, than are to be found in fome Hundred Leagues on the adjacent Confts of Africa. In China, wife Inftitutions male the Suil fruitfal, and the Nation numerous; now become fo populous, that they muft keep up to this high State of Cultivation, or ftarve. Our own llland of Barbadoes (its Size confidered) is wonderful, in the sich Crops it carries, all of them the Fruits of Skill, Indufty, and Expenicace.
but from the Force of Laws, to which they were willingly obedient, and for the Preferving and Recovery of which they frequently and vigoroully contended. Such a Syftem, or rather a Syftem of fuch Laws, is what we at this Day file the Constitution, and a moft excellent one it is, as hath in fome meafure been demonftrated already, and the Steps by which it gradually arrived at this fuperior Excellence will be hereafter traced; for fo folid, fo fuperb a political Structure, required Time as well as Science, and a Concurrence of many able and experienced Statefmen and Patriots to conftruct, repair, and, by gradually improving every Opportunity, to bring it to that perfect State in which it muft be our Duty, and that of our Pofterity, to fupport and to maintain it c.

In refpect to the Britons, who were the firft Inhabitants of this Inand, there is a great Variety, and indeed great Difcordance in Opinions, even amongft the moft Learned of our Writers. Some, without troubling themfelves about Authorities, treat there I'eople as naked, miferable, illiterate Savages, without Cloaths, without Houfes, except Hovels or hollow Trees, rude in their Manners, fierce in their Natures, without Arts, Civility, or Knowledge of any Kind. Others, following the Britilh Hiftory, deforibe them as a martial, potent, numerous, learned, and polite Nation, well known through a great Part of the World, who fent powerful Armies abroad, cquipped great Fleets, atchieved many Conquefts in foreign Countries, erected ftately Edifices, founded large Cities, inftituted Seminaries of Learning here at home, attracting thereby the Efteem, and preferving the Refpect, of thear Neighbours d .

[^132]
## of GREAT BRITAIN.

As in moft other Cafes, and efpecially in fuch as relate to Matters of Antiquity, Truth generally lies between the Extremes, and the fafert Way feems to be, the rejecting in a great meafure both of thefe Notions, the former having in it as much of Prcjudice, as there is of Partiality in the latter. The Britilh Hiflory may have, and indeed probably hath, fome fmall Ground of Truth; but this is fo mixed with Fables, fo blended with and cbfcured by idle Inventions, that there is no relying upon its Authority. But, waving this, "and taking to our Affitance better Guides, viz. Reafon and Experience, we may eafily difcern, that, though not a very potent of plite People, thefe ancient Britons, our primitive Anceftors, aeed not be degraded into abfolute Savages, merely bumpenthe Grecks and "Romans bertowed on themes well as all other Strationen tre contemptuous Appeligationaf. Barortis

Tine original augh of this Ift, even thofe who are filed Aborigines, didumenorertainly fpring up here out of the Earth, or fly hither over the Seas, but came from fome other Country or Countries in Veffels of tolerable Size, bringing, as we have before had Occafion to mention, Animals and many other Things with them; and this being the Cafe, it cannot be doubted that they brought alfo the Manners, Cuftoms, and in a certain Degree the Sciences, that had been introduced among the Pcople they left. Thefe Principles of Knowledge, they muft have great and frequent Opportunities of exercifing, in a Country overgrown with Wood, and which in that State could adminifter but little to their Subfiftence, without the Application both of Skill and Labour ; neither is it likely that thefe would have been found fimply fufficient, without the Affiftance from time to time of Supplics of different Kinds from their Parent and other neighbouring Countrics e. Thus far we have flated what feems to have

[^133]been probable, and therefore not very wide of Truth. Let us now fee how far this correfponds with Matters of Fact related by the mof authentic Hiftorians.

Britain was known to, and vifited for the fake of her native Commodities, by the Phcenicians and other Nations, as we have already had Occafion to hew, in very early Times. The Greeks were acquainted with it by Name at leaft Two hundred Years, and the Romans alio hefore the Days of Cexfar. There might therefore have begn true Hiftories written of what paffed within this Period, if there had been any Perfons able to write them f. Uulius came hither, he found, as himfclfatells us (and there cannot be beter Authotity defired) an entablifhed Syftem of Government, confifting in a Kind of princely Arifocy, compofed of many
 publick Tranquillity; but when Troubles arofe, on atracked by a fuperior Force, they confederated and chofe a Commander in Chief to lead their united Armies. Upon Cxfar's Invafion, they invefted Caffibelinus or Caffivellaunus, a Man every Way worthy of the Truft, with this furreme Authority, who by the other Princes, while the War lafted, was very punctually obeyed g .

They had a Religion full of Ceremonies, an Order of Priefts, and feveral Places of publick Worhhip. Thefe Priefts were the Druids, who were alio Senators, confulting together upon every critical Occafion, and in Effect directed all publick Affairs; and thefe Druids were their Magiffrates likewife, deciding in that Quality all private Controverfies, not arbitrarily but by fettled Laws, which, though not committed to Writing, yet were well and publickly known, like what is ftiled Common Law at this Day h.

They

[^134]Proof

## of GREAT BRITAIN.

They had too a regular and well-difciplined Militia, compofed of Chariots and Infantry. In the former rode their Chiefs, each attended by his Train; and they are allowed to have fought, after their Manner, not only with great Courage and fteady Refolution, but alfo with much military Skill and Addrefs, availing themfelves of every Advantage that could be taken, from the Situation of Ground and other Circumftances. Their Towns likewife, it feems, were fortified, which however muft be underftood according to the Manner of the Times, and the State that the Country was then in. They chofe for this Purpole a convenient Spot of confidarable Extent, in which they built their Dwellings fuch as they were; and, having done this, they encompaffed them witlymench, and this was furrounded with a ftandirg Grose, or with a Rampart of felled Wood; for in thote Days they foght only natural Defences, which were fully fufticient againtt the Arms then in Ufe. Whenever thefe Towns, after a long Reliftance, were forced, they provided Means for their Retreat ; and if they found themfelves too weak to keep the Field, they withdrew into Marfhes and Fens, the Avenucs to which they made as inacceffible as they could, regrarding fuch Marthes in the Light that we do Fortrefies i.

In regard to naval Strength, whether they had any fuch Thing or not, is a Point of fome Incertainty. The very learned and judicious Selden, than whom no Man was a better Judge, hath taken much Pains to eftablifh the Affirmative, and conceives that the Reafon why Cafar was not oppofed by Sea, was the total Deftruction of the Britifh Fleet fent to the Affittance of the Vencti, that is, in the Language of modern Times, the Inhabitants of the Diocele of Vannes in Bretagne; and he farther fuggefts, that it was their fending this Aid that principally induced Cicfar to invade this Ifland, which Pofitions he fupports by a Number of Arguments, that render it at leat highly probable; and if any Reliance could be made on our ancient Hiftorians, independent of Geoffrey of Monmouth, there might be fufficient Authority brought to countenance his Opinion $k$.

Proof of this (indeed a very frong Proof it is) that they fent over hither their Youth to be infructed in thele Myferies, which were comprehended in Poems that thefe their Difciples learned to repeat ; and lays farther, that in this Courfe of Study they fometimes fpent no lefs Time than Twenty Y'cars.
i Cafar de Bello Gallico, lib. v. cap. in-19. Eutropii Breviar. lib. vi. cap. 14. J. Ceifi Comment. de Vita J. Cxfaris, p. 73-87. He calls the Brisifh Monarch Cafincllanus. He aio fuys, that London, though at that time the frongeft Flace in the whole Iftand, furseniared to Cafar, whom he makes to have been always victorious, but allows he was expofed to continual Toil, frequently in Danger, out of which he extricated himfelf 'y Fortitude and Pericuerance, againft an Enemy brave in the Field and fubte in their Conduct

* Cafar de Bello Gallico, lib. iv. cap. 18. Henr. Huntingd. Aiftoriarum, lib. i. Seldeni Mare Claufum, l. ii. c. 2. Cafar exprefly fays, that in all their Wars and Revolts againft the Romans,

## 204 The POLITICAL SURVEY

As the Druids were Priefts and Magiftrates, fo they were alfo, as Philofophers, the Mafters and Inftructors of thefe People, who received from them implicitly whatever Opinions they thought fit to divulge. By them they were taught firmly to believe the Immortality of the Soul, which was a rational and laudable Principle of vigorous and intrepid Courage. They likewife delivered the Doctrine of the Seafons, or that Kind of practical Aftronomy by which they were enabled to profecute their Labours in the Field, and to conduct the feveral Branches of their rural Oeconomy. That they practifed various Superftitions, and, as fome fay, crucl and nefarious Ceremonies, and had recourfe to many delufive Arts to captivate the Minds of the Populace-apryt to be denied. By thefe they brought and retained them in the mort exact and fubmilive Obedience, fo that all were obliged to follow their refpective Occupations affiduoufly, and contribute thereby, as far as they were able from their private Endeavours, to the publick Welfare 1.

In confequence of this, we find they had fufficient Quantities of Corn for their own Support, and their Paftures were abundantly focked with Sheep and Black Cattle. Befides Animals for Food, they bred Poultry, Geefe, and Harcs to pleaie their Fancy. That they had Property, appears from the Druids deciding all Difputes about the Limits of Lands. It is likewife clear that they had a generous Breed of Horfes, and knew very well how to break and manage them ; and that they ufed Cavalry as well as Chariots, may be inferred from Carar's Relation $m$. They painted them-
the Gau's were fupported from Eritain, but he fay nothing of their naval Force. Henry Hurtingdon tells us, that Lud, the Fabier of Coffebellinus, aduced feveral of the Ilands lying near Intican, $b^{\prime}$ a marine Armancat. Mr. Sclden, lajag thefe and other Circumftances together, conclades the Britoms, prior to the Coming of the Romans, were Sovereigns in their own Sans.

1 Cadiar de Bellu Galiico, lib. vi. cap. 13. 15, i6. strab. Geograph. lib. iv. Diod. Sicul. lib. vi. Pumpon. Mela de Situ Orbis, lib. iii. cap. 2. Lucan. Pharfal. lib. i. Plin. Nift. Nat. lib. xxx. It way be faily prefured, that as the cortandy imported the Animals, fo they brought over alfo tho fri of timiag them; and from their fingular Eerpertnefs, and the great Numbers they brought i.to the rexd, that they had long practid d this Avaner of Fighting.

## of GREAT BRITAIN.

felves with a blue Pigment made of Woad, as we have already explained at large n. Now this Plant, and the Art of preparing a Pafte and Dye from it, they muft have brought with them hither. The Difcolouring of their Bodies with it, for whatever Purpofe the Romans could not help obferving, but it by no means follows that they had not any other Art or Manufacture amongft them, becaufe no other is reported by Perfons who invaded them as Enemies, ftayed amongft them but a fhort time, and were very . fully occupied by their own Affairs during the Time they remained hore.

In their Trade with each other, they ufed either Rings or fmall Plates of Iron tied together, in the Nature of Money, which cencledes in favour of their Civility, fince no barbarous Nation ever made ufe of any Medium in buying and felling ${ }^{\circ}$. That they had likewife foreign Commerce, is not barely probable, but certain, for the Inhabitants of Bretagne (as it is now called) traded hither in large Ships, and on this Trade, as Cerfar fays exprelly, founded a very formidable naval Strength. Yet their Merchants only were permitted free Accefs by the Britons, and none were allowed to penctrate into the Country, fo apprehenfive were they of a too great Refort of Strangers, and fuch was their Jealoufy of their Freedom. Other Nations, as in different Parts of this Work hath been already thewn, carried on confiderable Commerce in other Quarters of the Illand, and the Ports of Ircland were much frequented, as well as generally linown. by foreigu Merchants P .

Is reference to fmall Veffels, which is by no means a Proof that they had not any of a larger Size, thofe of their Conftruction were fo ingenious and fo conmodious, that Cæfar acknowledges his Obligation to them for their Invention, of which he profited on another Occafion 9 ; and which Veffels were made with fuch Facility, and were of fuch Utility, that the Ufe of them continued in fome Corners of this llland almoft within the Memory of Man r. If therefore we lay all thefe Circumptances together, and confider

[^135]
## 296. The POLITICAL SURVEY

ficer them as brought in Aid of what Reafon and Reflection fuggefts, in refpect to the Firft Settlers of any Inand, we may rationally conclude, that when the Romans came over hither, they did not find our Anceftors a Race of miferable ignorant Savages, but rather a People, though widely diffierent from them in Temper, Cuftom ${ }^{\text {c }}$, and Manner of Living, in Poffefiion of all the Neceffaries and fome of the Conveniences of Life, and, which is ftill of greater Confequence, they were in general content with their ownCondition.

Under the Reigns of Auguttus and Tiberius, the Britons were left to themfelves, lived fubject to their own Kings, and were groverned by their own Lawss. The Rumans, however, ftill kept up a Claim to the Ffland, founded upon Ctlar's Expedition; and the Britons, fur the fake of their Commerce with Gaul, kept Meafures with them, fending from time to time Prelents to Rome, which were there received and accounted for Tributes t . Caligula appeared difpofed to make a real Conqueft, which how'ever ended only in building a Light-houfe on the oppofite Shore, and in a childith and ridiculous Triumph $u$. Claudius executed what Caligula made a Shew of doing, and, either by the Force or Terror of his Arms, made fuch an Impreilion here as at Rome was confidered as a Conqueit. He left behind bim Aulus Plautius, whom he fent hither before he came in Perfon, to reduce his Acquifitions into the Form of a Province w.

It was from this Time that the Romans began to lead Colonies, to fettle Magiftrates, and eftablifh Jundietions in this as in their wher Provinces. They proceeded fo fpeedily and fo fuccefffully in their is-tticimint, that in lefs than Twenty Years many Emporia or tading Cities were fixed in proper Places; a regular Correlpondence being commenced with Rome, occafioned a prodigious Refort of Merchants; immenfe Sums were fent over and lent here at Intereft; and in a Word, as we have before fugyefted, all the Marks appeared of a lucrative and extenfive Commercex.

[^136]
# of GREAT BRITAIN. 

Tue greateft Perfons were the firft in adopting Roman Manners, and Kings themfelves flooped fo low as to become the Infruments of inflaving thole whom it was their Duty to defend. But the Druids, who faw with Regret their old Conflitution expiring, and themfelves defpifed, did all they could to revive the anciont Spirit of their Countrymen, and to render Plenty odious when purchafed by Servility.. This having fome Effects, Suetonius Paulinus, who then governcd here in the Time of Nero, refolved to extirpate them, and with this View marched to attack their great Sanctuary of Mona or Anglefey, of which Expedition we have fooken in its proper Place \%. But the Vices of the Romans themfelves proved much more defructive to their Affairs than all the Efforts of the Druids. Prafutagus, King of the Iceni, having bequeathed to them, that is, fo the Emperor, al! his Riches, in Hopes of procuring their I'rotection for his Queen and Dughters, they behaved to them with equal Infolence, Indecency, and Inhumanity, which induced his Widow, the famous Boadicia, to excite a general Infurrection, which, but for the Courage and military Skill of Paulinus, who returned with great Celerity from Anglefey to London, had probably compelled the Rumans once more to quit the Inand ${ }^{\text {. }}$.

Sne was overcone; but, notwithtanding this, the Britons continued their Struggle for Liberty many Years, till at length Julius Agricola was fent hither with a potent Army by Vefpatian, who had himfelf derved here, and had contributed as much as any of the Roman Officers to the Enlargement of the Province ${ }^{b}$. By this wife and able General the greater Part of the Inand was actually reduced; and what he won by Force of Arms, he alio fecured by his judicious Policy. By his difinterefted and equitable $\Lambda$ dminittration, he difpofed the Britons to a real Submiffion, and a cordial Coalition with the Conquerors. He refumed and perfected the Reduction of Mona, and the Dettruction or Expulion (if any ftill remained) of the Druids. His Affability gained him the Aftcitions of the People, whom he difpofed to embrace the Roman Menners by flattering then with the Names and Privileges of Citizens, receiving them into his Amies, pro-

viding for the Education of their Youth, living amongft them with much Familiarity, and commending and rewarding their Valour, their Learning, and thcir Politenefs c .

In a Word, this truly great Mán was properly fpeaking at once the Conqueror, and in fome Degrec the Legiflator, of Britain, of which he acquired a thorough Knowledge. He penctrated into Countries not known fo much as by Name to his Predecefiors, and, there are good Grounds toaffert, even as far as the Frith of Murray, after defeating the whole Force of the Caledonians under the Command of their Monarch Galgacus; an Expedition unequalled by any of the fuccecding Emperors, or their Generals s. The Roman Territory, thus enlarged, was in different Periods divided into different Provinces, in which the People lived intirely after the Roman Cuftoms, fooke at leaft many of them the Latin Language, had Prefidents over moft of the Provinces, Magiftrates in all the great Towns, who adminiftered Juftice according to the Roman Law e. The Tcmples, Palaces, Houfes, Baths, and in a Word all Buildings, whether publick or private, were after the Roman Model : Facts not barely fupported by Hiftory, but which the Remains of thefe ancient Edifices and Antiquities of every Kind, that have been and are daily digged up in a Multitude of Places, inconteftably provef.

Tus Change in the Manners and Difpofition of the Inhabitants was fo complete and io univerfal, that, confrdering themfelves as Romans and their Country as a Part of the Empire, they made no Scruple of calling fuch of

[^138]
## of GREAT BRITAIN.

their Countrymen, who ftill remained free, by the opprobrious Name of Barbarians; which they in fome meafure merited, by their continual Incurfions into a Country better cultivated, and of courle much richer than their own g. To fecure them from thefe deftructive Invafions, their Governors, inftead of acting offenfively againft the Northern Nations, had recourfe to well conftructed and well fortified Intrenchments, which, arcording to their original Defignation, we ftile Wallsh. The great Tract of Country behind thefe was highly improved, fully inhabited, and in a moft Hourifhing Condition; but thefe Inhabitants, though Natives, were Provincial Subjects, who had no Views or Interefts, but thofe of their Maftrs, employing their Subftance and their Swords for their Emolument, and for their Defence, and this according to their Directions i.

Turse Meafures were not only acceptable to the Roman Officers of cvory Rank refiding here, but were allo in many Refpects of the greateft Utility to the Empire. Dritain was on this Account much confidered, and very carefully attended to, more efpecially by the belt and wifeft of their Emperors. Trajan particularly took care that the Roads in all Parts hould be completed, and put into the beft Order poffible, that the Correfpondence between all the Stations might be regular, fate, and commodious. $k$. Adrian came over in Perion, remained here fome time, and provided effectually for the Security of the Fronticr ${ }^{1}$. Antoninus, following his Example, made additional Provifions for the Safety of the Ifland both by Land and

[^139]
## 300 The POLITICAL SURVEY

Sea, änd his Succeffor was no lefs active and attentive to the Welfare of Britain in. Under Commodus, Helvius Pertinax commanded in this Iland with great Reputation, which raifed him after the Deceafe of Commodus to the Empire. He fent hither Clodius Albinus, who, during the Confufions which enfued on the Demife of Pertinax, affumed the Purple, and carried over a numerous Army of Britons into Gaul, to maintain his Title againft Septimias Severvs, where, after gaining a Viftory; they were through his ilh Conduct routed, and himfelf fain n.

To compofe the Troubles, and to protect the Inhabitants in the Roman Provinces againft their Enemies, Scverus came over hither, and, from his glorious Exploits here, affumed the Sirname of Britannicus Maximus. He died at York, where the famous Lawyer Papinian prefided in the Britifh Court of Juftice. His Two Sons, Baitianus (afterwards filed Aurelius Antoninus Caracalla) and Geta, took each of them the Name of Britannicus ${ }^{\circ}$. In the fubfequent Troubles of the Empire, diftracted and torn to Pieces by ambitious Men, Britain had a very large Share; and feveral of thofe who are filed Tyrants in the Roman Hiftory affumed the Title of Emperors here, as many of their Coins in the Cabinets of the Curious plainly hew. When thefe deftructive Difturbances were compofed, the Emperor Probus permitted, as we have elfewhere obferved, the Planting of Vines in Britain.

New Diffenfions arifing after his Demife, Caraufius, who is faid to have been a Native of St. David's, a Man of fuperior Abilities, and an excellent Officer both by Land and Sea, afiumed the Imperial Title, and, as we have had occafion more than once to mention, held it for feveral Years, reliding chiefly in Britain, though the Sea Coafts of Gaul made likewife a Part of his Duminions. He did many great Things, and was exceedingly careful in providing for the Safety and Profperity of his Subjects, till he was flain, fome Gay in Battle, otheris through Treachery, by Allectus p , who likewife filed himelf Emperor, and hold that Title a little While. Againft him came Conftantius Chlorus, after reducing the Maritime Parts of Gaul with a great Fleet and Army, and Allectus being routed and killed, Conflantius reftored $t$ Peace and Profperity of Britain, where he had reffded in his Youth with great Credit, and is faid to have married a Britifh Lady. He

[^140]
## of GREAT BRITAIN:

breathed his laft at York, having been fome time before called to the Empire, and in that City his Son Conftantine, afterwards firnamed the Great, being come to vifit his Father, was upon his Death faluted Emperor by the Army, and in confequence of thofe happy Events, no Province during their Reigns was more cherihed by them, or more celebrated by their Orators than Britain 9 .

Ar his Demife he bequeathed, amongft other Provinces, Britain to his Son of the fane Name, who quarrelling through Ambition with his Brother, loft to him both Life and Empire. This Brother, whofe Name was Conftance, came over hither in the Winter, a Thing fo unufual that we find it mentioned in very high Terms in a Panegyrick on that Prince r. He was foon after fucceeded by his other Brother Conftantius, in whofe Time Gratian, who was the Father of the Emperor Valentinian, commanded here. On his being recalled, Magnentius fet up for himfelf, and for a few Years reigned with great good Fortune, but was at length fubdued s. Julian, while he bore the Title of Cxfar, and commanded with much Reputation in Gaul, drew, as we have Chewn in another Place, immenfe Supplies of Provitions from this Ifland, for the Reception of which he confructed prodigious Granaries t. When he became Emperor, knowing the Importance of this Inand, he fent over confiderable Forces to repreis the Incurfions of: the Nations from the Northern Part of the Ille.

Under Valentinian, Theodofius, Father of the Emperor of the fame Name, cane hither, and by his Military Exploits gained great Reputation, following the Example of Agricola, aciing offenfively againf the Enemy, and eftablifhing a new Province, compofed of the Territory out of which he expelled them ". When afterwards the Son of this vitorious

[^141]

## The POLITICAL•SURVEY

General was declared Emperor, it fo difgufted Maximus, who was at the INead of the Army here, that he fet up for himfelf, affumed the Purple, and carried into Gaul a numerous and potent Army compored chiefly of Britons, of whom few if any returned w. He was at firlt very fuccefsful, and poffefing himfelf of Part of Germany, fixed his Capital at Triers: But marching afterwards into Italy, he was there defeated and flain. This Tyrant, as he is frequently ftiled by the Latin Writers, contributed very much to extenuate the Roman Power in this Ifle x .

After his Death therc followed fuch a Scene of Confufion, that it would require much more Room than we have to fpare, flould we attempt to difcufs the difcordant Accounts of the feveral Revolutions that with great Bloodihed and horrid Devaltation happened herey. The Empire haftening to its Decline, was milerably harraffed on all Sides by the barbarous Nations, which was alfo the Fate of Britain; and the Inhabitants, having been hitherto protected by the Romans, looked continually to them for Relief, which they obtained fo long as they were able to afford it. Gallio Ravennas was the laft of their Gencrals who came hither, and who having with great Spirit and Succefs repelled the Scots and Pisis, repaired and fortified the Wrall, which he exhorted the Britons to defend, and fo let them $z$ after the Romans had held this Country Four hundred and Seventy-fix Years, according to Camden's Computation, though others fay more tin. Five hundred Years ${ }^{3}$.

[^142]
## of GREAT BRITAIN.

When the provincial Britons found that they were thus deferted, it exceedingly depreffed their Spirits, and they quickly difcovered they were utterly unequal to the Taik of defending themfelves. We have no Reafon to wonder at this, fince all their hardy and bold fpirited Youths had been gradually carried out of the Country, fo that the far greater Part of thofe left behind were either old and infirm or loofe, luxurious, profligate, and withal tourbulent and feditious People, alike incapable of refifting thic ir Enemies or of fubmitting for any Length of Time even to Governors of their own Choice b. In this fad Situation, being without any Order or Difcipline, and attacked on all Sides by forcign Foes, they had Recourle throngh Infatuation and Defrair to the very worft of all Expedients, in which however they only copied their old Mafters c, that of calling in One barbarous Nation to drive out another, which brought them under a new and heavier Yoke. Thefe are Facts fully attefted by their own Hiftorians Gildas and Nennius, who are indifputable Authorities, and whofe Accounts are not fimply Relations, but lictures allo of thofe truly miferable Times, drawn by Men who write as if they had been Eye Witnefles, and as if they fpoke of what they faw and folt in a Language fuitable to their Circumfances d.

It is the Remark of a very judicious and learned Prelate, that the great Source of the Misfortunes of the britons was the Errer committed by the Romans in not making an entire Conquet of the Iffund. This was planly the Detign of Julius Agricola, and the Caute of thote dreadful Apprehendions of the Calconnims when they faw bis Flect ftecring for the Crkners". If Domitian had iatioed him to have eficted what he was of nar acumplinhing, there would have been no Need of Walls; and if the Romaios had been obliged to quit this Country, they would have laft all the Britons in zencral on the tame Condition, and of courfe thoy woud cither hate united under ( me Monareh, or have recurred to their old Form of Gomement, and which ever had been their Choice, they would have hat Streagth. enrugh, when free frominteltine Divifions, to have repelled any forcign Invaion, as this could never have been made with fuch a Force as Cafar

[^143]brought over, and with which, when in a worfe Condition, they found themfelves able to Aruggle with Succefs?

Our famous antiquary Camden obferves, that if our Anceflors thought it fo great an Honour to derive themfelves from the Trojans, they might have done it from their Incorporation with the Romans, who valued themfelves on the like Defcent. But it may not be amifs to remark, that it was not barely the Romans, but all the Nations who were fubject to them, and in confequence of that ferved in their Legions here, who intermixed with the Native Britons, and even numerous Colonies from diftant Countries were tranfported hither, and had Lands given them to fettle upon and cultivate here s. It is alfo highly probable that very many, if not moft of thefe People, when they found Refiliance vain, fubtnitted to and intermixed with the Saxons.

In fo long a Series of Years as the Romans remained and ruled here, it cannot be doubted that they introduced many Ulages which were higlily advantageous to the Natives: They brought them from a rude and rough to a civil and orderly Manner of Life, and gradually to a Tafte for Urbanity and Politenefs. This was much facilitated by the Practice of thofe bodily Exercifes to which the Romans were addicted, and fill more by their $\mathrm{A}_{P^{-}}$ plication to Letters and Sciences. They likewife made them acquainted with many ufeful Occupations, to which, from their different Mode of Living, they had been utter Strangers. They inftructed them in a Multiplicity of mechanick Arts, fome of more and fome of leis Importance; all of which contributed to that Eafe, Affluence, and Splendour in which it is certain they lived in thofe Daysh. Their Intercoufe with foreign Nations, and of courfe their Commerce was extended through moit Parts of the Empire. But the moft permanent as well as the moft profperous of their lmprovements confifted in bringing over and naturalizing

[^144]
## of GREAT BRITAIN.

to our Soil and Climate many Things which we had not before, and by this the Country itfelf was enriched as well as its Inhabitants. They likewife extended and improved our Agriculture, and thereby not cnly a much greater Number of People were maintained and fupported, but maintained and fupported alfo in a better Manner $i$.

- They likewife eftablifhed Citices, Towns, and Fortreffes, which were gcncrally fo properly difpofed, and their Situation fo well chofen, as to preferve their Credit through all fucceeding Timesk. Thefe they connected, as we have already feen, by facious and ftately Roads, and in fome Places by Canals for conveying fure and fpeedy Supplies to their remotelt Garrifons. We may add to thefe, though calculated folely for their own Sccurity, the Sagacity of their Eftablimments for the Protection of their Dominions, both by Land and Sea, againft Invafions from the Noithern Nitions within the Inland, and the piratical Depredations of the Eaxons from the oppolite Continent 1; which Precautions of theirs have ever appeared mest worthy of Admiration to thofe, who by examining them clorely, have not barely obierved Facts, but difeovered alfo their Motives, and the trac Principles of that found Policy, by which they retained fo wide an Eimpire, inh hbited by fo many different Nations, under fuch frict Obedience, through the Courfe of a long Serics of Years. A Policy fo compleat and perfect, that if it had been fteadily adhered to, might have lublifted much longer than it did. But the Lutt of Porier in private Men, joined to that Luxury attendant on Profperity, unhappily excited fuch continual Convulions, as at length brought on the Diffolution of that So-

[^145]
# 306 The POEITICALSORVEY 

vereignty which had triumphed over the beft Part of what was then efteemed the habitable Worldm.

It muft on the other Hand be allowed, that there refulted from the Roman Government not a few Inconveniencies to the provincial Britons. Before they were totally fubdued, prodigious Numbers were deftroyed in making Caufeways, cutting down Woods, draining Moraffes, and erecting Fortifications. Labours fo much the more grievous and galling, as they were at once the Inftruments as well as the Badges of Subjection n. They were likewife expofed to much Rigour, Extortion, and Injuftice of every Kind from the Avarice, and even Caprice of the Roman Governors, efpecially before they obtained the Benefit of the Laws which afforded thein Protection, and even this they purchafed at the Expence of Taxes and Tribute. Theyafterwards felt the Burthens, and experienced all the Diftreffes that arofe from the Weaknefs of fome and the Violence of other Prefidents and inferior Magiftrates. They paid largely for the Maintenance of a fanding Army, compofed chiefly of foreign Troops, the Military Eftablifhment here being very high o, and the Naval alfo, though we have no diftinct Account of it, was alfo confiderable. The Youth were encouraged to affect a Military Life, enrolled and preferred in the Legions, and of courfe went abroad with them, efpecially when the Commanders inclined to fet up for themielves, from a ftrange Pcrfuation, that by fupporting thefe bold Adventurers they did Honour to Britain p. The Nation was befides exccedingly exhaufted by fending con-

[^146]
## of GREAT BRITAIN:

tinual Recruits to keep thofe Britifh Corps compleat that were difperfed in Garrifons all over the Empire, as the foreign Forces were here q. Add to all this the immenfe Supplies of Corn, which they were obliged to furnifh for the Subfiftence of the Legions in Gaul and in Germany, who could not otherwife be maintained there, as evidently appeared when the barbarous Nations, gaining Poffefion of the Coafts, interrupted that Correfpondence, and thereby obliged the Romans to abandon thofe Provinces. But the worft of all Evils was the ftifling all Senfe of publick Spirit, by diverting to the Roman Empire that Difpofition which hhould have rendered them zealous for the Interefts of their own Country, and by which the Bulk of the Nation were rendered indolent and inactive; a Circumfance that, from the fame deftructive Policy, proved not only fatal to them, but to the Inhabitants alfo of all the other Provinces, and rendered them an eafy Prey to their fierce and barbarous Enemies r.

As to thofe dark, perplexed, and doubtful Times that fucceeded this Cataftrophe, the Stories of them have baffled the Induftry and Judgment even of our ableft Writers. But the Subftance of what can with Certainty be collected is fimply this: The Romans were no fooner withdrawn, and the unhappy Britons left to themfelves, than their Weaknefs and Inability appeareds. The Scots and Picts penctrated the Wall; feveral Parts of which, that they might enter with the greater Freedom, they utterly ruined, facking the Cities that were neareft it, fpoiling the adjacent Lands, and by repeated Incurfions fpreading fuch a general Defolation as produced a Famine ${ }^{\text {. }}$ Vortigern, who was then King, unable to refift his Encmies, and
q It appears from the Notitia Imperii, and from Inferiptions, that there were at Icalt Twelve diftinct Corps of Britifh Troops, fome Horfe and fome Foot, not only in laly, in Gaul, and in Spain, but in Illyria, Armenia, Fgjpt, and other remote Provinces, from whence few returad hither. Befides thefe there were no Doubt confiderable Numbers that ferved on Boad the Fleets which were withdrawn at the fime Tine with the Legions, fo that the Country was ftripped entircly of all her Strength both by Land and Sca.
r In the Time of the Emperor Valentinian III, the Romans quitted Britain, and in the fame Reign the Franks feized the belt Part of Gaul; the Burgundi too fixed themfeltes in thofe Countries which bear their Name; the Goths fettled themlelves in Spain; the Hunns oicupicit Pannonia, now called from them Hungary, and afterwards took and facked dome. The lrouvinces when the Legions, being their Protators, were once withdrawn, having no Force or Spirit of their own, were with dittio or no Refinance over-run by thefe Inundations of the barburcus Nations.

- Fordun Scotichrou. lib. iii. mp. 12. We have the Fat afcertained b; Gildas, vennius, and other Writers; but they are not at all clear in Relation to 'Time. However it apf sars from them to have been but a very fhort Space. Fordun generally took his Accounts :" mod Chronicle:. which tor the moft Part he cites; and fiom him we may collent, that in the Space of Four or Five Years the Scots and ficts, whom Gallio with a fingle Legion had repelled (fuch hath becn always the Superiority of regular Troops) rencwed the ir Incurlions.
: Stillingfeet's Origines Britannica, p. 301. This Wall, built by the Inbou: of the Erionc, theugh under the Direction of the Remais, is a noble Ponument of thei" Shill a Military Ar-

## 308. The POLITfCAL SURDEX

at the fame Time afraid to truft his own Subjects, had Recourfe to the Saxons for Affiftance. Thefe on their firft Coming repelled the Northern Invaders, but not thinking themfelves properly rewarded for fo great a: Service, they compromifed Matters with the Scots and Picts in order to turn their Arms upon the Britons. At that Time they were a fierce, cruel, and rapacious People, unreftrained by any Senfe of Humanity or Principles of Religion; and being inflamed with an infatiable Thirft of Dominions. they plundered, burned, and ruined wherever they came without refpect to the Confequences that muft necefiarily attend fuch horrid and wide: jpread Devaftations u.

The Britons, conftrained by Neceffity to take up Arms, were often victorious, though their Succels is fo magnified in their own Hiftory, as not only to furpafs all Credibility, but even to render the very Exiftence of thofe Heroes who commanded them in fome Degree problematical. The Truth of the Matter however feems to be, that if they could have forborne their inteftine Difputes, and united thoroughly in the Caufe of their Country, they might have recovered and preferved it $w$. But this was a I.effon, they could not be taught either from Prudence or Experience, infomuch, that whenever they had the leaft Refpite from their foreign Enemies, they relapfed into civil.Wars, by which their Strength was not barely exhaufted, but they were likewife diverted from purfuing the Methods they might otherwife have taken to prevent the Return of their Enemies, or to have put themfelves into a State of Security.

So far was their Conduct from this, that they fuffered the Saxons to fettle in different Parts of the Ifland, and thereby gave them an Oppor-
chitequre; fo well confrueted, and the Forts for its Defare fo preperly difpoied, as to renderit, it well detended, impregnable; fo frong, that when deferted, the Scots could not demolifhit, or even Time and the Efforts of Men in fo many Ages. Bei? fi:ys it was Eight Feet broad and Twelve Fect high, which what till semains proves to be exactly tue.
n Gith. cap. 24,25 . Bed. lib. iii. cap. 15. The Britifin Hiftorian and the Saxon agrec exacty. ia their Accounts. They fay that all the Cities, Towns, and Habitations werc confumed from the Fidt Sea to the Weft ; Chuches, and all other publick Edifices farred the fume Fate; the Peopieallo who relifted were maflacred withont refpect to Sex or Age: In a Word, the Deftruction was fo univerfal in order to compel the Britors every where to retic, that at length the Saxons found subdiftence fo fares, that Numbers of them were for the prefent forced to quit the lland.
w The geat Kings or Chieftans of the Britons againf the Saxons were Vortimer, AureliusAmbrolins, and Arhur; but the chief Difficulty is as to the laft: He is not mentioned by GilAlas or the Saxon Chronicle; yet the Britifh Hifory makes him not only vistorious over the Scots and Picts, bet alfo over the Gauls, Romans, Exc. which being manifelly falfe, created a l houbt with fone whether fuch a Perfon ever exifted. Leeland and Sir John Price have confated this, and from then and bihop Stillingfleet the Sentiment delivered in the Text hatr been adopted. Means they were at length overwhelmed by Numbers x. In thefe Facts the Britifh and Saxon Writers upon the Whole agree tolerably well, and it is of little Confequence, at leaft to our Purpofe, to trouble the Reader with Circumftances in regard to which they do not agree at all. From this State of Things we fee clearly, that on the One Side thy y fought to acquire, and on the other to preferve Territory. In the Courfe of this furious Conteft, the Country in general was laid wafte, the Cities and Towns depopulated and defroyed, Induftry in a Manner totally extinguifhed; and, together with the numerous Monuments of the Magnificence and Grandeur of the Romans and their Britih Subjects, the very Memory of their Art, Sciences, and Polity buried in Oblivion; and thus this Revolution left both the Territory and its Inhabitants in the moft dreary and defolate. Conditions.

At the very Beginning of thefe Troubles, as well as during the Continuance of them, befides thofe who fubmitted to the saxons and the the Scots, great Numbers, to preferve their Lives and Frcedom, tranfported themfelves and their Effects into other Countries, more efpecially into Armorica, Bretagne or Britanny, in which Diftrict their Countrymen were fettled betore, though at what Time is a Point far from being clear Other
x If we atkmpt to account for the Conduet of the Saxons in thas burning and deftroyir: the Madland Comatry which they defigned to inhabit, it may look at lant fomen bat like a Reafon to fay, wat they meant to render it untenable by the ancient Inhabiants whis then countatan were coming over daily and fetting on the Sea Cadts. By this Poiny they had Tine to rim-

${ }^{2}$ Armonian in the Celice and in the Britif Language funifics a Conary on tie Soa Cont. Tha an Tines thete was (as we have already mentioned) a clofe Conneftion betrocia the Inhathants
 Colony fint from hence, it came to be called Britania cifmarina and Bitaniaim minor. Some Liy that Conthentine the Great fertied there the Invalids amonatt the Trop; he chisid from hence. Wibers that it was a Colony compofed of the Remains of the Britifh simise carried over by innacinins and Maximus. Some believe that thefe Exites who fied trom the Saxons feized on and fublura this Conatiy, which is not barely improbable but imponfible. Hindry the ers thate transmarion-

Others took Shelfer in the mountainous Part of the North of England, and from the Strength of the Situation, and the occafional Affiftance of fome of their Neighbours, defended themfelves for a confiderable Space againft all the Efforts of their Enemies. Many from the fame Motives fixed themfelves in Cornwall and Part of Devonfhire, of which Region Exeter continued long the Capital; and this Britif independant Sovereignty fubfifted for fome Ages. But the moft confpicuous and permanent Seat of their Power was in thofe Countries, anciently inhabited by the Silures, Dimetæ, and Ordovices, called by the Saxons Wales; and as Cornwall was inhabited by the fame People, and lay next the Kingdom of the Weft Saxons, they beftowed upon that the Name of West Wales a.

In thefe Times of Confufion, the Remains of our original Anceftors having fcarce any Refpite from War, lived without a regular Syftem of Government, conforming in fome Refpects to their old Cuftoms, and in others were directed by the Will and Wifdom of their Chiefs, and of their Clergy, who long adhered to the Principles of primitive Chriftianity uncorrupted by the Errors of the Church of Rome ${ }^{\text {b }}$. At length, when their Affairs were better fettled, Hoel Dida, that is Howel the Good, who was in Poffeffion of all Wales, by the Advice of the moft knowing of his Subjects, and with the Confent of his Great Council, compofed about A. D. 943. a compleat Body of Laws, in the Prefaces to which he fays exprefly, that they had none, or at leaft nongthat were fit to be obferved before. Thefe Laws in our Times have been carefully collected and publifhed $c$. They are divided into Five Books; the Firft regards Minifters of
tranfmarine Britons were both a potent and martial Nation at this Time, to whom their Countrymen from hence reforted for Protection.

2 The Saxons beftowed the Name of Wales on thefe Countries, and called the Pcople Wclinmen. But why? It is commonly faid that Wal/h in German means a Stranger, and that, as unlike their Conquerors in Speech and Cuftoms, they were fo ftiled from thence. Others that the Saxois meant from their Conformity in Language and Manners to denominate them Gauls. But the judicious and very learned Sumner obferves they did not call thefe People fo till they had expelled them, that the Sayon Verb weallan figaifies to wander, and that, by impoling this Appellation, they meant to file them Fugitives.
$b$ Gildas, who inveighs with equal Bitternefs agaiuft the Vices of the Clergy and Lairy, allows that the former, touched with fo fevere a Chaftifement, gave fincere Teftimonies of Repentance, and laboured to reform their Countrymen by Preaching and by Example. Selden, who was no Friend to their Order, highly extols the Britihh Monks for their Piety, Charity, and Induftry, cultivating their Grounds with their own Hands, by which themfelves and their Lands were rendered beneficial to the Community.
c This Work, magnificently printed in Folio, and dedicated to his late Royal Highnefs Frederick Prince of Wales, is entituled, CYFREITHJEU HYWEL DDA AC ERAILL, feu Leges Wallicæ Ecclefiaftice et Civiles HOELI BONI, et aliorum Wallix Principum, quas ex variis Codicibus Manufcriptis eruit, Interpretatione Latina, Notis et Gloffario illuftravit Gulielmus Wottonus, S. ## of GREAT BRITAIN.

State and principal Officers of the Houfhold of the King and Queen, defrribes their Functions, and afcertains their Privileges and Emoluments. The Second refpects civil Actions. The Third contains their criminal Law, together with many ceconomical Regulations. Thefe Three are authentic, and had the full Sanction of Authority. The Fourth comprehends the Elements of their Jurifprudence digefted in a very peculiar Manner; and the Fifth confifts of the Method of Proceeding in their Courts, with Decifions and Reports. Altogether they exhibit a fingular and curious Plan of their political Inftitution, as well as a juft Picture of the Cuftoms and Manners of that People at that Period d.

These Britifh Statutes intermix with their ancient Maxims many Things that have plainly a Connection with the Laws and Cuftoms of their Neighbours. The Houhholds of their Princes, for fometimes they had feveral, were numerous, and muft have been burthenfome upon the People. Their Lands, except fuch as were given to the Church, were fubject to . many Services. They were equally divided amongft the Heirs Male, and were not liable to Forfeitures. The Property, if it could be called fo, of the common People was very precarious, and yet it is certain the Inhabi-. tants of thefe Countries were inumerous, had for thofe Times a confiderable Share of foreign Commerce, and probably, if they had been lefs. turbulent, might have become more potent, and have preferved themfelves longer in a State of Freedom e.

Ir may be not amils to fhew, as we have mentioned their feveral Retreats, the different Periods at which they were expelled or fubdued. As to the Remmant of the Britifh Nation that continued in the Northern Parts, they maintained themfelves with great Spirit and Intrepidity for all. moft Five hundred Years; but being then attacked by feveral Enemies, but efpecially the Danes, the greateft Part of them quitted their old Seats and came into North Wales, then under PrinceAnarawd, who affigned them the Country between Chefter and the River Conway, if they-could

[^147]
## 342 The POLITICAL SURVEY

drive out the Saxons who had lately feized it. This they gallantly performed, and by his Affiftance defeated them in a decifive Battle A. D. 830, and fo feated themfelves there $f$. Thofe who were fettled in Cornwall held that Country fomewhat longer, though continually harraffed therein by the Weft Saxons. To revenge this, without weighing the Confequences, they opened their Ports, afforded Subfiftence to, and fometimes concurred with the Danes in their predatory Incurfions. This fo provoked the Saxons, that after depriving them of Exeter, and that Diftrict of Devominire which they had poffefled, they made them tributary, till at length they were totally reduced by King Athelftan g .

In Wales they continued, though in a State of Vaffalage to theSaxon Monarchs, till thcy were themfelves fibdued firt by the Danes, and afterwards by the Normans. The old Britifh Cuftom of dividing and fubdividing their Dominions, which, though ufually afcribed to Roderic the Great li, who made his Three Sons Princes of North Wales, South Wales, and Powis Land, was certainly of a more ancient Date, and thefe Princes fometimes more in Number i , contributed greatly to their Decline, which proceeded very rapidly after the Norman Conqueft, every One of our Kings feizing fomething; fo that South Wales and Powifland being detached from their Dominions, North Wales, on the Death of Prince Lhewelin ap Gruffyth

[^148]was annexed to the Crown of England by that great and fuccefsful Monarch Edward the Firf, A. D. 1282, or thereabouts.

Ir was neceffary to treat this Subject, which hath been hitherto but very flightly regarded, more at large, that the Obfervations thereupon might be the better underfood. In the original State of this Ifland, the Tribes or Nations who poffeffed it, and of courfe their Rulers, Princes, or Kings were very numerous, and confequently lefs potent $k$. This had fome favourable Effects, as it confined their Attentions to particular Diftricts, kept them upon their Guard, and obliged each of them to keep up fuch Forces, as when collected were confiderable enough to prevent One from fwallowing up another. How long this Conftitution had lafted we cannot fay; but much longer it might have lafted, if the Spirit of it had fubfifted, and the Refentment of private Injuries had not tempted particular Chiefs to forget what was due from them to the Publick ${ }^{1}$.

The Druids, who by interpofing had often extinguifhed civil Wars, when thefe exafperated Chiefs had Recourfe to the Romans, could apply no Remedy to that Evil, which proved the Ruin of this Syfem. The Powers thefe Priefts had over the Manners or rather the Temper of the People fupported the Authority of their Princes when duly exerted, and when otherwife, ferved very frequently to reftrain it. Thus the Bulk of the Nation were mere Engines in their Hands, and that Influence which Superftition gave them by diftributing and directing their Labours, produced the fame Effects that would have naturally flowed from Principles of Indultrym. Under the Romans the common Sort of People were inftructed how to exercife their Abilities, and were encouraged as well as permitted, after they became their Subjects, to exert them for their own Bencfit. This

[^149]Vol. II.
344. The POLITECE SURVEY
chanted the Face of the Country, and made fo favourable an Alteration in the Condition of the Bulk of its Inhabitants, that it is no Wonder they parted fo reluctantly with fuch Mafters n.

In the general Wreck that followed there were few Principles of civil Occonomy preferved, and the little that was preferved feems to have remained amongft thofe who fubmitted to the Conquercrs, or who retired to put themfelves under the Protection of their Neighbours. As to the Relicks of the Britilh Nation who continued under their own Chiefs, they recurred in a great Meafure to their old Conftitution, which fprung up again with all its Defects. Their Princes had great Power and narrow Territories. The Gentry or Freeholders had indeed, as we have Ihewn, Inheritances, but thefe were encumbered 'with numerous Services o. The common People were in all Refpects very little confidered, which damped their Spirits and excluded Induftry. No Regard was paid to the Change of Times and Alteration of Circumftances, though ever foapparent. When the Saxons were united, and they had their whole Power to combat, the Britifh Princes ftill continued dividing their already too fmall Dominions, and thereby rendered that Reififtance, which was before very difficult, altogether impracticable. If the fierceft Courage, or the moft obftinate Intrepidity without the Affiftance of milder Meafures, or a more extenfive Plan of Policy could have preferved them, they were certainly not deficient in either. Offa's Dike, ia moft ftupendous Entrenchment, formed for the Defence of the Saxon Territory againt the perpetual Incurfions of thefe martial People, is a direçt and a full Proof of what we have advanced ${ }^{\mathrm{P}}$. But in fucceeding Times, as the Saxons grew in Power, thej began to make Encroachments, the Britons in the

[^150]
## of GREAT BRITAIN

mean Time declining daily in Strength, and weakened even by their Vic tories. Inftead of teaching them Prudence, their Diftreffes only heightened their Refentments, to gratify which they fometimes fided with the Danes; but they foon found to their Cofts that thefe were worfe Neighbours, and were like to prove worfe Mafters than the Saxons $q$. When their Affairs grew vifibly irretrievable, Numbers quitted their Country to feek Safety in . rome other. Amongft thefe Princes Madoc, who, as we have already Thewn, is fuppofed, not altogether without a Colour of Reafon, to be in Fact the firf Difcoverer of America r .

Into thefe Extremities they were apparently brought by the Means fo often mentioned, the Divifion of their Dominions under fo many Princes and Lords, their inteftine Quarrels which put them upon purfuing different, and of courfe neglecting their common Intereft, and the little Regard Chewn in their political Syitem to the Welfare of the common People, who living dependent on the Will of their Chiefs, followed them in their predatory Expeditions. By this Mode of Life War became their great and almoft their fole Object, and they feem to have had no Idea that either Safety or Power could be otherwife obtained. This Contempt of the Arts of Peace was the Reafon that they built few or no new Towns, but on the contrary fuffered their old Ones to decay and fall to Ruin. In mof Parts of their Country there were fcattered Villages compofed of finall Huts intermixed with many little Churches and Chapels, Convents and Hermitages, which were the Retreats of fuch as were not difpofed to Military Exploits.

[^151]
## 34. The POLEFLCAL SURVEY

We may from hence difeern, that though this Inattention to Labour was in fome Meafure balanced by the irrefirtible Influence of the Druids, yet being freed from this Superftition, and having little Relifh for any other than a martial Life, they continued refifting as long as they were able, and brooked Subjection very ill, even when at laft reduced t. It the therefore obvious, that to the Well-being of any Community it is abfolutely requifite that due Refpect be paid to all, and more efpecially to the lower Ranks of People, fo as that Individuals may have the free Ufe of their Faculties for their own Emolument, by which an univerfal Spirit of Induftry being diffufed, Multitudes in purfuing their private Interefts will moft effectually promote the Power; Safety, and Profperity of the Publick, upon the Stability of which their own mult ever depend.

[^152]
## CH'A P. II.

Of the State of this Country under the Saxons, and of their Conftitution.

$\tau$HE Hiftory of the Saxons, though clearer than that of the Britons, yet not altogether frie from Obfcurities. Some Particulars relative to this Nation before their coming over bither:. Hengitt and Horfa their principal Leaders at their arrival. The Title of Monarch of the Anglo Saxons, what it implied and zobence it ro/e. The Settlement of the Kentio Kingdom, and the Converfion of its Inbabitants to Cbrifianity. A jbort iccount of the principal Events regarding it while in that State. The situation, Size, and Boundaries of the Territories of the Sautb Saxons. Tbeir Hiftory very olfcure to the Time of their being fubdued. . The Origin, Extent, and 1 imits of the Weft Saxon'Kingdom. A fuccinct Hiftory therecf to the Accefion of Egbert, who put an End to the Heptarchy. Origin, Size, and Situation of the King dom of the Eaft Saxons. The. Hifory of this little State to its Extintion: Defcription of the Jpacious Kingdonn of Northumberland. Several iffs Noniarchs the moft potent in the Illand. Often divided, weakened by Soctorntignd at length forced to jubmit to the Weft Saxons. Origin? Situbition, Both Boundaries of the Eaft Angles.

## of GREATBRITAIN:

AS the Saxon Story is later in Point of Time, it is of courfe more certain, and confiderably clearer than what was the Subject of the former Chapter. For in refpect to this we have furcr and leis fufpected Authorities, fuch as, the Ecclefiafical Hiftory of Beda, the Saxon Chronicle, and many of our old Hiftorians who are allowed to have drawn their Materials from contemporary Writers ${ }^{2}$. Add to thefe the Citie, Fortreffies, Cathedrals, and other publick Edifices crected in thofe Days, and remainirg indifputable Monuments of their Founders. The Charters and Records of thofe Ages, whether exilling or authentically proved to have once lubfifted, are further Evidences that cught undoubtedly to have their juit Weight. But notwithftanding all thete, there want not fome obfinte Points even in Reference to this Nation, more efpecially in regard to their Entrance into this 1lland.

The moft learned of our Writers differ very much in their Scntiments as to the Part of the Continent from which they came hither ${ }^{\text {b }}$. 'Ihey

[^153]
## of GREAT BRITAIN.

are not much better agreed as to the precife Time of their coming, or whether it was at firf by Accident or by Invitation. To fay nothing of the Sizc of their Ships in which fuch Multitudes of them were tuanfported, or of the Tale of the fair Rouena, whofe Bcauty was no lefs fatal to Britain than that of Helen to Troy. The cruel Maffacre at Stonehenge is a Fact that has been controverted, as are fome others relative to thefe carly Times e; but thefe are little or nothing to our Purpofe, and therefore to have meationed them is fufficient.

Tife Saxons were a numerous German Nation, well known, and not a little formidable to the Romans while they continued in Poffeffion of this Country; they were compofed of many Tribes, and in different Periods were equaily famous for their Incurfions by Land, and their Piracies by Sca. Their Neglect of Agriculture, and their fuperabounding with Pcople, obliged them to frequent Migrations, and thefe having gradually brought them down to the Sca Coafts, induced them to undertake maritime Expeditions. Tacitus with equal Elegance and Exactnefs hath defcribed their Manners and their Policy while they continued in their old Seats; and his Rela-tions agree perfectly with their Conduct after their Arrival in this Ifle d.

The Characteriftics of this potent and hardy Pcople were their Love of Freedom and of Arms. Their whole Policy turned on thefe Two Points. In Time of Peace their Princes, who were all defcended from their deifed.
of them came to the Mouth of the Rhine, and the Conatrics adjacent, from whence they had a hort Palfinge hither. If the inquifitive Reader datise to fee thas Matter further difculfed, he may confult the learned Bithop Stillinglleer's Fitth Chapter of his Antiquitics of the Britith Churches.

The Saxon Chromicle fixes the Arrival of IIengift and Horfa A. D. 449 , which is at leaft as prohabic a Diate as any. As to the Daughter of I'cugitt, who is called Rowena, Roxena, an. 1 Ronix by different Aubiors, we may have leave to doubt of her Exiltence. Nemmius is the Fi:t who tells the Sery, after him Jeffery of Momouth, from whom the Monkifh Writers borruwed:t. The Saxon Chanible never mentions her. The Murder of Four hundred and Sixty britif Noblemen at Stonelieuge is almoft as impobable as Merlin's binging oucr that Monument for them by his magic Art from Itein l. Lhigo jones has very fuily retuted that wild Relation. The Truth of the Matter i, that the Saxion Hiftorian tells evactly the tame Advenrace between the Saxons aid the Thuringians, fiom whence this was in all Probability copied. Whitikind de Geft. Sax. Lib. i.

- The Treatife of Tacians refered to in the That is his Difourfe of the Mauners of the Germans, and the Saxons bing a German Nation, wae of courle inchaded therein. The very learned and judicious Selden in feveral of his Works, but particularly in the Thind Chapter of what he entitles lingland's Epinomis, enters into this Mater, and by companing feveral Paffages in the Roman Author with the UGiges of our Saxon Ancefors, hews very clearly their Cinfiltency, and from thence deduces the original Grounds of thofe Icgal Infitutions that prevail and continue in Force even at this Day. In this he has been followed by many able Writers, who have illultrated this Matter by an Addition of Inftances of the lilie Natuec, by whish the Tiuth of the Thing is readered cqually certain and clear.

## 320 The POLITICAL SURVEY

Chieftain Wodin, had very limited Authority, whereas in War they were intrufted with full Powers. In their Military Expeditions feveral Tribes joined their Forces together under One Chiel, but fo long as thefe lafted there was no Divifion of Command, though each Chief of the Confederates was at the Head of his own Troops, and particularly attentive to their Advantage. This was the more requifite, as they were refponfible for their Conduct in their General Affemblies, which, fo long as thry remained in Germany, were held annually at leaft, and therein all their publick Concerns were openly difcuffed $c$.

The Heptarchy, which was the Firf Form of the Saxon Government here, was not either eftablifhed at once or by Defign, but took Place gridually, and in a great Meafure by Accident. Hengist and Horsa, who came over firft, were cmployed, as we have already feen by the Britons, againf the Scots and Picts, and left feveral fmall Bodies behind them to keep thofe Parts of the Country in Order which had been voluntarily abandoned to them, at fuch Time as they returned to Kent to receive froch Supplice, being now at Variance with the Britons; and in One of the Firft Actions Horfa was flain. Upon this Hengift was obliged to call in other Saxon Chiefs to his Atifitance, and upon the Report of his Succulies they very readily came. In thefe Circumflances it may be eafily conceised, that though in Procefis of Time thefe Chiefs acquired Territories for the Ausiliaries they commanded, yct fo long as he lived they acknowledged a Supremacy in IIengitt, to whofe great Courage, Military Skill, and long Experience they in a great Degrec owed their Acquifitions $f$.

The

[^154]
## of GREAT BRITAIN.

The Stream of our Hiftorians fpeak of this as a Meafure thence forward adopted, fo that Onc amongft thefe Princes had always a Primacy, and was filed Monarch of the Anglo-Saxons: But they do not tell us cither how bo was elected, what were the Functions of his Office, or what Utility refulted from it. That venerable Code, intituled, The Saxon Chronicle, gives a very different Account of this Matter; for though it allows there were fuch Monarchs, yet it neither affigns this Honour to Hengift, or admits a conftant Succeffion, but rather infinuates that it was aflumed by Princes when they became very powerful, and afferts that of thefe there were but Eight in all. It is however on all Hands agreed, that it did not interfere with the Sovereignty of the other Princes, each of whom was independent in his own Dominions, and with the Confent of his Affembly or Great Council made Laws for his Subjects. The Nature of our Defign obliges us to give a fuccinct Account of thefe Kingdoms, in order to explain their Effects in Reference to the Improvement of the Country, and the Progrefs of the Conftitutions.

Kent was the Firft Kingdom founded by the Saxons in this Illand, and this about A. D. 457. In regard to Extent it was the fmalleft of the Seven, but pleafant, fertile, and well fituated, having in thofe Days many excellent Ports, which facilitated the receiving conftant Supplies of frefh Adventurers from the Continent. Hencist, was the Firf King, and feems to have fixed the Bounds of his Dominion with great Prudence. On the North it had the Thames; the Sea on the Eaft ; on the South and Weft the Kingdom of the South Saxons. He reigned Eleven Years after affuming the Regal Dignity. In his own Territories he was fucceeded by his Son Esc or Osc, but not in the Monarchy of the Anglo-Saxons, fuppofing that he ever enjoyed it. This Honour however was recovered by his Great Grandfon Ethelbert, who, according to the common Computation, was the Sixth who held that Title, and the monf famous Prince of his Pofterity; for he was the Firf King who embraced the Chriftian Re-

Filla, for his own Conveniency in the Kingdom of the South Saxons. This might give him a Kind of Supremacy, but nor in the Manner that the other Kings of the Anglo-Saxons are fuppofad to have exercifed it; becaufe, except Ella, there was no other King but himfelf over whon he cuald exercife it.
${ }^{8}$ We have hewn, that before the Romans arrived this Country was not a Wildernefs, or its Inhabitants Savages, and that under them the Land was better cultivated, and the People became more polifhed. Upon their Retreat, and the Confequences attending it, Devallation and Defolation enfued. The feveral Nations that came hither from the Continent brought with them military Prowefs, and the Luft of Conqueft, but procceded thercin with great Ferocity, and farce any Tincture of Civility. Yet to thefe People we owe the Recovery of this Country to a State of Improvement, and the Fundamentals of the beft Conftitution that perhaps the World hath ever feen. It is to give the Reader a juft Idea of this, and of courle the Obligations we are under to our Saxon Anceflors, that we have dedicated this Chapter.

Vol. II.

## 322 <br> The POLITICAL SURVEY

ligion, being baptized by Auguftine the Monk A. D. $597^{\mathrm{h}}$. He was alfo the Firft Legillator among the Saxon Princes, and his Laws are ftill extant, which afford a flriking Picture of the Manners of thofe Times. He was in all Refpects a very extraordinary Perfon, but withal very ambitious, exercifing his Authority over the other Princes in a Manner far from being fatisfactory.

Tue Kingdom of Kent after his Deceafe had an Honour which none of the Reft could boaft, that of having Two other Legiliators amongft their Princes. The Firft of thefe was Lothaire, who made his Code about A. D. 676 . The Second Withred, who, by the Advice of his Great Council, publifhed his Conftitutions, A. D. $696^{\text {i }}$. This little Kingdom, after a Succeffion of about Seventeen Princes, the laft of whom was Baldred, was annexed to that of the Weft Saxons A. D. 823 , when it had remained an independent State for the Space of 366 Years $k$. It is however true, that it was long after this reputed a Kingdom, and Ethelfane the

[^155]
## of GREAT BRITAIN.

Son of Ethelwulf and Grandfon of Ecbert, who put an End to the Heptarchy, had this, together with other Dominions, affigned him by his Father the better to protect them againft the Devaftation of the Danes, from whence this Prince is ftiled by the Saxon Writers King of Kent, which Country however his Father again refumed upon his Demife.

- The Kingdom of the South Saxons was in Point of Time the Second, in regard to fize the Sixth of the Heptarchy, being a little, and but a little larger than the former; it was compofed of what are now called the Counties of Suffex and Surry, and was founded by Ella or Ella, who, with his Three Sons and a numerous Band of Followers, came over at the Requeft of Hengift, and fought gallantly againft the Britons, who notwithftanding defended themfelves for fome Years with equal Courage until overpowered by Numbers. When Ella perceived that he had Space fufficient to form an Eftablifhment for his People, he affumed the Title of King of the South Saxons, making the Thames his North Boundary; having the Kingdom of Kent on the Eaft; the Sea on the South, and his Countrymen then fighting againft the Britons, who not long after crected another new Kingdom on the Weft. Ella was a Prince of fuch Spirit and good Fortune, that all the other Saxon Chiefs then friving to eftablifh themfelves in this Ifle owned his Supremacy, and hence he is ufually called the Second Monarch of the Anglo-Saxons, though the Saxon Chronicle afierts he was the Firft 1 .

He was fucceeded by hisSon Cissa, and in Procefs of Time Edilwach, or rather Adelwald, came to the Poffeffion of this Sovereignty, who being defeated was made Prifoner by- Wulher King of the Mercians. He was during his Captivity baptized by Wilfrid Archbilhop of York, Wulher being his Godfather, who afterwards reftored him to his Dominions, and gave him the Ille of Wight A. D. 66 I . Of all the Saxon Principalities we have the flighteft Account of this, for except the Names of a very few Kings, and the Facts already mentioned, we know nothing more than that after having been long dependent upon the Kingdom of the

[^156]
## 324 <br> The POLITICALSURVEY

Weft Saxons, it was at length united thereto by their victorious King Inz A. D. $725^{\prime \prime}$. It is true that the People afterwards made many Struggles for the Recovery of their Liberty, which however they were not able to effect.

The Kingdom of the West Saxons was the Third both in refpect to Time and to Extent. It was confidered in every Light a moft noble, fpacious, and well feated Country, more than twice as large as the Two be-fore-mentiered Kingdoms taken together, bounded on the North by the River of Thames; on the Eaft by the Kingdom of the South Saxons; on the South by the Sca; and on the Weft by Cornwall, which, for a Reafon we have already affigned, they ftiled Weft Wales, and when this fell under their Power, comprehended no lefs than Seven of our faireft and fineft Countiesn. It was founded by Cerdic and his Son Cynric, ufually called Kenric, after fpending about Fifteen Years in driving the poor Britons out of this Part of the Country. Cerdic affiumed the Royal Title A. D. 519, and reigned afterwards Sixteen Years, was a yery brave and fortunate Prince, and our Hirtories make him the Third, and his Son Cynric the Fourth Monarch of the Anglo-Saxons; but the Saxon Chronicle owns neither of them, though it allows that Honour to Ceawlin his Grandfon, who was a very diftinguifhed and fuccefsful Captain, but at the fame Time of fo turbulent a Difpofition, and fo imperious in refpect to his fellow Princes, that entering into a League they compelled him to abandon his Dominions.

[^157]The Sixth King of the Weft Saxons was Cynegils, who was baptized by Byrin Bifhop of Dorchefter, A. D. $635^{\circ}$. The Eleventh Prince who wore this Crown, and wore it with great Glory was InA, who, with the Advice of his Great Council, publifhed a Body of Laws for the Ufe of his Subjects A. D. 696, which are ftill extant. He was a fucceffful General, of a liberal and munificent Difpofition, and at the fame Time an able Staterman. After a long and profperous Reign he thought fit in the Decline of Life, according to the Notions of Piety which prevailed in thofe Times, to refirn his Crown, and when he had done fo went to Rome, and becoming. a Monk died there when he had fwayed the Sceptre Thirty-feven Years ${ }^{5}$. After his Death much Confufion happened in the Weft Saxon Kingdom, till at length the Throne was filled by Biturick, who efpoufed Eadburga the Daughter of Offa the potent King of Mercia, and the fame Year, A. D. 787 , Three Danifh Ships entered One of the Ports in his Dominions, being the Firft of that Nation which had ever infefted this Illand. Bithrick had great Sufpicions, whether well or ill founded, of a young Prince of the Royal Line, whofe diftinguifhed Qualities made him the Delight. of the People. His Name was Ecbert, and to avoid the Effects of this Monarch's Jealoufy, he retired for his own Safety into foreign Parts, remaining there till the Death of the King, A. D. 800 , -when he returned and fucceeded him, becoming in Procefs of 'Time the Eighth Monarch of

[^158]
## 326 The POLITICAL SURVEY

the Anglo-Saxons, and the Firt who, after having extinguifhed the Luftre of the Heptarchy, affumed the Title of King of England.

The Kingdom of the East Saxons, though not very confiderable from its Extent, being in that Refpect the Fifth, as it was in Date the Fourth of the Saxon States, was however very remarkable from its having for the Seat of its Monarchy, that which is at this Day the Capital of the Britinh Empire, and was then, as Beda informs us, diftinguifhed by its Trade, and the Refort of Foreign Merchants. This little Kingdom was compofed of Countries equally fertile and pleafant, being bounded on the North by the River Stoure; by the Ocean on the Eaft ; on the South by the River of Thames; and on the Weft by the Colne q. It was founded under the Protection of Efc the Second King of Kent, by a Saxon Captain whofe Name was Erchenwine, about A. D. 527.

His Son Sledda, and the fucceeding Kings, were dependent on and clofely allied to the Kentih Monarchs, fo that, as we have already obferved, Ethelbert laboured the Converfion of his Sifter's Son Sebert, and was the joint Founder with him of the epifcopal See of London, and the Abbey of St. Peter atiWeftminfter, A. D. 604. Mellitus was the Firlt Bihop, who after the Deceafe of Sebert, being expelled by his Three Sons, who reigned jointly, and apoftatized from the Chriftian Religion, he fled firt into France, and then returning into Kent became the Third Archbifhop of Canterbury. Afterwards the Chriftian Religion was reftored, and firmly eftablihed by King Sebba and Cedda Bifhop of London, both highly applauded for their Wirdom and Virtues. The remaining Princes make no great Figure, and indeed the Hiftory of this little State, which was almoft always dependent either on the Kingdom of Kent or on that of Mercia, is equally obfcure and incertain even to its Period, under Su thred the laft of Fifteen Kings, when it was annexed to the Dominions of the Weft Saxons by the great Ecbert, when it had borne the Title of a Kingdom for the Space of about Three hundred Years r.

1 This Kingdom contained only the Counties of Middlefex, Effex, and a Part of Hertfordmire. It feems to have been the Policy of the KentiM Monarchs Hengilt and Efc to cover their own Dominions, by fettling other Chiefs between them and their Enemics, which gave rife to the South Saxon and Eaft Saxon Kingdoms. This laft was however equal in Size to the Province of Holland, in which the grand Penfionary de Wit computed, that in his Time there were Two Millions and a Half of Inhabitants, which Chews that Power and Wealth do not always depend upon Extent of Territory. The Eaft Saxon Kings were in general of a peaceable Difpofition, and not at all inclined to encroach upon their Neighbours, to which their Want of Force and the Difpofition of their People to Commerce might probably contribute.
r In the Time of the Britons Londor, was an Archbihoprick, and Bifhop Godwin affures us, that the Title was kept up even after the Saxons were in Poffeffion of the Country. When Se

## of GREAT BRITAIN.

Tar Kingdom of Northumberland was in Point of Time the Fifth of the Heptarchy, but in regard to Size the Second. It was indeed a noble and fpacious, and though in fome Parts of it a rugged and mountainous, yet upon the Whole it might be juftly ftiled a fair, a fruitful, and a well feated Country. It was bounded on the North by the Territories of the Scots and Picts; on the Eaft by the German Ocean ; by the Irifh Sea on the Weft ; and on the South by the Humber and the Merfey s. It hath been before obferved, that Hengift left a confiderable Body of his Troops, fome fay under the Command of his Brother Otho, and his Son in thefe Parts, and befides them there were other Saxon Chieftains; but having many warlike Nations to deal with, and this in a Country very capable of Defunce, the fubduing them, and reducing it, took up a long Courfe of Years to accomplifh. But this being at length in a great Meafure cffected, Two noble Saxon Captains Ida and Ella affumed the Regal Title. The former in Bernicia, which was the Northern Part between the Tine and the Dominion of the Scots and Picts. The latter, Ella, fixed himfelf in Deira, which lay between the Tine and the Humber.

Tire Inhabitants of thefe Principalities were involved in continual Quarrels. Sometimes they were united and then feparated again. But the moft powerful of there Monarchs, when either in abfolute Poffeffion of the Whole, or having the other Prince dependent upon him, always affumed the Title of King of Northumberland; and had it not been for thefe inteftine Divifions, they might have bid fair for the Poffeffion of: the whole Kingdom of England. Edwin King of Northumberiand having efpoufed the Sifter of the King of Kent, was converted to Chriftianity
bert advanced $\Delta$ ellitus to the epifcopal Dignity, he was filed Bifhop of the Eaft Saxons, and what wasat that Time the Extent of the Kingdom, now forms the Diocefe of London. Small as this Principality was, Scbba enjoyed originally only a Part of it, though he became afterwards Monarch of the Whole, and after a long and peaceable Reign refigned his Crown, and lived fome Time a Monk in St. Paul's, where was then a Convent, and at his Death was buried in the Cathedral. Ilis Tomb remained to the great Fire, A. D. 1606 , and the Print thereof and the Infcription thereon are preferved in Dugdale's Hiftory ot st. 1'an'is, p. 46-02, 03.

- This ample Sovereignty comprehended the Counties of Northumberland, Cumberland, Weftmoreland, Durham, York, and Lancafter, all of them Maritime, and befides thefe fome of the Southern Parts of Scotland. It was larger than Wales, or than any of the Provinces of Ireland, equal : to all the Dominions of the States General, little inferior to all the Cantons of Switzerland, and to the full as big as the Ihand of Sixily. It was exceedingly well watered, with feveral good Ports ou the Ocean, and on the Irihh sea, finely ciiverfified, and in all Refpects a very plealing and plentiful Country. The Capital of the Northern Part called Bernicia, was a frong Fortrefs now called Bamberrow Cafte, faid to be built by King Ida, though fome efteem its Foundations Roman, at firlt furrounded, as the Saxon Chronicle tells us, with a Hedge, afterwards with frong Walls. The chicf City in the Southern Parts or Dcira was York, then, what it might be made again, a Sea Port. The Frontiers were well fecured, and the Country for thofe Times remarkably populous.
by Paulinus, who attended that Princefs into his Dominions, and who was by him made Archbihop of York, A. D. 626 t . This King Edwin was fo potent as to attain the Title of King of the Anglo-Saxons, which Diftinction (a Thing that never happened in any of the other Kingdoms) was enjoyed by his immediate Succeffors Oswald and Oswy, both very great Princes in their Days. The laft of thefe defeated and killed Penda the Pagan King of Mercia, by whom both Ofwald and Edwin had been flain.

Ir may be truly faid, that with thefe Two great Monarchs who held all Northumberland, the Power of this Kingdom ended, though after them Ceonulph, to whom Beda dedicated his Ecclefiaflical Hiftory, and Egbert were diftinguifhed by their Pietyand Love of P'eace, as well as by the Number of their publick Foundations ${ }^{u}$. The fucceeding Kings, for in the Whole there were upwards of Twenty, did not either enjoy any Quiet themfelves, or were able to procure it for their Subjects; fince as alternate Factions prevailed they were fet up, depofed, and fonctimes murthered, which kept Things in a continual Confufion; fo that at length the Strength of the Kingdom was fo entirely exhaufted, as to f.ll at firft under the Protection, and at laft to become a Province to the Wert Saxons, though not till the Reft of the Heptarchy had been by them fubdued.

[^159]The Kingdom of the East Angles in Order of Time the Sixth, but in regard to Extent the Fourth, was a plentiful, and in many Parts of it a very pleafant, and at the fame Time well fituated Country. It had the German Ocean on the North and on the Eaft; the Kingdom of the South Saxons on the South, and the potent Kingdom of Mercia on the Weft w. As this Country lay conveniently for receiving continual Supplies of new Adventurers from the Continent, fo Numbers of Angles came over under many Chiefs, and fettled themfelves therein. Thefe Captains, fo long as they lived, would bear with no Superior ; but on their Demife Uffa took the Title of King A. D. 575, and eflablifhing himfelf thoroughly in his new Dominions, left them to his Pofterity.

His Grandfon, Redwald, proved a wife and generous Prince, an Infance of which is his obtaining the envied Honour of being filed King of the Anglo-Saxons. He it was who protected Edwin, and at length placed him on the Throne of Northumberland. He is faid to have been a Chriftian, but kept fuch Muaturcs with his Pagan Subjeets, as rendered it fumewhat doubtiml. His Son and Succeffor Erpenwaid, being fupported by Edwin King of Nurthumberland, declared himfelf, and was baptized A. D. $63_{2}$, and his Example was followed by fome of the Nobility. The Bulk of the People however remained Pagans, and a Confpiracy being formed againt him by One of their Chiefs, he was deprived both of his Life and Crown. After the Troubles this occafioned fubfided, Sigibert his Couin, who was Bruther by the Mother's Side to Erpenwald, coming over from France featd bimelli on the vacant Throne $x$. He was a Prince of grat Learning, and effectually reflored and re-cfablifhed Chrifianity, which that he might fix ra; a firmer Foundation, he crected Seminaries for the Education of
$\because G$, is fmall Tervitory was compofed of what are now Aled the Countics of Sufolk, Noufolk, ©....ndechire, and the lac of Ely, much interior :o fome of the other sates, but feparateis emitered by no Means inconfiderable, as being about Half the Size of Wales, coual to the Pro$\because$ c of Picardy, and very little infarior to the Duch; of Sawoy. It was neturali, fortificd on 'face Sides by the Sea and the Fons; and on the Weft, wheae it lay open, the were Three art:fictal Ramparts with Ditches, the noft confulcrabie of which in Rill very conficuous near Newmarket called Rech Ditch, from the Jittic Market Jown of Rerh where it bexias, bat better known by the vulgar Appellation of the Dewils Ditib, intended to ftop the lucurfons of the Mercians. We have followed in the 'Sext the Defaption given by Abbo Foriacenis, a wry aitcient Writer, who compofed the Life of St. Edmurid the Martyr.

* When King Sigibert returned out of France, he brought with bim a Prieft named Fadix, who was confecrated Bighop of the liaft Angles. Fis See was fixed at Dommoc, now burwich, a Place formerly of grat Extent and Conlideration, as we have thew, vol i. p. 277, 2, 3. In Procefs of Time this Diocele; being thought too large, was diridel into Two, the other cpicopal Sce being pheed at Helman, the Uletum of Beda, now Nouth Elmhan, a very fanm llace in Norfolk. It was from thence transterred to, Thettord, once the Capital of this Kingdom, and a very large and ftately piace. When this was ruined by the Dance, and Dunwich by the Lea, both Bifhopricks were agnin united and fixed at Norwich foon after the Conquen: :

## $33^{\circ}$ The POLITICAL SURVEY

the rifing Generation, whence we find him accounted by many for the Founder of the University of Cambridgey.

After no very long Reign he refigned his Crown, and became a Monk. But when Penda the furious King of Mercia invaded the Country, the People compelled him to quit his Convent, and with them to take the Field, where with his Succeffor, Ecrick, he was flain. After thefe we find the Names, and very little elfe of Eight Kings of the Eaft Angles, though their Power was much reduced. The laft of thefe was Egilbert, or as fome call him Ethelbert, exceedingly diftinguilhed by the Gifts of Nature, being very wife and prudent in his Conduct, as well as remarkably comely in his Perfon. He was invited to the Court of Offa King of Mercia, under Colour of concluding a Marriage with his Daughter, and was there treacheroufly feized and beheaded by the Orders of that ambitious Monarch, who thereupon feized his Dominions, and annexed them to his own A. D. 792. Yet, though in him the Monarchy was for the prefent extinguifhed, his Heir, whofe Name was Offa, efcaped to the Continent, where he was very kindly received by Onc Alkmund at Nurembergh, whole Son he adopted, and dying in his Return from Rome fent him his Ring.

The Name of this young Adventurer was Edmind, who with a fimall Force landed on the Coaft of Norfolk A. D. 855, was joyfully received ly the People, who owned him as King of the Eaft Angles, and he proved a very wife and pious Princc. He governed with great Tranquillity till A. D. 870, when the Danes breaking in like an Inundation harraffed and deftroyed his Country, and after deceiving him by various infidious Negotiations, attacked, routed his Forces, and having made him Pritoner, $\mathrm{f}^{\text {nt }}$ him to Death with the moft horrid Circumftances of Barbarity, whence he was honoured with the Title of a Martyr. The pleafant Town of St. Edmund's Bury in Suffolk fill preferving his Name, where a moft fumptuous Monaftery was erceted to his Memory ${ }^{7}$.

Mercia,

[^160]
## of GREAT BRITAIN.

Mercia, though the lateft formed, was the largeft of the Saxon Kingdoms. It grew by Degrees, by the Prudence and Prowefs of feveral independent Chiefs of that warlike Nation, who, from their Situation and Defient, were at firft ftiled Mid-Angles. The Bounds of their Acquifitions were exceedingly enlarged by the Valour and Succelis of Crida and his Son Wibra, who laid the Foundations of this fpacious and potent So'wereignty, which was at length fo far fpread as to be divided on the North by the Humber and the Merfey from the Kingdom of Northumberland. On the Eaft it was bounded by the Sea, and by the Territories of the Ralt Angles and Eaft Saxons; on the South by the River of Thames; and on the Weft by the River Severn and Dee; fo that it was difficult to decide whether it was more confiderable from Extent, or from the Fertility of the Country it comprehended ${ }^{\text {a. }}$

Pexda is regarded as its Firf Monarch, and the Kingdom is thought to derive its Name from the Saxon Word Merc, which fignifies a March, Bound, or Limit, becaufe the other Kingdoms bordered upon it on every Side, and not from the River Merfey as fome would perfuade us. Penda aftuned the regal Title A. D. 626, and was of the Age of Fifty at the Time of his Acceffion, after which he reigned near Thirty Years. He was of a mo't futious and turbulent Temper, breaking at different Times with almont all his Ncighbours, calling in the Britons to his Afiflance, and fhedding more Saxon Blood than had been hitherto fipilled in all their intettine Quarrels. IIe killed Two Kings of Northumberland, Three of the Eaft Angles, and compclled Kenwall King of the Weft Saxons to quit his Dominions. He was at length flain with moft of the Princes of his Family, and a Multi-
of Norfolk, which was the filt Land made by this Prince in his Voyage hither, took the Name of St. Edmund's Cape. Near it he built a Royal Tower at Hundtanton. The Port into which his little liavy came was Maiden Bower, by many fuppofed to be Ljon. Ife was folemnly ancinted and crowned at a little Place in Norfoli called Buers, by bifhop Humbirctry or Hunibert. He was gain by the Danes at Flegilfden, now Hoxton, and his Body was removed to Bury, where a fmall Munafery was firlt ere?ed, which was deftroyed by the Danes under King Swane, whofe Son Cinutus repaired that Injury, by building a much larger, in the great Church of which he folcmnly offered his Cruwn.

2 This fplendid and opulent Kinglom comprehended well nigh! Serenteen of our modern Counties, being equal in Size to the Province of Langucdoc in France, vely litile, if at all lefs, than the Kiagdum of Arragon in Spain, and fuperior in size to that of Buhenia in Germany. Nu Country could be more finely diveifitied, or better watered, abounding with whatever conld reader it cither rich or plealant, fine Woods, fair Downs, excell at Patures, Plenty of amble land, and Mines of the molt valuable Metals. Having feveral navigable livers, and beldes the Naritime Counties of Ciloncefter and somerfethire, all the Ports on the extended Coalt of lincolnthire, which were then in a much better State than they are now, from the Confideration of which the Reader uill be induced to believe we have not att all exceeded the Truth in what is fiad of it in the Text.

# 333 The POLITECAL SURVEY 

tude of his Subjects, in a Battle fought not far from Leeds, by Ofwy King of Northumberiand ${ }^{b}$.

His Son Peada, who married the Daughter of that Conqueror, became a Chriftian, and was not long after murthered, as is faid, by the Malice of his Mother. His Brother Wulfher, becoming King of Mercia, embraced in Procef: of Time the Faith of the Gofpel c, and proved a very victorions and potent Monarch, and is with no fewer than Seven of his immediate Succeifors commonly ftiled Kings of the Anglo-Saxons, though none of them are owned in that Quality by the Saxon Chronicle. But though polfibly none of them might enjoy this Honour, they were undoubtedly vory puilfant Princes, maintaining great Wars, and obtaining many Advantages over the Sovercigns of other Saxon States, and efpecially the Eait Angres, whom they reduccd, as hath been already mention d. The Extent of the Mercian Territorics was fo ample as to admit, and io fituated as to require, the conflitating fubordinate Rulers in leveral Provinces, to whom, effecially if they were of the Royal Line, they gave the Title of Kings, which occations fume Confufion in their Hiftory d.
b This Battle, which the Saxon Chronicle tells us was fought at Winwidfied A.D. 655, made a great Change in the Saxon Affairs, which the unbridled Fury of Penda had thrown into great Confufion. He had the Sear before killed Anna King of the Eaft Angles in Battle, whole Hrother Fethelred nowithfandieg took Pare with, Ienda. On the other Hand, Peada the eiseit son of Pcada, to whom his Father had piven the.ancient Kinglom of the Mid-Angles, had Two 1 ears b:fore married the natual Danghter of King Olwy, and had been bapized ar his Court. At that Time it noud feem that Ofwy and Penda were upon good lerms; bat after the lateer had conguered the Eatt Angles, he refisived to turn lib drms againft the Kingdom of Northamberland. Ofwy by no Means had provokel this Ruptuic; on the contrary Beda tells us, that he offered large Sums of Money and Jewels of great Value to purchafe Peace: Thefe Offers being rejected, he was reduced to the Necellity of deciding the Duarrel with the Sword. The River near which the Eatele was fonght overfowing, there was mote drowned than killed. Amongft thefe, as the Saxon Chronicle fays, there were Thinty Princes of the Royal Line, fome of whom bore the Title of Kings, and alfo Ethelred King of the Eaft Angles, who, as hath been hinted in the Text, fought on the Side of Penda agniaft his Family and Country.
c Ofwy King of Northumbelanl, alter his Vietory over Penda, affeted the Rule over Mercis, yet without difpoffeffing his Son-in-iaw leada. On the contrary he joinced with him in the Foundation of a noble Monaltery at l'eterborough, and caufed Diuma to be confecrated Bithop of the Mercians, who had been hitherto under the Juridiction of the Bifhop of Durchelter. Wulfher, who fucceeded his Frother Penta, when he becume a Chriftian finfod the fine Monaftery at Peterborough, and fixed the epicopal See at Lithficld. His Brother Ethelred divided his Dominions into feveral Diocefes. Ouc Sec was at Silnaceftre, but where that was is very uncertain, fome fay at Stow, others near Gainlborough; but it was afterwards transferred to Linco'n. Another limop was phacedar Lecicefter, and another at Woredter. Hereford became afterwards an Epifcopal See. Ofin, joulou: of the Power of the Archbilhop of Canterbury, procured by the Pope's Authority, who fent upon that. Occafion the Finf Legates hither, Litchfield to be raifed toan Archbihuprick, which Title continued but a few Years.
${ }^{\text {a }}$ Befides the eftablifiiary Epifcopal Sees and Convents, the Saxon Monarchs took other Methods for improving and adorning their Dominions, and as Mercia was the largeft, fo thefe Me-

At length the Crown devolving fometimes on Minors, and fometimes on weak Princes, inteftine Faction alfo prevailing, the Force of this hitherto mighty Kingdom began fenfibly to decline. This falling out in the Days of Ecgbert, the moft prudent as well as potent Munarch of the Weft Saxons, he took Advantage of thefe Circumftances, and having encouraged the Eaft Angles to make an Attempt for the Recovery of their Independence, he, in a Conjuncture every way favourable to his D: fign, broke with the Mercians, and after a hort War obliged them to fubmit; but this was not an abfolute Conqueft, the Kings of Mercia being allowed by him and his Succeffors to retain their Titles and Dominions till the Invation of the Danes put an End to their Rule, when this Kingdom had fubfifted above Two hundred and Fifty Years; and when the Danes were afterwards expelled by the Weft Saxons, it funk into a Province, or rather was divided into many.

Tire Reader hath now feen a very fuccinct Reprefentation of the Saxon Sovereignties, from whence it appears that from the Time of their Coming into this Hand to the complete Eftablifhment of the Heptarchy, there clupled about One hundred and Seventy Years. In this Period the War was carricd on with very great Vivacity againt the unhappy Britons, and but very fimall Attention feems to have been paid to any Thing elfe. It docs not indeed appcar, that till after the Introduction of Cirinianity, Laws, (ivility, Cultivation, or any Arts, except fuch as weee abfolutely recefiny to Subfiftence, had made any Progrefs. In the Space of about Sivty Ycars from the Time of its Firft Entrance, the: Faith of Chrift prevailed throughout all thefe little States, and therewith a Spirit of Humanity and Regard to rational Policy, and the general Welfare of tie People e. From the Scttlement to the Subverfion of the Heptarchy we may reckon about Two hundred Years.

The
theds were mon confpicuous therein. Coventry, as being fituated in the Center, was ufually, but not always the Royal Refidence. Penda, who was almoit continually in a State of War, lived as his Military Operations directed in fome great Town on the Frontiens. Wilf her built a Caltle or fortified Palace for his own Refidence, which bore his Name. Offa kept his Cuart at Sutton. Walls near Herefort. In each of the Provinces there refided a chicf Magittrate, and $i$ be was of the Royal Blood had ufually the Title of King. Peada at the Time he married Orivy's Daugher had the Title of King of Leicefler. Fthelred made his lbrother Merowald King of Hercfunt, who dying without Iffue bequeathed it to his younger Brother Mercelm. The like Honours were fometimes conferred upon the Princofies, and hence in Mercia elpccially we occafionally read of ViceQueros. By this Mans the Laws were better executed, the Obediance of the Sulyects more: ciftictually feemed, and the Splendour of thefe Refidences conftantly kept up and augene 1 .

- It hath been generally thonght that the Saxons had not the Ule of Letters before the Jone of Auguftine's Arrival. But th charned Mr. Edward Lhuyd proves the contrary, and that then. which are ufually effecmed saxoa were really Britida Characters; fo that probably even befor

## 334 The POLITICAL SURVEY

Tire Extent and Situation of each of thefe Kingdoms have been very briefly fhewn, fome Veftiges of which are ftill vifible in our modern Divifions. We have compared them one with another, that their reciprocal Proportions in refpest to Stengith and Size might be rendered evident. We have adventured alfo to make a Comparifon of them with fome foreign Provinces and Principalities, the better to illuftrate their Importance, which in thofe Ages, when other Countries were in a like Manner divided, was much more apparent than without fome Reffection they can be to us. The capital Events in their Hiftory have been pointed out for the fime Purpofe. Wc have lahoured alfo to trace out fome at lealt of the feveral Modes of Policy by which they fought to improve and adorn their Country, and which, confidered with an impartial Eye, will in the Sequel be found to have had far greater and more beneficial Confequences than have been commonly imagined f.

We have given alfo fome Inftances in refpect to the Commerce which they certainly had even in thefe early Times, the Reality of which evidently appears in the Riches employed in their religious Edifices, in the Pilgrimages of foveral of their Kings to Rome, and other Circumfances necelfirily productive of Expence, which mult have been defrayed from the Exportation and Sale of their native Commodities in foreign Parts, fince

Arvisal of that Mont, fome Converts had been made to Chrintianity by the Dritons. But after it became the efablifled Religion in Kent, we find great Alterations made ia the Numens of this Nation. The firit Laws plainly fhew the Rudenefy of the Times, which they ane chiefly calcalitol to reprefo, and in fucceebing difes there are withle Marks of their becoming mone pulified and better accuainted with ufectil Arts. All this was chicfly due to thein Clorey, whe tonk great Pains toinfrua and inpruve them, of whin from their own learning and Abilitice they werc vely capable, as appears tron the (stalogue that Leland has given us of more tian fity of their Writere. In Reference to the Progrefs of Humanity amonght them, we need orily mention Onc of the Lawo of King Ina, by whicl it is declared, that if a Briton, or as they called him, a Whehiman, was fana, who pofferid an Itide of Land, the Compenfation thould be One hunhed ad Twenty shillings; if he hat ouly Half a Hide, Fourfore Shillings ; it he had none, Sixty Shil-
 them. As to Cultivation, beides many Laws relpecting Agriculture and Pafturage, we find One particularly for the Procstion of $\mathrm{V}^{\text {ineyards. }}$
f After thefe Pcople became civilized, they arpear to have had a great Inclination to Building, and to hace Ausied every Method of promoting it that was in their Power. At finft by cruting Towers and Forteffes, Rowal Houfes, and repaiaing Ruman Stations; afterwards by fixiug. Bifhops Sees, eructing Monatitrics and Numeries: All thefe produced gradmally other Buildinns near then. Eviry Cathedral bad a Number of Clergy, and many of them Schools. The Ahsies had their Mu:ns, weetler with Villages and Farms in their Neighbombood. The Relincaces of

 Arer of the cife of king Aified, there are moie then ()ne Landred and Twenty Citice, Boroughs,

## of GREAT BRITAIN.

Bullion could no otherwife be procured ; in the Poffeffion of which, however, it inconteftably appears they were not at all inferior to their Neighbours. We may in like Manner conclude from their Buildings after they began to repair the old and to erect new, from their Cloaths, their Arms, their Shipping of feveral Sorts, their Furniture and other Conveniencies, that they muit have had a Variety of Manufactures. It muft be confeffed, that it would have been more fatisfactory if we could have entered into a clearer Detail of thefe Matters; but this our Materials would not allow. The ancient and authentic Annals of thefe Times are very fort, the Accettions and Deaths of Princes, their Wars and their religious Foundations, are almoft the only Things that are remembered in them: Yet nutwithftanding this, the Facts we have laid down, though lefs fatisfactory, are not at all lefs certain 3 .

Eccibrat, or according to the Saxon Orthography Ecgbrift, from the Time of his Accefion to the Wert Saxon Kingdom had the Conquea or the Coalition rather of all the other States conttantly in View. At the begiming however he attacked none of them, but commenced his Military ©perations by fulling upon what they filed Weft Wales, the Inhabitants of which he reducei A. D. 813. Ten Years after this, when he had broke the Power of the Mercians, by inftigating, as we have before hinted, the Eart Angles to affert their Independency, he openly invaded that great Kingdom and fubducd it, though from a Misture of Equity and Policy he retioned Wilaf, who then governed it, as his Vaffat. A. D. S27 he put an End to the Heptarchy by the Reduction of Northumberland.

[^161]
## $33^{6}$ The POLITICAL SURVEY

The next Year he fubdued the Britons fill remaining in the Northern Parts, and having thus accomplifhed his whole Defign, it is probable he would have given a regular Form of Rule to his now extenfive Dominions. It was with this Intention, as is fuppofed, that he called a General Affembly at Winchefter, and there directed that his Realm foould for the future be called England, and his Subjcits Englisumpn. But before he could proceed farther his Deliberations were interrupted by the Danes invading different Parts of his Territories. A. D. 83.3 he fought their Army at Carrum, a Place not certainly known, but with great Lois. A. D. ${ }^{3} 35$ he totally defeated them and the Corning. Britons who had revolted, and juined them at Hengfone Hill. This Vittory gave him fome Hopes of Quiet, which however he enjoyed not long, for the next Year he fell ill, dice, and was buricd at Winchefter ${ }^{\mathrm{h}}$.

IIe was fuccecded by his Son Eturlwulf, a Prince of a religions Turn of Mind, who notwithitanding by the Alfitance of his Sou Ethchtun, when as we before-mentioned, he had dechared King of Kent, repelled the: in:vations of the Danes, and fo far reftored Peace to his Kingdom, as to find an Ofportunity for making Two Vilits to Rome, and being a Widwher when he went thither laft, in his Return from thence he elpouici Judith the Daughter of the Emperor Cuarles the Bald, and about Two Yeare after deceafed. Ethelam his cldeft being dead, he was fuccected ly bin.. second Eon Etathanin, who enjoyed the Regal Dignity but a hent time, and was fucceeded in their Turns by his younger Brothers LTtumbent and Etheredi.

The
b It may be fatisfactory to the Reader to obferve, that this great Prince paffed his Thrie Year: Fxile in the Court oi Shalemage, who maintaned a clofe Correfpondence with mure wina
 Arms or Politios, and thetetore we need not wonder that he was fon nuch fuperior in both t., the
 with fo great Propriety. He commenced his Reign over the Weft Saxoms the very fane law: that Chates was crowned Emperor at Rome. Though his Edi\&t for giving the Nume of Forrland to his Dominions is currcat in our beft Hiftories, yet it is not mentioned in the sumalachonicle. 'To lay the Truth, the Title was of an older Date, and the Realon commomy atiratut is, that the Angles were a greater People than cither the Saxons or the Ju'es, for the Eaf Anseles, the Northumbians, and the Mercians were all of the fame Stock. It may be the ling chofe or continued this Titie to conciliate the Affection of his new Subjects. But after all we do not find that it was cither permanent or confant ; for though Aficr, who wrote the Memonirs of Aitral, and dedicated them to that great Prence, Alle; him Ahmarch of the Ango-Saxam, yet Aifred himfelf was conent wirh the tithe of King of the Weft Susons, as eppeats in many of his Writings, and moll authentically ia the Introduction to his Laws.
: The Intent of this Chapter is to give the Reader a competent Idea of this Cometry under the Saxons, and of the Progrefs of the Coultitution in their Thene. As thi coxid wit be done without emering into their Hiftory, we have purfucd that too as brielly as we could, and talioni

The Danes during the Government of thefe Princes ravaged all Parts of England, putting an End to the Northumbrian and Mercian Kingdoms, killing Two Monarchs of the former, and expelling Burherd, who was tributary to and had married Ethelfwitha the Sifter of thefe Kings, out of the latter, obliging both the King and Queen to fly into ltaly, where they died. They likewife placed a King of their own in the Country of the Eat Angles, as they had done before in Northumberland; fereading Dcination and Deftruction where-cver they cance. For their Mode of inaking Wiar was this, they feized upon fome tenable Plice, and iffuing from thence compelled the People to furnifh thein with Horfes, which cuabled them to m.ke Excurtions on every Side, and when they had amafied all the Booty they could they decamped, and either took up some frefh Station or returncd Home with their Plunder. Thefe Events, by which the whole Country was in a Manner rendered defart, fell out in the Space of about 'I hirty-five Years $k$.

Ar this Period, A. D. 87 I , Alfred, according to the Saxon Orthography, Eifren, in Latin Writers called Aluredus, the youngeft Son of Ethelwulf, came to the Ciown, or rather the Cares of it, which he had hitherto only fhared with his Brethren, devolved now folely upon him '. He proved One of the wifcif, braveft, and beft Princes that ever

Some Pains to render it not unintelligible or utpleafant. This leads us to fay fomething as to the Fiames of thefe linces, which tie Lauguage of our Forefathers being now forgotten, found not a litle harth in our Ears, though to them they were equally grateful and pleafing. Neither were they fingular in this Refpect, for in molt ancient Nations proper Names were fo framed as to exprefs the lixcellence of the Pafion to whom they were given. Thus in Hebrew Ifracl is the Prince of God. In the I'afan language, which is that of the Court in the Indies, Aurin Zabe is the Onament of the 7:irone. In like Maner the Saxon Names were in their Language equally figsificant. E.gbert. imphicd ever fpladid: Ethelwulf, a noble Support; Ethelbald, princely Conrage; bethelber, pincely Luftre; and Fthelred, nuble Counfel. Ethel was nobie or princely, and in the fugenative Degrec, Ethe'flan, mof noble.

* The Danes, as webate often olferved, were of all the Scourges this Country cever met with the mofl heavy and the moff fevenc. We have fuccinetly reprefented this in the Text, hut it feems meceflary th be buse eppicit. They did not make a regular or contant War, but acted by regoatad anl luchen Defients Wherever they came they proceeded with the umolt Cructy, not faring either Six or Age, and being Pagans, refpeted neither Churches or Religious Houles, which in the Saxon Wars wereacounted fated, and this, confifced in a politial Light, was no fmail Advantege, as it preferved the most cultisated larts of the Country from the Horrors of War. The Clijeit of the Danes, at the Beginning, was not Conquett but Plunder; they carried away whatever was valuable, and deftroyd the Reft. In a Coulfe of Years, therefore, they not only impoverifhed the Inhabitants to the lan Degiec, but harraffed them alfo in fuch a Manacr, as to lareak their Spiits and deprive them of Hope. They made Treaties, but with a View only to Estortion, atad having fold a leace, brohe it as foon as they had reccived the Pice.

1 This great and good Monarch uas horn at Wantage in Beri-hire, A. D. S.fo. His Father fent him at Five Years cld to Rome, where he was hocourably received by Pope Leo the Fourth.

Vol. 11.
fat on this or any other Throne. The Country was then, as it had been for many Years before, over-run by the Pagan Danes, againft whom, in the Courfe of that very Year, he fought Nine Battles with different Fortune. In the fucceeding Seven Years his Forces were fo miferably exhaufted, and thofe inhumane Invaders had made fuch Progrefs, and brought over fuch Multitudes of their Countrymen, that he was conftrained for his own Safety to retire into the Fens of Somerfethire, and to take Shelter in the IMe of Athelney m.

Here he had Leifure to plan thofe wife Meafures he afterwards purfued, and having at length found Means to allemble an Army with which he furprized and routed the Enemy at Ethandunc, he, to fpare the Effurfion of human Blood, made a Treaty with Gothrun the Danifh King, who with Thirty of his principal Nobility were baptized, in confequence of which he affigned them the Countries of the Northumbrians and Eaft Angles, of which they were already in Poffeffion, that therein they might fettle and procure a Subfiftence for themfelves agreeable to the Conditions of that Convention $\mathrm{n}_{\mathrm{o}}$.

He went thither a Second Time with his Father, and remained there a full Year. Fie derived from Nature a moft extenfive Capacity, which was improved by the beft Education that Age coull give. He applied himfelf affiduoully to Learning, and gradually acquired every Branch of ufctul Knowledge. He not only underftood the Principles of the Art Military, Alchitesture, and other Branches of the Mathematicks, but ftudied likewife Mechanicks. He had very free and liberal Notions, took great Delight in the Converfation of Men of Farts and Learning, at the fane Time addicting himfelf to all manly Exercifes, as well as to the Sports of the Field. It is indecd amazing, that in an Age like this there fhould have been a Prince of fuch Accomplithments; but if he had not been a Prince of fuch Accomplifiments, he could ncither have purformed what he: did, or have furnifked the Materials for thofe Memoirs of his own Times, which were writter in them by himfelf and others.
$m$ The Name of this Inland in Saxon is Fthelinga-yge, by Contraction Atbelney, that is, the She of Nobles. It lics in Somerfethire (fee Vol. i. p. 333.) furrounded by the Waters of the Thone and Perrot, fome Miles North-caft from Taunton, and South caft from Bridgewater. It was a Place very ftrong by Situation, being furrounded by Moraffes. There had been before his Time a Monaftery in it, where, for his own Security, he conftrufted a Cafle, but in fucceeding and better Times he again erected a Monaftery there. In the Leifure which this Retreat afforded him, it is believed that he framed not only the Project of attacking and difperfing the Danes, but 2 ifo that Syftem of Government which he afterwards cftablifhed. He was a Prince of a moft firm and undaunted Spirit, whom Succefs never elated, and whom no Difficulties could deprefs.
n In the Saxon Laws we find Two Treaties with this Danifh King Gothrun, and though the One is Itiled a Treaty between him and King Edward, yet in Reality both wese made with Alfred, who furvived the Danifh Prince Ten Years. The Scope of thefe Treaties was to eftablifh the Chritian Religion amongt the Danes, to conciliate as far as poffible the Differences between: both Nations, and to prevent their harraffing and pillaging each other. The Firft feems to be. a fiort Convention, and the Second a more claborate Treaty, in which, for the gieater Security of: the Danes, Edward was joined with his Father, and hath alfo the. Title of King given him, but. the Danes were to remain Subjects to them both.

## of GREAT BRITAIN.

The King profecuted his Enterprizes afterwards with fo much Diligence, and his Endeavours were attended with fo great Succefs, that having recovered London, and many other Places of Confequence, out of the Hands of the Danes, he at length brought his Affairs into fuch a fettled Situation, that A. D. 893, he enacted a Body of Laws for the Ufe of his Subjects, and foon after executed feveral other arduous Undertakings for their Benefit. In this noble and publick fpirited Courfe he perfifted with unremitting Vigour, notwithitanding the continual Interruptions he met with from repeated Invafions, performing fo many and fo great Actions, as nothing but the molt authentick Evidence could render credible ${ }^{n}$.

Citiss, Towns, and Fortrefles he repaired, the Country facked and pillaged, he repeopiced and refettled. His perfonal Induftry and Example animating and forming his Court and his People. He raifed up wife Minithers, able Gencrals, pious and learned Pielates, inftituted publick Schools, founded Univerity College and other Places of Learning in $\mathrm{Ox}_{\mathrm{x}}$ ford, fent for the moft famous I'rofffiors from foreign Parts, and eftablifhed them in his own Dominions. He held a clofe Correfpondence with, and was much admired by the greateft Princes on the Continent, difpatched frequent Meffiengers with Alms to Rome, and even to the Chriftians of St. Thomas in the Ealt Indies, from whom he received fome Prefents in return. He fhewed great Attention to Trade, revived and extended Navigation, and encouraged and rewarded every Species of Induftry. In this glorious Career, unblemifhed by any Kind of Vice or Weaknefs, he kcpt a itcady Progrefs, beloved at Home, refpected abroad, and having eftablithed an immortal Reputation by his Actions, he deceafed A. D. 90 :, after a Reign of Thirty-years, and in the Fifty-fecond of his Age.

[^162]
## 340 The POLITICAL SURVEY

If we may place any Truft in the general Opinion of our ableft Writers, this famous Monarch was the great Legiflator of this Country, and ought to be regarded as the Author of the Saxon, or rather of the Englinh Confitution r . This Sentiment will feem to be the more jufly founded, if we reflect that he was the fole Ruler of the whole Nation, not only as the Grandion and Succeffor to Ecgbert, who put an End to the Heptarchy, but as the Defender of the Anglo-Saxons againft the Danes, who were Mafters of a great Part of the Country, and had over-run and ruined the Rett. What therefore he held he had recovered at lealt, if not acquired, and had no Competitor or Rival to difpute his Right. But as he tells us himfelf in the Introduction to his Laws, he diligently wrought the old into the new Syftem, preferving fuch of his Anceftor's Infitutions as were fit to remain, and a'ding and fupplying by his own, what the Alteration of Times and Circumftances rendered neceffary, recommending the like Care and Conduct to his Succeffors.

As his Situation made this requifite, fo it alfo made it practicable; for. having none to controul him, and having likewife the entire Confidence of his Sabje:ts, founded in the Superiority of his Abilities and the Purity of his Intentions, of both which they had equal Experience, his Inftitutions oi every Kind met with a willing and univerfal Obedience. That this is a trae Reprefentation of Facts, the Confequences will inconteftably -fhis, for this Arragement cevidently prevailed in fucceeding Timus, though no Veftiges appear of its Introduction, and it is no lefs phain chat it conld not be made before his Timeq. Eefides there are many and expres

[^163]Proofs that feveral effential Parts of it were brought in by Alfred, to whom therefore we may rationally afcribe the Whole, efpecially as the Plan is timple, regular, and comected. It muft however be acknowledged, that it was gradually carried into Execution by his Succeffors, and of counfe the Eifects of it were moft confpicuous in their Reigns, though the Out-line of the Syftem was undoubtedly his. It is our Duty to give a Plan of this Conflitution, to explain the Spirit of it, and to fhew wherein the Excellency of it conifts.

Turs wife and judicious Monarch provided firf for the complete Reftitution of Religion, which was then far lets tainted with the Errors of Popery than in fucceeding Aees, looking upon it as the only folid Batis of civil Obedienc.:, and when he hat accomplifhed this, he proceeded in like Manner to refore the State. He oblerved the numerous Mifchiefs that arole from Diforder and the Want of a regular Diftribution of the feveral Iatts of his Dominions, and this induced him to divide the Realm into Countics or Shires, every County into Hundreds, and every Hundred into Tithings. By this Divilion, and the Circumflances attending it, he theroughly provided for the publick Tranquillity. Every Houfeholder was antwerable for his Family, and any Stranger who ftaid with him more than Two Nights. The Towns were accountable for every Houfeholder refiding in them; the Hundred, for every Town comprehended therein; an. 1 the County, for the Inhabitants in all the Hundreds it contained r.
narch have been recovered, that were formerly buried in Oblivion. But ftill this Difficulty is not re-
 How then is he a Leginator: Why is any Sylten atributed to him? Ur how if te did thane, whihout puimhits, came it to pechaii? 'The Truh feens to be, that as he recovered his Dominims by Deghes, fo in Proportion as be recovered them, he catablithed a certan and peBeliar Mante of Guvenment, the Model of winch he had franed in his own Mind during the Thine
 Combequmes with whin it was atconded, together with the Reverence that was long paid to his Menofy; chablifhed it cfectually, and the Saxons by Habit grew to have a jult Sente of the Enchilency, and from thence an unalterabie Affecton for this Condtitution.
$r$ The State of Things, ant the Naiure of his Inftitutions duly confidered, they will appear to any candil Judge, as well and as witcly contived as any of the boufted Sydems of Antiguity; jet it is by no Mcans probable, that Altred deaved much Heip frum contulting and compaiag fach Conifitutions: Though this, to do him Howon, hath beta alfated by fone of our Hifrorians. It is much more likelf, that they were entirely of his own Coneptom; neither is his Sagacity in forming to be more admired, than his Desionity in introducing thes: When he fund began to fec Ihings in Order, he fomd, amons many other Calanitice, that the Suxoms but skeguently plundered by wicked Men of their own Nation, difruifed in the Mabit of labes. The Divifion therelore of the Couniry, and the fevenal Subdivitions of its lahabitants, was the oujp ancquate Remedy that could be applied to this Evil. The People therefore readily fubmittes to it from a P'inciple of Intereft, and when once it was ellablithed, the Conemience wat io greate aud fo apparent, that they had no liomptation to alte: or complaia of it, Indecu the fionte-

By this fimple Regulation every Individual became refponible for his Conduct, as, for their own Security, his Neighbours in cafe of Delinquency were.bound to bring him to Juftice. That this might be done fpeedily, certainly, and with Facility, fettled Courts and proper Judges were ap $\boldsymbol{z}^{\prime}$ pointed in all thefe Diftricts, so that Offences againft the Publick, as welt a, private Wronge, were quickly and effectually redreffed, and this by the Confeat of the People themfelves, who compoled the Juries in thefe Courts s.

The Earl was the King's Lieutenant, the Shire Rceve, whom we by Contraction file Sheriff, was the minifterial Officer in every County. This Divifion ferved alfo for maintaining a conftant Force for the Defunce of the Country. The feveral Orders of People were in fuch a Manner difpofed, as to anfwer moft effectually the great Ends of Society. The Earls were to difcharge their Duties in their refpective Counties with Exactncfs and Fidelity, on Pain of Punifhnent, being deprived of their Offices, and lofing the Royal Favour. The King's Thanes, who were the next Clais of Nobility, the Under, or as fometimes called Mildle Thanes, who were poffiefled of Manors, and the Cheorls or Yeomen, the lowett Clafs of Frecholders, having all their legal Rights and Privileges; and as an Encouragement to Virtue and Induftry, if any by Agriculture, Merchandize, or other honeft Profeffion, fo improved his Property, as to be able to fupport the Dignity, he came into the Rank of Thanes. Vaffals or Servants, though not Freemen, were protected from ill Ufige, their Mafters being bound to regard them as God's People, and the King's Subjects t.

Citics

guences were very extraorlinary, for from the Roads being fo infefted, that it was dangerous to go from One Place to another, they became in a hort Space fo fafe, that Ingulphus teils us, Men might leave their Mones in them at Night and find it in the Morning, or as others affirm, Gold Bracelets were hung upon Trees and Bulhes without any Body's offering to touch them.
s The Courts by him eftablithed were conformable to and coeval with thefe Divifions. In the County Court, both the Earl and the Bifhop fat originally, till the latter was removed by Law, and the former gradually neglected it: This was the great Court in which Elections were made, all publick Bufinefs was tranfacted, as well as Caufes heard, and Wrongs redreffed. The Hundicd Court refembled that of the County. The Court Baron was more limited in Juifdiction, and the Court Leet or View of Frankpledge was molt frequently held, that the Fieehoidurs might have a diltinet Knowledge of each others Behaviour, and Once a Year the Sheriff prefided therein, which was thence filed the Sheriff's Turn. In criminal Cafes, Juries prefented all Bueaches of the Law, and thofe charged with committing them were tried as to the Fact by a Jury; thus, as we have often remarked, Juftice was brought to their own Doors, and every Man had Might done him, was acquitted or found Gailty by his leers or Equals, Men of the Vicinity or Neighbourhood, who, of all others, were like to be beft informed, and for their own Sakes would be molt wary in their Decifions: Yet, as Infallibility was not to be expected, thefe Judgments were expisfed to the Infpection and Controul of the King's own Courts, which were then Itirerant, following his Perfon in his Progrefs through different Parts of his Dominions.
t The Saxons ftiled thofe who had I:rifdictions under the King Faldormen, the Word Ealdorman meaniag the fame with Senator, or a grave Counfellor. In Procefs of Time, the Danith

## of GREAT BRITAIN.

Cities and Towns had their Magiftrates, and proper Mode of managing their Concerns, as by the Saxon Terms for their feveral Councils and Affemblies ftill remaining in Ufe, plainly appears. Publick Markets were affigned, Laws were made for preventing Frauds in Dealing, and other Steps were taken for a free and fafe Intercourfe for the Benefit of Tradc. In refpect to foreign Commerce, Merchants were not only protected and honoured, but the King for their Encouragement lent them S.'iips. He faw the Neceffity of having a Naval Force, and he faw that this was no W:y attainable, but either by the Practice of Piracy, which was the Method taken by the Danes, or by the promoting Commerce, which was the Mode he chofe. He fo much affected Navigation as to fend experienced Scamen to examine the Northern Fifheries, and to explore, as many believe, a Paffage that Way to the Eaft Indies; Things that would fcarce meet with Credit, if the Reports of thefe Mariners in the Saxon Language were not fill extant ${ }^{\text {a }}$.

In regard to Military Affairs, he was equally prudent and methodical, for in every County there was a trained Militia, muftered at ftated Times, and ready for Scrvice when Need required; fo that where-ever an Enemy l.nded, Refiflance might be immediately made; and if the Power of One County was not fufficient, they were affifted by the Counties adjoining. The Naval Force was alfo properly regulated, fationed in convenient.

Titce of Eorle was atopred, from whence our modern Word Farl. In Alfred's Days they adminiftred Juitive in their refpective Diftricts, whence we find them Riled Shiremen. The Thanes, or King's Thanes, were his Officers who held Lands in Right of their Offices. The Middle or Under Thancs, were Men of Property, and thofe of an inferior Rank who could acquire Five Hides of Land, had a. Church or Chapel, a Manor Hoafe for the Entertainment of their Tenants, and a Court in which they met to decide petty Caules, became from thence a Thane, and enjoyed all his lriviliges.
"The Cities and great Towns that: had been ruined by the Danes, he very carcfully repaired, direiting them to be wallel and fortified, to prevent luch Misfortunes for the future. He alfo built fome new Places, particularly Shaftelbury, in the Eighth Year of his Reign, as appeared by an Infeription on a Stone dug up there long after. The fame Scheme of Governmat prevailed in his Citics as in the Country!; for infead of Shires they were divided into Wards, with Magiftrates in each; he eltablimed in them publick Markets, to prevent the felling in them chandeftinely Cattle or Horfes thar were ftolen. He encouraged the Refort of Foreigners to his Court, which is a fafficient Proof of the Intercourle at that Time between this and other Nations. His Actions likewife demonfrate, that he mult have been diligent in his Finquirice, and have been very for:date in his Iutelligence; he could not orherwife have had any Reafon to have directed an Expedition into the Northern Seas, the Journal of which, from his own Preface to Orolius, is printe 1 in Saxon and in Latin, in the Appendix to Walker's 'Tranlation of Sir John Spelman's Lite of this Monarch, and is a vary curious Piece, as it Chews that Whale and Seal Himing were practifed in the.fe Times, and that the Fins and Laplanders placed their chict Licines in Shias, Liurs, and Rain Deer, as they do at this Day.

## 344 The POLITICAL SURVEY

Ports, and kept in conftant Repairw. The King himfelf examined the Ships of the Danifh Pirates, and finding them longer and better built than his own, he contrived and confluged Veffels that were fill larger, ftronger, and higher than thefe, which in a flort Space he ftationed on both Sides, the Inand, by which the Danes were frequently attacked at Sea, and thofe on Buard having no Quarter given them, were to exceedingly intimidated, that they ventured feldom within their Reach.

But as the Changes of Circumftances made a Change of Meafurcs fometimes requifite, and that the State of publick Affairs might be better underficod, it was fettled that General Affemblics fhould be ield Twice a Year, in which the Monarch afiifted by the Advice of the Jrolates, Eals, Thanes, and other Counfellors, Atiled in general wife Men, decided en Matters of the higheft Importance, and in which new Laws, when neeeffary, were enacled; which Affimbly was the Reprefentative of the Anglo-Saxon Nation, and in which alue the fupreme leginative Authority refided x .

Tire. Excellency of this Syftem might be hewn in a grcat Varicty of Particulars, but a few Intances may futice. In the Firlt Place, from the Diftibution of the Inhabitants, no Man could be idle unicu,
w It was the fingular Prudence of this able Monarch to convert Miferies into Mcrcies, and by making his subjects fonfble of the Caufes of their Misfortunes, infpiting them with courage and Perfevelance in the Application of proper Remedics. The Saxens to his Time had built but fingtly, and though their Towns were many of them great, yet the Houfes wore mon of them Timber. He convinced them of the Necellity of fortifying them, and tanght them how to do it. He placed regular Garrions, and fixed the Manner in which they were to be nilicvel. He filt inftitued a regular Squadron of armed Veffels for the Piotection of the Coalts, and appointed Guardians of the maritime Parts of the Cotintry, with extraordinary Powers for ardecabli:s Foces on the Fift News of an Invafion. He ferved in Perfon as well on Poard lis: Ships as in tis Armies; and as to all thefe Regulations we have Accounts of thom cither in vibers of his own Cime, or very near it, for whofe Fidelity we have this fingular l'felo, that thergh ihey might eafily record thele Fact:, it would have bech difficult, if not impofibile, is - them to have invented them.
$x$ Thele sereat Councils had varinus Names in the Saxon Langure, but are commonly fiad
 a) Saxon are file 3 Whtes, about which there hath been fome Controverfy; but by comparmg du Baxon Lawe, it very dearly appars, that they were Men of approved foberemt and Komladge in the Laws. The Bembers in the fe geat connils had a deliberative Voice in the making or eepealin:s of Laws, and a judicisl Voice in se!pect to the Caufes Civil aud Criminal, that werce either head or revied before them. (Sekdens W'orks, vol. v. p. 666.) Alfred was excediegly carctal in this Paticular, for his Hifmian Afer informs ue, that he repimonded very fevecly his 1 arls and cther Jufices for their Errors in the Decifion of Coufes, telling them piainly, that if they were ignotiant of the laws they ousht to refign their Officte, and to preent lach bials in fucceeding Times, he direfed every Man who had a competent Efate to breed ip his Sues in fuch Leaning, as migity qualify them for the Service of their Country in thele - ťicus.
or fupply the Wants that his Idlenefs occafioned by any Act of Violence or Wickednefs unpunifhed. In the next Place, though Punifhments were fettled by the Law, and declared by the Judge, yet this was in virtue of a Prefentment or Verdict by a Jury. Lafly, the Wiidom of the Laws, not the Will of the Magiftrate, regulated the Subject's Actions, the Authority of the Prince and the Freedum of the People being fo equally adjufted, and fo intimately interwoven, as to contribute alike to the Happinefs of Individuals, and to the publick Honour and Safety.

Edward, coimmonly filed by our Hiftorians Edward the Elder, fuccecded his lather in his Dominions, whom by his Military Talents he had long affifted in the Field, and he fucceeded him in the full Vigour of his Years. The Nation reaped from hence great Advantages, as the Danes who flood in Awe of Alfred, would not have failed to have tried their Strength afrefh againft a Succeffor of lefs Spirit. As it was, he had fcarce entered on the regal Office before his Courage and his Prudence were put to the Trial ty a Civil War raifed againft him by his Coufin, who, being obliged to thy, had Recourle to the Danes for Affiftance, who received him willingly, and this brought on a War which was attended with much Danger, Bloodficd, and Trouble y.

Edward fupported himfelf againf all his Enemies with equal Firmnets and Temper, purfuing feadily his Father's Maxims, which contributed not a little to make their Excellency better known and underftood. He fought a great many Battles, and moft of them with Succeis; yet in the Midtr of his V'ictories he littened willingly to any Overtures for Peace, which, when concluded, he kept religioutly, and employed to the bef Purpofies. He repaired many old and built not a few Cities and Towns, ftudyang carcfully all the Advantagcs of Situation, and peopled them promifcuoully with Saxons and Danes, who being once brought to practife Induftry,

[^164]
## 346. The POLITICAL SURVEY

as conducive to the Acquifition of Property, became both ufeful and faithful Subjects ${ }^{2}$.

By this Policy he not only repeopled and inproved his Country, but by Degrees fo won upon the Danes, who inhabited the Territory formerly belonging to the Eaft Angles, that they voluntarily fubmitted and owned him for their Monarch. Thofe in Northumberland he remdered tributary by Force of Arms, treating them with great Gentlenefs and Humanity. He was no lefs fuccefsful againft the Scots and Welch, whom he treated with like Moderation, fo that he grew more to be eftecmed for the Ufe he made of it, than feared from the Increafe of his Power. His conftant Aim was the perfecting that regular Eftablifhment which his Father had fo wifely planned, and by the Execution of which he fo evidently extended his own and diminimed the Strength of the Danes, who were more humbled by his judicious Conduct than they had been by his repeated Victories. By this Manner of Proceeding, though great Part of his Time was fpent in the Field, he conftantly cultivated the Arts of Peace, and rendered them known and acceptable to his Subjects a. He reigned with great Reputation Twenty-four Years, and left by Three Wives a numerous Pofterity, feveral of his Sons fucceeding him in the Throne, and Three of his Daughters matched with the Emperor of Germany, the King of

[^165]
## of GREAT BRITAIN.

France, and the Duke of Saxony, who was Son to the Emperor Henry the Third.

His eldeft Son Ethelstan fucceeded him, who was in the Flower of his Age in A. 1). 925, and was with great Solemnity crowned at Kingfton upon Thames. Some Troubles are faid to have clouded the Dawn of his keign, which were however compofed without Bloodfhed. He held reveral Synods and General Affemblies, in which many excellent Laws were enacted for eftablifhing Peace and good Order, promoting the due Adminiftration of Juftice, preventing Frauds, and regulating the feveral Mints throughout the Kingdom, all of them agreeable to and in Support of Alfred's Plan b.

Hs was diverted from his Attention to civil Affairs by the Incurfions of the Northumbrian Danes in Conjunction with the Scots, againft whom, acting with great Vigour and Succefs, he brought them to demand a Peace, which he granted upon very eafy Terms. This was far from being attended with fuch an Effect as he might reafonably have expected. For perceiving that his Power was continually increating, the Welch, the Northumbrians, the Irih Danes under their King Anlaff, with the Scots, formed a general Confederacy againft him, and afiembled a numerous Army and a prodigious Fleet in the Northern Parts of the Inand, from whence thcy intended to have invaded him in the Heart of his Dominions, and at the fame Time to have made Defents on different Parts of the Coaft.

But Ethelftan prevented this by marching againf them with a potent Army and a competent Naval Force, with which he gained, though not without great Bloodihed and Difficulty, a moft decilive Victory, in which the Slaughter was greater than in any Dattle before that Time fought in this Ifland. This lignal Event happened A. D. 938, and we have a very pathetick, though poetical Account of it in the Saxon Annals, fo much the more remarkable, as though delivered in a moft pompous Stile, yet it is not intermixed with auy of thofe fabulous Miracles, that, to do Honour to

[^166]this great Prince, have been invented and inferted in their Accounts by other Monkifh Hiftorians c. The King after this Succefs turned his Arms, as in other Places we have already mentioned, againft Weft Wales, difpofiefling the Cornifh of the City of Exeter, driving them beyond the River Tamar, and feizing the Illes of Scilly to prevent their becoming the Rendezvous of the Irifh and Danifh fleets. A. D. 941 he deceaied in the Fifteenth Year of his Reign, unmarried, and of courfe without Iffiue.

He was fucceeded by his Brother Edmund, a young Prince of a martial Spirit, and of a very active Temper. Againft him the Danes began to ftir on all Sides, which afforded him Ground to difpofiefs them of feveral great Towns which they had hitherto held in Mercia, and which he now fortified and peopled with Saxons. Afterwards on frefh Provocation he entered into and fubdued great Part of Northumberland, but on the humble Submiffion of Two of their Kings he concluded a Peace on Condition that they embraced the Chriftian Religion, in confequence of which he became Sponfor at their Baptifms. But they quickly apoftatized and the War broke out afrefh, on which he attacked them with a numerous Army, and, by the Affiftance of a Prince of South Wales, reduced the beft Part of their Dominions. In this War alfo he made himfelf Matter of Cumberland, then an independent Sovereignty, which he generoully beftowed on Malcolm King of Scots, upon Condition that he defended the Northern Parts of England againf any future Attempts of the Danes, by which Tenure it was held by him and his Succeffiors d.

This

[^167]This great Monarch was an able Statefman as well as a gallant Captain, as from the Laws made by him evidently appenrs, affording the ftronget Proofs of his Zcal for the publick Good, his Affection for his Subjects, and his Regard to the Conftitution. It may be truly faid, that to thefe Principles he facrificed his Life, for fittiing at Table on a Feaft Day, and feeing One who had been outlawed for his Crimes enter the Hall, he rofe and fized him: A Struggle between them enfuing, they fell twether, when the Villain drawing a Knife, thruft it into the King's Bowels, and killed him on the Spot, to the general Grief of the People, in the Seventh Year of his Reign. He left his Dominions much enlarged, and his Subjects in great Profperity ${ }^{\text {e }}$.

But his Two Sons being Infants at the Time of his Deceafe, he was fucceeded in the Throne by his Brother Edred, a Prince of great Prudence, whoreduced the Northumbrians, awed the Scots, and maintained his Kingdom in much 'lranquillity duripg a Reign of between Nine and Ten Years. He was fuccedel by the eldeft of his Nephews Edwy, Edwic, or Edwin, the Son of King Edmond, a Youth of whom the Monkifh Writers report many Things very dithonourable in eefpect to his Manners, which however arehardly credible, liuce at the Time of his Acceffion he was icarce Fourteen. The Truth feems to be their Profierity had corrupted the Bulk of the Clergy, grcat inificuions having arifu between the Monks headed by Dunftan, :ifterwards Arclbihhop of Canterbury, whom this King banified, and the fectar Prects whom he fupported. In confequence of the Animofities which theie Difputes occafioned, his Brother Edgar was invefted with Regal Al:thority over the Countries of Mercia and Northumberland,
had was given to Malcein to be Confederate with the King by Sea and by Land. This Concution hail iss Efteet: the Scots held Cumberland till the Norman Congueft, and the Heir of their Crown was ftile. Lord of Cumberlani, and often according to the Milude of thofe Times King.

- The Ruin Tion of Nortilimbertand, which Term, according to the Acceptation of thofe Times, coner"chended, as buth been hewn, Two Kinglons exclufive of that of Cumberlaud, was a wry whandabe Acquition, and haring colt mach Blood and Trouble, we need not wouder that King Edmual haned by eviry Methol to preferve it on his Succeffors. It was with this Intent, that ine endeawured to eftablith the Saxon Policy in thofe Northera Countries, and with a Viaw n, Duatit to promote the geteral Tramquillity, he made thofo Laws which are fill extant, and whinh are enirely calculacd to pronote that Hirmony and regular Manner of Living, which 1 Ifred made the Batis of his Con!litution. It was not however eafy to fubdne that fierce and yarrelfone Diforfition which fitl prevaited, notwithtanding the genil Laws made to seprefs it. All we kn iw of the Perfin who killed the King is tis Name, whieh wis leof. and from his. intruding, himfelf into the Roval Prefence, as well as his being perfonally known to the King, we may conclude that he was not of the Dregs of the reople.
which Edwy could not prevent, or with Patience endure; fo that in the Space of Two Years he died in Difcontent ${ }^{f}$.

By his Demife Edgar became King of all England, A. D. 957, at the Age of Sixteen. He was a Prince of a firm, generous, and intrepid Temper, accompanied with an Attention and a Degree of Prudence far above his Years. He was equally active and vigilant, knew perfectly the Superiority of his own Strength to that of his Neighbours, ftudied to maintain aid increafe it, but except the adjacent Illands and fome Part of Ireland, he made no Conquefts, contenting himfelf with that Submiflion which, without extorting it, was readily paid to his Power. By this wife Conduct he acquired the glorious Surname of the Peaceableg. He converted the Tribute of Wales into the Delivery of a certain Number of the Heads of Wolves, and thereby in a great Meafure extirpated them.

He treated all the other Princes of the Illand with equal Kindnefs and Refpect, encouraged a Refort of Foreigners to his Court, and thereby extended his Reputation through all Chriftendom. He kept his Garrifons complete, his Forces in good Order and in conftant Motion, and all his Cities and great Towns in a State of Defence. His naval Force, which was very confiderable, he divided into Eaft, Weft, and North Squadrons, and vifited them annually after Eafter, by which the Coafts were equally fecured againf Pirates and Invafions. In the Winter he went in Progrefs through his Dominions, infpecting the Behaviour of his Officers Civil and Military. He was much in the Intergft of the Clergy, and efpecially of

[^168] ferent Parts of the Kingdom ${ }^{\mathrm{b}}$.

He raifed alfo feveral other Structures, and his Nobility imitating his Example, he contributed not a little to the Embellifhment and Improvement of his Dominions, to which no Prince ever hewed more fteady Attention. His'Laws Ecclefiatic and Civil, as from the flourifhing Condition of his Subjects, they were more numerous than any of his Predecefiors, Chewed plainly what good Effects had arifen from Alfred's Syftem, and as dell as the whole Tenor of his Conduct, were plainly calculated to extend and carry it to the higheft Perfection. He was A. D. 973 crowned with great Solemnity at Bath on Whitfunday i.

He proceeded from thence to Chefter, where he was attended by feveral of his tributary Princes. His uninterrupted Profperity induced him to aflume, as his Charters fhew, the Name of Emperor, and other lofty Titles unclaimed by his Anceftors k . Yct with all thefe Chining Qualities, which rendered

[^169]
## 35.2 The POLITICAL SURVEY

rendered him the Delight of his People, he wanted not many, and fome of thefe great Vices. His Lewdnefs was inexcufable, and attended with the mof fatal Confequences. The Luxury of his Court was exceffive. He was too lavith of his Favours to Strangers, gave, as his Saxon Subjects thought, too great Encouragement to the Danes, and was very partial to the Monks from a Mixture of Superftition and Policy, who in Return were very ufeful Inftruments to him while Living, 'and in their Hiftories after his Death magnified his Virtues and extenuated his Failings. After a Reign of Glory and Peace, he died at laft in the Arms of Victory. For the Welth having raifed fome Commotions oft the Frontiers, he entered Glamorganhhire with a puiffant Army, and triumphing over his Enemies, fuffered his Forces to plunder the Country; but being flruck with the Mifery of the People, he ordered the greatef Part of the Booty to be reffored. In his Return from this Expedition, he died after a fhort Illnefs in the Flower of his Age, and to the univerfal Sorrow of his Subjects, A. D. 975 .

His eldeft Son, Edward, was advanced to the Throne by the Credit of Dunftan, who by his Father had been made fucceflively Biihop of Worcefter and London, and afterwards Archbilhop of Canterbury, the Queen Dowager, Elfrida, en eavouring, though ineffectually, to place the Crown on the Head of her own Son, though an Infant. The young King himfclf was but Fourteen at his Accefion, and under the Tuition of Dunftan, behaved very well during his fhort Reign, affording great Hopes to his Subjects that he would refemble his Father; but before he had enjoyed the regal Dignity. Four Years, he was cruelly murthered, forne fay by the Command, others by the Hand of his Stepmothcr, and from an $\mathrm{O}_{\mathrm{p}} \mathrm{i}$ nion of his Innocence and Virtue, is ftiled in our Hifories Edward the Martyr.

[^170]His Brother Ethelred fucceeded him A. D. 978, being at that Time about Twelve Years of Age, and proved One of the moft unhappy Princes who evcr wore a Diadem. His Kingdom at the Time of his Acceffion enjoyed a profound Peace, and was in the moff flourihhing Condition '. But this State was quickly and difmally altered, for the Danes renewed their Invafions, from whence the moft dreadful Confequences enfued. Luxury prevailing through all Ranks of People, excited fuch an Appetite for Riches, as corrupted the Morals and enervated the Minds of the whole Nation. TRe Nobility already become too powerful, grew equally profligate and ambitious; Avàrice and a Defire of Rule grew general among the Clergy, while the Commons became poor and oppreffed, being expofed to the Arts and Infolence of both. The King was conftantly and hamefully betrayed, fo that his Armies and Fleets, though very great, were frequently diffipated without comintg to Action, or defeated when they did. The victorious Danes with their ufial Fury took and deftroyed moft of the Cities and great Towns except London, plundering the Villages and open Country without Mercy, and hhedding the Blood of Multitudes without the fmalleft Relipect to Age, Sex, or Condition, after exhaufting by repeated Subfidies, fo well known by the Name of Dane-gelt, whatever the poor People had left "'.
${ }^{1}$ From the Time that the Northumbrians were totally fubdued by King Edred to the firf Depredations by the Danes in the Reign of Ethelred, these elapfed about Thirty Years, during which Space the Kingdom of England enjoyed uninterrupted Felicity. During this Period the Saxon Countitution was fettled and perfected, fo that the People enjoged every Thing they could wifh, frict Juftice, Trials by Juries, and equal I)ifribution of their Lands on the Demife of the Father of a Family; no Furfeitures but for Treafon, great Encouragement given to Induftry, in confequence of which the Country was thoroughly cultivated, and, from the Export of its native Commodities, bleffed with a lucrative Commerce. In order to form fome ldea of the State and CircumRances of the Saxons in their diffirent Periods, the Reader may compare King Alffel's Teftanent in the Edition of Affer's Annals by Wife, p. 73, with that of Prince Athelfan eldeft Son to King Ethelred, in the Appendix to Somner's Treatife of Gavellind, p. 197.
${ }^{m}$ The firt Raifing of this Tribute to procure a temporary Ceffation of the Dation Depredations is fixed by our Chronicles to A. D. 991, and is faid to have been advifud by Ginicus Archbilhop of Canterbury, the Sum then given was Ten thoufand Pounds. In the space of Twenty Years this Dane-geld, or Money for the Danes, was Five Times collected, and amounted in the Whole to One hundred Thirty-four thoufand Pounds, which woald coin into about Four hundred thoufind of our Money. This Tribute was raifed by the Confent of Generai Councils, and muft therefore have been levied according to certain Proportions through the Kingdom. This grcat and gencral Tax was exclufive of what Ranfoms the Danes extorted from particular Places: After their Cruelties and Oppreffion at Canterbury, they carried away the then Archbifhop Elphegus, and after keeping him Prifoner on board their Fleet fur a Yar, they put him on Shore at Greenwich, where, on his refufing to levy Three thoufand Pounds upon his Tenants for his Ranfon, they put him to Dealh with moft barbarous Cruellies, A. D. 1012.

These Miferies occafioned, though they could by no Means juftify, the general Maffacre of the Danes that were fettled through the Kingdom, which was perpetrated A. D. 1002, a bloody Expedient! that did not in any Degree anfwer its Intention. Swaine King of Denmark revenged it by a frefl Invafion, and though he met with much Refiftance and fome Defeats, yet perfifting feadily in profecuting the War, and receiving continually frefh Supplies of his Countrymen, he at length drove Ethelred to fuch Straits, that after fending his Queen and her Children to her Brother the Duke of Normandy, he was conftrained for his own Safety to follow thern. Upon this Swaine was generally fubmitted to, and r is confidered as the firf Danifh King ruling here $n$.

Bur upon his fudden Death Ethelred returned and refumed the Government, though with no better Fortune than before, the Dames ftill labouring to eftablinh their Conqueft, and the Saxons to repel their Attacks; and thus the Strength of the Nation was daily exhaufted by unfucceffful Struggles. The Current of our Hiftories attributes all thefe Difafters to the Wcaknefs and Inactivity of the Prince, whom they file Ethelred the Unready, yet the Fatts they relate point out plainly other Caufes more adequate to the Effect, and that feem to exculpate him ; but above all, his Laws, of which there are many, fpeak quite another Difpofition, and as it alfo appears, that he acted generally by the Advice of his Great Council, he could not be efteemed an arbitrary Prince, and therefore it feems unjuft to throw the whole Blame upon him?. In this Manner, often in the Field expofed to continual Dangers, and with very few Intcrvals of Reff, Ethelred wore out a forrowful and diftracted Reign of Thirty-feven Years,

[^171]
## of GREAT BRITAIN.

dying poffefled of but a fmall Part of the Kingdom, which was inherited by the eldeft of his furviving Sons.

Edmund was a Prince, who, as our Hiftories report, was of a very different Difpofition from his Father, infomuch that from his Strength, his Courage, and indefatigable Activity in War, he had obtained the Surname of Ironside. 'This gallant Monarch fought with different Succefs Six feveral Battles againft the Danes, and on the Point of fighting the Seventh, after, as.fome fay, a fingle Combat he came to an Agreement with his Competitor Canutus, by which the Kingdom was divided between them. Not long after this he deceafed fuddenly, or, as fome affirm, was bafely murdered at Oxford by the Traitor Eadric, or at leaft by his Procurement, who had fo often betrayed both him and his Father ${ }^{p}$, whom this King outlived only a few Monthi.

Canutus, Cnute, or Knut, the Son of Swaine, thereupon feized the whole Kingdorn A. D. 1016, though Edmund left behind him both Brethren and Children; but the Nation, tired out with a Series of Calamities, terrified by a very numerous Danih Army, and defirous of enjoying Peace, fubmitted and fuffered him to be crowned. He thewed himfelf in many Refpects at leaft worthy of this good Fortune, behaving with great Prudence and Moderation, adhering to the Conftitution, by calling general Councils, acting by their Advice, making many good Laws, as appears by thofe that are itill extont. He laboured diligently to incorporate the Two Nations, and with this View efpoufed Emma the Dowager of Ethelred. By her Advice he fent back a large Body of his Danif Troops into their own Country, rewarding them liberally for their Services with Englifh Money 9.

[^172]
## 356 The POLITICAL SURVEY

He made feveral Voyages into his Northern Dominions, where, on more than One Occafion he employed very: fuccefsfully his Saxon Troops againft his Enemies. It is not clear from what Motive, except that of difplaying his Grandeur, he made a Journey to Rome, where he appeared with great Splendour, was received there with great Refpect, and had very high Honours paid hin by foreign Princes in his Paffage. At his Return he acted fuccefsfully againft the Scots. He had the Title of Great beftowed on him, as well on account of his Juftice, Magnanimity, and Love of his Subjects, as for the many Victories he gained, and the wide Extent of his Dominions r. He Spent the laft Years of his Life iv: Peace, and in performing many Works of Piety, deceafing A. D. 1036 at Shaftbury in the Twentieth Year of his Reign.

His Son Haroly furnamed Harefoot, as is faid from his Swiftnefs, fucceeded him in the. Kingdom of England, notwithftanding the Oppofition of the Weft Saxons, headed by their powerful Earl Godwin, and the Intrigues of the Queen Dowager, whom he afterwards banifhed. This Prince made no very great Figure either in War or in Peace, though he raifed feveral heavy Impofitions on his Subjects during his Mort Reign of Four Years.

Hardacknute or Hardiknute, the Son of Canutus by Queen Emma, afcended the Throne upon his Demife, recalled his mother, and invited over his Brother Edward, which were the beft Actions of his Life. His Reign, like that of his Brother, was rendered odious by the heavy Taxes that he levied upon his People, and the Inhabitants of Worcefter killing Two of the Collectors, he caufed that City to be facked and deftroyed. In other Refpects he was an indolent and a luxurious Prince, whence it is no great Wonder that he

Soon after the King held a General Affembly at Oxford, where it was agreed his Subjects nould enjoy the I.aws made by King Edgar. Afterwards he publifhed a very foll and excellent Code of Liws Ecelcfiaftical and Civil at Winchefter, which were to be obeyed alike by his Danina and Suxon Subjects.
r It mult be allowed, that with all his good Qualities, Canute, either from Difpofition or Policy, exercifed fome Acts of great Severity. For befides the Traitor Eadric, he put to Death fome, and banifled others of the Engligh Nobility, and this early in his Reign (Chron. de Mailrn; A. ID. 1018.) and foon afier he had advanced them, perhaps:for their Perfidy, to grear Einployments. He likewife fent Abroad the Princes of the Royal Blood with an Intention, as fome fay, to have them deftroyed, which however is far from being certaip. Edward and Edmund, Sons of King Edmund lronfide, went into Hungary, where Edmund died, but Edwaird returned into Euchaud under the Reign of his Father's brother, Edward the Confeffor, yet did not furvive long, but left behind him an only Son Edgar Atheling, the laft Prince of the Saxon Line. After his Reuirn from Rome, A. D. 1031 , Canute feemed intent on effacing from the Minds of his People the Memory of paft Calamities, and to contribute to the utmont of his Power to the rcftoring Tianquility and good Order throughout his Dominions.
was not either efteemed or beloved by his Subjects, or his Death, which happened fuddenly at a Banquet in Lambeth, at all regretted: Hc fcarce reigned Two Years. It does not appear that either of thefe Princes attempted any Thing to the Prejudice of the Conftitution, the great Excellence of which made it no lefs acceptable to the Danes long fettled here than to the Saxons themfelves s, and fome Amends had been made for the great Sums levied by the Diffipation of their Father's Treafures.

He was fuceeded ly his Brother Edward, who is filed ufually, it being the Cuftoin of the Saxons to diftinguin their Kings of the fame Appellation by the Addition of Surnames, The Confessor. He proved a wcak fupertitions Prince, whom the Monks reprefent as a Saint, though his Ufige of his Mother and his Q:ecn feem not to entitle him to any fuch Dittinction. His Domiams iote fometimes infulted by; but oftener threatened with forcign Invalions, yer miened much more through the predatory Depredations or his rebelifus Suhjects ; fo that thefe Calamities, joined to inclament Seafons, prevented in a great Meafure the Repair of thofe llaces that had been in the preceding Troubles either injured or deftroyed .

[^173]
## $35^{8}$ The POLITICAL SURVEY

However he is faid to have remitted the galling Tax of Danegelt u, and to have framed a Code of Laws with a View to the bringing the feveral Cuftoms prevailing in different Parts of the Kingdom into One general Syftem, which in Part had been attempted, but never accomplifhed by any of his Predeceffors. His long Refidence in their Country filled him with ftrong Prepoffefions in favour of the Normans, which was a Circumftance highly difpleafing to the Nation ; fo that, .notwithftanding what is written by the Bulk of our Hiftorins fince the Conqueft, he was far from being fo highly or fo generally reverenced and efteemed as they would reprefent him. He fpent a large Surn of Monry in building the fately Structure of Weftmintter Abbey, which was hardly compleated and confecrated before it became the Place of his Sepulture. He died on the Eve of the Epiphany, A. D. 1066 w.

Harold the Son of Earl Godwin, who had during the Reign of Edward the chief Conduct of his Affairs, ftepped into the vacant Throne, was acknowledged for their King by the Nobility, and crowned hy the Archtifhop of York, though Edgar Atheling the Grandfon of Edmund Ironfide, and Grand Nephew to the deceafed Edward, was in the Court, and had been comidered by the Clergy and Yeople as his Heir. Mnowl had fcarce aflumed the regal Title before he found himfelf threatencd with an Invafion from Normandy, and while he was making Preparations for repelling this, his own Brother Tofty, who had been baniihed by King Ed-

[^174]
## of GREAT BRITAIN.

 ward, came with a piratical Squadron, harraffed the Coafts on the Weft and South Sides of the Inand, and at length failed to the North, landed his Forces, and endeavoured to repoffers himfelf of Northumberland, of which he had been Earl; but Morcar, then in Poffeflion of the County, affifted by the Earl of Chefter, gave him Battle, beat his Forces, and obliged him to fly with a few Ships into the Ports of Scotland.As he imet with no Affiftance there, he was compelled to put to Sea again, and arriving in Norway, perfuaded the King to join him with a Flect of fome Hundred Sail, with which they entered the Humber, and landed a numerous Army. The Two Earls before-mentioned vei;tured to fight them with an inferior Force, but were beat with confiderable Lofs. The News of this Misfortune obliged Harold to march Northward, and meeting his Enemies at Strangford Bridge, he gained a complete, though a very bloody Victory, in which Tofty, and fome fay Harold Harfager the Monarch of Norway was alfo flain, their whole Force deftroyed, and only a few Veffels of their numerous Fleet efcaped. At this very critical Juncture William Duke of Normandy landed in Suffex.

Harold, who was returned to London, and had difmified Part of his Army, marched immediately to oppofe him, and after perfo:ming all that could be expected from a brave Man, and a very experienced Officer, was flain in that fatal and decifive Battle fought on Heathfield near Haftings on the Fourtenth of October, when he had reigned Forty Weeks and One Day. With him fell the Saxon Power, and with it the Spirit of the Saxon Conftitution was well nigh extinguihed, after that Nation's flourifhing in this Inand about the Space of Six hundred Years $x_{0}$.

Ir is hoped that upon Reflection the Reader will fee no juft Caufe to complain of the Trouble given him in going briefly through the Saxon Hiftory, which at the fame Time it exhibits and explains the memorable and laudable Actions of our Ancettors, hews alfo the Grounds, the Growth,

[^175]
## 360

and the Changes of our Conftitution, as well as the different Facesthis Country hath worn in different Periods. The Saxons brought with them from Germany a rational Love of Liberty, and a juft Senfe of the properen Means of preferving. it in the fundamental Principles of their-political Syftem. The Ferocity fhewn at their Arrival, and which fublifted alio for fome Time after, flowed from the Errors of Paganifm. The native Rectitude of their Minds appeared in that Docility with which they embraced the Chriftian Religion.

The fettling themfelves in fmall Principalities was likewife conformable to their ancient Cuftoms, and as we have obferved, contributed not a little to the Territories which compofed thefe Principalitics being thoroughly and quickly peopled. But though their Sovercignties were feparate and independent, yet the Spirit of their Laws was every where the fame, which hiewed an inflexible Attachment to their original Notions. Alfred dicovered his great Wifdom in working thefe into his own Syftem, and by retaining and eftablifhing thofe Forms of adminiftering. Juftice to which they had been ever accuftomed, when divided into fmall States, through every County, Hundred, and even Tything, preferved the fame Order and Harmony through the whole Monarchy that fubfifted in thofe fmaller Principalities. The Inftitution of the View of Frank-pledge, which he fupcrinduced from the Circumftances of the Times, was a wonderful Proof of his Sagacity, as it eftablifhed Peace, encouraged Induftry; and became a Principle of national Probity $y$. He with equal Prudence formed a regular and ftanding Militia, and wifely diftributed the maritime Force he created in feparate Squadrons on the different Coafts of his Dominions.

His Succeffors invariably adhering to his wife Maxims, gradually compleated his great Defign, which appeared in its full Luftre under the peaceable and propitious Reign of Edgar, when the Power; the Riches, and the Supcriority of this Nation over all its Neighbours, was in every

[^176]
## of GREAT BRITAIN.

Circumftance carried to Demonftration. This feems to be a Thing not hitherto fufficiently confidered, otherwife no Doubt could have ever arifen, whether this regular and connected Scheme of Government was as well fuited to an extenfive Empire, as to a new Eitablifhment of a mo-- derate Extent ${ }^{2}$.

Ir ings not through any Defect in the Syftem, but from the Neglect thereof, and the Breaches therein, that the Saxon Monarchy declined. On thie contrary, the Firmnefs of its Materials, and Excellency of its Conthuction became more vifible from thence, and rendered it more worthy of Reficit and Vencration. The Perfian Empire was overthrown merely by fuperior Force of Aıms. That of the Romans by inteftine Divifions, and the Inroads of barbarous People, without any Veftiges remaining of their priftine Form. The Saxons experenced like Calamities, torn by domeftic Factions, invaded by numerous Swarms of favage Nations from Abroad, they were not conquered, but difpoled to Submiffion: They incorporated with the Danes, and acknowledged Danifh Princes for their Kings, but they preferved in a great Meafure their religious and civil Conftitution, and in Procefs of Time recovered the Monarchy. The Danes ceded that to prefcree their Intcreft in this Country and in the Protection afforded by its Laws.

The Normans, though their Duke pretended a Claim of Right, gave us in this Refpect a far harkher Shock: But the Foundation was too deeply laid to be fubverted. The People fhewed not only an Attachment to, but alfo a paffionate Love for their Laws, by contnually demanding them, they were often promised, and in fome Meafure were at laft, indeed, gradually and partially reftored. At this very Day they are the Bafis of the moft valuable Parts of our Conftitution, in the fame Manner that the German Maxims were of the Saxon Form of Rule, and the ableft Judges have dechared it their Opinion, that we very effentially fuffer through the Want of

[^177]362 The POLITICALSURVEY fome of thofe Parts of their Syftem that we have loft. Thefe are Points that certainly deferve to be univerfally known, to be maturely confidered, and to be had in perpetual Remembrance.

## C H A P. III.

## The Nature, Progrefs, and Improvement of the Norman Conftitution.

$T$HE Riafons that induced the Continuance of this Enquiry. The Objects thereof, and the Manner of treating it in this Cbapter briefly flated. William the Conqueror transferred in a great Meafuri botb Poaver and Property in this Country to the Normans. Other Innovations made by this Monarch. The wretched State to which the Natives, and more cfpecialiy the midling, and meaner Sort were reduced by thife Meafures. William furnamed Rufus governed with lefs Policy and equal Severity. Henry the Fir/t made a Sbero of Mildnefs, and an Intention of redrefing Grievances. Tile feeming Benignity and Moderation of bis Laws. Thi 1 i, though u'ver formally abrogated, were bardly, if at all obferved. The turbulent and diftracted Adminiftration of Stephen. Infurrections and foreign Wars brought beavy and rekeated Diftrefis on the People. Thefe Miferies, no: reithjanding jome fair Promifes, inflead of diminijling are increajed. The Face of the Country changed, and its Value impaired. Facts that evince the Reality of thefe Alfertions. The Normans labour to efface ail Memory of the Saxon Policy. Tbe Second Period, beginning with the Reign of Henry Plantagenet. His laudable Endeavours to fit Bounds to the exorbitant Power of the Clergy. Many reife and good Lavos and Regulations made by this Monarch. Succeeded by bis Son Richard the Firft. His Expedition to the Holy Land, and the Confequences thereof in refpect to tbis Country. King Joun by bis ill Conduct plunged the Nation into a civil War. Hc is compelled by bis Barons to grant Magna Cinarta, or the Great Cbarter of Liberties. The Remainder of bis difturbed and unfettled Reign. Henry the Thbird fuccecded bis Fatber in bis Nonage. The Miferics and Confufions of bis long Reign, webich wecre bowever compofed before bis Decenfe. The Condition of the Commons fill very low and indificrent during this Period. Yet fome Sparks of Induftry and Commerce began thercin to appear, but were unfettled and confined wbile Cultivation in general remained in a very low State. Enward the Firft fucceeded bis Fatber with the univerfal Applaufe of bis Subjccts. His entire Conqueft of Wales and frequent Dif-

putes woith France. He claimed the Superiority over Scotland, reduced it tbrice, and died in bis Fourth Expedition again/t that Country. As a Statefinan be acted with very great Sagacity and Penetration. Sbewed wonderful Abilities in managing the Tempers of all Ranks of bis Subjects. Provided Remedies for the internal Diforders of the Nation. His fingular Attention to the profer Adminiftration of Fuftice. Confirmed the great Charter, and the Cbarter of the Forefts with very Jalutary Additions and Improviments. Succeeded by Edward the Second, who profecutes the War againyt the Scots without Succefs. The Remainder of bis unfortunate Reign to bis Depopition. Edward the Tbird with different Fortune renews the War againgt the Scots. His Claim to their Crown, and repeated Succefies againgt the French. The principal Events of bis long Reign. The Condition and Circumflances of the People during this Third Period confidered. The Progrefs of Induftry and the Caufes of the Want of Cultivation. A curfory Revier of the Four fucceeding Reigns. The like in refpect to thofe of EDw ARD the Fourth and Richard the Third. A fuccinet Account of the Devaftation and Depopulation of this Country. The State of Trade and Agriculture at the Conclufion of this Fourtb Period. The Accefion of Henry the Seventh, and a brief Detail of bis Reign. The good Confequences attending the wiffe Mcafures and Jettled Sylfem of Policy wobich be introduced and maintained. Gradual Recovery and Improvements of every Kind from bis Time. Remarks and Refleciions on the Contents of tbis Cbapter.

IT feemed neceffary to go through the Britifh and the Saxon Hiftories more diftinctly and at large, as they had not been very fully confidered before in that Point of View in which we have endeavoured to place them. But from the Entry of the Normans, our publick Tranfactions have been, ef $f_{f}$ ccially of late, more amply related, and more critically examined, as leing fuppofed, from their being nearer in point of Time, to have a fronger Operation upon and a clofer Connection with the immediate Caufes of fubfequent Events. For thefe Rcafons, and becaure our Antiquaries, Lawyers, and political Writers, as well as our Hiftorians, have difcuffed many of thefe Matters very fully, we are by no Mcans tied to fo regular and circumftantial a Detail in this as in the former Chapters ${ }^{2}$. Beffides we have

[^178]
# 364 The POLITICAL SURVEY 

have already in many Places, and in the laft Book more efpecially, been obliged to enter in fome Refpects on this Subject, which Particulars we haill be careful not to repeat.

Yet to preferve the neceffary Connection, and to give a greater Perfipicuity to various Aflertlons already incidentally delivercd, we hall, *s fue: cinctly as may be, profecute the fame Mcthod, io as to mark theninoft fignal Changes in the Conftitution, and endeavour to trace their' Effectis on the State of the People, and the Condition of the Country. Circumfances not always attended to in general Hiftories, but which are the proper Subjects of the Political State of Britain. In order to execute this ar-duous Tak intelligibly, it will be requifite to range thefe Facts and Obferv: tions in dintinct Periods, by which they will be more naturally digefted, and ther Correfpendence better difcerned $b$.

We have at the Clofe of the laft Chapter remarked, that the Normans, when they became Mafters here, gave a great Shock to the Saxon Syilem, whereby many Alterations were wrought, and it will be the Burinefs of out Firft Section fo to explain that Matter, as to make this Affertion good. Wime mam the First, or as we are accuftomed to call him, Willinam the ConQUEROR, was a very penctrating, refulute, and antere Prince, much attached to his own Subjects, and frongly addicted to their Cuftoms. Ho provided moft nobly for thofe who canc over with him, by making large Grants to them of Lands taken from the Natives under feudal Tenures. according to the Manner of their own Country, by which a numerous, potent, and permanent Military Force became effabliihed, not only without any Expence, but incidentally with very confiderable Prufit to the Crowinc. The

Gibfon, Dr. Gale, Batteley, Stukelcy, and very many others. Some of our great llifonians have thrown Light upon them in many Refpurts, fuch as the Vifcount St. Albans, Lord Herbert, Binops Gudwin, Kennet, Sir Robert Cotton, Sir Heary Savile, Sir Roger Twylden, \&e. To thefe we may ald our learned hiforical Poet Michad Drayton. It would have been unpardonable not to have paid this Tribute of Re?pect to thefe great Nanses, fince from them, if any Merit fhall be allowed to this Work, it was derived.
b The candid Meader will, it is hoped, not confider the Wrant of Date; or of a Multitule of material Facts, as Omiffions or Defects in this Chapter, fince our Intomion therein is by no Menns to compofe, but to app!y Hiftory. A regular Deduction was nece Mary to reuder his intcilin: ile and perfpicuous; but the Whole is directed to a fingle Puint, that of hewing how the ficumftancec of the People have been altered by the Changes in our Coveinment, keeping: alfo always this Pofition in View, that the beft Conftitution is that which hath the Subject's Happine's, for its Obite?, and that this is beft adminiftered when the greateft Number of People of al! Ranks are made happy.
c At the very Beginning of his Reign he made Fizz Ofborn Fari of Arundel and Hercford, and gave !im vaft Pofffions. In like Manner Alan Tail of Breragne be made Earl of Richmond, hefowing on him Four hundred Ferty-iwo Mancis. To Robert Earl al Morton in Nurmandy

## of GREAT BRITAIN.

The more effectually to fecure the Clergy in his Intereft, he indulged them in a Kind of Independency on the Civil Power, by permitting the Prelates to withdraw from the County Courts in which hitherto they had prefided with the Earls, and at the fame Time fuffered them to connect themfelves clofely with the Papal See, by the Authority of which his ritle was fupported, and to finifh the Whole filled every Englifh Bifhopick $\infty$ it became vacant, either with his own Countrymen or foreign Prelates i. Dy taking thefe Steps he had in a very hort Space the firitual. as well as the Temporal Propictors of Lands entirely at his Devotion.

Instaf of the fimple and plain Mode of the Saxons in diftributing Juftice, he introduced Appeals to the King's Court, where, as they were to be determined by a Norman Magiftrate ftiled Jufticiar or Chicf Jutice, the Laws and the Pleadings were neceffarily in French, and this brought in all that Refmement and Chicane for which the Normans were cver famous. He alfo directed the judicial Decifion by Combat, in Addition to the Modes of Ordeal and Juries, which had been till then in ufe e. Forefts, and the fanguinary Laws refpecting them, came in with him alfo, and
the gave the County of Comwall here with Seven hundred Ninety-threc Manors, and was equally Pbet :1 to many whers. The 'Truth is he came in, and was to be kept in by their Aniltance, Whit: wa, the Reafon that he purcelled out mot of the Lands of the Kingdom to his own Countrysen, whe to the French, Fleniags, Angurins, Bretons, and Poitouvins. All thefe held by the
 Bi... the, c.ane in by Succeniun, becoming Wards while under Age; ant if the Fisf defended to atomale, lie ?ane her in Mitniage. Relides which they were fubject to Fícuage, Aids, \&eond sit whith all ine Burthens, thefe, and thefe Tcnures only were reputed frec, becaufe thofe who beht them wese tied ondre to Military services.
"He wa: aiwar: jemons of the Saxons, :man on his Fift Return to Normandy carried feveral of the principal Nobilit: with him as Holtages. His Sereivies proroked many to rebel, and this Uanded a tath Opiontmity of giving away their Lands. Stigand Archbifhop of Canterbury he - akd to be deprised to make Way for Lanfane a Noman. Alfred Achbigop of York, vho fet the Cown upon his llead, died in Dingre for remaching him with the Breach of his Fomik:, and Thomas a Munk of Bayonne fucceded him. This was the uniform Tenor of his Polis, futhat as his Sceretary Ingulphus tells us, by the lind of ins Reien there we:s hardiy any Imghimman, an Ial, Baron, Bifhop, or an hort truited with any Oifice of Digaty or Power thromplatht the Realm.
*The Jucl, confidered as a judicial Decifion, is faid to have taken its rife among the Burfinkili; but it was practifed alio by the Lombards, and amongt the Northern Nitions. Some Eatine to think it was in ufe amore the Saxons, but Lambard and Schta ate clealy of another Opinion, and that it was introfuced by the Nurmans. In the Reegn of William Rufas, Wilban! de Owe was accufed of Treafon, and being overcome in Combat, he, according to the Conyurors lisw, was deprived of his Eye Sight and of hits Tenticles. Malmetb. de aeb. get. R. Augl. lib. iv. Flor. Wigomientis, p. $6+7$. The refering both civil and criminal Cafes whe Tiall by Combat cenonned long to be Law. Yet the Cade wherein it was pratifed are but ram in our books, thourh there ane Infances enongh to then, that it was as incertain and barbanne as it was inhuman and irreligious. The learned Selden hath an experfs Treatie on this Subjeit at Lue Beginning of the Jifth Volume of his Wults.

## The POLITICAL SURVEY

were intolerably grievous. Thus the Sword, the Land, and the Law were transferred exclufively into the Hands of thefe Strangers, by whofe Affiftance he acquired his Power; and Labour and Submiffion only were the Lot of the Englifh ${ }^{f}$. As thefe Hardhips muft neceffarily exafperate any People, fo to prevent their meeting and caballing in Cities and great Towns, they were obliged on the Ringing the Curfeu, that is Couvre Eut Bell at Eight in the Evening, to put out their Lights, and rake out Cheir Fires. A Plan of Subjection this, of which it is very difficult to fay, whether it was more fubtile in its Contrivance, or opprefifve in its Operations.

William the Second, ufually filed William Rufus, was of a violent, cruel, and rapacious Difpofition. He came to the Crown under Colour of his Father's Will, and by the Affiftance and Influence of Lanfranc Archbifhop of Canterbury, who had been his Tutor. As his Title was none of the cleareft, and as he was rather feared than beloved by moft of the great Men, he was obliged to have Recourfe to fair Promiles, which had a great Effect in raifing the Hopes and reviving the Spirits of an oppreffed Pconle. Thefe he fometimes renewed when dangeroufly ill, or in deep Diftrefs, but never performed; on the contrary, in refpect to the Forefts, he acted with even more Rigour than his Fatherg.

## s We might well infer from the Conqueror's Generofity to the Normans, that the Enclifh, and

 more efpecially the common Pcople, funk into a miferable and diftreffed Condition. But we likewife know this from the beft Authority. Such as had been in Arms under Harold, or at any Time afterwards, let their Condition be what it would, loft thereby all Claim and Title to their Eftates, and they were thought to be mercifully dealt with if they efcaped with their Lives. Thofe who had been neuter were employed in the Drudgery of farming, or cultivating their own Eftates for the Bencfit, and at the Will of their Lords. In this Situation they found themfelves fo much oppreffed as to reprefent, that if they were not relieved, they muft, as others had done, leave their Country and go and feck Subfiftence elfe-where. Upon this it was declared, that wharever Conditions they could by their Submiffion and Services obtain from their Lords, they thould fafely and fecurcly enjoy. Dialog. de Scaccario, cap: x. We call this the belt Aathority, whether written by Gervafe of Tilbury, as is commonly faid, or Richard Fitz Ncal Bifhop of London, who was 'Treafurer in the Reign of Herry the Sccond.E forefts, though common in other, and efpecially in Northern Countries, were here the Works of Art and Power. For the making New Foreft in Hamphire, which was the Finft, many Villages, and not a few Churches were deftrojed. The King only could make them, and this was due wit hmany Ceremonies, in virtue of a Commiffion, the Lands thus converted, were, though not inclofed, exaćtly limited, and the Bounds proclaimed, and this was filed Affo:efting ; and numerous Officers were appointed for their Prefervation. All the Game in the Kingdom belonged to the Prince, and none had the Liberty of killing even on his own Lands, to whom he did not grant Chace and free Warren. The Punifhments infligted on Offenders werc terrible; for killing a Deer or a Boar a Man had his Eyes put ont, or lont his Privities. The Saxon Chronicle fays of William the Conqueror, that he was rather a Parent to the wild Beafts than a Futher to his People. Yet his Son, contrary to all his I'romifis, was more fevere in this Refpect

## of GREAT BRITAIN.

He impofed heavy Taxes, levied them with great Severity, and under Colour of Neceffity prevailed on a great Council to extend thefe Impofitions to the Lands of the Clergy, from whom, as well as from the Laity mpon other Occafions, he exacted immenfe Sums by downright Violence.

- Henry the Pirst, furnamed Beauclerck, had no better Title to the Crown ihan his Predeceffor, however, being upon the Spot, being born here after his Father's Acceffion, Ghewing much feeming $\Lambda$ itteation to the Englifh, bcing fupported by fome of the Norman Barons, and flanding well with the Clergs, Maurice Bifhop of London ventured to crown him on the Sunday following the Thurfday, on which his Brother was flot in the New Foreft. His Situation made it requifite to make a Shew of a better Temper than he really poffeffed, and therefore he not only promifed great Things at his Coronation, but was alio induced to publifh with tauch Solemnity a Charter of Liberties, and fome fay with the Aitice of a Great Council, a Body of Statutes, in Hopes of conciliating.the Affections of all his Suhjeits, upon which he could not help feeing that his Sovercignty muft depend h .

Turs is by far the mof complete Code of Laws hitherto given by any of our Norman Kings, milder in many Refpects than thofe of his Father; the Military Tenures in Favour of the Normans were in many Infances juftenced, and the Services rendered more certain. Some Regulations there are in reference to Succeffions. Theft during his Reign was for the firft Time made Capital, and he likewife fixed the Punifhments that were to be inflicted for other Crimes. The Civil and Ecclefiatical Courts were alfo by him rejoined, which however did not continue long. He left the Election of Bithops free, and in other Matters fhewed plainly, that the whole was contrived to give as far as poffible univerfal Satisfaction, which very probably would have followed, if thefe Laws had been fteadily adbered to.
than he, puting lifity of the better Sort of Englifh at One Time, on Sufpicion of killing Deer, to the Ordeal of fire, that is the handling red hot Irons, from which when they had efcaped, the King was not futisticd. In l'rocefs of Time Furefts became Sixty-cight in Number.
n" The Inhabitants of the Northern Parts of England, either from the natural Fiercenefs of their Temper, or being firred up by their Nobility, made leveral vigorous Attempts to flawe off the Norman Yoke. In order to this Edgar Atheling procured them the Affiftance of the Scots, and a Flect of Threc hundred Sail of Duiih Ships came withe the like View into the Humber. The Concurror judging the moft violent Remedies requilite to defeat thefe repented Revolts, deftroyed all the Country hetween the Humber and the Tees, waftel all the Sea Coant, druve away the Cattle, burned all Inftruments of Hufbandry, and fo effectually depoputated this great Kegion, that for the Space of Nine Years it lay totally wild and without Culture, Multitudes of People perifhing through Want, and dee wretched Remains of the Iuhabitants were obliged to Jubitit on Dogs, Cats, and uther Vermial.

## 368 The POLITYCALSURVEY

But I Menry was in fact, though more fpecious in .his Behaviour, yet as arbitrary and ambitious in his Nature as his Brother; and therefore, fo foon as the State of Things permitted, though he never pretended to abrogate his Laws, he Chewed not the leaft Regard to them, but asted as if they had never been made, One Inftance only excepted, which was taking away that udious and moft glaring Badge of Slavery the Corfeu i.

Henky dying in Normandy, his Nephew Striphen Earl of Blois, making all poffible Hafte hither, ftepped into the vacant Thrcne by the Affiftance of William Archbihnop of Canterbury, his own Brother Henry de Blois Biflop of Winchefter, and the Chancellor Roger Bihhop of S.lifbury, though they had all of them folemnly fworn to maintain the succeffion of the Emprefs Maud, the only Child of King Henry. At his Coronation, Stephen promifed upon Oath to maintain the Liberties of the Church, to mitigate the Severities of the Foreft Laws, and abfolutely to abolifh Dane-gelt; which had been levied annually as the ordinary Revenue of the Crown; with nor One of which Promifes he complied $:$.

Yet he granted Charters from time to time full of very gracious Conceffions, which had very little if any. Effect, as indeed his Power was never:

[^179] great, or his Government well eftablifhed. He held likewife many General Councils, chiefly in refpect to Ecclefiafical Affairs. At this Time the Clergy began to introduce the Civil and Canon Law into their Courts, though, the King oppofed it, and at this Time likewife we firt hear of Appeals to the Court of Rome. The Confuficn arifing from a long Cevil .War had the moft pernicious Effects, and of thefe One of the worft was, that fo long as this unftable Reign lafted there could be no IIope of a Reformatien'.

Tus Pcople of England under thefe Norman Kinge, during upwards of Pourfore Years, were brought into a State much eafier to be conceived than to be defcribed. It is truc, as we obferved at the Clofe of the laft Chapter, that they made no Stand after the unhappy Battle of Haftings, yet were they fo impatient under the immediate Confequences of fo great and uaiverlil a Change, as to break out into many and iharp Infurrections, which ineffectual Rilings proved equally fatal to the Nobles who excited, and to the unhappy Commons who were by them feduced into thefe unavailing Revolts. In the Northern Parts of the Kingdom the Danes and the Soots interpofed in thefe Quarrels, which occafioned infinite Bloodined and Defolation n. In the Ihe of Ely, and through the Fens, the like Events brought on the fame Miferies, and in other Places; indeed whereever Woois, Mountains, and Marthes afforded them Shelter, many of the deiperate Saxons endeavoured, as Opportunities offered, to leffen the Number of their Oppreflors, which ferved only to increare the Severities of the

[^180]Laws, and at length brought on that indelible Record of their Subjection the Doomfday Book n.

In the fucceeding Reign of Rufus, though fometimes careffed in Words, their Condition was not at all better, for here at Home Numbers fell in the Field againft the Norman Lords who fought to raife Duke Robert to the Throne; and they fuffered no lefs when thefe hoftile Difputes were transferred into Normandy. When thefe were compromifed by Money, it came out of their Purfes, fo that thofe who efcaped the Sword were impoverifhed to the laft Degree o. In the Time of Henry his Wars with the Normans, the French and the Scots exhaufted their Blood and Treafure. The fame may be faid in regard to the civil Wars in the Time of King Stephen, in a Word they were continually diminimed and diftreffed by all without deriving the fmalleft Benefit from the Termination of any of thefe Quarrels p.

- We have not only the Authority of contemporary Writers to prove that the King fhewed little Regard either to his Charter or Laws; but we have alfo the ftrongeft of all Proofs, Facts, fince thefe Grievances ftill continued during his Reign, and thofe of his Succeffors which he promifed to redrefs. His Intereft dictated thofe Promifes, and it feems he thought it his Intereft afterwards to break through them. In fome Cales he fhewed another Spirit. He granted many Immunities by Charter to the City of London, as alfo the Farm of the County of Middlefex for Three hundred Pounds per Annum. The Produce of the Manors in the Hands of the Crown was often levied in fo oppreflive a Manner as to ruin the Farmers. He applicd a Remedy to this by converting thofe Rents into a certain Sum of Money. He likewife gave a Check to the Grievance of Purveyance, which however revived again in the Reigns of his Succelfors. The Curfew once removed could not eafily be again impofed; and though it is certain he had no great Love for his Englifh Subjects, yet in a Point of this Nature he was too prudent to excite their Averfion.
- At the fame Time he feized the Crown he feized the Treafures alfo of the deceafed King, and by the Diftribution of thefe, and his fair Promifes procured for fome Time a quict Submiffion, more efpecially after he, had ratified King Henry's Charter, and bound himfelf to fulfil its Contents. It was within this Period that he violated the Condirions fipulated at his Coronation. When therefore his Troubles began by the Revolt of the Nobles, they juftified their own Conduct, by alledging that they had fworn to him as King folong as he kept his Faith, and that he by breaking his Engagements had freed them from the Obligation of their own Oaths.
p The great Lords having by their own Power feated Stephen upon the Throne, drew from him fuch Conceffions as enabled them to become little lefs than Kings. For they fortified their Caftles, laid the Country near them under Contributions, coined Money, and acted in i.ll other Refpeets with the utmoft Contempt for Law and Juftice. The King unwittingly increafed thefe Mifchiefs, by creating many new Earls, who very foon aeted like the Reft. The Churchmen tov, in thefe Times of publick Confufion, allumed unuarrantable Powers, and the King's Brother Henny Bifhop of Winchefter, prefiding as the Pope's Legate in a Synod held Auno Dumini 1139, fummoned that Mouarch before him, who condefcended wfend Aubicy de Vere to plead his Caufe. In this dreadful State of Thines ali Ranks of People were brought iato the mof perilous Sitnation, the Greatefl living in continual Danger, and the Porer expufed to the utmoft Mifery. Such were the Effects of Arill a racy, wiich was then the Government, if indeed there

It may be juftly inferred from this true Picture of the State of the Nation, that the Appearance of this Country mutt be much altered, and the Value of it exceedingly leffened by fuch a Series of finifter Events. The Introduction of new and harm Tenures, frequent Forfeitures, and continual thifting of Property could not but be attended with the moft difmal Effects. Thefe were rendered manifeft by inconteltible Inftances. 'Geveral Parts of the Kingdom were at different Times, and on different Occafions, harraffed, diftreffed, and laid totally Wafte. Several great Cities and large Towns were ruined or reduced to Afhes, and the Leands round them depopulated; a Thing fometimes purpofely practifed for the Sake of converting wide Tracts into Chaces and Forefts $\%$.

Thfse Calamities, deftructive of all Principles of Induftry and publick Spirit, were attended, as might reafonably be expected, with frequent Famine:, and thefe, as is commonly the Cale, followed by dangerous epidemic Difeafes, produced the Flight of many, and the Lofs in different Ways of luch Multitudes, as made it neceffary to bring over Numbers of Foreigners to fupply their Places, and more efpecially to fecure the Fronticrs againft the Inroads of the Scots and Welch, who, from a Variety of Motives, were by no Means difpofed to live upon good Terms with theie Intruders r .
was any Government, and very natural Effects they were, if we confider the Nature of Men when free from the leftraint of Laws.
"The crucl Punifments inflicted by thefe Princes muft have filled the Englin with Horror, who under the Saxon Government atoned for their Offences by the Lofs of Moncy, or at moft of Freedom, not of Blood. Farl Wraltheof beheaded at Winchefter A. D. re; 6 , was the Firlt Prifon who futfered for Trafon. But for much lefs Offences the Normans punifhed Men by difmembering, putting out their Eyes, or depriving them of their Tefticles. The Sixon Chrunicle under the Year 112.t, tells us with Horror of Forty-four lerfons hanged at One Time at Huncot in Leicelterthire, adding that the Nobility (Normans) acted ciuelly by the poor Poople, delpoiling them of what they had for Taxes, and when to fthipped leaving them to farve. In .1. D. 112\%, by Command of King Henry, alnoft ali the Mint Mafters in England loft their Right Hands and their Tefticles. The fane Monach made the Firft Park at Woodnock, seven Miles in listont, and walled round, for which many Villages were deftroged, and in his and in frocecting Reighs many of the great Nobility followed this Example. J. Roli Hif. Reg. Angi. fol. 122 b .

- The Saxon Chronicle mentions no defs than Fire general Famincs in the Space of 1itaja:e Ycars, molt of which were fucceeded by gricvous Mortalities of Men and Bealts. A figal Inflance is recorded in the Annals of Margan A. D. 1094. It is therefore no Wonder that Numbers fled from fuch a Scene of Bloodhed, Horror, and Devaltation, fome to Norwir, tome to Denmark, fome to Ireland, but the greatelt lart, and thofe of the higheft Quality, to Sombind, by which, fays an old Author, and the Fact is very true, that Country was i- purplea, that is his Expreflion, with the Blood of the primitive Nobility of Fngland. To re-peofie llaces thus deferted, Recruits were drawn from different Parts of the Cuminent, and II illim Ratu. futhed Numbers of Flemings in the defolate larts of the North, efpecielly about Carhile. Diaby of the fe Were again transferred by Henry the Finf to the Burders of Wates, in the Neighbouhuud of Rois

## The: POLITICAL © URVEY

Tur Contemplation of thefe molancholy Circumitances partieularly affected thofe who remembred the Saxon Government, ' of which there muft have continued many, in Convents more efpecially, through the greateft Part of this Period. Thefe Facts were recorded at the Time they happened, by living Witneffes, though not fo fully by fome as by others, and as Facts, were tranfmitted by them to Pofterity. The Apprehenfion of this, amongft other Caufes, induced thefe Princes to labour by every pofible Method to bury all the Monuments of Saxon Pofity in Oblivion, and by obliging all Children to be taught French in Schools, they manifefted a Defire to obliterate the very Language, in which howiever they might flatter themfelves, from their Succefs at the Beginning, they were very far from fucceeding s.

We come now to the Second Period, beginning with the Reign of Henry the Second, the Son of the Emprefs Maud, and the Firft of the Houfe of Plantagenet. He was a Prince who came to the Throne with very great Advantages, and from whofe Conduct his People fiad very high Expectations. He availed himfelf of the former in fulfilling the latter. At his Coronation he promifed, as was ufual with his Predeceffors, that be would do many good Things for his Subjeets, and which was not very common with them, he in a great Meafure kept his Word. He revived and confirmed his Grandfather's Charter of Liberties by One of his own. He difmiffed the foreign Mercenaries brought over by King Stephen, he refumed many of that King's Grants, by which he had impoverifhed the Crown. He deprived the new Earls he had created, and
and Denbigh, the Welch Inhabitants, as fome fay, being tranfported in their Stcad to the North. Certain it is that thefe Flemingstintroduced new Manufactures of Wool in both Places.

- The Humoar of fending Children over to Monafteries in France for Education is of a very ancient Date. But in the Time of Edward the Confeffor it became exceedingly common, as he laboured in all Things to recommend the Norman Manners and Language. Immediately after the Conqueft the Saxon Writing was difcountenanced for the French, under Pretence that it was fairer and more legible. There feems therefore to have been no great Occafion for Force, and yet we are affured that Children were enjoined to be taught nothing but French in Schools, and having acquired this they were taught Latin. Rob. Holcot. Leet. 2. fuper fapient. This and other Practices of a like Nature filled the Breafts of the Saxons with the moft difmal Apprehenfious, as we are informed by Ingulphus, who was himfelf Secretary to William Dake of Normandy before he came hither. Hift. p. 62, 71, 85, 98. This put him, and no Doubt others, apoa tranhating their old Saxon Charters into Latin, in which, that they might be better underfood by the Normans, they made Ufe of their Law Terms, from which they have been fumetimes very fallely fuppofed to be forged. But to preferve the Knowledge of the Saxen, we know, that in the Abibeys of Crowland and Tavifock there were l.ectures inflituted. When theretore we fay in the Text, that thefe Priaces did not fucceed in extinguining the Language, we only mean, that they were not able to render French the popular Tongue; but that the Pcople convinued to uie that Sort of Dinect which. fucceeded the pure Saxam, and from. their Uhage of it is. Pislod Eng!ijl.
caufed a Multitude of the new erected, ftiled in thofe Days adulterine Caftes, to be demoliihed ${ }^{\text {. }}$

The Peace of the Kingdom thus reftored and fecured, he held it expedient to fettle the Bounds between the Civil and Ecclefiaftical Powers in .order to reprefs the Encroachments the Clergy had made in the late unfettled Times. This he with great Prudence and Firmnefs performed by the Constitutions made in the Great Council heid at Cuarendon, to which the Clergy were not only obliged to fubmit, but to the Obfervance of which they were fworn. They were not long after abfolved from their Oaths by the Pope, on which very high Difputes arofe, and though in this Quarrel Archbihop Becker, the Firft Englifhman advanced to the See of Canterbury fiace the Conqueft, loft his Life, for which the King fuffered a moft humiliating Punifhment; yet thofe Conflitutions ftill remained Law $u_{\text {- }}$

When his foreign Wars allowed him any Refpite, he endeavoured by prudent and beneficial Regulations to give Eafe and Security to his Sub-
' King Stephen died at Canterbury on the 25 th of Oetober ${ }^{11} 54$. Henry, who was then in Normandy, made all the Halte he could into England by Advice of the Emprefs his Mother; but bcing detained by contrary Winds did not arrive till the 7 th of September, and Ten Days after was crowned at Weftminfter by Theobald Archbihop of Canterbury. It was thoughe extraordinary in thofe Days, that no Troubles arofe even in this hort Time; for according to the Notion that then prevailed, a Monarch was farce efteemed fuch till after his Coronation. He was in refpect to his forcign Dominions more powerful than any of his Predeceffors, for he inherited: Anjou from his Father, Normandy by the Refignation of his Mother, Poitou and other Counthics in Right of his Queen Eleanor. Yet thefe Dominions were fo far from being advanta. geous that they were a Burthen upon England, the greater Part of the Taxes raifed in his Reigg being on their Account, and of courfe the. Produce of them fpent out of that Country in which they were raifed.
${ }^{4}$ Henry affigned various Reafons for enacting thefe Laws, the Scope of which was to fubject the Clergy in civil and criminal Cales, where they had Difputes with the Laity to have their Caules. hard in the King's Courts; to reftrain them from going out of the Kinglom without Licence ; to prevent Appeals without Licence; to hinder the wanton. Ufe of Excommunications, and other Things of a like Kind : Becauf, as he faid, thefe were no new Reftrictions, but sivita Leges, agreeable to the Laws of his Grandfather; that they were become abfolutely necelfary, no lefs than a Hundred Murthers having been committed by the Clergy in his own. Reign, for which none of them had fuffered; and that without them he was in effect no King, as not being able to proteet One Part of his Subjects againft another. After much Altercation and a long Exile. Becket was reconciled to the King in France. The Monarch performed his Promifes to the Archbifhop, but he upon his Return to England excommunicated the Archbifhop of York, the Bihhops of London, Salifluury, and others, the News of which put, the King into a violent Paffion, in which fome hairh Words efcaping him, Four Knights came over and cruelly murthered Becket at the Altar, Jecember 29th 1171. The King with great Addrefs avoided Excommunication, purged himfelf befire the Pope's Legates, of having any Hand in the Affafination, fubmitted to be whipped by the Mouks of Canterbury, but never refcinded his Laws. .

## The POLITICAL SURVEY

jects. He eftablifhed in civil Cafes another Method of Trial than that by Combat w. He inflituted Juftices in Eyre, that is, itinerant Judges who paffed through the feveral Counties to hear and determine Caufes according to the Cuftoms and Laws of the Realm, and they were fworn to do Right in their Proceedings. This was recurring to the old Saxon Principle of carrying Juftice home to the People's Doors. The State of the Englifh Jurifprudence in his Reign is more clearly and fully reprefented than in former Times, fo as to afford much Light into the Principles of our legal Proceedings even at this Day x. - In his Time the Mode of commuting perfonal Service by a pecuniary Equivalent was introduced, which was of confiderable Eafe and Advantage to thofe who held by Military Service, and in his Time alfo the odious Tax of Dane-gelt, which, as we have already obferved, had been revived after the Conqueft, fell into Difufe 9. He likewife obtained from Pope Adrian the Fourth, an Englifhman, a Donation by his Bull of the Inand of Ireland, which was after-

 wards conquered by his Subjects, and hath continued ever fince he Dominions of his Succeffors z .$\mathrm{O}_{\mathrm{n}}$ the Demife of this wife and great Prince, his Son Ricuart; his elder Brother Henry, who had been crofwned in the Life-time of his Father, dying before hist without Iffue, fucceeded to the Crown, was inaugurited with much Solemnity and with univerfal Approbation, promifing to obfetye all the good, and to annul all the opprefiive Laws made by his Predeceffors, as they likewife had done. He was a Monarch of a high and martial Spirit, and was from thence furnamed Coevr de Lion. From the Tuin of his own Temper, as much as from the Mode of the Times, he undertook an Expedition into the Holy Land, for the Expence of which he put Honours, Offices, his Royal Demefnes, and whatever elfe would produce any Thing to open Sale, and thereby equally impoverihed himfelf and his Kingdom ${ }^{2}$.

Before his Departure he removed Ranulph de Glanvil from the Office of Jufticiary, and made Hugh Pufar Bihop of Durham, and William Longchamp Bihop of Ely, Jufticiaries, appointing them to govern the Kingdom in his Abfence. They were both of them Normans, but the

[^182]
## $37^{-6} \quad$ The POLITICAL SURVEY

latter immediately feized all the Authority, and made himfelf fo odious through his Oppreffions, that he was glad to leave the Kinerdom clandeilinely to lave his Infe. In his Return through Germany the King was. infidioufly made Prifiner by the Duke of Aufria, dehvered to and barbaroully treated by the Emperor Henry the Fourin, who extorted One hundred and Fifty thoutand Marks for his Ranfom, the Rainme of which brought great Diterefs upon the Nation. After he c.me back from Captivity his Neceffitice compelled him to employ many harfh Wethois to obtain Money. He appointed Juftices in Eyre, as his Father had done, and directed the Points of their Procedure in regard to Pleas of the Ciown and of the Forefts ${ }^{b}$. He allo made fome Regulations in reference to the Jews, v:ho were then very numerous here. In his Vojes to the Levant he infituted Rules and Orders, afterwards modelled intu ti ris famous Marine Laws, which from the Illand wherein they wac mauc, we ftiled the Laws of Oireon r. He was certainly a Prince who had many gocd as well as great Qualities, had a fincere Love for the Englinh, who repaid it by a ftrong Affection, as well as an high Efteem for him, though of
${ }^{6}$ The Laws of the Forefts were in themfelves fo hark and fevere, and were often executed with fuch Striennefs, as to excite much Difcontent in the Minds of People of all Ranks, for all felt and fuffered by them in their Turns. Moft of the Kings promifed at their Acceflion to mitigate their Severity, nind this they fometimes did; but it was only when the Situation of their Affare $16-$ quired it. King Stephen was a particular Inftance of this. He gave great Indulgences for fome time after he came to the Crown, when no ill Humours appeared. It was this Calm, thriugh of no long Continuance, which tempted him to break his Word, and proved One of the firft Sources of his Troubles. King Richard was a great Lover of. Hunting, and the Inftrustions he give for the Prefervations of his Forefts are preferved in R. Hoveden. Yet if we may credit a liriter of great duthority, Mat. Iaris, A. D. 1232, p. 373. he was the Firf of the Nomman Princes who abolifhed the cruel Punifhments of putting out the Eyes, depriving Men of their Tcfticles, or cutting off their Hands or Feet for their Offences againft thefe Laws. His Motive was wo: thy of fo great a Prince; he thought it impious to deface the Image of his Maker for the Prefcrvation of Beafts naturally widd, and as fuch every Man's Property by the Law of Nature. He Aill punifhed, but it was by Fine, Imprifonment, or Banihment, with an exprefs Prohibition of any Man's lofing either Life or Limb.
c Thefe Laws received their Name from a little INand at the Mouth of the River Charente, belonging to the Dutchy of Aquitain. It was anciently called Uliarus, afterwards Oliario, at length Oleron; Three Leagues long and Two broad, very plentiful in Corn and bafture, and fo pleafant, that Qucen Eleanor caufed a Cafte to be built there, in which the often refided. At her Return from the Voyage the made with her Son to the Holy Land, the came hither, and by the Advice of fuch as werc fkilled in thefe Matters, caufed the Firft Draught of thefe Laws to be made fiom the Regulations her Son caufed to be obferved, which were afterwards enlarged and publinhed by the Authority of King Richard. They were chiefly formed on the Model of the old Rhodian Laws, and gradually grew into Efteem and Authority with all who frequented the Sca. From thefe in Procefs of Time fprung the Laws of Wifby and the Hanfe Towns. The French Lawyers have publifhed fome ufeful Commentaries upon them, and becaufe they are written in French, and becaule there is no Mettion in them of England or Ireland, would arrogate them to themfelves; but that they belong to us, and not to them, is proved by Selden, Nare Claufum, lib. ii. cap. 24.
the Ten Years that he reigned he did not 'fpend fo many Months in this Kingdom.

John fucceeded his Brother, and was crowned by Hubert Walter Archbifhop of Canterbury with great Sulemnity, when he fwore, as ufual, to govern his Subjects with Juftice and Equity: His Firft Actions fuited well enough wifh thefe Promifes; but the Monks of Canterbury, by a clandeftine Election on the Demife of Archbihop Hubert, gave a Begining to thofe Diforders, which, in a hort Space, threw all Things into Confufion. The boundlefs Ambition of Pope Innocent the Third, the Intrigues of the Clergy, the Difcontents of the Nobility, the Diftrefies of the Pcople; but above all thefe, the King's perfonal ill Conduct kindled and rekindled a civil War, through the Fury of which the greateft Part of the Kingdom was almoft ruined d.

Ir was notwithftanding in the Midft of the Tumults and Troubles of this difturbed and diftracted Reign, that the Ground-work was laid of what may be with Propriety enough ftiled our Norman Conllitution. The Barons by the Advice of Stephen Langton Archbihop of Canterbury aff fembled fuddenly great Forces, and obliged the King to grant them at Runemede, a Place near Stanes, that is, in the Saxon Language, the Meam Dow of Council, what hath been ever fince ftiled from its Impurtance the Great Charter. By this the Clergy gained all they could defire, the Nobility obtained Security for their Honours and Pofleffions, their Undertenants were likewife relieved, and the People in general defended

## 378 The POLITICAL SURVEY

from Oppreffion e. For the full Performance of its Contents, as the Character of the King was faid to require, he was forced by the Surrender of feveral ftrong Caftles, and other Means, to evince the Sincerity of his Intentions, to which on other Terms they would not truft.

He very foon by his own Conduct juftified theirs, for having before this refigped his Crown to the Pope, and received it again from him as his Vaffal, he now complained to the Pointiff as his fuperior Lord of the Charter he had been conftrained to grant. The Pope upon his Reprefentation abfolved him from his Oath, and he bringing over a numerous Army of foreign Mercenaries made a cruel War upon his Barons, whom he diftreffed to fuch a Degree, that they invited over Lewis, Son to the King of France, and after ftipulating certain Conditions with him, fwore Fealty to and owned him for their Monarch. The foreign Mercenaries, or at leaft the greateft Part of them, very quickly revolted to Lewis, fo that in a fhort Time the King was reduced to the utmoft Diftrefs, when happily for the Nation and for his Family, which furely is an unufual Cafe, te was removed by Death, and thereby made Way for his Son, then a Child $f_{0}$

#### Abstract

- This famous Charter, of which we have now an accurate, learned, and fatisfactory Hifory, bears Date the Fifteenth of June, A.D. 1215 , and the Seventeenth of the Reign of King John; in the Preface to it the King fays, that he granted it by the Advice, and with the Concurrence of the Archbihops of Canterbury and Dublin, and the Bihops and Barons of his own Party. The Liberties of the Church are thereit granted firft in very full but in very general Terms, which no Doubt was acceptable to the Clergy, who knew well how to explain them. All Things relating, to Baronies and Tenures in Capite, Reliefs, Wards, Marriages, are therein fettled with 1hainuets and Precifion. The Liberties and Privileges of London, and of other Cities and Boroughs, ame fecured to them; and the Perfons and Properties of Freemen are protected from being ficized or diftrained otherwifs than by the Verdict of a Jury and the Law of the Land. The Manner of calling great Councils is alfo regulated therein, and by their Confent only, Taxes are to be raifed, the Three feudal Aids excepted, viz. for the Redemption of the King's Perfon, the Kinghting of lis eldeft Son, and the Marriage of his eldeft Daughter. The King and the Barons both fwore to the duc Obfervance of this Charter, and the King confents, in cafe of its being infringed by him, that he may be compelled thereto by Twenty-five Barons. ${ }^{f}$ It is certainly a very difficult Thing to gain a clear or diftindt Knowledge of the Reigns of thefe Norman Princes arifing from their Tranfactions with refpect to their foreign Dominions, their Difputes with the Clergy here at Home, and their Altercations with the Roman See, by which it becomes necelfary to be acquainted with the Conduct of the French Munarchs, the Temper of the Archbihops of Canterbory, and other leading Ecclefialticks, and the Difpofitions and Policy of the Popes in their Time. If this be true of them in general, it is particulaty fo with regard to King John, who had the Misfortnne to be alike under the Difpleafure of almoft. all of thofe from whom the Hiftory of his Reign is to be expected, which, mhe Reafon that no entire Dependance can be placed on their Açconats. The only Method of coming at Truth, which is the Soul of Hittory, is by comparing Facts, as related by different Writers, looking into whe State Papers and Letters that are ftill preferved; and paying a due Attention to the Characters af the principal Actors in thefe bufy Times, a Tak very arduous, and which is thought to have man. befia performed by Dean Barcham and the haborious William Pryane.

## of GREAT BRITAIN.

Henry the Third was very little more than Nine Years of Age when crowned at Gloucefter, and was very happy in having for his Protector William Earl of Pembroke, by whofe Advice he twice renewed the Great Charter, and brought to a Conclufion a moft dangerous Civil Warts. In the Ninth Year of his Reign, he again renewed the Grand Charter, and at the fame. Time granted the Charter of the Forests, which hath been ufually attributed to his Father King John, which wife Meafure had many great and good Effects h . But after the King difgraced his Jufticiary Hubert de Burgh Earl of Kent, he was feduced by foreign Flatterers and and Favourites to fquander away the Revenues of the Crown ; and by this and other Acts of equal Imprudence brought himfelf and his' Subjects to the loweft Ebb of Mifery and Diftrefs i.

The
${ }^{2}$ King John died 19th October A. D. 1216. His Son Henry was crowned on the 28th of the fame Month in the Prefence of Walo the Pope's Legate, by the Bithops of Wiochefter and Bath, and the Concurrence of fuch of the Nobility as had remained faithful to his Father. Whatever the common People might be, the Princes and great Men of thefe Times were many of them fofiar from being fuperfitious Bigots, that they feem rather to have been felf-interefled Politicims without regard to Morals or any Tincture of Religion. Philip of France, though he had folicited and obtained from the Pope the Gift of the Kingdom of England, when John was in 1 )ifgrace with him, now maintained that John had no Right totefiga his Crown to the Pope, or the l'ope to accept it, and yet held it clear, that his Son Lewis might take it from the Barons in fite of the Pope. Cardinal Langton, ever devoted to France, though he had prevailed upon the lope to lay the King and Kingdom under an Interdiet for many Years in his Quarrel, yet contemned the l’apal Excommunication when threatened with it for taking. Part againft the King, doing Homage to Lewis, and becoming his Chancellor. He failed however in bis Attempr to mahe his Brother Simon Langton Archbibop of York, and was obliged to fubmit to the Pope's Sufpenfion from his Archicpifcopal Dignity, and after all, when reftored to it, made no fcruple of crowning King Henry a Second Time. Lewis of France, whom the Barons owned for their King, never expected that they would prove his loyal Subjects, and therefore pat all the Arong Places which he took by their Affiftance into the Hands of French Captains, upon whom he thought he might more fafely depend, which difgufting theni fent them gradually back to their Duty.
"The very learned and accurate Author of the Hindory of thefe Chartere, feems to have fully proved, that the Charter dated at Weftminfter the isth of February 1224, the Ninth of Henry the. Third, is that very Charter of the Forcfts which had been heretofore unamimoufly alcribed to King John. It is indeed a full and ample Detail of what from this Time. wis to be the Law of the Forett, and hews clearly in a great Variety of Infances the Grievances that were to be removed, and the Security that was to be given by it. The Penalty of fealing Venifon is however fufficiently fevere, senge the Offender, according to the Law of King Richard formerly mentioned, is excmpted frow fuffer Imprifin, Ir a Year and a Day, and to put in Pledges, or if he could not do that. to abjure the Re, The Charter itfelf contains internal Marks of its belonging to Henty and not to John, as in his Magna Charta there are Claufes relative to the Forefts, which would have been cqually needlefs and improper, if he had alfo made this Charter, and which Claufes, for this very Reafon, are omitted in the Magna Charta of Henry. A Copy of this Charter was feat. $t 0$ cvery County in which there were Furefts, and the Great Charter into every Diocefe.
${ }^{1}$ This, as it was the longeft, fo it may be truly filed One of the môt unforumpate Relgos in, the Englilh Annals, not from any Malignity in his Nature, but from the Eafinefs and Iontabi-

The Rage of Civil War, under a Variety of Pretences; rofe in confequence of this general Poverty and Diftraction, even higher than in the Time of King Stephen, fo that King Henry himfelf and his gallant Son Prince Edward, being nade Prifoners by the Barons in the fatal Battle of Lewes, were long detained and treated with great Severity. At length however thefe Troubles fubfided, and what is truly wonderful, the Contitution which had been in a Manner overturned, not only recovered, but became alfo more regular, ftable, and uniform, than it feems to have been before by the occafional, and at length contant Admiffion of the Reprefentatives of the Commons intc Parliament $k$. In the latter Part of his long Reign, the King.enjoyed Quiet, and his People their juft Rights in
lity of the King's Temper; prone to gratify his Favourites rather than to Support his Minifters. His foreign Domiuions, from which he received little or no Benefit, kept him always craving from his. Subjects. His Attachment to his foreign Relations, Courticrs, and Clergy, excited to and kept them in ill Humour. His liftening to papal Councils, and his permitting their Extortions, continually drained the Kingdom. Through the greater Part of his Time he drew no Advantage from the Experience of his Father's Sufferings and his own. His Meafures were fometimes timil, always feeble, and yet on particular Occalions he was drawn to act with too much Rigour. The Diforders arifing from this ill Management profuced ubiverfal Poverty and Difcontent, and as for the King himfelf, after walting his Demefnes, pawning his Płate, taking unworthy Methods to obtain temporary Supplies, he was driven to break up his Court, to live upon Abbies, to folicit private Perfons for Support, and even to alledge that it was greater Charity to relieve him and his Fumily, than to give Alms to a Beggar in the Street.

* The Affairs of the Kingdom being in great Diftraction, and the King having called a Par. liament at Midfummer 1258 at Oxford, the Barons came thither with their Retinues well armed, and fettled there what were called the Exiovisiens of Oxfora, by which the Government of the Kingdom was devolved upon Twenty-four Perfons, who were impowered to chufe the great officers of State, and all Aliens were to be banihed, except fuch as the Barois chofe fhould remain. Amongft thefe was Simon Montfort Earl of Leicefter, once the King's Favourite, married to his Sifter the Widow of the Earl of Pembroke, and now their Chief. To the Obfervance of thefe Provifions the King and his Son Prince Edward were compclled to fwear. Many of the Nobility feeing juft Reafon to diflike this ftrange Settlement, reconciled themfelves to the King, who, endeaveured by their'Affiftanee to recover his Power; but being defcated in the Battle of Lewes, igth of May, A. D. 1264, himfelf and his Family taken Prifoners, Simon Montfort made fome new Alterations, by which the whole Power was devolved upon him, the Earl of Gloucefter, and the Bifhop of Chicefter. Richard King of the Romans the King's Brother he kept Prifoner in the Tower of Lordon, his Son Fienry, and Prince. Edward he pat into the Cafle of Dover; carrying the King about with him-in Triumph. In this State of Things he obliged the Prince to refigh to him the Earldom of Chefier; the Earl of Gloucefter obtained the Eftates of John de Warrene Earl of Surry, who had been always faithful to the King; and Peter de Montfort fecured in like Marner a good Eftate. Thefe Proceedings, and that Haughtiapfis the numerous Family of Montfort difgufled many of the Nobility ; fo that be apprehes that what had happened to the King in the Parliament of Oxford, might poffibly happen to withe the Parliament, he obliged the King to call on the 20th of Jannary 49 Henry III. at Laidoh, he directed Writs to a grcat Number of the Clergy, Deans, Abbots, and Priors, as well as Bifhops, to a very few of the Nobles, and thofe only of his own Faction, and likewife commanded the Sheriff to fend Two Knights out of their refpective Counties; and Citizens and Burgeffes from the Cities and Boroughs, in order to make himfelf popular ; which Mode, though thus introduced, being apparently juift and reafonable in itfelf, was afterwards purfued, as we fhall have Occafion to hacwo

## of GREAT BRITAIN.

 confequence of many wife and good Laws, and of a new Confirmation of. both Charters by Statute in the Fifty-fecond Year of his Reignl.This Period comprehends near Six Score Years, during the greateft Part of which, Multitudes were deftroyed inforeign and in Civil Wars, and the People were alfo grievouly harraffed by heavy and repeated Impofitions, the better Part of what they produced being fent to other Countries, and there fpent without procuring any national Advantage. It is true, that in fo long a Space, there was fuch a blending by Marriages, as at length made themin fome Degree but one People, and befides moft even of the great Barons being born here be$\mathrm{g}_{\mathrm{an}}$ to diniike Foreigners, and to confider themfelves as Anglo-Normans m.

Yet the Bulk of the old original Englifh remained fill but in a low and fervile State, occupied in cultivating the Grounds for their Lords, or working at Trades in Towns or Cities under theirs or the King's Protection. However if lefs confidcred, they were alfo fomewhat lefs expofed, and confequently grew more numerous in the Villages, and by their Induftry of every Kind, and more efpecially by their Woollen Manufactures, fuch as we then had, and muif have long had, began to thrive in other Places. The conftant Intercourfe with the Continent could not but introduce new Arts, and by the Knowledge neceffarily acquired from the Expeditions into the Holy Land, in which Numbers were employed, Navigation muit have been enlarged and Commerce revivid and extended $\mathrm{n}_{\mathrm{o}}$.

This
I Statutum de Marleberge, cap. v. This Parliament, we may affirm, on the Authority of that frent Antiguary Lambard, was held at Marlborough, A. D. 1267. In this the old King difcowered his thue Difpolition, hy paffing many wife and good Laws. Jndeed throngh the Courle of wiselin, as of en :is it was in his Power, he Chewed a Zeal for Juftice, and an earneft Defire to prevent the P'cople from bcing oppratied by the Barons, which it is not impoffible might be in Part the Caufe of his Misfortunes. He had before this Five Times confirmed the'Great Charter pand now he direfeet that both Charters hould be held for Law in his Courts, and that fuch as tranfgreffed them thould be ponilhed. The introducing the Claufe of Nop Obftante in his Charters, after the Mode of the Court of Rome, was very bad in itfelf, and of molt pernicions Tendeacy in its Confequences, by eftablihing a difpenfing Power in the Crown. We have a Syftem of the Laws, as they flood in his Time by One of his Juftices Itinerant Henry Bracton, which was firf printed at London, A. D. $5^{669}$ Fol. and again at the fame Place, A. D. 1640. 4to. it was abridged by Gilbert de Thornton, Chief Juftice in the fucceeding Reign.
${ }^{\mathrm{n}}$ The great Owp of Land, t appears by the Record of Domelday, in Number were about Seven hundred, Wi, very great Haron had under him his Friends and Clients, to whom he diftributed K-night's Fees, to be held from him by the ufinal Selvices. In Procefs of Time thefe Knight's Fees were fplit and divided, without altering the Nature of the Teaure, fo that even be who held a Twentieth Part was confidered as Libir Homo, a Frecholder or a Gentleman. It is calily to be conceived from hence, that many of the native Englifh, more efpecially the Brothers, Nephcws, and near Relations of lishops, Abbots, and other rich Clergymen, rofe gradually into thefe Ranks, as appears from the Dialogue concerning the Exchequer and other Authorities.
a It was in the Villages, and among the common Sort of People, that the Eoglinh Language was preferved; for in thofe Days all who affeted Prefermont, or affected to nivuc in fuperior

This is to be underftood only of certain Times, as during the former and middle Part of the Reign of Henry the Second, and at the Clofe of that of Henry the Third, and alfo of certain Places, as London, Briftol, Bofton, and Lynn, then the moft frequented Ports in the Kingdom. But in general the greateft Part of the Country remained very ill cultivated for the Reafons formerly affigned, and the frequent Civil Difturbances, by which, it different Times, all Parts of the Realm fuffered exceedingly. To this we may add, that Spirit of Licentioufnefs incident to weak Governments, and which more efpecially difcourages Agriculture, from whence, as our Annals fhew, proceeded a great Fluctuation of Prices, frequent Scarcities, and fometimes Famines 0 .

Besides, hitherto the Importance was not difcerned of thofe from the Labour of whofe Hands the Earth was made to produce, and by whofe Diligence and Skill the Value of its Productions were enhanced ; but they were left unheeded in a Kind of navih Subjection, even in thofe Times when Liberty, as our Hiftories report, feemed to be the great national Object. But gradually, and as Experience opened Men's Minds, it was found expedient for the common Benefit to cherih Induftry, that noble Principle of Virtue and focial Happinefs p.

Come

Spheres of Life made ufe of French. In regard to Indufry and Trade, we have already frequently vindicated the Antiquiry of the Wroollen Manufacture in England. The Statute of the Ninth of Hen. III. cap. 25. which enjoins that certain Cloths hould be Two Yards broad within the I.ifis, fully juplifies our Sentiment, as the Art could be by no Means in its Infancy when Clotins of this Breadth were made. In refpect to Commerce, Henry II. made Laws for preventing the llundering of $\begin{aligned} & \text { ITrecks. The Laws of Olcron we have already mentioned. In Magna Charta we find }\end{aligned}$ Provifion made for the fafe going and coming of foreign Merchants; a Circumitance very jufly applauded by foreign Writers, Thefe Precautions muft undoubtedly have produced great Efficits, fince King John was enabled to employ a Fleet of no lefs than Five hundred Sail agringt the French, over whom he gained a great Victory.

- The Hiflory of thefe Times fufficiently points out the Caufes of thefe Difafters. The Banons in Time of Peace were very fevere Landlords, in Times of Civil War fpoiled each others Lands, without any Tendernefs for the Inhabitants : Robberies alfo were fo frequent, that we are tohd Henry the Third adjudged fome of his own Servants upon Detection to be hanged. No Wonder therefore that Agriculture was neglected when there was not cither Security or Encouragement for thofe who fhould have exercifed it. The Ciftercians, an Order of Monks eflablified here in the Reign of William the Sccond, turned their Views to the Fceding of Shecp, and we find that all their Wool was feized towards the Payment of King Richardis Ranfom. Matthew Paris tells us of a dreadful Famine and Mortality from thence in A. D. 1258, when Multitudes did, and more would have perifhed, if the King's Brother, Richard Enrl of Cornwall, and King of the Romans, had not fent Fifty Veffels laden with Corn to London, when the King by an Edict pievented the Citizens from buying it up (as had been formerly practifed) and retailing it at extravagant Rates. Chron. Johan. Abbatis S. Petri de Burgo, p. 113.

PIt is exceedingly difficult to difcover with abfolute Certainty, how Things of the greatect Moment were conducted in thefe Times, and therefore the beft Judges cver fpeak of them diffidently, and with a Degree of Caution. It has been thought that Kings in thefe Times fum-

# of GREAT BRITAIN.

## Come we now to the Third Period.

Edward fucceeded his Father with all the Advantages a Prince could well poffffs. In the Flower of his Age, with high Reputation and much Expericnce. The great Expectations thefe Circumfances excited, were by his fucceeding Conduct amply fulfilled. In the Courfe of his Reign his Actions juftly gained him the Character of an able and fuccelfful General, a wife Statefinan, and a prudent Legillator. Hic Country deriving from him many fignal Benefits in all there Qualities, hath defervedly rendered his One of the moft diftinguihed Reigns in our Hiftory 9 . His pertonal Valour and his Military Skill he difplayed during his Father's Reign in the Civil War, in the noble Exploits he atchieved in the Eaft, and in the Feats of Arms he performed in his Return Home ${ }^{\text {r }}$.
monel fuch Barons, and fuch only to Parliament as they thought fit; and there is a great Appearance of this being true. Yet Mr. Ellynge, Clerk of the Parliaments, in his learned Treatife, p. 41, advances another Duetine : He lays the Barons were always fummoned in right of their Nobility, hut that others wele capabie of lxing fummoned in virtue of their Tenures, who were fometimes fummonet: and functimes umitted, and that thefe were not Barons but Peers, that is, Barons Peers. In like Dtanner the Mode of Summoning the Commons was not exactly the fame from the Beginning. Niay, even in refpect to Juries, Doubrs have been raifed when they commenced, and very learned Putinns have been of different Opinions, furme having affirmed, that they were not eflablifhed till the Reigu of Ifary the Second. Yet thefe Opinions may be reconciled by confidering Juries in ditionest lights, fior they might be more or fewer in feveral Periosls, and impannelled in a diffeent Manner. Upon the Whole, we want fufficient Authorities to fix any of thefe Points abfolusecy, and all that can be affrmed is, that Power followed Property then as it does now, and that in Propurtion as Men acquited the latter, they afpired to and graduaily attained the former.
${ }^{4}$ 'This gieat Prince was born at Weftminfter the 28th of June, A. D. 1239. Chron Thome Wiks. He marricil Elconora Daughter to Alphonto the Tenth King of Callile, from whom he rexrived the Hunuar of Knighthoud, A. D. 1254. Henry the Third died 16th November 1272, baving tirt fwom Cilbert Earl of Gloucelter to fecure his Son's peaceable Poffeffion. He accordingly, with the Advice of the Queen Mother and fome of the principal Nobility and Prelates, caufed Prince Edward to be folemnly proclained, and kept his Dominions perfect Quiet, till upon his Return he was with his Queen crowned at Weftminfer 'gth Auguff 1274, by Robert Kilva:ghy Archbithop of Canterbury, amidf the joyful Acclamations of the People. Annales Wanvurliciff:s, p. 227, 229.
$r$ His great Ahility in the Art of War was acknowledged by Simon de Monfort Earl of Lcicefler, who feeing his Order of Battle at Evcham, Augult oth 1265, when he was jant entered into the Twenty-feventh Year of his Age, fail, God receive our Souls, for our Bodies will be at their Mcrey. Sir Adm Gurdon, who was reputed the thoutelt and moft accomplifhed of the Malecontents, and remained atter that Defeit in Arms about Farnham in Surry, Prince Edward eneages in fingle Combat, and having obiged him to yicld, gave him his Life and Fortune. Tiivcti Annals, vol. i. p. 227. In Syria he was cyually beloved by the Chiflians, and admired by the Saracens. As he was coming fome the Count de Chalons in Burgundy invited him and his Retinue to a Tournument, and being perf, trally worfted by the King, his Knights attacked the innglith, who repulfed them with fuch stauphter, that this was called the little Battle of Chalons. Hec vilited the Pope at Lyons, and prevaiicd upron him to excommunicate Guy Montfort the.Son of Simon, who had bafely murthered his Consiy the Son of the King of the Romans at the Almr. He fenled his own Affairs in Cuienue, went to Paris, and did Homage to Philip the: Hardy:

## 30) The POLITICAL SURVEY

Apter he came into his own Dominions he looked circumfpectly into the State of the Nation, and made the neceffary Difpofitions for its Settlement inftead of entering immediately into a War, which he chofe rather to have in Appearance forced upon him by Lewellyn the laft Britifh Prince in Wales, whom he more than once defeated, and who in the Courfe of the War being killed, he reduced, though not without repeated and obftinate Struggles, the whole Country and its Inhabitants under his Obediences. He was frequently involved in Difputes with France on account of his foreign Doninions, which coft him very dear in Reference bath to Men and Money, producing many Difficulties, much Vexation, little Honour, and no Profit t.

Hfatdy in theferemarkable Words, I -do you Homage, Sir, for the Iands I hold and ought to hold of you.: After this be returned with great Reputati in to Enghand. We have given fo great a Charafer of this King in the Text, that it impofes a Kind of Obligation to make it good for the Reader's Sautsfaction.

- At Ais Coronation the King fummoned Prince Leweliis to do him Homage, who refufed to come onlefs. he had Hoftages given him for his Sccurity. He hid certainly Grounds for his Apprehenfions, as he had been, during the Courfe of the Civil Var, the priucipal Support of Simon Montfort. His Widow about this Time fent over her Daughter, accompanied by her Broiler a Prieft, who was to marry the Prince. They were taken at Sea and carried into England. Lewellin on this broke out into a War, to which, finding his Forces unequal, he. A D. 1277, fubmitted to a Peace on very hard Conditions. His intended Wife however was reftured, and the Marriage folemnized with great Maguificence in the King's Prefence, and at his Expence ; but he did not furvive long. A. D. 1281, at the Perfuafion of his Brother David, whom after many Kindneffes received, ai: 1 refiding long in his Court, the King had reconciled to him; he renewed the War, in which he was the next Year lain: David then affumed the Title of Prince of Wales, but in 1283 was taken and executed. A. D. 1295 the Welch broke out into Rebellion under feveral Priuces, againft whom the King went in Perfon, reduced them effectually, and to bridle them built feveral Fortreffes on the Sea-coaft, which were lafting Monuments of his Skill in Military Architecture, as well as of his Policy. Camdeni Britan. p. 553 . He alfo declared his Son Edward, who was born at Carnarvon, Prince of Wales. Triveti Annal. W. Heming. Walfingham. Puwell's Hiftory of Walcs. Selden.
' Philip the Faim, who fucceeded his Father Philip the Hardy in the Kingdom of France, though a very young, was a very artful and defigning Prince. He fuffered a War to be kindled A D. 1293 on account of fome Difputes between Englifh and Norman Seamen, which gave him an Opportunitywof invading Guienne. Edward defirous of Peace, fent over his Brother Edmund, who had married the Mother of the French Queen, and by thofe Two Princeffes he was grolly deceived, and through him his Brother, who at his Infance put Guienne into the Hands of Philip upon a Promife of immediate Reflitution. Inftead of this, Philip fummoned him to appear as btts. Vaffal, and for Non-appearance declared him a Felon, and all his foreign Dominions efcheated to the Crown of France. The King endeavcured to recover Guienne by Force; but failing, he entered into a grind Confederacy with the King of the Romans, the Farls of Flanders, Guelders, and other Princes, at a moft immenfe Expence, as our Records Thew. But perceiving the Remedy to be worfe than the Difeafe, he confented to a Truce, and admitted of the Mediation of Pope Boniface the Eighth, who decided, that the King, who was then a Widower, Thould efpoufe the Sifter of Philip, and Prince Edward that Monarch's Daughter. Accordingly 1299 the King married the Princefis Margaret of France at Canterbary, and had his own Dominions in France (which haj ever been a Burthen) reflored as her Dowry. Triseti Annal, vol. i. p. 274. 277. $3^{16 .}$

## of GREAT BRITAIN.

He was very fuccefsful againft the Scots, compelled John Baliol to refign the Crown which he had adjudged to him, and, in confequence of that Refignation took Poffeffion of his Dominions. Thefe he reduced a Second Time, when the famous William Wallace endeavoured to reftore his Countrymen to Freedom, and penetrated a Third Time to the very Extremity of the Kingdom, when Robert Bruce had arfumed the Regal Title. Againft him, in fipite of Age and Infirmities, he made another Expedition, in which he died at a Place not far from Carlife u. Whereever he was prefent he was in all his Wars victorious, and this continued Profperity rendered him alike revered at Home and dreaded Abroad.

As a Politician he feemed to act on the Principles of his royal Predeceffor Egbert in aiming at the Sovereignty of the whole Inland, which he very nearly acquired, and like him appears to have meditated the bringing all its Inhabitants to live under one fettled Form of Laws, towards the accomplidhing of which he bent all his Endeavours, and fhewed very great sagacity in every Step of his Proceedings. He took Care to act with much fecming Moderation towards the Welch for a long Time, that his Reduction of them might appear as a Work of Neceffity the lefs oppreffivew.
"Alexun ler the Thirt King of Scots had efpoufed Nargaret the eldeft Daughter of Henry the Third, in confequence of which he had conftantly affifted him in all his Troubles, and in the Jike M:nner adhered to his Bhother-in-law King Fdward. By his Queen he had a Son, Alexande", who dical lofiore him, and a Daughter Margaret, who married Firic King of Norway, who hy her had : Danghter of the fame Name with her Mother. Alexander died by a Fall from his Honf( A. I). 12 S 9 , and his Grand-daughter was acknowledged Heirefs of the Crown of Scotland. Filwial, with the Confent of the Nobility of Scotland, contracted his Son, Prince Edward, to Margaret, as appears by Rymer, vol. xi. p. 482 ; but the dying in her Paffage Home, great Difpuac's atofe as to the Right of Succefion. The Decifion by the free Confent of the Nobility of that Kinghom was left m Edward, who previous thercto engaged them to own his Superiority, and in conicquence of the unnimous Refolution of Twenty-tour Commiffioners, Twelve of each Nuion, pronounced in favour of John Baliol, who in A. D. 1292 did him Homage. Yet, conceiving himfelt afterwards ill ufed, he entered into a Treaty with Philip of France, and in confeguence of that invaded England. Edward turning his Arms againft him compelled him to refign his Crown A. D. 1296, and foon after held a larliament at Berwick, where moft of the Scotrifh Nobility did him Homage. The very next liar they rofe in Arms under Wallace, by which a new ll ar was commenced, terminated by a Second Conqueft A. D. 1304. The next Year Robert líruce caufed himfelf to be crowned King, who with Vatiety of Fortune maintained his Pretenfions till in an Expedition againf him, this great Prince died at a fmall Village called Kurgh on Sands the Seventh of July 1307, the Memory of which is preferved by a Pillar erected on the Spot by Henry Howard Duke of Norfolk.
w The laft of thefe Britifh Princes, Lhewelin ap Gruffyth ap Lhewelin ap Jorwerth, was little if at all inferior either in Parts or Prowefs to Edward. He acceded to his Dominions, A. D. 1246 , which was the Thirty-firf of Henry III. and from political Motives had connected himfelf clofely with Simon Montfort, to whom he conftantly adhered. Poljdor Virgil fays, that King Henry cacated his Son Edward Prince of Wales; but the Record Pat. $3^{8}$ Hen. III. Vafc. 111. 8. 11. 25 . gives him only the Conquefts in Wales, together with Gafcony, but without any

## 386 The POLITICAL SURVEY

In regard to the Jews, whom his Predeceffors had protected, by liftening to the Complaints of his Subjects, who loaded them with the Imputation of adulterating the Coin, and the Practice of intolerable Ufury, he rendered the banifhing of them not more lucrative to himfelf than acceptable to the Nation $x$.

His Claim to and Conquert of Scotland was conducted with infinite Addrefs, as well as profecuted with indefatigable Vigour. His French Wars were fory very expenfive, that he thought himfelf warranted to fupply his Wants by the moft arbitrary Methods. But even in thefe he acted with fuch feeming Reluctance, was fo ready in framing Excufes and promifing Reltitution, that he got over Steps by which a Prince of another Character would have been undone. According as his Occafions required he fhewed either Firmnefs or Complacency, and by a proper timing of there he frequently brought his Clergy, his Nobles, and his Commons to his Willy. His Severity and his Clemency, for he gave fignal

Title. It appears indeed by another Record, Pat. 52 Hen. III. membr. 9. that Edward was Lord of lreland. The Prince of Wales had Reafon to ftand in Fear of him upon his Return; but his Refufal to pay him Homage without having Hoftages was not a little haughty. The Terms impoled on his Submiffion were hard, but Edward did not inlint upon them frictly. He gave himfor his Wife Eleanor the Daughter of Montfort, who was his own Niece, and treated him with great Deference and Refpect. When he was again difcontented he fent his Relation the Archbikhop of Canterbury to receive his Complaints, and the Archbighop at his Return excommunicated him. After his Death Edward carfed a famous Law, entitled Statutum Wallix, or the Statute of Rotheland, from the Town of Rhydland in Flinthire, to be enacted, which is one of the wifelt and beft confidered of any Act paffed in his or in any other Reign, as it contains an entirc Plan for the Adminiftration of Juftice in the greateft Part of this Principality, and may be feen at large in Wilkins" Appendix.

I The miferable Jews, though faid to be protected here, were expofed to perpetual Indignities, obliged to wear a Mark of Diftinction on their Garments, confidered as the King's Slaves while they remained Jews, deprived of all they had if they turned Chriftians, and fent to live in a Building affigned to fuch Converts, which many Years after this King gave for the Refidence of the Mafter of the Rolls. The fole Reafon of their remaining here was becaufe they were no better treated elfe-where. In former Reigns they had been often fleceed, in this twice fo, and at length they were flead. A. D. 1278 Multitudes were hanged for clipping. A. D. 1290 they were all feized in One Day, their Goods confifated, and themfelves banifhed. Matthew of Weftminfter compates their Numbers at One hundred Sixty-five thoufand Five hundred and Fleven, for this, exclufive of what he gained by the Confifation, the Commons gave the King a Fifteenth of their Moveables, and the Clergy a Tenth. Walt. Hemingford, vol. i. p. 19.
${ }^{\gamma}$ It is amazing, confidering what happened to his Grandfather and Father, that this Monarch was able to act for more than Twenty Years as he did. The Clergy to fcreen themfelves procured a Bull from Pope Boniface the Eighth, forbidding them under Yain of Excommonication to pay any Tax impofed without his Confent, which they pleaded in Bar to the King's Commands. He gave them Time to confider, and on their perfifting pur them out of his Proteetion, which obliged them to comply. He had before feized the Money collected for the Holy War, and afterwards confiderable Sums depofited in their Hands. His Barons he curtailed in lower by his - Whens, kept them in continual Employment, and gratified them fomctimes with Lands and Ho-

He was ftill much greater as a Legiflator than as either a Hero or a Statefiman. In a very fhort Time after his Coronation he held a Parliament for reforming the Abufes which had been accumulating in the unfettled Times of his Father's Reign, and which was a Work of equal Neceffity and Difficulty a. In the Courfe of his Reign he held frequent Parliaments, nad made in them many and good Lawsb for the fecuring Men's
nours. IIe once feized all the Wool of the Clergy and Laity, fold it for what he could, and for Repayment fixed a Chort Price and a long Day. Inftead of the accuftomed Duty, he afterwards raifed Forty s!illing; a Sack on Wool, and took befides what ever Commodities were requifite for the Supply of his forces. In order to keep the l'eople quiet he dealt with them feparately, giving them always very fair Words, by which he levied Money on the inferior Clergy, from the Merchants, and from the Burgeties, all of whom he caneffed and encouraged in their 'Turns. But at length the Meafure being full, the Nubility, Clergy, and People all concurred in an Expontulation when he was upon the Point of going over to Flanders with an Army, and yet were pacified on his promifing them full Satisfaction on his Return. Such were the Effects of his Reputation, his Succels, his publick Liberalitics, his Frugality in his Court, and his wonderful Addrefs, by which he wound himfalf out of every Difficulty.
${ }^{z}$ The Body of Prince Lhewelin being known after his Death, his Head was cut off and brought to the King, who directed a Silver Coronet to be put thereon, fent it up to London, where, after being carricd in Triumph through Cheapfide, it was placed on the Battlements of the Tower of london to hew the Fallacy of a Welch Prophecy. Walteri Hemingford, vol. i..p. Ir. His Brother David was proceeded againft in Parliament, condemned as a Traitor, and fuffered as fuch A. D. 1282 . Thomas de Turbeville, who had confpired with the French King to raife new Commotions in Wales, met with the like Fate A. D. 1295. Sir William Wallace fuffered in Jike Manner A. D. 1305. Adam Murimuth, p. 36. Three Brothers of King Robert Bruce were trcated in like Manner, as was alfo the Earl of Athol, Sir Chriftopher Seton, and others. On fome Ocrafions Edward mewed a different Spirit, as in the Cafe of Sir Adam Gurdon. Gafto de Hierna reivelled againt him in Gafcony, and when he was upon the Point of taking him in his Caftle he appealed to Philip of France as his fuperior Lord. Edward acquiefced in this. When Ihilip heard the Caufe he fent him over to England with a Halrer about his Neck. He was confined for fome Time, then fet at Liberty and reftored to his Eftate. He fpared Madoc, who had allumed the Title of Prince of Wales. He fet at Liberty Henry Montfurt, who was taken Prifoner with his Sifter ; and in like Manner enlarged John Baliol, and fuffered him to live and die quietly in France.
$=$ This Parliament was held in the Third Year of his Reign, A. D. 1275, and in our Law Books is ftiled Weftminfter the Firf. The Statute made thercin is digefted into Fifty Chapters, relating to a great Varicty of Subjects, fuch as carrying good Laws already enacted into Execution, providing againtt Extortions and Oppreffions of every Kind, and by all Sorts of Perfons; for punifhing falte and collufive Verdicts; for raifing the Hue and Cry, and ufing other Methods for bringing Robbers and notorious Felons to Juftice; for reftraining immoderate Punifhments; for lupporting the Rights of the Clergy in fome Cafes, and putting them under proper Regulations in others. In this Parliament the Commons affifted.
b It was the wife Policy of this Prince to hold frequent Parliaments, and thefe too in different Parts of the Kingdom, in which he made fuch prudent Statutes as might compenfate to his Subjects by their Effects for the large Sums which he exacted from them. On this Head T. Wikes, P. 113 , fays that it was Edward's Cuftom to awaken fuch good Laws as had long dept,

Perfons, by inftituting Watch and Ward in Cities, and by various Regulations for their Safety in travelling the great Roads.

He was no lefs attentive in refpect to the Prefervation and Recovery of Property of every Kind. Thus the Goods of Perfons dying Inteftate, which being left to the Care of the Church, the Ordinary applied to pious Ufes, were directed by Statute to be liable to anfwer the juft Debts of the Deceafed; which gave rife to Adminiftrators. He eftablifhed that new Kind of Security called a Statute Merchant for the Benefit of Trade, gave an Elegit for fubjecting Lands as well as Moveables to the Demands of the juftereditor, regulated the Operations and Effects of Fines, which before were very intricate and perplexed, rectified feveral Inconveniencies in refpect to Tenures, and fettled the legal Modes of Entails $c$ and of Alienation. He for the common good fixed the Standard and eltablihed Means for preferving the Purity of Money, fettled Weights and Meafures, directed
to bring back to their proper Objects fuch as had been abufed, and as Occafion required to make new for the publick Good. After refiding a long Time in Gafcony, he found at his Return a gemeral Murmur through the Nation againit the Judges, on which he caufed ftrict Enquiry to be made into their Behaviour in full Parliament, where he removed and fined moft of them feverely. It hould feem that their great Wealth was the ftrongef Proof of their Iniquity; for though the Salary of the Chief Juftice of the King's Bench was but Forty Pounds, and that of a Baron of the Exchequer but Twenty, yet Adam de Stratton, One of the latter, was fined Thirty-two thoufand Marks, near Twenty thoufand being found in ready Money in his Houfe, and the Chief Juffice of the Common Pleas loft his whole Eftate both real and perfonal, and was banifhed. Walteri Hemingford, vol. i. p. 15. T. Walfing, p. 54. H. Knyghton, apud x. Script. col. 2466. A. D. 1305 there were great Diforders in the Kingdom occafioned by People of fome Confequence confpiring to difturb, diftrefs, beat, wound, and under falfe Suggeftions to procure thofe againft whom they had Malice to be imprifoned. For the Punihment of fuch Offences, there was a Law made 33 Ed. I. Stat. 2. and upon this the King iffued a Commiffion for enquiring after and bringing fuch Offenders to Juftice, of which much has been faid, as if they had proceeded in a fummary Way, and not according to the ufual Forms of Juftice, the contrary of which will appear from the King's Writ fill extant, Placita in Parliamento 33 Ed. 1. n. 10. However Adam Murimuth, p. 36, fays, Ordinavit Juftitiarios de Traylebaftonc, per totam Angliam, ad caftigandum malefactores, per quos fuerunt Multi puniti, et Regis ararium valde ditatum. He ordained Juftices of Traylebaftone throughout all England, for chaftizing Malefactors, by whom many were punifhed, and the King's Treafury well repleniflacd. Traylebaftone was only a vulgar A ppellation given to thofe Judges, for nothing like it occurs in the Commiffion.
e The Statute of Weftminfter the Second, made in the Thirteenth of this King's Reign, contains Fifty Chapters relative to a great Variety of ObjeCts, and made with great Care and Circumpeetion. The Firf of thefe is very famous under the Title of de Donis conditionalibus. It is very much blamed by Sir Edward Coke in the Preface to his Fourth Part of his Reports for introducing, as he fays, an Eftate Tail. This however feems not to be ftrictly the Cafe, fince it rather revived or confirmed them, there being plain Mention of fuch an Eftate in the Laws of King Alfred. This Law was made for removing certain Inconveniencies then felt and recited therein. In fucceeding Times it is true it produced many and greater Inconveniencies, as having a ftrong Tendency to create Perpetuities, which very probably were not then forcfeen. But for the Purpofes intended it was fo well made, as for a Time to be highly commended, and a Reedy, though a better is to be wifhed, hath been found for the Evils it occafioned.

## of GREAT BRITAIN.

the careful Collecting and fafe Keeping of publick Records. He repreffed the exorbitant Power of the Church, by limiting the Bounds of ecclefiaftical Jurifdiction, reftrained the granting Lands to Monafteries by repeated Statutes of Mortmain, and prohibited the Convents depending upon religious Houfes in foreign Parts from fending the Wealth of this, at the Command of their Superiors, into other Countries, and provided againft the Oppreffion of Monafteries by great Lords and Prelates, that they might the better anfwer the Ends of their Inftitution.

He hewed his Concern for Trade by deciding the Complaintemade by the Citizens of London againft foreign Merchants, provided for the Payment of Debts arifing in Commerce, and fixed the Staple of Wool at Sandwich. Ie gave up as unjuft the heavy Cuftoms he had laid upon Wool, and difclaimed all Right of doing the like again under Pretence of Presogative. In reference to publick Jultice, and whatever regarded the Adminiftration thereof, on which the Peace and Welfare of the Subject fo much depended, no Prince was ever more attentive. He reftrained County, Hundred, and Manor Courts within fuch Bounds as in thoee Days were proper. He fettled alfo the Jurifdiction of fuperior Courts in order to prevent their interfering with each other. He directed original Writs to be formed for every Species of Actions, provided that the Pleadings upon thefe hould be fimple, fuccinct, and perfpicuous. In a Word, he did as much as poffible to remove Fraud, to extirpate Chicane, and to prevent Delay in judicial Proceedings, for which in his own and in fucceeding. Times he hath been juftly celebrated by the greateft Sages of the Longrobe, which will do equal Honour to his Memory and to theirs d.

The enterprizing Valour, the profound Pulicy and profeffed publick Spirit of the King, though they rendered him highly revered by the Nation, could not however reconcile them to thofe high Acts of Power, and thofe bold

[^184]Stretches of royal Authority, by which, thoush ever under the fpecious Pretence of publick Utility, he fupplied his Neceffities in fuch Ways as feemed to him the moft fpeedy, and in fuch $P$ :oportions as he judged to he moft expedient. The Clergy, Nobihty, and Commons layi:g hold therefire of a favourable Opportunity, frated to him tir ir Grievances, demanded R:drefs, together with the Renewal and Conermation in Parliment of the Great Charter and Charter of Forefts, which was grant waccordingly in a Parliament held by his Son, the King being then abruad, and confirmed by his Charter dated at Ghent. But fome Jealoufies ftill remaining, he again confirmed them in Parliament. However after all this he procured the Pope's Abfolution from all his Engagements by a Suggeftion, that they were extorted from him. He then freely and of his own Accord confirmed both Charters, fo ftrengthened as to prevent future Infringements, and with fuch Additions as proved to the full as bencficial to the Subject as the Charters themfelves e; which from this Time became the fettled and immutable Bafis of publick Liberty and the Conititution.

Edward the Second, at the Time of his Acceffion to the Throne, was in the Twenty-fourth Year of his Age. He was a Prince handfome in his Perfon, and very adroit in his Exercifes, of an open generous Turn of Mind, but without thofe Qualities that were requilite to his Station, and more efpecially in thofe Times. He began his Reign with difgracing the Bilhop of Coventry, his Father's Treafurer, and a very wife Man. He recalled Peter Javefton, whom his Father had banifhed for minleading him in his Youth, and intrufted him with the Government of the Kingdom when he went over to do Homage for his foreign Dominions to King Philip, and to marry his Daughter Ifabella, who was then about Twelve Years of

[^185]
## of GREAT BRITAIN.

Age f. On their Return they were crowned together with great Solemnity, in which Gavefton bore fo great a Share as not a little heightened that Enmity which the Nobility had conceived againit him.

They quickly compelled the King to fend him again into Exile, which however he foftened by giving him an honourable Employment in Ireland, where, as the ancient Annals of that Kingdom thew, he acquired fome Reputation. It was not long before the King, after making great Conceffions to his capital Enemies, brought him back, and married him to the Sifter of the Earl of Gloucefter, who was his Niece, having before honoured him with the Titles of Lord of Man and Earl of Cornwall. Upon this new Murmurs were raifed, and the King obliged to confent in Parliament to a Commiffion, which devolved almoft the Whole of his Authority on Four Bifhops, Four Earls, and Four Barons, Gavefton being again banifhed, and declared a publick Enemy if he returned. In Hopes of giving a new Face to his Affairs, Edward afiembled an Army in the North, where he had Gavefton quickly with him, who was privately returned, and whom he employed in his War againft Robert Bruce. In this however he had little Succets, and the Barons having recourfe to open Violence, the King was obliged to leave Gavefton with a Garrifon in Scarborough, which he was foon compelled to furrender, and was not long after, with many Circumfances of Indignity, beheaded by the Command and in the Prefence of Thomas Earl of Lancafter, and other great Lords.

The King, though much offended with this, was forced on the pretended Submiffion of the Barons to pals an Act of Indemnity in favour of them and their Adherents. The War againft the Scots was renewed, and Edward marching with a numerous Army to the Relief of Stirling Caftle, was defeated by Robert Bruce at Bannockburn, where the Earl of Gloucefter and fome other Perfons of Note were flain, and many more taken Prim

[^186]foners. In confequence of this Misfortune, and fome other Caufes, there enfued many Calamities; greatScarcity of Provifions, Mortality of Cattle, and a Peftilence; which Diftreffes excited a general Spirit of Difcontent. This was fomented by the potent Nobility, who, or at leal mof of them, had conceived a ftrong Hatred againt the Spencers, Father and Son, though originally placed about the King by themfelves, becaule they were grown highly into his Favour. There great Lords coming armed to Parliament procured their Banifhment, though abfent, which the King infifted was againft the Great Charter, and the more effectually to crunt them thefe potent Lords at the fame Time plundered their Eftates.

Tine Spencers came hack in no lorior Space, and the King having collected a fimall Force, rebols ci to chanie the Inmence of the Lord Badlemere, the Queen having heen refuadd Intrance into his Caftle of I ceds in Kent. After reducing that cafle, finding his Fove in reafe, he marched Weftward, humbled fone of the Barons who had Eftater there and an the Borders of Viales, after which he turned fiddenly Northward againt Thomas Earl of Lancater, who was alrady in the Field with a coniderable Army. The Earl retiriag from Buton upon Trent, codeasonad to get into Yorkfhire, but at Borough Bridge, atter a fhort Dipute in which the Earl of Hereford was killed, himelf and mof of his 1 ollowers were made Prifoners by Sir Andrew Harklay, and was very quickly after condemned and executed with many Marks of Ignominy, notwithtanding his high Quality. About Twenty Perfons of areat kank were alio put to finameful Deaths in different Parts of the Kingdom, and many of their Forfeitures given to the Spencers.

This excited a general Spirit of Difaffection, not a little heightened by another unfuccefsful Expedition againft the Scots s. Charles the Fourti,

[^187]who had lately afcended the Throne of France raifed fome Difputes, to accommodate which the King fent over firft feveral Ambaffadors, then his Brother Edmund Earl of Kent, and to facilitate the Negotiation ftill protracted, the Queen at her own Defire was permitted to go likewife. In confequence of an Agreement the made that her Son Prince Edward Mould do Homage inftead of the King; he alfo by the King's Permiffion followed her thither. But Edward being informed of what was contriving againft him by the Queen and the Exiles, efpecially Roger Mortimer, who had made his Efcape out of the Tower, declared them publick. Enemies, as our Hiftorians fay, though the King denies it in his Letters, and endeavoured by a naval Force to prevent their landing in any Part of his Dominionsh. Thefe Precautions proved however vain, for the Queen, the Prince, and Roger Mortimer, with a fmall Body of Flemings, found means to debark in Safety at Harwich, and were received with fo general a Welcome, that the King clearly perceiving he could not refift, in hopes of finding a Paffage to Ireland, fled to Wales.

The Queen having reduced Brifol into which the King had put a Garrifon, and executed there with great Circumftances of Cruelty Hugh Spencer the Father, whom the King had created Earl of Winchefter, "proceeded immediately after to Hereford, and there hanged Hugh Spencer the Son, ftiled Earl of Gloucefter in Right of his Wife, with many Marks of Infamy. Others alfo both of the Clergy and Laity fuffered in the fame

Robert Bruce found in the Pocket of the Earl of Hereford was produced. The very next Year Sir Andicw Harklay, who for his good Service in taking Lancafter Prifoner, Edward had malc Earl of (arlile, was convicted and executed for the like Treafon, into which heg had been dhawn by his Hatred of the Spencers, and the Hopes of marrying the Siffer of Robert Bruce; which Fiats, if attentively confidercd, will fufficiently mew the true Caufe of this King's repeited Defiats.
${ }^{n}$ This Queen, Ifabella, was the Daughter of Philip the Fair, and Sifter to Lewis Hutin, Philip the Loug, and Charles the Fair, all of them fucceffively Kings of France. This latt came to the Crown A. D. 1322, and had many Altercations with his Brother-in-law Edward of England, who was very defirous to aroid coming to a Rupture, which induced him to fend fo many Embaffies, and at length, on a Suggeftion from the French Court that it would be acceptable, he fent his Encen, with whom went the Bifhop of Exeter. This Prelate perceiving ber fecret Detigns, and the Countenance which the gave to Roger Mortimer, who Two Years before had cliaped out of the Tower, where with his Uncle he had been imprifoned, and had been I uice pardoned, "ery honourably returned, and acquainted the King with the whole Intrigue, which induced him to wite to the Qucen to come Home, who exculed herfelf from her Fear of Hugh Spencer the younger. In Aufwer to this the King expreffed his Surprize, as the had the wingreat Civility to him at parting, and wrote to him in Terms of Friendhip while in France. Her brother, to whom her Practices could not be unknown, pretended to difcountenance her, on which fle left his Court and went into Hainault, where fhe contracted her Son the l'rince to the Princels Philippa, the Eal of Hainault's Daughter, and engaged his Brother John to come over with her, with a fmall Body of Flemings, and with thefe fhe landed about Michaelmas A. D. 1325.

Vol. II.
Eee
Caufe

Caufe. At length'a Parliament being called in his Name, the King already taken and imprifoned, was with much Solerinity depofed, and in nolong Time afterwards moft barbaroully pat to Death ${ }^{i}$. Whatever the Temper of 4 his Prince might be, or however he is reprefented inour Hiftories, his Lawsfurnih no Proofs cither of a cruel Difpofition or a Spirit of Defpotifim, but rather the contrary, for they chiefly define the Liberties of the, Church, provide. that Sheriffs and other Officers hhall be Men of Property, explain fome former Statutes that werc obfcure, and give Eafe in many Cafes to fuch as held of the Crown by Military Tenures.

Edward the Third affumed the regal Title by his Father's Confent, as he affured the Nation immediately after that Prince's Depofition, and was foon after crowned at Weftminfter by Walter Reynolds Archbinop of Canterbury, being in the Fifteenth Year of his Age. A Council of Regency was appointed by Parliament, but it does not appear they ever acted, and a very large Provifion was made for the Queen Mother. The young King, on the Scots breaking the Truce, marched againft then-with a numerous Army ; but the Enemy, inured to the Chicane as well as Fatigues of War, were too hard for them, and the King himielf was in the utmort Danger of being furprized, though he had the good Fortune to efcape unhurt. Upon this"the Negociation which had been before upon the Carpet was renewed, and terminated in a Peace, the Articles of which were confirmed by a Parliament held at Northampton. The King in his Return folemnized his Marriage with the. Princefs Philippa of Hainault at York.

In a Parliament held at Salifbury, 'John- of Eltham, the King's Brother, was made Earl of Cornwall, Roger Mortimer Earl of March, and Edmund Butler Earl of Ormond. Edward being fummoned went over to France, and did Homage to Philip de Valois as King of France for his

[^188]foreign Dominions, though he held the Right to that Crown to be in himelf, his Sifter Joan, purfuant to the Treaty, efpoufed David King of Scots, who was then a Child. Some of the great Lords had already tuken Umbrage at the enormous Power of the Earl of March, who by an infamous Intrigue betrayed the King's Uncle Edmund Earl of Kent into a Plot, for which he was condemned in Parliament and executed. This quickly produced, what it was contrived to prevent, the Ru:n o the Qieen Mother and Mortimer. He was dreaded and detefted by all who rem ined of the old Ccurtiers, envied and hated by the new, who remdering him fufpected to the King, he went in Perfon to furprize him, which not without Bloodihed was effected, in the Cafte of Nottingham, fent him from thence Prifoner to London, where being condemned unheard by his Peers, he was hanged upon the common Gailows $k$.

In the fame Parliament Edward declared that he would for the future manage his own Affairs, though he was then only turned of Eighteen, confined the Queen his Mother to the Cafte of Rifing, and reduced her Revenue to Four thoufind Pounds a Year. The Repulfe he had met with from the Scots fat ill upon the young King's Mind; the Peace was generally difagrecable becaule held difhonourable to the Nation, and therefore he meditated a Stroke on that Side as foon as an Opportunity offered. He did not

[^189]
## 396 The POLITICAL SURVEY

wait for this long; Edward the Son of John Baliol came over from France, revived his Father's Claim, and by the Connivance of the King raifed and tranfported an Army into Scotland. He proved fucceffful in this Enterprize, and on his doing Homage the King marched to his Affiltance, and gave the Scots one of the mort fatal Defeats at Hallidown that they ever fuftained. David Bruce and his Queen were conveyed to France, and there royally entertained. Baliol was crowned at Scoon.' Edward made' leveral Expeditions for his Support, took Berwick, reduced the Southern Provinces, and penetrated farther North than his Grandfather had ever done. David Bruce returning, remounted neverthelefs his Thronc, and in order to make a Diverfion in favour of the French invaded England in the Abfence of Edward, when, notwithflanding his Superiority of Numbers and the fignal Proofs he gave of perfonal Courage, he was not only defeated but taken Prifoner, and remained a long Time in that Condition. His Captivity however did not put an End to the War, his Subjects continued ftill in Arms, and fought obftinately, though often without Succefs. Edward Baliol, tired with the empty Title of King, refigned, as his Father had done, all his Rights to Edward, and lived and died in Yorkhite a private Man, with a very moderate Penfion for his Subfiftence. The Enylifh Monarch at length releafed his Brother David on Condition that he paid him in Ten Years, a Ranfom of Ninety, which the Agreement not immediately taking Place, was increafed to One hundred Thoufand Marks, and when more than Half that Sum remained due offered to the Scots a Treaty of Union, fo advantageous, that it appears frange they did not accept it 1 . On the Demife of David Bruce fucceeded Robert the Firf of the Houle of Stuart, and though no open War followed thereon between the Two Nations, yet the predatory Excurfions on the Frontiers continued.

1 The Act by which Edward the Third renounced his Claim of Sovercignty over the Kingdom of Scotland, bears Date March ift 1328. Edward Baliol was invited over from France by the Englifh Noblemen who had. Eftates granted them by Edward the Firf, and John Baliol in Scotland, Edward's Paffport for his coming over bears Date Ottober 1oth 1330. The great Viftory of Hallidown Hill was obtained July 19th 1333. David Bruce then retired into France, where he continued Nine Years. He was made Prifoner at the Battle of Durham the 17 th of October 1346. Edward Baliol refigned all his Rights by an Inftrument, dated the 12th of March 1356, and had a Penfion granted him of Two thoufand Pounds a Year; and fuch was the State of King Edward's Finapces, that he was forced to poftpone the Second quarterly Payment. David Bruce was fet at Liberty in 1357, and died in 1371 . This ruincous War continued with a few Intersuptions for Seventy Years, and was attended with the moft difmal Eonfequences to both Nations. Edward the Third purfued his Grandfather's Maxims, and lefs no Method untried of annexing Scotland to his Dominions either by Conquent or by Treaty. The Scors feem to have dreaded the becoming a Province to England, and this Apprehenfion hindered them from percciving, that in endeavouring to avoid it they became in Effect Subjects . 10 France.

## of GREAT BRITAIN.

The War which this great King entered into with France was more fuccerfful, and by far more fertile in great Events than that of Scotland. Philip de Valois not content with prevailing againft Edward in their Difputes for the Crown, and obliging him to do Homage for his hereditary Territories, gave him many other Marks of Ill-will, which induced Edward to form a Confederacy with the Emperor, Lewis of Bavaria, many of the Princes on the Lower Rhine and the great Cities of Flanders, which were.then a Kind of Republicks. To content the former he accepted the Trite of Vicar of the Empire, and to pleafe the latter he affiumed the Title of King of France. In order to join his Allies the King failed with a potent Fleet, and gained in Perfon the decifive Vistory at Sluys over the French and their Allies, or in other Words over almoft the whole naval Force of Europe. His Confederates furnihhed him with two numerous Armies, One of a Hundred, and the other of Fifty thoufand Men, and both in his Pay, with which however he was able to perform little, fo that the French difcouraged by their great Lofs at Sea, and the King finding his Finances exhautted by the cnormous Charge of his Alliance, concluded a Truce ${ }^{m}$.

The War broke out afrefh a few Years after on account of the difputed Title to the Dutchy of Bretagne. Edward carried over a puiffant Army into France, with which he fipread Terror and Defolation through the moft fertile Parts of the Kingdom. Philip, though he had a far fuperior Army, wielly declined a Battle; but on Edward's Retreat, confiding in his Numbers, he altered his Conduct, and though he found the Engliih Monarch well pofted and ready to receive him, attacked his Forces at Creci in Normandy with all that Impetuofity which is natural to his Nation, and with great Lofs was abfolutely defeated. Edward after this Victory formed

[^190]the Siege of Calais, and though Philip again collected a fuperior Army, and the Place made a vigorous Defence for more than Eleven Months, it was taken, and remained long Part of the Dominions of the Englith Crown. This Succefs did not hinder Edward from making foon after, at the Requeft of the Pope, a Truce with Philip, whom he.fliled his Adverlary of France, that he might have Time to recruit his Truafiry ${ }^{1}$ :

This Trace, from the miferable State beth Nations were i , , was continued for fome Years. At length the War broke out with redoubled Violence, John having fucceeded in the Throne of Fiant: to Ihili: his Father. Againt him out of Guienne marched Edward lysu or Wales, better known by his Sirname of the Black Princf, whin a Corps of Veteran Troops, ravaging the Provi ces of Auvargne, Limoufin, and l'sitou. King John, who faw this with infinite Concern, collected the waole t urce of France, and by quick Varches overtook the Prince ma very difadvantageous Situation. Edward fenfible of his Condition offered to aliandon all his Conquefts, and to conclude a Truce for Seven Years; but John infifted upon his rendering himfelf and One hundred of the principal Perfons in his Army Prifoners, which Propofition the Prince rejected with I)ifdain, and having gained a little Time by the Negotiation, made the bel I iifpofition he could to recerve the Enemy. John relying on the Inequality of Numbers, having, as the French Writers own, Eighty to Eight thoufand Men, refolved to decide the Difpute by the Swoid, the Prince on the other Hand confiding in the Courage and Difcipline of his Army, received

[^191] Confufion, and then charging them before they could recover, after a warm and bloody Struggle gained a decifive Victory, in which King John, who had behaved with the utmoft Bravery, was taken Prifoner, with feveral Princes of the Blood, and fome of the Firf Nobility of France ${ }^{\circ}$.

- Hr was treated with all imaginable Refpect and Courtefy by the Black Prince, who conducted him to Bourdeaux, and from thence brought him over hrither. DHe was ufed with the like Regard and Kindnefs by the King, who neglected nothing that could add Luftre to an Event the moft glorious of his Reign. The Two Kings having entered into a Negotiation, agreed upon a Treaty which the States of France refufed to accept. This obliged Edward on the Expiration of the Truce concluded by his Son to renew the War, and to tranfport a frefh Army into France. The Progrefs he made in this Expedition was fuch, by his advancing to the Gates of Paris, in which the Regent thut himfelf up, and the Confequences of the War continuing became fo apparent, that both Sides were equally difpofed to Peace, which was at length concluded at Bretigni, on Terms fo highly honourable to Edward, that in Confideration of the Ceffions made thereby, he laid afide the Title of King of France p.

[^192]As his Victories very juftly gained him the Reputation of a great and fortunate General, fo the whole Tenor of his Conduct Anewed him to be a very able and refined Politician. None of our Monarchs difplayed more Skill in the Management of Parliaments, or practifed it with mote Succefs. He confulted them freely on the Meafures of his Government, and availed himfelf to the full as much of their Advice as he did of their Grants. Yet notwithftanding this feeining Compliance and Condefeenfion he carried his Authority at leaft as high as any of his Predeceffors \%. He was very careful in cultivating a good Correfpondence and eftablifhing a great Character with moft of the Princes of Europe, proceeding with equal Penetration and Sagacity in moft of his Negotiations, which notwithftanding did not always anfwer his Expectationsr. The Popes of his
by the Two Kings. Edward by this Peace obtained the Addition of fome confiderable Conntries to Guienne. A Diftrict about Calais, together with the County of Ponthien in licardy. John was to pay a Ranfom of Three Millions of Gold Crowns, which amounted to about Half a Million Stetling Money of thofe Days, and a great Number of Hoftage, were given for the due Performance of thefe Conditions. At firft Sight it fhould feem that the Englifh Monarch was a great Gainer by Acquifitions, which taken together were not much inferior in Extent to the Kingdom of Ireland; j'et more clufely confidered, thele Terms will appear what we have filed them, very moderate, for in Return he not only renounced his Title to the Crown of France, but his Claims to Normandy, Anjou, and orher Counties, and except Calais and its Diftrict, he gained nothing, the Sovercignty cxcepted, but what he had a juft Title to before. In refpect to the Englifh Nation they were certainly no Gainers, for the King foon after erefted Guienne and its Dependencies into the Principality of Aquiain, which he gave to his Son the Prisce of Wales, whe kept his Court at Bourdeaux, and the Maintenance of this Principality coft the Kingdom Twenty Thoufand Pounds a Year. Calais alfo was a great and conftant Charge. Little more than One Third of the Ranfom was in his Time paid, and moft of the Hoftages made their-Efcape.. - .
$q$ When he firft took upon him the Government he complained of Corruption in Elections by the Adminiftration immediately preceding. He afked the Adzice of the Commons, as to his Conduct in refpect to Scolland. He did the fame with regard to his War with France, adding in full Parliament a Irroteftation, which was to have the Effect of a Statute, that he and his Succeffors, Kings of France, Chould have no Claim as fuch to the Obedience of the People of England, and promifed to make no Peace without their Conifent. In confeguence of their advifing his Meafures he took all Sorts of Provifions, as bis Occafions required, at all Times for the Support of his Fleets and Armies. He took up Ships for his Service in fuch a Manner as he thought beft. He obliged the rich Merchants of London to fend out armed Ships at their own Expence. He borrowed of the wealthieft People in his Realm, according to their Abilities, from a thoufand down to Forty Pounds apiece. He feized the Goods of the Ciftertians, and of fome other Orders. He became the fole Merchant of all the Tin in Cornwall and Devonthire. He levied by his own Authority additional Tax Forty Shillings on a Sack of Wool, which amounted to Sixty thoufand Pounds per Annum for many Years. Other Infances might be given ; but it is fufficient to add, that he declared a Statute granting him conditional Aids to be void, becnule he confented to it from the Neceflity of his Affairs, and not of his own free Will.
: The Negotiations of his Reign were as numerous, directed to as various Ends, and managed with as much Addrefs as in that of any One of our Monatchs ancient or modern, With the Emperor Lewis of Bavaria Edward cnutracted a ftrift Alliance, in confequence of which he tolicited him to raife Imbert Dauphin of Vienne to the Rank of King, in order to detach him from the French Interef. He entered into Treaties of Subfidy with molt of the Ecclefiaftical

## of GREAT BRITAIN.

Time, though generally in the French Intereft, he rendered in many Inftances fubfervient to his Views, expreffing the higheft Refpect and Veneration towards their Stations and their Perfons, which did not hinder his diminifhing gradually their Power and Influence in his Dominions, which Conduct of his was highly beneficial, as well as acceptable to his Subjects s.

Tue Nobility he kept firm to his Intereft by treating them with fingular Courtefy, fonferring on them high Employments, introducing new Titles, inftituting the Order of the Garter, and beftowing on them continual Marks of Favour and Confidence. The Commons he conftantly careffed, encouraged their Complaints by Petition in Parliament, by which he knew at all Times the truc State and Temper of the Nation, and by allowing them to make thofe open and legal Declarations of Grievances prevented Murmurs and Tumults, of which, notwithfanding the Number and Weight of their Taxes, there were few or none in the Courfe
and fecular Princes of the Empire, which gave him fuch a thorough Knowledge of them, that when the Imperial Crown was offered him he refufed it. To rivet, if poffible, the moft ufeful of thefe Forreigners filmly to his Side, he gave fome of them Fiftates and Peerages in England. ThemMargitis of Juliers he made Earl of Cambridge. John Duke of Bretagne, Earl of Richmond, Ingetlam de Conce, Fan of Bedford, to whom alfo he gave in Diarriage One of his Daughters. He made Treaties of Commerce with the Maritime Cities of Spain and of Portugal, with the Doge of Genoa, with feveral of the Princes of Italy, with the King of Caftile and Leon, and with the King of Portugal. Bat what in this Refpect does his Memory the greateft Honour was the frimindy Vifir male him A. D. 1363 by John King of France, David Bruce King of Seots, who hat been buth his l'rifoners, and the King of Cypros drawn hither by his high Reputation for Magnanimity and Magniticence.

- The Papal Tyranny at this Juncture was very feverely felt, and generally refented in this Kingdu:n. M.ny Bifhopricks, and moit of the rich Bencfices were given by the Popes frequently t.) It llians, and thet: bale and illiterate Perfons. Experifive Suits were continually depending at Avi nion or at Rome, ant immenfe Sums drawn annually under a Variety of Pretences into the Pule of the Pope and his Creatures. Thefe Enormities bore alike hard on all. The King fele himent injursd in his Prerogative, the fuperior and inferior Clergy were oppreffed, the Lords and other fesfons of Diftinction loft their Patronages, and the Commons were pillaged and impurcrihed. This raifal an univerfal Difcontent, from whence proceeded a Sririt of Enquiry The tumous Joha Wickliffe, amongtt others, had met with ill Ufage, and began to point out many of thofe Errors which were evident enough to a difcerning Eye. In a Word, there was fin ! a $a$ Difpolition to Rcformation, that if Edward had been difpofed to it he might eafily have fiecl the Nation from Papll Slavery. He concurred with the Temper of his People fo far as to write very grave: and charp Letters to the Roman Pontiffs, and when thefe Reprefentations proved incfeitual, he by the Advice and with the Confent of Parliament made fome fevere Laves for the Redelis of many of thele ciricuanes. But he concurred only to a certain Degree, and this not fimply becaufe of the Ule he made of the Pope's Interpofition in his Negotiations with foreign Pinces, but alfo in procuring Biihopricks and other Benetices to be conferred hy him at his Reeommendation, and theretore though he made Laws to reltrain the papal lower, which intimidited the Court of Rume, he counived at their Breaches of them for his own Convenience, which in fume Cates hept his Clergy in Awe, and in others enabled him to gratify the Requefts of his Nobility in the coaferring ecclefiallical l'referments.

Vor. II. ment to Induftry than moft of his Predeceffors; which in fome Menture arofe from his conftant Intercourfe with the Flemings, very many of whom he invited to fettle here, and to improve our Woollen, and alioour Linnen Manufactures. He likewile regulated the Herring Fithery. .He granted great Privileges to feveral Cities and Boroughs, but efpecinily thofe of London and Briftol, incorporated new Companies, and afforded his Countenance to fuch Undertakings as had an Appearance, of publick Utility t .

He made Treaties of Commerce with mof of the great Powers in Chritendom, and when the Spaniards, prefuming on their naval Power, infulted our 'Traders, he went in Perfon with the Prince of Wales on board a Fleet to avenge the Injuries done to his Subje?ts. He favoured and protected foreign Merchants. who fettled, or who traded here, and granted an extenfive Charter to thofe afierwards ftiled Merchant Adventurers. His Title to the Dominion of the Sea he openly avowed, and vigoroufly maintained $u$. He regulated his Silver Coinage according to the Standard of

cther

#### Abstract

${ }^{2}$ In this Fourteenth Century, Induftry, Arts, and Commerce were in a very flourithing State in different Parts of Europe." The whole Trade of the North was driven by the Haufe Town:, that of the Levant by the Maritime States of Italy, and in the Inland Provinces of that fair Country the richoft Manufactures were carnied on with cqual Vigour and Succef. The Ficmings lying in the Middle had a great Intercourfe with both, and drew much Wealth to thomfelves befides by their Woollen and Linnen Goods. We may form fome Idea of the conparative Riches of thefe States, by confidering that the Foriune of Habella the Daughter of a King of France, and the Sifter of Three, was but Eighteen hundred Pounds; and the Payment of One Million of King Jubn's Ranfom fo exhaufed that Kipgdom that they were fored to make Ule of Lenther Money; while John Vifconu Duke of Xhiañ, gave with his Daughter to Lionel Duke of Clarence, King Edward's Son, to the Amonat of Two huadred Thouland Fhorins in Gold, which was between Sixty and Seventy thouland Pounds of the Money of thofe Fimcs, and about Two hundred Thoufand of ours. Edward had an intimate Correlpondence with all thefe, and very probably borrowed fome ufeful Inventions from the Subjects of every (ne of them, as we may gather from the Companies which he incorporated, viz. the Guidfmiths, Skinners, Carpeaters, and Pepperers, afterwards afed Grocers. He alfo brought over fome Clockmakers, and fetded them here. In the Firn Year of his keign he granted a molt anple Charter to the City of London, and afterwards anucxed Southonark to their Jurifdiction, which gave him fuch an lntercft in the Citizens, as to borrow lirge Sums of them on his Revenues. The City of Briftol he made a County of itfelf, and granted Privileges to other Towns. - In ghe Tenth. Year of his Reiga, King Edward by a folemn Infrument afferted the Sovereignty of the Sea, ws an indubitable Roght tranfinitted to him by the Kings his Predecefors. Rot. Scotia 10 E. 111.1420 The fame was vouched by Parliament towards the Clofe of it. Rot. Parl. 46 E. III. 1 t $\mathrm{go}^{\prime}$. It was farther dempintrated by the Conccflions of foreign Powers, as appears by Lirences for Finfing, for paffing through the Englifh Sens, and other Circumftances recorded by Stldeh and by Ryiner. As a dear Retaifutation of this, the King fruck that beautifu! Coin filed bis Rose NobzE. (an this the King is reprefented ftandiag in a Ship crowned, hupling a Sword apright in his Rightifand, and a Shiald on his Left with the Arms of Frarice aud

## of GREAT BRITAIN.

other Nations to prevent Money from being exported; and Gold Coin was firft minted here in his Reign. He was a Patron of Englifh Literature in the Perion of Geoffrey Chaucer, and removed by Law that Badge of foreign Slavery, our pleading in French.

In his Reign alfo many wife and good Laws were enacted, fo that he has teen juftly regarded as one of our greateft Legillators, confirming in almof eyery Parliament the Great Charter, and that of the Foreits, and conlenting tafome additional Statutes for rendering both more effectual in many Refpects. But of the numerous Laws paffed in his Time, the Neceffity, Fitnefs, and Operation of many, from the Diftance of Time, the Alteration of Manners, and Change of Circumftances, we cannot fo properly judge. Yet that they were both ufeful and falutary, we may fafely conclude from their being made at the Inftance of the Commons, who alfo exerted their Intluence in procuring fuch Statutes, as upon Trial were found inexpedient to be repealed. As a Proof of thefe Affertions there are Three of his Law of fuch Confequence as require particular Notice.. The Statute of Truions, which is fo much for the Benefit of the Subject, and continues Liw at this Day. That of Provifors, which curtailed the exorbitant and epprefive Power of the Pope in collating Strangers to Benefices, by which moft of the Churches were filled with Foreigners, which Law had fuch an EFEct in opening the Eyes of the People, that it may be, and indeed hath been confidered as the Firft Step to the Reformation. Add to thefe the conftituting Jurtices of Peace in every County, which was of great Confequence in carrying the Laws into Execution, took away the Neceffity of Special Commitions, which were frequently abufed, and contributed not a little ly the Maintenance of good Order to the public Tranquillity. We come ni, w to the Conclution of this Reign. Prince Edward refiding at Bourdonus, received into his Protection Peter, King of Caftile and Leon, whom his haflard Brother Henry, by the Afritance of the French, had deprived of his Dominions, to which the Prince by his fuperior Mihtary Talents and the happy Succets of his Arms fpeedily reftored him. But Yeter thus reftored' moit bafely broke his Faith with himin refpece to the Expences of the War, which, as was highly reafonable, he haid engaged to defray. This obliged the Prince to impofe a Chimney Tax upon his Suljects in the ljutchy of Aquitain to difcharge the Pay of his Soldiers;
Fnotind quartelv, the Arms of France Semi delis, Three Lions paffant, and Thrce Fleurs de. lis upon the Side of the Ship. Reverfe in a large Bote, Crofs Fleari, with a Fleur-de-lis 2t can Poinr, and a Lion paffant under a Crown in eachouarrer, the Letter $E$ in a Rofe in the Center. Thw were coived at different Trmes of different Weights, but of the fime-Standard, the towit wighed One hundred and Twenty Grains, about the Value of our Cuinea, though current then only for Six Shillings and Eight Pepce. The Propurtion of Gold to Silver atithis Tine bing as sixy feven to Six.
which Impofition raifed great Difcontents, and thefc were artfully fomented by the Intrigues of the French. At length the Freach King Charles the Fifth (notwithftanding all the Places ceded by the Peace of Bretigny were yielded in Sovereignty) fummoned the Prince to Paris to anfwer for his. Conduct, and under Pretence of Contumacy declared War w.

The County of Ponthien on One Side, immediately revolted, and a general Defection enfued in Guienne on the other. Upon this Edward by the Advice of his Pariament refumed the Title of King $!1$ France, and endeavoured by tranfporting Armies thither to maintain his Rights, going over, old as he was, in Perfon. Biut all his Attempts failed, the Black Prince returned in an ill State of Ffealth from Aquitain, and died not long after of a Diftemper that through the extreme Heat he had contracted in Spain. The French rather by Policy than Prowefs were fo fucceffful as to recover almoft all they had hoft, except Bourdeaux and Calais.' The King, after lofing much Blood and Treafire,; found himedf obliged to confent to a Truce *:

[^193] It was by thefe Forces that Peter was driven out of his Kingdom, whofe Quarrel the Black Prince hat many Reafons for efponfing. In the Firit Place he bad been contracted to his Sifter, who: died at Bayonne in fer Paffage into Spain. In the next, the Caufe of his Antagonift Heury was efpoufed by the French. Lattly, if that Prince, thus fupporied, had remained the quiet Poffeffor of Cafile and Leon; the Principality of Aquitain mult dave been at the Mercy of the Confederates. On the March of the Prince into Navarre many of the. Companies revolted to him as to their old General," and it was tyy their Affiftance he gained "the Battle of Najara; thele were Men not to be triked with, and upon Peter's refufing to pay thim, the Prince was obliged to fell his Plate for their Subfiaence. The Chimney Tax was impofed by the Confent of the Sntes of: Guienne for Five Years only. The Tpops being difmiffétbe the Prince fell into the French Dominions, which Charles affected to ell an Invafion by the Englifh, and uppo the Appeal of the difaffeted Nooles declared Gaichne heifithed in A. D. 1369 ,
$\therefore$ In a former Note it hath been figgefted; that Edward's Moderation indinced him to accept of thofe Countrice to which he had an jaft ritle independent of the Succefs of his Arms. In doing this he foems to have made a groff political Miftake, for the Principality of Aquitain lay. at fuch a Diftance from England, as Yioderid the fending Succours thisher not'only very ex-
 thefe Countries were afolitety lolt bytuth. Eter the Englith Fleet under the Command of the Earl of Pembroke was beat bis the fopetior navali Force of the siew. King of Caftile, and Rochelle, which it was fent to ralietc, was ticintupen betrayed to the French. Another potent Fleer com. manded by the King in Perfor was diven from the Coafs by tempeftuous Weather: The Prince a: the thegining of the War, feeling himfalf winable to updergo its. Fatigues, refigned Aquir tain to his

## - of GREAT BRITAIN.

This Reverfe of his Affairs made an Impreffion on the Minds of his Subjects, who no longer endured with their former Patience the heavy Burthens that were laid upon them, but expoftulated roundly in regard to the King's Meafures, and accufed in Parliament fome of the great Perfons in his Council and about his Perfon. Thus the Decline as well as the Dawn of this glorious Reign was overcaft by dark Clouds of foreign Calamikies and domeftic Difcontents, which plainly prefaged that Storm which fell upon the Head of his unhappy Succeffor. All this might probably have been prevented, if this great Prince had applied his pregnant Abilities to the promoting the true Interefts of his Kingdom, inftead: of following, in too many Inftances, the Ditates of his Ambition, and preferring his own Glory to the Welfare and Good of his People $y$.

Tue Reigns of thefe Three Edwards have been the more fully confi-dered, becaufe they very clearly reprefent the gradual Arrangement of our political Syftem; fo that by a due Attention to the Accounts given of: them, we may with Certainty difcover from what Caufes, in what Manner, and by what Degrees it affumed the Form, at leaft, of a limited Momarchy. At the Beginning of this Period we have feen the Power of the Barins arifing from their extenfive Property; and the Confequences neceflirily attending it, the great Bulwark againf Defpotifm in the Crown, and the Commons fheltering themfelves under it. In the next Reign the: clathing either of their Interefts or their Humours brought on general.

[^194]The laft Edward, following the Example of his Grandfather through the Courfe of his long Reign, gave both Strength and Confiftency to the Legiflaturc. It was from hence; and from the perfonal Abilities of the firft and laft of there Kings, that we ftand indebted for the Reformation and Regulation of our municipal Laws, the Introduction of fectled Magiftrates for maintaining the puitric Peace, the Encouragemefol given to and Regulations made in Manuiactures, the Protection affiorded to Commerce, and whatever elfe could contribute to excite a Difpofition to call out by Induftry the internal and natural Riches of this Country for the Bencfit of its Inhabitants; which for thofe Times had greater Effects, all Circumftances confidered, than can well be imagined. If it had not been for the Refources which thefe Methods, however imperfect they may feem in our Eyes, moft unqueftionably produced, it would have been impoiiible for the Nation to have fupported the exorbitant Expences of foreign Wars, and to thefe Methods, fuch as they were, we alio owe all the fubfequent Improvements which would much fooner have taken Place, if frefl Commotions at Home, and the old inveterate Evil, a Propenfity to foreign Wars, had not retarded them a.

- It may not be amifs to enter a little more particularly into the Poffefions, Wealth, and InGuence of thefe potent Bayons. Many of them had a hundred or more fpaciuus Manors, mult of Which they held in their owin Hands, and manifed br their Bailiffs. Hugh Spencer the Eldur, when recalled from his Exile, complained that his Enemies had pillaged Serenty-fix of his Mh, toris, that they had driven away T'wenty-eight thoufand Sheep, T'wenty-two thrufand Head of Black Catile, Six hundred Horfes, and deftroyed Two Crops of Corn. Une in the Barn and the other on the Ground. He cftimated his Damages at Thirty thoufand Pounds. His Son Huyh the younger rited his Loffes at Two Thirds of that Sum. At this Time thefe great Lords graned Subfidies by themfetves, as the Koights of Counties Hikewifc did, and the Citizens and Burgetf's by themfelves;. In the Time of Edward the Sucond the Number of thefe Lords fummined to Parliamentamounted to about Fourfeore. Thomas Earl of Lancaftr, the g "atell Peer ia that Reign, had th his own'mind his Wife's Right Six Earldoms. Sir Adam Binifter having fonme DifFerence with himp, the Quarrel wis ended by the Sword, whereby Banifter and his Affowintes perihed. His Heirs after the Earl's Deceafe applied to Parliament for fome Compeufniom, atledging that while he lived his Power was fo grent, that no Redrefs could he had. Sir Roncrt Holland, who was his Domeftick, is branded as a Traitor for having juined the King's Army with Five bondred Mep whom he had rifed for his Lorl's Service. Many of thefe Barons in all the 'l thie Reigns were vefy great Oppreffors, andinterpoled heir Authority fometimes to protect, and at other's to procïre Pardons for the Inftranents of thetir Injuftice, of which frequent Cumplaints were made by the Commons in Partiament.

2 The great Atretatloat made in this Counitry by the Norman Conqueft occafioned, as we have already hewn, a great Change in the Mandgement of Efates, and of courfe this was quickly follqwed by wery wifible Efficte. The moftyconifderdble of thefe was a fudd and general Turn to drising which muft have begungey tarly nince the Cifertian Order of Monks, cftablithed

We fee likewife in thefe Reigns the Acquifitions made by the Addition of Wales, which, befides ridding us of very troublefome and dangerous Enenies, added at the fume Time to the Strength of our Armies. Ireland alio was more effectually fubdued, and from thence likewife Ships and Soldia were procured. The Experience of thefe Bencfits, the Defire of incroumg them, joined to a quick Senfe of the Inconveniencies arifing from the V'icinity of the Scots, while they remained a feparate People, induced all thefe Pripces to exert, as Occations offered, both Power and Policy to reluce then, to thrir Obedience, in which, though they fometimes came very near it, yet was it never accomplinhed. The Wars that fo frequently broke out between them on this Account were diametrically oppolite to the true Intereas of both Nations, which in their cooler Moments they divierned, andthis produced fhort Intervals of leace, or rather Ceffations of Arms:

 Commady aml its Mamantucs (for notwithanding all that is faid to the contrary, we exported (donh as anly as we dhl Woll) became the great Staples of this Conotry. This was collected in the dafenm l'arts of the Kinertom, by Jealers who were ftiled Wool-ftaplers, and carried by. th. m w the Ports from which it was allowed to be exported, thence ftiled Staples; and thofe who capurtid it ilerchauts of the Staple. The Flemings then manufactured the fineft Cloths, and were (al: piaxijul Culiomers for thefe Staple Commodities, the Sale of which gradually increafed; till in Hu Twenty-cishth Year of Edward IIt, the Export of Wool, Woolfells, Cloths, and Worlteds, nmonaiced to upwards of Scren handred thoufand Pounds of our Money. According to fome Accunte, in the hater laut of that Reign, the Exports were fill larger. We need not wonder H:asore, comfikeing alo that Leather was another Staple Commodity, that the great Landholders : 'he alant whelly upin Grazing, as a Proof of which we find the following Account of the sionk belorging to the Bitherprick of Winchefter A.D. 1366, 1556 Head of Neate or Black"Cattle,

I In di: wit (mathens in the Reign of Henry III. the Scots had given him all the Afartance an ther lower, and at the Beginning of the Reign of Euward I the King of Scots marched a conthowhe Doly of Fores to his Aflitance againt the Welch, for which Edward made bim the wont con.ind Acknowlelgments; and it is rery ptob. ole, if that Prince kad not died without: lila:, EJwan woald have cultivated by every Meins a grod Underfanding between the Two Natous. It is mud evident that the Scots reliad upon this in making him the Arbiter of their dif patid biacefina. The Opportuity the give him, awakened his Ambition, and his fublequent Cunfat excitad an uncurable Awhina towardseach other batwen the Two Nations. His Death
 K.h.n Buce intripud with the maleconcont ords, ani horiby defated all his Endeavours ta. firfucac his father's llan. After the Eatle of llanoosburn it fiould feem that the lariament atXiatimpion appoved the lreaty made with Rohert Mruce, and the Marriage of the Princefs. ## 408 The POLITICAL SURVEY

The Motives to and the Confequences refulting from foreign Wars, with a View to the Acquifition of foreign Territories, have been impartially ftated, and as a Repetition of the fame or of like Events conftitute in a great Meafure the Hiftories of fuccee ing Reigns, it is by no Mcans requifite to the Plan of this Work to enter as fully into them, which could only lead to the like Remarks with thofe that have been already made, the Propriety and Weight of which mutt"be left, as mof f willingly they are, to the Judgment of the candid Reader.

This Period comprehends fomewhat more than a Century, in which great Alterations were made, and fome confiderable Improvements introduced, to which we have endeavoured to do Juftice. The fame Diipofition obliges us to obferve, that notwithftanding many of our Writers have reprefented Four Fifths of this Time, as the, moft profperous and glorious in our Annals, yet in fact the Nation was through the Whole of it declining and decaying in its moft effential Interefts, for which the Eclat of Victories, the Splendour of Triumphs; or the Acquilition of forcign Territories, neither did or could make any Compenfation. It would be very unfair, as well as unfatisfactory, to advance this on Conjecture only, or even upon the mere Bafis of politicat Arguments, though ever fo fpecious.

But what hath been affirmed is founded on fuch Evidence as is not to be either doubted or denied. For through this whole:Space of Time the Number of the Inhabitants was continually decreafing from the Multitudes that were daily deftroyed in foreign or in civil Wars, by the frequent Return of peftilential Diftempers, and by a Varitty of Difcouragements to Population, the Two laft generally occafioned either by the Want or the Unwholefomenefs of Provifions. As the natural Confequence of this, Cities and Towns declined, and Numbers of Villages funk into Hamlets, and at laft perifhed." This was the Cafe in the Midland Purts of the Kingdom, while the Dread and Apprehenfions of hoftile Defcents, which were very far from being imagipary Terrors, depopulated in a

[^195]
# of GREAT BRITAIN. 

 cautions that were taken to prevent it $c$.The Generality of our Hiftorians, it muft be acknowledged, fay very little on thefe Subjects, which notwithftanding th ir Silence are neverthelef's certain. They were too much taken up, and too well pleafed with the Glaxe of thofe great Events, of which thefe were however the Confequences, ta afford them any Notice. There may likewife appear fome Inconfiftency in admitting that Manufactures were encouraged, and Commerce increafed, at the fame Time that the Nation is reprefented to be in fo low and fo diftreffed a State. In refpect to this we muft obferve, that the Policy of thefe Times was very often improperly directed, in confequence of which fome Ranks of Men lived even in thofe Days in Affluence and Luxury, while the Bulk of the People, and more efpecially thofe who deferved beft of the Community by their Labours, were diftreffed and depreffed d. Add
c In the Whole of this Period there were fcarce Ten Years of Peace. The numerous Armies which Edward the Firft led into Scotland, were chiefly compofed of Welh and Irifh. In his Wars with France he hired Fcreigners at a valt Expence. Edward the Second had Recourfe to the moft violent Meafures for raifing his Armies. There was during his Reign almoft a continucd Scarcity of Provifions, and in confequence of this a moft dreadful Peftilence. There were Three great llagues in the Reign of Edward the Third. Thefe Calamitics occafioned fuch a Diminution of l'cople, that many Cities and Towns applied for an Abatement of their Fee-farms. Funds were afligned by Parliament for the Relief of decayed Towns, and fome of thefe defired to be excufed from fending Burgeffes to ieprefent them. In the Thirtieth Year of Edward the Third, the Shenff of Lancalhire certified, that thare were no Boroughs in his County in a Capacity to fend Members. To put this Matter beyond all Doubt, in the Forty-fifth Ycar of his Reign the Commons granted him an Aid of Fifty thoufand Pounds by way of Land-tax, to be levied on the foveral Pailhes: at the Rate of Twenty-two Shillings and Four Pence, which hews, that they procecded on the Survey of the Congueror already mentioned, Political Survey, vol. ii. p. 36 r . But upon the Return into Chancery it appeared fo infufficient, that they were obliged to make a new Affeffent of Five lounds Ten Shillings, the Number of Parifhes being reduced from Fortyfive thoufind to Fight thoufand Seven hundred. Cotton's Abridgement, $\mathrm{p} .111, \mathrm{i} 12$. In the Beginning of his Reign the French burned Suuthampton, and made frequent Defcents upon the Coalt, which fiighted the Icople from their Habitations, and to engage them to return, Meafures were taken by Parliament, and the Commons frequently preffed the King to fee them frictly exccured.
d We have already fown, that upon the Parcelling out of the Kingdom into large Eftates beftowed on Eals, Barons, Knights, and Churchmen, grazing came to be effeemed the beft Oeconomy, as producing the molt falcable Commodities, and this by employing the fmalleft Number of Hands. Wool, Cloth, and Leather expoited, heing fubject to Cuftoms, our Monarchs encouraged Trade for the Sake of their Revenues; and Cities and great Towns foom the Profits they reccived by Fee-farm-rents, and other Means. It is eafy to difcern from hence, that the Leginature as it then ftood, might have very little Regard to the Bulk of the People; that is to fay, for thofe who got their Bread by the Swent of their Brows. Thefe martial Times brought forth another tivil. The feudal Syitem was, from Experience, found unfir for foreign Wars, and our Kin.s; hining Soldiers and Commanders allo at a fettled Pay, War became a Trade, and a profitable Trade likewife; for the lay of an Archer was Six-pence a Day, when that of a Mafter Car-

## The POLITICAL SURVEY

to this that feveral of thofe wife and falutary Laws made in this Period were not yet fo thoroughly eftablifhed as to have their Effects uniformly and univerfally felt through all the Degreos of the People.

This plainly appeared in the Difcouragement of Agriculture, the great and general Source not only of Plenty but of Population. Sometimes, which Mews our Soil, when cultivated, retained its Fertility, Haryefts were fo copious as to render Corn much too cheap, more frequently it was too dear, fometimes extravagantly fo, and never for any Length of Time at a middle and reafonable Price e. Exportation was in thofe Days far from being unknown; but it was an unprofitable Exportation. The Grain fent Abroad being taken up by the King's Purveyors for the Subfiftence of his Forces in Foreign Parts, or for that of his Subjects in Guienne, and paid for at à very low Price here.

Richard the Second fucceeded his Grandfather at Eleven Years of Age, with the Approbation and Affection of his Subjects. The Beginning of his Reign however wase clouded by the Depredations committed by the
penter or Mafon was bot Three-pence, and his Servant had but Half as much. In confequence of this, and of the Sriccefs of our Apms abroad, the Soldiers of all Ranks who returned brought in Money and inSpoils, what enabled them to make a Figure, and introduced a Kind of Luxury, to reprefs which fumptary Laws were made, which fell heavy apon Induftry, and fome other Laws ftill heavier. For the Peftilence having thinned the People, Acts were paffed to regulate Labour, by. which a Man who had not wherewithal to maintain himfelf, was compelled to go to Service, if he refufed, to Prifon, and the fame was his Lor, if he did not work at the old Wages. Much more might be faid on this Head, if we had Room, but this furely is fufficient to fhew the Truth of what is afferted ia the Texst, and how hardly the Many, who by the Exercife of their Hands procured Wealth, were treated by the comparatively Few, whoby the then State and Difpofition of Things were intitled to poffefs it.

- If we confider the Number and Exumymizorefts in thefe Times, the great Quantity of wafte and cammon Grounds, the Numberstaryk Cattle, and prodigious Flocks of Sheep thatwere then Stept, and add to thefe the con tr Supplies of able-bodied Men that were required: for the Wars, we may eafly conceive that Agriculture, which demands much Eand, continual Labour, and of eonife many Hands, conlit be but in a very imperfect State. We have however ftronger Proofs: than thefe, ariffigg from the continual Incertainty and amazing Variations in the Price of Wheat, sifing fometimes to Oine, Two, and if the Authority may be depended upon, to Four Ponnde, at other Times falling to Four, Two, and in fome Places to One Shilling a Qoarter. This in oar Hiftories is frequently referred to bad Seafons, to Plagues, and to great. Scarcity of Moneys : But certainly it is more probable, that it was owing to bad Husbandry, and the miferable State of the poor People, compelied, if they did not beeome Soldiers, to work at a low Price, and under great Difcouragementre from their Tenures, It is poffible that the Prelates, Atbots, and other rich Clergy, and the Eithe Barons, Knights, and other Men of landed Property, might, Without ging to Market, provide for the Subfitence of their refpective Houfeholds, and if fa, the very high Prices of Corn were chiefly felt by thofe who were leaft able to bear them. What corroborates this Reafoning is, that though there were Alterations in the Prices of Flefh and Fifh, yet they were not fo difproportionate, and it may be, that Living, when Corn was very dear, on Salt Mutton, foufed Swin's Fjeh3, and Fifh, might contribute not a little to epir. demic Difeales.

## of GREAT BRITAIN.

French on our Coafts, who burned the Town of Rye and feveral other Places, the Invafion of the Scots, and fome other finifer Events, which made confiderable and conftant Supplies neceffary. Thefe were in Part raifed by a Poll-tax, which though no higher than Twelve Pence, yet being a Mode unufual and odious to the lower Sort of People, already labouring under the galling Yoke of Vaffalage, they fuddenly rofe in prodigious Multitudes,rnd in their Proceedings at leaft, if not in their Purpofes, manifefted Intentionsdeftructive of all Government. Their Motions were quick and irrefiftible, $\mathrm{c}_{\mathrm{t}}$ that feizing London and entering the Tower, they beheaded the Archbihop of Canterbury, and Sir Robert Hales High Treafurer, and feemed abfolutely bent on overturning the Conflitution, if their Progrefs had not been ftopped by the gallant Behaviour of the Lord Mayor, who killed their Leader, and their Rage at this diverted by the King's Courage and Prefence of Mind, though he was then but Sixteen.

At this Time his Uncle John Duke of Lancafter, who was then on the Borders of Scotland, wifely concluded a Treaty of Pacification, and then retired to Edinburgh, from his Apprehenfion of the Commons, by whom he was exceedingly hated. The next Parliament declared the Manumiffions which the King had granted in order to difperic the Rebels to be null and void, reduced thofe who rofe again by Force of Arms, and then by the Sword of Juftice deftroyed about Fifteen hundred of fuch as were moft guilty. The Wars with Scotland and France continued during a great Part of this Reign, and though nothing decifive happened in either, yet were thefe Difputes attended with no fmall Expence of Blood and Treafure. The King's Minifters being accufed of many Mifdemeanours, were removed from him by the Credit of his Uncle Thomas Duke of Gloucefter, the Earls of Warwick, Arundel, and Nottingham; but they were foon recalled, and declared innocent by the King. Afterwards, by Authority of Parliament, the Archbihop of York, and the Duke of Ireland, the latter of whom raifing fome Forces had been beaten at Radcote Bridge by the Earl of Derby, eldeft Son to the Duke of Lancafter, were banifhed, and Sir Simon Burley, who had been the King's Tutor, and fome other Perfons put to Death as Traitors.

When the King became of full Age he changed his Minifters and his Meafures, and having by no very honourable Means got the Duke of Gloucefter and the Earls of Warwick and Arundel into his Power, he proceeded againft them in Parliament, where the Duke of Glotcefter, who had been ftifled at Calais, was condernned, though dead, the Earl of Arundel executed, and the Earl of Warwick banifhed. All that had been done in and by the former Parliament, was at the fame Time declared void

## 42 <br> The POLITICAL SURVEY

and illegal. John Duke of Lancafter, who had compounded his Claim in Right of his Wife to the Crowns of Caftile and Leon, amafing thereby an immenfe Treafure, was at this Time returned and concurred in thefe violent Proceedings. His Son the Earl of Derby was alfo very active, in Acknowledgment of which the King beftowed on him the Title of Duke of Hereford, which he had nof long enjoyed, before he accufed the Duke of Norfolk of High Treafon, in confequence of which they weye Doth Danifhed, the former for Ten Years, and the latter for Life.

In the Abfence of the Duke of Hereford, his Father the Duke of Lancafter died, upon which the King feized his Inheritance, contrary to his Promife. Richard going over to. Ireland to fettle the Affairs of that Kingdom after the Death of Roger Mortimer Earl of March, who had been his Governor there, he behaved as he had done in a former Expedition with great Spirit, and met with much Succefs, many of the petty Princes in that Illand fubmitting to him, whom he treated with great Kindnels. In the mean Time the Duke of Hereford landed with a finall Retinue in Yorkfhire, declaring he came with no cther Defign than to claim his own Title and Eftate.. But being quickly joined by fome of the Nobility, and his Forces greatly increafed, he began to form other Pretenfions. The Duke of York, who was Uncle both to him and to the King, being left his Lieutenant, raifed an Army, and made at firft a Shew of Refiftance.

Bur they very quickly came to an Agreement, and the Duke of Hereford advanced with a very numerous Army towards Wales, where, after being long detained by contrary Winds, the King was at length landed. Richard meeting with much Treachery from thofe in whom he moft confided, retircd to Conway, from whence being feduced by the fair Promifes of the Earl of Northumberland and by him carried to Flint Caftle, he was delivercd to the Dake of Lancafter, who brought him to London. A Parliament being fummoned, upon his owning his Incapacity for Government, and refigning his Crown, Articles were therein exhibited againft him, upon which he was depofed, and after an Imprifonment of no long Duration at Pomfret ended his unfettled and unhappy Reign by a violent Death, as to the Manner of which there is great Incertainty $f_{\text {o }}$

[^196]It is eafy to difcern, that in Times like thefe, in the Midat of fo many Commotions, and when Property was fo very precarious, the State of the Nation muft be of Confequence very indifferent, and the Minds of the People, from their being oppreffed ard impoverimed, equally difturbed and uneafy 2 Yet great as this Evil was, the Events of which it was productive were ftillmore calamitous, and entailed upon them and their Pofterity, for a long Series of Years, fucceffive Scenes of Difcord, Bloodhed, and Confufion b.

Henry the Fourth, as he afcended the Throne, partly by Force and partly by Favour, fo for a great Part of his Time, his Seat thereon was very uneafy and infecure. In his Firft Parliament, having

Jeft him what little he had. A. D. 1394 the King, attended by his Uncle the Duke of Gloucefter and other great Lords, went into Ireland, where, as Froiffart fays, he with great Solemnity kniphted Four lrih Kings. A. D. 1397 the Duke of Lancafter, as Lord High Steward, fat in Judgment on the Earls of Arundel and Warwick. A. D. 1399 the King went a Second Time to Ireland, and after his Return was dethroned the 3oth of September in the fame Year. On the 14th of February, A. D. 1400, he breathed his laft at Pomfret ; his Body was brought up to London, and intcrred afterwards without Ceremony at Langley. This Act of Cruelty was far from anfwering the End for which it was perpetrated, Henry being haunted by living Apparitions of pretended Richards during the whole Courfe of his Reign.
: The Wafte of Men, the true Riches of every Country, muft have been very great during this Reign. Armics were frequently marched into Scotland, and once the greateft Force that had ever bech raifed in this Kingdom. Great Succours were fent into Flanders, and confiderable Bodies of Men tranfported at feveral Times into France. The Earl of Cambridge went with a great Flect and a numerous Army to Portugal. A much greater Force went with his Brother the Duke of Lancaller, to afert his Title to the Crowns of Caftile and Leon, of which very few retuined Home, to fay nothing of thofe that were loft in the Civil Wars, and in thofe of Ireland. Yet, as if we had fill a Superabundance of People, fuch was the Rage for foreign Expeditions, or fo much better the Life of a Soldier than that of a Clown, that Henry Spencer the wariike Bihhop of Norwich, levied a numerous Army in the Caufe of the Pope, of whom he brought not many back. The Earl of Derby went with a confiderable Force into Pruffia, and a Third Army was fent to the Affiftance of the Genoefe againft the Infidels. In this Reign there was a great Earthquake, and a Waterquake, a deftructive Peftilence, more efpecially in the Noish, frequent Scarcities and a continual Fluctuation in the Price of Grain. Thefe Miferies would have been more felt, and the Poverty of the People much greater, but for the predominant Pafinn for Grazing, and the prodigious Exportation of Wool, which however was at certain Times very cheap. at Home. The Woollen Manufactory alfo increafed, and fpread itfelf through different Parts of the Country. But Agriculture continued very low.
${ }^{\text {n }}$ The difaftrous Conclufion of this Monarch's Reign was productire of innumerable Calamities to his People. The Parliament, attentive to theSucceffion, had engaged Edward the Third to declare his Grandfon Prince of Wales in his own Life-time, and with the like Pregaution declared Roger Earl of March prefumptive Heir to Richard the Second. This Roger was the Son of Edmund Mortimer Earl of March, by Philippa the only Child of Lionel Duke of Clarence, Second Son. so Edward the Third. In Right of his Mother he had a large Eftate in Ireland, where he was the King's Lieutenant, and was 』ain A. D. 1399 by the Rebels, and it was the Deffre of a venging his Death, that induced Richard to go over into that Illand. This Roger left a Son Edmund Earl of March, and Two Daughters. Edmund died without Ifue, but his eldett Sifter Ann married Richard Earl of Cambridge, Son to the Duke of York, which Marriage produced the fatal Difpute between the Houfes of York and Lancanter.

## 414 The POLITICALSURVEY

fixed the Succeffion for his Son, he to gratify the Commons, degraded his Coufin the Duke of Aumarle, eldeft Son to the Duke of York, to his former Title of Earl of Rutland; the Dukes of Surry and Exeter, Brothers by the Mother's Side to the late King, being deprived of thofe Dignities, were ftiled, as before their Promotion, Earls of Kept, and Huntingdon, and the Earl of Gloucefter reduced to his old Tyrie of Lord Spencer. Thefe Noblemen, combining with others who were equally full of Difcontent, confpired to furprize and murther the King at Windior, where he kept his Chriftmas, taking their Meafures fo well, that in all Probability they had fucceeded, if Henry had not been informed of their Defign Time enough to make his Efcape. They came notwithftanding to the Palace, but finding him gone, they betook themfelves to Arms. In this they were equally unfortunate, being routed feparately, and without Ceremony executed in feveral Places.

The Infurrection of Owen Lord of Glendour (Owen Glyn-Dwr) who rxifed a Rebellion in Wales, gave him much Trouble, more efpecially as he was owned and affifted as Prince of that Country by the French, and clofely connected with all the Malecontents, who were very numerous in England. Yet great as this Mifchief was, it proved favourable to him in one Refpect, inafmuch as Owen in the Courfe of the War took Sir Edmund Mortimer, and his Nephew the young Earl of March, and kept them Prifoners for feveral Years. The Percys, who had been very ufeful, as well in the fupporting him upon, as in affifting him to afcend the Throne, thinking their Services not fo well requited as they deferved, or at leaft as they expected, broke out into open Rebellion, and being in full March with a confiderable Strength towards Wales were met by the King at Shrewfbury, and after a vigorous and bloody Difpute totally defeated. Sir Henry Percy, diftinguinhed by the Name of Hotfipur, being flain in the Field, and his Uncle the Earl of Worcefter taken and beheaded.

The Earl of Northumberland, who was coming to their Affiftance, retired back into the North, and for a Time, by an humble, though feigned Submifiion, made his Peace with the King. The Quiet this procured lafted not long. Richard Scroop, Archbihhop of York, and Brother to the Earl of Wilthire who had been beheaded at the Beginning of King Richard's Troubles, in Conjunction with the Earl of Nottingham, Son to the deceafed Duke of Norfolk, raifed new Troubles; but being over-reached and feized by the Earl of Weftmpreland, the King by a fummary Proceeding condemned and put them both to Death. He then tarned his Arms, though not with great Succefs, againf Owen Glendour, and while thus employed, a new Infurrection broke out in the

## of GREAT BRITAIN.

 North, headed by the Earl of Northumberlant and the Lord Bardolph; but before they could affemble any confiderable Force, they were routed by the Sheriff of Yorkhire, the Earl being killed upon the Spot, and Lord Bardolph dying foon after of his Wounds $i$.Trus in the Space of Seven Years the King quelled as many Rebelions, detecting alidmany fecret Confpiracies befides, and not long after by the Defeat and Flitht of Owen Glendour, who at length perihed by Hunger in the Mountains of his own Country, was freed from any farther Troubles on that Side. Thefe domeftic Difturbances obliged him to act with foreign Potentates rather by Policy than Prowefs, and it fell out very opportunely for him, that the State of their Affairs was in fome Meafure fimilar to his own. The Imbecility of Robert the Third King of Scotland, and the Confinement of his eldeft Son James, after his Deceafe, though it did not entirely prevent, yet rendered the Inroads from thence rather troublefome than dangerous. In refpect to France, the Infanity of Charles the Sixth, and the Factions of the Princes of the Blood were no lefs favourable to him, and though Calais was once befieged, and fome Imprefions made. at different Times upon Guienne, as well as fome Depredations on our own. Coafts; yet on the Whole the Loffes fuftained were not confiderable, and by the Mode of his Alliances and Negotiations the Means were pointed out to his more enterprizing Son, by which he brought that great Kingdom to the very Brink of Ruin.
i At the Entrance of his Reign, the King found himfelf furrounded with open and fecret Enemies, and with very few fincere and cordial Friends. Amongft the latter however he counted: Henry Percy Earl of Northumberland, who at Grit joined him upon his Return from Exile, and Ralph Nevil Earl of Weftmoreland, who had married his Sifter Joan. Thefe Two Lords wereexceedingly powerful in the North, and gave Proofs of it by keeping the Scots in Awe. Nor* thumberland defeated them at the Battle of Homeldon near Wooler in Northumberland, wherehe took the Earl of Fife, Earl Douglas, and other Perfoup of Diftinction Prifoners, for which he re-ceived the King's Thanks, and yet upon this grew the ápparent Ground of their Quarrel. Henry: had beftowed upon him the high Office of Conftable of England, and had given him the Inand of Man, which had belonged to the Earl of Wilthire. But after this Victory he demanded, for Reafons of State, the Scots Lords who had been taken Prifoners, and to whofe Ranfoms Northumberland had a Right. Befides there were fome other Grounds of Difcontent on both Sides, Northumberland, though he concurred in depofing, was very zealous in Parliament for proferving: the Life of Richard the Second. Henry Percy the Earl's Son had preffed the King to ranfom the: Earl of March, and had been refufed. The Earl of Worcefter, Northumberland's Brother, whoknew the Difpofitions of the Nobility, planned that Infurrection which coft him his Head, after the Defeat at Shrewsbury, when the Body of Henry furnamod Hotipur was dragged out of theGrave, and beheaded likevife. Northumberland, though pardoned, could never digett this; yet he did not join Scroop Archbifhop of York or Mowbray Earl of Nottingham in their Rebellions, from the Feuds fubfilting between their Families, and it was thefe Feuds that gave Henry an Opeportunity of defeating all his Enemics in.Detail, as the fating of thefe Circumflances gave Oce; eafica. to this Note.

## 416 The POLITICALSURVEY

His Adherence to the Church againft the Attacks of the Houfe of Commons, fecured to him the Affiftance of the Clergy to the utmoft of their Power k, and his Compliance in other Refpects with the Commons, procured as compleat an Entail of the Crown in his Family as he could defire. The latter Part of his Life, though far enough from being free from Uneafinefs, allowed him fome Relaxation, till a llow and lingering Difeafe brought him at length to his Grave 1.

Henry the Fifth, furnamed Henry of Monmouth from the Place of his Birth, fucceeded to the Crown in the Flower of his Youth. He had however acquired great Reputation for Courage by his gallant Behaviour in the Battle of Shrewbury, and for Conduct by his quafhing the formidable Rebellion of Owen Glendour, for which he received the Thanks of Parliament. His juvenile Sallies were repaired by a fteady and manly Repentance. The Magnanimity of his Mind appeared, by his removing the Corps of Richard the Second from Langley, and caufing it to be interred with that of his Firft Queen, Ann of Bohemia, purfuant to that Prince's Will, with great Solemnity in Weftminfter Abbey. He alfo re-
$k$ This Monarch, from the Time of his being firft feated on the Throne, had thewn great Attention to Churchmen, and had fuffered them to profecute the Lollards as Hereticks, cven to the Flames. But this was by no Means acceptable in the Eyes of the Nation; on the contrary, the Commons knowing their own Circumftances, and being oppreffed with continual Demands for the Supply of the King's Neceffities, reprefented to him and to the Lords, the great Opulence of the Clergy, who poffeffed One Third Part of the Revenues of the Kingdom, which, if properly diftributed, might be more ferviceable to the Community, as it would afford to Fifteen Earls, Three thoufand Marks annually; to Fifteen hundred Knights, One hundred Morks; to Six thoufand Two hundred Efquires, Forty Marks each; to One hundred Alms Houfes for the Relicf of the Poor, One hundred Marks each; to Fifteen thoufand Priefts, Seven Marks each; and to the King Twenty thoufand Pounds. This Propofition was rejected, but it deferves neverthelefs to be remembered, as it acquaints us with many Particulars worthy of Notice, and Shews that the annual Rents of the Kingdom were upwards of a Million of Money in thofe Days.

1 In the Second Year of Henry's Reign, A. D. 1401 , one William Sawtree a Prieft was burned in Smithfield for Herefy. The Battle of Shrewfbury was fought Twenty-firf Juiy, A. 1). 1402. The Archbifhop of York was beheaded at Pomfret the Eighth of June, A. D. 1405, being Whitfunday. A. D. 1410 the laft Attempt was made for depriving the Church of its Revenues. A. D. 1413 , March the Twentieth, Henry the Fourth died. The Civil Wars, the continual Incurfions of the Welch on the Weftern, and of the Scots on the Northern Counties, the Depredations of the French who burned, Plymouth and ravaged the Ine of Wight, muft have occafioned great Confufions, and a conliderable Lofs of People, to which we may add fome forcign Expeditions and a Peftilence, which happened in this Reign. The Taxes therein were very heavy and grievous, and One in particular fo much fo, that Walfingham fays, the Commons directed the Accounts of its Amount to be burned, after being examined, that it might not remain a pernicious Precedent on Record. There feems to have been a Decay of foreign Trade, to remove which the King made feveral Treaties of Commerce, and paffed a Law for the Improvement of the Cuftoms. The Diftractions before fecified were detrimental to Agriculture, as the Fluctuation of the Prices of all Kinds of Grain plainly Shew, which indeed were fcarce and dear through the Whole of his Time.
reftored the noble Family of Percy in Honour and Eftates, and Chewed a Difpofition to receive into his. Favour without any Diftinction fuch as ftudied to deferve it.

He followed his Father's Example in giving his ountenance to the Clecgy, to which he was the more inclined from a Prejudice, whether well or ill founded is incertain, againft the Lollards, now grown very numerous, as People difaffected to his Perfon and Government. Upon this Principle they were left to the Mercy of the Church, or rather to that of Churchmen, by whom they were treated with extreme Rigour. It was from the fame Caufe, that is, from the Prevalence of the Clergy in the King's Council, that he had turned his Views entirely to a War with France, from which he could not be diverted by the large Ofiers that were made on the Part of that Crown, or by the Difficulties that he found in providing the Means neceffary for accomplihing fo arduous an Undertaking, to which neither his own Revenues, or the Supplies his Subjects could afford, were fully adequate m .

However by ftraining every Nerve, he at length drew together a namerous Army, and affembled a great Fleet at Southampton. His Embarkation was however a little delayed by the Difcovery of a deep Confpiracy, and this too by Perfons in whom he had the greateft Confidence, and of whom he had of courfe the leaft Sufpicion. Thefe were his Coufin the Earl of Cambridge, Brother to the Duke of York, the Lord Scroop of Marham then Lord Treafurer, and Sir Thomas Gray. Their Defign was to carry away the Earl of March into Wales, and to declare for King Richard in cafe he was alive, of which it feems there was ftill a ftrong Belief, and at all Events againft Henry. The Delinquents were immediately feized, brought

[^197]
## 418 The POLITICAL SURVEY

to Trial, condemned and executed, notwithftanding the Earl's near Relation to the King, his ample Confeffion, and his humble Submiffion to the King in a Letter fill extant.

This Affair over, he failed with the Flower of his Nobility for Normandy, where having debarked his Troops, he laid Siege to Harfleur, which, though well fortified and gallantly defended, he at leigth, not without Difficulty reduced. The Time fpent therein, Sicknefi, and the Garrifon it required when taken, much diminifhed his Forces, and his Fleet being returned, he determined to march from thence through Picardy to Calais. The French had a great Army in the Field under the Command of their High Conftable Albert, who harraffed the King exceedingly, and at length brought him into fuch Straits through Want of Provifions, and the Flux that prevailed in his Army, that he ftood in need of all his Courage and military Skill to difengage himfelf from fo perilous a Situation, which however he effected by attacking the French with Nine, or at moft Eleven thoufand Men, though they were Fifty thoufand in Number, gaining a complete Victory, in which fell the Conftable, many of the prime Nobility, and Ten thoufand Men, and as many were taken Prifoners. This is the famous Battle of Agincourt, or as the French ftile it, Azincourt ; which, except the Duke of York, who commanded the Vanguard, and was killed in the Charge, the King's Lofs was inconfiderable; and he afterwards continued his Route to Calais unmolefted, from whence he returned to England with his Prifoners, and entered the City of London in Triumph.

The French ufed every Method that was in their Power to recover their Reputation, hiring Ships from feveral Powers, but more efpecially the Genocfe, and with a potent Fleet appeared on the Coafts of Hamphire, and attempted to land at Southampton and on the ille of Wight, but were repulfed, and at the fame Time they befieged Harfleur by Land and Sea: The King fent his Brother John Duke of Bedford-with a great naval Strength and Twenty thoufand Men on Board, by whom their Flect was vanquihed, and their Army compelled to retire. 'The next Year the Earl of Huntingdon beat the combined Fleets of France and Genoa, funk fome, and took feveral large Ships with a confiderable Sum of Money on Board.

In the mean Time the King having made an Alliance with the Duke of Burgundy, who acknowledged him as King of France, and having obtained by Loans and by other Means a large Supply of Money, paffed over agaiu

## of GREAT BRITAIN.

into Normandy with a royal Fleet and Army n, where he carried on the War fuccefsfully. The Duke of Burgundy, who notwithftanding his Treaty meant to have deferted him, in an Interview which for that Purpufe he had with the Dauphin, was killed in his Prefence, to revenge which treacherous Action his Son Philip, firnamed the Good, joined cordiatlf: with the. Englifh, which gave them fo great an Afcendancy, thatthe Freith King Charles was driven to yield to a Treaty, as honourable to Henry, as he could wih. His Title was acknowledged, himfelf declared Succeffor to the Crown of France on the Demife of Charles, and Regent during his Life-time, the Princefs. Katherine given to him in Marriage, the Dauphin Charles declared a public Enemy, and all this with the Confent, or rather through the Intrigues of his own Mother the French Quecn, Ifabel of Bavaria.

Tue Two Kings and the Two Queens lodged in the fame Palace at Paris, till Henry found it requifite to go into Normandy, and after holding an Affembly of the States there, to Calais, from whence with his young Queen he came over to England. On his Return a Parliament was held in order to furnilh him with the neceffary Suppes of Men and Money, in which, though he met with the moft chearful Concurrence, yet the Chancellor could not help reprefenting the diftreffed and exhaufted

[^198]
## 420 . The POLITICALSURVEY

State of the Nation; which induced the King to promife he would accommodate all Things as foon as he Chould find it pollible. He then returned withagreat Fleet and Army, leaving the Queen behind him, who was pregnant, with a full Intention of profecuting the War with Vigour. His Prefence was indeed become neceffary by a Check his Army had received through the Forwardnefs of his Brother the Duke of Clarence, who loft his Life in the Action. This Misfortune was occafioned by a Body of Scots fent over by the Regent, Duke of Albany, under the Command of his Scn the Earl of Buchan, to the Affiftance of the Dauphin, which was a Stroke not provided againft by the Policy of the King, who had hitherto kept the Regent from giving much Difturbance to his Meafures, and was really owing to the Nobility of Scotland, who concluded their own Ruin, as an independent Nation, mult neceflarily follow that of France. To remedy this Evil, he took with him James King of Scots, fuppofing that at his Command his Subjects would quit the French Army ; which however, confidering him as a Prifoner, they did not.

Yet Henry's Prefence reftored the State of his Affairs, the Dauphin continually retreating, ared avoiding by every Means poffible coming to any Action that might be decifive. Henry baving the beft Part of the Country, and all the Appearance of legal Government in his Power, went on reducing all the ftrong Places that held for that Prince; and on the Queen's coming over, who had been delivered of a Son at Windfor, remained with her fome Time at Paris, where, though in the Name of his Father-in-law, he exercifed all the Functions of Sovereignty. The Seafon calling him again into the Field, he through Fatigue found himfelf fo much indifpofed, that he was farced to retire to Bois des Vincennes, where he died, fome fay of a Fever, others of a Flux, and fome of a Fiftula o. He was a Monarch of confummate Abilities, conffdered either as a Soldier or as a Statefman. He bid fair for the Conqueft of France, fo far as Courage and martial Skill could accompligh it. He took on his Death-bed the wifeft Meafures for preferving it, as fully appeared fo long as they were purfued, and fill more plainly as foon as they were neglected.

- The Dates moft neceflary to the Underfanding the Facts mentioned is this Rcign, are thefe; A. D. 1415 , the King being at Southampton, made his laft Will, dated the 24th of July, failed in the next Month became Mafter of Hardeur September the Tenth, and gained October the Twenty-fifth the Batile of Agiacourt. A. D. 1416, the Duke of Bedford obtained his great naval Victory in Jnly. A. D. 141\%, the Duke of Burgundy made his Treaty, by which he acknowledged the King's Tiule to the Crown of France. A. D. 1418, Rouen and the bef Part of Normandy was fobdued. A. D. 14.9, Augut $18 t h$, John Duke of Burgundy murthered. A. D. 1420, May 20th, the Peace figned at Troyes; 2d June the King married the Princefs Katherine of France. A. D. 12 I he held his laft Parliament in the Month of May; returned to. Firance in June ; Prince Henry born the Sixth of December. A. D. 1422 he deccafed.

Henry the Sixth fucceeded his Father, when little more than Eight Months old, and in lefs than Two Months after on the Demife of Charles the Sixth was proclaimed King of France at Paris. The Parliament of England declared his Uncle John Duke of Bedford Protector of the Realm when prefent, and in his Abfence his other Uncle Humphry Duke of Gloucefter. The_Care of the King's Education was committed to their Uncle the Bilhop of Wincheiter. The Duke of Bedford, agreeable to his Brother's Will, acted with great Prudence and Spirit as Regent of France, while the Duke of Gloucefter governed here at Home. The Regent profecuted the War with Vigour and Succefs, gaining foon after his Brother's Death the: Battle of Crevant, and the next Year that of Verneuil, in which, amongt other Perfons of Rank, fell the Conftable (Stuart) Earl of Buchan, and (Douglas) Duke of Touraine, which was a terrible Blow to Charles the Seventh, who now poffeffed only the Southern Provinces of France beyond the Loire ${ }^{\mathrm{P}}$.

In this Situation of Things it was judged expedient by the Englih Adminifration, that the King of Scots fhould be difcharged from his long Captivity, which was done on very advantageous Terms. He was to pay for the Expence of his Entertainment and Education in England, Forty thoufand Pounds. He married alfo the Daughter of the deceafed Earl of Somerfet, who was of the Royal Family, and this Event was in many Refpects favourable to boti Nations; yet this Alliance fcarce balanced the Mifchiefs occafioned by that of Humphry Duke of Gloucefter with Jaqueline, who was the Heirefs of Holland, and other Provinces in

[^199]
## 422. The POLITICAL SURVEY

the Low Countries, already efpoufed to the. Duke of Brabant, and in her Right the Duke of Gloucefter pretended to and endeavoured to gain by Force of Arms Poffeffisn of thofe Territories, which equally difguted and aharmed the Duke of Burgundy, to whom her former Hufband was nearly related, and who had Intereft enough with the Pope to prevent the Divorce which the endeavoured to obtain. This produced many, and would have produced ftill more fatal Confequences, but for the Prudence and Moderation of the Duke of Bedford, who had married the Duke of Burgundy's Sifter, and who to promote his Nephews Interefts would have declined in this Duke's Favour the Regency of France. The Duke of Gloucefter, who was of a very warm Temper, quarrelled alfo with his Uncle the Bifhop of Winchefter, and their Difputes-had fuch an Influence on publick Affairs, that the Duke of Bedford was conftrained to come over to fettle thefe Differences, and to procure-Supplies of Men and Money, which not without Difficulty he accomplihed, in a Parliament held at Leicefter.

On his Return he revived the War with fuch Vigour and Succefs, that Charles found his Affairs in a very critical Situation. But the Siege of Orleans, undertaken without the Regent's Direction, being raifed by the Maid of Orleans, a bold Pretender to Divine Infpiration, threw a great Damp on the Englifh Arms, more efpecially after the Coronation, or rather Unction of Charles the Seventh at Rheims, which gave a new Turn to his Affairs. The Regent however exerted himfelf with great Firmnefs, and having caufed Henry to be brought over, the Bifhop of Winchefter crowned him at Paris with great Solemnity. The Maid of Orleans being taken by the Forces of the Duke of Burgundy, was delivered into the Hands of the Englif, who proceeded againt her before an ecclefiaftical Tribunal, by the Sentence of which the was burned as a Witch at Rouen. But though for the prefent thefe. Incidents revived a little the Affairs of England, they very foon fell again into a Decline. This arofe from the Death of the Duchefs of Bedford, and the precipitate Marriage of the Duke to Jaquetta the Daughter of the Earl of St. Paul, which gave great Umbrage to the Duke of Burgundy by whofe fteady Adherence to their Caufe the Englinh were fo much obliged. Soon after followed the Congrefs at Arras, to which, from a Defire of Peace, or rather from an extreme Wearinefs of the War, the Englifh were induced to confent, and fend Ambaffadors, who found themelves deluded and deceived. There the Duke of Burgundy took the Opportunity of reconciling himfelf to the French King by a very advantageous Treaty, which proved fuch a Blow to the Regent's Interefts as he did not long furvive.

## of GREAT BRITAIN.

The Duke of Burgundy, to give the ftrongeft Proof his great Power, as well as to Shew his Attachment to his new Friends, laid Siege to Calais with a numerous Army. This alarmed the Nation, and the Duke of Gloucefter coming with a Fleet and Forces to its Relief, and the Flemings being little inclined to a War with England; the Duke of Burgundy found himelf obliged ta retire with fome Difgrace: The Duke of York, Son to the Earl of Cambridge, Nephew and Heir to the Earl of March, fucceeded the Duke of Bedford as Regent, and notwithftanding that at his Arrival he found Paris in the Hands of the French, and through the Diftraction of publick Councils was able to draw but little Affiftance from home, yet acted in a Manner that gained him much Reputation. He was fucceeded by the Earl of Warwick, who likewife fuftained the Honour of the Englif Arms fo long as he lived. On his Demife the Duke of York went again to France, where he found that Country and the Englifh Intereft in mof miferable Circumftances. The Confequences of a long and lingering War had brought innumerable Evils on the former, and the fame Caufes had gradually reduced the Strength of the latter; fo that inftead of making new Acquifitions, they were hardly able to preferve the little that was left.

Things however might have gone better, but for the Diffenfions among themfelves, and the Factions that reigned at Home. The Duke of Gloucefter, full of the martial Spirit of his Brethren, endeavoured all he could to fupport the War; whereas the Cardinal of Winchefter was much more inclined to Peace. It was with thefe Views that he advifed, and at length procured the Liberty of the Duke of Orleans for a large Ranfom, notwithflanding the folemn Proteft of the Duke of Gloucefter againft it. This made Way for the Negotiation of the Earl of Suffolk, who, after making a Truce with the French, ventured to conclude a Marriage for his Mafter with Margaret Daughter to the titular King of Sicily. This Princefs. had great Abilities and a mafculine Spirit, by which fhe abfointely governed Henry, a meek and pious, but by no Means either an active or an able Prince. This Marriage, and its Confequences, were difagreeable tothe People, with whom the Duke of Gloucefter was in great Credit, and from an Apprehenfion of his overturning their Meafures, the Queen and her Party caufed him to be arrefted on his coming to Bury to the Meeting of Parliament, and he was foon after found dead, or as is generally fuppofed murthered in his Bed. His Uncle and great Rival the Cardinal did not furvive him many Days 9 .

## These:

[^200]
## 424 The POLITICAL SURVEY

These old Statefmen removed, new and more violent Commotions enfued. The Nobility, long accuftomed to War, returned Home reftlefs and impatient of Rule, fome of them by Defcent and Marriage poffeffed of great Eftates, and of confequence of great Power ; the Clergy envied and hated for their Riches and their Pride; the Commons poor, diftreffed, and from thence difpofed to Sedition. In fuch a State of Affaiss no fettled 多ider or permanent Stability was to be expected, more efpecially, confidrring the Want of Genius in the King, and the haughty and intriguing Temper of his Coofort. Suffolk, her Favourite, who was advanced to the Titlc of Duke, was become the Object of publick Odium; the King to fave him fent him into Exile for Five Years. The Ship in which he embarked was taken at Sea by his Enemies, who cut off his Head. The Duke of Somerfet fucceeding to Power, fucceeded alfo to that Envy which attends it, and the Clamour againft him was the louder, becaufe he had fuperieded the Duke of York in his Government, and commanded in Normandy when it was loft. A popular Infurrection in Kent under an obfcure Leader Jack Cade, who affumed the Name of Mortimer, after much Mifchief donc, was with Dificulty fuppreffed.

The potent Duke of York, who had been fent to reduce fome Commotions in Ireland, where be did great Service, on his Return from thence

Caufes of the Decline of the Englifh Inter:At there. John Duke of Bedford, though a very able Prince, and ever strictly lojal to his Nephew, yet committed fome grcat Faalts. The Taking of Orleans was on many Accounts a l'uint of the laft Confequence, and the Bofieged would have rendered it to the Duke of Burgindy, which the Duke of Bedford would not permit. Ithis gave no fmall Difyrut to that Prince, and allowed Time to the French, after the Death of the gallant Earl of Salisbury befure the Place, to fuccour and to relieve it. This Duke's fudden Marriage with Jaquetta of Luxemburgh (afterwards Mother-in-law to Edward the Fourth) added to the Duke of Burgundy's Difpleafure, which polibly might have been appeafed by ar Interview to which they both came, but which was rendered abontive by the Duke of Bellord's infifting on the Firf Vifit, and foon after the French King gained that Prince, by allowing him to dictate the Terms of their Reconciliation. The Duke of Glouceller, though he alfo was verv zealous for his Nephews Interefts, occalioned great Detriment to them by his Attack on the Duke of Burgundy, in Hopss of rendering himfelf Mafter of Iart of the Low Comutries, to which Idca lie was fo obflinately wedded, that upon the Duke's making I'cace with the French King he procured a Grant from his Nephew, as King of France; of the Earldon of Flanders on the fuppofed Forfeiture of the Duke of Burgundy, pas a Traitor (Rot. Franc. 14 Hen. VI. n. I) His repeated Differences with the Cardinal of Winchefter, whom he accufed jin Jarliament of Treafon againft his Father and his Brother, and afterwards endeavoured to deprive him of his Bifhoprick, were alfo very injurious to the publick Interelt. The Cardinal was crafty and covetous, but had both Spirit and Parts. He raifed an Army at the Expence of the Clergy, for the Service of 「ope Martin the Fifth, againft the Bohemians, but employed thefe Futces at a very critical Conjuncture in France, in Support of the Duke of Redford. He had as great Crodit with the larliament, as the Duke of Gloucefter with the People, and their Difputes, which lafled as long as their Lives, caufed a continual Divifion in the publich Councils, and this too at a Tine when Unanimity was mof requiâte,

## of GREAT BRITAIN.

being fufpected of ambitious Defigns, purged himfelf by a folemn Oath. Things were pacified for a little Time; but from a Concurrence of unlucky Circumftances, civil Diffenfions broke out again with greater Violence. The King being indifpofed," the Adminiftration was vefted in the Duke of York, and a Parliament being called declared him Protector, which Office he difcharged with much Prudence and Moderation. But Henry recovering his Health, by the Advice of the Queen and Somerfet refumed his Authority. To this, though at firft he did, the Duke of York could not.long fubmit, and withdrawing from Coart betook himfelf to Arms for his own Security, as he faid, and to remove his Enemies. The King likewife affembled an Army, which was beaten by the Duke at St. Albans, and the King wounded and taken Prifoner. He was brought to London, where, a Parliament being called in his Name, the Duke of York was again declared Protector, and in no long Space again difmiffed by the King, in which he quietly acquiefced $r$.

[^201]New Stirs arifing; the Archbifhop of Canterbury interpofed, and all Parties coming together to London, they were theie with little Sincerity, but with much Solemnity publickly reconciled. This feeming Calm did not laft long. New Difturbances arofe, and the Earl of Salifbury, having gathered fome Troops, marched to join the Duke of York at Ludlow, and in his Way defeated Lord Audley, who endeavoured to prevent their Junction. This Succefs was but of fort Continuance, the Duke and his Adherents being conftrained to difperfe. The Duke for his own Security retired to Ireland, as the Earl of Warwick did to Calais. The King went to Coventry, and iṇ a Parliament held there attainted the Duke of York and all his Adherents. This, though intended for their Defruction, was but a hort Interruption of their Defigns; for, in no long Space after, the Earls of Warwick, Salitbury, and March affembled an Army in Kent, made themfelves Mafters of London, continued their Progrefs to Northampton, where having defeated the Army of King Henry, and made themfelves Mafters of his Perfon, they returned with him and called a Parliament at Weftminfter; the Firf Step taken therein being to annul all the Proceedings of that held at Coventry. In this Affembly the Duke of York being returned from Ireland appeared, and openly ftated his Title to the Crown, which after mature Deliberation was acknowledged, and he declared Heir and Succeffor to Henry, to whom however the Regal Title was preferved for Life, and both Parties bound, upon Pain of forfeiting the Advantages they were to reap from it, to a flrict Obfervance of this Agreements.

[^202]
## of GREAT BRITAIN

Quern Margaret, who was bufy in the North, colletted more fpeedily a Body of Forces than was eyected, on the Firft Intelligence of which the Duke of York moved Northwards to oppofe her, where very imprudently quitting with an inferior Force, a frong Situation, he with his Second Son was fain near Wakefield. This Victory raifed exceedingly the Spirits of the_Queen and her Party; though they knew that the Eatl of March, now become Duke of York, was levying Troops on the Frontiers of Wales to fupport his Father's Caufe. To intercept him the Qusen fent the Earls of Pembroke and Ormgnd, who came behind him with their Army, but he fuddenly turned, and after a Charp Difpute routed them, and refumed his Progrefs towards the Capital. The Earl of Warwick, who had remained there with King Henry, being informed that the Queen was marching towards him, he advanced to meet her, and at St. Albans the Armies engaged, where through the Defection of Some of his Troops he was totally defeated, and King Henry recovered his Liberty. t. On the other

Ther Law for preventing the Importation of fome Sorts of wrought Silks, which the Siatute, 2 Circumftance worthy of Notice, recites to hive been prejidicial to the Induftry of. Women employed in that Manufacture. Scveral Laws were alfo made for fecuring the. Freedom of Elections, and reftraining the Votes for Knights of the Shire to fuch Freebolders only as were poffeffed of Forty Shillings per Annum. Various Treaties were made with foreign Powers for promoting Commerce, more efpecially with the Flemings, with whom we had a great Intercourfe, to the mutual Advantage of both Nations, and from whom, as hath been largely hewn, we borrowed feveral Inventions of publick Utility.

- The great Number of Fafts mentioned in the Text, render it requifite to fupply the Dates for the Sake of Perficuity. A. A.D. 1459, September 23d, the Battle of Bloreheath in Staffordinire on the Frontiers of Chefhire, in which Jomes Lord Audley, who commanded the §ing's Forces, was flain, and with him the Flower of the Gentry of that County Palatine. A. D. x460, July 1oth, the Batte of Northampton gained by the Earls of Warwick and March, in which the Duke of Buckingbam, the Earl of Shrewfbury, and the Lords Beaumont and Egremont lof their Lives. December 24th, the Battle of Wakefield, in which the Duke of York was killed, the Earl of Rutiand, 2 Youth of Twelve Years of Age, murthered by Lord Clifford, and the Eart of Salisbury, Father to the Earl of Warwick, being taken, was beheaded by the Qieen's Orders. A. D. 1461, Feb. 2d, the young Duke of York gained the Victory at Mortimer's Crofs, between the Counties of Hereford and

## 428 <br> The POLITICALSURVEY

other Hand the Duke of York availing himfelf of his late Succefs entered London with his victorious Army, and taking Advantage of that Joy and Alacrity which was expreffed on his Appearance, caufed himfelf to be proclaimed King.

Edward the Fourth. fo he was now filed, had no Time to lofe-in maintaining that Title which he had fo boldly affumed. He marched therefore with all his Forces Northward againft Henry and his Queen, who had drawn together'a very numerous Army in thore Parts, 'and had been joined by moft of the Nobility who adhered to the Houfe of Lancafter from all Quarters of the Kingdom. In the Ghort Space of Three Weeks Edward reached his Enemies in the Weft Riding of Yorkhire, where, on Palim Sunday, after a very hard fought and bloody Engagement he gained a compleat Victory. Henry, his Queen, and Son retired into Scotland, and to procure a good Reception there furrendered the important Town and Caftle of Berwick. Edward made a triumphant Entry into York, where he kept his Eafter, caufed the Heads of his Father and the Earl of Salifbury to be taken down, and then returned to the Palace of Sheen till the neceffary Preparations could be made for his Coronation, which was performed with great Solemnity. He then held a Parliament, in which his Title was recognized, and a Law paffed for the Settlement of the Kingdom. At- the Clofe of it he made his Court to the Commons by a very gracious and familiar Speech.

Queen Margaret leaving her Hurband in Scotland went over to follicit Succours in France, and having obtained fome Affiftance, returned from thence, and excited new Difturbances in the North, where fhe was joined by her Hufband. Thefe were fpeedily fupprefied by the Activity of the Lord Montacute, Brother to the Earl of Warwick, who for this fingular Service was created-Earl of Northumberland. Some Time after the unfortunate King Henry was betrayed, made Prifoner, and fent up to London, where he was committed to the Tower. This Flame thus extinguifhed, and domeftick Tranquility in fome Meafure reftored, gave the young King an Opportanity of turning his Thoughts to the ferting the Affairs of the State at Home and Abroad, in refpect to which he fhewed. both Abilities and Application.

Salop, whiere Sir Owen Tudor the Grandfinher of Henry VII. was aken and beheaded. Feb. 17th, the 8eciont Battle of St. Albans, in which the Queen was viltorious and Lord Bonvile and Sir Thoutas Kiriel Knight of the Garte? maining with King Henry at his Requef, were notwithsaading beherded by the Queen's Commanit:

## of GREAT BRITAIN.

His Prudence however in his moft important perfonal Concern, overcome by his Paffion, engaged him in a Marriage, that ptoved not a little unfortunate to himfelf, his Family, and his-Subjects. The Object of his Choice was the Lady Elizabeth Gray the Daughter of Sir Richard Woodvile, by Jaqueline Dutchefs of Bedford, and the Widow of Sir John Gray of Groby,Alain in Support of the Houfe of Lancafter in the Battle of St. Albans. He fet no Bounds to his Liberality in regard to her Family. He created' her Father Earl of Rivers, married her Brethren to the richeft Heireffes of the Nobility, and Thewed a like Partiality for her Children by her firf Marriage, which, as was very natural, drew a heavy and lafting Load of Envy. upon them, and alienated the Affections of many of the Nobility from him, the Confequences of which were afterwards very apparent. Some Time after the King concluded a Marriage for the Princefs Margaret his Sifter with Charles the Bold, Duke of Burgundy, which was equally honourable and advantageous, as well as highly acceptable to the Nation.

The repeated Refumptions, the numerous Executions, the fill more numerous Forfeitures, and other Acts of Severity which Edward judged it requifite to exercife, though moft of them done with the Concurrence. of Parliament, and, qualified by various Regulations of publick Utility, inflamed that Spirit of Difaffection which his Marriage had excited. This gave rife to feveral Infurrections in different Parts of the Kingdom, particularly in the North, which in the beginning was checked by the Lord Montacute, now made Earl of Northumberland, Brother to the Earl of Warwick, who feized and executed the Author of it. But Part of the Rebels going South, becoming more numerous, gained an Advantage over the King's Troops in Oxfordihire, and deftroyed the Earl of Pembroke and Sir Richard Herbert his Brother. Afterwards they feized and beheaded. the Earl of Rivers the Queen's Father, and his Son Sir John Woodvile:. Another Rifing happened in Lincolnghire under Sir Robeit Wells, and: though his Forces were very numerous, they were defeated by the King. who upon their Firf Rifing had granted a Commiffion of Array to the Earl of Warwick, and to the Duke of Clarence his own Brother, who a little befote had married the Earl's Daughter. It is not howwewer improbable, that they had fome Correfpondence with there Rebels, for not long after the Archbithop of York, by the Inftigation of his Brother Warwick, endeavoured to leize the King's Perfon at an Entertainment to which he invited him; and from which he very narrowly ecapedu.

Boтa:

[^203]
## 430 The POLITICAL SURVEY

Boтн Sides then had Recourfe to Armis in which Edward, by his Activity had fo much the Advantage, that the Duke 2nd Earl were-conftrained to quit the Kingdom, and to retire with their Families into France. Lewis the Eleventh received them with great Joy, and prevailed upon them to adopt a new Plan for Edward's Deftruction. This confifted in reconciling them to Queen Margaret, whofe only Son Edward efpoufed Apne the younger Daughter of the Earl of Warwick, and failing of Iffue by this Marriage, it was agreed that the Succeffion to the Crown of England hhould be entailed on the Duke of Clarence. A few Months after the Duke and Earl returned with confiderable Forces, landed at Dartmouth, declaring for King Henry, and loading Edward with the opprobrious Names of Rebel, Traytor, and Tyrant. The King no way difcouraged began to raife Forces to oppofe them, being then in the North, where he had juft fupprefled a leffer Rifing. To ftrengthen his Army he ordered John Earl of Northumberland, whom he had now created Marquis of Montacute, to join him. Thefe Orders he in Appearance obeyed, but in reality intended, by the Inftigation of his Brother the Earl of Warwick, upon the Junction of their Forces, to have feized his Perfon. Edward having Notice of this Treachery, and perceiving many of thofe about him weak and wavering, he with a few faithful Followers made his. Efcape to Lynn;

Earl of Warwick. His Father the Earl of Salißury, who became fo by marriage, was Brother to Circly Dutchefs of York, theMother of Edward the Fourth, to whom therefore this Earl was Firft Coutin. Some, to give a Colour to his Conduct, fay that Edward was ingrateful to him, and others that he was jealous of him. As Earl of Warwick and Salitbury, he had about Fourteen thoufand Pounds a Year; the King, as Comines informs us, and our Records alfo mew it, boftowed upon him about as much more. He made him Captain of Calais, the moft profitable Government in Europe, Warden of the Marches towards Scotland, Conftable of Dover Caltle, Lord Great Chamberlain; and Lord High Steward of England. Others fay that he was particulurly piqued at the King's Marriage, which is improbable, as he was Godfather to the Princefs Elizabeih. It hath been faid that he oppofed the Marriage of the Princefs -Margaret to the Dukeof Burgundy: It appears from the Records that he negotiated it, and he condueted her to the Sea Side, when ghe went to the Low Countries. The King found his Brother George, Bithop of Excter and High Chancellor. He continued him in that Office Eight Years, and advanced him to the Archbihoprick of York. Tbe Lord Fauconberg, his Uncle, he created Earl of Kent, and Lord High Admiral. His Brother John he made firt Lord Montacute, afterwards Earl of Northamberlandr"and finding that the People in the North defired the Reflitution of Heary Percy, Sen to the Earl Dain at the Battle of Towton, he procured his Refignation of that Title, m Confuteration of which he advanced his Son George to the Title of Duke of Bedford, defgniag to have married him to the Princefs Elizabeth, and created his Father Marquis Moncacute. The Earl of Warwick's Diffaciafaction, whatever it was, did not appear till after he had married his Daughter Izabel in the Eighteenth Year of her,Age to the Duke of Clarence, then about Tweaty, which Ceremony was performed by Geq.ge Archbimop of York at Calais. But even after this both the Duke and the Earl received Marts of the King's Kindnefs and Comidence to within zew Weeks of their breaking into ketwetion.

## of GREAT BRITAIN.

HE there embarked himfelf and his Retinue on board a few, and thofe fmall Veffels, and not without great Hazard of being taken by the Ships of the Hanfe Towns with whom he was then at Variance, arrived in a very poor Condition at Alcmaer in Holland. His Brother-in-law the Duke of Burgundy received bim very indifferently ; for that Prince was by the Mother's Side defcended from the Houfe of Lancafter, had given Refuge to the Duke of Somerfet, and other Exiles of that Party, and not a little alarmed at the Apprehenfion, that upon this new and unexpected Conjunction of Interefts he might be attacked at once by England and France. In the mean Time the Earl of Warwick in confequence of his own Popularity, and his declaring for King Henry, carried all befowe him, and in the Space of a few Days faw himfelf at the Head of an irrefiftible Force, in confequence of which a compleat Revolution enfued.

Henry being brought out of the Tower, was again acknowledged as King, and in a Parliament held by him the Agreement made with Warwick in France, was in every Particular ratified and carried into Execution, and the executive Power lodged in this potent Earl, and his Son-inlaw Clarence. This new Syftem, fuch as it was, lafted little more than Six Months. The Duke of Burgundy, from Motives rather of Policy than of Affection, furnihed Edward, though very fparingly, with Ships, Troops, and Money to return into his Kingdom. This he accordingly did, and landing in Yorkthite was there fo coldly received, that he was forced to pretend he came only to claim the Stile and State of Duke of York, which Henry and his Parliament had conferred upon Clarence.

By this Addrefs he with fome Difficulty gained Admittance into York, from whence removing quickly with his Forces, and being foon after joined by fome Perfons of Diftinction, he refumed his regal Authority, flipped by the Marquis of Montacute, who lay at Pomfret, and in like Manner avoiling Warwick, arrived with his Troops at London. His Friends having procured his Entrance into the City, he feized on the Perfon of Henry, and fent him back to the Tower, recruited his formy. and being reconciled to his Brother Clarence, took the Field againft the Farl of Warwick and the Marquis of Montacute, who with their numerous Forces were advanced to Barnet: There on Eafter Day Edward engaged them, and after an obftinate and bloody Difpute obtained a compleat Victory, in which both the Earl and Marquis were flain. On the lame Day this decifive Action happened, Queen Margaret and her Son landed in the Weft; and; as foon as fhe received the melancholy News; betook herfelf to Sanctuary inftead of raifing Forces. On the Refort howcver of the Duke of Somerfet, the Earl of Oxford, and other great Perfons to her Affiftance, the altered her Refolution, and finding herfelf at the

## 434. The POLITICAL SURVEY

for having contrived and brought about that Revolution, which had driven him out of his Dominions. The Conqueft however of fo great a Country demanded large Supplies, and though his Pärliament contributed liberally, he found it neceffary to augment the Aids they gave him, by putting the Affections of his People to the Irial by requefting a voluntary Contribution, which he ftiled a Benevolence.

In confequente of thefe Efforts, and the confiderable Sums they produced, he carried over a numerous and a well-provided Army; but finding himfelf hamefully deceived by his Alliethen readily liftened to Propofitions of Peace, which very quickly brous Sout the Treaty of Amiens. By this Lewis confented to give a certain Sum towards the Expences of the War, to pay Edward an annual Penfion of Fifty Thoufand Crowns, which he not without Reafon confidered as a Tribute, to flipulate the Marriage of the Dauphin with this Monarch's eldeft Daughter; and to pay a round Ranfom for the unfortunate Queen Margaret. Befides all this he gave great Prefents, and promifed annual Penfrons to Edward's Favourites, that by their Perfuafions the Séa for the future might be kept continually between them. Edward did not treat his Allies as they had treated him, but fipulated, that if fo difpofed, they might accede to the Peace. He then returned Home, and being met by the principal Citizens on Blackheath, proceeded from thence to London, where he was received with univerfal Acclamations.

He then refumed his former Courfe of Life, and, as he had promifed his Parliament, defrayed the Expences of Government out of his own Income. This, with his conftant Attention to the regular Adminiftration of Juftice, made it unneceffary for fome Time to call a Parliament, and when he did, it was purely for regulating national Concerns, and no pecuniary Grants were to much as requefted. He feemed himfelf to fudy, and thereby recommended to his Subjects the Cultivation of the Arts of Peace, fo that the Remainder of his Reign might have been equally placid and profperous, but for the fudden Imprifonment and violent Death of his Brother the Duke of Clarencw, which, though covered, or rather coloured by a Parliamentary Attainder, with the Grounds of which we are very imperfectly acquainted, caft an indelible Stain on his Character.

To this fucceeded fome Years after, notwithftanding all his Care to avoid it, a very ferious Mifunderftanding with France, and a Mhort War with Scotland, ywh hich afforded what was very acceptable to the Nation, an Opportunity of recovering Berwick. The former was not fo eafily termi-

## of GREAT BRITAIN.

nated. Lewis had ftirred up the King of Scots to an Invafiop, contrary to his own Intereft, and to the Senfe of his People. * He flopped the Pay ment of his Tribute, and preferred the Alliance of the Houfe of Auftria to that of England, in direct Violation of the Contract between theDaup hin and the Princefs Elizabeth, upon which Edward had fet his Heart. Thefe, how much foever he loved Peace, were Injuries too flagrant to be digêted by fo brave a Monarch, fecure of the Affections of his Subjects, and whofe Affairs were in good Order $y$ : He refolved therefore upon War, and in this Refolution, according to the martial Temper of tho? Times, was warmly feconded by his Nobility, Clergy, and Commons. But the Vigilance with which he profecuted the Preparations requifite for undertaking fo great an Enterprize, had fuch an Effect on his Conftitution as brought on a Difeafe that quickly put an End to his Days in the Flower: of his Age, to the univerfal Sorrow of his Subjects, who were juftly fenfible' of
$y$ There are few of our Princes that had more Tranfactions with foreign Powers, as appears by the 'Truces, Alliances, and 'Ircaties of Commerce extant in the Eleventh and 'Twelth Volumes of Rymer's Collections. All of thefe were made either for the Support of the King's Title, or for the Improvement of his Subjects Trade, in regard to which hes was cver very attentive. Many of thefewere with the Dukes of Burgundy, Philip and Charles, for the Regulation of Commerce, which was of eyual Importance to the Englifla and to the Flemings, we being their beft Cuftomers, and they ours, which however did not hinder frequent Difputes, but at the fame Time was the Canfe, that they were fpeedily and amicably terminated. When through the King's wife Laws on Woollen Mannfacture was fo improved that the Importation of foreign Cloth was prohibited, and much of ours exported, the Flemings forbid its being brought amongt them; upan which Edward prohibited all Trade with the Low Countrics, which had its Effect, and the King carrical his Point. We had alfo in thofe Days many Difputes with the Hanfe Towns, their Mcrchants fettled here having had very great Favours hewn them by the Kings of the Houle of Lancafter, which rendered then averfe to Edward, and attached to that Family. But at length, when this King's Power was fully eftablifhed, he caufed thefe Difputes to be examined in a Congrelis held for that Purpofe, reftored their Charter; and as their own Writers acknowledge, trented them with great Equity. He was alfo very careful in refpect to the Naval Power of this Kingdom, and carricd it very bigh. This Fact however is controverted by De Witt, whofays he was awed by the fuperior Furce of the Eafterlings or Hanfe Towns, and fome Facts are mertioned to prove this: But thefe relate to the Time of his Troubles. For when he retired into the Low Countries, the Seamen revolted, and in Conjunction with the Commons of.Kent committed many Diforders, till reprefled by the Earl of Warwick, who upon Heary's Reftoration was created not only Co-Regent with the Duke of Clarence, but alfo Lord High Admiral, or as Foreigners ftiled him, Great Captain of the Seas, and had Precedency before all Earls. On Edward's Return, and before he was fully fettled, the Baftard Fauconberg, Son to the Earl of Kent, who had been Edward's High Admiral, and who had been afterwards Vice Admiral to Warwick, committed the moft horrid Devaftations, and attempted to enter and plunder the City of hondon, but was repulfed. He was pardoned for his Father's Sake, but endeavouring to raife new Difturbances was taken and beheaded. But when the King had re-eftablifhed his Affairs, he quickly broughit his Navy into excellent Order, as appeared by his employing Five hundred Sail in tranfporting bis Army so France; and on this Foot it continued during the Remaiader of Eis Reign.

# 436. The POLITICAL SURVEY 

the many Benefitg which his Attention to their Welfare had procured them z .

Edward the Fifth fucceeded, who at this Time refided at Ludlow under the Care and Tuition of Anthony Earl Rivers his Uncle, the moft accamplifhed Nobleman of his Age, the young Prince being then in tris Twelfth Year. His Father had a Forefight of the Calamities that might attend his Minority, and in order to avert them laboured on his Deathbed to procure a Reconciliation of the Factions that had lohg reigned in his Court, and with the fame View called his Brother the Duke of Gloucefter who had ferved him with Fidelity during his Reign to the Regency. Vain and feeble Precautions! The Reconciliation ferved only to delude the King in his laft Moments, and his Brother, either from his own Ambition or the Suggeftions of others, very quickly aimed at a higher Title
$z$ The Dates more efpecially requifite to fupport the Facts mentioned in the Text are thefe. A. D. 1461, March the Fourth, Edward affumed the Title of King. Twenty-ninth of the fame Month was fought the Battle of Towton, Saxton, or Shirburne, which Mr. Camden truly calls the Englifh Pharfalia, in which fell upwards of Thirty thoufand, and on the Part of King Henry were』ain the Earl of Northumberland and the Lords Dacres and Wells. Twenty-ninth of June Edward was crowned, and on the Fourth of November held his Firf Parliament at Weftminfter. A. D. 1463, the Lancaftrians received a Cbeck at Hegely Moor, foon after, on the Fifteenth of May in the fame Year, were totally routed at Hexham, where Hemry Duke of Somerfet was taken and beheaded. A. D. 1464, Queen Elizabeth was crowned at Weftminfter. A. D. 1467 , in the Beginning of June, the Princefs Margaret svas fent to her Hulhath in the Low Countries. A. D. 1469 , July the Eleventh, the Duke of Clarence married at Calais. The Twenty fixth of the fame Month the Battle of Banbury, foon after which the Farl of Rivers and his Son, and the Earl of Pembroke and his Brother were beheaded. A.D. 140 , March the Seventh, the King directed his Commiffion of Array to the Duke of Clarence and the Earl of Warwick. The Thirteenth of the fame Month he beat Sir Robert Wells and the Rebels in LincolnMire, and on the Twenty-third declared Clarence and Warwick Rebcls, foon after which they efcaped out of England; September the Thirteenth they returned. October the Third King Fdward fled to Lynn. The Sixth of the fame Month King Henry was releated out of the Tower. His Firlt publick Acts bear Date the Ninth. On the rwenty-fixth or Twenty-feventh of November he opened his Parliament at Weftminfter, in which Edward and his Adherents were attainted. The Earl of Oxford fat as High Conltable, and condemned John Tiptoft Earl of Worcefter, who had fat upon his Father and Brother. A. D. 1471 , March the Fourteenth,' King Edward landed at Reivenfpur. The laft Regal Acts of Henry the Sixth are dated the Twenty-feventh of the fame Month. April the Tenth King Edward granted his Pardon to the Archbilhop of York. "The Fourteenth of the fame Moath was fought the Battle of Barnet, at which denry was prefent, being a Prifoner in King Edward's Army. May the Fourth the Batle of "Tewklbury; in which the Earl of Devonhire and Lord Wenlock were hain, Prince Edward murdered, Queen Margaret taken, and foon after Edmund Duke of Somerfer, the Prior of St. Johrisi, and Twelve Knights beheaded. The Twenty filf of the fame Month King Henry was found dead in the Tower. A. D. 1475, Auguft 2gth, the "Three Treaties figned between Edward the Fourth and Lewis the Eleventh, at Pecquigni. $\Lambda$. D. 1478, February 18th, Death of the Dike of Ciarence. A. D. 1483, April the N.nth, the King deceafed in the Twenty-third Year of bio Reign, and in the Flower of his Age:

than that of Protector, refolving at the fame Time; to remove whatever Obftacles ftood in his Way.

#### Abstract

The Queen Dowager at firft inclined to bring the King her Sorr to London with a confiderable Force, from which The was diffuaded as a Mea-fure-incompatible with the late Reconciliation. The Duke of Gloucefter met the young King upon the Road, and approached him with all the exterior Marks of Affection and Duty, notwithftanding which he immediately caufed his principal Attendants and nearef Relations to be arrelled, and fent Prifoners into the North, from whence they never returned. The Queen upon this News retired to the Sanctuary in Weftminfter, in which Place the young King was born, when the fled thither upon King Henry's refuming the Throne, carrying with her at this Time her youngeft Son the Duke of York and her Five Daughtets. The Protector brought the young King to Town, with all pofiible Marks of Honour and Submiffion, and fonc Time after, through the Interpofition of the Archbifhop of Canterbury, prevailed on the Queen to part with the Duke of York, whom with the King his Brother he transferred to the Tower, while Preparations were making for the Coronation. *

[^204]
## 438 The POLITICAL SURVEY

Pique to the Queen and her Family, the avoiding the Inconveniencies of a long Minority, and it may be the Hopes of fharing the Favours of a King, who purely by their Affittance was elevated to the Throne, and in the Courfe of his Adminiftration muft continue to depend upon their Attachment and Support ${ }^{2}$.

Ricimard the Third having thus gained the Colour of national Confent, took the Title of King, received the Homage of the Nobility, and fome time after celebrated fis Coronation, together with that of his Queen, with extraordinary Splendour and Solemnity, Dr. Bourchier Archbihhop of Canterbury officiating, and moft of the Peers and Prelates, and a great Number of Commoners of Diftinction affifting. But previous however to this Ceremony he fent for Five thoufand Men out of the North, where he was very much beloved, yct finding their Appearance gave Diftaite to the City of London, he quickly ordered them back. It was not long afte: this that he began a Progrelis through the Nation, in which he vifited not a few Cities and great Towns, to feveral of which he gave Marks of his Favour. It was during this Progrefs, as our Hiftorians lay, that his Two Niphows were truelly murdered in the Tower by his Order.

On his Arrival at York with his Queen, he was again inaugurated with great Pomp, and upon this Occafion created his only Son Edward Prince of Wales. Richard had been accompanied by the Duke of Buckingham in this Progrefs as "far as Gloucefter, where taking his Leave when the King went

[^205]
## of GREAT BRITAIN.

Northward, he went to his Cafle of Brecknock to put in Order the great Eftates which the King had reftored to him ; and there Dr. Morton Bishop of Ely, whom the King had releafed at the Requeft of the Univerfity of Oxford, was committed to his Care. This Prelate, a Man of great Parts and Eloquence, foon drew the Duke to a Compliance with his Notions, in contequence of which the Friends of the Queen and of the Houfe of Laicafter, on the Profpect of a Marriage between Henry Earl of Richmond. ard the Princefs Elizabeth, difpofed themfelves to rife in different Parts of the Kingdom, and the Duke raifed a great Power amongft the Welch to ioin fuch of the Malecontents as were neareft him ; but by a fudden Rife of the Severn this was prevented, and his Forces, through Difcontent as well as for Want of Provitions, difbanded. The King by this Time was advanced with a contrderable Body of Men to Salifbury, and having publifhed a Prochantion with a Reward for the apprehending the Dulse, he was quickly et rayced by a Servant whom he trulted, and being brought to Salifbury, atter making a very ample Confeffion, was there beheade 1. Ilis Confederates in other Places were quickly fuppreffed, fome of whom fuffered Death, and many ediaped into forcign Parts b.

Ricmard returning to London, held a Parliament, in which the Firit Step that was taken was converting the Bill that hath been before-mentioned into a regular Act, to whin he gave his Affent, and thereby ratified his own Jitle. It is on all I Fands agreed that many good Laws were palfed by this Anembly; and though fome Writers fay that heavy

[^206]Taxes were laid, and matay Perfons attainted, yet there is no Mention of cither in the Statutes; neither does it appear that he reciived any Money from his Subjêts, except a Tenth from the Clergy of bot' ${ }^{1}$ Provinces granted in Convocation. The fucceeding Part of his Reign was takein up in repairing, fortifying, and relieving feveral Towns, Ports, and Cities, that in a Courfe of Time, and from a Diverfity of other Cuaies, were fallen into Decay ${ }^{\text {c }}$.

He entered alfo into various Negotiations with forcign Princes fur promoting the Commeree of his Sitijects, and particularly with refpect to the Princes and States of Italy. While he was thus employed he found his Sccurity extremely weakened by the Death of his only Son Pripe Edward;

[^207]
## . of GREAT BRITAIN.

which as it filled him with deep Concern, fo the like $\Lambda$ flliction feized his Queon in fuch a Manner that the did not long furvive. In this Situation he is liid to have daclared the young Farl of Lincoln, the Son of his Sifter the Dutchefs of Suffolk, prefumptive Heir to the Crown, and the more effectually to fupport hipu entered into a Treaty with James the Third for the Marriage of that Earl's Sifter with the Duke of Rothfay, afterwards King Janes the Fourth of Scotland. In the mean Time the Earl of Richmond, with the, Apliftance of the Bifhop of Ely, the Earl of Oxford, and other Exiles, who held a facret Correfpondence with the" Malecontents in Englaat, made Preparations for a Defcent, and being furnifhed with Ships and other Succours from the French King, landed at Milford Haven. He was quickly joined by many Perfons of Diftinction, paffed the Severn, and adlancing into the Heart of the Kingdom, was met by Richard near Bofworth, where a decifive Battle enfued, in which Richard, the Duke of Norfulk, and fome other Perfons of Rank were flaind. This is confidered as the final Action in the Wars between the Houfes of York and Lancafter, which had now raged with extreme Cruelty on both Sides for the Space of Thirty Years.

Turs Fourth Period comprehends the Space of about One Hundred and Six Years. The Hittory of the Monarchs reigning therein hath been more 1.: gely minted upon, becaufe it is in Effect the Hiftory of this Country, which durmg their Reigns fufferedenot a little in fome of its moft effential Concorns. In the Beginning of it the Number of Inhabitants, which were then guatly decrealed, had been very much leffened by Wars at Home and inter: in the Midale of it by the Conquefts made in France, and the Meafuresucetï..ry for their Defence; and in the Three laft Reigns by Civil Wars, which the Writers of thofe Times fay, were much more dettructive than the Difiutes with the Scots or the Invalions of France. Befides what perifhed in tic 1 ield, many were driven into Exile, and with thefe other Circumfances of thepopulation concurred; neither were fuck Calamicies confined to one or to a few Parts of the Country, but as by marking the feveral Ficlus of Battle, we have been careful to fhew, extended gradually to all e.

[^208]In confequence of thefe Ravages private and publick Defolation enfued. Houres and Caftles, the Monuments of more fettled Days, were demolifhed, Lands laid wafte, Improvements of every Kind deftroyed, and this to fuch a Degree, that in fucceeding Times we meet with various Things mentioned as newly introduced, which in reality had been well known, and very common many Years before. It cannot indeed be conceived that any Kind of Cultivation could be carried on with Spirit, when the Owners of Eftates knew not how long ghey fhould continue fo; when the common People were called into the Field to fupport the private Interefts of their Superiors, embarked now with this, and by and by with an oppofite Faction, ever pretending, but hardly ever intending the publick Good. The fame Diforders occafioned the continual Decay of Cities, Decreafe of Towns, and the utter Subverfion of Villages; of all which we might have much more ample Teftimonies, if more of the Abbey Chronicles in thefe Times had been preferved, though in refpect to the Certainty of the Facts our Records afford us clear and authentic Evidence, confirmed by collateral Circumftances which put it beyond all Dilpute, and exhibit a true Picture of the ruinous Confequences attending fuch a long. Series of domeftic Diffenfions ${ }^{\ddagger}$.
amifs to add Two or Three ather Examples out of the very many that might be mentioned. Ann Beauchamp, the Widow of the famous Earl of Warwick, and who brought him a vaft Eftate, was fripped of it on his Demife, and languinted in a Prifon during the Reign of Richard, though ber Daughter was his Queen. Henry Holland Duke of Exeter, who married the Sifter of Edward the Fourth, adhering to the Houfe of Lancalter fled into the Netherlands, was there feen, ragged and barefoot, following the Duke of Burgundy and begging Alms. The Hefr of the noble Family of Clifford, from whom defcended the Earls of Cumberland, was bred up by a Shepherd under a borrowed Name, and underwent innumerable Hardhips before his Mother durft own him in the Reign of Henry the Seventh. In Leland's Itinerary may be found various Accounts of fplendid Houfes demolifhed our of Hatred to their Owners, freh Buildings begun to be erected by new Poffeffors, left $u$ nihhed at the next Revolution, and crumbling again into Ruins. To this may be added, whin was in thofe Days efteemed a very great Lofs, the numerous Provinces our Kings had poffelfed in France. From the fame Caufes arofe the Neglect of Ireland, which gradually relapled into that State, out of which with a vaft Expence of Blood and Treafure it had been recovered.
f It was very natural in Times of (ou great Confufion to neglect fuch Fruits and Vegetables as were not immediately necelfiry to Subfiftace, and as natural in quieter limes to refume the Define of poffelfing fuch as flvurithed in the neighbouring Countries. It is commonly afferted that Cherries were brought here A. D. ${ }^{1540}$, but Camden affures us, that they were brought over hither by the Romans in the Middle of the Fiift Century; and the like might be fhewn of many other Things. Ais to the Decay of Citics, Towns, and Villages, we have already 服解n that Parliament in their. Supplies provided for them from time to time, and we may very well believe that the Evil continued growing notwithftanding, fince in the Eighth of Edward the Fourth Twelve Thouland Pounds were dedusted for this Parpofe out of a Grant made to the Crown. The very fame Year the Sheriff of Effex and Hertford returned, that there were but Two Boroughs, Colchefter aid Malden, able to fend Burgeffes from the former, and that there were none in the latter. 'The Tiu!! is, that in this Period the Sheriffs excufed at Diferction the decayed.

## of GREAT BRITAIN.

But thefe Misfortunes, fatal as they were, would have been much more fo, and their Effects ftill more vifible, if the Inconveniencies they occafioned had not fuggefted certain Remedies which leffened the Preflure of them at the Time, and produced unexpected "Advantages in fucceeding Ages. Amongft thefe we may juftly reckon the remitting the bafer Kind of Tenures, and more efpecially that of Villenage, which grewainto Difufe, not from any pofitive Law, but from the Conviction of its Inutiliyy and the clear Experience of fuperior Benefits arifing from the Labours of Freemen. This was found to be equally true in all Occupations in which the Bulk of the People were employed. It was this that produced the Encouragement given to new Manufactures of different Kinds by the Incorporation of thofe who exercifed them, which enabled then to gain an Eftablifhment from the mutual Support of their Members, and contributed to increafe and improve them, to a Degree which otherwife, as Things then ftood, they could never have attained. For to that State of Things we mult look back, and not form our Ideas upon that very different State in which they are at prefent, and it will be a farther Argument for the Expediency or rather Neceffity of Corporations, if we obferve, that from like Cauies they were likewife in Ufe in cther Countries g.

IN

Boroughs in their refpective Counties, of which no Complaint was made, it being confidered rather as a Favour than a Hardhip. Many Cities and Towns had their Fee-farms diminifhed upon Petition, as the Reader may fee in the laft Chapter of Madox's Firma Burgi, and many others were repaired and beautified, and had new Privileges beltowed upon them, when occafionally vifited by any of thele Monarchs. There is yet another ftrong Circumftance in Proof of what is advanced in the Text, and that is the Fall in the gencral Jrice of Lands. It appears by the Rewards offered for apprehending the Duke of Clarence and the Earl of Warwick by Edward the Fisurth, and the Duke of Buckingham by Richard the Third, of Money or Lands at the Option of the Receiver, that the Value of the latter was; Ten Years Purchafe; whereas at the Clofe of the Reign of Edward III. Simon Langham Archbifiop of Canterbury gave a Thoufand Marks for the Purchafe of Forty Marks per Annum for the Maintenance of Four Monks, which is"at the Rate of Five and Twenty Years Purchafe. Godwin de Prafulibus, p. 116.
b We have more than once expatiated on the Mifery of Villenage mid endeavoured to expofe the Mifchiefs that attended it. As it followed the Norman Conqueft fo when the apparent 1 je cline of Agriculture conttrained fucceeding Kings to thinis of other Methods for lupplying their Coffers, they had Recourfe to incorporating Cities and Towns after the Example of their Neighbours, and granting them Privileges in refpect to thetr Trade and Manufactures, in Return for which they reccived an annual Rent. In I'rocefs of 'lime Icffer Incorporations of Tradefinen and Artificers took Place, and for their Encouragement their Members were excmpted from fervile Labours, that is, from remaining Vaffals to the Lord on whofe Eftate they happened to be born, and were from thence thled Freemen. This the Barons faw with Regret, loching en it as a Itiminution of their Power, and took from time to time violent Meafurc, for their owa Support, which brought on that general Infurrection in the Reign of Richard the becond, when they endeavoured to procure a Law to prevent Villains from giving their Children Learning. In the fucceeding Reign a Statute was actually. made to prevent any Man who had not Tweury Shillings a Year from putting his Son Apprentice. By Degrees however this Spinit of Oppr flion evaporated, chiefly from the Exhortations and Examples of the inferior Clugy, who rejrefented it as

IN like Manner their Commerce, and of courfe their Navigation were extended, the Elements of our Knowledge in both being in a great Mcafure derived from Foreigners, who were invited by the Abundance of our native Commodities, in the working up of fome and in the Exportation of others, they were encouraged by our Princes for the Sake of Cuftoms, and it was the Emoluments arifing from their Induftry which gradually produced Imitation, and in fucceeding Times Emulation and Jealoufy, that gave rife to the Limitation of the Privileges granted to Strangers, and to the increafing the Powers lodged in the Hands of our Companies, becaufe by fuch Afifociations the whole Commerce of Europe was in thote Days, and had beci for fome Ages before, carried on. The Policy alfo of our Princes in refpect to thefe Matters grew more refined, which appeared in the Variation of the Denomination and Quality of their Coin, which were conducted in fuch Manner in Reference to the Specie of other Countrics, as to prevent the Impoverifhment, and fometimes to promote the Interefts of their Subjects, though in a later-Period fuch Changes were made with different Views, and with bad Effects $h$.
inconfiftent with the Doctrines of Chriftianity, and engaged many on their I cath-beds to manamit their Villains. In Proportion as thefe Hardhips were rclaxed, the Advantages arifing fiomindi:ity more ciearly appeared, and then from a Principie of Interct the Barons and Gentry gew mas tractable, and thefe Tenures extinguifhed daily, though fome ftill remained in the Reign of filizabeth, as appears from Sir Thomas Smith's Commonwealth of England, Book iii. chap, : . . whence thefe Particulars are taken. It is indeed truc, that fiom Incorporations which were a: firt neceffary, Inconveniencies in. Procefs of Time arofe, to which f:ch Remedie; have berna applied, as have had a greater Effect in this, than in molt other Comutrics, aud is an:iny ano it

- the Expediency of that abfolute Authority in the Legillature, to relax as Occaforn r-athes the Inftitutions, that in former Times, and when the Nation was in differcat cucwathanes me it be requifite, and which for that Reafon ought to be preferved no longer than they we requifite.
h Companies for the Management of Commerce were crested lecre fiom the fame Nunive with Corporations, becaufe they had already taken Place in other Coantrice, were enccive? to be neceffary for the obtaining fufficient Funds of Money and Credit, and for the (conveimey of the Prince, who could a eafly obtain Affatate from than that Indivivals. I he Suce s of thefe Companies fupported their Inftitution, they quickence womefic Trale, fixed vematrs in foreign Comntics where they obtained extenfive Privirges, and by giving haplament ad Subfiftence initiated Numbers of Yeople ia different Rufnefles. As their 11 antit te time and their Intercourfe with othe trading Nations inrrenfel, they came on interfere with the torign Companies and foreign Merchants, who formerly dıove all, and nill contime to drive a great Partof the Trade of Enghand. In fucceeding leiods pivate Merchants began to comphain of de.te Companies as being in effect Monopolies, and their Comphints were not without Reafon. jiut at the fame Time that this is faid it muft likewife be allowed, that by thon Mean, and undet their Protection, particalar Merchants had grewn up into a Capacity of carying on wamus Branches of Commerce withont them. It is requifite to confider Thinge of this Nature with it the Circumftances that attend them, and it is for want of confodering Things in this Light, that we treat Eftabifthments that would be now necdlefs or abfurd, as if the $y$ had beca always fo, whereas a little Reflection will hew us the contrary. The Treaties and Cuncations made winh the Dukes of Burgundy, the Kiags of Cantic, the Princes and Commetcial Statesin Italv. will

## of GREAT BRITAIN

Tine Advantages of a limited over an abfolute Monarchy were in thefo Days not only difcerned but maintained with Spirit and Freedom, thr: hat the fame Time it muft be allowed that many Exertions of Power were ftill practifed, that did by no Means correfpond with this Doctrine. Yet this falutary Principle being once admitted, gave both Room and Right to the Subject to improve every favourable Opportunity to diftinguinh and ta diminim fuch Fvils by Degrees, which was chiefly effected by the growing Authority of Parliament. The difputed Title to the Crown afforded many Advantages in this Refpect. The Prince in Poffeffion wanted at the fame time equally, Parliamentary Sanction and Parliamentary Support, and on this Account was well difpofed to concur with them in moft Things, more efpecially thofe of the Houfe of York, who in a particular Manner affected Popularity. This enabled them to provide for the Freedom of Elections, for prefribing Rules of Conduct to Sheriff:, for maintaining the frec Courfe of Juftice, for promoting Works of general Utility, for preventing public Nufances for private Benefit, and for encouriging Induftry in the lower Surt, the good Effects of which began now to be felt as well as to appear. There Regulations, which commonly arofe from the Commons, had rendered their Confequence equally evident and confiderable. But in thofe. Days the Power of the Lower Houfe, for Reafons already given, refided chiefly in the Knights of Shires, and thefe, though in a great Meafure exempt from the immediate Influence of the Crown, were fill very flrongly affected from their clofe Connections with the potent Nobility, who in political Meafures feem to have been fecure of their Support, and therefore had no Reafon to differ with them in their peculiar Province, the guarding the Purles, protecting the Perfons, and promoting the Eafe, Freedom, and Welfare of the People; who now, as hath been obferved, began to look up to Parliament for obtaining the Benefits of which they ftood in need, as well as for the Redreis of Grievances ${ }^{\text {i }}$

Henry

## 446 The POLITICAL SURVEY

Henry the Seventh was ftiled by that Title on Bofworth Field, and the Crown Richard the Third had worn that Day was there placed upon his Head by Sir William Stanley. He marched directly from Leicefter to London, and finding a general Welcome, as well as Submiffion, proceeded foon after to his Coronation, and when this Solemnity was over held a Parliament. In this his Title was owned, the Crown entailed on the Iffue of his Body, the Attainder of his Friends and Adherents annulled, the late King, and thofe who were his Abettors attainted, Tonnage, Poundage, and the other ufual Subfidics fettled upon him for Life. To quiet Men's Minds, he of his own Accord, and by his own Authority, publifhed a general Pardon, and to comply with what he faw was the general With of the Nation he married Elizabeth the eldeft Daughter of Edward the Fourth k.
cal Strides in fanctifying the moft cruel Proceedings, in multiplying Afts of Artainder, and in repeating Atts of Refumption. We have already endeavoured to account in fome Me.lure for this, but as a Point of much Intricacy and Importance it deferves to be more fully explained. In tinefe Days the Power of the Peers was very great, their Number fmall, and when they met in Parliament they were uftally all on one Side, and from the Confideration of this and the Defire of pleali:g the Pince, the lrelates concurred with them. But this was not all; the Commons were under the Infuence of the Peers, more efpecially the Knights of Sbires, and the Burgeffes, as we bave fhewn, were but few. This Influence arofe from the Number of Retainers attached to every Peer, and bound by fulemn Inftruments to concur with them in all their Meafures. A fingle Inftance will make this plain. Lord Ha'ings, when a private Gentleman, was a Ketainer to the potent Duke of York, gradually raifed to the higheft Honours by his Son E.dward the Fourth. In Dugdale's Baronage, vol. i. p. $5^{8}+$, we have a Copy of the Bond figned by his Retainers, and thefe were Two Lords, Nine Knights, Fifty-eight Efquires, and Twenty Gentlemen of Property. His Influence lay chiefly in Leicefterfhire, where next to him Sir William Catelby had the greateft Intcieft, and probably fucceeded to the beft Part of his, upon Richard's putting him to Death. Whoever confiders thefe Circumftances attentively, will ealily difern that Attainders and Refumptions put it in the Power of the reigning King to ceward and frengthen his Friends, who, as well as himfelf, regarded their own Safety and their own Greatnefs in fuch Conceffions, and it was to quiet the Minds of the People, as well as to confult the Welfare of their Dependants, that together with thefe they paffed other Laws of a milder Tendency.
${ }^{k}$ Henry affumed the regal Title when towards Thirty Years of Age, and when of courfe his Dif. pofition was tixed, and his Charafter formed. He had long lived in Exile, expofed to repested Dangers, and from thence in continual Anxiety; often betrayed from Princilles of Fear or of Interef by thofe who had made him the warmeft Profeffions, which taught him Diftruft and Sufpicion. As he had long known the Want, as well as the Ufe of Money, he became ftudious to acquire, and unwilling to phrt with it. By repeated Difappointments he had acquired a Habit of finding Refources He was willing to receive Advice from thofe he thought capable of giving it, but having from thence formed, perfifted fteadily in his Refolutions. By living in continual Difficulties he had little Elevation of Sentiment, and made up by Vigilance and Attention that Want of Vivacity which Nature had deniad him. The Courfe of his Reign was filled with Events no way calculated to alter his Manner of Thinking. The Victory of Bofworth decided the Difpute, but he very well knew did not fettle the Opinions of the People. His Hirft Care was to remove the young Earl of Warwick and the Princefs Elizabeth from Sheriff Hutton to the Tower. He placed his Confidence in the Companions of his Misfortunes and the Authors of Lis Succels, the Adherents to the Houfe of Lancafter. He extended it afterwards chicfly to the

The Hiftory of this Reign hath been fo often, and fo fully written, that it will be neceffary for our Purpofe, only to run over fuccinctly. the principal Events at Home, the King's Conduct in regard to foreign States, and then, which concerns us moft, to contemplate his legal and political Inftitutions. The Storms that had fo long agitated the Nation, though they fubfided for the prefent, were quickly felt again when the King's yictorious Army was difmiffed, except the Corps of Fifty Yeomen of yhe Guard, whom, partly for State, and partly for the imme-
 Intention to fertle a regular Government in the Northern Counties, he was fuddenly alarmed with the News of Two Infurrections, one by the Vifcount Lovel, and the other by the Two Staffords. He affembled haftily a fmisll Force under his Uncle the Duke of Bedford, and as foon as they were in the Field publifhed a general Pardon to fuch as returned to their Duty. This diffilued the Forces under Lord Lovel, wwho thereupon fled to the Low Countries, and was protecled by the Dutchefs of Burgundy, Sifter to Edward the Fourth, and Richard the Third, to whom he had been Lord Cinamberlain. Upon the News of this the Staffords in like Manner difbunded their Men, and took Shelter themfelves in a Sanctuary ${ }^{1}$.

A violent

Cler,y and tu the Lawyers, whom he found moft ufeful in his Affairs, and whom he could re. wat without Expence. He railed his Uncle Jafper Earl ot Pembroke to the Title of Duke of Beatind his Father-in-law Lord Stanley he made Earl of Derby, and reftored to the Family of Cumit tey the Title of Earl of Devon. In his Firf Parliament the Houfe of Peers was farce Thirty in Nimiver, and though by his lextrous Management he obtained many Things from the Commons, yer, as the Contimuation of the Abbey of Crowland, which cuds here, plainly thews it with not wirhout many Altercations, more efpecially in regard to the attainting thote who had been in the liild with his Cumpetitor; and though ha got over this for the prefort, yet he wifely adopted their Sentiments who oppofed it on a future Oceafion. Befides the ufual Grant: he obraincd a Tenth from the Clergy, and as a l'ledge of their Fidelity borrowed a fmall Sum of the City of Lomdon. His Coarage was never doubted; his Conduct, or as funse call it Cunning, was uniform through his Life.

1 This Francis Vifcount Lovel, with Sir Humphry Stafford and his Brother The nas, hid, after the Defeat at Bofworth, taken Sanctuary at Colchefter. But as foon as they had Intelligence of the King's Progrefs they departed into the Countrics where they had Interett, and wih wonderful Celerity affembled great-Forces. The Staffords took Gloucefter, and were on the Point of attacking Worcelter. Lord Lovel, who, though his pincipal Seat was in Oxfordihite, had an Eftate alfo in Yorkfhire, affembled his Troops at Rippon, and from thence intended to have marched directly to York. Thefe Infurrections, though as fuddenly quanhed as they were raifed, were in fast the moft dangerous to which tine King was expofed ; for he was in a Country univerfally difaffected, fo that he could have had no Reliance on the People, if he had raifed them. His fole Refource was in the Nobility who attenJed him, and their Retin:ies, which having embodied he fent under his Uacle the Duke of Bedford to ftop the Progrefs of Lord Lovel, and the Duke proclaiming Pardon to all without Dillinetion who came in and fubmitted, this cauled a Wavering in Lovel's tumultaous Followers, which be perceiving laft them in the Night, and proceeded to Sir Thomas Broughton's in Lancalhire, on which they twbuitted and sifperfed. The Staffords fell into a like Panick, retircd to Cubham in Berhainc, and clamed

A vinlent Fermentation in Men's Minds fill remaining, the next Attenpt to diiurb Henry was more deliberately concerted, and from thence attinded witi more furmidable Effects. Richard Simons, a Pricit at Oxtond, having under his Tuition a Youth of comely Perfon, graceful Mien, and quick Parts, though of mean Parentage, refolved to make Ufe of bim, to raife them both oat of that losv Condition in which Nature had placed them. In order to this he inftructed him to perfonate a Prince of the Houre of York, and in this Scheme met with all the Singerefs he could with in the Docility and circumfect Behaviour of ity, wimpil. What chiefly fwelled his Hopes, were the Rumours that flew phrose3. and were greedily received, that the Sons of King Edward the Fourth were yet living fomewherc in Obfcurity Abroad, and that Edward Earl of Warwick the only Son of the Duke of Clarence was murdered in the Tower, to which Place King Henry had removed him. The Firft of thece Reports was raifed to flatter the Hopes of fuch as had an Affection for Edward's Family, and the latter to render the King odious to his Subjects. When the Prieft had futticiently inftructed his Scholar, he went with bim privately into Ireland, where, as a Prince of the Hotife of Plantagenet, he was joyfully received by all Ranks of People, and even by the greatedt Perfons in the Kingdom, and without Hecitation proclaimed, and foon after with great Solemnity crowned. He was there alfo joined by fome of the principal Malecontents who had fled out of England, and by a fimall Body of veteran Geiman Troops furnifhed by Margaret Dutchefs of Burgundy. With thefe Forces he landed in Lancafhire, where a Number of his Contederates were ready to receive him. He thence marched through Yorkthire into Nottinghamihire, and the King advancing from Coventry into the fane County, the Armies met at the Village of Stoke, where after an obftinare Difpute, in which moft of their chief Leaders were flain, the Rebels were toxilly defeated. Simons the Prieft and his Pupil were taken, the former thruft into a Dungeon for Life, the latter made a Turnfit in the Kıng's Kitchen, and afterwards his Falconer m.
the Protcition of the Abbot of Abingdon. The King recovered from his Surprize, made fuch frict Inquif iuns in YorkMire, as Atruck a great Terror through the Commons. It afterwards caufed the Privi'cge of Cuinham to be examined in the King's Bench, where it was found that the Grant ot King Kenwulf did not render it a Sanctuary for Treafon, on which the Staffords were taken out by Force, Sir Humphry tried and executed at Tyburn, and his Brother pardoned. For his farther Security the King fome Years after procured a Bull from Yope Innocent VIII. in refpect to Traitors taking Sanctuary. The Reader will difcern from hence the Itrange State of this Country at this Juncture, and with all this Monarch's Dexterity in managing his Lawyers at Home, and his influence Abroad at the Court of Rome, which Engines he continued to ufe through the Courfe of his Reign
"As we differ a little in the Text from what is afferted by mof of our Iliforians, it may feem mecellary to explain it here. They fay that the Prieft firft inftucted his Pupil to call himfelf the Son

## of GREAT BRITAIN.

The King after his Vietory continued his Progrefs through the North, to extinguinh the Embers of Rebellion, and on his Return to London, to fatisly the Defires of the People, caufed the Queen, who had born him a Prince, to be crowned with great Splendour. The Parliament having granted him a Supply for affifting their old Allies the People of Bretagne to preferve their Liberties, the Inhabitants of Durbam and the adjacent Country abfoluely refufed to pay what was afiefied on them, and Henry Earl of 'Srihymberland by the King's exprefs Commands endeavouring to levy the 10 'Tumult enfued, in which, with many of his Servants, he was murbered. In order to reftore Quiet in thefe Parts, and to do Juftice on the Earl's Murtherers, the King difpatched the Earl of Surry Northwards with a fimall Force, and followed himfelf, as in that refpect he was always ready, with an Army. The Rebels in the mean time were become more numerous, and formidable. and had engaged Sir John Egremont to put himfelf at their Head, profefling their Intentions to maintain their Liberties. But the Earl of Surry advancing with great Celerity, their Hearts failing them, they were eafily difperfed, the chief Actors in the Firft Riot taken and executed, but Sir John efcaped into the Low Countries, from whence it was conjectured that there was more in his Infurrection than appeared.
of King Edward, but afterwards to ftile himfelf Earl of Warwick. This Change feems not a little improbabic. Bur a Perfon of better Authority than any of them, Bernard Andreas, who at this Tinue, as we find in Rymer,'Tom. xii. P. 3r7, was Poet Laureat to King Henry, affirms that he gave himfelf out for the Sou of King Edward, and as fuch was proclaimed in Ir-land. This fecms the moft probable for Thrce Reafons; firf, becaufe the Report being current, that the Two sions of Edward were alive, it would have been fetting them afide, to have owned the Earl of Warwick, whofe Title was inferior to theirs. In the next Place, Henry's Sufpicions led hin to feize the (ancen Mother, and to confifate her Eftate, and alfo to imprifon the Marquis of Dorfet her Son, who might be both prefumed to have a Tendernefs for a Son and Brother, but could hardly be thought Friends, cipecially againf a Daughter and Sifter, to the Son of the Duke of Clarence, whom they had perfecuted. Laßly, John Earl of Lincoln, whocame over to the Affifance of L.ambert, and commanded his Forces, had been by Richard III. preferred in the Succeffion to the Earl of Warwick. It may be objected that the King brought the Earl of Warwick out of the Tower, and hewed him to the Nobility, which he might-do, to difprove the Rumour of his having caufed Lim to be murdered. However this Pretender was owned by the Lord Deputy, the Eari of Kildare, the Lord Chancellor, and many of the Peers and Prelates of Ireland, fome of the former coming over with him into Lancafhire, with Martin Swart, who commanded Two thoufand Germans, fent by the I)utchefs of Burgundy. It is certain, that he, together with the Earl of Lincoln, Lord Thomas Fitzgerald, and fome other Irifh Men of Quality, were killed in the Battle of Stokc. But Francis Vifiount Lovel, and Sir Thomas Broughton efcaped, and lived concealed long after. Henty had given Directions to fpare the Earl of Lincoln, that from him he might hnow the Bottom of this Bufinefs, to prevent which, and the Confequences that might have attended his Difceveries*itw alfo faid that he was killed. This hould feem another Circumflance not very compatiote with Lambert's paffing for the Earl of Warwick, as to which Henry had alrendy every Information in his Power; wherens if he fet up for the Son of Edward the Fourth, he might well defire to know on what Grounds the Dutchefs of Burguady and the Earl gave Comimance to fuch an Impofture.

Vol. II.

## 450 The POLITICAL SURVEY

Bur notwithftanding the Severity with which thefe Northern Men were treated, a new Tax fome time after produced a frefh Rebellion in Cornwall, attended with more alarming Appearances. For thefe Men, though headed only by a Lawyer and a Blackfimith, after killing fome of the Colleetors of the Subfidy, marched through the Heart of the Kingdom, without committing any Spoil, directly towards the Capital. In their Way they were joined by Lord Audley, and came as far as Blackicath, where not without fome Bloodhed they were beaten and difperfed, their Thitob Leaders being taken and executed $n$. Yet the Mifchief did not end $r$, broply for out of the Afhes of this Fire arofe the laft Flame of civil Diffention which difturbed this Reign, the Caufes and Progrefs of which we flall as briefly as poffible relate.

The Report that One of the Sons of Edward the Fourth remained fill alive continued to prevail, and a young Man arriving in Ireland fliling himfelf Richard Duke of York, was reccived as fuch by many, and amongit thefe fome Perfons of Diftinction. He was invited from thence by the French King Charles the Eighth, with whom Henry was at War, and on his Arrival at Paris had all the Honours ihewn him due to the Rank which he affumed. A Peace being concluded between the Two Kings, he retired to the Court of Margaret Dutchefs of Burgundy, who acknowledged him as her Nephew, affigned him a Guard, and willingly received and entertained fuch Englifh Gentlemen, who were not a few, or of mean (2uality, as reforted to him. This occafioned many Jealoufies and various dififtrous Events in England, tillHenry by indefatigable Enquiries traced out, and with.

[^209] threw fuch a Damp on his Defigns, that, to prevent his Caufe from finking into Oblivion, this Adventurer, whom our Hiftorians call Perkin Warbeck, with a few hundred Men putt to Sea, and anchored with his fmall Fleet in the Downs, hoping that the People in Kent would have rifen in his Favour. In this he was not only miftaken, but narrowly efcaped bcing furprized, lofing One-fourth Part of his Men, who were feized on their Landing, and who weremilof,them afterwards executed.

He theigupan failed again into Ireland, and from thence, by the Advice of the few who ftill adhered to him, he paffed over into Scotland. James the Fourth received him with great Courtefy and Kindnefs, at the Interceffion of the Emperor Maximilian, the French King, and of the Dutchefs of Burgundy, treating him as a Prince, which Character it is on all Hands agreed He with great Dexterity fuftained. In his Court, and with the King's Confent he married the Lady Katherine Gordon, who was that Monarch's Relation, and in the War that broke out between the Two Kings he en-

[^210]In this Expedition he met with little or no Support, and upon a Treaty between the Two Nations, he was obliged to retire again into Ireland with his Confort, and was there fo well received, as to be able with the Forces he raifed to befiege the City of Waterford; being repulied from thence, and receiving an Invitation from the Cornifh, who had met withiismbroclamation in their Expedition to Blackheath, he readily accepted ithen with a few - of his Followers croffed over to them. In a very fhort Spachirterdrew together an Army of refolute Men, and with them came before Exeter, which he attacked with great Fury ; but not being able to take it, he from thence marched to Taunton. The King's Forces approaching, he, notwithftanding his Adherents were difpofed to rifk a Battle, withdrew from them with a few of his Affociates, and flying to Beaulicu, put himfelf there into Sanctuary. Yet finding the Place foon after invefted by a Body of Horfe, on the Promife of his Life being fpared, he came out and furrendered to the King. When he was thus in his Power, he made a Confeffion, which was rendered publick, and his Lady, who was taken a little after him, was very kindly treated, and fent to remain with the Queen.

This unfortunate Man being left in a Sort of free Cuftody, efcaped from his Keepers, endeavouring to fly out of the Kingdom, but finding this altogether impracticable, applied himfelf to the Prior of Sheene, at whofe Interceffion his Life was once more fpared. This did not however hinder his bcing

[^211] the Tower. There it was faid that he contrived to make his own Efcape, and to have perfiaded the young Earl of Warwick to have gone with him, for which they were hoth indicted, convicted, and fuffered Death, though in different Ways. Thefe Proceedings were attended with Circumfances that occaioned many Sufpicions, and certain it is, that in providing for his own Security 3 ed that of his Family, the King fooped to and perfifted in Arts littlopyited to the Majefty of a Prince, and acted alfo in ieveral Jnftances with. severity which even the Pretence of Necefity (much leff Reafon ( $j_{\eta} \delta t^{\prime}{ }^{\prime} f$ ) could never excufe $q$.

In refpect to the Realm of Ireland, the King acted with much more Temper and Lenity, though it hould feem that he had met there with more and greater Provocation than in England. This however muft be afcribed to his refined lolicy; for he knew not only the fimall Number of his Friends anongtt the Inhabitants, who were generally attached to the Houfe of York, but alfo the great Declenfion of the Englifh Intereft, and therefore he foothed the Nobility in that Country till fuch Times as his Affairs were in better Order, and he was more thorougly informed of the Nature of thofe Remedies that were fitteft to be applied. He then acted with Firmnefs

[^212] -who was a Man of Refolution and Wirdom. He carried with him a competent Force, and executed his Inftructions with Spirit and Moderation, but being aware of the Inefficacy of fuch temporary Expedients, he went a great deal farther, and by the Authority of Parliament, the fole falutary Inftrument of publie Safety, fettled a permanent Conftitution, and by the Act that bears his Name, fecured a lafting Reputation to himfelf, and fixed on a found and folid Balis, the Connection between the ${ }^{W}$ Kingdoms, $\$ 0$ the mutual Advantage of them both, and to the Honourtefye Nation, by whofe fpontaneous Suffrages this Statute was enacted r. M"

The Conduct of Henry, in regard to Scotland, was equally artful and cautious, regulated by the Circumftances of that Nation, and his own Inclinations to maintain Peace, and prevent as far as poliible any Interruption from thence of his own Defigns, either foreign or domentick. In the Beginning of his Reign James the Third retook Dunbar, and as Henry's Affairs were at that Time embarrafied, this did not occafion a War or preventa Repetition of Truces during the Remainder of that unfortunate Monarch's Reign, who, after a long Succeffion of Difputes, was at laft flain in a civil War by his own Subjects, in which however Henry took no Part. James the Fourth was a Prince of an active and martial Spirit ; his Subjects retained their old Jealoufies and Prejudices againft their Neighbours, which
$r$ The Firft Plan of a regular eftablifhed Government in Ireland was laid in the Statutes made in a Parliament held at Kilkenny in the 40 th of Edward the Third, by his Son Lionel Juke of Clarence, who poffeffed by Inheritance in Right of his Wife One Third Part of the Kingdom. The greateft Part of this fell through the Mortimers to Richard Duke of York, Father of Edward the Fourth, who governed here near Ten Years, in fuch a Manner, as equally gained the Hearts of both the Englinh and Irin, and was the Source of that univerfal Affection borne there to his Family. This proved a great Detriment to the Kingdom, for moft of the Heads of the great Englifh Houfes came over hither in his and his Children's Quarrel, in which many of them loft their Livec. The native Irifh, and Numbers of the Englifh who intermarried with and adopted their Manners, acquired with Eafe in this Situation of Things the greatef Part of the Kingdom, fo that the Government and Laws were reftrained within the narrow loounds of what was called the Englifh Pale, which comprehended only Four fmall Counties. In this State of Affairs Sir Edward Poynings came to the Adminiftration, and paffed his famous Act, by which all the Statutes made in England before that Time were rendered of Force in Ireland. He alfo provided by another Law, that no Act fhould be propounded in any Parliament of 1reland, but fuch as thould be firft tanfmitted to England and approved by the King and Council under the Great Seal. This was done at the Prayer of the Commons, from a full Perfuafion that the Oppreffions under which they fuffered, were chicfly owing to Laws made by Governors of their own Nation, who, infead of confulting the public Interclt, fought only their private Benefit and the Support of the Faction they formed. Sir Edward made many oiher good Laws for advancing the Revenue, promoting Civility, and extending legal Authority through the Kingdom. He was enabled to do this, by convincing the Nobility and Gentry, that he had the common Good and no finifter Ends at Heart, and his Actions correfponded with his Profeffons.

French Intrigues were never wanting to foment. As the natural Confequences of thefe, fome Hoftilities paffed between the Two Nations, which from time to time were fufpended by Truces, not very frictly obferved on either Side, but ftill a Spirit of Negotiation was kept alive. At length, as hath been before hinted, James made Two vigorous Incurfions into England, and the Eatl of Surry in return carried Fire and Sword into Scotland, fo that a lyog and bloody War feemed inevitable, when, without the leaft Injury to hr ow: Honour, Herry found Means to fet on Foot a new Treaty, by the Mc., atan of a Spanifh Ambafiador, which, after a long Train of Negotiations, terminated as he wifhed in a Peace, cemented by a Marriage between James and the Princefs Margaret, eldeft Daughter to Henry, which gave prefent Joy to both Nations, and proved in refpect to Pofterity preg. nant with the mof happy Eventss.

Tue King in refpect to foreign Affairs acted with a Degree of Circum-fpection that expofed his Conduct, in his own and in fucceeding Times, to much Cenfure. He had, while only a private Man and in Exile, lived long in Bretagne under the Protection of Francis IH. the reigning Duke, who was. confidered as the ancient and natural Ally of the Englif Nation. A War-

[^213]
## $45^{6}$ The POLITICAL SURVEY

breaking out between this Prince and the French, Henry inftead of affording him immediate and powerful sfliftance, contented himfelf with offering his Mediation. The French not only accepted it, but teftified alfo a Difpolition to an amicable Compromife of their Differences, but at the fame Time carried on the War with Diligence and Vigour. The King continued to temporize, yet fuffered Woodvile, who was Governor of the Ine of Wight, to traniport into Bretanny a few hundred Men, widh, whom he joined the Duke's Army, and now long after perifled with thin and the - whole Force of Bretagne, in the fatal Battle of St. Aubin葵 4

The Duke dying, left an only Daughter, who was contracted to Maximilian King of the Romans, who by the Acquifition of the Dutchy in her Right, muft have become a formidable Encmy to France. In their Quarrel Henry feemed refolved to engage, and for the Support of to popular a War, obtained a competent Supply from Parliament. In confequence of this he fent over Six thoufand Men under the Command of the Lord Brooke, who rendered great Service while he remained there, which was not long. He found the Miniters of the young Dutchefs involved in Difputes among themfelves, fo that nothing of any Moment could be midertaken, and that the very Subfiftence of the Englifh Troops was efteemed by her Subjects as a greater Burden than their Serviccs could balance. The French availed themfelves of thefe Intrigues, which very probably they had excited, by offering to the Dutchefs the Participation of the Throne of France, though the was contracted to Maximilian, and their King Charles the Eighth to his Daughter, then a Child, refiding at Paris, and treated as Queen of France. This Negotiation was managed with fuch Secrecy, and with fuch Addrets, that nothing tranfpired till it had taken Effect; and thus by a Marriage rather neceffary than voluntary, this great and important Fief was annnexed to the Crown of France, of which at Home and Abroad Henry bore all the Blame ${ }^{\mathrm{t}}$.

[^214]Tue King was by no Means infenfible，cither of the Affiont or the Af－ perfion，and therefore to thew at once his Force and his Refentment，as well as to gratify the Humour of his People，made immediately open Preparations for a War againft France，and even avowed an Intention of reviving old Claims，and of making an abfolute Conqueft of that King．． dom．In fupport of thefe Declarations he entered into very prodent and proper Alliances Abroad，raifed large Supplics，and drew together a very formidable army at Home．Thele Forges，commanded by moft of the Nobility $\mathrm{c}^{\prime}$ ．ine Kingdom，he tranfported in the Autumn to Calais，and though late in the Seafon undertook immediately the Siege of Bologne， which he pulhed on with great Vigour．He well knew the State of France at that Time，and the Difpofition of the French King，and that both thefe were very favourable to his concealed Views．In this Situ－ ation of Things the Enemy made Overtures for a l＇eace，thefe were fe－ conded by the Advice of the Marquis of Doriet，and the principal Officers of his own Army，fupported by a long Train of fpecious Reaions． This produced an immediate Negotiation，which in due Time ended in a Treaty，conccived in Terms perfectly conformable to his Notions，and purchaied，as he wifhed，at a very dear Rate；notwithftanding which it was then，and hath been fince confidered in no very advantageous Light ${ }^{\text {u }}$ ．

As

cours into Bretagne It is truc，that he made very ftrict Stipulations with the Dutchefs for the Repayment of the Fxpences，that as an Auxiliary he incurred，and had certain Places put into his Mands by way of Sccurity．But thefe Points being fetted，he actually fent over Six thoufand Men，and hi，Frugality with refpect to the Blood and Trenfure of his Subicets，the State of the Nation at that Time confidered，may to a candid Politician not appear either inglo－ rious or criminal．After the Succous were fent，it clearly appeared that the Dutchets could not carry on the War，fiom Caules in which he had no Concern，and whatever his Behaviour might be to her，it is allowed that hers was not very commendable in refpect to him，fince，contrary to her exprefs Engagenent，the contracted herfelf to Maximilian without his Confent，and with the Fastions in her Court which brought about the Diffolution of that Marriage．and her enter－ ing inte another with Charles the Lighth，he had nothing to do，and when it broke our he acted in fuch a Misaner as did not bethay any Want of political Prudence or Magnanimity．He had then juft Reafon to reim the Behavionr of the French King；he did fo，declared it openly，and took the proper steps to make hian ced its l．ffects．It was the Addition of lower this gave to Fance that excited a geteral Aharm，as it the was becume theneby invincible．Heney could not ufe a more clear or convincing Argument to his own Subjects，to his Allies，or to the Ref of Einope，than by declang 1 ar imnediately againtt this formidable Crown，to fhew that he was fill in his Opinion vilacratle．
＂The King in a wife and weifhty Speech explaned the Cunfes of the War to his Proniament We f．id he had been neglected，deceived，and infulted by the French King，that his tllies were Maximilian，who was Mianer of the Low Countries，and Ferdinand Sing of Spain；but that withour counting upon thefe，he meant to make good his 品arre by lis owi Fo：e，and to
 V＇ul．II． Nロロ Ared

As to the other Potentates of Europe, he maintained fuch a Correfpondence with them, as procured great Refpect to himfelf, and derived confiderable Advantages to his Subjects. His Intereft at the Court of Rome during Five Pontificates was fo prevalent, that he fcarce met with any Refufal in his Requefts, which, as we have feen, he turned to great Utility at Home, and which conftantly preferved to him the Attachment of the Clergy. He was even courted by the Holy See, received Prefents from feveral Popes, and was regarded as their Protector fwhich contributed not a little in thofe Times to raife and fuppott his Character through all Chriftendom. The Emperor Frederick held him in great Efteem, and with much Reafon, for at the Requeft of his Son Maximilian, he granted a Supply of Ten thoufand Pounds, no fmall Sum in thofe Days, towards the Expences of the War againft the Turks. He made Two Treatics with King John the Second of Denmark, both of them very beneficial to his People. With the commercial Republic of Florence he concluded an Alliance of very great Confequence to the Nation, as it ferved equally to extend both their Commerce and Navigation. Through the whole Courfe of his Reign he maintained a clofe Connection with Ferdinand and Ifabella, Sovereigns of Spain, which was in all Refpects honourable to him, and profitable to his People, in which laft Refpect he concluded with King Philip while here, a bencficial Treaty of Commerce. He kept the Hanfe Towns in Awe, though they could not help feeing with Regret the great Trade carried on by his Subjects in their own Ship-
dred Horfe, which were embarked on Five hundred Tranfports, commanded under Him by his Uncle the Duke of Bedford, the Marquis of Dorfet, and many other Nobles. Maximilian, inftead of being able to affilt him ftood in need of his Aid againft his own rebellious Subjects, and received it. Ferdinand King of Caftile, like a wife Prince, made a feparate Peace, and gained thercby Two good Provinces. In this Situation Henry made out a long Bill for the Arrears of Tribute due from the Reign of Edward the Fourth, the Amount of the Succours he had given to the Dutchefs of Bretagne then Queen of France, and the Fixpences of the War, amounting in the Whole to Seven hundred Forty-five thoufand Ducats, computed by a Writer of thole Times at One hundred Eighty-fix thoufand Pounds, though perhaps a little largely, which the Fiench King undertook to pay at One hundred Twenty-five thonfand Livres, halt yearly; which Agrecment was ratified $b_{j}$ the Nobles of France, and the King farther confented to be excommunicated by the Pope if he failed in his Payments, which weither he nor his Succeffor did. The King acquainted the City of London, by his Letter, of the Terms he had made, and finilhed the Whole of his Expedition in Three Months. It hath been faid by way of Reffection on this Tienty, that the King fold his People War, and his Enemics Peace; but if we confider that he was deferted by his Allies, that he made very honourable Terms, and ermpelled France to pay very daar for the Tnjury he had received, and confider likewife that at this, !encture he was in Danper on the side of Scotland, and that the Dutchefs of Burgundy was centriving an Infurcetion in England, we lintl perhaps think he did as well to content himfelt with what be niled a Tribute, rather than at the Expence of Blood and Treafure to have acquired a Province or Two in Frame, which muft have been, as Expericnce facwed, a conftant as well as a heavy Burdua on his Subjects.
ping in the Baltic, which they had till then in a great Meafure monopolized w.

Bur the flrongeft Marks of his confummate Skill in Negotiation appeared in his Tranfactions with the Sovereigns of the Low Countries, which were then in their moft flourifing Condition, with whom he was in continual Correfpondence, and to whofe Interefts, from Motives of true Policy, he was obliged to pay almoft as much Attention as to his own.

This arofe from the double Relation in which that Country ftood to ours. For, confidered in a political Light, the Houfe of Burgundy had been long our moft ufeful Ally againft France, and as fuch was peculiarly fo in the State of Things during his Time. In a commercial View, the Ties ware no lefs ftrong between the Two Nations. Yet notwithfandthis, and all the Pains taken by Henry to maintain the ftricteft Harmony with the Flemings, it was fometimes interrupted in regard to both Connections. The Affairs of Maxmilian King of the Romans, Arch-duke of Auftria, and Tutor to his Son Philip, who in Right of his Mother was the Heir of the Houfe of Burgundy, were in continual Diforder, and though he was often relieved and always fupported by Henry, was neverthelefs at certain Times far from being on good Terms with him or with his own Subjects, whence many Mifchiefs and Mifunderftandings enfued. On the other Hand, the great Wealth accruing from their numerous Manufactures and extenfive Commerce, excited a Degree of Ar rogance, and a ftrong Spirit of Monopoly in the Flemings, which in their

[^215]
## 460 The POLITICAL SURVEY

Confequences created frequent Difputes with the Englifh, and heavy Complaints on both Sides.

In fuch a Train of complicated Concerns, this Monarch proceeded with equal Patience and Perfeverance, difembling at fome Periods his Difcontents, and arailing himfelf at others of critical Conjunctures, by which he was enabled to do at one Time what would have been abfolutely impracticable at another. He was never actuated in refpect to thefe People either by Refentment or Caprice, and yet, when his ableft Minifters failed of obtaining Satisfaction from them by fair Means, he had Recourfe to an abfolute Prohibition of Trade between the Two Countries, which, though attended with no fmall Inconvenience to his own Subject:, bore fo much harder on the Flemings, that they were at length glad to accommodate Matters on his Terms, which were however highly reafonable; and when this Reconciliation had once taken Place they never ventured to differ with him afterwards, but prudently endeavoured to maintain that Harmony which fo manifeftly promoted the commercial Interefts of both $\mathrm{Na}-$ tions x .

We come now to that Part of this Reign, which in the Vicw in which we conlider it, we have already hinted is of no finall Importance, an Account of the Conduct of this Monarch as a Legiflator. He was fo, frictly ipeaking, his Laws proceeding in a great Meafure from himfelf, and in that Refpect bearing the Stamp of his Character. The Three great Ob-

[^216]
## of GREAT BRITAIN.

jects that occupied his Attention were the fixing his Power, the filling his Purfe, and the eftablifhing his Pofterity. As he was fteady and uniform in all his Purfuits, we have from hence a Clue that will lead us through all the Lihyrinth of his Yolicy. His Abilities were, as hath been already hinted, rather folid than fhining; he was guided by the Lights of Oblervation and Experience, and was indefatigable in point of Application. Hecame perfectly well informed as to the State of the Country and its Inhabitants, by thofe well acquainted with both, at his feating hienfclf upon the Throne. He was well aware that no Authority could be exerciled over a diftracted and tumultuous Race of Men, who were firf to be reduced and gradually reconciled to Order, by feeling its good Effects. He was very fenfible that no great Revenue could be raifed upon an indigent People, and he very well knew that Induftry alone was the Wealth of a Nation. He was alio convinced, that Commerce as well as Confideration in the Eye of the Reft of the World, could be no otherwife acquired or maintained than by a fair Correfpondence and judicious Connections with foreign States. To the Attainment of thefe Ends therefore his Laws were directed ; and the carrying them into a conftant, regular, and frict Execution, was the unceafing Bufinefs of his Adminiftration).

Tue fame Motive determined him in the Choice of his Inftruments. The great Officers of his Court, the Government of Provinces and Fortreffis, and the Command of his Armies at Home and Abroad, he gave to

[^217]462 The POLITICAL SURVEY
Men of Birth and Quality diftinguifhed by their Talents. The Clergy he employed in Embalfies, received them into his Council, and confided in them for the Management of his moft fecret Affairs. His Lawyers had no fmall Share in his Favour, and in all his Tranfactions with his Pcople, being fuppofed to cloath the King's Sentiments with proper Words, in all Acts of State. In thefe and in many other Inftances he followed the Examples of his immediate Predeceflors; for though he hated the Family, and perfecuted the Adherents of the Houfe of York, yet he adopted without Scruple their Maxims of Government $\%$.

In regard to Law, he provided by a Statute, that Fines duly acknowledged mould bar dormant Claims, which added much Security to landed Property. He laboured to reprefs the Partiality and Corruption of Juries, which was then a common and dangerous Offence. The Punifment of Murder, which till then was very frequently evaded from leaving too much in the Power of the Appellant, was by Statute made more certain and effectual, by directing an immediate Profecution againft Offenders at the Inftance of the Crown. The Punifhment of Burning in the Left Hand, when the Benefit of Clergy was allowed, took Place in this Reign; and this Benefit was at the fame Time limited to the Firf Offence. The carrying away Women by Force, for the Sake of their Fortunes, was made Felony. All Perfons imprifoned for Crimes were directed to be called over by the Juftices of Gaol Delivery, in order to their being punifhed or difcharged. The Negligence or Partiality of Juftices of the Peace, on whofe Vigilance the public Quiet was held to depend, was

E It will be expected that I fhould bring fome Proofs of what is faid in the Text. He began his Reign in the fame Manner with his Predeceffors, by a Law to declare his Title, another to fettle the Succeffion, and by a Refumption. He borrowed Money frequently from the City of London, at firft with Difficulty, afterwards without, and this he did when in no W'ant, that hy the Punctuality of his Payments he might gain Credit. He fent for the great Lords of Ireland over, after Lambert Simnel's Bufinefs, reproved and afterwards careffed them, and made a confiderable Prefent to the Lord Howth. He revived the Benevolence invented by Edward the Fourth, Lo:d Bacon fays by Confent of Parliament, which is not flrictly fo, yet he mentioned his Intention in his Speech, and his Realon, that the meaner Sort of People might be fpared. He afterwards obtained an Act to levy the Arrears of this Benevolence. In making Peace with France he purfued Edward's Meafures Step by Step, and like him permitted his Nobility to receive Penfions. He took great Pains to ingratiate himfelf with the City of London, condefcended to be Mafter of the Merchant Taylors Cumpany, and dined with them in their Hall in his Habit. He built large Ships and lent them to the Merchunts, whom he alfo accommodated with Money to enable them to enlarge their Commerce. In confequence of the great Effects produced by his Treatics with Deamark he incorporated the Stock-fifh Mongers. It was not for the Sake of advancing fomething new, that this Remark was made, but for a better Reafon, to hew that the fame Plan of Government fubfifted here, for almoft Half a Century, which will in fome Menfure account for the very extraordinary Effects that it produced, and which are not therefore to be afcribed entirely to this Prince.

## of GREAT BRITAIN.

quickened by a Law, the Contents of which were properly made known to the People, who from thence, if they were injured, knew where, how, and from whom to feek Redrefs. In our Days feveral of thefe Statutes may feem to be of fmall Moment, and others perhaps looked upon as fevere. Buit if we go to the Bottom, reflect on the long Period in which thefe Evils had remained without Remedy, confider the Effects that they muft have produced, and contemplate impartially their Confequences, we thall very probably difcern, that much of the Quiet we enjoy, much of the Security we poffefs, and much of the Civility of which we boaft, may have been owing to the Alterations made by thefe Laws, and their gradual Infliuence on the Tempers and Manners of the People a

In refpect to the general Oeconomy of the Subjects in his Dominions, many Statutes were made in his Time, and though fome of thefe might be improper, others prove ineffectual, and it may be a few might be injurious in their Confequences, yet were many of them highly ufeful, and all of them apparently well intended, for which he deferved great Praife. He faw with very juft Concern, that Paffion which dilcovered itfelf in his Time for Inclofures, in order to throw the greater Part of the Land into Grazing, and endeavoured by a Statute to reftrain it, which was often revived, on a Suppofition that it might gradually make Things
a The Firf of the Laws mentioned in the Text, is 4 H. VII. cap. 24. which has been improperly ftiled the Statute of Alienations This Error perhaps might arife from a Tradition warranted by Hiftory that many of the Nobles did fell or alienare their Fiftates to furnifh themfelves with Money when they attended the King into france. This might be in confequence of another Law, 7 H. VII. cap. 3. and it is not improbable, that it was in order to make them fome Amends, the King allowed them to receive Penfions from France. In refpect to Murder it is really amazing how loofe the Law had food to this 'Time. We have heretofore obferved, that the very Term did not fignify what it does now, but the Killing of a Man in fo fecret a Manner, that the Uffender could not be known. The killing a Man out of Malice or Refentment was left to the Vengennce of the next Relation, who pr fecuted within a Year and a Day by Apoeal. If this was not done, the Offender might te indicked on the Part of the Crown. But an Appeal being a perfonal Action, attended with Trouble, Expence, and Delay, Offenders frequently efcaped, which was the Motive to this Law, which though it fubjected the Ciminal to an inmediate Indictment at the Suit of the Crown, dil not take away the Subjects Right of Appeal, but left it as it was; fo that whether the offender was convicted or acquitted upon the Indictment, he might be profecuted by the Perfon intilld to the Appeal within the Vear and a Day. As to the taking away the Bencfit of Clerry after the Firft Offence, it was with the fame View of leffining the Frequency of fuch Crimes, by removing One of the Methods by which the Punifhment due to them was cvaded. In thofe Days this was thought very hard, and the King was afperfed for violating the Rights of the Church. By the 12 H . VII. cap. 7. the Benef:t of Clergy was totally taken away iu cafe of petty Treafon, hut it was not till the next Reign that it was taken from Murder, which news how tenderly this black Crime was then treated. It is a Atrong Proof of the Wifdom of the before-mentioned Law, by which cien fior the Finft Offesce the Criminal incurred the burning in the Hard, that, though alteral by a fubfequent Statute to burning in the Cincek, it was found neceffary to repeal that, and to re-cftablik the former Method of Punifhment.

## 464 The POLITICALSUREX

better, or at leaft hinder them from growing worfe ${ }^{b}$. He punifhed the Counterfeiting foreign Gold Coins that were current in his Dominions. He recoined light Money, and was exceedingly careful that the new Specic hould be of full Weight, of due Finenefs, and of great Reauty. Goldfmiths were obliged to make all their Plate agreeable to the Standart. He likewife appointed ftandard Weights and Meafures to be kept in certain Cities and great Towns, intending thereby to introduce a Uniformity in this Refpect, in which, if he failed, future Attempts have not been much more fuccefsful. He made repeated Efforts to fupport the Rights of his Subjects againft thofe Combinations formed by rich and great Men, to maintain a Power inconfiftent with Juftice. He thewed no lefs Attention to fecure honeft and induftrious Perfons from the Intrigues of fuch as took themfelves to be beneath the Notice of the Law, than he had done to protect them from being oppreffed by fuch as affected to be above it; and this he did by punilhing feverely Vagrants and Vagabonds, prohibiting at the fame Time thofe Sports, Games, and Plays, that by encouraging Idlenefs proved a Nurfery for Malefactors, and diffufed a Spirit of licentious Indigence, incompatible with that Order which is the Effence of civil Society ${ }^{\text {c }}$.

In Reference to Manufactures, he was very defirous to encourage and fupport them, more efpecially the Woollen, in regard to which, many ufeful Regulations were made. Care was alfo taken that the home Manu-

[^218]
## of GREAT BRITAIN.

facturer thould be fupplied with Wools before any were exported, and that thefe fhould be fent into foreign Parts in our own Bottoms. The Ety of Norwich, and afterwards the whole County of Noifolk, were exempted from that frange Law that reftrained Children from being bound Apprentices, if their Parents had not Twenty Shillings per Annum in Land. He added feveral new Corporations in London, and gave additional Privileges to others, particularly to the Leather-fellers, who were impowered to infpect the Making of that Commodity through the Realm, which had vety good Effects. Such fimall Silk Wares as were made here, he prohibited to be imported, as he did other Manufactures we had gradually gained; and provided againft Impofitions in various Sorts of Goods, that were brought from foreign Countries. In fixing by Law the Prices of Goods and fettling the Wages of Workmen; the Notions current in thofe Times prevailed, and fo far they are excufable.

As to domeftic Trade, it is evident that all the Steps taken to eftablifh general Quiet, to excite Induftry, and to fupprefs Idlenefs and Licentioufnets, had a Tendency to promote it, and that it actually did fo, appears from the Extenfion of the Woollen Manufacture in the Northern Counties. He by Statute took away many of thofe Reftraints on Trade, which for the Sake of local Advantages, Corporations had impofed, fuch as Tolls at their Gates, and on navigable Rivers. A Bye-Law of the City of London to prevent its Inhabitants from frequenting Country Fairs was annulled by Parliament. By another Law the Power of Corporations in making Rules for their own Members, were put under fuch Refrictions, as to prevent facrificing to private Benefit the public Good d.

[^219]
## 466 The POLITICAL SURVEY

As to the great Bufinefs of Foreign Traffic, his long Refidence in Bretagne had given him much Experience, the Effect, of which clearly appears in aH the Treaties of Commerce concluded by him with foreigin Powers. He by Law obliged Denifons to pay alien Duties f ' ${ }^{\text {p }}$ prevent Frauds in the Cuftoms, yet he frequently granted Liceness to foreign Merchants to export our Native Commodities. He revined and enforced the old Navigation Laws in order to promote Ship-building, to encreafe the Number of Seamen, and to preferve the Freight.for his own Subjects. He encouraged and fupported Factories in foreigh Parts. Diftant Difcoveries he patronized, and the Firft made by this Nation were in his Reign. The Merchant Adventurers received a New Charter, and that Appellation from him, and they were likewife emancipated from the Encroachments of the London Merchants by Law, which fhewed a juft Concern for Commercial Liberty e. He built large Ships, that he might encourage and improve his Shipwrights, demonftrate the Utility of fuch Veffels, and thereby introduce the Ufe of them; and to effect this the more fpeedily, when he had no immediate Occafion for them, he let them out to Merchants, and fupplied them alfo with Money without any Profit, that they might engage in more extenfive Adventures. Himfelf embarked in toreign Commerce, as Edward the Fourth had done before, and was no Doubt a very great Gainer by it, at the fame time that his Example raifed the Credit of Trade, and in other Refpects had an Influence upon his People.

[^220]
## of GREAT BRITAIN.

The Poor were by no means below his Notice, on the contrary it may Bep truly afferted, that he chewed greater Attention towards them than any ${ }^{\circ} \mathrm{f}$ his Predeceffors. In the Statute againft Vagabonds, it was directed thieshe Aged and Infirm fhould be conveyed to the Place of their Birth, that thè might be relieved from the natural Affection of their Relations, or matetained by the Charity of the Monafteries. He provided by another Settute, that in cafe of their being wronged they hould have the full.Aid of the Law, and the Affiftance of Lawyers without Expence, that Poverty might be no Bar to the obtaining Juftice, or Difference in Circumflances give One Subject an Advantage over another. He founded alfo and endowed an Hofpital for their Reception and Maintenance, when they came to London to attend their Suits in his Courts. We may add to this, that he employed Numbers in his Buildings in Town and Country, as well as in his Docks; and the Laws for fettling the Prices of Labour, the Cheapnets of Living confidered, are allowed to have been liberal f.

Br the great Change thefe Inftitutions wrought in the Country and its Inhabitants, the Constitution was much frengthened and improved, and all the Branches of the Legiflature acted with more Regularity and Dignity as well as Freedom. To keep good Order, to prevent Tumults, and to carry into full Execution the Laws againft Retainers, a Statute was made in Support of the Court of Star-chamber, with fuch Powers as were thought necefliry to correct the enormous and inveterate Abufes that had grown ùp during the long Continuance of the Civil Wars, which Court in fucceeding Times becoming arbitrary and oppreflive, was by the Legiflative Authority very wiflly fuppreffed. By another Law he provided, as far as it was poffible, for the Security of fuch as at any Time fhould
f The Statute of the in Hen. VII. cap. 12. which is intituled, "A Mean to help and fpeed poor Perfons in their Suits," is very fuccinct, but not obfcurely worded. At prefent a Perfon who will fue in Forma Pauperis, makes an Affidavit that he is not worth Five Pounds befides his wearing Apparel, and this with a Council's Opinion that he hath a juft Caufe of Action, gives him a Right to fue without paying either Fees or Stamps. The fevere Statutes againft Maintenance and Champerty, made fuch a Law neceffary, which however hath been thought to ftand in Need of fome Amendmens, fuch as having the Caufe of Action examined and certified by fome Perfon of fuperior Rank in the Law in order to give Credit to the Pauper's Caufe, and in cale of Succefs to allow proper Cofts out of what the Plaintiff obtains, which might excite Zeal and Expedition. The Court of Requefts, which now no longer exifts, permitted all Petitions to the King for Redrefs to be profecuted without Fees, and had from thence the Title of The Poor Man's Court, as Sir Thomas Smith tells us. For the fame Reafon, Henry is thought to have obtained the Title of the Poor Man's King, which Mr. Barrington very judicioully fays, is a more honourable and lafting Monument, than that erected to his Mepmory in his own Chapel.

## The POLITICAL SURVEY

take up Arms in Defence of the King in Poffeffion, whatever the Event of the Difpute might be. He by this and other beneficial Laws, as wel' as by the Succefs that attended his Undertakings, grew into much Crtdit with the Commons, and they had no lefs Credit with him. $-\hat{s}$ appears by his Confidence in Applications to his Parliaments, anf by the free Language held by the Commons in their Petitions fyon the very Beginning of his Reign, and which they held on withourhis taking any Offence to the very End 3 .

It will appear from thefe Particulars, and many more might be produced, that this Monarch had fome great Qualities, though certainly mixed with many bad and even mean Difpulitionst We have alieady mentioned many Inftances of Artifice and Faifehood, as well as of Aufterity or rather Cruelty, but his predominant Vice, which continued to increafe as he grew in Years, was Avarice. In the former Part of his Reign this was imputed to his Minifters Cardinal Morton and Sir Reginald Bray, but without Caufe, as it appeared more flagrantly when he employed Sir Richard Empfon and Edmund Dudley, Men confpicuous only in being his Inftruments in this dirty Bufinefs. It would be unjuft to palliate, and much more to defend thefe infamous Extortions; let it fuffice to fay, that to enhance as well as to fecure his Profits, they fell not on the meaner, or even on the middle Sort of People. Yet with all his Blemilhes, which were not either fmall or few, this Nation flands indebted to him, not only for various but for great and lafting Benefits b. He put an End to civil

[^221]Wars, which had ruined the Country, and exhaufted its Inhabitants. His Wovernment was what in fuch a State of Things the Welfare of the Subject required, as appeared by his reftoring Order, Civility, and the free Courfe of Juftice:. The naval Expeditions he patronized excited a Spirit of Difcovery, whichigave us a Title to the great Country of Florida, which now in its utmont Extent we poffefs. We owe to him the Firf Eftablifhment of the Rojal Navy on a firm and folid Bafis. He reltored the Tranquillity and fixect the political Conftitution of Ireland, to which his Son gave the Title of a Kingdom, as it well deferved. He it was that projected the Union of the Two Crowns, which when it afterwards took Place removed innumerable Evils to which both Countries had been expofed, and brougt thereby fuch an Acceffion of Strength, as hath rendered Great Britain the moft independent and the greateft Maritime Power the World ever faw. In how much better a State he left his Dominion, than they had ever been in from the Time of the Norman Conquef, the Treafure he left at his Deceafe, and the Teftimonies of Writers of thofe Times, furnih full Proofs ${ }^{i}$.

We

fon the filed her Nephew in this Year, as the fruck a Silver Coin wcighing Sixty Grains with this Infcription, Domine falvum fac Regem. On the Reverfe, Mani Teckel Phares. This Year died Margaret Dutchefs Dowager of Burgundy Sifier to Edward the Fourth. A. D. 1506, Duke of Suffolk brought over and committed to the Towicr. A. D. 1 509, 21 it of April, fays Fabian, with whom agrees the large Account of the Kin ${ }^{\text {b }}$ 's Funeral, but Speed and Bacon both fay the 22d of April, with whom our regal Table agrees; this King deccafod at his Palace of Richmond in the Twenty-fourth Year of his Reign, and when he was about the Age of Fifty-two.
${ }^{1}$ We have no lefs than Three refpeclable Authorities, in reference to the Wealth left by this King, in which as they differ widely it will be proper to give their own Words. "He left at " his Death, fays Lord Bacon, moft of it in fecret Places under his own Key and Keeping at " Richmond, as by Tradition is reported, the Sum of near Eighteen hundred thoufand Pounds "Sterling, a huge Mafs of Muney, eicn for thefe Tines." Bacon's Works, vol iii. p. ic8. Edit. $4^{\circ}:{ }^{1761}$. "He heiped up his Mafs of Treafure, fays Sir Robert Cotton, fo that he left in Bul" lion Four Millions and a Half, befides his Plate, Jewels, and rich Attirc." Rcafons againft forcign Wars, p. 53. He there profeffes, that he took this from a Book of Accounts between the King and Eidmund Dudley. The laft is the greateft Authority of ail. "By the Clofe Roll, " fays Sir Edward Coke, Anno 3 H. VIII. it appeareth, that the King left in his Coffers Fifty " and Threc hundred thoufand Pounds, moft Part in foreign Coin, which in thofe Days was

We have now finimed the Chapter, and therewith brought this Book to a Conclution, in which it hath been endeavoured, through a long Serie., of Ages to trace, as far our Materials and Capacity would allow, the-pofitical State of this Nation. In doing this the utmoft Diligengenath been uied to difcover and to point out the real Caufes of great Events, to fhew the Method and Manner in which they were produceds and to deficribe the Contequences that have attended them. By fuch iciffitudes to which all fublunary Things are expoied, Countries and tbar Inhagbitants change their Appearances and their Characters in different Periods, fo as to bear hardly any emblance rat One Time to what they really were at another. This hath been fuliy fhewn to have been the Cafe in this Ifland, where fometimes, according to the Genius and Condition of the People, the Soil hath been well cultivated, and in confequence of that and its natural Fertility; fuch an Abundance of all Things neceffary produced, as to excite the Wonder and Envy of our Neighbours. In others, we have feen it to a great Degree wafte and barren, with fcarce any Remembrance of former Improvements. In the Firft State the Country was of courfe populous, full of Cities, Towns, and Villages; in the latter thinly peopled, and the fattered Inhabitants in a poor and low Condition. The Revolutions that produced thefe Alterations, fometimes arofe from foreign Invafions, fome-

[^222]
## of GREAT BRITAIN.

 times from domeftic Diffenfions, generally from a Concurrence of both, and Things have been again brought into Order, by the gradual Refti--tutic: of an equal Form of Government, that by a due Temperament of Liberty wich Authority, provided effectually for public Power and private Security. In bringing this to the View of the Reader, in order to inform, not to influence hi: ludgment, Facts have been plainly ftated, and the Inferences from them as fairly deduced, from the earlieft Times to the Settlement of that ConQtitution which fill endures, and which in virtue of fuch Modifications and Improvements as the Change of Circumflances rendered necefflary, and public Wifdom therefore adopted, have raifed us to that flourihing and extenfive Empire we at prefent poffefs, and which may Divine Providerte ever profper and preferve!

## THE

## POLITICAL SURVEY

# GREATBRITAIN. 

BOOK IV.

C H A P. I.
Of Revenue amongft the moft ancient Inhabitants of Britain.
1 Sufficient Force and a competent Revenue neceflary to every Government. The due Regulation of one and the proper Application of the otber, Points of tbe bigbef Political Importance. The End, Defign, and Object of this Book fuccinctly explained. This Country at the Coming of Cafar divided ints many Principalities. The Cbief in each of thefe bad a Militia and fome Sort of Revenue. Cafar acknowuledges their Militin to bave been alert, intrepid, and well trained. The Actions, Condutt, and Refources of Calibelan pluinly , prove bis baving a Revenue, thougb we know not how it was rajed. What

Cafar fays of this Country's being zvitbout Gold or Silver explained and Jbewn not to be inconffent with this Alfertion. The People of Britain actually bad thefe precious' Metals, and even the UJe of Gold Coin before the Invafion by the Kucin?ns. This Revenue, bowever levied, was not either grievous or oppreffive. The People frongly attacbed to the Form of Gavernment that then fubfifed. AJter Cafar's Departure the Country better cultivated and the Inbabitants became more porijbed. They maintained from that Time a Correfpondence with Rome, and were in fome Meafure dependent on the Empire, the Britons tbougb living, fill unack their old Government enjoyed great Eafe and Pro.perity. The Avarice of the Romans the principal Motive to tbeir refuining tbeir Defign of conquering the I/land.

THE effential Difference between Savages and People living in civil Socicty is, that the latter have Property, the former none. This Property, that is, the certain and fecure Poffeffion of what a Man hath acquired, is derived to him from the Government under which he lives, whatever the Form of it may be, and for the Sakc of this and other Advantages, civil Societics were formed; and in the full Enjoyment of thefe continue to fubfitt. For the Sake of thefe Advantages every Government is invefted with Power and intrufted with a Revenue. In different Forms of Government, difierent Modes of fettling thefe have prevailed, but the Neceflity of fettling them for the Support of Government, or in other Words, for attaining the Ends for which Government is eftablifhed, have rendered fuch a Settlement univerfal. Thefe, though they are derived from Individuals, cannot be faid to be taken from them, becaufe they are given for their Ufe. An Individual in a State of Civil Society employs his Property in procuring the Neceffaries and Conveniencies he defires, and that Portion of it which is appropriated to the Support of Government is clearly appropriated for the Sake of that Protection which enables him to difpofe of the Reft for procuring Food, Cloathing, Habitation, and other Ufes. In this, which is the true Light in which it ought to be confidered, the Revenue is beneficial to every Individual, and is therefore with great Propricty filed the Revenue of the Public, and if at any Time the Weight of it hecomes grievous or oppreflive, it muft be from its being injudicioully levied, or from its being diverted from its proper Ufes ${ }^{\text {. }}$.

[^223]
## 474 The POLITICALSURVEY

These Circumftances maturely confidered, will very plainly fhew, that the fettling, altering, or new modelling a Revenue will be in every State a moft interefting Point of Policy. The Weight of all Impofitions, however neceffary, will be felt, and the fimpleft Method of leffening this Weight, which is very requifite alfo to its being cheerfully borne, is to lay it upon all. Any Order of Men exempt from that Burden which falls upon the Reft, though they may be eafed, cannot fail of being envied. In laying fuch Imponitions upon all, due Regard muft be had to the different Circumitances of Men; for a Tax very equal in Appearance may be fourd very unequal in its Confequences. Suppofing them however to be perfectly well adjufted in this Refpect, great Circumfpection will be neceffary in the Methods of employing them. The very End will be fruftrated if they are hoarded, and will be far from being anfwered if they are fquandered, or in any other Way mifapplied. Evils of this Sort naturally produce Clamours and Confufions. In free States, and it is indeed the Characteriftic of their being fo, the utmof Effort of human Wifdom is exerted to guard againft all thefe Mifchiefs, by placing the Power of giving for the public Service, and the Infpection of the Manner in which the Revenue is expended, in the Hands of the People themfelves, or of their Reprefentatives ${ }^{\text {b }}$.

We will now come to the proper Bufinefs of this Book, in which we by no means pretend to give a complete Hiftory of our Finances, as that would require Lights and Informations to which we do not afpire, and becaufe it would alone exceed the Limits within which this Work is to be confined. What we prefume to offer to the Reader is a fuccinct View of our Finances in the fame Manner in which we have gone through our Hiftory in the preceding Book, and this with the very fame Intention, that it may appear how the different Kinds of Taxes, and the different Modes of levying them, according to the different Forms of Rule that have prevailed in this Illand, have operated on the State of the Country and the Condition of the People. If to any it Chould feem, we might have purfued a fhorter Me thod than this of taking up the Matter as it were Thread by Thread, we thall content ourfelves with faying, that we will render it as little tedious as poffible, and that we hope it will prove both more entertaining and more fatisfactory, from its fully explaining the Truth of our previous Obfervations,

[^224]
## of GREAT BRITAIN.

enabling the Reader to difcern the different Effects arifing from this Caule in different Periods, and ultimately to demonftrate, in what Manner our Refources have been multiplied from the Increafe of our Frecdom, and thote Improvements that have from thence been gradually made in cur political Conftitution c .

In the Beginning of the former Book it hath been clearly fhewn, that when Julius Cefar came hither he did not find this Country inhabited by wild undifciplined Savages, but by People diftinguihed into ieveral Nations, that is, living under difinct Governments. We will not recur to what is regarded as fabulous Hiftory in Reference to thefe ancient Inhabitants, but take up Things as he has itated them, which is in truth fully fufficient for our Purpofe. He admits the Country was divided into many finall Principalities, each of thefe under a Chicf, a Prince, or as he ftiles them, a King. Thefe Principalities muft at the Time of his Invafion have fulffifted for feveral Ages, from the Numbers of Men they contained, from the Form of Policy under which they lived, and from their Acquaintance with Arms and Arts which he allows them. Each of thefe Principalities, however fmall, had a certain Form of Rule; and from thence we may necefiarily conclude, the Prince had a Military Power, and fome Sort of Revenue. This Deduction is fo natural that it cannot well be difputed; for without fuch a Force thefe feparate Territories could not have fubfifted, or their Princes have maintained that Rank without fome competent Provifion. As this is reafonable, fo it is likewife certain; for we are told that the Druids, who for that Reafon were probably the Authors of this Conftitution, were entirely free and exempt, which implies that the Reft of the People were fubject to thofe Aids that every Government requires, and thefe were Military Services, and fome Sort of Tribute. From the former the Druids were excufed as Priefts, and from the latter they were likewife free, though we are alfo told that they were the fole Judges in judicial Cafes, which fhews that the People had Property, from which, whatever it was, thefe Impoficions muft arite d.

- This is bringing Things to the Teft of Experience and common Senfe. If Mon fee that in difterent Ages, the fame Pcople have been in different Circumftances, fometimes enfy and even opulent, at others low and miferable, they are defirous of knowing whence this arofe, and winh so be acquainted with the true Source of Matters fo very important. But when this relates to their own Country, and to their Anceftors, however remote, it becomes a Tining of fill greater Coisfequence, and naturally excites a ftronger Spirit of Enquiry. It is to fatisty this that fo much Pains have been taken, and if thefe are fo happy in any Degree to anfwer that Ead, they will abundantly repay their Author, who pretends to no other Merit in thefe Difquifitions than Diligence and Sincerity.
d Cafar de Bello Gallico lib. iv. cap. 27. lib. v. cap. 9. Tacit. in vit. Agricolx. Pomp. Mel. de Situ Orbis lib. iii. cap. 6. All thefe Writers agree as to this loint. Cafor trom what he haw

## 476 The POLITICAL SURVEY

In regard to Military Service we have as full Evidence as can be defired. Cxfar at his Firft Invalion found himfelf oppofed not by a raw and tumultuous Multitude, but.by a regular, and in their Way a well-difciplined Army, confifting of Infantry, Cavalry, and armed Chariots, which were probably the Forces of the Four Kings which then reigned in Kent. They affailed his Army with great Spirit, and though repulfed, did not, as barbarous Nations are accuftomed to do, difperfe, and betake themfelves to Flight. On the contrary he acknowledges, that they fill continued to oppofe him, to practife all the Arts and Stratagems of War, to avail themfelves of all their natural Advantages, and of every Accident that happened, fhewing on all Occafions that Activity, Firmnefs, and Sagacity, which arifes from natural Courage, improved by Military Experience. In confequence of this vigorous Refiftance, notwithftanding the feveral Checks, which he afferts they received, he grew weary of a Difpute which he did not expect, and after a Three Weeks Campaign mewed as great Readinefs to liften to Propofitions as they did in making them, and having entered into an Accommodation, which, even as he reprefents it, feems calculated to fave the Honour of the Roman Arms and fecure his Retreat, he re-embarked his Forces, refolved when he came next to bring a much fuperior Force. This he really did, for in his Second Expedition he employed Five Legions, making at leaft Twenty thoufand Foot, a competent Body of Horfe, and a Fleet of Eight Hundred Sail -

To refint fo great an Army compofed of Roman Veterans and commanded by the moft experienced General of his Time, the Britons entered into a Confederacy, and appointed Caffibelan General and Commander in Chief of the Troops of the combined Kings. This Confederacy plainly proves their having early Intelligence, their fteady Refolution to defend their Liberties, and the Preparations they made, and the Bodies of Men they brought into the Field manifefted their having a great Strength, and this too directed

[^225]by a juft Degree of military and political Prudence. That they were beaten by Troops fo much better armed, fo completely difciplined, and in all other Refpects fo much their Superiors, affords no great Caufe of Wonder. But that they fhould fill perfift, notwithftanding this Reverfe of Fortune, to continue the War, when probably from the Want of Means of fubfifting them, Caffibelan was forced to difmifs his Infantry, and to retain only Four thouland Chariots about his Perfon, mewed much Intrepidity as well as great Capacity in that Prince, who after all was more diftrefed by the Defertion of fome of his Confederates than by the Efforts of the Romans, who by the Information of thefe Deferters were enabled to fack his Capital. After all this he managed his Negotiation with equal Ability and Dignity, and his Circumftances confidered, made no difhonourable Treaty. But can we imagine, that he did all this without a Revenue or Subfidies of fome Kind or other? If we could suppofe it, Cæfar himfelf hath put it out of our Power, for the Tcrms he demanded were Hoflages and a Tribute. In what this was paid, if it was paid, the does not tell us, but it is not impoffible that in Part at leaf it was in Pearls, for a Shield covered with thefe he dedicated in the Temple of Venus, as a Trophy of his Vietories in Britain $f$.

If it hhould be objected, that Cæfar fays exprefly there was no Gold or Silver in Britain, but that the People made ufe of Brafs Plates or Iron Rings of a certain Weight for Money. Should we grant this to be exactly true, it would not conclude againft the Britifh Princes receiving Aids from their Subjects, that is, from receiving thofe Things which Gold and Silver, if they had pofiefled them, would have purchafed, or which might have been had for theie Braifs I'lates or Iron Rings, in which Subfidies might

[^226] be faid, that Cæfar fpoke only of what he faw or knew, and he therefore might fay what he did, though at the fame Tine there might be thefe precious Metals in Britain.

Subsequent Authors acknowledge, that there were and the Fact is certainly true, that the Britons were by no means Strangers to Gold and Silver before the Romans came hither. There have been large Quantities of Gold Coin difcovered, which from the Rudenef's of their Impreffion appear to have been Britifh, and from that Circumftance alfo are concluded to have been in Ufe before Cefar's Invafion. Some other Pieces have been fuund without any Impreflion at all, which are with very great Probability fuppofed to have been ftill earlier in Uic. It is impoffible from the le Circumftances to fay in what Manner Subfidies were paid; but it feems to be fufficiently certain, from thofe Ends of Government being anfwcred for which Subfidies are raifed, that they were paid in fome way or other, and very pofibbly in different Ways in the different Principalitics into which the Mand was then divided 1 .

8 If the candid Reader can poffibly entertain a Doubt, notwithfaniling what is fuid in the Text, of the Britif Princes having fome Kind of Revenue, many other Particulurs mipht i.e mentioned to prove it inconteftably. Whatever fecret Motives Crefar might have, the abowed Caufe for his invading Britain was, becaufe of the continual Supplies the Inhabiams affodud to their Neighbours the Gauls. Now what were thefe? Not furely Fleets of Cock boats, for he allows us nothing better ; and if as fome very intelligent Writers have conccived, the Britons had Ships of Strength even in thofe Days, they muft have been built at the public Expence. Or if this Affiftance did not confift in Ships, it muft have confilted in Moncy, or in fumcthing worth Moncy, and thefe Contributions muft have come from the Britin Princes, who mult of Neceffity have raifed them upon their Subjects. Before Cafar's Expedition, the Britons fent Ambaffadors or Deputies to make Propofitions, and they were very well reccived. Who fent thefe Deputies? How were they maintained? or how were Armies affembled, and marched from one Place to another, without fome Fund for their Subiftence? We fee in all thefe Tranfactions, and in many more, the ftrongelt Marks of Civility, good Senfe, and lolicy; and if, notwithftanding this, they are ftiled Barbarians by the Romans, they were no worfe treated than other Nations, and we muft not conclude from the bare Sound of the Word againft - fo many clear Facts owned and admitted cven by thofe who ufed it.
${ }^{n}$ In Borlafe's Antiquities of Cornwall, b. iii. chap. I2. that very learned and induftrious Gentleman informs us, there were found in the Month of June 1749 , in Karnbre hill in that County, fuch a Quantity of Gold Coins as fold for Sixteen Pounds, and foon after very near the fanie Quantity at no great Diftance. Thefe taken together could not weigh lefs than Two thirds of a Pound. They were of pure Gold, that is, Gold without Alloy, as all the Britin Coins are, the upper Side a little convex, fome of them worn plain by Ufe, but moft of them charged
with rude fymbolical Figures, without any Head or Infcription. Thefe, that worthy Perwith rude fymbolical Figures, without any Head or Infcription. Thrfe, that worthy Per-
fon feems to have fally proved not to be either Phenician or Gaulin Coins, fon feems to have fully proved not to be either Phoenician or Gaulifh Coins, but Britih. Of which no one who confiders them attentively can well doubt, and as he very judicioully obferves, Things thus difcovered at fo great a Diftance of Time, in a Place of which Crefar could not have the leaft Knowledge, ought not to be affected by his Afertion, that there was not either

## of GREAT BRITAIN.

As we have now eftablifhed by a fair Deduction from Facts, which are of all others the beft Authorities, that our Britifh Ancefors had both a aregular Militia, and though we know not how it was raifed, a competent Xevenue, we fhall next by the fame Method enquire into their Effects. Yn the Firf Place it appears that the Cuuntry was populous, for the Firft Invafion of the Romans was oppofed, and we might fay repelled by the Subjects of the Four Kings of Kent. When Cæfar came the Second Time with a much greater Force, Caffibelan oppofed him with an Army fuperior at leaft in point of Numbers. This alfo proves that the Country muft have been well cultivated, fince People cannot live without Provifions: We may from thefe Circumftances conclude, that the Form of -Rule was gentle and acceptable to thofe who lived under it. Indeed the very Exiftence of fo many feparate States is an Indication of this, for nothing but an Attachment to that Kind of Government could have preferved it.

Tins ftill farther appears from the very Rife and Iffue of the Conteft. Caffibelan had killed the Father of Mandubratius, compelled him to quit the Illand, and had reduced his Subjects the Trinobantes under his Dominion. Mandubratius applied to Cæfar in Gaul for Affiftance, and when in the Courfe of the War, Caffibelan had fuffered a Defeat, the Trinobantes made a feparate Peace, that they might return again into their former State, and when Ceffar made a definitive Treaty with Caffibelan, he ftipulated that Mandubratius fhould govern the Trinobantes in Quiet. Another and a very conclufive Argument arifes from the Valour of the Britifl Nation, than which nothing can more clearly difcover that their Government was juft and cqual, for no Nation harfhly treated or opprefled with Taxes, ever exerted a martial or intrepid Spirit. This will appear no Compliment to the Britons, if we confider the Forces Cafar had with him, which from Experience he found to be neceflary, and the Terms upon which, after exerting all his Military Abilities, he found it at length expedient to conclude the War i.
either Gold or Silver in this Inand. It is alfo to be remarked, that Gold, though in fmall Quantities, and chicfly in Tin Streams, hath beer and fill is found in that County. It icannot therefore be thought an improbable Conjecture, that befure the Coming of the Romans, the Britons found this valuable Metal in greater Quantities; for there can be little Doubt, that what is now found is wafhect down from the higher Grounds, and they might, it is very likely, be acquanted with thefe Fminences from whence it defeends. The fame Principle that induced them thus to bury their Coin, would naturally lead them to conceal the l'laces from whence they drew their (;old, and in Procefs of Time, and through frequent Revolutions, all Memory of them might be loft.
${ }_{i}$ Befides that Arong Liking to their own Manners and Cuftoms, which we fee long Habitude create in all Nations, we may calily conceive fome other Motives that might excite in them a fin-

After the Return of Cæfar to the Continent, the Civil War follcwing, the Romans thought no more of depriving other Nations of their Liberty, but employed their Swords againft each other till they had fubverted their own. This Interval of Qliict, the Inhabitants of Britain ícern to have improved in the polifhing their Manners, and extendin'd their Intercourfe with other Nations. Auguftus fometimes affected to confider this Country as dependent on the Empire, and at others treated it with Contcmpt, as a Place not worth the conquering. Yet to keep up his Claim and to fwell that Reputation which he held neceffary to fupport his Power, he threatened more than once to invade it, but fuffered himfelf to be appeafed by the fair Offers made by fome of the Britifh Princes who fent him Prefents, and made fuch Submifions as he thought fit to require. Amongit thefe Princes was Cunobelinus the Cyinbeline of our Britifh Writers, who held a great Correfpondence with Rome, and is thought to have brought from thence thofe Artifts who coined his Money, which, befides bearing his Head, and bcing infcribed with his Name, is in a much neater and more elegant Stile than the Britih Cuins in preceding Times $k$.
cere Affertion to this Kind of Government. - The great Town (we will not call it the Capital) was in the Center of the Principality, and of courfe their Chicf who refided there was continually in the Sight of his Subjects, muft have employed his Thime in the Functions of his Office, and in taking care of the Safety and Welfire of his People. He had no foreign Wars to exhauft either their Blood or their Treafure, fo that whatever he received from, muft have returned amonght them. His Power, his Grandeur, and his Independence they confidered as reflecting Honour upon them. The Druids held the Scales of Juftice, aeting alfo the Part of Mediators when Mifunderftandings of any Kind arofe, fo that the longer we contemplate and the more we confider thefe Circumflances, the lefs we hall be furprifed, that thefe Ties and Temperaments held the Prince and his Subjects in fo flrict a Union.
k The Coins of Cunobelinus are numerous, but all of different Sorts, many of different Sizes, fome of Gold, fome of Silver, and fome of a mixed Metal. There are fome of them rude and charged with the Britifh Symbols on the Reverfe. Others neat with very elegant Figures on the Reverfe. On moft of thofe that are figured, and on fome others we meet with a Word in Roman Characters, which our ableft Antiquaries have not been able faitisfactorily to explain. This Word is Tafcio, Tafcia, Tafcie. Some have conjectured that it is the Name of a Ylace, others that it is the Mint Mafter's Name, many, becaufe it occurs not on all Coins, believe that it implies Tribute, and that our Word Tax comes from it, or that both are derived from the fame Root. Mr. Camden infinuates, that the feveral Reverfes where this Word appears of a Bull, a Hog, and an Ear of Corn, imply the Impoft upon great Cattle, upon fmall Cattle, and upon Grain. This is undoubtedly very ingenious, but at the fame Time very incertain. Some from the Word made ufe of in Cafar's Writings, Vectigal, think he did not infift on Tribute, bur on thefe Duties on Commodities. Our old Chronicles, particularly thofe of Sprot and Rofs, affirm on the contrary, that it was a Tribute, and fix it at Three Thoufand Pounds, on what Authority we know not. The Reader, if he would fee this Subject more clofely examined, may confult Mr. Pegge's curious and learned Difertation on the Coins of Cunobelin.

In confequence of this good Correfpondence, the Romaps became much better acquainted with this Inland, and their Subjectscacarried on a very confiderable Intercourfe with its Inhabitants, who, though: "fill fo jeatixs of their Freedom, as to be exceedingly averfe to Tribute, readily confented to pay Imporits or Dúties on Exports and Imports. Befides this they gave Marks of Humanity and Generofity in relieving the Roman Soldiers thipwrecked on their Coaft, and fending them back in Safety, which might have merited a better Title than that of Barbarians, with which they were ftill treated, and however harfh in its Sound, was better than that of Slaves. Tiberius under Colour of adopting the Maxim of Augufus, that the Empire ought to be bounded by the Ocean, gave the People of - Britain no Difturbance, who, content with their own Condition, remained quiet in their own Inand, fatisfied with thofe Advantages that arofe from their Trade. The only juft Apprehenions they had during this Period arofe from bad Citizens of their own. Adminius the Son of Cunobeline, being difgraced and banimed by his Father, fled to the Continent, and excited Caligula to an Invafion, which however cnded in a ridiculous Manner, which might poffibly render the Britons too fecure.

Twirs Seafon of Quiet, between the Second Departure of Julius Cefar, and the Invafion by Claudius, which comprehended near a Century, affords a clear and fatisfactory View of what may be ftiled the Policy of the ancient Britons, and may ferve to convince us, that as it continued long, indeed who can fay how long, to preferve to the Inhabitants a regular Syitem of Laws, under which their Lives and Properties were fecured, and Induftry cherihed, their Happinefs in all Refpects being equal at leaft to any of their Neighbours, fo might it in like Manner have lafted many Ages longer without any other confiderable Inconvenience than occafional Difputes among their Princes, which for their own Sakes were ufually compromifed by the Druids, if as we before obierred in its proper Place, the Vicinity of the Romans in Gaul had not affordece thofe who preferred the Gratification of their own Refentments and Ambition to the common Safety and Welfare of their Country, an Opportunity of fubverting is Conlitution, and fubjecting its hitherto free Inhabitants to a foseign Yoke.

This perhaps had not been fo foon brought about, if the Romans, who had now free Entrance into Britain, had not difcovered the improved State of the Illand, and by vifiting the Courts of their little Princes been fatisfied that their Subjects were not fo poor and defpicable, as Cæflar and thofe who accompanied him were plealed to reprefent them; and this is not founded in Conjecture, but upon the exp efis Tcitimony of the ableft Writer of Antiquity on this Sulject, at leaft o. thofe whole Works

Vol. IL.

have

## 482 The POLITICAL SURVEY

have come down to our Hands 1 . Yet this and the fubrequent Revduution which followed in confequence of it, does by no Means difparage the Ni: ture of the Britifh Government, which appears to have fully anfwered the Fyds of its Intention, and thereby provoked the Avarige and Ambition of a potent-Empire, that withoui receiving any Injury, \%undertook with Forces incomparably fuperior to make a Conqueft of Princes ill fuited from that Form of Rule, which, however adequate to their own Welfare, did not difpore' them to fuch an Union as might have refifted thefe Invaders, notwithfanding which they loft not their.Liberties without long and violent Struggles, which fufficiently demonftrated the interior ftrength of their fmall Sovereignties, as well as the Valour, Conduct, and Magnanimity of fome of their Princes, who for thefe Virtues are highily celebrated, even by their Enemies.

[^227]
## CHAP. II.

Of the Revenues raifed by the Romans whillt they were Mafters. of Britain.

THE Scope of tbis Chapter briefly fated. Britain invaded for tbe Tbird Time by the Emperor Claudius. He came over in Perfon, and by ufing much Clemency, prevailed upon many of the little Princes to Jubmit. Proots tbat at this Period tbofe Princes were not eitber indigent or inconfderable. The Country in general.jbewn to be very populous. Tbe Metbods which the Romans purfued to fecure bheir Conqucfls. The difinguibed Merit of fulius Agricola in this Refpett. The Difpofition of their Cities and great Towns made with great Skill and Circumppection. The civil Adminillra-

## of GREAT BRITAIN.

Sion executed with admirable Regularity. Four and fometimes Five Impofitions levied upon Grain. Orcbards, Meadowes, Commons accurate'y furveyed and fubjected to an annual Tax. Duties upon the Produce of the Mines. Salt averded folely for the Benefit of the Public by Officers appointed for that Pu:pofe. Inland Duties frictly levied, and Cuftoms paid upon all Goods importewand exported. Tributes, their Nature, and bow far they were extended. Excifes of many different Kinds, the entering more minutely into this Subject unneceffary. Tbe Manner of affefing and collecting this Revenue explained. THefe Impofitions no way prejudicial to the Country or to the People. The great Object of the Roman Policy in all the Provinces was the Improvement of Land and the proper Employment of its Inbabitants. The Number and Splendour of tbeir Cities a ftriking Proof of this. The fartber Illuftration of this Subject from the repeated Revolts of the Commanders bere, and the Confequences of their Attempts in refpect to the Empire and to the Province. A fuccinct Review of the Means by which their Government and even their Taxes rendered their Dominions in Britain rich and flourifling.

IN the former Book a very fuccinct Account has been given of the Roman Conqueft, and of the principal Tranfactions that happened during the long Space in which they remained poffeffed of this Inand. Some Points were however left untouched, as being thought more proper for this Place, where it is intended to give a concife View of the Revenue they raifed, the Manner in which they raifed it, and what Effects this had upon the Inhabitants. This great People were equally remarkable for their Policy and their Oeconomy. By the former they fecured the Countries which by their Valour they obtained, and by the latter they rendered them valuable to the State of Rome. But before we can clearly explain hoiv this was done in Britain, it will be requifite to thew, that they had very ample Materials to work upon, and that when they fet in earneft upon the Conqueft of this Country, it was not, as many have been perfuaded, in a low or mean, but in a thriving and flourihing Condition, and fo well peopled as to afford them from the very Begining, an inviting Profpect of rendering it a rich, fruitful, and valuable Acquifition to the greateft Empire then in the World.

As the wife Auguftus and the politic Tiberius had their Reafons for attempting nothing agxin!t Britain, which probably influenced the Writers in their Times in the Accounts they gave of its Condition; fo Claudius no doubt had better Motives than the Suggeftions of Bericus the Britifh Exile, for departing from their Conduct, and undertaking a Third Invafion of this Country. But whatever his Motives might be, it is certain that the

# 484. The POLITICAL SURVEY 

Troops in Gaul under the Command of Aulus Plautius, were by no Meats pleafed with the Orders he received to employ them in that Expedition, and it was not without great Reluctance they were brought to embark to profecute a War, as they termed it, in another World.

The People here were well informed of this, and of "certaif Accidents that retarded for fome Time the Profecution of their Attempt, which rendered the Britons negligent in their Preparations to receive them. Yet when they actually landed, though we hear of no Confederacy to withftand them, an Army was however formed under Two gallant Princes, Caractacus and Togodumnus, who oppofed them with great Valour, and nat altogether withour Succefs, till the latter of thefe Princes was flain, whichinftead of difcouraging, animated, or rather exafperated the People fo much, that Caractacus transferring the W'ar to the Mouth of the Thames, where the Marhes gave him many Advantages, the Roman General tound himfelf fo much embarrafied, that according to the Inftructions he had received he fent to Claudius for Affiftance, who came in Perfon with a more confiderable Force, which turned the Scale in Favour of the Romans. He feems however to have owed more to his Clemency than to his Courage, and by the Kindnefs he fhewed to thofe who fubmitted, drew feveral of the Britifh Princes to declare themfelves his Allies, and having done this, he returned and left Plautius to reduce the Country alreauy fubdued. into the Form of a Province a.

The War however reyived, and Caractacus maintained it with great Spirit and Intrepidity, till being obliged by the fuperior Power of the Romans to feek Refuge in the Court of Queen Cartifmundua, the bafely delivered him up, and he was afterwards fent to adorn the Triumph of Claudius-at Rome, where in a fhort Oration that gained him the Applaife of his Enemies, and will ever do Honour to his Memory, he fpoke in high Terms of his Power and Riches in his more profperous State. Cogidunus,

[^228]
## 2EAT BRITAIN: - 485

ancotner britum king, is celebrated for his fteady Fidelity to the Romans; who in return added to his own fmall Principality feveral others, and he , amongft other Marks of Gratitude decorated his Capital with Temples anur other public Buildings. Prafutagus, another Ally of the Romans, was diftinguifhed by the Treafures he amaffed. London even at this Time was a Place of great Trade, and the Refort of foreign Merchants thither made it very confiderables. We fee therefore, that even in the earlieft Times, and when the Roman Province was of fmall Extent, there wanted not Inducements to enlarge and to preferve it, in order to which the Country being very acceptable to the Soldiers, they. had Lands given them ard Coloniss were fettled.

But while Suetonius Paulinus was employed, as we have Thewn in the freceding Book, in an Expedition againf Mona now Anglefey, the Britons made a general Revolt under Boadicea the Widow of Prafutagus, who had made Nero Coheir with her and his Daughters, which did not prefurve either his Dominions or his Wealth from the Rapacity of thefe Conquerors. This generous. Heroine was at firf very fucceisful, deftroying Verolanium and Camulodunum, the Two principal Cities of the Romans, putting to the Sword Seventy thoufand of them and their Allies This was feverely revenged by Paulinus, who having defeated her in a decilive Engagement, killed therein Eighty thoufand Britons c. . Thefe are

[^229]
## 486 The POLITICAL SURVEY

Facts well attefted, and from thefe we may with Certainty collect, that the Romans having once more seduced Things into Order, might entertain well-grounded Hopes of bringing this fair and well-peopled Country under their Dominion; which, though not without much Trouble aind many hard fought Battles, they at length in a great Meafure fecomplihed.

IT was an eftablifhed Maxim of the Roman Policy, that the Introduction of their Laws, their Magifrates, and their Manners, was the moit effectual Means of fecuring the Obedience of their new Subjects. This it was they meant, by reducing the conquered Country into a Province, a Thing no Way difficult to their Generals, who were pét x fectly acquainted with the Steps neceffary to be taken for that Purpofe, and had befides ufuallyo about them, Men of Gravity, and Experience in the Laws, from whom they might derive Affiftance. It is true, that in thofe Times, and indeed in all Times, fome Men were apt to abufe their Power, and to give a Loofe to their Paffions, which naturally gave a Diftafte to thofe Regulations, however expedient, which they endeavoured to enforce. But befides this, there was fuch an Oppofition from the rough and martial Inclinations of the Britons, to the fettled and fevere Difcipline of the Romans, that it is no Wonder the Multitude complied with Regret and Reluctance. Yet many there were, who either from a milder Turn of Mind, or making a Virtue of Neceflity, cheerfully fubmitted to the Rules prefcribed; for otherwife it is impoffible to account for fo great a Number of Inhabitants in the Roman Cities, which when deftroyed had not fubfifted for above a Dozen Years d.

Some

at the Ifand, and poffibly if he had attempted to have embarked them, they would not have followed him. Aulus Plautius found the legions in Gaul very unwilling to accompany him. He, though an excelient Commander, found it requifte to fend for Clavdius, who brought with him fref Forces and Elephants. The Romana had always Three, fometimes Four Legions or more in Britaia. The former was, if we may ufe the Expreflion, their Peace Efablifhment, and Boadicea fully proved, that it was not more then fufficient. Dio Cafius makes the Number of the Roman? and their Allies Qain to be Eighty Thoufnod. Tacitos, from the Information of Agricola, and he could not have better, fays they were Seventy Thowfand. The far greatef Part of thefe were certainly Britons, for the Roman Inhabitants of the Colony, who retired into the Temple of Clawdius, and defended themfelves for Two Dape, conld not be any Thing near fo many. Yet this Defruction happened after many Years War, and notwithfanding this and the Slaughter of Boadicen's Army, the Rotmans met. With frefh Refiftance. We muft therefore either admit thefo Fadt, which certainty prove that Britain was then thoroughly peopled, or we muft give up all the Roman Hiftorians together, fince Suetonius and others, though they do not enter into Parciculars, yet confefs it was one of the greateft Difgraces that the Roman Arms ever fuffered.

- It is certain that this great People conceived fo highly of their own Sytem of Poficy, that whey looked on alluwho lived otherwife than they. dịd, as Barbarians. It was therefore in their Judgrent, an AAA of thegreatef Himanity, to communicate their Cufoms and Mode of Living

Bome of the Roman Governors, by whatever Title diftinguifhed, were Men of great Military Talents, and others better fuited to the Conduct of Civil Affairs. Julius Agricola joined both thefe Qualities, and was not ouniy $a^{\text {g }}$ great Captain, but a confummate Statefman alfo. He came hither when Things were in great Confufion. He left them in the greatef Order. He vanquifhed the braveft of the Britons in the Field, and he fubdued the Minds of thofe who had perhaps unwillingly fubmitted to the Roman Government. He extended that farther than any of his Predeceffors or any of his Succeffors, and at the fame Time planned and in a great Meafure executed that permanent Eftablifhment that gave them a quiet Poffeflion of this Country. He chofe the Stations for his Troops with the greatert

- "Frudence, connected thefe Stations by military Roads, fecured the Frontiers by well fortified Lines, and diftributed his Forces in fuch a Manner as to bridle thofe already fubdued, and to fecure them from the Incurfions of thofe Nations who were ftill in Arms to preferve their Freedom. His comprehenfive Genius dictated to him this, as the fureft Mode not only of preferving but of improving and effectually eftablifhing the Roman Power, by bringing the Natives not fimply to fuffer, but to be pleafed with the Condition in which he had placed them, and in this he fucceeded fo well that all Thoughts of revolting were fuppreffed, and the Inclinations of the People wholly turned to the Cultivation of the Country, and the quiet Enjoyment of what that and their other Habits of Induftry produced e.
to the People they fubdued; and as they refided amongt them, or as One of their Writers $\mathrm{S}_{15 \mathrm{y}}$, where the Romans conquer they inhabit, they took every Method to bring them to what they filed Civility, and even to copy them in Luxury; though, as Tacitus juntly obrerves, this was real Servitude. But he faid this, rather as a Politician than as a Roman, and deviated therein: from the PraCtice and Principles of his Father-in-law, who adopted thefe Notions in their utmone Extent, and thought this his Duty at leaft in the Office that he filled. He well knew that the Submiffion extorted by Force was at once both partial and precarious, whereas the Conjunction of Manners eftablifhed a perfect and permanent Obedience. In carrying this Scheme of Subjection into Execution, as no Nation ever proceeced with mare. Ability or Addrefs than the Romans, fo none ever fucceeded better.
- We have in thie former Book (poke highly of Julius Agricolay but it was necieflary to fay. fomething more of him here, in order to hew that he was the great Author of the regolar planting of Britain by the Romans. His'Stations were fo well chofen, and his Forts erefted with fuch Judgment, that none of them were ever taken by Force, Famina, or Surprize. In. his Seven Campaigns he acted always on the Offenfive, fecured in the Winter what he had giained. in the Summer, and when by harraffing the little Principalities 'of the Britoas till they were tired of the Miferies of War, he readily received their Submiffoions, and coaftanty proteted them. He moderated their Tributes, relieved them from Hardhips, converfed with them familiarly, aftifted them in their Buildings, and encouraged them in their Applications to Learaing, and thus brought them to relim Civility, Industry, and 2 quiek Lifa. We have indeed all thefe Circumftances from Tacitns, who may be filed the Latia Hiftorian of Britaln, but we have no Zeafon to queftion his Memoirs, from his Relation to that great Man. The Facts fpeak for themot Selves, and the noble Camp at Ardoch in Strathern in the North of Scotland, with the Roman Ano. tiquites

In Confequence of thefe Difpofitions, which were not peculiar to this, but were invariably practifed in every Country they conquered, there were in the Roman Province, and when thefe were multiplied in eqery Province, one or more great Cities, many of ain inferior Size, fome ftill ters confiderable, and Numbers which at leaft in their Beginnings were yet fmaller than the former. The Situation of every One of thefe was well and wifely chofen in refpect to the Soil and Climate; ufually on a rifing Ground, on the Bank of fome River, or at leait in the Vicinity of a running Stream, with every other Conveniency that could be contrived, and either fecure from its own Strength, or covered by fome or other of their Fortrefies, and of courfe lying upon fome of their Military Ways, that the Accefs thereto might be cafy, and that the Inhabitants might enjoymfree Communication with their Neighbours. Thefe Circumftances are not only fupported by the beft Authorities, but in a Multitude of Particulars evident to us at this Day, from the numerous Citics and Towns flourinhing from the Enjoyment of moft of thefe Benefits, originally owing to their Choice, and it is by thefe Rules that our Antiquaries are guided in their Inquiries after thofe that are either loft or not certainly known ${ }^{f}$.

As thefe Cities differed in Magnitude, fo they diffcred likewife in Dignity, and in the Privileges which they enjoyed. The mott confiderable were not only governed by the Roman Laws, as indeed moft of the others were, but had their refpective Magiftrates after the Roman Model, Tri-
tiquities that have been found in its Neighbourhood, and even beyond it, are fu many inconteftible Evidences of what he hath afferted; let us aifo add, that even in the rcmuten l'arts of the Ihand the People appear to have been very numerous.
${ }^{f}$ It is evident from the Hiftorics, Antiquities, and Law's of this potcut People, that every Thing refpecting their public Affairs was regulated by wife, and well coufidered Rulcs, and that in a perfect Acquaintance with thefe conlifted the Knowledge requifite to form Men for public Employments. We difcern from hence, that in all their Undertakings the moit prudent Plans were laid down, fo that as little as poffible was left to Chance. We need not wonder therffore that Cities and Towns, built in Places fo fkilfully chofen, fhould even from fmall Be;inuings continue to flourihh and increafe, or that when overthrown and buried in Rubbiih by fuperior Force, the very Ruins of them fhould invite their Succeffors in Power to rebuilding on the fame Spots. The fame Accuracy and Circumfpection was ufed in their Military Encampments, as appears from Vegetius, and in difrofing the Lands given to their Suklicrs in their Colonies, and in the nice feting out of their Bonudarise, as we learn from Siculas Flaccus, Julins Frontinus, Hyginus, and other Writers on thefe Subjefts. -In reference to the Cominerce carrited on here, we are to confider, that except the Corn Trade, the Practice of it was looked upon as ignoblc at Rome, and therefore rich Men lent their Money in the Provinces at very high Interef, as Seneca did in Britain, to the Amonnt, as Camden computes, of Three hundred thoufaud Pounds; and Dio reports that his fudden calling in of his Money was One Caufe of the general Revolt under Boadicea. Yet this proved no Bar to the fame Practice in fucceediag Times. From thefe Circumflances the judicious Reader will be led to form in his own Mind a juft Notion of the State of the Roman Provinces in Britain, and the Credibility of all that is advanced in the Text.

## of GREAT BRITAIN.

bunals of Juftice, and other Marks of Diftinction. Thefe, though gricvous in the Sight of the Britons while they retained any Notions of their former Freedon, yet as thefe wore out, when the Druids were expelled or sather extirpated, and when Agricola had rcconciled them to the Manners, infpired them with the Sentiments, and accuftomed them to the Exercifes and Studies of his Countrymen, they became very acceptable, and excited a Spirit of Emulation, which quickly difcovered itfelf in fumptuous Buildings, and more efpecially in public Edifices dedicated either to Religious or Civil Purporesg. The raifing and maintaining thefe, the Support of the great Officers fent from Rome, the Salaries and Emoluments appropriated ta.chcir own Magiflrates, and a Multitude of other Demands for the public Sereice, created a conftant, and in Proportion to their Improvements, an increafing Expence, which of courfe was raifed upon the People. In few Words, they had by degrees a regular Civil, Military, and Naval Eftablifhment, for the defraying of which they had fettled and fufficient Funds; for in this, as we befure obferved, the Roman Oeconomy was very exact, and as thefe. Things took Place in confequence of their Policy, fo the Charge of fultaining them was not left (at leaft not legally) to the Will or Caprice of their Governors, but was provided for in the fame Method, and under the like Regulations, with thofe eftablihed in their other Provinces.

Agriculture was always the Firf Object the Romans had in View. In order to premote this they diftributed Lands, as we have already obferved, to the Soldicrs, referving a certain Rent upon them, for the Ufe of the Public, and in like Manner they affigned to fuch as were difpofed to enterupon them, Lands that had never been cultivated, at an eafy Price. On the Produce of both thefe they levied anannual Tax, or rather feveral Taxes. In the FirfPlace they took the Tythe of the Corn in Kind. Next fuch a farther Quantity as was held neceffary for the public Service at a low ftated Price. If this was not found fufficient, a farther Supply was exacted, but was peid for at a higher
${ }_{8}$ The Diftinction of Cities was a great Mark of the Roman Policy, of which we have room to fay but little herc. Some were Muvicipia, or free Cities, the Inhabitants of which, with great Privileges were allowed to live under their own Laws, and of thefe we know unly of Two in Britain, Verulam near St. Albans and York. The next were Colonies, compufed originally, at leaft in a great Degree, of Roman Soldiers who had ferved their accuftomed Time in the Army, and were rewarded with Lands in the Neighbourhood. Inferior to thefe were fuch as enjoyed the Jus Latium. Others again are Atiled by Richard of Cirencefter, Stipendiary. Thefe had all of them Two Magiftrates of their own refembling Confuls, Senators, who could not enjoy that Rank without having a certain Revenue in Land. They had likewife Cenfors, Edils, Queftors, Priefts, Augurs, \&c. In a Word they bore in Proportion to their Size, a Refemblance to Rome, and the Iuhabitants in gencral not only lived after the Roman Manncr, but foke the Latin Language. We are told that there were about Thirty Colonies in Spain, and there were about a Third Part as many here. But befides thefe there were the Confederate Cities, that is, the Naioons who fubmitted to the Romans upon certain Terms, and were thercfore permitted to live according to their own Cuftoms, paying aunual Tribute, and furnifhiag their Cuatingent of Troops.

Vol. II.
Rris
Price. Chief Magiftrate's Family, and fometimes a Fifth was infifted upon: as a Mark of Refpect in the Nature of a free Gift. Thefe Impofitions did not fall fimply upon Wheat ; but upon all other Grain, and even upon Pulfa. The Motives to thefe Levies were the Supply of the Soldiers, who had each a certain Quantity of Flour allowed him by the Month; for the Supply of their Magazines in their fortified Places, where they had ufually a Year's Provifions; and as we have often mentioned in•other Places, vaft Quantities were exported for the Service of thei: Troops in Germany and Gaul h.

Bur though the largeft Revenue arofe from Arable, yet other Lands did not efcape but were likewife taxed, in Proportion to the Profits accruingfrom them. Thus Orchards paid a double T'ythe, becaufe the Producs of them was without Labour. There was an Impofition likewife upon Meadows, when they were private Property. An exact Regilter was kept of all Kind of Cattle that fed on the public Domain, and the certain Rate paid for every Beaft in Proportion to its Value, which muft have arifen to a very confiderable Sum in a Country where the People were natarally inclined to grazing. In all Probability however the Weight of theic Taxes might gradually difpofe the People, where they found it pristicable, to turn their Lands from Pafture to Tillage, which was much enculuraged by the Government, as they were in no Danger of wanting (attle from the Confederates, who ftill lived according to their ancient Cultoms, and bred them in the marfhy and mountainous Parts in Abundance i.

[^230]
## of GREAT BRITAIN.

IT was not from the Surface only, but even from the Bofom of the Earth, that the Romans extracted a Revenue. Britain had been always famous for. Tin, and continued fo under their Dominion, as a Proof of which fome of the Emperors that fet up here, coined Money or Medals of this Metai. They extracted alfo great Quantities both of Lead and Iron, and of the later efpecilly raded many Manufactures. From all thefe Mines a Revenue accrued to the State which in other Countries was a Tenth, and very probably it was the fame here. It is certain that the Romans knew there was both Gold and Silver in Pritain, but it is not certain that they drew any Advantage from thein. In their other Provinces Gold Mines were only wrought for the Profit ef the Emperor, which might be a good Reafon for the Britons concealing them heae, that is, the Rivulets in which the Partictes of Gold were found, and the Muuntains from which they defcended 5 .

Tuis vending of Salt belongcd exclufively to the Public, whether made in the Province or brought hither from abroad. This mult have produced a vaft Income from the general Confumption of a Commodity fo neceffary to Mankind. I'ct it hath been fuggefted, that this did not originally arife from a Defire of burdening, but rather of eafing the People, becaufe thole who dealt in it railed it to an extravagant Price, to prevent which the Sale of it was confined to Perfons intrufted by the Magiftrates, by which Mcans this Neceflary of Life was through the whole Empire fupplied in Abundance, and at a reafonable Price 1.

Besidfs all thefe, they levied inland Duties and Cuftoms upon all Goods. The former were paid at the Entrance into Cities and Towns; the latter before Goods were either thijpped or landed, which were viewed by the Revenue Officers, and paid according to their Value, fometimes

[^231]and in fome Places at a higher, in others at a lower Rate; what this wasin Britain cannot with any Certainty be determined, but according to the beft Lights that we have, it might be fometimes at Five per Cent, and at others about Half as much. Whatever it 'was, it amounted to a vèry large Sum, and was always confidered as a principal Branch of the eftablifhed Revenue m.

Thers were befides thefe capital and conftant Impofts, others which were perfonal, and which were peculiarly diftinguimed by the Title of Tribute. The Firft of thefe was a Capitation or Poll Tax, as to the Nature of which nothing can pofitively be affirmed, except that it was le-vied in Britain, as was alfo another ftill harkher upon Burials. Thefe ${ }^{-}$ feem to have been incertain in their Nature, fometimes more, fometimes lefs, according to the Exigencies of the State. But it Ihould feem that the Tribute or Poll Tax was conftantly levied on thofe, who fubmitted to the Roman Power, and poffibly not on thofe who were ftiled Allies or Confederates n. The Working on the public Roads was another Kind of perfonal Service, for which, however, fuch as were employed therein, received competent Wages or at leaft Subfiftence. It hath been already obferved, that the Confederates furnifhed their Contingent of Troops, both of Horfe and Foot, but more efpecially the former, who were placed on the

[^232] ficers ${ }^{\circ}$.

In the Times of the Republic, all Taxes were impofed by the Senatewith great Deliberation, and uniformly levied. But in the Time of the Emperors, they were fettled fimply by their Edicts, according to their Will, andfometimes, thoughi rarely, fuppreffed when they grew intolerable. Thefe were moftly a Kind of Excifes, fuch as the Duty on the Sale of Slaves, upon Goods fold by Auction, upon the Admiffion of Artificers or Mechanics to what might be called their Freedom. For in thefe Times they had Colleges, as they called them, of Carpenters, Joiners, Smiths, Armodurers, Mafons, \&c. in the Nature of our Corporations ${ }^{P}$. There was likewife a Duty upon Smoke, which was a Kind of Hearth or Chimney Tax, and feveral others. Amongft thefe there was One upon Horfe's Dung, and Vefpafian's famous Tax upon Urine; which Excifes muit altogether have produced a great Deal of Money, though we have not the fimalleft Materials to warrant any Computation 9.

- The Confederates were fometimes more in Number than the Legions, and it wasthis made the Precautions mentioned in the Text fo neceffary. By dividing them, and placing them on the Flanks, their Force was leffened, and by their being commanded by Roman Officers filed Prefects, it was made ftill more difficult for them to revolt. Befides the Horfe fought immediately under the Eye of the Commander in Chief. In the laft Battle fought by Agricola againft Galgacus, this Prince in his Harangue obferves, that the Roman Colonies were compofed only of weak, old, and worn out Soldiers, that the confederate.Cities were many of them difcontented, and that thofe in that Army could not fight with a good Will againft their Countrymen, fo that if once beaten in the Field, the Romans would immediately find themfelves oppreffed by Enemies on every Side.
${ }^{P}$ It might be eafily apprehended at firf Sight, that being expofed to fuch a Variety of Impofitions, and thele reaching to all Ranks and Degrees of People, the Burden of the Roman Government muft have been great, as indeed it was, but not oppreffive. For the Multiplicity of Taxes was in a great Meafure balanced by the Multiplicity of public Expences in the erecting fumptuous Edifices for public Purpofes, building Fortreflis, laying out extenfive and expenfive Roads, exhibiting Shews and Spectacles for the Amufement of the People, all ilfuing out of the Treafury; befides the Support of the Civil, Military, and Naval Eftablifhments, the Subfiftance of the Confederate Troops whenever they were employed, the Conftruction and Repair of Ships, and a Variety of other contingent Articles, which gradually diffuled a very great Part of the Money among the People from whom it had been collefted. Add to this the Profits arifing from foreign Commerce, which being maintained by the native Commoditics and Manufactures of this Country, brought in continual Supplies of Wealth, without which it would have been impoffible to havefupplied the Sums annually tranfmitted to Rome, on private as well as the public Account.
${ }^{9}$ Eutrop. lib. vi. cap. 14. Vell. Pater. lib. ii. p. 144. Tacit. Annal. lib. i. cap. xi. It would: certainly be more fatisfactory if we could afford the Reader fo much as a probable Account of the Revenue raifed by the Romans in Britain. Some Guefs might be formed if we knew, certainly what Income they received from Gaul. Eutropius indeed fets it down exprefsly; that Czfar drew: from thence by way of Tribute, upwards of Threc hundred and Twenty thoufand Pounds ans; nually. The very learned Lipfius thinks there is an Error in the Figares, and that he levied:

Ir would not be difficult to add a great Deal more on fo extenfive a Subject as this, by pointing out efpecially the feveral Alterations made by Conftantine and his Succeffors in the Adminiftration of Government, through the whole Extent of the Empire, and confequently in the Britannic Provinces. But befides our having already fpoken on this Head in the former Book, very little could be advanced in Reference to Taxes, and their'Produce, but from Conjecture; which, however it might ferve to amufe, could contribute fcarce at all, to what alone is had in view here, the Information of the Reader. We will therefore inftead of launçhing into a Field of Speculation, proceed to a Point of much more Confequence, and endeavour as fuccinctly as poffible to hew how a Revenue,: in Appearance fo very complicated, could neverthelefs be very accurately affeffed, regularly collected, and in general properly applied, fo as to anfwer all thofe Ends for which it was raifed, and thereby juftify the Excellence of that œconomic Plan, for which in all Ages the Romans have been fo much commended r .

We have already obferved, that in the free Cities and Colonies there was an exact Reprefentation in refpect to the Magiftrates, of the Capital of the Empire, Rome. Thefe Magiftrates were not honorary, or fimply graced with the fame Titles, but within their finall Diftricts were efdectively what they were filed. The Cenfors at Rome let once in Five Years the public Revenues to farm, and they were enabled to form a true Judgment of the Value of thefe Farms, from the Reports made to them

[^233]
## of GREAT BRITAIN.

by the Cenfors in the Provinces, who took each in his own Diftrict, a moft accurate and diftinct Account of every Perfon refiding therein, and of his Condition and Circumftances. They fet down his Name and Age, if fingle or married, his Children, the Lands he poffeffed, their annual Produce in Corn, Fruit, or Hay, the Number of Cattle he kept on the Domain of the Republic, or on his own Lands. They regiftered in like Maniner the Quantity and the current Price of the feveral Kinds of Merchandize tranfported from One Province to another, and the Duties they paid; the Amount of the Impoft upon Salt, and the Produce of the Mines. In confequence of their Reports the Cenfors were enabled to fix the Value of the Farms, and thofe who took them fent a Number of Pficers to receive and collect thefe Revenues. The Provincial Cenfors, like thofe in the Capital, were chofen by the People, who of courfe took all the Care they could, to elect Men of the ftricteft Integrity and Honour, as their own Eafe and Happinefs depended fo much on their making a right Choice. The Officers of the Revenue were under the Controul of the Tribunals, and in the laft Refort of the Prator, who determined whether their Claims were well founded, or the Colonifts injured by too high a Charge. In like Manner the Queftors received the public Money, and accounted for it; the Edils had the Care of public Buildings of every fort, faw that they were kept in good Order and perfect Repair, and the fame Affiduity was thewn by other Officers in their refpective Stations. This Order of Things, though eftablinhed at firf with Difficulty, grew in a courfe of Years fo habitual, that all Things were conducted with equal Regularity and Facility.

We muft not however conclude from hence, that thefe wife Regulations were at all Times punctually obferved, fo that what we have been faying, is to be reftrained to thofe Periods in which they were fo, and in which they failed not to have their Effects. But as Laws are framed by Men guided by the Dictates of Reafon, and acting from Principles of public Spirit ; fo the Execution of them muft have fometimes fallen into the Hands of fuch, as acted under the Impulfe of their Paffions, or from Motives of Self-intereft; when the true Tendeney of thefe Laws were of courfe interrupted. This happened in the Provinces, even in the Times of the Commonwealth, for which the Qffenders were frequently punifhed. But Britain did not become a Province till after the Roman Liberty was fubverted; and we know that under the Emperors thefe Evils were very. early felt here. In fucceeding Times Abufes of Power were not uncommon, or the Confequences of them Difcontent and popular Commotions, unknown. On the contrary, it hath been hhewn in the preceding Book, that to compofe thefe Diforders, as well as to reprefs the Incurfions of
the unconquered Natives, feveral Emperors, which is a full Proof of the Importance of Britain, came over in Perfon, and valued themfelves highly ion their Exploits here. But all this did not hinder, at leaft, for a very long Space, the Progrefs of Improvements, or prevent the Country from wearing a very flourifhing Appearance, notwithftanding the Number and Weight of the Taxes, and which was fill a greater Mirchief, the Application of a confiderable Part of them to Purpofes that had no Relation to Britain.

IT is of great Importance to make it clear to the intelligent Reader, that while under their Dominion Britain was in a thriving Condition, beçaufe this will thew the Connection between the Increare of public Revenue, and the general Welfare of the People upon whom it was raifed. We have already maintained that the raifing Corn in Britain was practifed before the Coming of the Romans. Cæfar owns this, for he found it ftanding at his Arrival. Yet there is no Doubt that the Romans inftructed their Subjects more perfectly in the Art of Tillage, introduced a Variety of Grains and Pulfe, and being themfelves as good Hurbandmen as any in the World, extended the Practice wherever they fettled, and this moft effectually by fixing the great Fund of their Taxes on the Produce of the Earth. Their Policy in reference to this extended to Meadows, Orchards Gardens, all of which they meliorated in many Refpects, and at the fame Time and with the fame Views improved Pafturage, and taught the Me thod of Breeding a large Size of Cattle for the Plough, and of feeding Sheep for their Fleeces, as well as for their Flefh. They no Doubt taught likewife better Methods of making Cloth, though both the Gauls and the Britons had a coarfe Kind before they came amongft them. In like Manner they gave them better Notions of the complicated Arts of raifing, preparing, and manufacturing Hemp and Flax. Architecture alfo, and al the Branches of Ingenuity fubfervient thereto, they likewife communicated, and no Doubt found the People very apt Scholars, as the Conftruction of their War Chariots is an inconteftable Proof of their Genius ir this Refpect, and the Building fo great a City as Camulodunum in a fex Years, a Faet that fully fupports what hath been advanced. In a Courf of Years they raifed Numbers of Mechanics of every Kind, and the Conveniencies of Life thus provided for, they likewife improved their Talt in the finer Arts of Sculpture, Painting; Poetry, and Mufic.

A well cultivated Country is a fufficient Proof of its being well inha bited; but fomething more perfraps may be thought neceffary, to thew tha thefe People were in eafy and even in affluent Circumftances. This mas be effectually done by conlidering the great Number and apparent Splendc

## of GREAT BRITAIN.

their Cities. In thefe, efpecially fuch as were free Roman Colonies, or $\mathrm{Ca}-$ pitals of Provinces, there were all the Marks of Grandeur, that every where diftinguifhed the Roman Genius. They had for Example facious Amphitheatres for the Exhibition of public Games and Shows, Things neceffary to captivate the Minds, and conciliate the Affections of the common People. Magnificent Bafilics or Halls of Juftice, which ferved likewife for the public Mettings of Strangers, and had Shops on both Sides like our Exchanges. Stately Baths, Temples, Porticos, Places for public Exercife, and whatever elfe-could contribute to decorate thefe Refidences of the Roman Officers. Leffer Towns were neat and well built, and all their numerous Forts ftrongly fortified, and their Walls compofed of the beft and moft lafting Materials, more efpecially thofe upon the Coaft which were meant to cover and protect their maritime Places. For the Truth of this the Things themfelves give Evidence to this Day, as well as of the Tafte and Elegance and immenfe Expence of their fplendid Villa's from the Ruins that yet remain, and from the authentic Accounts that we have, of what excited the Admiration and Aftonifhment of former Times, fo that on this Head our Proofs are moft conclufives.

[^234]
## 498 The POLITICAL SURVEY

Another and no lefs cogent Argument, if it was neceffary, might be drawn from the vigorous Efforts made by feveral Commanders in Bri tain to raife themfelves to the Imperial Dignity. Clodius Albinus was. very near effecting this again!t Severus, and in his Defeat there perifhed the Flower of the Britifh Youth. Caraufius feized and kept Britain with the Title of Emperor for feveral Years, performing great Things both by Land and Sea, and doubtful it is how much longer he might have kept it if he had not been murdered by Allectus, who for a Mort Time wore the fame Title. Conftantine was faluted Emperor here, and manifefted through his whole Reign a great Kindnefs for this Country. Laftly, Maximus affuming the Purple carried over a great Army from hence, and after murdering the Emperor Gratian, penetrated into Italy, where he perihed: All thefe were fupported in their Defigns by the Fleets, the Forces, and the Treafures of Britain; which fully demonftrate the Wealth and Strength of this Country under the Dominion of the Romans. It may be thefe frequent Revolts might induce the Emperors to adopt for their own Security the Maxim of withdrawing fuch Troops as were formed in the Provinces, that they might be in leis Danger from the Officers who commanded here. Whether this was the Cafe or not, certain it is, that however the great Captains before-mentioned might raife and extend the Fame, they exceedingly enervated the natural Strength of Britain, and thereby contributed to leave her in that weak and helplefs State, in which the appeared when deferted by the Roman Legions.

After having thus inconteftably eftablifhed the Fact, that in the Time of Peace, and of well fettled Government, the People in the Roman Provinces here lived much at their Eafe, and enjoyed all the Bleffings of Life in great Abundance. I fay, having eftablifhed this, let us have leave to enquire a little into the Caufes, which are in truth the proper Bufinefs of this Chapter. In the Firft Place, the fortified Line which made their Northern Frontier, fecured the Country behind it from the Incurlions of the uncivilized Natives, and the interior Parts were likewife covered by Fortreffes, and when Occafion required by Winter Camps, which were very ftrong and fo well chofen, that they were commonly fucceeded by Villages when deferted. The Communication throughout all the Provinces was effectually provided for by their excellent Roads, and in fome Places where it was more commodious by Canals. This exceedingly facilitated the Conveyance of Provifions and all other Neceffarics, for which there was a conftant and a regular Demand; which uniform Correfpondence was of the higheft Utility to the Inhabitants, as it enabled them to carry their Commodities where-ever there was a Market. The Plan of Government alfo, being every where the fame, kept all Ranks and Degrees of

People in due Subordination. At the fame Time this feldom gave Occafion to Oppreffion, as it was a conftant Maxim of theirs, to encourage by every Method the Exertion of Talents of every Kind for the common Benefit of Society. As their domeftic Trade was perfectly well protected, fo the like Care was taken, as we have already hinted, of their foreign Commerce, which was as extenfive as the Bounds of the Empire; and to all this we may-add, that their very Taxes, Impofitions, and Duties of every Kind contributed not a little to the public Welfare, by difcouraging Idlenefs, exciting Induftry, and promoting an active, regular, and continual Circulation.

## C H A P. III.

## Of the Revenues of the Saxon Monarchs.

WHE Saxons, in Proportion as tbey founded and Jecured their Principalities, applied themjelves affiduoully to the Improvement of the Countries they pofiefed. By their fleady and general Application to Hu/bandry they very foon procured Plenty, and in confequence of that rendered their feveral Kingdoms populous. They were at the fame Time far from being negligent as to maritime Affairs, wobich at firft arofe from Neceffity, and became afterwards very convinient. Their political Confitution was formed upon their old Cuffoms applied to the Change in tbeir Situation, whicb created an uniform Syftem of fundamental Lazes in each State. Tbis E/ablijbment formed from the very Beginning for the common Benefit, fucb Ties upon Individuals as proved in effect a public Revenue. The Provition made for their Cbief Magiftrate or King confifted firft in Lands allotted to bim as bis Demefines. The Fines for great, and the Mullits for lifer Offences, compofed another Branch of the regal Revenue. The Tolls, Duties, and otber Impofitions on the inland Trade of Boroughs, and the Rents of Houfes in them built upon the Royal Deme'ilic, became a Third Branch. The laft confifed in the Cuftoms or Duties levied on the Exportation of native Commodities, and on the Importation of foreign Goods into their refpective Kingdoms. Tbefe Revenues, as tbeir Hiftory Jbew, wevere fully an/werable to the Occafions of tbeir Monarchs. They witbout any extraordinary Aids or Alifance lived reith Dignity and Splendour, beloved by their Subjects, and revered by their Neighbours. The Mode of Perception rendered their Revenues a Means of improving the Country. At the Jame Time that they contributed to the Eafe, Emolument, and Welfare of the People.

AT the Firt Entrance of the Saxons and their Confederates into this Inand, and after their turning their Swords upon thofe, who are raid to have invited them hither, there followed, as we have elfewhere Ghewn, a difmal Scene of Defolation and Deftruction. But when thefe Nations had eftablifhed themfelves by Force, they began, as it was natural, to think of preferving and improving their Poffeflions. Their Firft Principalities being fimall, their Rulers or Kings were able to vifit and to fuperintend the different Parts of their Dominions, which they fettled and governed according to the Cuftoms of their Anceftors, with fuch fimall Alterations as became requifite from the Change in their Condition, as they were now no longer under the Neceffity of quitting their Abodes as they had formerly done, which Alteration in Circumftances introduced Notions of Property, and with them a Neceffity of dividing and affigning feparato Portions of the Country, that it might be the more fpeedily cultivated, for their Subfiftence. In this the Prince did not act according to his own Will, but by the Advice of his principal Commanders, who, as they had been the Companions of his Vistories, were Sharers likewife in his Conquefts, and Partakers in the Labours requifite to their Security and Improvement ${ }^{2}$.

In order to this, after the Divifion and Subdivifion of the Country they poffeffed, amongtt the feveral greater and leffer Leaders and their Dependants, they took the beft Meafures in their Power to cultivate the Lands, and to raife from their Produce the Neceffaries and Conveniencies of Life, in which from the Nature of their free Government, which afforded every Encouragement to Induftry, they became quickly very fucceffful; and in Proportion as their Abilities and Numbers increafed, began to repair many of thofe Cities and Towns, which in the Heat of their War againft the Britons they had overthrown, being invited thereto by the Convenience of their Situations, and the Plenty of Materials they afforded. In the Con-

[^235]
## of GREAT BRITAIN.

Atruction of thefe, and of fuch Fortreffes as were requifite to fecure them, in the Building of Bridges, and other neceffary Means of Communication, the Direction of the King, affifted by his Council, was punctually obeyed; for as thefe Directions were dietated by Prudence and Experience ; and were vifibly intended for the common Good, they were willingly fubmitted to by the People, who felt the Advantages that flowed from them, and thus thefe Kingdoms gradually increafed, and as the principal Object in Time of Peace was Cultivation, the Country grew populous of courfe, and as from their Plan of Policy, Power and Rank attended Property, a Spirit of Emulation every where produced Plenty, fo long as there was no Interruption of Peace ${ }^{1}$.

Thise People before their Entrance into Britain were famous for their Exploits at Sca, and were eftecmed the hardieft and the moft enterprizing Seamen in thofe Days. The Recruits that from time to time they received, and which enabled them to keep, and to extend their Poffeffions here, came to them likewife by Sea. When more thoroughly fettled, they kept upa conftant Correfpondence with their Neighbours; and all this induced them to be very attentive to the Ports in their little States, which they fortified early, and built Towns in their Neighbourhood. They received foreign Merchants with great Kindnefs, allowed them to trade freely, and when any Vefiels were wrecked upon their Coafts, behaved with Juftice and Humanity to fuch as efcaped. Thefe were among the Cuftoms they had learned from their Anceftors, and which had the Force of Laws in the Countries with which they had an Intercourfe. A Spirit of Commerce prevailed amongft them from the very Beginning, and of courfe enlarged in Proportion with their other Improvements, fo that Trade was ever efteemed amongft them as a very honourable Occupation; and though their Veffels were not very large or ftrong, yet they were very numerous,

- It hath been proved, that Gavelkind fignifies properly Land yielding Rent, or in other Words a Country thoroughly impruved. In order to this, almoft every Rank of People had fome Kind or other of Property, which cacouraged their Induftry, and was the Caufe of that general Cultivation before-mentioned. Many Portions of Land were let our by great Proprietors on a referved Rent, and this was filed Gaffuland. Thefe again had their Undertenants, as well as the great Proprietors, who had fmall Pieces of Land in Confideration of the Services they performed, fuch as reaping their Landlord's Corn, mowing his Grafs, carrying his Grain to Market, which fad all their proper Names, Work-land, Cot-land, Aver-land, Drof-land, Swilling-land, the Explanation of thefe and many more may be found in the very learned and induftrious Mr. Somner's Treatife of Gavelkind, P. 115 . This may ferve to convince the Reader of the Truth of what is fiad in the Text, and to flew lim that what hath been advanced in the former Book and clfewhere, in refpect to the Application of the Saxons to Hurbandry is perfectly well-founded. It may not be anifs to add, that though the Cuftom of Gavelkind is now chiefly to be found in Kent, yet in the Time of the Saxons it prevailed generally dirough the whole Kingdom.
and ferved to find Employment for a great Body of Seamen, as is evident from the Fleets that they occafionally fitted out c .

The People whofettled here after their driving out the Britons, though of different Nations, had the fame Language, and in general the fame Cuftoms, of which they were very tenacious, and of courfe thefe had all the Force and Efficacy of Laws. But though in general they were the fame in refpect to their Nature, yet they might and did vary in particular Circumaltances, and thefe Variations fubfiited even after the feveral Principalities were united into One Kingdom. In each of thefe there can be no Doubt that the Prince had a competent Revenue for the Support of his Dignity, and this in virtue of their ancient Cuftoms arifing from the Reafon of the Thing, for with regard to written Laws they had none for a Century and a Half after their coming hither, and even thefe enact nothing upon that Head, becaufe, as we hhall fee, it was unneceffary. In reference to this as well as other Things, the fame Rule it is likely prevailed in every One of their States, which made no Alteration requifite upon their Coalition, of which we do not perceive any Traces. All that hath been faid regards the pure Saxon Conftitution while that remained unaltered, and the People unmixed with Danes and other foreign Nations; for in confequence of this many Alterations were made, and many Innovations took Place, for want of attending to which many Things have been reprefented as fuch, which in reality, though they happened in the Time of the Saxons, were by no Meaus Part of the Saxon Conftitution. For this appears to have been very fimple in itfelf, very regular in its Forms, and very uniform in its Ope-

[^236]
## of GREAT BRITAIN.

 rations fo long as it continued to fubfift upon the Bafis of its original Principles $d$.The Firft of thefe was, that to whatever regarded the common Safety or Welfare of all, every Man was bound to contribute in his Perfon or in his Property. In cafe of a War, every Freeman was confidered as a Soldier, and the neceffary Levies were made by the Direction of the King, affifted by his Council or Senators, who were prefumed to be the fitteft, and were therefore confidered às the legal Judges of the Manner in which the Force of the Nation was to be exerted. In reference to Fortreffes that were to be conftructed for the public Security, and in every Thing of the like Nature the People were obliged to bear the Expence, not in an arbitrary Manner, or at the mere Will and Pleafure of the King, but according to a certain Rule, that is, in Proportion to their refpective Shares of Property, which being founded in natural Equity, and their Poffeffions being known with great Certainty, met with a ready and general Submiffion. Thefe Regufations might very properly be faid to conftitute a public Revenue, as they were raifed only for public Purpofes in fuch Seafons only, as they were apparently requifite, and in fuch a Manner as could never tend to Opprcflion. It was in confequence of this, that in fucceeding Times, when Alfred framed what hath been juftly ftiled his Conftitution, he regarded thefe fundamental Laws as the Groundwork of his Syftem, and only modified them in fuch a Manner as to render them more eafy and more effectual, in which having the Concurrence of the Legillature as it then ftood, and the general Approbation of all his Subjects for his Wifdom and public Spirit, he met with no Oppofition. He feems indeed in this Refpect to have done no more than his Firft Predeceffors in their Eftablifhment of the original Saxon Principalities, to each of which there is no Doubt that:

[^237]
## 504 The POLITICAL SURVEY

they gave the Form of Rule, which they in Conjunction with theis Council efteemed fitteft for the Situation of their refpective Countries, and the State of their Inhabitantse.

The proper Revenue of the Saxon Kings arofe in the Firf Place from Lands affigned them, or otherwife acquired in different Parts of their Dominions, which they let out to farm, and had their Servants upon them in the fame Manner with other Proprietors. This was very convenient or rather requifite, as for the Sake of infpecting public Affairs, nolding Courts of Juftice, and other Purpofes, they travelled throigh different Parts of their Territories, and took up their Refidence either in Towns or in theHoufes belonging to their Royal Demefnes, which, as fome old Writers inform us, were commonly fuch as had been the Villas of Roman Governors, very probably on account of their well chofeil Situations. Thefe Poffeffions were partly of a private Nature, fuch as came to thefe Princes by Defcent, or were acquired by Purchafe, which they might beftow by Gift, difpofe of them by Will, or alienate in any other Manner they thought proper. Others again were confidered as Crown Lands, which the King could not part with, or beftow even upon the Church, to which moft of thefe Monarchs were very liberal, without the Conicit of their Nobility. In Proportion as their Dominions were extended, thefe Crown Lands became very confiderable, and afforded the Monarch who pofieffed them no contemptible Income. They had alfo an Opportunity of gratifying their younger Children and other Relations, fuch of their Nobility as married their Daughters, and others who ftood high in their Favour, with thefe Manfions and the Lands belonging to them, which by this Means

[^238]
## of GREAT BRITAIN.

were always kept in good Order, and in confequence of this, however rieh the Prince might be, it was without any Detriment to or laying any Burden upon the Subject $f$.

The Temper of the Saxons was fierce, and their Manners rough at their coming here, whence Quarrels were very frequent, and fometimes attended with BloodGhed, which though they held worthy of Punifhment, yet it was not by Death or Imprifonment, but by a Fine proportioned to the Rank of the Perfor flain. Leffer Offences were in the fame Manner panifhed by Mulcts, and no corporal Punifhment (for a long Time) inflicted on any but Slaves. The Cuftoms they brought with them, were confequently eftablifhed in their feveral Principalities, and though they might be afterwards regulated by, were certainly more ancient than any of their written Laws. Of thefe Fines a large Share was appropriated to the King's Ufe, and though this Proportion might, as indeed it did, differ in different Principalities, and this Difference continued to fubfilt when they were united under One Monarch, the Part appropriated, whatever it was, remained the fame. Thefe Fines for greater and Mulcts for fmaller Offences were paid in Money, and confequently this is to be regarded as another, and very confiderable Branch of the Revenue of thcfe Saxon Kings. True it is, that this Income was incertain in refpect to its Produce, but then it was equally certain and general in its Nature, and fo reafonable, and of fuch apparent Utility, that it was adopted in fucceeding Times upon the original Principle, that thofe who vielated the King's Laws made for the Benefit of his Subjects, hould pay a Compenfation to the King, in Proporportion to the Nature of the Offence g.
' As to the Demefne Lands of the Saxon Kings, their Royal Manors and Houfes upon them, we have the clearelt and moft authentic Evidence from a Variety of Laws relatiag to them, and the Privileges annexed to them. Befides thefc, all the Royal Charters for granting thefe Lands to Churches and Monafteries, with the Confent of the Nobles, are fo many additional Proofs. Befides thefe we have a Variety of Teftaments, particularly that of Alfred the Great, printed at the End of Alfer:s Life of that Prince, in which he recites alfo his Father's Laft Will, and his particular Title to thofe Lands which he affigns to his Children and Relations. We are alfo told that he made a general Defription of the Country, or a Kind of Survey, in which the Royal Demefnes and all the other landed Property in the Kingdom was fet forth; and this is fuppofed to have been the Model of the Conqueror's Doomiday Book, which likewife affords fufficient Teftimony as to the Truth of what is laid down in the Text, and though very probably the Crown Lands might be much diminilhed by the Revolutions that had happened in the State, yet it appears from thence, as we fhall hereafter fee, that Edward the Confeffor was poffeffed of a large landed Property.

SAll Ranks of Men amongt the Saxons had a certain Rate or Sum fet upen their Heads, which were to be paid in the Manner their Laws directed in care they were killed. This Fine was termed Wergild, that is, Man's Price ; the King's Head was eftimated at Twenty thoufand Thrimfa's, as to the Value of which there hath been many Difputes, but the judicious Doctor Clarke feems to have made it clear that the Thrimfa was Three Pence. The Archbifhop, the Yos. 11.

## 506 The POLITICAL SURVEY

-At the Firft Erection of the Saxon States, their Monarchs found it requifite to appoint certain Places, where People might live together in Safety, and carry on their Dealings with each other with Facility and Freedom. Thefe were called Burghs, that Word in its primitive Signification implying a Place of Strength. Thefe were all mediately or immediately of Royal Creation; for though many of them belonged to Prelates, Monafteries, or to Lay Lords, yet even thofe were erected by Licence from the Crown. For the Eare and Commodity of the Inhabitants open Markets were fixed in them, with certain Privileges, and in cosifequence of this Tolls were received and Duties impofed upon the Goods carried thither for Sale, which Impofitions were collected by a Bailiff, and in Procefs of Time, for the Conveniency both of the Crown and of the Piople, the Produce of them was let to the Burgeffes themfelves, at a ftated annual Rent, which was ftiled a Fee-farm, and this being paid, the Tolls and Duties were collected for the Benefit of the Inhabitants. Befides their Fee-farm, or the Tolls and Duties, if they were not fo let, fuch of the Burgeffes as lived in Houfes built upon the King's Demefne, paid him Rent, as others did to their refpective Lords; and from thefe Two Branches there arofe a Third Kind of Revenue to the Crown, more certain but perhaps not more confiderable than the former. We might feeak more fully, and enter more at large into thefe Points, if we were poffeffed of better Authorities. The beft and fureft Guide we have, is the Book of Doomfday, but this Record being fettled fome Years after the Conqueft, and reciting only the State of Things in the Time of Edward the Confeffor, when great Alterations had been made, and many foreign Cuftoms adopted, we cannot with any Certainty collect from thence what the State. of thefe Places were in earlier Times, or when the Saxon Government was in the moft flourihing Condition h .

Prince, the Thane, and fo down to the loweft Freeman, had his Value. But this was not all, every Limb was alfo valued, and every Kind of Wound or IDjury. Thefe were punihhed by Mulets, called in Saxon Wites. In fome Cafes the Wergild was divided : The King had the Firft Part, which was called Frith-bote, which was for the Breach of his Peace, and for the Lofs of his Subject. The Lord of the Perfon Aain, if he bad One, had another Part, which was ftiled Man-bote, for the Lofs of his Man. The Third Part belonged to the Relations, and was called Cengild, that is, Kindred's Money. By this Price of their Heads, the Ranks of Men were diftinguifhed into Twelfhind, Sishind, and Twyhind. The laft was an ordinary Perfon whofe Head was eftimated at Two hundred Shillings, the Second at Six huodred, and the Firft at Twelvo hundred Shillings. What very plainly proves, that this was an original or fundamental Law which the Saxors brought with them, is its prevailing among other Northern Nations, for the Danes had it likewife, though their Wergild feems to have been One Fifth lefs than that of the Saxoms. Kiog Alfred raifed the Price of an ordinary Man's Head from Thisty to Two hundred Shillings.
${ }^{1}$ It is hoped, that the Account given in the Text will give the Reader a competent Notions, of Saxon Burghs, which was their general Name for Towns of what Size foever. They were

## of GREAT BRITAIN.

It hath been elfewhere very fully fhewn, that from the Firf Settlement of the Saxon Kingdoms, their Subjects held a Correfpondence with thofe of Foreign States for their mutual Conveniency. Indeed if we had no Authorities it would be impoffible to conceive Things otherwife, or to apprehend that an Illand abounding with fine Ports inhabited by a Nation accuftomed to the Sca, and gradually poffeffing all the natural Commodities of this Country, fhould not avail themfelves of foreign Trade. It is no Objection to this, that in the Saxon Laws Artificers and Tradefmen are ftiled Merchants. They made indeed no nice Diftinctions in thofe Days, yet we find even in thefe Laws Mention of Traders who croffed the Seas in their own Veffels, and thofe Veffels freighted on their own Account. The Truth certainly is, that Commerce there was in all maritime Parts of the Kingdom, but it fluctuated like other Things, fometimes flourifhed, and fometimes decayed, according to the State the Nation was in. But in every Condition of Trade, the Kings levied Cuftoms on Goods imported and exported, and the Perfon who collected thefe was filed a Port-reeve, though very poffibly he might alfo collect the Tolls, Inland Duties, and Rents in the fame Place. Of all this we have as much Certainty as the Nature of the Thing requires, and therefore this is allowed to have been another Branch of the Saxon Revenue i.

These
appropriated for the Habitation'of fuch as got their Living by buying and felling, and the Burgeffes or thofe who dwelt in them were Mechanics, Tradefmen, and Merchants. They had Privileges fuitable to their Mode of Life, clected Magiftrates, and tranfacted other Bufinefs in their General Meeting, which was filed a Burgmote. Thefe Privileges, and their. having regular Markets and Fairs, diftinguihed them from Villages, which were folely inhabited by Perfons employed in Hulbandry. The latter were more numerous, the former of greater Confequence. In 'lime of War however they were expofed to all its Inconveniencies, were frequently plundered, and fometimes deftroyed, more efpecially by the Danes. It is from thence, as we have hinted in the Text, that there is no fpeaking with Certainty or Precifion of their Size or Number of Inhabitants, as the Reader may be convinced, by confulting what is faid of Stanford, Camdeni Britannia, p. 401. All that we fhall add farther upon this Subjeft is, that moft of the local Cuftoms, many of which are very fingular, are derived from thefe Times, and in feveral Places have been continued in Practice, though the Reafons of their Inftitution are no longer known. If the Reader is defirous of entering farther into this Matter, he may confult the Confuetudines et Jora Anglo Saxonica ex Libro cenfuali, dicto Doomefday; which is printed at the End of the Firft Volume of Dean Gale's Collection of ancient Hiftorians.
${ }^{i}$ The Attention fhewn to Trade and Commerce did not confint folely in the providing proper Places for the Refidence and Accommodation of fuch as were concerned thercin, but appenred likewife in the Diverfity of Weights for different Kinds of Goods, and for the Difpofal of them in Wholefale and Retail. The Variations in the Saxon Money which hath given fo much Trouble and Perplexity to our Antiquaries, arofe from the fame Caufe. It is evident that before the Time of Alfred, the Saxons employed their Veffels chiefly, if not wholly in Trade, and as we have Shewn in the former Book, this obliged him to conftruct Ships of greater Capacity and Strength for guarding the Coafts. The great Fleets, which, if any Credit be due to all our Hiftories, were employed by Edgar, required many thoufand Sailors, and thefe could not have been found if there had not been an extenfive Commerce, in confequence of the Care taken, of which, ac-

These are all the Branches of the Saxon Revenue, that with any Certainty are known, and we may have leave to fay, fhew the Excellency of that Conftitution, which was alike applicable to the Support of the regal Dignity whien confined to the little Sovereignty of Kent, and when extended to all. England. From the Nature of their Government, thefe Princes, though they had a Place of peculiar Refidence, were obliged neverthelefs from a Variety of Caufes to vifit different Parts of their Dominions, which by the Diftribution of their Demefnes, they were enabled to do without any Inconvenience to themfelves or Burden upon their Subjects. Theie allo afforded them, as we have before remarked, competent Provifions for their younger Children, and put it alfo in their Power to reward their faithful Servants. We find them likewife in a Capacity to erect and endow Monafteries, and to make other confiderable Donations to the Church, in which they had the Concurrence of the Nobility, who were certainly the proper Judges of their Prudence in fuch Alienations, and would very probably have prevented them if they had appeared incompatible with the public Good, which is the more likely, as they actually interpofed when it was done without their Confent, treating fuch an Alienation as illegal and invalid $k$.

In other Refpects it is very apparent, that they were in a Condition to fupport their Dignity, to build Palaces, to live according to the Mode of thofe Times in Eafe and Affluence; to fend Alms and to make Journies to Rome at no fmall Expence; to keep up a Correfpondence with foreign Courts, and to make Intermarriages with Princeffes of the moft refpectable Houfes in Eurcpe. The Adverfity and Profperity of Alfred was in

[^239]
## of GREAT BRITAIN.

common with that of his Subjects. When they were reduced to Indigence fo was he, and when by his Conduct and Courage, and their Affiftance, the public Affairs were retrieved, he of courle recovered his former State and Revenue. The One was the natural Confequence of the other, and both were effected by the natural inherent Force of the Saxon Form of Rule. The Grandeur and Magnificence of Edgar's Court was the apparent Effect of the flourihhing State of his Dominions, and of the general Tranquility and Opulence of his Subjects. It was not till the unfortunate Reign of Ethelred that we hear of any extraordinary Aid or Impofition, and this when done was done by the Confent of the States. In the fucceeding Diftractions the Saxon Conftitution was very much weakened, and in many Inftances altered, as we have already fhewn. But even in the Reign of Edward the Confeffor, the Revenue feems to have been very fufficient for his Support, and upon his Demife Harold made very great Hifforts without any other Affiftance, than he derived from what yet remained of the Saxon Conftitution I.

This Revenue was not only at all Times adequate to the Purpofes for which it was given, without being oppreffive on the Community, but which was its greateft Excellence, turned very much to their Advantage. The fettled Principle of drawing the neceffary Supports of the State from Land made a general Improvement of it requifite, into whatever Hands it fell, for which the Saxon Oeconomy was admirably calculated; and the Poffeffions of the Crown and of the Church, being as well or better cultivated than the Reft, what they held could be no Lofs to the Nation. In the next Place, the Appropriation of Fines and Mulcts rendered it the Intereft of the King and his Officers to be very'attentive in the Execution of Juftice, as the Provifion made by Appeals from inferior Courts was very wifely calculated to prevent Abufes. The erecting of Burghs was beneficial $t$ ) the King and to the Lords of the Soil, and at the fame Time of great Utility to the Bulk of the People, who reforted to the Markets and Fairs in them for the Difpofal of their Commodities and the Pur--

[^240]$5: 0$ The POLITICAL SURVEY
chafe of Neceflaries. The King likewife found his Account in cherif ing Commerce, not only from the Duties he received, but for the publ Service in raifing of Seamen; and in all Probability fome of thefe $M$ narchs having it more in their Power than their Subjects, might becort Traders themfelves, and thereby increare their Income m .

Upon the Whole it muft be evident to every candid and confidera Reader, that from the whole Frame of the Saxon Government, the Ir terefts of the King and Kingdom were thoroughly and inseparably unites The whole Current of their Hiftory, as fufficiently appears from the Sketc given of it in the former Book, and which was there given for that Pur pofe, very clearly proves this to be a Fact, and not a Conjecture. If t this we add, that thefe Saxon Monarchs, at leaft fo far as credible Hif tory reaches, were not much difpofed to foreign Wars or forcign Con quefts, that is, without the Bounds of this Ifland, we may from thence dif cern the Credibility of themfelves and their Subjects becoming rich, a leaft for thofe Times, fince by far the greatef Part of what their Commerct brought in mult have remained in their Hands, and though it is agreec that all Ranks of People lived (at leaft in Times of public Quiet) in greal Plenty, yet this was from their own Produce, and being the Refult of thei Induftry could never impoverifh them ${ }^{n}$.

[^241]
## of GREAT BRITAIN.

Two hundred thoufand \$ounds of their Money, which I freely acknowledge I know not how to value in ours, though much better Judges than I have computed it at feveral Millions. If this is not as frong and as convincing a Proof as could be withed in refpect to the Truth of what is advanced in the Text, it will be very hard to find one ; for if we confider it maturely, we mult fee that nothing but the Balance of a very lucrative foreign Trade, could have repair'd in fo hort a Space, a Country fo totally exhaufted. It may however add fome Weight to what hath been faid, if we farther obferve that a Norman Monk affirms, that the Revenue of $\mathbf{W}$ illiam the Conqueror amounted to upwards of One thoufand Pounds per Diem, or about four hundred thoufand Pounds per Annum, making upwards of a Million in our Coin, and if all the Circumftances be taken in that make a Difference in the Value of Money in thofe Days and in ours, it will amount to a very great Deal more. Alfredi Recuis Prefatio ad Paftorale Sancti Gregorii. Affer. Menevenf. p. 15, 27. 3 1. Spelman's Life of Aifred, p. II. Chron. Saxon. p. 126-i51. Oder. Vital. Hift. Ecclef. p. 52.3 .

## C H A P. IV.

## The public Revenue from the Coming in of the Normans to the Reftoration.

THE Metbods employed in raifing the Revenue under the Normans, very complex. The landed Eftate of the Crown compofed of Demefines and Efcheats. The Ifjues and Profits, from the Counties farmed by the Sheriffs. Fines, Amerciaments, Licences, छֹc. formed anotber Branch of tbe Income. Cafualties of various Kinds brought in alfo confiderable Sums: Danegelt, Aids, Scutages, Eic. were Taxes of a more general Nature. Cuftoms and otber Iinpofitions rigoroufly exacted. The Monies on various Pretences levied upon the 7 feus, brought into the Exchequer, wbich bore tbeir Name. Tbe Operations of thefe Taxes on the Circumftances of tbe People confidered. Many Accidents concurred with thefe in producing finifer Effects. Tbe. Weight of thefe Grievances at length produced Magna Cbarta. The Clergy tax themfelves fpparately in Convocation. Parliamentary Taxes differently. modelled. The Rife and Nature of Tonnage and Poundage. Tibe Frequency of foreign Wars the great Source of national Calamities. This Evil received a Cbeck from Edward the Fourth and Henry the Seventh, wobich gave a new Face to Afairs. The old Syltem being revived produced the former Efects. Tbe State of Tibings during the Reign of Edward the: Sixth. Condition of the Revenue in the Time of Queen. Mary. The Wifdom of Elizabetb's Adminiftraticn in a Variety of Inllances explained. Tbe judicious Meafures taken to promote Induftry and to extend Commerce. The perfect Refitution of the Coin to that State in wubicb it. bas ever. ince: xemained. Tbe Revenue as it flood in the Time of King Fames. The Metbods employed for raifng Supplics by Cbarles the Firf. The. Manner ing - which.
avbich the Parliament levied Money during the Civil Wat. An Account ! Cromvell's Revenue before and after bis afluming the Tit'e of Protector The Conclufion, with Remarks.

AS the Mode of providing for the public Service, and defraying the Ex pences neceffary for the Support of Government, was, as we hav :already feen, very fimple and regular fo long as the Saxon Conftitution re mained in full Vigour, the Change made by the Norman Conqueft wa: in nothing more conficicuous than in this, which was equally complicatec and oppreffive. To enter fully and minutely into this Matter would require a Volume, and at the fame Time would be unneceffay $y$, as it hath already exercifed the Pens of very able Writers, who have very fully hewn the Truth: of what hath been afferted, though they have not treated it in its utmon Extent. What is propofed in this Chapter, is to point out a few of the many Inftances in which the Manner of levying Money upon the Subject affected the Cultivation of Lands, the Indultry of the Peopie, their Commerce, and in a Word Property in general. In this we may be the more concife, as having been obliged to touch many of thefe Points already, more efpecially in the former Book, as the Hiftory of our Norman Kings is continually perplexed with Difputes about the Claims of l'rerogative to raife Money at Pleafure, and the Endeavours ufed to reduce thefe Claims within proper Bounds ${ }^{\text {a }}$.

In order to form fome Notion of the Revenue of our Norman Kings, we muft take Notice in the Firf Place of their Crown Lands, into the Poffeffion of which the Conqueror entered as Succeffor to Edward the Confeffor. Thefe, or at leaft a very great Part of thefe he retained in his own Hands, letting out moft of them to Farm, for the Supply of his Houfehold, and for other Purpofes, converting others into Forelts, to gratify his Paffion for hunting, and tranfmitting both to his Pofterity, who employed them in the fame Manner b. Befides thefe Royal Demesnes, himfelf and

[^242]
## of GREAT BRITAIN.

and his Succeffors held many other Lands by Forfeitures, Extinction ot Heirs, and various other Circumftances under the general Title of Escheats; and thefe, when in the Crown, were as much the Property of the King, and the Profits arifing from them as duely brought into the Exchequer as thofe that arofe from the former. Thefe Monarchs therefore had not only as large, but a much larger Land Revenue than the Saxon Kings, to which we may add, their having a greater Plentitude of Poffeffion, fince they were, or at leaft acted as if they were at full Liberty to alienate them at Pleafure. X Prerogative confidered at firft as highly advantageous to their more potent Subjects; but which in Procefs of Time, and when the Conftitution came to be better regulated, was found very inconvenient and prejudicial to the People c.

The Conqueror indeed made a very free Ufe of this extemfive Power, and diftributed the far greateft Part of the Lands of England to thofe by whofe Affiftance he had acquired them. But this Liberality, as it proceeded from political Motives, and fecured to him a ftanding Force without Expence for the Prefervation and Protection of what he and they had acquired; yet it was not fo abfolute a Gift, as to be held fimply by that Condition, but was likewife fubject to feveral others, which were readily fubmitted to, not only for
were put under new Regulations. The Cities and Burghs paid their Rents, and had fome Priviliges and Exemptions, and in particnlar they were not liable to the Danegelt; but on the other Hand they were talliated as the King's Occafions required, at fuch Times and in fuch Proportions as he and his Council thought fit, and the Sums affefled upon them were fometimes levied upon the Community, fometimes by a Poll Tax, and fometimes by compounding both Methods. As to thofe who cultivased the King's Lands, they were fo hardly treated that they deferted them, for being Freemen they were unwilling to become Villains ; at length however they returned, and fubmitted to take them again on the Teinure of privileged Villenage, by which they preferved the Freedom of their Perfons, and their Services, though reputed bafe, were however certain. Hence, though thefe Lands have been long fince alienated from the Crown, this Tenure fill remains, and thofe who hold by it are fliled cuftomary Tenants, that is, not holding at the Will of the Lord, but by the Cuftom of the Manor. Dial. de Scaccario, lib. i. cap. 7. Bract. 'ib. i. cap. 1 i. Blackfone's Commentaries, book ii. chap. vi. fect. 4. It is eafy to conceive how much thefe arbitrary Taxes, incertain in Point of Time as well as Proportion, and oppreffively levied, muft have diftreffed Trade and difturbed Hußbandry.
c Efcheats, coming by fo many different Ways into the Hands of the Crown, afforded a very Jarge Revenue, more efpecially as the feudal Syftem admitted many Forfeitures, of which the Crown took advantage, and if upon Petition the Lancis were reftored, a confiderable Fine was exacted. When Archbihopricks, Bifhopricks, or Abbies of Royal Foundation became vacant, our Norman Kings feized the Lands belonging to them, and not only enjoged the Profits, but treated them as if they had been their own Demefnes, till the Succeffor was reftored by the King's Writ to his Temporalities. The Lands of Englifhmen who adhered to Harold, or who afterwards attempted to fhake off the Norman Yoke, were confidered as Efcheats, and under this Colour were granted to the Norman Chiefs, who divided them again amiongt their Followers according to that Syftem, which was natural to them, though uew to the Englifh. In fucceeding Times it was faid, that though the Crown might grant Efcheats; yet the Demefnes could not be alienated; but thefe by Degrees were fo confounded as not to be eafily diftinguifhed.

the

## 514 The POLITICAL SURVEY

the Sake of acquiring fuch ample Poffeffions, but becaufe Lands had be generally held under the like Tenures in Normandy ; and fome of the Conditions introduced by the Danifh Monarchs, were not totally unknok in England before the Conqueft d. The Crown alfo let out to Farm $t$ Profits arifing out of Counties and Boroughs, for which the Sheriff, nc become a minifterial Officer, accounted regularly to the Exchequer, Court, which, as fome of our ableft Antiquaries affert, was alfo deriw from the fame Country, though others think that the Norman Exchequ rather was regulated according to that of England; whish Sentiment though they feem fo repugnant, may poffibly be reconciled, by allowir the Court to have come from thence, and the fubfequent Regulations ma here adopted there. However this be, the Exchequer feems clearly to ha been coeval with the Conqueft, and the Firt Officers therein, fuch of tl Norman Nobility as were capable of thofe Employments, from whene the Judges to this Day retain the Title of Barons. The Jurifdiction this Court was at firft very extenfive and embraced almoft all Kinds Caufes, though in Procefs of Time, and in confequence of other Judic: tures being erected, it became merely a Court of Revenue e.
d As to the Earls, Barons, and great Men who held of the King in Capite, the Number them as collected from Doomfday was about Seven hundred. Their Dependents hedd of the Knights Fees, both by the fame Military Fenure of ferviag the King in the Field, the only 0 in thofe Days reputed free and noble, as if this Appearance in the Field, when fummoned, h: been their fole Service. This however was not the Cafe, for on certain Occafions they furnifh Aids, of which hereafter. If at the Tenant's Deceafe his Heir was of full Age, he paid what w called a Relief, which was at firft arbitrary, at length fixed to a Hundred Shillings for Knight's Fee. Befides this he paid, if he held immediately from the King, Primer Seisen, whio was One Year's Value of the Land he immediately inherited, and Half a Year of Land expestan and this he did before ho could fue out his Livery, by which he came into Poffeflion. But it il Heir was under Age he became a Ward to the King; or to his Lord till he was of the Age Twenty-one, during which Space his Guardian had the Profits of his Lands, and thofe of Female to Fourteen. The Guardian was befides entitled to the Value of his Marriage, that i he might propofe it, and if refufed, the Value was to be afcertained by a Jury; and if the He married without Confent, the Guardian had Double the Value of the Marriage. When of $f:$ Age the Heir fued out his Livery, for which he paid Half a Year's Rent, but no Relief. If I held a Kight's Fee he received that Honour, or paid a Fine if he declined it. If the Tenas found himfelf obliged to part with any of his Lands; this could not be done without Licent from the Lord, who for that exacted a Fine. Laftly, the Fee was fubject to Eifcheat on $t$ Extinction of the direct Heirs from the Firft Poffeffor, and to Forfeiture in cafe of Treafon, F lony, \&c. Such was the Nature of this free Tenure, and fuch the Methods taken to extra a Revenue from it.

- The Rents, Iffues, and Profits of the Countics were farmed by the Sheriff, who a counted for their Produce to the Barons of the Exchequer in Michaclmas and Eafter Term His Power was very great, and he executed all Writs directed, to bim from the King. In tl Time of William Rufus, who kept Bifhopricke long vacant, and took the Profits of them as if the had been his own Demefnes, he leried large Sums by Way of Reliefs on feveral Perfons by his Wri and in cafe of Refufal or Xon-Payment direeted their Lands and Effects to be feized. Heming

Another Branch was that of Proffers, Fines, Amerciaments, \&c. thefe and a Multitude of other Impofitions, the Names and the Nature of which can only be known from the old Records, were levied upon the Subject by the regal Authority, and for the King's immediate Profit, which thew that there was fcarce any Tranfaction of a public or even of $a$ private Concern, in which the Crown did not take Occafion to interfere, and this always for its Emolument. Men in thofe Days paid not only for their Offences, but for Favours, for obtaining Juftice, for the accelerating of it, onif that fuited them better, for delaying it, for the Crown's Interpofition in certain Cafes, or for preventing fuch Interpofition; fometimes People were allowed to bid againf each other; Inftances of all which ftill remain upon the Rolls, though without Doubt many more have perihhed. It is on the Whole very apparent, that though the Particulars of which this Branch of the Royal Income was compofed, were frequently inconfiderable, yet Numbers of them occurring continually, muft have fwelled it to a very large Amount, and when attentively confidered, affurds us a very ftrange Idea of the Times, as well in refpect to the Crown as in regard to the Subject f.

As this of which we have been fpeaking was, though incertain, yet 2 permanent Income, fo there was another Branch, and that too not inconfiderable, which was cafual, and like the former, comprehended under a Variety of Heads, fuch as Treafure-trove, Waifs, Wrecks, Forfeitures of Felons, Fugitives, Outlaws, Ufurers, and other Delinquents, with feveral more of a fimilar Kind, which gave Occation to many fevere Proceedings, and to no fmall Oppreffion g. For as the Power of the Crown was not to

> be

Chart. Wigorn. p. 79. It is eafy to apprehend that in fuch a State of Things, and when every Kind of Poffeffion was fo infecure, there could be no great Attention paid to Cultivation beyond what immediate Neceffity required. It is true that in Procefs of Time fome of thefe Inconveniencies were removed, as we have elfewhere thewn, but this ferves only to prove, that from the Light of Experience it was gradually difcerned that this Syflem, as originally framed, was found to be intolerable.
f Befides thofe meationed in the Text there was an ample Revenue raifed out of the Defaults, Trefpaffes, and Pourpreftures of the Forefts, exclufive of the harfh and cruel Punifhments inflitted upon Offenders. In the Hiftory of the Exchequer, there are Four Chapters fent in the Enumeration of the feveral Kinds of Fines and Amerciaments, and numerous Inftances given under every Head, fome fo fingular, fo fmall, and of fuch a Nature, as nothing but the Authorities there produced could induce us to believe. They reached not only to Individuals, but to Corporations, and the little Guilds or Fraternities of Tradefmen in Corporations, which muft have created infinite Trouble and Perplexity. It may nor be amifs to obferve, that with regard to legal Proceedings, a Remedy was promifed in the Great Charter, wherein the King engages not to deny, fell, or delay Juftice, which did indeed moderate in fucceeding Times, but did not entirely eradicate this Evil.
8 The Reader who wilhes to be more clearly informed in refpect to thefe Particulars may be gratified by confulting Mr. Madox's Hiftory of the Exchequer, P. 234. The Inflanices he

## 516 The POLITICAL SURVEY

be directly refifted, and all Applications for Mercy or Mitigation, however well founded, only involved the unhappy in a long Train, perhaps of fruitlefs Expence, it as frequently ferved to enhance as to alleviate the Misfortune. Befides, this Variety of Claims afforded an Opportunity to the inferior Officers of the Crown to difturb and harafs the Subject on Pretences that in thofe Days were feldom wanting, to fuch as were difpofed to gratify either their Avarice or their Refentment at the Expence of their Neighbours.

As thefe feveral Branches reached gradually to a Number of Individuals, by which large and continual Supplies were brought into the Royal Coffers, fo there were likewife Means of levying fill larger Impofitions, as fpreading wider in their Influence, and which were practifed only on extraordinary Occafions, and fuch as were fuggefted to be of public or national Concern. Thefe were ftiled Danegelt, Aids h, Scutage, Tailliage, Gifts. Of thefe Danegelt feems to have been the moft general, being in effect what is now called a Land Tax through the whole Kingdom, certain in its Extent, though not in the Rate, which varied according to the Caufe for which it was levied, or rather according to the Will of the Prince. It had been remitted, as hath been mentioned in the former Book, by Edward the Confeffor, but was revived by the Conqueror, and frequently, if not conftantly levied by the firf Three Norman Kings, and then, at leaft, under that Name, which was exceedingly odious, difcontinued. The Reft were not fo univerfal, but they fell notwithftanding
will meet wiph, plainly evince the Profigacy of thofe Times, the Poverty of the People, the Avidity and Meannefs of heaping Diftrefs upon Diftrefs, which alfo evidently fhews that the Crown itfelf was neceffitous and needy.
${ }^{\text {b }}$ Aids were originally voluntary Affifances which the Tenants gave to their Lord on preffing Occafions, but in Procefs of Time came to be exaCted as of Right. They were Three. Firf, to make the Lord's eldeft Son a Knight, which was done with much Solemnity, and at a great Expence. Secondly, to marry his elden Daughter ; and Thirdly, to ranfom his Perfon if taken in War. The King had thefe Aids from his Tenants, and inferior Lords from their Vaffals, from which none were exempted, fince even Abbies paid them to the Defcendants of their Founders. They were all founded on One general Principle, that the Lord being a Military Man concerned not himfelf in pecuniary Affairs, and was therefore to be helped out of his Neccflities by thofe who held under him. On this Principle inferior Lords demanded hids to pay their Reliefs to the Crown, and fometimes to pay their Debts. But this was not the only or the greateft, Grievance. There was no fixed Rule or Rate by which they were to be regulated. King John's Magna Charta reftrained them to the Three ancient Aids; but this was omitted in the Charter of Henry the Third, and the old Evils revived till they were again removed by Edward the Firft. By the Firft Statute of Weftminftet the Aid of a Knight's Fee was fixed at Tweuty Shillings, and the like Sum on Twenty Pounds-a Year held by Socage. This bowever was underfood to relate only to inferior Lords, which however was remedied by a Statute of the Twenty-fifth of Edward the Third. It may not be amif' to obferve, that we find this Term frequently, though improperly applied to other Taxes,

## of GREAT BRITAIN.

very heavy on thofe who paid them, and were highly detrimental, as may be eafily conceived, to Induftry in general, and to the Cultivation of Land in particular; for in thofe Days the drawing Money out of thePockets of the Subject for the Purpofes, whatever they were, of the Crownwas alone attended to, and the Interefts of the People, or the Confequences fuch Taxes might produce, were never, or at leaft feldom confidered i.

Customs upon Merchandize were likervife levied, and levied according to the Temper of thofe Times with much Incertainty, and under a Diverfity of Denominations, which could not fail to render Commerce languid and precarious. To this feveral other Circumftances concurred, fuch as the Confufion attending fo fudden and fo total a Revolution. The Wars in which our firft Norman Princes were continually involved with their Neighbours, the Diftrefs and Defolation of this Country, which of courfe diminifhed its Produce, the Variety of Duties exacted from foreign Merchants, the Severity of the Penalties impofed, and many others k . It was natural from fuch Difcouragements that Trade fhould decline, and it actually did fo, the very Means employed for raifing a Revenue from it, defeating the End propofed. In Procefs of Time however this Evil cured itfelf, at leaft in a Degree, for when from the State Land was in, grazing came to be confidered as the general Improvement, our Monarchs found:

[^243]
## 518 The POLITICAL SURVEY

themfelves conftrained to be more attentive as well as more favourable to Commerce, that by the Exportation of the great Staple Wool, they might repair in fome Meafure the Treafures that their Predeceffors had fo imprudently wafted !.

There is one Article more of Revenue that deferves to be mentioned, and this is what arofe from the Jews. They belonged in a peculiar Manner to the King, living here folely by his Permiffion, and entirely fubject to his Will, fo that he difpofed of them, their Wives, their Children, and their Subftance at his Pleafure. They were fettled in great Numbers in many of the moft confiderable Towns in the Kingdom where they dealt in Merchandize, lendiag Money on Mortgages, Pawns, and other Securities, by which not a few became for thofe Days very rich. At fome Periods and under fome Monarchs, they feem to have been highly favoured, being allowed a Chief Prieft and a Kind of Rulers among themfelves, which did not however exempt them in the leart from the abfolute Power of the Crown, or the univerfal Hatred of the People, who fuffered deeply by thęir Extortions. Thefe unhappy Men were frequently punifhed for Frauds and Offences, fometimes with and fometimes without Reafon, and at all Times taxed and pillaged without Mercy, and without Pity. In a Word, they lived in 2 Ilavih and miferable Dependance, being the mere Inftruments of mercilefs Princes, who fometimes ftripped Individuals, and at others fqueezed the whole Community, a feparare Court being erected for the Receipt of thefe Exactions called the Exchequer of the Jews. At laft, as hath been mentioned in a former Book, the whole Race to gratify popular Refentment were exiled and plundered, with which the Nation was fo well pleafed as to grant a confiderable Subfidy to the Crown m.

1 In the former Note we have obferved that there was probably a Degree of Moderation exercifed by our ableft Princes, fuch as Heary the Firtt and Henry the Second, in whofe Time from the Extent of his foreign Dominioas, Commerce muft have increafed, and that this is nut mere Conjecture, appears from the Laws of Uleron, made by his Son Richard. It is generally agreed that legal or Parliamentary Duties commenced in the Reign of Edward the Firft, who was a wife Prince and inclined to fortify his own Authority by Parliamentary Conceffions. The Perufal of the Charta Mercatoria publifhed by Pryone fets this Matter in a clear and full Light.
${ }^{m}$ In the Firft Law we have that mentions thefe People it is laid down, that Junar, Ef omnia fua regis funt : The Jews and all that they have belong to the King. They were towever permitted not only to acquire Etates in Money, but alfo in Land. On the Deceafe of a Jew, a Sum was paid to the King by way of Relief. If bis Children were under Age they were the King's Wards. Judges swere affigned to hear Caufes between them and Chrifians; and if tried for any Crime, One Half of the Jary were to be Jewi. They were however under fome fevere Reftrictions, being obliged to wear a Mark of Diflipetion upon their Cloaths, no Chriftian could neep in their. Houfes,

## of GREAT BRITAIN.

The public Revenue muft always arife from the Syftem of public Policy, and therefore both in its Nature and in the Mode of levying, become, as we have frequently obferved, a very material, and if the Expreffion may be allowed, a very characteriftic Mark of that Policy from which it arifes, and upon which the Stability of Government, and of courfe the Safety and Happinefs of the Subject, muft depend. The Norman Syftem was evidently calculated to fupport, at the Expence of the Multitude, the Grandeur of a few, who were to defend the vaft Property thus given them by the Sword, and thence the Military was the ouly honourable Tenure, and thofe who cultivated the Lands thefe Nobles poffeffed were reduced to the meaneft and moft fervile Condition n. The Clergy, to whom the Conqueror was fo much obliged, retained their ample Poffiffions; but thefe were no longer exempt from public Burdens, and confequently thofe who lived under them were but Villains like the Reft. We need not wonder, that in this State of Things all Kind of Hubbandry declined, and Famines frequently enfued. The Cities and Towns were haraffed by the Crown, and

Houfes, they could not live in any City but by the King's Licence, and fome Cities purchafed a Pivilege from the King that no Jews hould live amongt them. Many Individuals became exceedingly rich, as appears by the Sums taken from them. In the Reign of Henry the Third, Loricia, the Widow of Darid the Jew, fined to the King Five thoufand Marks to have the Chattels of her deceafed Hulband. The fame King rook from the Community of the Jews a Tailliage of Sixty thoufand Marks. They remained here between Two and Three hundred Years, for which Mr. Madox affigns this Reafon, "They fleeced the People, and the King fleeced" " them." It is indeed clear that they were introduced and tolerated purely for the. Sake of the Revenue raifed from them. Statutum de Judaifmo 4. E. 1. Coke, Second Infitu:e, p. 506. This snltitute, chap. 70. Selden's Works, vol. vi. col. 1459. Hiftory of the Exchequer, chap.7. p. 150.
a Thefe Points have been confidered at large in the former Book, and are only mentioned here to hew in what Manner they were connefted with the Revenue. It hath been, very juflly obferved in refpect to this Syftem, that the whole Kingdom was in effect One great Barony, and that every Barony was a Sort of Diminutive Kingdom. The fame Spirit of Rule pervaded the Whole. The King filled his Coffers by Reliefs, the Profitsarifing from Wards, the Sale of Marriages, \&c. at all 'Times, and on extrao'dinary Occafions by Aids and Tailliages. The Barons and Lords of Manors did the like in regard totheir Tenants. As for the Body of the People they worked not for themfelves, but for their Lords, depending folely upon their Will, and pafing upon any Change of Property with the Land they tilled. The Confequences attending fuch a State of Things are very obvious. The great Men, when not engaged in foreign, or which was too often the Cafe, in civil Wars and Quarrels with their Neighbours, employed their Tims in Jufts and Tournaments, in hunting in their fpacious Parks, or in building ftrong and ftately Caftles, looking upon all other Cares as abfolutely beneath them. Thefe were to the full as much above the Reach of the mearier People who had no adequate Intereft to prompt them, enjoying only a fmall, and that too a precarious Benefit, from what they earned. So that though there was much Labour there was but: little Indufry, and that little only amongf Manufacturers, and in Cities and great Towns, defended by Royal Charters and Incorporations, which from thence appear to have been of great Ufe in thofe Times.

## 5520 The POLITICAL SURVEY

-their refpective Lords, by which they gradually decayed, and War affording a better Subfiftence than Work, the Number of Artificers and Mechanics diminifhed. The Lofs of People and Difcouragement of Induftry neceffarily affected Navigation and Commerce, which fuffered likewife by the Frauds and Exactions of the Jews, and was no-ways relieved by their Punifhments and Confifcations, which ferved only to carry the Produce of their Extortions into the Coffers of the Crown, and left the Evil unremedied ${ }^{\circ}$. To our Hiftories we may appeal for the Truth of thefe Affertions.

There wanted not many other Caufes to heighten thefe Difafters. The Norman Kings had a violent Paffion for Hunting, which induced them to convert vaft Tracts of Country, in former Times well inhabited and cultivated, into Defarts. Their Example fpread this Humour of depopulating amongt their Nobility, and became a new and dreadful Source of Oppreffion on the Subject. Civil Wars on account of difputed Titles to the Succeffion, and thofe againft the Scots, laid many Parts of the Kingdom wafte, and rendered the Northern Counties almoft a Wildernefs. But what contributed moft to exhauf the Blood and Treafure of the Nation were foreign Wars and foreign Dominions, which were fo many continual Drains upon the People, whatever Events attended fuch Difputes. If we loft, it produced new Levies of Men and frefh Taxes for the Support of Armies in other Countries. If we gained, it only added to the national Expence of preferving thefe Conquefts. Such were the bitter Fruits of a Military Government, the martial Genius of our Princes, and the political Delufion of the Times, in which the Subftance of the State was facrificed to Shadows, and the Splendour of unavailing Victories fo dazzled the Eyes

[^244]of our Rulers, that they neither difcerned the Miferies of the People, or formed any Plans for the common Good P .

But if the True Caufes of thefe Mifchiefs were not clearly difcerned, their Effects however were feverely felt, and gave Birth to very loud Complaints. Thefe produced Charters of Liberties from our Kings, fometimes flowing from themfelves, to quiet the Minds and conciliate the Affections of their Barons, and while thefe were tolerably obferved Things went on in the old Channel, and the Body of the People who had none to reprefent their Grievances, fuffered in Silence: But when Monarchs ventured to violate their Engagements, and to tranfgrefs thofe Bounds which they had prefcribed to themfelves, the Barons, though they acted little better towards their Tenants, were notwithftanding able to affemble a Force fufficient to compel their Princes to grant new and more explicie Declarations of the Subjects Rights, and to fubmit to their being held to a due and conftant Performance of them. In this Manner was that Inftrument obtained, defervedly, as well as emphatically, ftiled the Great Charter, the Bafis of our civil Liberties, by opening a Way to the Removal of thoie Fetters which the Conqueror had forged and his Succeffors had rivetted upon all Ranks of their Subjects. Yet the perfecting this Scheme was a Work that required both Time and Labour, and the Ability of another Sort of Artificers than thofe who took it firf in Hand. A Variety of Incidents contributed to the Progrefs of the Defign, after tho Foundation was once laid; the Circumftances, Temper, Interefts of all Degrees of People changing, gave an Opportunity to our Englifh Juft tinian Edward the Firft to new model the Laws and the Conftitution, by giving a more regular Form and a more folid Confiftency to Parliament, which in a long Courfe of Years, by fometimes adding, fometimes demolifhing, and frequently altering, at length, as we have in another Place

P In the former Book there are Proofs fufficient of thefe Particulars, and the candid Reader, by comparing the State of Things in this Country in thefe Times, and in thofe of the Saxons, will be convinced of the Truth of all we have advanced. The turning fo great a Part of the Kingdom into Forefts is a Atriking Inftance of the Neglect of Cultivation. The Condition of the Northern Counties was fuch, as exempted them from being taken into the Conqueror's Survey. Foreign Dominions belonged to the King, not to the Kingdom; and whatever Profits arofe from them went into the royal Coffers, whereas the Charge of the Wars which they occafioned fell upon the People here. Their Numbers were diminihed in foreign Service, and the valt Sums levied to tranfport and to maintain them never returned. Pafturage took Place of Agricultare, in confequence of the Decay of Inhabitants, and the Products of this Improvement, Wool, Woolfells, and Leather were the ftaple Commodities exported to employ the Induftry of our Neighbours, and to repair in fome Degree the Want of it amongft ourfelves, which it might have done more amply, if a large Proportion even of this had not been converted into a Revenue.

## 522 The POLITICAL SURVEY

obferved, conftructed a fair and beautiful Edifice, out of the Materials of the old Gothic Pile 9.

The principal political Points agitated in thefe unfettled Times, and the Confequences refulting from them to this Country and Nation, have been briefly but truly reprefented in the former Book, and from thence it fufficiently appears, that the Revenue was a Subject of very great Perplexity. For, though in appearance, the Crown had renounced its Claim to the Power of levying Money but by Confent of Parliament, yet eveń there, the Power of giving was not well fettled, and as for the Clergy, they as a feparate Body granted their Supplies in Convocation r.

At certain Junctures the Parliament followed the old feudal Method of Taxing, fometimes they combined it with fome other Mode, and at length finding it inconvenient and ineffectual had Recourfe to Subfidies of feveral Kinds. Thefe they at laft reduced to a Tax on Lands, and an Impofition on perfonal Property, which were the ufual Grants when the Neceffities of the Crown required them. However on fome extraordinary Occafions they tried other Means, fuch as raifing a certain Sum on every Parihh throughout the Kingdom, or a general Poll Tax. But thefe

[^245]were not at all relifhed by the People, who difliked fuch Novelties as much as they did Taxes. The Land Revenue of the Crown was frequently increafed by parliamentary Attainders, and when diminifhed by imprudent Grants, reftored again at leaft in fome Meafure by Acts of Refumptions.

For the Support of the Sea Service (ever regarded as a Point of national Importance) they granted Tonnage and Poundage, at firf occafionally and in different Proportions, then for a Term of Years, and at length to foone Kings for Life. They regulated alfo the Cuftoms, appointed ftaple Ports, and fometimes took the Keeping of the Seas and the Protection of the Coafts upon themfelves. All this however neceffiary, chiefly from the Manner of employing it, bore hard on the landed and trading Intereft, and would have been infupportable if our Kings had not confented from time to time to fuch good Laws as by the Sagacity of Parliament were devifed for the Eafe and Emolument of the Subject, and this chiefly by abolifhing thofe Hardhips, that at and after the Conqueft had been introduced t .

[^246]
## 524 The POLITICAL SURVEY

OUr long and repeated Wars with France gave an Opportunity to fome of our able and vittorious Monarchs to refume in a great Degree the Prerogative of raifing Money, or what was equivalent to Money, taking Commoaities, Provifions, Ships, for their Service, under the fpecious Pretext that they were requifite to accomplifh Ends that had been approved in Parliament. When the Nobility, Clergy, and Commons remonftrated, they gave fair Words, and when Parliament interpofed, yielded very prudently to their Authority. Weak and ill-advifed Princes, mifled by thefe pernicious Precedents, excited civil Wars to their own Deftruction. The Nation however fuffered alike by both, through a Diminution of Inhabitants, the Spoil of the Country, the Decay of Hurbandry, and in confequence of general Licentioufnefs, univerfal Poverty. But though the Caufes of thefe Evils were too obvious to be concealed, yet from a ftrange Fatality they continued through feveral Reigns, and which is ftill more extraordinary, were often countenanced, or at leaft fupported by the Legiflature u. At length, from an Attention perhaps as much to his own Situation and Safety, as to the national Good, Edward the Fourth gave a Check to this Spirit of making foreign Conquefts, turning his Views to domeftic Improvements. In this Plan he was followed by Henry the Seventh, and though booh of thefe Princes were fufficiently difpofed to extend their Prerogatives, and to divert large Sums into their own Coffers, yet being wife enough to difcern, that this could never be done from an indigent People, they promoted the public Welfare as the fureft, and indeed as the only Means of promoting their own w. What effects this

Change

[^247]
## of GREAT BRITAIN.

Change of Conduct had, and that too in a very fhort Space, hath been already very fully thewn, and this from the unanfwerable Evidence of Facts.

But if any Shadow of Doubt could have remained, it muft be removed by even a tranfient View of what happened under his Son and Succeffor Henry VIII. a Prince of a martial and magnanimous Spirit. He revived the old Syftem, and placed his Glory in being fometimes the Terror, fometimes the Umpire of contending Princes on the Continent. Grand Confederacies, continual Negotiations, expenfive Embarkations, Expeditions, Battles, Sieges, and all the Diverfities that diftinguilh an active and bufy Reign appeared in his, which rendered him often dreadful to his Foes, and almoft always a Dupe to his Allies. Succeffful he was againt the French and againft the Scots, but thefe Trophies of his Glory coft his Subjects dear. That immenfe Mars of Money which his Father left, was quickly diffipated, and after this he made continual Demands upon his. People, moft of which were anfwered through the Complacency or Timidity of his Parliaments. Yet not trufting folely to this, he had frequent Recourfe to his Prerogative, not only reviving Methods condemned in former Reigns by the Legillature, but venturing on new Modes of Exaction, fuch as muft have been injurious to every Species of Induftry, by rendering all Property precarious x. It muft be acknowledged, that confidered.

He engaged himfelf in Commerce, and left behind him a confiderable Treafure, whatever became of it. Henry the Seventh availed himfelf of all thefe Refources, and devifed befides feveral Others. Moft if not all his Statutes, as a learned Lawyer has obferved, had either 2 direct or a remote Relation to his Exchequer. He took Advantage of the feudal Tenures, and by falfe Verdicts procured by his snftruments Empfon and Dudley, who were afterwards attainted for thefe Practices, exacted large Sums from his Subjects. By thefe and the Sale of Offices he brought into his Coffers annually about One hundred and Twenty thoufand Pounds. By Licences to export and import contraband Commodities, by granting Monopolies and other fuch Methods, as well as by carrying on in his own Ships a great foreign Trade, he amaffed that amazing Sum which he left behind him.
$\times$ It has been fuggetted by fome of our Hiftorians, that at the Beginning of his Reign; and fo long as his Father's Money lafted, which was about Three Years, he was tender in refpect to the Purfes of his People. The Fact however was otherwife, for his Firf Parliament granted him Two Tenths and Two Fifteenths. When in Want of Money for his foreign Expeditions he: iffied Commiffions for levying Loans after the Rate of Two Shillings in the Pound, but finding fome Difficulty in raifing them, he had Recourfe again to Parliament. When Sir Thomas. More was Speaker, Four Shillings in the Pound were demanded, which it feems to be agreed; on all Hands would have raifed about Eight hundred thoufand Pounds. This met with great Refiftance, and when a Subfidy, to which a Poll Tax was annexed, was at length granted, to be paid in Four Years, the King caured it to be levied in One. The Mode of raifing Money by Loan was again attempted, but the Sucefs being doubtful, it was difowned by the King, and the Blame thrown upon his Minitter the Cardinal. What had been raifed by the former Loan upon Privy Seals or Letrers Miffive, acknowledging the King's Obligation to repay it, was after-

## 526 The POLITICAL SURVEY

fidered in another Point of Vicw, many Things were done by him in his Parliaments, which were very advantageous. Such as freeing us from pap.il Tyranny, opening a Way to Reformation, enacting many Statutes for the Amendment of the Law, in Points refpecting Property; encouraging the Woollen Manufacture, giving a Beginning to the Royal Navy, and fortifying his Coafts againft Invafions. The good Eficis of thefe were chiefly felt in fucceeding Times. -But after all the Fame of his Victories, the Splendour of his. Triumphs, and the matchlefs Magnificence of his Interviews with foreign Princes, it is certain that he left to his Son a Minor, an exhaufted Treafury, a debafed Coin, and a debilitated Kingdom.

Ir is not at all ftrange, that being left in fuch Circumftances, the Reign of Edward the Sixth hould be fuch as it really was, exceedingly embarrafied. The War with Scotland brought that Part of the Ifland to the Brink of Ruin, without doing any Good to this, or effecting the End for which it was begun. The State of foreign Affairs was through the whole very perplexed. The Crown was oppreffed with a heavy Debt (for thofe Times) at Home and Abroad. Factions in the Court created a continual Fluctuation in Meafures, and the Grievances arifing from thence excited feveral popular Infurrections, attended with much Bloodhhed. Parliaments relieved the King's Neceffities, made repeated Grants, and endeavoured to vary them in Hopes of eafing the People; but were obliged, from the Difficulties they found in levying them, to return to the ancient Modes again. The greatect Mifchief of all, and which was in Truth the latent Cauie of moft of the Reft, was the miferable State of the Coin. Yet in this Reign and in the

[^248]
## of GREAT BRITAIN.

Midft of thefe Perplexities, a ftrong Spirit of Commerce continued to appear, and as we have elfewhere hhewn, produced many good Effects, and in the laft Year of the King's Life there was an Amendment of the Coin; fo fudden however in its Operation, as muft have been attended with very cualiderable Inconveniencies $y$.

The hort and unhappy Reign of Mary was difturbed with civil and religious Commotions, and when thefe were a little appeafed, new Difcontents arole from a forcign Marriage, and in confequence of that a foreign War, which brought on the Lofs of Calais, then regarded as an irreparable Misfortune. She obtained, notwithftanding thefe untoward Circumftances, confiderable Supplics from Parliament, which proving inadequate to her Expences, The had Recourfe to Loans and other Methods of raifing Money, not very confiftent with her natural Regard to Juftice. But Manufactures, particularly that of Cloth, were attended to and encouraged, foreign Conmerce was likewife protected and extended, and a new Trade opened to Ruffia. The beft Thing however done in her Time was the regulating the Silver Coinage, and putting it on the moft proper Standard, in which the was certainly well advifedr.

The

[^249]The Wifdom of Queen Elizabeth's Government hath been always and very juflly celebrated, fince the Affairs of the Nation were never in a more diftracted State than at her Acceffion. The Minds of Men exceedingly agitated at Home by religious Diffenfions, an unfinifhed War Abroad, few or no Allies, an heavy Debt fubfifting from the Time of her Father, the Crown Revenue impaired, and an exhaufted Treafury. When thefe Difficulties were in a great Meafure got over, by the Moderation and Dexterity of her Management, new and not lefs formidable Mifchiefs arofe. Difcontents of feveral Kinds, and from various Caufes, rifing fometimes into Rebellions, Difputes with Scotland, a long and dangerous War with Spain, repeated and perilous Infurrections in Ireland, fecret Confpiracies, and almoft perpetual Factions in her Council. All thefe were combated and gradually fubdued by the Prudence of her Minifters, which was in nothing more confíicuous than in the Management of her Finances. She called few Parliaments in her long Reign, and yet managed thefe in fuch a Manner as to obtain from them, in Comparifon of former Times, very confiderable Supplies, the Subidies both of the Clergy and Laity being to be levied in a Courfe of Years, which rendered them more ufeful to her and lighter to the People. She fhewed great Addrefs in declining extraordinary Aids, when offered with a View of altering her Meafures. Alked them at all Times with great Tendernefs, received them with much Thankfulnefs, and employed them with great Frugality; fupplying their Deficiencies on critical Occafions, by exciting the public Spirit of her Nobility, accepting the voluntary Affiftance of her Subjects, and having frequent Recourfe to Loans, which were punctually paid a.

Many

that without much Difficulty it was taken by the Duke of Guife. The commercial Spirit introduced in the Reign of Henry the Seventh exerted itfelf fo ftrongly that our Exports of Woollen Manufactures, diminifhed the fending abroad the raw Commodity, to almoft nothing. The Merchants of London, Briftol, and Hull were indefatigable in opening new Channels of Trade, and the Charter to the Ruffia Company granted in this Reign is a Proof of the Attention of the Queen's Minifters in this Refpect. The Coinage of Mary is commended, becaufe it rendered the Pound in Tale, aliquot Parts of the Pound Weight. At the Time of the Conquelt, the Two Pounds were the fame, by the Queen's Coinage, though a little lefs Fine than that of her Brother's laft Year ; Four Ounces of Silver were divided into Twenty Shillings, and fo it continued till towards the End of her Sifter's Reign. The Proportion between Gold and Silver was not altered.

- The great, and indeed the fole Object of this able Princefs through her whole Reign, was the Security of her own Perfon and Government, and her Wifdom confifted in perceiving that this mun arife from the Profperity of her Subjects. The Difficulties fhe had to encounter immediately after her Acceffion, taught her Vigilance, Circumfpection, and Parfimony, and thefe Atrengthened into Habits. She kept One of her Parliaments near Eleven Years, by a Multitude of Prorogations, by which the had them always ready, if Neceflity required, and yet demanded their Affitance as feldom as the could. Her Crown Revenue was under Two hundred Thoufand Pounds per Annum. Yet before hene eptered into the War with Spain, the had, as Sir Robert

## of GREAT BRITAIN

Many good Laws were made for encoutaging; pronoting, and fupporting the Credit of our Manufactures. A judicious Lenity, but no Partiality was Shewn to foreign Merchants fettlea here. The diftreffed Proteftants from France, Flanders, and indeed from all Countries were kindly. received, and fettled in different Places to the great Benefit of the Nation. Improvements and Inventions of every Kind not only met with a favourable Reception, but were forwarded and protected by her Minifters. She was like her Anceftor Edward the Fourth, exceedingly gracious to Merchants, eminent Citizens, and Perfons of diftinguifhed Abilitics in ufeful Profeffions. In her Time the Turky, Eaft India; and African Branches of Commerce were opened. Expeditions to, and Difcoveries in America, countenanced and fupported. By thefe Methods Trade was exceedingly increafed, and with it the public Wealth b .

The Firmnefs and Uniformity of her Conduct, vifibly directed to public Good, qualified the Ufes of her Prerogative, of which the was as jealous as her Predeceffors. She completed the Reftoration of the Coin, which had been begun by her Brother and Sifter, by the total Extinction of bafe Money. She rather chofe to diminifh the Crown Revenue for the Support of public Meafures than prefs too hard upon her Subjects, and with the Affiftance of Parliament, would have revived and encouraged Agriculture,

Cotton affures us, Seven hundred Thoufand Pounds in her Treafury. In the Courfe of upwardz of Thirty Years fhe had from the Commons Twenty Subfidies, and Thirityeight Fifteenthn, and Eighteen Subfidies from the Cleıgy, which did not amount to Three Millions in the Whole, and yet out of this he lent Eight hundred Thoufand Pounds to the poor States of Holland, and upwards of Half that Sum to the Freach King Henry the Fourth, by which. fhe kept War for the moft Part at a Diftance, and acquired a high Reputation with all the European Powers.

- The Commerce of England had been growing for near a Centory, and though it had received various Checks from the ill-judged Policy of feveral of our Princet, it quickly recovered from them, and exerted itfelf with frem Vigour. Burin this Reiga, meeting with all poffible Ea: couragement, it rofe to a prodigious Height, as Camden informs us from a very exact Enquiry, Annal. Eliz. p. 108. The Queen was allo very attentive to her Nivy, made feveral Lawe for promoting and encouraging Navigation, treated Raleighy Dreke, Hzwkins, and other Seamem with much Kindneff and Refpeft. She was remarkably frugal in every Thiog but her. Apparel, and though the laid out nothing in Buildings, was pleafed to fee the Mirkg tit her Subjects Riches, in fumptoous Edifices public and private, vifitiag fuch as were medyly in well to do them Honour, as to fave Expence. The Cuftoms the railed from Fourteen thotifige Hounds at which they were farmed by Sir Thomas Smith, to Forty-two thoufand, and toliged the to pay a large Sum for haviog them at that Price, and aférwards raifed them to Fifty thouifund, as Camden tells us, p. 615 , and this in Oppofition to the Sentiments of her principal Miniffier., She had Credit enough with the City 'of London to procure the Bonds of the Corporation: as a joint Security for the Money the boirowed Abroud, snd thefo:Bonds difcharged and cancelled the delivered up, which enabled her for the future to boriow as Home.

## 530* The POLITICAL SURVBY

if that had been praticicable while the old Tenures remained. On the Whole fhe left the-Nation much better fettled, richer and more profperous in every Refpect thian it had been before her Time e.

James the Firf, though he fucceeded without Oppofition, and feemed to be received with general Satisfaction, found himfelf very foon embarraffed in Point of Revenue, and thefe Difficulties grew upon him through his whole Reign. The late Queen left a confiderable Debt, and had, befides difpofed of a very large Proportion of the Crown Lands. It is true his Firft Parliaments were liberal, but it is as true that the King became profufe, and afterwards upon fo bad Terms with the Houfe of Commons, that though he opened his Neceffities to them, he received no adequate Relief. This reduced him to have Recourfe to Monopolies and Projects, which at his Entrance on Government he had fupprefled. He likewile attempted Benévolencies and Loans, but with little Succefs, and being at laft driven into War, propofed that the Supplies given for his Support fhould be appropriated, and the Application of them put out of his Power. But though the Crown was diftreffed, the Nation was very profperous. He made very early a good Treaty with France, and a very advantageous Peace with Spain. In confequence of thefe Trade flourifhed, and though, from Merchants miftaking their Intereft, Navigation was for fome time checked, yet it quickly revived and extended itfelf in a high Degree; the Navy alfo was augmented. Virginia, New England, and Barbadoes were fettled, Difcoveries were encouraged. The Nation became more and

[^250]
## of GREAT BRITAIN.

more papulous; but notwithfanding this Tillage remained in a low Condition ${ }^{\text {d }}$.

Charles came to the Crown in a State more embarraffed than that of his Father. Great Yart of the Crown Lands were fold, much of the remaining Revenue anticipated, a heavy Debt at Home and Abroad, and a War entered into by the Advice of Parl'ament; from whom for that Reafon the King had great Hopes. They gave him fome Supplies, and brought in a Bill for Tonnage and Poundage for.only One Year, which for that Reafon was rejected by the Lords. The King met the fame Parliament at Oxford, but differing with and diffolving them endeavoured to carry on the War as well as he could. In order to this he continued to exact the Cuftoms as if they had been a Revenue inherent to the Crown, had Recourfe to Loans, Privy Seals, and other Methods of the fame Kind, which prejudiced him in the Minds of his People, and there Difcontents were heightened by an unfuccefsful Expedition againft Cadiz. To thefe: Miffortunes were added a Breach with France, precipitate in its Commencement, and unfortunate in its Progrefs. Another Parliament, though inclined to grant Supplies, totally difapproved the Meafures taken to raife Money without their Afliftance, and the rigorous Steps by which thefe Meafures were enforced. This produced the Perition of Right, by which thefe Evils were prevented for the future. The King afiented to it
d As the Queen left a Debt, fo the left alfo a Part of the laft Supply that had been given her unlevied. The King had a great Family, and the Rate of Living was very bigh. The Whole of his Income never reached Five hundred thoufand Pounds per Annum, of which the Crown Lands made lefs than a Fifth, and the. Profits arifing from the Tenures about Two Fifths. In the Courfe of his Reign he fold Crown Lands to the Vatae of near Eight hundred thoufand Pounds, aad by the IJelp of this, parting with the Captionary X Whs in Hifland, the Debt received from France, Benevolences, and other Means, raifed about Two Mhions. The Supplics granted him by Parliament (the laft excepted, which he did not receive) amonnled to Six hundred and Thirty thoufand Pounds. The Cuftom at the Beginning of his Beign were about One hundred and Twenty-feren thoufand Pounds., He raifed them afterwards to One hundred and Sixty thoufand, and towards the Clofe of his Reign higther. Bise Comage in his Reign did not amount to quite Five Millions and a Hidf. Pan of which was from Siver finelted out of Lead in Wales. He made fome Alierations in the Value of Gold Coin, in conferuence of: a like Alteration in other Parts of Europe. The Mitake of the Merchants witw refpet to Navigation arofe in the Queen's Tine, and continued through a Part of his, add confilted in their making Ufe of large fureign Ships for the Bnke of tiving Freight of which the Seunten heavily complained. But when it was perceived that Foreigoert madean Advaitage of this, and found Means to import Goods hither for their own Profit, the Merchants took the Alarm; and the King by Proclamation forbidding all Comtierce but on Engith Bottoras, many and large Shipm wete quickly buft in feveral of out Porta. The Harditip arifing from Tenurcs being come plained of in Parliament, the King readily agdeed mege op thatitat of his Revenue for an Equivalent, and the Bargain was at laf made for Two hundned thatitand Pounds per Annum, but never carried into Execution.

## 532 The POLITICAL SURVEY

with Reluctance, and finding the Parliament determined to truft him with Tonnage and Poundage only for a very fhort Time, diffolved them. He then made Peace with Spain and France, which was highly beneficial to the Nation, by reftoring a lucrative and extenfive Commerce. The King continued many Years to govern without Parliaments, fupplying his Wants by the Strength of Prerogative, and in order to fupport the Sovereignty of the Sea, levied Ship Money, which, though it enabled him to carry his Points Abroad, and to deftroy the Sallee Rovers, who had difturhed and diftreffed our Trade, yet it excited fuch Difcontents as threw all into Confufion at Home. A IVar with the Scots, and other Misfortunes brought him to call a new Parliament, which he precipitately diffolved, and not long after called another, in which, though he confented to abolifh the Star Chamber, and High Commiffion Courts, and made great Conceffions, yet his Difputes with them terminated in a Civil War; in confequence of which the Monies raifed for the public Service were both levied and applied by the Authority of that Parliament e.

As the Caufe of the Parliament was confidered by thofe who adhered to them as the Caufe of Liberty and of the People, they were in a Condition by

[^251]
## of GREAT BRITAIN.

their own Authority to raife competent Supplies, which from their perfect Knowledge of the real Situation and Riches of the Nation they were enabled to do by a Variety of Means, and by fpreading their Impofitions wide, rendered them lighter to Individuals, though they were very heavy in their Amount, and being again gradually difperfed for the Maintenance of their Forces, and the Support of their Government, this Circulation rendered their Continuance practicable, till their Power was fixed beyond the Poffibility of Refiftance. The Reduction of Scotland and of Ireland was attended with great Expence, but both being accomplifhed, extended, and atgmented their Authority. The Senfe they had of their own Strength, and the Appearance of a general Submiffion eacouraged them after the Death of the King to undertake a War againft the Dutch in Support of the Sovereignty of the Sca, by which they in a great Mcafure ruined the naval Yower of their Rival f.

At length being difpoffefied of the Government by their own Army, their General Cromwell found it very difficult to raife Money without the Affiftance of Parliament, and ftill more difficult to obtain it from thofe Afiemblies which he called by that Name. He was obliged therefore to raife Supplies as well as he could; and it hath been thought highly probable that he broke with Spain that he might replenifh his empty Treafury by forcign Spoils, in which he was not altogether unfuccefsful; though even with this Help he died in Debt, and left his Son fo embarraffed, that he was not long able to maintain his Seat. The Remains of the Long Parliament then refumed Power, and levied the Sums requifite for their Support in their accuftomed Manner, till the City of London refufed to pay

[^252] drawn to concur with them, put an End to thefe Confufions, by the Method which the. City had propofed; and which produced the Reftoration 3.

Thus the Reader hath feen by as fuccinct a Deduction as it was in my Power to make, the Connection between the public Revenue and tice Condition of this Country through a long Series of Ages. Thereall Britin Principalities, as they had a regular Comitution, had alfo undoubte: l , Revenues fuited to their Occafions and Eatent. The Romus witithey lield it, fhewed in every Refpect of what thes Iland was capaiole, mind from their great Improvements of all Kinds, raíed an immenie public Revenue. The Saxons proceeding on a cifferent Plan, rettrained their Views to the fame Bounds within which Nature had confined their Inminions. By this Policy they rendered the Country populous and wall cultivated, the Inhabitants according to their feveral Ranks in cafy Circumftances, and the Crown Revenue ample. The Dancs deftroyed the Kingdom, and deranged the Saxon Syfem fo much, that it wis unabile to bear up againft a new Iivader. The Normans not only introduced a ftrange and fevere Form of Rule, by which they changed the Manacrs, and in fome Degree the Language of the People, but allo from their

[^253]
## of GREAT BRITAIN.

Connedions with the Continent, fell into Meafures repugnant to the Intereits of England. Their foreign Wars impoverihed, their Civil Diffenfions defolated, and the continual Repetitions of both depopulated the Country to fuch a Degree, that at the Clofe of the Reign of Henry the Sixth both the Crown and Nation were equally diftreffed. But by the Intervention of new Counfels, the relinquifhing foreign Quarrels, an Attention to domeftic Concerns, excited a Spirit of Induftry and Commerce, that in fite of fome temporary Interruptions, opened the Eyes of both the Prince añd People to their true Interefts, which ever were and will be the fame. The Confequence of this was a gradual Increafe, and a due Difribation of Property, and in Virtue of that the Demolition of the ftill remaining Checks on rational Freedom; how effectually this operated in the Clole of this Period, may appear from hence, that the Parlinment raifed more Money on that Part of the Kingdom under their Dominion in One Year than there was Specie in the whole Nation a Century before. This amazing Alteration arofe from our poffeffing in effect the whole Trade of Europe for about Fiften Years. A very fenfible Differeace was foon after fclt from our imprudent'Conjunction with France againft Spain, which greatly altered the political and commercial Balance which had been fo long in our Favour.

## 536 The POLITICAL SURVEY

of fome falutary Statutes for the Eafe and Emolument; of the commercial Interef. A fuccinct Detail of the 1 rincipal Events in the firft Tbirteen rears of bis late Majefly King George the Second. The Meijures purfued in tbat Time for the Bencfit of the Public, and their: Effccts. The War zoith Spain and afterwards againft botb that Crown and France, wbich continued for about Six Years. The Lazes enacted, and other Metbods ufed for promoting the public Weal within this Space.: A Review of what palfed from the Peace of Aix-la-cbapelle to the Breaking out of the lall War. Tbe Progrefs thereof to the Demife of bis late Majefty. The State of the Nation confdered tbrough this Period: The Profecution of this Subject from the Commencement of the prefent Reign to the Conclufion of the Peace of Paris. The Nature and Confequences of the public Debt truly flated and impartially confodered. The Rife and Progrefs of the Sinking Fund in like Manner fairly reprefented, and its Utility explained and eftablijbed. The Conclufion of this Book and Cbapter, .with Jome neceflary Remarks.

THE Horrors of a Civil War, the longSeries of Commotions that fill, lowed, and the numerous fatal Confequences that vifibly attended them, brought the Nation in general to a true Senfe of its own Interefts, and convinced them by Experience, that the overturning their ancient Conftitution had fubverted the Bafis of their Happinefs, by removing thofe wife Provifions, that by ä due Temperament of rational Liberty with Sovereign Authority conftitute the beft of all Governments, a limited Monarchy. Experience had convinced them likewife of many Truths, to a juft Senfe of which they could never have been perfuaded by Arguments. They perceived plainly that for the Security and Profperity of the State, it was requifite that Government hould be fupported by an ample Revenue. They difcovered that in a flourihing Society, Taxes judicioufly laid and properly applied, might promote the Welfare, inftead of diftreffing the Circumftances of the Subject. They were rendered fully fenfible of the Opprefiion, as well as Danger of a numerous Army, from which they were confequently very defirous of being freed. They faw clearly the great Utility of Cultivation, and they felt from the Removal of the feudal Tenures, and the Increafe of Inhabitants, that this was fully in their Power. They began to have more enlarged Notions in regard to the Benefit arifing from Manufactures, the lowering the Intereft of Money, and the removing all Obftructions to the Freedom of Navigation and Commerce. They were therefore difpofed, from thefe and othet Confiderations, chearfully to embrace any Meafures that had a Tendency to promote thefe falutary Views, and to prevent their falling again into thofe Confufions, from which they were so lately recovered.

## of GREAT BRITAIN.

At the Return of King Charles the Second, the Convention Parliament; as it was called, made an imonediate Settlement for the Support of the Crown, provided for the difbanding the Army, and though by no means difpofed to be profufe in their Grants, hewed an Inclination to do whatever was neceffary. The fucceeding Parliament was more liberal till difgufted by the Mifcarriage of the Firft, and the bad Intention of the Second Dutch War. After this Time, though the King received occafionally much Affiftance from Parliament, yet his Conduct brought him into Neceffities that involved him in Difputes with his People as well as in perpetual Difficulties, and induced him to incur a Debt, which he found it out of his Power to difcharge. But notwithftanding thefe Miftakes and Misfortunes the Nation received fome Advantages from that Monarch's Difpofition, and many more from the Attention and public Spirit of the Legiflature. His Temper and Experience inclined him to take great Care of the Navy, to promote the Interefts of the Plantations, to countenance ufeful Inventions and Improvements of different Kinds, and particularly Difcoveries, in which his Views were feconded by feveral Perfons of Quality and Diftinction. On the other Hand the Parliament took many laudable Steps for the Security of the Proteftant Religion, the Liberty of the Subject, and the Maintenance of Juttice. They removed by wife and well-weighed Statutes, all thofe Impediments that had fo long continued to impede the Cultivation of Land, and took the moft effectual and falutary Methods to promote it, and were not wanting in their Endeavours, though thefe were not fo fuecefisful, to fupport and extend our Fifheries. They encouraged Manufactures, afforded a kind Reception to Foreigners that might be inftrumental in this Refpect, brought the Cuftoms into Order, were zealous in promoting a free Trade, and by the Att of Navigation and fubfequent Laws to fupport and enforce it, provided effectually for the Security of Commerce, and took the wifeft Methods for maintaining a Conjunction of Intereft between the Colonies and their Mother Country, from which many beneficial Confequences fpeedily enfued to both a.

James

[^254]James the Second, notwithftanding the Difficulties to which he had been expofed in the Reign of his Brother, fucceeded to the Throne with greater Advantages than almof any Prince that had ever fat upon it. He found the public Revenue much improved, and put into better Order than it had ever been. He added to this the eftablithed and ample Income which he had poffeffed as Duke of York. His Parliament was fo complaifant as to fettle both upon him, notwithftanding he had by Proclamation directed the Payment of the Cuftoms before that Affembly met. They likewife granted him feveral confiderable Additions for the Repair and Support of the Fleet, and for fuppreffing the Duke of Monmouth's Infurrection. As he was naturally a good CEconomift, we!l acquainted with public Affairs, and a Prince of indefatigable Application, He very foon brought his Revenue into fo good a State, as to be able to make annually very confiderable Savings. That Spirit of Cultivation and Improvement which had prevailed for many Years, ftill exerted itfelf with the greateft Vigour, and the French Refugees who were kindly received and very prudently encouraged, perfected fome and introduced many new Manufactures, which in Procefs of Time proved of infinite Benefit to the Nation. The peaceable State of Europe, and the Removal of thofe Difturbances that had long fubfifted in America, was exceedingly favourable to Commerce, to the promoting of which he fhewed great Attention. He was particularly careful in protecting the Eaft India and African Companies, which were then in a very flourifhing Condition. The Navy, in the Management of which he was perfectly well verfed, he directed himfelf with the Affiftance only of a Secretary, and had brought it into excellent Order, when his exceflive Bigotry to the Popifh Religion,
fand Five hondred Pounds, to Forty-thrce thoufand Pounds. Hearth-moncy in his Time brought in One hundred Sixty-two thoufand Pounds. The King, notwithfanding this Income, and feveral large Grants from Parliament, amounting in the Courfe of his Reign to Eleven Miilions Four hondred Forty-three thoufand Four hundred and Seven Pounds, found himfelf obliged to fell Dunkirk to the French for a Million and a Half of Crowns, which were coined into Three hundred Thirty-fix thoufand Seven hundred and Thirty-three Pounds. He alfo fold the Fee-fartm Rents in virtue of Two Acts of Parliament, but for what Sum is not a little incertain, and at his Death ftood indebted to the Bankers, who had advanced Money on the hereditary Revenue, in the Sum of One Million Three hundred Twenty eight thoufand Five hundred Tiwenty-fix Pounds, and alfo owed his Houfehold Sixty thoufand Pounds. The Teft Aft, the Habcas Corpas, the Law for preventing Frauds and Perjuries, and many others prove the Truth of what is advanced in the Text. In confequence of thefe, Property was fo well fecured, and Induftry foeffectually encouraged, that our Trade became both extenfive and lucrative ; the Plantations flourifhed, the Rogal Navy was doubled, and Land rofe from Twelve to Sixteen and Eighteen Years Parchafe. The Coinage of Gold and Silver in this Reign was very near Eightit Millions. By an Act paffed in the Eighteenth of his Reign, a Duty was impofod upoo Wine, Brandy; \&c. to defray the Expence of Coinage; whish Duty being by fubfequent Statures contipued fill fubfifts, fo that Gold and. Silver are alflayed and coined at the Mint in the Tower free from all Charges.

## of GREAT BRITAIN.

 and thofe Innovations in Government into which that led him, excited the Dififfection of his Subjects, and obliged him to abandon his Dominions b.Besides thofe Circumfances that have been, and many more, that if we had Room might be mentioned, which contributed to increafe the Subftance as well as Credit of the Public, there was alfo a wonderful Concurrence of favourable Events which human Wifdom could not forefee, or human Policy bring about, that conducted to the fame defirable End. -Such as the general Situation of Chriftendom at that Period, the great Need that Spain had of our Friendihip, the Advantages accruing to our Conmerce after the laft Peace with the Dutch, whilft they were fill engaged in a War with France, and the Security with which our Veffels nivigated the Mediterranean, while thofe of other States were expofed to the Depredations committed by the Barbary Corfairs. Thefe excited and maintained a more general Spirit of Enterprize than had been ever feen, and that Succeis which attended thefe Efforts was really amazing. Our very Errors turned in feveral Inftances to our Benefit. The Attempts made to introduce arbitrary Power produced new and effectual Barriers againtt it. The prohibiting of Irifh Cattle infpired the People of that fintile llland with Views which they profecuted to their own Advantage. The bard Ufage of Diffenters of different Denominations filled our Plantations with Numbers of fober, intelligent, and active Inhabitants. It was from thefe and a Variety of other Caufes, that not only the Stock of this Country was augmented much beyond what it had been in former Times, but the Seeds of univerfal Induftry fo effectually fown, as to promote

[^255]lafting Profperity, which was truly fortunate for the Nation, as the was thereby enabled to fupport foon after thofe glorious Struggles, in which fhe was involved, for the Prefervation of her own and the Liberties of Europe ${ }^{\text {. }}$

The Reign of King William and Queeṇ Mary opened with an extenfive and expenfive War with France, undertaken and carried on with great Difficulties for the Space of Eight Years. It was however a War of Neceffity not of Ambition, and was fupported with a Spirit that did Honour to the Nation. Repented Cuftoms, Excifes, Poll-taxes, Impofitions on Windows, Joint-ftocks, Marriages, Burials, Manufactures, and Land, bore heavy upon all Ranks of People, and there were much aggravated by high Premiums, large latereft, Mortgages for long Terms, and other oppreffive Circumftances. It is very probable that many of thefe Difficulties might have been leffened, and fome of them avoided, but we wanted Experience in Things of this Nature, and which was ftill worfe, there was a Want of Unanimity, and of confequence of public Spirit. The War was at firft unfuccefsful in its Operations, and difaftrous in its Confequences;

[^256] La Hogue was fatal to the naval Power of France, her Commerce did not enable her to repair it, her Manufactures declined, her Finances were gradually exhaufted; and the Peace of Ryfwick clearly proved that the was fenfible of her decaying Strength. On the other Hand there were many Circumftances that turned to our Advantage. The Bill of Rights declared and eftablifhed our Conftitution. The Minds of Men were quieted, : the proteftant Intereft ftrengthened by the Toleration, and at the Clofe of The Reign by the Eftablifhment of the Proteftant Succeffion. Some very fafutary Alterations were alfo made in the Adminiftration of Juftice. A Bounty on the Exportation of Corn was fettled by Act of Parliament. The Subject was reftored to Freedom in the important Bufinefs of working Mines, and in the Midft of all our Diftreffes that which threatened us moft, the miferable State of our Money, was effectually removed by a Recoinage. The Bank of England was erected, and its falutary Operations promoted by an Engraffment. The Board of Trade was eftablihed, our Manufactures enlarged at the Expence of France, the Length of the War delivering us from a Trade with that Country, and a Fondnefs for its Fahions, which had been highly detrimental. In a Word, national Credit gradually revived, Circulation increafed, and the Benefits flowing from it began to be underftood. At the Clofe of the Reign our Navy was: doubled d.
d At this great Crifis, in confquence of the defpotic Power of her Monarch, France was become terrible to all Europe, and nothing but Union in Sentiments, and that Conjunction of Interefts which the Revolution brought about, could have reftrained its Force within proper Bounds. The Parliament having afligned their Majefties a Civil Lift, undertook to provide for the Expences of the War, which they confidered as abfolutely neceffary for the Support of that Government which they had eftablifhed. As they had the Power of controuling the Difburfements, as well as raifing the Supplies, they were able to proceed with Vigour, and in the Courfe of Thirteen Years raifed the Sum of Fifty-nine Millions Two hundred Fifty-one thoufand Seven hundred and Fifty two Pounds Fourteen Shillings and Nine Pence. But as they judged it unfafe at leaft, if not impracticable, to raife the Sums requifite within the Year, they had Recodirfe to Loans at the Rate of Eight and of Seven per Cent.mand notwithfanding this, and the granting. Annuities at as high or higher Rates, they were obliged fomerimes to give Premiums, in confequence of which the whole Sum borrowed amounted to Forty-one Millions One hundred thoufand Seven hundred and Ninety-five Pounds. For the farisfying the public Creditors; they mortgaged Funds for long Terms, the Produce of which went in Difcharge bothof Principal and Jntereft. Hy this Means there was repaid Thirty-four Millions Thirty-four thoufand and Eighteen loounds. Among other Helps towards carrying on the public Service, Exchequer Bills were invented, but in the Year 1697 Things were in fu bad a Stare, that Tallies were from Fiftyfive to Sixty-five per Cent, Difcount, and the Difcount on Bank Notes at the fame Time Thire, teen or Fourteen per Cent. At this Juncture the Engraffment took Place, which made an Addition of Five Millions One hundred Sixty thoufand Four hundred and Fifty-nine Pounds to the Capital of the Bank of England, Four Fifths of which was fubfribed in Tallies and other Goverament Sccurities, and the remaining Fifth in Useir owa Notes at Eight per Ceat. Interef,

At the Time Queen Anne afcended the Throne the Nation was preparing for a War on Motives of political Prudence, in order to prevent France from giving Law to us and to the Reft of Europe, for which Purpofe the Grand Alliance had been formed. This War, intowhich we foon after entered, as it was more extenfive and of longer Continuance, fo it was more expenfive than the former. To fupport thefe Expences the fame Methods were purfued that had been taken in the preceding War, probably from the Experience of their Practicability, though many Ohiections had been raifed againft them, on account of their bearing hard upobi our Manufactures, raiting the Price of Neceffaries, and producing other: Inconveniencies. Thefe however being efteemed lighter in their Nature than the Evils that were apprehended from what the War was meant to remove, occafioned their being adopted by Parliament, and the great Succefs of our Arms made them more tolerable to the People. Befides this there were other Circumftances that contributed to keep up their Spirits. Several Laws were made of vifible Utility to the Public, fuch as for the preventing the Alienation of Crown Lands, the encouraging Tillage and Manufactures of different Kinds, the promoting inland and foreign Trade, by a Variety of falutary Meafures of which we have already taken Notice. Some Obftructions were removed that impeded the free Courfe of Juftice, a farther Security given to the Freedom of Parliament, by requiring certain Proportions of landed Intereft as a Qualification for the becoming Members of the Houfe of Commons. We may add to this the Union between the Two Nations fo often attempted without Effect, and now happily concluded. Some juft Steps were likewife taken for promoting the Welfare of Ireland, for encouraging the Commerce of our Colonies, and the bringing from thence naval Stores, and to affift thefe by facilitating general Correfpondence, a new Form was given to the Poft-office, which diffufed the Benefits arifing from it through all the Britifh Dominions, and as a Proof of the prolperous State of the Nation, notwithftanding the vaft Charges fhe had fuftained, the legal Rate of Intereft was reduced from Six to Five per Cente.
which in a very fhort Space brought every Thing into Order with the Affiftance of the Recoinage at the Tower, and at the Mints eftablifhed at Briftol, Chefter, Exeter, Norwich, and York, in all which were coined Six Millions Four hundred Thirty-five thoufand Thirty nine Pounds, and the total Coinage in this Reiga both of Gold and Silver anounted to Ten Millions Five huidred and Eleven thouifand Ninc hundred and Sixty-three Pounds, and the Whole of the Debt was by the Means before-mentioned reduced to Ten Millions Sixty-fix thoufand Seven thandred and Seventy.feven Pounds.

- The fame Provifion was made for the Queen upon her Acceflion as had been granted to King William, viz. Séven hundred thoufand Pounds per Annum, out of which the Queen gave One hundred thoufand Pounds a Year towards the Expences of the War. She was likewife impowered to fettle One bundred thoufand Pounds' per Anrum, and the Palaces of Kenfington and Southampton

## of GREAT BRITAIN.

543
King George the Firt, in virtue of the Act of Setilement, came to the Succeffion on the Demife of the Queen. But he had not been long feated on the Throne before a formidable Rebellion broke out, which however though fpeedily fuppreffed, occafioned the making fome fevere Laws for preferving the public Tranquillity. Soon after a Mifunderftanding arofe with Sweden, and the unfettled State of Things in Europe gave Occafion to the quadruple Alliance, which brought on a War with Spain, and the Deftruction of the naval Force of that Kingdom. Some Differences nré likewife had with Ruffia, and their Imperial and Catholic Majefties gaving concluded a Treaty at Vienna, his Majefty thought proper to counterbalance this, by what was ftiled The Treaty of Hanover. Thefe Difputes made it requifite to fend Fleets into the Baltic, to the Mediterranean, and to the Coafts of Spanifh America, which, though expenfive, feem to have anfwered the Ends intended by them, by preventing the Mifchiefs with which we were threatened, fo that we had no War of any Continuance during this Reign f.

The

upon Prince George of Denmark, in cafe he furvived her. The Money requifite for carrying on the War was raifed upon eaficr Terms than in the preceding Reign, as public Credit was now better eftablifind. As in order to effect this the great Companies were equally ready and ufeful, they were treated with great Indulgence. The United Company of Merchants tradiog to the Eaft Indies were thoroughly eftablifhed in the Beginning of her Reign, and their Capital afterwards augmented to Three Millions Two hundred thoufand Pounds, the Intereft of this Sum being reduced from Six to Five per Cent. The Bank having difcharged the great Sum engrafted in the former Reign. and being very ferviceable in circulating Exchequer Bills, were allowed to increafe their Capital to upwards of Six Millions and a Half, and their Term prolonged to the Year 1746. After the Conclufion of the War the South Sea Company was erefted, with a Capital of betwcen Nine and Ten Millions, compofed of a Subfaription of pablic Debts, on the fame Plan with the Engraftment on the Bank Stock in the Reign of King William. At the Union the lroduce of the Cuftoms in England was fated at One Million Three hundred Fortyone thoufand Five hundred and Fifty-nine Pounds, and the Excife at Nine handred Forty-feren thoufand Six hundred and Two Pounds per Annum. In the Courfe of the War the French Marine, which had becn once fo formidable, was in a great Meafure ruined, whereas ours was greatly increafed, moft of our Manufactures were exceedingly improved, many new Ones erected, and our Commerce in gencral and with the Colonies in particular much extended. The Supplies granted amounted to Sixty-nine Millions Eight hundred Fitteen thoufand Four hundred and-Fifty-feven Pounds Eleven Shillings and Three Pence Half.penny. The Expences of the War were fated by the Commiffioners for taking the public Accounts at Sixty-five Millions Eight hundred Fifty-three thoufand Seven hundred Ninety-nine Pounds Eight Shiltings and Seven Pence Half Penny. The Coinage in this Reign amounted to Two Millions Six hundred Ninetyone thoufand Six hundred and Twenty-fix Pounds.
${ }^{\text {f }}$ At the Acgeffion of King George the Firft the Parliament gave his Majefty a Revenue of Seven hundred thoufand Pounds per Annum in clear Money to defray the Expences of his Civil Lift, and affigned for this the Funds that had been given to his Royal Predeceffors. But. it being found that thefe Funds were incumbered with feveral Charges and Penfions to the Amount in the Whole of Two hundred and Seventy.fix thoufand Eight huadred Pounds per Annum, it was. thought requifite to affign the annual Sum of One hundred and Twenty thouland Pounds from. another Fund to make ue the Seven hundred thoufand Pounds in clear Money. As ample as this:

The bringing the Funds into proper Order for the effectual Support of public Credit was often recommended from the Throne as a Point of the higheft Importance, and was for fome Years profecuted with fo mach Prudence, as to produce a Reduction in the Intereft paid to the public Creditors s. This Succefs however made Way for that Calamitous Project called the South Sea Scheme, which under a Variety of fallacious Pretences ruined the Fortunes of Multitudes, and brought no fmall Difgrace upon the State. The moft effectual Remedies were as fpeedily applied as poffible, and by Degrees the Evils this Project had introducted weite. fry; thoroughly removed, that public Credit revived, and the national Intergit was at length reduced from Five to Four per Cent. which washighly beneficial to Society h . There were likewife feveral good Laws made for preventing Delays

Provifion might feem, it was found neceflary in the Courfe of this Reign to grant about One Million for paying the Debts of the Civil Lift. The Whole of the Supplies raifed during the Life of this Monarch for the public Service amounted to Thirty-five Millions Four hundred Fortyeight thoufand One hundred and Thirty-five Pounds. At the Time of the King's Demife the public Debt was about Fifty Millions. The Coinage during his Reign amounted to Eight Millions Seven hundred Twenty-five thoufand Nine hundred and Twenty-one Pounds. It may not be amifs to remark that in the Year 1718 there was a Coinage of Nincteen thoufand Five hundred and Eighty Pounds in Quarter Guineas.
$g$ The State of the public Funds was at this Time, as indeed it is at all Times, a Matter of the utmof Confequence. We have before oblerved, that in the Reduction of legal Intereftax the Clofe of the Queen's Reign from Six to Five per Cent. there was an Exception in favour of the Stipulations made with the public Creditors. But the Situation of Things being much altered, it was thought both reafonable and practicable to relieve the Public in this Refpect, as well as in another, which was then confidered as a great Inconvenience on account of the Number of private Perfons holding Annuities at bigh Intereft, with whom it was difficult to treat feparately. But the engrafting Act in the Reign of King William, and the Mode of eftablifhing the South Sea Company in the Queen's Time affording Precedente, there paffed in the Third Year of this King, Three Acts known by the Names of the General Fund Act, the Bank and the South Sea Acts. By the Firft of thefe fuch as held Annuities were allowed to fubfcribe them into the Bank Stock, and to receive Five per Cent. for the future. By the other Two Acts the Bank (excepting their original Fund) and the South Sea Company agreed to reduce refpectively the Interen they received from the Public, from Six to Five per Cent, and to advance, the former Two Millions and a Half, the latter Two Millions, to pay fuch of the private Creditors as chofe rather to accept their Money, than to continue it at the reduced Intereff. This had fo good an Effect, that apwards of Nine Millions and a Half were fubferibed into the Bank, and thofe who chofe to receive their Money were paid with lefs than Five hundred Pounds.

- The great succefs attending the Subfcription to the Bank before-mentioned, and another Operation of the fame Kind by the South Sea Company, excited a frong Defire of putting all the Reft of the public Debts, if poffible, into fuch a 8rate as might render it practicable to pay them in fo ne reafonable Time. Thefe Debts were of Two Kinds, Irredeemables and Redcemabler. The former were alfo of Two different Sorts, fome for very long Terms, others for a Shorter Number of Years, which taken together, colt the Public very near Eight hundred thoufand Pounds per Annum. The latter were allo of Two Sorts, that is, Annuities bearing Five per Cent. and others Four per Centi amqunting together to upwards of Sixteen Millions and a Half. A Propofal was made by the Suath Sea Company, to take in the Whole by the Confent of the Pruprietors, and for the Liberty of doing this they offered a large Sun to the Public. Upon this the Baok offered Five. Millions for the Bargain. But the South Sea Company oubid them,

Delays in the Courts of Juftice, for abolifhing pretended priveleged Places, a Grievance which had long prevailed, and was now effectually removed, and for giving Eafe to Sheriffs' in the paffing their Accounts, all of which were of great public Utility. Care was likewife taken of the general Tranquillity by effectually fuppreffing Pirates Abroad, by feveral Laws againft Deer Stealers, and Perfons committing Acts of Violence in Difguife, as alfo for fuppreffing Smuggling, which had rofe to an enormoys Height.
. The Woollen, Linnen, and Silk Manufactures were promoted, regulated, and encouraged by feveral Statutes; and the wearing printed Calicoes to the Prejudice of our own Manufactures prevented. There was much Attention paid to the Fifheries of North Britain, and a particular Treaty made with the City of Hamburgh in refpect to their pickled Herrings. The like Notice was extended to the Government and Trade of Ireland, and many Favours granted to the Colonies in order to preferve a ufeful Supply of Timber for Ship Building, encouraging the Making of Pitch, Tar, Turpentine, and other naval Stores. But what may be juftly filed the peculiar Honour of this Reign, was the exempting moft of our native Commodities from Duties on Exportation, an heavy and moft impolitic Bur-: den, and at the fame Time the Duties were abolihed on a great Variety of foreign Drugs imported for the Ufe of Dyers, which gave no fmall Affif-
and obtained an Act in the Sixth of the King, upon fuch Terms as would lave coft therm Scven Millions, and likewife agreed that at Midfummer 1727 the Intereft of their whole Capital flould be reduced from Five to Four per Cent. This was mon certainly highly advantagcous to the Public, and the Terms they propofed to the Proprietors of thefe Debts were fo fpecious, that upwards of Twenty-fix Millions were actually fabfribed, and the Capital of the Company thereby raifed to upwards of Thirty-feven Millions. On the Conclufion, and even before the Conclufion of this Bargain, South Sea Stock rofe to Three hundred per Cent. This Madnefs was cherihhed by taking in a Money Subfription at Three hundred, a Second at Four hindred, a Third and Fourth at One Thoufand per Cent. each, to which Price Stock had gradually rifen. The Company alfo made Loans upon their Stock and declared very high Dividends, and thefe for a Term of Years. The Fallacy with refpect to equblic Creditors lay in paying them for their Property in Stock at a very high Price, fo that whet wet Infactation was over they found themfelves by the Fall of that Stock in a deplorable Condition. The Parliament took feveral Methods for their Relief, in confequence of which the Proprietors of the Redeemable Debts had fomewhat more than Fifty-five per Cent. The Proprietors of the Irredeemables had better Terms, and the old Proprietors of South Sen Stock had upwards of Fifty-five per Cent. added to their refpective Capitals. The Public loft the Seven Millions that had been promired, but upon the Whole were no Lofers by this Project, fince thereby upwards of Twelve Millions of the Irredcemables were converted into South Sca Stock, and the Intereft at the Term before mentioned was to be reduced to Four per Cent. It would have required a Volume to difcufs this Matter thoroughly, but it js hoped that what is here faid will be fufficient to explain the Text.

546 The POLITICAE SURVEY
tance to our Manufactures; which Indulgences were recommended from the Throne ${ }^{i}$.

At the Acceffion of King George the Second, the political Hemifphere of Europe was overcaft with very thick Clouds, for difperfing which we entered into 2 long Train of Negotiations. Preliminaries in a little Time were figned with his Gatholic. Majefty. A Congrefs for difcuffing all Difputes was afterwards held at Soiffons. To this fucceeded the Treaty of Seville, and in order to execute the Engagements contracted thereby wiv were obliged to conclude another Treaty at Vienna, by which we guirantied the Succeflion of the Dominions of the Houfe of Auftria agreeable to the Pragmatic Sanction. The Spaniards, notwithftanding all the Complaifance that had been thewn them, continued to take our Ships in America under Colour of their being employed in an illicit Trade, and for compromifing the Difputes on this Head we concluded, after many tedious Altercations, a pacific Inftrument filed a Convention. Thefe different Tranfactions involved us in a very confiderable Expence, by obliging us to keep foreign Troops in our Pay, granting Subfidies to feveral Princes, and employing large:Sums to facilitate our Views with refpect to different Courts.

By thefe Means however it muft be acknowledged, that we avoided an actual War; and thereby gained Time to make Abundance of neceffary Regulations for the vifible Benefit of the Nation, by fome convenient Provifions in refpect to the Funds, by taking Meafures to fecure their Stability, and by Difcharging feveral Millions of the public Debt. Many prudent Laws were alfo enacted for the Support, Encouragement, and Extenfion of our Manufactures, as alfo in regard to the Fingeries. Great Attention was paid to the interior P.olice of the Kingdom, the Emendation of the Laws in feveral Refpects, and particularly by putting all the

[^257] Proceedings in our Courts of Juftice into Englifh. The like Care was extended in moft of thefe Particulars to North Britain and Ireland, and Induftry cherifhed in every Part of the Britifh Dominions. The Welfare of the Colonies was likewife confidered, feveral Bounties continued, fome new Ones granted, more efpecially in regard to naval Stores; and at the lame Time that Meafures were taken to render them-ufeful to themfelves and to their Mother Country, the Legillature provided likewife by proper Reftrictions againft fuch Practices amongft them as might be priejudicial te fier Interefts $k$. But notwithftanding all the Pains taken, and the many different Methods tried in fo many Years to prevent the Interruption of Peace, it was at length found neceffary, for the Support of the Honour of the Nation and the Freedom of our Commerce, to enter into a War with Spain.

At the Beginning of this War, our Squadron in America took Porto Bello, which ftruck the Spaniards with great Confternation. But we were not fo fortunate in our Attempt upon Carthagena, or in fome other naval Enterprizes. However fo long as we were fingly engaged againft Spain, and of confequence carried on all our Operations by Sea, the War was lefs burthenfome to us, and more diftreffing to our Enemy. But the Death of the Emperor Charles the Sixth exciting a War in Germany, in which we were obliged to take Part, the Difpute became more complicated, and of courfe more expenfive and-more doubtful in its Event. The Battle of

[^258]
## 548. The POLITICAL SURVEY

Dettingen was very glorious to our Arms, and fo alfo was the naval Engagement near Toulon, in which the combined Flects of France and Spain were beaten, and might have been deftroyed.. Our Enemies fenfible of their Inferiority inftigated a Rebellion here, which operated in their Favour, as a Diverfion, but was very quickly cruthed. The War on the Continent was then refumed with Vigour. The Battles of Fontenoy and Laval hhewed the Valour of our Troops; and though the French were in fome Inftances fuccefsful againft our Allies, yet they began to be weary of the War, more efpecially after we rendered ourfelves Mafters of the lifon of Cape Breton, and threatened both their Dominions on the Continent of America and their Illands in the Weft Indies with formidable Invafions, which however was prevented by a Peace that put all Parties nearly in the fame Condition they were at the Time of the Commencement of Hoftilities.

Yet our Councils were not fo entirely occupied with Military Affairs as to neglect our domeftic Concerns. For as at the Beginning of the War proper Meafures were purfued to procure the Seamen requifite for our feveral Fleets, fo at the fame Time very juft Precautions were taken to render this as little detrimental as poflible to our commercial Navigation. The great Companies continued to be very ufeful in raifing the neceffary Supplies, and in raifing them on eafy Terms. Salutary Laws were pafied for promoting our Manufactures, particularly Sail Cloth, already become very confiderable from former Bounties. The Linnen Manufactories in North Britain and Ireland were confidered with Attention and liberally encouraged. A Royal Charter was granted to a Company formed in order to facilitate the Progrefs of the Firft, and the moft effectual Means ufed for fupporting the latter. The Colonies likewife continued to be confideredby Leginature, and the Alacrity and Courage they had Shewn in the Reduction of Cape Brcton, met, as it merited, with proper Regard, as well as Applaufe from the Mother Country. The Province of South Carolina having ftruck into the Culture of Indigo, a Bounty was granted for its Support, which hath been attended with great Effects. The moft liberal Methods were ufed to increafe the Number of Inliabitants in the Plantations by inviting foreign Proteftants to fettle in them, and to prevent the People there from being impofed on by plaufible Projects, a Stop was put to Banks when on the Point of being erected ${ }^{1}$.

[^259]The Treaty of Aix-la-chapelle, and even the Definitive Treaty with: Spain, though they delivered us from many Inconveniencies and all the Hazards of War, left us fill under fuch Embarraffments and Apprehenfions as created greater Expences than had been ufual in Time of Peace, and hindered in fome Meafure thofe Alleviations of public Burdens, that in fuch a Seafon might have been expected. In this pacific Period, comprehending the Space of about Six Years, it muft be however acknowledged $\rightarrow$ Thatseveral prudent Meafures were taken for the public Benefit, and that Whefe were attended with confiderable Succefs. The farther Reduction of fititcreft on the public Funds, a Meafure which but a few Years before had been in Agitation, and then laid afide, was refumed and carried into Execution, which demonftrated at once the Spirit and the Subftance of the Nation. The favourable Opportunity was taken of relieving the People of North Britain from the Hardhips they laboured under from their ancient Tenures, and by the fame wife Provifions that were thought neceffary for preventing future Difturbances in that Part of the INand, the mon effectual Encouragements were given to almoft every Species of Induftry, and the great Hopes that were conceived from thefe Expedients were very fpeedily, as well as very perceptibly accomplifhed. The Attention of the Legillature was likewife fhewn afrefh in the Support of thofe Manufactures which had been raifed by former Bounties. They fith extended their Care and Protection alfo to the Fifheries, becaufe the Si tuation they were in evidently required Affiftance. The Colony of NovaScotia, which had been too much and too long neglected, began to be fettled at a large Expence, and other Steps were taken to promote thofe-
thoufand Six hundred Seventy-two Pounds. After we were involved in continental Meafures, which was before France declared War again? us, the Supplies in the Space of Six Years amounted to Forty-feven Millions Three hundred Seventy-nine thoufand Two hundred Eighty-five Pounds. The Supplies in the whole Nine Years came to Sixty-four Millions Thi:ty-two thoufand Nine hundred Fifty feven Pounds. The Peace of Aix-la-chapelle was concluded Of:ober 11th 1748 , by which the French reftored to us Fort St. George in the Eaft Indies, as we did to them the Ine of Cape 3reton. The Difputes between us and Spain were not very long after adjufted by what was called the Definitive Treaty, and thereby a Period was put to the Afiento with the South Sca Company, and the Sum of One hundred thoufand Pounds given in full Satisfaction for her Claims. The public Debt at the Clofe of the War was fwelled to above Seventy-four Millions, which in the Year 1740. was fomewhat under Forty fix Millions. Within this Period, our Taxes were alfo very confiderably increafed in the feveral Branches, of Cuftoms, Excife, and , Inland Duties, which could not fail of checking in fome dcgree both domentic Induftry and fo: reign Commerce. It hath been before temarked, that the priginal Capital of the Bank being One million Six hundred thoufdnd Pounds ntill continued at Six per Cent. but upon a Prolongation of her Charter the Company advanced the like Sum upon the fame Annuity; which reduced the Intereft on both to Three per Cent. The Eaft India Compapy alfo advanced a Million at the fame Interef. Farther Bounties during this Juncture were granted on the Exportation of Brition, and Irifh Linnen, and in regard to the latter, it may not be amifs to remark, that in the Space:of Fifty-two Years the Exporiation of that Commodity advanced in its Value from Six thou. fand Pounds to Six hundred thoufand Pounds annually, and hath been increafing erer fince.

Enterprizes;
:Enterprizes of the Inhabitants in the Plantations which were calculated for their own and for the Benefit of Great Britain, and thefe had and.continue ftill to have very happy Confequences in refpect to both. We may add to all this the Zeal of Individuals for promoting the public Intereft which appeared in feveral Inftances and afforded indifputable Teftimonies of that heroic Genius, which is the diftinguifhing Characteriftic of a free People, and-which, though confined to their own Country and their own Concerns, does them more Honour than the moft extenfive Conquerts no...'

From Purfuits of this Nature the Attention of the Nation was diverted by the Dangers impending over her Colonies, from apparent Marks of the Jealoufy and Ambition of the French, who faw with equal Envy and Regret the continual Advantages we derived from them. The Difputes that began in that Part of the World foon brought on a War, the moft extenfive and the moft expenfive in which we were ever engaged. attended with a Variety of interefting Events in every Part of the Globe.

[^260]
## of GREATBRITAIN.

At firft we were unfuccefsful in our Operations from the Enemies being earlier and better prepared. The Check we received in America; the Lofs of the mportant Ifland of Minorca, the indeciifive Battle in the Mediterranean, roufed at once the Indignation and Spirit: of the People, which produced fuch an Exertion of our Power as will fcarce appear credible in fucceeding Times. Our Troops were employed on the Continent, our Fleets were fpread even to the remoteft Seas. The Valour and Activity of our Soldiers and Seamen were every-where confpicuous, and triumphant in mof. The French were difpoffeffed of their Forts on the Coaft of Africa, which put us in Poffeffion of the Gum Trade. We became once more Mafters of Cape Breton, and not long after the Capital of Canada was reduced. The Ifle of Guadaloupe fubmitted to our Arms. We more than once infulted the Coafts and fpread Terror into the very Heart of France. We wafted her Strength, and exhaufted her Wealth in Germany, where Valour and Militaky Skill proved too hard for the Superiority of Numbers; and we at length deftroyed her whole naval Force in Sight of her own Ports. Thefe great and glorious Atchievements demanded immenfe Difburfements, and thefe were cheerfully fupplied in a great Meafure from the Profits of our Commerces which our Maritime Force fecured. In the Midft of thefe Military and Naval Expeditions, the Legillature was not inattentive to Affairs at Home. The Militia was fettled, difciplined, and rendered truly refpectable. Our Humanity was difplayed, in generoully relieving the Portugurefe on the Subverfion of Lifbon by an Earthquake, and in the kind Treatment of a Multitude of Prifoners, which perhaps procured the Blefling of Providence on oar Arms. Our Prudence appeared in the Meafures that were taken to prevent the Scarcity with which we were threatened, and which in other Countries was feverely felt. At the fame Time our Manufactures, Fiheries, and Colonies experienced in many Inftances-the public Care; fo that while many other Countries were during the Whole of this Yeriod expofed to innumerable. Calamities, this happy Illand efcaped them ally and its Inhabitants continued in the full Poffefion of undifturbed Profperity $n$.

[^261]At the Acceffion of his prefent Majefty King George the Third the War was in the moft critical Situation, and notwithftanding all our paft Succeffes, required fuch an Exertion of our Force as might bring it both to a happy and a fpeedy Period, which was the more difficult from the Remotenefs and the Diverfity of the Scenes of Action. This arduous Undertaking was accomplihhed by the Zeal, Unanimity, and Firmnefs of the Nation. The War in Canada was ended by the complete Conqueft of that Country, and the entire Submiffion of its numeraus Inha- $I$ bitants. In the Eaft Indies the Power of the French, which had been oñe fo formidable, was abfolutely extinguifhed by the Reduction of Pondicherry. Nearer Home the Terror of our Arms, and the Senfe of theirown Weaknefs was increafed by the Capture of Bellcille, which was as humiliating at the Clofe, as it would have been fatal at the Beginning of the Difpute. In the Weft Indies many of their fmaller Ifles, and one of their largeft, Martinico, fell into our Power, whereby an End was put to the troublefome Depredations of their Privateers. The War in Germany was carried on with Vigour. In the Midft of thefe complicated Efforts we nobly fuccoured the Portuguefe, and after all milder Meafures had been tried in vain, we declared War againtt the Crown of Spain. This new Object was profecuted with a Spirit that convinced all Europe that Magnanimity was the fole Motive of our Forbearance. Our Fleet, the .greateft ever feen in the American Seas, paffing through the dangerous Channel of the Bahamas, appeared on the Coaft of Cuba, where our Forces befieged, and after a gallant Refiftance made themfelves Mafters of the Havannah, the Key of the Spanifh Commerce, and of all the Ships of War and other Veffels in the Port. Providence favoured our Endeavours againft the fame Power in the Eaft, where, having made a Defcent on the Illand of Luconia, we reduced its Capital the City of Manilla. Thefe decifive Strokes had the defired Effect, and compelled our Enemies to yield to a Peace, which gave abfolute Security to our old Colonies, and left us

[^262]
## of GREAT BRITAIN.

 in quiet Poffeffion of thofe vaft Acquifitions, the Value of which will hereafter appear, and muft continue gradually to improve. The Conduct and Succefs of this War inconteftibly demonftrate the Excellence of our Conftitution, the unfhaken Intrepidity of its Subjects, with the amazing national Refources arifing from Freedom and Commerce. All thefe afford us a probable Affurance, that by a conftant and fteady Adherence to thefe Principles, all thefe invaluable Advantages may be preferved to us, and tranimitted to our lateft Pofterity ${ }^{\circ}$.We are now come to the Clofe of this Period, and it is hoped that the candid Reader will difcern from the Comparifon between the public Income, and the improved State in all Refpects of this Country, how exactly they have correfponded with, or rather how much they have contributed to fupport each other. The Power of raifing Money on the Subject, and of controuling the public Expence, being both lodged in the Reprefentatives of the People upon whom it was to be levied, and for whofe Benefit it was to be fpent, produced a Facility of furniming Supplies adequate at all Times to the Neceffities of the State, without Danger of their being fquandered or mifapplied; and as this was done without interfering with, or leffening the Force of the executive Power; the Advantages of a popular and of a monarchical Form of Government have been happily united, without our being in any great Degree expofed to the Inconveniencies of either. After having from the Evidence of Facts eftablifhed thefe very important Points, it would be expedient to put an End to the Chapter, if there were not fome collateral Matters of Confequence to the full Illuftration of the Subject which fill remain to be dif-

[^263]cuffed, and therefore we will endeavour to fet thefe alfo in as clear a Light as may be before we conclude.

We have in the Courfe of this Deduetion feen the Origin, the Mode of Increafing, and in Procefs of Time the immenfe Accumulation of our Public Debt. At the Juncture in which it was firft contracted thofe who were the fole, and at the fame Time propereft Judges, held it neceffary for many Reafons, fome of which are fill fufficiently obvious, and others which are not now clear to us might be io to them. The Weight of it was felt from the Beginning, and feveral Circumftances concurred to render it at that Time more uneafy to the People than it hath been fince. The Facility of increafing it arofe from the Augmentation of national Wealth, the Opinion entertained of Parliamentary Security and that ftrict Regard which hath been always paid to public Faith. The War in the Reign of Queen Anne, as it prevented the Removal of the Incumbrances then lying on the Public, fo the Expences attending it fwelled the Debt to a Size that rendered the immediate-or even the fpeedy Difcharge of it impracticable; and therefore all that could be done in the fucceeding Reign was to take fuch Meafures as might render the Load lefs felt, and we may without Injury to Truth affirm, that fuch Meafures were taken, and taken with Effect. This will appear lefs extraordinary, if we confider that the far greater Part of the public Creditors are Natives of this Country, and confequently the Sums they hold therein, though a Debt on the Public, is at the fame Time the Property of Individuals, and the monied Men have the fame natural as well as legal Title to their Intereft that the Land-owners have to their Rents; and as the Situation of Things have varied, the former have fubmitted to Reductions, as well as the latter (at all Times) to the Weight of Taxes. We are likewife to obferve that this Species of Property, being in conftant Circulation, hath in regard to the Community been attended with great and manifeft Advantages. Gentlemen have by this Means an Opportunity of improving the Savings out of their Income; Tradefmen veft their Money occafionally in the Funds, and in like Manner Merchants, fo that (though always ready) it never lies idle, when there are no immediate Demands in refpeet to retail Trade; Manufactures, or Comimerce: Befides the Futds have been found equally fafe and convenient for depofiting the Money left to Widows, Orphans, and public Trufts, and all thefe together have excited $\%$ peculiar Kind of Induftry unknown to our Anceftors. Foreigners alfo are no inconfiderable Proprietors, at which, if duly conifidered, we have no Reafor to repine. In the firft Place it is the highef Mark of Confidence in our national Subftance and Credit, that Strangetrs can give. In the next, we have their Mone y at a low Intereff, anf this pafing into the Hants of our Subjects, is em ployed by them in a great Variety of Wayss to their own Advantage.
had it formerly, at higher Intereft, for the fame Purpofes, on private Credit, and if we have more of it now, fo much the better. Add to all this, that whatever the Amount of the public Debt may be, the Nation in refpect to Payment can never be diftreffed by it, for though the Intereft may yet the Principal cannot be demanded. But notwithftanding all that hath been and much more that might have been faid on fo copious a Subject the public Debt, more efpecially as it is increafed of late Years, muft have been confidered as an heavy (and as moft of the Funds for paying the Intereft of it, though at firft granted only for certain Tcrms of Years, are long fince for the Security of the Creditors rendered perpetual, might have been efteemed an intolerable Burden, if a Method had not been happily contrived for its Difcharge. Of this we are next to fpeak, and are the eby obliged to take Things a little higher, and to recapitulate fome Particulars, that* for other Purpofes have been already mentioned P .

The Public Debt, as we have already obferved, became at the Entrance of the Reign of King George the Firft, a principal Object of the Attention of the Legillature from a laudable Defire of rendering the public Creditors eafy, and of reducing their Demands into fuch a Situation as that they might be managed with more Facility, and transferred with

[^264]
## $55^{6}$ The POLITICAL SURVEY

greater Eafe. It was with this View that an Act paffed in the Firft Year of that Reign, by which, for the Purpofes therein affigned, a Number of Duties which had been formerly granted, were now combined and afreh appropriated under the Title of the Aggregate Fund q. About Two Years after this, and when the Efficacy of that Arrangement was clearly difcerned, it was judged expedient to purfue this Method ftill farther. To this End feveral Laws were paffed, of which, fo far as they regarded the Reduction of Intereft, we have already taken Notice, but befides that, they had other important Points for their Objects. The South Sea Company having confented to a new Regulation of their Concerns on fuch Terms as are clearly ftated in the Act which regards that Company, had alfo a Number of Duties appropriated, or rather re-appropriated for the Payment of the Intereft, as it became due to their Proprietors, which from thence affumed the Title of the South Sea Fund r. A fimilar Difpofition being made in Reference to thofe Branches of the public Debt, which for the Convenience of the Public were to be put thenceforward under the Management of the Bank, many of the Duties formerly granted, were in like Manner appropriated to that Company, and thefe Duties from the Time of this Appropriation were diftinguihed by the Name of the General Funds. By thefe wife and well concerted

9 This Fund took its Rife and Name from Stat. 1 Gco. I. cap. 12, which enacts, That a great Number of Duties, Cuftoms, Excife, and inland Impofitions therein very accurately fated, which had been granted to his Majefty's Predeceffors, fhould be accumulated, and fuch of them as were not before granted for ever, are unlefs redeemed by Parliament, rendered perpetual, and all Sums coming into the Exchequer, and being unappropriated, after Michaelmas, A. D. 1715, are directed to be carried to this Fund. The Services to be anfwered by it are next affigned, and it is provided, that after their Difcharge, if any Surplus fhall remain, it is to be at the Difpofition of Parliament, and in cafe of any Deficiency it was to be made good out of the next annual Supplies. The Tenor of this Act plainly fiews that thefe Duties and Impofitions, and confequently the Materials out of which they arofe, had, notwithftanding the Two long and expenfive Wars in the Reign of King William and Queen Anne been continually increafing.

5 This was eftablifhed by Stat. 3 Geo. I. cap. 9, which, though intituled An Act for redeeming the Capital of the South Sea Company, continues and eftablihes to them the Dutios originally granted them by the gth of Anne, cap. 21, and for the Security of their Interelt granted for ever. The Scope of this Act was to reduce with the Confent of the Proprietors of this Company their Annuity of Six hundred thoufand Pounds to Five hundred thoufand Pounds upon their Increafed Capital of Ten Millions. It was alfo provided, that if there was any Deficiency it thould be made good by Parliament, and that with regard to any Surplus that might arife, it fould be at the Difpofition of Parliament. It is evident that by this Act, exclufive of other Advantages which have been before-mentioned, the Public gained, or at leaft faved One hundred thoufand Pounds per Annum.

- Thefe Dutics were accumulated and appropriated by Stat. 3 Gee. 1. cap. 7, which was intituled, An Act for redeeming the Duties and Revenues which were fettled to pay off Principal and Intereft on the Orders of Four Lotteqries in the late Reign, \&c. The total Amount of the Duties which were to conftitute this general Fund was computed at Seven hundred Twenty-four: thoufand Eight hundred Forty-nine Pounds. The Defign of this new Arrangement was to puo cure fome Eafe to the Public, by engaging the Poffeffors of thefe Lottery Orders to fubleribe

Meafures the redeemable Debts of the Nation were at leaft in fome Degree reduced into Order, and brought into fuch a Method as was at once fatisfactory to the Proprietors, and convenient in regard to Government. In purfuance of thefe Alterations, and a clear Conception of the Effects that muft follow.from them, the Legillature very prudently enacted; that the Surpluffes of thefe feveral Funds fhould from time to time as they arofe conftitute another, which from the End and Defign of its Inftitution hath been ever fince known by the Appellation of the Sinking Fund, as being folely appropriated to the Difcharge or finking of the national Delts contracted before Chriftmas, A. D. 1716 t . The great Sa gacity of this Difpofition appeared in many Refpects very confpicuous, but in none more than in the vifible Difproportion between the public Debt and the inconfiderable Fund affigned for reducing it. This fhewed that
them into the Bank, and to receive Annuities at the Rate of Five per Cent. or if they declined this to be paid off. They chofe the former, and accordingly upwards of Nine Millions and a Half were fo fubfribed. For the Security of this general Fund it was provided, that if at any 'rime the Duties fell Mort of the Sum before-mentioned, the Deficiency fhould be made good out of the next Aids granted by Parliament.
:There is fill another Law, of which it is neceffary that Notice flould be taken, and this is 3 Gco. I. cap. 8, intituled, An Act for redeeming feveral Funds of the Governor and Company of the Bank of England, and for fecuring to them feveral New Funds and Allowances, \&c. by which many Things were flipulated that the Bank were to do and perform in Confideration of the new Sccurity they obtained, and by which the Public, as in the Cale of the South Sea Company, faved upwards of One hundred and Thirty thoufand Pounds per Annum, and the Surplus of thefe Funds thus appropriated, was referved to the Difpolition of Parliament. But as all thefe; Acts werc l'art of One great Syftem, by a Claufe in the general Fund Act all thefe Surplulles, viz. of the Aggregate, South Sea, and General Funds were directed to be fet apart and applied to the national Debt, and are from thence, as we obferved in the Text, filed The Sinking Fund. This, though at firt inconfiderable, yet being gradually increafed by Abateo ments in lintereft, and the augmenting of the feveral Duties appropriated to the Three Funds fo frequently mentioned, conftantly growing, as at its Inftitution had been forefeen, and is in this Refpect, as might be calily fhewn, the trueft and teft Criterion of the State of the Nation. In order to explain this we flall obferve, that at Michaelmas 1719 thefe Surpluffes ftood thus: $\mathbf{O n}$ the Aggregate Fund T'wo hundred Eighty fix thouland Four hundred Ninety-five Pounds Seven Shillings and a Penny; on the South Sea Fund Ten thoufand Six hundred Siytyeight Pounds Sixteen Shillings and Eleven Pence Farthing; on the Gencral Fund One hundred Twenty-feven thoufind Seven hundred Forty-two Pounds Six Shillings and Nine Pence Three Farthings, making in the Whole Four hundred Twenty-four thoufand Nine hundred and Six Pounds Ten Shillings and Ten Pence. Twenty Years after this, viz. at Michaelmas 1739; the Account ftood thus : On the Aggregate Fund Seven hundred and One thoufand Four hundred Ninety-two Pounds Eleven Shillings and Fuur Pence Halfpenny; on the General Fund Three hundred Eighty-five thoufand Seven hundred and Forty Pounds Eighteen Shillings and Four Pence; on the South Sea Fund One hundred and Eight thoufand Sixty-one Pounds Six Shillings and Three Pence Half-penny, amounting in the Whole to Onie million One hundred Ninety-five thoufand Two hundred Ninety-four Pounds Sixteen Shillings. At the Clofe of this Period, A. D. 1763 , the Sinking Fund with the Additions carried thereto in virtue of fubfequent Acts, had produced from its Commencement Sixty-nine Millions Seven hundred Seventy-two thoufand Three huadred and Sixteen Pounds Five Shillings and Seven Pence Halfpenny.
thofe who formed this Provifion thoroughly underfood the Nature and.the Confequences of all the preceding Regulations, had at the fame Time a perfect Knowledge of the Circumftances of the Nation in all Refpects, and a true Forefight of the gradual Increafe and Operation of this feemingly fmall Engine deftined to remove fo ponderous a Weight. Experience hath fully juftified the Efficacy of this Provifion, if it had been invariably applied, and all pofible Precautions were taken at its Eftablifhment to fecure the Permanency of its Effects, as well as to afcertain the End and Mode of its Application u.

As in regard to natural Knowledge, the fureft Principles are thofe deduced from Experiments; fo in reference to political Refearches, the cleareft Lights are fuch as we derive from Facts. There are not many Countries that have undergone more Revolutions than this, and however remote in Point of Time we fill retain more or lefs of their Effects, which Circumftance rendered it neceflary to give diftinct hiftorical Details of them all, that from thence it might the better appear how our prefent Conftitution had been formed and gradually improved, by the purging out of old Errors, and adopting new Meafures as the Change of Affairs required, and carefully remarking the Confequences they produced, as efteeming thefe the beft Indications of their Nature, according to that unerring Rule, that as Trees are known by their Fruit, fo the Excellence of a Government is to be difcerned and determined from the Condition of the Subjects who live under it.

Irhath been laid down as a juft Pofition, that the moft perfect Syftem of Rule is that which makes the moft People happy. This can be only

[^265]
## of GREAT BRITAIN.

done by leaving to Individuals as much of their natural Freedom as is confiftent with the Welfare of Society, and the Submiffion due to the Laws made for its Support, and without which no Society can fubfirt. This rational Liberty excites the full Exertion of the human Faculties, and enables Men to difplay their feveral Capacities to the utmoft, in order to procure for themfelves and their Families the Neceflaries and Conveniencies of Life. This active Spirit of Induftry, being encouraged, fupported, and protected by the Powers intrufted with Government for that Purpofe, is ever attended with the moft favourable Effects, as contributing to whatever hath a Tendency to public Welfare. This it is that conftitutes the Difference between One Nation and another; and in like Manner the different State and Condition of the fame Nation under different Circumftances.

Industry, as we have always afferted, is the fole Source of national Riches; and as Liberty is the Support of Induftry, fo where this prevails, a Spirit of Independency, that is, of fubfifting from their own Acquifitions, pervades the whole Body of the People. Every Citizen according. to his Abilities and Situation employs his Skill and Labour to ufeful Ends, and the Produce of thefe, in whatever Kind, are Riches. The Proofs of this are never equivocal or incertain. In a Country filled with fuch Inhabitants the Lands are cultivated, Manufactures flourifh, Situations are improved, Rivers navigated, Ports opened, Commerce extended. The whole Community is in continual Motion, the Succefs of one exciting the Emulation of another. Old Arts are improved, new Ones invented, Colonies are fent out into the remoteft Parts of the World, and thefe diftant Citizens. carrying with them the fame Difpofitions, not only provide plentifully for their own Subfiftence, but by adminiftering frefh Motives to Induftry employ, and confequently enrich thofe they left at Home.. Such are the Effects of Freedom, Diligence, and Oeconomy, which cannot either be counterfeited. or concealed. Whereever therefore thefe appear, and appear with Splen-: dour, they are indifputable Characteriftics of the Genius of the Nation, andi the Temper of the Government, and are fure to continue and to increafe fo long as thefe remain unchanged..

CHARL Of Colonies in general and their Utility.
2HE wiffl Nations in aneient Tives fet us the Exainple of eftablibing CoLonjes for promoting Commerce. Ibe barbarous People witbo Jubverted tibe Romain Empire retied folely on Force for tbe Prefervation of tbein Coniquefts. In more afoilized Ages Factories weere fettled, and gradually attained jucb Immunities as rendered them a Kind of Colonises in Effect.'Tike opirit of Difcovery introduced into tbis Country by Henry the Seventb and profecuted by all bis Defcendantse The Plantations by a Conturrence of different

## of GREATBRITAIN.

Event became confiderable in a jhort Space of Time. The Propriety and Utility of fucb Settlements bath been controverted upon different and even contrary Principles. In our own Times the Advantages accruing from our Plantations are too evident and numerous to admit of: Difpute. © Same Infances of tbeir extraordinary Utility to tbe Motber Country more particularly pointed out. The Reafons for entering into a fuccinct Detail of them in this Work, and of the Metbod in which it is propofed to treat tbem.

THERE are certain Principles fo clear and fo felf-evident as to ftrike the Underftandings of Men in general upon their making any Matter of Importance the Object of their particular Attention. To this we may attribute the Idea of fixing Settlements in diftant Countries for the Sake of Commerce. We may even look upon this as a Matter of Certainty, when we confider that the wifeft and moft intelligent Nations in early Times who acted fyftematically upon Maxims of found Policy, and not from Caprice, univerfally adopted this Meafure. This we find to have been the Cafe with regard to the Egyptians, the Chinefe, the Phenicians, the commercial States of Greece, the Romans and the Carthaginians. . It is true that their Colonies differed in certain Circumftances, bue the leading Principle, that of maintaining a Correlpondence between the Mother Country and the Colony, was the fame ${ }^{2}$.

The Warlike Nations, who by Numbers, Firdanefs, tud Valour overrun and ruined the Roman Empire, afimed owly at Conquefts, and aftor overcoming the Inhabitants of the Countries in which they feated themfelves, either extirpated them or held them in Yaffalage. This unfeeling and unpolifhed military Difpofitionlaftedlong, wâs the conftatitsource of Bloodhed

[^266]and Devaltation, and whenever Princes enlarged their Dominions at the Expence of their Neighbours, they had Recourfe to Garrifons in ftrong Places, and to flying Camps in the Field in order to preferve thefe Acquifitions, as judging rightly enough on their own Principle, that what by Force had been obtained, Force only could retain. For this they have been however blamed by a celebrated political Writer, as in his Judgment they might better have attained their End by eftablifhing Colonies $b_{0}$

But when in Procefs of Time this ferocious Temper abated, and Monarchs began to have better Notions of Policy, they returned gradually, though lowly, to fomething of this Sort. Edward the Third when he befieged Calais made even his Camp a Kind of a Mart, and when he became poffeffed of the Place very prudently fixed his own Subjects therein, and made it the great Staple for Englih Commodities of all.Sorts. The Factories eftablifhed in the Low Countries, with extenfive Privileges, and the Settlements made in different Parts of Europe by the Merchants of the Hanfe Towns were of the fame Kind, and were made with the like View. Henry the Fourth and Henry the Fifth extended thefe mercantile Eftablihments in favour of their own Subjects into feveral foreign Countries. Edward the Fourth and Richard the Third, as we have hewn in its proper Place, fettled Confuls and Factories in Countries ftill at a greater Diftance, and particularly in Italy, and fecured to their Subjects very extenfive Privileges by Treaties, as we have likewife fhewn c.

[^267]
## of GREAT BRITAIN.

Hevk y the Seventh, as might well be expected from a Prince of his Temper and Genius, entered deeper into Things of this Nature, readily received Bartholomew the Brother of Chriftopher Columbus, and accepted his Propofitions for Difcovery before they were agreed to in Spain. He afterwards took John Cabot into his Service, who may be juftly ftiled the Author of our Title to all that we poffers on the Continent of America, and to whom by Letters Patent he granted the proper Powers to fettle Colonies in remote and new found Countries. His Son Henry the Eighth had the fame Objects in view, and encouraged his.Subjects to Enterprizes of this Sort, in confequence of which they failed to the Coafts of South America, traded to Guinea, and vifited Newfoundland. In fome of thefe Expeditions Sebaftian the Son of John Cabot was employed, who was in fuch Favour with Edward the Sixth that he granted him the Office of chief Pilot of England with a handfome Salary. He fettled at Briftol, where he kept up this Spirit among the Merchants, and it was chiefly by his Credit that the Ruffia company was formed, of which, for his great Services, he was in the fucceeding Reign declared by Charter Governor for Life; and indeed the Difcovery of Archangel and the fettling a regular Correfpondence with that Empire hath been conlidered as the mort fortunate Event of Queen Mary's Adminiffration d.

In confequence of thefe Beginnings, and the Increafe of our Navigation and Commerce, Difcoverics and foreign Settlements were more vigoroully pufhed in the Time of Elizabeth, as that heroic Princefs had many Motives to give them as fhe did all the Countenance poffible, and thereby, as we have already mentioned, excited a Multitude of bold, active, and enterprizing
d It is equally carious and pleafing to contemplate the dawning of thofe Speculations which in their Procefs and Practice have been fo ufeful and beneficial to Mankind. Henry the Seventh hath been moft unjufly cenfured for letting llip the Offer of Columbns, which was his Misforcune, not his Fault. His Patent to the Cabots is an inconteftible Proof how ready he was to liften to any thing of this Nature, and it is not a little furprizing to find how quick thefe Arts advanced. Mr. Robert Thorne, a Merchant who had refided long in Spain, addreffed to Henry the Eighth Two hundred and Fifty Xears ago, a Requeft that he would attempt opening a Paffage to China; by navigating directly through the North Pole ; which Scheme he' fupported by Arguments equally rational and frikiog. It was probably by his Advice that Sebattian Cabot, who had made a Voyage in the Service of their Catholic Majefties, returned hither, which thews that he had more Dependance upon Encouragement here, neither was he deceived in his Expectations as we have Shewn above. We may indeed be faid to owe as much to the Father and Son as Spain did to Columbus. They gave the Nation a Tura to thefe Kind of Studies, which very quickly grew fafhionable, and Perfons of the Firft Quality became not only Patrons and Proficients in thefe Sciences, but undertook Vozages in Perfon, or caufed them to be undertaken at their Expence. This maintained the like Difpofition amonglt the Merchiznts, and excited an Emulation in fftting out Veffels for Difcoveries from feveral Ports. We may likewife add; that the Fame acquired by thefe Enterprizes kept up their Credit till by the Advantaget fowing from them it came to atand upon firmer Ground. .

## - ${ }^{\circ}$

## 564 . The POLITICAL SURVEY

Perfons to hazard their Lives and Fortunes in fuch Undertakings. In the Days of her Succefior they were profecuted from Motives of Profit. Companies were formed for promoting them. Noblemen and Gentlemen of large Eftates obtained Grants of Inlands and Tracts of Country which they undertook to fettle at their own Expence. The fame Steps continued to be taken in the Reign of Charles the Firft, and whoever attentively confiders the Situation of Things and the Difpofitions of Men in thefe Three Reigns will eafily difcern how our Colonjes came in to thort a Space to acquire that Strength and Confiftency which rendered them of fo much Confequence, and fo jufly an Object of national Concern as we find them to have been a little before, and at the Reftoration, when that Provifion was made which hath been fo highly advantageous to them and to their Mother Country by the Act of Navigation e.

We muft not however conceive that thefe Settlements, many of them in wild and defart Countries, and at a vaft Diftance from this Inand, were made with general Confent and univerfal Approbation. The Nature of Mankind does not admit of Unanimi in Matters of this Sort, and therefore we need not be furprized that both in their Origin and Progrefs they have been expofed from feveral Motives, and from feveral Quarters to mahy Objections. At the Beginning they were turned into Ridicule by thofe who were very incompetent Judges of their Utility. Their flow Growth and the Mifcarriages that happened to fome of them occafioned their being treated by fome others as rafh and chimerical Projects, by which the Perfons and Fortunes of Numbers were expofed to be Chipwrecked on

[^268]
## of GREAT BRITAIN.

 inhofpitable Coatts and in unwholfome Climates from the Views of avaritious Men, who made no Scruple of facrificing public Welfare to private Gain. When all thefe Pretences were not only fully refuted by folid Arguments, but what admitted of no Reply; the Teft of Experience, new Clamours were raifed from very different Topics, and it was furmifed that the Growth and flourihing State of the Colonies muft operate to the Detriment of this Illand, and become the Source of gradual Depopulation, with many other finifter Infinuations of a like Nature which never did or can make any Impreffion on the Minds of fenfible Men, and who from their comprehenlive Knowledge are enabled to be proper Judges of Things of this Nature $\mathrm{f}_{\text {. }}$But whatever might be the Cafe in reference to this Subject in Times paft, yet in our Days the Value, Utility, and lmportance of the Colonies in refpect to this Inand have been by the Evidence of. Facts put beyond all Difpite. The Britifh Inhabitants in them draw fome of the Neceffaries. and many of the Conveniencies of Life from hence. The fupplying them with thefe is a new and very great Source of Induftry, which by affording Employment to Multitudes, cannot but have an Effect in augmenting the Numbers as well as contributing to the Eafe and Happinefs of our People at Home. The having a certain, conftant, regular, and increafing Market for our Commodities and Manufactures hath had a very vifible Effect on. almoft every Branch of our domeftic Trade. Befides, as the Correfpon-. dence between us and our Countrymen in thefe remote Parts is carried on. by Sea, this extends our Navigation, and hath added amazingly to the Num-

[^269]ber of our Shipping, which is another Article very advantageous and profrtable to the Inhabitants of Britain. At the fame Time by raifing and fubfirting Numbers of hardy and experienced Seamen, it evidently contributes to the Support of our Naval Power g.

These, though fignal and Thining Advantages, as plainly conducing to the increafing our Riches and Strength, are far, very far from being all the Benefits that have refulted and continue to refult from our Settlements. By the Returns they make us for Goods of every Kind that we fend them weare enabled, after furnifhing our HomeConfumption, to manufacture and export immenfe Quantities of their Produce to other Countries, which is a farther Addition to our Commerce, and fwells not a little the Profit that arifes from it. We likewife receive from them many Things which we formerly purchafed from other Nations at their own Prices, and which were frequently brought to us in their own Bottoms, neither in fome Cafes were thefe the greateft Inconveniencies.. Their inexhautible Fifheries are alfo pregnant with innumerable Benefits. The Number of our Subjects in thefe Parts have been and may be increafed without Danger, by permitting foreign Proteftants to fettle in them, from whofe Skill and Labour new Improvements may with much Probability be expected to arift. What confiderably advances the Value of thefe, and many more Advantages that might be enumerated is, that they are not only folid and permanent, but belong exclufively to Great Britain, and of which, while we retain our Freedom and Naval Power, we never can be deprived $h$.

[^270]
## of GREAT BRITAIN.

As from this very flight and flender Sketch of the Emoluments flowing from our Plantations, it is inconteftibly evident, that they have contributed greatly to increafe our Induftry, and of courfe our Riches, to extend the Commerce, to augment the Naval Power, and confequently to maintain the Grandeur and fupport the Profperity of the Mother Country; the Propriety clearly appears of inferting a fuccinct Detail of them in a Political Survey of Britain, which would be indeed otherwife very incomplete. This then being the fole Point of View in which they are here to be confidered, it is by no means neceffary to enter any farther into their Defcription than is requifite to this Purpofe, and to afford a Series of in-con:-itible Proofs of the Truth of what hath been afferted in relation to them in this Chapter. We may be the rather difpenfed with on this Head, as there are already feveral general and very many particular Hiftories of the Colonies in the Hands of the Public, whitre all the Information that can be farther faught in refpect to them may be obtained. As thefe Settlements were made in very different Parts of the World at very different Times, and for very different Purpofes, To the moft eafy and obvious Method of treating them feems to be, at leaft in regard to our Plan, ranging them under the feveral Quarters of the Globedon which they have been eftablihed, and pointing out particularly by what teans, in what Manner, and to what Extent they are or may be rendered beneficial to Britain i.
to this, as mof of them are exported in our own Bottoms, we are to add the Frcight likewife, which is very confiderable. Moft of thefe Goods before we had Plantations of our own we bought fiom Foreignces at very high Prices, as for Inftance, Brazil Sugar at Seven and Eight Pounds by the Hundred, Tobacco from four to Eight Shillings a Pound. Indigo, of which we now receive much, and are like to receive much more from our own Colonies, we ftill purchafe from the French and Spaniards to a large Amount. What may ferve to fet this Point in a ftronger Light is the Cafe of litch and Tar, which we formerly bought from the Swedes at what Price rhey pleafed to fer upon it, and even at this high Rate they infifted on fending in their own Ships. At the Beginning of Queen Ann's War we found ourfelves in fo precarious a State with refpect to thefe Commodities fo neceflary for our Navy, that Dr. Robinfon, afterwards Bifhop of London, then our Minitter at the Cours of Sweden, recommended the procuring them from our Colonics upon any Terms. This produced a Bounty for the obtaining them, and that foon brought them not only at a Third Part of what we had paid for them to Sweden, but alfo in fuch Quantities as enables us to export them to the.Straits, Spain, Portugal, Holland, Bremen, and Hamburgh. Upon the fame Principle we have fince by the fame Means obtained great Quantities of Iron, and in Time are likely to draw all our Naval Stores from our own Settlements.
${ }^{1}$ There is nothing can more fully or more fenfibly evince the Truth of our Affertions in refpect to the, commodious Situation of this Inand, the fuperior Genius of its Inhabitants, and the Excellence of our Confitution, than the performing the Promife made in the Text, of giving a concife View of the Enablifhments we have made in all Parts of the World. For thefe mult be confidered as fo many diftinguilhing Teftimonies, fo many hining Trophies of our maritime Skill and naval Strength. Thefe maintain rcgular and conftant Correfpondence unjer our Aufpice between Countries the moft remote from each other, and thereby while they cstend the Fame, difplay the Power and fupport the Commerce of Great Britain.

## C H A P. II. <br> Of the Britilh Territories in Europe.

## S E C T. I. <br> Of the Fortrefs, Town, and Port of Gibraltar.

THERE are few Places of fo fmall an Extent, that have made fo Mhining a Figure in Hiftory as this. It lies in the Province of Andalufia, the faireft and fineft in Spain, in the Latitude of Thirty-five Degrees Fifty Minutes North, though fome place it higher by near Twenty Minutes, and in Five Degrees Thirty-five Minutes Longitude Weft from London. It is a Promontory or rather a Peninfula, joined to the Continent of Spain by a narrow, flat, and fandy Ifthmus. The whole Extent of this immenfe Rock, forfych it is, rifing in its perpendicular Height about Four hundred and Forty Tards, meafures from North to South about Two Englifh Miles and Three Quarters in Length, and is fcarce One in Breadth. The Mountain which gives Name alike to the Town, the Straits, and the Bay, is called Gebel-Tarek, that is, the Mount of Tarek, from the Moorim Ge neral, who landed here in the Beginning of the Eighth Century. This Promontory was known to and famous amongt the Ancients by the Name of Calpe ${ }^{2}$.

On the Eaft Side which is wafhed by the Mediterranean, the Rock is fo fteep as to be efteemed utterly inacceffible. On the Weft which looks to the Bay it is lefs rugged, and on this Side lie the Town and Fortifications, by which it is now thought to be rendered impregnable. In regard to the Climate, the Air when the Weather is ferene is very thin and pure, and confequently wholfome; but from the Beginning of June to

[^271]
## of GREAT BRITAIN.

the Middle of September, it is exceedinglv warm. In the Winter it is fubject to very heavy Rains, and the Weather is fometimes cold. Snow feldom falls, and does not lie long. Ice is rarely feen, and only on the Summit of the Rock, where it is very thin. The Soil is various; where the Town ftands, it is red Sand, but in fome Places, and more efpecially in the Clefts of the Rock it is black and rich, fo that Oranges, Lemons, Grapes, Pomegranates, and other Fruits grow in the highef Perfection, and the whole Mountain is covered with Shrubs of different Kinds, and a great Variety of aromatic Plants. There is alfo, which is a great Bleffing, Plenty of excellent Water b.

The Town of Gibraltar lies along the Bay on the Weft Side of the Mountain, on a Decline, by which, generally fpeaking, the Rains pafs through it freely and keep it clean. The old Town was confiderably larger than the new, which confifts at prefent of between Four and Five hundred Houfes, many of the Streets are narrow and irregular, the Buildings of different Materials, fome of natural Stoneout of the Quarries, fome of a factitious or artificial Stone, and a few of Brick. ThePeople are fupplied with frefh Provifions chiefly from the Coaft of Barbary, with Fruit, Roots, and Vegetables of all Sorts from thence or from their own Gardens. Befides what is properly called the Town there are feveral fpacious and commodious public Edifices erected, fuch as Barracks for the Soldiers with Apartments for their Officers, Magazines of different Kinds, Storehoufes for 1'rovifions, Warehoufes, Yards, and praper Accommodations for the Commander of the Mediterranean Squadron, and for repairing and heaving down of Ships, with very airy, fpacious, and noble Hofpitals for the Ufe of Soldiers and Scamen when fick. The Inhabitants, exclufive of Britiih Subjects dependant on the Garrifon, or who refide there from other Motives, confirt of fome Spaniards, a few Portuguefe, a confiderable Number of Genoefe, and about as many Jews, making in the Whole between

[^272]
## 570 The POLITICAL SURVEY

Two and Three thoufand (though fome make them much fewer) without reckoning the Garrifon c .

This Town may be faid to have Two Ports, the Firft lying to the North, and which is proper only for Tartans and fmall Veffels, covered towards the Land by the old Mole. The other lying to the South of this between the little and the new Mole, is very commodious for larger Verfels, and hath a fair Stone Quay. The Bay of Gibraltar is very beautiful and capacious, being in Breadth from Europa Point to Point Cabrita about Five Englinh Miles, and in Depth about Eight or Nine, with feveral fmall Rivers running into it. The Ifthmus between this Bay and the Mediterranean, on which are the Spaniih Lines, is about a Mile in Brcadth, and between it and the Mountain there is a Morafs, which is now rendered an Inundationd.

The Strait of Gibraltar through which the Ocean palfes into the Mediterranean, thereby dividing Europe from Africa, runs from Weft to Eaft, about Thirteen Leagues, though others make it longer. In this Strait there are Three remarkable Promontories or Capes on the Spanilh,

[^273]and as many oppofite to them on the Barbary Side. The Firft of thefe on the Side of Spain is Cape Trafalgar, oppofite to this is Cape Spartel, near which ftood the Fortrefs of Tangier, once in our Poffeflion. Between thefe is the Weftern Entrance of the Straits about Eleven Leagues in Breadth. The next on the Spanih Side is Tarifa, and over againft it lies Malabata near the Town of Alcaffar, where the Straits are about Five Leagues broad. Laftly Gibraltar, facing the Mountain of Abyla near the Fortrefs and Town of Ceuta, which make the Eaftern Entry of the Straits. It is commonly faid that Gibraltar abfolutely commands the Straits, which is in a great Degree, though not abfolutely true, for with a ftrong Levant Wind, which brings with it very dark Clouds, Fleets have paffed through the Straits without being difcerned by a Squadron in Gibraltar Bay e.

In the War occafioned by the difputed Succeffion to the Crown of Spain Vice Admiral Sir John Leake propofed to Sir George Rooke who commanded the Englifh Fleet in the Mediterranean, and to Prince George of Heffe Darmitadt, an Attempt upon Gibraltar, the Reduction of which he judged would be of the greateft Confequence to the carrying on the War. The Admiral and the Prince concurred in Opinion with him. The Fleet entered the Bay on the Twenty-firft of July One thoufand Seven hundred and Four. The Prince landed a Body of Men on the Ifthmus, the Fleet cannonaded the Town from the Bay, a Detachment of Englith Seamen debarked at Europa Point, and with fome Lofs carried the Outworks, which made fuch an Impreffion on the Inhabitants and the Garrifon, that the Governor the Marquis de Salinas capitulated, and the Prince of Heffe took

[^274]
## 572 <br> The POLITICAL SURVEY

Poffefion of the Place on the Twenty-fourth of the fame Month with the Lofs of lefs than One hundred Men. The Truth is that it was in a poor Condition of Defence with fcarce One hundred Guns mounted, and a Garrifon not more in Number than the Gung. The Fleet landed Eighteen hundred Marines for a Garrifon, and fupplied them with Ammunition and Provifions for three Months $f$.

The Spaniards extremely fenfible of the Lofs, immediately marched an Army of Ten thoufand Men under the Command of the Marquis de Villadarias to befiege it, and at the fame time the Count de Thouloufe who commanded the French Fleet in the Mediterranean put to Sea to cooperate with the Spaniards. Thir produced the Battle of Malaga Auguft the Thirteenth, in which the French were beat, though Sir George Rooke was forced to draw Nine hundred Marines from Gibraltar to man his Ships, and was in fuch Want of Ammunition from what he had fpared to the Garrifon, that he was unable to profecute his Advantage and totally deftroying the French Fleet. The Siege however went on, and the Place was fo much preffed, that if Sir John Leake had arrived a Day later in the Bay of Gibraltar it moft have been taken, Five hundred Men having fcaled the Rock with Rope Ladders, all of whom were deftroyed. Marhal de Teffé with a Body of French Troops joined the Spanih Army, and continued the Siege for near Six Months, when the French Fleet under the Baron de Pointie being beat by Sir John Leake they were forced to change the Siege into a Blockade. The good Correfpondence between Sir John and the Prince of Heffe Darmftadt, and the excellent Conduct of both faved the Place. At this Port the late Emperor Charles the Sixth

[^275]- then ftiled Charles the Third King of Spain landed. On the Conclufion of the Peace his Catholic Majefty Philip the Fifth yielded this Town and Fortrefs in full Property (but without any territorial Jurifdiction) to Great Britain for ever g. The Spaniards notwithftanding this continued to behold it with a jealous Eye, and: are faid to have meditated feveral Attempts to recover it. At length in the Spring of the Year 1727 they again befieged in Form with a great Army under the Conde de las Torres, but after lying before it near Four Months, during which they made but a very rmall Progrefs, a Ceffation of Arms took Place, and we have fince remained in quiet Poffeffion'h.

The Prefervation of this Fortrefs, more efpecially after the perpetual Ceffion of it to the Crown of Great Britain, became and will be ever confidered as a Point of the utmoft Confequence. The Firft Siege; in which it ran a great Hazard of being taken, was however of great Utility in pointing out the moft proper Means for providing for its future Defence, by repairing or rather reconftructing moft of the old Works, and adding new wherever it was thought requifite, fearping the Rocks where the fcaling them was in any Degree practicable, elevating and increafing the Number of Batteries fo as effectually to protect the Town and Ports. In thefe Works the ableft Engineers were employed, and no Expence fpared in rendering them folid and complete, the good Effects of thefe Precautions

8 The Ceffion of Gibraltar is contained in the Tenth. Article of the Treaty of Utrecht concluded between her Majefty Anpe Queen of Great Britain and his Catholic Majefty King Philip the Fifth ; our Minifters did indeed demand an Extent of Grouad of Two Cannon Shot round it, but the French King anfwered, he could not prevail with the King of Spain to part with One Inch of Land more than the Town itfelf; but if the giving up the whole IIAnd of Minorca would be taken as an Fquivalent, he would endeavour to obtain it. This was accepted, and the Ceffion of that entire 10 and is contained in the very pext Article of the fame Treaty. In refpect to both it mult be obferved that the Ceffions are asifun, clear, and abfolute as Words can exprefs, So that no Room is left to controvert the Titie of the Crown of Great Britain to efther, for the only Condition annexed is (which if pofible frectgthens the Fitle) that in ctfe Great Britain Maall be inclined to l'art with them, his Catholic Majefty is to have the Firf Offer.

- The Spaniards, as we have faid, were very near fucceeding in the Firft Siege, when the Town and Fortifications were in a very indiffereut State of Defence, and when the Enemy faffered their Affiirs to run almott to ruin effe where in Ropes of taking it. The Second Siege was owing to the Hopes given to Millip the Fifth by the Regent Duke of Orleans that he would procure the Refitution of this Fortrefs and the Illand of Minorca, and when it was fowpd that this could not be effected, it was refolved to attempt the Redaction of Gibradtar by Force. The Governor was the Earl of Portmore, the Lieutenant Governor Colonet Clayton; the Garrifon confifted of rabout Twelve Battalions, and as the Place was now well fortified, well sup: plied and a Fleet in the Bay the Spaniards, though they did all that could be expected from. them, had themflyes hittle Hopes of Succefs, In this Siege we had Two Oficers and Sixtynine Men killed, and abour Two hundred wounded:. The Lofs of the Enemy was Betweca Thiree and Four hundred Men.

## 576 The POLITICAL SURVEY

tunity or Tempation to invade or injure either, though at the fame Time it certainly enables us to gain the mof early and certain Intelligence of any of their hoftile Preparations, and at the fame Time, as we have before obferved, puts it very much in our Power to obftruct, diftrefs, and to defeat them, as Experience hath fully and repeatedly demonftrated, and from thence gives us a Degree of Security that could by no other Means be obtained. The holding this Fortrefs, and the holding it in fo refpectable a Manner as hath been Chewn we do, does Honour to the Britifh Arins and, to the Councils of this Nation in the Eyes of all Europe, which we may fay with Probability at leaft hath been from this Circumftance indebted more than once for the Prefervation of the Public Peace: Upon the Whole, from this Chort and plain State of Things every candid and competent Judge will be able to fatisfy himfelf, that confidering the Inconveniencies it prevents, the Refpect it excites, and the Benefits it procures, the Fortrefs of Gibraltar fully merits all the Care that hath been taken, and all the Attention that can be flewn to it 1 .
${ }^{1}$ There hath been an Opinion advanced and at fometimes very warmly infifted upod, as if Cib. raltar might be made a Place of Trade, at leaft in fuch a Degree as to diminifh its Expence. In this View it hould feem that her late Majelty Queen Anne, very foon after it came into our PofFeffion; declared it a free Port without ans great Effect. In the Year 1940 a civil and crimin:l Jurifdiction to be eftablifhed here was in Contemplation, but never carried into Execution. It may be, that the very fmall Extent of the Place, and the Difficultics that might arife between a civl Adminiftration and a Military Government have hindered fuch a Defign from taking Place. But certainly if any Method could be found to render a Thing of this Kind in any Degrice practicable the Situation of the Place is fo favourable as to promife great Advantages. But the procuring thefe mutt be left to thofe who have a Power of examiniag into and removing thofe Obftructions that have bitherto prevented it. The Number of Ships that entered ehis Bay A, D. $177^{\circ}$ were Eight hundred and Twenty-feven,

## The Illand of Minorca.

THE Cmall but pleafant Iland of Minorca, which the Natives write Menorca, is fithated in the Mediterranean in the Latitude of between Thirty mine and Forty Degrees North, and in the Longitude of near Four Degrees Eaft from London. It lies Ten Leagues to the North Eaf bf Majorca, about Sixty South Weft from Barcelona, having France to the North, the Italian Mes ${ }^{\circ}$. Sardigia and Corfica, and the Kingdom of Naples on the Eaft, Spain to the Weft, and Barbary to the South. In

## of GREAT BRITAIN.

Length from South Eaft to North Weft, it is about Thirty-three Miles, in Breadth from Eight to Twelve, but in general about Ten Miles, fo that in point of Size it may be nearly equal to the County of Huntingdon or to Bedfordfhire. The Form of it is very irregular, and the Coafts much indented by the Sea, which forms a Number of little Creeks and Inlets that might fome of them be rendered very advantageous a.

The Climate is temperate, except from June to the Midft of September, when it is very hot, the rainy Seafon follows; but it is admitted by our Officers who have refided there, that for Seven Months in the Yearit is as plearant a Country as can be wifhed. The North, Notth Eaft, and North Weft Winds generally blow from the Middle ofSeptember to the Middle of March, and though wholefome to the Inhabitants yet are very unfavourable to the Fruit Trees that arc expofed to them. The Face of the Iland is diverfified with rifing and floping. Grounds, for though there are many Hills, yet there is not properly fpeaking a Mountain, or at moft but One in the Iiland. In the Vallies, for Want of a fufficient Declivity, the Rains fettle in many Places and the Grounds are marihy. The Soil in the flat Country is thin and fandy, on the Sides of the Hills and in the Valleys, black, rich, and fertile, and may be every where cultivated without any great Degree of Labour. The great Defect is in refpect to Water, of which, except what is faved from Rain in Cifterns, there is little either palatable or healthy ${ }^{\mathrm{b}}$.

This
a The Inands filied Baleares by the Ancients were only Two, the One larger and the other lefs, from whence they derived their Names, the former of Ma orca and the latter Minorca. The Epithet Baleares arofe from their Inhabitants being more dextrous Slingers than any other Nation, in which the Shepherds of this Ine ftill excel, and the Inhabitants in general are very exccllent Markfmen. Thefe llles made a very great Figure in ently. Times, as the learned Reader may be informed by confulting Diod. Sicul. lib. v: cap. 17, 18. Strabon. Geograph. lib. iii. p. ${ }^{167}$. Mela de Situ Orbis lib. ii cap. ult. If he wifhes to fee a Continuation of their Hiftory he may find it in Johan: Gerunden: Parilip: Hifp: lib. ii. they have befides had Two Hiftoriaths of their own Juan Dameto and Vincent Mut, the Works of both printed in Majorca. But without taking this Trouble his Curiofity may be gratified by perinfing Armftrong's Hiltory of Minorca, which is very entertaining as well as very methodical and exact.
b Though the Climate of this Inand is certainly viry warm, yet through the Favour of Provjvidence it is in many Refpects fo qualified as not to be intolerable. For in regard to Men the Emi: nencies fcattered over the whole I Iland afford them the Means of fixing their Habitations where the Air is cool and ferene for the greateft Part of the Year. In refpect to Animals Nature hath provided almoft every where fufficient Shelter for them by Trees, Shrubs, and Bruft Wood growisg on the Sides of the Rocks. Buth participate of the Breeze from the Sea which follows the Courfe of the Suo, being ftrongeft at Noon, and dying gradually away as the Day declines. The Markes which are in many Refpects noxious might be eafily drained and turned into Meadowts, as in that State they certainly were in earlier Times, when this Country was more thoronghly inihabited and by a more induftrious Sort of People. See Dr. Cleghoru's Obfervations on the Difeafes

## 578 The POLITICAL SURVEY

Thrs Ifland, fmall as it is, contains many Commodities that are or might $r$ be rendered of confiderable Value. In the Bowels of the Earth are Iron, Copper, Lead Ores, of none of which except the laft hath hitherto any Ufe been made, and even the Working of this it is faid hath long been difcontinued. Great Quantities of Marble, very beautiful and finely variegated. Free Stone and Lime-Stone in Plenty, and an excellent Kind of Slate that might be raifed in any Quantities, and is very near the Water. The Surface thin as it is produces excellent Wheat, though not enough for the Confumption of the Inhabitants, as alfo Barley, and fome India Corn, not inferior to any in America. In refpect to Fruits they have great Plenty of Vines which bear both white and red Grapes, from which they make a confiderable Quantity of Wine. They have alfo Olives, Dates, Almonds, Oranges, Lemons, Limes, Pomegranates, Figs, \&c. Hemp and Flax grow in great Perfection, and from fome Trials that have been made it is known they might have large Quantities of admirable Cotton. They grow likewife fome very good Tobacco, but not Half as much as they confume, as alfo Capers and Annis. Their Kitchen Gardens are exceedingly well focked, and the Vegetables they produce are not inferior to thofe of any other Country $c$.

As to Animals that ferve for Food, there are in this Inand black Cattle, finall in Size, and in general poor and lean, which arifes chiefly from the Careleffnefs of the People who dillike fat, for with proper Attention they have been and may be rendered as good as any of their Size. Sheep alfo are fmall, their Wool neither very coarfe or very fine, yet fuch as furnifhes the Inhabitants with Cloth for their own Wear, and fome of their Wool likewife they export. Goats are larger in Proportion, but are eat only by the pooreft People. Their Swine are large, and as the Minorquins have a Religh for their Fat, they are well fed and afford great Plenty of excellent
in Miborca. London 1762, 8ve. Reflevions Géngrales fur lille Minorque, fur fon Climat, fur la Maniere de vivre de fes Habitaps, \& fur les Maladies qui y regnent, par M. Claude François Pafferat de la Chypelle. Paris $17 \mathrm{O}_{4}$, 12 mo .
c There are in this IMand Clays of differeat Colours, of which they make Tiles, and fome coarfe Eaxhenwart, und of which much finer mighit be made by Perfons better \&killed in the Art of Pottery. Their Free Stone in of the fame Nature with that of Bath, and is generally cut in the Qearries into what they call Cantoous, being a Double Cube of a Foor. A Dozen of thefe coft but Hilf a Crown, and might be exported as Bullaft. They have likewife an excellent Cement called Grihn, which is a grey coloured Gypfom, and with this they join their Cantoons, and it hardens in a Monent. By the Help of thefe Materials their Houfes are very quickly buits at a very fmall Expence, and in that Climate are very lititog. Their Lands would produce miph more if weh dunged, which might be eiflly effected, if they were more attentive to their Catle. Their numerous's ruir Treesmight be improved to the higheft Perfection as Experience hath hewn, asd indeet harding any sind of Improwement atcempted here and properly purfued ever failed. But Things of this Sort being done by Perfons who did not long refide ia the Iasnd have never been either lafting or of much Utility:

## of GREAT BRITAIN.

Meat. They have no Deer or Hares, but Rabbits in great Plenty. In reference to Beafts of Burthen they have a Breed of fmall Horfes, which for want of Grafs and Hay are fed with chopped Straw and a little Barley mixed with it, fo that though they feem to have Spirit they have little Strength. On the other Hand their Affes are large, and are made ufe of both for the Saddle and Plough. Mules are large, ftrong, and fit for all Kinds of Service, being efteemed full as good as any on the Continent of Spain. They have all Sorts of domeftic Fowl, and thefe very good in their refpective Kinds. Wild Fowl and Water Fowl of all Sorts, and many Birds of Paffage, with which their Tables are plentifully fupplied in all Seafons. They have Eels and Smelts, with a great Variety of Sea and Shell Fih in as great Abundance as they can wifh. They have no wild Beafts, $?$ but many Birds of Prey, fuch as Eagles, Hawks, and Owls. There are alfo Snakes, Vipers, Scorpions, with fome other venomous and troublefome Reptiles and Infects; yet not in fuch Numbers as might be expected in fo warm and moift a Country d.

The Inand is divided into what they file 'Termino's, of which there were anciently Five, now reduced to Four, and refemble our Countiss. The Termino of Ciudadella at the North Weftern Extremity of the Illand is foftiled from this Place which was once a City and the Capital of Minorca. It makes a vencrable and majeftic Figure even in its prefent State of Decay, having in it a large Gothic Cathedral, fome other Churches and Convents, the Governor's Palace, and an Exchange which is no contemptible Pile. There are in it Six hundred Houfes which before the Seat of Government and the Courts of Juftice were removed to Mahon were fully inhabited, and there are fill more Gentlemen's Families here than in all the Reft of the Illand. It hath 2 Port commodious enough for the Veffels employed in the Trade of this Country, which though in the Poffeffion of a Maritime Power is lefs than it formerly was. It is ftill in the Stile of our Officers, the beft Quarters (and there are none bad) in the
dAll the antient Authors defribe the Animals in this 1 land as remarkably large, which is fo far from being contradicted, that it is really werified by their prefent Condition. In remoter Ages, as the Remnins of them fhew to this Day, the People built Walls round their Hills at certain Diftances to prevent the Earth from being wafhed down, and cultivated thofe Hills to their very Summits. This gave them Plenty of al! Xinds of Grain, and as Marfhes are every where the Effects of Idlenefs, we may fairly prefume that in thofe Days thefe were Meadows in which Cattle were fed to their full Size. An additional Proof arifes from their domeftic Poultry, for which they fand indebred wo Goyernor Kane. He brought them from different Parts, difributed them amongft the Peafants, gave firft a Premium for hatching and afterwards fet a Price upon Eggs, which very foon produced Plenty, and Ghewed what might be done in other Things. Their Honey is the beft, their Wax as good as any in Europe, and fo univerfally acknowledged, and yet their Exports of both do not exceed Three hundred Younds annually.

$$
4 E 2

Country,

## $580 \quad$ The POLITICAL SURVEY

Country, and if there was a Civil Government, and the Place made a free Port, the beft Judges are of Opinion would very foon become a flourihing Place again, and the Fortifications if it hould be found neceffary might then alfo be eafily reftored and improved e .

The Termino of Fererias is the next, a narrow Slip reaching crofs from Sea to Sea, and the Country little cultivated, it is therefore united to Mercandal. In this laft Termino fands Mont-toro in the very Center of the Ine, and the higheft Ground, fome fay the only Mountain in it, on the Summit of which there is a Convent where even in the hotteft Months the Monks enjoy a cool Air, and at all Times a moft delightful Profpect. About Six Miles North from Mont-toro ftands the Caftle that covers Port Fornelles, which is a very fpacious Harbour on the Eaft Side of the Illand. There are in it Shoals and foul Ground which to thofe who are unacquainted with them, render it difficult and dangerous, yet the Packets bound from Mahon to Marfeilles frequently take Shelter therein, and while the Spaniards were in Poffefion of the Ine large Ships and Men of War frequented it. At a fmall Diftance from thislies another Harbour called Adaia, which runs far into the Land, but being reputed unfate, and being fo near Fornelles, is at prefent ufelefs. The Country about it is however faid to be the pleaianteft and wholefomeft Spot in the Inland, and almort the only One plentifully fupplied with excellent Spring Water, fo that the Gardens are well laid out, and the richeft and fineft Fruits grow here in the higheft Perfection. Alaior is the next Termino, in which there is nothing remarkable but the Capital of the fame Nanne, well fituated on an Eminence in a pleafant and tolerably cultivated Country ?

The

[^276]The Termino of Mahon at the South Eaft End of the Inand is at prefent the moft confiderable of them all, containing about Sixty thoufand Englifh Acres, and nearly One Half of the Inhabitants in Minorca. The Town of Mahon derives its Namc from the Carthaginian General Mago, who is univerially allowed to be its Founder. It fands on an Eminence on the Weft Side of the Harbour, the Afcent pretty fteep. There are in it a large Church, Thrce Convents, the Governor's Palace, and fome other public Edifices. It is large, but the Streets are winding, narrow, and ill-paved. The Fortrefs of St. Phi'ip ftands near the Entrance of the Harbour which it covers, is very fpacious, of great Strength, with fubterrancan Works to protect the Garriion from Bombs, large Magazines, and whitever elfe is neceffiry to render it a compleat Fortification, and hath a numerous and well difpofed Artillery g. Port Mahon is allowed to be the fine R Harbour in the Mediterranean, about Ninety Fathoms wide at its Entrance, but within very large and fafe, ftretching a League or more into the Land. Beneath the Town of Mahon there is a very fine Quay, one End of which is referved for the Ships of War, and furnihed with all the Accommodations neceffary for careening and refitting them, the other lerves for Merchantmen. On the other Side the Harbour is Cape Mola, where it is generally agreed a Fortrefs might be conftructed, which would be impregnable, as the Cafte of St. Philip was efteemed before we took it
$h \circ n$ to Ciudadelli. This Genteman, who finithed bis Life here, was the Author of almoft all the bencticial Regulations that have been made, and was defervedly filed the Patron of his Officers, the l'ureat of the Soldiers, and the Protector of the Natives. There was before him a Spanin Gorcmor, I am forry I cannot mention his Name, who compelled the Inhabitants to t.fice fome Pains with repard to their Olives, as well in picliling as in exprefing their Oil, but notwithanding the Benetits that arofe from thence all Attention to them expired with his Authority. The Ciardens in the Neighbounhood of Adnia fluewed plainly that their Fruits might be brought to as high Perfection, and confequently become of as great Value as in the Southern Provinces of France or the Illands of Hieres. The Truth is that Attention and Encouragement might do any thing in a Country where Nature has already done fo much, as evidently to fiew that with a moderate Proportion of Skill and Care fhe might be brought to do more.
:The Town of Mahon derives many Advantages from its elevated Situation, for befides an extentive Prupect and a coul Air, it is even in Summer almolt entircly free from Mufgui:ocs. It is at prefent the Scat of Government, the Refidence of the Governor who hath a darge irregular Palace here, and withal the principal Place of Commerce in the Ine, to which fome attriture the indiffercist and neglected Condition of the other Dithicts. It muft however be allowed, that the Merchants have great Accommodations. Their Veffels come as clofe as can be dieired to the Quaty; there is a very convenient Place, (which is a Matter of the utmoft Confequence) for the lerfurmance of Quarantioe, and are eafily fupplied with naval Stores. But is there is a Regiment quartered in the Town this Nixture of Military and mercantile People is lishle to fome Inconvenicucies. The French fettled here, and the Commodities they import, and which, from a Variety of Caufes they are enabled to fell cheap, is by no Means acceptable either to the Englifh or Minorquins, who from Motives of Interell probably would be glad to fee French Falhions and Fiench Fopperics difcomaged, which by lue Exanale of the Governor and the:principal Perfous about him might be eafily cffectod.
and beftowed fo much Money upon it, that though fome Works were erected at Cape Mola, it was not judged proper to proceed in the Fortifications there at a frefh Expence, at leaft this is the only Reafon that hath :been affigned b.

The ancient Hiftory of this Iland and its Inhabitants belongs by no Means to this Place. It was reduced in September, A. D. 1708, by Major General James Stanhope, with the Affiftance of the Fleet under Sir John Leake. The General was afterwards created Earl Stanhope, and to preferve the Memory of this important Service, Vifcount Mahon. In the Summer of the Year 1756, through a hameful and inexcufable Infatuation it was fuffered to fall into the Hands of the French, but was again reftored to Great Britain by the Twelfth Article of the Treaty of Paris, A. D. 1763 , in Conformity to the original, abfolute, and perpetual Ceffion of this Ine by the Eleventh Article of the Treaty of Utrecht, fo that except this very finall Interruption it hath remained Part of the Territory of this Nation upwards of Threefcore Years. A Space fully fufficient to make us well acquainted with the Minorquins and the Minorquins with us, and with the Advantages they derive from their being Britioh Subjects, of which it is but doing them Juftice to fay, that they are very highly fenfible ${ }^{i}$.
${ }^{h}$ At no great Diftance of Time after this IDand was reftored to our Poffefion it was vifited by Lord Hope eldeft Son to the Earl of Hopeton, a young Nobleman of quick Parts and great Obfervations, who liftened willingly to the Informations given him by the Natives, and undertook to convey them as be did to the Perfons in Power here. Amonght other Things it was fuggefted that if Commerce was properly encouraged. a Fortrefs might be built at Cape Mola, lefs in Extcat, and confequently requiring a fmaller Garrifoa than that of St. Philip's, having an equal, if not a better Command of the Entrance of the Harbour, and anfwering in all other Refpects to the full as well as that immenfe Fortification. In fuch a Cafe they conceived that a confiderable Part of the fubterranean Works under St. Philip's might be converted into Warehoufes and Magazines, for the Poffefion of which perhaps the Merchants might undertake to defray the Expences of conftructing the new Fortrefs. How tar this Nation deferves to be confidered mult be left to better Judges, but that it might be mentioned here with Propticty, will be evident to any Reader who confulte Armiftung's Hiftory of Minorca, p. 39-
${ }^{i}$ The Natives of the Ihand are well enough apprized of the Advantages they derive from their heing Britifh Subjeets. The Inand produces Five Times as many Articles of Confumption fince it came into our Hands from the Demand for Provilions and other Neceffaries, and this is continually increefing In refpect to Wine, though fold very cheap, what is drank by the Troops hath been computed at Twenty Thoufand Pounds per Annum, which is Ten Times as much as the Value of what they drink themfelyes. The Piy of the Garrifon makes the greateft Part of their Circulation, and to the Infructions afforded thiem by the Officers, and the Examples given them by the Soldiers under their Direqtion, they.owe the few Improvements they have. They know very well the Advantage of saling under our Flag, which not only fecures them from Corfairs, but procures them alfo a free Admittance into the Ports of Barbary, and they are confiderable Gainers by both. But they would fill reap much greater Benefits from the Eftablith-

## of GREAT BRITAIN.

By the Capitulation made with General Stanhope at the Time this Inand came into our Hands, the free Exercife of their Religion was fecured to this People, and at their own Defire, though it hath been their heavieft Misfortune, their ancient Form of Government which ftill continues, and is entirely modelled on the feudal Syftem. The Land Revenue, by whi.h is to be underfood the total Rental of the landed Property in Minorca, doth not exceed Twelve thoufand Pounds per Annum, and the public Revenue amounts to about One Third of this. The Number of Priefts fecular and regular and the Nuns are about Three hundred, and the Number of the Inhabitunts about Two Years after the Ifland was refored to us was between Eighteen and Twenty thoufind. There have been fome Greeks brought into Minorca, and as they wer:: a very induftrious and ufeful Race of Men, might have contrihuted much to the Improvement of the Inland, if their Undertakings had not been difturbed by the French coming into Poffeffion. Our ufual Eftablifiment confifts of a Governor, Deputy Governor, \&cc. with Five Regirments, the Expence of which, including the Staff and Subfiftence, may amount to about Seventy thoufand Pounds a Year, exclufive of the Expence of the Ordnance and Marine, the Repairs of Buildings and other Contingencies $\mathrm{k}_{\mathrm{o}}$.

After having thus given a very hort, though it is hoped'a very phain: and intelligible Account of this very valuable Illand, it will be proper to infift next on the actual Importance of it to this Nation, and then to point out what farther Advantages might be expected from it. In reference to the Firft, it muft be obferved, that it would be very difficult fully to ex-
ment of an Englifh civil Government, and haviag their Choice to feek Relief in our Courts or in their own. A decent Ecclefiafical Eftablifhment at Mabon and at Ciudadella, with Schools. for ceaching Engliih, would have many good Effoets, and Intermarriages with the Natives fill more.
${ }_{k}$ The Form of their Government, the Nature and Numbers of their Magiftrates may be feen in. the Ninth Chapter of Armftrong's Hiffory, where he zakes Notice alfo of the Hardhips refulting from their Confitution, fuch as Fines on the Alienation of private Property, on the granting of Leafes beyond the Term of Nine Years, and the Impofitions on almoft all their Produce, in confequence of which Taxes and their Inability to pay them they have contracted a large public Debtwhich bears Intereflat Eight per Cent. There is however an Abfurdity bejond all thofe of which he does not take Notice, which is, that an Appeal lies from their fupreme Court to the Tribunal at Perpignan in Rourillon, and that as they are very litigious, their Lawyers are a greater Burden to them than their Priefts. As the Value of the landed Property is fo fmall Purchafes might be eafily made in favour either of Englifh or of Greeks, or for any other ufeful Purpoles, and the People might be readily drewn to follow their Examples in any Improvements. They are naturally very attentive to their owa Interefts, and if properly managed it would be our Intereft that they fhould be fo. A frong Prof of this is the Care axid Diligence they ufe in manuring, pruaing and fencing their Vineyards, though at the fame Time they neglect the Culture of every other Kind of Fruit, becaufe no inmediate Advantage could be derived trom. it.

## 584 The POLITICAL SURVEY.

prefs the numerous Benefits that we derive from having fo noble, fo capacious and fo fafe an Harbour as that of Port Mahon, more efpecially in fo happy a Situation, where our Ships may be at all Times relieved, our Squadrons meet with Refrefhments, and not only thefe but alfo with every Kind of Accommodation and Repairs, and where our Armaments may be carried on with equal Security and Secrecy when neceffary. The Senfe and the Experience of this hath ftruck fuch an Awe into all the piratical States of Barbary, who with the Emperor of Morocco have all acknowledged by Treaties this Illand Part of the Dominion of Great Britain, that we have never had any Difpute with them fince, except as to Mediterranean Paffes, in refpect to which perhaps we have not been always is the Right. Our holding this Ifland hath a very frong Influence on the Italian Powers, and indeed may be faid to render us an Italian Power, to whom in that Light, our maritime Force confidered, due Refpect will be at all Times paid. It is in Time of War a conftant Bridle on the Ports of Marfeilles and Toulon; the former of which for that Reafon furnifled the French King with a very large Sum towards defraying the Expences of the Fleet that was employed to invade it. Its Vicinity to the Ports of Spain is another Circumftance of Confequence, and with regard to other Bencfits flowing from it, it would require too great a Space, even fuppoing it proper, fhould we attempt to enumerate them 1 .

This Reprefentation, with the Refiections that it muft neceffarily fuggeft to a judicious Politician, would clearly convince him that Minorca .ought by no Means to be confidered as a Burthen or dead Weight upon Britain. But independant of thefe it is certain that many other, and thofe alfo very confiderable Benefits might be derived from thence, if due Attention was Chewn to this Country, and proper Care taken of its Inhabitants. A few intelligent Perfons fent thither and kept there for fome Years would put the Natives in the Way of improving their Paftures, which are now miferably bad, and alfo their arable Lands for Agriculture muft be furely at a very low Pafs in a Country where an Afs and a Hog fometimes draw

[^277]
## of GREAT BRITAIN.

 together the Plough m. Their Gardens and their Orchards with the Helpof a little Skill and Application would furnifh them with near as great Profits as they now draw from their Eftates. They have many ftaple Commodities, or at leaft might have them amongtt them, which would fupply Exports to a very confiderable Amount. Salt, which not only may be made but hath been made, and which is the fole Support of the neighbouring Ifland of Yvica, might be obtained in any Quantities with little Trouble and lefs Expence ; which Salt, if it was employed in their own Fifheries under proper Directions, would be more than fufficient to balance all their Imports, at leaft upon their own Account ${ }^{n}$. All this willm We have before remarked more than once, that this Country, as appears from Hiftory, was furmerly in a much better Condition, to which there is certainly nothing abfurd or improbable in fuppofing that by Skill and Induftry it maye be reflored. The Marlhes, by cutting proper Channels might be drained, and with due Care converted into Meadows, which would facilitate the breeding a greater Number of Cattle, and this again would furnim greater Plenty of Manure for their arable Lands. Indced I have been (and I hope truly) informed, that Agriculfure is now in fo good a State, that Corn is very feldom imported. But more may be ftill done. The Culture of Indian Corn might be encouraged, and in Places no fuited to Wheat or Barley, Rice, Millet, and other Grains might be introduced. But due Care fhould be takan in all Improvements to have conftantly in view the Dependance of Minorca upon Great Britain, fo that the Interefts of the Natives fhould, in confequence of fuch Improvements, be fo united to this Country as that they might ever find their own Happinefs clofely, and if poffible, infeparably connected with their remaining Britih Subjects, and then the Increafe of Inhabitants would be an additional Strength to our Interefts.
nIt would require much Room to enter into a minute Detail of what might be done to render the Productions of Minorca more valuable than they are at prefent. It may fuffice to fay; that from their Gardens and Plantations we might be fupplied with Oranges, Lemons, Pomegranates, Almonds, Figs, Prunes and Raifins, in as high Perfection as any we import from Spain and Por: tugal. It is amazing that they have never attempted to draw a Spirit from any of theferich Fruits, though they confume anumally to the Amount of Ten thoufand lounds in Aguardiente or Arong Waters. Eefides thefe, all thofe odoriferous Oils, Effences, \&c. which we have now from dif. ferent Parts of Italy, might be as well imported from hence. We might alfo, if a little Encouragement was given, receive much greater Quantilies of Honcy and Wax than we have hitherto done. In regard to valuable Commodities, we thall out of many, mentiun only Three, which it is indifputable might be obtained, becaufe in fmall Quantities they have been obtained, and thefe are Silk, Oil, and Cotton. As to the Firft, they have a vaft Number of Malberry Trees over the whole Illand, lying in the fame Latitude with the Kingdom of Valentia, which produces the beft Silk in Spain. In regard to the Second, large Quantities are anumally exported from Majorca, as a Century ago they were from hence. In cuerence to Cotton, it grows to the full as well here as in Malta, where it is the ftaple Commodity of the Illand. To thefe may be added feveral valuable Drugs, particularly Mattic, Aloes, and fome think Cochineal; for the Opuntia or prickly Pear grows wild over the whole Country. In reference to Fin, the Tunny Anchovies and Sardins come there annually in immenfe Shoils, the Art of pickling and barrelling them might be enifly acquired, and they might be cured with their own Salt ; and great Qunntities of Fih oil might be likewife made. They have alfo on their Coufts great Abundance of Coral, the Nacar, a large Kind of Mufcle, the Inide of the Shell more beautiful than Mother of Pearl, and on the Outfide there is a Kind of long Hair, ur as they cill it Wool, which is manufactured in Italy and in Spain. The Orchilla, of which we import grear Quantities from the Canaries, grows unnoticed upon their Rocks.
appear to the Reader the more practicable, if he recollects the Port that there are in this Inland and their Situation, and is farther told that the Inhabitants are as expert Seamen, that is, for the Mediterranean, as any of their. Neighbours.

## C H A P. III.

## Of the Britih Settlements in Afia.

> S E C T. I.

Of the IJland of St. Helena.

THE numerous Places occupied by Britih Subjects in this Quarter of the Globe were acquired at different Times, in very different Manners, fettled for very different Purpofes, and are held by different Tcnures, all of which it is of no fmall Importance to know, and which therefore it thall be the Bufinefs of this Chapter concifely to explain. The Commerce of the Eaft hath been ever efteemed to be in its Nature and Confequences fuperior to all others, and in Point of Fact the Nations who have poffeffed it, have been, fo long as they retained it, the moft confiderable Traders in the World. In early Times the Tyrians and Sidonians, in fucceeding Ages the Carthaginians and Romans were Mafters of it. When after a long Series of Barbarifm Arts and Sciences began to revive in Europe, the States of Venice and Genoa engrofied it, and thereby rofe in Reputation, accumtulated immenfe Riches, and acquired a great naval Power. It fell next into the Hands of the Portuguefe by their difcovering a Paffage round the Cape of Good Hope, which opened the Way to other-Jations, and to us among the Firf. In fo long a Navigation it was found of abfolute Neceffity to have fome Place of Refrefhment in the Route, and this it was that recommended to Notice and even raifed into Confideration a little unpromifing Ine, or as fome have ftiled it, a rugged inhofpitable Rock, which, purely from the Convenience of its Situation, is and hath been long looked upon as a Place of the utmoft Confequence, and as fuch it is our Duty to defribe a.

This

[^278]
## of GREAT BRITAIN.

Turs Inand derives its Name from St. Helena, the Mother of the Emperor Conftantine the Great, and fhe is faid to have been a Native of Britain. In the old Maps it is laid down in the Latitude of Fifteen Degrees Fifty-five Minutes South, and in the Longitude of Seyen Degrees Weft from London. Modern Obfervations place it in th Latitude of Sixteen Degrees or Sixteen Degrees Fifteen Minutes South, and in the Longitude of One Degree Weft from the Lizard, about Three hundred and Fifty Leagues from the nearelt Coaft of Africa, Five hundred from that of Brizzil, Five hundred and Fifty, though others fay Six hundred and Twenty North Weft from the Cape of Crood Hope. It is full Six Miles long, hardly Four in Breadth, and about Seven Leagues in Circumference. In point of Size fcarce fo big as the Inle of Bute. As it rifes very high it is feen at a great Diftance, and being full of Rocks of different. Heights looks like a valt Fortrefs in the Sea b.

Tire Climate of this little Inand may be juftly ftiled excellent, for notwithftanding its Vicinity to the Line, the Heat is fo qualified by Breezes continually flying over the Rocks, and the Air is fo frequently cooled by fhort refrefhing showers that it is equally pleafant and wholefome, as appears from the Inhabitants being in a Manner free from Difeafts, and of as clear Complexions as in Europe. It is faid that they never have the Small Pox in their own little World, but are extremely apt to catch the Difcale, if they remove our of it. It is alfo yery remarkable that they are exempt from Thunder and Lightning. In it Appearance St. Helena feems to be no more than a Congeries of rude rough Rocks, amongft which the natural Soil is red, friable, and refembles Ahhes, from which Circumftances, and the finding of Sulphur in many of the Cliffs, fome have conjectured there was once a Vulcano. To the Windward it is utterly inacceffible.
rendered a fine and fertile Country. Yet we Twice fent Pcople thither before tl.am, who made fo bad a Report both of the Place and the Inhabitants that we defifted from the Defign of fixing there. The French have eftablifhed themfelves in the Ine of Mafcarenhas, which they call Bourt on, and fince that on the Inand of Maurice, which they nile the Ine of France; we might have had both or either of thefe. Indeed we had the latter even before the Dutch, who Twice deferted it, and from our Voyages made thither to cut down Ebony, it was for fome Time fliled the Englin Foref. The Portuguefe retain their original Settlement for Refrefhment at Mozambique. It may appear inaccurate to treat of this, which is commonly efteemed an African Ifland, in the prefent Cibapter, but as it belongs to the Eaft India Company, and is connected with their Settlements, there feemed to be no Impropriety in placing it here.
b The Render if he is inclined to fearch more thoroughly into this Matter, may confult the Decades of John de Barros. The noble Collection of Voyages by Ramufio. The Voyages for eftablibing the Dutch Eaft India Company. Ovington's Voyage to Surat, p. 89. Lockyer's Account of the Trade to India, p. 304. Hamilton's New Account of the Ea!t lidies, voi. i. P.A.

## 588 The POLITICAL SURVEY

To the Leeward there are but few Landing Places, and thofe difficult and dangerous from the Surf; fo that the People may be faid to live in a Place which Nature, has impaled with Rociss, and furrounded with the Ocean. The Interior of the Ifland hath alfo many high and ftecp Cliffs, but there a fome little pleafant Vallies between them, and rude and dangerous as thefe Rocks are, the Inhabitants with very little Affiftance from Art have made Roads through them, which they and more efpecially their Slaves pafs with great Speed and Facility, and which is much more wonderful, have taught their Horfes to do the like, fo that how dreadful foever their Journcys may appear to Strangers, yet it is generally agrced that very few Accidents happen to the Natives, who think all thefe Inconveniencies are balanced by their living in perfeat Security.

All the Advantages which this Inand derives from Nature have been ftated in the former Paragraph, whatever is found in it befide may be truly ftiled Exotic. The Soil is generally very thin, though in fome of the Vallies it is now become near Two Feet deep, and from the regular Intervals of Rain and Sunmine very fertile. Hitherto they have not been able to raife Wheat, but of late Years (if I am rightly informed) they have fown Barley with Succefs. Their Gardens produce Yams, Plantains, Bananas, Water Melons, as alfo French Beans, Purlain, Sorrel, and many other wholefome Herbs, mg of them Antifcorbutic. As to Trees, they have Oranges, Lemons, Apricots; Peaches, Pomegranates, Apples, and by the Care of the Company in fending a French Gentleman, Mr. Porier thither, Vines which produce excellent Grapes, of which hitherto however they have not been able to make Wine. In reference to Animals they have a fufficient Stock of Black Cattle, Shecp, Goats, and Hogs, with a Breed of fpirited little Horfes, admirably fuited to their rugged Roads. They have alfo Plenty of domeftic Fowl, fuch as Turkeys, Geefe, Ducks, Guinea Fowl, and other Poultry; and for Game they have Pheafants, Partridges, Woodcocks, and Plenty of Sca Birds. Yet the chief Support of the Natives is drawn from the Sea, which abounds with a vaft Variety of excellent Fiih, amongft other Mackrel, Boncta's, Conger Eels, \&c. It is a Kind of negative Advantage that they have not either Beafts or Birds of Prey, or venomous Creatures of any Kind. But with Rats and Mice the IIland is exceedingly infefted, for the Deftruction of which no effectual Method hath been yet found. In the Cavities of the Rocks, the Sea Water by the Help of the Sun is turned into the fineft white Salt. Let me have Leave to add, though none of our Writers mention it, my Conjefture, that they have alfo upon thefe Rocks the Orchilla

## of GREAT BRITAIN.

Orchilla ${ }^{W}$ eed c , as it is certain they have a Kind of wild Tobacco which might poflibly by tranfplanting be improved. We muft not omit the principal Blefing of St. Helena, which is Plenty of moft excellent Water ftreaming from the Rocks, and wandering in little Rivulets through every Part of the Illand. It is true that after heavy Rains the Water is apt to be a little brackih occafioned by the walhing down the Salt incrufted on the Rocks, but with a very little Attention in collecting /ater in Cifterns in milder Scafons, this Inconvenience is eafily avoided.

The Englifh Eaft India Company fettled this Ifland in the laft Century; that their Ships, more efpecially Homeward-bound from the Eaft Indies, might meet with Refreflments and Accommodations there as the Dutch did at the Cape of Good Hope. In the Second Dutch War in the Reign of Charles the Second it was taken by a Dutch Squadron, the Fort being in no Condition of Defence, but the Governor and Garrifon retired 'orm board the Ships with their Effects. The next Year Captain Richard Mundanc, being fent with Four Men of War to efcorte our Eaft India Ships, came to take in Water in the Road of St. Helena, when perceiving that the Dutch were Mafters of the Place where he had formerly been and with which he was well acquainted, he fent fome of his Boats well manned round to a finall Creek where they landed, and fcaling the Rocks with infinite Labour and Ilazard came down upon the Dutch Fort, at the fame Time that the Ships made a Defcent and a brifk Cannonade, which foun obliged the Governor to furrender May the Seventh 1673 . It was indeed not only a very hort-lived but alfo a very unlucky Conqueft to the Dutch, for the Europa, a rich Outward-bound Eaft India Ship coming foon after into the Road was feized, and the Whole of the Dutch Outward-bound Eaft India Ships were very near haring the fame Fate, being decoyed by tite Dutch Flag which the Governor kept flying, and Twoof the largef Ships were actually taken. At his Return the King knighted Captain Mundane, and as the Property of the Illand was vefted in the Crown by Conqueft, his Majefly was pleafed to grant it to the Eift India Company by his

[^279]
## 590 The POLITICAL SURVEY

Charter, bearing Date the Sixteenth of December in the fame Year, under which Grant they have poffeffed it ever fince-d.

In Chapel or James's Valley, which though a difficult is the mon commodious Landing Place in the Infe, there is a little Town confifing of between Fifty and Sixty Houfes, a fmall Church, which with the Governor's Refidencezverye rebuilt at the Company's Expence with Materials fent from England fomewhat more than Twenty Ycars ago. Moft of thefe Ho:fes are or at leaft are turned into Places of public Entertainment wien the Shipping arrive, at which Seafon mof of the Inhabitants repair thither to furnih the Seamen with frefh Provifions, and to purchafe Neceflaries fur themfelves, when no Pains are fpared to render thofe Strangers all the gcod Offices in their Power. Lemon or Apple Valley where there is alio excellent Water, is a very plealant Place. Belides thefe there is in the interior Part of the Ille a larger Spot of tolerable plain Ground, to come at which however from the Town in Chapel Valley it is neceffary to pads Ladder Hill near the Fort. This Plain is called Long Wood, in which the Governor hath an handfome Country Houfe, with pleafant Walks planted with Fruit Trees, and here alfo are kept the Company's Stock of Black Cattle for the Service of their Ships. The Inhabitants have their Houfes, which are generally fmall and neat, in the little Vallies between the Cliffs with a Garden, a fmall Field, and a Hovel for their Slaves belind each. In the whole Ifland there may be about One hundred and Fifty Families, and thefe have amongft them abput Three hundred Slaves, exceedingly ferviceable to their Mafters, who live comfortably and in great Tranquility.

The Company for the Security of a Place of fuch Inportance to them have confructed a frong Fort, well provided in all Refpects, and furnifhed with a numerous Artillery. This Fort completcly commands the Road (for there is no Harbour) and Ships come up to and ride at Anchor al-

[^280]
## of GREAT BRITAIN.

moft clofe to the Shore. At Chapel Valley, where confidering the conftant Difficulties and fometimes Accidents that happen in bringing Goods on Shore, a Quay would be a great Conveniency, and might be made at no great Expence. The other Landing Places are in like Manner perfectly fecured by ftrong Batteries of heavy Cannon. The Garrifon confifts of about Three hundred Men, who are generally healthy, and make a very good Appearance. In cafe of Danger all the Inhabitants may be put under Arms, and their Slaves are furnifhed with Iron Crows, with which they might be enabled to roll Showers of immente Stones from the Rocks upon any Invaders. The Company befides other Officers maintain likewife a Chaplain and a Schoolmafter for teaching Englih, Writing, and Arithmetic, with competent Salarics. The Governor fupplies the People's Wonts from the Company's Storehoufes, allowing them Six Months Credit for what they purchate. Thefe Debts they are enabled to difcharge by the Moncy they receive from the Seamen and Paffengers, to whom they furninh frefh Provifions, which is all the Trade they have, as except Fiihing Boats thcre are no Veffels belonging to the Inand.

Tue flourihing Condition of this fitle Inte is a very fingular and ftriking Proof of the Benefits that are to be-derived from Situation, which, as we have obferved, hath raifed into fo much Confequence a Rock deftitute of cvery other Advantage. In its prefent improved State, there may be fome Doubt made thether its Strength and Size, from both which it derives an almoft abfolute Security, do not compenfate for all other Defects, and render it to the full as valuable to our Company as any Ettablifhment of this Nature their Competitors poffers, though they make a much better Appearance. The annual Ship which carries the neceffiry Stores of every Kind is the only Outward-bound Indiaman that touches here, but as the Befrethment of the Crcws of Homeward-bound Veffels is the principal Ufe of this Settlement, any pofffble Improvements in Agriculture would be highly advantageous. The difcovering there, or introducing any valuable Drugs, or Plants that yield a rich Dye, might be alfo very beneficial to the Inhabitants, by enabling then to live better, and to make more vigorous Efforts in the Cultivation of their finall Firms; fome have alfo thought that Means might be found by the Help of this Ifland to keep a more regular and conftant Correfpondence between the Indies and Europe than hath been hitherto eftablifhed $e$. But as to the Utility and Practicability of this the Company muft be the proper Judges.

CHAP.

[^281]
## 59.2 <br> The POLITICAL SURVEY

weft of the Ine of a rich bright red, which may poffibly be what Nieuhoff mentions, and towards the Eaft Yeins of a very finc Azure. It is not improbable that by the Offer of a Premiun thefe Earths might be recovered; for though the Inhabitants are not in any high Reputation for their Induftry, yet from Habit they are very dextrous in traverfing the Precipices of their native Country. The Company have always flewn an Inclination to promote Improvements; with which View, A.D. 1705 , they caufed to be tranfported from Gambron, fome of thofe Ande mals that bear the Caramania Wool, which however it is probable did not fucceed. The annual Expence of the Company in refpest to this Settlement, if I am rightly informed, amounts to upwards of Twenty thoufand Pounds, whereas their Income falls fhort of One thoufand Pounds, In a State of the Company's Accounts dated 30 Sh September A. D. 1771, it appears that the Expence of their Buildings to that Period amounted to 28,1281. The Cam in their Treafury was 8852 1. The Value of their civil and military Stores was computed at 37,558 1. Their Pian tations at 11,1661 . and their Slaves at 45951 .

## C H A P. IV.

S E C T. II.

Of the Prefidency of Bombay on the Coaft of Malabar.

THE Defcription and Hiftory of the Eaft Indies affords a fpacious Field, that would require much Room, great Talent, end very extenfive Information to treat with a Degree of Accuracy and Precifion. Theie Circumftances, together with the Importance of the Subject hath, of late Years more efpecially, produced from many Perfons of diftinguihed Abilities, a Variety of Works that do Honour to their refpective Authors, as well as contribute to the ample Satisfaction of the Public. As the Scene is continually changing from Revolutions that happen there more frequently than in any other Part of the World, thefe muft continue to furnilh Materials which will call forth new Performances of the fame Nature, and thefe without Doubt will be equally well received. What is here propofed is to exhibit a concife View of our Settlements in the Eaft, with fuch Circumftances as may beft ferve to point out their Confequence relative to Great Britain. To perform this with all poffible Brevity and Perfpicuity, the eafieft and plaineft Method that can be purfued is to feeak of the Ieveral Prefidencies the Company have eftablifhed, and their lubordinate Factories, in that Order in which they lie according to the Geography of the Country a.

[^282]First, then with regard to the Coaft of Malabar, the Company have cftablificd their Seat of Government at Bombay. This is an Iland lying*in the Latitude of Ninetcen Degrees North, and in the Longitude of Seventytwo Degrecs Eightecn Minutes Eath from London; One hundred and Thirty Miles S', uth from Surat, and Two hundred North from Goa. It is, though in many Refpects a Place of great Importance, yet of very finall Extent, bcing not more than Twelve Miles in Circumference. The Climate was heretofore eltecmed very unwholefome from a Variety of Camis, the principal of which were a vaft Namber of Coco Trees which hindered the free Circulation of the Air, the Manuring thefe Trees with Fith, from whence arote putrid Exhalations, and from thote alfo of Sea Oufe and Pools of itagnated Waters. Thete Cauies being now in a great Meafure removed the Iflund is at prefent eftecmed tolerably healthy, and thofe who live temperately fpend many Vears there without any extraordinary Inconvenience. The soil is not very fertile, producing only Fruit, a great Quantity of Coco's and a little Rice, infomuch that the Inhabizants depend in a great Meature for their l'rovitions upon the neighbouring Continent and Iflands. The Water alio is but indifferent, there being but few good Springs in the Ifland $b$.

Tine City or Town of Bombay, which is about a Mile in Circuit, is very plearantly and conveniently fituated, and in its prefent State is large, commodious and well built. The Harbour is equally fafe and capacious, pro-
pofes they are intended to anfwer, and in confequence of thefe their Importance to Great Britain. Thefe are all folid and permanent lomints, from the Contemplation of which we can at all Times form a Judgment of the State of Affiirs in thefe far diflimt Countries, as well as of the Tendency of the Events that happen in them, to which there will be always fuch Attention due as is proportioned to the Benctits refulting from them to the Commeree, Navigation, and Revenues of this Nation.
b The Climate in Bombay is at prefent by no Means fo intemperate as for: ? of our old Writers reprefent it. The dry' Scafon lafts for cight Months, during which the Heat of the Day is generally temperd by alternate Lend and Seal Breezes. Towards the Clofe of May they have uffually a terible Storm which brings in the Rains that laft to the Beginning of September, refrefh the Air, reflore Moilture and the Power of Vegetation to the Earth, and are by no Neans uahealthy. The Country ly Dint of Cultivation produces Abundance of Cocos in which the Wealth of the Inhabitants confitts; foine Rice, and great Abundance of excellent Onions, which with Variety as well as Plenty of good Fith, fupply no inconfiderable Part of thcir Subfillence to the Natives. In this Refpect they might be much better accommodated if vift Quantities of Fifh caught upon the Coalts of thefc Illands were not falted'and fent to Surat and other Places, in which Trade there are many large loats employed. The Salt likewife expended in this Finery is manufactured here, and a great lart of it made for the Account of the Company; this is certainly much better than laying the Filin to the Roost of the Trees and corrupting the Air, as was formerly practifed. The Company have Two fine Gardens, One of them a little Way out of Town, the other at the Governor's Country-feat, both very pleafant and well cultivated. The Company have likewile an Eltate in Land, the Profits of which are brought to their Account.

## 594 The POLITICAL SURVEY

tected by a regular Fortrefs very ftrong, and to which at different Times Alterations and Additions have been made at a great Expence. Thefe, though every way fufficient for Defence againft the Country Powers might, from their being commanded by an adjacent Eminence, have been expofed to great Danger if attacked by Europeans, but that Inconvenience is now removed. There are alfo fome other fortified Pofts in the Ifland, by which it is rendered perfectly fecure. This with the Excellence of its Port, in which there is a fine Dock that will admit a Seventy Gun Ship, together with other Docks and converient Places for building and repairing Ships, much fuperior to any in other Parts of India, have been highly advantageous to the Settlement, in Time of War more cfpecially when his Majeft's Ships come thither to repair, and are readily fupplind with all Necefiarics. Merchant Ships are at all Times repaired here, and fome even of Seven or Eight Hundred 'Ions Burthen are built here either for the Company's Service as Cruizers, or to be employed in 'Trade. Gunpowder is likewife made in great Quantities not only for the Ufe of the Ships and Settlement, but alio for lupplying Madrats and Bengal. Thefe are Circumftances which render this llland wonderfully populous. Amongft its Inhabitants there are many rich Merchants, and formerly a Multitude of Weavers, of whom fome remain, the Reft of the Pcople are Planters and Farmers, who under the Protection of the Company enjoy Plenty and Pcace ${ }^{\text {c }}$.

Bombay was for a long Series of Years in the Pofleflion of the Portuguefe, who notwithftanding the Convenience of its Port, derived little Benefit from it. This induced them upon the Marriage of their Infanta Catherine, to make a Ceffion of it to our King Charles the Second; who fent a Fleet with a confiderable Body of Land Forces to receive it, and as length, though not without much Reluctance, it was put into our Hands. The chief Difficulties were raifed by the Clergy, and efpecially by the Jefuits, who, at length, by an equivocal Interpretation of the Grant, kept the Ifland of Salfet, which hath been fince conquared by the Marattahs. Our King had not the Illand long in his Hands before it was evident that

[^283]
## of GREAT BRITAIN.

the Revenues were by no Means adequate to the Expence, and therefore at the Requeft of the Eaft India Company his Majefty relinquilhed all his Rights to the Ifland, Port, and Fortifications to them, referving only the Sovereignty and a very fmall Quit-rent, and under that Grant it hath been enjoyed ever fince $d$.

Agter this valuable Acquifition came thus into their Hands, it was very wifely judged expedient by the Company to transfer thither the Prefidency from Surat, where it had been eftablihed under the Protection of the Mogul, which was done for many weighty Reafons. The Place was their own in which they were abiolute Matters. Th. Harbour fo commodious, as under a good Government to attract Merchants from all Quarters; and the Situation of the Place exceedingly convenient for mamaging the Commerce of the whole Coant. The fupreme Power is lodged in the Prctident and his Council, compofed gencrally of Nine Perfons appointed by the Company, who have the Management of all Affairs Civil and Military. Judicial Proceedings belong to the Mayor's Court, crested by Charter, which with proper Regulations might be rendered exceedingly ufeful to the Settlement. The Mermbers of the Council have alfo the principal Offices in the Company's Service allotted to them, that is, to fuch as are refident there, fome being always abient in Quality of Chiefs at their fubordinate Factories. Thefe hold a conftant Correfpondence with the Prefident and Council; which Correfpondence, together with their Deliberations and Refolutions, are regularly tranfmitted Itme to the Directors e.

[^284]The moft Northern Place in which we have any Refident is Scindy or Tatta, once the Capital of an independant Kingdom of the fame Name, on the River Indus. At prefent this Place is poffefled by one Golam Shah, who ftiles himfelf Prince of Scindy, and notwithftanding the Confufion that bath fo long reigned in thefe !itts, there is ftill a very confiderable Commerce carried on here :in tome of the richeft Commodities, and in many of the fineft Manutactures in the Eaft. The Trade of the Company however hath been very much enbarrafled from a Mifunder.ftanding with the Prince, for removing of which there was a Treaty made fome Years ago, but we are not able to fay what Effects it hath produced. We have alfo a Refident at Cambay, in the Latitude of Twentythree Degrees, at the Bottom of the Gulph of the fame Name, in a very fertile Country, abounding with a Variety of rich Commodities and Manufactures. Some very judicious Perions have thought that greater Advantages might be drawn from both thefe Places than have accrued for fome Time paft, and it is in Hopes of this that our Correlpondence with them is ftill continued. Surat lies in the Latitude of Twenty-one Degrees Ten Minutes, it was formerly One of the moft famous Marts in the Eaft, but is at this Time much declined, and what Commerce ftill remains is owing to its being immediately under our Protection, a Circumftance that may hereafter poffibly become of gruater C'onfequence than it is at prefent. As in this Part of the World Countries and Cities change their Appearance and Conditions much more frequently than in any other $f$.

[^285]At Carwar which lies to the South of Bombay in the I atitude of Fifteen Degrees, we had formerly a Fort feated in a fine healthy Country, and upon a pleafant River, but we have not any Thing to do there at prefent. Onor in the Latitude of Fourteen Degrees is likewife fented in a good Country abounding with Pepper, for the Purchafe of which we bave ftill a Refident there. Tillicherry in the Latitude of Twolve Degrees Thirty Minutes, hath a fmell Fort and a Town near it, the principal Object of Trade here is Cardemoms, a Spice peculiar to this Part of the World, but on account of the Expence the Comp.: y y it is faid is difpofed to withdraw from thence. Ajengo is a little n. at Fort about Thirty-five Miles North of Cape Comorin, erected about Fourfcore Years fince for the Sake of the Pepper Trade, but the principal Uie now made of it is for the Slaughter of Black Cattle for the subliftence of the Inhabitants of Bombiy. The whole Extent of the Malabar Coalt is about Nine hundred Miles, in which we had formerly feveral more Factories than at prefent, but the Pepper Trade being of lefs Confequence ince our Improvements made at Bencoolen, they have to fave Charges been withdrawn. The Trade to Arabia, the Red Sea, and the Gulph of Perfiat were alfo with great Propriety put under the Direction of this Prefidency, when in a much more flourifhing Condition than they are at this Juncture, though in procefs of Time perhaps they may recovers.

Ture Company's Servants, privatc Traders, and Merchants of all Nations refiding here carry on a conftant and extenfive Commerce through all Parts of the Indics, which in many different Circumflances proves exceedingly beneficial to the Inhabitants of Bombay. This Commerce confifts in lupplying feveral Ports on the Malabar Coaft, on that of Arabia, and in the Gulph of Perfia with Provifions, Goods, and Manufactures brought from Madrafs, Bengal, and other Places, as well as European Commo ities, and carrying the Produce and Manufactures of thefe Places, accordir. - as they are in Demand to thofe Settlements refpectively. This

[^286]
## 598 The P-OLITICAL SURVEY

it is which confitutes what is filed the Country Trade. Befides this the Gentlemen at Bombay fend ufually an annual Ship to China, and diftribute their Returns from thence through the feveral Places before-mentioned. As in the Management of fo much Bufinets a great and conftant Circulation of Specic becomes requifite, a Bank under the Direction chictly of the Prefident and Council hath been crected here, and there are befides many private Perfons who are Dealers in Money, and very frequently acquire as large Fortunes by lending at Refpondentia as are raifed by being cuncerned cither in Shipping or in Trade. It is by fome or by feveral of thete Metinods that the Britih Subjects in this Inand accumulate gradually thote Ettates which center at length in this Country, where the Enjoyment of their Friends and Families can alone compenfate for their long Labours in the Eaft ${ }^{1}$.

There are many of the little States on the Coafts of Arabia and Malabar that have been from a long Series of Time as much addicted to Plunder and Piracy as thote of Barbary, which rendered the Navigation of theie Seas cqualiy liazaroous and precarions. The Succefs of the fe Freebooters fonetime infipired their Chiefs with fuch Ambi:ion, and at the fame Time furnilhed them with fuch Accefions of Power as rentered then: formidable even to the Europeans, nore efpecially to the Portuguefe, and it length to the Dutch and Englifh, till by the Amtance of a Squadron of his late Majelty's Ships their principal Forts were tahein and their Naval Force ruined, though not fo entirely extirpated as not to be ftill in fome Degree troublefome. This obliges the Company to keep up a regular Marine at Bombay, confifting of everal Veficis carrying from Six to Twenty Guis, conftructed in a particular Manner to accommodate them for this Service. Thefe armed Vefiels are chiefly employed as Cruizers and Cinnoys, and fometimes for carrying Military. Stores and Goovis to other settletments, and bringing back proper Returns. This Marine Eftablifment i, of great Confequence to the Settlement, as it not only gives Sccurity to their Commerce, and keeps their turbulent Neighbours in awe, but alfo conciliates the Friendhap and Ef-

[^287]
## of GREAT BRITAIN.

teem, as well as the Relpect of other Nations, who very willingly accept of their Protection i.

Trus: unfair and injurious Conduat of the Portaguefe in refpef to their Ceffions to Charles the Second upon his Marriage with their Infanta Catherine hath been already explained. This Conduct of theirs, befides innumerable other Inconveniencies invelved the Eaft India Company in contimal Dipates and Altercations with the Viceroys and Governors of the Portaguse Settements for near Threefore Years, as appears by numerous Numrials and other Papers fill preferved among the Archives of the B and of Trade, many of which I have perufed. They were at length deturmincl by the Maratahs making themfelves Mafters of Salfet, Caranfar, and the cther liles that in a Manner hem in that of Bombay. This however wis only changing One troublefome Neighbour for another, theash the lefs vexatious of the Two, but beyond all Doubt we can nevir revider this Settement of that Confequence which it ought to be, but by delisering ourfelves fome Way or other from thefe Embarrafiments 1.

Tur Company feem indecd of late Years to have paid more Attention. than formerly to Bomblay, but by no Means more than it deferves, or to Mak with greater Accuracy, than it requires. They have increafed, as the Ruader will fice at the Buttom of the Page, the Military Eftablith-

[^288]
## 600 The POLITICAL SURVEY

ment in fuch a Manner that when fully complete it will be very formidable, and muft at all Events be very expenlive. The Motives to this Conduct, if we may pretume to develope them, were not only the Sccurity of this Inland, but providing alfo for that of Madrafs, by kecping fuch a Force on the Back of the Marattahs, as might enable us to make a Diverfion whenever theic reflefs People were troublefome to cither Settlement. This however can never be thoroughly effected without the Acquilition of the Iflands before-mentioned. Some very judicious Perfons, and well acquainted with the State of Things in this Part of the World, have thought that confidering the whole Malabar Coaft is pofiefied ty many independant Princes, excecdingly jealous of each other, and oft a at open War, few of them having any better Title than Force or Fraud to their Dominions, and at all Times courting our Friendhip, it might be poffible for us by Means of Negotiation to ohtain fuch Concestions amight be requifite for the Profperity of this Prefidcucy. Others again with at leaft equal Prohability are inclined to blieve that we have this Alternative only in our Power, to purchafe the Places that we want or to conquer them, either of which will he attended with much Expence. If theie Methods are declined another muft be adopted, which is the raducing the prefent and propofed Eftablifhments, which otherwile muft prove a conftant and heavy Burden upon the Company without producing any confiderable Advantage. A Matter that certainly deferves great Confideration, more efpecially in the prefent State of Things, when the Face of our Affairs in India are fo much changed from what they formerly were, and when from Principles of found 1'olicy it becomes requifite to purfue fuch Meafures as may prevent their changing again!.

[^289]
## S E C T. III.

## The Prefidency of Fort St. George on the Coaft of Cboromanael.

THE Eaftern Part of the Peninfula on this Side the Ganges called the Coaft of Choromandel or Cormandel, is a fpacious noble Region watered by many fine Rivers, and beautifully diverfified with Hills, Plains, and Woods producing all the Neceffaries and Conveniences of Life in the greatef Plenty. The Sea Line of this excellent Country reaches about Two hundred Leagues, and the Fertility of the Soil correfponding with the Induftry and Ingenuity of its Inhabitants, it was filled with Cities, Towns, and Villages well peopled, and abounding in the richeft Commodities and moft valuable Manufactures, which were the Objects of a moft extenfive Commerce long before the Europeans found a Paffage into thefe Seas. The Kingdoms and Principalities into which fo vaft a Tract of Land was divided, maintained a mutual Correfpondence with each other, and even with the remoteft Parts of India. Trade being univerfally encouraged, and Merchants every where admitted and careffed. Hence it was, that when the Europeans came upon this Coaft under this Pretence they met with a friendly Reception, and were permitted for the Conveniency of their Commerce to eftablinh Factories, and afterwards to erect Forts for their Security, with the Licence of the Princes in whofe Dominions they were allowed to refide. This affords a probable Account of the Difparity that hath been remarked in point of Situation amongft thefe Settlements, as they did not in many Cafes depend fo much on the Choice of thofe who made, as the Will of thofe who permitted them to fettle where they did ${ }^{2}$.

Fort

[^290]
## 802 <br> The POLITICAL SURVEY

Fort St. George which is our Capital Settlement on this Coaft, lies in the Latitude of Thirteen Degrees Fifteen Minutes North, and in the Longitude of Eighty Degrees Seventeen Minutes Eaft from London. The Town was anciently called by the Moors Jenna Patnam, or as it is commonly written China Patnam, that is, the little Town, but at the Time we fettled there, it was ftiled Madras Patnam. It lies Twenty-five Leagues North from Pondicherry, and near Fourfcore Leagues South from Mafulipatam. The Climate is very warm, but the Heat is tempered by the Land and Sea Breezes, and by the Contrivance of Verandas, a Kind of Piazzas to the Houfes, and hhady Walks without Doors, is rendered very tolerable, fo that it is efteemed in point of Health equal to any Part of the Indies. The Soil immediately on the Sea Coaft, and for fome Space round it, is fandy and of courfe barren, but within Land fertile and well cultivated, fo that at no great Diftance from the Town there are many pleafant and agreeable Retreats, to which the wealthier Inhabitants retire in the Summer.

The old Fort of St. George was a regular Square, with Four Baftions all of Stone, looking directly upon the Sea. In this Fort was the Governor's Houfe, a very ftately Pile of Building, in which the junior Servants lodge, Councils are held, the public Records kept, and all other Bufinefs of Importance tranfacted, though the Governor no longer refides therein. The White Town as it is called, and which is inhabited by the Englifh, that is, thofe in the Company's Service, their Families and Dependants, is very neat and compact, with good Houfes, feveral fair Streets, and fome very handfome public Edifices. It forms a long Square in which Fort St. George is included, is well fortified, hath a numerous Artillery on the Baftions, a deep Foffe, and a fpacious Efplanade between it and the Black Town. The latter is what is properly called Madrafs, is much larger, though not fo well built as the former, the Streets wide, the whole furrounded with a ftrong Wall, and that by a broad and deep Ditch, on the other Side of which there is a Rampart and a very thick Fence or Quickfet, through which Apertures mult be cut before an Enemy can approach the Ditch. The Whole makes a very beautiful Appearance at Sea, affords a fine Profpect at Land, and hath many delightful and well cultivated Villages in its Neighbourhood. It muft however be acknowledged, that

[^291]through inclement Seafons, and the Multitude of People in Madrafs who fubfift by Manufactures and Trade, there is fometimes a Scarcity of Provifions, which are fupplied from other Parts, and there have been Infances of Famines. But the Northern Parts of this Coaft being now in the Company's Hands, and very plentiful Countries, they might, by erecting Granaries, provide effectually againf thefe Calamities not only without any Expence, but with a certain and confiderable Advantage to themfelves, befides doing an Act of the greatef Beneficence to the poor Inhabitants, who are immediately under their Protection. There is indeed no Port at Madrafs, but the Road is good, and though the Surf runs high the Country Boats, which are always ready, land both Goods and 1 affengers from the Ships with great Safety ${ }^{\text {b }}$.

Tur Englifh Company fettled here and built their Fort fomewhat more than a Century ago with the Permiffion of the King of Golconda, in whofe Doninions it then was. The moft probable Reafon for their fixing here was the Vicinity of St. Thomas or Melizpour, at that Time a Place of great Trade, in which they were willing to have a Share, and to which upon the Redution of that Place by the Moors, who took it from the Portuguefe, they lave happily fucceeded. The Encouragement they gave to Manufacturers, their kind Treatment of the Natives, and other Circumftances, rendered it in a few Years a very confiderable Place. It was notwithitanding expoled to many Difficulties and Inconveniencies from the Troubles that happened in the Country from time to time, and from the Avarice of the Governors after the Country firft became Tributary, and in Procefs of Time was abfolutely fubdued by the Mogul. In our own Days, fince the Declenfion of that Empire, and the Governors of Provinces fetting up for themfelves, it hath had a full Share of thofe Difturbances which this occafioned, more efpecially after the French began their Intrigues with the Country Powers and thereby put the Prefident of Fort St. George under the Neceffity of entering alfo into Alliances with them for the Prefervation of the Company's Concerns. In confequence of this in the War before the laft

[^292]
## 604 The POLITICAL SURVEY

between the Two Nations, this Place was taken by the French, and reftored, as we have elfewhere mentioned, at the Peace. It was again befieged in the laft War, but fo gallantly defended, that the Enemy were compelled to retire, fince which it is become in all Refpects more confiderable and more refpectable than any European Eftablifhment upon that Coaft c.

Affairs are adminiftered here, as in the other Settlements of the Company, by a Governor and his Council, who have under their Direction a fufficient Number of experienced Perfons in different Ranks of Service, and thereby in a Capacity of rifing gradually to the higheft Pofts, and by thefe, as we have faid, the White Town is chiefly inhabited. The Company perceiving the Expediency, and conceiving their Charter vefted them with fufficient Authority, inftituted a Court of Mayor and Aldermen and other Magiftrates for the Diftribution of Juftice, many Years before they had jpecial Powers delegated to them for that Purpofe by the Crown in the Letters Patent mentioned in the former Section. This wholefome Inftitution hath been productive of fo many good Effects that the Town of Madrafs, as we have before obferved, is filled with Inhabitants of all Nations, who are glad to refide in a Place where their Perfons and Properties are fecure, and where Induftry and Ingenuity are encouraged and protected. Befides the Bufinefs of the Company, their Servants refiding here and the Armenian and other Merchants carry on a moft extenfive Trade to moft Parts of India on their own Accounts. As by this Commerce the Servants of the Company in Procefs of Time acquire confiderable Fortunes by Dint of their Vigilance and Experience, fo in the End thefe center here, and the Nation is enriched by their Acquifitions, independent of the great Profits the lucrative Commerce of the Company produces. This Commerce confifts in all the rich Goods and Manufactures for which this Country hath been ever famous, fuch as long Cloths, Salampores, Beteelas, \&c. On the other Hand they take from us Woollens, Copper, Lead, Iron, Steel, Coral, Cutlery Wares, Toys, \&c. They export alfo from fome Parts of the Coaft

[^293]
## of GREAT BRITAIN.

Salt and Cotton. Their Manufacturers are very induftrious, ingenious, docile, and ready to imitate whatever is Thewn them. Almoft every Diftrict is diftinguihed for fome particular Kind of Goods, not only on the Sea Coafts but in the Inland Towns, from many of thefe they are tranfported to Madrafs, which is alfo fuppofed to be the greateft Mart in the World for Diamonds, though the direct Road to the Mines is from Mafulipatam, which is well fortified, and in our Poffeffion d.

Amongst the Factories fubordinate to Fort St. George the moft confiderable was Fort St. David's, at the Diftance from it of about Ninety Miles South. The Ground upon which this Fort was built, and a fmall Territory round it, was fairly purchafed from the Natives at a very highì Price, and regularly fortified at a great Expence. But as it food in the Neighbourhood of Pondicherry, and was in point of Trade as well as Strength a Place of great Confequence, when they became Mafters of it by the Fortune of War, they levelled it with the Ground, and as they left it it till lies in Ruins c. But the Company have a convenient Factory near it at (ioudelore or Cuddelore, upon a very pretty River, which anfwers all the Purpofes of Trade perfectly well. Farther to the South the Company as well as the Dutch have a Houfe at Porto Novo, which belonged to the l'ortuguefe, and when taken from them by the Moors was called Mohammed Bander. In the Kingdom of Tanjour, which is a pleafant and fertile Country, they have Davecottee, which is the laft Place they have to tise South. To the North of Madrafs the Company have Mafulipatam and

[^294]Nizampatnam

## 606 The POLITICAL SURVEY

Nizampatnam, with the Diftrict belonging to them, in Property. On the River Narfipore they have Madepollam, a little to the Northward Bandermalanka on the Narcapell Ingwam. They have alfo a Factory at Vizagapatnam, where are manufactured the fineft Chintz in India, and dependent upon that One at Gonjam, very famous for fpotted and and flowered Mullins, which is the laft Port upon this Cuaft. Befides thefe they have the Five Northern Sircars granted them in Perpetuity by the Subahdar confirmed by the reigning Mogul. Thefe were formerly poffeffed by the French, and lying at a Diftance from the Subalidar's Territories, and in the ${ }^{*}$ Neighbourhood of a mountainous Country in the Hands of Yolligars, or little Indian Chiefs, were of fmall Confequence to him, though they yield a confiderable Revenue to the Company, and arc befides of great Importance, as lying near the Confines of Oriffa f.

We may from this very fuccinct Account form in fome Meafure a juft Idea of the very great Value of this Prefidency from the prefent happy State of the Company's Affairs therein. The Situation of their Polleffions in one of the finelt Countrics in India affords them the higheft Advantages in point of Commerce, which is fufficiently evident from the large and valuable Cargoes they receive from thence. It is of no lefs Confequence in refpect to Security from the judicious Arrangement of their Concerns with the Subahdar of the Carnatic ; his Dominions being protected by the Company's Forcesmaintained at his Expence tothe mutual Advantage of both. It is no lefs advantageous in point of Revenue, which is regularly collected, and amounts to a great Deal more than all the Charges that the Company is at, though thefe are very large. The Power and Influence arifing from thefe Poffeffions render the Company highly refpectable in the Eyes of their Neighbours. We may add, that when the Affairs of the Bombay Prefidency

[^295]Thall be as thoroughly and effectually eftablighed, and a proper Correfpondence maintained for the Support of thcir mutual Interefts, the Country Powers may be fo balanced as that the Peace of the Peninfula may be effectually fecured, which will equally redound to the Honour and Profit of the Company, and at the fame Time procure a Degree of Happinefs to all its Inhabitants fuperior to what they have hitherto enjoyed $\varepsilon$.

5 The following State of the Company's Concerns in this Prefidency from the Month of May, A. D. 1769 , to the fame Month, A. D. 1770 , will it is hoped throw a fufficient Light on the Particulars mentioned in the ' Cext , and thereby fully explain to the Reader the very great Importance of this noble Settlement. The Number of Perfons on the Civil Eftablifhment were One hundred and Two. The Civil Charges 57,7621 . The Military Eftablifhment confifted of 4642 Furopean Troops, and of 36,674 Seaposs; the Total of the Military Charges $367,6521$. The Expences of Fortifications and Buildings 26,2151. the Total of both Civil and Military Charges 451,629 l. The Value of Civil and Military Stores 266,0661. Goods for Europe 132,1841. Debts due to the Company 879,2271. Balance in the Tieafury 100,664 I. Inveltment 199,3261. Annual nett Receipt of Revenue 510,3471. Value of their Ships 28,6541. Of their Elephants, \&ec. 17,492 1. Of their Plate, Houhhold Furniture, \&cc. 9,0191.

## S E C T. IV.

## Of the Prefidency of Fort William at Calcutta in Bengal.

THE Object of this is very different from any of thofe which have been the Sub.jects of the former Sections. We are here to confider not merely a particular Settlement and Factories fubordinate thereto, but a large, fertile, and pleafant Country, great in its Dependencies, great in its prefent Productions, and fill more fo in the Advantages that are and may be derived from it. Thefe however, that is to fay the Revenues, the Modes of collecting and Means of improving them, having been already amply difcuffed by thofe who were perfunally and intimately acquainted with all the Points as well Political as Commercial relating to them, there is no Neceffity to repeat what they have faid, or to enter into the Difputes which different Views and different Notions have excited amongft them. It will be abundantly fufficient for the Purpofe of this Work to give a fuccinct, and according to the beft Lights we have been able to obtain, a true Account of the Situation and Extent; the Climate, Soil, and natural Productions of this extenfive Territory, to point out briefly thofe Emoluments that have accrued, and thofe that may probably and
reuionably

## 608 The POLITICAL SURVEY

reafonably be expected to arife to this Nation from thefe opulent Dominions being occupied by Britifh Subjects.

The Provinces of Oriffa, Bahar, and Bengal are the moft Eaftern of thofe that compofed the Mogul Empire. They extend from the Twentieth or Twenty-firft to the Twenty-feventh Degree of North Latitude, and from the Eighty-fourth to the Ninety-fecond Degree of Longitude Eaft from London. They are bounded on the North by the Kingdom of Boutan; on the Weft by feveral Provinces of the Mogul Empire, and by a Tract of Country in the Poffeffion of the Mahrattas; to the South by the Gulph of Bengal and the Kingdom of Arracan; and to the Eaft by the Kingdoms of Affam and Tipra, fome Part of which is in the Hands of the Company. Thefe Territories comprehend a Space that might be fufficient to fatisfy human Ambition, if human Ambition could be reftrained within any Bounds; fo furnifhed with necefflary and valuable Commodities as to fatiate all the Wihhes of their Inhabitants, and in fo happy a Situation as to put it in their Power by the exporting their own Superfluities to relieve the Wants, and by that Means to draw to themfelves immenfe Riches from the remoteft Countries, as well as from their immediate Neighbours ${ }^{\text {a }}$.

This Defcription will naturally lead us to conceive, that in fo diffufed a Country there muft be a great Diverfity of Climate, independent of the Accidents arifing from the Circumftances that attend particular Situations. This will be ftill more evident if we reflect, that the Tropic of Cancer paffes over the Middle of it, fo that all on One Side is in the Torrid, and all on the other in the North temperate Zone. In the higher Countries therefore the Weather is temperate, and the Air pleafant and wholcfome. In the lower the Heat is great, and the rainy Seafons difagreeable. But notwithftanding this it is very certain, that even in thefe Temperance and Prudence fo effectually defend both Natives and Europeans againft their Inconveniencics, as to enable the former to reach to an advanced Age, and the latter, after

- Thefe Provinces fpread from Weft to Eaft, that is, from the River Caramnaff to the Borders of the Kingdom of Affam Four hundred Miles at leaft; and very little lefs from South to North, that is, from the Gulph of Bengal to the Fronticrs of Boutan. This confequently comprehends a Country no way inferior in point of Size to Spain or France, and in general much better watercd and more fertile than either. The Bounds on almoft every Side are defended by Mountains, and the Paffes through them by which the Mahrattas enter might be eafily fortified, and at a very moderate Expence; which, with the Army ufually maintained, would render it as defenfible as perhaps any Country in the World, more efpecially if we confider that there is little or no Concert between the Country Powers.
a long Refidence there, to return Home in fo good a State of Health as to furvive many Years ${ }^{\mathrm{b}}$.

In fo large a Tract of Country there muft be a proportionable Diverfity in the Soil; but in general the Whole may be ftiled exceedingly rich and fertile, and adapted by the Skill and Labour of the Inhabitants to a Variety of ufeful Purpofes. Grain of different Sorts, but more efpecially Rice, grows in almoft incredible Abundance. Great Plenty and Variety of excellent Fruits. No Country produces more or better Vegetables of every Kind, either for Food or Phyfic. The Mountains, which are chiefly on the Confines, fupply various Sorts of Timber, particularly what is called Shaal, no Way inferior to Oak. As to tame Animals for the Ufe of Food, for Draught, and for Carriage, this Country affords a fufficient Stock, and the fame may be with equal Truth affirmed in refpect to Fowl and Fin, both excellent in their Kind, and in amazing Plenty. But at the fame Time it cannot be denied that there are Abundance of wild Beafts, Birds of Prey, and other noxious Creatures, more efpecially in defart or thinly inhabited Places c. Befides the celebrated Rivers Ganga, Ganges, and Brimhaputre there are many fmaller Streams, fo that no Region in the Univerfe is either better watered, or hath an eafier, cheaper, more conftant or more regular Communication through all its Parts, and even from

[^296]
## 610 The POLITICALSURVEY'

thofe the moft diftant, quite down to the Ster, which is very commodious in refpect to the Trade within Land, as well as exceedingly fo in regard te foreign Commerce d .

The natural Fertility of the Lands, the Benignity of the Climate, and the Toil of the Hufbandman produces almoft incredible Quantities of Neceffaries, fo that their Markets are every-where full of Rice, Honey, Oil, Butter, Ginger, long Pepper, \&cc. Befides thefe they abound with many rich Commodities fuch as Lac, Civet, Opium, Salt Petre, Sugar, Indigo, Wax, Cocos, Salt, Beetle, Tobacco, and a great Variety of Materials for Dyeing, and other Kinds of Drugs. To thefe we may add their Two great Staples, Cotton and raw Silk. Very large Quantities of the latter are exported, but the former is manufactured into a vaft Variety of what we ftile Piece Goods, Mulins, \&c. and fometimes their own falling fhort they import, as we have hinted, Cotton from Surat. Their Manufactures of Silk are alfo very confiderable, as the Natives are equally diftinguifhed by their Induftry and Ingenuity, which with Plenty of Neceffaries and their Sobriety renders Labour cheap, and the Country extremely populous (though lefs fo than formerly) containing, as fome have computed, Sixteen Millions; neither will this appear at all incredible, the great Extent of Territory, and the Advantages before recited being maturely confidered, fince in Proportion it is not fo great as in the Province of Holland ${ }^{\text {e. }}$

[^297]The Mogul Tartars undetwheir Emperor Akbar made their Firf Impreffion upon thefe Provinces, within a Chort Time after we found our Way into their Dominions. He and his Succeffors conquered them gradually but not entirely, for large Territorics were left in different Places under the Rajahs or Princes of the Natives, who became tributary to the Mogul, but otherwife retaincd their Sovereignty, and governed the Gentoos according to their own Laws and Cuftoms. Thefe Conceffions were very wife, as they preferved a conftant and confiderable Revenue to the Conqueror, though perhaps not quite fo great as if the Conqueft had been abfolute. The Subahdars or Governors had an Officer under them called the Duan, who collected the Emperor's Revenues, which in Time of Peace were annually fent to Dehli. In the Declenfion of the Empire thefe Governors fet up for themfelves, and very feldom paid their Tribute. Our Eaft India Company formed feveral Settlements, the Principal of which was at Hughly, which for fome Realons they transferred to Calcutta; towards the Clofe of the laft Century built a Fort there, and had a imall Territory afiigned them by the Emperor's Firman. They had befider this other Factories, as at Calfimbuzar near the Court of the Subahdar, and at Patna, to which by Fleets of Boats they carry great Quantities of Goods, and from whence they brought great Quantities of Salt Petre. An headitrong Youth, who fucceeded to the Government, hurried on by the Violence of his own Paffions, attacked our Factory at Caffimbuzar, and afterwards deftroyed Calcutta. This produced that War, which by a Varicty of fucceflive Revolutions hath thrown the Whole of thefe Provinces into the Hands of our Eaft India Company, who adminifter them, and collect their Revenues as perpetual Duans to the prefent reigning Emperor in virtue of a folemn Treaty. Such is the prefent State of our Affairs here f.

The

Faries and Conveniencies of Life, Me fcarcetook any Thing in Exchange but Goldand Silver, if we except fometimes for the Supply of Manufactures to be again exported, Cotton from Surat. A clear Proof that this Account is not exaggerated is the yearly Tribute which the ee Provinces paid to the Mogul, and which in the Days of Aurengzebe amounted to $3,358,1781$. of which a large Sum was fent in Silver, as Taveruier tells us, who was an Eye-wituefs of it. In the Decline of the Einpire, the Sum actually carried out was fixed at $1,250,000$ 1. of which not a fingle Rupee returned.
f The Emperor Akbar invaded Bengal about the Clofe of the Sixteeath Century, and the Conqueft was not difficult for feveral Reafons. The Country was divided into many independent Sovereignties, none of their Princes of a martial Spirit, and the People in general, as they ftill continue, of a mild and timid Difpofition. After the Subahdars fet up for themfelves, Civil Wars and Confufions followed, and theaCountry was likewife frequently harrafted by the Maharattas who extorted great Sums. Surajah Dowla facked the Town of Calcutta on the 20th of Gुune 1756 , wihout any juft Caufe. It was retaken with the Affiftance of his late Majefty's Fleet. When a new War broke out with that Nabob, he was defcated in the Battle of Plaffey June

The Adminiftration in this as in the other Prefidencies, is by a Governor and Council, confifting generally of Fifteen Members, in whom the fupreme Power is vefted, and who have the entire Management of the Company's Concerns. Several of the Members of this Council are fent to refide as Chiefs at the feveral Factories, or to prefide over thofe Diftricts the Company holds, each having a Council to affift him. Thofe who remain at Calcutta, which may be regarded as the Capital, affift the Governor in tranfacting all Affairs, and the Minutes of their Deliberations are conftantly taken and regularly tranfmitted to the Directors here. For the $\mathrm{Se}-$ curity of the Place there is now a noble, fpacious, and well conftructed Citadel, and in the Town dependent on the Englih Government a Multitude of Inhabitants of all Nations to the Number of fome hundred thoufand Souls g. The feveral Offices relative to the Commerce of the Company are likewife executed by the refiding Members of the Council, who, as we may reafonably apprehend, have a great Number of Perfons in the Company's Service fubordinate to them, and who are employed to affift them in the Difcharge of their refpective Duties. The Mayor's Court erected by the fame Letters Patent that have been mentioned in the former Sections diftributes Juftice. But an Appeal hies from them to the Governor and Council. To them alfo belong the political Arrangements requifite for mantaining Peace and good Order through the whole Provinces. One of the Members of the Council is conftantly Refident at the Durbar or Court of the Subahdar at Muxadavad, who as well as the Mogul receives an Allowance out of the Revenues collected by the Company. This Refident, in Conjunction with the Minifter of the Subahdar, regulates the letting of Lands,

22d 1757, and Meer Jaffier elevated to the Subahdarry upon his Death. He was depofed by his Son-in-law Coffim Aly Cawn, 20 OCtober 1760, who had more Vigour than his Predeceffor, an inveterate Hatred to the Englih, and a fixed Purpofe of rendering himfelf indepeudant. His Violenee and Cruelty induced the Company to reftore Meer Jaffier, July 24, 1763, notwithftanding which Coffim, with the Affifance of Sujah al Dowla Suba of Oude, made a new Effort to recover his Authority, but was abfolately defeated at the Battle of Buxar 23 O OCtober 1764. Meer Jaffier died the 5 th of February following. The feveral Grants of the perpetual Dewannee of the Provinces of Bengal, Bahar, and Orixa, bear Date the 12 th Auguf 1765 , and in virtue of thefe the Eaft India Company have ever finceretained them in their Poffeffion.
I It may afford fome Information to confider the progreffive Growth of the Settiement of Calcutta, which at the Beginning of the current Century had by the Firman of the Mogul a Territory of Six Miles in Length and Three in Breadth. The Fort was then very fmall, and the Company's Troops between Two and Three hundred Men, the Town not confiderable, and containing about Ten thoufand Inhabitants. The prefent Fort, which is about Three Miles in Circumfrence, was ereeted or rather begun to be erefted after the Place was recovered from Surajah Dowla, with a View to preferve it from the Hike Misfortnne either through the Malice of the Moors, or the Attempts of European Enemies, and from that Time to the Clofe of A. D. 1770, this Fort hath cof the Company $891,26 \% 1$. The Diffricts granted in Property to the Company by Coffim Aly Cawn, and which it was propofed this Fort fhould protect, produced an annain sucome of $600,000 \mathrm{l}$. and the Conduct of thofe who are employed in collecting of the Rents, Duties, \&c. which when received are paid into the Company's TreafuryFor the Security of the Province a numerous Army is maintained, compofed of Three thoufand Eight hundred and Ninety Whites, and TwentySix thoufand One hundred and Thirty-two Seapoys, regularly difciplined: under European Officers, and with the Charge neceffary for repairing Fortifications and other Contingencies require, independent of what is paid for the Support of the Civil Government, a very large annual Expence, and this being defrayed the Remainder of the whole public Revenue is the Property of the Eaft India Company ${ }^{b}$.

This fuccinct Account of the State of thefe Provinces, with the Facts adduced to fupport them will, it is hoped, be fufficient in fome Meafure to Thew their vaft Importance to the Eaft India Company, and in confequence of their being fo the Benefit they are likewife to the Nation. IInftead of that incertain and precarious State in which our Commerce romained here for many Years, we enjoy now the moft certain and ample Security from the Nature of our Fortifications, and particularly the extenfive and highly improved Fortrefs at Calcutta, the large Body of Troops that we maintain and pay, who from that Circumftance it is hoped may be depended upon, as the Natives, to ufe their own Expreffion, have been hitherto faithful to thofe whofe Salt they eat. This joined to the Experience of our Officers and their Knowledge of the Country, with the Reputation arifing from our Succefs, may in a great Degree watrant what hath been faid. This Security hath enabled and difpofed us to acquire a very large Property in thefe Parts, for fuch our Fortifications, Magazines, and in. general all our Effects there may be confidered. The territorial Income arifing from the Rents of Lands, Duties on Cattle, Inland Trade, Cuftoms,: \&c. amount to an immenfe Sum, from whence all Deductions being made there may, or at leaft ought to remain in the Company's. Treafury what: is fufficient for the Purchafe of the Company's Inveftments without fending an Ounce of Silver from hence. To all this we may add the Capacity the Company is in to furnifh a comfortable Subfiftence, and in areadonable Space of Time, without either Fraud or Oppreffion, ample Fortunes to the Britih Subjects whom they employ in their feveral Eftablifh-

[^298] and Seamen in the Service of the.Company, the Price of Freight, the Provifions they cọnfume, the Stores they carry with and are fent to them, and the Commodities and Manufactures of this Country exported thither, and which will continually increafe. The raw Goods, efpecially Silk and Salt Petre, imported from thence, and that give Butinefs and Bread to Multitudes here, the annual Produce of the Company's Sales, which bring in great Sums from foreign Countries, the Cuftoms and other Emoluments that accrue to Government, and in that refped operate in Diminution of our National Expence i.

These and many other Circumftances that might be enumerated very fully demonftrate how much this Dominion merits the Attention of the Public. It ought not, indeed it cannot be concealed, that the feveral Revolutions that gave us the Poffeffion, and certain Meafures that either wwere or were furppofed neceffary to preferve it fince, have for the prefent brought fome Diftrefles on this Country by diminifhing the Quantity of Silver that circulated thercin, difcouraging Induftry, and leffening Commerce $k$. But the Wifdom of the Nation to whom this properly belongs,
i At Firft Sight it certainly appears ftrange that we fhould truft the Natives themfllves to fupport our Power, and it appears equally Itrange that the Indian Potentates fhould nor be able to employ them with equal Efficacy againft us. But befides that Experience hath cicurly evinced that it is really fo, the Caufes may without much Difficulty be explaincd. Our Seapoys owe their Confequence to conftant Difcipline, regular Pay, and a Confidence in their Officers. The Forces of the Country Powers are haltily raifed, ill paid, and under no Difcipline, and when they have attempted to imitate ours their Seapoys could never be brought to entertain any Opinion of the Military Skill of their Leaders, and as thefe Circumftances have given, fo there is great Reafon to believe they will preferve our Superiority. To this we may add, that when our Covernment is thoroughly and properly eftablifhed on Principles of Equity and-Indulgence, the Natives will find it their Intereft to fupport thofe who cherifh and protect them. The being able to carry on this Trade without exporting Silver, obviates the frongeft Objcetion that hath bcen raifed againft it. The Inveftments from Bengal in A. D. 1771 amounted to 980,2791 . which in our Sales produced Two Millions and a Half at leaft. When our Government is thoroughly fixed we may very probably be able to extend our inland Trade Northward, which will certainly cularge the Exports of our own Commodities and Manufactures, and augment thereby in many Refpects our national Advantages.
$k$ The Silver fent to Madrafs and Bombay, though certainly detrimental to Bengal, was a Meafure neceffary to the Company's Affairs, and contributed to extricate thofe I'refidencies from a troublefome and deftructive War, fince which they are both, but efpecially the former, brought into a State of Security and Profperity, and thereby afford a Profpect of what by a right Management may be done in Bengal. The Sums fent to China were likewife a Lofs to thefe Provinces but not to the Company, as the Froduce was found by them, from the Goods which thefe Sums purchafed in their Sales. Others, and perhaps greater Drains have arifen fiom the Treafures carried away by Coffim Aly, and what harh been withdrawn by Perfons retiring out of the Three Provinces during the Troubles, which it is to be hoped are now at an End. Several Pranches of Commerce have been ftopped by inevitable Misfortune, fuch as the Confufions in
fupported by its Authority, may eafily reftore Order by eftablifhing a mild and fettled Government, under which all Europeans in general may enjoy the Protection of our Laws and the Natives be permitted to live according to their own Cuftoms, free in all Refpects from Conftraint or Opprellion. This being once done, the natural Fertility of the Soil, the innate Difpofition of the People, and the proper Improvements that may be made with refpect to both, will both fpeedily and certainly lead to Profperity, and bringing all Things back to their old Channels render the future flourifhing State of thete Provinces as much an Honour to the Councils of Britain as the Acquifition of them hath been already to her Arms.
the Perfian and Turkin Dominions, and the Trade to Manilla hath likewife failed; but there is nothing improbable ia inppoing that by degrees thefe will be recovered, or that new Channels will be opened. Agriculture in Time of Peace will certainly revive, and confidering the rude State it is in, may and undonbtedly will be improved, and the fame may alfo be expected in regard to Silk and other Commodities. We are but lately become Mafters, and have not as yet had Leifure or Opportunities to difcover and turn to $\Lambda$ dvantage thofe Refources which in a Country like this may, and certainly will be found.

## S E C T. V.

 Of the Prcfidency of Fort Marlborough near Bencoolen in .the Ifland of Su\%-THE noble and capacious Illand of Sumatra; being divided nearly in the Middle by the Equator, extends beyond it on One Side to about Five Degrees Thirty Minutes North, and on the other to about Six Degrees of Latitude South, and reaches from Ninety-four to One hundicd. and Four Degrees of Longitude Eaft from Londona. It hath

[^299]
## 616 The POLITICALSURVEY

been defervedly famous from very high Antiquity on many Accounts, for in point of Extent it hath been afferted by various Authors to be the Third Inand in the World, which however, from the Knowledge we now have of it, feems to be exaggerated; more truly renowned for its rich and valuable Products and fill more juftly celebrated for its happy and commodious Situation, which rendered it the Center of Commerce in refpect to all the trading Countries of the Eaft, before the Europeans found a Paffage into thofe Parts by the Cape of Good Hope b.

The Climate, as may be eafily conceived from the Situation of the Inland, cannot be either very agreeable or wholefome. The Power of the Sun is great, the Country in general very marhy from the Overflowing of Rivers, fo that the Air is generally hot and humid. The rainy Scafon is particularly dangerous from fudden Storms attended with Thunder and Lightening, which are however but of hort Continuance, fucceeded by as fudden Calms, which alternate Variations have pernicious Effects, efpecially upon European Conftitutions. Befides there being large Tracts of Fenny Ground, the Exhalations from them which the Land Winds bring down to the Coaft, are equally noxious and noifome. But notwithftanding all this, Temperance, proper Precautions, and Cuftom reconcile People to thefe Inconveniences, and befides there are feveral Places on the South Weft Coaft, particularly Sillebar, which from their high Situation are equally healthy and pleafant. The Inand in general is frequently fubject to Earthquakes.

The Appearance of the Country from the Sea is exceedingly pleafing, being finely diverfified with lofty Hills, covered with Trees, craggy Rocks. wide fpreading Plains, verdant Groves, many large beautiful Rivers, and the Coaft frequently indented by fine Bays. The Soil is deep, rich, and fruitful, and would be more fo, if inhabited by an induftrious People, producing Grain and more efpecially Rice, with all Kind of Herbs; moit of the rich Fruits peculiar to the Indies, Forefts of good Timber, abounding

[^300]
## of GREAT BRITAIN.

with Buffaloes and other Cattle, with a Breed of fmall but ferviceable Horfes, tame, wild, and water Fowl in the utmoft Plenty, and a great Variety of River and Sea Fiih, many of them excellent in their refpective Kinds. There are alfo in the Mountains and Defarts Elephants, Rhinoceros's, Tygers, and Bears, which laft are not found in any other Parts of the Indies. Crocodiles, Serpents of feveral Kinds, and other venomous Creatures are but too common.

We may be however affured, that it is not from Curiofity, or the Defire of feeing ftrange or rare Things that Europeans vifit, and much lefis refide in this Country. 'Sheir Motive is Trade, and thofe numerous rich and valuable Commoditics which this lifand produccs. Amongft theie the Firft Place is ufually given to Gold, which is wafhed down in Dun and fmall Pieces from the Mountains, efpecially after Storms, which in this Country are very frequent. This was formerly a great Article in Commerce, though we hear little of it now, and yet the Dutch as well as the King of Achen are faid to have a Mine there. The Camphire foul.d here is equal to that of Bornco, and much fuperior to what is brought from China. Sapan and other dycing and fweet-fcented Woods, which are much efteemed and fold at a high Price in the Indies. Benjamin, and a graat Variety of valuable Drugs, are and many more likewife might be brought from hence. But after all the chief Staple is Pepper, which grows in finill Bunches on a Kind of Vine that creeps up great Trecs, or twifts round Stakes fet for that Purpofe. Of this immenie (Luantities are exported, and it happens very fortunately that the leant Grains, which have the mildeft Flavour, are in moft Efteent in fome Parts of the Indies and in China, to which great Quantities are annually fent, as there might be alfo of thofe odoriferous Woods that have been bcfore-mentioned c .

[^301]
## 618 The POLITICAL SURVEY

OUR Correfpondence with the Natives of this Illand began very early, and with Circumftances of great Eclat. Queen Elizabsth wrote a Letter to the King of Achen in favour of her Subjects trading in his Dominions, fo did her Succeffor King James the Firft, who is allo faid to have made a Prefent of fome Pieces of Cannon to the then reigning Monarch. We continued ou: Cominerce there and in other Parts of the Illand for many Years without making any Settlement thereon. But when the Dutch made themfelves Maiters of the Kingdom of Bantam, to which, though fituated in Java, a great Part of the Southern and Eaftern Provinces of this Illand belonged; it became neceffary for us to take proper Meafures to prevent our being entirely beat out of the Pepper, as we had already been out of all the other Spice Trade. At the fame Time fome of the little Princes of Sumatra being with good Reafon jealous of the growing Power of the Dutch addreffed themfelves to the Prefident of Fort St. George and offered him a Settlement in their Territories. This was accepted, and the Englith accordingly fixed thomfelves at Bencoolen, where the then Eaft India Company built a Fort at a very great Expence. In Procefs of Time fome Difputes arofe between our People and the Natives, which made it requifite to fend a Naval Force thither, and to conftruct a new Fort, which was called Fort Marlborough, of which with Bme other Places we were difpofiefled by the French in the laft War. On our regaining Poffeflion, that Fort hath been rebuilt, and Things brought into a much better Condition than they were before, but till this could be done our Settlement proved lefs beneficial than formerly to the Eaft India Company ${ }^{d}$.

[^302]The Adminiftration is vefted in the Governor and Council, compofed of Eight Members, who have the entire Direction of Civil and Military, as well as Commercial Affairs. The Extent of the Company's Jurifdiction is very confiderable which they hold by the free Confent of the Natives, who invited them to prevent their being oppreffed by the Dutch. The principal Perfons in each Diftrict contract in Writing to furnifh the Company, and them only with Pepper at a certain Price, and for the Reception of this Pepper we have feveral fubordinate Refidencics. To the Northward Tappanooly, Nattal, Mocomago, Bantal, Ippoe, Cattowan, Laye, and to the Southward Sillebar, Saloomah, Manna, Cawoor, and Croee. $\Lambda$ bout Fort Marlborough they let their Lands to Farmers who are bound to raife a certain Number of Pepper Vines, and are paid at a certain Rate for every Bahar or Five hundred Weight. They likewife raife a confrderable Quantity of Rice, of which Arrack hath been made. They have likewife a confiderable Number of Camphire Trees, fome of the Produce of which was fent home, but did not turn to account. However large Quantities are annually fent to China, where it is manufactured in the fame Manner with what the Dutch carry to Japan. The Company alfo fent Home Caffia and Benjamin, but the Freight proved fo heavy as to prevent their turning to Profit. They reccive here annually a Ship laden with Stores of different Kinds, fome of which, more efpecially Iron and Steel, are fold for the Company's Account. There are befides uiually Three, fomctimes Four Ships fent thither to take in Pepper, and as the Produce of this Commodity is daily increafing, it is expected the Settlement will very foon furnifh a greater Number of Cargoes. The Chinefe formerly drove a great Trade here, and carried Home confiderable Quantities of this Spice. But at prefent they get little, except it may be a few Junks laden by Stealth from the Dutch, which does not in any Degree anfwer to the Confumption of the numerous Inhabitants of that extenfive Empire, where it is in general Ufe. We fupply them commonly with about Twelve hundred Tons, which amounts to about Sixty thoufand Pounds, and is the only Commodity, except Cardamoms and Sandal Wood, furnithed by any of our Settlements, though it is not at all improbable that Alves and other odoriferous Woods highly valued by the Chinefe, might be raifed in this Country, and exported thither e.

The

- The following Facus may contribute to give us fome Idea of the Expences attending, and the Advantages accruing froin thits important Settlement. The Number of civil Servants which the Company had there, A. D. 1769, was Fifty-feven, and their Appoiniments and other Expences on account of the Civil Eftablifhment amounted to 24,8431 . The Military Force confifted at the fame Time of Two hundred Forty-feven Europeans, and One hundred Thirty-three Scapoys, their Pay amounting to 14,921 l. the Charge of Fortifications 3,262l. the Whole of the ftanding

$$

$$

## 620 The POLITICAL SURVEY

The original Defign of this Settlement, as we have already obferved, was to preferve Pepper from being monopolized by the Dutch as well as all other Spices, and we may form a Judgment of the Importance of the Ob ject at that Time from the large Sum that the then Eaft India Company fpent on York Fort, in order to fecure their Infant Eftablifhment at Bencoolen. This End it had anfwered and promifed farther Advantages before it was conftituted a Prefidency. In this Light it is and ought to be confidered as a Place of great Confequence. But affuredly there are many Commodities befides this in the Inland, which though hitherto they have not,may hereafter be turned to advantage. The Soil and Climate confidered, there is. certainly nothing unreafonable in fuppofing that feveral Trees and Plants. of. fingular Utility in Phyfic and Manufactures may with due Care and Attention be raifed here, efpecially if we reffect that it is in the fame Latitude with the Moluccas, and that the Dutch have practifed this very Method with Succefs in One of their Illands f. To this we may add, that in the Vicinity of this Settlement there are various Ines of different Sizes. well inhabited, which may probably be found to produce Commodities that are not, or at leaft have not been obferved in Sumatra. At all Events. the very happy and commodious Situation of this Place for carrying on a Commerce with the richeft Countries of the Indies may without Difficulty be improved. The Dutch at Malacca as well as in Java, are continually traverfing thefe Seas with great and fmall Veffels, and we are undoubtedly:
annual Charges, 43,0261. The whole Charge of Fortifications from the Time we recovered it to A. D. 1770 amounted to 29,277 I. On the other Hand the annual nett Receipt of Revenue in 1770 was 2,6801. the Inveftment 8,9181. The Civil and Military Stores valued at 50,2161 . Goods for Europe 8,394 1. Balance in the Treafury 43,3501. Debts due to the Company 30,6081 . Value of their Ships, A. D. 177 I, 12,3631. of their Elephants, \&c. 252 I. of their Plate, HouMhold Furniture $1,2.19$ l. of their Slaves $14,197 \mathrm{l}$. The fame Year the Company exported to this Settlement in Bullion $9,7731.138 .4 \mathrm{~d}$.
f The old Eaft India Company made a great Mcrit of eftablifhing this Settlement; which they afferted coft them in Ten Years no lefs than Two hundred and Fifty thoufand Pounds. They fuggefted, that if the Pepper had fallen into the Hands of the Dutch they would have advanced the Price of it to what they vend their other Spices at, which on a Confumption of Six thoufand Tons in different Countries would have amounted to an immenfe Sum, and have given them an. infuperable Advantage over all other European Nations trading to India. We may add to the Number of the Commodities already fecified in different Parts of this Section, Swallow, that is, Canes, Rattans, Cardamoms, Ginger, Arek, or Beetle Nut, Dragon's Blood, \&cc. It is faid that Spices have been brought hither, but that the Plants died; yet furely the Object is. of Importance enough to have the Experiment repeated. There are feveral Sorts of Trees highly valuable in producing Materials for Varnifh and Dycing, which might be eafily introduced from the adjacent Countries, and cven from China and cultivated in the Company's Plantazions in the fame Manner as Pepper Vines and Camphire. Befides in a Country like this aboundiag. with all Kind of Metals, there might poffibly be difcovered fome valuable Minerals with the Natures and Properties of which the Inhabitants are not acquainted, and might therefore be obtained and fent to Europe upon very eafy Tarms. "not inferior to them in Martitime Skill, or in our prefent Circumftances lefs. likely to fucceed in Undertakings of this Nature with any of the orien:al Nations. Commerce is the great, the proper Bufinefs of the Company and of its Servants, and whateyer they acquire in this Channel muft in the Iflue turn to the Benefit of this Nation s.

The prefent as well as the old Eaft India Company have at Times Shewn a due Senfe of the Rectitude and Utility of thefe Principles, as evidently appeared from their eftablifhing Factories and even Settlements. in different Parts of the remoter Indies which however were afterwards withdrawn. But as the Motives on which they were eftablifhed ftill fubfift, and as very many, if not all the Obftacles which heretofore hindered their Succefs in thefe Enterprizes are removed, and the prefent Circumftances of the Company fuch as may afford them juft Room to expect better Fortune in their future Endeavours, we have a probable Ground of Hope, that thefe Defigns will be refumed, fo that all the different Commodities and Manufactures of the Eaft may be brought into this Nation through their Channel only. An Event which would be in various Refpects beneficial to the Public as fuch an Extenfion of their Commerce might enlarge their Exports, and would certainly increafe their Shipping, augment the Number of Seamen in their Service, and very probably by a new Supply of Raw Materials contribute to the Employment of our induftrious Foor at Home, at the fame Time that it would prevent our Wealth from going out, and poffibly add to the Number of foreign Purchafers at. their Sales ${ }^{\mathrm{h}}$.
g The Illands to the North Weft are at. leaft many of them fubject to the King of Achen,: but thofe to the South Weft are fuppofed to be inhabited by the original Natives of Sumatra, who retired into them when expelled the larger Inand by the Malays, who have coptinued Mafters of it ever fince. The People in thefe Ines are generally reprefented as then "f brutal and ${ }^{x}$ intractable of all Savages, with whom there can be no dealing, as they are faid 4 . r ber with-out Mercy all Strangers who come to or happen to be wrecked upon their Coafts. "y notwithftanding thefe Stories, if I have been rightly informed, a late Governor found Meane, enter: into a Correfpundence with fome of them, and even prevailed fo far as to engage them to come and make him 2 Vifit at Fort Marlborough. It is not at all unlikely that if this. Intercourfe: could be improved, we fhould be able from thefe new Countries to derive fome Advantages that: might very well compenfate our Trouble in vifiting them. The Commodities they may afford, though not Objects to the Company might be fo to their Servants; and it is very well known: that the private Trade in the Eaft Indies turns not only highly to the Benefit of thote concerned in it, but alfo to this Nation, on which Account it has been very wifely permitted, and: is the Means of earrying no fmall Quantity of different Kinds of Goods from,hence, that would: not otherwife find a Paffage to the Eaf.
b The Caufes of our not extending our Trade in thefe Parts fo far as might have been rastipally expected may be reduced to Three. The Firft, our Factorics in diftant Parts being oftens

As we have no Eftablinment in China our Commerce with that Empire does not, ftrictly feaking, belong to this Chapter; but as we before made a fmall Trefpafs on Geography in fpeaking therein of the Inand of St. Helena, though belonging to another Quarter of the Globe, fo for the fame Reafon, that is, to bring this Subject into one View, we will now trefpafs a little upon Method in order to treat briefly of this Matter. Our Company fends now many more Ships thither than formerly and brings Home large Cargoes, the moft valuable Parts of which confift in raw and wrought Silk, fome Cotton Manufactures, Tea, China, and in the private Trade, Variety of Drugs and much lacquered Ware. On the other Hand the Chinefe take from us fome Broad Cloth and other Woollen Goods by which we get little; Lead, on which there is no great Profit, Sandal Wood, Cardamoms, and Pepper. The Balance, which is much in their Favour, being paid in Silver. It manifeftly appears from hence of how great Confequence it would be to diminifh this Balance by introducing Commodities from Europe, or other Parts of India, as the Dutch do Spices, and which is certainly a Thing that is or may be at leaft in fome Degree practicable. As for the raw Silk we import, as it is manufactured here, and as the wrought Silks are again exported, this Part of their Cargoes is of Benefit to the Nation, which is the great Point to be attained, and ought therefore to be kept conftantly in View ${ }^{\text {i. }}$
expofed to Ruin by Invafions, inteline Confufions, and Revolutions in the Countries where they were fetted. In the Second Place, they were not a little hurt by the embarraffed and incertain State of Things at Home, whence there were at the fame Time and in the fame Ports Ships of the Company, Permiffion Ships, and feparate Traders or Interlopers all carrying on their Commerce under Englifh Colours. Lafty, (of which many Inftances might be given) the fuperior Power and finiter Arts of the Dutch. To fome One or more of thefe Caufes were owing the Lofs of thofe Factories we formerly had in the Kingdoms of Pegu and Siam, as well as at Ilean the Capital of the Kingdom of Tonquin. A Settlement was ifo eftablifhed on Pulo Condore over againt the Coant of Cambodia, where our Governor and moft of the People were cut off by their Macaffar Soldiers A. D. 1705 . We had a Factory at Succadana in the Inand of Borneo in the Vicinity of a Diamond Mine; and another at Ban ar Maffecn in the fame llland. The former was withdrawn, and from the latter we were driven by the Natives. However A. D. 1714 Sir Gregory Page being then at the Head of the Direction, a large Ship was fent under Captain David Beckman, who made a profperous Voyage to the fame Place, though it is faid that a Faclory might be much more conveniently feated oppofite to the fmall Inand of Pulo Lout, where there is high Ground, a healthy Air, and a good Port. It muft be acknowledged $\mathrm{in}^{2}$ favo:rr of the feparate Traders and Interlopers, that they carried on their Commerce very fiuccefsfully in moft of the oriental Inands with which we have little or none at prefent.
${ }^{i}$ The old Ealt India Companies carried on the Trade to China at their Port Amoy or Emoy, where they were very indifferently treated by the Chinefe. They endeavoured thercfore to procure leave to creCt a Factory at Ning.po, in which they did not fucceed. But with fome Difficulty they were allowed to fettle on the Inand of Chufan, according to the Chinefe Orthography Tchcou-chan, about Three Leagues from the Continent, and from thence they had a free Trade

## of GREAT BRITAIN.

This very fuccinct Defcription and Detail of our Poffeffions in the Eaft, and of the Advantages arifing from them, demonfrates clearly of how great Confequence they are to Great Britain. The Manner in which they have been attained hath been alfo plainly ftated; but without defcanting upon that, it is a Point of much more Importance to confider how they may be retained, for this beyond all doubt is become a very important national Object. Their Diftance and their Extent may feem to render this exceedingly difficult, but if requifite to national Safety and Profperity, it ought by no Means to be looked on as impoffible. The Firft Step feems to be fo to connect the feveral Prefidencies, as that by a Concurrence of Councils and of Forces when neceflary they may reciprocally affift each other, for then all their feparate and diftinct Interefts would in every Inftance receive the Support of the Whole. A mild, uniform, and permanent Government hould be eftablifhed in every Prefidency, allowing the Natives to live according to their own Manners and Cuftoms, which are fuited to the Soil and Climate to which they are enured by Habit, and the altering of which in the End might prove as contrary to our Interefts, as in the Beginning it would be to their Inclinations. The Laws of this Country fteadily and ftrictly enforced by refpectable Courts of Judicature, would controul the Conduct of Europeans. The abfolute Protection from every Species of Oppreffion in either their Perfons or Properties would reftore Induftry and Manufactures amongft the Inhabitants, as well as conciliate their Affections, increafe their Numbers, andinduce them from a Senfe of their being perfectly fecure to bring to Light their hidden and now ufelefs Treafures. Foreign Commerce properly encouraged would foon return, and extending through new Channels augment the Confumption of our Commodities, enlarge the Circle of Correfpondence through the Indies, furninh new Articles for our Sales, and bring many of the old Ones hither on eafier Terms. The Whole of this Arrangement once thoroughly digefted and fully carried into Execution would, under the conftant Infpection and Protection of the Legillature, preferve in perfect Harmony every Branch of this political and commercial Syftem.
to Ning-po. This Inand they deferted a little too haftily in the Year 1702. The Ihand was indeed thinly inhabited, and in a very indifferent Condition, but it had been one of the faireft andmoft flourithing Ines dependent upon that Einpire till ruined by the Tartars, and had been re-fettled but a few l'ears. The Port was very good, and the Factory conveniently fituated. The great Point the Company had in view was to preferve a Correfpondence with the Japonefe Juaks that reforted annually to Ning-po. This alfo led them to transfer this Colony to Pulo Condore in Hopes of getting the Chinefe and Japon Junks to touch there in their Way to Tonquin, when, as we mentioned in the former Noic, they were cut off. The Company fince then have refumed their China Trade, and fixed at Canton, at which Port their Servants from Fort St. Ceorge had traded for many Ycars, and at this Port and this Port only the Trade fill continues

## C H A P. IV.

## Of the Britih Forts and Settlements for the Protection of Commerce in Africa.

THE prefent Chapter will reach to no great Extent, though the Intercourfe with this Part of the World is and hath been highly beneficial, and in Pracefs of Time will probably become much more advantageous to this Nation. Africa is a Peninfula, and the largeft Peninfula on the terraqueous Globe. It is bounded on the North by the Mediterranean, on the Weft by the Ocean, on the Eaft by the Indian Ocean and the Red Sea, and joined to Afia by the narrow Ifthmus of Suez, which is between Twenty and Thirty Leagues in Breadth. In Longitude it extends from Eighteen Degrees Weft to about Fifty Degrees Eaft from the Meridiin of London, and from Thirty-four Degrees of North to fomewhat more than Thirty-four Degrees of South Latitude. It is diftinguifhed by Four remarkable Promontories; Cape Bona to the North, Cape de Verd to the Weft, the Cape of Good Hope to the South, and Cape Gardefuy to the Eaft. In Extent it meafures from Weft to Eaft One thoufand Five hundred and Fifty, and in Breadth from North to South about Fourteen hundred Leagues. It is divided into Two not very unequal Parts by the Equator, and lying almoft altogether in the Torrid Zone, the Climate is very hot, and the Soil in many Places parched and barren. This however is chiefly to be underftood of the interior Parts of the Country. In many other Places, more efpecially on the Coaft, the Climate is more tolerable, and the Soil very rich and fertile, producing Wheat, Barley, Rice, and other Kinds of Grain in great Plenty and Perfection ; the Woods abound in feveral Kinds of valuable Timber, and other Trees that produce rich Fruits or precious Gums; it abounds in Cattle, Camels, Horfes, and with Elephants and almont all Sorts of wild Beafts. The Bowels of the Earth and Mountains afford alio Quarries of fine Stones, and moft Kinds of Metals, but in particular Gold and Copper in large Quantities. In regard therefore to Commodities, as well as Situation, it is evident ti.us: few Countries are fitter than this for foreign Commerce ${ }^{2}$.

[^303]
## of GREAT BRITAIN.

The whole Continent of Africa was not always what it is at prefent, the Seat of unlearned and unpolifhed Nations. For the Egyptians in the earlieft Ages were famous for Arts and Arms, for planting Colonies in diftant Countries, and for their Maritime Expeditions. In fucceeding Times the Carthaginians were no lefs diftinguifhed for their Turn to Improvements of every Kind. They penetrated into and built Cities in the interior Part of this great Continent, their Commerce was extenfive, and fo were thcir Difcoveries, the Records of which Time however hath in 2 great Meafure buried in Oblivion. The Romans who fupplanted them, held the Inhabitants in a State of fevere Subjection, and were chiefly intent on fupporting their Power and raifing a Revenue. The Goths and Vandals over-run what the Romans had poffeffed, without taking much Pains to improve what they had acquired. The Arabs who followed them were as rude Conquerors as their Predeceffors, and have defaced and demolifhed thofe Remains of Grandeur, which even the Teeth of Time. had fpared. After Barbarifm had long prevailed, when Science revived in Europe, ap Inclination quickly arofe of exploring foreign Lands, and the Situation of this immenfe Country naturally attracted Notice. But who firft adventured hither admits of fome Doubt. The French fay that the Inhabitants of Dieppe failed along a great Part of the Weft Ccaft in the Fourteenth Century, and made fome Eftablifhments there, which on account of their Civil Wars were abandoned. It is more certain that the Portuguefe in the Beginning of the Fifteenth Century undertook this Tark, in which they proceeded flowly, and with great Difficulty, and were many Years before they doubled the Cape of Good Hope, and made themfelves acquainted with the Eaft Side of this Continent. As thefe Expeditions coft them much Trouble and Expence, they arrogated to themfelves the Sovereignty of thefe Seas in Exclufion of all other Nations. The Englin were the next who attempted this Commerce; after them the Dutch, who conquered feveral Places from the Portuguefe. The French interfered with them, and when the Nature and Advantages of this Commerce became known, the Brandenburghers and the Danes became alío Adventurers therein b.

[^304]
## 626 <br> The POLITICAL SURVEY

Ters Views of the Englih Nation with refpect to this Commerce were earlier than is commonly mentioned. But there is no Certainty that any Veffels were actually fent thither till under the Reign of Edward the Sixth. In that of Queen Mary, and at the Beginning of Queen Elizabeth's, it was fill profecuted by private Adventurers only. That great Princefs was the Firft who interpofed Royal Authority in favour of an exclufive Company for a certain Term of Years. Under King James the Firft and King Charles the Firf Merchants were encouraged to trade thither, and for the Protection of their Ships Sir Nicholas Crifpe built at his own Expence a Fort at Cormantin. Another fimall Fort was alfo erected in the River of Gambia. The Dutch during this Period had eftablified their Weft India Company, invefting them with an exclufive Right to the Trade of Africa, and this Company having overpowered the Portuguefe, affumed the fame Prerogatives they had exercifed. Soon after the Reftoration Charles the Second erected a Royal African Company, notwithftanding which the Dutch confifcated our Ships, and this brought on the Firf War in that Reign againft that Republic. This Company being quite exhaufted made over their Rights and Effects to another erected by the fame Monarch with exclufive Powers for the Term of One Thoufand Years. After the Revolution this Trade was in a great Meafure laid open and the Company declining received annual Grants from Parliament for the Support of their Fortifications, till their Affairs falling into Confufion, the Public gave them a Compenfation for what they poffeffel and transferred this Commerce to an open Company under the Direction of a Committee chofen by the Merchants trading to Africa on their own Account, from the Ports of London, Briftol, and Liverpool, in which State, though not without fome Alterations, it fill remains c.

From
which they granted this Trade exclufively, with great Privileges and Advantages, was not eftablifhed till 1621 . The French had an Eftablifhment in the River of Senegal A. D. 1626. But their Firft Company was not eftablifhed till A. D. 1664.
$E$ It is generally fuppofed that we did not trade to Africa till the Reign of Edward the Sixth. But it clearly appears that in the Twenty-fecond of Edward the Fourth, A. D. 148 I, Application was made to that Monarch by the King of Portugal, John II. to ftay Sir John Tintam and Pierce Fabian, who were fitting out Ships for the Coaft of Africa, and fome fay they actuallin made fuch a Voyage, and were immenfe Gainers thereby. The Firft exclufive Company was eftablighed by Queen Elizabeth in 1588 for a Tcrm of Years. King James the Firf, A. D. 1618, erected another Company under the Title of the Company of Adventurers of London trading to Africa. King Charles the Firf, A. D. 1632, eftablifhed a new Company. Something of the fame Kind was done in 1.651 by the Powers then fubfifting. King Charles the Second, A.D. 1662, fettled this Trade in the Company of Royal Adventurers of England, the Term of Years granted by his Father to the former Company being expired. This Company of Royal Ad. venturers having obtained a Compenfation for their Rights, the fame King erected, A. D. 1672, the Royal African Company, as is faid in the Text, for the Term of One thoufand Years. In 1673 the-Sum of Fifty thonfand Guineas wcre coined out of Gold brought from Africa. This

From Port Sallee where the Limits of the Company began to Cape Blanco, fuppofed by many to be the moft Weftern Point of Africa, comprehending a Space of Six hundred Leagues, it was generally believed there was no Port. However near Ten Years ago, Captain George Glas, being furnihed with a Veffel of Two hundred and Fifty Tons, with a fuitable Cargoe by private Merchants, proved this Notion to be falie by entering into a good Harbour, which he called Port Hilliborough. It was fituated in a wholefome Climate, the adjacent Country plentiful as well as pleafant, where he traded with the Inhabitants for feveral valuable Commodities, and procured from them a Ceffion of this Port, and a fmall Diftrict round it to the Crown of Great Britain. But this Gentleman, after fuffering a long Imprifonment in the Canary Illands, being murdered on Board the Ship in which he was returning Home, this Difcovery hath been no further profecuted, though it may poffible be thought hereafter a Matter of more Importance d.

The next Place of any Note is an indifferent Port called by the Portuguefe who difcovered it, Rio de Ouro, or the River of Gold, becaufe there they met with this precious Metal, where an Englifh Ship once entered, but no fucceeding Attempt hath been made. To the South of

Company was determined April the Tenth 1752, by an Act paffed in the Twenty-fifth of his late Majefty's Reign, the new open Company to whom all their Rights were transferred being previoully eftablifhed. In the Year 1764 the Fort of Senegal and all its Dependencies were by Act of Parliament granted to this new Company. But the Traders to Africa conceiving this to be prejudicial to their Interefts, this Act was repealed by another in the fucceeding Year, and the Forts in Senegal, and all the Forts and Settlements to the North of Cape Ronge, or the Red Cape, were abfolutely vefted in his Majefty, his Heirs and Succeflors, in which State they remain at prefent.
${ }^{d}$ This Difcovery of Captain Glas, when firf propofed, was thought of fuck Importance that by the Statute laft mentioned his Majefty was authorized by the Advice of his Privy Council to make. to that Gentleman, his Affociates or Afigns, a Grant by Letters Patent, not exceeding Twentyone Years, of the fole Right to the carrying on Trade to a Port by him difcovered on the Coaft of Africa called Regeala or Gueder, fubject to be redeemed at any Time, for fuch a Compenfation as fhould be judged reafonable by Parliament. This Port, to which he gave the Name of Port Hillfborough, lies in the Latitude of Thirty Degrees Thirty Minutes North, almoft oppofite to the Canary Ines, and the Ccfion thereof with a Diftrict of Land by the Natives, together with a Draft of the Harbour, was by him or his Affociates depofited with the Board of Trade. When Went from thence with fome Goods there unfaleable, to the Canary Illands, his People traded with the Natives till upon fome Quarrel between them they were driven from the Coaf, and loft much the greatef Part of their Property; however they brought away about One hundred Ounces of Gold, a Tun of Orchilla, as much Bees Wax, Six Tons of excellent Wool, Two hundred Weight of Ofrich Feathers, Twelve hundred Deer and Four thoufand Goat Skins. Captain Glas wrote and intended to have publimed an Hiftory of this Part of the Coaft of Africa, which would have been both curious and ufeful, but his unfortunate Death prevented that valuable Work from appearing. It is however to be wihhed that the Effects of his Difcovery hould pot be loft to the Nation for many Reafons which we have not Room to mention here.

## 628 The POEITICAL SURVEY

this lies Argouin; firft in the Hands of the Portuguefe, who built a good Fort there, taken from them by the Dutch, reduced while in their Hands by the French, who demolifhed it. The Brandenburghers refettled it, the French reclaimed it at the Congrefs at Ryfwick, but it was adjudged as a Derelitt to the former, who fold it afterwards to the Dutch. Twenty Leagues to the South of Argouin, where the Fort now lies in Ruins, we meet with Port Andric, where formerly there was a confiderable Trade for Gum., But the Sea running very high, the Shore being dangerous, and alt: the Goods brought on Board in Boats, it is now but little frequented e.

We come next to the River of Senegal, which makes the North as the River of Gambia does the South Boundary of the Province of Senegambia, now in the Hands of the Britih Government. In the Firft of thefe Rivers there is an Illand of the fame Name, which while in the Poffeffion of the French was called St. Louis. In this the Governor refides, with a competent Garrifon, and from thence by Factories on the Continent is carried on the Gum Trade which is of fogreat Confequence to this Country. In the River Gambia there is another lle upon which fands Fort James, formerly belonging to the African Company, now in the Hands of Government. In this there is a Lieutenant Governor fubordinate to the Governor of Senegal. Between the Mouths of thefe Two Rivers, and in the Vicinity of Cape Verd, lies the Ifland of Goree, where the Dutch had formerly a frong Fort taken from them by the French, and from the French in the laft War by a Britifh Squadron, but reftored by the Treaty of Paris, by which Treaty Senegal and all-its Dependencies were in the cleareft and moft explicit Terms given up to Great Britain. The River of Gambia is navigable by Veffels of Two hundred Tons Burden for Six hundred Miles, and the Commerce here and in the Province of Senegambia is certainly capable of very great Improvements. In order to this it hath been fuggefted as the moft proper Expedient, that as the interior Country is very unhealthy in refpect to Europeans, to breed up fome of the Children of the Natives in fuch a Manner as to enable them to tranfact Bufinefs with

[^305]
## of GREAT BRITAIN.

their Countrymen at the Pofts within Land; and from thence alfo other: Advantages might arife. $f_{0}$.

At Cape Roxo, Cape Rouge or the Red Cape; the Windward Coart bewgins, upon which the Portuguele have a few Settlements, fome of themwithin Land, though we have none. Yet our Veffels trade there, though with great Caution, from the. Perfidy as well as Ferocity of the Natives, In the Hizescof Sierra Eeon, the only Place that we now hold; is Bance Ifland, in' which the od African Company hatt a ftrong Fort, which they abandoned when their Affairs declined, and being occupied and repaired by fome Merchants, it is now become private Property. In Cerbera, or as we ufually call it Sherbro River there are the Ruins of an Englifh Fort, and we ftill fend Ships thither, and carry on a confiderable Commerce with the: Inhabitants. The Grain, Malaguetta, or Pepper Coaft begins at CapeMonte, and ends at Cape Palmas, comprehending about Sixty Leagues, along. which we drive a confiderable Trade with the People, who are of a quiet ${ }^{-}$ Difpofition, though we have no Forts in any of the Rivers. The Irory: or Teeth Coaft fucceeds next, in which our Commerce is carried on in: the fame Manner without Settlements, and the Number of our Ships that refort thither, together with the Intereft that the Natives have in pre-ferving our Correfpondence, enable us to deal largely in Elephant's T'eeth,

[^306]
## 630. The POLITICAL SURVEY

in Cam Wood, and Drugs, but chiefly in Negroes for the Service of our Plantations in the Weft Indies g.

At Cape Appolonia the Gold Coaft begins, and ends at the River Lagos. This hath been always confidered as of great Confequence to Britain. The Two laft African Companies built at different Times the following Forts, Appolonia, Dixcove, Succondee, Commenda, Cape Coaft Caftle, Annamaboe, Tantumquerry,. Winnebah, Accra, Prampram, and Whidah. which ftill fubfift, and are under the Direction of the African Committec, who receive annually from Parliament not lefs than Ten thoufand, fometimes Thirteen thouiand, and even Fifteen thoufand Pounds for their Support. Thefe were formerly, and may be now of fingular Utility in maintaining the Credit and Honour of the Nation, in protecting our Veffels that trade upon the Coaft, and in affording them Shelter and Protection in their Dealings with the Natives, which is the more neceffary as there are feveral Dutch and Danih Forts upon this Coaft, and at Whidah the Englifh, French, and Portuguefe have Forts within Gunhhot of each other. Great Care therefore fhould be taken to infpect our Forts from time to time to fee that they are in good Condition, and if any of them are of little Ufe it would be prudent to demolifh thefe in order to preferve the Reft in a more refpectable State at the fame Expence ${ }^{\mathrm{b}}$.

At the River Lagos commences what is called the Bite or the Bite of Benin, which ends at Cape Lopez. In this long Tract of Coalt there

8 This TraEt of Coaft from Cape Rouge made formerly a greater Figure in our Accounts than it does at prefent. The conftant Demand, the great Profirs produced, and the quick Returns fin in the Slave Trade feem to have leffened the Attention to any other, at lealt in this Part of lfr:ca. What is yet carried on, is chiefly by private Traders fettled on the great Rivers, who rurchate Ivory, dyeing Woods, and other Things from the Natives, and fell them to the Ships thit rep.ir annually to the Conft. The Property of the Merchants who fettled Banfe Illand is fecuied to them by that Act of Parliament which eftablifhes the New Company. It might perbaps l : advi:eable to bring the private Traders under fome Regulation, and by granting them certain Advantages, to fecure their Correfpondence with Britifh Ships only. In A. D. 1771 the Number of Ships that vifited this Coaft was Fifty-fix, and they carried away Eleven theufand Nine hundred and and Sixty Slaves.

- The principal Fortrefs we have is Cape Coant Cafle, which with the Peft ought certainly to be maintained in a proper State of Defence to fupport the Honour of the Nation in the: $2=\boldsymbol{x}$ the Natives and Foreigners. They ought alfo to be made conftantly ferviceable to the Purpofes for which they were crected, and are maintained at the Expence in a long Courfe of Years of immenfe Sums to the Nation upon a Truft and Confidence that they would be fo emplcyed. The Parliament upon the Petition of the African Traders have, more efpecially in the prefent Reign, done much, and have fhewn great Readinefs upon proper Information to do more. A. D. 1771 there were fent to this Coaft Twenty-nine Ships, who carried away Scven thoufand Five hundred Twenty-five Slaves.
are the Rivers of Benin, New Callabar, Bonny, old Callabar, and feveral others, and notwithftanding that in thefe we have not either Fort or Settlement, yet our African Traders fend thither more Ships, and purchafe more Negroes thereon, than in any of the feveral Coafts we havementioned. This is the more extraordinary, as the Shore is dangerous, the Navigation of the Rivers difficult, and moft of the Inhabitants, who are very numerous, cqually perfidious and barbarous i. To the South Eaft (n' Cape Lopez lies Majumba, where fome Ivory and much Cam Wood is purchafed. Loanga lics next, then Malemba about Thirty Leagues South. About Seven Teägues farther lies Cabenda, where the African Company had a Fort, which hath been deftroyed by the Portuguefe. The River Congo lies Ten Degrces from hence, beyond which we have no Trade. The Portuguefe are Mafters here, having on the Coaft of Angola the City of Loanda St. Paul's, from whence they carry on a great Inland Trade by Caravans to their Colony at Mozambique on the Eaft Side of Africa. The Coaft from the River Congo to the Cape of Good Hope is Scven hundred Leagues in Extent, and poffibly fome commodious Ports may be difcovered thereon, though feldom or never vifited at prefent 1 .

After this flort Detail of the State of the Britifh Commerce on the Coant of Africa, from Port Sallee to the Cape of Good Hope, containing an Extent of about Three thoufand Leagues of Coaft, it is natural to conclude with chewing the national Advantages ariing from this Trade. To reprefent thefe fully would be a Work of extreme Dificulty, to trace them

[^307]
## 632 The POLITICAL SURVEY

minutely, would employ a confiderable Volume, and in any Degree to ftate thcir true Value requires fuch a Meafure of Information as very few poffers. It may fuffice for the prefent Purpofe to make the candid and judicious Reader fully fenfible that thefe Affertions are well founded. In the Firft Place then this Trade is carried on for the mof Part by the Export of our own Commodities and Manufactures, and thefe arifing from their Labour rewards the Induftry of our own. People. In the next it is entirely carried on in our own Shipping, which is another great Advantage, and this too in many Rcfpects. What is wanting to compleat the Aflortments for the Ships thus employed, exclufive of our Home $\mathrm{P}:$. duce, is made up from Manufacturcs brought by our own Subjects from the Eaft Indies. Add to all this that we import no Articles of Luxury, but on the contrary fuch as are abfolutely neceffary to our own Minufactures, or which being wrought up here are for the moft Part re-exported. Hence it appears that the Anount of this Trade, which viewed in this Light pnly is very confiderable, muft be efteemed fo much clear Profit to the Nation, which is more than can be faid of many others !.

All this however is but a Part, and not the moft confiderable Part of the Benefit arifing to Great Britain from the African Co:nmerce. For it is to this that we owe the greateft Part of the Advantages derived from our Pleffitations in America, in which the Labour is chiefly performed by Negroes. To be convinced of this we need only confider that the clearing of Woods, the Cultivation of Sugar, Rice, and Tobacco, can in thore fultry Climates be performed only by them. If any Thing farther be neceffary we may compare the State of thcfe Colonies and the Returns made by them to the Mother Country before and fince the Introduction of Ncgroes, which will very clearly demonftrate that both thcir Subfiftence and

[^308]
## of GREATETTAIN

 their Extenfion depends and muft deptid upon this Cominiorce, of how great Importance this is will be hewir in the next Chapper witsThere is ftill another Point that merits Notice, which is, that evon thefe great and numerous Emoluments arifing from the Aftican Comp merce are capable of being very much augmented. In the Fifftplace ity adopting proper Regulations and granting neceflary Encourtgoment For ate more effectually carrying it on. By caufing judicious Enquipies to be in oas to new and valuatit Commodities that may be brought fiom that valt Country, which hith to from our light Acquaintance only with its Coafts have efcaped all Knowledge, or are but imperfectly or inçertainly known. By attempting to make further Difcoveries on what is celled the Coaft of the Defart, and of that long Tract from the River Congo to the Cape of Good Hope, which could hardly fail of producing farther'Advantages. To this we may add, that if fome at leaft of our Forts were put in a more refpectable Condition, and the Natives properly encouraged to fettle about them, the Soil and Climate might induce us with great Probibility to hope that fome very rich and valuable Commodities we now take from Foreigners might be raifed there, which would come to us fooner and of courfe in greater Perfection than we can have them at prefent. Thefe Settlements would have alfo this peculiar Circumftance to recommend them, that nothing which could be cultivated there could poffibly interfere with the Produce of Britain n.
$m$ In order to form fome Idea of what is above-mentioned, it will not be amifs to remark, that in the Year 1771 the whole Number of Negroes exported was 47,146, and of thefe the Liverpool Merchants carried 29,250. The Produce of thefe, to lay nothing in this Place of the numerous Advantages derived from them, which will however, as hath been already mentioned, áppear in the next Chapter, according to a moderate Computation amounts to One Million and a Half Sterling, and the Produce of the other Branches of this Commerce have been computed at ithe a Million more, that is, Two Millions in the Whole.
${ }^{n}$ It is fomewhat more than Threefcore Years ago that the Merchants of Liverpool entered into this Trade, which they began by fending only a fingle Ship. In A. D. 1752 , the whole Number of Ships employed in this Commerce were but Eighty-eight, and of thefe Fifty-eight were from Liverpool. As an Inftance of what might be expected from One or more Colonies that might be eftablifhed in fome Part of this Country it may be remarked, that he French brought from thence Indigo fuperior to any of their owa from the Weft Indies, and affirn. that growist there almoft every-where it might be had in any Quantities. Guinkas were firl coined A.D. $166_{3}$ mu iv give Credit to the new Company by thewing whence the Gold was brought, were matked with an Elephant. Formerly it was computed that we broughtmannally from One hundred ta One hundred and Fifty thoufand Ounces of Gold from Africa, what we nowdiring is net,knowat,

## C H A P. V.

## The Britih Colonies and Settlements in America:

THE Spiritof Difcovery we may fafely affirm, appearedas early in $4 \cdot \mathrm{~s}$ in any Part of Europe; and in refpect to the Continentof America our aetual Difcovery was the earlieft of all. For Sir John Cabot vifited fo muchof that Continent as we now poffers in the very fame Year that Vafquez de Gama doubled the Cape of Good Hope, and a Year before the Greas Columbus faw any Part of the Main Land of that extenfive Country. We never from that Time loft Sight of this Object, though from the Situation of our Affairs it was profecuted at firf but llowly, yet being in the Hands of Perfons of Rank and Property, it kept up an enterprizing Difpofition which gradually rendered the Eftablifhment of Colonies practicable, and even thefe were at firft fettled, and for a confiderable Space of Time fupported at feveral great Men's Expence. Things are now in deed exceedingly changed, and in lefs than Three hundred Years we fee a great Part of the Wilds and Waftes of America become rich and well cultivated Countries, fettled and improved, 'as well as poffeffed by Multitudes of Britilh Subjects ${ }^{2}$.

It muft however be acknowledged, that the fignal and folid Advantages that have arifen from our Colonies, are by no Means fuch as occupied our primary Expectarions. Thefe were excited by fanguine Hopes of finding Regions full of rich Mines, or abounding with valuable Spices. The Expedition of Cabot was undertaken to difcover a North-Weft Paf-. fage to the Indies, and very many fubfequent Voyages were made with

[^309]
## of GREAT BRITAIN,

a View of reaping the fame Golden Harvefts with the Spaniards b. But by the kindly Interpofition of Heaven thefe Aims were difappointed, and we were led as it were by the Hand to Schemes of more Utility, and much more Emolument. The Countries we found furnithed no valuable Metals; but they furnithed plentiful Employment for Induftry, and this in due Time hath been followed by lafting and increafing Profits. This gradually reconciled us to that Lot which had been affigned us, and we have long continued to profecute with indefatigable Prudence that Plan which an All-wife Prosidence pointed out.

Ar the Firft Forming of thefe Settlements, they were, as hath been already obferved, fupported by Perfons of Figure and Fortune, and though no immediate Benefits might accrue to them, yet what was thus expended was very advantageous to the Public. As the Numbers reforting thither increafed by Perfons wanting Employment, through Difference in religious 6 entiments, and civil Diffenfions, the Mother Country, continued to gain. Thefe People would have left Home had there been no Plantations, and would have been abfolutely loft to this Inand, whereas in going to our Colonies, though they changed their Abode they remainedftill a Part of the Nation. They had their Supplies from hence, and as foon as they were able they made their Returns hither. As their Circumfances improved their Demands grew larger, which by giving Employment to Multitudes at Home, not only prevented detrimental Emigrations, but afforded Encouragement to Foreigners to refort hither. By thero Means our Lands improved, our Rents.were raifed, new Manufactures and Trades were introduced, Navigation encouraged, Shipping increafed, our Seamen augmented, and the Power and Wealth of the State was continually promoted. That thefe are not plaufible Conjectures, but certain and inconteftable Facts, will appear from hence, that the Profperity of Britain and of her Colonies have regularly and uniformly grown up and kept'
b To how great a Degree thefe golden Dreams poffefled the Minds of the Nation in thofe Days will appear from what fabian fays of John Cabot, that be promifed the King to difcover a certain rich mand, which fo able a Man would never have done, and which the Tenor of the Letters Patents before-mentioned clearly fhew he never did. Sir Martin Frobither in Queen Elizabeth'r. Time raifed great Expectations of a Gold Mine in an Illand near the Straits to which. he gave his Name, and in his Third Voyage thither he brought over a great Quantity of yellow fhining Spar, in which however nut a Gngle Grain of Gold was to be found. Sir Humphry Gilbert, who perifhed in returning from Newfoundtand, believed that he had found a. Silver Mine there, of which nothing hath been heard fince. The great Sir Waiter Raleigh fell into the fame Notion with refpect to Guiana, but in all Probability was deceived. The Stare of our CoJonies compared with thofe of the Spaniards clearly demonfrate a Truth, upon which from ita great Importance and Utility we have ofteo infifted, that it is Induftry alone which couftiqutes National Wealth.

## 636 The PGLITICALSURVEY

Pace with each other c. In order to treat this very important Subject with that Propriety and Perfpicuity it requires, the eafieft and the moft natural Method will be to confider firft the Provinces on the Northern; then thofe on the Southern Part of the Continent of America; after thefe the noble Illand of Jamaica; Barbadoes, and the Leeward IHands next; and laftly the ceded Ines.
c It will be eafy for thofe who will take the Trouble of enquiring into the Rife and Progrefo of our Settlements, to difcover the true Caufes why they were fo long before they hewe :- :y Signs of that great Confequence to which they have fince attained. They will fee that this was at firft owing to our Want of Skill in the Art of Colonization; that afterwards their inteftine Divifions had very finifter Effects, which were heightened and increafed by Difappointments amongtt thofe who thould have fupported them at home, and, which was no inconfiderable Caufe, our undertaking too many at once. But when Neceffity urged, and the Practice of other Nations, as well as their own Experience, had taught them the Means of overcoming thefe Difficultics, and put them on a Arrict Attention to the Staples which fuited refpectively the different Soils and Climates in which they were placed, they gradually emerged from their Obfcurity; and when they began to make a rapid Progrefs, the Benefits refulting from their Labours were focured to the Mother-country by the Act of Navigation.

## SECT. I.

Containing an Account of our Colonies on the Northern Part of the Continent of America, viz. Hudfon's Bay, Labrador, Newfouxdland, the Importance of the Fifhery there, and upon the Banks; Canada or the Province of Quebec, Nova Scotia, New. England, New Y̌ork, the Ferfeys. Pennfilvamia, Maryland, and Virginia.

THE mof Northern Part of America, on which there are at prefent any Britih Subjects fettled, is the Coaft of Hudfon's Bay, which derives its Name from a bold and able Seaman who difcovered the Straits that enter into this great Body of Water, and after Two Voyages thither in Hopes of difcovering a North Weft Paffage perifhed in the Third by the Treachery of his own People. It lies from Fifty to near Seventy Degrees North Latitude, and from Seventy-feven to Ninety-feven Degrees of Longitude Weft from London. The Botundaries on the North are not well defined, on the Eaft by a broken Coaft efteemed Part of Labrador ; on the South, by the fame Country ; on the Weft, by New North and South Wales. It extends in Length about Five hundred Leagues, and fome fay Four hundred in Breadth. The Climate is exceedingly cold, as the Bay is not free from Ice above Two Months in the Year. The Land is generally barren
barren except at the Bottom of the Bay, where there is fome Herbage and Trees. There are many fine Rivers that fall into the Bay; at the Mouths of fome of which ftand our Forts. The Property of the Soil and an exclufive Right to the Trade was granted by a Charter from King Chartes the Second, in which it is declared a Colony by the Name of Rupert's. Land, and under this Charter is ftill held. As inhofpitable as this Country may appear, there is none better fupplied with Fifh, Flefh, and Fowl; Flour, Bifcuit, and other Neeeffaries, fiuch as remain here in the Company's Service receive annually from England. The Trade is generally fuppofed to be very lucrative, and is carried on with little Trouble, the Savages reforting thither with Furs, Caftior, and other Goods in their own Canoes to the Number of about Twelve handred every Year, and thefe Commodities being fent Home in the Company's Ships produce very large Sums at their public Sales ${ }^{2}$.

Labrador, Laborador, or New Britain, is a Country of great Exitent, and thought to be inhabited by the Efquimaux: As it is now indifputably ours, it hath a Claim to be remembered, that in Time it may. be better known. It lies from the Latitude of Fifty to Sixty-three Degrees North, and in the Longitude of from Fifty to Seventy-five Degrees: Weft from London. It is bounded on the North Eaft by Hudion's: Straits, on the Eaft by the Atlantic Ocean, on the South Eaft by the Straits. of Belleifle; it is divided from Newfoundland on the South by the Gulph and Bay of St. Lawrence and Part of Canada, on the Weft by Hudfon's Bay. It hath been afferted by thofe who have vifited the Coafts, that the

[^310]
## $63^{8}$ The ROLITICALSURVEY

Climate is fomewhat milder, and the Soil rather better than in the Country we have before deferibed. It is allo faid to produce moft of the Neceffaries of Life, if we except Corn, in great Abundance, and though no Gettlements have been hitherto made, yet the Fifheries upon its Coafts have been wery plentiful as well as profitable, and it hath been alfo fuggefted, that if it thould be found practicable to fettle thereon, Whale Oil, Whale-bone and other Things might be prepared there, which would fave a great Expence, and enable us thereby to import fuch Commodities much cheaper b.

The Ifland of Newfoumdand was fo called by John Cabot, which the French have adopted, and in their Language ftile it Terre Neuve. The Spaniards call it Terra de Baccalloes, or the Land of Cods. It lies from Forty-fix Degrees Fifty Minutes to Fifty-one Degrees Thirty Minutes North Latitude, and in Longitude from Fifty-three Degrees Thirty Minutes to Fifty-eight Degrees Twenty Minutes Weft from Landon. The Form is that of an irregular Triangle, the Baie or South Side being Eighty Leagues in Extent, the Eaft Side is the longeft, and the whole Circumference about Two huhdred and Fifty Leagues.: It is bounded on the North by the Straits of Belleifle, which feparate it from Labrador; on the Eaft and South, it hath the Atlantic Ocean; and on the Wett the Gulph of St. Lawrence. The Climate, though fevere enough, is more temperate than in either of the Countries hitherto mentioned. The Soil, at leaft on the Sea Coaft, which is all that we know of it, is poor and barren. A few Kitchen Vegetables with Strawberries and Rabberries are all its Produce. The Country within Land is mountainous, and abounds with Timber; there are feveral Rivers which are plentifully ftored with feveral Sorts of Fifh, Abundance of deep Bays, and many good Ports. St. John's and Placentia are the Two principal Settlements, and at each of thefe there is a Fort, the Number of People who remain here in the Winter hath been computed at Four thoufand. The French by the Treaty of Utrecht were permitted to filh from Cape

[^311]
## of GREAT BRITAIN.

Bonavifta on the Eaft Side round the North of the Ifland to Point Rich on the Weft, and by the Treaty of Paris, they are allowed the Mes of St. Pierre and Miquelon, upon which they are to dry their Fih, but not to erect Fortifications of any Kind c .

The great Importance of this Place arifes from its Fifiery, which is in Part carried on by the Inhabitants at the feveral Harbours, which are about: Twenty in Number, who take vaft Quantities of Cod near the Coaft, winch they bring in and cure at their Leifure in order to have it ready. for the Ships when they arrive. But the great and extenfive Fiftery is on the Banks at fome Diftance from the Ifland: The great Bank lies Twenty Leagues from the neareft Point of Land from the Latitude of Forty-oneto Forty-nine, ftretching Three hundred Miles in Length and Seventy-five in Breadth. To the Eaft of this lies the Falfe Bank, the next is ftiled Vert or the Green Bank, about Two hundred and Forty Miles long, and. One hundred and Twenty over, then Banquero about the fame Size: The Shoals of Sand Illand, Whale Bank, and the Bank of St. Peter's, with feveral others of lefs Note, all abounding with Fif.

The Cod are caught only by a Hook, and an expert Fifher will take. from One hundred and Fifty to Three hundred and upwards in a Day, for the Fifh never bite in the Night, and the Labour is very great. The Seaton is from May to October, in the Height of which there are from. Five to Seven hundred Sail upon the Banks at a Time. The Finh caught in the Spring Months are beft; they are cared in very different Ways. Some are ftiled White Fiih, others Mud Fin, which are ftowed and falted in the Hold, and will not keep long, but the beft and moft vat luable are the dried Cod. The Quantity taken is prodigious, yet in fome Seafons and in different Places varies confiderably, as the Finh frequently:

[^312]640 The POLITICAL SURVEY
change their Stations. The Fifhing Ships, as they are called, lie upon the Banks, with the Help of their Boats take and cure their own Fiih, and as foon as they are full fail for a Market. The Sack Ships proceed directly to the INand, where they purchafe Fin from the Inhabitants either by Barter or Bills of Exchange. The principal Markets for Cod are Spain, Portugal, Italy, and the Weft Indies. The Value of this Fifhery is computed at fome bundred thoufand Pounds annually, employing befides feveral hundred Ships, fome Thoufands of Seamen, and affording a Maintenance to a Number of Tradefmen of different Occupations, by which many divige Towns on the Weft Side of England accumulate Wealth, and at the fame Time contribute in many refpects to the Benefit of the Public d.

Tre Countries or at leaft the greatelt Part of thofe Countries which the French called New France and Louifiana, fince they came into the Poffeffion of the Crown of Great Britain are filed Canada or the Province of Quebec. The Firft of thefe is an Indian Name, derived from Kannata, which in the Language of the Iroquois fignifies a Village or a Number of Cabins. This great Country lies from Thirty-nine to Fifty-nine Degrees of North Latitude, and from Sixty-feven to Ninety-feven Degrees of Longitude Weft from London. Its length from Weft to Eaft is about Eighteen hundred Miles, in Breadth from South to North it is about Twelve hundred Miles. On the North it is bounded by Hudion's Bay and Lands unknown, on the Eaft by Hudfon's Bay and Labrador, by feveral Britih Colonies on the South, and on the Welt by the River Miffifippiaid Lands unknewn. The Climate in fo vaft a Country muft be very different, buteve: the beft inhabited Patt of it is certainly excteedingly cold, the River of St. Lawrence being ufually frozen Eight Months in the Year, notwithltandin;; which it is on all Hands allowed that even in this long Winter the Weather is both wholefome and pleafant. In the Weftern and Southern fate toc li-

[^313]
## of GREAT BRITAIN.

mate is milder. The Soil in general is fruitful, and when duly cultivated produces every Thing requifite to Subfiftence, Corn in great Plenty, a great Variety of Vegetables, and thofe excellent in their Kind, fome Fruit Trees, as Apples, I'ears, Pluns, and Cherries, an immenfe Quantity of excellent Timber, and many. Trees and Shruhs of great Ufe in Dyeing, and in Medicine. 'There are alfo very rich Mines of Iron and Copper. There is no Country in the World happier than this in Water Carriage, for befides Lake Supcrior, the Lake of the Illinois, Lake Hüron, and Lake Erie, which communicate one with another, Lake Ontario and Lake Champlain, which both difcharge their Waters into the River of St. Lawrence, ther: are many other Lakes and Rivers that water all Parts of the Country. The City of Quebec, theSeat of Government, ftands about One hundred and Ten Leagues from the Mouth of the River of St. Lawrence, Montreal Sixty Leagues higher, and Trois Rivieres between them. There are feveral large Villages, fortified Pofts, and Settlements along the River, and in different Parts of the Country. 'The prefent Staples of Canada are, Furs, Fifh, Oil, and Lumber; but as every Thing is now in a thriwing Way, the Number of Inhabitants increafing, and their Commerce much more confiderable than it was, there is no Doubt that Canada will become daily of greater Confequence to Britain e.

Nova Scotia received that Name from its Proprietor Sir William Alexandur, afterwards created Earl of Stiring, but the French when they ob-

[^314]
## 642 The POLITICAL SURVEY

truded themfelves into this Country called it Acadia. It lies from Fortythree to Forty-nine Degrees of North Latitude, and from Sixty-two to Seventy-two Degrees of Longitude Weft from London. The Extent of it from South to North is about Three hundred and Sixty, and from Eaft to Weft upwards of Five hundred Miles. It is bounded on the North by the River, on the Eaft by the Gulph or Bay of St. Lawrence and the Atlantic, on the South by that Ocean and the Province of New England, and on the Weft by the River of St. Lawrence. The Form of this Country is very irregular. The greateft Part of it lies on the Continent, the Remainder, which may be about One Third, is a Peninfula, feparated from the Main by an Arm of the Sea called the Bay of Fundy, and joined to it at the North End by a narrow Ifthmus. It was to this Peninfula that the French would have confined their Ceffion of Acadia by the Treaty of Utrccht, contrary both to the Letter and Spirit of it. By this Means being well fettled on the Continent, having the Indians in their Intereft, and being in Poffeffion of the adjacent Illands, our Colonies muft ever have been in a very precarious State; but now thefe Difputes are at an End, and we are in full Poffeffion of the Whole. The Climate is rather fevere in point of Cold, and the Country much infefted by Fogs, which are however not unwholefome, though unpleafant. The Soil where it is cleared, if we may credit both Englifh and French Authorities, is very fertile, yielding Corn, Grafs, and Vegetables of every Kind. The Continent efpecially is mountainous; and the far greateft Part of it remains fill a Foreft. There are many Lakes, feveral beautiful Rivers abounding with a Vafiety of Fifh, and nothing wanting to encourage the Induftry, and of courfe to increafe the Number of its Inhabitants. The principal Places therein are Annapolis, which the French called Port Royal, feated on One of the finclt Havens in the World, capable of receiving any Number of the largef Ships, and which is very remarkable, the Tide rifing there Twenty-eight or Thirty Feet. On the oppofite Side of the Peninfula ftands Halifax, the Seat of Government, where a noble Eftablifhment hath been made at the Expence of Great Britain, and all the Difpofitions requifite for the Service of his Majenty's Ships when a Squadron is fent into thefe Seas. Minnes, Chenigto, Lunenburgh, and Canfo on the Strait that divides Nova Scotia from the Inand of Cape Breton. The prefent Exports of this Country are Peltry, Lumber, Fifh, Oil, and in Procefs of Time, Maits, Pitch, Tar, Hemp, and all other naval Stores may be fupplied from hence. The Ines of Cape Breton and St. John, though the latter is now a reparate Government, feem dependent on this Province,

## of GREAT BRITAIN.

 and till they are better fettled fand in no need of a particular Defcription ${ }^{\text {f }}$.New England received its Name from Charles the Firft when Prince. of Wales. It confifts of feveral Parts, and fome of thefe are under different Forms of Government. It is in Point of Strength, Improvements, and Independency the moft confiderable of all our Colonies. It extends from Forty-one to Forty-fix Degrees of Latitude North, and lies from Sixtynine to Seventy-three Degrees of Longitude Weft from London. On the North it is bounded by Nova Scotia and Canada, on the South and Eaft by the Atlantic, and on the Weft by the Province of New Yofk. In length it is near Three hundred Miles, hardly any where Two hundred in breadth. The Climate is not much to be commended. The Winter is long and fometimes very fevere; the Summer fhort and fultry, heavy Rains, but of no Continuance. With all this the Weather is frequently clear and ferene for a long Continuance, and in general wholefome. The Soil very different, in fome Places coarfe, rocky, or fandy, in others deep and fertile. European Corn of every Kind hath hitherto fucceeded but indifferently, but of Maize or Indian Corn they have Abundance, and apply it to all Sorts of Ufes, even that of Malting; Peas they have likewife in Plenty. The Paftures there are extenfive, and produce great Quantities of Grafs and Hay. Black Cattle and Hogs are large and very fine, but Sheep are indifferent; there are great Variety of Vegetables, and all Sorts of edible Roots are excellent. Fruit Trees abound, and bear luxuriantly, fo that feveral Hogheads of Cyder are fometimes made from the Apples of a fingle Tree. Timber of all Sorts, more efpecially Oak, Pine, and Fir, there is no where better or in greater Plenty. We need not wonder that with thefe Advantages the Country hould be well peopled, and much improved. Befides Bofton, which is the Capital, and the largeft

[^315]
## 644 The POLITICAL SURVEY

Town in America, they have many others very confiderable; fo that the Whole is laid out into Counties as in England. Their principal Exports are Mafts, Yards, Naval Stores, Pot Afhes, Whale Oil, Provifions of all Kinds, and Lumber. But their kiches principally arife from their different and extentive Filheries, from Ship-building; and above all from their Commerce, fur which they have been fliled, not at all improperly, the Dutch of America. The Number of Inhabitants have been computed at about Half a Milliong.

New York received that Appellation from the Duke of York, to whom, after it was recovered from the Dutch, it was granted by his Brother King Charles the Second. It lies between Forty-one and Forty-four Degrees of North Latitude; and from Seventy-two to Seventy-fix Degrees of Longitude Weft from London. In length about Two hundred Miles, in breadth fcarce One, indeed the beft Maps make it much narrower. It is bounded on the North by.Canada, on the Eaft by New England, on the South by the Sea, and on the Weft by the River Delawar, which divides it from Penfytvania. The Climate is very fine, though the Winters in comparifon of ours are very fevere, with large Falls of snow, but the Summers are very warm, and of Six Months Continuance, which with the Fertility of the Soil renders this both a rich and beautiful Country. Not only Maize but all Kinds of European Grain come here to full Perfection, their Meadows are very luxuriant, their Fruits in great Variety, and excellent in their refpective Kinds, all Sorts of Vegetables, Pulfe, and Roots in the utmoft Plenty. The Two principal Tuwns amongft many others are Albany in the North, and New Y.ork in the South at the Mouth of Hudfon's River, admirably fituated, fo that the whole Pro-

[^316] duce of the Colony arrives there, even from the moft diftant Parts, in Three Days by Water Carriage. The Inhabitants procured formerly much Fur and Peltry from the Indians, have great Quantities of good Timber of every Kind, Iron Ore in Abundance, very happily fituated in all Refpects, and it is thought a Sturgeon Fihery might be carried on here to great Advantage. The Merchants of New York carry on a moft extenfive Commerce, not fimply in the Produce of their own Colony, but alfo from Connecticut and the Jerfeys. Long Ifland and fome athers to the South are annexed to New York, and are wonderfully fine and: fertile, and in the firft-mentioned they have an excellent Breed of Horfes. The Number of lnhabitants is faid to be about One hundred and Twenty thoufand b .

New Jersfy, or as they are commonly called The Jerfeys, being Two Provinces united into One Government. They lie from Thirty-nine to Fonty-one Degrees of North Latitude, and from Seventy-four to Seventyfive Drgrees Thirty Minutes Longitude Went from London. . In length One hundred and Fifty Miles, in breadth in fome: Places about One hundred. Bounded on the North by New. York, on the Eaft by the Atlantic, on the South by Delawar Bay, on the Weft by Penfylvania. This Situation, and their having on all Sides either the Sea or cultivated

[^317]
## 646 The POLITICAL SURVEY

Countries, accounts for the Mildnefs of the Climate, which is equally ferene and pleafant. The Soil is almoft every-where deep and fertile, producing vaft Quantities of excellent Wheat and all other Kinds of Grain in Abundance, a Variety of rich Fruits, fine Timber Trees fit for building, prodigious Quantities of Cattle of all Sorts. Abounding alfo in Copper and Iron Ores, which are very rich. .The Inhabitants live here much at their Eafe, and with little Labour, enjoying not only all the Neceffaries but moft of the Conveniences of Life, from whence this Country hath been not improperly ftiled the Garden of America. It is a Royal Gavernment, the Governor being affifted by a Council of Twelve which compofe the Upper Houfe, as the Reprefentatives of the People do the Lower Houfe of Affembly, and are in Number Twenty-four. In Eaft Jerfey the Capital is Perth Amboy, which hath a fine Port, notwithftanding which Elizabeth Town is much larger. In Weft Jerfey they have Two Ports, Burlington and Salem. The Commodities of the Jerfeys are the fame with thofe of New York; and the Number of the Inhabitants is faid to be Sixty thoufand ${ }^{\mathrm{i}}$.

Pensylvania is a Province granted by King Charles the Second with an additional Grant from the Duke of York to William l'enn the Son of Sir William Penn a famous Admiral, and in great Credit with them both. William Penn was in Principle a Quaker, a Gentleman of a moft amiable and benevolent Difpofition, as appears from the Conflitutions he gave to this Colony which became very flourinhing in his own Time, and chictly through his judicious Regulations. He derived his Authority from the

[^318]Crown; the Soil he purchafed fairly from the Natives, cherihing and protecting the Indians, who in return lived peaceably and traded with his People. In regard to Religion he eftablithed a moft comprehenfive Toleration; and in reference to civil Liberty, left as much of it with the People as was confiftent with their Peace and Safety. The Whole of the Country extends from Thirty-nine to Forty-two Degrees-ivorth Latitude, and from Seventy-four to Seventy-eight Degrees Longitude Wuft from London. In length about Three hundred Miles, very different in point of breadth, in fome Places One hundred, in others not more than Forty. Bounded on the North by the Territory of the Five Nations, on the Eaft by Delawar River, on the South and Weft by Maryland. The Climate, like that of New York, colder than ours in the Winter, and hotter in the Summer. The Soil deep and rich, differing from the adjacent Countries in this, that it abounds in Lime-ftone and Gravel. The Produce is muchthe fame with New York, Grain and Pulfe of all Sorts and in great Perfection, Varicty of fine Fruits, great Plenty of Timber, with much Iron and Copper Ore. The Capital is Philadelphia, a noble, regular, well-built plealant Place, fituated between Two navigable Rivers, Schoolkill and Delawar, Ships of contiderable Burden coming to the Quays by both. The Country is full of large Towns, and well cultivated to a great Extent. The Proprictor when Refident is Governor; if he appoints a Deputy, that Deputy muft be approved by the Crown. He is affifted by a Council, and the People are reprefented in theirAffemblies. For the Three lower Counties, Newcaitle, Kent, and Suffex, lying along the River Delawar, which were added by the Duke of York's Grant, have an Affembly of their own. They extend from North to South One hundred and Twenty Miles, from Eaft to Wert about Forty. The Commerce of the Inhabitants is very extenfive throughout America and to Europe; the People frugal andinduftrious, and their Numbers in the whole Colony, if we may depend upon fome late Calculations, between Two and Three hundred thoufand $k$ -

[^319]
## 648 The POLITICAL SURVEY

Maryfand received that Name in Honour of Henrietta Maria the Confort of King Charles the Firtt, who made a Grant of this Country, with very extraordinary Powers, to Lord Baltimore. It lies betweenThirtyeight and Forty Degrees of North Latitcide, and in Longitude from Seventyfour to Seventy-eight Degrees Weft from London. It is in Length about One hundred and Forty Miles, bat not quite fo much in Breadth. It is bounded on the North by Pentylvania; on the Eaft by the lower Countics of the fame Colony, and by the Atlantic; on the South by Chefapeak Bay; on the Weft by the River Potowmack, and the Province of Virginia. The Climate may well be ftiled mild and pleafant, for though the Winters are cold they are fhort, and the Heat of their Summers is tempered by cool Breezes from the Bay before-mentioned, which is One of the fineft in the World. The Country, except towards the North, is in general a flat open Plain of a deep rich Soil and very fertile. It produces Grain of all Sorts, rich Fruits of different Kinds, Timber, Hemp, Flis, and in the Bowels of the Earth there is great Plenty of Iron Ore. The Staple of this Country is Tobacco, of which hitherto they have raifid immenfe Quantities, though fome lay their Lands begin to wear out, which obliges them to keep great Numbers of Cattle for the Sake of Manure. They likewife export Lumber, Naval Stores, \&c. The Situation of this Country and the Nature of its Staple prevent the Building of Tuwns; for the Plantations lying on the Banks of their numerous navigatle Rivers, their Vefiels come up to the Planters Doors, and their Tobacco's are con-fequently-laden without Trouble. Their Cuftomhoules are on the Rivers Pocomocke, Chefter, Patuxint, and the North Side of Potomack. They have however One Town, Annapolis, which is the Seat of Government, and though fmall is one of the faireft and beft built in America. The Number of Inhabitants exceeds One hundred Thoufand, of which however Three Fifths are Negro Slaves, the Remainder Whites, who live in geneial much at their Eafe ${ }^{\text {. }}$

Thoufand Tons yearly. Thir Exports, A. D. 176 , amounted to 453,419 i. In order to fhew the amazing Increafe of this Colony, it may be not amifs to obferve that in A. D. 1748 there entured inwards in the Port of Philadelphia 62 Ships, 291 Sloops; cleared outwards 6.4 Ships, $2: 7$ Sloops. Whereas A. D. 1770 there entered inwards $39^{8}$ Ships, $4^{03}$ Sloops; cleated outwands 413 Ships, Sloops 407.
2. The Patent which bad been promifed to Sir George Calvert of this Part of whit was then filed Virginia was granted to his Som Cacilius, created Lord Batimore, and bars date 20 th of June $6_{3}$ 2. He fent oier his Brother Leonard Calvert, Efig; with Two hendial Gentemen and Perfons of fome Property to fetde there. His Son Charles Cavert wals atterwards Govertior for near 20 Years, and under their Adminiftration the Culony flourifhed excectingly. They made themelves fo acceptable to the Indians at their fiff Coming, that the". yielded to them haif, and as foon as their Harveft was over, their whole Tow: l, and this goed Ludenauding combunly fubfifed. Ey Means of a general Tolcration of al Chriftians, the Nunbu: ol luhalitants was

Virginia received its Name from Queen Elizabeth, and hath been confidered as the Mother of all our Colonies on the Continent. It lies from the Latitude of Thirty-fix Degrees to fomewhat more than Forty North; in Longitude from Seventy-four to Eighty or Eighty-one Degrees Weft from London. Its length is incertain, but in breadth Two hundred Miles. On the North it is bounded by Maryland; on the Eaft by the River Potowmack, Chefapeak Bay, and the Atlantic Ocean; on the South by Carolina, and on the Weft by feveral Ridges of Mountains, between which many Plantations and back Settlements have been made. The Climate may be efteemed temperate. The Spring begins early in the Month of April, the Weather continues moderately warm to the End of June, July and Auguft are very hot, with terrible Claps of Thunder, which howevcr feldom do any Mifchief, the Rains come on in September, and they have Four Months of Winter, but hardly One Month of very cold Weather. The Face of the Country is for about One hundred Miles from the Sea very flat, but farther up there are many pleafant Hills and rich Vallies. The Soil is as various as in Britain, but almoft every where fertile, and a great Part of it luxuriant. In its Bowels are found Iron, Lead, and Copper Ores, and fome fay richer Metals; Pig and Bar Iron and fome Copper are brought hither. There is alfo Antimony, many fine Clays and Ochres. The natural Productions are many and valuable in their Kinds, Maize, Silk Grafs as fine as Flax and tougher than Hemp, Peaches, Nectarines, and other fine Fruits, Timber of different Kinds and of the beft Sorts very large, Abundance of valuable 1)rugs, and Materials for Dyeing. Befides thefe all Kinds of European Grain grow in the highef Perfection, as alfo Roots and Vegetables of every Sort; Cattle, Sheep, Deer, and Hogs, the latter in fuch Plenty that they are never mentioned in Inventories, as if their Numbers rendered them of no Value. The great Staple is Tobacco, chiefly the fweet-fcented, the fineft and moft valuable in the World. There is no Country better watered, as may appear from the Four great Rivers which fall into the Weft Side of Chefapeak Bay. The moft Northern of thefe is Potowmack, navigable Two hundred Miles, in moft Places Seven, in fome Places Nine Miles
muh increafed. The Government is now on much the fame Plan with the Reft, for the Depayy Ciovernor, though appointed by the Proprietor, mult be approved of by the Crown. He hinth a Council and in Affembly, but the Laws made therein are not tranfmitted to England. The Cuhture of Tobacco male Negroes neceflary ; this is of a particular Kind called Oroonoko, or as fome wite it Aranohoe, which is hoter than whar is made in Virginia, and lefs acceptable liere, but fells better in the Eaftrn and Northern Parts of Europe. The Inhabitants carry on 2 conliderable Trade to Great Britain, as well as to the Southern Parts of Europe, the French and Britifh Weft Indics, and the Continent of America. They have alfo fome Intercourfe with the Confts of Africa. The ' Total of their Exports, A. D. 1769, amounted to 350,097 1. In A. D. 1770, there were entered inwards Ships 205, Sloops 197 ; cleared outwards, Ships 228, Sloops $17 \lambda$.

Vol. II.
40
in breadth. Rapahannock is the next, and a very fine River. York River, called by the Indians Pomonky, and the moft Southern. James River, which is Two Miles wide, and navigable for about Fourfoore Miles. Befides thefe there are many fmaller Streams, which afford fuch Conveniencies for fhipping their Tobacco's, that Plantations are formed upon moft of them $\boldsymbol{m}_{\text {s }}$ and there is fcarce any Town in this fine Province, except Williamfburg: which is not very large, though the Governor refides there, and a College hath been erected for the Inftruction of Youth. This Colony is divided into between Twenty and Thirty Counties, the largeft containing Two hundred Thoufand, the fmalleft Thirty thoufand Acres. The Number of Inhabitants, Negroes and Slaves included, are upwards of One hundred and Fifty thoufand m .

These Countries confidered in the Light of Colonies, contain in them fuch Numbers of People, as renders it of great Importance to Britain to direct their Application to fuch Objects, as may be equally beneficial to

[^320] themfelves, and to their Mother Country. With this View the Staples they have hhould be encouraged conftantly, attentively, and vigoroully. Thofe that have not been hitherto attempted, but which have a vifible Probability of Succefs if they were, fhould be likewife brought forward by every Means poffible. New Staples fuitable to their different Soils and Climates hould, if practicable, be gradually introduced. Thefe Meafures fteadily and fkilfully purfued muft have Confequences exceedingly favourable to the public Profperity, as they could not fail of exciting, and of courfe extending Cultivation Abroad, and promoting by a Supply of a great Variety of raw Materials, Manufactures at Home. With thefe few and hort but weighty and falutary Obfervations, we will clofe the prefent Section, and proceed to the Confideration of thofe Colonies on the fame Continent that lie to the South n .

#### Abstract

a The Propofitions infifted on in the Text are by no means cither new or fingular. They were long lince advanced by very judicious l'erfons, and which is more to the Purpofe they were, though in fome mealure felf-evident, long canvaffed in Speculation, before any Attempt was made to carry them into Exccution, when this was done they were found in fome lnftances to anfwer, and the good Effects of lounties being confirmed by Experience, their Utility was confeffed. If in fublequent Cafes they have not been fo fucceffful, this is no Proof they will never become fo. Accidents may intervenc to prevent their Operation for a Time, and yet not deflroy their Horce. This however is undoubtedly a good Argument for Enquiry, that if fuch Impediments can be difcovered they may be removed. But the principal Points to be confidered are the Importance of the Obiect to the Public, and the Pulfibility of its being attained, for if thefe are certain, all Obfacles are to be overcome. Caution and Oeconomy in refpect to great Enterprizes are requifite to private Men, but larfimony may be detrimental to a Nation, more efpecially where the Expences paid by One, are received by another Part of its Subjects, and where the Ead propofed will vifibly redound to the Profit of both.

Containing an Account of tbe Soutbern Colonies on the Continent of Nortb Alnerica, viz. Nortj Curolina, Soutb Carolina, Georgia, Eaft Florida, and Weft Floridu, as aljo of the Babama and of the Bermudas Iflunds.

THE Province of Carolina was taken out of what in cur old Writers is called South Virginia, by a Charter granted by King Charles the Second, from whom it received its Name, to certain Lords Proprietors. It is fince the Surrender of this Charter divided into Two Governments. The Firft of thefe is North Carolina, in the Latitude from Thirty-four to

$$
402
$$

Thirty-fix

## 652 The POLITICAL SURVEY

Thirty-fix Degrees Thirty-three Minutes North, its Longitude Seventyfix Degrees. Weft from London. It is bounded on the North by Virginia; on the Eaft by the Atlantic; on the South by South Carolina; and on the Weft its Boundaries cannot well be affigned. In length there is upwards of Three hundred Miles fettled, in breadth about One hundred and Fifty. The Climate is temperate, the Air pure, thin, and ferene, the Summers warm, the Winters fhort, in which the Weather is fometimes very cold, but this lafts only a few Days. The greateft Inconvenience to which the Inhabitants are expofed is Thunder, which however rarely does any Mifchief. The Soil is various, and the Face of the Country finely diverfified with pleafant Hills, large Vales, fine Rivers, and the different Sorts of Ground render it fit for all Kinds of Uies. Corn of all Sorts, the richeft Fruits, a vaft Variety of Vegetables, wide Paftures abounding with Cattle, Sheep, Hogs, Deer, Horfes, \&c. render it very rich and pleafant, though with very indifferent Culture. As it lies in the Midft of the temperate Zone, we may fafely credit thefe Accounts, and perhaps fee no juft Grounds to queftion the Truth, or at leaft the Probability of their Conjectures, who fuggeft that Almonds, Dates, and Olives, might be planted here with juft Hopes of their thriving as weil as any where. At all Events the Experiment might be very eafily made, and at a imall Expence. There are no great Towns, and except the River Fear or Clarendon River they have none navigable for Veffels of above Fourfcore Tons, but there are many fine Sounds and fair Inlets, the moft remarkable of which are Currituk, Roanoake, Bath Town, Beaufort, and Bruniwick. Their principal Exports are Peltry, Pitch, Tar, Turpentine, Timber, and to the Weft India Iflands Lumber and Provifions. They likewife grow fome Rice and Tobacco, which is fent through Virginia. This Province, though long neglected, is now in a very thriving Condition, and the Number of Pcople, as to which we can fay nothing with Certainty, is daily increafing by frequent Emigrations from Europe ${ }^{\text {a }}$.

[^321]South Carolina is one of the fineft and moft fruitful Countries in Amcrica. It lies from the Latitude of Thirty-two to Thirty-five Degrees North, and in Longitude from Seventy-nine to Eighty-feven Degrees Weft from London, including the moft diftant Plantations. The Length is very incertain, the Breadth about Two hundred Miles. The Climate is temperate or rather warm. The Air in general pure and ferene, but the Weather ftraingely inconitant, the Extremes of Heat and Cold being felt not only in different Scafons, but varying fometimes, and that very confiderably in the Space of a Day. The Country from the Sea Coaft for upwards of an Hundred Miles is a vaft Plain interfperfed with Woods, and interfected by many fine Rivers. The Soil towards the Sea Coaft is fandy and light, Northwards the Country rifes, and the Weather is more fettled. There are many natural Lawns, or as they call them Savannahs; their Swamps have commonly a Clay Bottom, this renders them exceedingly fit for Rice, as their light fandy Soil is well adapted to Indigo. The Firf Plantations being made near the Sea the worft Land is already well improved, "hat lies behind is fit for any and every Thing. They have Grain of all Kinds, and Vegetables in the higheft Perfection. Oranges, Lemons, and other rich Fruits, ufeful Timber of various Kinds, and in their Paftures immenfe Quantities of Cattle of all Sorts. On the Sides of the Rivers there are very rich, deep, and frong Lands, producing as fine and good Hemp as any in the World; and which might be certainly by proper Encouragement brought hither in large Quantities. There are befides large Tracts of hilly Ground in the interior Part of the Province, which in the Opinion of competent Judges are perfectly adapted to the Culture of Vines, in which, if undertaken with Vigour, and profecuted with Skill and Perfeverance, there is little Reafon to doubt of Succefs. Their Exports confift of Ricc, Indigo, Naval Stores, Lumber, and Provifions. The Sea Coaft is about Seventy Leagues in Extent, the River of Winyaw hath a Channel Twelve Fcet deep. Charles 'Town, which is the Capital, and the Seat of Government, is one of the pleafanteft and beft built Places in America. lort Royal is as fine a Harbour as any that Nature hath made, exceedingly well fituated and capable of receiving Ships of any Size in any Number. The lnhabitants are amazingly increafed of late Y'ars, infomuch that there are reckoned upwards of Thirty thoufand Whites, and Eighty thoufand Negroes. The latter are fo well treated by the Planters that they had little or no Occalion for any new Supplies,

[^322]
### 6.54 The POLITICAL SURVEY

thofe born in the Country, being fufficient for all the Purpofes of the Colony. But their Plantations being much enlarged, they have lately been conftrained to admit frefl Importations of Negroes ${ }^{b}$.

Georgia is a Colony of about Forty Years ftanding. It lies from Thirty Degrees Thirty Minutes to Thirty-three Degrees of North Latitude, and from the Longitude of Eighty to Eighty-three Degrees Weft from London. It was taken out of South Carolina, and the original Bounds were the River Savannah on the North, and the River Alatamaha on the South ; extending about Fifty Miles between the Mouths of thefe Two Rivers on the Sea Side, but gradually widening within Land. As this Province was taken out of Carolina the Boundaries were not very accurately fettled, an Inconvenience not peculiar to this Colony. But after the laft Peace his prefent Majefty, by his Royal Proclamation, fettled this Point effectually, by annexing to Georgia all the Country between the River Alatamaha and that of St. Mary, which laft is declared to be the Northern Limit of the New Province of Eaft Florida. On the North it is bounded by Carolina; on the Eaft by the Atlantic; on the South by the River of St. Mary, and Weft by feveral Indian Nations. The Climate is very warm, the Air pure and ferene, but fometimes expofed to violent Thunder. The Lands towards the Coaft are fhallow and fandy, but higher up exceedingly rich and fertile. The narrow Limits of this Colony have been confiderably extended, not by Incroachments, much lefs by Violence, but by fair Purchafes from the Indians, with whom the Inhabitants live upon the beft Terms. The Improvements here were at firft very flow, but have been furprizingly great within thefe few Years, as is evident from the increafed Value of Land, notwithftanding the Bounds of the Colony being fo much enlarged. There are Two Ports, Savannah on the River of the fame Name, which is the Seat of Government, and Sunbury. The Exports from hence are Peltry, Rice, Indigo,

[^323]
## of GREAT BRITAIN:

Silk, Naval Stores, Lumber, Provifions, \&c. The Number of People Seventeen thoufand Whites and Thirteen thoufand Negroes c .

East.Florida is a large and beautiful Peninfula, lying from the Latitude of Twenty-five to near Thirty-one Degrees North, and in Longitude from Eighty-two to Eighty-four Degrees Weft from London. In Length from South to North Three hundred and Sixty Miles, in Breadth from Eaft to Weft about Two hundred at the Northern Boundary, leffening to about One Half of that Space to the South. It is bounded by the River of St. Mary on the North; on the Eaft by the Atlantic; on the South and Weft by the Straits of Florida and the Gulph of Mexico. The Climate is very temperate and healthy, which is attributed to its Si tuation between Two Seas, and the Land and Sea Breezes that (except about Two Hours in the Morning) blow alternately. The Face of the Country, except towards the North, is generally flat, the Soil near the Sea Side fhallow and fandy, but within there are Swamps, Pine Barrens, and fome very rich Land on the Sides of the Rivers. The Whole is finely interf Cted by Rivers running fome into the Atlantic, and others into the Gulph of Mexico. It abounds with very fine Timber, fit for all Ufes fuch as Oak, Mahogany, White and Red Pines, Cedar of different Kinds, Pine Trees of a great Size, Mulberries, \&c. Thefe Trees grow mofly at confiderable Diftances, and not in thick Woods as in moft Parts of America, fo that any Part of the Country may be eafily cleared. The natural Produce is Maiz or Indian Corn, which they reap Twice annually. Oranges, Lemons, and other rich Fruits fairer and finer than thofe of the fame Sort in Europe. There are allo Abundance of Cattle, wild and tame Fowls, Sea and River Fifh in great Plenty, the Produce expected fromr it Rice, Cotton, Indigo, Cochineal, and Barilla, to which we may add,

[^324]
## 656

many valuable Drugs and rich Dyes. As to the Third of thefe Commodities we not only know from Experience that it may be raifed, but alfo that it is fo, and with very peculiar Advantages. In the Firft Place as there are no Frofts to the South of St. Auguftine capable of chilling the Roots, the Plant grows for Three or Four Years, whereas in our other Colonies it is fown annually. In the next Place the Climate is fo favourable that it may be cut Three or Four Times in a Seafon ; and laftly it is very perfect in its Kind, and at leaft equal if not fuperior to the French. In refpect to the Reft Time alone can juftify or extinguifh our Expectations. It muft however be obferved that the interior of this Country is but little known, and that on the Weft Coaft there are many fmall Inlands, or as they are ufually called Keys, fome abfolutely barren, others producing Mahogany, Braziletta, and other hard Woods which have been brought hither from the Illand of Providence. The Capital is St. Auguftine, but as to the Number of Inhabitants we can fay nothing with Certainty, except that the Greeks carried thither live very comfortably, and there is no doubt that Proteflants from the South of France, and from different Parts of Germany might here find a Country very agreeable and capable of rewarding their Induftry. But exclufive of the Commodities this Province may produce, it is of the utmof Importance to Great Britain that it Thould be fpeedily and effectually fettled from the Nature of iss Situation, which in Time of Peace will facilitate a Trade with the Spaniards from its Vicinity to Cuba, and in Time of War, as there is a good Port at the Extremity of the Peninfula, it will be an effectual Check to the Paffage of the Homeward bound Fleets, by our keeping a Squadron there, which the Country being once tolerably fettled might be done with great Convenience d .
d This Peninfula, with all the reft of Florida, was ceded in Pcrpetuity to the Crown of Great Britain by Spain, in the 20th Article of the Treaty of Paris A. D. 1763. As to the Wholefomnels of the Country the Spanif Writers ancient and modern equaliy agree. Several of the Inhabitants of St. Auguftine when it furrendered were from yo to 99 Ycars of Age. The Ninth Regiment of his Majeftys Forses remained there Twenty Months without lofing a Man. As to the Tempe:ature of the Air we have been affured by l'erfons who have refiled in this Province feveral Years, that white People work without Incenvenience in the Ficld in the hotteft Weather. The Extent of the Country hath been afeertained by a Susvey to be about Twelve Millions of Acres. Eaft Florida hath Anared the Fite of all new Settlements, being magnified by fome beyon: Meafure, and decried beyond Meafure by others. By Degrees as the Nature of the Soil in different Parts comes to be known, we cennot doubt that mot of the Articles mentioned in the Text will be produced; the very worlt Lands being fitteft for Barilla, of whish we import great Quantities for the Soap and Glafs Manufactures. We have as yet no Cuftom-houfe Accounts, but it is well known that confiderable Quantities of Indigo, excellent in its Kind, and which foldat a high Rate, have been alieady brought from thence to the Amount A. D. 1772 of upwards of Thirty thoufand Pounds Weight as I am credibly informed. In A.D. 1.770 there were entcred inwards, Ships 3 , Sloops 47, and cle.red uutwards, Ship; 4, Sloops 48.

## of GREAT BRITAIN.

West Florida comprehends the Reft of the Country ceded to the Crown of Great Britain by that of Spain. It lies from Twenty-nine Degrees Forty Minutes to Thirty-one Degrees North Latitude, and in Longitude from Eighty-five to Ninety Weft from London. The Length may be about Two hundred and Eighty, and the Breadth about Eighty Miles. It is bounded on the South by the Gulph of Mexico; to the Weftward by the Lakes Pontchartrain and Maurepas and the River Miffiffippi which the Indians call Metchatippi, or the Father of Rivers; to the Northward, by a Line drawn due Eaft from the River Miffifippi in the Latitude of Thirty-one Degrees North to the River Apalachicola; which River is alfo its Eaftern Boundary. The Climate is very warm and moift, more efpecially on the Sea Coaft, and from thence efteemed unhealthy, but within Land the Climate is better. Immediately on the Coaft, and at fome Diftance from it the Country is all white Sand, but advancing inward the Soil is found to be rich and fertile, affording Two Crops of Indian Corn annually, with very good Paftures well ftocked with Cattle. Timber of all Sorts and fit for all Ufes, excellent Saffafras and other valuable Drugs, many Materials for Dyeing, and is very capable of producing Cotton, Indigo, and Cochineal. As to the Two Firft they were actually raifed by the French, and confequently there can be no Doubt about them. In refpect to the Cotton it was very fine and beautifully white, but fhort, which leffened its Value. In reference to the Indigo, it was generally acknowledged to be brighter than that of St . Domingo, and therefore it is certainly our Intereft to cherif this Cultivation. If by any Means the laft, which it is far from being improbable, cuuld be brought to Perfection, it would prove of infinite Advantage to the Province. Hitherto Peltry, which they obtain from the Indians, Logwood, Lumber, and the Balance of their Trade with their Neighbours for European Commodities is their principal Support, and if our Jait Advices may be depended upon, the Colonifts begin to thrive. The neighbouring Indians, who from their Hatred to the Spaniards are well difpofed towards us, furnifh the Inhabitants with confiderable Quantities of Peltry, and may be made very ufefal in other Refpects. There are Two Ports in Weft Florida, Penfecola and Mobille, which carry on fome Trade directly with London, and as we have before hinted, have alfo fome Commerce with their Neighbours, which may gradually tura to account. This Province is likewife of great Importance, confidered as a Frontier, and deferves great Attention in that Light.

Thire lies behind our Settlements on the Atlantic, that is, between them and the Province of Quebec, an immenfe Tract of Country, which in point of Climate and Soil is by no means inferior to any in America,

Vol. II. $4 P$
which

## 660 The POLITICAL SURVEY

they have many who are equally fober and fkilful. The Town of the fame Name contains upwards of a thoufand Houfes, well built and inhabited, and with a fine Church. It is the Seat of Government, and there are faid to be in thefe Illands between Six and Seven thoufand Whites, befides Negroes g.

Ie we ferioully reflect on the Soil and Situation of the feveral Countries which have been the Subject of this Chapter, we cannot entertain the leaft Doubt of their enjoying as great natural Advantages as any upon the Globe ; and we may from thence difcern, that the richeft and moft valuable Commodities may be jufly hoped for from them. If we at the fame time advert to their Extent, in which they are at leaft equal to any Kingdom in Europe, we thall fee no Caufe to fear, that even by the utmoft Induftry of their Inhabitants they fhould be exhaufted. Befides all this, as hath been incidentally Chewn, there is none of them but what are very capable of other Staples, no lefs profitable than thofe which they at prefent poffers; fo that there can be no Danger of our finding at all Times Markets for their Produce. Thefe Circumftances ought certainly to entitle them to the Affection, as well as to the Attention and Protection of their Mother-country, as to the frequent and feafonable Exertion of thefe, thofe Colonies ought always to remember that their prefent Security and Happinefs are due.

[^325]
# of GREAT BRITAIN. 

## S E C T. III.

## A fuccinct Account of Yamaica.

TIHIS noble Inand, the largeft of thofe which we poffefs in this Part of the World, is one of the Great Antilles, and is particularly happy in its Situation, having the Illand of Cuba to the North, at the Diftance of about Forty Leagues; Hifpaniola on the Eaft, from which it is removed about Twenty Leagues; the Mofquito Shore on the Continent to the South Weft, about One hundred and Forty Leagues; and Porto Bello, about Onc hundred and Fifty Leagues directly South. It lies from Seventeen to Nineteen Degrees North Latitude, in Longitude Seventy-fix to Se-venty-nine Weft from London. In Length near One hundred and Seventy Miles, and about Sixty in Breadth. It approaches in its Figure to an Oval. The Windward Paffage right before it hath the Inand of Cuba on the Weft, and Hifpaniola on the Eaft, and is about Twenty Leagues in Breadth ${ }^{\text {a }}$.

The Profpect of this Ifland from the Sea, by reafon of its conftant Verdure, and many fair and fafe Bays, is wonderfully pleafant. The Coaft, and for fome Miles within, the Land is low, but removing farther, it riles and becomes hilly. The whole Inle is divided by a Ridge of Mountains running Eaft and Weft, fome rifing to a great Height; and thefe are compofed of Rock, and a very hard Clay, through which, however, the Rains that fall inceffantly upon them, have worn long and deep Cavities, which they call Gullies. Thefe Mountains, however, are far from being unpleafant, as they are crowned even to their Summits by a Variety of fine Trees. There are alfo about a Hundred Rivers that iffue from them on both Sides; and though none of them are navigable for any Thing
a This Inland was difcovered by Admiral Chriftopher Columbus in his Second Voyage, who l: aded upon it May 5th, A. D. 1494, and was fo much charmed with it as always to prefer it to the Reft or the Inands, in confequence of which his Son chofe it for his Dיrkedom. It was fettled by Juan de Efquivel A. D. 1509, who built the Town, which from. the Place of his Birth he called Seville, and Eleven Leagues farther to the Eaft ftood Melilla. Oriftan was on the South Side of the Illand, feated on what is now called Blue Fields River. All thefe are gone to decay, but St. Jago, now Spanifh Town, is fill the Capital. The Spaniards held this Country One hundred and Sixty Years, and in their Time the principal Commodity was Cacao ; they had an immenfe Stock of Horfes, Affes, and Mules, and prodigious Quantities of Cattle. The Englifh landed here under Penn and Vemables May rith 1654, and quickly reduced the Inand. Cacao was allo their principal Commodity till the Old Trees decayed, and the new Ones did not thrive, and then fome Planters from Barbadoes introduced Sugar Canes, which hath been the great Staple ever fince.
662. The POLITICAL SURVEY
but Canoes, are both pleafing and profitable in many other Refpeits. The Climate, like that of all Countries between the Tropics, is very warm towards the Sea, and in marky Places unhealthy; but in more clevated Situations, cooler, and where People live temperately; to the full as wholefome as in any Part of the Weft Indies. The Rains fall heavy for about a Fortnight in the Months of May and October, and as they are the Caufe of Fertility, are ftiled Seafons. Thunder is pretty frequent, and fometimes Showers of Hail ; but Ice or Snow, except on the Tops of the Mountains, are never feen; but on them, and at no very great Height, the Air is exceedingly cold b .

In an Illand fo large as this, which contains about Five millions of Acres, it may be very reafonably conceived that there are great Variety of Soils. Some of thefe are deep, black, and rich, and mixed with a Kind of Potter's Earth ; others hallow and fandy; fome of a middle Nature. There are many Savannahs, or wide Plains, without Stones, in which the native Indians had luxuriant Crops of Maize, which the Spaniards turned into Meadows, and kept in them prodigious Herds of Cattle. Some of thefe Savannabs are to be met with even amongft the Mountains. All thefe different Soils may be juftly pronounced fertile, as they would certainly be found, if tolerably cultivated, and applied to proper Purpofes. A fufficient Proof of this will arife from a very curfory Review of the natural and artificial Produce of this fpacious Country c.

- The moft eaftern Part of this Ridge are famous under the Name of the Blue Mountains. This great Chain of rugged Rocks defends the South Side of the Inand from thofe boifterous North Weft Winds, which might be fatal to their Produce. Their Streams, though finall, fupply the lnhabitants with good Water, which is a great Bleffing, as their Wells are generally brackin. The Spaniards were perfuaded that thefe Hills abounded with Metals, but we do not find that they wrought any Mines, or if they did, it was only Copper, of which they faid the Bells in the Church of St. Jago were made. They have feveral hot Springs which have done great Cures. The Climate was certainly more temperate before the great Earthquake, and the Inand was fuppofed to be out of the Reach of Hurricanes, which fince then it hath feverely felt. The Heat however is very much tempered by Land and Sea Breezes, and it is afferted that the hotteft Time of the Day is about Eight in the Morning. In the Night the Wind blows from the Land on all Sides, fo that no Ships can then enter their Ports.
c The firf Kind of Soil, which from its Colour, is in this Country denominated Brick Mould, is the moft fruitful of any. After this come a Variety of others compounded of loofe Mould and fmall Gravel, which are likewife fertile, and other Soils are made fo by labour and proper Management. But Sugar Works, though the moft profitable, are at the fame 'lime the moft expenfive, and therefore it hath been alwings wifhed that for the Sake of increafing the Number of White Inhabitants, fmall Plantations of other Kinds were encouraged. For this Purpofe no Country perhaps in the World affords a greater Variety of inferior Staples that might be cultivated to Profit, as fome of them already are, many others might; and if intelligent Perfons were employed, there is no Queftion thit their Number could be confiderably increafed. Befides, the Contineats of North and South America are open, and alfo the Eaft Indies, from which

## of GREAT BRITAIN:

It al unds in Maize, Pulfe, Vegetables of all Kinds, Meadows of fine Grais, a Variety of beautiful Flowers, and as great a Variety of Oranges, Lomons, Citrons, and other rich Fruits. Ufeful Animals there are of all Sorts, Horfes, Affes, Mules, black Cattle of a large Size, Sheep, the Fleth of which is well tafted, though their Wool is hairy and bad. Here are alfo Goats and Hogs in great Plenty, Sea and River Fih, wild, tame, and $W$ iter Fowl. Ainongft other Commodities of great Value, they have the Sugar Cane, Cacao, Indigo, Pimento, Cotton, Ginger, and Coffee; Trees for Timber and other Ufes, fuch as Mahogany, Manchineel, White Wood, which no Worm will touch, Cedar, Olives, andd many more. Befides thefe, they have Fuftick, Red Wood, and various other Materials for Dycing. To thefe we may add a Multitude of valuable Drugs, fuch as Guaiacum, China, Salfaparilla, Caffia, Tamarinds; Vanellas, and the Prickle Pear, or Opuntia, which produces the Cochineal; with no inconfiderable Number of odoriferous Gums. Near the Coaft they have Salt Ponds, with which they fupply their own Confumption, and might make any Quantity they pleafed d.

As this Illand abounds with rich Commodities, it is happy likewife in having a.great Number of fine and fafe Ports. Point Morant, the eaftern Extremity of the Illand, hath a fair and commodious Bay. Paffing on to the South there is Port Royal; on a Neck of Land which forms one Side of it there ftood once the fairef Town in the Illand, and the Harbour is as fine a one as can be wihhed, capable of holding a. Thoufand large Veffels, and fill the Station of our Squadron. Old Harbour is alfo a convenient Port, fo is Maccary Bay; and there are at leaft Twelve more
from which innumerable Trees and Plants might be brought hither, and with a little Care cultivated to great Profit, and for which Markets would never be wanting.
${ }^{d}$ The very great Importance of this noble Illand feemed to demand a more large Account of it than of the Reft ; and this Argument was enforced from the Confideration of its Extent, and of the great Improvements that may be yct made, though very great Improvements have been made already. Some valuable Things however are in a Mauner loft, as the Cacao, of which there is fcarce enough preferved for their own Confumption, though in general Ule among the Inhabitants, and which, when the Englinh firft came there, yielded Two hundred Pounds an Acre. Other. are in a Manner overlooked, as the Opuntia and the Anotto, which in the Hands of filful and induflious Perfons might turn to great Amount. Some are lefs confidered than they deferve, as the Canella Alba, which is in Truth a Kind of wild Cinnamon, and might by proper Culture be improved. What comes over hither paffes for the Correx Wiuteranus, which it is not. All the fine Drugs, Gums, Balfame, \&c. do not yield the Inhabitants any Thing like what they might do. To put this Matter paft a Doubt, it may not be amifs to mention. that when Pimento was firft exported from thence, they cut down the Tree before they gathered the Spice. They found it afterwards expedient to plant them; and yet Twenty Years appo they did not fend over a Fourth Patut of what they do at prefent; which would probubly be the Cafe with refpect to other Things.

## 664 The POLITICAL SURVEY

between this and the Weftern Extremity, which is Point Negrillo, where our Ships of War lie when there is a War with Spain. On the North Side there is Orange Bay, Cold Harbour, Rio Novo, Montego Bay, Port Antonio, One of the fineft in the Illand, and feveral others. .The North Weft Winds, which fometimes blow furioully on this Coaft, render the Country on that Side lefs fit for Canes, but Pimento thrives wonderfully ; and certainly many other Staples might be raifed in fmall Plantations, which are frequent in Barbadoes, and might be very advantageous here in many Refpects e.

In fo large an Ifland as this it might be expected there fhould be a confiderable Number of great Towns, which however there is not. The Reafon of this is very obvious, for the Wealth of the Inhabitants arifing from their Plantations, of which there are at prefent about Five hundred, and each of thefe containing fome Hundreds of Inhabitants, it appears from hence that every Plantation forms a Village, and accounts fufficiently for the Difpofal of the greateft Part of the Inhabitans. There are however fome few Towns, the largef of which is Kingfon, which ftands on the Harbour of Port Royal, contains about Sixteen hundred Houfes, and is very populous. It is regularly laid out for about a Mile in Length, and Half that Space in Breadth inhabited chicfly by Merchants and Perions concerned in Trade, moft of the Sugars being ihipped off there. There is a fpacious Parih Church, Two Synagogues of Jcws, and other Places of religious Worrhip. St. Jago de la Vega, or as it is ufually called Spanih Town, is properly the Capital of the Illand, being the Refidence of the Governor, the Place where the Affembly mects, and is alfa the Seat of the principal Courts of Juftice. It conliifts of about Four hundred Houfes, fituated in a fine pleafant Valley, on the Banks of the Rio Cobre, and as mof of the People who refide there are Perfons of

[^326]high Rank and great Fortunes, every Thing breathes an Air of Splendour and Magnificence. Port Royal after all its Misfortunes is the Third Town in the Illand merely from the Convenience of its Situation, and contains about One hundred Houfes. Fort Paffage, fo called becaufe People land there, to go either to Kingfton or Spanif Town, contains about Fifty Houfes, and befides thefe there are fome other Hamlets fcattered through the Country, and a few contiguous Houfes at almoft every Port f.

The Adminiftration of public Affairs is by a Governor and Council of Royal Appointinent, and the Reprefentatives of the People in the lower Houfe of Affembly. They meet at Spanifh Town, and Things are conducted with great Order and Dignity. The Colony hath a confiderable public Revenue of which the Quit-rents, by a Grant of the Crown, make a Part. Another Branch arifes from a Tax or Fine laid upon fuch as keep fewer than Three White to One hundred Black Servants. This is preferring the Eafe to the Security of the Community, in refpect to which it would have operated much more beneficially as a Regulation. The Inand is divided into Three Counties, Middlefex, Surry, and Cornwall, containing Nineteen Parifhes, over each of which prefides a Magiftrate ftiled a Cuftos, but thefe Parihes in Point of Size are a Kind of Hundreds. Yet is this fine Country upon the Whole but thinly peopled and indifferently cultivated ; for though near a Fourth Part of the Lands are patented, yct not above a Ninth Part is actually under Cultivation. The Commerce of Jamaica is very confiderable, not only with all Parts of Great Britain and Ireland, but with Africa, North and South America, the Weft India Illands, and the Spanifh Main, for the Encouragement of which a late Act was paffed. The Ships annually employed are upwards

[^327]Vol. II. dred and Seventy thoufand Negroesg.

[^328]
## S E C T. IV.

## Of Barbadoes, the Lecward and Virgin Iflands.

IN the Two Firft Sections of this Chapter we have difcourfed of large Countries producing many valuable Commodities, and affording ample Room for the Production of many more. In the Section immediatcly preceding we have fpoke of a noble Inland abounding with numerous and rich Productions, bleffed with many fafe Harbours, endowed with feveral other Advantages, in which however there are ftill not a few large Tracts that remain, and have long remained to be improved. In this we are to treat of Countries very different, and from which we may derive the cleareft Ideas and the fullert Conviction of the Benefits that may be derived from an infular Situation. By this their Inhabitants have been enabled to avail themfelves of all the Bounties and Bleffings of Nature, whence they are rifen into a Degree of Affluence that is aftonihing, and inconteftibly demonftrates what, though unaffifted by Extent of Territory, Skill and Induftry united can effect. From a conftant and uniform Exertion of thefe, they not only enjoy that Opulence they fo well deferve, but contribute greatly by the Purchafe of large Quantities of their Produce to the Welfare of their Sifter Settlements upon the Continent, and are in a Variety of Refpects highly beneficial to Great Britain. The State and Hiftory therefore of thefe Colonies is a Subject of the utmof Importance to every Individual of this Country who is defirous of underfand-
ing whence its prefent Grandeur hath arifen, and by what Meafures it may be beft fupported and preferved ${ }^{2}$.

The eldeft of our Settlements in the Wef Indies is Barbadoes, called by the Spaniards los Barbudos, as is fuppofed from a Kind of Fig Trees upon the Coaft, the long Filaments falling from which were conceived to refemble Beards. This Illand is fituated from Thirteen Degrees Ten Minutes to Thirteen Degrees Twenty-three Minutes North Latitude, and in the Longitude of Fifty-eight Degrees Fifty Minutes to Fifty-nine Degrees Three Minutes Weft from London. It is not more than Twenty-five Miles long, or Fifteen broad, about Sixty in Circumference; a great Part of this Nature hath impaled with Rocks, and where thefe are wanting there are Fortifications which render this Ine in fome Degree inacceffible. The Face of the Country is agreeably vafiegated with fmall Plains, gently rifing Grounds, fome Ridges of Hills, which with tall Trees, fpacious Buildings, and a continual Verdure, exhibit a moft pleafing Profpect both from Sea and on Shore. It hath the Illand of St. Chriftopher's to the North Weft at the Diftance of between Eighty and Ninety Leagues; the Spanifh Main about Fourfcore Leagues to the South Weft; and is near a Thoufand Leagues diftant from the neareft Part of Africa. The Climate is very warm, but the Air exceedingly pure, and the Heat moderated by conttant regular Winds blowing over an immenfe Expanfe of Sea, and though the cutting down of Woods is faid to have been detrimental in diminihing the Quantity of Rain, yet by giving a free Paffage to the Air the Country is become more healthy.

- What hath been above flated in the Text, muft at firft appear fomewhat furprizing in regard to lllands of fo fmall a Size, and from which therefore fuch great Emoluments could hardly have been expected. But a little Reflection will let us at leaft in part into the Caufes of their quick Growth and wonderful Improvement, and at the fame Time explain what hath been afferted in refpect to the Advantages they derive from their Situation. In the Firf Place their callieft Inhabitants had a great Degree of Safety from their being furrounded with the Ocean, and confecuuenily were from thence lefs in Danger than a fmall Number of Men would have been if they had fixed upon a Continent iuhabited by Savages. This Circumftance allowed them Leifure to conlider and attempt every Kiad of Improvement, and the Narrownefs of their Territory rendered it the more mangeable in point of Cultivation, and when they had once made a right Choice of a Staple put it in their Power to carry it t. Perfection. Befides thefe the furrounding Ocean afforded them many other Bencfits, rendering tue Air purer, milder, and more wholefome, than on greater Continents, or even in much larger Illands, as Experience fhews, allowing them at all Times a free and fixile Communication with their Neighbours, as well as the Means of receiving Supplies from, and exporting their Produce to diftant Countries, and to thefe we may add the affirding them, what is a confiderable and lalting Benefit, a conftant Proportion of Subfiflence by Finiing, common to every Part of the Settlement. Lafly, it beftowed an extraordinary Degree of Security, more efpecially under the Protection of a Maritime Power.

The Soil is very different, in fome Places a heavy Clay, in others a light Sand, dark heavy Easth in fome, a light red Mould in others, nor are there wanting wet and fwampy Grounds, or fome Spots that are dry and afford a hard Gravel. In general it is very fertile, and with proper Management and Manure almoft all Parts yield large Crops of Sugar. The Inhabitants are happy in a vaft Variety of vegetable Productions, Maize, Guinea Corn, and many edible Roots. As to Animals, they have Black Cattle and Sheep of their own, a few Horfes, but many are imported from.England and the Continent of America, the former for the Saddle, the latter chiefly ufed for Labour. We have been fettled here about One hundred and Fifty Years b. The Firft Planters raifed Tobacco, but this was in Procef's of Time abandoncd for Sugar Canes, which were originally brought thither from Fernambuca in the Brazils. In Proportion as the Illand grew rich and populous an excellent Conftitution was formed, to which they fteadily adhered, and from which they have derived a Stability and Security that hath juftly gained them the Character of One of the beft regulated Colonies in the World $c_{\text {. }}$

The feveral Accounts we have hitherto had in regard to the original Settlement of this Inand are very dark and incertain. All that can be eollected is, that the Lord Ley High Treafurer of England, and afterwards Earl of Marlborough, had a Grant by Letters Patent of Earbadoes from King James the Firft, and therefore it mult have been fettled, though perhaps very imperfectly, in his Reign. In that of his Succeffor, the Earl of Carlifle intent upon fettling St. Chriftopher's obtained a Warrant for a Grant of all the Caribbee Inands, Barbadoes included. This was ftopped at the Grcat Seal on account of the Earl of Marlborongh's prior Patent. The Two Earls however coming to an amicable Agreement the Earl of Carlifle's Patent, in which all ours and all the French Illands are exactly enumerated, paffed A. D. 1627. On the breaking out of the Civil War no farther Regard was paid to the Proprietor. But after the Reftoration a Claim was made by his Creditors, and the Crown thought fit to enter into an Agreement with them, and to make a Compenfation to his Heir for the Surrender of the Patent, and thus this and the other Illands returned into the Hands of the Crown, to the no fmall Joy of the Inhabitants. But their Satisfaction was not a little abated by the Demand made by Lord Willoughby of Parham, their Governor, on the Part of the Crown, of a Duty to reimburfe the Expences of this Purchafe, and for other Purpofes, to which, though very unwillingly, the Affembly gave their Confent, and thereby fixed the Impofition of Four and a Half per Cent. on the Commodities of thefe Inands, wlich hath ever fince been paid.
c The Government of Barbadoes was fettled by Philip Bell, Efq; appointed Governor by the Earl of Carlifle, and fo well conftituted that it hath fubfifted ever fince, and been in fome Degree a Model to the Reft of the Jlands. The Governor is appointed by the Ring's Commilition, fo are his Council confifling of Twelve by Mandamus, the Affembly is enmpofed of 'Tiventytwo, that is, Two Mcmbers from each of the Eleven Parihes. The Inand is divided into Five Diftricts, in each of which there is a Judge and Four Alfiftants, who hold a Court of Common Pteas every Month, from January to Seprember. There is another wife Law which hath been of the utmof Utility, in affigning to every Servant at the Expiration of his Term a fmall Patrimony, of Three, Four, or Five Acres. This conftitutes a Ycomanry, and is the Caufe that the Force of the Illand hath been at all. Times refpectable. At prefent they have Six Regiments of Foot, Three of Horfe, and a Troop of Guards, all fout Men and well-difciplined.

The Capital of the Illand is Bridge Town or St. Michael's upon CarHifle Bay, by much the largeft and moft convenient in the Illand. In this Town, before it was deftroyed by Fire, there were Fifteen hundred Haufes, moft of them neatly, fome magnificently built, and it is now rifen out of its Ruins with frefh Beauty. Befides this there is Oftins or Charles Town, St. James's in the old Maps, the Hole, and Speight's Town, formerly called little Briftol, becaufe chiefly frequented by Ships from thence. The Planter's Houfes are many of them very elegant Structures, and the neceffary Accommodations, with Negro Huts and the Tenants Houfes, render each confiderable Plantation a Kind of Village. The principal Commodities for Exportation are Aloes, Cotton, Ginger, Sugar, Rum, and Melaffes. The Commerce between this Illand, Great Britain, North America, and Africa is very confiderable, fo as to employ upon a moderate Computation upwards of Four hundred Veffels of different Sizes. As to the Number of Inhabitants it is impoflible to Speak with any great Degree of Certainty, but according to the moft authentic Account that could be obtained there are about Twenty-two thoufand Whites and Seventytwo thoufand Blacks. It is however pofitively afferted that the Number both of white Inhabitants and of Slaves had been confiderably greater in former Times d .

St. Christopher's was fo called by Admiral Columbus, whether after his own Name or that of St. Chriftopher is uncertain. It lies in Seven-

The Skill and Indufry of the Inhabitants have been always confpicuous, and the Commodities of cvery Sort they raife very perfect in their Kind.
d There have been and ftill are many large and lucrative Plantations on this Mand, fo valuable that thofe who purchafe them fcarce make Four per Cent. of their Money. As a Specimen of thefe Effates we are told that Two hundred and Sixty Acres properly managed will rejuire 180 Negroes, 100 horned Cattle, 12 Horfes, 40 Sheep, Three Tenants or Militia-men with their Families, who fupport themfelves upon the Grounds allowed them. A Manager at One huudred or One hundred and Fifty Pounds per Annum, a Driver, a Difiller, and Two Apprentices, their Salarics tugether Forty-five Pounds; a Town Agent and Book-kceper at Twenty Younds each, an Apothecary at 'Thirty or Forty Pounds, a Farrier at 'Twents, an Englifh Agent at Two and a Falf per Cent. Commiflion. All this, exclufive of Freight of Sugar., Taxes; Repairs, and incidental Expences. In A. D. 7 - - , their Fxports were to Great Britain 930 IIun dred Weight of Aloes at Three Pounds Te 11 Shillings per Huadred Weight, 3255 1. 453 Bales of Cotton at Twelve Pounds per Bale, 54351. 5361 Bates of Ginger at Two Pounds and Five Shillings per Bag. Tpo( 121.5 s. 90 Hides at ieven Shillings, 311.10 s. 2031 Hogheads of Kum at Ten Pounds, 20,3 to l. 28,36 do to Ireland, 28.360 1. 5349 Hogfheads, Two Tierces of claycd Sugar at 'rwenty Pounds the Hoghead and Fifteen Pounds the Tierce, 107,0101. 5149 Hoghcads, 3522 Tierces, 544 Barrels of Mufcorado Sugar at Seventeen Pounds Ten Shillings per Hoghead, Twelve Pounds the 'rierce, and Four Pounds the Barrel, 134,5471. 10 s. The Total $311,0121.5 \mathrm{~s}$. Total of the ike Goods to North America, 111, 8281.4 s . To the other Mands 1173 1. The Account of this Illand hath been'more particular as in many Refpects it may ferve to give us an Idea of the Reft.

## 670 The POLITICAL SURVEY

 teen Degrees Twenty-five Minutes of North Latitude, and in Sixty-two Degrees of Longitude Weft from London. It is Twenty-one Miles in Length, and between Six and Seven in Breadth, except to the South Eaft, where it is connected by a narrow Ifthmus to a Tract of Land of about a League in Length, and near as much in Breadth, in which there is a Iarge Salt Pond. This Peninfula is Ceparated by a very narrow Channel of the Sea from the Ifland of Nevis. The whole Circumference of St. Chriftopher's is about Seventy Englifh Miles. The Climate is warm, but from the Height of the Country lefs fo than might be expected from its Situation, and the Air pure and healthy. On the other Hand it is fubject to frequent Storms, and is alfo expofed to Hurricanes and Earthquakes. It affords a beautiful Proipect from the Sea, appearing at a Diftance like a vaft Mountain covered with Woods, but on a nearer Approach the Coaft round the Illand is found to be fmooth and the Afcent gentle, One Hill rifing above another to argreat Height, but cultivated almoft to their Summits. The Chain of Hills that divide the Illand are in the Centre broken into rocky Precipices hardly paffable, and in thete there gun? out Hot Springs towards the Bottom. There is One Eminence filcud the : iniphur Mountain, and in another there is faid to be a Silver Miac, blis it was never wrought $e$.The Soil is light and fandy, but very fertile and well watered by many Rivulets that run from both Sides of the Mountains. It yielids Plenty of Manioc, of which the Caffada Bread is made, edible Rouss in Abundance, a Variety of Vegetables, rich Fruits, and fine Timber. The Animals are much the fame as in Barbadoes, Abundance of tame and wild Fowl, and the Sea affords Store of excellent Fifh. The chicf Town is Baffeterre, and befides this there are Two Shipping Places, One at Old Road, and the other at Sandy Point. The whole 1lland is covercd with well cultivated Plantations, the Owners of which live in very hand-
e This Inand was fettled by the Englifh and Frcach, A. D. 1625 , who arrived on different Sides of it the fame Day, the former under Captain Warmer, afterwards Sir Thomas Warner, under the Patsonage of the Earl of Carlule, the latter nader the Sieur D'Efnambuc, under the Authority and Aufpice of the Cardinal de Richlien. Thefe T'wo Governors made an amicable Divifion of the Illand, the Freuch having the Lait and Welt Ends, and the Englifh the North and South, by a Treaty of Partition, A. D. 1627. Two Years after both Nations were driven off the Ifland by the Spariards; but rot long after thair Departure the Englifh and French refetted and iemained very good Friends till the Fir: I)uth War in the Reign of Charles II. when the former were driven out by the French, kut were again reftored by the Peate of Breda in 1667. As foon as the News of the Revolution reached the Weft Indies, the French, without waiting for a Declaration of War, drove them out a Second Time, and they were again reftored by the Peace of Ryfwick in 1697. In Queen Anne's War the Englifh expelled the French, though fome of the beft Fanilies, and a great Part of their slaves remaiaed, and the Whole of the Inam was finally ceded to Great Britain by the 'Itreaty of Utrecht.
fome Houfes built chiefly of Cedar, and their Grounds fenced with Orange. and Lemon Trees. Public Affairs are adminiftered by a Governor, Couñil, and Affembly, chofen from the Nine Parifhes into which the line is divided, it each of which there is a pacious Church. Their principal Commodities are Cotton, Rum, and Sugar, which is of a very fine Grain. The Number of Inhabitants is faid to be Forty thoufand, and of thefe there are about Ten thoufand Whites ${ }^{\circ}$.

Tue Inand of Nevis, called by the French and Spaniards Nieves, and by us very commonly, though corruptly, Mevis, at a fmall Diftance, as we have faid, from St. Chriftopher's, and about Seven Leagues North North Weft of Montferratc. It lice in Seventeen Degrees Twenty Minutes of North Latitude, and in about Sixty-two Degrees of Longitude Weft from London, making a beautiful Appearance from the Sea, being a large conical Mountain, covered with fine Trees, of an eafy Aicent on every Side, and entirely cultivated. The Circumfercnee is about Twenty-one Miles, with a confiderable Tract of level Ground all round it E . The Climate in the lower Part is efteemed to be warmer than Barbadoes, but more temperate towards the Summit. The Soil below is very fine and fertile, but becomes coarfer in the Afcent. However, as there is a Space

[^329]
## 673 The POLITICAL SURVEY

of about Three Miles all round, the Induftry of the Inhabitants is confpicuous in its Cultivation. As to its Productions, they are very nearly he fame with thofe of St. Chriftopher. There are Three pretty good Roadds or Bays, with fmall Towns in their Vicinity, Charles-town, Moreton-bay, and Newcaftle. There is here a Lieutenant-governor, with a Council, and an Affembly, which is compofed of Three Members from each of the Five Parifhes into which the Inland is divided. The Commodities exported from hence are Cotton and Sugar. About Twenty Sail of Ships are employed annually in this Trade; and the Number of Inhabitants is faid to be between Two and Three thoufand Whites, and upwards of Six thoufand Negroes, though it was formerly much better peopled ${ }^{\text {th }}$.

Antego, Antegoa, rather Antigua, from Santa Maria la Antigua, a Church in Seville, from whence it was fo called by Admiral Columbus. It is the largeft of the Leeward Inlands, and now the Seat of Government; it lies in the Latitude of Seventeen Degrees Twenty Minutes North, and in Sixty-one Degrees of Longitude Weft from London. It is in Length about Twenty-one Miles, and nearly the fame in Breadth, in Circumference upwards of Sixty. The Climate is very warm, and Hurricanes are often felt. The Country is finely diverfified into low and high Grounds, but without any of thefe fo elevated as to be ftiled Mountains, fo that there are no Rivers, but few Springs, a Couple of little Rivulets which rife not far from and run into the Sea. This Ine is of courfe very ill fupplied with Water, which the Inhabitants for their own Ufe preferve in Cifterns, and in Ponds for their Cattle, both depending upon Rain. It was this Defect in refpect to Water, that for a long Time retarded the Settling of this Ifland. At this Time the Inhabitants are now and then difteffed by it. Some good Judges however who have lived long upon the Place think it in fome Degree their own Fault, fince if they made their Cifterns larger, and dug their Ponds deeper, this Calamity might be avoided. It is allo to be obferved that the Water thus preferved is wonderfully light, pure, and wholefome. The Soil varies, but is in many Places a fine black Mould, in others a deep and pretty ftiff Clay, yet is indifferently fertile. The Country is rather better ftocked than the other Ifands with Animals of all Sorts, great Plenty of wild and tame Fowl, and a vaft Variety of excellent Sea Fifh. They have Rfas and Vege-

[^330]$\mathrm{t}_{\mathrm{p}}$ bles in great Abundance, and all the Fruits common in the Weft Indies. here was formerly fome Indigo and Tobacco raifed here, but thefe have been long, ago abandoned for Cotton, Melaffes, Rum, and Sugar the prefent Produce of this rich Illand $i$.

The Capital is St. John's, upon a very good Harbour of the fame Name; the Town of Falmouth ftands upon Englifh Harbour, which in confequence of much Care and fome Expence hath been rendered fit for careening Ships of War. There are befides Parham and Willoughby Bay with fome leffer Crceks. But in general the Coaft of the Inard is rock', and wherever it is caly of Accefs well fortified, and there is commonly a Regiment of regular Troops quartered therein for the Defence of the Inhabitants. The Governor-gencral of the Leeward Iflands, who ufually refides here, calls, when he thinks proper, a General Alfembly compofed of Reprefentatives deputed from the other Iflands. Antigua hath befides a Lieutenant Governor, a Council, and an Affembly compofed of Twentyfour Members. It is divided into Six Parihhes and Ileven Diftricts, Ten of which elect each of them Two Reprefentatives, and that of St. John's Four. The Number of Ships that enter here are about Three hundred, but with refpect to the Inhabitants, Whites and Negroes, we have but very incertain Accounts of their Numbers $k$.

[^331]
## 674 The POLITICAL SURVEY

Montserrat is a very fmall but a very pleafant Inand, fo called by Colombus from its Refemblance to a famous Mountain near Barcelesic: in Catalonia. It lies in Sixteen Degrees Fifty Minutes of North Latitude, and in about Sixty-one Degrees of Longitude Weft from London, having Antigua to the North Eaft, St. Chriftopher's and Nevis to the North Weft, and Guadaloupe lying South South Eaft at the Diftance of about Nine Leagues. In its Figure it is nearly round, about Nine Miles in Extent every Way, Twenty-feven in Circumference, and is fuppofed to contain about Forty or Fifty thoufand Acres 1. The Climate is warm, but lefs fo than in Antigua, and is efteemed very healthy. The Soil is mountainous, but with pleafant Vallies rich and fertile between them, the Hills are covered with Cedars and other fine Trees. Here are all the Animals as well as Vegetables and Fruits that are to be found in the other Iflands, and not at all inferior to them in Quality. It is befides pretty well watered which is no fmall Advantage. The Inhabitants raifed formerly a confiderable Quantity of Indigo, which was none of the beft, but which they cut Four Times a Year. The prefent Product is Cotton, Rum, and Sugar. 'Ihere is no good Harbour, but three tolerable Roads at Plymouth, Old Harbour and Ker's Biy, where they fhip the Produce of the Intand. Public Affairs are adminiftered here as in the other Ines, by a Lieutenant Governor, Council, and Affemtly, compofed of no more than Eight Members, Two from cach of the Four liftricts into which it is divided $m$. There a few Ships employed in Trading

[^332]
## of GREAT BRITAIN.

to this Ifland from London and from Briftol. As to the Number of Inhatitants according to the moft probable Accounts, they confirt in between Twelve and Fifteen hundred Whites and from Ten to Twelve thoufand Negroes, 'though fome fay not fo many.
barbuda is a fmall Ifland lying in Seventeen Degrees Forty Minutes North Latitude, and in Sixty Degrees Thirty-two Minutes WeR from London, Ten Leagues North from Antigua, Fifteen North Eaft frum Montferrat, and about the fame Diftance from St. Chriftopher's and Nevis. Soon after the Firft of thefe Two Iflands was planted, the Inhabitants had an Account of this fo very favourable that they immediately took a Refolution to fettle it, which they did, and called it Dulcina. They found it healthy, pleafant, and fertile; but the Coafts were rocky, there was little Water, the Suil but fhallow, and they were frequently difturbed by the Caribbees, on which they quitted it and retired to Nevis. Many Years after General Codrington, who was equally diftinguihhed as a Statefinan, Soldicr, and Planter, obtained a Grant of it in Property, and it ftill belongs to his Family. There are upon it fome Hundreds of People, who raile Corn, breed Cattle, tame Fowls, and other Provifions, for which they always find a Market in the other Ines, and live very happily and much at their Eafen.

Ancumla is another little Ifland, which lies in Eighteen Degrees Twenty Minutes North Latitude, and in Sixty-one Degrees Thirty Minutes Longitude Wen from London. At the Diftance of Twenty Leagues North Wift from Barbuda, and Twelve from St. Chriftopher's. It derives its Name from its winding Form, which is thought to refemble that of an Eel, or as the commen Notion is of a Snake. The French thought it, as it is very low and flat, not worth keeping or cultivating, and it was long in cur Hands before it was confidered as a Place of any Confequence, though Fifteen Miles long, and in fome Places Seven broad. But of

${ }^{14}$ Thex were Two Metives that indured General Codrington to procure a Grant of this Inand, the fole proptryy (incunment in the Weft Indics. The Fiff was the raifing Provifions, in which he effecturn siaccecded, the Second the Cultivation of Cinnamon, to which he was induced from fome Experiments he bad made frem the wild Cinnamon Trees in Antigua. In this Project he was: interruptad by the Frencla War in which the Enemy once attempted to furprize him, while he and fome of his Friends were amufing themfelves at his Plantations in Barbuda. His Death, which followed not long after, put a Period to his Defigns, in which, confidering the amazing Progrefs he made in improving the Sugars of Antigua, it is not at all improbable he would otherwife have fucceeded.

## 676 The POLITICAL SURVEY

late Years the induftrious Inhabitants have fhewn that this was a Miftake, for befides raifing all the Neceffarics of Life, they now exphis Cotton, Rum, and Sugar as well as their Neighbours, and are, in a very thriving Condition. According to the Information of thofe who have lately vifited this little Ine, it is in its prefent State as healthy as any in this Part of the World, and the Natives remarkably ftout, vigorous, and indefatigable in raifing Provifions of all Sorts, with which they fupply their Neighbours ${ }^{\mathrm{D}}$.

The Iflands which the Spaniards ftile las Virgines, and we from them the Virgins, lie in a Clufter, from Eighteen Degrees to Eighteen Degrees Forty Minutes of North Latitude, and in the Longitude of from Sixtytivo Degrees Thirty Minutes, to Sixty-three Degrees Weft from London. Tortola is the largelt of them, and next to that Spanifh Town, or rather Penifon, in which there is faid to be a Silver Mine, neither of them very confiderable in point of Size, but otherwife pleafant and fertile. There are befides thefe Ten or Twelve more, all of them inhabited, and have been fo for many Years, though it is not long fince they were put under a regular Form of Government. There is in the Midft of thefe Iflands the finef Baion of Water that can be imagined, in which Veffels may lie Land-locked from all Winds, from which they are covered from the regular Difpofition of thefe Iflands round them, which is a very great Advantage to the Inhabitants, and to fuch as by frequenting them are experienced in this Navigation. Otherwife the Coafts of thefe Iflands being many of them foul and rocky are exceedingly dangerous, and many Veffels have been wrecked upon them, and amongit thefe fome Spanilh Galleons. We have now a regular Communication with Tortoln, from whence there is annually exported, chiefly of its own, but fome alfo of the Produce of the other Illands, confiderable Quantities of Cotton, Rum, and Sugar. As to the Number of Inhabitants in thefe Ines our Accounts have been very incertain, but I have been lately informed by a very judiciois and credible Perfon, who conftantly trades thither, that they amount to about 2 Thoufand Whites, and to upwards of Ten thoufand Negroes p.

[^333]
## of GREAT BRITAIN.

It is not a little amazing, and if we had not the cleareft and mi At - "bentic Evidence in its Support, would appear abfolutely incredible, that a few, Iflands containing altogether not more Ground than the County of Monmouth, and but a very little bigger than the Inland of Minorca, Mould produce to the Value of One Million and an Half Steriing annually, in the Commodities they export, exclufive of Freight and every other Advantage. It is true that the Staples of thefe Iflands are very rich. But we muft not conclude from thence, that fuch fmall Illands could not otherwife be fupported, fince it appears by a Report made to the Board of Trade near Twenty Years ago, that Rloode Illand in North America, which is not bigger than St. Chriftopher's, had upon it Thirty thoufand white Inhabitants, and Four thoufand Negroes, all of whom were fubfifted by the Produce of the Ifle and its Commerce. Let us now procced to the Ceded Iflands.
diven thither to preferve Freedom, picked up as they could, a precarious Subfiftence. This pelhaps might be really the Cale, but feeing the Effeets of Induftry in fome of the other Illands, they gradually began to imitate them, at firf by planting Cotton, and this proving very fine furnifhed them with the Neans of purchafing Negroes,, and at length put it in their Power to plant ('anes. A. D. 1770 the Illand of Tortola exported 29 Bales and 1590 Bags of Cotton, amounting to 16,2481 . Hides 368,1281 . 10 s. Sugar 2446 Hogheads, 20 Tierces, 73 Baricls, $43,3,3$ l. Welides this from the l'roduce of other Illands in Cotton and Sugar to the Valuc of 10821 . ios. in all to Great Britain, 61,6961. 6 s . and to North America in Cotton, Rum, ind uther Commodities to the Value of 10,1321 . 10 s .

## SECT. V.

The coded Iflands, St. Vincent, Grenuda, the Grenialines, Tobago, and Doa minica.

IN the former Section it hath been flewn at what Time and in what Manner the Englifh fettled the Illands of Barbadoes and St. Chriftopher; anithat the French likewile fettied themfelves on the latter at the fame Time. It does not appear that the People of Barbadocs thought of making any Excurfions from their own Inland, but contented themfelves with cultivating and improving it to the utmoft of their Power. But St. Chrifopher's being fmaller, and a Moiety of it only occupied by each of the Nations, their Chiefs who were both Men of enterprizing Spirits entertained other Views. Sir Thomas Warner, as we have alrcady mentioned, fettled moft of the Leeward Inands. Mr. Deinambuc wrote to:

## 678 The POLITICAL SURVEY

the Court of France, and propofed an Expedition for fettling One of Three Illands which he named. His Propofition was accepted, and a fmall Fsteaccordingly fent under Two Commanders who firft debarked, upon Marw tinico, but dilliking its mountainous Appearance quitted it, and fixed themfelves on Guadaloupe. Mr. Defnambuc no fooner heard of this, than he likewife embarked a fmall Body of Men, and took Poffeffion of Part of Martinico. The French met with no fmall Difficulties in both Inands, but by keeping Meafures at firft with the Natives, and then gradually picking Quarrels with them, they at length made themfelves Mafters of both after a Difpute of about Thirty Years, in which Space all our Inands were pretty well fettled ${ }^{2}$.

A French Weft India Company had been ereeted ander the Aufpice of Cardinal Richlieu for the Direction of their Affairs in this Part of the World. Their Capital confifted of about Four thoufand Pounds Sterling, and this even in thofe Days proved fo infignificant that they were in a little Time unable to fupport thofe who had poffeffed themfelves of the Ifles before-mentioned; and therefore in a juft Senfe of their Inability they fold the fmaller Iflands to the Order of Malta, and granted Martinico and Guadaloupe to Two of their Countrymen as Proprictors, referving only the Sovereignty to the Crown of France, and having thus ridded themfelves of all their Poffeffions as a Company, they broke up. When Lewis the Fourteenth took the Reins of Government into his own Hands, he by the Advice of wifer Minifters than thole who had been employed during his Minurity, erected a New Weft India Company, with Funds properly proportioned to the Schemes they were to undertake. This Company was fo well conducted that they redeemed all the Inands, carried on a War againft England in thofe Parts, and put their feveral Poffeffions into good Order, and a competent State of Defence. All this they did in to thort a Space as Nine Years, and in return their Great Monarch difiolved them and took all into his own Hands. It muft not be fuppofed that we were inactive all this Time, for on the contrary we reduced the great Illand of Jamaica, in which Service Five thoufand Men from the other Iflands were employed, and after it was fubdued the fettling it was attended with much Expence of Men and Money. Numbers alio went from Barbadoes to

[^334]
## of GREAT BRITAIN.

Surinam; which Colony, as hath been before obferved, we exchanged sr: -Tew York, and it muft be likewife remembred, that at the Time the French King eftablifhed his New Company, our Illands in the Weft Indies were thoroughly improved, and in the moft flourihing Condition ${ }^{\text {b. }}$

We kept up our Clain during this whole Period to the Illands of Dominica, St. Lucia, St. Vincent, and Tobago, which were conftantly inferted in the Governor of Barbadoes Commiffion, and we fent Governors to fome of them, and exercifed other Acts of Sovereignty. It was owing to the Intrigues of the French that we did not abfolutely reduce and fettle them, fur while they were conquering the other Inands, they not only willingly permitted the Caribs to retire into thefe, but alfo afforded them the neceffary Affiltance to prevent our driving them out. In the Keign of James the Second a Treaty of Neutrality was concluded between the Two Nations in the Weft Indies upon Terms, which confidering their different Views were advantageous and acceptable to both. But King James did not mean to include thefe Iflands in this Treaty, but on the contrary took Meafures to fettle them, on which, under pretence that the Caribs or as they ftile them Caraïbs were their Allies, the French interfered in the Difpute, for terminating of which a new Negotiation was begun at the Time the Revolution took Place. In the Reign of King William, the Situation of our Affairs did not permit us to profecute our Rights, and the fame Reatons feem to have operated in the Reign of Queen Anne. King George the Firft made a Grant of St Lucia and St. Vincent to the Duke of Montagu, who fiom a Mutive of Public Spirit andertook to fettle them at a valt Expence, but France interfering again

[^335]
## 680 The POLITICAL SURVEY

in favour of her Indian Allies, Things were compromifed to prevent enfering into a War upon what might feem to be a private Quarrel. NAL Reign of King George the Second a new Regulation took Place, by which Dominica, St. Lucia, St. Vincent, and Tobago, to which the French had never formed any Pretences, were declared Neutral Iflands by the Treaty of Aix la Chapelle. In this State Things were at the Entrance of the laft War, but at the Conclufion of it the French quitted all their Pretenfions to Dominica, St. Vincent, and Tobagn, and ceded the Ifland of Grenada to his Majefly as an Equivalent for the Illand of St. Lucia (thereby admitting our Right) which we yielded to the French who had conceived higher Notions of the Value of that Ine, than it will perhaps ever be found to deferve c .

In defcribing thefe Illands we begin with that of St. Vincent, which received its Name from being difovered on the Twenty-fecond of January, the Feaft of that Saint. It lies from Thirteen Degrees to Thirteen Degrees Twenty Minutes of North Latitude, and in Longitude Fifty-nine Degrees Forty Minutes Weft from L.ondon. At the Diftance of between Five and Six Leagues South Weft from St. Lucia, Twenty-three South Weft from Martinico, Thirty-fix or as fome compute Forty South from Dominica, Twenty Weft by South from Barbadoes, and Sevc:tecn or Eighteen North Eaft from Grenada. Being thus fituated directly to the Leeward of Barbadoes, it may in a few Hours be reached from thence, and is at the fame Time fo feated as to cover and connect the fmall Inands that lie between it and Grenada. It fretches in Length from South to North about Twenty-five Miles, and is about Thirteen in Breadth, in Circumference between Sixty and Seventy. In Point of Size therefore it differs but little from Barbadoes. The Clinate is very warm, at leatt in the Judgment of Europeans. The Country is in general hilly, in fome Places mountainous, but interfperfed with a Variety of pleafant Vallies, and fome large and luxuriant Plains, the Soil being every where very fer-

[^336]
## of GREAT BRITAIN.

tile, and the high Grounds are at leaft in general eafy of Afcent. Few $T \mathrm{~A}$ is of its Extent are fo well watered, for feveral Rivers run down from the Mountains, and fmaller Streams from almoft every Hill ; there are likewife feveral fine Springs at a little Diftance from the Sea. The Inhabitants raife all Kinds of Ground Provifions in Plenty, and with little Trouble. The Rivers fupply them with a Variety of Fifh, and the fame may be faid of the Sea that wahhes their Coafts. They have Abundance of excellent Fruits, and very fine Timber fit for almoft every ufe, and with which they formerly fupplied their Neighbours d.

The Freach, though they did not venture to raife Sugar, had feveral fpacious Plantations at the Mouths and on the Sides of the Rivers, planted with Cacao Trees, Coffee, Indigo, and fine Tobacco. There are feveral commodious Bays on the North Weft and South Weft Sides, and at the Southern Extremity there is the deep fpacious fandy Bay, formerly filed the Bay of St. Antonio, but now Kingfton Bay, where large Ships may ride commodioufly; and there is faid to be good anchoring Ground round the whole Inlang. It remained for a long Space of Time after it was difcovered by the Europeans the Head Quarters and general Rendezvous of the Caribs or Carailbs, who from thence made Expeditions to the Continent, and were alfo fometimes very troublefome to the adjacent Illands. Befides thefe there are another Race of People generally, though very improperly, filed Black Caribs, but who are in reality Negroes defcended, as is generally believed, from fome who efcaped out of a Guinea Ship wrecked upon the Coaft, and gradually augmented by fuch as from time to time fled thither from Barbadoes. Theie Nations were often at

[^337]
## 682 The POLITICAL SURVEY

War, but when their Quarrels were compofed they had a Strength fuf-. ficient to prevent Strangers from fettling by force $e^{\text {. }}$

The French about Halfa Century ago, at the Requeft of the Caribs, made a Defcent from Martinico and attacked the Negroes, but were repulfed with Lofs, and afterwards found it their Intereft to conciliate a Friendhip. with both Nations by means of Prefents, and furnihing them with Arms and Ammunition, which procured them the Means of making thofe Plantations that have been before-mentioned. Since it came into our Poffeffion, it hath proved as profitable, though not quite fo healthy as could be wifhed. But now that our difagreeable Difputes with the Negroes are over, it is to be hoped for ever, we may reafonably expect, that what. telongs to us in the Inand will be fpeedily and effectually cultivated; and as by this a free Circulation of Air will be promoted, the Climate become more wholefome. The Government is of the fan:e Form with that of our other Inands, but dependent upon the Governor and Captain General, who refides in Grenada. As to the Number of Inhabitants we have not poffeffed this or the other Intes long enough to have any diftinct Accounts, but competent Judges may frame a probable Conjecture from the Nature and Quantity of its Produce ${ }^{\text {F }}$.

Dominica reccived that Name from its being difcovered upon a Sunday, being fituated in the Latitude of Fifteen Degrees Twenty Minutes, to Fifteen Degrees Forty Minutes North, and Fifty-nine Degrees Thirtyfive Minutes of Longitude Weft from London. It lies in the very Midft

[^338]
## of GREAT BRITAIN.

of the French Inands, at the Diftance of Eight Leagues North by Wreat rom Martinico, about the fame Diftance South South Eaft from Guadalotipe; the fmall Inands called The Saints lying between them, Five Leagues Bouth Weft from Marigalante, about Forty Leagues North from St. Vincent's, about the fame Difance North Weft from Barbadoes, and about Seventy Leagues North and by Eaft from Grenada. It is fretched out from North Eaft to South Weft in the Form of a Bow, of which the Leeward Side, which makes but an indifferent Appearance at Sea, reprefents the String. A very noble Ifland it is, between Thirty and Forty Miles in length, about Fifteen in Breadth, and upwards of Ninety in Circumference. The Climste is remarkably warm even for that Part of the World, though the Air is very thin and pure, and the Country from thence reputed to be healthy. In its Appearance it is rough and mountainous more efpecially towards the Sea, but within there are rich and pleafant Vallies, and a few fine Plains s.

The Mountains are not fleep, and the Soil is every where a deep black Mould, wonderfully fertile, and not eatily exhaufted. There is in it a Sulphur Mountain, and One in which the French believe there is a Gold Mine. No Place can be better watered, as there are Thirty Rivers, one of which is navigable for feveral Miles. There are feveral hot Springs, which, if we may believe the Report of our own Countrymen, who made Trial of them a Century ago, are not inferior in their Virtues to thofe of Bath. Bananas, Potatoes, and Manioc, from which Caffada Bread is made, and which in theie Parts are ftiled Ground Provifions, are here in great Plenty and in their feveral Kinds are all remarkably good. All Kind of Vegetables they have in Abundance, the richeft Fruits particularly the fineft Pine Apples in the Weft Indies; inexhauftible Stores of Timber of all Kinds. Hogs wild and tame, Variety

8 This Inand was difcovered by Admiral Colambus on Sunday Nowember the 3d, A. D. 1493 ; but it does not appear that it was ever fertled by the Spaniards. The Accounts we had of it is former limes were but very iabifferent, from our being acquainted only with its Coults. The French took geat Care to dicy and mifreprcfer, it, as mountainous, barren, and a fit Habitation only for the sivages; thengh the more ancient Writers of their own place it in quite another Light, and at knowleiged it to he, what it really is, One of the faireft ind fineft llands in thefie Parts. The confant Comrefpondence lept up by the Inhabitants of Martinico with the Caribs in this llee emblal them to prepoffers thofe poor People with the mott dreadtul Ideas of the Englin; and Father Labar, after giving a molt unfavoarable linture of lominica, fags very ingenuouily, that infignificent as it was, the Englifh had made fercral Attenpts upon it, which they had ufed all imaginable Pains to fruftrate, as knowing the bad Cunfeguences that mult refult to them from our becoming poffeffed of this llle.

The Caribs here were formerly very numerous, and reputed the braveft and the moft robuft of any in the Ines. They are now much diminithed, of which the French taking Advantage, had fettled almoft all the Windward Coaft, and raifed in their fpacious Plantations, Cacao, Coffee, and fome Canes. At the North Weft End of the Inand there is a deep capacious fandy Bay, which from his Highnefs's anchoring in it for fome Time with his Fleet, hath born ever fince the Name of Prince Rupert. It is covered from moft Winds by the Mountains round it, and hath more than once been the Station of our Squadrons when in thofe Seas. There are befides many other Bays and Inlets, and very fafe anchoring Ground on the Leeward Side of the Ifland, notwithftanding the Infinuations of the French to the contrary, for which they had their Reafons. This, as well as the Illand of St. Vincent, was when firft ceded to us dependent upon Grenada, but is fince become a feparate Government and a free i'ort eftablifhed therein ${ }^{\text {i }}$.

The Ifland of Grenada, is, except Tobago, the moft Southern of all the Antilles, was difcovered by and received its Name from Admiral Columbus, who finding it Atrong by Situation and very full of People, made no Attempt upon it. It lies from Eleven Degrees Fifty Minutes to Twelve Degrees Five Minutes of North Latitude, though fome of the lateft French Maps place it from Twelve Degrees Five Minutes to

[^339]
## of GREAT BRITAIN.

1 welve Degrees Twenty Minutes, and in the Longitude of Sixty-one Degrees Weft from London. It is fituated about Eighteen Leagues South Weft from St. Vincent, Thirty-five from St. Lucia, Thirty-five Leagues South Wuft by Weft from Barbadoes, about Fifty Leagues South Weft from Martinico ; and between Sixty and Seventy Leagues South South Wea from Dominica, fomewhat more than Twenty Leagues North Weft from Tobayo, between Ninety and One hundred Leagues South from St. Chrift opher's, and about Thirty Leagues North from the Spaniih Main. In Length about Thirty Englih Miles, and Thirteen in Breadth according to the beft Accounts hitherto received. The Climate is certainly warm, bit fo tempered by the regular Returns of the Sea Breeze as to be rendered very tolerable. The Air is generally pure and ferene; and thou!h fuch as came firft were frequently vifited by a Kind of Fever, which however feldom proved mortal, yet as the Woods have been opened and the Country better cultivated this no longer excites any Apprehenfions, but when it happens is confidered as a temporary Inconvenience; to balance which, it is afferted, that the Seafonings, as they are called in the Weft Indies, are more regular here than in the other Iflands, the Blaft not frequent, though not, as the French Writers fay, altogener unknow.n, and as yet no Hurricane hath ever been felt k .

There is a Chair of Mountains, fome of them pretty high, which runs. from South to North, and in other Parts of the Illand there are Hills but of a very gentle Afcent, and confequently capable of Cultivation. Both the Mountains and the Hills are of great Utility, as from them larger and leffer Streams, feveral of which deferve the Name of Rivers, roll down in gentle Currents on both Sides the Inand. There are alfo Plenty of Springs, fome Salt Ponds, and a few Lakes, of which only Two are of any. confiderable Size. The Soil is of feveral Kinds, but chiefly of a deep,

[^340]
## 686 The POLITICAL SURVEY

rich, black Mould which is very fertile. There are large Woods of various Kinds of fine Timber, in which, while in the Hands of the French, there was a great Deal of Game. In refpect to Ground Provifons, Vegetables of all Kinds, rich Fruits, Animals, River and Sea "Fiih, it is inferior to none of the Illands. In reference to Protuctions that enter into Commerce, it was generally allowed, that whatever they were, Sugar, Cacao, Coffee, Cotton, or Tobacco, for all in their Turns have been raifed there, they were the very beft in their refpective Kiuds. It hath been afferted on good Authority that the tr:ie Cinnamon and Nutmeg Trees have been found in the Forefts, and the efore however neceffary it may be to clear the Country, the Wowds fhould be cut with Caution and under proper Infpection!.

But what adds exceedingly to the Worth of this Ine, and which, independent of all other Advantages, would have rendered it highly valuable, are Two very fine Ports, Calivenie at the South Eaft Extremity of the Ifland, which is fingularly fafe and fpacious, c.mpofed of an outward and an inward Harbour, the latter having Seven Fathom Water and a foft muddy Bottom. The other at the South Weft End is called the Carenage, the Harbour of Port Royal or the Old Port, always efteemed One of the beft in the Weft Indies. At the Entrance it is about a Quarter of a Mile broad, but fo capacious within as to hold with Eatic a Squadron of Twenty-five Ships of the Line, and fo covered as that they may ride with Safety in reipect either to Wind or Weather. At a fimall Diftance from this Port there is a very decp Lake of confiderable Extent, which by the cutting of a Sand Bank that divides them might be joined to the Harbour, and would then become as fine a Bafon as could be wifhed, and where ary Number of Ships might be very commodioully careened. As the Eaft Side of the Illand is the plaineft and beft cultivated, and as the Planters found the Conveyance of their Sugars to either of the Ports be-fore-mentioned attended with much Trouble and Expence, they were de-

[^341]
## of GREAT BRITAIN.

firous of finding fome Means to fhip them more commodioully. Our Seamen, to whom nothing feems impracticable, have accomplifhed this by venturing through feveral Reefs of Rocks into a Bay that lies very deep within Land, but is fo commodious for the Purpofe of loading Sugars as to become, notwithftanding the Difficulty of its Entrance, One of the moft frequented in the Iland, and which is now known by the Name of Port Grenville. With all thefe Advantages, and few Iflands can boaft fo many, the French were vcry long in Poffeffion of it before they made it turn to any Account, and this notwithftanding various Reprcfentations of the numerous Bencfis that might have been derived from it m . A Circumftance very fortunate for us, and which there is little Doubt that we dhall improve, and that ${ }^{n}$ a very high Degree.

Tifere fretches from the Northern Extremity of Grenada in a North North Eaft Direction a long Range of fimall Inands for the Space of more than Twenty Leagues. Thefe except the Round Inand are all but very little, having narrow Channcls between them, navigable only by Boats, and not always by them with Safety. The Indians called them Begos, the Spaniards Grenadillas, and the French the Grenadines, their Number is not very well afiertained, though it is generally agreed they are fomewhat more than Twenty. Small as they are, in point of Climate they are exceedingly pleafant, have a rich deep Soil, and are very capable of Improvement. The People of Barbadoes, though not without fome Hazard, vifited them formerly for the Sake of the excellent Timber that grew upon them.

Besides thefe there are Five other Iflands more confiderable in many Refpects. The Firft of thele, that is the neareft to Grenada, from which it is diftant only Five Leagues, bears ftill the Indian Name of Cariouacou, about Twenty Miles in Compafs, and by thofe who fhould be beft acquainted with it reprefented as One of the faireft and fineft Spots in this
${ }^{m}$ This Innd was upwards of a Century in the Hands of the French. 'They had their Views upon it early, but the Natives were then fo numerous, and fo moch upon their Guard, that they durf not atterapt it. At leng‘h Mr. du Parquet planned and eftablifhe i a Settlement, hasing finf paid a Comfideration to the Indians for their Confent. In the space of Seven Years he fold it to the Count of Cerallac for Ninety thoufand Livres. It was certainly a cheap Purchafe if it had been well manged. The Royal Company redeemed it. It was refumed from them, and made a royal Government; fo that in the fhort Space of Twenty-four Years this Colony was expofed to Two Maflicres by the Indians, Three lnfurrections amongit themfelves, and Five Rcvolutions in the Form of their Geivernment. At the Beginning of the current Century it was not in a much better State than when originally fettled. By Degrees, however, the Inhabitants buer, n to thrive, chietly by a clandeftine Trade with the Dutch, to whichthe French Government put an entire Stop ; yet even after this it is faid to have yieldes, in its moft fourifhing. State, not more than Tiwelve thoufand of their Hrafteads of Sugar annuarly.

## 688 The POLITICAL SURVEY

Part of America, enjoying a Climate equally wholefome and pleafant, Soil wonderfully fertile, abounding with valuable Timber, as well as fine Fruit Trees. But what diftinguihes it moft, and which induced more than One Recommendation to the French Court, is its having an Harbour as fafe, as fpacious, and as commodious as any that this Part of the World can boaf, and communicating by a narrow, though a deep Channel, with a Lagune, in which, without any Affiftance from Art, Ships may careen very conveniently, and which, its Situation confidered, cannot but draw our Attention. On the next of thefe lles the French have beftowed the Name of the Union, though in fact there are Two Illands, One Three and the other Two Leagues in Extent.' The Third is called Cannouan or Caouanne, a Word which the Fr-nch have adopted from the Indians, and which fignifies a particular Kind of Tortoife, of which there are or at leaft were Numbers, and thofe of a large Size, that went to lay their Eggs thereon. It is about Nine Miles in Length and Three in Beadth. The Fourth is called Mukito Ifland, nearly the fame Size, and diftant from the laft-mentioned about Two Leagues. Thetic are much of the fame Nature with thofe that have been already defcribed, and as for many Reafons they merit, fo there is little Reafon to doubt that in Procefs of Time we fhall continue to improve and reap confiderable Advantages from them n.

The Fifth and laft, which lies about a Mile from the Mukito Inand, and not above Two Leagues South Weft from St. Vincent's, is bequia; which as the French Writers affert, is between Twenty and Thirty Miles in Circumference. The French befowed upon it the Name of Little Martinico, becaufe infefted with venomous Serpents, a Circumftance peculiar to that Ifle and St. Lucia ; the Reptiles in the other Ifles, though fome of them efpecially in Dominica of a very large Size and difigrceable Appearance, yet are abfolutely harmlefs. In Point of Climate and Soil

## ${ }^{n}$ The Vigour and Induftry of our Planters hath been to the full as extraordinary as the

 Indolence and Want of Spirit in the French. For though we have been fo fhort a Time fettled here, thefe numerous Inands, of which they farce made any Ufe at all, have found Owners, and are either improving or improved. The Inet Rond, as the Vrench called it, or the Round Inand, is in the Hands of a Gentleman who propofes to ereet an Indigo Work there, with great Probability of Succefs. The greaten Part of that prodigions Quantity of Cotton annually exported hither, hath been raifed on Cariouaccu; for if I an rightly informed, there are but few Cotton Plantations upon Gremada. The reft are all turned to fome ufeful Purpofe or other, and without Queftion will be fill farther improved in Time. The Want of Water in moft of them, which the French confidered as an infurmountable Difficulty, will not appear fo to us, fince befides our own Mand of Antigua, and the Dutch Inand of St. Euftatia, there are feveral others fully inhabited and cultivated, norwithtanding this Defeet, and, which is ftill more, notwithfanding they are deftitute of many of the Advantages which thefe Inands poffers, more efpecially in regard tolPorts; for St. Euftatia hath nothing more than a Road; and this is likewife the Cale of others.this hath highly commended, as alfo for the delicious Fruits growing thereon, fome dyeing Woods which well deferve to be enquired after, and which is of fill higher Importance, a fafe and fpacious Port, of which the French made great Ufe in the laft War. It is on the other Hand faid that this Inand being almoft entirely flat, is from that Circumftance deftitute of frefh Water, which however we have reafon to conceive may by the ufual Helps be fully fupplied, fince the Number and Height of its Trees clearly fhews that the Seafons are regular, and the Rains copious. Thefe Ines and Incts, though already Objects of Attention, may in Procefs of Time, when all thel. Properties come to be thoroughly underftood, be found capable of being paverted to a Variety of beneficial Ufes, fuperior to thofe of which we havd at prefent any Conception, but which may be gradually fuggefted to the enterprizing Abilities of our Planters, affifted by the Lights continually.furnihed by Experience. This Sentiment is in fome Degree warranted by the numerous Advantages that are already derived as well as thofe that are fill expected from the Skill and Labour of our induftrious Countrymen in the larger Illand of Grenada 0 .

The laft of the ceded Iflands, though in a Courfe of Years perhaps it may not be found the leaft confiderable, is Tobago, difcovered, but does not appear to have been ever fettled by the Spaniards. It lies in the Latitude of Eleven Degrees Ten Minutes North, and Fifty-nine Degrees Forty Minutes Longitude Weft from London, about Forty Leagues South by

[^342]
# 690 The POLITICALSUREY 

Weft from Barbadoes, Thirty-five South Eaft from St. Vincents, Twenty South Eaft from Grenada, Twelve North Eaft from the Spanifh Ifland of Trinidada, and between Thirty and Forty North Eaft |from the Spanifh Main. According to the lateft Accounts we have received it is fomewhat more than Thirty Miles in Length from North Eaft to South Weft, between Eight and Nine in Breadth, and from Twenty-three to Twentyfive Leagues in Circumference $P$.

The Climate notwithftanding its Vicinity to the Line is fo tempered by Breezes from the Sea, as to be very fupportable evoni to Europeans, and hath the fame Advantages with that of Grenada iof having regular Seafons, and alfo in being exempt from Hurricanes. There are throughout the Ifland many rifing Grounds, though, except al the North Eaft Extremity, there is no Part of it that can be ftiled mountainous, and even there the Country is far from being rugged or impaffable. The Soil, if we may credit either Dutch or French Writers, is as fertile and luxuriant, if not more fo, than any of the lllands, and very finely diverfified. Ground Provifions of all Sorts have been raifed in the greateft Plenty, a vaft Variety of Vegetables excellent in their Kind, fome for Food, fome for Pbyfic. Almoft every Species of ufeful Timber is to be found here, and fome of an enormous Size, amongft others the true Cinnamon and Nutmeg-trees, as the Dutch confefs, and of which none could be better Judges. Whole Groves of Saffafras, and of Trees that bear the true Gum Copal, with other odoriferous Plants that render the Air wholefome and pleafant. As well watered as can be wifhed, with Rivers that fall into the Sea on both

[^343]
## of GREAT BRITAIN．

Sides，many fmaller Streams，and fine frefh Springs in almoft every Part of the Illand．The Sea Coalt is indented by Ten or Twelve fair and fpacious Bays，and there are amongft thefe One or Two Ports capable of receivingtas large Ships as ever vifited thofe Seas．Wild Hogs in great Plenty，Abundance of Fowls of different Kinds，and a vaft Variety of Sea and River Finh．With all thefe Advantages it may be fafely concluded， that with proper Cultivation this for its Size will be rendered as lucrative as any of our Poffeffions in America，and what gives greater Weight to this Affiction is，that during the mort Time the Dutch were poffefied of it， this Character of Tutiate was fully juftified by Experience q．

In the mountainous Part near the Sea there are a few native Indians fettled，who are as quiet，Marmlefs，and docile Creatures as can be ima－ gined，fo that if they fhould be of no Service，it is certain they cannot give us the leaft Umbrage．At the North Eaft Extremity lies Little Toba－ go，which is Two Miles long，and about Half a Mile broad，very capable of Improvement．It is indeed amazing with what Alacrity and Suc－ cefs the fettling this Ifle hath been carried on，and how great a Progrefs is already made not only on the Coaft but through the whole interior Part of the Country，to which the numerous Bays，wherein Ships may load and dicharge their Cargoes with perfect Eafe and Safety，have not a little contributed，infomuch that if our moft recent Informations may be depended upon，there are upwards of Forty Sugar Eftates on the Inand，and others are daily forming，fo that in the Space of a few Years there is the

[^344]greatef Probability that its Produce will be-equal to what is received from fome of our Leeward Inands r.

The Profits that have already arifen, and which may be corifidered as the Earneft of what we may reafonably expect, though very confiderable, are not the only Advantages that accrue to us from thefe new Settlements. Befides thefe they have clearly added to us, an Extent of Territory nearly equal to all that we before held in the Weft Indies, and at the fame Time have connected, and thereby ftrengthened the feveral ynands we formerly poffeffed. This was become abfolutely neceffary toour Security againit the fuperior and increafing Strength of the Frencf: At the fame Time thefe Acquifitions may with great Propriety be $\%$ ooked upon as taken out of the Scale of their Power, as well as added co ours, fince it hath been very fully fhewn, that in a very fhort Space they would have imperceptibly gained and fettled thefe very Iflands for themfelves. But neither are thefe Advantages all that we have reaped, of which we muft be convinced if we reflect on the Situation of fome of thefe Illands, and the Confequences that muft neceffarily arife from thence. Dominica when fettled will be a perpetual Check upon both Martinico and Guadaloupe, give us timely Nutice of any hoftile Preparations made in either, and by fending a Squadron into Prince Rupert's Bay we thall be effectually able to awe both. In like Manner St. Vincent is a Check upon St. Lucia, and the Former of thefe Illands in cafe of Danger may receive fpeedy and fufficient Succour from Barbadoes. The fafe and commodious Harbour of Port Royal, now St. George, in the Inland of Grenada, is fo feated as to command the Paffage of the Spaniih Galleons in cafe of a War or the Apprehenfions of One. Taking therefore all thefe Circumftances together, it muft appear to every candid and intelligent Judge that our Condition in this Part of the World is inexpreflibly mended by the Ceffions procured to us by the laft Peaces.

[^345]
## of GREATBRITAIN.

In order however to render thefe Places as foon and as effectually beneficial to this Country, by the Arms of which through the Bleffing of the Divine Providence they were acquired, fome falutary Steps may be requifite, afd polfibly amongft them thefe. An immediate adopting that Conititution which hath been fo vifibly ferviceable to Barbadoes, the granting Lands in fmall Parcels to Tenants on Condition of their ferving in the Mifitia. This would contribute to eftablifh fuch a Force, as feems to be peculiarly proper for Inands in their Situation, and would at the fame Time procure $\mathcal{H e n t w}$ 和 Provifions, for the raifing of which fuch fmall Parcels of Land re witally applied. It would facilitate alfo an Increafe of white Inhabita $s$ s, and retaining them in the Countries where they were fettled by the resureft Tie, that of their own Intereft, and at the fame Time excite a Reddinefs from the fame Principle to take up Arms in its Defence. It might be alfo proper to erect in the Center of each Ifle, or in the Place beft adapted for fuch a Purpofe, a frong and capacious Fortrefs, to which upon any fudden Invafion the People might carry their moft valuable Effects, which once done, and the Women and Children being likewife fent thither, they would have both Leifure and Spirits to repel the Enemy, or fo to harrafs and fatigue them as to afford Time for obtaining Succours from other Settlements. It might be alfo expedient to lay out a public Garden in eaction of them like that at St. $V$ incent, which would have many good Confequences, fuch as the acquiring a perfect Knowledge of the Nature and Qualities of the Trees, Plants, and Vegetables of every Kind, the Fitnefs of the Soil and Climate for introducing Exotics of every Sort, and by a Variety of Experiments of their Utility in Food, Phyfic, Dyeing, and other Arts, lead to the augmenting the Commodities that might be exported to Profit. To this we may add, that fuch an Eftablifhment could not fail of raifing a fcientific Spirit that would have innumerable good Effects there, and meet with conftant Encouragement and Support from hence ${ }^{\text {t. }}$

This
Profits of our old Colonies. We have not yet a Redundancy of Sugar, and if we hould have, it would be an evident Advantage by increaling our Exportation. Befides from the high Prise of Lainds in fome of our Illands, and from Caufes that need not be mentioned in others, Numbers of indelltious People had removed to the Dutch Illands and to their Settlements on the Cintinent, to fay nothing of Santa Cruz, in a great Meafure inhabited by our Subjects under the fiotcetion of the Crown of Denmark. It is true that fome Inconveniences may have arifen from the Expences attending the fettling of the new Illands, and from the Advance in the Price of Negroes, but thefe are only temporary Evils, which in no long Space of Time will be overcome.

- Thefe Regulations were the rather mentioned in the Text, becaufe if they are not early introduced, there is too much Reafon to fear they will never be introduced at all. This would be a great Misfortune, becaufe nothing can be more obvious than their Utility, more efpecially if

## 694 The POLITICAL SURVEY, \&c.

This arduous Taik is at length accomplifhed, and it may be permitted to fay that even this very fuccinct Inventory of our different Poffeffions, for fuch it is, and is given for no more, fufficiently fhews the Extent of the Britifh Empire, and the Grandeur to which it is arrived. This to a candid and confiderate Reader will appear the cleareft Demonftration of the Excellence of that Conftitution, by which fuch amazing Effects have been manifeflly produced. By this as it was acquired it hath been alio hitherto upheld, and as far as human Forefight can difcern will continue to fubfift fo long as that Conftitution fhall retain its $V_{j g o u r . ~ A n ~ A r g u m e n t . ~}^{\text {in }}$. furely of all others the ftrongef, for our warm-and feady Adherence thereto, as that upon which our all, and how reat an All this is, this Book hath in fome Degree explained, muft eyer depend. It is true the Foundation is wonderfully wide, and the Superftructure raifed thereon as wonderfully fuperb, but the fame Power that with the Affiftance of Providence raifed, will be undoubtedly able through the fame Affiftance to fupport it, if we are not wanting to that and to ourfelves in the Exertion of Unanimity and public Spirit, which having fuch Encouragement to Perfeverance, we cannot from fo brave, fo generous, and fo enlightened a Nation as this, have any Occafion to fufpect.

- BOOK VI. <br> The Commercial Interefts of Great Britain.
}

## C H A P. I.

A general View of our Traffic with foreign Countries.
THE Scope of this Book is to give a comprebenfive View of our Traae in all its Branches. The Nature and State of our Intercourfe with Rufia. Our Irade with Sweden and the Occafion of its Decline. Our Commerce with Norway and Denmark confidired. The State of our Traffic with the Jeveral great Cities in Germany. The Nature of our Intercourfe with the Auftrian Netberlands. The Commerce between Great Britain and tbe United Provinces impartially confidered. Our paft and prefent Intercourfe with France fiated in the like Manner. The former and prefent Condition of our Traffic with Spain, with Remarks. Our Commerce zoitb Portugal The Trade between Great Britain, Africa, and ber Colonies explained in the former Book. The Fame and Reputation of thefe Nations diffifed by our extenfive Commerce tbrough all Parts of the World. This is likewife the great Source of national Wealth, and is alfo in many'ptber Reßects the Foundation of national Happinefs.

THE Pains that on every Occafion have been faken in placing the numerous and invaluable Advantages arifing from Commerce to this Nation in the fulleft Point of View through gery Part of this Work, makes it unneceffary to enter here into minue Details on this very important Subject, which could only lead to the Repetition of Things that in their proper Places have been explained alicady. What is ftill wanting is to.collect into a narrow Compafs a general Profpect of our extenfive Traffic, that we may from thence form clear and diatinct Ideas of the Ufes that have been made, and the Benefits that have been drawn from the many favourable Circumftances thefe Iflands poifefs, for maint lining 2 great and permanent Maritime Power, founded upon our univerfal Mercantile Correfpondence through all Parts of the known World ${ }^{-}$.

To begin then with the Northern Nations.
Our Intercourfe with Ruffia hath fubfited long, and been fubject to many Revolutions, that is, in different Periods we have had greater or lefs Connections therewith, have fometimes fent morc at others fewer Ships thither than other Nations, but in no Period fo many as at prefent. We export thither Woollens of various Sorts, Silks, Paper, Mercery, Hard Wares, Arms, Powder, Lead, Pewter, Herrings, Coppras, Dyeing Woods,

[^347]
## of GREAT BRITAIN.

Sugar, Pepper, and many other Things. We import Cordage, Tallow, Skins, Furs, Pot Ahh, Iron, Copper, Hemp, Flax, Linfeed, coarfe Linens, Sail Cloth, \&c. in confequence of which the Balance againft us is very great, greater indeed than with any other Country. But it by no means follows from hence that this is a detrimental Trade, it is in Truth quite the contrary for we import no Luxuries from thence. The Naval Stores are requilite (fupport our Shipping, and the Freight we receive fromForeigners goes a grea Way in diminifhing this Balance. This Trade being carried on in bulky Commodities increafes our Navigation and the Number of our Seamen. Befides this many of our Imports from thence are manufactured here and re-exported. The great Profit that Rufiia derives from us makes her a natural and uleful Ally. But notwithfanding all this it would be highly beneficial to us if we could raife more of thefe naval Stores in our Plantations, or excite the Inhabitants of the Weftern Illands of North Britain to cultivate Hemp in large Quantities, for which their Soil is exceedingly proper, and as we have elfewhere fhewn, no Hemp whatever is preferable to our own ${ }^{\text {b }}$.

Sweden is a Country with which we had formerly much larger Dealings than we have at prefent. We continue to export thither fundry Kinds of Woollen Goods, wrought Iron and Brafs, Paper, Pepper, and different Jrugs. On the orher Hand we bring from thence Iron, Copper, Plank, and other Naval Stores, and thefe in fuch Quantities as to create a confiderable Balance againft us. But as we obierved before, thefe are Neceffaries not Luxuries, fo that the Lofs is the lefs to be regretted, though heightened by the Swedes fending moft of thefe Goods in their own Veifels, by which the Freight is added to the Price. The Decline of this Trade the Swedes owe to their own Conduct by raifing the Price of their Pitch and Tar, and putting us under other Hardhie's, which induced us

[^348]to take thofe Steps, that by procuring thefe Commodities from our own Colonies have delivered us from this Inconvenience. This Behaviour ought to be a warning to other Nations and to ourfelves, for fuch unreafonable Impofitions, though they may be attended with temporary Advantages, cannot but prove detrimental in the End c.

Our Commerce with Denmark and Norway is as ancient as afik We export fome coarfe Woollens, Herrings, Paper, Pepper, an different Kinds of Drugs. On the other Hand we import Fiy. Timber, Deals, Spars, Iron, and other Naval Stores in great Quantizes, by which there is a large Balance againft us, and this is alfo enhanced by their bringing thefe Commodities in their own Ships. Yet thefe are Neceffaries likewife, though undoubtedly it is not neceffiry that we fhould deal with Foreigners in preference to our Subjects in the Colonies from whence we might be fupplied, which is a Thing that cannot be too often repeated, while the Evil which occafions thefe Repetitions continues to fubfift d.

Our Intercourfe with the Trading Cities of Germany, Hamburgh, Lubeck, Dantzick, Koningiberg, Elbing is very confiderable. We export to them Woollens of almoft evcry Sort, Tin, Lead, large Quantities of Eaft India Goods and Manufactures, and many Commodities from our Plantations. We receive in return Plank, Kid Skins, Linnen, Linnen Yarn, and many other Articles. Thefe great Cities by the Means of large Rivers diftribute what they takc from us through Germany, Poland, Pruffia, and other Countries, to a very great Diftance, by which they acquire much Wealth, and their Demands for the Goods which we have befiori-

[^349]mentioned

# of GREAT BRITAIN. 

mentioned are continually increafing. It would however certainly be a great Advantage to us, if by encouraging the Linnens of Great Britain and Ireland we could leffen their Importation, as this would not only find Employment for our induftrious I'oor, but alfo contribute to heighten the Balance in our Favour, a Point that certainly merits the greateft Attentionc.

With thanfrian Netherlands we have, and have had for fome Ages a conftant and vermconfiderable Intercourfe. We export fome Woollens, Grogram:, Cotton, Herd Ware, fome Silk, a great Deal of our Plantation Produce, and large Quantities of Provifions, efpecially Butter from Ircland. On the other Ftund we import Lawns, Laces, Threads, Tapes, Tapeftry, \&c. this employ very many Ships, a great Number of Sailors, and not a fev Manufacturers, which are Circumftances certainly in our Favour. But as many, if not moft of the Goods we receive are not Neceffaries, it ought to induce us to take every Method poffible to raife our own Manufactures of the fame Kind, which would gradually contribute to enhance the Balance in our Favour :.

Our Commerce with Holland hath been long very great, and continues increaling. We expurt thither Woollens of almoft every Kind, Leather, Coals, the Produce of our Plantations, and many of the Commodities and Manufactures that we bring from the Eaft Indies. Our Imports confilt in fine Hollands, Thread, Spices, Rhenifh Wines, Battery, Madder, Wainficot, Clapboards, \&cc. It is on all Hands allowed that we have a large Bal.ance in our Favour. It hath been faid, and faid with Truth, that notwithtanding what we gain from the Dutch they derive great, perhaps greater Profits from this Trade than we, by fending what they

[^350]purchafe into other Countries. There feems however to be no Caufe that we fhould repine at this, for what accrues to us from the Sale and Freight of our Commodities is the fame, let who will confume them. In truti, inftead of Complaint it ought to furnifh us with Grounds of Stuisfaction, fince it is an experimental Proof, that a Nation, inftead of being impoverifhed may be enriched by trading with another Nation, though in the Firft Infance the Balance is againtt her, and thercfore it gives his juft Reafon to hope that this may happen to ourfelves in other cades s.

France is a Region that not only furnihes the Neceffaries and the Conveniencies, but abounds alfo with what may be truly ftiled the Luxuries of life. Our Commerce therefore with the French/ath been always, and that juftly an Object of Jealoufy. We export to them Flannels, a very feiv Woollens, Tin, Lead, Coals, Tobacco, Alum, Lanthern Leaves, Druge, and fome of the Commodities of the Eaft Indies. On the other Hand we import Wines, Brandies, Lace, Lawns, Cambrick, Brocades, Pruncs and other Fruits, with a Variety of other Articles. It is evident therefore that dealing with them for Articles of Luxury moflly, it is not to be wondered that the Balance is againft us. But ince Dunkirk hath been made a free Port, and we have exported Cambricks when printed, fent over fuch large Quantitics of Tobacco, and taken lefis of their Wines and Brandies, it is probably lefs detrimental than formerly. However if we confider the Practice of Smugling, there is no fpeaking pofitively to this Point. Our greateft Security would be following the Example of the French, in taking from them as they do from us fiuch Things only as we cannot do without h .

[^351]
## of GREAT BRITAIN.

Spain is a noble and extenfive Kingdom, with which we had larger commercial Dealings formerly than of late Years, and many Errglifh Houfes of great Reputation were fettled in the principal Ports by eminent Merchants who lived in great Credit and Efteem. We export Woollen Cloths, Stuffs, Hats, Silk and worfted Hofe, Leather, wrought Iron, Brafs, ${ }^{3}$ eter, Tin, Lead, Copper, Sail Cloth, Linnens printed and plain, Clock Wurk, wrought Silk, Cordage, Glafs, Copperas, and a great Variety of Plarsation and Eaft India Commodities. We import from thence -Wine, Oil, Silk (Fhen the Extraction of that Commodity is permitted) Iron, Wool, Indigo, Barilla, Kelp, Cochineal, Cork, Kid Skins, and a great Varisty of Fruits. It is plain from hence, that from this Intercourfe both Nations are raciprocally benefitted. We are by far the beft Cuftomers the Spariards have, indeed, except to Holland and Germany, they fend their Commodities no where clie, and on the other Hand they have ours on the moit moderate Terms. We have ftill a confiderable Balance, but fome competent Judges have thought this Trade might be again put into a better State, than that in which it now ftands i.

Portugat owes more and more recent Obligations to us than any other State in Europe, of which at the Eeginning of the current Century they feem to have had a truer and ftronger Senfe than at prefent. Our Exports confitt in Woollen Cloths and Stuffs of different Kinds, Hats, Hole, Iron, Brafs, Lead, Pewter, Sail Cloth, Linnen, Glafs, Cabinet, Turncry, and Millenery Wares, Gunpowder, Cordage, Clock and Watchwork, wrought Plate, Leather, Drugs, and a great Variety of other Articles, more efpecially from our Plantations. We import Wines, Oils, Almonds, Railins, Canes, Cork, Fruit, and Salt. The prevailing Opinion is that we draw a great Balance from thence, we certainly did fo formerly, but things have beer very much altered in lefs than Half a Century. It was always and is fill trac, that we take more of their Coms
them in that Country. From thele and other Cavfes our Demands for French Commodities have heen very much leffened. But notwithtt:nding this the Principle advanced in the Text is perfeetly well-founded, and we have fill juf Reafon to be jealous of a Commerce that fupplies us only with Laxuries, and litl greater Re.fon to guard by every poffite Niethod agairift their being brought in clandefinely to the Derriment of the Revenue, as, well as the public Intereft in many other Refpects.
${ }^{\text {i }}$ A judiciuus Hiftory of our Intercourfe with Spain political and commercial wond boof very great Uite, and rectify many Miftakes which otherwife perhape may never be cured. It is very cvideut that the Interefts of both Nations are very compatible, and it might te very cati'y. Sown, that in confequence of this a flrict Friend hip between them would contribute to their mutual Advantage, and on the other Hond, that any Mifunderflanding benven them muft te exceedingly detrimental to both. As Things ftand at prefent this Tride is ftill very valuable; though nor in fo high a Degree as it was. But by pruden: Mauagement, and a little Forbeara ance on both Sides it might be made muth more fo than it is.
modities than all the other Nations of Europe, and that if we did not take them they would find it difficult to difpofe of them elfewhere, whereas there are few or none of them with which we might not be fupplied on as reafonable Terms from other Placesk. Under the former Article the Canary, under the latter the Madeira Illands are included.

- Italy is a very fpacious Country, and hath fome valuabl) Dependencies, abounding with a Variety of rich Commodities, 2 inhabited by an intelligent and commercial People, with whomy" have always had, a great Intercourfe. The great Cities of Turin, Milan, Bologna, Parma, Lucca, and feveral others, though within Land, drive a very great Trade by the Means of different Ports, fuch as Nice, Genoa, Leghorn, Ancona, Venice, Naples, and in Sicily, Meffina, Palermo, \&c. Our Exports confift in Woollens of every Kind, Hats, Hofe, Silk mixed and wrought, Leather, Pewter, Brafs, Tin, Lead, Lanthern Leaves, Bugles, Glafs, Earthen and China Wares, Pipes, wrought Plate, feveral Sorts of Pinh, and a great Variety of Plantation and Eaft India Commodities. We receive in return Silk raw, thrown, and wrought, Oils, Wines, Currants, l'aper, Marble, Rock Alum, Vermicelli, Coral, Cotton, Goats Hair, and Skins, Soap, Sulphur, Drugs of different Kinds, and many other leffer Articles. Many of thefe are neceffary in our Manufactures, fome of them abfolutely fo, as to what may be ftiled Luxuries, they do not amount to much, and ate paid for in our own Goods. The Balance may be and probably is againft us in fome Places, in others for us, and we have, it is belicved, a general Balance upon the Wholel.

[^352]
## of GREAT BRITAIN.

The Commerce of the Levant is under the Direction of the Turkey Company, erected by Queen Elizabeth, confirmed by her Succeffor King James, regulated by Charles the Second, and altered by a late Act of Parliament. 9 This is not a joint Stock Company, but rather an Affociation of Merchants trading under certain Rules and Reftristions of their own framing, and for a long Series of Years confidered as the moft refpectablep 4 ercantile Body in the Nation. We export Woollens of all Sorts, 'Tin, Dad, Leather, wrought Iron, Glafs Wares, and large Quantities of Plantation and bint India Commodities. Our Imports confill in raw Silk, Grogram Yarn, Cotton and Cotton Yarn, Wool, Goats Hair, Dyeing Goods, and a Varicty of Drugs. It is obvious from this very fuccinct Account, that no Branch of our Trade can be more beneficial than this, as it carries out only Commodities and Manufactures, and as we receive in return no Luxuries, but on the contrary Staples that empley the Induftry of our own People. It is however afferted, that the French by their Addrefs, and by their favourable Situation for thi Commerce, have in fome Meafure fupplanted us, but it is fill hoped that by the neceffary Affiftance of the Legifature, and the known Abilities of our eminent Merchants, the Splendour of this Company may be again reftored m .

1. refpect to our Intercourfe with Africa, the Eaft Indies, and our Plantations, the beft Accounts have been given of them that lay within the C'ompats of our Abilities, or the Reach of our lnformation, and upon the Whole the Reader cannot but perceive with Fleafure, that whatever hath becn advanced in this Work in reference to the wide Extent of our Commerce, is ftrictly true, and that no Nation at prefent can with any Degree of Juftice be thought our Equals therein. But though this gene-
[^353]
## 704 The POLITICAL SURVEY

ral Reprefentation, founded as it is on particular Inftances, might poffibly fufice, and make an Inipreffion fufficiently ftrong upon fuch as ase acquainted with this Subject, yet for the Sake of others not fo converfant therewith, it may not be amifs, the great Importance thereof conlidered, to defcend a little farther into the Matter, in order more effectually to difplay, and more clearly to afeertain the great and numerous Bencfits ariling from it.

As it is the immediate Balfis of our Correfpondence emith other Countrics, it affords them in the fereral Specimens of our Commodities a certain Degree of Knowidge of thete Inands, the Fame of which hath reached the mofi ditant l'arts of the Globe. By the Salue of our Cargres we rate our Credit with the Inhalitants. Through the Advantages they seat irom our Dealings with them, they are induced to court our Fawner, and to preferve our Friendhip; ; wore Cand ar and Jutice, and our being known to have none but connercial liews we conciliate their Eifeem, while our maritime Fince cocites that Refoct which is fo neceflary to maintain it. Thefe are losists of the highett Confequence to a Nation, and are cleariy in our Pestition.

Bur there is another $S_{\text {pecies of }}$ Power which we caive from the fame Source, and that is our national Wealth. This will i:contethally appear if we contider the Condition we wore in and the figure we made before we became comiderable for our foreign Commerce, to which from the Perulal of the former Books the Reader can be no Stranger. It in to this that we owe the Improvement of our Lands, the Increate and Varicty of our Produce, the Rite of Rents, and that Spirit of Cultivation, fur which, as a People, we are diftinguihed. It is no leis evident from the Increaie of our Cities, Towns, and Ports, the Beauty, Convenience, and Elcgance of private as well as public Struatures, and the rich Furniture with which they are adorned. It is confpicuous in our Magazines of contly Goods, in the Quantity of nur Plate and Jewels, as well as in the Treaiure we poffifs, and the low Rate of Intereft, all of which have been the gradual Confequences derived from, or Benefits continually furnifhed by our Commerce ${ }^{\text {n. }}$.

[^354]
## of GREAT BRITAIN.

Therz are fill perhaps better Effects flowing from the fame Caufe, that is, the general Change of Circumftances in refpect to Individuals. We are no longer divided into great Lords and mean Vaffals. Riches acquired by Traffic being more equally difperfed are better employed, and confequently thake more People happy. The Support of Commerce is Induftry, the Spirit of Induftry is the Refult of Freedom. The Security of Propers \% ${ }^{*}$ roduces Independency, and the Confcioufnefs of this, and that it is derived hzom and depends upon our Conftitution, is the genuine Characteriftic of pubte: Spirit. It is true that this great Fabrick does not reft entirely upon foreign Trade, but derives likewife no inconfiderable Strength from that which refults ftom the Intercourfe between the Inhabitants of the different Parts of our own Dominions, as will appear in the fubfequent Difcuffion of this Subject.
computed from thefe mnft be indecifive. The Rate of Exchange, which hath been called a commercial Barometer, would be really fo, if Commerce only operated upon it ; but this not being the Cafe, it can be no Rule at all. The Cuftom-houfe Books, though very ufeful, are yet no unerring Guides; whatever is fmuggled does not appear, fome Exports are beyond the Truth, and fome Things are not rated at all. The Plenty or Scarcity of Money cannot for many Reafons be relied on; and yet the Judgments formed from One or more of thefe have mif. led feveral inquiftive Perfons, and have, according to their refpective Prejudices, excited the monf fanguine Notions in fome, and produced deep Defpondency in others. A due Senfe of this prevented the inferting any Calculations in this Chapter, confiding rather in thofe Signs mentioned in the Toxt, as being level to every One's Underftanding, and the Truth of which are too notorious to be controverted. Our Foreign Trafic hath been for a Series of Years increafing ; if the general Balance had been againf us we muft by this Time have been brought very low, if not totally undone. But as every Thing we fee proves the contrary, it may lerve to convince us, and this the rather, becaufe Foreigners fhew their Senfe of the Matter by the Sums they entruft in our public Fiunds.

## C H A P. II.

## Of the Coafting Trade, and of that between Great Britain and Ireland.

Gencral Reprefentation of the national Advantages that arife from the Coaft Trade. The Bafis of this, the bappy Diftribution of the various Productions through different Parts of thefe IJands. By tbis Moae of Communication they are all brougbt into a confant and continual Circulation. Tbis Circumfance promotes Indufiry equally, effectually, and univerfally. Becomes thereby a principal Infrument of national Felicity. The Conflruction of Coafling Veffils afords Employment and Subffience to Multitudes. The VoL. II.

## 706 The POLITICAL SURVEY

Force of tbis Reafoning no Way impeacbed by the acknowledged Incertointy as to the Number of thefe Veffels. The Seamen they breed may be juffity conm Gidered as a Naval Militia maintained witbout any national Expence. The Intercourfe between Great Britain, Ireland, and the Coaft Trdłe of both a Matter of great Confequence. T'be promoting a general Correfpondence betveen tbefe and tbe leffer Iflands depending upon them, a Pdigt of great Utility. Tbe Connection between Foreign Commerce and tb)s Coafting Trade fated and explained.

AS thefe Inands are moft admirably feated for embracing a conftant foreign Commerce to all Parts of the World, fo their Form and Difpofition is at the fame Time the moft favourable that can be wifhed for the carrying on a Coafting Trade, the Nature, Importance, and Confequence of which it is our next Bufinefs to explain. If we confider them in this Point of View we Phall difcern that the Bays, Creeks, and Mouths of Rivers are molt commodioully fituated on both Sides of both Inands, at convenient Diftances from each other, which is of inexpreffible Benefit to fmall Veffels. What is ftill a greater Advantage is the very large Extent of our Coafts, the peculiar Prerogative of infular Situations, which we have taken fo much Pains in different Parts of this Work to render evident. Thefe fignal and fingular Bleffings of Providence naturally invites, as well as facilitates to an intelligent People who poffers them, the correfponding with each other by Sea. By this Means an eafy and conftant Communication is preferved to the Inhabitants, who with Veffels of different Sizes, and conftructed for different Purpofes, make longer or horter Voyages according as their Occations require, and thus with little Rifk and Trouble, without hearing fo much as the Sound of a foreign Language, or being out of the Protection of their own Laws, Multitudes are fupported, and very many of there acquire eafy Fortunes, by the Profits arifing from their Induftry in the Management of domeftic Traffic ${ }^{2}$.

[^355]This Subject, fimple as it feems, cannot be developed to fuch a Degiet às it deferves, without much Attention and Pains. The Bafis of thofe Benefits we derive from it is the very great Difference in the Soil and Clingate of the different Parts of thefe Iles, which may in this Refpect be konfidered as fo many different Cauntries. The Products and Commodities that are extremely common in fome of them, are in others not to de met with at all. A proper Senfe of this, and a juft Defire to make a fight Ufe of it, naturally dietated the transferring Commodities from One Pari of the Illand to another. In early Ages, however, this from various Caufes was very much confined. For before Genius had invented and Induftry perfected many Arts, or thefe Ilands were united under One Monarchy, this Intercourfe was often interrupted and always incomplete, and of courfe its Effects lefs confiderable. But by Degrees as thefe. Obftacles were fuccefively removed, its Advantages grew more confificuous, from whence Improvements were continually made, and its Progrefs greatly increafed, till in our Days it hath reached to a fupendous. Height, notwithftanding which it is daily extending. For where Profit invites and Example points the Way, Bounds are not to be fet, fo that probably Pofterity, when comparing the State it may be then in with what it is now, will look back upon us with the very fame Sentiments that we do upon our immediate Anceftors b.

The Carriage by Sea, wherever it is any Way pradicable, is pregnant with many apparent, conliderable, and growing Advantages, being eafy, fpeedy, cheap, regular, and in our Seas always free from Ice, conftant and open. In confequence of fo many favourable Circumftances we fee Wares of every Kind brought with the greateft Facility from Places very diftant, and by this Means thofe to whom they belong contract an Acquaintance, and the Knowledge is thereby fpread of the Commodities of which they are poffefled, and thofe Wants they defire to have fupplied, whence it hath arifen that we now receive many Things from different remote

[^356]
## 708 The POLITICAL SURVEY

Parts of our own Dominions, with which, when this Communication wazs lefs extenfive, we were furnifhed by Foreigners. To the fame Caule we owe that whatever is of any Ufe or capable of being any where converted to Ufe, wherever it lies, is fooner or latter brought to Market, ant finds in Time its proper Value, which otherwife from being unknown night for ever have continued neglected $c$.

All the various Products, Commodities, and Manufactures of this moft rich and plentiful Country are happily diftributed starough all its feveral Parts, as much as may be on account of faving Expence, by the Help of coafting Veffels of different Forms and Sizes. The Counties beft adapted to grazing, wherever fituated, furnih immenfe Quantities of Butter and Cheefe. Thofe again that abound in Pafture, afford Wool. Arable Lands fupply Corn, Flour, Meal, Malt, Hops, \&c. The raw Materials are conveyed from the Places of their Growth, to thofe in which from the Cheapnefs of Provifions or other Circumftances, they are wrought up. In the like Manner, Things of daily Confumption, fuch as Timber, Stones, Bricks, Iron, Tin, Lead, and Copper, all bulky Commodities, afford conftant Loadings. Befides thefe there are many neceffiary Articles, fuch as Salt, Coals, Lime, \&cc. which being in continual Demand, are continually tranfported. Thus as in the Commerce of the Univerfe the Superfluities of One Region adminifters to the Wants of another, and where Induftry is not deficient, Abundance is communicated to all d.

[^357]This Ditribution of Nature's Benefits is fo far from being an Inconveniente, that it is in many Refpects highly beneficial to the Public. For by this Means every Country purfies that Mode of Improvement and Cultivation which is moft fuitable to the Soil and Climate, and for thefe Reafons moft dafy and agreeable to the Iuhabitants, which contributes equally to Plenty and to Perfection. This accumulated Stock being fent to different Places, brings in Return all thofe Neceffaries and Conveniencies which no fingle Spot however fertile could have fupplied, and Induftry is by this Meang uiniserfally excited and fupported, through that general Circulation which this Coafting Trade maintains, and which is in itfelf a moft uferul and extenfive Branch of Induftry, and at the fame Time the Source of many other Branches, productive of numerous Emoluments to the Community, and therefore it is neceflary, in order to fet this Subject in its proper Light, to take fome Notice of thefe e.

The Conftruction of thefe Veffels require a Variety of Materials, Commodities, and Manufactures, fome of them brought from a confiderable Ditance, and fome that have paffed through and given Employment to feveral Hands. For before they can be put upon the Stocks there muft be a Provifion made of Timber, Plank, Iron-work, Hemp, Flax, Tar, and leveral other Things. The Affiflance then becomes requifite of Carpenters, Joiners, feveral Sorts of Smiths, Painters, Sail-makers, Rope-makers, Ancho--finiths, and other Artificers, and when thefe have done their Work, and the Veffel is fit for Sea, the Butcher, Brewer, Baker, Ship-chandler, and other Tradefmen contribute their refpective Wares to fit her for the Voyage. It is eafy to apprehend from this, that in Places where a

[^358]
## 710 The POLITICAL SURVEY

Number of thefe Veffels are built, Multitudes of People are employed and their Families fubfifted, as every One knows who has vifited-fach Places or feen the Builders Yards in fomè of our great Ports ${ }^{\text {s }}$.

These Obfervations will at leaft enable us to form a general Nofon of the Nature of this Trade, which will be fufficient to convince us of its Importance to the Public. It would certainly put this more in our Power, if we could affign exactly the Number of Veffels that carry it on in Great Britain, Ireland, and the Hlands dependant upon them. But wherfft is confidered, that on the one Hand their being exceedingly numerous is a Fact indifputable; and that on the other they have been progrefively increafed, and are continually increafing, is a Thing not to be denied; it is evident from thence that all Computations on this Head munt be indecifive, notwithftanding the Facts before ftated, on which the Argument is grounded, are abfolutely certain. Some, and thofe alio very competent Judges, have advanced as probable at leaft, that about One hundred thouland Seamen are employed in the Coafting Trade; and though this may pofibly be beyond the Truth, yet, if we comprehend Bargemen, Keelmen, \&c. they might fwell to a much larger Number g. All thefe maintain themfelves and their Families comfortably and creditably by their honeft Labour, in which, as well as in other Refpects, they ought to be regarded as very uiciul Micmbers of the Community ; a Character very refpectable in a free Country.

[^359]But this Body of Men will appear of much higher Confequence, if we look upon them in another Point of Light. They may with great Propriety be fited a National Naval Militia, ferving at their own Expence. For the are by Experience known to be as fout, active, and hardy Sailors aiyany in Europe, always at Hand on any Emergency, which is a Refource of inexprefible Importance to a Maritime Power, and which being founded on the Situation and Extent of thefe Illands, may without the Imputation of Jartiality be contidered as a Refource peculiar to ourfelves. This isa Circumftance that cannot but affird the moft fincere Pleafure to every One who really loves his Country, a:d who of courfe histh a warm Sel ie of whatever contributes to her Profperity. It is an additional Satisfaction to reflect that this is not only a great and a peculiar, but alfo a growing Advantage. There are many remote Parts of Great Britain and Ireland that have ftill no very confiderable Correfpondence One with another, at leaft by Sea, which in Time however, as well as the Communication with our fmaller Inands, cannot fail of taking Place and thereby contribute to the Increafe of our Naval Force, and to the Welfare of Thoufands of our People b .

Tue continual Intercourfe between Great Britain and Ireland muft be. regarded as a very confiderable Branch of this Trade, and which is therefore of the utmolt Confequence to thefe Nations. Our Exports to that Illand confilt in a prodigious. Variety of our Native Commodities, in the greateft Part of our Manufactures, in Goods imported from the Levant, the Eaft Indies, and our own Plantations. On the other Hand we import from thence Linnen anid Linnen-yarn, Wool, Woollen, and Worftedyarn, Copper-ore, Feathers, Hair, raw Hides, Kelp, Calf, Goat, Kid, Shecp, Lamb, and Rabbit Skins, Tallow, Butter, Fih, Frieze, Pork, Becf, and other Things; all which are of apparent Utility; and many of them abfolutely neceffary in our Manufactures, and therefore highly beneficial to the Community. It is alfo evident from the very Nature both of the Exports and Imports, that a great Number of Veffels of different Sizes muft be continually emplojed in carrying on

[^360]the Communication betwreen the Two Kingdoms. The feveral Adydintages arifing from hence are diftributed through the different Ports on the Weft Side of this Ifland, contributing thereby to the Emolument of Wales, South and North Britain. Under this Head we muft offo include all the Coaft Trade of Ireland, and the Communication betwefn her and the reveral Illands belonging to Britain, which, as the Spirit of Commerce diffufes itfelf through every Pärt of the Britifh Dominions, is gradually and perceptibly increafing $i$.

In reference to Guernfey, Jerfey, Man, the Weftern, Orkney, and Shetland Iflands there hath been already fo much faid of them and of the Advantages that may be derived from them, with the Means of deriving thofe Advantages, that it is unneceffary to refume that Subject here. It may not however be amifs to obferve, that in Proportion as thefe Advantages can be obtained, and a conftant and regular Correfiondence eftablifhed and fupported between them, thele Two great Inards, and amongit each other, it will afford an almoft inexpreffible Augmentation in the Coafting Trade, with this additional Benefit, that the Perple empleyed therein muft neceffarily become in a very fhort Space, from the Nature of this Navigation, as bold, active, and in repid Seamen as any in cur Service. A Circumftance fo much the more worthy of Attention, as the Salors thus bred are, as we have already very fully fhewn, the moft important Body of Men, for the immediate and effectual Supply of our Fleets, and on which our Superiority as a maritime Power, the great Bulsark of our Safety, as weli as the chief Source of our I'rofperity, moft evidently depends k. Whatever Meafure therefore can be taken to promote and ex-
tend

[^361]tend this general Communication, or to encourage thore concerned thercin, cannot but be in many Refpects highly beneficial to the public Interefis. -

Bur ncizwithtanding the Coaft Trade is in a great Degree diftinct from, yet it mun not be fuppofed to have no Connection with foregn Commerce, fince the contrary is true, as in man Refjects it pronstic, and is ia fome manated by it. In bringing, which is its proper Ohjest,
 to there great Port. fiom which our commerce is carried on, it facilitates the Allirtments of their forcign Cargocs. The Returns ariang from thefe are in like Manner diftributed to the leffer Ports, even in the Extromities of the fllands by the bate Moans, and thereby contributes alio to fpread
 Spirit of Inluitiy, by which the Mans of obtaining them ca:n only be procurcd. It allo promotes Commerce, as we have before hinted, by is heing a conftant and convenient Nurfery fur Seamen. It is affitted on the other Hand by Fereign Commerce in tranforting, as we have oblerved, agrat Part of it: Returns, and it is the cleareft and moft evident Proof of the 'Truth of what hith licen advanced, that they have both grown, increafid, and Hourimed togetlier !
peclals them from other Views. But in all of them there is Room, Materials, and EncoutBi.fernont for this Ocupation. They have lorts, Filheries, Kelp, and other Advantages from the Ser, trom whence they at preferilderive a poor and indifferent Subliftence, which difpofes, one misht hay compels them to emigrate continually in hopes of bettering their Fortune. But if the: we: I woe tum their Thoughts and their Endeavours heartily to this Obyect, fo plainly
 Since of thir prcteat Poverry, and Experience would gradually teach them new, and perhaps
 unticm, but as we have bid in the Text, a fignal Em dument to the Nation whicia might thereby mptac in the Space of a few Years donble the Namber of Seamen, that their coafting Trade tariathes at piefont.
${ }^{1}$ A, the fame Spirit animates the whole commervial Somen, there aifes from thene a confant Hamony amonglt its feveral Branches, which comtributing to the Support of each, thereby invigotates the Whole. It would have been eafy to have given more Indances of the Gana tion of forcign Commere with this Coating Trade, but as the fe will fat in with the subcits of the fucceeding chapters, it was thought better to onit them here fo prevint unneitfory iepations, and the rather becaufe the lant Remark in the 'Text is concluftere on this Head, as wall e apparent to the intelligent Reader, who will confoder the fands alpeady fatel in the Acounts given of the inst: of Whirdaven and Whithe. For in moints re the Kind, laets not only onvey fuller Evidence, but at the fame Time clearei intellinence than can be commandeated by ny other Method.

## 714 The POLITICAL SURVEX

## CHAP. III.

## The Nature and Importance of Inland Trade.

ASbort Account of what is to be underfood by the Term of Inland Trade. The Settling of Towns and Cities particularly attended to by every Go: vernment. The different Modes purfued in this by the Romans, Saxons, and Normans, with their Effects. The Means employed to extend this Communication by the Help of Markets, Marts, and Fairs. Public Events by zwbich the Extenfion of this Home Trade was gradually promoted. A fartber Detail of Incidents that vere likewije favourable thereto. The Encouragements given and the Liberty indulged to the Jetting up Manufactures attended with the moft advantageous Confequences. Many new Circumftances tbat affifed the Eflablifbment and Perfection of Inland Trafic. The numerous national Benefits arijng therefrom jet in a true Ligbt. The clafe Connection between Inland Trade, the Coaffing Navigation, and foreign Commerce clearly explained. The Advantages derived from them may probably be fartber augmented by Inland Canals.

THE numerous Benefits arifing from the great Extent and from the irregular Figure of our Coafts having been very largely difcuffed, we conne now to a Subject of a very different Niture. The llands of Great Britain and Ireland, as they are of great Extent, contain Mediterranean as well as Maritime Countries, the former of thefe in fome Parts comprebending very large Tracts of Land. Thefe according to their feveral Kinds being fitted and employed to different Purpofes, their Inhabitants for the Sake of thofe Advantages that arife from Society, and particularly to facilitate the Difpofal of their Wares and Commodities, affociated themfelves in Villages, many of which gradually fwelled into Towns, and fome of thefe rofe into Cities, being increafed by the Emoluments arifing from reciprocal Communication by the Help of Roads and navigable Rivers. The Aggregate of the Traffic thus carried on, which perhaps in no Part of Europe is at prefent greater than here, conftitutes what is properly ftiled Inland Trade, and is a fubject that deferves to be confidered with the greateft Attention ${ }^{\text {a }}$.

The

[^362]The Choice and Eftablihment of thefe Habitations, or at ieaft thofe of a larger Size, were always under the Direction of Government, and One of the principal Objects of its Care. The Towns of the Britons however rude were fettled by their refpective Princes, and were fuch as fuited the Condwion their Subjects were then in. The Romans in Proportion as they Iptead their Dominions introduced their Policy, gave a regular Form. to their Provinces, a new Face to the Country, and furnihed full Employment to its Inhabitants. The Saxons when they had conquered, and were become the peaceable Poffeffors of the beft Part of this illand, made fuch Alterations as were agreeable to their Syftem of Rule, and the Normans did the like. In the former Parts of this Work we have fufficiently expatiated on thefe Points, and therefore a Recapitulation for the rake of preferving Connection between the feveral Matters contained in this Chapter feems to be all that is requifite here $b$.

It is eafy to conceive in fpite of the Remotenefs of Time that thefe Places or at leaft moft of them, may yet retain fome Traces of thefe Alterations, as indeed they do. The Romans, all agree, were very curious and exact in the Choice of their Situations, in fome of which however they followed thofe that had been fixed upon by the Britons. The Saxons were fo much aware of the Truth of this Obfervation, that they generally followed their Example, and rebuilt upon the fame Spots, fo that even at this Day we owe the happy and convenient Difpofition of many of our beft Towns to the Wifdom of that great People. In refpect to the Forns of Government, the Terms that ftill remain in Ufe hew that they were derived from the Saxons, but it muft at the fame Time be allowed that great Variations were made in them by the Normans, who from their Military Difpofition, more efpecially, at the Beginning were lefs inclined
be but Twelve Miles from the Sea. But Nature hath been much kinder to thefe Inands, for both Great Britain and Ireland are fo difpofed, as to unite with the Advantages of an extenfive Coaft a large Proportion of Land, fo elevated in fome Parts into Mountains, as to aford many and large and beatuiful Rivers, that contribute to the Fertility of the Country, and feveral of them to the cheap and ealy Conveyance of its Products. The former, that is Great Britain, in ite utmoft Breadth is about Three hundred and Sixty Miles, in Length upwards of Six hundred; and though the Breadth is by no Means equal, yet it is evident from hence that the midland Country muft be, as is faid in the Text, very confiderable.
b It was for this Purpofe of making thefe interefting and important Points perfectly clear and iatelligible to every Reader, and not for the Sake of amufing him by introducing our remote Antiquities and Pieces of ancient Hiftory, that what we have delivered in the former Books found a Place in this Work; and it is hoped that with whatever Brevity they are delivered, or with whatever Plainnefs of Language they are expreffed, they will anfwer this End, and contribute to that Perficuity which is fo neceffary in Things of this Nature, and where an Author is deGrous that his Sentiments fhould be thorougbly underfood.

## 716 The POLITICAL SURVEY

to favour by their Policy, the Principles of Trade or the Arts of Peace ${ }^{\text {. }}$

At length and by flow Degrees, imitating the Practice of thfir Neighbours they had Recourfe to Guilds or Fraternities of different K fads, commercial and mechanical, to Corporations, which as we have often hinted, might be very expedient under their Conftitution, and alfo erected Mar-$\mathrm{k}-\mathrm{ts}$ at proper Dittances, as they conceived, in Country Towns, and farther to failitate a more general Communication, inftituted Fairs, which as Thisgs then ftood were very ferviceable, as fome of them are to this Day. Thus this Matter continued till the Advantages derived from Commerce began to open the Eyes of Princes, and inclined them to look with a more favourable Alpeet on the Means of increafing the Subftance of their Siuhjects, that they might be able to levy the more upon them by a Variety of Duties and Impofitions. A Principle evil in itfelf, but which Was notwithilanding attended with good Effects d.

In the Courfe of Time there fell out gradually various Events, which wre not only favourable to, but without which thefe Improvements in , ,i whe to the Extenfion of Inland Trade never could have been accomphice. Amongft thefe we may reckon the Reduction and Incorporation
"Fer in Effex and Maidnone in Kent are Inntances of the Romans adopting the Choice $\%$ = uy ie Britons, when they found them correfponding to their own Notione in this Refpect. An regard to the Number of Citics, Towns, and Villages that owe their original Fomdation to this wife Pcople, the Reader may confult Camden, Baxtar, Stukcly, and all unr Antigunics in general The Saxon Terms of Rurghmote, Wardmote, and Moot-hall for a Sinirehouic or Town-
 that Affars relating to the public Welfare fhould be publicly debated by the who had a Concen in them. The Normans feem to have been under a Necenty of elcting (orprations fis the Sue of preferving Artificers, \&ic. by cxempting then from the fevile Contition to wh:th ualer their rigud Conftitution the greate bart of the Peope were reduced: And hate it ant: har fieh an

 and befides this, the procuring a kevenue :n the Excheguer, for lixtace to tix themelves tor the Benefit of their refuetive Cunmenitio. For the fame Reafon Suplea were deviind, to which a,one the valuble Comonditien of the Jealm coulat be cariced for the forpole of laportation ; and thef, as our Shathes hew, were continmally wathe, till at lengeh the secte was difoverel thet they were uferis. A三 to Mance Towns, bacton hys it down, that they were not to be nener than Sclun Miws to ench other. This Utili: hirth preferved and increafed them, moie efpecially where free from Tolls and Impulitions. sais have contimed for the fam Renfon ; and though we canor boeft of any like thote of Fandent, Riga, or byons, y't we have many that are very conhterable, and tacilitate Inkend 'Trade, by bringing together Ueiters from different and very diftant larts of the Country, and fuch gentities of Gouls as ferve en fix a lair Price, and prevent Combinations.
of the Principality of Wales, which not only procured a larger Acceffion of Territory, but alfo fecured Peace to the Weftern Counties of England. In like Manner the Junction of the Two Crowns put an End to the frequeht Wars and Depredations that had been fo detrimental to both Kingdoms Add to this, what quickly after followed, the Pacification of Ircland, and a regular and increafing Communication with that Ifland. All thefe made Way for a great Change in the Manners as well as Difpofition of the People, that Fiercenefs and Spirit of Violence which had been -kept alive by a Succeffion of foreign Wars, tending only to impoverifh the Country and to exhauft its Inhabitants, and which when thefe were fufpended broke out into civil Broils and intentine Commotions, fubfided by Degrees, and a milder Temper prevailing, Men applied their 'Ialents to the Exercife of Arts that contributed to their mutual Bencfit. This was quickly attended with fo many good Effects, and the Puffifion of Property, now calily acquired, and when acquired perfectly ecure, had fuch an Influcice on their Minds, that the national Genius exerted its 1 igour in furmine a Variety of Plans for increafing the public Stock at IIcme, and providing Materials thereby for the carrying on of foreign Commerce e.

Is fupport of this happy Alteration of Temper, there fell out many Circumitances that contributed to ifrengthen and to fupport it. The Duk: of Alva's l'crfecution brought over hither Numbers of induftrious Perfuns, who being well reccived and properly encouraged, gave us many new Lights with refpect to Agriculture as well as Arts. The Reception of other tor ign Proteftants, who fled hither for Refuge, and brought with the:n new inventions and feveral Modes of Induftry unknown before, introduced a Vatiety of Manufactures, and which was fill of greater Confequate a drong Dibobition to perfect thefe, and an Appetite for acquiriag merte. The Emoluments arifing from thefe different Kinds of Le:nour were fo great and fo apparent as to attratt the Notice of Perions in Power, and Men of great Quality and Intereft, who availing themfelves

[^363] Letters Patents to fecure to themfeives and their Afiociates the Advantages that might arife from new Attempts of this Sort, which though they excited, and perhaps juftly an Outcry againft Monopolifts, than which nothing can be more diladvantageous to a commercial State, yet they were not totally ufelefs, as they procured fome Branches of Manufacture that we might otherwife not have had, or at leaft not fo foon, and contributed withal to give a Reputation to Trade, and to leffen at leaft, if not entirely to abolifh that Kind of Pride fo detrimental in other Countries, where the abfurd Opinion prevails that it derogates from Nobility by the Way of Induftry to profecute public Good, the deftroying which Chimera hath been highly beneficial to the State f.

Ir was impoffible that when Things were once brought into this Condition, it hould efcape Obfervation that Freedom was of the greatelt Confequence to Trade. It was indeed foon difcovered as appeared by the general Clamour againft Monopolies, to which however their Novelty did not a little contribute. There were however fome cther Reftraints incompatible with the true Spirit of Induftry, and confequently not a little prejudicial, which were not fo fpeedily difcerned, or fo eafily removed, as having exifted long and feeming in fome Refpects wrought into our Conftitution. Thefe were the Reftrictions fiowing from Cörporations, which however have been gradually pointed out, and mitigated here more than in any other Country in Europe. Several exclufive Companies erected on plaufible Pretences, all which poffibly might have their Ufes in the Infancy of our Commerce, were very wifely fuppreffed. Thofe who chofe to fet up new Manufactures, or to exercife fuch as were already introduced in a more extenfive Manner, were allowed full Liberty to eftablinh them in fuch Places as from a Variety of favourable Circumftances feemed to them proper, and the Succefs that they have met with, and the Advantages vifibly arifing to the Community from the proper Encouragement thereby given to the vigorous Ef-

[^364] recommending, as in a great Meafure to prevent any new Reftrictions, and - to free the Minds of Men from the old Prejudices of fuppofing that Corporations were as requifite to the Training up. of Traders as Colleges to the Breeding of Monks ${ }^{3}$.

Tae Civil War gave a very fevere, but anly a temporary Check to our Progrefs, and as foon as it was over the Nation returned with redoubled Vigour to the fame Purfuits, which though interrupted by the Plague, the Dutch Wars, and the Fire of London, were neverthelefs refumed with fuch Spirit arifing from our increafed Knowledge in the true Principles of Trade, the Experience we had had of its Efficacy and the Reduction of Intereft, as foon put our Domeftic Affairs once more into a flourifhing Condition. The Settlement of Ireland immediately after the Revolution, and the Introduction of the Linnen Trade there, the bringing over the French Proteftants expelled their own Country by the Revocation of the Edict of Nantes, and the Union of the Two Kingdoms, were fuch fortanate Circumftances, as evidently raifed the internal Strength of thefe Nations, and the Place they held in refpect to the Scale of Power in the Eyes of the feveral States of Europe, much beyond what they had reached in any former Period. The limprovements carried on from the Advantages derived to Ireland and North Britain, and the Removal of Competitions in refpect to Manufactures which were detrimental to South Britain, together with a great Acceffion of Demands for all Sorts of Commodities from both, vii.bly difcovered to all difcerning and impartial Jadges, that whatever tends to the Benefit of the feveral Parts of a great Empire tends ultimately to the Benefit of the Whole, the Promoting of which is the true Object of public Spirit ${ }^{\text {th }}$.

[^365]This is a plain, fuccinct, and it is h.ped fatisfactory Account of the Rife, Increafe, and amazing Extenfion of our Inland Tqade, of which every Village and Hamlet, as well as great Towns and Cities participates in a proportionable Degree. For the Inhabitants in them all have livod, Cloaths, and Dwellings fuitable to their feveral Ranks, and much iuperior to what in their relpective Stations are fecn in many other Countancs not inferior to ours in Scil and Climate, but wanting the great bictings of Freedom and Trade. Wherescr Manufactures are ell thithed they diaw a Concourfe of People, who all find Employments of diffirent Kinds: Thefe Manufactures, together with the Commodities of the in reunding Country, are conveyed to other llaces by Water or by Land. ; he former gives Bread to Numbers, the latter hath produced qood Reads the uph a great Part of the Kingdom. This affording Convenienc of Carrace, firnifhes Subfiftence, as we have aiready thewn in another P..it ef this Work, to Multitudes, and this Subfiltence being drawn from the Cownics: idjncent, hath promoted the Cultivation of our Lands, and in comicquanee of the Augmentation of their Produce hath railed their Rems. Ail this plainly fhews, that our principal Marker for all sorts f Wares, Manufactures, and Provilions is at home, and that the cimampon of our con People is the Bafis of national Proferity, which fins comfanty, coy ioufly, and regula:ly through all the Channels of Intand Trade, and muft continue to to do, as long ats Labour fumines a cemfertable Maiat nance, and Induftry a generous Reward, Effects arifing from, and which, while our excellent Confitution fubfifts, can never faili .
written hewed what prodigions He'pa Induftry might receive firm Science. The areat political Oneftion, as to the Ctility of raduag Intered, was thoroughly difulfed, and all the good Confegmences that attended it readerd indifputably clear. The Propriciy of ieceining and en-
 tionai advantige This keafoning was very foon confirmed by for?s they tareht us may

 live better, and thereby pamote Confumption of all Sorts of Necefarics and Cozvabmbic. The Sight of this crates Eamalation in their poorer Neighbours, and of come exates that Induftry which :s the dether a iroferity. By thefe Steps and in this Manner the combinim of our People hath beea changed, and benty, fo far as this hath reached, extended iticit though both Inands.

I In the Cuurfe of this Work, whenever a fuitable Occafion offered, no Puins have becn
 bitants of the? Ehats, in Point of Mannces, Circomflates, and Modes of living, tracing it the fame Tine il: woble C.ufes fron which fuch Changes arofe, fupponted by authentic Alathorities, one of the moft influtive and bencficial Ufes of Hizory; for while more dazohner Scenes ferve oaly to cotertain atad fill the Me nory, thefe contribute ten excrife abd inform the Juls: hate There wall be m, $G$, mits, ther fore, for repeatigr fuch obfervatoms here, a; the Reader muft be well acyanintel wita them already, and what is faid in the lext is only ${ }^{\prime \prime}$,

## of GREAT BRITAIN.

The Connection of this Inland Trade with that of the Coafting Navigation and foreign Commerce is too plain and apparent to be infifted upon is at large: It may not however be improper to oblerve, that after the Time of the Romans, who embraced every Species of Improvement, and carried them to a very great Height, Inland Trade was in a great Degree loft, and in its Recovery made a flower Progrefs than either of the former for Reafons that are already mentioned in the Courfe of this Chapter. The Facility of conveying Things by Sea where-ever it was practicable, brought it earlier into ufe, and conftantly maintained its Credit. Foreign Commerce arofe from thence by Degrees, and the Wealth derived from thence, and the Spirit of fupplying Materials, for it were ftrong Inducements to pufh Inland Trade beyond the narrow Bounds it attained by the feeble Efforts it had made in Times of Barbarifm and Confufion. In Procefs of Time the Effects of them all have been moft happily blended, and the People have been employed, enriched, and made happy by thefe Three Branches of Traffic mutually affifting and fupporting each other k .

Upon thefe Principles, and in confequence of fuch Obfervations as in this Chapter have been laid down, we have ventured to declare in favour of Inland Navigations, and to affert the Probability of their promoting national Profperity ftill farther. It feems evident, that by the Help of thefe Canals, the making which by the Way, plainly fhews the Spirit and the Subftance of the Trading Intereft, will produce a more equal Diftribution of Provifions for the Subfintence of Men, of Materials for Manufactures, and of all Sorts of Commodities than hitherto have been known. We may therefore reafonably expect, that in confequence of this they will render
refrefh and recal his Ideas, in order to thew how thefe Facts apply to this Subject, and more fully develope the Menns by which this Species of Traffic have been fo highly, fo extenfively improved, and what falutary Confequences have refulted from thence to the Community, at the fame Time that they difcover the Reafons on which juft Hopes are entertained of their Continuance.
$k$ In the preceding Chapter we have infifted on the great Utility of the Coafting Trade, in conveying Materials and Commodities from one Part of the Illand to the other, however remote. But the Intent of this is chiefly to fupply the Inland Parts, and to afford Employment for the Induftry of their Inhabitants, the Produce of which is again conveyed to the fame or other Ports, according to their different Demands. In reference to foreign Goods, it may not be amifs to remark, that in refpect to Edibles, Wines, Spirits, Fruits, Spices, Pickles, \&c. are confumed over all the Country, and chiefly by a Retail Trade. As to our Manufactures, the Materials of very many are brought from abroad, fuch as Spanifh Wool, Silk, Mohair, Linen and Cotton Yarn, fine Woods, \&cc. all of which are wrought here, and immenfe Quantities, when wrought, exported. We likewife bring in the neceffary Materials for Dyeing, fuch as Madder, Shumack, Orchel, Indigo, Cochineal, \&c. To thefe we may add, prodigious Quantities of feveral Sorts of Oil, confumed in our Woollen, Leather, and other Manufactures, as alfo Gold and Silver for Gilding and Plate, with a Multitude of other Things which it would be needlefs to mention.

# 722 The POLITICAL SURVEY 

Labour cheaper, increafe the Number of working Hands, and fupply new Means of Subfiftence to Numbers. It may be likewife expected that by thus becoming the Means of univerfal Communication they may remove all the Obftacles that yet remain in refpect to Inland Trade, and by exciting Induftry in Places, where for Want of Conveyance it never reached before, augment our national Stock, and add freh Vigour by furnihing more Employment for our Coafting Navigation, and larger Cargoes for Foreign Comnerce .

[^366]
## C H A P. IV.

The Advantages refulting to thefe Nations from Indultry and Commerce farther confidered, and their Effects more at large explained.

$T$HE manifold Advontages arijing from Inland and foreign Trafic bave been already copioully dijplayed. Yet fome fartber Obfervations on thenn may not be inexpedient. Tbe Nation in general profited hy the Introdisition of a free Government injlead of the feudal Sy/tem. A juiccinct Par allet between them in order to prove the Truth of this Afertion. The Nobility and Polfefiors of landed l'roperty enjoy under the prefent Conflitution allt that tbey can defire. In the Mode of their Enjoyment they contribute to the Welfare of the Body of the People. The regular and conftant Circulation of the Effects of Induffry is a continual Source of National Ricbes. The natural Advantages of thofe Ifands improved by Laboui" Jecure to Perfons of all Ranks perpetual Plenty. The Protection of Indulfry for thefe Reafoins ougbt to be the great and invariable Object of our Ruiers.

AFTER having gone through the feveral Branches of our commercial Syftem, having Thewn the Advantages arifing from each, their Connection one with another, and the accumulated Benefits arifing from thence, it hould feem that nothing more was neceffary on this Head, or if there were that it muft confift in producing Authorities, which might be eafily done, to demonfrate that thefe were not fimply the Sentiments of an Individual, but fupported by the concurrent Teftimonies of the ableft and and moft intelligent Perfons in this and in other Nations. This however may appear the lefs neceffary, if it be confidered, that in treating thefe Subjects, Refpect hath been always had to the cleareft and frongeft Evidence, that of Facts, and that in reafoning from them, where-ever it appeared requifite, Authorities have been produced ${ }^{2}$.

Вот notwithftanding all this, and that perhaps the Matter might be fafely refted here, yet the Subject itfelf is of fo great Importance, the Confequence of its being thoroughly underfood fo material to national Happinefs, and as the eftablihhing thefe Points beyond all Doubt, as well as beyond all Contradiction, hath been all along confidered as the great End and Object of this Work, the candid Reader is defired to extend his Indulgence to fome farther Reflections relative to the Advantages arifing from Induftry and Commerce, and to pardon any involuntary Repetitions that may efcape in the Profecution of a Theme, which hath been already fo much canvaffed, and which nothing but its general Utility could excufe the preffing thefe addional Obfervations upon his Memory, and recommending them to his impartial Judgment ${ }^{5}$.
${ }^{2}$ One of the carlieft, and at the fame Time one of the beft Writers upon Trade, was Mr. Thumas Mun, himfelt a very eminent Merchant, and his Treatife publifaed by his Son immediately after the Reftoration This able Man, who had extenfive Knowledge and many Years Experience for his Guide, and who had confidered the Subject in a political as well as practical Light, concludes his Work with telling us, "That foreign Trade is the great Revenue of the " King, the Honour of the Kingdom, the noble Profeflion of the Merchant, the School of our "Aris, the Supply of our Wants, the Employment of our Poor, the Improvement of our Lands, " the Nurfery of our Mariners, the Walls of our Inands, the Means of our Treafure, the Si" news of our Wars, the Terror of our Enemies." If what we have already faid, or what is farther to be faid in this Chapter fhall afford fuch a Commentary as may contribute to make the Truth of this Gentleman's Sentiments clear to every Reader, the Labour this Work hath coll will be cfteemed well beftowed.

- A Propofition may be fo felf-evident, or capable of fo clear and manifeft Proofs as to merit general Reception. Yet even fuch an Affent as this may not be attended with a diftinct $\Lambda$ pprehenfion of the full Extent of fuch a Propofition in all its Confequences, which however is very neceflary in many Cafes, more efpecially in fuch as are of public Utility and Importance. A moft convincing Inflance of this appears in the well-known Terms of the Linded and the Trading Interefts, which, as in this Chapter will be fully fhewn, ever were and ever muff be the fane, notwithftanding they have been, and that too by feveral flarewd and otherwife fenfible

## 724 The POLITICAL SURVEY

Ir is hoped that in the Courfe of this Undertaking there have been fufficient Reafons adduced to fhew how much the People in general have been benefited by the Introduction of a free Government inftead of the feudal Syftem, under which their Anceftors groaned, and by the Relics of which other Nations are fillf oppreffed. It is to this we owe the Mildnefs and Equity of our Laws, and that their Protection extends to every Man in every Station of Life. It is to this that we ftand indebted for theSecurity of our Properties, and the abfolute Power we have over whatever we acquire. This is the great Encouragement of Induftry, in confequence of which a greater Equality hath been introduced here without the Interpofition of pofitive Laws, than by their Affiftance could be effected in the freeft States, of which Hiftory has preferved any Records. The Face of the Country proclaims this, the Circumftances of its Inhabitants in general are a farther Atteftation of the Truth of this Pofition, and if we reflect that the only or at leaft the higheft Prerogative afcribed to the Feudal Syftem, that of maintaining a national Force and Independency, is fo far from being weakened, as in thefe Days of Freedom we are infinitely a more formidable Nation than we ever were, and are enabled to preferve our extenfive Dominions through the Superiority of a Maritime Power, which hath indifputably been raifed by, and can only be fupported from our Commerce $c$.

But in order to comprehend clearly how all this hath been done, and to difern evidently the Connection between Caufes and Effects, we muft rife a little higher in refpect to Times, and defcend a little deeper in regard to Things. The Fertility of this Countryland all its naiural Advantages were

[^367]ever the fame, though the Face of it hath worn very different AppearancesForeft, Chaces, Heaths, Commons, and Marhes occupied formerly immenne 'l'racts of Land, the greateft Part of what remained was converted into Sheep Walks. For Wool then was our principal Staple, and this we exported to exercife the Skill and employ the Labour of our Neighbours. Our Mines were moftly unopened, and the little Trade we had was carried on chiefly by Foreigners, in virtue of Privileges purchafed from the Crown. Our Nobles, who were a Kind of Princes in Point of Territory and Authority, lived in a rough Plenty and a rude" Magnificence. The Churchmen, in confequence of their poffelling the Learning of thofe Times, had immenfe Pofieffions, and made no Scruple of employing Perfecution when they thought it necefiary to preferve them. The Bulk of the People as the Vaffals of both were either doomed to fervile Drudgery, or lived in lazy Indigence. How different a State this from that which we have juft defcribed? Yet the Change hath been effected only by the introducing Freedom and Induftry which have naturally and neceffarily, though gradually wrought this amazing Revolution, by difpofing the different Claffes. of Inhabitants to the Purfuit of thofe Plans of Life, to which their Talents were beft adapted, and by which they might render themfelves moft eafy and independent of every Thing, but the Laws from which arofe, and by which thefe Bleffings are fecured d.

Tife Nobility of all Ranks preferve under this free Government their ancient Dignities, Privileges and every other Circumftance of Grandeur, except the oppreffive Power of the old Barons, which did others Hurt and themielves no Good. The fame may be faid of the Clergy, who enjoy every thing conliftent with religious Liberty. The Gentlemen of landed Eftates have much Influence and great Refpect paid them. All of thefe

[^368]
## 526 The POLITICAL SURVEY

have their Duties towards the Community pointed out, and are in general $f_{0}$ educated as to acquire the Qualities requifite to difcharge them, in performing which they are the moft ufeful Members of the Commo:i $\boldsymbol{\gamma}^{\prime}$ wealth. For amongft thefe are to be found our Legiflators, Judges, Magiftrates, \&cc. who are the natural Guardians of their own and their Fellow Subjects Liberties. Thefe having opulent Fortunes, live with great Splendour, and at a large Expence. Their Houfes, Gardens, Equipages, and all the other Appendages to their Magnificence in Town and Country, gives Employment and of courfe Subfiftence to Numbers, and confidered in this Light fuperfluous Luxury becomes the Source and the Support of honeft Induftry. Add to this that by the Elevation of their Rank and their Superiority in Riches, they are in a peculiar Manner bound to the Interefts of their Country, as infeperable from their own, for whatever imporerihes the one muft depreciate the other, and the Connlitution cannot be weakened but at the Expence of their Independency and Importance ${ }^{\text {. }}$

But have thefe Nobles and Gentlemen of landed Property done all this for themfelves? No, furely. It hath been done for them by the Skill and Labour of others. Under the old Conftitution they might compel their Vaffals to take the Field, to fight in any Quarrel, anit on any Side they chofe to efpoufe, by which their Numbers were lefiened and the Properties of thefe great Barons themfelves very fruquently deftroyed. In fucceeding Times, when their Tenants came to have a legal and fecure Poffeffion of the Lands on Terms reciprocally beneficial to both, Induftry infpired by Liberty, excited a univerfal Spirit of Cultivation. Arable and Pafture Lands were every where improved, Heaths, Waftes, and Commons were converted into good Eftates, Marfhes drained, Mountains planted with Trees, and the Rental of the Kingdom, in other Words, the Income of Men of landed Property augmented daily. Thefe Improvements were not however confined fimply to the Surface of the Soil; our Mines were

[^369]
## of GREAT BRITAIN.

opened, their Contents produced every Species of Metals, each of which became a new Source of Skill and Labour, and confequently of Profit, fand mof other Commodities furnilhed gradually in like Manner Materials ior numerous Manufactures. As thefe fpread and grew more confiderable, Multitudes drew the Means of Subfiftence from their refpective Employments in them, and which is more, they affifted, encouraged, and enriched each other, by fupplying their feveral Wants from the Looms, the Forges and the Shops of their Neighbours, while all in general created an increafed and increafing Confumption of Provifions f.

It muft be feen from the hiftorical Parts of this Work, that moft of thefe internal Improvements were not only gradual, but flow, and in Point of Time pofterior to the Benefits derived from foreign Commerce and the Coafting Navigation; the former bringing in Riches, and the latter facilitating the Correfipondence between the different Parts of thefe Illands, buth great Ifelps to Induftry, efpecially at the Beginning. Thefe therefore it muft be admitted, laid a Foundation for all the reft. The thriving Condition of our Sea Ports, and the vifible Advantages derived to Cities and great Towns fituated upon nayigable Rivers, excited Emulation, and contributed not a little to diffufe a commercial Spirit in their Vicinities. In the preceding Chapter we have fhewn how various Impediments were removed, and how many ffavourable Circumftances concurred to promote thefe Views, and which being embraced, Communication was continually extended with all the Tiain of happy Confequences that are its natural Attendants. Hence arofe, as we have already hinted, a fucceflive Altcration, or if I may be allowed the Expreffion, an Improvement in our Mamers, and in our Modes of Living, in our Diet, Drefs, Buildings, \&cc. all of which, frictly feaking, in Proportion to their Value, are as truly and certainly national Wealth, 'as they are indifputably the Fruits of Art and Iuduftry 8.

[^370]
## 728 The POLITICAL SURVEY

Ir is hoped that we have now fully proved, that when the Genius of the Britifh Nation came to be applied to the Arts of Peace, it was exerted with Vigour, Ingenuity, and Perfeyerance, as is abundantly evident from our acknowledged Succefs in Agriculture, Manufactures, and Commerce. This hath been in a great Meafure excited by a Delire of Independency, the natural Companion of Freedom. This Defire animates equally the Artift, the Mechanick, and the Seaman, and this generous Spirit which is the true Source of Excellence in all Purfuits, is happily feconded and fupported by the natural Advanitages which this Country poffeffes, and which thereby render it attainable by a juft Degree of Induftry, which in fome other Places is not the Cafe. Provifions of every Kind, the Materials for Cloathing, Fireing, Building, and in a Word moft of the Conveniencies, as well as all the Neceffaries of Life, are of our own Growth ; and therefore it is evident that national Opulence arifes principally from our own Confumption, and this by a due Circulation of the Effects of Skill and Labour is;: and while our Conftitution fubfifts, ever may be maintained and extended. Foreign Commerce is the great Wheel giving Motion to the whole Machine, as it adminifters to lnduftry, fupplies Materials for fome Manufactures, exports many others, and carries awvay into other Countries our Superfluities, which is of apparent and prodigious Confequence, increafing the Means of Confumption, and furnifhing befides, Gold, Silver, Jewels, and other rich Goods, the Produce of our Wares and Commodities of all Sorts, or in other Words, the Portion of Induatry, the Wages allotted by Providence to Labour and Affiduity, directed by Science and ftimulated by Freedom b.

The
reflecting on the State this Country was in Five hundred Years after the Norman Conqueft, and the Change that hath been made therein within the Two lan Centuries. An univerfal Alteration in People's Circumftances is the cleareft Proof that can be defired of national Profperity. If Men drefs better, live better, and are better lodged, it is evidept that their Circumftances are better than thofe of their Ancefors, and confequently that the Wealth of the Nation is greater. This Fack is not the lefs true or the lefs certain from the Inattention that may be paid to it, or the partial and fophiftical Reafons fometimes advanced to infinuate the contrary.
${ }^{1}$ The Britih Merchant, Vol. I. p. 142. hath fome very pertinent Obfervations upon this Subject, which deferve the Reader's Notice. "Our own People are a conftant Market for our " own Pioduct and Manufactures. The Gentleman fondly imagines, that he receives, his Rent " from his Tenant, the Weaver that he is paid his Wages by the Mafter Clothier ; but it is the "Confumer that pays both. He pays the Price of the Wool and the Charge of the Manufacture, " neither the one nor the other can be paid but by the Confumption of the Pcople. I confider "c every Perfon in the Kingdom, for what he eats, and drinks, and wears, as a Tenant to the "Lands, and a Paymafter of our Labourers; and if Seven Millions of People confume the " yearly Value of Forty-two Millions of our native Product and Manufacture, every One at a "Medium pays the yearly Sum of Six Pounds to the Lands and Labour of this Kingdom, " every One is a Market of fuch a Value to his Country," The Amount of our forcign Commerce is but fmall in Comparifon with that of our Home Confumption, but from the Balance we

The ferious Contemplation of the fevervl Fatts and Obfervations which have been laid down in this Cliaptery will open etarge Field for u ufeful Enquiries, as sherein the edmbined- Fores of all our different Species of Induftry have been fo explained, as not to leave a'Shadow of Doubt, that while they all of thern tend to the fante Pointof promoting pablicProfperity; they alfo reciprocally affift exchrother, which accounts for that fuccefilive and fucceffiful Progiefs they bive for apparciatlige made fince dieeted by tight Princ̈iples, and allowed to expard themfedves iwith perfeat Freadom. It hath Been filly fhewn thtic ind indutriout Perfon; who by his Ingenuity
 Independance, contritutev it the frme Tinte by their Confumption to the Welfare and the Support of the Commennity Lt follows equideqdy from hence that every Affiftance fhould be given to promote thin thudable Spirizo and to enable fuch Perfons to the wit their Eafes the mote they are casabled to expend, the more they benefit then Rublic: Whatever hath a codtraty Tendency mutt in remdering Suibfiftance difficult, pot only imereqle the Number of the Poor, but in many other Refpects become highly detrimental to the State. It is alfo clear from hence that the Lols of indultrious Perfors' is an apparent and irrepazable Injury to the Commonwealth, as not only lefering the public 'Stock in shat Degree which their Contimuance increafed it, but by driping their Talents and Labofur ginto other Countries, enriching their Inhabitants at Mour Expence, a Folly the more inexcufable, as we vifibly profied by it : when it was the Malady of our Neighbours. It thould therefore be the Study of a wife and good Government; not only so take cyery Meafure to pevent fach Loffes; , but alfo to devife and practife every Method poffible to protect, encourage, and extend Induftry, as the fole Bafis of public Felicity i:
draw not only a fufficient Qanatity of the procious Metale to ferve in the Shape of Money asa Medium in Trafic, buit alfo to afford us Plate, Lace, \&ec, and when is cai be dope wibh more Advaptage than keeping it here, for Exportation atfo. It is therefore a Mark of our Riches, and fuch a one, as if our Induftry wis lefs, or ouc Importhtion of foreign Luxaries ntore, woutid guickly leave us.
${ }^{1}$ There is an Energy in Indofing nuder the Protection of a free Government; that emables it to extend itfelf evers Way and too ondicope Difficulties that were for Ages thought and frund to be infurmonatable. We have ineive this unqueftionably in the Courfe of this Work, by the Ioflances we have given of trorts cgaffricted, aipd many more of thofe that have been improved beyoud

 taat Communications by Land, by removing Impediments is navigable Rivers, and of late by the Cooftruction of Cently to fy, pothing of the Dfithing of the Fens, mid many other Things of a like Natane. Al thefe huve irideed had the Conateomice of the Legithiture, but thave been pecfoymit chicely at the Expence of private Prront, with Vhesw to their oith Profix and Conve-

## CHAP. V.

## Farther Improvements are fill neceflary.

$T$'HE greater the Propperity of a State the greater Prudence requifite to preferve it. This requires a fuccinct Specimen of our Defeits and Rifources: Propofal for improving Agriculture by extcnding our Cultivation. Our capital Manufactures are capable of being mucb improved and greatly. extended. Commerce by good Laws may seceive many Advantages. Tbe Fifheries a prodigious national Refourse, Tbe Number of our Poor no formidable Objection againft what batb been faid of our Propperity. Twio Propofals offired for the diminifing this Burden in future. Tbeg Grounds on wobicb woe may bope to proceed vigoroully in our Improvements. An Apology for the numerous Propofals contained in tbis. Work. Tbe Conchyfion.

${ }^{7} T$HE happy and flourianing Condition of thefe Illands in Comparifon of the State in which they formerly were, hath been fully and clearly reprefented. It is however a wife and a juft Maxim in Politics, that as much or more Prudence is neceffary to preferve a State when raifed to Opulence and Grandeur, than were requifite to exalt it. thereto, and Experience hath juftified the Truth of this Pofition. On thefe Grounds it becomes abfolutely our Duty to have a conftant and vigilant Attention to the Means of preferving and extending that Profperity to which by our own or by our Anceftors. Application we have attained. This can only be effected by a fteady Adherence to thofe Principles on which it was gradually raifed; we are well acquainted with their Nature, their Operations, and their Confequences, and may therefore with good Reafon conclude them to be in point of Efficacy adequate to whatever our prefent or our future Circumftances may require:. The Demands of an extenGive Empire are, many; but her Refources are likewife numerous, the Bufinefs is to fee them prudently chofen and properly applied. Under fuch a Conftitution as ours we may always truft to the Exertion of our national Faculties, an active Induftry directed by wife and well executed Laws will, with a proper Confidence in the Divine Blefling, fupport that

[^371]Rolicy:

## of GREAT: BRITAIN.

Policy by which, as we from Experience know, human Happinefs is beft maintained ${ }^{2}$.

In order more clearly to comprehend thefe Points it may be very expedient to enter a little into Particulars by mentioning and explaining fome of thefe Demands, and at the fame Time Ihewing that thefe Nations are really poffeffed of Refources abundantly capable of anfwering them all, and of courfe not only to maintain what we have already acquired, but even to extend thofe Acquifitions much beyond their prefent Bounds; and all this without the leaft Danger of detracting from the Hopes or leffening the juft Incitements to Induftry; that for the Sake of the fame good. Purpores ought to ftimulate our Pofterity.

We may without Fear of incurring the Cenfure of Partiality venture to affert, that (though poffibly very far fhort of Perfection) Agriculture hath been carried as high in this'as perhaps in any other Country, and that our Inhabitants are as well Ikilled in the Nature of different Soils, the propereft Means of improving them by a Variety of Manures, the Method of fencing and inclofing them, the preferving their Fertility by a regular Variation of Crops, and all the other Arts of Hufbandry that have been hitherto invented. By thefe Means prodigious Improvements have been made, more efpecially of late Years, and under the Aufpice of Legifature very large Tracts of Commion I and have been brought into regular Culture. In confequence of this fuch a Change hath been made in our Circumfances, that inftead of purchafing from, we have, till within thefe few Years, been able to fupply large Quantities of different Kinds of Grain to our Neighbours. But Experience hath taught us that neither the Skill of our Farmers or the Affiftance of the Legiflature can guard againft thofe Deficiencies in Crops occafioned by inclement Seafons. The only Remedy for this is an Extenfion of our Cultivation. This may certainly be

[^372]732 The POLITICAE SURV.EY obtained lay parchafing at the public Expence thofe Tracts of Heath, Moors, and other Wafte Lands that deform more or lefs every. County in the Kingdom. By this Mode of Proceeding, injurious to none, and be-; neficial. to 2ll, there might be fuch an Acceffion made to our Arable Lands as would fecure us from Scarcity at Home at all Times, and: with the Blefling of Heaven reftore us to that great Source of national. Wealth, Exportation of Grain, and this perhaps without a Bounty b.

It is natural to fuppofe, and indeed the Thing is felf-evident that 2 : very great Part of fuch Lands as thefe could not be; at leaft immediately: converted to this Ufe. Thefe therefore might be turned into grazing Farms,. which would raife what is equally wanting, a great Number of Cattle of all Sorts, which valuable Purpofe would be much facilitated from the Adwantages. derived from the Farms firft mentioned; in the prefent beft approved Mode of Cultivation. On the. Whole therefore, a great and a continual Augmentation would accrne of the public Stocks, and quickly reftore Plenty of Provifions, fo exceedingly neceffary to Cupport the Induftry of our People. Thefe Meafures without any Struggle, Violence, or Bloodhed would produce better Effects than the Conqueft of Territory equal. in Extent to all the Tracts thus improved. For thefe would not only furnifh immediate and future Employment for a Multitude of Hands in the moft ufeful Kinds of Labour, but would alfo excite a general Spirit of Induftry, and diffure fref Vigour and Activity through the whole Nation, as well as in its happy Confequences by abfolutely removing the Caufes put an effectual Period to future Emigrations c.

[^373]
## of GREAT BRITAIN.

In fuch of thefe Farms as were properly gituated, and in fuch Parts of them as thould be found firteft for the Purpofe, Timber more efpecially, fuch as is requifite for the Ufe of the Royal Nayy, might be moft conveniently planted and preferved, by making fuitable Provifions for that End in the Tenure of the Lands, fo as to render it the Intcreft as well as the Duty of every Tenant to comply with fuch Injunctions. For thefe Lands being the immediate Property of the Public, and purckafed with a fpecial View to their Benefit, every Thing regarding them would by the Wifdom of the Legiflature be adjufted with the utmont Circumfection, and the Settlements made caurioully gradually, and under fuch Regulations as might equally provide for the Security and Encouragement of the Occupier, and for the general Welfare of the Community. By the Execution of fuch a Scheme the properent Size of Farms for national Advantage might effectually be determined, from the cleareft of all. Lights that of Experience, and many other Points of public Utility that have been long, and may continue much longer Matters of Doubt and Altercation, be fully decided. If in the firft Elfays any Errors hould be committed, they might be amended in fubfequent Eftablifhments, and remedied even: in thofe whenever the Firf Terme expired d...

The great Number of ufeful and valuable Subjects maintained by our Manufaktories of different Kinds, and the vaft Emoluments arifing continually from their Labours to the Public, muft ever render them and whatever regards them, Objects of the higheft Importance to fuch as ad-
of our l'eople requires Eocouragement; put Subfiftence in their Power, and they will work, and wook alliducully to obtain is. Thas would be effectually doat by the Merhod propofed, which befides providing Employment for Multitudes that want it, in the immediate Bufinefs of Farming, would add like wife greatly to the raw Materiats requifite for our Manafactures, fuch as Wool, Leather, Tallory, \&c. Befides, the Improvement of thofe hitherto wafte and ufelefs Lands would, as we thall hereafter fhew, afford both Exampile and Lufruction to the Inhabistants of the remoter Parts of both Inands, and put them ypon a like vigorous Exertion of their Tnlents, and prodace thereby maay ufeful and felotary Effects.
d It will be oxpodient that all the Regulations in refpeft to thefe new Farme thould be cefy, cheap, and of apparent Uxility. Such as the allotting Cotmges, with fmall Portions of Land, for: the Habitations and Subfiftence of Labourers and their Familiea. The reviving the Practice of ufing Oxen inflead of Horfes for Draught. The riifing Flax upon Moors, where Experience fhews it-may be done to great-Advanfage. Poffibly alfo the Breeding of Bees might deferve Confideration. But in every Thing of this Sort Encouragemens fhould be beld forNs, and liste or no Compulfion ufed. As the Fira. Srep. of thefe Improvements mull be a Ariar Extominatioe of the feveral Kinds of Soil, in order to difinguith the Ufes to which they may be be A applied, the very Hiftory of chefe. Fwems, when brought to any Degree of Perfeftion, would be of extraordinary. Benefit, as is would comprehend a Syftem of experimestal Kowledge, that,' as is hinted in the precedingNote, could not but fimulate the Inhabitants of remoter and hitherto lefs cultivatod Parts of both . Ionnds, thus taught and encouraged, to enter upon the. like. Methods of Improsermept.

## 734 The POLITICAL SURVEY

minifter the Affairs of this great and opulent Nation. They are indeed Objects that are to be confidered with conftant Care and with the deepent Attention, but at the fame Time they are Objects that cannot be contemplated, but with the greateft Pleafure and with the higheft Satisfaction. For it is the Happinefs of this Country to poffefs the raw Materials of many, and thofe too the moft confiderable, which is a Point of the greateft Confequence, and in Reference to the Materials brought hither from abroad, thefe likewife are monly obtained by the Exchange of our own Produce. It may be truly affirmed of all our capital Manufactures, as well from Wool, Leather, Metals, Linnen, as thofe of Silk; Cotton, Glafs, Paper, \&c. that they may be extended beyond their prefent State, and many of them to a very great Degree. We have it alfo in our Power to promote them in many Refpects. For we may relieve thofe employed in them from a Variety of Reftraints impofed when Things of this Sort were lefs underftood, and which have been continued rather from Cuftom and Prejudice, than from Necellity or Ufe. By countenancing, encouraging, and rewarding amply, the introducing new, or the Improvement of thofe already introduced. By oppofing public Spirit in preferring and fupporting them agaiuft the vain Intrufions of frivolous Fathions. By diminifhing, as in many Infances might be done, the Price of raw Materials. By eafing them in refipect to Duties, which is alfo practicable, not only without Detriment, but with great Advantage to the public Revenue. By a jadicious Application of Bounties; to promote their Exportation, by bringing them cheap to foreign Markets, and by a Variety of other Methods. To thefe Hints it may not be improper to add, that what hath been before recommended in regard to the extending our Cultivation, would have an immediate Effect on our moft valuable Manufactures, by an Increafe of their Confumption, by a new Race of Farmers and their induftrious Dependants e.

[^374]We have in the Progrefs of this Work very frequently thewn how much our foreign Commerce and domeftic Trade have been indebted to the wife and timely Interpofition of the Legiflature, and particularly in the Act of Navigation, the Meafures taken to leffen our dellructive Importations of Luxury from a neighbouring Country, and in exempting moft of our native Commodities and Manufactures from Duties upon Exportation. We may from hence form the moft realonable Expectations, that the like falutary and effectual Helps will never be wanting in future for the fame bencficial Purpofes. By their Intervention, whenever it is necefiary, a Check may be given to fuch Importations as are injurious to our Interefts, and ferve only to gratify Luxury or Folly. We may alfo rely on them for fecuring to us the Advantages Atipulated with foreign Nations by our Treatics of Commerce, which Advantages have generally fpeaking been purchafed by our Affiftance in Times of Difficulty or Diffrefs. It would perhaps contribute to the general Benefit, if all the Laws now fubilling in reference to Commerce and Trade were carefully examined, thofe of experienced Utility enforced, and fuch as are not of this Nature, or are already fallen into Difluetude, repealed. A Coutt-merchant for the deciding Caufes relative purcly to Difpuies in Trade, hath often been recommended by the ablent Judges, and would certainly have good Effects, in preventing Lofs of Time and Expence. The Revifat of the Laws relating to Bankrupts feems likewife very requifite, in order to diminif the Charges that attend Commiffions, to expedite the Recovery of Bankrupts Debts, and to procure a fpeedy and certain Dividend of their Effects. But above all, the greateft Attention hould be Chewn to the Encouragement and Support of Induftry of every. Kind, and to the depreffing :and if poffible extinguilhing that fraudulent Spirit of Gaming in Trade, where, however concealed under fpecious Difguifes, fome gain by outwitting, and others lofe by being outwitted, while the Nation fuffers by a pernicious Practice, which, though univerfally condemned, hath not hitherto been fubjected to the Punihment it deferves $f$.

The

- The Vicifitudes of human Affirs, though coonlpisuous in all; is in none more evident than in Matters of Trace. Thefe are continually nifing and varying in fuch a Manner, that the Bules inof ufeful and falutary at one Time become ufelefs and fiequently pernicious at another. It is our peculiar Felicity, that we bave. a permanent and never-failing Refource againf thefe Evils, in the Legillature. To this Application may at any Time be made, new Regulations propofed, Alcerations defired; and the good or bad Effects of former Statutes freely and fairly fated, in order to their being eaforced, or in Rart or in the Whole repealed. From the Wifdom and; Powar of the, Legillature we many expent, that in regard to our domeftic.Interconrfe, that Probity berween Min and Man be maintained, which is fo effentially requifite in fuch Concerns, and to fupport the Credit of our Goods and Manufactures fent abroad for the Benefit of the Merchant: and the llonour of the Nation. We may expect fiom thence the Supprefion of Smuggling, so: bighly injurious to the honen Dealer, and fo exceedingly detrimental to the public Welfare. As

The feveral Fifheries that belong to this Inand, have been confidered in their proper Places. In feaking of them it hath been thewn, that though they are by no Means what they might be, yet are they far from being fo inconfiderable as they are fometimes reprefented. The greatefit Pains have been taken to thew that they might be extended and improved, and the moft effectual Methods for doing this have been pointed out. Here it is proper to obferve, that there is no Species of national Induftry more lucrative than this, that it converts the Ocean into a Mine, and furnifhes immenfe Profits from what, except Labour, cofts but little, and is befides attended with very many beneficial Confequences. It hath been farther rendered inconteftably evident, that Great Britain and Ireland, with the Illands dependant upon them, are in this Refpect poffeffed of natural Advantages fuperior to all other Nations; in refpect to Situation, Numbers of People, Materials of every Kind, and indeed whatever can be required for fuccefsfully carrying them on. It therefore depends entirely upon ourfelves, to gain by a proper Exertion of thefe peculiar Benefits, the abfolute Poffetion of almof all the Fifheries, without having Recourfe to Difputes or Prohibitions. This, without Doubt, would be an arnazing and perpetual, as well as eafy Acquifition, in regard to Wealth, Shipping, and naval Power. Our Neglet hitherto of fo great an Object is indeed a Reproach to our national Policy; but confidered in another Point of Light, it is at once a practicable and a prodigious national Refource E
alfo the Extirpation of that Spirit of Monopoly and wholefale Gaming mentioned in the Text, fince thefe are the Two Rocks, on which, more efpecially in our Times, fo many Shipwrecks have been made. The Truth is, that Fraud ought to beconfidered as the Ruft of Trade, which if the File of Law is not fanrp, or the Arm of the Magiftrate not Arong enough to abrade, ic will gradually corrode and deftroy the Subflance. It is true that this Reform cannot be effected at once. or abfolutely perbaps at all. Bat this hinders not that every Means fhould be exerted to proteit rhe honeft and induftrious Citizen againf Men blinded by Sedf-intereft and void of Priuciple, whofe Artifices are aludys fatal to others, and fometimes to themfelves, but mofl of all to the Community.
g The yery ingecious and judicious Sir William Petty, from the Confideration of the State of Things as they ftood in his Time, propofed that the Taxes of Scotand fhould be paid in Fifh, and of Ireland in Flax, both according to his Scheme being to be fold by and for the Benctit of the Public. This Scheme, though not praCticable in iffelf, carrics in it a very juft Idea. For by promoting the Growth of Timber, the Cultivation of Hemp, the Linnen Manufacture, and above all the Fifheries, North Britain might receive infinite Benefits. On the other Hand the giving cvery Encouragement to the Cattle Trade, to the Importation of Woul and Woollen Yatn, and more efpecially to their valuabie apd extengive Manufature of Linnens, the Inhabitants of Ircland might be fully emploged and greally enriched. Thefe feparate Purfuirs would ant barely contribute to the Welfare of thofe Counitries, to the Harmony between the Nations, but alfo conduce exceedingly to the Benefit of this Kingdom. The Fiftheries in the fmaller Inands more efpecially would turn to the greateft and moll immediate Advantage, fince whatever they ac-

## of GREAT BRITAIN.

Ir may be urged as a ftrong Objection againt what hath been faid, that in the Midft of our Opulence we have a great and increafing Number of Poor. Yet this in Reality doth not in the leaft diminim what hath been advanced with refpect to our national Profperity, for Poor there always have been, and always will be, and more likewife in Proportion in rich Countries, where, from that very Circumftance, Luxury and a Propenfity to Idlenefs will in a great Degree prevail. It muft however be allowed, that vagrant Poor and common Beggars are incompatible with juft Policy. Our Laws however for the Settlement of the Poor are fufficiently expreffive of the Intention of the Legiflature, and the Fault therefore lies in an ineffectual Execution, which, however, in many Cafes plainly arifes from no difhonourable Source, the Mildnefs and Lenity of Magiftrates. Indigence fimply confidered is no Crime, and of Confequence no fit Object for Severity. It is often the Misfortune and not the Fault of Individuals, and with refpect to the Poor we ought to confider, that as our Fellow-creatures they are intitled to Humanity, as our Fel-low-fubjects to Compaffion, and as our Fellow-chriftians to charitable Relief. In this laft Refpect we certainly have not been wanting, as Hofpitals and other charitable Infitutions are amongft the moft honourable Teitimonies of ourWealth h .

There is a plain Diftinction to be made between profigate Vagrants and fuch as are indigent from inevitable Neceflity. The latter only are juft Objects of political Care, which ought to be extended with the utmoft Tendernefs to the Aged and to the Infirm. It might perhaps con-
quired muft be applied to procuring the Conveniences of Life, and with thefe they mult be furnifhed from hence. Upon the Whole their Condition would be much mended, and the People of South Britain derive great Profits from thence.
${ }^{n}$ The Maintenance and Employment of the Poor is a Subject that bath employed the Heads and the Pens of very able Men. Amonght thefe Sir Matthew Hale, Dr. Davenant, and Dr. Burn. Many Efforts have been made, many Alterations in our laws have been tried with very little Effect. Our loor are ftill very numerous, and many of them are fill a!fo in a very wretched Condition. We have in general wrong Notions upon this llead in refpect to Holland; for, though they have no common feggars they have great Numbers of Poor. lin that Country however the Indigent are far from being unhappy. For being committed to the care of intelligent Perfuns of unfpotted Integrity, who from a Principle of Religion and public Spiait confantly and regularly difcharge that Duty, they receive a comfortable Subliftence at no very great Expence. But great as the Number of our Poor is we find it magnified it by fome Writers. Mr. Gee computed that we had a Million many Years ago, and upon this Suppofition was for tranfporting them to the Colonies. But whatever their Number be it is better to keep and maintain them at Home, becaufe even tbeir Confumption is a Benefit to the induftrious. One great Source of their Number is certainly the Dearnefs of Provifions, for though Men are naturally ahamed to beg, yet that Shame may be overcome if they find they mult work and ftarve. If the Reader is difpofed to fee this Matter very tully difinfed by a Perfon of great Knowledge and Humanity, he may confult a late Treatife intitled, "Oblervations on the "Prefent State of the parochial and vigrant Poor, London t773, 8 vu."

Vol. II.

## $73^{8}$ The PLITICAL SURVEY

tribute to leffen the Number of thofe who are now effecmed a Burthen if proper Schools under the Diredion of well qualified Perfons were erected, to which young Children might be fent by their Parents, and meet with a proper Education in relpect to Morals, and at the fame Time be employed in fome fuitable Kinds of Labour. It may be that another Step hitherto unattempted, would contribute to the fame good Purpofe, and that is, by holding out proper Encouragement to an induftrious and regular Courfe of Life, by atligning a Cottage with a fmall Proportion of Land to fuch-Families as have bred up three Children or more, and fettled them in the World in any honef Occupations. This competent Provifion for fuch Perfons in the Evening of their Days flould be made, not in the Mode of Charity, but as the juft Reward and Diftinction due to them from Society, as having been, while they were able fo to be, ufeful, active, and induftrious Members of it $i$.

Tuese Inftances, to which if it had appeared necefia:y, very many more might have been added, fhew plainly that in the mott capital Points we have very pregnant Refources, and are in mo Danger of declining through Want of Means to proceed. We may likewife on the fun Grounds of Experience, in refpect to Cultivation, Manufactures, and Commerce, expect that our recurring to thefe will produce fref Refources not yct perhaps in any Man's Contemplation. At all Events there are Two Points, which maturely confidered, are fufficient to excite our Endeavours, and to fupport us in the Purfuit of them. The Firft is that vilible Spirit of Enterprize, which diftinguifhes the prefent Age, and is the ftrongeft Proof of national Vigour. The Second is that Readinels which the Le-

[^375]
## of GREAT BRITAIN.

giflature almoft annually exprefies, to countenance, affift, and cherifh every Undertaking in refpect to which there is a probable Profpect of Succels. While therefore we are actuated by this Spirit, and our Conftitution retains its Force, there can be no Doubt of our profecuting whatever Plans may be formed for the Embellifhment of that Structure of public Oeconomy, which, though in fome Parts fo highly finifhed, is yet in others viifibly incomplete.

Ir is neceffiry to mention that the Propofitions offered in this Chapter, and indeed through the whole Work, are offered by a Perfon who has the greateft Diffidence of his own Judgment, and the greateft Deference for the Sentiments of thofe who have fuperior Talents and better Lights, and to their Correction, he hall always cheerfully and willingly fubmit. His thinking much and long upon thele Subjects, making many Jinquirics, and receiving which he gratefully acknowledges, a Variety of Information, induced him to give them Place. If, as is very poffible, fiome of them hould feem impracticable or even chimerical, it will not afford him any femible Mortification. If he had feen them in that Light, he would certainly not have produced them to public View, neither did this procecd from any Prefumption of his own Abilities, but from obferving that many Things which had been treated with Contempt and even with Ridicule at their Firft Appearance, have notwithftanding in fuccecding Times been adopted and brought to bear, and he hath upon this IIead always thought, that the Credit of a private and obfcure Individual, was a very trivial Sacrifice to make, in any Cafe where public Utility was in View.

I smali conclude this Work with recommending a fhort Obfervation to the Reader's Contemphation, which is, that notwithftanding the general Opinion that in every political Syltem the Seeds of its Diffolution are contained, yet fuch is the excellent Frame of our Conflitution, that if we cramine it with Candour no fuch Seeds will be perceived therein; and that therefore we may reafonably hope the great Extent of Dominion and A'ower which in this laft Century we have under the Influence of that Confitution to wonderfully attained, may be looked upon as fuch an Indication of a robun State of Health, as may preferve the Empire of Britain many Ages from Decay. At leaft this ought to be the Wifh of cevery true fricind to his Country, and who hath a juft Senfe of its prefent happy tate!

    - Frce Stone is fu çalied from its being cut and worked in any Direction ; Sand Stone, from its. Appurance; Rag Stone feems to be:a Sort of Marble; Ketton Stone, which is juftly efteemed one of the fineft Eree Stoncs we have, is from Ketton of Fieath (Muarries in Ruthati, a few Wrikes South Falt from "Starrford; though Dr. How'i in his Micrography, and Dr. Woodward, place it in: Northamptonflire.
    c Stulus for Paving and other Ufis, as well as Building, are brought in prodigions Quantities fiom thele Quaries, aind hare furnifhed the Materials for moft of the great Edifices in London.
    d We hare Lime of all Sorts, and fit for all Ufes, in all Paris of the Britifh Dominions, which. to whoever attentively confiders it will appear an invaluable Advantage.
    e Thefe are found in Cornwall, Cumberland, Derbyfhire, Devonflire, Leicefterfhire, Northampto:\{hire, Shrophire, Somerfethire, and alfo in North Britain and Ireland. The blae Slate has many Properties to recommend it as a Covering; it is beautiful, light, reffifs the Weather, and is eatily repiired. Horfham Stone is ufed for the fame Purpofe, but is not fo light.
    - Iheie being gencrally obtained in Fxchange for our own Manufactures, and brought to us in our own Valils, lefens the mational Fxpence.
    \&. It is certain that this has the effential Qualitics of Marble, is very hard, and bears an high Posih Sue Hilis Hliftury of Fotfils, p. 469.
    h In Anglefan, of a dark Browil near Mlack ; in Cornwall, Grey; in Cumherland, dark Green; in Devon, finely veined with Red and White ; in Derbyhire, of an Afh Colour; in Kent, a Kind of Ophites, dark Brown with green Spots, Philofophicil Tianfactions, N'. 155, P. 463. In Somer-

[^16]:    EIn the Year $1 ; \sigma_{4}$ we exported to different Parts of Europe, Afica, and the Ealf Indics, 33.203 cwi. and 411 Chefts of Clafs. We the fame Year exported to vur Plantations, 41,515 ciwt. and 302 Chefts. In all $7+, 78 \mathrm{cwt}$. and 803 Chefts of Cilafs.
    ${ }^{11}$ The great and continual Confumption of this brittle Ware, which is now a Source of Piofit, would have been then a Drain. It was a Senfe of this that induced James I. ant Charles 1. as we fre in Rymer, tom. xix p. 663 . to prohibit the Importation of forcign Claifs. It was allo to enchirage Sir Robert Manfell, to whem the firft of thefe Monarchs had granted an exclufive Patent for making Glafs, in Confideration of his having introduced Pit Coal inflead of Wood.
    ' In France, for the Encouragement of the Manufarture of Plate Glafs, and the eafier to furnifh the Sums requiite to fupport fo expenfive an Undertaking, it was by Lewis XIV. confined to the Nobleffe or Gentry ; fo that while other Trades are fuppofed to deregigate from, this of Glafs is confidered as a Mark of Gentility. By this, and by laying heavy Duties on forcign Clafs, diis Manufacture has been brought to bear in that Kingdom.
    k Shaw's Lectures on Chemiftry, p. 426. where he has hewn a Method of making a ncw Glafs, much harder than any now in Ufe.
    ${ }^{1}$ Moft of the Improvements already made were in confequence of the Enlargement of Science: and it may be furely from thence inferred, that there is nothing abfurd in fuppofing that as Na tural Hiffory, Chemiftry, and Mechanifm are better underftood, new Improvements may be made, more efpecially if we reflect that this Manufacture was eftemed perfect even before thefe late Improvements were introduced.

[^17]:    - In Anglefea, Carmacrthenfhire, Chefhire, Cumbaland, Dethyfiic, Duham, Flinthirt, Lancahire, Leicefterfhire, Northumberland, Pembrokchire, Shrophire, Somerfulhire, Statfordihire, Warwickfhire, and Yorhfhire.
    $*$ England's Grievance in relation to the Coal Trade, by Ralph Gardiner, London 1655, foo. p. 53 .
    y As may be collested from the Writings of Mr. Evel;n, Sir P. Pet, Dr. Chamberlay ne, and many others.

    2 Dr. Chambarlayne's Prefent State of England, 1671 , p. 192.
    a Taking an Average of the Years 1687,1683 , 1689 . from thic Cuftom-houfe Intice, the Importation was 323,097 Chalders.
    b Hunter's Complete View of the Coal Trade, p. 184. uhere he Sates it in 1755 at 535,342 Chalders. But in 1706 it was 614,242 Chaldicas.
    c In North Britain they fupply their own Confumption, and alfis export. In Ireland thuagh they have Coals, yet they taice annually to the Value of $\mathcal{L} \cdot 30,000$ from England, and $£ .12,000$ from Scotland.

    As far as I am able to colle?t, the Duty on Coals exporte l on board Pitioh Ships, including the new Duty of four Shillings, in 1757 , amounts to ten Shillings every Clablet.

    - The pecfent Duty, as high as it may feem, is fo little more than what is paid in London that this Alfertion cannot appear improbable.
    t Sume French Patriots are very angry that their Smiths, Farricrs, \&c. will not ufe their own Coal (Houille); and in Holland they might have it from Licge, Roer, and other Places: But notwithftandis, the Dut h Duty is much lower on thefe than ourg yet in their Manafactures of Glafs, Metals, in their Forges, Light-Houfes, and where a ftrogg Fire is requifite, they ufe Houille d'Angleterre. This thows the Supcriority of our Coal inconteftibly.

[^18]:    I In refpect to this (though the Fast is fo senerally admited as to need no Proof) I have careZaily inquircal fiom the propereft Judges, who all confirmed it.
    " Political Survey of Creat Briain, vol. i. p. 156.163. 165.303, 309.

    - Thefe are thiled comphatically W A P-LE AVES, and are let at as high Rents as any landed: Property in Britain.
    k In the fame Manner they have coritrihated not a little to the Benctic of Leicefterkire, Glouecflerhire, and Shrophire; more ftill to Staffordihire, Ec.

    1 All thefe are retained and comfortatily fupported in their native County, have encreafed as this Commodity grew into Demand, and have the Piofpest of a permanent Eflablifhment derived trom it. Circumfances to which gidds, rain, and difipated People, whatever their Rank, very fcllom advert ; but which Perfons of a fedater Turn will attentively confider and contemplate :wih Pleafure.
    ${ }^{n \prime}$ Numbers of fout robuft Men fubfifting themfelves, and breeding up their Families by theire: own Indultry and Labour, are the natural Strengtio and the greatef: Honour to a Nation. .

[^19]:    n As this may feem an extraordinary Affertion it ought to be explained. Sir William Monfon in his Naval Tracts, p. 279, gives us, from a Survey taken A. D. I582, a State of the Ships and Seafaring People in England, according to which the Number of Veffels was 1232, their Burthen 72,450 Tons, and the Number of Mariners 14,295. When the laft Duty was granted for the Benefit of the Port of Whitby [ 1750 ] it was admitted that there were then fhipped annually fiom the Port of Newcaftle and its Members 500,000 Newcaftle Chalders, equal to $1,250,000$ Tons. Allowing the Veffels employed to be 200 Tons, and to make one with another four Voyages, then there will be 1313 Ships, their Burthen 262,600 Tons, and 13,130 Men and Bojs in this caltan Navigation only.

    - A great Part of the Silver thus obtained might and probably would be fpent on the idle and the profligate of both Sexes, who are fo many Incumbrances and dead Weights on Society, infead of furnifhing Subfiftence to Labourcrs, Keelmen, Sailors, and Traders, all induftious pains-taking People, who in their feveral ()ccupations are fo many profitable Servants to the Publick.

    P In this we would be underftood to include all the Duties impofed on Coals to whatever Purpofe appropriated or where-ever rcceived, as thefe Duties are deftined to and expended for the Service of the Publick, and in that Light may be juftly confidered as Revenue. A Circumftance of very grear Weight when we confider the national Advantages arifing from this Commodity.
    ${ }^{2}$ We are apt to undervalue what we have, and to overate what we wifh; it is reafonable therefore to make thefe Suppofitions in order to give us jufl Ideas of both.
    r If the Reader defires to purfue thefe Speculations farther, he may confult Houghton's Collections, vol. iv. p. 259.

    - Dr. Shaw, in his curious and ufeful Notes on Boerhaave, hath fome vers jnit and infructive Remarks on this fingular Circumftance.
    "This is the true Characteriftic of Metals, by which they are diftingaified from other Subftances, and one fion another.
    w Becaufe Mine: are moft common in mountainous Countries, the Veins being more readily difcovered, and the Works eafier carizd on, this connects the Idea of Mines with Mountains, fo that we can farce feparate them. But in Nature they have no fuch Condoction; in America: many rich Mines are in low Ground, and in our own, the Mines in Swale Dale in Yorkthire, thofe near Newland in Gloucefterfhire, and in Braffington Moor in Derbyhire, are in Plains.
    $x$ Hence they are Sources of much L::hour and Expence, maintaining thereby Numbers of People comfortably by the Fruit of their own Jnduftry.
    y Philofophical Tranfactions, No. 69, p. 2096. No. 138, p. 949. Woodward's Hiftory of Foffis, vol. i. p. 199. vol. ii. p. 30. 85. 107.
    $z$ The Principle which excites that indefatignble Induftry vifible in this Country is the Profits being divided. The Lord of the Soil has commonly a clear Sixth. But is Mines wrought with Difficulty and IIazard, is often content with a Ninch, a Twelfth, or a Fiftecnth, the Reft being' divided amongot the Adventurers, and this it is that hy keeping Hope alive, leffers the Senfe of Lis' ur, and fupports the Spirit of Mining. A Cincumfance that delerves die derpell Atentian.

[^26]:    2 For thefe Coinage Towns, fee Political Survey of Great Britain, vol. i. p. 345.
    b Thefe Blocks weigh Three hundred and Twenty Pounds, the Stamp authenticates the Purity, and implies a Permiffion to vend the Tin as being fo.
    c This Aurum Mofaicum or Mufivum, is a Pigment ufed in writing or embellifhing Letters in a very beautiful Gold Colour; it is allo ufed in faining Glafs and in marbling Paper.
    ${ }^{4}$ This is not the Glaziers or Painters Putty, but a Powder of calcined Tin, ufed in giving the laft Polih to fine Works in Steel, \&cc. We had better write it Puty; the Freach call it Potée.

    - It is of Confequence to enumerate the principal Ufes of Metals, that an Idea may be better formed of the ir Value from the various Channels of Confumption.
    $\ddagger$ We fend annually to different Parts of Europe, Africa, and the Eaft Indies about 8000 Cwt. and about the fame Quantity to our Plantations.
    * Tin imparts this Quality to Pewter, and for this Reafon Vats of this Metal are ufed in general by the Scarlet Dyers. See Houghton's Collections, vol. ii. p. 183.

    It See the ingenious and worthy Dr. Eorlafe's natural Hiflory of Cornwall, p. 183. See alfo Maline's Lex Mcrcatoia, p. 59.

[^27]:    - Plot's Natural Hiffory of Staffordhire, p. 1 59. Houghton's ColleCtions, vol. ii. p. 21 . Woodward's Hiftory of Foffils, vol. i. p. 223-234. vol. ii. p. 36-38. 86. 108. Hill's Hiffuiy of Foffils, p. 629. Borlafe's Natural Hiftory of Cornwall, p. 195. Befides thofe mentioned in the Text there are other Iron Ores, fuch as Hæmatites or Bloodftone, the Magnet or Loadflune, Smiris or Emery, and Magnefia or Manganefe, all of them found in Britain.
    r Boyle's Works, vol. v. p. 197. Boerhaave's Chemiftry, vol. i. p. 93. Neuman's Worliz, p. 68-85. Macquer's Elements, vol. i. p. 63. Juncker Elemens de Chymie, tom. iii. P. iii. ch. v.
    - In this Cafe they feem to act as Flaxes to each other; and it is faid that different Sorts of Ore, none of which feparately could have been wrought to much Profit, have anfwered well when mixed. See a very curious and remarkable lnftance of this in Juncker Elcmens de Chymie, tom. iii. p. 30 I .
    ${ }^{\prime}$ It is from this and other Improvements that our Mines yield much more than formerly. In the old Times they fcarce made in their Foot-blafs or Bloomerics One Hundred-weight in a Day, and left as much or more Metal in their Slaggs ; whereas they now make two or three Tons of Iron in the fame Space, and leave a mere Cinder behind. It is faid that about a Century ago there were Eight hundred Forges in England.
    $u$ This is what the French call Fer en gineufe, and alfo Fer de Fonte. Sows and Pigs are of different Sizes, thofe which run firft are fmalleft.
    w This fome have thought proceeded from the Attraction of the finer. Parts of the Metal remaining in the Slagg by the new Iron, and combiuing therewith.
    x Such as Pors, Kettles, Bullets, Bombs, Chimney Backs, and other coarfe Work; Eut this fron is תill full of vitreans Impurities, which are expelled by repeated Operati ns.

[^28]:     are two Forges commonly under one Koof. The firft is called the Finery (Affinerie) where it is heated and hammered alternately till rendered pure. The fecond is Atiled the Chafrey (Chatferic) where it is alfo heated and hammered into large Bars.
    ${ }^{2}$ In this State it is complete as a Commodity, and fit for Sale 10 the Manufacturers in Iron, who know how to diftinguig the Sorts that are fitteft for their refpective Purpoles.
    ${ }^{2}$ It funifhes in Agriculture and in Arts all the Inftruments for a valt Variety of Purpofes; and if Utility was refpected in Tities, had never been ftiled a bafe Metal.
    "In which the Time, Labour, and Skill of the Workmen are to be paid for, and of Courfe enereate the Price of the Metal. As in Buckles, Sciffars, fine Inftruments of all Kinds, Springs of different Sorts, paticularly Wratch Springs.

    - In Countrics where this Metal abounds, and can be made cheap, it is exported as a Commodity. Rufia exports annually 300,000 Pouds, or 6000 Tons. Sweder, 300,000 Schipponds, oi 48,000 Tons. Norway to the Amount of 400,000 Rix Dollars. A great deal, and efpecially Stecl, comes from Tranfilvania, Hungary and different Parts of Germany, and fome from Hollin!, which is bought from Germany, and only wrought there into another Form.
    d The Iron Works in Mendip Hills had long fince deftroyed the Oaks in that Foreft. But in fome Places Woods are preferved for the Suptly of the Iron Works.
    e In Lancafhire Time out of Mind they have ufed Turf with Charcoal, and prefer it to Chatcoal aione. They tried Pit Coal but without. Saccefs, Yet in 1746, Mr. Ford (in Colebroke Dale in Shrop(hiic) the fame Perfon who made a Cylinder of Spelfer, made Iron brittle or tough as ine pleafed with Pit Coal, both Ore and Fuel being found in the fame Dale. At this Time, :: I have been well informed, Iron is wrought with Pit Coal at the Carron Works in North bitain.

[^29]:    Thefe Duties are very judiciounly regulated, for the Support of Commerce, and the promo* ting our own Manufacture.

    ETo Sweden, Spain, and America, through the fuperior Dexterity of our Micchanics, and feveral Means employed in promoting Expedition.
    h In great Plenty in Cardiganfhire, Chefhire, Cornwall, Cumberland, Derbyfhire, Devonfhire, Lancafhire, Ine of Man, Northumberland, Shropfhire, Somerfethire; Staffordhire, Yorkhire, Wales, Warwickfhire, Weftmorland, in North Britain, in Ireland, and in America.
    ${ }^{i}$ This was occafioned chiefly by thofe Errors and Incertainties in our Laws in regard to Mincs, which are now happily removed.
    $k$ Borlafe's Natural Hiftory of Cornwall, . p. 203.
    ${ }^{1}$ Plot's Stafford/hire, p. 165. Woodward's Foffls, vol. i, p. 193-198. vol. ii. p. 24-m27. 83. 106. Boerhaave's Chemiftry, vol. i. p. 9r, 92. Macquer's Elements, vol. i. p. 59. Hill's Foffils, p. 632 . Juncker Elemens de Chymie, tom. iii. P. iii. ch. iv.
    m L. Erckerns's Affays, the whole Third Book. Neuman's Chemical Works, p. 67. He allo. afferts that Lapis Lazuli ought to be confidered as a Copper Ore.
    ${ }^{n}$ Dietionaire de Commerce, tom. i. P. ii. col. 1230, 123 I. Differtations Chymiques de M. Pott, tom. iii. p. 297-586. Juncker Elemens, de Chymie, tom. iii. P. iii. ch. iv. Dictionaire de Chymie, tom. i: p. 333. Mineralogie de Bomare, tom. i. p. 175-205. Encyclopedic Portative, tom. i. p. 411 . Beaufobre Intraduction a l'Etude de la Politique, tom. i. p. 127.

    0 What we are told of Gopper from Japon being lieavier than any European Copper is not rue; Swedifh Copper, according as it is refined, is fometimes heavier and fometimes a little lighter, in this Proportion, $8,834,8,799,8,734$; the middie Number reprefenting the Japon Copper, and the firft and third Swedifh, and Water efteemed 1,000 . At Amflerdan Swedifh fetcitis the fame Price as Japon, that is about 70 Florins for 100 lb . An Halfpnony of the Coia of Clarles II, weighed 9000, our Copper being when pure as heavy as any.

[^30]:    n This is to be underfood of our Mines, for in foreign Countries there are fome much deeper, as having been longer wrought.

    4 Borlafe's Natural Hiftory of Cornwall, p. 206. This Mine is in Huel Virgin, in the Parifh of Giwenap, and the Fact happened in July and Auguft 1757.
    r It might contribute to the rendering thefe Mines more valuable, if, as in Germany, we wore affiduous in extracting the richer Metals from the Copper, which though it might be formerly very pradently declined, from the Fear of its being feized as a Mine-royal, yet now when: there are no fuch Apprchenfions, private and publick Interef unite in recommending fuch Enstavours.
    -Borlafe's Natural Hiftory of Cornwali, p. 203, 204. 205. Yet our Ores are by no Means: f. refractory as in fome other Countrics.
    $t$ In this Fufion a proper Flux is ufed to difpofe the Metal to feparate from the earthy, fony, fulphurcous, and arfenical Particles with which it is intermixed.
    "The Copper in this State continues fill mixed, but mixed with metallic Particles, chiefly Lead: and Iren, from which it mult be alfo purified:
    w In Citmany Copper is frequently mixed with Silver, which they are very dextrous in difcoveling, from the Appearance of the Ore, as alfo in the Block.
    $x$ In tyme of the richeft Mines in Hungary"their Copper requires fourteen Medings to render is firic.

[^31]:    c It would contribute much to this if fome Means could be found to leffen the Number of Fufions, or in other Refpects to Ghorten the Procefs of refining Copper.
    f Plin. Nat. Hift. lib. xxxiv. cap. 17. where he fays it was obtained with much. Difficulty and: Lahour in France and Spain, but with great Facility in Britain.
    \& Cardiganfhire, Chefhire, Cumberland, Derby hire, Devonfhire, Durham, Flinthire, Glou: s.cfterfhire, Lancahire, Ine of Man, Monmouthhire, Montgomeryhire, Northumberland, Shropmire, Somerfethire, Staffordhire, Weftmorland, and Yorkhhire.
    ${ }^{n}$ All Ores are fubject to many accidental Alterations in the Earth, to which thefe different Appearances are to be referred; but the Metal when refined is precifely the fame.

[^34]:    y The judicious and indefatigable Boerhanve was actually working on different Specimens of our Mundics, fent him by our Cornih Antiquary, when Death put an End to all his Inquiries and Difcoveries.
    ${ }^{2}$ The Produce of thefe Mincs are of greater Value than thofe of Silver in the fame Eleftorate, though reftricted to the raifing annually only Six thoufand Quintals.
    ${ }^{2}$ This certainly deferves Notice, if we confider what we annually import, what we might export, and that in fending is to China it would fave fending Silver. For though formerly the Chinefe prepared the blue Colour ufed in Painting their Porcelhin, from Materials fonnd in their own Empire, yet for many Years paft they have been fupplied from Europe.
    b Dr. Borlafe tells us (p. 13.0) that a Ton of Manganefe, which was had in Cornwall for eighteen Pence, was fhipped for Liverpool, carried forty Miles from thence to Bollam, and fotd there for 51. 8s. 6d. This, which is one of the Pooreft of our Jron Ores, muft have been employed to fome very fingular Purpofe, or fome valuable Subftance extracted from it, to raife it to more than feventy Times its original Price.

    - The Inflance in the former Note is one only out of many, to thew the Adraptages that would arife from making thefe concealed Proceffes public.

[^35]:    d It is to (hew this, that Comparifons have been made of the Quantitics of Mctals formerly, with the Produce of our Mines from the beginning of the prefent Century to this Time.
    e In Bihop Gibfon's Additions to Camden his Correfpondent mentions this Mine; Heton In his Preface to his Account of Mines fays, the working it was ftopped by Law Suits.
    ' It is from the numerous Advantages which refult from them to the Community, that Mines in à peculinr Manner ciaim the conftant Notice and Protection of the State.
    g All that is intended in the Fext, is to fuggeft a ftrict and fteady Adherence to the Spirit of thofe two Laws founded upon the jufteft Principles.
    h Thefe Franchifes feem to have exifted from Time immemorial, were recognized by all, and confirmed and extended by our wifeft Princes.

    IThe fareft Way of difcovering thefe, is by making a frict and accurate Analyfis of all the mincrai Subftances, the Contents of which arc not already known.
    $\dot{k}$ A Defire joined to a Security of quietly poffefing a Gold or Siliver Mine is a Premium (without Coft to the Public) fufficient to excite the moft diligent Enquiry.
    ${ }^{1}$ Affording a comfortable Subfiftence to the Induftrious is the Share of the Public, and a Share of which at all Events the cannot be defrauded.
    m At the Clcfe of the Statute, Anno primo Culicimi \& Marix, thete is a Provifoe, that all Godu and Silver extractedfrom Copper, Lead, or Tin, fhall be coined at the Mint, and the like

[^36]:    *Thefe Improvements though in the firf Inftance due to Mines, come in a Courfe of Years to be able mutually to íupport each other, even if the Mine fiould fail.
    $x$ L'Homme defintereffe, p. 127, where the Author obferves, that if a Million of Livres be annually fpent in the working a Mine, which produces no more than Nine hundred thoufand, yet this laft Sum, exclufive of all other Improvements, being juft fo much added to the public Stock, the Community may well afford to pay the Difference, or continue working under this apparent Diadzantage.
    y The state athe Counties in which Mines are wrought, compared with their Condition in former Periods, amotmronp this Head to Demonftration.
    $z$ Foffils of every Kind are ftrictly and truly what we have always filed them, Bleffings befowed by Providence. For though Men may raife Woods where therc never was a Tree; render Fields fertile where Grain had lever grown; or naturalize Animals in Countries where till imported they were never feen : Yet all the Skill and Induftry of Men cannot conftitute a Stratum of Clay, Chalk, or Gravel, a Quarry of Stone, or a Load, a Vein, or fo much as a fparry Lump of any kind of Metal. We may purify, refine, and fit them for Ufe, but the Things themfelves are pure Gifts of Nature, the peculiar Riches of thofe Countries in which the has placed them.

[^37]:    ${ }^{2}$ Strab. Geog. lib. xv. p. 715 , in the Speech of the Brachman Calanus. Virgil. F.cl.iv. Orid: lib. iii. Eleg. which hew the Antiquity and Univerfality of the Tradition of Paradify whenet theprincipal Vegetables created for the Ufe of Man wcre to be removed, as ther- probably wacre, before the Deluge, and after that, upon the Difperfion of Mankind, quexually improved by them in all the inhabited Regions of the Earth.
    ${ }^{6}$ Plin. Nat. Hift. lib. xv. cap. 13, 14. 18. 22. 25. Are not fall Vegetables fpontancous in their Growth in fume Country or other ? Muft they not have been tranfplanted from thefe into differeut Regions? Were not Ceres, Triptolemus, Bacchus, \&c. deified by the Ancients for thus extending the Benefits beftowed by Providence? Has not this been the Cafe ia: Countries now famed for Fertility ? Is it not remarkably fo in our own?
    c' But even thefe Limits are not fo confined as is generally believed. Cinnamon and Cloves would grow in Tobago. Sugar does gruw in Spain, Sicily, and in Egypt. Oranges have been naturalized in Portugal, that were originally the Production of China. Curiofity and Luxury however, in refpect to modern Importations, have done more than the nobler Principles of Oeconomy and public Spirit.
    d L'Efprit des Loix, liv. xviii. ch. 3, 4. 9. Ile obferves, that in Countries naturally abundant the People are idle, feeble, and tinid.
    e Plin. Nat. Hift. lib. xvii. cap. 4. wherc he oblerves, that the Soil about Philippi being drained by Sluices, the Climate was altered and hecame drier. The fame has been obferved in Ireland, and in our Plantations. I fay obferved, for in Truth the Cafe is the fame every where, only every where it has not been obferved. The Crnverfe of this Propofition is alforme, for in Countries long neglected the Climate becomes unhealthy, and the Soil barren.
    f If we confide in the Sentiment of Camden, Orpheus calls this the Royal Court of Ceres. See alfo Strabo, Geog. lib. iii. p. 200. Diod. Sicul. lib. v. p. -09. Authors, who though they wrote after Cæ\{ar, yet drew their Materials from Greek Geographers and Hiftorians, who lived long before him.

[^38]:    8 De Bello Gal. lib. v. cap. x. He acknowledges however that the Climate was lefs fevere than in Gaul. Cic. de Legibus, lib. ii. gives us the Reafon, becaufe of the tepid Vapours from the fursounding Sea.
    u In Vita Agricole, cap. xii. His whole Relation thews him to have been diligent and exact in. his Inquiries; very fenfible and impartial in his Reports.

    1 The fame that has been faid of Ireland, our Hebrides, and the Wef Indies, and from the fame Caufes, i. e. the Want of Cultivation.

    - Stat. 25 Car. II. cap. i. §37. A Bounty is granted on Wheat at 48 s . or under, of $5 \leq a$ Quarter; on Barley or Male, at or under 24 s . of 2 s and 6 d ; and on Rye, at or under 32 s . of 3 s . and 6 d. a (Luarter.

    PHoughtion's Collections for the Improvement of Hufbandry and Trade, vol. iv. 1. 389. where he aflures us that in one Year the Bounty amounted to more than 61,000 1 .
    ${ }^{7}$ Stat. I Jac. II. cap. xix. coutinued by feveral Statutes, and made perpetual by Stat. 3 © io. 1. сир. vii.
    'Stat. I W. and M. cap. xii. § 2. commonly confidered as the firft Bounty Act, but gives tie: fame Sums and at the fame P'rices as 2.5 Car. II. cap. i. § 37.

[^44]:    - In Europe Wheat grows in Norway as well as in France and Sicily ; in moft Parts of Afia; but that of Smyrna or the Archipelago is fitteft for our new Hufjandry. See Tull, p. 104. 136 . In regard to Africa, the Harvefts of Egypt and Barbary, in point of Quantity and Quality, are cqually famous. Shaw's Travels, p. 230, 406. In refpent to America, in the Kingdom of Chili in the South, Ovalle, lib. i. cap. 3. in great Plenty and Perfection; and as to North America I need citeno Authority.
    $t$ Stat. 5 Ann. cap. xxix. $\$ 15$. A Bounty on Exportation of 5 s.az Quarter is given on WheatMalt, ground or unground, when Wheat is at or under 21.8 s . a Quarter.
    *On the firlt Apprehenfion of Scarcity the Difillers are prohibited the Ufe of Whent; but in Seafons of Plenty, Exportation and the Diftilfery fupercede the Neceffity, and confequently fave the Expence of Granaries, the Ends of which are immediately and effectually anfwered by fuch temporary Prohibitions; becaufe the Quantities ufed by both are brought to Market for home Confumption, in Bread and other Kind of Provifions.
    * Starch is made by fecping Bran or damaged Wheat in foft Water for a Wcek or ten Days in the Sun; the Sediment properly prepared is turned into tiris Commodity, of which we make abrut Forty thoufand Hundred-weight, and the Duty amounts annually to Thirty thoufand Pounds, but is drawn back on Exportation. The French under fevere Penalries prohibit the ufing good Wheat in making Starch; they alfo make very confiderable Quantities.
    $\times$ Bran is much ufed by the Dyers, who boil it in Water, to which it gives an Acidity, and makes it fit for fcouring ; when preffed after fteeping, it is foid for Dung.
    y For the Hiftory of Wheat confult Columel de re Ruftica, lib. ii. cap. vi. Plin. Hift. Nat. lib. xviii. cap. vii. Raii Hift. lib. xxii. cap. i. Plot's Oxfordfhire, p. 153-155. Morton's Hiftory uí Northamptonfhire, p. $476,477,478$. Borlafe's Natural Hiftory of Cornwall, p. 87, 88. Worlidge's Syfem of Agriculture, p. 39. 53. Mortimer's Hufbandry, vol. i. p. 127-130. 149. 332. Tull's Horle-hocing Hubbandry, chap. ix.
    ${ }^{2}$ If we confider the Number of Perfons employed in this Hufhandry, the Expence of Cartle, and the Wear and Tear of Country Uteanils, we may quickly fee that there is no 1 mproprity in Stiling the Culture of Wheat a Manufacture. Indeed in fome Refpects it furpaffes moft Mam-

[^45]:    e Plin. Nat. Hift. lib. xviii. cap. xvi. Camdeni Britan. p, 546. Raii Hift. Plant. lib. xxii. cap. 2. Markham's Farewell to Hubbandry, p. 79.93. Worlicige's Syfem of Agriculture, p. 40. 54. Mortimer's Habandry, p. 125. 149. Borlafe's Natural Hiftory of Cornwall, p. 87, 88. Lifle's Oblervations in Hußandry, vol. i. p. 270. Hill's Hiftory of l'lants, p. 213 .
    $i$ It rifes bigher than Whear, the Ear is fmaller, with Norter, fiarper, and rougher Awns, the Grain is lefs in Size, thinner and darker, the Root not fo bufhy as hat of libe at, and therefure does not fo much exhanf the Soil; it is carlier in the Ear by a Ronth. It is next in Weight to Wheat, the Buftel being from 56 to 59 Pounds; whore they aliow ninc P'ecks to a riufhel it fometimes reaches to 67 Pounds.
    $g$ This mixed Corn is commonly called Mallin (Mifcellane) and alfo Mung-corn or Munk-corn, corruptly for Monk-corn, becanfe Bread made of it was cummonlyeeat in Monalteiles. Profelfor Bradley affurcs us, that this was the fweetelt and moifteft Bread he ever tafted. Many others are of his Opinion in this Refpest. Eut in the Article of Bread, we are at prefont rather governed by the Sight than the Tatte.
    h Mr. King eftimates the Produce of Rye in his Time at $10,000,000$ of Buhtels. We grow at prefent $8,509,216$ Bufhels, of which $7,992,000$ are fpent in Bre:a, 248,000 are confumed in other Ufes, and 269,216 l3ufhels are annmally exported. This Amounts to 283,7981 . whereas in the laft Century, though wevgrew more, we imported cowfiderable Quantities, and confequently the Nation gains very confiderably by this Grain.
    i In Germany Rge is as much nfed as in any Conntry in Enrope, and the People who eat it are very robuit, and go through a great dial of Labour, which they think they could not do without it.

    - Ufe in this Kefpect has wonderful Effects, infomuch that thofe who have long eat Rye.bread have little Relifh for Wheat.

    1 When this was the Bread, as it once was of the common People, Wheat went much farther, which is the Redion, that notwithfanding the Difference tof Money, Wheat is now thought dear ac what avas then efteemed a moderate Price.
    meye parched and ground has been uled as a Subltitute for Coffee; it is lefs heating, but has mot the Flavour or any other Propertics of the Mocha Bean.

[^46]:    : The Confumption of this Grain in Bread is computed at 8,129,000 Bufnels. It is allowed that thofe who eat Barley-Bread eat one with another eleven Buhels in a Year, whereas People ufually eat but eight Buthels of Wheat. This is highly probable, fince Barley commonly weighs but from Forty-four to Forty-feven Pounds a Bufhel ; in the Counties where nine Pceks are computed to a Burhel it fometimes weighs Fifty-eight Pounds.
    n Raii Hift. Plant. lib. xxii. § i. cap. 3, 4. Plot's Staffordhire, p. 343. Hordeum Nudum, or Zeopyrum, this by the Botanifts is called Tritico-Speltum. At Rowlcy, where it grows plentifully, they call it Freach Barley. It produces largely, makes Bread very near as good as Wheat, and Malt not inferior to any Barley.
    w The annual Quantity of Barley made into Malt is computed to, be $26,400,000$ Bufhels, and the Duty on Malt in 1762 amounted to $E \cdot 1,011,701$.
    $\times$ It appears from hence, if there were no other Arguments to prove it, that Agriculture is the great Support of the Nation, in which every Individual is interefted for the molt material Articles of hie daily Subfiffence in Food and in Drink ; in this Refpest all Maufactures depend upon it ; from its Produce it is the chief Say of the Landed Intereft ; it contributes largcly to Navivigation and Commerce, and in various Ways; and, taking all thefe togrether, to a vaft Amount towards the Maintenance of Government. All thefe Benefits, important as they are, become exceedingly more fo, from the Confideration that they are ftable and permanent, the Work of Prudence and Perfeverance, and which can neverdecline but through Indolerice and Folly.
    $y$ The grofs Duty on Matt in 1762 has been given above, and in 1764 ; the Quantity which paid Excife advanced to $28,000,000$ of Buhhels.
    ${ }^{2}$ It is fufficient to hew the Importance of the Diftillery to the Public to remark, that every Quarter of Cora confumed therein pays three Pounds or more in Duty.
    ${ }^{2}$ This was the Ufage of the Romans, and is ftill fo of the Spaniards, and of many other Nations who have it in Abundance, and make no Ufe of Malt.
    b The Confumption in thisWay, confidering how much better Animals for Food are now kept to what they were formerly, muft be very large. It has been rated by good Judges at 936,000 Buanels, which is rather cel:a aly within than beyund the Truth.

[^47]:    c It has heen computed that we annyally export in Barley 299, 184 Buhhels, in Malt $\mathbf{1 , 8 0 6}, 840$ Buflcts, and our Exports in both contiaue to increafe.
    d For the Hiftory of this Grain, fee Columel de re Rufica, lib. ii. cap. ix. Plin. Hift. Nat. lib. xviii. cap. vii. Raii Hift. Plant. lib. xxii. § r. cap. v. Plot's Natural Hiftory of Oxfordfhire, p. 155. Staffordhire, p. 343. Childrey's Britan. Baconica, p. 1t. Morton's Natural hiltory of Northamptonfhire, p. 479. Worlidge's Syftem of Agriculture, p. 39. 53. Mortimer's Hutbandry, vol. i. p. 130 . 151 . 333 . Lille's Obfervations in Hufbandry, vil. i. p. 27:-280. Rorlafe's Cornwall, p. 87,88 .
    e Lifle's Obfervations in Hulbandry, vol. i. p. 50, 51, where he hews the Uies, explains the Reafons, and alligns the Quantities of this Manure.
    t For the Hiftory of Oats, fee Plin. Hitt. Nat. lib. xviii. cap. xvii. Raii Hith, Plant. Iil. vxii: cap. xiii. Sibbatdi Scotia illuftrata, lib. i. P. i. cap. xiv. Worlidge's Syttem of Hubandry, p. 40, 41. 54. Mortimer's Art of Hufbandry, vol. i. p. 134. 151. 354. Life's Obfervations in Huflhandry, vol. i. p. 289-295. Hill's Hiftory of Plants, p. 209.

    8 Plot's Natural Hiftory of Staffordhire, p. 344, 345. Mortimer's Hulbandry, vol. i. p. 136. Borlafc's Natural Hiftory of Cornwall, p. 87.
    ${ }^{n}$ It is generally beld, that in South Britain fewer People eat Oat than either Barley or Ryebread, and yet the annual Confumption of Oats in this Way amounts to $14,329,300$. Bumhels, which falls only fort $1,701,200$ Bumels of the Rye and Barley ufed in Bread put together. This arifis from the different Quanticies which are reciuifte for Subfiftence. A fingle Perfon eating of this Bread within a Bufhel of three Quarters in a Year. The common Weight of the Buhhel feldome exieeds forty Pounds, and where it contains nine Pecks rifes but to forty-five.
    ${ }^{\text {' Markham's }}$ Complete Englifh Houfe-wife, B. ii. chap. viii. p. 175. where there is a large Account of the Ufes made of Oats in his Time, which is curious.

[^48]:    $k$ It is computed that for the Maintenance of Horfes, and in ather Ufes, we fpend yearly $19,692,000$ Buhhels. But our whole Growth amounts to no lefs thant 33,927,576 Buflels; where:is Mr. King ftates the Produce of Oats at $16,000,0^{\circ} 00$ Bufkels. But our ufual Confumption amounts to $34,021,800$ Bufhels, which is fupplied by an anmual Importation of this Crain, whicls feems to be ftill encrealing.
    ${ }^{1}$ Mr. Gervafe Markham in the Work before cited, B. it. chap. vii. gives the Method of malting Oats, which in his Time he fays was commonly practifed in Lancalhire, Chefhire, Derbyfhise, Devonhire, Cornwall, and elfewhere. Mr. Mortimer alfures us, that in Kent they cummonly brewed with one half Barley and the other Oat-malt.
    $m$ This Oofervation has arifen from confidering the Refemblance between boiled Starch and Flummery, which is beft madefrom the Hulls of Oats ftecped in Water; and from the Likenefs of the Thing produced, and the Similarity of the Procefs in making it, a Prefumption appears, that this Grain might be applied as well as Wheas in this Manufacture, which, if Experience fiould jailify this, wouid be of Utility.

    - Stat. 5 Ann: cap. xxix. § 10 . gives a Bounty of 2 s .6 d a Quarter on Onts exportcd, when Onts are under fifteen Shilliags a Quarter.
    - It has been fuggefted, that inftead of 15 s . Exportation fhould be permitted till Oats are 20 s . a Quarser, but this Merits mature Confideration.

    P We have before ftated the prefent Growth, from the Traets on the Corn Trade to what is mentioned by Mr. King, to be as 17 to 8, and yet we fall hort of the Demand.
    q In A. D. 1763, was the greateft Importation, which amounted in Oats and Oat-meal to 219,310 Quarters, or $1,754,480$ Bufhels, which muft colt about $\mathcal{L}, 175,448$.

[^49]:    r Columel. de re Ruflica, lib. ii. cap. x. Bradley's Survey of Aucient Hußbandry, chap. xi. Lifle's Obfervations in Hulbandry, vol. i. p. $317,318,319$.

    ${ }^{1}$ It is looked upon as a great Improver of Clay Ground, chiefly by feeding it, and in this View it has been very much cultivated in Suffex and other deep Sohs.
    $k$ The feeding before it is mowed for Seed, according to the beft Information I could obtain, may be eftimated at a Guinea an Acre, and after mowing at about Three Shillings.
    ${ }^{1}$ It will appear from the foregoing and the following Note, that an Acre yiedding Three Bufhels. of Clover Seed, at I l. 5 s . is worth 'near a Fifils more than an ordinary Crop of Wheat at Thirty Shillings a Quarter, exclafive of the different Expence in raifing the Two Crops, which is likewife in Favour of Clover.

[^52]:    ${ }^{\text {t }}$ There is a wide Difference between an Improvements being known and publihed, and its coming into general Ule; in relpect to which, an Hiftory of Britifh Hulbandry would be of great Utility. As to this particular Hulbandry, it came into Norfolk about the Beginning of this Century, and in about Twenty Years grew into general Ule there, where it fill continues to flourifh, and is profecuted with increafing Succefs every Year.
    "Sce an Account of thefe Inconveniencies and their Remedies in Tuli's Horfe-hoeing Hußbandry, p. 91, 92. An Engint has been invented for nicing of Turneps, and the Society offered a Premium to make fuch an Engine ufeful and cheap. In Ireland alfo fuch In!truments have been brought into Ufe by the Care of their Society, the laudable Endeavours of wbich for the Improvement of their Country are univerfally known, and as univerfally applauded.
    w In many Parts of the South of Scotland they cultivate Turneps with Affiduity and Succefs. In Ireland alfo they are falling into this Hufbandry. In both Countries as Improvements are made by or under the Infpection of Perfons of Property, they are commonly carefuily and effectually perfor ned.
    $\times$ The great Lord Vifcount Townhend, a Practifer as well as Patron of Agriculture, made a Trial of Luth Mcthods in the fame Field, when the Difference appeared to be no lefs than One Fon and an Half in the Prodice of an Acre, in Favour of the New or Drill Hulbanilry. Befides the Ronts raifed in this Way are perfectly. fweet, free from that Ranknefs which attends the Uie of Dung, and of courfe communicates no. bad Tafte to the Milk or Fleh of the Cattle that feed upon them.
    $y \mathrm{Mr}$. Tull fays he has heard of fome rglb. but has often known them of 16 lb . However, in. 1758, there was one pulled up near Tudenham in. Norfolk upwards of 29 lb . Weight.
    ${ }^{2}$ Hift. Nat. lib. xviii. cap. xiii. He, fays the beft grew in the Country of the Sabincs, and were. worth at Rome a Seftertius or Two Pence a Piece.

[^53]:    ${ }^{2}$ Tull's Horfe-hoeing Hufandry, p. 89. Dr. Defaguliers in the Philofophical Tranfactions before cited fews, that an ounce of Turnep Sced contains between Fourteen and Fifteen thouland Grains; and he farther flews, that fuppofing the Growth aiways uniform, a Turncp may increale Fifteen Times its own Wcight in a Minute.
    b. It was this that gained them fo much Credir in Norfolk ; and the Money gained by this, as it put Wealth in the Farmers Furfes, fo it gave then a Turn to feveral other Improvements, and a Capacity as well as a Spirit to purfue them; which fo changed the Face of Things in that County, that an Eltate at Scultiorpe, which had been let to a Warrener for Eighteen Irounds, in no very long Space came to be worth 240 I. per Annum.
    a The Number of Cattle fed and fattened by, this Means is in may Refpects bencficial to the Public as well as the Proprictors, and has contributed not a little to the Improvements before mentioned.
    d Amongft thele we may include the Trial made by Dr. Hill in regard to the Naper or Norway - Tarnep, which grows to a large Size on Hillocks raifed upon Bogs. This, though of no great ( onfequence in a fertije Country, may be found of great Utility in Moors and Moraffes, thll they fall into the Hands of fuch as can afford to drain and cultivate them in a better Manner. All Experiments of this Nature ought to be made as much known as poffible.

    - The Romans boiled and eat the green Leayes, as has affo been done here in hard Frons. In Times of Scarcity they formerly boiled Turneps, and after prefling kneaded them with an equal Qiantity of Wheit Fluur into what was called Turnep Bread. The many Ufes to which they are applied in Medicine are well koown; and Atrongly fupported by Experience.
    : His late Majefty caufed an Abftract of the Norfolk Humbandry to be publinhed for the Ule of his Subjects in Hanover. The French have alfo introduced and made many Experiments for the Advancement of this Improvement.

[^54]:    ${ }^{r}$ All thefe Faits are alfo taken from Mr. S's Account, where he enters fully jato Patiadars, for a; to leave no Doubt that what he wrote was from his own Experience and wed confederei. Tla: faws the Inpontance of this new lanandry, and it ja hoped will jullify the lains taken berse to fet it in a poper point of light. It is biy folom that in Matters of this Nature one has. had authentic and conclafive Fividence.
    s Haterence to Honfes, the Vistucs of Carrots in preferving and refloring their Wind had ben kng hnown a: ! pratifed :is a Secret beime it wis iatroduced as their common Food in Suttiol. It may be this ationded a Ilint for ficing them to ious, as better and cheaper than what they an "undy tel win. It is ahi probable that Caruts may keep them cool, and prove in fome Desice a Peforative trom Madicis. NIr. Miller fpeaks of their Utility in refpet in 1) cer.
    © The proper Time for draving Carrots is when their Leates change Colour. As to their fuffeng ly troll, it probably hapens but foldom, and is feons to be a Proof of this, that the Cutare contame may lans in saffolk, which it would farce have done it this Acadent hadbeen frequat. When through Pratice in different Soils, the Manegement of thefe Roots
    
    "It foms to deterve Notice, that the Redion affencel by Mir. B. for Ploaghing but twice for this Carrot Crup the Land that bore Tarneps is, that it was thoronghly clean from the Cultiation and Sumaer Hocing of the preeding Coop. Neither was there any Dunging but what procedel fiom the feeding of the 'lurneps, yet he had Sixteen Loads of Carrots on an Acre. He fiys he hat Threc Lomes of Barkey on ain Ace atter the Carots. He further tells us, that in aformer Io having fown the Two fints of a large Clofe with Carose without Dung, and the Nidlle whe Tumep, tor whin the hand was well dunged, when the Whole wes the next tear fown with Barley, that after the c'arnos was the bett.
    w This hath been fo much intatal upon for mony Reafons. As a new Hathandry it deferred to be particularly exphiaed. It thews how long an laprowenent of this Kind may be overioobed and neglecied. It preves lanty, what probicious Idvattages are in our Days derived from arable Land, for the Manntrance of Catle and obler Anmals. Adsantages to which our Forchabere wat: utter Strages.

[^55]:    f Dr. Childrey in his Britannia Batonica, mentions Hops growing naturally in the Marfhes between Thanet and Sandwich. If he mcans wild Hops, they are found in many Flaces. In Kent fome Oeconomifts plant Apple and Cherry Trees at convenient Ditances in their Hop-grounds. At the Clofe of Ten Years, when the Cherries bear plentifully, they deftroy or tranfplant the Hops, and in Thirty Years cut down the Cherry Trees, the Apples bcing then in full Perfection.

    8 This can be only in a few deep Soils. In Kent they find Hops profper well in a fine hazle Mould, though there be a rocky Bottom but three Feet below the Surface.
    h It is clear from Experience, that they will do well in differcnt Soils if due Care is taken in their Cultivation. In Effex, in a moory Ground, dug deep, well drained, and properly prepared. In the Neighbourhood of Farnham in Surry, where there are or were as fine Hops as any in England, and in the adjacent County of Hants, they throve on various Soils. In fome Grounds they fet the Hills at twice the ufual Diftance, and yet have as many Hops on an Acre.
    ${ }^{1}$ The inquifitive Reader, if he defires to fee the Whole of this curious Subjest more minutely difcuffed, may confult the Article Lupulus in Miller's Gardiners Dictionary, where he will alfo find fome ingenious Experiments made by the learned and judicious Dr. Hale. What is here offered is to Khew the national Importance of this Improvement, which would have been lefs perfpicuous without a general Account of the Nature and Cultivation of this Vegetable.
    k The great Hop Planter, if a Man of Skill and Subftance, feldom fails of making or rather earning a large Eftate. He is continually attentive to his Grounds, and by that Attention provides for the accurate Culture of them, at a fmall, at leaft at a moderate Expence. In a common Year his Profits are confiderable. In a Year of Plenty he lays by a Stock, and when in the Courfe of Four or Five Years Crops in general faii, his Stock fetches a large Price, and he has a Cure Sale.

[^56]:    ${ }^{1}$ This Computation proceceds on the Suppofition, that in a Year of moderate Fertility an Acre produces Ten Hundred-weight of Hops, and that thefe are fold at Three Pounds an Hundred. The Miviety is thus accounted for, the Rent One Pound, the Tythe Ten Shillings, Expence of Hufinandry Three Pounds, for the Wear of Poles Four Pounds, for Picking and Drying Five Pounds, and for Dung (one Pound Ten Shillings. Thus the Produce goes into a Vaniety of Hands, and: the Public pays and yet gains the Whole.
    m This Duty, which is One Penny on cvery Pound Averdupois of IIops cured, was impofed by Stat. 9 Amme, cap. xii. \& 1 made perpetual I Geo. I. cap. xii. and Part of the Aggregate Fund. On fo incertain a produce the Duty mult of courfe vary, and that very confiderably. In A.D. 1760 , it amounted to $\mathcal{E} .42,115$; in 1761 t , to $\mathcal{L} .118,513$; in 1762 to $\mathcal{L} .8 \mathrm{I}, 78 \mathrm{t}$. On thefe Fafts many Remarhs might be made, bat thefe will occur to every difecrning Reader, as we have not reom to inilt upon them here. It may not however be amifs to add, that for Thirty five Years, cading A. D. 1753, the net Duty onHops paid into the Exchequer amounted to $\mathrm{E} .1,891,981$, which is neerly $6 \cdot 5+, 056$ per Annum.
    "Stat. 9 Ainn, c:ap. xii. § I gives an additional Duty of Three Pence a Pound on foreign Hops. None but tritifh Hops can be imported foto Ireland under the fevereft renaltics. No Drawback is allowed on the Hops fent to Ireland; and Mr. Dobbs computed, A. D. 1730, the ammal Exportation thither at $\mathcal{L} \cdot 40,000$. The deftrofing Hops while growing hath been made Felony withont 3 Bencfit of Clergy.

    - Culumcl. lib. xri. rap. ii. Plin. Hift Nat. lib. xix. cap. ix. lib. xx. cap. xxiii. Diofcor. lib: iii. cip. cxli. Raii Hift. Plant. lib. iv. §1. P. i. cap. ii. p. 1 58. Meretti Pinax Rerum Naturalium Brit.unicarum, p. 19. Hartib's Legacy of Hubbandry, p. 3y-43: Worlidge Syftema Agricultura, P. 43. Mortimer's Ait of Hutbandry, Book v. chap. ii. P. 152, 153. Bradley's Survey of Ancient Hurbandry, p. 96, 97, 98. Gee's Obfersations on the Growth of Hemp and Flax, 8vo. Dictionaire Oeconomicuue, tom. i. p. 506-510: Dictionaire Univerfelie d'Hiftoire naturelle, tom. i. p. 524-531. Corps d'Oblervations de la Societe d'Agriculture, de. Commerce, et des Arts. ctablic par les Etats de Bretagne, p. 137-145.
    p. In this the moft intelligent of our own and foreign Authors agree. In the firt Place the Soil is to be regarded, and that Deing either by Nature or by Art rendered fertile, if the Thread is to be fine the Seed muft be fown thick, and the Summer Hemp, efpecially if well drefled, will produce a: Yarn as fine as Flax, and of an excellent Colour. But if Strength be required, then the Seed is so te thinner fown, and the. Winter Hemp particul.urly will have great Strength and Subfance.

[^57]:    9 Markham's Farcwell to Humandry, B. ii. chap. xv. R. 66-69. Finglih Houfewife, B. ii. chap. v. p. 129-135. Houghton's Collcétions, vol. ii. p. 380-39?. Thefe ohd liorhs ieprefent the Principles of the ancient Culaure of Hemp in Marfham, Ille oi Axholme. and other Parts of Lincolnhire, where it has flourinhed for Ages, adad fill flounihes upon very different Suils, and is the great Staple in thofe Parts, producing high Rents and large Profits.
    ${ }^{5}$ The Advocates for the new Hubandry think (and indecd with great Appearance of Reafon) tha.: it would be exceedingly advantageous in this Culture. It is allowel that the Stalks of Henmp twice hoed looked brighter, role higher, and fpiead more than ulual; and it has been fown in Drills with Succels. It woid be cotainly an ufeful Experiment to cultivate fiemp for three Jears faceefively, according to the new Hathandry, on a Soil of moderate Fertility, as in Cale of Surra: i: would remove thofe Prejudices thar have hitherto hindened a gencral Cultivation.

    - The common I'eople eftem the Fimble or Summer Hemp to be the Fimale, but it iv trul: the Male; for it bears fmall yellow Fiowers, from whence procteds that prolitick Dull whici, impregnates the Seeds born by the other Plant. This latter is the Kartor Winteridemp commonly r.peted the Male, becaufe the Staliss are fronger and flouter, but is really tise Fimate, as beang tae Seeds, which unlefs tecantated by the Duat before-mentioned, will not grow or yield (in.
    ' In this confifts the nicelt and moft material Part of the Cultivation. If the Summor llamp was allowe! to fand a Fortnight longer, it might be pulied with greater Satety, and the Sed of the Plants leit. will be all full and fair, and amount to Three Quarters on an Acre.
    ${ }^{*}$ As to the faperior ( inality of our Hemp, which is what I mean by Perfection, it aryens from the Price, for when toreign Hemp fells form 27 to 29 Shillings per Cwt. ours will fetch ifron 34 to 40 Shillings. We are not the only F'ople who complain of this unjuft Prepoffefion. The French import Hemp from the North, get the Inhabitants of Bretague afferted theirs was betor, and upon Trial before the beft Judges in France fo it was found. Upon this the States of Bretagne have talen the Cultivation ol Hemp under their Protection.

[^58]:    1764, 8vo. This is with great Propriety dedicated to the Laudable Society for the Improvement of Arts, Manufactures, and Commerce.
    ${ }^{2}$ Herodot. lib. ii. p. 56. Athen. Deipnos, lib. xiv. cap. dexxvii. Plin. lib. xix. cap. i. The Scriptures alfo frequently mention the fine Linnen of Egypt. The principal Argument ufed to prove the People of Colchos were an Egytian Colony, was their Proficiency in this Manufacture. In Pliny's Trime the Culture and even the Manufacture of Flax feem to have reached thofe Countries, in which they ftill flourifh.
    b This Nution, that Flax would fucceed only in a rich fat Soil had funk fo deep into the Mind of Sir Richard Wefton, who was a Gentleman well killed in, as well as a great Lover of Hulbandry, that he was exceedingly amazed, when he found in Flanders they employed their rich Lands in producing Grafs, Barley, and Wheat, while their meraluable Crops of Flax, Turneps, and Clover, were raifed by Dint of Caltivation out of barren Sands.

Mortimer's Hulbandry, B. V. Ch. xii. p. 154, 155 . Tracts prablifhed by the Dublin Socicty.
    d This Circumftance of employing Numbers of induftious People in a kind of mixed Labour, in which Agriculture is compounded with Manufacture, ought to recommend the Culture of Hemp and Flax in an extraordinary Degree to intelligent Statefmen, who muft know how much the public Tranquillity depends on providing a conftant and comfortable Subfiftence every where, for fucti as are difpofed to carn it, and at the fame Time facilitates Settlements.

[^59]:    e Another Circumfance, which is no lefs in Favour of this Improvement is, that it mult be both begun and continued in Country Places, and probably in different and diftant Parts of the Country. This is actually the Cafe at prefent in refpect both to raifing and manufacturing thefe Articles; more efpecially in South Britain, where though great. Quantities of Hemp and Flax are annually grown, and large Quantities of Homefpun Limnen made, yet little of it goes to diltant Markets.
    f Thefe Experiments Chould be made with great Care and Skill on Heaths, Moors, Commons, bairen Sands, and other wafte Lands, of which in the Northern Parts of South, and in the North Weit Parts of North Britain and the Iflands, large Qaantities which have been ufelefs may be found. The bringing any Proportion of thefe eqto fuch Cultivation would be a prodigious Acquifition, and this would remove the Doubt as to the procuring Soil for fo extenfive and fo profimble an improvement.

    8 When once the Way was broken, our People would quickily equal, and very poffibly excel the Dutch. In purfuing this, our Cultivations of other Kinds, and of Corn particularly, inftead of being leffened would be increafed. It is owned, that Flace is of all others the mof lucrative Crop; but as the Land will not bear fucceffive Crops, we learn from the Inftances of Spalding Moor and the Ine of Axholm, that Wheat, Rye, and Barley muft come in their Turns.
    h In the former Notes we have fhewn the Propriety, the Practicability, and Expediency of encouraging effectually the Growing of Flax in Great Britain. If we neglect this, our Linnen Manufacture muft be cver at the Mercy of Strangers, who, putting what Price they pleafe on the.Material, will thereby put a Check on our Induftry. Of this there are already great Complaints in fome $\mathcal{H a r t s}$ of this Inand, and great Apprehenfions expreffed, that the Manafacture of coarfe Lianens (which

[^60]:    - The Produce of this Vegetable dcferves to be particularly confidered. The Keafon why the Planting large Roots at double or treble the common Diflance has been preferred, is, that it renders the Potatoes larger without diminifhing the Number. At Darlington, in the Bilhopric of Durham, John Baldry planted in a Piece of Ground which had been under Flax the Year preceding; Potatoes in the Month of April in the nefv Manpert and on the Fourth of Weptember he from Foar Plants took up Three Hundred and Two Yotaloes, which weighed Forty-eight Pounds.
    b The Principles on which the new Hulbandry is mifed appear very fatisfactory in regard to all Sorts of Roots, and Experience feems in miany Intances to be in its Favour. Stirring, dividing, and pulverifing the Earth, opeas a Paflage for the froll Strings pafling from the Potatoes and the repeated Hoeings furnifhing continnally the Knobs with wholefoms Food, it is ealy to conceive they murf gradually and equally ivcreate; lo that Facts (fappofing them true) corrcipond with the Theory very exactly.
    : This Poiet of meliorating coarfe Lands, and renargit (pithout Expence) Grounds capable of bearing Crops, that were eftermed unfit for Withot oferits unqueftiunably fome Attention. It had been long fince remarked in Ireland, by the worthy wablimop of Dublin, as may be feen In the Philofophical Tranfactions before cired. It hatibeetralfo experienced by feveral intelligent Perfons in the South of Scotland, who have given yery lage and circualtatial Accounts of it in the Select Efrays.
    - Other Nations have not beeppartentive to this ufeful Root, whioh they own that they received, an we did, from Ireland. In ofretage thyy are afiduroully culivivated, abd have fpread under the
    
     it is thought Two Thide of the:compon Pegfe ina Manner fubfift upon them.
     in Timen of great Scarcity have beet winition Cows particulaly, and alynys with Succefs. But we are aftired that abroad they baqe given then Hot oady to Cows and Calves, but to Horfes,

[^61]:    ${ }^{i}$ Plin. Hift. Nat. lib. xix. cap. viii. Raii Hift. Plant. lib. ix. §ii. cap. v. p. 446. Meretti Pinax Rerum Naturalium Britannicarum, p. 22. See alfo the Catalogues of Plants in Bilhop Gibfon's Tranlation of Camden at. the Clofe of Lincolnflire and Yorkhire. Pliny fays it was a Native of Caria, a Country of Leffer Afia, lying between Lycia aad Ionia, and received its Name from thence. It appears therefore that Countries very remote in Situation may be nearly allicd in their Productions.
    k Houghton's Collections, vol. ii. p. 461. Mortimer's Att of Hufbandry, B. v. chap. xxxiv. t. 202. Bradiey's Survey of Ancient Hufbandry, P. 2299. Hill's Hiltory of Plants, p. 3.77. This Tlant grows plentifaliy in France, and is fent particularly from Languedoc and Provence in large Quantitics to Paris, where there is a valt Confumption amorgft the Druggifs, Apothecarics, Confeftioners, Difillers; \&c. In Germany they are yet more efleemed, and the Ufe of them more common.
    ${ }^{1}$ Flin. Hift. Nat. Hib. xx. cap. wx.- Rati Hilat, Plant. lib. ix. § iii. cap. xxii. p. 470, 47 I. Meretti Pinax Rerom Naturalium Buttannicirtim, p. 30. Mortimer's Art of Hulbandry, B. v. chap. xxir." p. 203. Bradicy's Survey of Ancient Hefbandry, p. 'z3o. Hill's Hiftory of Plants, p. 34 I , 3:2. Is it at all impofible that other Platits, Natives of the fame Soil and Climate, fhould be reconilled to Britain as well as Corinader?
    ${ }^{\text {w }} \mathrm{Mr}$. Mortimer mentions this as commonly praCifed about Kelvedon, Coggefhall, and other Places. in Eifex. Profeffor Bradley feaks of it as in Ufe in ather Counties. Where-ever practifed, or when-

[^62]:    r All our old Writers lay a great Strefs on rich Mould and rotten Dung; and Plenty of Manure appears to be the eftablifhed Practice. Mr. Bradley, however, ventures to doubt as to the Neceffity of it, and freaks of a deep black Sand, in whict: Liquorice did very well withuat it. The Land about Godalmin is very Gandy. Mr. Miller informs us, that the rich Garden Soil ahote London increafe the biilk of the Root very faft; but that when taken up it looks very dark, and has not what he cmphatically calls, the fightly Appeatance, of what is planted in open faudy Ground.

    - The Charge attending the Planting and Culture of Liquorice, and the waiting fo long for a Crop, has hindered the Extenfion of this Cultivation. Yet Houghton and Bradley agree, an Acre of Liquorice will produce from Fifty to Sixty, and even to an Hundred Pounds, the Onions being equivalent to the Expences of Management. A convincing Proof of its Advantage is its continning a flaple Commodity at Pomfret for Two Centuries paft.

    It is evident from thefe Circumftances, that allowing the Roots room in a lcofe Soil well tilled, is the principal Means of preferving their Vigour, and bringing them to their full Size. Mr. Miller Cays, in a very extenfive Plantation the Rows may be three Feet afunder, by which the Hoeing may be conveniently done by a Plough, which would leffen the Expence. There are na Doubt, thefe Circumftances confidered, many Places in Britain where Liquorice would fucceed.
    u Perfia is the Country in the World where Liquorice grows to the greatelt Perfection ; that is, to the Size of a Man's Wrift; whereas with us it feldom exceeds that of the Thumb. It grows alfo in Italy, France, and Germany. At Bambergh they make vaft Quantities of Juice of Liquorice, and adulterate it exceedingly. But the moft, and by much the beft comes from Arragon, where immenfe Plains on the River Ebro, above the City of Saragoffa, are entirely deftined to the Culture of this Plant. Their Juice rolled in fmall black Pieces is annually imported here to a valt Amount, though under a Duty of Seven Pounds Two Shillings and Six Pence per Cwt. befides, what is fmuggled. This fully fhews the Importance of this Article, and will juftify the Pains befowed uponit.

[^63]:    - The Affayers are fworn duly to refpect the Ordinances of Zealand, of which there are feveral; very explicit and well confidered. The Calks, tefides the Arms of the Town, have the Name of the Stove where made, and the Quality of the Madder painted on them; and thus the Credit and Reputation of all the different Parties are ftaked, which excites a conftant Attention and Emulation amongit them. Whoever reflects on the Sagacity of thefe Meafures, and the Propriety of the States interfering to prevent private Avarice from injuring the public Intereft, will fee no great Caufe to wonder, that the Dutch in a Courfe of Years gained this Commodity, or that they have fo long kept it from their Neighbours.
    z We have this Fact from Mr. Blyth, who having been an Officer in the Parliament Army became afterwards a great Promoter of Agriculture and all Sorts of Improvements, and is confequently a competent and unfufpected Whnefs. He fays, that Mr. Shipman planted Madder, and fet up his Works at Barn Elms, and that his Commodity was highly commended by its only proper Judges the Dyers. It is evident therefore, that at this Time we were poffeffed of this valuableArricle, and might have been foon had in Plenty as well as in Perfection, If this Opportunity had been taken, and the Cultivation of Madder (as it might have been) univerfally introduced, it would be na difficult Matter to demonfirate, that this Nation might have been the richer for it by fome Millions.

[^64]:    " Sut. 3: Geo. II. In the Preamble the great Advantages that would attend the Cultivation ot Madder are fuccinctly fated, and for promoring fo important a Defign, the Tythe of every Acre on which it is planted is fixed at Five Shillings from Auguft in 1758 for Fourteen Years. Stat. 5 Geo. III. cap. xviii. after reciting that the Price of the Commodity hath been raifed, continues the Tythe at Five Shillings an Acre for Fourteen Years farther from the Expiration of the former Act. The Society alfo for the encouraging Arts, Manufactures, and Commerce have promifed very confiderable and well confidered Premiums for the encouraging this very expenfive Improvement, as alfo (which may be of no fmall Importance) for the Cultivation c ¢ our own wildMadder.
    " It feems to be a received Maxim that Eight Years fhould elapfe before Madder is to be planted again on the fame Ground. But it is allowed that in the Ine of Schowen, where they grow the very bent, they are for Want of Land obliged to plant it in Four Years, It is alfo acknowledged that nothing prepares Land fo well for Corn as the growing Madder, fo that they have Three large Crops of Grain before Madder is planted again. If Experience chould juftify this, we need not in Britain be under any Neceffity of Planting again before the proper Time, which will give us an Advantage on this Principle. But it may be that Experience will fhew the contrary, and that by proper Crops and proper Tillage. the Land may be fooner fit for Madder again,

[^65]:    * As Things now ftand, Madder, which is a capital Article in the Dycing many, and in fixing more Colours, is looked upon as abfolutely neceffary, and therefore allowed to be imported free. But if it nall once appear to the Leginature, that we can grow it in as great Plenty as well as in as great Perfection as in Holland, the fame Motive of encouraging our own Manufactures will render it expedient to take every Method for facilitating the Culture of this Plant. What thofe Methods will be, the Growers of Madder will be beft abie to point out, and frum the Attention already paid to them, they may well hope for Succefs. The Sum annually paid for Madder is a Rent-charge on our Manufactures, of which the fooner we are rid fo much the better.
    y Le Tcinturier Parfait, par Theodore Haak, p. 160-167. Dictionnaire de Commerce, tom. ii. col. 3O3-305, Memoirs fur la Garance \& fa Culturep par M. du Hamel du Monceau, Paris, 1757, 4to. Elements de Agriculture, liv. xi.chap. iv. Dictionnaire Univerfelle dHiftoire Naturclle, tom. ii. p. 269. Beaufobre Introduction a l'Etude de la Politique des Fimances et du Commerce, tom. i. p. 206, 207. Encyclopedie Portatif; tom. ii. p. 113.
    $z$ This Subject hath employed the Thoughts and the Pens of Three very able and knowing. Men, Meffrs. Hellot, Duhamel, and D'Ambournay. In confequence of their Refearches and Experiments, it appears that it will grow very well on very different Soils; that it may be with Factlity propagated by Seed from the wild Madder ; that the Roots of this Madder will dye as well when green as when dry; that Four Pounds will have the Effects of Eight of green converted into One of dry Dutch Madder ; that the green Roots may by a proper Method be preferved green, and without becoming mouldy for a long Space of Time; and that the Hazala or Ifari of the Turks is very probably the fame with our wild Madder, at leaft whon carefully dried in Sun or Shade, will dye as bright and beautiful a Colour, though this as to its being wild Madder hath been doubted. The French King by an Arret of his Council, dated 2.4 th February 1756 , excmpts all Perfons who Gall drain Moraffes for the Culture of this Plant from the Taille for Twenty Years. They have begun to cultivate it in Germany and in Prufia. The Dublin Suciety have been many Years endeavouring to introduce it into Ircland.
    "It may in refpect to the Cultivation of Madder, which if fo far introluced as to ferve only our own Confumption, would afford a comfortable Subfiftence to Four or Five Thoufand lamilies, deferve to be confidered. Whether fome Improvement may. not be made in the Manncr of growing it fo as to leffen the Expence? Cannot the Method of Curing it be rendered more fimple without Prejudice to the Commodity? Will not the Roots of our wild Madder yield a rich Colour, and in what Proportion to the cultivated ? Might not the fearching for, and coliceting widd Madler Roots at a proper Seafon of the Year afford fone Affitance to the Poor? Have we no other Plants in Britain, the Roots of which may afford as good a Dye as Madder if adequate Encuuragement was given to find them? When it is faid we import all our Madder from Holland, it is meant of the Krap or Maduer in Powder, for fome we receive in Roots from laly and the Levant. We might

[^66]:    r Cæfar. de Bello Gallico, lib. v. cap. x. Pomp. Mcla'de Situ Orbis, lib. iii. cap. vi. Vitruv. lib. vii. cap. xiv. Diofcorid. lib. ii. cap. 215 . Plin. Hift. Nat. lib. xxii. cap. i. Meretli Pinax Rerum Naturalium Britannicarum, p. 46.
    s Cæfar fays exprelly, that the Britons painted themfelves of a blue Colour to make them eerrible to their Enemies. Mela doubts whether it was for Terror or Beauty. Pliny makes this rather an Act of Religion. The Women in Britain, fays he, both old and young, dje their whole Bodies, and fo affilt naked in their Sacrifices, being like in Colour to Ethiopians. Cafar and Mela both call the Herb Vitrum, which in Latin fignitics Glafs. Pliny calls it Glaflum, fays it was common in Gaul, and refembled Plantain. Glafs is a Celtic Word, was the Name of the Herb, and of the Colour drawn from it, viz. Bluc, as it is fill in Wellh; by the fane Name they alfo called Glafs, becaufe theirs was of a blue Colour. Cxfar and Mcla tranllate the Britith Word, whercas Pliny retains it with a Latin Termination.

    - In this as in many other Cafes, Cultom eftablinics a Rulc. There is no Doubt, that on veiy deep rich Soils Woad does admirably well. It docs not therefore follow, it can do well on no other Soil than this. Yet it has been known to do full as well on an old Waren broke up and properly prepared. There is another Circumatance that ought is be conidered, the Expolition. The more Sun the better Woad, the more Shade the lareer the Crop.
    w The Tillage is to the full of as gico! Confequate as the Soil. Sowing in Rows with a Drill Plough is a good Mcthod, Icavine he ''hats fix Inches afunder, hocing them regularly,

[^67]:    a Some learned Antiquanics, particularly Mr. Baxter, Mink Glaftonbury derived its Name from the Cultivation of Glaftum or Woad in the Ifland on which it is fituated. The Britons called this Ifc Inis üitrum, and the Saxons tranlated this Glafteney, i. e. Infula Glaftaria, Glaft or Woad Illand. It fhould feem the Britons in this Appellation adopted the Latin Term, Vitrum, by which Cæfar expreffed their own Word Glafs, i. e. Blue; in Irifh Blue is Gor, and Woad Cormin.
    b Avicenna is fuppofed to have defcribed both Woad and Indigo in feparate Chapters, but under the fame Appellation of Nil, that is Blue. It is a long Time fince our Dyers were acquainted with a coarfe Indigo made up in fimall Cakes called Ancal. But the truc was brought hither from the Eaft Indies about the Beginning of the laft Century, and was then filed by many Glaftum Indicum, i. e. Indian Woad, though in truth the Product of quite a different Plant.
    c It may be fomewhat more than a Century fince Indigo grew into Ufe and Reputation here, from the Facility of ufing it. For Sir William Petty tells us "The Ufing of Woad is One of the " moft my'ferious, nice, and hazardous Operations in Dyeing. It is One of the moft lating "Colours that is dyed. An intenfe Woad-colour is almon Black, that is to Cay of a Damfon-co" lour; this Colour is the Foundation of fo many others in its Degree, that the Dyers have a "Scale or Number of Stalls whereby to compute the Lightnefs and Deepnefs of this Colour." Thus far this ingenious, inquifitive, and judicious Writer. As Woad was ufed to give Solidity and Subftance, fo Indigo was employed to give Brightnefs and Luflre; which Notion was adopted in France as well as here.
    d This is a Circumftance fo natural, that it might well be expected; yet it is more felt, and of Confequence mure deplored in France, becaufe, as we fhall fee, Woad wa an Object of more Importance there than here, on account of the great Quantity exported. Many propofitions were therefore made to remedy this Evil, and to reftore the Credit of thi: Commodity, but it dues not appear they have hitherto been thought fo practic. ble as to be carried into Execution.

[^68]:    ${ }^{n}$ Thefe fem to be the mon obvious Means of advancing the public Weal in this very material Branch of Induftry. Science in the Abftract exceedingly delights, as well as ennobles the human Mind. But an Inclination and an Endcavour to render Science ufeful to Socisty, is fill a more pleafing and a more noble Principle. What has been hitherto done in this Narter, has been rather from Tradition, Imication, and Accident, than from :my Kind of Syftem or tegular Inquiry. But that much more may be done in this Way by ingerious and diligent Perfons, the intelligent Reader will cafily difcern, if he confults Philofophical Tramfiactimes, No 381 . p. 15 \& 17, and the. curious Paper of Mr. de Juffieu on the Corn Marygold, in the Fiench Memoirs, A. D. 1724, as aifo Mr. Dufay's Differtations in the Memoirs, A. D. 1737.

    - This is a Fact not denied even by thofe who believe that Wond exhaufts the Earth on which it grows. But they did not pcreeive this in Languedoc; where, after taking two Crops, they had Recourfe to Paftel or Woad the third Year. Now this continuing for a long Scries of Years without Intermiffion, the depauperating Quality of Woad muft have appeared, as that of Tobacco afterwards did, fo as to render the Soil unfte either for Woad or Corn.

[^69]:    y The judicious Render is defired to remember, that what is faid in the Text is by no Means to controul the Judgment of Perfons verfed in Huibandry, or to eftablinh any Theory or Pratice in this or in any other Article, but fimply to fate fuch Facts and Circumftances as might bedt ferve to explain the Nature and Effects, the Rife, the Progrefs, and the Confequenec of cur Inprovements.
    $z$ In this Refpect it is eafy to difcern that it muft be of infinite Confequence. In dry, chalky, frony, flaty, barren Hills, it grows and thrives exceedingly. This is owing to the Fibres of the tap Root creeping through the Interfices of the Stone or Slate, and finding thereby Food, to which other Plants could never reach. Befides, wherever it thrives, Cows find a wholefonc pleutiful Pafture, and from thence furnifl Abundance of rich well-tafted Milk.
    ${ }^{2}$ Mr. Tull reckons Four Sorts of this Hay, the Virgin, bloffom'd, full grown and threhed Hay; the firf in his Opinion is the very bef that can be made, and may be worth to the Owner tour liounds. He affirms, that the Hay from a fingle cultivated Plant may weigh about Half a Pound. But taking them at a Quarter comp, it will will make Two Ton for a Crop upon an Acre. Other intelligent Writcrs agrec with him nearly in this Computation, which may be takcn Sor Tienh.
    ${ }^{6}$ In this as in all Matters of the like Nature, much depends upon Skill and Carc in the cutting, theching, and caring. This Secd (on account of the large Quantitics commonly fown) fells for Thice Shillings a Bithel. Sone fpeak of Five Quarters, but Four is a great, and Three Quarters nu an Acre a good Ciop. The threched Hay of fuch a Crop may be worih Forty Shillings, and the Chaff from the Sced Twenty, the Aftermath paying for the cutting and threfhieg.
    c When the Cuftom of fowing this Seed very thin comes gencrally to prevail, it will evidently redace the Confumption, and perhaps the Price. In that Cafe, it will be very material ti) confiler cvery other Uie to which it can be applied. The making it in Conjunction with other Thisurs inppiy Oats in feediry Hores, the enabling Sows to bring up more ligs, and the uling It in feeding and fattening all Sorts of Poultry, may in fome Degrec at leaft anfiver this End.

[^70]:    - Though Sainfoin lafts longer than any Grafes, it Aands lefs in need of Manure, on account of its drawints the greateff Pat of its Nourinment below the Staple of the Soil. In the firf Year howewer, when the llans are young and tender, Soot, Peat, and Coal-a hes ferve to cherimh them, . Ind quikien their Giowh. Atter the firl lear, they require lefs hoeing, and when old may be sevived by fliring the Earth properly with the Plough.
    e The moll intelligent Writers differ as to the Cabics of this, but they all agree in regard tothe Fact. 'The Gronnd muft be well tilled, on the breaking up of Saintfoin (for want of which f( me have failed) ; and this Precaution taken, it will produce $T$ hrce large Crops of Grain, without the Affiftance of Dung, and this on a Soil, which, before it was improved by Saintfoin, would have yidded but an indifferent Ciop even with the Help of Manare.
    r As to the Profit arifing from samfoin, Mr. Kirh!am mentions an Fifate of One hondred and; Ten Pounds per Anmum, fo improwe ther be as to be fold tor Fonten thoufand Bounds. Mr.
     diftrefled the Tenant at no more than Ten Pounds: tear, whea planted with Santfoin was let for Onc han'red and 'I on Poumis per Amam, ad prowd a good bargain. Thefe were bothflaty Lands, woth only from Gie to Two Shillings an dire and aver would have been worth. mose but for this Improvement. As great as thic Advantages are, which have been already derived from this Vegetable, tine fubfegucut Artick will thew, that managed in the fame Way, it may poribly be rendered (in fome Soils at lealt) itii more heneficial.
    e Dioforid. lib. ii. cap. cxuii. Theophrant. de llants, hb. viii cap. viii. The former of thefe Authors tells us, that the Scats being mixed wich Sall werefor their eprecable Tafte caten in Fickle, and that the whole Piant was acceptable and numitive to Animals. Pliny informs as, that Amphiluchas wrote a whole book on the Medica and Cytifus; that is, the Lucern and the Sierab Trefoil, which were in the utmont Credit with the Amticnts; and the hater, though not introduced here, is fill in great Eftem in the Eafl.

[^71]:    a Amongt other Reafons, becaufe it hews that an Improvement is not defeated by being delayed, but may be an Object of rational Hope, though not perfected in a Couple of Centurics: that it is a real Service rendered to the Publick to keep this Hope alive, by repeated Revivals of the proper Reafons for attemping fuch an Improvement; and that when cordially efpoufed by proper Patrons, more may be done in the Space of Twenty Years than in Seven Times Twenty Years preceding.
    $r$ There are many Sorts of Mcdica; and therefore this by Clufius and other eminent Writers hath been ftiled Medica Legitima, by our old Authors Medick Fodder. The Medica Paluftris or Meadow Medic, and fome others mentioned by Dr. Chriivopher Merrett, are Natives of this Country, and perhaps we may apply to them, what was emphatically faid of Lucern, that they have (fome of them at leaft) been too much and too long nenlested.
    s It was however to thefe fruiticfs Attempts that the Dilcovery of a more fuccefsful Method of treating this very valuable Plant was due. When fown with Corn, here and there One of them remained, though the Crop mifcarricd, and many more where fown by itfelf, and the Ground afterwards tilled. Thefe fingle folitary Plants continued to grow and thrive beyond any that had been cultivated with the utmolt Care, which fhewed that giving Room, and fuitable Tillage, was all they wanted.
    ${ }^{\text {t }}$ From a true Senfe of this the Rows, Intervals, Horfe and Hand-hoeings, are rctained in the third Method. Air, Tillage, and keeping the Soil free from all Weeds and Grafs are Principles common to both, and upon which their Succefs depends. In the broad-caft Method thefe are and muft be wanting, to which the Failing of the firft Attempts feem juftly attributed. But then, as has been fhewn in the former Note, they were not ufelefs, fince palt Errors pointed the Way to Truth.

[^72]:    "In this lies the great Merit and fuperior Excellence of the third Method, as it removes Mr. Tull's Objection or rather Apprehenfion, that Lucern trith all its Advantages (of which he had a very juft and high Senfe) could never be rendered a general Improvement. This was the laft, and, in the Conception of the beft Judges, the mof arduous Step to be taken in order to put Britain on a Level with France and Italy in refpect to Lucern as well as Saintfoin.
    w The Confequence of cutting the tap Root, is its puhhing no longer downward, but horizontally, and therefore tranfplanted require a greater Space between them than drilled Roots. Dr. Harte allowed Thirty Perches for a Nurfery, and Four Ounces of Seed to a Perch. At firf he allowed but Iwo Feet between the Rows, and Six Inches between the Plants: But finding they ftood too clofe, he refolved to thin them, and this fuggefted a new and better Method, which in few Words is this; tranfplant an Acre according to the firft Method, which may contain 26,000 Roots, let another Acre of Ground be properly prepared, and in the Spring remove One Half of the Plants, and difpofe them as directed in the Text; by this a fecond Nurfery will be faved, a Year gained in Point of Time, and Two Acres of Lucern equally good inftead of one.
    $x$ When properly coltivated, it will generally be fit for cutting by the Tenth of April. It is fit when Sixteen or Eighteen Inches high. It hiould be cut even in the Nurfery when about to flower, becaufe flowering weakens the Roots. This Operation is better performed with a Reaphook than with a Scythe, becanfe the latter is apt to wound the Crown of the Plant. It is proper to cut towards the Clofe of OEtober, though but Six or Eight Inches high, for the Health of the Plants.

[^73]:    y According to Dr. H's Computation, the Whole of the firf Year's Expence may amount to Six Pounds Twolve Shillings, and One Third of this may be caved by the Method already mentioned. The fecond and every fucceeding Year, the Horfe-hoeings, Hand-weeding, and Manure, fuch as Peat-afhes, Scot mixed with Sea-fand, or Malt-duft, may come to Forty Shillings. In Procefs of Time no Doubt, as People become more accuftomed to this Tillage, it will be done cheaper.
    $z^{\text {In }}$ this Refpect, it is commonly Six Weeks, fumetimes Two Months, earlicr than the beft Graffes, which is furely a great Recommendation. In fome Seafons it has been near a Foot high in February. This news how well it agrees with our Climate, and indeed it grows very well in Neufchatelle, where the Winters are commonly more rigorous than with us. As it comes earlier, fo it alfo continues later than any other green Fodder, and is in that Refpect a great Benefit.
    ${ }^{2}$ It is pretty certain, that neither in France or at Geneva they cut oftener, or more at a cutting than has been done in England. But they have a little more Expcrience, and fo fpeak with more Certainty. Mr. Du Hamel, a Man of a moft refpectable Character, and to whom the World is much obliged, affirms that he hath actually had Ten Tons of exceltent Lucern Hay from One Acre. This inews what may be done in regard to this Vegetable, and poffibly in the next Century this will not be thought very extraordinary in Britain.

    - Lucern Hay, judicioully given, will fublift Coach Horfes without Corn, and contributes much to their Recovery when fick. Oxen are fpeedily fatted with grcen Lucern. Cows from this Food give Plenty of exccllent Milk, and Calves may be tempted to eat it when they will not touch other Grafs. Sheep eat it readlly, and it is very wholefome for them. The Lucern when cut fhould be kept in a dry fhady Place Forty-eight Hours before it is given to any Animal.
    c Dr. H. is moft commendably cautious, not only in avoiding all Exaggerations, but alfo in holding conftantly in View the rendering this as far as poffible an eafy and prakticable Improvements. He declined the Choice of the beft or moft proper and promifing Soils for his Nurlery, bis Plantations, and all his Experiments, contenting himfelf with fuch Grounds as might cafily and almoft any where be found, that many might be from thence encouraged io like Undertakings.

[^74]:    d Mr. Du Hand fayc exprefsly, that each of Three prime Cuttings of a good Acre of Lucern is equal in Quantity, and berior in Guality to the Produce of Two Acres of natural Grafs; that is, One god sere of Lucenin is worth Six Acres of Meadow Land. Dr. H. docs not go fo far, but he adopts this Mode of citimating the Value of the Improvement. If we abate fomething in this Accunt :ce the Value of this Acquifition will appear very confiderable.

    The 'x fice and for a Plantation of Lucern is an old Hop Garden; and if the Situation
     Care aeght $: n$ he time: to preferve it from Hares, \&c. It will not admit of Feeding by Horfes, Hack Cattle, o Shep, neither are Geefe or Ducks to be allowed Entrance into a Ficld of Lucern. It certainly requirss agreat Deal of Trouble in its Culture, but it will in its Confequences Le found: ment all the Tronble it requires.
    ${ }^{1}$ N. Lullin de Chate:uvicux, chief Syndic of Geneva. The Reader may alfo confult Agoftino Gallo v!ati fiomata da l'Agricoltura, hella feconda Giornata. Della Agricoltura de M. Africo Clencen': Padouano, lib. i. cap. xxiii p. 36, 37. Dictionnare Oeconomique, tom. i. col. 1558 1563. Traite de la Culture des Terres, par M. Du Hamel, tom. i. p. 271-280. iv. p. 497522.v. p. 3. $\boldsymbol{7}$ 1-76. 523 - 529. 531-534. 537. 577. Dictionuaire d'Hifoire Naturelle, tom. iii. p. 327-329. M. Bertrand Elfai d' Agriculture, p. 132. L'Agronome, tom. i. p. 518, 519.
    g The Picce referred to is the Second of the Fffays on Hurbandry, the Title of which runs thus, "An Account of fome Experiments tending to improve the Culture of Lancern: Being * the finft lixperiments of the Kind that have been hitherto made and publified in England. "From whence it appears that Lucern is an Article of great Importance in Hufbandry." In this fingle Work all the mateial Obfervations of ancient and modern Writers are judiciouly collected and candidly examined.

[^75]:    * Burnet is a Native of this Country, grows frcely on a poor, light, fandy, or chalky Soil, and is a perennial Plant. It is fown in Broad-caft in Autumn, but fucceeds better when fown in the Beginning of July, and tranfplanted in the Manner of Lucern in the Beginning of October in Rows Twenty Inches apart, and the Plants about Fifteen Inches from each other. It will perfect its Seed twice in a Year, and at Two Mowings will yield Ten Quarters of that, as much Chaff, and Three Liads of flay (or rather Haum) on an Acre. It is a good Winter Pafture for Cattle, encreafes their Nilk, and renders it rich and well tafted ; it does not like fome rich Graffes fweat or bloat them : It will bear Feeding with Sheep, and when it is grown plenty, the Seed it is thought will anfwer as well as Oats for the Support of Horfes. Practical Obferfations on the Culture of Lucern, Tur--nips, Burnet;' Timothy, and Foul Meadow Grafs. Communicated by Letters to Dr. Templeman, London, $1766,8 \mathrm{vo}$.
    ${ }^{1}$ It is the judiciops Remark of the wife and noble Verulam, that Man is the Minifter and Interpreter of whater, hat his Skill arifes from his knowing her Manoer of Proceeding, and that his Powertsamatied by this Knowledge of her Operations. If he feems in fome Infances to command her, it is only in the Eyes of fuch as have beenlefs her Servants and Scholars, and know. not, that even in this he only practifes thofe Leffons which he originally was taught by her.
    $k$ The great Linnæus gave the firft Hint of this important Difcovery. He obferved (Flora Lap. p. 159) that there were feveral Plants that Horfes though hungry, would not tafte. He judged that this might be the Cafe with other Animals. He then very earneftly requefted, that a ftrict Inquiry chould be made, as to the Flants moft acceptable to ufeful Animals, and fuch as they refufed. Afier waiting in vain for fome Years, he was obliged to commit this Tafk to his own Difciples. In confequence of this, one of thefc, Nicholas Haffelgren, from a Multitude of . Experiments, produced his Pan suecus, in which there is a Table fhewing what Swedifh Plants

[^76]:    ${ }^{f}$ It is a Point out of all Doubt, that both the Southern and Northern Parts of this Inand were overgrown with Wood; and immenfe Quantitics of fubterraneous Trees of different Sorts, have been for Ages paft, and are ftill in feveral Places digged out of the Bowels of the Earth. Our Oak, Elm, Afh, Chefnut, Beech, \&c. grow as large, laft as long, and their Wood is as found and ufeful, as in any Country. Trecs brought from the molt diftant and difcordant Soils and Climates are made to live and thrive here.

    I In thofe Days, when regular Surveys were taken of thefe Places of Amufement and royal Recreation, though Towns, Fields, and Commons, as the Country grew populous, came to be interfperfed, yet their original Defign was fo far remembered, as that Accounts were conftantly raken of the growing Timber to preferve it, of the periodical Falls of Coppices, and burning of Charconl, which though rarely beneficial to the Crown, was highly aleful to the Publick.
    h We have already empluyed fome Pains to juftify this Propofition. Indeed, valuable Timber-trees, fuch as Oak, Ah, and Elm, may be cultivated, where both Land and Labour are dear, to great Advantage. But through the Beneficence of Providence, there is no Kind of Land bur may admit, with Improvement, fome Kind of Trees. The coldeft, moft open, and expofed Situations fuit that noble and ufeful Timber the Chefnut beft. In dry hilly Lands (fit for nothing elfe) Sycamore in a few Years will grow to a large Size. On ftony, barren, and chalky Grounds, and on the Declivity of Hills, may be raifed Groves of Beech. Box and Yew, both valuable in a bigh Degree, as their Wood feryes for various Ufes, will thrive in the coldeft and moft dreary Soils without Care or Coft. The Poplar, Aipen, Abeal, Alder, Withy, Sallow, Willow, and other Aquatics, in Marflies, Fens, Bogs, where no other Trees will live; yet are of quick Growth, in conflant Demand, and very profitable. The fame may be faid of Birch, which will grow any where. The Scots Pine, commonly, though improperly called the Scots Fir, from which we have our Deal Boards, will grow in Peat Bogs, in chalky, gravelly, or fony Soils, and in dry barren Sands. The Laburnum or Peas-cod Tree will grow on the bleakent Mountains, and if only fuffered to grow will become a large Tree, and afford excellent Timber. The Rowan Tree or Quick-Beam, which produces both an ufeful and valuable Wood, grows, and is the only Tree that grows naturally, on fome of the Rocks in Shetland.

[^77]:    I In Norway, in Switzerland, and in France, they make bitter Complaints of the Decay of Wood of all Sorits. This they very truly afcribe to the Defire of prefent Profir, by complying with that cucreafed Demand which growing Luxury every where excites, without providing an adequate Supply. The Price of this, which not only is, but muft ever continue a Neceffary, is daily rifing at home and abroad, which though an immediate Draining, may in its Confequence become an Advantage. For thefe high Prices may be confidered as Bounties in favour of our Application to planting; and thofe who firft fall into thas Treck, will fo avail themfelves of this Circumftance, by raifing immenfe Sums from Lands that now yield very little, $: 1 ;$ to create Envy, which may excite a general Imitation, and of courfe a gradual Approach to Plenty.
    ${ }^{k}$ In fome llaces where Timber is confidered as a Staple, they have already had Recourfe to Reftrictions in cutting down their Woods. It is true, that there hath in thofe Countrics been hitherto little Regard paid to thefe Reftrictions, which is the Reafon we have not felt their Eiffects, except in raifing the Purchafe. The French, however, aware of what may happen, have enforced their old Liws, and a lhict Reform of their Ferefts, which has produced fome Memorials of Mr. Buffin, and leveral excellent Works by Mr. Da Hamel.

    1 Whensue hear or read of Oaks many Fundred Years old, and of other Timber-trees of valt Agre. we muft not conclude that the Effects of Planting are oot to be felt within a much thorten Periond. In grood Land, agreeable to their Nacure, Timber-trees will be fit for Service in Half a Century, and continue improving Half a Century more. In worfe Soils Trees grow more nowly; but the Timber is not the worle. But even Half a Century is a long, a very long Period to be fpent in Expectation.
    in The Statutes from the Rign of Henry VIII. are mot of them penal Laws, and are from a Variety of Caufes feldom executed. It might probably anfwer leiter to propofe Eacounagemeats, as

[^78]:    y We look on Spain as a rich Country, becaufe of the Wealth that is drawn from it, which is rather a Proof of its Wants. We in general confider Switzerland as a very poor one. But fince the Swifs have applied themfelves affiduoufly to difcovering and improving the Refources they have in their Country, harh as it is, their Liunens, Horics, Black Cattle, Cheefes, and Manufaetures bring in vaft Sums, which their Induftry in raifing Corn, Vines, Hemp, Flax; Timber, and other Neceffaries, with their great Frugality, enables them to keep: There are in confequence of this fewer indigent Perfons there than in almoft any other Part of Europe. The Swifs would be ftill richer, if their Government did not lock up the public Trcafure in Chefts, and private Men velt theirs in foreign Funds.
    z It is from the various Products of our own Soil, that the Bulk, as well as the mof ftable Part of our national Subflance procecds, and therefore fuch Products call more. immediately for publick Attention and Protection. In the firf Inftance they arife from Labour, and thereby give a frugal Livelihood to many Thoufands of Families; in the next they fupply Materials for Art and Induftry to work upon, and, our home Confumption provided for, become lafty, the moft lucrative Articles (their whole Amount being clear Gains to the Nation) in our foreign Commerce. It is allowed they are not the only lucrative Articles; but then it mult be alfo admisted; that in their very Production they procure us a Race of active, robuft, and hardy Men, to protect and preferve what by thefe different Means we acquire.

[^79]:    ${ }^{b}$ But the fame Supreme Being, who fo beneficently and fo cffectually provided for the Happinefs of Animals, beftowed the Dominion of them upon Man, who therefore ultimately reaps the Profits of the Provifions made for them. In virtue of his fuperior Abilities, he, for his own Emolument, or even for his Amufement, enlarges for them thofe Limits affigned them in a State of Nature. He makes Ponds and Canals to multiply Fifh. He feads and provides for Multitudes of winged Creatures, thence fliled domeftic Fowl. Forefts and Parks give Shelter to the Reft of the feathered Tribe, and even to wild Beafts. In refpest to thofe that are tame, by multiplying their Subfiftence, he multiplies them to the Extent of his Convenience, or even to that of his Wines.
    c In refpect to ufeful Animals, it is the Bufinefs of the Chapter to give an Account of them, and it would be ncedlefs to enumerate them here. In regard to the voracious and the venemous, we have of Quadrupeds, the Badger, Wild-car, the Ferret, the Fox, the Martern, the Otter, the Pole-cat, and the Weafel. Of Birds of Prey, we have the Eagle, the Falcon, the Hawk, the Keftrel, the Kite, the Lanner, the Ofsprey, the Sparrow-hawk, the Tafel, and a few fmaller of the Owl Kind chiefly. Of the venemous, the Viper, the Blind-worm, and as many think the Toad and the Spider. Some of thefe are only in particulap Diftricts, and in feveral liarts of the Britifh Illes moft of them are not found at all. Wolves were formerly in thefe Ifands, but have been long fince rooted out, to our inexpreffible Benefit.

[^80]:    ${ }^{n}$ This was in the Reigns of Hemry VII. Henry VIII. and Edward VI. when, as hath been remarked in the former Chapter, a Spinit prevailed among the Land-owners, to give an unrcafonable Preference to Grafing. This concurring with, or perhaps being occafioned by, the wretched Policy of the Two laft Reigns, of debafing the Coin, produced a general Dearnefs of all Things, and of Confequence univerfal Difcontent and Confufion amongit the Commons.
    ${ }^{1}$ As to the Signs of a good Ram, they are diftinctly mentioned by Varro, by Virgil in his Third Georgic, and by Columella, who from the Experiments of his Uncle, M. Columella, has given more Light upon this Head than almoft any other Author, In Spain, where the Nobility pique themfelves on the Breed of their Sheep, they give 'Two hundred Ducats, or Fifty Pounds, for a fine Ram. Strabo alfures us, that in his time (under Tiberius) they gave more than Three Times that Sum fer a Ram of the Breed of the Coraxi, who were a Pontic Nation believed at that Time to have the fineft Sheep in the World.
    $k$ It is obferved, that as sheep grow older their Wool becomes finer, but then they have lefs of ir. In Germany and Sweden, if a Ewe be a rcmarkably good Breeder, they keep her beyond the nfual Time, thotgh her Mouth is broken, and fupply her with foft Food when the can no longer feed herfelf. The Ewe gecs One hundred and Fifty Days or Five Months; fle knows hor Lamb. and the Lamb her in a large Flock, though Sheep are looked on otherwife as very ftupid Creatures.
    ' It is from this flegmatic Conftitution that Sheep are expofed to fo many, and fuch dangerous Diftempers. It is obferveable, that almoft all the Cautions for preventing, and Remedies tor the Cure of thefe, are to be found in Virgil, Columella, or fome other of the Authors de re Ruftica. It thould feem, that we have added little from our own Expericace, which is fingular, and the morefo, as our Soil and Climate, and we may prefume too the Nature of our Shecp, to be in fome Degree different from theirs.

[^81]:    m In order to underfand this clearly it nay be proper to remark, that a Lamb at a Year old hath eight Teeth in the lower Jaw, but thefe are all tharp, or, as they are commonly called, Dogreeth. At Two Years of Age Six of thefe remain, and in the Front they bave-Two broad Teeth. At Five Years old they have Eight broad, and no harp Teeth at all. But though their Mouths: brenk at Seven, they will live, and their Fleeces grow, to Twenty. Vide Johuftoni Hill. Nat. de Quadruped. p. 6r.
    n We have very different Kinds of Sheep in Finglanit; in Herefordhire, Worcefterfhire, and Gloncefterkire, for Example, they have fmall Sherep with black Faces, which bear fine Wool, but their Burthers are not great. Warwickfhire, Fnckinghamfhire, and Northamptonthice produce large boned Sheep of the beft Shape and deepeft Staple. Lincolnhhire the largelt Sheep of: all. In Walcs the Sheep are fmall, cxcellent in their Fleh, but the lane camsot belaid of their Elecce.

    - Sanctorius has eftablihed the Superiority of Mutton as an Animal Food from Exnci:mint. Profper Alpinus affures us, that the Arabs half boil their Muton, then put it in a Pot wetl farp'd, and fo carry it even in their Journies under that hot Climate for Tweuty Days wicheas rorrupting. Sheep's Milk is fill much ufed in fome Countriss, and is very rich in its Noture The Brain, the Call, the Oefypus, or Sweat on the Thighs, the unwahed Wool, the tat, Iungs, Cawl, Dung, Urine, Bladder, Hend, Feet, incinerated Boncs, and Rennet, are all ufed in Phyfick.
    - The Curriers have many different Methods of dreffing Skins, according to the dificrent Purpoles to which they are applied. Amongh others, a Method bath been fuond to make themrefemble Shagreen. At Rome and Paris they difcovered the Neans of feparating, by the Hejp of

[^82]:    - It is the Opinion of the moft learned and judicious Authors, that the Northern Paits of this ${ }^{-}$ great Inand were peopled from Germany, the Southern from Gaul, and the Weftern from Spain; and there fecms to be litule Doubt, that the original Inhabitants of Ireland came from the fame Comery. There is therefore nothing unreafunable in fuppoting they brought over Sheep with then, which feems to be cunfirmed by the Breed being the fame in both Illands, and having a meat Refemblance unto thofe of Spain.
    "Pirt of the Ranfum of King Richard I. was raifed by a Loan of Wool, which fhews that long: branc thisjt was a thaple Commodity. P. Chomel, in his Dictionnaire Oeconomigue, gives us a. lini, fiomal Story of a wife King of England, who fent an Ambaffador to a.King of Caftile, from whoa he procured Three Thoufand Sheep, which he diftributed, a Ram and Two Ewes, to every Pailh in which there was proper Pafture: All which is a pure Fiction, intended to fhew how c..fily fuch a fcheme might be executed in France. It is Conjecture, not authority that applics: thi, to Heary II. But againft this, our Hiftory furnifhes à Fiact that feems to be decifive: For that Munarch, in the Thirty-firft Year of his Reigu, grantid a Patent to the Weavers of London, that if any Cloth was found to be compofed of Spanifh mixed with Englinh Wool. it hould beburned by the Mayor. Stowe's Annals, p. 419.
    ${ }^{\text {w }}$ In the former Note it hath been fhewn, that we had this Manufacturc, and were :ealous of: it, A. D. 1185 . In A. D. 1224, we have an Act of Parliament regulating the Bieadth of Cloths.: Upon this Statute Sir Edward Coke very jufly obferves, that though this is the firft Law refpectingit, the Woollin Manufacture had neverthelefs fubfifted here from Times heyond Memory. Yet our Hiftorians fix it to A. D. 1331, which was 28th Edward III. becaufe in that Year the King: brought John Kemp and other woollen Weavers from Flanders:
    $\times$ The only Authority for this is Hail's Chronicle of Edward VI. fol. vii., and he miftakes the Year of the Treaty. Some foreign Writers reverfe the Story, and fay it was Edward IV. who procured Shecp from Spain. But the great Objection is, that allowing the Fact of a Prefent made to the King of Arragon of Sheep from Cotefwold, the fine Wool of Spain is not in Arragon but in Caftile, and had been there long before this Time. It wuald have ben eafer for them to have mended their Breed from thence than from England:
    y The Lanas Caftillas, or fine Wools of Cafile, are divided into Segovianns, I.conifas, Scgovias, Sosias, and Molinas. The Wools of Arragon are Albarazins, finc and middle, the Campos, anal the black,

[^83]:    Wool of Saragofa. There are alfo fine Wook from Portugal and Navarre. We have generally imported the Prime of the Caftilian Wools, which were ufed in making our finefl Cloths; our own from Hecford tiaice, Cotefwold, and the ine of Wight being equal to the Reft of the Caltilian Wosels in all Ref feets.
    ${ }^{2}$ It was for this Reifon we find more Laws relating to them than in Reference to any other Subject. At home they made the Buik of private Property. The Wealth of the Nobility, Clergy, and Mon:Ifteries confifed chiefly in Wool. It was at the fame Time the prime Articie in Comsnerce. Aids to the Crown were granted therein. It fupplied the Demands for the Suppont of Armies, the Payment of Subfidies, and all other Expences incurred on the Account of the Publick in foreign Parts.
    ${ }^{2}$ It was the Intrrcourfe in refpect to Trade, that occafioned for a long Series of Years fo clofe a Conjunction between the Two States, which was equalty conducive to their Interefts. Our Wools long fapported thcir Manafactures, in which they were alfo our Malters, as they likewife were in other Aris. But this Harmong between the States was fometimes interrupted, generally through the Quarrels and Caprices of their Princes, and to the no fmall Detriment of their refpcetive Subječts, which hiwéver, when felt, brought them together again.
    b Theic wete various Motives affigned for the fixing and removing thefe Staples; but the great Object thercin was the gaining a more perfect Knowledge of what was exported, and fecuring the Cullum. But u hatever the Object might be, the Places abroad and at home, where thefe Staples were fixed (though bat for a Time) were exceedingly benefited by them. Thofe originally affigned for Ergland were Briftol, Canterbury, Chichefter, Exeter, Newcaftle upon Tyne, Norwich, Weftwinter, and York. For Wales, Caermarthen. For Ireland, Cork, Drogheda, Dublin, and Watcrford. To facilitate Exportation they were to be fent from York to Hull, from Lincoln to Roftou, from Norwich to Yarmouth, from Weftminfter to London, from Canterbury to Sandwich; and from Wiachefter to Southampton.

[^84]:    c Thefe great and opulent Companies, by Means of their extenfive Correfpondence abroad, and their numerous Connections, fupported by their Privileges here, were enabled to export aniually inmenfe Quantities of Cloth to foreign Markets with much Regularity and Certainty, which maturally recommended them to every Goyernment, who, as it was natural, preferred that Stabiliy in Tiade which certainly anfwered beft fo them to the laying it open, though that might, in many Sisfect:, hare anfwered beiter to the People.
    $\therefore$ The Trade to France, Italy, and the lles adiacent, at leaf in fome Periods, were in refpet ir Wrol and Woollen Cloths left free. This gave the Subjects fome Notions of unreltrained Commerce, and indifpofed them efpecially againft the Murchants of the ffanfe. I'ct even in regrard tu the Trade to Italy, it was not curred on in our Veffels, but the Merchants from Genoa and viher Plices came with their Commodities to Sonth mptun, fold them to our Merchants, and took their Value in our Goods.
    e In A. P. 1552 the Company of the Stilyard wetc Biffolved for the Abufe of their Charter. But our Hiftorians give an obicure Account of the Matter. in firying they exported 4,4,000 Cloths, and all other Merchants but 1100 . It could be no Crime to export a large Quanrity of our Munufactures cither againll the Crown or the Nation. What was it then? sir John Hayward (Kennet's Hiftory, vol. ii. p. 326) fays, all the other foreign Merchants exported but 1 roo (llotns. The Merchants of the Stilyard were by their Charter favoured in their Culloms, and in the Reign of Edward IV. futeited their Charter for colouring other Strangers Goods, that is, exporting them as if they had been theirs, but had it refored. It is mof likely they were guilty of the fame Faule now. They were profecuted before the Council by the Merchant Adventurers.
    'There were fome prudent Regulations made in refpect to the Manufacture. A kind Reception was given to the Proteftant Weavers driven out of Flanders by the Duke of Alva. The Purity of the Coin was reftored. Trade was opened with Holland, France, and the Streights. After Antwerp was deftroyed, a new Correfpondence arofe from our Staples being transferred to Emb-- den, Middleburgh, Stade, and Hamburgh. Our Commerce to Turkey, Barbary, and the Eaft Indies, now frit eftablifhed, procured us Variety of aew Markets.

[^85]:    n It munt be obferved, that as we had Holland and Germany before, fo from this Pcriod France became our Rival, and a very formidable Rival me hath been, thongh confeffedly infeitur in the Mateinal, at leaft of her own Growth. Hut this was made up by lange Aflifances from Gowernmerit, Affiduity in Management, well planned Eflablifhments, the Aid of foreign Artifices, and Cheapnefs of Labour. All thefe have been fladily emplojed in the Supfort of her Manutac t: res ever fince.

    - If: confequace of feveral of thefe Lawes, which removed many Obfacles, furnihed various E ouragements, and promoted a general and vigorous Spirit of Induftry, the Englifh Woollen Manufactory was enabled to cope with all its Rivals, more efpecially by the Treaty conciuded with Portugal in 1703, and the Demands from our own Plantations, particularly on the Continent of North America, and other now Chamels of Trade that were opened, by our Merchants being relcaied fiom all Reftrants, and left at full Liberty to promote the publick Intereft and their uwn.

    PThis abundantly appears in the many Laws for regulating the feveral Sorts of Drapery, io as to correct every Species of Fiand, and to amend every Defext as foon as cither was dilowered. By the Statute, it William III. cap. xx. §i. All Duties on all Cloths and Woollen Couds, and Sublidy and Auhage, were taken away. Lit ly the Statute, 6 Ann, cap. $x x$. § i. a Duty of Five Shillings was, and fom very prodent Monives, again impofed on every Piece of broad Cloth exported White, but withont any Refraint of Esportation. Hy fercral Laws palled in the Reign of King Wilitan, perts in Ireland were fixed, from which only wool was whe exported, and this only to certain anfigned Ports in England, in which fome Alterations were made in the Reign of Queen Anne. Bat in A. D. 1753, all thefe Reftraints were takin away, and ail the Ports opened for this Purpofe in both INands.

[^86]:    ${ }^{n}$ Many Computations bave been made on this important Subjeft, and, among ft ohers, One about Thirty lears fince, which at that Tine was thought to be pietty near the Truth. According to the beft Informations that can be ob:ained there may be fom Ten to Twelve Millions of Sheep in England, fone thish more. The Value of their Wool may One Year with another, amount to Three Millions, the Expence of manufacturing this may probably be Nine Milions, and the tot.. 1 Value Twelve Miltions. We may export annuaily to the Value of Three Miilions, though One Year we exported more than Four. In Reference to the Number of Perfons who are maintained by this Manufacture, there are probahly upwards of a Million. Sanguine Men will juige thete Computations too low, and few will beliewe them too high.
    w The Duties on Cloth as well as W'ool were of very old Standing. By a Patent Roll, 30 H . III. m. 4. it appears, that Monarch exempted Simon de Campis, Merchant of Duuay, from paying any Duty on Cloths purchaled here for Three Years. As this Trade encrealed, the Revernic arifing from it augmented, fo as to become a very interefting Object in that Refpect. But accord:ng to the prefent Mode of Taxatien it is become much more confiderable, fince all who are employed in all thefe numerous and extendive Branches of Manufakture, muft expend what they earn in all Kinds of Necolfaries, which if we advert to their Numbers before, it not exactly, is at lealt under-rated, ought to be computed at between One and Two Millions, another Circumflance that puts Sheep, and what is produced from them, in a ftrong Point of Light.
    x In refpect to what may be effected by Attention to Breed it is well underflood and pracrifed. By this the Hair of Cornilh Sheep hath been improved into good Wool. To this we owe, that exceeding fine, long, foft, Mining, combing Wool from the Sheep in fome Parts of Leicefterfire, and the South Marthes of Lincolnhire, as alfo the long Wool fiom Warwick, Northampton, Rutlandhire, Rumney Marfh, \&ac. and indeed more or lefs in molt Counties where due Attention hath been paid to this Circumftance. There is no Doubt therefore that this Advantage may be extended over all thie Illand. Mr. Stillingfeet's Propofal of fowing the beft Graffes pure, will furnifh, in Conjunction with fine Hay and Turnips in the Winter, the moft proper Nourimment for the fine Fleece, which may of Courfe'in like Manuer with the Brecd, and pith like Facility, be expended.

[^87]:    c Their Funds ought to arife from their Fifheries, and the Manufatures and Commerce neceffary To, or proceeding from them. For it will be the conftant Endeavour of every wife Adminiftration to promote extenfive Agriculture, and from thence a general Plenty through the whole Bitifh Domimions, to excite and encourage Indultry every where, and by every Means, directing it always to proper Objects, to that an affiduous Exertion of Individuals, purfuing their private Intercifs in all Places, may, without crofling or clafhing with each other, concur to the Accomplifhment of publick Good.
    d The Irifk Wool in general, but efpecially in Limerick, Kilkenny, Kerry, Waterford, Cork, and other Counties, is fine long combing Wool, than which there is litte in Englard furerior. It is this makes it fo acceptable in foreign Parts, where it is not our fhort tine Wools they defire to have for the making fine Cloths; for thefehthey may, and do procurc from Spain and Portugal, but that before defcribed, which is indeed not common, and therefore valuable in uther Countries.
    e We may fafely affirm, that no Law was ever fo warmly artacked, or fo indifferently de fended, as this for prohibiting the Importation of Itifh Catt!c, and yet bcing a popular Law it was perfifted in, and by fubrequent Statutes enforced. Tine Conduet of the People of Ireland was natural, and fuch as might have been, and probably was forefeen; and fome Englifh Manufacturers attentive to their own Interefts, and knowing the numerous, and in refpect to Manufactures and Commerce, important Advantages of Ireland, went over and fet up there. It was not at all pleafing here even in this Period, that the Irifh hould manufacture for Exportation (though even then Wiool could not be exported to foreign Parts); but as the Bulk of their Exthorgation confilted in Frizes and coarfe Stuckings, which did not interfere with the Trade of 需, it produced no new kgal Reftraint.
    i The War that followed the Revolution in Ireland contributed to the Ruin of thefromollen

[^88]:    \& By Stat. i. Wr. \& M. (ap, xxxii. § 2. the Exportation of Wool from Ireland was limitel to

[^89]:    'As the moft cminent Phyficians, antient and modern, concur in thefe Seatiments, it isfurcly very practicable to introduce the like Ufe of this caly and effectual Remedy in fome Parts of Eng:land, fuch as Malvern Hills which feparate Worcenter from Herefordnire, feveral Places in Cornwall, and very many in the Northern Cotaties. It cannot be doubted that under a proper Regimon as to Air, Diet, and Exercice, Goats Whey would be found as falutary in any of them, as in any other Parts whatever in this Iland. It is by no Means improhable, that an annual Refort of Company in the proper Scafon might gradually produce Villages and Hamlets, where otherwife they will never be feen.
    "Virgil acquaints us, that in his Time Goats were conftantly fhorn as well as Sheep, and that cenrfe Cloths were made of their Hair, which were worn by Seamen. Ropes mate of this laft long in Water without roting. The French, who are very great Artifts in Dyeing, make an excellent Red, by boiling Goats Hair, fhred faall, in a certain Lye in which it diffolves. This Colour they call Nacarat de bourre, which is eftecmed very lafting. See the Preparation and Lles of itin le T'cintercur Parfait, p. 9. 17. 22.
    w In refpect to mending our own Breed, by importing He-Goats from Afia, it feems prafticable, becaufe faid to have been tried with Succefs in France. But it would be probable b: tter to import both the He and She Goats, and to preterve the Race pure, which might be eati: done in fome of our fmall hilly Inands. This is , hat the Swedes, encouraged by mending the: Wool, through the gerting over (in Spite of our fev laws) Engiifh Rams, have alreadr atcempted; Mr. Alftroemer, one of the Members of their How \% "rade, having for this Purpofe expiefle cummiffinned fome fine Goats from Alexandria. This flews the Notion not to be either dinesiar or chimerical.
    $x$ The fuecral Kinds of Ienther made of the Skins of thefe Animals prove that they ma: be enembed very profitable: To mention only a few; that foft, finooth, fine grained Sort, which we call Spanizh Leather, Morocco of all Sorts, and of all Colours, the beft broagtht from Confantinople and the Levant, much from Barbary and Spain, though it might be made in great lue fection here. In Spain and France they make ufe of Goat-Rin Bags for tranfporting Ual and: Wine, whence the latter acquires a peculiar Tafte, which we cill the Borachio.

[^90]:    h Black Cattle feem confined to Europe, Part of Affa, that is, as far as Armenia and Perfia, Barbary and Egypt, where they are very large, in fome of the African Inands, and in America, to which thoy were traufported by Europeans. Our Farwers fay proverbially, an old Cock and a young Bull. This Animal, chofen with much Care, and reared with fome Trouble and Expence, is worth near thrice as much at One as at four Years old. He is then commonly gelt, called afterwards a Bull-flag, worked fome Years, then fatted, and killed when their Flefl is tolerable.
    c Cows have larger Ilorns than Bulls; in other Refpects the more they refemble them, or Oxen: (which Shall be particularly defcribud) the more they are efteemed. The Ancients kept their Cows from Breciding till Four Years old. We, for the Sake of Profit, admit them fooner. It is faid (but it is unufual) that a Cow hath had Nine, nay, Ten Calves in the Space of Three Years. In Effex, Cows have had Three Calves, which haviug been brought up with Care, have been fold to the

    - Butchers for Nine Pounds. In Niorcton's Northamptonhire, p. 446, we have a fingular Inftance of a Cow that had Two Calves at Eighteen Years old, and both Cow and Calves remained found and healthy.
    ${ }^{d}$ It is univerially allowed, that for all Ufes whatever, but more efpecially for Salting for Land and Sea Scrvice, our Englith Beef is as good and as wholefome as any in the World. If therefore our Manner of Living, and the'conftant Demands for our Shipping, be confidered, we may eafily conceive the Confumption, and of Courfe the Value of Beef muft be very great. The Confumption of Beeves within the Bills of Mortality exceed (according to the beft Lights that could be obtained) Onc hundred thouland, in the Reft of South Britain perhaps Five hundred thoufand or more, the Amount of which mult come to many Millions; but how many muft depend upon the Size of the Bealts, the Pice of Meat, and other contingent Circumftances which vary annually, indeed we may fay, alter continually.
    \&. The breeding Calves for the Butcher many Miles round London has been long in Ufe, and attended with great Psofits, in conlequence of the Judgram, Skill, and Pains exerted in rendering them of a large Size, and very delicnte. They are biought partly in Carts or Waggons, partly on Horfes, by which they wafle lefs. It appears from the Returns of the Clerks of the Market, and other Informations, that the Nunber of Calves is about double the Number of Beeves confumed in this Metropolis; and it is from thence cvident, that there is annually fent in Veal upwards of Half a Million ; an amazing Sum! bur greatly, at leaft for many Years paft, mithin Compars.

[^91]:    f This Difeafe hath been hitherto but indifferently explained, more efpecially as to the Caufe. It has fometimes fpread over a grent Part of Europe, but gradually, and not all at once. Some afcribe it to a putrid Humour in the Juices of the Cattle, others to an infectious Difpofition of the Air, fome to a peftilential Vapour from the Earth, and others again to Infuets, which feems to be the moft natural, as the moft effectual Prefervatives and Remedies are Sout, Saltpctre, Gunpowder, Brimftone, and fuch-like.

    8 Heliod, the oldeft Author on thefe Subjects, makes the Farmer's Family confift, in the Hufband, the Wifc, and the Ox. He was termed the faithful Minifter of Ceres, and the conftant Companion of Man ir the Labours of the Field. Virgil gives it us as a ftriking Circumftance of the Saturnian Age, that it preceded that in which an impious Race firft fafted on flain Bullocks. In thofe Days the Horfe was only for the Saddle, and the Culture of the Earth entirely conmitted to Oxen.
    ${ }^{6}$ The Reafon of this is his ficrce, furly, and obftinate Nature. If 'Two Bulls were yoked, they would gore eacli other with their Horns; on the other Hund, it fhould feem more practicable with un Ox of the fame Size. This alfo hath been tricd, but with little Succefs, not barcly from the mifchievous Difpofition of the Buli, but chicfly from the mafeous Ranknefs of his Breath, by which the Ox, as the Fumers afferr, (fee Lifle's Cbforvations, vol. ii. p. 85) would be vary feeting in killed, and therefore whenever Balls are wrongit they draw in a Line.
    i Varro fays, the Ox fitteft for Labour hath a brod Forehead, lirge black: Eyes, rough lairy Ears, Jaws wide and ftrong, thick black Lips, Dewiap !arge reaching to the Lances, thick brawny Neck, his Shoulders broad, his llai, not rough or fa',oms, well fot fraight Legs, rather thort, to fuftain better the Weight of his and, lii: Knees laree and ftrong, his Feet rurning out, fprealing wide, and broad withal, his Cont thick, fhon:, and Cecty his Tail lung, and covered well with hair.

[^92]:    ${ }^{k}$ In Marmland, and other Places, where thicy pique themfelves on fatting Oxen to a large Size, they are very plentifully fed with fine Inas, live at their Eafe, and are very carefully attended. Eut perhaps this may be more eafily and cheaply performed. Mr. Houghton affures us, that an Ox which fold for Thirty Pounds, was Seventy Years ago fatted upon Cabbage Leaves in Suffolk. They are now very well and very fpeedily fatted with Carrots, as hath been already mentioned. Some of our Stall-fed Oxen are in Truth of an almoft incredible Bulk. In A. D. 1755 an Ox was killed at Sunderland which weighed Two hundred Seventy-feven Stone Five Pounds, or 2221 lb . A.D. 1754, a Pair of Oxen, belonging to Mr. Conftable of Burton Conftable, were killed at Beverley, Which weighed Five hundred Forty-two Stone and One Pound, or 4337 lb . But thefe fell all fhort of an Ox of Sir Walter Wagfaff Bagot, Baronet, killed A. D. 1753 , at Blyth Field in Staffordmire, which weighed Three hundred Thirty-five Stone and Six Pounds, or 2686 lb . But thefe, out of many more Inflances that might be produced within thefe Seven Years, are to be regarded as extraordinary and unufual. They fhew however to what prodigious Sizes qur Bealts may he raifed; that this may be done, wherever there are good Paftures and due Attention; and that confequently very large Beeves mas be had in any l'art of the Iland where the Courfe of the Markets may require them.
    ${ }^{1}$ It is true, that in Summer Oxen as well as Horfes Feed on Grafs. Yet it hath been long fince remarked in favour of the $O x$, that by lis Dung he reftures to the Soil as much as he takes from it. By this, and by the Thicknefs of his Lips, which hinder lim from biting clofe, the Ox leaves his Pafture better than he found it; whereas an Horfe gradually fmpoverifhes and confumes it. In Winter, Straw and a few Turnips content Oxen, or at moft a little Hay. A Lad that finds his Hauds full in managing Four Horfes, would look to Eight Oxen with much mote Eifo
    $m$ This is the moft weighty Argument, morecfpecially if we confider the Price and the Demand for Beef of late Years. An Ox when his Vigour abates, and he is no longer fir for Plough, by which for Seven Years he has amply carned his Living, fats kindly at laft, and fells for a good Sum. A difabled or a fuperannuated Horfe is utterly ufelef, and as fueh is configned to the Dogs. Indced the Death of Horfes, and the many Accidents to which they are liable, make an iheavy Article in moft Farmer's Expences, as themfeives allow.

[^93]:    n. The Romans marked very frongly their Notion of Oxen only being adapted to the Plough, By giving their Acre, which was the Bafis of their fuperficial Meafure, the Denomination of Jngerum, i. e. A Day's Ploughing of a Yoke.of Oxen. Our Saxon Anceftors on the fame Priuciple had their Oxgang or Bovata Terræ, which was Fifteen Acres, and Six of thefe made a Ploughland, that is as much as Six Oxen could plough in a Year. Three Jugcra make very nearly Two of our Acres. It fhould feem therefore that the Ancients did by no Means over-work their Cattle, fince in many Places a Pair of Oxen will Plough One of our Acres in a Day without being faint or fatigued.

    - It feems unreafonable at leaft to recur hafily to Authority in a Cafe of this Nature. We know not what the Farmers have to fay for themfelves; but without knowing this, we may fafely conclude they think Ploughing with Horfes molt for their Intereft. Convince them it is not fo, and there will need no coercive Methods to bring them back again to the old Manner of Ploughing with Oxen. His Grace the Duke of Queenfberry in Wilthire, and Lord Clare in Effex, have already purfued this Mode, and it would be well if they were imitated by others of Rank and Fortune. This would quickly put the Fact out of Difpute; and, if they are in the wrong, the Farmers out of Countenance.

    P The Romans were acquainted with this fterile Cow, and called her Taura. In Moreton's Northampton(hire, p 447, we are told the Opinion of the Graziers in that County, which I take to be general on this Head. They fay, that when a Cow brings a Bull and a Cow Calf together, the latter is always a Free Martin, and never bears. He profelfes not to know whence the Name arifes, and in this I profefs alfo to be no wifer. But I much Doube the abfolite Truth of the Graziers Account of thia Matter. Mr. Lifle obferves from an intelligent Farmer, that a Free Martin's Head is coarfer, her Horns more open, he, Udder finaller than that of a Heifer. He adds, that the Fleh of a Free Martin when fatied will fetch an Halfpenny a Pound more than any Cow Beef:

    - The Truth is, moft modern Writers copy Varro and Columella in copying each other, and they conld not do better, as thefe great Mcn, as is faid in, the Text, copied Nature. The latter incirte:

[^94]:    * In all Computations of this Kind no Sort of Precifien can be had, or indeed ought to be expected. The utmont that can be done, is to make the beft Inquitics in onc's Power, to conGder and compare them carefully, and to leave the Refult of them to the Reader's Judgmemt. It hath been reckoned by Mr. Maitland, who took all the Methods he could devife to come arCertainty, that there were confumed within the Bills of Mortality upwards of Sixteen Millions of Pounds of Batter, above Twenty-one Millions of Puunds of Cheefe, together about Thirty-cight Millions, and Five Millions of Gallons of Milk, every Year. As this Account was taken about Thirty Years ago, if it was then a little too large, it car hardly be thought fo now. It alfo agrees very well with the Principles of another Calculation, as to the general Expence in Provifrons in this Metropolis, in which I find all thele Articles rated together at upwards of One Mil-. lion annually.
    * Our Black Cattle are very confiderable in point of Size. Some of our Oxen meafure Two Yards between the Tips of their Horms, whercas a French Ox's Horns are afunder about Two Feet. Thefe large Cattle are bred in Lancalhire, Lincolnthire, and Yorkfhire, and in other Noithern Counties. The Danil, Cows are large, brought into Holland, and there, though ever fo well fed, they do not grow fat, but give prodigious रuantities of Milk, which is alfo very good. The French, who purchafe them from tience, call them Flandrines. In general however their Cow: yield lefs Milk than ours, fince, aciording to a very modern Calculation, the Profit of a milch Cow is reckoned there at Thirty Livres per Annum. As to the Be:uty of Cattle, the Preference is given to thefe of Esypt, from the perfect Symmerry of their Limbs, id dhe exact Regularity of their Marks. They are aifo of a large Size. Ihe Ahients highly commended the Ereed of Cattle in Iepirus; thefe were of a red Colour, wicy large and firong, ine fint they atributed to the Circum.. fpection ufce in the Chosce of their Bu:, and ilye latter to the not fuffering their Cows to have Calves till they were between Font abd live icars old. Our Grazie's are allowed to be as expert as in ang Country whatever.

[^95]:    - The Daties were origin.lly impofed by Stat. 8 Ann. cap. ix. §. 1. of One Half-penny on a Pound for Thirty-two Years. By Stat, 9 Ann. cap. xxi. § 7. the former Duty was rendered perpetual, and by the fame Act an additional Duty was laid of another Half-penny, and by Stat. 3 Geu. I. cap. vii. made perpetual, and Part of the Ceneral Fund. Thefe Taxes produced, A. D. 1752. $150,05 \mathrm{Il}$. 13 s . 2 d . and A. D. 1762 . $184,545 \mathrm{l}$. 18 s . $5 \frac{1}{2}$ d: But the whole Duty is drawn back if Candles are exported.
    ' By Stat. 10 Ann. cap. xix. § I. a Duty of One Penny on every Pound of Soap was impofed for Thirty Two Years, made perpetual, and Part of the General Fund by Stat. 3 Geo. I. cap. vii. By Stat. 12 Ann. cap. ix. § 1 . an additional Duty of One Half-penny was laid for the fame Term, which was alfo made perpetual by Stat. 6 Geo. I. cap.iv. Thefe Duties produced, A. D. 1751: 143,737 l. 16 s . 10 d . and the grofs Produce in A. D. 176 I. 183,459 1. 2 s. $11 \frac{1}{2} d$. But the whole Duty is drawn back on all Soap that is exported.

[^98]:    ${ }^{1}$ In King Fihelfan's Reign, as we read in Bromon, a Law was mase io provent fending Ifmiti abroad for Sale. In the Senatus Cougha de Nonticolis, in the Time of King Ethelod, A. I. wore
     Twenty Shillings, a Mule or young, Ah Twelve Shathings, an Ux Thinty Peace, a Cow Twenyfour Pence, a Swine Eight Pence, a wan One Pound. This hew: the relative Walue ot Thine a thofe Days; but then we mult remember this wis Sixon Mfonev, of which lomeyteha shified, made a Pound, and Five Pernce a Shilling. According to this Valnation, an Henfe wasorth Iit: Oxen, and a Cow worth Three Swine. It may not be amifs to ald, a Sheep was then whac: at a Shilhag, and a Gear at Eleven Peare; that is, Two shallings and a Penyy.
    $m$ The Dancs ded not fight on Horftack, but made ufe of thefe Creature to dras their Veffe. agninift the Stream, in conveving Plunder to their Ships, but more efpecially for expeclition Marches, which enable! them to come upon their Enemics, by Surprize, whom, Trefl and uni..tigued, they boldy athacked on Ioor. When they had but fow of their owa, they ownelled the Peafints where ever they came to furnih them wih Horfes. This pertaps is äs carly an lithance of Dragocin Service as is to be found in Hiflory. For this the Danifh Horfes are fitil famula, being tight, font, ipirited, weil moulded, and wery hardy. In the Armp of the Allies at the bicgiming of the current Century they ferved with mech Repatainn. This Sale of Hortes is inded a principal Article of the Commetce of Jutan.
    " William i. won the decifive Batte of Huftings by the Supeiority of his Cavalry, which he brought over with him. It is alfo to be confidered, that our Norman Monarchs hat Dominions on the Continent, where thefe Horfes might be eatily procured, and convenienty kept and maintained. In the Reign of Edward I. his Son, afterwards Fidward II. bought egantt a Toumament of fome Italian Merchants Ninteen Horfes, which coft him 4801. 2s. 8d. Yict Nathew Pais rells us, p. Iaji, that the Abbot of St. Abhaus going a Journey with Six Pages, hired for them Six ftrong handiome Horfes, on Coodition that if any of the mi died they fould be paid for at the Rate of Ten Shilings an Horfe. This w.ss A. D. 1232. In A. D. 1425 , a pime Horfe for the Pior of Rurcelter's Stable was purchated :at One Pound Six•Shillinges, and Fight Pence.

    - Mr. Snape, in his Deffication of his Anatomy of a Horfe to Charles If fays, that fome or other of his Fanily had been Farriers to the Crown for the Space of Two hueded Years, which carries this Office as high as the Reign of Henry VII. As this Monarch had great Knowledge of the World, de was defrous tor many Reafous of raifing here at llome a goud Breed of tiorfes; and in order to

[^99]:    is faid in the Text, the Breeding the beft Horfes was quicily transferred to the Northern Countie: in England, efpecially Yorkihire, as Fuller tells us, and where indeed many of the molt celebrated of "ir Horfes have been bred.
    : Thefe, though more placid, proved more potent Inducements to the anending our Breed of Horfes than the fevere Law, 32 Hen. VIII. cap. 13. which was altered from Fifteen to Thirteen Hands in the Ille Ely and the Fens, by Star. 8 Eliz. cap. 8. §2, 3. and was totally repcaled as to Cornwall, by Stat. 2: Jac. I. cap. 28. \$12. By which, as the worthy Cornifh Antiquary Bolafe inton me us, a meft valuable Race of fmall Horles, called, from an extenfive Moor in which they pafmec, Cunhillies, and are exactly fuited to the Roads and Labours of that County, were pleferved. Lavis made to controul Nature, or even old Cuftoms, operate very flowly, if at all. But if Laws f:ucur the Interefts or go along with the Inclinations of the People, they meet with an implicit Obediance, and are fure to make a very fpeedy and very extenfive Progrefs.

    - There is a Tadition, that Arundel in Suffex rectived its Name from a favourite Steed of Bevis Int of Southampon. Roger Earl of Shrewforry is reported to have brought over fome Spanith Ho: fes into Montgomeryhire. Italy, and efpecially Naples, was for a long feries of Yuars the gra:d School for Ikurfemanhip. Henry Vill. brought over Two famous Mafters from thence. Dir. Thomas Blunderill was the filt who in our Language publifhed a Treatife on the Art of Riding. This much enlarged he republifhed in the Reign of (2. Elizabeth, and dedicated it to Robert Earl of Leicefter, whom he highly commends for bringing over Claudio Corte, who was his riding Mofter, and at the fam: Time deeply deplones the miferable Siate of Ilorfes and Incapacity of Horfemen in this Conatry. He profeffedy copied Grifon! an Italian Author ; and Markham, De Crey, and others have copied him.
    "As it was well und rftoot, that for various Purpores, and more efpecially for Stallions, it was reqnifite to import fortign Holfes; thefe, t.y Stat. 12 Cai. Il. cap. 4. were rated at Ten Pounds, and the Duty fixed at Ouc lound Eighteru Shillings and Six l'cace. But though our Horfes were

[^100]:    $x$ The Name in Latin of the Ammal probect be an Hofe with an Afs is Himus; when a Foht,

[^101]:    ${ }^{2}$ Polltical Survey of Great Britain, vol. i. p. 59. 59. where the Reader will alfo find the proper Authontins cital in Support of this Affertion. Add to thefe, that fome vay learncat Critics have mantained, that the Procurator of the Cynepium Ventenfe was an oflicer who had the Care of ' the imperal Kennel at Winchefter, and furnimed Dogs, mone ofpecially Mafliffe, for the Amplitheatue; whence, as their l'octs feew, they were fo well known, and io univerfally admired at Rome. -
    ${ }^{4}$ In refuence to Scent, the Blood-Hound is a mon furprizing Infance, concerning which fec Boyle's W.aks, wh. iii. p. 332. The Swiftnefs of the Gre Hound or Grey-Hound, is amazing, as is the

    - Steadinde and lerfeverance of other Hounds and leagles, the Boldnefs of Terriers in uncarthing Foxes, Ex. the Sagaciay of Pointus aud Setting Deres, taught a Langunge of Gigns, as inteligible to Sportfonen :as Spech, and the iuvincibe Spirit of a Bull-dery to be quelled only by Death.
    - 'Hac bovereisity of ivan over other Animafs, is in a erreat D-ffree acquired and maintained by the Affiftance his fuperior Shill emables him to derive from Animals themedves, efpecially the Haxi and the Dog. By the Help of the latter, he takes not only beafts but Birds, zad purfores his Game nut barcly ove: Land, bat alfo throngh the Waters. In fome Nouthern Countries thefe

[^102]:    n It is cillled by the Italians Armellino, by the French Hermine; it is, though a fimall Animal, bigger than a Weafe!, and thercfore improperly called Nuftela Candida, being a differemt Specis:It lurks in Hedges, in Meadoves, and by River Sides, wherc it fecls on Rats, Mice, and Moles. It is common in Rutia, Norway, and other Northern Countics, and in Armenia, whence it derives its Nane. It is all over a fnowy White except, (which is the (haraterittick of the Animai) the Tip of the Tail, and that is a decp hining Black.

    - They diftinguith Three Kinds of Foxes The Grey-hound Fox the tallent, the Maftiff Fox the ftrongeft, and the Cur Fox the commonef. They lodge themfelves miler Ground like the Madger. They feed on Lambs, Hares, Rabbite, Ponltry, lirds, and, in cafe :hey camnot get thefe, Rats, Mice, or Roots. Their frong Scent is thought to be a Prefer wative agemft contagions Diftempery. The Black Fos Skin, which is rare in the Northern Countrice, and of which there are a ${ }^{\circ}$ few in Canada, is cfeemed One of the richeft Fars.
    ${ }^{5}$ In different Parts of Britain this Creaturc hath different Names. It is of the Size of a Cat, fonerer in the Bolly, but with horter Legs. It lives chiefly in Woods, makes its bed or Neft inholhuw Trees. They feed on Birds chieffy, but will alfo cat Rats, Mice, or Moles. The larger Martin it is faid hath been tamed, and kept in the Houfe like any ober domeftick Animnl. In Nurth Britain, they fay the Whte frequents the Beech, and the Yellow the Fir Woods. In the Weftern Ines of Scolland it is called the Mertrick, andj its Fur is very finc. Thefe Shuns under the Name of Marts are imported from Rufia, and many more form Cinada, and by the HudionsBay Company. Thefc Furs are not confumed here, but fent into other Councrics, priacipully inte the Levant, where they fetch a large Price.

[^103]:    ${ }^{9}$ Befides the Difference in the Feet mentioned in the Text, the Otter is diftinguifhed from the Reaver by its Tail, which is longer and covcred all over with Hair; whereas that of the Beaver is haped like a Racket, and covered with a Kind of Scales. Otters difcover great Subtilty in taking their Prey, and in the framing their Holes, but fall much Mort of the Beaver in both, and indeed in their whole Occonomy, that is, in their natural State. But the Otter may be tamed, and rendered as fubfervient to his Mafter in taking Fith as a Dog in catching Game. This, though Jong practifed in Sweden, was in other Countries regarded as fabulous, till Mr. John Lots, a Member of the Royal Academy of Stockholm, pubiifhed A. D. 1755, the Method of training them, which is equally circumftantial and curious.
    r It is commonly underftord, that our famous Saxon Monarch Edgar, by his Law for receiving their Heads at a Price in Payment of Fines and Taxes, ridded the Nation of Wolves. But this is not precifely true. He certainly pointed out the proper Method of doing it. In the Beginning of the Thirteenth Century they made fuch Deftruction in the Weftern Counties, that Edward 111. iffucd his Writ, direEting a general Hunting, and exhorting the Ufe of all poffible Methods for their Extirpation. According to thefe Examples, a Law pafled in Scotland in the Reign of James I. diresting all Gentemen and their Temants to chafe the Wolf Four Times every Year. The was enforced by a new law fo late as the Reign of James VI. In Ireland the Depredations by Wolves were not omitted in Prefentations by Giand Juries till. A. D. 1710, or thereabouts.

    Vol. 1 II .
    E e

[^104]:    - It is a general Complaint, that fince the Enlargement of Farms, Poultry, cycept for the Ufe of their own Familiss, is very little the Farmers Concern, and that from thence Fowls are become fearce and dear at almoft every Market. It may be, a Coltager with Four or Five Acres of Laud might be able to maintain his little Houfhold by breeding Fowls. keeping lees, and raifing a few ufeful Roots an: Vegetables in his Garden. It might at leaft prove aun additional Support to an Hufberdman's Family, find them Employment, and by rendering their Condition comfortable, encourage Matrimoay, and thereby promote, what is the greaten Blefling any Country can cajoy, the propagating a Race of healthy, hardy, and honef People. In itfelf the Thing is certainly practicable; and amongt other falutary Effe?s that would attend it, we may be fure of this, that it would diminin (where they are moff feit) our Puor Rates, and that by the mof defirable Method, leffening the Number of our Poor.
    r Eggs are not only deftined to a Muhtude of Ufes in the Kitchen, which occafions a valt Confamption daily, but are alfo emplöyed in Mcdicine, in various Manufactures, in the Fining of Liquors, in many Trades, and in moft of thefe great Num'ers are ufed at once. It is this occalions fo great an Inportation, which of courfe creates a very large Expence. In the Book of Rates framed foon after the Reftoration, Eggs are vained at Tiwenty Pence an Handed (containing Six Score) and the Duty is about a Groat. It is difficult tio (ome at a probable, impofible to procanc in exagt Accont of the Number of Egys and their Valne annually confomed in this Nation. Yet I have feen a Calculation, which appared to be within Bounds, that at Six for a Pemuy made it amount to Four hundred Thoufand Pounds.

[^105]:    7 This Experience flacws to be a great Infrument of Fertility in all Countrics, and as fuch of great Value. The fmall Ine of Foulney on the Coaft of Lancahire is a Proof of this. Pigeons Dung hath the Preference, and is commonly fold by the Buthel. Hens Dung is cooler, but lafts longer. Goofe Dung is allowed to be a good Medicine in the Jaundice, but hath been held to burn the Grafs. Mr. Morimer vindicates it fully from this Imputation by 2 Number of Inftances. From the due Confideration of thefe Articles taken collectively, the intelligent Reader will form a competent Idea of the real and fubftantial Advantages we derive from our Poultry, and be from thence difpofed to think Mr. King did not exaggerate in valuing our tame fowl at Four hundred and Sixty thoufand Pounds.
    ${ }^{2}$ Wild and Water Fowl have not in general Men for their Protectors, but rather the contrary ; they are inftructed therefore by the All-Wife Author of Nature to provide for themenclves. Food and Safety, efpecially when Breeding, are their Objeets; where both thefe are to be found they conftantly remain ; when either is wanting, they retire. If this happens to them in other Countries they come hither, and it it befalls them herc, as, in refpect to the latter particularly, is oftela the Cafe, they remove elfewbere.
    a The Game Laws, fo far as they tend to preferve the Stock of Wild Fowl, by preventing the ki hing them but in proper Seafon, and protecting their Eggs from being wantonly deftroyed, feems caculated for public Benefit, inafmuch as thefe are to be confidered as belonging to the Publick, which hath an Intereft in providing that they fhall not be exterminated. By a late Law, Partridges are not to be killed between the Firlt of February and the Birlt of September, or Ibeafants from: the Firft of February to the Firft of October.

[^106]:    ${ }^{b}$ It was obferved, that there were Birds as well as Beafts of Prey. Upon this Principle Hawks of feveral Kinds were taken into the Service of Men, and Falconry, or the Method of Trainirge thefe Fowl, and Herons, which were alfo ufed in the fame Way, became an Art, and the Practice of it, in its full Extent, an Occupation. After Shooting came into Ule, an old Horle was fo difciplined as to affift the Sportfman, by concealing him from, and amufing the Game till he could take Aim conveniently. This Creature is called a Stalking Horfe, and Cows and Deer have been trained to the fame Scrvice. Dogs of different Sorts are broke, as it is phrafed, to affilt the Sportfinan when he ufes either Gun or Net, and a Dog completely taught is very valuable. But the Performances of the Setting Dog or Land Spaniel, though truly admirable, are yet in the Judgment of Connoiffeurs inferior to thofe of the Water Spaniel. In this Animal is required a wider Meafure of Comprchenfion, with as perfect an Obedience to the Looks and Geftures, as well as the Bort Words of Command from his Mafter. But it may be every Thing of this Kind is outdone by the Londoa Biid-catchers, though their Object is no more than taking the poor little Songlters that fill our Cages. Thefe Artifts have a large Apparatus of what are called Clap-nets, which in Autumn are foread in the Dawn of the Morning, and the Birds are allured into them by Goldfaches, Linncts, Woud-larks, \&ec. ftiled Call-birds, moft artfally and wonderfully inftructed in this tiaterous Bufinefs.
    c This Improvement confifts in what are called DF.COYS, of which there are feveral in Lincolnfiire, as alfo in Somerfetfhire, and may be in any marfhy Country; a Decoy is a pretty large Pud, made in fume romote Hace, haded with Trees; from the Pond there run Five or more Channels, growing clofer by Degrees, their Banks planted with Trees, over which is throwna Net which forms an Arch, and at the Extremity there is a Purfe-net. The Keeper or the Decoy hath a convenient Stock of Ducks, thained from the Egg, well fed, and rendered familiar. Thefe Decoy Ducks flying abroad, bring with them Multitudes of Wild Fowl at their Return to their Quarters. When the Mancr of the Decoy, at the Clofe of the Evening, fees the open Pond well covered with Fowl, he polls himfelf behind a Reed Hedge at the Angle of a Channel fo as not to be feen, where he gives a Whiftle, and throws Grain or Hempleed over the Hedge into the Water; on this Signal, the Decoys kead the Strangers into the Channel; and being advanced. therein, a little Dug, trained alfo, makes its Appearance through Holes in the Hedges made for that Purpofe, running filently about withont taking Notice of the Fowl; bat if as the Channcl grows narrower they attempt to return, he barks and drives them on till taken in the Purie-Ner. The becuys by diving commonly recover the Pund, but if taken, are preferved, carefed, and are plenifully fed for their good Service.

[^107]:    d. Amongft the vaft Variety of our wild Fowl, the moft efteemed are thefe: The black Game or moor Fowl, which by a late Law are not to be killed from the Firft of January to the Twentieth of Augunt. The red Game or Growfe, protected by the fame Law, between the Firft of Dicember and the Twenty-fifth of July. The white Game or Ptarmigant in the Highlands of Scotland. The Buftard in Dorfethirc, Wilthire, \&c. The Dottrel in Cambridge, Derby, and Lincoln Shires on the Moors. The Godwit common in the Fens. The Knot in I.iacolnhiire, fiad by Fuller to be brought hither from Denmark by King Canutus or Knut. Partridges, Puffins, in the Ille of Man, \&c. Quails in feveral Parts of the Mland, but in no great Plenty. Rail or Land Rail in Anglefen and in Somerfethire, common in North Britain and Ircland, by the Name of the Corn Crek. Ruffs and Reeves, the latter being the Hen, in Lincolnflire and the Fens. The Wheat-car, by fome filed the Englifh Ortolan, in vaft Numbers in Suffex. The Woodersk, which like the former is a Bird of Pallage, coming in the Autumn, and leaving us very canly in the Spring.
    e It will be cvident from this very fuccinct Detail, that no accurate Eftim tie can poffibly be made upon this Ilcal. Mr. King however hath adventured to guefs, that the whole Stock of wild Fowl in his Time, which is Seventy Years ago, might be about Twelve thouland Pomms. In proportion as a Country becomes more cultivated, the Quantity of fuch Fowl will decline; and yet cne may be induced to believe from Circumftances, that our prefent Stock is ftill of greater Valve, fince a few Years paft it was computed, that the wild Ducks fuld that Scation amountel to Ten thoufand Pounds. The Curious and Judicious Reader who would be more fally informed on this Subjeet, may fatisfy himfelf by confulting an excellent and entertaining Work juit publifhed, antit:led, BRITISH ZOOLOGY.
    f There is no Subject refpecting Oeconomy on which the Ancients have more fully fooken than this of Bees. Arifotle, Varro, Virgil, Cohumella, and Pliny; have all treated of them at large. They had very juft Notions of their Utility and of the Value of their Labours, and therefore fhewed all the Attention polfible to their Support; fo that in truth there is but little (with regard to Management) in the Writings of the Moderns, which is not to be found in fome orwizher of then. The Egyptians effecintly were perfeer Mafters of ehis Matter, and removed their Hives on Boats upon the Nile for the Conveniency of Fecding. This is fill praetifed by the Help of proper Carriages in Germany and in France on the fame Principle, that the Bees may have the greater Plenty and Variety of Palture.

    E Mr. Fitzherbert obferves, that he who hath Sheep, Swine, and Bees will thrive while he fleeps, Gonge gives fome curious Practices of his own upon this Subject. The ingenious and jadicious

[^108]:    * It hath been already fuggefted, that a Cottager, with four Acres of indifferent Land, might be very ufeful to himfelf, his Family, and the Publick in raifing Poultry; and this would be not only augmented but facilitated by his keeping Becs. A fmall Orchard or Garden properly difpofed and managed to this Purpofe would help to fupport then ; and an Acre fown with Buck-wheat, which will grow on any Soil, would Supply all Defects; and the Grain fattens Poultry more than any other. Such poor People, if induftrious, would be very attentive to whatever would better their Condition; and having but few Things to mind, and being confined to narrow lounds, and thefe few Things being continually under their Eycs, they wonld cxert all rheir Faculties to improve them ; which Obfervation and Experience woul.I fpeedily put in their Tower.

    1 Thefe Inands, though thinly inhabited. have large Tracts of Land ; and the moft uncultivated of thefe would furnihh Bees with very acceptable Nouriftimenr. For, wild as they are, they abound with Heath, Broom, and Multitudes of flowering Herbs; and every Cotrage ${ }^{\text {Winging a Kitchen Gar- }}$ den, though a poor one, they could never be at all diftrelfed for Subfiltance. If any Objections arife from the Confideration of Climate, thefe will admit of Two Anfwers. The firft is, that none, even of our remoteft Northern Illes, are fo cold as from their Situation might be expented: And next, that in Countries more to the North, and confeffatly much colder, there are prodigious Quantities of Honey and Wax made; which, the laft efpecially, brings in valt Sums from Southern Regions, where that Commodity is confumed.

[^109]:    P It would be a very difficult, and after all a very precarious Undertaking, to calculate the Value of thefe Fihherics, which depend upon Seafons and other Accidents. But with refpect to what is faid in the Text, fome great Authorities may be produced to fupport it. Mr. John Collins, who wrote a Difcourfe on Salt, and was thoroughly Mafter of the Subject, the famous Dr. Davenant, and the ingenious Mr. Houghton, all agree that we take full as much Fifh as the Dutch. Indeed, if we confider the Extent of our Coafts, the Number of our Inhabitants, and of the Veffels and Men employed in this Service, it will leave us no Room to doubt. But then, if we contemplate the Territory of the Seven Provinces, the People who live in them, and the Proportion of thofe dependant on Fihing bears to the Whole, it will enable us to fee this Matter in its true Light. We fhall then difcern, that though the Totals hould be equal, yet with them the Fifheries employ and maintain One Fifth of their People, with us perhaps not near a Twentieth; which, in a political View, makes the Fifheries of infinite Importance to them, and at once explains and juftifies what De Witt and other Authors have faid on this Subject.
    q The ingenious Mr. Houghton, taking Occafion from what fome have afferted, that Fifh to the Value of Elcven Millions in One Year had been caught by Foreigners in our Scas, though he pretends not to vouch the Certainty of the Fact, undertakes however to Shew the Poflibility of it, and this by Calculation. He affumes from Dr. Heylin, that the Extent of the Coalt of Britain is 1836 Miles. Suppofing then the Fihing ouly Ten Miles over, though it is vaftly more, this makes 88,360 fquare Miles. In a fquare Mile there are 640 fquare Acres, and if in the Courfe of Twclve Months Twenty Shillings worth of Fifh may be taken out of a fquare Acre of Sea, which, its Depth confidered, is no unreafonable Fofition, this will amount to 11,750,400l. In this Computation Ireland and all our other Illands are excluded ; thefe however are more indented by the Sea, aud confequently have in Proportion to their Size a more extenfive Line of Sea Coaft than Britaia. If therefore we apply this Mode of Reafoning to them, it will afford us a new and

[^110]:    = In order to fiame an Idea of the gradual Improvements made in this Country in general, we may compare and confider Carew's Survey of Cornwall, Camden's Account of that County, Morden's Defcription of it, the Bifhop of Winchefter's Additions to Camden, and Eorlafe's excellent Works fo frequently cited. If we had the like fucceffive Relations of other Slifes, they would: Ghew in a greater or lefs Degree the fame Thing. At the Acceffion of Queen Elizabeth, the Cuftoms yieldod but Thirty-fix thoufand Pounds per Annum. Sir Walter Raleigh afferts, that in the Twelfth Year of her Reign, the Navy confifted of Thirreen Sail, and our Ships employed in Trade: were One hundred and Thiry fix. How frange does this appear to us? How much more wonderful, not to fay incredible (fuppofing it cuald have been predicted) would our prefent Situation have appeared to them? What then is there abfurd in believing, that with io wide and firm aFoundation, fuch a.Multiplication of Powers, and fuch Acceffion of Wealth, Pofterity fhould profperoully proceed in the fame Track, and then, according to the comsuon Courfe of Things, all that we expect may be accomplifhed.

[^111]:    2 The different Degrees of Civilization amongft Nations arifes from their having many or few of thefe Mcans of Improvement. Next to the Materials, which are the natural Stock of a Country, thefe Inftruments of Art are the moft neceffary toits Inhabitants. The Earth fown and tilled produces Grain of feveral Sorts. This Grain produces Flour or Malt. Flour makes Bread and other Things; Malt is brewed into Drink, and this is fometimes diftilled into Spirits. Of thefe, when we have a Redundance, we export and fell to People inhabiting other Countries. The Means ufed to improve our Soil fo as to increafe its Products, the Methods employed for their Prefervation, the Skill fhewn in Manufacturing them, are Arts, fome of them of late Invention, and all of them gradually improved. The fame may be faid with equal Truth of many other Things, the favourable Alterations, as to which, were all of them brought about by a due Diftribution of fmall Canals from thofe great Streams that are mentioned as flowing from the noble Source of publick Spirit in the Courfe of this Chapter.
    b Silver might have been at all Times fmelted from our Lead, and what an Advantage this would have been we have ftated already. See the Political Survey of Great Britain, vol. i. P. 340. Our Mines might have been more numerous, and incomparably more advantageous, if we had adopted right Notions earlier. Our Anceftors need not have been ex pofed to frequent famines, if our Hufbandry had been better, and our Laws wifer than they were. Our Woollen Manufacture, and indeed all our Manufactures, might have been fooner improved, if thofe employed in them had been left more at their Liberty. Our Black Cattle might have been always of the fame Size they now are. Our Horfes were ever capable of being, what in this Century we have feen them. But the Mcans, more efpecially Security, Encouragement, and Attention, were wanting.
    c There were Treatifes of Hubbandry, or as they were then filed, Books of Gainage, as old as the Reign of Edward II. or older. which are long fince loft, and except that they taught and iecommended the Ufe of Mark, we know not what they contained. Fizherbert flewed the Utility of inclofing, and points out many Things that were not attended to in Halte. Tuffer's old Rhimes, which however uncouth to us, were well fuited to the Age in which he lived, contained much good Matter. Sir Thomas Chaloner, in his Poem de Republica Anglorum Inftauranda, bath many judicious fuggeftions; fo hath Blundevile, Googe, Sir Hugh Plat, Mr. Gabriel Plattes, and other ancient Writers, which hew they had very clear Ideas of fome that are cfteemed modern Inventions.

[^112]:    "This Neceffity of encouraging new Eftablifhments, providing Remedies for all Infringements of Tufice, and removing thofe Obftacles that food in the Way, proved the Source of that Muliplicity of Lass, of which, withont confidering this Neceffity, there might feem juit Reafon tocomplain. But in whatever Way Men acquire Pıoperty, it is the Intencf of the State it hould be fecured, and this our Conftintion could only do by laws. Thefe therefore became requifite, to facilitate the Opening and Working of Mines, the raifing, fupporting, and regulating Manufactures and Manufacturers; the proviting due Wagcs for Labourers and Servants; the taking Meafures for promoting Induftry ; the affigning a proper and conftant Relief for the Poor; and a Multitucie of other Objects, which inercating People, and their increafing Occupations, were continually demanding.

    - It inth been the great Object of this Work to thew, that the principal Prerogative of this potent Monarchy cunfifts in being compofed of Two fpacious Inands, which are inbabited by One Feople, who have but One Intereft, viz. the preferving a frict Union, and thereby maintaining our fice and hapry Conftimtion. This as it now ftamds we apparently owe to a Spinit of Induftry aid Commerce. I'hefc produced fo many excellent Laws, and thofe fo calculated as though each hath its paricular Object, yet ald of them concur in the compleating that rational and univerfal Liberty, without which Indultry and Commerce, in that Extent we enjoy them, could not exiít. This Liberty being thus plainly the Refult and Efiect of laws, muft be fuftained by Iaws, and can never be delloyed but by our falling into Anarchy or finking under Defpotifm.

    F As the Effects of Induftry of every Kind are equally beneficial and obvious, it is furprizing that this ufefuland falutary Quality fould $r_{2}$ or be every where alike efteemed. But we fee it is not, and with a very little Attention we may difecrn the Confequences. In fome Countries Trade is thonght difhonourable; and in thefe, thofe whoexercife it are in a low, dependent, and contemreible Coudition. In others, a watchful Eye is kept over them, that their Taxes may be raifed in Proportion as they thrive. This in Effect is an Impolition on Trade, and keeps it always deprefled. With us, Heaven be praifed, it is otherwife; and it is to the Refpeet which waits on Indufty in every Profeffion, to the Farmer as well as the Tradefinan, the Mechanic as well as the Merchant, that we owe that noble Ardour which diftinguithes every Rank amongl us in Comparifou with thofe in other Countrics.

[^113]:    "The fhortef Method of explaining and confirming what is faid in the Text, is to fet down the different Rates fettled by Law, and the Times at which they commenced. The Firft legal Intereft was fixed at Ten per Cent. by Henry VIII. January 31, 1545. Repealed by Edward VI. 1549. Revived by Queen Elizabeth 25 June 157 I. Reduced to Eight per Cent. by James I. 24 June 1625 . Reduced to Six per Cent. by Charles II. 29 September 1660 . (It had been actually reduced Nine Years before to that Rate, by an Ordinance of Parliament, September 29 1651 ). Reduced to Five per Cent. by Queen Anne, 29 September 1714, at which it flill remains. There is befides the legal, a natural Intereft which at prefent is lower; for, upon undoubted Security for the Principal, and punctual layment of Interef, Money may be borrowed at Four.
    w The Dutch, though Protefants as well as ourfelves, never embraced thofe rigid Principles in regard to Ufury. Their Divities confidering Deut. xxiii, 20. as a Proof, that the prohibitory Law of Mofes on this Head was judicial and not moral. In Grotius's Time, their legal Intereft was Fight per Cent. But their extenfive Commerce, Scarcity, and Dearnefs of Land, Frugality in Living, and great Plenty of ready Money, kept the Rate of Intereft continually falling, without the Intervention of Law. This gave them prodigious Advantages in the huiding of Ships, in the Purchafe of Commodities, in carrying on extenfive and expenlive Manufactures, keeping Goods in Warchoufes, waiting the Rife of Markets, and lending, as they did here in the Reign of Charles II. immenfe Sums at Six per Cent. which they could borrow at home for Three.
    $x$ It hath been faid with great Truth in the Text, that an eftablifhed Rate of Intereft was the fureft Method of preventing Ufury. It was common and exceffive, when the fevereft Laws fub: fifted againft it. Men would be paid for the Hazards they ran, and the Shifts they ufed, as well as the Loan of their Money, and therefore Ufurers never throve better than during the Sulpenfion of the Law of Henry VIII. Sir Thomas Colepeper obferving the good Effecis of that Law, wrote, A. D. 1620 , a Treatife to hew the Expediency of a farther Reduction, which took Place. His Son of the fame Name wrote warmly againft Mr. Manly and others, who difliked the Reduction to Six per Cent. It is obfervable the laft Reduction was at the Clofe of an expenfive War, and that Intereft was reduced from Ten to Five per Cent. in lefs than the Space of a Centary.
    y Abundance of Accidents concurred to throw and to keep the Bufinefs in the Hands of the Italians. The Pope drew anciently a large Revenue from hence, and for this he had his Collectors,

[^114]:    P It may fecm a fanciful, but upon Reflection it will be found a juft Pofition, that a Senfe of Want is the Source of l'lenty. As foon as Induftry was produced by Choice, inftead of being compelled by Power, and Men were inclined to labour from a Profpent of its Fruits, it became practicable to work upon their Opinions, and this rendered it poffible to engage them to exert their Induftry, not only for actual Money, but for what in a reafonable Space would entitle them to Money. When this Step was once accomplifhed, and different Commodities and Manufactures were produced, thofe pollefled of them found an Intereft in parting with them for thefe Titles to Money, which raifed thcir Eftimation, and thus a Circulation of Credit grew and gathered Strength. But how did it operate as it grew and gathered Strength? By the fill increafing Progrefs of Induftry, produced through Emulation amongft different Degrecs of People, who perceiving that Labour properly purfued, would fecure flenty, which was all they could promife themfelves from N'oney, were content to receive another Medium, when convinced by Experience that it had the fame Effect.

    I It muft be acknowledged, that in the common Apprehenfion, Gold and Silver only are efteemed Wealth. And why ? Becaufe with them moft Things may, and little can be obtained without them. A finall Degree of Attension will Thew, that what they purchafe are Riches, and the Gold and Silver given for them no more (as we have often faid) than the Mealures of Riches. The common they are, but not the neceffary or univerfal Meafures. In fome Countries Shells called Cowries, in others Cocoa Nuts, and in others Cakes of Salt have the fame Effect. But are they therefore Riches? He who hath all he wante, is rich without Money; but with Heaps of Gold and Silver in a Country without Neceflaries, a Man may be poor indeed. A Mifer is that Man in every Country, not from the Want of Money, but from miftaking the Ufe of it, which however could never render him milerable if the common Apprehenifion was right,

[^115]:    - It may be farther urged, and urged with Truth in anfwer to this Objection, that fo far is Circulation from contributing to the leffening in any Manner our Stock of Gold and Silver, that in that Inftance in which they have the beft Right to be confidered as real Riches, viz, as valuable Commodities, it hath actually increafed and preferved them. It is certain, thefe precious Metads wear lefs in Plate than in Coin, and it is no lefs certain that we have much more Plate now, than: while we had no Medium in Trade but Specie. This likewife fhews, that what is advanced in the Text is the true Caufe of the diminiming our Coin, becaufe there is Gain in converting it into. Bullion, whereas the Fafhion fecures Plate, which it would not, indeed could not do if the general. Balance of Trade was againft us. But farther ftill, it mot only preferves Plate but even Coin from. Exportation. Since all who iffue Notes payable on Demand, keep and are obliged to keep very large Sums in Cafh, which fo long as it remains in their Hands (which is more than it would do if circulated) is fafe from Melting and Exportation.
    s This of all others is the Argument mof relied on by thofe Writers on this and on the, other Side the Water, who quedtion the Utility of Paper Credit. This, fay they, without af. fording the folid Support of Silver and Gold alike valued in all Countries, expofes us to the only Evil too great a Plenty of Moncy can create, the advancing the Price of all the Neceflaries and Conveniencies of Life. But is this the Fact? May not Two Things exift at the fame Time without one being either the Caufe or Effect of the other? In the Reign of Quces Elizabeth, Houfcs, Lands, \&c. rofe confideribly in Value, though Paper was not then introduced. May not the fame which operated at that Time, and not Paper Credit, be the Caufe now? If we look clofely into Matters, perhaps we may find that fo it really is, as in the next Note we fhall endeavour at leaft to prove.
    ' In the Reign of Elizabeth, from a Variety of Caufes which have been already explained, Trade began to fread, Manufactures to increafe, and many new. Branches of foreign Commerce

[^116]:    were opened. In confequence of this, Numbers of Families grew into Eafe and Independence. This cauled a greater Confumption of Things neceflay, and augmented the Defire of Conventences. A conftant and growing Demand raifed the Price. Trade being more flourifhing, Nianutâtures more numerous, Commerce much farther extended, Things are become fill deatre from the fame natural Caufe. For if the Fruits of Induttry increafe, however that may be offected, the Confumers will be more numerous, the Confumption larger, and the Piices of many Things higher. But the People, by lining better, will not grow the poorer. As the Fact, fo the Knowledge of this Truth is as old as the Days of Elizabeth, when they did not conceive that Money was the only Property, but were wife enough to comprehend, that he who polfelfed fuch Things as were worth Money, was really worth as much as thofe Thirigs would tetch A Truth obvious then, and which, remaining a Truth, will ever appes fo upon a litule Reflection, and yet the overlooking it is the fole Caule of this heavy Charge on Paper Credit.
    " It is fo far from being peculiar to this Species of Meney-Security, that they are liable to Inpofition, that on the contrary even Money is more fo, for it may be light, debaled, or cuunterfeited. Securities of a more folemn Kind, fuch as Mortgages, Deeds, and Ronds, ale tytally fubject to Forgery, and not to io fpeedy Detection. In reference to the degal simitions fow the preventing fuch Dangers, Stat. 2. Geo. II. cap. 25, 6. 1, makes forging, procuring, or affiling in forging promiffory Notes, or publifhing them knowing them to be forged, Felons without Benefit of Clergy. As to Impofitions frum Credulity, the fame Prudence and Circumfection requilite to guard a Perfon in the other Occurrences of Bufinefs, will defend him bere. fince Notcs can have no Credit but from free Acceptance, and that generally hath and hould be always founded oe kiowledge.

[^117]:    * Corporations, which imply the uniting certain Individuals into a Body, that they may thereby become more uleful to the Community, are created by the Crown. Many of thefe were formed for promoting Trade, and, according to the old Syftem of our Government, were necelfary and ufeful. On the fame Principle Privileges were granted to private Perfons, on a SuggeRion that what was immediately of Ufe to them, would terminate in public Utility. Thefe alfo did Cood in bringing in many Arts and Manufactures, though in fome Cafes, tending to private Intereft more than publick Emolument, they were liable to legal Correction. At prefent, Letters Patent are ufually granted for fhort Terms, in favour of new Inventions, or for ficuring cltablifhed Pioperty.
    $\times$ We have flated in the Text the true Intention of this Bounty, which was, to encourage Agriculture, by procuring for the Farmer a ccrtain and a conftant Market. Let us fee how this hath operated in regard to Whent. We now grow more than twice as much as we did at the Eftablifhment of the Bounty; we even confume twice as much in Bread, as we then grew; yet in A. D. 1697 we exported a fifteenth Past of what we grew, of late Years about a twenty-ninth Part only. The Bounty on this twenty-ninth Part amounted to fomewhat more than Fifty thoufand, and the Produce to more than Four hundred thoufand Pounds. It is evident that all this is fo much clear Gain to this Nation. But this is far from being all that we have annually gained. For if our Cultivation is doubled, as indeed it is, then the Rent of Lands, the Subliftence of Working Hands, the Profits of the Tradefmen fupplying them with Utenfils, Cloaths, the Value of Horfes employed, \&ec. muft all be taken into the Account. Befides this, we muft add the Freight (amounting to Half the Bounry) to make the Idea of the Advantages complete.
    $y$ The Reader may find, in our Statute boosks, may Laws in favour of the Silk Manufacture, made with great Wifiom and Propsity for the Encouragement and Support of many Thoufands of induftrious Perfons employed thacin. By Stat. 8 Geo I. cap. 15. §. I. a Buanty was given. on the due Exportation of Kibbons and Stuffs, of Silk only, of Three Shillings upon a Pound Wight; Silks, and Ribbons of silk mixed with Gold and Silver, four Shillings a Pound;: on Silk Gloves, Silk Stockings, Silk Fringes, Silk Laces, and Sewing Silk, One Shilling and Three Pence a Pound; on Stiffis of Silk and Grogram Yarn, Eight Pence a Pound; on Silks mixed with Ircle or Cotton, One sibilling ; on Stuffe of Silk mixed with Worfted, Six Pence a Pound for Thre: Years; and, from Experience of their Utility, thefe were continued by fubfequent Statutes.
    ${ }^{2}$ The promoting the Manutacture of Britifh sail-cloth was undoubtedly a very important national Objest, as the Confomption was very lange, and of courfe the Purchafe of it from. Foreigners an heavy Expence on the Publick. Many Mcthods wee therefore devifel, and countemanced by Law, bcil here and in Inclend, for introducing and encouraging our own, in pre-

[^118]:    - The Law De Pace Quatuor Cheminorum, and the Appellation ftill in Ufe, of the King's Highways, fhew how mach they were anciently refpected. The Four great Roads were, the folfe, Watling-ftreet, Erming or Ermin, called alfo Eelong-Atrect, and Ikeneld, Ryknild, or Rykenehtflreet. As to the Erymology, Extent, and Direction of all which, the Learned are in Eentiments much divided. In their Wars with the Biton', the Samons commonly occupied Roman camps: When they had fubducd the Country, in building their Towns they made Choice of Rominn Stations. Thie of courfe preferved the Roads. Thefe and the Camps alfo were in like Manace uled by t':e Dancs, both adding to or altering a little, as their Fields oi Battle phamly fiow, which, when-particularly mentioned, appear to hare been on or near forse of the Ruman Roads.
    p By the Statute of Winchefter, in the Reign of Edward l. fome Prowifion is made for the Security of Hghwas, by fuffering now Wood in grow within Two hundred Feet on one side or other, that Paffengers might not be furpiled ty Thieves. In the 'time of Hingy VIIf. fome Laws were enaeted for preferving and amending Cauleways, and for facilitating the making new and more commodious Roads, by the giving to fich as made them legally through their own Lamls the Property of the Soil and in the Materials of the old ones. As to the leffer Roads betwen Tuwn and Town, they were left to the Protection of the common Law (Knyghton de Eventibus Anglix, ap. x. Script. col. 1350, 1357.) to which the preleriptive Right of Regulation fill remains, where not expretly altered by Statute.
    . ${ }^{4}$ The Oripin of this Syftem may be found in Stat. 2. \& 3. Phil. \& Mar. cap. 8. The Preamble dechares, that the Roads were tedious and noifome to travel in, and dangerous to Pafin-

[^119]:    - We owe many of our national Bencfits to happy Experiments, and the Confequences that have unexpectedly followed them ; and we might have owed mure, if all our Artilts had been endowed with Mr. Brindey's Sagacity, and their Patrons with the Perfeverance and publick Spirit of the Duke of Bridgewater. The original Scheme of the Canal was, to carry it from Worlley to Salford near Manchefter, buth on the fame Side of the River Irwell, as the Firit Act of Parliament hews. But when this Defign was ctanged, and the Second Act obtained for carrying the Canal over the River by Barton Bridge, which implied a Necellity of raifing the low Ground to preferve the l.evel, and to cariy the Canal over Roads, and in a Variety of Directions, it was by the Pcople in the Country generilly concluded impracticable. But when, by Refources equally fingular and extrandinary, this was effected, and the Camal proceeded in fpite of all Obftructions, they changed their Sentiments, and rightly concluded, that by a due Application of Skill, Labur, and Expence, a Canal might be carried on through every Kind of Soil, to any Extent, and without Danger of meeting any infurmountable Obftacle.
    : Upon perufing his Aft, it will appear, that, in granting Powers to his Grace, the Legilhature kept pablick Uitity in View, and provided that all the Bencfits propofed by this new Navigation hould be effectually fecured. Strict Regard is paid to private Propety, proper Means affigned for fpeedy Decifion in cafc of any Difputes, and, which deferves particular Notice, the Completion of the Work is limited to a fhort Term. It is afferted, that Two thoufand Ton of Guods went annually by Land Carriage from Liverpool to Manchefter, at the Rate of between Thirty and Forty Shillings per Ton, that is, to the Ammunt of at leaft Three thoufand Pounds per Annum. On the Dukces Canal they mult be carried for Six Shillings, Freight and Tonage included, that is, the Whole for Six hundred Puunds. The Finf Bend of this Canal paling in the Neighbourhood of Altrincham in Checthire, faves the Carriage of Coals and other heary Goods Thirteen Miles by Land through very bad Roads. By the Act, all Manare tor Lands, and all

[^120]:    ${ }^{2}$ A Short View of the moft confiderable of thefe Objections, and the Anfwers given to them, fecm requifite to the fetting this important Object in a proper Point of Light. It is faid, that cutting theie Canals, and thereby dividing cultivated Lands, as well as in other refpects, is an Injury to private Property. To this it might be anfwered, that under all Governments private Interelt muft give Way to publick Utility. But more fatisfactory Anfwers in this Cafe may be given. Private Intereft is here confulted in the very Meafure purfued for promoting publick Utility. A Senfe of this produced the Petitions on which it is founded, and the Subfcriptions by which if mult be promoted. Men are not apt to miltake their own Interefts, and never concur deliberately in hurting them. Belides, Compenfations are provided, and every Limitation on the Powers inferted in the Acts, that could be devifed, to prevent Grievances in this Particular. It is alleged, that by this very Cutting much Land is walled and deftroyed. leet us fee hotw far this is founded. A Mile of Canal takes up an Acre and an Half; a Canal of an Hundred Miles, One hundred ans Fifty Acres, which is lefs than a Quarter of a Mile fquare. It is believed it will very much diminifh Land Carriage. To thofe who think the Nation fuffers by our leeping two many Horfes, this will appear an Advantage ; thofe who think otherwife, may doubt as to the Eact. They will own, that, in the Firtt Infance, Land Carriage between Places feated on Canals will be diminifhed; but as the Trade of thefe Places will be increafed, the Land Carriage from thofe to Places not feated on Canals muft increafe with it ; in what Proportion, Time only can determine. It is fuggefted, it may interfere with River Navigation. But this can happen but feldom, and only by being cheaper, which is an Advantage to the Publick. It is not however impoffible that Means may be found to improve fome of thefe River Navigations, fo as to prevent this lnconvenience. Laftly, it is apprehended thefe Inland Navigations nay hurt the Coan Trade. The Event may prove the very reverfe, becaufe by them greater Quantities of Commodities will be conveyed to the Sea-Ports. and of courfe they muft be fent to forcign Countries, which will increafe our Commerce, or Coal-wife to different larts of our own.

[^121]:    a As there are a great Variety of Soils in this Country, fo very different Ploughs have beenInvented, fuited to this Difference in Soils, which hath been of general Utility in Hufbandry, and is one great Reafon why, in proportion to its Exteat, we have in this Kingdom more cultivated Land than in any other Part of Europe. On this Account, feveral of them derive their Names from the Places where they are moft in Ufe, fuch as the Colchefter, Lincolnhire, and. Suffex Ploughs, as alfo the Caxton or 'Trenching Plough drawn by Twenty Horfes. But the molt common are the Dray, Single and Double-wheeled Ploughs, and the Four-Coultered Plough, accurately. defcribed and highly commended by the celebrated Tull. The fame may be faid of our Harrows, Hoes, Spades for feveral Ufes, \&c. Yet are we fill much fhort of abfolute Perfection, fince the worthy Author of the Eflays on Hubbandry gives Defcriptions and Figures of feveral Inftruments. which might be introduced from other Countries, and fome old ones, which, having been inadvertently difufed, deferve therefore to be revived. The ingenious Mr. Young, in his excellent Farmers Letters, delivers his Thoughts on the fame Subject with equal Intelligence and publick. Spirit.
    ${ }^{\circ}$ As Metals are amongt the Staple Commodities of this Country, no Skill or Pains have been: fpared in contriving and improving Machines for reducing them into Forms fit for Sale and Ufe. Of thefe we may reckon the Stamping Mill for Tin Ore, the Forging Mills for making large Iron. Bars, the Slittiug Mills for dividing thefe; Brafs Battery Works; Plate and Flatting Mills for the finer Metals; Gold and Silver and other Wire Mills, and many more. Yet thefe great, thefe ingenious; thefe expenfive Pieces of Mechanifm, are only preparatory to Manufactures of different Kinds, in every one of which very many and very curious Machines are employed with fuch Effect, that not only the fineft and moft ufeful Things are made, but are alfo made in fo thort a Sp:re, with fuch Facility, and in fuch Quantities, as render them at the Firft Hand exceedingly. chaly, winch gives and fecures Subfiftence to Multitudes of induftrious and laborious Workmen.

[^122]:    c The Profit of Mines depends in a great meafure on the Expence of working them, in proportion to the Valuc of the Metal. If no Engines were in Ufe, more Men mult be employed; but then, from the great Charge attending this, a few, and thofe only the richeft, could be wrought.: But, as Things now ftand, Engines dininifhing much of the Labour, many more Mines are worked, and of courfe more People fubfint by them. For the raifing Ores out of the Pits, Winlafles, Crancs, and Horfe Engines are cmployed. For raifing and carrying off Water, they have in the Tin Mines in Cornwall (fee Berlafe's Natural Hiftory, p. 169-175) abundance of Contrivauces, the Whim, the Ragg and Chain, the Water Wheel and Bobbs; but the beft, mofteffectual, and therefore ufed in Mines of every Kind, is the Steam or Fire Engine. This, by continual Improvements, is now brought to fuch Perfection, that, though a very complicated Machine it in a great meaffure regulates itfelf. It would be tedious, if not endlefs, to mention the feveral Inventions to anfwer different Purpofes, and to remedy particular Inconveniences which are to be unet with in almoft every confiderable Mine in thefe Kingdoms.
    ${ }^{d}$ In the Coal Mines which extend very far under the HiHs at Worley, he had practifed many of thefe Methods afterwards transferred to the Canal. For after bringing the Coals from the Places where they were hewn in little Waggons, carrying a Ton each, eafily pufhed by a Man down an inclined Plain to a flat Stage, he caufes them to be fhot from thence into Boats, on a fubterranean Canal of Water raifed out of the Mine, with a Rail on each Hand, by the Help. of which a Man draws Five, Six, or more of them, cach of the Burthen of Seven Tons, more than a Mile to the Mouth of the Mine, and, being there received into a capacious Stone Refervoir, from thence is conveyed, carrying the Boats with it, into the open Canal that goes so Manchefter. The vaulted Roof of this fubterraneous Canal is fupported in fome Places by a Brick Arch, but is in moft fuftained by the natural Rock through which it is cut. In the feveral Operations requifite to the cuttiag and extracting the Coals, this great Difciple of Nature hath fhewn his Sagacity in a Multitude of new invented or much improved Machines, fuch as portable Cranes for removing of Stones, an Overfhot Mill which gives Motion to a Wheel Eight Yards in Circumference, which, beffes driving Three Pair of Stones for grinding Corn, and a Boulting Mill of curious Conftruction, ferves alfo for making Mortare Add to all this, his having taught a new Method of muking a Fire Engine, by which Two Thirds of the Expence is diminilhed (ufuaily. Five hundred Pounds) by making Cylinders of Deal inftead of Caft Metal, and Chains of Wood, which are found to anfwer better than thofe of Iron.

[^123]:    1 Thefe are the moft diftiuet, and at the fame time the mon inconteftible Kinds of Improvement, affording, if the lexpeffion may be allowed, ocular Demonftration of the Advantages they produce. The draining Ten Acres of Fen, or reclaiming Ten Acres of Bog, removes a Nuifance, and adds to much Land to the publick Territory. In this Light, it may be confidered as the Donation of Induftry, and as real an Acquifition as if obtained by Conqucft. The Produce, and confequently the Value of Land, raifed in a confiderable Degree by the mere Alteration of the Mode of culture, is a real Acquifition alfo, and may be regarded as the Prefent of Oeconomy. By Methods like thefe a Country may be extended and improved; but it is by fuch Methods only that an Illand can ever be extended and improved, Nature having affigned us Bounds that we can pals no other Way; Bounds, however, by which we are not imprifoned, but defended.
    ${ }^{m}$ Sec Political Survey of Great Britain, Vol. I. p. 404, 405. Romney Mark differs from the Fens in this, that it was not recovered but wrefted from the surgand both is and mult be defended againt it by flrong Banks, and at great Expence. This Difference in their Nature is the Reafon that, norwithtanding by Stat. 15 Car. II. Cap. 17\% §. 15. all the Laws of Romney Marfh, univerfally allowed to be very wifely and judiciounly fettled, are declared to be incorporated with thofe of Bediord Level; yet that Corporation could never avail itfelf of fo much as One of them. We have declared againtt this Manner of Gaining, or, as the old Term is, Winning Jand from the Sea, but we as frecly own, that Fifty thoufand Acres of fine Feeding Lands, tand this Marfh docs not amount to lcfs, is an Acquifition, and an Acquifition of very great Value, and not only fo, but as the Lands continually improve, and the Climate grows better, their Value is daily increafing.
    ${ }^{n}$ We have fpoken of thefe Somerfethire Fens, Vol. I. p. 331, 332, 333, and have mentioned the numerous Advantages that would arife from draining them, as well as the Probability there is that they might be drained with Facility. As to leffer Quantities of thefe wet Grounds, there are more or lefs in the feveral Counties of Derby, Effex, Gloucefter, Kent, Middlefex, Nottingham, Surry, Suffex, and York, as appears in Sir William Dugdale's Hiftory of Imbanking. Many of thefe have been of late Years recovered, and others much improved by Cultivation. Such Grounds, when once brought into a State of bearing Hemp, become highly valuable, and not only yield good Rents, but contribute alfo to employ, and confequently to maintain, great Numbers of induftrious Perfons of both Sexes and all Ages, as we have occafionally fhewn in the Courfe of this Work.

[^124]:    - Philofophical Tranfactions, No 330. contains the Earl of Cromarty's curious Account of the Origin and Growth of Inland Heath and Peat Moffes in Scothoud and no doubt in other Countries, ewhere they abound, they were produced the fame Way. Stagnating Waters caufe them likewife, and thele are apt to extend their Bounds. Locher Mofs, Ten Miles long, and of confiderable Breadth, contains many Thoufand Acres near Solway Firth, was caufed as the Fens were in Lincolnhire, by the Sea throwing up Land to fuch a leight, as, impeding the laffage of the frefh Waters, forced them to fette on the Land, and, by corrupting all Kinds of Verctables, generated this Mols. Many Circumftances formerly concurred to their being fuffered to remain in that State. There was no Want of Land, Peat was a cheap ufeful Fuel, Draining was little undolfood, it was expenfive, and Money was farce. But fince Property is becume lecure, and Manufictures and Trade flourifh, a new Sy ftem prevails. Land bears an high Price, Conls are cafily bad, the Method of Draining is well known, the Gentry have a Turn to Improvements, and thefe have anfwered fo weli, that their Fortunes are enlarged, and of courfe this Difpolition datily extends.
    : Sir William Petty, than whom no Man knew Ireland better, reckoned 1,500,000 Acres of coarfe Land, ufually ftiled unprofitable, and as much more which (a Century paft) he held to be abfalitely fuch. The greatelt Part of this was Marfh, Fen, or Bog. Dr. King, Archbifhop of Dubiin, in the Philofophical Tranfactions, $\mathrm{N}^{0} 190$, hath given an excellent Account of their $\mathrm{Na}-$ ture, and the Methods by which they might be recovered, juftified by Experiment. Since the Trime he wrote, this laudable Work hath been affiduoully purfued, and with fuch Succefs, that it is thought One million of Acres or more have been reclaimed, to the inexpreffible Bencfit of the Country. There is no Doubt that the Premiams given by the Dublin Society have contributed execedingly to this, for they very wifely propofe Giold Medals to Gentiemen, and offer ready Money to farmers; and this they have done, and done it with confant Succefs, for many Years paft.

[^125]:    4 As to the Origin of Commons, Opinions difer, and as, in all Things of high Antiquity, Conic?ure comes in have n great Share in all that is faid about it, there is nothing improbable in fappofiny (though there is mis Appearace of it now) that Commons were anciently Woods, which thai. Lort!s affigned to their Tenants, referving certain Services or Quit Rents, and that the Na: , o! their Polle!tion arofe from their claring it in common, which gave them Property in ras id to Smaners, and a Com nunity in this Property amongft themelves. But though this gives a genmal Lida .f a Common, and the Propery of thofe to whom it belongs, it by no means acromas tor may circumftances attending Commons, which arife from local Cuftoms and ancient Ufage. Tla ic, wherer the: are, prove biading alake on all, no Individual having any Power to interfere with them. It is itifficiently clear, that Property thus reflrained, of which a Man hath no Disction, and coafequently can make no Improvement, muft from thence be expofed to many Inconveniences, and of courle it need excite no Wonder, that Petfons renfible of thefe Ineonvenienes, thenth be defrous of b, ing gelieved from them.
    ${ }^{w}$ It is proper tomention, that an Act of Parliament is not neceffary where all Parties are aspeed; for, in that ("fe, a Ded of Agrement amonglt the Proprietors, confirmed by the Court of chancuts, is fuffictit. Where this eneral Confent is not to be attained, the Affent of thofe who hold Foun fiths of the Property is fuppoled to warrant an Application to Parliament. In the N-mber of thefe mult be included the Lord of the Manor, and the Impropriator or the Clemoman intited to Tythes, thefe being confidered as the leading and permanent Intevefts. In cafe of an Impropriator, he cither receives Tythes afier Inclofure as before, or a proportionable Sum in Money. In the latter Cafe, the Clergyman who is interefted in Tythes hath a Compenfation, equivalcut to their Value, affigned him in Land, and of courfe the reft of the Lands inclofed remain thencetorward Tythe-free.

[^126]:    $x$ The Difadrantages arifing to the Publick from common Fields are faid to be, that fimply from their Conditioa their Produce is finall in Quantity, and of an inferior Quality ; that the Creatures bred upon then, Horfes, Cows, and Sheep, are ftinted in their Size, lean, half flarred, of very little Valac ; and that the Commoners themfelives live meanly, aud are taught to cunfider Idenefs and Indigence as Independency. In refpect to Individuals, that of Neceflity furis Iands are ill cultiated, and this too at a great Expence; that they are more liable to be trefp.ficd on than any other; that this makes the Attendance on Catte in them very troublefome and chargeable; that the Neceffity of general Agreement, where the Proprietors are numerous, renders all Alterations and, Improvenents in a great meafure inpracticable ; that Commons, when fimall, are of little Confequence; and in proportion to their Incrafe in Extent, all thefe Inconveniences, with which they are attended, increafe likewife. For thefe Evils no Remedy hath becn or indend can te devied, except Diviting and Inclofing; and, as a Proof of this, we find it unifurmly recommended by all our eminent Authors on Hulbandry, from Fizherbert down to Worlidge. A Circomfance well deferving Attention.
    y As to the popular Clamours formerly againg Inclofures, they might have fome Foundation, as Tillage was then negketed, we had few Manufactures and litte Commerce, fo that the common Pcople had fow Refources. But this hath litile to do with the prefent State of Things. The Anfwers given to the Objections made in the Text, are briefly thefe: Dy Depopulation muft be meant a local, not a national Lofs of l'eople, which however would be difficult to prove, fince the Villages and Towns in the Vicinity of thefe inciofed Commons are as well or better i:habitcd than ever. As to the Nation, the Confumption and Price of Provifions geew, our People in genetal dunot decreafe. In truth, this Spirit of Inclofiag proves it. For the Intent of Inclofing is; to increafe the Quantity of Provifions; and nothing could excitc, or at leaf nothing could fultain this, but an increaled Demand. In refpeet to decreafing Tiilage, this alfo is hardly to be proved. It is certuin the Prodace of arabl: Lands in general is greatly augmented, that the Tillege of Commous was inconfiderable, and a gicat Part of it Beans. In refpect to the Poor (to wiom the greateft Regard is due) they only chatge the Kind of Labour, and this not to their Difadvantage, for Wages are higher, and Euployment, in inclofed Countries, more cafily obtuined.

[^127]:    $z$ If vifible i! Confequences attended dividing and inclofing. Commons, fo great a Proportion. of l'ropictore in them, as ate requifite to concur in the letitions for lnclofing, conld not be obt.incel, beauic a farl! temponary Advantage would be no Equivalemt for bringing fuch F.vils on the
    
     the:r wwn Cunduct ? Or would not fuch as mainain this Doctrine adiduce Fasts in its Support. which is the more incumbent upon them, as It can be fupported no other way? If nowhiag of this kind hath appeared to problick View, and foch petitions continae to be every Se fions pre: fented, is not the Prefumpion in fatour of the Practice, and is it not highly probainle that foth Individuals find their Accoust, and that the l'ablick is alfo bencfited, by bingiag fach lamets iato :horough Cuitiration?
    a M•Johalie Inflitutes of the Law of Scothand, Vol. i. p. 682. where the Reader may find the anciunt Law of that Country upon this Subjećt. As aifo, p. 210 . Where it appars, that ir fue the statute mentioned in the Text, there was no Method of Dividing, which nccafoned murh Gacabnefs and many Incomenienecs, for the Kemedy of which the Law was male. [^128]:    b The candid Reader will permit me to ufe the Word Parliament for National Councils, which have been in ufe with us ever fince we were a Nation, and it is hoped will remain fo as long as we continue a Nation, though this Name was not ufed before the Reign of Edward I. We fpeak of this great Council here, as fuperintending the general Oeconomy, and thercby preferving and promoting the publick Welfare. This, in Times preceding the laft Century, would have been confidered as mere Conjceture. But the Diligence of our judicious and laborious Antiquaries Lambard, Somner, Salden, \&c. have put the Matter out of all Doubt, by refcuing from Duft and Oblivion very many of our ancient Laws, which juftify very fully what hath been advanced in the Text, of which we fhall have Occafion to fay more, and to produce fome Inftances, to the Honour of our Anceftors, in the facceeding lBook.
    e It is generally agreed, that though the Laws after the Conqueft, and yet prior to thofe in our Statute Books, feem to proceed folely from the Monarchs by whom they were made, yet in reality they were made by the Advice and with the Confent of the great Councils or Parliaments of thofe Times. As to the Laws immediately fuccecding thefe, however uncouth, oblcure, trivial, harfh, or even abfurd mont of them may appear to us, yet if we look back to the Cuftoms and Uiages of thofe Times, in other Countries as well as our own, which is with indefatigable Pains, as well as great Accuracy and Judgment, performed to our Hands (and a great publick Service it is) by the ingenious and learned Mr. Bartington, we fhall certainly and upon good Grounds change our Minds, and admit fuch rough Statutes were fuited to thole rough Ages, and contributeí to make Way for thefe fmoother Times, in which we have the Happinefs to live.

[^129]:    - After Henry the Seventh had fettled himfelf on the Throne, he took every Meafure in his Power to promote a more equal Diftribution of Property than had prevailed before his Time. The Commons in Parliament from this Period became much more fteady as well as more regular in their Proceedings, which gained them univerfal Reverence and Refpect. In later Reigns, if more Bufinefs came before them, which brought on a Multiplicity of Laws, we muft attribute this to the increafing Wealth and growing Induftry of their Conftituents, and the univerfal Confidence repofed in them by all Ranks and Degrees of People, not only at home, but abroad. This Regard for the Authority and Deference for the Decifions of Parliament is not only exceedingly honourable, but highly advantageous to this Country, and ought, if that was at all neceffary, to be an additional Argument for our confidering this as a peculiar and a tranfcendent Bleffing to Britain.
    e This unreftrained Freedom of examining Propofitions for enacting new, or repealing or altering old Laws, hath been productive of the moft beneficial Effects in regard to publick Utility. Tiuth is beft difcovered, and Certainty more eafily found, from indulging Inquiries, and alloyving every Man to fpeak his Sentiments. It is by this means we have detected Errors, not barely received, but refpected by our Anceftors; that we have emancipated ourfetves from thofe narrow Notions by which their Trade was, and that of other Nations is ftill confined; and that we have overcome thofe Prejudices, by which they were hindered from feeing their truc Interefts for Ages, and by which, but for this Remedy, we might have been likewife blinded. By this Mode of canvafting thoroughly Matters of publick Importance, we come to have enlarged Notions, to reifon clearly from junt Principles; to pay due Refpect to Experience, and to hew a proper Regard in every Inftance to the Authority of thofe who are beft acquainted with and argue from it. Hence our Superiority in Hulbandry, Manufactures, and Commerce, now not fimply acknowleged, bu: foowedly copied by our moft intelligent Neighbours.
    ' Befides thofe mentioned in the Text, there is yet another Method, which, becaufe it will require fome Difcuffion, we referved for this Place. Human wifdom is folimited, and the politi-

[^130]:    * As it is effential to Government that abfolute Power fhould refide fomewhere, fo it is the pecuKar Felicity of the Britih Conftitution that it is placed in the Legiflature. By this means every attainable Benefit is within the Nation's Reach, and the Redrefs of every Evil, where it is poffible, may be obtained. In other Countries, and under other Forms of Rule, abfolute Power may act quicker, and from thence appear more confpicuous, but not more effectually or more permanently. This appears plainly from the Inftances given in this Chapter, for all the falutary Changes in our Oeconomy, by which Britain hath been rendered fo great, and its People fo happy, as to be at once revered and cnvied by all her Neighbours, have been devifed by the Wifdom, and carried into Execution by the Authority of Parliament. Add to this, what may be lcoked upon as Atill more extraordinary, the publick Credit of this Country, by which the hath attracted the Confi-- dence of her Neighbours, was originally cflablifhed, and hath been in every Inftance fteadily and honourably maintained by Parliament. Thefe are fuch Proofs of the wide Extent and great.Uti-, lity of this fupreme Puifance of the Leginature, as are gencrally known through the Britih Empire, and it is hoped will at once explain and juftify what is afcribed thereto in the Text.

    In thofe Days we had many Commodities which were uf.lefs becaufe unknown, and many more imperfectly known, and therefore imperfectly uled, for we wanted that Source of national Abundance, Induftry. This was not a natural or national Defeet, that is, it did not proceed either from our Soil or Climate. The former was ever capable of gratefully repaying the Care and Labour that proper Culture required, and the latter through all our Illes was no-where cold enough to chill, or hot enough to debilitate. our Bodies, and thereby deprefs our Minds. But Encouragement was wanting. The greatelt Part of the People, particularly thofe moft ufeful to the Community, were in their Perfons not free, in their Properties infecure, ufeful Knowledge at a very low Ebb, the Country almoft always either impoverifhed by foreign, or haraffed by civil Syars. In fuch a State, Improvements were not made, becaufe they were plainly impracticable.

[^131]:    2 It is by contemplating coolly the State and Condition of our Anceftors that we come to have liberal and cakarged Notions, and to extinguill thole narrow and ill-founded Opinions which produce

[^132]:    . It is exceedingly pleafint to confuder the Rudiments of great Empires, to mark the Progref: of their Power, to trace their political Improvements, to look into their Effects on the Mansers of the Pople, and, in confequence of that, on the Condition of the Country; to contemplate the lieverfis and Revolutions in their Affairs, and to diftinguifh thofe fingular and unexpected Fivents which they produce. But when thefe Inquiries affect ourfclves, and refpect the Community of which we are Members, they become ftill more pkafing and more fatisfactory, as they are from their Objećt more interefting and inftructive, efpecially when fuch Inguiries are conducted without Prejudice or Partiality, and folely with a View of inechigating and making known the 'Truth, as far as, from a ferious Meditation on the beft Materials we can procure, it may be difcovered. ${ }^{1}$
    ${ }^{d}$ The Trandator and Publifher of this Bitinh Hiltory was Gicoffrey of Monmouth, Difhop of St. Alaph, a Man of great Learning for thofe Times. Jle tranflated it for the Ufe of his Patron Robert Earl of Gloucefter, natural Son to Henry I. His Credit was attacked by Two of his Contemporaries, G. Bary, commonly filed Girahdus Cambrenfis, and William Littc, ketter known by the Appellation of Gulielmus Neubrigenfis, who roundly charges him with inventing or forgeing a great Part at leaf of this Hiftory, which he pretended to tranflate out of the Britin, his native Language, into Jatin. In this cruel Accufation he if followed by Polidore Virgul, and many obers. But this (whatever may be thought of the book) is a dowright Calumny. The vencrable Kentifh Antiquary Lambard had a lair Copy of the Britih Original, older than the Stine of Ciesfrey. Mr. lewis, who wote the Ilifory of Britain (dedicated to Henry Irince of Boscs) had aifo fuci a Cory. L::r, to put this paft Difpute, there is a Copy, larger than that

[^133]:    which Geoffrey ufeil, fill preferved in the Library of Jefus College in Oxford. But, notwithftanding it was thus decricd, we find an Abridgrent of it was made, for the Satisfaction of an Italian Lady of Britifh Defcent, by Ponticus Virrmius. We have alfo an Englifh Tranflation of Gcoffrey's Britilh Hittory, with a copious and very curious Preface by Mr. Aaron Thompfon. The Diftafte taken by critical Readers againtt this Work induced them to run down the Britons, of which a large Specimen may be found in Dr. Woodward's Letrer to Sir Chrifopher Wren, printed by Mr. Heane at the Clofe of the lighth Volume of Leland's Itinerary.
    e If a great, it may be the greatcll lart of the Britinh Hiftory, though no Forgery, but, like other Hiftorics of lihe carly Jimes, compofed fiom what in Vailes they fill call Hen Whelley, i. e. old Stoifes, thould be thought too fabulous to merit Belief, and for this good Caufe in a great meature exploded, why hould we not try to fubftitute fomething in its Room that may be at lealt probable? This is what we have attempted in the Text, and to the candid Reader's Judgment thereon we readily fubmit. After laying down this, as what might have been fuppofed the Cafe, and then comparing it with Faits delivered by Authors of unfufpected Credit, we come to have rational Evidence that fo 'Things really were. In refpect to fuch remote Peiods, we are not to look for abfuluce, if we can reach moral Certainty it is fufficient.

[^134]:    ${ }^{6}$ Political Surrey of Great Britain, vol. i. p. 343. 470. rol. ii. p. 38. where the Authorities from anticnt W:iters are circd. It may not be amifs to remark the following Palfage, Ezck xxvi. 12. "'raithith was thy Merchant, by reafon of the Multitude of all Kind of Riches; with Sil" ver, Iron, TIN, and Lead, they traded in thy Fairs." This is fpoken of Tyre before its DeAtuction by Nobuchadnezzar, which was more than Six hundied leats before the Coming of Christ. The Scptuagint for Tarhifh fets down Carthaginians, and all the Antients agree, that the Carthaginians carried Tin from hence. It follows, that this Country, or fome Parts of it, were then miabited; that thefe Inhabitants digged and fold or exchanged their Tin, for in thofe Jimes, and many Ages after, there was none koown but what came from Britain.
    e Cirl: de 13.llu Gal. lib.iv.v. He fpeaks often of thele Britifh Princes or Chiefs conferring trocther, and taking Refolutions in what we fhould call Councils of War. It appears from the Menfures thay took to repel his Firft Invafion, they were not unfilled in military Operations; nad though he covers it handfomely, yet it may be collected from his Relation, what was well innown in his own Times to be the FaCt, they obliged him to reimbark.

[^144]:    f Dion. Hinl. Rom. lib. xsxix. Where he fays phanly, that except the Glory of coming hither, Cafar gained nothing either for himfelf or the Republick.
    $\varepsilon$ It was the Policy of the Romans to form Corps of Horfe ( $\mathrm{A} \mid x$ ) and Foot (Cohortes) out of the Nations they fubdued, and thefe they fent into diftant Provinces, where from being Strangers, having differcut Cuftoms, and not feaking the Language of the Country in which they were flationed, they were lefs likely to form Cabals. In this Illand, as the Notitia Imperii, and many lufcriptions Shew, befides Gauls, Spaniards, and Germans, we had Dalmatians, Sarmatians, and other Nations.
    *The Roman Soldiers were moft of them Artificers, which enabled them to infruct the People amongft whom they were ftationed. That they actually did fo here, appears from the Potteries, Founderies, and other Manufactories, the Relicts of which have been difcovcred in different Places. The immenfe Quantities of Utenfils of divers Materials dug out of the Ruins of their Towns and Fortreffes for a long Series of Ages, affords an additional Proof. To all this we may add, that the Emperors had an Officer here who was Director of the Looms.

[^145]:    1 Pradley's Survey of Ancient Hufhadry and Gardening, p. 10.f. 290. It is faid in fome of the Sumbern Combics feveral Roman Terns of Art are in we amongt lathandmen at this Iny. Their Mole of Cultivating was practicilly tanght the Saxons by the Pectpic who fubmitted to them. It is alfo not at all improbable that fome of the Writings of the Romans on Agriculture were preferved in the Monafteries; for we know that in thofe Days the Monas were not ouly the great Patrons of this Art, but the greatelt Proficients in it.
    ${ }^{k}$ In Gillas and Nennius we have a Lift of Twenty-eight Cities that were here in the Time of the Romans, upon which we have an excellent Commentary by the leaned Archbithop Uher. Richard of Cirenceiter telis us that there were Ninct)-two, and that of thele Thirty-thee the Names of which he hath giten) were the moft emineat. Camden and others have offorved that the Saxons built upon the old foudations. Sped fays very juifly, that the Roman Staions were the Sed Plot of our Englifh Cities.
    ${ }^{1}$ At fome Tines there were Four or more Legions here, hat connantly Three. Accoring to Conflantine's Regulation the Concs Britamixe commardul a fmall Force in the ibtcion of the Roman Territoriss. The Dux Bitannaruin commanded the Rctt and all the fortified Pofts alon:s the Wall. But the Sea Porrs and their Carrifons obeged the Count of the Saxon Shor or Comes Tractus Maritimi. They had allo a conpetent Sea Force to proceit the Conft, and a convnient Number of armed Veffils ftationed ia the Friths and upon great Rivist.

[^146]:    ${ }^{2}$ The Secds of civil Polity and the Principles of the Chriftian Religion were fuwn in all the Countries fubject to the R:man Empire, and thefe were not fo rooted out by the Irruptions of the barbarous Nations as nover to fpring up any more. On the contrary, the Countries which had teen under their Duminion were earlier and more effectually civilized than thofe which never fell under their Power. 'This is very confpicuons in other Countrics in Europe as well as thefe ullunds. and is a loont worthy of being well confidered.
    n Thafe Wo.ks, as they rendered the Country more open and more advantageous to the Komins, fo it renderel it lefs ferviceable, becuufe lefs defenfible to the Britons; it is no Woad:r therefore they went about it unwillingly and by Compulfion. Tacitus therefore with equal Elegance and Propricty puts this Complaint into the Mouth of Galgacus Monarch of the Caledonians, Corpora ipfa ac manus, Silvis ac Paludibus emuniendis, Verbera inter ac contmelias conterunt. In vit. Agricol. cap. axxi.

    - Pancirolius computes the Number of Roman Troops fationed here at Ninetcen thoufand Two hondred Foot, and One thouland Two hundred Horfe. Dr. Arbuthnot in his Tables of ancient Coins, p. 179, 180, rates the Pay of a Foot Soldier at Six Pence per Diem, and the sforfe at One Shilling and Six Pence. According then to this Calculation the annual Eftimate of the R'sman Forces amounted to upwards of One hundred and Sixteen thoufand Pounds, exclufive of Officers Pay, Military Stores, and other Contingencies.

    P As unreafonable and abfurd as this Notion was, it cannot be looked apon as unnatural, if we confider the Habit of a Soldier's Obedience, and the Share he takes in the Succefs and Glory of his General. Bur the Armies carried from hence in fo Mort a Space of Yars under Clodius Albinus, Caraufius, Magneatius, Miximus, and Conftantine, who was chofen by the Britons for the Sake of his Name, we may cafily conceive mult exhauft even a populous Country, more efpeeially when joined with a Variety of other Casles.

[^147]:    ${ }^{1}$ To this fplendid Edition of the Laws of Wales, there is prefixed a large and learned Freface by William Clarke, in which a curious and copious Account is given of the Contents of the Work, and of the Care and Accuracy employed to render it as perfect as poffible. In this Work, lib. ii. cap. 19. p. 155 occurs a Law of Mulmutias Dunwallo withian Introduction plainly taken out of the Britifh Hiftory, lib. ii. cap. 17. which Lave in the Preface and in the Notes is acknowledged to be fpurious.
    e This Conduct, though manifeftly impolitick, was by no Means unnatural, confidering the Manners of the 'Times, the harp Senfe they had of their Misfortune in the Lofs of th-ir Country of which they had been deprived, and the unfriendly Difpofition of thefe People towards them. We might perhaps underftand thefe Matters more clearly if we had a better Hiftory of thofe Princes; but the Britigh Writers are fo attentive to Genealogies, that in refpect to Hiftory and Chronology they are rather defective.

[^148]:    ${ }^{f}$ Cliron. Saxon. p. 83. Affer. vit. Alfredi, p. 27. Camden's Britannia, p. 802. where this Account is given from a judicious Antiquary, Mr. Robert Vaughan of Hengwyrt. Bifhop Gibfon witeres thele Cumbrian Britons, called in the Saxon Chonicle Britons of Strixclekwealds, who vere driven out A. D. 675 . by the Danifh King Halfien, did net derive that Name from their old (as many have imagined) but from their new Poffeffion in the Yftrad Klwyd or Vale of Cluyd in North Wales.
    g The People of Cornwall maintained a confant and clofe Correfpondence with the Inhabitants of Britanny, and were aflifled by them in all their Struggles againft the Saxons. Their Ioft deferves fome Notice, as having a greater Reach of Policy thin was common in thofe Times. They entered into a Confederacy formed againt King Æthelfan by the Scots, Dines, Lrim, Es. The Army and the Fleet of the Confederates were very formidable, and the Battle was fought at Lrunanbwhe, a Place not well afcertained, of which A. D. $93 \%$, there is a pompous Account in the Saron Chronicle, and this drew him upon the Cornifh, whom he fubdued foon after.
    a This Rodri Vaur or Roderic the Great had Three Sons, Mervin, Cadelh, and Anarawd. Thefe were filed the Three crowned Princes of Wales, becatife each of them wore a golden Hand or Fillet about his Bonnet, which is properly a Diadem. His Son Anarawd fubmitted to Fing Alfred. The Son of Anarawd was Howell Ida the Legillator, in whom the Three lrincipalities were again united. See more upon this Subject in the Political Survey of Great Britain, vol. i. p. 491, $49^{2}$.
    i Dr. Powell adınits this, and indeed there are unqueftionable Proofs of it. Gildas dechaims again/t no fewer than Five Britifh Princes as Monflers in Wickednefs, and thefe were all cotemporarics reigning in different Difticts. Roderic himfelf acquired Part of his Dominions by Marsiage of an Heirefs Lefdes the Three crowned Princes he left Three others who were alfo ftiled Princes, and fubmitred themfelves to Alfred before Anarawd took that Refolution. Affer. Menevenf. P. 49,50 .

[^149]:    ${ }^{k}$ In Camden we find Sixtecn Nations in England, and Five more in Scotiand. Marcianus Haracleotus fays, that in Albion there were 'Phirty-three. But it is highly probable there were many more, or that numerous Tribes lived under different Chiefs, fince Cafar names no fewer than Four in Kent; and if fo many in One County, it is improbable that any Monarcan ruled over Four or Five, There muft have been at leaft a tolerable, though not an exact Equality, otherwile it is not caly to conceive how thefe Kentifh Tetrarchs could have fubfifted.

    1 The Finft Iuvafion by Julius Cafar had amonght other Caufes the Inftigations of Androgeus or Mandrubarius, a Britifh Prince who came over with him in that Expedition. Caligula was animated to his abortive Attompt by the Solicitations of Adminius the Son King of Cunobelinc. In the Reign of Claudius the gallant Caractacus King of the Silures was after Nine Years W'ar betrayed to the Romans by Cartifinandua Queen of the Brigantes.
    m Inftead of thinking meanly of the Abilities or Knowledge of the Druids, we have mote Reafon to fufpect them of that Want of Philanthropy which is but too common wirh Puliticians. They were themelves free from all Serviees In Peace and War, living in Plenty and Fale. The Princes and Nobles they educated in manly and generous Sentiments. But indulging a Commonity of Women aud other. Senfualities to the Vulgar, difpofed them thereby to implicit and boundlefs Obetience to their Dietates.

[^150]:    ${ }^{n}$ This Matter is clearly and judiciounty difcuffed in the valuable Preface to the Laws of IIoweil Dda. Speaking of the Condition of the Britifh Nation when fubject to the Romans, he fays, * Legum fuarum jacturam paticnter ferre poterant, cum per hanc Antonini Confitutionem al " fummos Kæipublicæ Honores patuit jam perviam et honeftum iter: Nec amplius corum animis ct ulla ineffit veteres Difciplinee cupiditas, quando in fenatu, in exercitu, non togati folum, fed * trabeati et purpurati inciderent."
    o The candid and inquifitive Reader may find thefe enumerated and explained in Rowland's Mona Antiqua Reftaurata, chap. x. where it is remarked that many of thefe had a clofe refemblance to the Cuftoms of the old Irifh, whence he concludes that they were Remnants of the old Britifh Conftitution. This agrees exactly with what Richard of Cirencefter fays, that when the Romans formed this Country into a Province, the Cangi and Brigantes went over to Ireland and fettled themfelves there.

    P Offa King of Mercia, who, as Selden fays, made himfelf Mafter of the greateft Part of England; to fecure his Dominions from the Incurfions of that reftefs Nation, cut this Dike from Wye to Dee, which thews the Bounds of Wales, about the Middle of the Eighth Century. Two hundred Years after Harold, who gained great Victories over thefe People, made an Ordinance to keep them quiet, that if any Welch. Man was found armed on this Side Offa's Dike, he fhould lofe his Haod.

[^151]:    9 It feems juft to attribute this rather to Refentment than Policy. If Wales had remained under Onc Sovercign, and bis Subjects had been true to his Interefts and their own, they might have maintained their own Independency, and have been courted by the Saxons for their Affiftance. The Danes were Pagans, the moft barbarous, and of all Invaders the moft cruel, the Saxons Chriftians and civilized, fo that the Welh, to revenge old Injuries, paved the Way to new ; and their Paffion to facrifice their Enemies was fo frong as to hinder them from percciving that they were alfo facrificing themfelves. This is a capital Inftance to hew how much this Inand fuffered by being divided into different States, and of courfe how much its Power is increafed by having all its Parts directed by One Government, and comprized under One Legillature.
    $r$ l'olitical Survey of Great Britain, vol. i. p. 492. To the Authorities there inentioned, we will take this Opportunity of adding, that a Perfon of uncueftinned Veasit: tound many It ords (See Wafer's Voyages, p. 186 .) in the Language of the Darien ladians which reembled the Erie or Irifh, but which are plainly much nearer the Welfh, and he alfo afiers a S milarity ia the Pronunciation, which is ftill more remarkable. The fame Obferration hath been made in Reference to fome other Indian Nations.
    ${ }^{3}$ Cafaris de Bello Gallico, lib. iv. cap. 13. In omni Gallià eorum Hominum, qui alijuo funt numero atque honore, genera funt duo: nam llebi penè fervorum habetur luco; quae per fe nihil audet, et nulli adhibetur concilio. In the fame Chapter he alferts the fame Cutoms prevailed in Britain and in Gaul, whence all Power centered in the l'ricfts and in the Chicfs, to whom the Com mons were fubfervient. Thus we fee this was an original Error in their Gorcrament, and as fuch remained unaltered and indifputed.

[^152]:    - It may be proper, for thessitisfaction of the learned and inquifitive Reader, and to convince him we have fairly and without Exaggeration ftated Facts, and truly affigned the Caulis of the Diffulution of this Syftem, to refer to the Teftimonies of Two celebrated Britifh Antiquaries, One who flourifhed while his Countrymen were Atill free, the other living after they were become fubject to the Englifh, zealous, yet judicious Writers both. Girald. Cambrens. Cambrix Defcript. cap. viii. H. Lhuyd Fragment: Britan. Defcript. fol. 49.

[^153]:    a The Wrork of venerable Beda, entituied, An Feclefiaftical Hiftory of the Finaifh Naton, hoth been always very defervedly efteencd as One of the moft ancient and authemick Acmumente of :", " Deeds of our Saxon Anceftors. He was a Saxon himflf, a Man of very condiderable f.emping :ain thofe Times, dedicated his Work to Cermph King of Northumberland, and bal the 11.". W have his Book tranflated into Saxon by King Alfred. The Saxon Chronicle, of which D:. a.thfon late Bimop of Londen publifhed an excellent Edition, is with good Reafon fuppoied th hase belonged to the Church of Peterborotgh, derives its Nane from its being written in ti..it Language, and is cited with great Refpet by Florence of Worcefter, and other ancient Wiates. In Ecclefiafical Affairs it agrees with Beda, but it does not follow that it was tanfubed tiom his Book. On the contrary, from the Simplicity of the Stile, and the Orthography whin aftes exactly with the ancient Coms; the former l'art of it feems to be of an ealice Date. Thare is entany Doubt that it was writien by various Matade, and the Stile phinly fows it ; but this by ats Mcans diminimes its Authonty, which hath been always highly confu!ered by our able it and an it accurate Writers.
    "We find fome Writers fetching thefe Ancefters of ours, not omly out of the Heart of Cactmany, but even from the moft diftant Parts of the North. Olans Rudleck affum, that the Sumens and Angles both came o iginaliy our of Sweden; many are for bringing then from futand and the Banks of the Elbe. Ubbo Emmins affigns very probable Reafons to fhew that wherever they came from originally, they paffed over hither immediately from Figelland, and hat a grat Part of Heagifts Recruits were compofed of Frifians; in Support of which he hath One very firong Argument, which is, that the Language foke in that country cones the neareft to the Anglo Saxon, infomuch that when Priefts went from hence to convert the Natives to Chiftianity, they preached to them without the Affifance of any Interpreter. There may be a Degrce of Truth in thefe feemines ly contadictory Notions, for thefe Northern Nations pullud ane saother out of their ancient Scats, to which however they left their vames, till at length fome

[^154]:    e As in their own Country the Saxons were amon continually in a State of Wa:, fo when a
     there 1 ecived his Ame, hat thence forward a Repht to Admifion. To thefe Affembles they ame alway, armed; for with them a Citizen and a sohatr were fyonimous Terms. It was mon lawful to fpat of poblick Matirs, bot in thefe Comals, which for befor Matters whe fresuatly lacid, at the Sew ind Fu'i moons. Hut in they feldom refided above a Year in Onc Place, Io the kegelation of what was to be done durng their Continance, that is, the (ewantity of Land that wa: whe cu'tivatel, the Divition of its I'soluce, and the Diceition of their nest Removat, was reguated in a Gencal Alembiy lula for that lurpofe. Thefe Cuflums the saxuns brought witi them bither, as was veiy natural, for hefe and their Arms were all they had to bring, and when their Circtaftences aftorward changed, they very ratonally accommodated thefe Cuftoms to the new Stare of their Alfuis.
    ${ }^{1}$ it is requifice to difuls fome Points here to prevent an Appearance of Contradiction. Hengith wime Thate grat Victorics, though not withour much Expence of blool, over the Britons at Abesford, caytord, and wipued, feet, by which he acequired, fecmed, and cowled his Kingdom of Kent, wi h wheh be feems to have been fatisfied; a al therefore it is improbable that
     nu lamit a (inefpondence with tie Chiefs of his own Naion, whe were endcaveruing to chai...th theatives in difienent Pars of the Inc, and fems to have contributed to the Sething of

[^155]:    ${ }^{\text {h }}$ Upon the Introduction of Chriftianity, King Ethelbert erected an archiepifcopal See at Canterbury, which was his Capital, and the See of Rochefter in his own Dominions. He likewife prevailed upon his Nephew Sebert King of the Eaft Saxons to liften to the Inftructions of his Clergy, and upon his Converfion dedicated and endowed the Church of St. Paul's, making it the Cathedral of the Sce of London, contributing alfo to the Building of St. Peter's Weftminfter, befides feveral Convents in his own Dominions. We mention thefe as very great publick Advantages, for the Clergy during the Saxon Times were very induftrious in improving of Lands; and as after their Converfion there was a great Spirit of Picry among thefe Princes, fo in all their Wars the Poffefions of the Church were refpected, and of confequence Cultivation revived, and fpread itfelf in a very high Degrec. There was likewife even in thofe Days a Proportion of foreign Commerce, otherwife this Monarch would not have married a French Princefs, which Shews a friendly Communication muft have long fubfilted between their refpective Subjects.
    i Thefe Laws were fhort, precife, written in the Saxon Language, and though they afford pres;nant Proofs of the Rudenefs of the Times, yet they very plainly appear calculated to reform and retinc the Manners of the Pcople; and this was another Advantage fpringing from Chriftianity, before the Introduction of which the Pcople were governed according to their ancient Cuftoms and the Will of the Prince and his Nubility. The Names of thefe Priuces in the Titles of their Laws agree in Orthography with their Coins, and with the Saxon Chronicle, which confirms the Antiquity of thofe valuable Annale. Æthelbirth's Conftitutions were Eighty ninc in Number; thofe of Hlothair and Eadric his Nephew, who reigned with him jointly, were Sixteen; thole of Wihtred are not numbered. Wilkins Leges Anglo-Saxonicæ, p. 1-1.3.

    * In the former Volume we have endeavoured to fhew in fome Mcafure the Beauty, the Advantages, and the Importance of this Country, to which, confidered in the Light of a Kingdom, we ought to add fomething here. The lower of Ethelred gave him an Influence over all the Country as far as the Humber; and this is fufficient to Shew, that his Doraitions furnifhed him with Mcn and Money. Another Teftimony arifes from the People of Kent's being able many Years after to compromife their Quarrel with Ina King of Mercia, by paying him down Thirty thoufand Pounds of Silver, which they muft have gained by Trade. Long after this the barbarous Danes deftroyed Canterbury, and by the molt cruel Decimation faved but One of the Inhabitants out of Ten; from which bloody Slaughter it appears that there were at that Time in the City near Fifty thoufand Souls. It was then a Province, and we may reafonably conclude, that when it was the Capital of a Kingdon, its Citizens wer not fewer.

[^156]:    Chron. Saxon. p. 71. A. D. 827, where the Reader will find a Lift of thefe Anglo-Saxon Monarchs. This Kingdom of the South Sixois, as hath been obferved in the Text, was of no great Extent, and yet fo woody and wild a Country that it was but thinly inhabited. Ella and his younger Son Ciffa, who fucceeded him, are faid to have reigned about a Century ; the latter diffinguiihed himfelf by building a Cits, and a royal Seat or Refidence, to both of which he left his Name. The Firft was Ciffaceaftre now Chichenter, the latter Cifbury ; the Ruins of which, and the Marks of the Moat which furrounded it, are fitll vifible. He was a Prince very fudious of leace, and therefore chofe to pay an annual Subfidy or Tribute to his Neighbour the Monarch of the Wen Saxons, by whofe l'ower he was defended from the Inroass of the Britous.

[^157]:    ${ }^{m}$ There is fome Confufion in the Hiftory of this Converfion, which it is no Way neceffary for us to difcufs. It may not however be amifs to obferve, that befides the Ine of wieht, the King of Mercia gave his Godfon the Peninfula of Selfey, that is, the Inc of Seals. This the Monarch of the South Sasons beftowed on Wilfrid Archbihop of York, then in Exilc, who founded a Monaftery and a little Town here, the Inhabitants of which were taught by him the Art of Fifhing, and this Place became the Sec of the Bifhop of the South Saxons, which long after was transferred to Chichefter. The Improvements made in this Country were after it became a Province, for as a Kingdom it feems to have been very inconfiderable.
    n It may be cafily conceived, that fo great a Kingdom as this could not be fo quickly formed and eftablifhed, as thefe fmaller Ones of which we have fpoien. It owed its Grandeur chietly to the warlike Princes Ceawlin and Ceolwulf, the former had been victorious feparately againft all his Neighbours, Britons, Saxons, and Scots, till they all united againft and dethroned him, A. D. 5 )I, and Two Years after he died in Exile. The latter was alfo a great Captain, and enlarged his Dominions, fo that they comprehended the Counties of Berks, Wilts, Hants, Dorfet, Sumerfet, and Devonhire, which for thofe Times was a very potent Sovereignty, equal in Extent to the Province of Munfer in Ireland, not inferior to the Duchy of Normandy, and very little iefs than the United Provinces, with the fignal Advantage of having the Briftol Channcl on One Side, and the Bitifh Channcl on the other, whence it is eafy to difcern how it grew to be fuperior to the other Principalities, bringing firft the South Saxons, then the Kingdom of Kent into Dependency, and fwallowing up at length the Remainder of the Heptarchy.

[^158]:    - Ofwald the potent King of Northumberland was Godfather to Cynegils at his Baptifm, and beth the Kings concured in erefing Dorchefter within Eight Niles of Oxford, which at that Time it feems was in the Hands of the Weft Saxon Monarch, into a Bihhop's Sce, where Birinus was placed; and thus at once, as embracing the Whole of the Weft Saxon Kingdom, it became the hargedt in England, but was afterwards transferred to Lincoln. Succeeding Monarchs however crectu. many others out rif Zeal for the Chriltian Faith. Cynegils himelf, as fome fay, but as otheis affert his Son, raifed the Cathedral at Winchefter. Their Succeffers procceded in the fame Track. Hua not only removed his own Refidence from Congerfbyry in Somerfethire, but the Bifhop's Sce alfo fiom the fame Place to Wells. Succeeding Princes eftablifhed Sees at Sherburne in Durfethire, Crediton in Devonflire, St. Germains in Cornwall, and Ramfbury, the Saxon Name is Ravenfbyrye, in Wilts; Crediton and St. Girmains were afterwards united to Exeter, Sherburneabforbed Raintbury, and afterwards the Sce was transferred from Sheiburne to Salifbury. By this Means feveral new Towis were crected, and fome old oncs reftored.
    $p$ This Moparch was in his Day the moft potent in this Ifland, and equally diftinguithed by his Valour and Succefs in War, his Magnificence in his Foundations and Buildings, particularly the great Church at Glafonbury, which he furnifhed with Plate and other Ornaments at a vaft Expence. and for his Love of Jutice. In the General Affembly in which he nude his Laws, he was aflifted by the Bimops of Winchefter and London, as well as the Nobility and Senators or Aldermen of his Kinglom. Thefe Laws, Scventy-feven in Number, are expreffed more elegantly, and at large, than thofe which we have formerly mentioned, and very cridently prove, as wall as the many liberal Acts of this Pince, that the Saxons were grown mone wealthy, as well as more polite, than at the Firft Founding of their refpective Kingdoms. In the Conclufion of thefe Iaws there is a very diftingt and particular Account of the Fire and Water Ordeal, or Mode of Pur.. gation then in Ufi. Leges Anglo-Saxonicix, p. 14-27.

[^159]:    t The Princels married by King Edwin was Ethelburga the Sifter of Eadbald King of Kent. Paulinus before his Departure was comfecrated Bifhop of the Northumbrians at Canterbury, and in his Favour Edivin revived the See of York, which had been an Archbihoprick in the Time of the Britons. After the Deccafe of this Monarch, when l'enda had made a Conqueft of the greateft Part-of the Kingdom, Paulinus fled with the Queen back into Kent, where he was made Bimop of Rochefter, and there he died. Ofwald fent for Aidan out of Scotland to preach the Gufpel to his Subjects, and he became Bifhop of Lindisfarn, now Holy Inland. In fucceeding Times there was a Bifhop at Hexham. The Danes deltroying Holy Illand, the Bihop and his Clergy removed to Conchefter, now called Chefter in Strete, and from thence the See was finally tranfferred to Durham, where it has fince remained. Carlifle, an ancient Roman City, was given to the Church in the Time of the Saxons, though not erected into a Bihop's See till after the Conqueft.

    - The Building of Churches and of Monafteries, when Chrintianity was firft received in any of thefe Kingdoms, was a necelfary Work, as the Converfion of the People could no otherwife be carricd on, and the Hiftories of thofe Times fhew us tiat they were very poor and mean Edifices. Afterwards when fome Kings, and many linceffes retired into them, it is no Wonder that they were improved; and whoever confiders the continual Wars and Confufions in thofe Days, will as litile wonder that ferions and religious lerfons chofe fuch Retreats. They were ufually in defart and folitary Places, and if in conlequance of thefe Foundations, and the Care and Attention of thofe who dwelt in them, Toinns grew up, as they ufually did, in their Neighbourhood, this only proves that fuch Foundations had as od effect. Indeed, whoever reads with Canduur and Confideration the Annals of thefe Ages, cannot fail of being convinced that they were the principal Cavics of fpreading, promoting, and preferving Civility and Cultivation. A political Writcr, like an Hiftorian, hould be free from all religions Prejudices, and fpeak his Mind with Fresdom and Candour, which is the fole Motive to thefe Remarks.

[^160]:    - We are affared by Beda, that Sigibert built a School for the Inftruction of Youth, but he docs not fay where. Some think it was at Thetford, and it is certain that there was in ancient Times a very great schoul there. But the general opinion is, that it was at Cambridge, and upon this a great Controverfy has aifen, and leveral learned Works have been written to fhew that he was the Founder of that famons Univerlity. But the Truth feems to be, that Sigibert erecled his School in Imituion of what had boen before done at Canterbury, and fuch we find alfo at other Haces where there wete cither Cathedrals or Monafteries, as at Malmelbury in Wilthire, and at Jarow, where beda refided; all which tends to fhew that the Saxons to the utmon of their Power were Euct aragers of Literatare from the Time of their Converfion to the Chriltian Religion.
    . He will take this, Opportunity of mewing the Methods practifed by the Saxons in preferving the Memory of great Events, by raifing to them Monuments of different Kinds. The Promontory

[^161]:    E There were long and great Difputes about the Sourecs of the River Nile, but the Overfowing
    
     comphyed Fitteen thom:aid Nin. hundred Eighty-four Younds Weisht of Gold in decorating the Church of that Monathey, in Vellis for the Altar, in Images, \&e. betides Siluer and precious Stoncs. Without boult coher dines were in life Mmocr libeal aceording to the Levoton of thofe 'Times in ether faces. We comot nevertielefs bur incine to think, that houcer piote, their Magnificunce was not wimbly co dined to religious Places, but that Gold and silver eco binewife to be found in t': is Palaces, and in the Purfes of their Subsets. The Lands of this country in thofe D.y's, as th- Laws clearly hew, produced abundantly all the Neceflaries of Life, and thercfore we may whe 'ijpole, or raber affirm, that this Wiatharofe from the bepontation of Corn, Wool, and other mane Commolities, the rather, becaufe we find foon ater this fatiod
     be exported for sake. King lina liken e cunowed Schools at Rome, and fetticd an amatal Revenue for their Support, to be remitte trom hence; other Princes made the libe fourness, and lift
     not been Plenty at leaft, if not Upulenee, at Home. The Fort of Londen, and no bonltt other Ports, were ficquated by Merchants; and theatore taking all thete thins: feqs:hor, though we
     what it produces is a funicicnt l'roof that it actually exilited.

[^162]:    - This great Monarch wrote himfclf many Things, fome of which are come down even to our Times, and thefe ate inconteftable Evidences of his Temper and Intentions, as weil as of his Abilities. In his Preface to Gregory's Paftoral, he hath given a very plain, but a very pathetic Account of the low State to which Learning was reduced by the Devaftations of thre Danks. In his Englifh Trannation of Orofius, we have a more full and perfect Account of the V';jage made by his Orders, by Other and Wolltan in:o the North Seas, than that in Hakluys's Colleciem. In a Word, we have abundiant Teflimony from himfelf, that he was reilly fuch a Man and fuch a riance as we have reprefented him. The Memoirs of his Life by his Chaplain Affians Nenevonfis, written in his own 'rime, and addreffed to himfelf, are of indifputible Authority, and though they relate his great Actions, yet the Sule is plain and fimple like the Maunces of the Age in which he lived. The fame may be faid of the Saxon Chronicle. Ethelwerdus, and :ngulphus Abbot of Croyland, lived at no great Diftance from his Times, and agree feif. Of will with thefe. Florence of Worcefler and William of Malmelbury, though later in Poini of Tinee, feem to have collected their Hiffories from good Materials. Add to this, that the l.aws of his Succeffors bear Witnefs to his Wifdom, Piety, and Juftice, and we might likewite mention :ncient Infcriptions that corroborate the Truth of what we find recorded in our Hilhries It was neceflary to apprize the Reader of the Certainty there is of the Facts delivered in the 'Fext.

[^163]:    PIt is requifite to apprchend thefc Matters clearly, that we fhould expitin in what Senfe he is to h. undertion to give Laws to this Country. It mult be allowed he was aut the Intentor of w. Thithon mo shires, or perhaps of Hundreds; the former, ar kult, bing certainly knowa brfore his iome, Affer having told us, that he was born in Berkfire, an' mentions feveral other Shine is the Conife of his Work. It mis be likewifc fuid, that he combly notithly compleat thi, Bivitua, the Countries Nuth of Humber, and thole poffefed by the Eatt Angles, being in bis Tinata he Hatm of the Danes It is alo true, that there were Earls before his Time. But all this does not derogate from whit we Reader will find hereafter affered in sefpect to him. For retabing the ol. 1 Name, and is a grat Meafure pertaps the old Divifione, he adiapted them to ne: Puppotes. Shires befure his Tine were only in the Weft Saxin Kinglom and its Demadraies; bur he introduced then, fixel their Lintits, and fubdivided them into Hundreds and Tathengs throngh ali bis Duminions He made the Earls or Aldermen civil Officers, and intio. duced obler iufaior Oficers under thein, upon which Mondel his Saceffors proceeded; and it is in this S: nfe that tie is very truly faid to be the Aluher of thele fuftitutions.

    T Though nothing can te mare excit or more uniform than Alfred's Plan of Governmeat, yet in re pet thereto, it dows riut wpar that he crer laid down an exprefs Syfem or Code of haw,
     an Appearance of this, anit there can be no 1 ) whbt that may of his Laws and ligal Jodgments, zac def, as it is likewife, true, that in mor'ern Times fevcral Pieces relative to this great Mo-

[^164]:    y This Prince, when young, was bred up under his Brother-in-law, Ethelred, Eul of Mercia, who married his Sifter, Ethelfleda, buth very extaordinary Perfons, to whom many of the Monks. without Cermony, give the Title of King and Queen of Mercia, though the chicf Place of their Relidence was London. The Truth is, that Ethelred was a great Captain and a great State:man, and Alfred, when he recovered London from the Danes, committed it to his Care, and afterwards gave him the Government of fo much of Mercia as he had recovered. In his laft II ill he bequenthed him, by the Title of his Commander in Chief, Two thoufand Marks. Fracired deceafed A. D. 912, upon which Ethelfleda furrendered to hor Brother I ondon and Oxicu, I ut retained Nercia, which fhe governed with great Wiflom and Spirit, commading her Amics in Perfon, with which the invaded Wales and took Brecknocik. She alterwards rureed ber Arms againtt the Danes, from whom the took Derby by Storm, in which the loll Four of her gieat Captains; the likewife reduced Leicefter, built and fortified Stanford, Toweefter, Cherbury, and other Places. She alfo repaired Warwick, and dying A. D. 920, was iaterred ai:h hei Lord in the Abby of Gloucefter, which was founded by them both.

[^165]:    z This Monarch, taught by the Examples of his Father 3nd Brother.in-law, fpent a great Pal: of his Time in repairing and fortifying old Cities and great Towns, fuch as Hertford, Lecicefter, and other Places, and building new Ones where they might boft ferve to bidle his tubulent Neighbours. The Method he took was this: He cantoned his Army in the Summer in fome: convenient Quarters, fo as to cover completely thofe who were employed in bailding the new Town he marked out. Thus for Inftance, he lay One Summer at Witham in Effex with his Forces, while he built and fortified Malden. He had not long retired from thence before it wa: invefted by the Danes; but the People knowing the Strength of the Place, and that they foond be quickly relieved, defended it vigoroully, and when the King with his Army attacked the Eismy, they fell furioully upon their Rear and deftroyed Numbers. In the interior Part of the Country he peoplad the Towns and Villages with Saxons and Danes, relying upon the Wifdoin of his Father's Laws, which, by rendering the Iahabitants of every Tithing refponfible for the Conduet of each orher, kept the new Subjects in good Order, till for the Secuity of the Subftance they had attained, it became their own Intereft to perfift in their Duty.
    a This Monarch alfo made feveral good Laws, and particularly enjoined the holding Once within every Month the County Court. We find in thefe Mention made of the Dombec, but what that was Authors are by no means agreed. Some take it for a Kegifter of original Writs, whers, for a Collection of Judgmeats, and fome for a Book of Statutes: Whatever it was, it phainly fhews that the Judges in thofe Times had a certain Rule of Action, which was known likewife to the People, according to which they were bound to act, and in cafe of Tranfgreffion were liable to be punithed. He was very ftriet in the Exccution of Juftice, though very sender of creating new Crimes. It appears from his Laws, that if Men were guilty of Offences for which they were unable themfelves to pay the Penalty, and their Relations would not do it for them, they loft their Liberty, and. this feems to be the Source, or at lealt the priacipal Source of Bondage among the Saxons.

[^166]:    b The Laws of King Atheltan breathe a true Spirit of Patriotifin, and are calculated for the public Benefit of the whole Community. He Thews himfelf particularly anxious for preferving the public Peace, that is, an uniform and univerfal Submiffion to the Laws. He is remarkably fevere agaiuft Julges deparing from their Duty. He ordains that all Pieces of Money of the fame Value flould be of the fame Weight and Finenefs where-ever coined, and adjudges the Mafter of the Mint guilty of Fraud therein, to lofe his Hand. In his Statutes there are many Provifions agaiun Fratd and Oppofition, and it is very eafy to diftinguinh from the whole Tenor of them, that they were made when the Condition of the Subject was in refpect to paft Days become fafe and eafy, the Provifions in them plainly declaring, that through the Operation of Alfred's Syitcm thefe were become thriving Times.

[^167]:    ${ }^{c}$ In the Chronicles written fince the Conqueft, we have fome frange, not to fay incredible Srories of this Prince's Piety. In his March Northwards it is faid, that be went to pay his Devoticas at the Shrine of St. John of Beverly, where he promifed, that if he obtained Vistory, by the Intcrcefion of the Saint, he would make large Donations to his Church, in Foken of which he pawned his Knife, which on his Return, with Vistory, he redecmed by the full l'erformance of his Promiie. It is alfo faid, that being near Dunbar, he prayed for fome fignal Proof that the Kingdom of Scotland ought to be dependent upen his, and thereapou flruck his Swordan Ell, or as lome fay Three Ells deep into a Rock. But the more ancient Chronicles, though they mention his Vistories, are filent as to the Miracles. It is however true, that he reftored Lakis that had been taken from the See of Durham, and by his Charter grantcd lasely to the Charch of beverly, as in reality he did to almoft every great Monaftery in the Kinglom. It may not be amifs to add, that like his Grandfather he was a very learned and fludious Prince.

    It feens very certain, that at this Time Cumberland was an independent Kingdom, but perhaps it is not quite fo certain, who were its Inhabitants. Camden inclines to think they were the Remains of the ancient lifitons; but from Circumfances it may admit of fome Donbe whether they were not Dancs. Whoever they were, Edmund by the Affitance of Leolin King of South Wales entirely fubdued them, and beftowed this Kingdom; as the Scots Chronicles adsnit, on a Prince of their Nation, whofe Name was Malcolm, the Faglifh Hiftorians make him King of Scutand. The Scots fay he was their Irince and Heir apparent. It Chould feem, that his was a very wife Conceffon, for by this, Mcans the Scots were interefted in keeping out the Danes, with whom they hal ofin leagucd before. The Sayon Chronicle tells us, that Cumler-

[^168]:    f The People on the other Side of the Humber being long ufed to another Kind of Life, and not at all relifhing the Reftraints impofed by Edmund's Laws, as foon as he wais dead, called back Anlaff a Danih Prince, who had formerly ruled them: But growing very foon weary of him, they drove him out and fet up another, againf whom Edred came with an Army, and in a Ghort Time difpoffefed him, rellored the Saxon Polity, to which, tired with repeated Revolutions, the People now more willingly fubmitted. It is not impofith that upon the Death of Edred the Saxon Nobility might think it good Policy to eleet Prince Edgar to the Kingdoms of Mcrcia and Northumberland, as the moft probable Means of keeping the People in the laft mentioned Country in due Obedience, leaving Weft Saxony, Kent, and the Eaf Angles to King Edwy, who is faid to have banihed Dunftan, for not rendering bim an Account of the Treafure which his Uncle Edred had committed to his Charge.
    ${ }^{8}$ As this Monarch was very young, his wife Conduct muft be attributed to good Advice. This feems to have been given him by Dunftan, whom he recalled, and who, whatever his Character in other Refpects might be, was certainly a great Politician. He was a Man of Quality by Birth, had an excellent Education, came early into the Management of publick Affairs, and had conducted them with Succefs. He fixed in his Mafter's Mind the Love of Peace, as moft neceffary to the Situation of his Affairs, the conciliating the Affections of his Suljects, and the Maintenance of his own Greatnefs and Glory. His Neighbours obferving this Difpofition, were the lefs alarmed at his Power, and faw their own Interefl in Living with him upon good Terms, as on the other Hand his l'eople felt the good Effects of his Policy in thcir own Happinefs.

[^169]:    n The Saxon Chronicle afferts, that never any Prince looked more attentively than he did to all the different Duties of his Station, and that he had a more potent Fleet than any of his Predecelfors. Florence of Worcefter and Roger Hoveden Ppeak of Three Squadrons of Twelvehandred Veffels each; John Brompton makes them Four thoufand, and others have gone ftillhishor. Lut the Saxon Chronicle is our beft Guide, and it is impoffible to conceive that he could man fo great a Fleet, or provide for the Support of his Seamen, if his Subjects had noe carried on a very extenfive and lucrative Commerce, of which the flourifing Static of all Things in his Reign is another Argument not to be controverted.
    i Some W iecs lay, that Edgar was crowned as ufuad at Kiugton at the Entrance of his Reign, by ()do Archbifhop of Canterbury, which it would be eafy to thew, is improbable at leaft. Whers lay his Coronation was deferied as a leenance enjoined by Dunfan. The Sason Chroniches differ in the Year, for fome Cupies make it Nine hundred Seventy-two, others Nine hundeed Seventy-three; but \{peak of it as done with extraordinary Solemnity, and with a great Refort to Bath of the Nobility and Clergy. Leland in. his Itinerary, vol ii. fol. 39, hath the following remakable Paffage. "King Eadgar wat crounid with much Joy and Menor at St. Peter's " in Bath, wherapon he bare a gret Zeale to the Towne, and gave very great Fraunchefes and "Privilges onto it. In Knnwlege wherof, they pray in al their Ceremonies for the Soule of " King Eadgar. And at Whiffunday tyde, at the which Tyme Men fay that Fajgar there was " crounid, ther is a King electid at Bath every Year of the Townefmen in the joyful Remem" braunce of King Edgar, and the Privileges gyven to the Toun by hym. This King is feftid: "and his Adhercntes by the richeft Nenne of the Toun." The Saxon Chronicle fays, that he went frum hence to Chefter, where he was met by Six Princes. Our other Chtonicles tells us of Right tibutary Kings, viz, thofe of Scotland, Cumberland, Minn, and Five Sovereign of Wales, Who rowed him in his Barge on the River Dee.
    k As to the lofty Stile of this Prince, the Reader may find what is advanced in the Text proved in the learned Sehlen's Titles of Honour (in his. Works) Vol. v. col. 14., 142, Infances. might be alfo given from our ancient Hiltoians. But the learne 1 Witcr we have mentioned. hath produced (Mare Claufum feu de Dominio Maris, lib. ii, cap., 12.) another Ch.rter, the Begining of which, though we have little Room, we mift tranferibe, becaufe auminticated by the-

    Sentiments:

[^170]:    Sentiments of thofe excellent Judges of our Hiftory and Laws, Mr. Camien, Primate Uther, and the Lord Chiff Juftice Coke; thus it ruas, "By the abundant Goodnefs of Almighty Gol, who is the " King of Kings, I Edgar King of England, and of all the Kings of the Ilamds, and of the " Ocean hing round about Bitain, and of all the Nations that are jncluded within the Cir" cuit theieof, Supreme Lord and Governor, do render Thanks to the fame Almighty God my " King, who hath colarged my Empire thus, and exalted it above the Royal Eflate of my Pro" genitors, who although they arrived to the Monarchy of all England, ever fince the Time of
    "A Athelfan (who was. the Firf that by Force of Arms fubdued the Englifh and all the Nations that
    " inhabit Britain) yet none of them ever attempted to extend their Empire beyond the Bounds
    " thereof. But the Divine Goodnefs hath favoured me fo far, as befide the Englifh Empire,
    " enable me to fubdue all the Kingdoms of the Illands in the Ocenn, with their moft fout
    "" and mighty Kiugs even as far as Norway, and the greatef Part of Ireland, together with
    " their moilfamous City of Dublin. All which (by Cod's Grace and Affitance) I have fubdued,
    " and made their Necks to ftoop under the Yoke of my Command." This furely is a clear Confrmation, and a decilive Proof as to t'r:s Monarsh's maritime Power.

[^171]:    - The Maflacre of the Danes was on November the Thirteenth A. D. I002, not long after the King's Marriage to Emma Daughter to the Duke of Normandy. The Carnage was no Doubt very great, though it might not be univerfal. Several Reafons have been given for it, but the moft probable is that in the Saxon Chronicle, that the King had Intelligence of their having formed a Defign to murder him and all his Nobility. King Swaine, for the Space of about Ten Years, wafted almoft all Parts of the Kingdom with Fire and Sword, deftroying many Citics, Towns, and Villages, and plundering others, fo that this is looked upon as the Secund general Devaftition by the Dapes, and is attefted not only by "our own, but by foreign, and even by the Danifh Chronicles.
    - This King Ethelred came to the Crown, as we have Ghewn, whep a Child, and was from the beginning bated by Archbihop Dunftan and the Monks, who were now become rich, felf-interefted, and in all Refpects exceedingly degenerated. :They forgot the Obligations they were under to his Father Edgar, and to bimfelf, and their Ladds being exempted by the Laws, they would contribute nothing voluntary, even in the Depth of their Diffrefs, to the Support of their Sovereign or fellow Subjects. It appears plainly from the Saxen Chronicle, that the King frequently confulted his Nobility and his Bihops, whofe Advice he followed, and it is alfo no lefs plainly faid, that he was as frequently deceived and betraycd by thofe he confulted; fo that inftead of being branded with the ignominious Epithet of Unrealy, be ought in Jufice to have been atiled Ethelred the Unfortunate.

[^172]:    P This Eadric was a Man of great Quality by Birth, nobly allied, and very potent, fo that the King was obliged to ufe him in his Councils and in his Armies. He was, as all our Hiftorians agree, an artful, intriguing, infidious Man, and withal very avaricious, whence he was ftiled in Saxon Eadric Streona, that is Eadric the Gatherer, from the great Eltates he acquired, and the immenfe Wealth he amaffed. Ethelred to render him faithful made him Entl of Mercia, and gave him his Daughter in Marriage. In Edmund's fhort Reign, he Twice bindered hin from gaining complete Victories, and is faid by moft Hiftorians to have procured his Death, and to have boafted of this Service to Canute, who caufed him to be flain. This is, very fimply told by the Saxon Chronicle, Twice by Ingulphus (Hift. P. 57,58) and with the Addition of a Variety of Circumftances by other Hiftorians.
    ${ }^{4}$ The Danifh Troops were fent back A. D. 1018, and the Saxon Cbronicle fays they had a Subfidy given them of Seventy-two thoufand Pounds, and befides this Eleven thoufand from the City of London. Some other Writers fay Eighty thoufand from the Kingdom, and Fifteen thourfand from the City, which, confidering the vaft Sums that had been formerly levied, fufficiently demonfrates the Wealth of the Kingdom, and in Proportion thereto the Wicalth of the City.

[^173]:    - It a a ars very frange, efpecially to modern Hiforians, that the Danes Mould make no Efforts on the Deanife ot Hadikinte, to fer up fome One of their own Nation, confidering their great 1'sine; ; ut the Wuater witt be much leffened, if we confider that Canatus laboured inceffantly to cominiate the Minds of his Subjects, and as faft as was poffible to incorporate them into One Natisin, which it would the eafy to fhew from the moft ancient and authentick Hiltories of thofe Tians, he in a great Meafure effected by Intermarriages, efpecially anongt the great Families. Ge! thes, Mdwad was on the Spot, and the Daves had no Prince of their own, whole litle tiay could hupror. Il e mult alfo remember that the Danifh Fleets and Armics were gone. 'lace is thature no Reafon to credit what Pontanus (in vit. Magn. Boni lib v.) reports, that Hamold, mader Preterce of celebratiag the late King's Funeral, drew out the Danifh Forses, and caufel them in Onc Night to be all maffacred. As little Credit is to be given to John Eromton's Stury, ap. decen Script. col. 9j4, that at this Period the Englifh expelled the Danes and then naifed Ldwad to the Throne. The Truth is, he owed his Adrancement to Earl Grodwin, Hilt. Ingulphi, p. 62, who had coullantly adhered to his Mother Queen Emma, the Widow of Cant'e.
    t We have already hewn the Methods taken by the Saxons to found new Towns, and to enlarge old Ones, which is fufficient to explain the Alterations that pufl have happened in many of them, from the Change of the Heptarchy into a Monarchy. In the Wars before the Time of Alfied and daing his Reign and after, great Devaftaticns happocd, and though from the Tine of fedgar the Saxon Princes were very alfiduous in reftoring and rebuilding, yet from the leginaing of Ethelbert's Reign to the Clise of it there was a new Scene of Confufion, Defolation, and Hoodithed. We may therefore very cafily conceive that a great Change was made in the Face of the Country, and in the Condition of the People, and of this we have Two very ftrong Proofs, viz. the Fanines that prevailed in the Beyinning of the Reign of Edward the Confoffor through the Want of Cultivation, and the Exhortation of the Pope foon after the Norman Conqueft, to remove cpifcopal Sees out of mean and decayed Towns into thole that were more flouilhing and fitter to becume Cities.

[^174]:    ${ }^{u}$ Mr. Selden very judicioully diftinguifhes two different Kinds of Dane-gelt : The One was a Tribute which was paid to procure a Refpite from their Depredations, the latter was a coultant annual Tax to protect the Country and the Coafts from their Invafions, which was ralkat in the Nature of a Land Tax, and was employed in fitting out Ships of War, and in the Mantename of Seamen. This was alfo very frequently paid to the Danes, both before and after the Acceffion of Canuse, as they were ready to hire themfelves for this Purpole, and it was this hat Tax, which, as fome of our Hiftorians fay, amounted to about Thirty-eight thonfand Pounds per Annum, that ivas remitted by Edward the Confeffor when it had fubfifted for Thitity tight Yeas, and in that Space, if their Accounts be right, amounted to about Four Millions of our Money.
    ${ }^{w}$ It is afferted by John Bromton in his Chronicle, ap. decem Script. col. 956,957. Henr. de Knychton, col. 2338, that Edward the Confeffor made fuch a Code as is mentioned in the Text, and he gives us fome Saxon Terms from it, which be explains in Latm and in French. In the Saxou Laws there are thefe of Edward the Confeffor, faid to be confirmed by the Conqueror ; but they are a flrange pei plexed Compilation, and even in theie it is faid, that they were nut called his Lavis, becaufe he made them, but beciule he obferved them. It is likewife infinuated, that from the Acceflion of Canutus the Saxon Laws had been buried in Oblivion, and that the great Merit of Edward lay in his reviving thofe of King Edgar, which, as the Reader bath already feen, is not conformable to Truth, though well calculated for the Purpofes of thofe Times when all Inquiries into Saxon Learning was difcouraged. As to the Laiws of King Edward, inferted by Ingulphus in his Hiftory, p. 88, to which fome Additions were made from MSS. by the learned Selden in his Notes and Obfervations upon Eadmeras, p. 173-194. thefe are publifhed in Wilkins's Collection, p. 211, with a Latis Tranflation, for the Conqueror publifhed them in French, thorgh under the Name, and as the Laws of Edward the Confeffor.

[^175]:    x It hath been by fome thought frange, that the Fate of fogreat a Nation hould be decided by a fingle battle: A little Confideration will diminifh at leaft, if not take away the Wonder. The People had been long harrafied by Wars, and thereby their Numbers leffencd. In this very Year there were no lefs than Three very bloody and hard fought Battles, in which, as fome compute, there fell not lefs than One bundred thoufand Men. In the next Place, the Norman gave them no Time to breathe, but marched dinectly with his victorious Army so London. Add to this, that he immediately compromifed Matters with the Clergy, who being very attentive to their own Intereits, and being allowed their own Terms, acknowledged William for their King, and the Archbichop of York crowned him at Chriltonas, Ten Weeks and Two Days after the liathle of Haftings, and when there were Eleven Dass wanting to complete the I ear in which Edward the Confeilor died.

[^176]:    y It is judiciouny obferved by Mr. Selden, that it is only by pieceing together Fragments, and comparing them with our apcient Cuftoms, that we gain any Idea of the Saxon Conflitution, which notwithftanding appears to have been wonderfully complete. The Divifion of the Kingdom: was peffectly regular: The Rights of the feveral Orders of People exactly fettled from the Crown to the Clown, and none deprived of their Freedom, but fuch as had hewn themfelves unworthy and incapable of it. There was a due Diftibution of Juftice, quick, eafy, and equal through all Parts of the Reatm, by which the King's Peace, which was their Phrafe for a perfect Submifion to Government, was conflantly maintained: A fanding Provifion made both for a Military and Naval Force, Idlenefs prevented, and as for the real Poor, who were proper Objects of Compalion, Care was taken of then by the religious Houfcs, who by their apparent Charity in this Refpectig gave fuch Eafe to the Publick, as certainly procued, and in fome Meafure feemed to jutify the Donations they received.

[^177]:    z The Contents of this Chapter being maturely confidered, it will not certainly appear furprizing, and much luls incredible, that under fuch a Conftitution, the Country fhould be thoroughly peopled, and confequently every where improved. But we do not barely lay this down as an Opinion, but affert it alfo as a Fact. R. Higden the Monk of Chefter affirms, that in virtue of a Commiffion granted in the Fourth of W'illiam the Conqueror, that is precifely Seven hundred Years ago, there were then found in this Kingdom Fifty-two thoufand Towns and Villages, and Forts-five thoufind aad Two larifhes. A Thing looked upon as very certain in the Reign of Queen Elizabeth, as appears by the Teftimony of Mir. Harrifon, who wrote the Defcripdion of Mritain, and that leamed Antiquary Mr. Jofeph Holland (Hearne's Collection of curious Difcourles, p. 62.) thotugh at that 'lime the Number of Towns and Villages were funk to Seventcen thoufand. Now if we confider the Number of Inhabitants that thefe Cities, Towns, Villages, Hanicts, and Parifhes muft have contained, we cannot doubt that England at the Time of the Conqueft was very well, though before the Danin War it muft have been better peopled, -and as the Number of P'eople infer Subfiltence, fo muft that have arifen from Cultivation.

[^178]:    - It is a Point perfectly well known to all who have attentively confidered our publick Concerns, that they have becn much affifed by the fedulous and indefatigable Refearches of our ablef Antiquarics. For this the Names of Leland, Talbot, Camden, Sir Henry and Sir John Spelman, Somner, Lambard, and Burton will be ever held in grateful Remembrance. Much hath been likcwife done by fome eminent Sages in the Law, particularly Glanville, Bracton, Fortefcue, Sir William Fleetwood, Selden, Sir Edward Coke, Sir Matthew Hale, and many others. Our Clergy have likewife contributed their Labours in a Manner that will ever do them the greateft Honour, fuch as the Archbihops Parker and Uher, Bihops Eell, Stillingfict, Fleetwood, and

[^179]:    i Hereward a noble Saxon took Shelter with his Followers in the flle of Fly, and foon after a Danifh Fleet landed a Number of Forces to fupport them. Thefi Mcu plandered moft of the Monafteries in the low and fen Country of immenfe Riches, and the Conqueror is faid to have difpofed them to retire, by giving them large Sums of Englinh Money. Cithn, the Mother ef Harold, excited the Pcople of Exeter to fhut their Gates againft the Normans, which biought an Army into DevonMire, by which that rich Country was harraffed and deftroycd. The like Fate befell Cornwall and Somerfethire, and at length the fevereft Punifhments being fround ineffectual, to prévent the Killing of Normans, when it could be done fecretly or by furpize, a Law wals made to punif the liundred wherein fuch a Murther was committed by a heavy Fine from Thinty th Forty Pounds, which was attended with Succefs. As to the Donesfay Book it was macle arout the Twenticth Year of the Conqueror's Reign, and obtained that Name, as the Autler of the Dialogue of the Exchequer fays, from its decifive Authority in all Cafes. If we credit the Saxon Chronicle, the Anna!s of Waverly, and other Authors of that Age, we nuft believe, that not only the Land was furveyed and regiftered, but the Subftance alfo, and cven the Catile that every Man poffeffed. See upon this Head the Conciufion of the Finf Volume of Dr. Gale's Collećtion of Englifh Hiftorians.
    k William Rufus was equally prodigal and rapacious. His Wirs on the Continent required continual Supplies, fometimes obtained by heavy Taxes, Tometimes extorted by Violence. By thefe grievous impofitions the Nation was doubly impoverifhed : Finft by depiving the Induitrious of the Fruits of their Labour, and next by carrying all this W calth out of the Kingdom to be fpent amongft Foreigners. The Truth of thefe Obfervations may be verified from a lingle Fact. This King, though according to his Father's Example he levied Tares cqually on the Lands of the Clergy and Laity, by which his Revenues Gould bave much fupated thofe of the Saxon Monarchs, found it fo difficult to raife the Sum of 'len thoufand Marks, for which his Brother Robcrt mortgaged, and in Effect fold to him the Dutchy of Normandy, that he defpoiled the Churches of their. Plate, and reduced Multitudes of the middle Sort of I'cople to dowaright -Beggary.

[^180]:    'In the Time of Henry, not only his foreign Wars but his Alliances and Negotiations on the Contincut, of which he had many, were very expenfive. The Wars with Scotland hindered the Nom the in Parts of the Kinglum from recovering, as their ruined Condition had prevented their Weing inferted in the conqueror's Survey. It is true, that in the hatter Part of his Reign the Fegulations which lave been before mentioned gave fome Eafe to the People. But in the Days of bis Succeffor, Stephen, when this Country was fplit into more than a Thoufand Principalities uader fo many petty Tyrants, the Diftrefs brought on the People was exceffive, as authentically appears in the Articles of Accommentation betwcen him and his Competitor Heary.
    ${ }^{i n}$ Thie Chim of Robert Duke of Normaudy found Favour in the Eyes of many of his County youcn who bad great Eftates in England, and to pleafe them the King made fome Concefions, fuch as that Reliefs which feem to be the fame, or nearly the fame with Herriots, hould be reatumble and certain, that Relations fhould have the Wardhips of Minors, that Marriages flould be leff free, and that perfonal Eftates might be left by Will. His Charter is inferted in the Textus Roffenfis, there are Two in the Red Book of the Exchequer, and it was likewife fent into cevery Cuunty. It ftands as a l'refiace alfo to his Laws, in which there are many equitable Regulations in favour of the conmon Peuple. The Whole is in a great Meafure a Compilation from the Sixon Laws, though internixed with fome Nurman Cuftoms, which, according to the Mode of his, Anceflors, lie tilied the Laws of Edward the Cumiffor, and the better to colour this, an Opition was vented, that the Norman Laws were framed by St. Edvard, and given by him to Wiitain when Duke of Normandy, who caufed them to be obferved in that Country before he came to the P'offerifion of the Kingdom of England.

[^181]:    - Glanvil lib. ii. cap. 7. where feeaking of this he tells us, that it was an Act of Royal Beneficence, flowing from the Clemency of the Prince, with the Advice of his Nobility, by which the Duet was avoided in certair civil Cafes, and a legal Procefs fubftituted in its Stead. But the Trial by Combat ftill remained in reference to criminal P'oints, but more efpecially in Cafes of Treafon, and was held for Law even fo late, as the Reign of Charles the Firft.
    x In A. D. 1176, the King in a Great Council at Nottingham divided the Realm into Six Circuits, when Ranulphus de Glanville was appointed One of the Juftices Itinerant, as he was again 1179, when there were Four Circuits only. In the fucceeding Year he was made Jufticiary or Chief Juftice of England. Under his Name we have a Collection of the Laws and Cuftoms of the Realm, divided into Fourteen Books. It hath however been difputed, whether this belonged to him or not. Selden fays that fome of the Manufcripts afcribed it to E. de N. i. e. Edward de Narbrough, and there is a Manufcript extant in which it is attribured to Henry the Second. Some Queftions have been moved, whether it was penned before or after his Time, and whether the Regia Majeftas, a Book of great Authority in the Scots Law, be not taken from it. It paffes however commonly under the Name of Glanville, and contains a clear, regular, and diftinct Account of the Principles and Practice of the Law in his Time. It was firf printed by the Care of Sir William Stanford A. D. 1557, Duodecimo.

    I It is very difficult to underfand clearly the Mode of raifing Money in thefe D.ys, our ablef Lawyers and moft penetrating Antiquaries differing with each other upon the Subject. All our Aim bere is to hew what Change was made by this Monarch, and how it operated. The Danegett was levied at the Beginning of his Reign, but never afterwards; from whence it fhould feem that the Efcuage or Scutage came in its Room. This alfo had probably been levied before his Time, but not with that Exaetnefs which it was afterwards. He caufed a very frict Account to be taken of the Knight's Fees in his Realm, which amounted to Sixty thoufand Two hundred and Sixteen ; fo that as Sir Robert Cotton fays the Tax was certain as to the Method, though incertain as to the Sum, for fometimes it was Ten Shillings, fometimes One Mark, fumetimes Two Marks ; but in Truth it was not in any-wife certain, fince if the Knights ferved in Pcrfon they did not pay, and befides there were certain Tenures, fuch as Cornage and Cafte-guard, which were exempted from Scutage. The Ufe made of the Money thus levied, was to hire Mercenaries, which were more ferviceable, and could be kept longer on Foot than an Army raifed on the Principle of the Feudal Tenure.

[^182]:    2 Pope Adrian's Grant of the Inand of Ireland hath in it fome Particulars worthy of Notice. In the Firft Place his own Title is fomewhat fingular. He fays it was well known, that all the Illands on which the Sun of Righteoufnefs had rifen were undoubtedly the Patrimony of St. Peter. The Motive of granting is no lefs ftrange, which was, that the King had a pious Defire of introducing and fpreading the Chriftian Faith in a Country, the Inhabitants of which were already Chillians. But the Rent which was to arife to the Holy Father was very intelligible, the King was to pay a Penny for every Houfe, and to preferve the Rights of the Hoty Church throughout the llland. It is wonderful that fo wife a Prince fhould defire foch a Ball as this, by which he was to gain nothing. Giraldi Cambrenfis fays, he had a better Claim derived to him from the Conqueft made of fome Parts of it by the Saxons. Certain it is, that by recognizing fuch Powers as thefe in the Pope, Princes raifed Opinions in the Minds of their Subjects, that were frequestly attended with very troublefome Confequeaces.
    a This Monarch was born at Newhall in the City of Oxford, and being of very quick Parts, knew perfectly well how to manage the Tempers of Men, fo as to bring thent to his Purpofes. His Expedition to the Iloly Land was One of the moft expenfive that was ever undertaken by ana Englifh King, and our Defign requires that we fhould point out fome Inftances of this, He took out of his Father's Treafury at Winchefter Nine hundred thoufand Pounds in Silver. Be fold many of the Srown Iands cheap ennagh; bat many of thefe at his Return be refumed. To Hugh Pufar, Bifhop of Durham, he fold the Earldom of Northumberland for his Life, and the Earld,un of Sedbergh; which Lamburd thinks mould be wrote Sacbeorh, which comprehended the ben Fart of what is now called the Bithoprick of Darham, to him and his Suoceffors for Eleven thouland Pounds. The Firft of thefe he refumed at his Return, and forced the Bifhop to pay him thirteen thoufand Pounds more for the latter. The Taxes in his Reign were numeroas and heavy, levied on all Sorts of People, and fome under Denominations that were never heard befole Archbihop Ilubert afferted, that in the Space of Two Years he drew out of his Kiugiom Eleven hundred thoufand Marks. It is to be obferved, that though the railing thefe immenfe Sums munt have teen very grievous, yet the Nation fuffered much more from the Money bcing fueiat Abread, which fufficiently proves the Truth of what is allerted in the Text.

[^183]:    d. What is afferted in the Text, as to the Source of King John's Troubles, is exactly true. The King had Reafon enough to be difpleafed with Hubcrt Archbifhop of Canterbury, and he was fo to fuch a Degrec, that when he heard of his Death he faid, Now I begin to feel myfelf a King. The Monks of Cankrbury with great Secrecy, and without the King's Leave, chofe their Sub Prior Reginald, Archbihop, and fent him to Rome with Infructions not to divulge his El, wion till he obtained the Confent of the Pope, which he did not obferve, but as foon as he was beYond the Scas took the Title of Archbinhop Elect, which expofed his Brethren to the Refentment of the King. 'To pacify him they chofe on his Recommendation John Gray Bilhop of Norwich, and mont of them went to Rome to fupport one or other of thefe Elections. Immocent the Third was at this Thime Pope, a Man of flrong Parts and boundlefs Ambition. He quahed both Elections, and terrified the Mooks, who were totally in his Power, into a Third in favour of Stephen Langton an Euglifluman boun, but who had been brought up and paffed all his Life in France, and wis at that Time Chancellor of the Univerfity of Paris, and alfo Cardinal of the Roman See. The King was exceedingly exafperated, refufed to acknowledge the Archbiihop, and feized his Temporalities. The Pope as obftinate as he, interdicted the Kingdom, and raifed up fo many Enemies at Home and Abroad, that the unhappy King was forced; not only to acknowledge the Archbifhop, but meanly to refign his Crown to the Pope; and to accept it again under a yearly Tribute.

[^184]:    ${ }^{4}$ The Characters of Princes are with much greater Certainty learned from the Tenor of their Laws than from either Tradition or Hiftory. This Obfervation may moft Atrictly be applied tothis great Prince, who undoubtedly had a very large Share in the Framing and Contrivance of thofe that were paffed in his Reign, infomuch that fome have confidered him as the Author of them (Seldeni Opera, vol. ii. col. 1043). It is no Wonder therefore that in his Time thereflourimed fo many learned Lawyers, fuch as the Author of the Book entitled Fieta, from its being written in the Fleet Prifon, probably by one of the great Lawyers difgraced and confined there. Sir Gilbert Thornton, who abridged Bracton, Str Ralph Hengham, Breton or Briton, generally thought to have been Bifhop of Hereford, but more likely to have been a Judge, and we may add, though not with like Certainty, Andrew Horne. After his Deceafe his Memory was in the higheft Credit with the ableft Men of the Profeffion, fuch as Sir W. Herle, Sir Edward Coke; Lord Bacon, Sir Matthew Hale, all of whom have concurred in giving him the Character of one of the wifeft of our Kings, and the ableft of our Legillators, to which we may add the Commer dations in our own Times beftowed upon him by Blackftone and Barrington.

[^185]:    - Thefe Difputes began, as hath been before hinted, A. D. 1297, and notwithftanding in the Parliament held at London in the fame Year by the Prince of Wales, then of the Age of 7 hirtcen, the Charters were confirmed, and all the great Lords who had refufed to follow the King into Flanders were pardoned, this did not give entire Satisfaction. New Sufpicions arofe, and to remove thefe the King directed Writs to the Sheriffs, directing them to inform his People by Proclamation of his fincere and good Intentions towards them. In Confirmation of this he agrain confirmed them at Carlife the next Year, and directed Perambulations to be made of the Forcits. A. D. 1300 he confirmed both Charters and granted thofe Extenfions of them mentioned in the Text, directing Writs to every County for the electing Three Kuights as Commiflioners to tee thofe Charters fully executed, and to puninh Offenders againft them by Fine and Ranfom, cummanding them to be publihed Four Times every Year in the County Courts. After the Abfolution he obtained from Pope Clement the Fifth, he in 1306, by a Statute introduced by a very pathetick Preamble expreffing his great Care and deep Concern for the Peace and Welfare of his People, provided Remedies for all the Grievances relative to the Forefts. At the fame Time that he was fo attentive to his Subjects here, he likewife extended his Protection to thofe in his other Dominions of Wales, Ireland, and Scotland, efpecially in regard to the Oppreffions which they fuffered from the papal Authority,

[^186]:    f In the Account of the former Reign, it was principally intended to hew in what Manner the Norman Cuftoms were fo altered and amended, as to be formed in fome Meafure into a Syftem $\boldsymbol{A}$ chiefly by the Wifdom and Application of the Sovereign. In fpeaking fo largely of this Reign, our Defign is to let the Reader fee how eafily that Syfem was again broken and thrown into Diforder under a Sovereign of lefs Abilities, and confequently of lefs Attention. The Second Edward, from the Beginning to the Clofe of his Reign, aimed at plealing himfelf, and left the Care of his Bufinefs to others. The principal Sources of his Misfortunés were the too great Power of the principal Nobility, who werc in Effect fo many Princes, defirous of conducting all Things in their'own Way, and according to their own Wills, in which they did not always regard either the Letter or the Spirit of the Laws. The afpiring and intriguing Difpofition of the principal Churchmen, many of whom abetted the Barons, and in their Difputes with the Crown frequently added 10 their Military Force that of fpiritual Cenfures. Laftly, the Want of Prudence and Policy in the Prince, who often provoked them raflily, fubmitted when he wanted Power to refilt, and when he had Power ufed it with too great Severity.

[^187]:    F It will throw great Light on the Ififtory of this Peiod, 0 give a fuccitat Detail of the Ditputes between Edward and the Scots. At the 'Time of his Father's Demife; the bet! l'ant of that Country was in his Hands, and not a few of the Nobility adhoted to him, as thicy did afterwards to his Son. But Robert Bruce taking Advantage of the King's Ablener corvencd mort of the North, and made Excurfions into the Soath. This, as we have ihe wn in the Test, inducal Edward to make an Expedition againft him, A.D. 1310, when Gavellon penctratedas far as I'eath; tut the Country was fo ruined, that the Eiglifh Army could not fubliat. Whe great Defat at Bannochburn happened tise $24^{\text {th }}$ June A. D. 1313, where the king, as on many other Occafions, gave great Proofs of perfonal Counge. Four Years after Berwick was taken; tor the Recovery of which impoitant l'lace the King, a, foon as his Affiirs would permit him, made another Expe:dition, hut without Succels; and A. D. 1322 he made a Truce for Thirtun Jcirs. The Lofles fuftained in the fe Actions, added to the continual Incurfions of the Scots, occafiened the utmolt Mifery to boih Co ntrics, where the People at Times were reduced to foed upon Dogs, and even viler Food. Many of the Barons in the Northern Parts, under Colnur of defcading them/eves, became petty Fyrants, and were guilty of great Cruclies. At the Tiial of 'Thomas E:arl of Lancafter tine l'roceedings in which are preferved by John Trukcluwe, the Tanty betweon him and

    Ruburt

[^188]:    i The State of this Conntry, by a Train of deplorable Difafters, was fadly changed in a very Hort Space; for in lefs than Twenty Years after the Death of Edward the Firn the major Part of the great Nobility either fell by the Sword or perithed on Sc:iffulds. In confequence of civil Feuds, their Eftates had been reciptocally wafted and deftroyed; while in the Midit of thefe Miferies, all Ranks of P'eople were oppreffed with Aids, Taillages, Increafe of Cuftoms and Impo-
     this Reign hath found many Hiftorians to record them. The pincipal of thefe are Sir Thomas de la Moor, who lived in the Courts of the Three Edwards, John de Trokelowe, and Henry de Blaneford, Monks of St. Alban's. An anonymous Writer, fuppofed tobe a Monk of Malmefbury, all of them Contemporaries. Yet we want perhags the beft Hiftorian of tham all, Stephen Eiton, a Yorkmire Monk, who, Leland fays, wrote the Niemoirs of Edward with Candour and Fidelity. The Chronicle of Robert Boton of i'eterborough, the Contineation of Trivet's Annals, Adam Murimuth, Walter of Hemingford, Thomas Walfingham, Ralph Higden, and Henry Kugghton, to which we may add the Records that have efaped the Wreck of Time, and the Staic Papers preferved in the Third and Fourth Volume of Rymer's Collectiou.

[^189]:    k The Facts delivercd in the Text are of fuch Moment, that for this and other Reafons, it is neceffary, as far as poffible, to fix the Dates. Sume Writers fay that Edward the Third began his Reign on the Twentieth, others on the Twenty-feventh; birt it is certain that our Records phace it Jumary the 2 th, A. D. 1327. His Father was murdered on the 21 ff September in the fame Year. The Parliament at Northampton was affembled in March 1328, the Earl of Kent was beheaded March 19th 1330, the Parliament affembled at London, 4 Edw. IiI., on Monday after the Fult of St. Catherine, that is 25 th November 1330, when Roger Earl of March was arraigned, ex farte Domini Regis, and upon the Notoriety of the Facts of which he was accufed, codemned to be duwa and langed at Tyburn the Thurfay following, that is, November the 2 gth, ihnugh Barses fiys the 26 th. At the fame Tine the-Lords gave Judgnient upon Sir John Mautiewirs, to be drawn, hatged, and bcheaded for feduring Edmuind Earl of Kent the King's Uncle, and thereby bringing him to Death, promifing a Reward of a Thoufand Marks for taking him alive, and Five Hundred for bringiag his Head; they gave the like Judgment upon Sir Thomas Gurnay and William Ogle, for being concerned in the Murder of the late King. Gurnay was feized in Spain, and being ient from thence to Bayonne, was there embarked on board a Ship for Englind, but behended in his Paffage to prevent further Difcoveties. Mautrevers was forie Ycars afte wards pardoned. The Peers, upon Recollection, were by no Means fatisticd with their own Judgment upon the Earl of March, and therefore in the very next Parliament befought the King in Favour of his Son Edward Mortimer, that he might be reftored to his entailed Eftates, which was sratited 5 Ed. III. n. 13; afterwards Roger Mortimer applied in Parliament to reverfe the Judgment, which was accordingly done, and he refored to his tlonours and Hercditaments, 28 Edw. III, n. 8. There were many Mot: Pas both private and public to this Proceeding. The Family of Mortimer was allied to moft of the great Houfes in the Kingdom, and on the other Hand the Judgment againg him was of fuch a Narure, and fo directly contrary to Law, that it is no Wonder the Commons joined in procuring it to be reverfed.

[^190]:    ${ }^{m}$ The Title which Edward formed to the Crown of France was in Right of his Mocher. He admitted neverthelefs the Salic Law, which excluded Females; but according to his Conftruation did not exclude a Male defiending from them. He knew by Experience that a War againf France muft be carried on with grear Difadvantage from the Side of Guienne, aad this induced him to cnter into a Confederacy with the Emperor and other Princas. A. D. $133^{8}$ he had an Interview with that Prince at Colugnc, the moft fplendid that had been ever feen, and was there: created Vicar of the Einfire with much Solemniry. The next Year he made a Campaign with fmall Succefs on the Side of Flanders. He then returned to England, to procure frefh Supplies, and would have embarked ou board a very fmall Squadron, if the Archbifhop of Canterbury John Stratford, had not fent him Intelligence that the French had affembled a Fleet of Five hundred Sail to intercept him. Edward with equal Induftry aid Vigour drew together Three hundied Veffels, embarked his Forces on board them, and attacked the Enemy in the Harbour of Sluys the 24th of June 1340. Robert de Avefbuiy, p. 54-56. After this Viefory he undertook the Siege of Tounay, in which finding hinfelf baffed he concluded a Truce, and at his Return endeavoured to throw the Blame on the Archbilhop of Canterbury; as if tirough his: Fault, in not affording hin the Money he wanted, his Schemes had failed, whereas the Truth geems to be, that the Demands made upon him by fo many hungry Princes were beyond chep Abilities of his Subjects to defray.

[^191]:    n The Competitors for the Dutchy of Bretagne were John de Montfort and Charles de Blois. The former was the Heir Male, and yet was fapported by Fdward. The lattcr claimed in Right of his Wife the Heir Female; but heing his Nephew was protected by Philip de Valuis, who procured a Decree of the Pecrs of France in his Favour. Edward by this Means gaincot, as he conccived, an eafier Entrance into the Heart of France, and therefore fent over Sir Walter Manny, and afterwards fullowed in Perfon, but was not able to make any great Impreffion, and therefore returned to England. Philip to be revenged fent his Son John Duke of Nurmandy with a great Army into Guienne. Edward, to fave that beloved Conntry, aflembled a Fleet of One thonfand Sail, cmbarked a great Army, and putting to Sea was Twice driven back, and at length debarked at la Hogue in Normandy, and from thence carried on the War, as is chewn in the Text. The Batile of Crefly was fought 26 Auguft 1346 . It may not be amifs to remark, that this and the fubrequent Battle of Poitiers pretty clearly fhew how little the Feudal Syftem was ferviceable even in War. Edward's Army confifted chicfly of Troops in his Pay, long difciplined and inured to Service. Philip had with him the Flower of the French Nobility, and their feudal Tenants, Men mich fuperior in Number, and not defficicnt in Courage, but lefs under Command, and after the Firft Charge eafily defeated. Calais furrendered Auguft 3, 1347. Edward had before it a Fleet of Sceven hundred Sail of his own Ships. His Army was cantoned in good Barracks, and befides large Magazioes of Military Stores and Provifions, there were Two grcat Markets or Fairs for the Sale of Wool, Cloth, and other Englifh Goods and Manufactures, and yet the Expence was fo heavy as to difpofe the King to conclude a Truce. David King of Scots was taken during this Siege.

[^192]:    - King Edward feems never to have had any fanguine Notions of his own Title to the Crown of France, and thercfore from the Beginning of the Difpute had repeatedly intimated to fucceflive Popes, his Inclination to accept of an Equivalent, and upon this Bafis it was that upon the Mahing of a 'Truce, a Negotiation for a leace was commonly fet on Foot under the Papal Mediation. The French Kings Philip and John feem to have been lefs ferious in this Matter, and having: the Popes in their Intereft, amufed Edu ard from time to time with illufory Propofitions, fometimes. offering to reftore all they had taken from him in the Neighbourhood of Guienne, holding out at others the Cemfon of an ample Tenitory about Calais. At length Edward looked upon the: Peace to be as good as concluted, when King John declared his Son Charles Duke of Aquitain, and fent him to take Poffefion of it. Edward upan this loft all Patience, gave the fame Title tothe Black Priuce, and fent him thither with fome Force. to maintain it. He was very acceptable to thar leuple, as having been born ar Bourdeaux, and very caligy levied an A'my of Twelve thoufand able and experienced Men, nut Onc-fourth of which were Englifh, and with thefe he made the Expedition mentioned in the Text. King Juhn came up to him on Sunday the 18 th of September 1.356 at Maupertuis near Poitiers, in the Midft of Vincyards. If tief French Monarch had engaged him that Day inltead of deferring it to the next, or if he had contented himfelf with furrounding him, he had probably carried his foint. But the warm Temper of the King, and the Vimatity of the lrinces and Nobility who were with him, led him to attick the next Morning, and produced that decilive Defcat.

    P King Edward in his Return from his Excurfions towards Paris met with a violent S:om of Thunder and Lightening, by which fome Thoufands of Horfes, not a few of his Soldicrs, and: fome Perfons of Note in his Army were fain, on which the King made a Vow to grant the French Peace. This Vow however hath been fuppofed to be no more than a political Colour ; but it is very likely to have been a real Motive from the Nature and Moderation of the Terms. It was concluded near Chartres on the 8th of May A. D. 1360. The criginal Treaty: anfisted of Eoty Articles, fane of which were revifed and altued before the'; were fyom tos

[^193]:    - Charles, who from the Succefs of his political Arts the French furname the Wife, meditated the Breach of the Treaty of Bretigny from the Time of his Acceffion, if not before Under Pretence of raifing Money for the Ranfom therein Thpalated, he obtained great Subfidies from the States of his Kingdom. Part of this Money he tepployed in hiring the Companies as they were Ailed, which were the mercenary Soldiers employed in this long War, and which now fer up for themfelves under feveral Commanders, fome of wham were Egglinmen. Thefe he fent to join the Forces of Henry the Brother of the King of. Cantile, and thofe of the King of Arragon his Prorector.

[^194]:    Y It lath becn fhewn from various Inflances that Edward had great Abilities, and on manyz Occafions difcovered much Zeal for the Interefts of his Subjects. But his Ambition milled him. in many more. In this he exceeded all his Predeceffors, having formed in his own Mind Prou-. jeíts for reducing Scotland, France, and Flanders, in all of which he made no inconfiderable inourcre, and yet fucceeded in none. His War with Scotland totally ruined that Kingdom, and is had dimolt the fame Effect with refpeet to the Northern Parts of England. In big War with:" France he fpent much more Money than King John's Ranfom. : His Intrigues in. Flanders proo. duced the Murder of James Arteville his moit active and aimot only faithful Allys . Ifsforeign Expeditions extaufted the Treafare of the Nation, diminilhed, the Number of his Subs:jects, and in g great Meafure. defroyed the Shipping and Commerce of the grext Ports. He thought to repair this, by encouraging the Refort of foreign Merchants hither, whick bad indeed a good Effect in refpect to his CuRoms, but in other Refpetes, inftead of alleviating increnfed the Eril. His removing the Staple to Calais was another wrong Step. His confentiog to a fimptuary Law for reftraining the Bulk of the Nation to wear coarfe Cloths directly counteraCted what he had done in Favour of the Woollen Marafagture: His temporaty Prohibitions of cxporting Wool weremere Contrixance to eohatesthe Price of what wasexported on his own Account. The State of the Nation find opemed the Eyes; and at length the Lips of the Houfe of Commons. He himfelf et Fimes felt great Diftrefles. He pawned his own and his Confort's Crown Abroad: He aftervmerds pivined the Quecw and: her Childre, while he came Home to raife Money for his bungry Allief, ine after this payriedxhis Crown twice to Sir John Wefenham, with whom it remained Eight Years before hectoudd redecm ic: Ye with.
     Thares.

[^195]:    States of Scotand would confent to acknowledge him for their Monarch on the Demife of David. To facilitate this, an Indenture was drawn up in the Prefence of the Two Kingo, dated 27th November $\mathbf{1 3} 63$, in which he promifed to reftore all the Places he then held, to give ample Compenfations to the Englifh Barons for their Claims to Lands granted by his Grandfather, to remait what was remalining of David's Rtanfom, to reftore the Marble Chair, and to be crowned on it at Scoon, to govern Scotland by its owa Parliament, to beftow all Emplofments Ecclefiaftical and Civil on Natives only, to allow a free Trade to the Scots Merchants in England, and many other Things equally advantageous. Rymer's Foed, tom. vi. p. 426, 427. This Propolition was accordingly made to the States and rejected; notwithfanding which Edward perfifted in the moit gracious Behaviour to. David and his new Queen, and to the Clergy and Nobility of Scotland fo long ád tived.

[^196]:    'This unhappy Prince was born during his Father's Adminiftration in Aquitain A. D. 1366, and from the Place of his Birth filed Richard of Bourdeaux. He came to the Cruwn by the Death of his Grandfather 21 ft of June 1377. The Rifing of the Commons was in 1381 , the Archbifhop of Canterbury being beheaded by them on the $14^{\text {th }}$ of June. The Archbifhop of York, the Duke of Ireland, and Michael de la Poole Earl of Suffolk fed the Kingdom, A. D. $138 \%$ and all died in Exile. The Archbihhop became a Parifh Priett for Bread in the City of Louvain, where the Duke of Ireland died alfo rery poor, though the Earl of Suffolk, who died at Paris,

[^197]:    ${ }^{m}$ The War with France was the great Object of this Reign, and therefore it will be proper to enquire a little into the Motives upon which it was begun and profecuted. The King himfelf was of a martial Difpofition, which difpofed him to liften to Propofitions of this Sort. Thefe are faid to have come firfl from his Father, who thought it the beft Expedient for attaching the Nobility to his Perfon and Fortunes, and by finding them Employment Abroad, to prevent their caballing at Home. They were countenanced by the Clergy, as appears by the Speeches in Parliament by his Uncle the Bifhop of Winchefter as High Chancellor. The Nobillty were eager for this Meafure, on the King's promifing them Lands in France and other Rewards. But the Circumfance that gave the greatel Encouragement to this arduous Enterprize was the Diffenfions in France, of which the old King had availed himfelf by fiding, as bis Intereft directed, fometimes with the Faction of Burgundy, fometimes with that of Orleans, deceiving in their Turns, and in their Turns being deceived by both. Amongft all thefe Motives we find nothing of national Advantage, , hich in the Policy of thofe Times was but little confidered, and therefore we need not be furprifed at the Confequences, that in this Refpect attended the carrying the Glory of the Englifh Arms higher than it had been ever carried before:

[^198]:    - The Firf Army tranforted into France, taking in fuch as attended thereon, amounted to Fifty thoufand Men. Twenty thoufand were employed the next Year for the Relief of Harfleur, and fome Thoufands on Board the Fleet commanded by the Earl of Huntingdon. The Second Royal Expedition was at leaft equal and the Third not inferior in Force to the Firft ; fo that upon the Whole Two hundred thoufand Men at the lealt were carried out of this Country, the Lofs of which muft have been feverely felt. That it was fo in Fact,"appears from the higheft Autbority, Stat. 9. H. V. cap. 5. which recites, that in the Fourteenth of Edward III. that is, about Fourfore Years before, every County being replenifhed with Gentlemen of Subflance and Fortune, it was emacted, that no Sheriff hould ferve more than One Year, whercas at this Time, through PeftiIence, and foreign Wars, the Number and the Ciffumftances of the People were fo leffened, that the King wrs empowered to continue Sheriffs for the Space of Four Yeafs. In refpect to the general State of the Nation, it may bc collected from the Royal Revenue, of which a difinct Account was leid before the Houfe of Commons, amounting to Fifty five thoufand Seven bundred Fifty-four Pounds and a few Shillings; whereas in the Twentieth of Edward III though then greatly reduced, it amounted to One hundred and Fifty-four thoufand One hundred Thirty-nine Pounds; add to this, that King Henry had been obliged to coin Thirty Shillings out of the Pound of Silver ; whereas in that Year of King Edward be coined no more than Twenty twio Shillings and sixpence. In fuch a State of Things he was compelled to have Recourfe to the voluntary Loans of fuch as could afford it, to heavy Impofitions upon the foreign Merchants fettled here, grounded on the Wealth obtained by their Commerce, through the Favour of the Crown, and by large Suns levied on the Places he reduced in France. All thefe could not hiader his falling inro fuch Neceffity, that befides borrowing a large Sum upon his Crown, from his Uncle the rich Bifuop of Winchefter, he was conftrined at different Times to pawn his Jewels to feveral Pcrfons fir Sums even fo low as One hundred Marks. Circumftances hardly credible, if we had not the atof awthentick Teflimonies to prove them.

[^199]:    F There cannot be a Aronger Proof of the low and wretched Condition into which both England and France werc reduced than the Weaknefs of the Armies on both Sides, feldom more: than Ten or Twelve, hardly ever Twenty thoufand, and thefe on either Side, in a Country: wafted anddeftroyed, with much Difficulty fubfifted. The Duke of Bedford; though a wife and a juft Prince, was forced to raife fuch Sums in the Provinces onder his Jurifdiftion, as, added to the Circumfance of their being Forcigners, made the Yoke of the Englifh odious and incupport-able to the French. When Edward the Third held King John Prifoner, the Dauphin, in order toobtuin Supplies, affembled the States of France, and by their Liberality was enabled, after he became King, to recover the Dominions that he had loft. But this War was as fital to the Liberties of Frauce, as that was favourable; for, upon the Pretence of vifible Neceffity, Chiarles the Seventh. raifed Money by his Edifts; and by large Grants to his Nobility, which were requifite to retain them in his Intereft, readered them very potent, and alike formidable to the People and to the Crown. In England the War had a very differcat Effect; for, as it could be only fupported bySupplies of Men and Money raifed by Authority of Parliament, the Commons extended and eft ablifhed their Authority. The Character of the French King Charles was very prablematic, and though late Writers have reprefented him as a Prince of great Virtues and Abilities, yet in his own Time he was certainly efteemed a $w$ eak Man, and all his Succeffes attributed to his Generals and Statefmen ; and therefore, as the French furnamed the Charles the Fifth the: Hife, they beftowed the Surname of Fortunate or Victorious on Charles the Serenth.

[^200]:    * As the Kingdom of France was loft and ruined by the Diffenfions of the Princes of the Bloods fo the like Diffenfions and Miftakes of the Princes of the Houfe of Lancafter were the principas.

[^201]:    - While the War with France continued, the great Expences attendiag it octafioned a Defire of its Conclufion. But this by no Means reconciled the Nation to the Manner in which it wys brought about. The Duke of Armagnac, who was in Poffeffion of the greaten Part of whiat is properly called Aquitain, offered all his Territories with his Daughter in Marriage to King Henry: The Offer was accepted, and the King actually betrothed to her. The French irritated at this, deprived him of his Dominions, and Henry's Minifters, inftead of giving him any Support, fent over the Earl of Suffolk, who concluded the Marriage with the Princefs Margaret,' who, inftead of bringing any Thing, was bought by the giving up Maine to her Family, which laid open Normandy to the French. Notwithfanding this, Suffolk's Negotiation was approved. by Parliament, and the King gave him all the Help that he could : But being confidered as the Author of the Duke of Gloucefter's Murther, he was profecuted by the Commons; as is related in the Text. The fubfequent Difputes between the Dukes of York and Somerfet were in a great Meafurc perfonal. They were both very powerful, in confequence of their refpective Properties; but more fo from their Alliances. The Duke of York Having. married the Daughter of the Earl of Weftmoreland, was fupported by the Earls of Salifibiry and Warwick, both of the Houre of Nevil, and by feveral other great Lords connected with theien. The Duke of Somerfet was not inferior to him in this Refpect ; fo that when $\Rightarrow$ Meeting was propofed at London for conciliating their Difputes, every One of thefe Lorts bromight a Namber of fits Retainers \% hispon Liverice. and Badges, fo that in Effect the Two Parties had with them cach ant Army reddy to take the Field, fome Lords having Four hundred of thefe Dependants, aty fome many yone, which from the idle Courfe of Life they led, as a Dininution of Induntry, opefited with great. Detriment in many Refpefts tothe Nation. The incidental Circumflances thatiritatcof the Minds of the People, were the continual Jealoufy of the Queen's Correfpondence with the Freach Court; of which her Father had been ever a zealous Partizun. The Revolt of the "nhmbatonto of "Gdientie, after it had been fubdied by the French in Favour of their old Mafters the exten, for the Sup. port of which the brave old Earl of (Talbot) Shrewsbury, If fome TVoufthat tew, wife Cent
     Defcent made upon the Coafts of Kent by the Prench, Who plundered and burnt the Town of Sandwich, which, as Well as an Irruption of, the Scots, were attributed to the Imtrigues of the Queen.

[^202]:    - The Number of People in this Ringdom feems fill to have been diminifhing, even before the Devalation and Deffruction occafioned by the Civil Wars. The conftant Supplies fent over to the feveral Regents in France, the Croifade of the Cardinal of Winchefter into Germany, and the Pilgrimages that werc then in Falhion-into foreign Countries, muft have carried away Numbers. It feems to be a Proof of this, that Provifions were made in almoft every Parliament for the Relief of decayed Towus. The Graats for the publick Service, the Circumftances of the Nation coifidered, were aifo very large; and befides the accuftomed Manner of raifing them by Duties upon Wbol, Recourfe was more than once had to the old Practice of tuxing Land by Knight's Fees, and fome new Modes were alfo introduced. Thefe were found requifite from the extreme Neceffity of the Crown, aid notwittiftanding afl the Methods ufed, a Debt was contracted of between Three and, Four hundred thoufand Pounds on the Faith of Parliament, in order sodicharge which the King, at the Requeft of the Commons, confented to Tbree feveral Refamptions, with foime Exceptions in favour of particalar Perfig. But notwithftanding all thefe, and fomeother Misfortunes, our political Syftem was fo muclizuty foved, and the Subjects Property, at leaft for thofe Times, fo well feenred, as we learn from the clear Teflimony of Chief Jufice Fortefeue (de laudibus legam Anglix, cap. 18.) that conliderable Improvements were made. A Law paffed in the Reign of Richard II. for permitting the Exportation of Corn, when Whent was no more than Six Shillings a:ad Eight'Pence Quarter, was renewed, and after feveral temporary Trials, rendered perpetual, which muft have been very beneficial, fince in fome Years the Price fell fo low as one Shilling. Another Law was made for promoting the Navigation of the River Lee. For ceabbling the Chancellor to grant Coming for Sewers, which bad been done before by royal Prerogative. Ano-

[^203]:    a As the Account given ia the Text differs entirely from our of Chromeles; and"from mofiof our modern Hiftorians, it may for that Reafon, and alfo becaufe it with thropgreat Light ont the Hiftory of his Reign, be very proper to enter into fome Particy ${ }^{2}$ rs relative to this celebrated

[^204]:    The Duke of Buckingham, the moft powerful and the moft popular of the Nobility, was the prime Confident of the Protector, and the chief Inftrument of his Ambition, notwithftanding he had married the Qucen's Sifter. The Plan concerted for depriving his Nephews and raifing Gloucefter to Sovereignty was exceedingly fpecious. Moft of the Nobility and of the Prelates, with many Perfons of Rank and Diftinction, being come to London to aflift at the Coronation, a Party amonglt them were engaged to prefent a certain Inftrment to the Duke of Gloucefter in the Names of the Lords Spiritual and Temporal, and Commons of the Realm, Aating what they called the Grcunds of the Nullity of the late King's Marriage with the Queen from the Want of the Concurrence of the Peers, the Privacy with which it was concluded, and the King's being under a Precontract to the Lady Butler, whence they deduced the lllegitimacy of the Children of this Marriage ; they took Notice next of the Incapacity of the Iffue of the Duke of Clarence from the Attainder of their Father, from which Premifes it was inferred, that Richard Duke of Gloucefter was the true Heir of Richard Duke of York, on whom and on whofe Pofterity the Crown was entailed by Authority of Parliament. This Bill, as it is called, without either Signature or Daie, declared the Title and procured the Admiffion of Richard to the, regal Dignity without any vifible Interpofition of Force. This manifettly proves the Intluence of the Nobility and Clergy; who feem to bave acticd from

[^205]:    - It cannot well be doubted that King Edward had a very high Opinion of his Brother the Duke of Gloucefter, who had conftantly flared his Fortunes, accompanied him in his Adverfity, atd contributed to his Profperity by. expofing his Perfon in his Service from the Time he became of Age. He was in great Favour alfo with the Nation, on account of his recovering lerwick from the Scots, and as far as he was able had continued Neuter in refpedt to the Factionsat Court. As he had been fome time abfent from thence it is very likely he took his Notions of the State of Things from the Duke of Buckingham and Lord Haftings, both of them violent Enemies to the Queen and to her Family. Her Brother the Marquis of Dorfet, on the King's Death, is faid to have entered the Tower, and to bave made free with the Royal Treafure, which with other Circumftances were reprefented by Buckingham as fufficient Reafons for arrefting the Earl of Rivers and the Reft, in which Meafure Hartings, who hated the Queen and was hated by her, fully concurred, and afterwards advifed the putting them to Death as neceffary to the Protector's Safety; But be was immoveable in his Fidelity to the young King, and refinted all the Sollicitations of Sir Wi liam Catelby, the Duke of Gloucefter's Confident and his own, which when the Duke of Buckingham underfood, he advifed and concurred in removing Haftings alfo. After his Death Buckingham principally managed the Invitation to Gloucefter to affume the Crown, and to fet alide his Neptews, as appears from the Continuation of the Hiftory of Croyland Abby, and the very few contemporary Writers that ftill remain, and from whom the Facts mentioned in the rext are taken. It may be prefumed that thefe contained a genuine Reprefentation of this dark Bufinefs; to be convineed of which the Reader may. confult. Camden, Britan. p. 260, where he gives a full and fair Account of this Matter, though he confidered Richard as a Ufurper, a Marsherer, and a Tyrant.

[^206]:    b This Itenry Stafford Duke Racianh? wat lineally defoended by the Mothen's Side from Thomes of Woudtock, Son 10 I wand the Third, and in Her Right rlamed the luheritance of the E !at of Hereford, which ha! been the Patrimons of the Houfe of Lancaiter, and was at that Time in the Crown. In the Recig of Ledward the Fourth be mate his Court Alrongly, and fitting as High Steward in Paliament (Hitt. Croylandenfis Contin. p. 562. ) pronounced Judgment of Death upon the Dahe of Clarence; but was not able to precurc the Lands of Hercford and the Uffice of High Cuatuble, which the lobuns who had borne that Title enjoyed. Some b. y that he met with a rede Repulite in this Suit from King Pichard, ad therenpon kfthim at Gloucefter in Difcontent. But this cannot be true, for Sir Wiliim Dugdale tiath giren us a Lift of the Lands reflored to him upon this Cham, and Strype, thongh no Farourer of this King, in his Notes upon Fuck's Hiftory, exhibits a long Catalogue of Cirants made to him by that Prince both as Protector and King, which jultifes Richard in filing him, in a Letter to his Chancellor the Bifhop of Lincoln, the moft untizue Creature living. Ite was a Man exceedingly proud and vain, and treated the Welch whom he put in Arms with fuch Intughtinefs as to occalion their Dcfestion, which obliged him to feek his Safery in Flight. It is faid that he made fo fieca Confeffion in Hopes of being admitted to the King's Prefuce, when he intended to have flabbeid him with a Dagger. This Confeffion proved fatal to feveral Pcrfons of Dittinction, and amongt the Reft to Sir Thomas St. Leger, who had married the Duthets of Exeter the King's sifter. This, and other Executions like thofe of the Earl Rivers, Sir Richard Gray; and Lord Hanings without any Trial, leave fufficient Reproach ugon this Monairch's Charakw without having Recourfe to Facts that are lefs ccitain.

[^207]:    c The Two preceding Notes were intended, not fimply to fupport the Fafs mentioned in the Text, but alfo to thew the Complexion of this Age and the Condition of the l'eople, fince from them the Reader, will difcern the bad liffeits of fueh immenfe, and in fume Sort indefeafible Fiftates in the Hands of a few of the Nobility and Gentry, :who combining into Parties cither oppreffed, or by a rude Hofpitality drew the meaner Soxt into a fervile Dupendency, equally fatal to Induftry, deftrustive to Liberty, and ferving only to fupport thofe Fends which enervated legal Authority, and enabled thefe great Men to wreak their Refentment on each o:her at the Expence of pablick Peace and publick Profperity. In fuch a State of Things theic was the prateft Need of wiferlaws being enated to rone out, or at leaft to diminith thece fivil, ard more effetually to fecure the Liberties and Propertias of the Commons. Rechard hed but One Parliament, the Statutes made in which were comprehended in Fifteen Chapters, mot of thefe are wigheyin Point of Matter, and at the fanc Time weil and clearly exprelled. His Acts were the firtt that we have printed. From his Time our laws have heen peoned, wot in latin w: Ficach, but in Englih, and in his Days pivate Ac̈ts began. One of the Laws emeted in this Pardancut w... for removing or at leaft diminifhitg the Mifchicts occifioned by fecret Feofineurs and Trunt, the Confequences of frequent Troubles, and which were excectingly denimental to inneecut Perfons: By another, that infidious Tax of Benevulence, by which People werc obliged to give, not whethey themfelves pleafed, but what would pleafe the Prince, was for cver abolinch. Juftices of the leace had a Power given them to Bail, which they had not before, and Men's titfects were fecured from Confifcation till after Conviction. It was provitad, that fuch as were fworn upow Juries in the Sheriff's Court thould have a Property of Twenty Shilings per Annum. On a Complaint that Foreiggers, fuch as Venctians, Genoete, Flo:entincs, Af uinas, Lucheric, Sicilians, ata Eatalans, dealt not only as Merchants but as Retailers and A1mentacturers, and would take no Apt, dupices or Servants but Foreigners, it was enactel, that they thould rot fell by Retail or conplogit Sirangers in their refpective Tiades but their own Coun 1 ymen. Regulations were made for $\mathrm{m}_{\mathrm{k}}$ proving Brond Cloth, and for fettling the Contents of Veffels filled with Wine and Oil. It was alfo enacted that certain Manufactures which were now made to Perfection in Eogland, fhould not be brought hither out of other Countrics. Mof of thefe Statutes are dtill in Force, and the Confequences of them when firft nade were fo well relihed, that Camden fays, "Richard was moft worthy of the Royal Title, if by evil Arts and foul Deeds he had not arrived " at the Kingdom, and that in the Opinion of the moft pradent, though he was numbered "amonght bad Men, he was neverthelefs to be reckoned amongf good Princes." Lord Bacon likewife owns, that "He was a Prince in Military Virtue approved, jealous of the Ho"nour of the Englifh Nation, and likewife agood Law-maker for the Enfe and Solace of the " womon People." Strype alfo admirs, that abftracted from the horid Imputations that lie up,n his Memory; one might judge him a good King, as he expreffed a great Care of the good Eftate ci his People, fhewed a Conccts: to have Wickednefs reprefled, and carriced himfelf with due Regard to Religion and Learning.

[^208]:    d The Dates requifite to be maitioned in this Mort Reign are but few. A. D. 1483, June $13^{\text {th }}$ the Earl of Rivers, Sir Richard Gray, \&c. were beheaded at Pomfret, and the Lord Hantings the fane Day in the Tower of Loudon. The 1 gth of the fame Month Richard affumed the Title of King, was proclaimed the next Day, and on July Sixth was crowned. Augult 24th he created his Son Irince of Wales. November Second the Duke of Buckingham was beheaded at Salifbury. A. D. I484, Jamuary 23 d , the Parliament was opened at Weftminfter. In April Pince Fdward died. A. D. 1485 , March 16 th, Queenn Anne deceafed. Auguft 22d, the fameY ear King Richard was flain in the Battle of Bofworth.

    - The Infances that have been already given of the Princes and Nobility killed in Battle, barbaroully exccuted, and driven into Danifhment, fully fupport what has been faid. It may not be

    Vol. I!.

[^209]:    - The Rebellion in the North flowed from. Two Sources, Dillike to the Meafures of his Ciovernment, and Difaffection to Henry's 'Title and Perfon. Thefe concursed in th. perpula Hatred to Henry Earl of Northumberland, a Mau of a haughty Temper, who had uncertaken in a rught Manner the Execution of a harfh Bufinefs, and was befides obnoxious for having decited Riige. Richard, whofe Memory was very dear to thefe Northern People, for Keafons that fully appear ia Drake's Hiftory of York. The Earl of Surry having extinguithed this Fire, Henry went ia Perfon to the lait-mentioned City, where he caufed the Firft Stirrer in this Commotion, foha a Chambre or Chamberlain, to be hanged on a very high Gibbet in the Midn of a fipare (i,Mow-, upon which hung Numbers of his Companions. He then left Sir Kichard 1 uatall why the Fax to the laft Penny, and to fine and mafom inferior Offenders, according :u his (nitom of turning every Thing to Profit. The Tax againft which the Cornifh wie, was gimel on wecount of the Scuts War, in which thefe People conceived they had no Concern, honn a fanccit that the Northern Pcople by their Tenures were bound to defend themfeves. They dienaral againlt the King's Minifters, who they faid put him upon feeceng his Peopie, and they comminted no Devaltations : in their Paflage, in Hopes of making it a common Canfe, and were efocially perfaded that the leople of Kent would join them, in which however they weredifuppointed.
     Kin!! hed enetmped a numerous Army en St. Geurge's. Fields to cover them. As fon:a the Re. seis were defcated, Henry, to new that he could paife as well as punifh, font Comabibiomers into Kcat to acknowledge in very frong Terms his Senfe of the Loyalty of that Conaty, the beficits. -f wish appared fous after, when Perkin came with his Ships upon their Coalt.

[^210]:    - Thic Spirit of Confufion which had fo long reigned continued fill as ftrong as ever, from the Jcaloufice of fome, the Ambition of others, and the Defpair of Numbers. This kept the Nation in a reflefs Condition, and no Doubt weakened in no fmall Degree the Endeavours of the King and Parliament to promote public Tranquillity; which, for hisown and his Family's Sake, was Henry's Intereft by promulgating wholefome Laws for eradicating old Abufes, and promoting gencral Induftry. The Rumour of the Duke of York's being in France roufed the Attention of fuch as wihhed to raife their own Fortunes by another Revolution. Sir Ceorge Nevil, Sir John Taylor, and many other Gentlemen reforted to him there, as did likewife one Frion (with what View the Reader will for himfelf determine) who had been the King's French Secretary. They fent over fuch flattering Ascounts to the Friends of the Family of York, as put them in Motion, and induced them to fend over Sir Robert Clifford, a Man of Rank and Character, who knew perfectly the Son of King Edward, to fetule their Sentiments. He affured them that this young Man was certainly that Prince, and his Report had fuch Effects as. alarmed the King exceedingly. He took Two Methods to defeat thefe Defigns, the Firft was attempting to prove the Murder of the Two Princes by Richard, from the Evidence of Sir James Tirrel, who was faid to have directed that execrable Deed, and one Dighton, who it was believed had performed it. Lord Bacon agrees that in this he was not very fucceffful. The next Step was to difcover who this Adventurer really was, is which he was cfteemed to have been more lucky, and publifhed : plaufible Narrative, which Nobody durft contradict. His moft effectual Engine was the corrupting fome of the pretended Duke's Adherents, and in confequence of their Infurnations, Sir Simon Montfort, Sir Thomas Thwaites, William Dawbeny, Efq; and feveral other Gentlemen, were convicted and executed. The Dean of St. Paul's, and fome other Clergymen of CharaCter, were condemned, but not put to Death. At length Sir Robert Clifford cameover, accepted the King's Mercy, and accufed Sir William Stanley, the Brother of the Eanl of Derby, Henry's Father in-law, his own Lord Chamberlain, and the very Man who fet the Crown upon his Head, all which could not foften his Refentment. Sir William was convicted and fuff.red; and by his Attainder Forty thoufand Marks in. ready Money, and Three thoufand Pounds a Year came to the Crown.

[^211]:    p This Proclamation was preferved by Sir Robert Cotton, and is publifhed at large by Lord Bacon, notwithftanding it contains a very different Picture of Henry's Reign fiom that exhibited by his Lordmip. In this Piece, the Perfon ftiling himfelf Duke of York gives a very fuccinct Account of his Prefervation when his Brother was murdered, yet commends in other Refpects Richard's Adminiftration, laments the Fate of Sir William Stauley and other noble Perfons who had fuffered in his Caufe, charges Henry with employing none but mean and intereflid Miniflers, whom he enumerates. Affirms, that though he pretended to have deftroyed a Tyrant, he was himfelf a greater, inftancing his Oppreffions, Talliages, and Exactions, all which he promifed to remove in cafe of Succefs, and to govern as Edward the Fourth had done in the latter Part of his Reign. He promifes a Reward of a Thoufand Pounds in Moncy, and One heudred Marks a Year, to whoever fhould kill or take his Encmy (King Henry) and concludes with declaring, that the King of Scots affifted him upon Principles of Generofity and Honour, and had not exacted from him any Conditions whatever. This Declaration produced no Effect, probably for thefe Reafons: The principal Perfons attached to the Houfe of York were already put to Death, Bed to Sanctuary, or in Prifon. The People in the Northern Couvties had been already expofed to fuch frict lnquifitions, and fuch fevere Treatment, that their Spirits were Froke. Laftly, he came in with an Army of Scote, againft whom thefe People had an hercditary Hatred. Henry the Seventh had in this Refpeat the good Fortune of Henry the Fourth. Me encountered and deffroyed in Detail, Enemies that probably might have borne him down, if shey had attacked him at once and in Concert.

[^212]:    I The Confeffion of Perkin Warleck, mentioned by the King, when it was firt taken, in 2 Ietter to the Mayor of Waterford (18th OSt. 1497) repentedly read by himfelf, and at the Place of Execution, did not afford full Satisfaction in thofe Days, when the Multitude beheld his Miferics with Wonder, and many amongt them with Pity. A lrieft defirous of availing himfelf - of ponular Difontent, carricd one Ralph Wilford the Son of a Shomaker of Loadon into Fent, where he endeavoured to make him pals for the Earl of Warwick; for which the poor Creature was hanged. This foine think haftencd the Fate of the Earl himfelf, which was mof pitiabie, as he was clearly incapable of committing any Crime, being fo ignorant, that he did nos know one Animal from another (Hall Henry vii. fol. 50.) In Ircland, a Confpiracy was formed in Favour of a Baftard Son of Richard the Third, who had been kept long in Prifon, and finifhed his Days there at this Juncture. Edmund Earl, or as the Continuation of Fabinn's Chronicle calls him Duke of Suffulk, retiring on fome Dilcontent into Flanders, the King full of Jealoefy directed Sir Robert Curfon Guverior of the Cafle of Hamme to defert to him, and to give him the more Cr r caufed him, together with the Earl and Five more, to be folemnly accurfed as his Encmies at $S$. Crofs. Upon his Informations many P'eople of Quality werearrefted, and Sir James Tirre' .. Paul's and Governor of the Caftle of Guifncs, who had failed the King's Expectations i s, Banneret, Death of Edward the Fifth, and his Brother, Sir John Windham and others v a proving the holding a Correfpondence with him. Philip Arch-duke of Auftria, un.' reve executed for Suffolk lived in the Low Countrics, becoming King of Caftile in Right. der whofe Protection Paffage with her to Spain was driveu by a Storm on the Coaft of E. of his Wife Joan, in bis month. The King to do him Honour invited him to his Cour aghand, and landed at FalMagnificence as well as Kindnefs, yet before he fuffered him $\cdot . i$, and treated him with much fend for Suffolk, who was carried to Calais, from thence hr io depart, prevailed upon him to committed to the Tower, where when he had remaine. . Ought over under a frong Guard, and his Life to his l3rother of Spain) He was, as lord $r$ aforbert fays, beheaded wing haring pronifed by Ilcary the Eighth, in confequence, as it was tt aught, of his Father's Inswithout logal Caufe

[^213]:    s Amongt other Methods which the King practifed to amufe James the Third, there wasOne very fingular, which was the connecting their Families by Thrce Matches. To the King: he offered the Dowager of Edward the Fourth, and Two of her Daughters for his Two Sons.. It came to nothing, and very probably was never intended. As he gave that Prince no Affiftarce in his Troubles, fo he kept a ftrict Eye on his Son, though a Stripling, from the Moment ${ }^{-}$ of his Accellion, and to prevent his giving him any Trouble, cither formed or at leaft encou: raged a Defign of ieizing his Ierfon, and that of his Brother the Earl of Rois, in which we may: be furc he was in cameft, from his advancing a Sum of Money to Three Perfons of fome Quality who undertuok it, Rymer, Tom. $\therefore$ ii. p. $44^{\circ}$ : He had enough to do with this young Prince afterwards, what the lafligation of the French King and his Queen was frequently difpofed to give him Trouble, but at the fame Time found Employment for the Northern Lords in the Deefence of their Property on the liurders. The 'Two Inroads he made in favour of Perkin engaged: the King (as is fuid in the Text) to make ufe of Don Pedro de Ayala; Ambaffador from Ferdidand and Ifabella, by whofe Negotiation it is thoughit lie gained a thorough Infoght into that Prince's Dilpofition, whom ine mannged afterwards by Dr. Fox, then Binop of Durbam, who * propoled to him the Marriage with the Piincefs Margarct, at that Time very young, and by ther Hopes of it kept him quict till it was accomplithed, when the was in her Fifteenth Year. HerPortion was Thirty thoufand Nubles or 'Ien thoufand Pounds, her Jointure Tiwe thoufand: Pouids a Ycar, and One thoulind Pounds Scots, which made Five Hundred Marks Sterling for her Pify Purfe dusing the King's Life. The Jointure was confirmed by Parliameut. It may not $r$ be amifs to add, that the Mariage Portion given with Katherine of Spain to Prince Arthary was Two hunded thouland Crowns, making about Forty-one thoufand Six hundred and Sixty-. frx Pounds, and that the Portion which Henry fipulated to give with his Daughter Mary to the:Arch duke Charles of Anflia was Two huadred and. Fify thoufand Crowns, whigh Marriage : however never took Effect. Heary himfelf entered into a Contrat (whing never took Place) for a Second Marriage with Margaret Dutchefs Dowager of Siavoy, and King Ehilip: fipulated ton gixe her Three humdred thoufand Crowns, amounti $\cdot \frac{2}{5}$ to Sixty thoufand Poands Steniag.

[^214]:    * Notwithnonding the numerous and bitter Reflections on Henry the Seventh for his Behaviour in this Affair of Bretagne, fome Apology may be made for it. In refpect to Gratitude, if he was indebted to the Duke, he was no lefs fo to the King, by whofe Affiftance He was cnabled to make that Defcent on England which brought him to the Throne. In the next Place, the French King was not clearly the Aggreffor ; fince the Duke, previous to the War, had received and affifted his Rebels. It fhould from theuce feein that King Henry was not fo blameable in affuming the Chaiacter of Mcdiator. In refpect to both Partics, their Forces, Inclinations, and Intrigucs, Henry underfood them better than any other Man of his Time, and might therefore be prefumed to act from that Knowledge His own Affairs during the Courfe of this Difpute were in none of the beft Poftures. At the beginning of it he had Lambert Simnel and his Affociates on his Hands. The Lofs of Woodvile, and thofe brave Men whom he commanded, might ap. pear to him an ill Omen, and he was not like to be better difpofed from the Infurrection in the North, on account of the Sublidy be demanded and obtained from Parliament for fending Suc-

[^215]:    *Thefe Trcatics with the King of Denmark, who at that Time poffeffed alfo Sweden and Norway, are to be found in Rymer, Tom. xii. p. 374.381. Seldeni Mare claufum, lib. ii. cap. 32. and deferve great Confideration. By them Permiffion is given to the Englifh freely to vifit Iceland, and to furnifh the Natives with Woollen Cloth, as well as to fifh upon the Coafts, which before the Difcovery of Newfoundland afforded a very beneficial Branch of Commerce. They were alfo allowed to purchafe Lands to build Houfes and Magazines at Bergen, and in other Parts of the Danifh Dominions, and to elect a Magiftrate to prefide over their Factories. By the Treaty with the Republic of Florence, Rymeri Foed. Tom. xii. p. 390. the Wools fent into Italy, except Six hundred Sacks to Venice, were to be carried into their Dominions, and in Englifh Shipping. At the very Beginning of his Reign Henry granted fome Indulgencies to the Subjects of this Republic in refpect to the Cuftom upon the Goods they exported. Towards the Clofe of it he remitted to the Venetian Merchants certain l'enalties that they had incurred. We fee in thefe Inflances in how different a Manner he could act with refpect to Foreigners, though very fevere in the like Cafes with refpect to his own Subjects. His Intereft was the Spring of Action in both; for he well knew, that lefs of our national Produce would be exported under Duties grievous to the Merchant, and that in refpect to Commerce it was better to pars by fmall Offences than to hazard either the Interruption or the Decreafe of it. To fay the Truth, the Treaties in thefe Three Reigns, maturely confidered, will convince the Reader that the Tiaffick of the Englinh Subject was much more extenfive than is commonly apprehended.

[^216]:    $\times$ The Caufe of that great Qarrel mentioned in the Text was Maximilinn's conniving at, or rather concurring in the Intrigues of Margaret Dutchefs Downger of Burgundy to difurb licnry's Government, on which he prohibited Trade with the Low Countries, and obliged the Flemings to quit his Kingdom, which they retaliated. This Interruption of Commerce was moft feverely felt by the City of Antwerp, which had rifen from a very inconfidera: le Piace to grat Wealth and Splendour by the Refidence of the Englifh Merchants. Whecler's Treatife of Comenerce, p. 16,17. About Three Years after, when Philip came to govern his own Dominions, he hy his Ambarfadors defired to renew the old Correfpondence. Henry was by no mocans averfe; for thomerh the Company of Merchant Adventurers took all the Cloths that were made in England, which fhewed the Importance of that Company, yet many Inconveniencies were felt, fo that the Conclation of a large and explicit Treaty, which may be found in Rymer, Tom. xii. p. 587. was very acceptable to both Nations. This was called Intercurfus Magaus by the Flemings, becaufe it lettlelall Difputes, and was very favourable to their Fifheries, and when the Englifh Merchants returned ag, in in confequence of it to Antwerp, folemn Proceffions were made, and they were reccived with the grateft Demonfrations of Joy. But about Ten Years after, when Philip King of Caftile their Sorcreign was here, Henry engaged him to conclude a new Treaty lefs tapoutable to his Subjects in fome Refpects, Rymer, Tom. xiii. p. 132, and this the Flcmings niled Intercurfis Malus. However, Henry not long after confented to a provifional Treaty of Commerce with ifurgaret Dutchefs of Savoy, then Governefs of the Low Countrics, for her Nephew Charles of iallria, after vards the Enperor Cuarles the Fulth.

[^217]:    ${ }^{r}$ It is gencrally allowed, that the perfonal Characters of Princes when judicionfly drawn, are of great Utilitw, as will as very o:mmental in Hitory. Yet this cortainly was not the Bufinefs of the prefint Work, and if the; have been fometimes introduced, it wais trom a real, or at leaft a conceived Neceffity of illuftratimg the Subiete here trated; but in no Cafe hate we entercd fo deeply as in the prefent, and the Realon is obvious, the perfonal and political Charader of Henry being precifely the fame. He was at all Times, on all Cecafions, and in every Stuation a King. He feated himfolf on the Throne with fo dhbous a Tite, and fomm that fo oftur called in Queftion, that he had no Leifure to adt oflce wife. He was conftrained to have his Wits always about him, to be cere upon his Guad, and to have the Support of his Di:nity continually in View. He was certainly an unamiable Prince, fiom his continnal nttuntion to limedf and to his own Intereft, and therefore it is no W'onder, that his conduct hath been deverely cii:ijifed. The being obliged to dwell fo particularly on lis Story was by no means agreable, bit being necetfary we have endeavoured to treat it fairly, withoart favering, flatecing, or libeling his Meafurcs. Where it is faid in the Text that his Laws were pecuifinly his own, it was not meant that he dictated them at his Will, sud oberuded them on the Legilature, for that was hy yo means his Method. But they were for the moof lart planued and dipelted in his Council, and when brought into Parliament, had fuch a Colour of common Benctit and public Geod, as iuduced both Houfes, and the Commons in particular, to adope them with great Readinefs, in which they confidered their own Benefit, though in their Firit Conception, the King no Detibt confedred his. Upon the Whole we have drawn his Charafter from Facis, and the Praife we have given to his Laws ftands on the fame Bafis. With refpeft to his Motives, they can omly be reached by Comjecture; but as to the Effets of his Statures, which we bave chithy confidered, it muf be do wellathat there is a Degree at leaft of Certainty.

[^218]:    - This Statute, which was 4 H. VII. cap. 19. is very well and clearly explained by Lord Bacon, who has fully juftified the King's Intention, which was to encourage a Number of fmall Farms. Another Statute in the fame Palliament for preventing more than One Farm from being held by the fame Perfon in the Ille of Wight, was formed upon the fame Pinciple, which was to increale the Number of People, and the Serength of the Country thereby. But the Rectitude of the Intention could not fecure Succefs. The Truth is, Inclofures did not caule but were the Effects of Depopulation. We have fhewn the Number of People had been decreafing for many Years, and this could not be immediatcly helped by any Statute. Befides Agriculture was at this Time very incertain, Wheat felling fometimes at Four Shillings a Quarter or under, fometimes at Six Times that Price, and above. The Wages of Manufacturers induced fuch as were inclined to Labour, to follow that Courle. The Owners of Land therefore could find but few Hands to employ, and this, together with the immediate Profit arifing from Sheep and Wool, induced them to turn their Thoughts generally to grazing. This feems at leaft a probable Account of the Matter, and of the little Effect that this and other Statutes of a like Kind, for a long Series of Years produced.
    c The foregoing Hiftory, and the Remarks thercon, to Ghew the State of the Nation, demonAtrates fufficiently the Neceffity of fuch Inftitutions. The Nature of the Regulations they were to make, the Mifchiefs they were to remove, and the Benefits they were to beftow, prove their Utility. As moft of them were made not only with the Confent but at the Requcft of the Commons, it appears they were acceptable. The Alterations they produced are Arguments that evince their Expediency, and that moft of them continue in Force, and that the Principles of the Reft have been adopted in fuccceding Times, leaving us no Koom to doubt, that as they were well conceived they were alfo well digefted.

[^219]:    ${ }^{d}$ It is an Obfervation not confiued to this Country, that the partial and narrow Views of particular Traders become oftentimes the greateft Hindrance and Impediment to Trade. Thas the impofing of Tolls for Goods brought ro this or that Market, Paflage Duties on navigable Rivers, and indecd petty mpofitions of every Kind, though they mayfeem advantageous for a Time, yet in the End prove detrimental even to the Places for the Benefit of which they are levied For Trade, like Water, loves a frce Paffage, and if impeded in One Courfe, will divert itfelf into another. Corporations had now acquired fuch a Degree of Strength ${ }_{j}$ as enabled them to abufe that very Power, and thofe very Privileges by which they acquired it; and from making Bye-Laws requifite for the common Benefit of their Members, began to lay upon them Reflraints, which they were not able to endure, and nf which as Freemen they had a juf Right to complain. It was cherefore by Statute provided, that a Bye Law fhould have no Force unlefs approved by the Chancellor, Treafurer, Two Chief Juftices, or at leaft Two of thefe, or Two Judges of Affize. The particular Bye-Laws of the Ciry of London for preventing Citizens from carrying their Goods to Country Fairs, was with a View to enforce a Refort of Country Traders to London, and the Hardhips being felt by fome of the Citizens themfelves, they had Recourfe to Parhament for Relief, which they obtained. This is a pregnait Jnftacee of the great Uitity of the Leginative Power, by which alone fach Evils can be contefted, and the public Intercat and public Liberty fecured.

    VoL. II.

[^220]:    - This Corporation was originally Atiled, The Fraternity of St. Thomas à Becket, and the Firf Company erected in this Kingdom. The Reader may fee the Hiftory of their Eftablifhments at Home and Abroad, very well worth knowing, in Wheeler's Treatife of Commerce. As to the prefent Point, Trade being become much more confiderable, and the Merchant Adventurers (for fo they filied themielves) very numerous in different Parts of England, thofe refiding in London took upon them' to enlarge the Admifion Fine, originally no more than a Noble, by flow Degrees to Forty Pounds, and till this was, paid by the Merchants refiding in different Parts of the Kingdom, they would thot fuffer thein to expore their Goods to fale in the foreign Marts. Upon this the Yerchatets àt large petitioned the difreet Conmons, fo the Words of their Complaint run for Rediefs, fetiting forth, not-only the particular Hardhips and Difcouragements they were under, but the great Detriment ariing from hence to the Trade of the Natlon in general, in Terms very well worth the Perufil. Upon this the Statute of the 12 Hen. VII. cap. 6. was. made, by which the Admiffion Fine is fixed at Ten Marks. This Company had Three feveral Charters greated them by Henry the Seventh, and a Place affigned them with large Privileges in the Towns of Calais, when, as we before obferved, they were obliged to remove from Antwetp, and for the Services rendered to the Public at that Time they were honoured by Charter with the Tiste of Merchant Adventurers of England. In the Reign of Queen Elizabeth, whein their Intefcourfe with the Low Countries was agsin interrupted, they were impowered to trademito Gervany, "and being invited to "letrle at Elamburgh, they are now fited The Hamburgh Comprang.

[^221]:    * As Henry made Laws to reftrain the exorbitant Power and Oppreffions of the Nobility, fo he endeavoured to infpire them by his Example, with a Spirit of fupporting their Dignity by milder and more munificent Methods. He was very magnificent in his Court, and upon all public Occafions, fuch as the Coronation of his Queen, the Marriage of his Daughter by Proxy to the King of Scots, as well as in that of Prince Arthur to the Princefs Katherine of Spain. His Buildings were fately, and he encouraged Men of Learning and Genius. He alfo introuluced great Decorum in the Houfe of Peers, which had fo good an Effect, that Sir Ed $\stackrel{\text { ard Poynings judged it ex- }}{ }$ pedient to purfue the like Method, in order to give Luftre to the Houfe of Lords in Ircland. His Council was always compofed of very able and wife Men, which gave weight to their Decifions; and it is remarkable, that except Sir William Stanley, he difgraced no great Officer during his Reign. In the latter End of it, Sir Thomas More, who was a Burgefs in the Houfe of Commons, made a warm and weighty Speech againf a Subfidy, a Frcedom that had not been taken before.
    h The principal Dates that relate to his Reign are A. D. 1485 , 30th October crowned; 7 th of November opened his Firft Parliament. A. D. 1487, June 16 th the Lattle of Stoke, in which the Earl of Lincoln was flain ; 2 . 5 th November, Queen Elizabeth crowned. 1488, July 28th, Battle of St. Aubin du Cormier in Bretagne. A. D. 1192, OEtober 6th, the King debarked his Forces at Calais ; $3^{d}$ of November Peace figned at Eftaples. 17th of December returned to England. A. D. 1494 ; it hould feem, that the Dutchefs of Burgundy intended to have fent over the Per-

[^222]:    " not of leaft Value." Inflitutes, Part iv. cap. 35. p. 198. But it muft not be from hence fuppofed, that this Monarch locked up all or the greateft Part of the Moncy in this Kinglom, or that the wife Law's he made, and which was ftill of more Confequence, faw punctually executed, Chould have no confpicuous Confequence in regard to the Welfare of his Subjects. On the contrary, it clearly appears that there were many amongft all Ranks of Men during his Reign in improved Circumftances. Sir William Stanley we have heard had Forty thoufand Marks in ready Money. The like is faid of the Earl of Ormond. The Duke of Buckingham, the Earl of Surry, afterwards Duke of Norfolk, the Earl of Oxford, and others of the Nobility, had valt Etates. In refpect to Church Men, Cardinal Morton fpent immenfe Sums in repairing and rebuilding the Houfes belonging to his Two Diocefes of Ely and Canterbury. Cardinal Wareham, befides his iplendid Inthronization at Canterbury, fpent Thirty thoufand Pounds in publie Works. Fox Bifhup of Winctefter, befides other Acts of Munificence, built Corpus Chrifti College in Oxfurd Bifhop Alcock, who fucceeded Morton in Ely, built Jefus College in Cambridge, ans Dr. Ruthal Bifhop of Durham, who died in his Son's Reign, amaffed no tefs than One hundred thoufand Pounds. Godwin de Praful. p. 754. In refpect to the Law, the noble Houfes of Mulgrave, Peterborough, and Townfhend were all of them founded by Lawyers, who flourihed in his Reign, in which Sir Thomas More, when a very young Man, got Four Hundred Pounds a Year at the Bar. As to the opulent Merchants in London, Briftol, Hull, and othcr Places, we have not Room to mention them. It may be fufficient to fay, that the Writers of our Hitory in and near his Time, fome of whom were Citizens themfelves, encur in affirming that by the Countenance and Encouragement as well as Protection that he gave to Commerce, he caufed immenfe Quantities of Coin and Bullion to be brought into this Kingdom by foreiga Merchants, and as Hall obferves, as he lived highly revered for his Power and Wifdom by foreign Princes, fo by his domeftic Policies, he at his Deceafe left his Subjects at Home full of Wealth, and in the Height of Profperity.

[^223]:    2 Simple and almof felf-evident as thefe may appear, they are notwithatanding Truths of the nimoft Importance. Tacitus, who is confidered as an Oracle in Pulitics, hath laid down the Doctrine delivered in the Text with great Force and Precifion, his Words are thefe: "Nulh "quies Gentium fine Armis, nec Arma fine Stipendiis, nec Stipendia fine Tributis haberi queunt." Hift. lib. iv. cap. 74.

[^224]:    - Plutus, who looked very deep into human Nature, tells us, Moncy is the Blood of Mortals, Decunia anima \& fanguis eft Morralibus. It certainly is fo, and therefore Mould never be drawn wautonly or in too great Quantities, but upon juft Occafions, and with much (ircumfecition. We may farther add, that it is upon a free Circulation thereof, the Health of the animal liody and the Body Policic equally depend, and the great Secret is to prevent any Stagnation, which is ever dangerous in either.

[^225]:    and knew. - Tacitus from friif Enquiry, for making which he had the beft Opportunity, and he afferts that the Britons had been long fo governed. Juftin from Trogus Pompeius affirms, that all ancient Nations were governed in the fame Manner, which is conformable enough to the Sentiments of the moft ancient facred and profane Writers. Thefe fimall Principalities being immediately under the Eye of their Sovercign, call him what you will, feem to have thriven exceedingly, and to have been for their Extent very populous, as they evidently were when Cexfar landed here.
    e Tacitus trents this Matter very fairly. Julius, fays he, of all the Romans was the Firf who led an Army into Britain, and though fucceffful in feveral Actions, and being Mafter of the Coafts, yet after all feems rather to have fhewn than to have delivered this Country to Pofterity. Other Writers fay plandy, that he was beaten by the Britons. Indeed Tacitus in another Place makes a Britin Prince, to cncourage his Subjects to behave gallantly, put them in Mind that they were the Defcendants of thofe brave Mes who had repelled the Dictator Julius, and forced hin to quit their Country.

[^226]:    ' Cafar Bello Gallico lib. v. c. 19. Tacit. in vit. Agricolx. Plin. Hif. Nat. lib. ix. cap. 35Bed. Hift. Eccl. lib. i. cap. 1. Lifleni de Cochl. Fluv. cap. 2. It is true that Caffar fays nothing conceruing Britifh Pear's. But Plaily affirms, that he did not difown that the Shield covered with Pealls, which he dedicated in the Tcmple of Venus Genetrix, was compofed of the Spoils of Britain. His Silence with refpect to Pearls hould as little prove that there were none in Britain, as that there were no precieus Mefals. It is certain they were here, and known to be here before he came. Tacitus fays, and indeed Pliny alfo, that they were dark and ill-coloured. Beda with much more 'Truth, that they are of all Colours. Calar's Soldiers could not have foond them here, fir they were never within a hundred Miles of any River in which they are found, and therefore he ubtuined then cither as Prufents or Tributc. They are flill found in the River Conway in Wales, in the River Irt in Cumberland, and a Patent was ouce granted for a Pearl Fifhery there. In many Rivers and Lakes in Scotland, and in Ircland likewife. They are found ufually in large ill-fhaped Mufcles, are multiy brown, fometimes well-hared, fair, and bright, and are then fold for Oriental Pearls. The ingenious Dr. Liffer conctived them to be the Eiffects of old Age, and a Kind of Scurvy in the Fifh, and there are many of his Opinion.

[^227]:    1 M. Tullii Epift. ad Familiares, lib. vii. ep. 7. ad Atticum lib. iv. ep. 1 6. Strabo lib. iv. p. 199, 200. Tacit. Vit. Agricolx, cap. 12. In his Epille to his Friend Trebatius, Cicero intimates that he had learned from his Brother Quintus, who accompanied Cafar in his Expedition hither, that there was not either Gold or Silver in the LIand. He fays the fame to his Friend Atticus, and that except his Captives, Cæfar had brought no Booty out of Britain. All we learn from this. is, that as the Romans were excited to this Invafion by Avarice, the Britons acted very prudently in keeping Gold and Silver out of their Sight. But after his Departure, when the Romans came to have a friendly Intercourfe with this Country, they were foon better informed, fo that Strabo fays, there were in Britain not only Corn and Cattle, but Gold, Silver, and Iron. Tacitus, the Author alluded to in:the Texs, who drew his Knowiedge of Britain from-his Father-in-law Agricola, tells us plainly what the Effects were of this Information. "Britain;" fays he, "produces. Gold, Silver, and other Metals, which render it worth conquering; the Oceab too "produces Pearls, but of a brownih Caft and livid." Fert Britannia aurum \& argentum \& alix Metalla, pretium Victorizo: Gignit \& Oceanus Margarita, fed fubfufca ac liventia.

[^228]:    a Dio. Hift. Rom lib. 1x. Tacit. vit. Agricole, ap. 13, 14. Sueton. in Claud. cap. 17.2 Eutrop. lib vii. cap. 8. P. Orofii lib, vii. cap. 6. We learn from thefe anthentic Writers, not barcly all the Cincumfances of the Expedition of Clapdius, but alfo the Reception he met with on his Rerump. He had bcen, which was very unufual, of en faluted Imperator by his victorious Army. He had moll fplendid Tiumph, in which his principal Officers bad a Share. Triumphal Arches were erected at Rome and at Bologne. Heftrock a very fineGold Coin with the Triumphal Arch on the Reverfe,: Ile celebrated magoificent Games and Shews for the Recreation of the ieople. He received Crowns of Gold from the Provinces to an immenfe Valuc. He capfed a: naval Crown to be fixed upon hiryalace, to fignify that by entering Britain he was become Lord of the Ocean, and laftly he not only aflumed btofelf, bat beftowed alfo upon his Sun the Surname of Britancicus. Thefe firely are inconteftindiprofe of what the Romans thought of the Acquifition of Britain.

[^229]:    - Tacit. Annal. lib, xii. cap. 37. lib. xiv. cap. 3 I. 33. et in vita Agricolx cap. xiv. Whatever Power or Wealth Caractacus poffeffed, he muft have acquired before the Romans came hither in virtue of his Station as a Britifh Prince. If it be objected that the Oration of this King might be prade for him by Tacius, it muft ar the fame time be admitted, that the Fact was recent, and that an Hifterian of his Credit cannot be fuppofed to advance a Falfehood, which mult have been known io moft of his Readers. Cogidunus lived to the Time of Tacitus, and what he fays of him has becu confirmed by an Infeription of a Monument found at Chichefter in our owe Tiines. Prafutagus was diftinguighed by liis Opuience, and the Means he took to preferve his Riches, which projuced the Ruin of his Family, is a Fact not to be queftioned. The Reputations of London as a maritime City, could not well have been eftablifhed in fo hort a Space as from the Time of the Romans entering Britain. Camden, and indeed moft of our Antiquaries agree that Londinium was framed from a Britifh Word, which fighified a Port. In fucceeding Times the Romans ftiled it Colonia Augufta. When they retired out of this Iland, and the Brizons were agnin in Ponjefion of it, they called it by its old Name, which it has bom ever fince. All this is eafy and natural, and therefore very likety to be-the Truth.
    c Vel. Patercal. Hift. Rom. Kib. ii. pi 147. Strab. lib. iv. p. 200. Din. Hift. Rom. lib. Ixii. Tacit. Annal. lib. xiv. cap. 33. Suetoni in Nerone, cap. 39. The Fint of thele, Paterculus, was a very elegant and a very courtly Writer. To flatter the Memory of Cafar, he fays that he twice penetrated Britain. Strabo, in compliance to the Maxim of Auguftus, tells us that it would have required a Legion and a competent Body of Horfe to have kept Britain in Subjection, and that this would have abforbeita great Part of the Duties that the Inhabitants voluntarily paid. But is this Fact true? Ceflar brought over Five Legions in his Second Expedition, and did not fubdue it. Caligula brought a great Army to the Sea-fide only to look

[^230]:    h The Firt of thefe Levies was called Frumentum Decumanum, Tythe Corn ; whic': was the abfolute Property of the State. The Sceond Frumentum emptum, Corn bought; bat pail fat: a low Paice. The Third, Frumentum Imperatum, Corn upon Command, that is. by (Ohat of the Senate, for which there was ufually given a Third more than for the bought Corn. The Fourth Frumentum xftimatum, the Corn eftimated for the Prator's Houfhoh, which was at the fame Price with the Frumentum Imperatum. The laft Frumentum IIonorarium, which Cisero fays, though it bore this fair Title, and was fuppofed to be a Mark of Refpect, was in rality extorted by felfifh and avaricious Magiftrates, wios upon Deteetion were punifhed. We have befure, p. 62, of this Volume, fhewn of what Confequence the Fertility of Pitain was to the Northern Provinces of the Empire, and from unqualtionable Authority proved, that Fight hundred Veffels built on purpoie, of a large Size, were laden at once fron hence with Corn, which on a moderate Computation mult have amounted to between Two and Three hundred Thoufand Quarters.
    i In order to the regr:'ar Cullection of this Tax, a Reginer was neceffary, in which the Name of the Farmer was fer down, aud the N : mbor of Bealts which he kept. This Regifter was called Scriptura, whence the Name of the Tax. In this Regifter the Size and Situation of the Field was likewife defcribed, which was from thence filed Scripturarius Ager, and the Comptroller Cencral of this Tax had the Title of Magifter Scriptura. Thefe Circumfances are mentioned to give the Reader an Idea of the methodical Accuracy of the Rumans in Things of this Nature, which will fully fupport what we have faid in the Text, of the Corrcetuefs of their: axconomy.

[^231]:    $k$ Pir lave in the former Part of this Woblaid fo moch of the Metals an this Country, that these is no need ed dachias on the Subicet here. The lemperor Claudius truck a CoBony Nofal of Camuswam in lin. There is likewife another of the fame Metal of Caraufus in the Cobinet : Ur. Shat pe, Archdeacen of Northumberland. The Mines of Carthagena in Spain prodaced to lle Eoman to the Valse of Eight hundred Pounds per Diem, and they wrought a Gold Mine in Dalmatia which brought in more than twice that Sum. We may therefore fafely
    

    1 As in regard to ? mas di well as wery Thing clic, this great peole were acgular and fyfematic, we may be tare that this las on baht extended to ther provinces hee. It was a very
     narchy. It was revied achin for the Reafon mentioned in the Text, as livy tells us. An additional Jonpoit being had be M. Jivius, he obtaned from thence the Surname of Salinator. There were not only Salt-works wrought for the Benefit of the Public, but others likewife that were prive: Property, the Iroduce of which howerer they fold to the State. It !. in poflible to Gay what this Jax produced, but however modente it might be. it mut have amounted to an immenfe Sum, if the we we, as hath been aferted, Seventy-five Mitions of People in the Roman Empire. As Male Criminals were condemned to work in the Mines, fo Women for certain Offences were doomed tu the Salinat or Salt-works.

[^232]:    - The inland Duty upon Goods, which the Romans filed Vectigal in porta, was levied upon whatever pafled either by Land or Water, and was collected upon Rivers, Bridges, and at the Gates of Towns. The Duty upon Importation and Exportation was called Vectigal Peregrinum. We learn from a Paffage in Cicero, that in the Port of Syracufe it was Five per Cent. in his Time. But from the very Natare of Things, it muft have altered, as it was an excellent Engine in the Hands of Government for the proper Regulation of Commerce, in which Light it appears to have been very well underfood; for Pliny mentions that the Indian Trade carried on by the Port of Alexandria, drained Rome of between Four and Five hundred thoufand Pounds a Year ; and we alfo know, that the Cuftoms of Alexandria rofe higher than any other Port in the Empire. As. we had many Ports in Britain, fome of them very confiderable and much frequented, it cannot be doubted that in quist Times the Cuftoms muft have rifen, as well as inland Duties, to very large Sums, though the Rates might be very moderate, fince it could not efcape fo wife a Pcople, that the lower the Duty the higher the Revenue.
    - Dion. Hift. Rom. lib. Ixii. It is from the Speech of Boadicea recorded by Dio, that we learn both thele Taxes were exacted here under the Emperor Nero. If the Reader difcovers any Incertainty or Ambiguity in the Text, he muft afcribe it to our Want of Authorities, which puts it out of oar Power to be clearer or more explicit. We know that thofe who fubmitted to the Romans, were in general taxed by them, fo that immenfe Sums in ready Money were annually fent from the Provinces ; but we are far from knowing exactly, how all this Moncy was raifed. Vefpafian impofed a Poll Tax upon the Jews. In Gaul this Tax was fwelled to fuch an cnormous Degree, that when Julian commanded there, he reduced it to lefs than One-third Part. It is generally faid that Tributum implies an Impofition upon Petfons, Vectigal, upon Goods; but perhaps this is not always to be relied on. When Auguftus made a Divifion between the Provinces left to the People, and thofe that appertaiaed to the Emperor, he directed, that the Moncy raifed in the former hould be called Tributa, in the later Stipendia.

[^233]:    Ten Times that Sum, or upwards of Three Millions. Vellcius Paterculus fpeaking of Augufus faye, that he rendered Egypt tributary to the Empire, and that the Revenue was nearly equal to what his Father extracted from Gaul, which may be thought to countenance the Opinion of Lipfius. But Aill there is nothing certain. We muft not conclude from hence that the Romans were not very exact in this Matter. On the contrary, Augufus left behind him, as Tacitus inform us, an exact Detail of the Forces and Revenue of the whole Empire, and upon this Plan perhaps other Emperors proceeded. Appian, who flourihed under the Emperor Adrian, undertook to give a like Account, which would have fully anfwered our Purpofe. But unfortunately neither of thefe are now extant.
    $r$ The Particulars meationed in the Text have been collected from the beft Authorities, to have fpecified thefe exactly would have taken up a great Deal of Room, which we have not to fpare. Cicero in his Orations affords great Light with refpect to thefe Matters in the Time of the Republic. They are afterwards to be picked up out of the Roman Hiftorians, and fuch Greek Writers as have alfo treated that Subject. Thefe have been drawn together In different Colletions of Roman Antiquities. But if the Reader is defirous of entering more minutely into any of the Poipts mentioned, he may very cafily gratify his Curiofity by con\{ulting the learned Dietionary of Samuel Pitifcus, who with equal Labour and Accuracy hath collected all the fcattered Materials, ranged them under their proper Heads, and adjufted the WFhole in alphabetical Order. Our Point, as we faid at the Beginning of this Chapter, was to give the Reader a competent Idea of the Roman Revenues in Britain, and the Intention of this Note is to point put to him the Means of obtaining -more particular laformation if he defres it.

[^234]:    - The eafieft Method of gaining a clear and competent Notion of the Size and Splendour of the Roman Cities in Britain, is to confider carefully the Accounts we have of thofe that are now in Kuins. Of thefe we fhall mention Three, referring the Reader to thofe Paffages in ancient and modern Authors, where he may fatisfy himfelf as to their original State. The Firf of thefe Shall be Verolanium or Verulam, out of which rofe firf the Abby, and then the Town of St. Albans in Hertfordflire. Mat. Paris Vit. S. Albani Abbat. p. 40, 41. Lelandi Commentarii in Cygneam Cantionem, p. 95. Lambard's Dictionary, p. 4. Spenfer's Ruins of 'Time. Camdeni 13ritannix, p. 292, 293. Englifh Tranflation, P. 351 -355. Stukeley's Itinerary, p. 110. and in Plate 95 the Reader may fee that the Situation both of the old City, which Boadicea deftroyed, and the new One which the Saxons overthrew, are fill to be diftinguifhed. The Second is Silchefter, which is as much as to fay the great City, in Hamplhire on the Borders of Berkfhire, in refpect to the Roman Name of which Authors are not agreed, but Camden's Opinion that it was Vindonum feems the moft probable. It is now arable Land, though there was a fmall Village and Parim Church in it in the Time of Qucen Elizabeth. There is an Amphitheatre near it. LeJandi Commentarii in Cygneam Cantionem, p. 47. Itinerary, vol. vi. fol. 56. Laiubard's Dictionary, p. 320. Camdeni Britannix, p. 195. E.T. p. 147. Weever's Funeral Monuments, p. 39. Stukeley's Itincrary, p. 169, 170. Pl.6I. Tie Third is Rhutupium, Rutupium or Rhitupis Portus, now Richborough, of which having faid fo much in the former Volume, only the Writers who have preferved Accounts of it Mall be mentioned here, and thefe are Lelandi, Geneth. Ead. Principis, p. 39. Itinerary, vol. vii. fol. 138. Lambard's Dictionary, p. 287. Harrifon's Defcription of Britain, Book i. chap. viii. fol. 12. Camdeni Britanniæ, p. 240. E. T. 243-245. Somner's Roman Forts and Ports in Kent, p. 4. 17.89. Battely Antiquitates Rutupinæ. Lewis's Hiftory and Antiquities of Tenet. Stukeley's Itinerary, p. 117.119. From thefe it will be apparent that what has been faid in refpect to their Choice of Situations is exactly true. In regard to the Strength of their Buildings neither the Teeth of Time or the Violence of Men have in the Courfe of fo many Ages been able utterly to efface them, and in refpeft to their Riches and elegant Decorations, notwithftanding the Plunder of fo long a Period, they are not yet abfoiutely exh.ufted.

[^235]:    - The Firft Leader of the Saxons, Hengift, after varions Struggles ereCted the Kingdom of Kent. He appears to have been a Perfon as much diftinguifhed by his political as by his military Talents. He contented himfelf with that fmall but fertile Territory, fixing the Eaft Saxons on one Side, and the Sonth Saxons on the other, by which it was effectually covered. His Succeffors adopted his Maxims. His Son Efk, Oifc, or Ofca, who hath been ftiled the Saxon Numa, fettled a regular Plan of Government, fo much to the Satisfaction of his Subjects, that they ftiled themfelves Efkins. His Son and his Grandfon purfued his Meafures, fo that for the Space of near a Century they lived in profound Peace, and fo effectually fettled and improved their Country, that Ethelbert the Fifth in Succeffion from Hengift, who proved a more active and ambitious Prince, ftretched his Dominicns, or at leaft his Influence, as far as the Hamber. It was from hence, that Kent, as it was the firf was alfo the mof flourifhing of all the Saxon Kingdoms, and the Inhabitants, from a Senfe of their own Felicity, the molt ftrongly attached to their own euftoms.

[^236]:    e It is generally agreed, that the peculiar Privileges granted to the Cinque Ports are to be referred to the 'Times of the Saxons, and were probably a political Inflitution of the Kings of Kent, and it is alfo generally allowed, that Earl Godwin exercifed the Office of Warden in the Time of Edward the Confeffor. Ethelbert, who is meationed in a former Note, married a French Princefs, which fhews that there was a friendly Correfpondence between the Two Kingdoms. In Procefs of Time we find that a Door was opened to the Acquifition of Honour, by Trade as well as by the Improvement of Land. A Merchant who had Thrice croffed the Sea in a Veffel of his own, and had acquired a competent Property, became thereby worthy the Rank of a Thane. The Voyages of Saxon Princes on the Score of Devotion mult have opened their Minds, and made them acquainted with foreign Countries. The Expedition by the Command of Alfred, for the Difcovery of the North Weft Paflage, more than once mentioned already, is an inconteftable Evidence that in thofe Times they were by no means ignorant of naritime Affairs, and this being fo, we can no way fo probably account for that Knowledge as from their Correfpondence in the Way of Trade with foreign Countries, and efpecially with the Northern Parts of Europe. The hiflorical Accounts we have of their Affairs are fo few, fo fhort, and from thence in many Places so obfcure, that very little can be known on thefe Subjects but by Way of Deduction.

[^237]:    d In the former Book the Authorities are given which fupport the Facts that are delivered here, and therefore it is unneceflary to refert them. The very Nature of the Subject renders it impoffible to be circumftantial, but this by no Means deftroys or cven weakens the Certainty of. what is advanced in the Text. The Heptarchy is univerfally allowed, and there feems to be as little Difpute in regard to the Similarity of thefe States, fo long as they remained free and independent. This muft have arifen either fron copying the original Effablifhment of Hengift, who, Nennius fays, Hift. Brit. cap. xxxvi. was a learnel, fubtle, and crafty Man, or which is much more probable, that thefe Governments were framed according to their ancient Cuftoms, and therefore: we have fo ftated it in the Text. Thefe Cuftoms were indeed the Dictates of common Senfe applied to the Situation of their Affairs. Their Firf Object was the driving out the Britons, and in: profecuting this they acted with Violence and Fury ; but when they had once gained Poffefion, and confidered the Country as their own, they altered their Conduct, and took the moft naturali Method for preferving what they had acguired, by diftributing the Lands amongft their Chicfs, as ehefe again divided them amonght their Dependants, and as their Strength increafed by an Ac| seffion of Recruits from Abroad, they extended their Conqueft, and divided them in the like: Manner.

[^238]:    - Thefe general and indifputed Obligations of every Landholder, are what we find generally comprized under the Term of Trinoda Neceffitas of the Saxons. Thefe were defending by the Sword what had been gained by the Sword, contributing to Fortreffes, and to the Conftruction of Bridges, which were not looked upon in the Light of Services, but as Things neceffarily conneeted with landed Property. This Notion firongly confirms what has been advanced in the 'lext, and in the former Note, as not being founded in any Law, but exifting as a univerfal Cultom through all their little States, and therefore conftantly refpected as a fundamental Principle of Government. The Rule in this and in all other Cales that refpefted the Public, was the Pro. portion of every Man's Property. This was meafured by Hide Lands. The Quantity of Land which compofed this was incertain; that is to fay, in fome Places it was more, in others lefs; but the Idea it eonveyed was very clear, it was fuch a Quantity of arable Land as would ferve to maintain a Family, with a competent Proportion of Meadow and Pafture for the Support of the Beafts requifite to till it. In fucceeding Times every Five Hide Lands were bound to furnith a Man for the public Service, and this is faid to have conftituted a ftanding Army, or rather a ftanding Militia, of near Fifty thoufand Men. The directing the Manner in which thefe were to be emplo ed, made Part of Alfred's Conftitutions, and polfibly befide thefe the King and his principal Officers might have fmall Troops of Soldiers either in conftant Pay, or bound to this Service by Lands beflowed on them with this Condition.

[^239]:    cording to the original Principles of the Saxon Confitation, the King levied Cuftoms and Dutics, and upon this Ground flands the Opinion of our ablef Judges, that they were due to the Crown by Common Law. Dyer's Reports, 43.165. Davis's Reports, 3 .
    k There are many Circumftances that would render this Subject clenrer and more fatisfactory, if they could be afcertained. For Inflance, if we knew what the Royal Demefnes were, in any One of the Kingdoms of the Heptarchy, which we do not. Conjectures are no Evidence, yet we-may be permitted to hint, that the Saxons affected a certain Proportion in their Effablifhments of every Kind. The Head or Life of a Freeman had its Value affigned, that of the Thane was Six Times as much; and the King's Life was valued at Six Times that of the Thane. We know-that Five Hides of. Land was thought a competent Effate for a Man of that Dignity; but, though we may fuppofe fome Proportion obferved, we cannot conclude from thence, what in the original fetting out of thefe Principalities might be affigned to the King. The Hide was an incertain Qnantity of Land, fuppofed to be fufficient for the Maintenance of a Family, that is, of a confiderable Landholder, who, as we bave feen in a former Note, parcelled it out on various Conditions to his Tenants, all of whom drew their ownand their Family's Maintenance out of ii. As to the King's Royal Demefnes being confidered as the Patrimony of the Crown, and nut alienable at the mere Will of the Prince, we have an Inftance in King Baldred, who gave the Manor of Maling in Suflex to aMonaftery in Canterbury without the Coufent of his Nobles, which was declared void, and granted again by King Egbert with their Confent. Concil. Britap. 3.40.

[^240]:    ' We may form fome Judgment of the conflitutional Power of the Saxon Princes, before the Junction of their Kingdoms, from the farmoas Ditch called by the Britons Klawdh Offa, which that Monarch drew for the Security of his own Dominions, and which was a moft ftupendous Wiork, no lefs than Ninety Miles in Extent. Charkmagne correfponded with that Prince, and Egbert, who united all the Saxon Kingdoms, was bred up in his Court. The Journies made by our Monarchs to Rome were not folely on account of Religion, for that City was in thofe Days the School of Learning and of Arts; and Alfred in Commemoration of his Retreat, in the Inand of Ethelingey, built there, as William of Malmefbury tells us, de Geftis Pontif. p. 255. a Monaftery, which from his Defription feems to have been conftructed afier the Model ! of the Pantheon. In fucceeding Times, feveral beautitul and coftly Structures were erected,' particularly the Abbey at Wentminfler, to whioh Edward the Confeffor devoted tie Teath . Paft of his Revenucs.

[^241]:    $m$ It appears that the Number of Villages in England at the Time of the Conquen was nearly equal to that of the ftanding Militia, fo that to raife an Army of Fifty thoufand Men, there was only One taken out of each, which fully proves the Populoufnefs of the Country, and of courfe that it was thoroughly cultivated. It hath been already remarked, that the State of this Kingdom was declining before the Survey called Doomefday was taken, and yet many Proofs might be produced from thence to thew the Utility of the Burghs, in all Refpects fufficient to fupport what is faid of them in the Text. As to our Princes carrying on fome Degree of foreign Commerce, the Hiftory of Alfred feems to be conclufive'; for he, as we have frequently had occafion to mention, employed Ships for Difcovery in the North Seas; fent Alms to the diftreffed Chriftians in the Eafl, and received Prefents from thence, which are clear and uncontroverted Proofs of what is the ufual Effect of Trade, an extenfive Correfpondence, and the great Refort of Foreigners to the Court of Edgar, may well be confidered in the fame Light. Lord Bacon indeed tells King James, that his Kingdom was much better fuited thereto than either Portugal or Tufcany, if his Predeceffors had not defpifed it as beneath them, in which he forgets Edward the Fourth and Heary the Seventh, who enriched themfelves and their Subjects by this Practice. Bacon's Works, Vol. ii. P. 255.

    - As the fundamental Laws of the Saxons were in Ufe from the Inftitution of their refpective States, fo they lafted as long as their Dominion:; For we find by the Record of Doomefday, that Edward the Confeffor was poffeffed of One thoufand four hundred and Twenty-two Manors in feveral Parts of the Kingdom. What his Intereft was in the Boroughs we find therein likewife expreffed. In the Days of Alfred, as himfelf and his Hiftorian tell us, this Rcalm was plundered of every Thing valuable by the Danes, fo that both the Mogarch and his Subjects were reduced to the molt abject State of Poverty that can be conceived. Yet in the Compa/s of a few Reigns, the Country and the People were fo recovered as to be able to pay the fame barbarous Invaders, within lefs than Thirty Years, as the Saxon Chronicle informs us, Tributes to the Amount of

[^242]:    a Dr. Brady in his Hinory, and in his Treatife of Boroughs; Mr. Madox, in his Hiftory of the Exchequer; and Mr. Stevens, in his Account of Taxes, have ranged the feveral Materials they met with in our Records, in our ancient Hiftorians, and ial the Works of our old Lawjers, ia fuch Order as the Nature of the Pieces they publinhed required. 'To thefe, and to the ancient Dialogue on the Exchequer we refer, as in thefe all that we have Occafion to mention is to be found. What is principally intended here, is to afford the Reader fuch a View of the Norman Policy in this Refpect as may enable him to compare its Effects with the Methods of raifing a Reventue in preceding and fucceeding Times, and from thence form a true Eftimate of the Operations of this Syftem of Government on the Country and its Inhabitants, which is the only proper Teft of the Merits or Demerits of any Conftitution.

    - The Royal Demefnes, at we obferved in the Text, were thofe which had belonged to the Saxon Monarchs, and conffied of Cities, Burghs, and Farms. But npon this Change they

[^243]:    i It is generally faid that Scutage, which was a Sum more or lefs levied on every Knight's Fee, in Place of perfonal Scrvice, was firlt introduced in the Reiga of Henry the Second. But it was probably more ancient, though from that Time it came more generally into Ufe. By this Acceptance of a pecuniary Compenfation for perfonal Service, it hath been juftly obferved by a very learned Writer, that all the real Utility of the feodal Syftem was really taken away, and nothing but the Burdens that attended it left behind. As the King had Scutage from his Tenants,i, fo they again demanded it of theirs. As this was occafionally levied, and the Rate inceranin, it' became very oppreifive, and therefore in King John's Magna Charta it was provided, that it Mould not be taken but by the Confent of the Leginature. It was in effeet a Land Tnx; though not completely fu, for it did not reach Lands held in Socage. In Procefs of Time this, like the Word Aid, came to be improperly ufed, and at length both were laid afide to-make Way for new Terms of more general and extenfive Import, which became abfolutely neceffary for the.Support of Armies beyond the Seas, for which the old Syllem of Knight's Service was found very inadequate.
    ${ }^{k}$ All that can be known concerning the Duties raifed in the Reigns of the Six firt Monarchs of the Norman Iine, mut be collected from Records, of which there are not now many extant, however there ale chough to Mev, that there was a great Diverfity in them, and that they. were levied wilh great Strictnefs. Prifage of Wines feems to have been One of the oldeft. Befides there were Difmes and Quinziems on different Sorts of Merchandize, on the Imports and Exports. As to the former we find Mention made of Woad, Silks, and other Things, andas to the latter Wool, Leather, Tin, Honey, Salmon, \&c. There were Duties alfo paid Coaftwife, and. for the Paffage of Goods on navigable Rivers. It may well be fuppofed, that thefe Impofitions. were more moderate in fome Reigns than in others, which had of Courfe an. Effect upon Trade. Ses Madox's Hiflory of the Exchequer, cap. xviii. p. 525.

[^244]:    - The general Welfare could not be interrupted without its being felt by Men in every Degree. The Barons were the firft who complained and refifted becaufe they had more Power. In Procefs of Time, both the Crown and the Barons difcovered the Neceffity of relaxing in favour of their Tenants and the middle Sort of People, but this was done Nowly, and only in particular Cafes where the Evils were glaring and intolerable. The Reigns of Henry the Second and Richard the Firft gave an Infight into the many Advantages that might be derived from an infular Situation in refpect to Commerce and naval Power. The continual Troubles of the long Reign of Henry the Third, though they might interrupt, did not extinguifh thefe Ideas. On the contrary, the Barons for the Sake of their Support courted and careffed the Cities and Boroughs. Edward the Firft was a Prince of great Parts and Penetration, he faw and felt the Benefits that arofe from Cuftoms, and perceiving the Miichiefs done by the exorbitant Ufury of the Jews, he reftrained that by a Law in the Fourth Year of his Reign, punifhed them afterwards Feverely for debafing the Coin, and at length finding his Revenue from them decreafe, and the Odium againft them fill fronger, he at length banifhed them all at once, and feized their Effeets dia the Eighteenth Year of his Reign.

[^245]:    - The Firf Struggles with the Crown, as we have more than once obferved, arofe from the Nobles, at a Time when they were almoft in full Poffefion of all the landed Property. In Procefs of Time, and by a Variety of concurring Circumntances, the Crown and the Great Lords, from a Principle of Interefl, abated of their Rigour in refpect to Tenures. This being vifibly attended with good Effects difpofed the Nation willingly to receive thofe falutary Alterations that Edward the Firft thought fit to make, and as thefe were the Fruits of great Yenctration, lo were they conducted with confummate Prudence. He reduced the Laws into Order, devifd proper Methods of Proceeding, took care that thefe foould be carried into Execution, and Juftice fo impartially adminiftered, as to excite Induftry by fecuring Property, and to encourage the Commerce of his People by a Diftimetion of the Duties impofed upon them and upon Strangers. As thefe Changes were wrought by the Authority of Parliament, ir raifed a great Degree of Reverence for and Confidence in the Wifdom of the Legiflature. At the fame Time there Changes, and the happy Confequences following from them, clearly thew the Defeaivenefs of that SyAtem introduced by our firft Norman Monarchs, on whatever Pretences they might be founded.
    $x$ The Clergy, as appears plainly by our Records, were not fo cafy under the Norman as they had been under the Saxon Government, the Prelates and Abbots who were fummoned to the King's great Council in Right of their Baronies, were obliged to furnifh Aids for the Number of Knigh's Fees they held, and were in other Refpects fubject to the Power of the Crown. But their being allowed to form a feparase Body gave them an Opportunity, which the Crown readily embraced, of granting Money in Convosation. Sometimes this was done by One Province only, gencrally fpeaking by both. Their ufual Grant was a Tench, which Lord Coke fays amounted to about Twenty thoufand Pounds. But however this Grant in Convocation was confirmed by Parliament, and this Mode of Taxing continued fo low as the Fifteenth of Charles the Second, fince which Time the Clergy have been admitted to vote as Freeholders, and in confequence of this. ave now like other Subjects liable to the Land Tax in whatever Proportion that is granted by Parliament.

[^246]:    - The Reader may find in the Seventeenth Chapter of the Hiftory of the Exchequer, and in Cotton's Abridgment of the Records, Inflances of the various Methods taken by the Legillature to grant Affiftance to the Crown, from which it will fufficiently appear that this, as we have faid in the Text, was often a Matter of great Perplexity. At length, about the Reign of Richard the Second, the Mode of giving by Sublidies and Fifteenths was adopted, and continued, though not invariably, long after. The Subfidy was not a direct Impofition on Land, but Commifioners were appointed to make Examination by Oath, and to tax Perfons in every County according to their reputed Worth at the Rate of Four Shillings in the Pound for Land, and Two Shillings and Six Pence perfonal Eftate. A Subfidy, Lord Coke informs us, amounted to about Seventy thoufand Pounds. The Fifteenth was invariable, being levied according to an ancieut Eftimate, fo that when granted by Parliament, the Sum that every Place was to pay was cortain, and amounted in the Whole to about Twenty-nine thoufand Pounds or thereabouts. Attainders and Refumptions, however beneficial or neceffary to the Crown, or whatever temporary Relief to the Pcople, made fuch frequent Alterations in the State of landed Property, and brought along with them fuch other Inconveniencies, as were very highly detrimental to the Subject.
    : The Origin of Tonnage and Poundage feems to have been this. About the Twenty-firft of Edward the 'Third, Complaint was made, that Merclauts were robhed and murdered on the Seas. The King thereupon, with the Confent of the Peers, levied a Duty of Two Shillings on cvery Tun of Wine, and Sixpence in the Pound on all Goods imported; which was treated as illegal by the Commons. About Twenty-five Years after the King, when the Knights of Shires were returned home, obtained a like Grant from the Citizens and Burgeffes, and the Year after it was regularly granted in Parliament. Thefe Duties were diminifhed fometimes, and fometimes increafed, at length they feem to have been fixed at Three Shillings Tonnage, and One Shilling Poundage. In old Times thefe were diftinguihed from Cuftoms which were confidered as Duties on Staple Commodities, though they have been long fince blended together. The fixing of Staple Towns had its Advantages and Difadvantages, and even the great Staple at Calais, which rendered the Lofs of that Place fo much regretted, cramped our Navigation. By fucceffive Aets of the Legillature, the Liberty and Property of the Subjects of all Ranks being better fecured, promoted domeftic Induftry, and thereby the Welfare and Happinefs of the People.

[^247]:    n It muft at firft Sight feem very furprifing, that Meafures fo repugnant to Reafon, and the ill Confequences of which had been fo often manifefted from Experience, fhould yet be fo obftinately purfued. A little Attention to the State Things were then in, will however explain this. Foreiga Wars were often fuggefted by, and generally concurred in by the Favourites and Council of our Kings, from private and partial Views. The Nobility had a natural Intereft in fuch Expeditions. War was their Trade, they grew rich and great by it, obtaining lucrative Covernments Abroad, drawing large Ranfoms from their Prifoners, and fpending thefe in erecting Caftles and Palaces at Home. Their Retaipers rofe likewife by thefe Means, which was the plain and almoft the ooly Path whereby Men of Courage and Parts could elevate themfelves from a private to a public Station. Add to all this, that amongft other Ranks of People there were Numbers alfo who found their Accounr in it; fo that upon the Whole, as the moft powerful and the moft active Spirits were impelled by Ioclination and Interef, there is the lefs Room to wonder, that little Regard was had to the milder Difpofitions of fuch, as either from Choice or Situation were employed in Hufbandry, or in Manufactures, though thefe raifed the Supplies and bore the Burdens of thefe expenfive Wars, without receiving any Benefit from them whatever.

    - In the former Book we have fufficiently expatiated on the Policy of Edward the Fourth, and explained the Motives of his Conduct. By Refumptions and Forfeitures he recovered a great Land Revenue to the Crown. He made himfelf well acquainted with Trade, encouraged it, together with Manufactures and Induftry of every Kind. He was the Firft who turned a foreiga War to the Emolument of his People, ind added an annaal Tribute from France to his Revenue.

[^248]:    wards difcharged, that is, releafed by Parliament on a Suggeftion, that the King borrowed and expended it for the public Service. He had likewife large Supplies from the Clergy, particularly in the Twenty-fecond Year of his Reign, when, as Sir Robert Cotton fays, they granted him a Moiety of their Lands and Goods to be paid in Five Years, which Moiety, according to his Computation, amounted to Four hundred Seventy-five thoufand Pounds. The Monafteries and other religious Foundiations fuppreffed by Parliament, and given to this Monarch, according to the Lord Herbert of Cherbury, who feems to have token great Pains in his Enquiries, yielded an annual Revenue of One hundred Sixty-one thoufand Pounds. Mr. Ephraim Udall, who was alfo very diligent in his Refearches on this Subject, tells us (Hiftorical Account of Taxes, p. 191.) that the Lands belonging to the Abbey of Tewkefbury in Gloucefternire, which at the Suppreffion were eftimated at Sixteen hundred Pounds, were in his Time let for one hundred thoufand; and if this Computation be any Thing near the Truth, the Value of all the Abbey Lands muft have been about Onc Million per Annum above One hundred Years ago. To this may be added the Saving to the Nation thofe immenfe Sums, which under a Variety of Pretences were annually fent from hence to Rome. Thefe Particulars are. mentioned, not fimply to explain and fupport what is faid in the Text, but alfo to afford the intelligent Reader an Opportunity of collecting from them the Circumftances of the Nation and the Clergy in thefe Times.

[^249]:    7 The profufc Grants of Abbey Lands to the Nobility and Gentry in this, as well as in the former Reign, may very well be fuppolid to have operated upon the Temper of Parliaments. They had allo another Operation, whi:ly:- ceedingl! difturbed the public Peace. Thofe to whom they were given being defirous to makc f. greateft and fpeedieft Profit from them, demolifhed Farms, and turned them by making Incloitires into Pafturage, which depriving Multitudes of their Living, excited the Infurrections that we have mentioned above, and brought on fuch a. Scarcity of Corn, and all Kinds of Provifions, as could not be remedied by Proclamations for fixing their Prices and preventing Exportation; which Expedients being at length found ineffectual, were recalled. As to the Coin, Henry the Eighth, at his Death, left the Pound reduced to: lefs than One Half; that is to fay, 'Twenty Shillings of his Moncy was worth but Nine Shillings and Four Pence of ours, and the Proportion of Gold to Silver was as Five to One. His Son in the laft Year of his Reign reduced the Puand to lefs than a Fourth, Twenty Shillings being worth no more than Four Shillings and Eight Pence of ours, and brought down the Proportion of Gold to Silver as Two to One. It is erident that this muft have occafioned the Hoarding of old Money or exporting it, and the railing all Kind" of Neceffaries to exorbitant Yriees, that is in Appeariance. At the Clofe of his Reign, the Pound was railed to the Value of Ore Pound and Seven l'ence of our Money, and the Proportion of Gold to Silver became as Eleven to Ono. See Folkes's Tables of Englifh Gold and Silver Coins, p. 29-45.

    2 In the laft Parliament of King Edward they granted him Two Tenths, Two-Fifteenths, and a Subfidy towards the Paymeut of his Debts. Mary by Letters Patents releafed the Subfidy, which the declared by Proclamation, and fome Doubts jet remaining, difcharged her Subjects by Aft of Parliament, promifing at the fame Time so pay her Bother's Debts at Home and Abroad. Yct to fupport the French. War the borrowed, as is faid, on Privy Seals, more certainly from the Ciry of London, Twenty thoufand Pounds at Twelve per Cent. for which he mortgaged Crown Lands. Stowe's Chronicle, p. 632: The vigorous Support given to King Philip gained him the Victory of St. Quintin ; but oceafioned fuchenegligence in regatd to Cala:s,

[^250]:    e There was nothing on which the Queen valued herfelf more than on the utter Deftruction of this Monifter, as the filed bafe Money. Her Predeceffors had coined forme good, and redaced by Proclimation the debafed Money to the fame Value, But Elizabeth called this in, and withont any Charge to the Subjeed recoined all to the Amount in the Courfe of her Reign to Five Millions and a Malf, befides the Portcullis Pieces which were ftrack for the Ule of the Eaft Iodia Company. As long as Cécil lived fhe refined all the Overtares' frequently made . her to relieve her Neceffities, which were fometimes very great,' by again tampering with the Coin. Towards the Clofe of her Reign however the made a fimall Atteracion, bat without Injary to the Standard; by coining Sixty-tivo Shillings fiftead of Sixty out of the Pound of Sitver. The Acts for promoting Tillage proved fin great Meafure ineffectual. We may eafily guefs at the Condition of the Teriants from the Account given us by her Secretary of State, Sir Thomas Smith", of that of their Landioths. "He who lind a Paiher, who kept a good Houfe, and had "An" Thito in order to maintian is, thall tome to his own; after he is out of Wardhip, " Woodi deciyed, Houtes fatien Aowhy sliock whited, and Landa utterly worn, and plowed to "the bapren, and to make Amends thall" pay yet One Year"s Relief, and fue oufter le maine, i befide other $\mathrm{Ch}^{2}$ ges, to that not of tunt Years, and peradventure never, he flall be able "to fecover, and cone to the Ettute where his Father" left it." Commonwealth of England,
     rufal.

[^251]:    - At the Time of his Acceffion the Debts of his Father were computed at Seven hundred thoufand Younds, and he was befides himfelf indebted in Thirty thoufand. The Parliament gave him about a Tenth Part of the Sum that he declared to be requifite for his immediate Scrvice. This obliged him to borrow from the City on the Crown Lands a large Sum at Eight per Cent. He pawned his Jewels in Holland for Three hundred Thoufand Pounds, and by other Methods of the like Kind ran himfelf deeper in Debt. When difappointed the Sccond Time by Parliament, he had not only recourfe to many irregular Methods of procuring Money, but committed likewife fuch as refufed to lend, and by this Means heightened extremely the Difcontents of thofe who were moft able to embarsafs his Affairs. By his Affent to the Petition of Right, he put an End to thefe Practices, and declared them illegal; however being again difappointed, he had recourfe to other Prerogative Mcafures of Supply, fuch as erecting new Corporations, Charters, Compofitions with Recufants, confirming defective Titles to Crown Lands, Fines for Kuighthood, and the like. As to Ship-money, which produced Two hundred thoufacd Pounds per Annum for Four Years, it was hlictly applied to the Purpofe for which it was raifed, powerful Fleets were fent out, the Coaft fcoured from Pirates, the Dutch obliged to pay Thirty thoufand Pounds for Licence to Fin, the Navy Board regularly eftablifhed, new Ships built, particularly the Sovereign, of upwards of Ninety Guns and Seventeen hundred Tons. Commerce flourified wonderfully; the Ealt India, African, and Turky Trades ware improved and extended. The Plantations began to thrive exccedingly. Ireland was reduced into Order, and yielded a confide rable Revenue, as a Proof of this the Cuftoms rofe, and the Coinage at the Tower amounted to upwards of Twelve Millions. This large Sum was exclufive of what was coined by the King at. his feveral Mints of Aberiftwith, York, Shrewßury, Oxford, Exeter, and other Places out of his own Plate, that of the Univerfities, the Nobility, Gentry, and Clergy, who adhered to him, and which we bave reafon to judge muft have been very confiderable both in Cold and Silver. from what yet remains in the Cabinets of the Curious; and though fome of the Pieces are but of cuarfe Workmanthip, yet others are very fair and neat, and all of them of due Finenefs and Weight; which by adding to the Circulation muft have been of great Utility to the Nation even in thefe difmal Times. This hews that what Clarendon, Rufhworth, and Coke affirm, that the Nation at the breaking out of the Civil War was in a moft profperous Condition, is a certain Truth.

[^252]:    ' Ihifory of Independency. Aecount of Taxes, p. 295. Selden's Works, vol. iii. p. 2070. Wefore the Civil War actually broke out the Parliament gave Six Subfidies and a Poll Tax, which they compated made tagether Six hunded thoufand Pounds, for Payment of Debts, and fetting with the Scors. Atter the Civil War began they raifed weekly and monthly Aftefments, introluced Excifes, took Tonnage and Poundage, impofed new Duties, called in Silver Plate, for the Value of which they allowed Eight per Cent. borrowed occafionally immenfe Sums from the City of London, the Merchant Adventurers, and other public Companies. When their Power was eftablifhed they found new Refources in Sequeftrations, Compofitions, Sale of Crown and Church Lands, \&c. When Cromwell was declared General, an Affefment of One hundred and Twenty thoufind Pounds 4 Month was raifed for the Army and Nayy. Mr. Walker in his Preface to the Book firit cited, after enumerating the Methods taken by them afferts, that what they raifed in Six Years, amounted to Forty Millions. Other Computations may be found in Stevens's Account of Taxes. The Dutch War was enteredento upon Motives that had induced the King to levy Ship money, that is, for maintaining the Sovereignty of the Sea, the Right of the Flag, and the Fifhery. The larliament might have fecured all thefe by a Peace and the Satisfaction due to the Nation for the Injurics in the Eaft Indies. But they infifted on a Coalition of the Two Republics. The War was detrimental to Cemmerce, left the Army idle, and the large Rewards given by the Parliament to their own Members, raifed that Spirit of Difontent, which in the Nidst of their feeming Plenitude of Power enabled their own Cereral to turn thena out.

[^253]:    g The Firft Parliament called by Cromwell was compored of Nembers appointed by him, w/o finding themfelves able to do nothing refigned the Power again into his Hands. After this he made Peace with the Dutch upon Terms much better in Appearance than they were in Reality, in which it is thought he found his Intereft. When he had taken the Pitle of Protector, he called a Second Parliament, with whom he parted in Difguft. His T hird Parliame:t fettled a Revenue upon him, but it was inadequate to the Expences of his Government. He by his own and his Council's Authority reftored the Exchequer, took Tonnage and Poundage, Excicc, Munthly Affefments, and the cafual Revenue, all which did not fuffice. In an Account fatcd April 7 th 1659 by Richard's Parliament, the whole national Chargemmounted to Two millins Two handred and One thoufand Five hundred and Forty Pounds, which exceeded the Revenuc by Three hundical Thirty-two thoufand Eight hundred and Twenty-three lounds, and the public Debt wats reperted to be Two millious Four husdred Seventy-four thoufand ' Two hundred and Ninety lounds. Thefe refpective Sums regard the whole Three Kingdoms. It was not fimply the Degrading of Richard after forcing him to diffolve his Parliament; recalling the old Parliament, turning them out again, that revolted the Minds of the Nation, but many other Circumftances concurred, fuch as the decliningr of Trade, from the Captures in the Dutch, the Seizute of the Merchants Effets on the breahi g out of the Spanigh War, and the violent Proceedings of the Sectarics, who equally oppreffe. 1 the Church and the Prefbyterians, and thereby excited a Defire of recurring to the old Conftitution. Before the King's Death the Money coined by the Partiament at the Tower bure his Stamp, thence forward the Arms of the Commonwealth was ufed even during the Time of Cromwell, and af:erwards; but the Whole did not amount to Half a Million. Sume very fine Pieces were fruck by him both in Gold and Silver, but it is doubted whether they were ever current. The Spirit of Hulbandry and Cultivation which revived in the Reign of Quetn. Elizabeth, continued from that Time, but through the pablic Confofions and the Inclemency of the Scafons Corn bore a very Hugh Price during this Prriod.

[^254]:    * Kis Firit Parliament paffed an Act for affording his Majefty a fpeedy Supply of Seventy thoufand Pounds, fetted on him Tonnage and Poundage, the hereditary Excife in Compenfation for the legal Abolition of Wards and Liveries and Purveyance; the temporary Excife for the Support of Government, the Revenue arifing from the Poft-ofice, and afterwards Hcarth-money. But it ought to be obferved that many Years elapled before thefe Revenues were brought into Order. This was done at firft by farming, which gradually difcovered their true Value. The Cuftoms (Davenant on public Revenues, vol. ii. P. 42.) yielded A. D. 1666, Three hundred and Ninety thoufand Pouuds ; but were raifed by Degrees to Five huindred Fifty-five thouland Seven hundred and Fifty-two Pounds per Annum. The Excife, as the fame Author tells us, voi. i. p. 127, rofe in like Manner from Two hundred Seventy-five thoufand Nine hundred Fifty-two Pounds, to Six hundred Forty-four thoufand Eight hundred Fifty-four Pounds per Anaum. The Poff-office, as we have already obferved, vol. ii. p. 256, 257.advanced from 'Twenty-one thou-

[^255]:    "The Revenue granted to King James amounted to full Two Millions per Annum, whereas that of his Brother did not exceed One million Two hundred thoufand, and this was fo well managed by him, that he is fuppofed to have faved about Three hundred thoufand Pounds a Year, A long Continuance of Peace, an increafing as well as extenfive Commerce, and many other favounable Circumftances concurred to the Improvement of the Country, and the enriching of its Inhabitants. The French King having revoked the Edict of Nants, many Thoufand Refugees came over hither, who were not only well received and protected, but highly encouraged alfo by the King, on account of their bringing with them many valuable Manufactures. To the Fift India Company he granted anew and very ample Charter, which was the Sixth they had rcecived fince the Refloration, and at this Time their Trade was fo flouridhing, and their Credir to great, that they borrowed Six hundred thoufind Pounds at Three per Cent. He was alfo very indulgent to the African Company, in which while Duke of York he had a large Concern. But as both thefe were exclufive Charters by the fole Power of the Crown, the Legality of them was difputed, and feveral private Mercharts endeavouring on this Ground to interfere with them, were fited Intertupes. In refpect to the Navy, it was at the 'Time he left the Kingdom in admirable Condition, confifting of One hundred and Seventy-three Veffels of different Rates, for the Manning of which Forty-two thoufand Seamen were required. The Coinage during his flort Reigu was in Gold Two Millions One hundred Thirteen thoufand Six hundred Thirty-nine Pounde, and in Silver Five hundred and Eigliteen thoufand Three hondred Sixteen Pounds. Amounting together to Two Millions Six hundred Thirty-one thoufand Nine hundred Fifty-fite lounds.

[^256]:    c It will not be Time mifpent to enquire a little more minutely into the Caufes of thefe Effects, in order to have a clegrer Conception of both. The Nation had been certainly in many Refpects improving and growing more wealthy for at leaft Forty Years before the Reftoration, and though this might and certainly did receive fome Check from the Dutch and Spanifh Wars, and though very l.arge Sums might be hoarded in thofe Days of Confufion, yet from inconteftable Marks it appeared that the Public was Aill in a healthy State, and capabie with a competent Degree of Attention of recovering its former Vigour. Many excellent Treatifes in regard to Agriculture, Manufactures, and Commerce were publifhed, which by explaining the true Principles of them all had fingular good Effects. The Firf, becaufe the eafieft Improvements were made in Pafture and Meadow Lands, which by taking in large Quantities of what had been efteemed wafte and barren Grounds, occafioned in fome Places a Fall of Rents, whence arofe the Clamour againf Irith Cattle, but the Rental of the Kingdom was raifed, and Eftates in general increafed in their Value. Corn continued dear, which gave the Firft Hint for giving a Bounty on Exportation, as we have fhewn elfewhere. A Native of the Low Countries brought over hither the Secret of dying Woollen Cloths to the higheft Perfection, which till then we fill wanted. The Art of making fine Glafs was at the Expence of the Duke of Buckingham brought from Venice. We became better fkilled than formerly in whatever related to Metals. The ManufaCture of Hats was gained. The Silk Trade became very confiderable. The Manufactures of Linen and Cotton were introdnced and cucouraged. The Taxes were fo laid as to promote Circulation, which was 解 farther increafed by the joint Stock Companies, and by the Loans to them and to the Crown. It is very true that the Two Dutch Wars, the Plague, and the Fire of London produced Loffes that have been compured at Twenty-feven millions, which however duly confidered amount to a convincing Proof of the Truth of what hath been faid. For after this our Commerce augmented ; the City was very foon, as well as very fplendidly rebuilt; and the Number of its Inhabitants within this Period increafed more than One Half. Add to all this, that our Shipping doubled in the fame Space, all which could never have happened, if Things had nots besn as we have flated them, as in Points of this Nature no Arguments are fo conclufive as thofe that wife from Facts.

[^257]:    i.The Statate remern to in the Text is the 8th Geo. I. cap. 1 5, by which it was enacted, That from and after Lady-day 1722, the Subfidies and orher Duties payable on the Exportation of any Goods or Merchandize of the. Product or Mannfacture of Great Britain hould ceafe and determine, except thofe payable on the Exportation of AHum, Lead, Lead Ore, Tin, Leather tanned, Copperas, Coals, Wool Cards, white Woollen Cloths, Lapis Calaminaris, Skins of all Sortt, Glue, Coney Hair or Wool, Hares Wool, Hair ofall Sorts, Horfes, and Litharge of Lead. Then as to Importation, the feveral Sortspf Drags and foreign Goods ufed in Dyeing were in this Act particularly enumerated and made free from'all Duties, but if again exported, to pay upon Exportation Sixpence in the Pound adWalorem, according to the Rates fixed by this Act. The Duties upon Importation alfo of feveral' Sorts of Goods were iredueed, upon Beaver Skins from Sixteen Pence to Sixpence per Okin, upon Pepper from One Shilling and Eleven Pence Halfpenny per Pound to Four Pence per Pound, apon Màce from Ten Shillings to Three Shillings, on Cloves from Five Shitlings to Two Shillings;: and on Nutmegs from*Four Shillings to One shilling, and Six. Pence per Eound.

[^258]:    : At the Entrance of this Monarch's Reign the Parliament fetted his Civil Lift in fuch a Maga: ner, as that if the feveral Funds, which were the fame granted to his Royal Father, fhould not produce Eight hundred thoufand Pounds, the Deficiency was to be made up to his Majefty: The Total of the Supplies within this Period of Thirteen Iears amounted to Forty-three Millions Seven hundred Twenty-eight thouland Seven hundred Twenty-nine Pounds. The Eaft India Company, befides a confiderable Sum paid for the renewing her Charter, confented to the Reduction of Interelt on her Capital from Five to Four per Cent. The Proprietors of South Sea Stock were, at their own Requeft, permitted to convert Three-fourths ef their Capital into Annuities, ftiled New Annuities, to difinguifh them from the Old, the whole Capital, fome Years before having been divided into One Moiety Stock, and the other Moiety Annuities. A Law was dikewife paffed to prevent Stock;obbing, and the Mifchiefs attending it. Great Eacouragement was given to the Manufacture of Britifh Sail Cloth, a Thing in many Refpects of the greateft Confequence to the Nation. The moft effectual Means were employed for promoting the Whale Finery which was become fo much the more neceflary, as it had failed when attempted by the South Sea Company. The feveral Proprietoss of Carolina (except the late Earl of Granvilles) furrendered their Charter for a valuable Confideration, and the Province was divided into Two Royal Governments with very happy Effects. "The new Colony of Georgia was fettled. The free Exportation of Rice to all Places South of Cape Finifterre was permitted, which hath beem highly beneficial to the Two Colonies laft-mentioned. An Act alfo paffed for encouraging the Sugar Colonies. By another Stature effectual Means were provided for the fpeedy Recovery of Debts due from the Inhabitants of the Plantations to the Merchants. of Great Britain, and a Law was likewife made to prevent the Exportation of Hats manufactured in any of the CoSonies.

[^259]:    1 The War with Spain, which be'gan by the Court of Madrid's refufing to pay what had been Atipulated by the Convention, unlef the Sonth Sea Company complied with a certain Demand made on them by the Court of Spain, was decläred here October 19th 1739. In the Three Years which the naval War continued, the Supplies voted amounted to Sixteen:Millions, Six hundred Fifty-three

[^260]:    .m The Incumbrances left upon us by the War, the Difcharge of a large Navy Debt, Deficiencies on new-created Funds, Sublidies to foreign Princes, and the Charges incurred by conItructing Fortifications in America, were the Caufes of thofe extraordinary Expences mentioned in the Text, fo that the Supplies in thefe Six Years amounted to Twenty-one Millions Eight hundred Ninety-five thoufand Six hundred and Eleven Pounds. Befides the Reduction of Irterelt on the Funds to Three per Cent. which though it did not take Place immediately, was a very extraordinary Thing, confidering the Charges which the Nation had fo lately born, fome other Alterations were made in refpeet to the public Companies. Thefe were with a View to relieve Commerce from the Reftraints that were fuppoled to be prejudicial to it. The Terms of Admiffion into the Turky Company were made eafier, as well as the Manner of trading, in Hopes of reftoring it to its former Vigour. The old African Company was diffolved at no fmall Expence to the Public, and a new One Sublituted upon a more free and enlarged Eftablifhment. The Duties upon China Silk were reduced, farther Bounties were allowed in Favour of Britifh Sail Cloth, the like was done with refpect to Britifh Linnen. In a former Note we have hewa the Effects of thefe Bounties in refpect to Ireland, it may therefore not be improper to mention here the furprifing Progrefs of this Manufacture in North Britain. The Board of Truftees for the Encouragemeut of Fifheries, Manufactures, and Improvements, was confituted by Authority of Parliament, A. D. $172 \%$, and the next Year the Linnen made for Salc was 2,183,978 Yards, in Value One hundred Three thoufand Three hundred and Twelve Pounds, and in A. D. 1754 (that is, in the Space of Twenty-feven Years) the Quantity of Linnen made was 8,914,369 Yards, and its Value Four hundred Six thoufand Eight hundred and Sixteen Pounds. The Importation of Wool and Woollen Yarn, which hitherto had boen permitted only from certain Ports in Ireland to certain Ports in Britain, was now laid entirely open for the Bencfit of both Countries. An Act was made for encouraging the Importation of Pig and Bar Iron from America. The Bounties allowed on Whale Fihing were expended to thofe Scas, and Foreigners employed in that Fifhery for Three Yeare were naturalized. A voluntary Society for carrying on the Herring Fifhery was incorporated, and neceived repeated Encouragements from the Public. The Britih Mufeum was erected, and endowed at the national Expence, and the Society for the Eacouragement of Arts, Mannfactures, and Commerce, a moft laudable Defign, was begun and profecuted for the public Bubefit, at the Expence of Adividuals. It may help us to form fome Idea of the Extenfion of our Power at Sea, to remark that the Tonnage of the Navy had doubled to the Space of the laft Eorty Years.

[^261]:    n The Supplies granted withim thefe Five Years amounted to Fifty-four Millions Three" huadred Nineteen thoufand Three hundred Twenry-five Pounds. All this immenfe Sum was raifed by a Duty upon Plate, Licences for Selling Beer, a"farther Duty upon Cards and Dice, an Impofition of Five per Cent. on Olices and Penfions, additional Duties on Hovfet and Windows, a new Poundage of Five per Cent. and an additional Malt Tax of Three Pence per Bufhel, with the Affiftance of Loass, Lotteries, and the Application of the Sinking Fund. The Total of the Supplies daring this whiole Reign amounted to One hundred. Eighty-three Millions Nine hundred Seventy-fix thoufand Six Hundred Twenty-four Pdunds.' Laws were made for encouraging our own Woollen Manufactures, and preventing the pernicious Practice of Britilh Merchants exporting French Cloths from Leghorn to the Levant. The Britigh and Irifh Linens had still farther Encouragements given them in:order to fupport that amazing Progrefs they had

[^262]:    already made: The Cultivation of Madder, as we have fhewn elfewhere, received, as it highly deferved, the ProteCtion of the Legilature. Farther Affiftance was afforded to the Whale and White Herring Fifheries, and the latter was in North Britain relieved from fome Oppreffions that had continued for Ages. The Bounties upon Indigo were continued, and Pig and Bar Iron from the Plantations, the Importation of which had hitherto been reffrained folely to the Port of London, was allowed to be brought into any Port. The Encouragements given to the Sugar Colonies were likewife continued. If in Addition to thefe vifible aad incontefible Marks of the Increafe of domeftic Indufry, and the Extenfion of foreign Commerce, we advert likewife to the feveral Statutes made within this Period for embellihing and improving the Cities of London and Wefminfter, and other Cities and great Towns throughout the Kingdom, for draining Fens, in.clofing Commons and wafte Lands, erecting Bridges, improving ofd and making new Roads, ;confructing Holpitals, Infirmaries, and other Edifices for poblic Convenience, with many more Inftances of a like Nature that might be mentioned, we can entertain no Doubt of the Truth of what is afferted in the Text.

[^263]:    - At the Time of the prefent King's Aceeffion, a very confiderable Change was made in the Settlement of the Civil Lift by his Majefty's Confent, on account of the Alterations that it had been found neceffary to make in the Courfe of the late Reigu for the public Service in refpect to the feveral Funds appropriated thereto; which Alterations are recited in the ACt, all of which Funds, to prevent for the future thefe and other Iaconveniencies, were given up to the Public, and inftead thereof an Annuity granted to his Majefty out of the Aggregate Fund of Fight hundred thoufand Pounds per Annum, being the Sum granted to the late King including therein Seventy-feven thoufand Pounds per Annum fettled on the Princefs Dowager of Wales, and other Branches of the Royal Family. In the Courfe of the firft Three Years the Supplies granted by Parliament amounted to Fifty one Millions Four hundred Thirty-feven thoufand Three hundred and Fourteen Pounds, and fome of the Taxes impofed in order to raife thefe valt Sums bore heavy upon the People, more efpeciatly the additional Excife of Three Shillings a Barrel on ftrong Beer, on which Twelve Millions were borrowed. By this and other Loans the public Debt was fwelled to an enormous Height, which however was far from depreffing the Spirit of the Nation, for that was fuftained not only by a continued Flow of Succefs in all Parts of the World, but by a vifible Increafe alfo of internal Improvements and of foreign Commerce, which afforded juft Hopes, that upon the. Conclufion of an honourable and advantageous Peace, fuch Meafures might be purfued as would fupport Great Britain in the futh Poffefion of that Superiority, mich through the Blefling of Providence on her Councils and. Arms, fhe had fo glorioully dequired.

    Vol. II.

[^264]:    P It would no doubt be very fatisfactory to Chew by what Means and in what Manner the fignal Events mentioned in the Text have been and are continually brought about; which however would require much more Room than we can fpare. We will notwithftanding endeavour, by ftating a few leading Principles, to put it in the Power of any intelligent and inquifitive Reader, who will reflect on and purfue them, fully to fatisfy himfelf upon this Head. The Sums raifed, whether by Levies or by Loans, are immediately expended for the public Service, or in other Words, what was drawn from the Nation iffued again to Individuals. By this Means a conftant, regular, and increafing Circulation is kept up, and Multitudes of all Ranks ufefully employed in their different Occupations, which creates a continual Demand for Provifions, raw Materials and Manufactures. This Circulation neceffarily lightens the Weight of Taies, for the Money being no fooncr collected by them, than again Spread abroad for the Purpofes beforementioned, enables thofe who receive it to contribute afrefh without any ccafiderable Inconvevience. As this Expence promotes and fupports Induftry of every Kind, fo confanat and certain Intereft draws out Specie from every Hoard, where it lay as ufelefs as in the Mine, and of courfe quickens Circulation, and by its vifible good Effects invites Foreigners to participate in thefe Advantages. That all this is not plaufible Conjecture, but founded on the Balis of Truth, is evident from thofe Difficulties found origially in funding fpeedily decreafing, and ftill more fully appears from the Increafe and Improvement of our Manufactures, the Enlargement of our Commerce, the Augmentation of our Marine, and above all the Rife of landed Property; and the repeated Falls of Intereft. Thefe are Facts too vifible to be denied, and cannot be: referred to any other Caufes than thofe that we have affigned. But we muft not conclude from what hath been faid, that our public Debts are not productive of fome Inconveniencies, for we have thewn as well as allowed the contrary, yet their being liable to Ruft, was newer urged againft the Ufe of Merals. Much lefs can it be inferred, that our national Credit is without Limit. It is our great and fingular Happinefs that we have not hitherto been convinced of it by Experience, and it will be a frong Proof of our Wifdom to fecure thofe good Effects that flow from it, and at the fame Time maintain and accelerate this falutary Circulation by 2 regular and judicious Reductime, which is certainly in our Power.

[^265]:    - The enacting Claufe referred to in the Text runs in thefe Words, "That all the Monies
    "c to arife from time to time, as well of or for the faid Excefs or Surplas, by virtue of the faid " ACt made for redeeming the Yunds of the Governor and Company of the Bank of England, " viz. the Aggregate Fund, and of or for the faid Excefs or Surplus by virtue of the faid Act for " redeeming the Funds of the faid Governor and Company of Merchany trading to the South " Seas, \&sc. and of or for the faid Excefs or Surplus of the faid Duties and Revenues by this Act " appropriated as aforefaid, viz. the General Fond, and the faid overplus Monies of the faid General " Yearly Fund by this Act eftablifhed or intended to be eftablifhed as aforefaid, faall be appro" priated, referved, and employed to and for the Difcharging the Principal and Intereft of fuch "c national Debts and Incumbrances as were incurred before the Twenty-fifth of December 1716, "c and are declared to be national Debts, and are provided for by Act of Parliament in fuch oc Manner and Form as thall be directed and appointed by any future AEt or Acts of Parlia" ment to be difcharged therewith or out of the fame, and to and for none other Ufe, Intent, or "Purpofe whatioever." If the Reader is defirous of entering more minitely into this moft im. porrant Subject, he may consult a Treatife intituled, "An Anaual Abftract of the Sinking Fund ${ }^{6}$ f from Michaelmas 1718, when it was firf ftated to Parliamient, to the 10th of October 1763. $\because$ By a Member of Parliament many Years in the Treafiry, Londen 1764, 410.

[^266]:    - What is faid in the Text muft be onderfiolof of the ancient Egyptians: For how much foever the Accounts we have of Qitit; Sefoifrif, :an other Mooarchs of theily may be mingled with Fable, yet they certainly had a Ground of Truth. Unider thein the Egyprians fetled Colonies in the Indies, in Arabia, in Colchis,:- Herodot. Euterpe Diod. Sicul. Wh. i. Strabo xvi. The Chinefe, in the Opinion of the judicious Bifhop Hinet and maif other learned Men, were themfelves a Colony from the Egsptians. Before the Europeans Davigated thofe Seas the Chincfe vifited all Parts of the Indies, fertied many. Colonies, and particularly in the Ilaped of Ceylotit The Two great Republisks of Tyre and Stidon miniaiped their Power and extended their Commerge By their numierous Sertements. In reference ta the Maritime States of Greece, and parvaulirly of Athens; the Render may find a very curiotis and infruetive Account in Clank's ConWexion of Roman, Saxog, and Englim Coins, chap. ii. P. $55^{\circ}$ The Romans, though their Colonies were chiefly Military made Ufe of them dikewife for the Purpofe of Trade, as hath been already fhewa at latge. The Corthaginians were a Cölony from the Tyrians, and for a Time divided the Commerce both Cunte Eaft and Weft with their Mother Gquntry. They likewife fetted many Colonits, aniat are by fome fuppofed to have difcovered America. Thefe Intances are fufficient to fhew both the Gentiments and the PraCtice of the wifent Nations as to this Point.

    Vol. II.

[^267]:    - The Author alluded to in the Text is the famous Machlavel del Principe, cap. 3. where he labours to fhew that the fettling Colonies would have been a cheaper and a more fecure Method than that of building Fortreffes in order to bridle conquered Countries. He hath advariced the fame Doctrine, and fupported it by very folid Arguments in his Hiftory of Floreuce, and in foihe of bis other Works. All thefe are very juftly and properly applied in regard to Republics; but One would think he had little Reafon to fuppofe that Princes, more efpecially fuch as he has reprefented them, would ever have Recourfe to fuch Expedients, becaufe in their wery Nature Colonies require Eafe and Freedom, and are confequently not very compatible with the Maxims that prevail in defporic Governments.
    c The eftabliming Factories in Foreign Countries was Onc of the Firft Effects that followed from the Revival of a Spirit of Commerce, and the Confequences that atteaded them were fo beneficial that when they were once introduced, they quickly increafed. In confequence of the Privileges granted them, the Merchants who compofed them lived according to the Laws and Cuftoms of their own Country, and were governed by Magiftrates of their own chufing, or appointed by their own Sovereigns, wherever they were placed. In Procefs of Time they became fill more like Colonies, for it appears that in virtue of Treaties Engligh Subjects fettled in Bergen, and in other Partswof the Danifh Dominions, were allowred to purchafe Lands, to erect Warehoufes, to vend their Goods wholefale or retail, according to their own Choice, and were exempt from all Duties, except fuch as were confented to previons to their Eftablifmment. Sce Rymet's Fcedera, tom. xii. p. $3^{811}$

[^268]:    e John de Witt, who was One of the ableft and mof difinterefted Statefmen that ever committed his Sentiments to Writing, though he knew perfectly well how much Population contributed to the Welfare of Holland, yet zealouly recommended Colonies, as affording a Refuge to fuch as had been unfortunate in Trade, who becoming poor after having been rich were doubly miferable; as opening a Field in which fuch Men might exert their Abilities, as through want of Intereft could not rife to Power and Places in their own Country; and as a Supplement to Hofpitals and other charitable Foundations which he thought in Time might come to be overcharged. He alfo highly commended the free Spirit of our Plantations, which as we have hinted in the Text were fettled by very different Sorts of People. Under Elizabeth Men of Figure and Family, of bold adventurous and enterprizing Tempers, led the Way, and left behind them a Succeffion of Men lefs confiderable in Point of Rank, but of the fame Turn of Mind. Under James a more fober Race of People, preferring the Freedom of their Confiences to:all other Confiderations, embraced the Opportunities that were offered them of removing into thefe remote Countries rather than live under Conftraint in their own. Under Charles political Malcontents took Shelter in the Colonies; Afterwards the diftreffed Royallits retired in great Numbers to Virginia. The Parliament and Cromwell increafed their Number, by tranfporting fuch as were obnoxious to them. Whoever wifhes to fee upon what Principles thefe Things were condueted in their Origin may' confult Lord Bacon's Works, vol. i. p. 493. vol. ii. p. 273. where in his Advice to Sir George Villiers upon this Head will be found as much good Senfe and folid Reafoning as perhaps was sver delivered upon this Subject.:

[^269]:    ' In regard to thofe who made a Jeft of the Advantages propofed by Plantations, they couldnot well receive an Anfwer, for as there is nothing fo important that Men of quick Wit and light Minds may not ridicule, fo there is fomething ridiculous in affording them a ferions Confideration. Lord Bacon fays truly, that foreign Plantations may be compared to thofe. of Trees at Home, from whence iminediate Prosit cannot be hoped, and if it is, the Abfurdity lies not in the Thing, but in the Expectation. Such as went to the Colonics were not forced thither, but went of their own Accord, and if they had not gone thither would -not or could not have flayed here. Before we had any fuch Settlements, Multitudes went from this Inand to the Coutinent from a Variety of Caufes, and in the Time of Queen Elizabeth many Thoufands of Brownifts into the Dominions of the States. T tis is a clear and a true Anfwer to what had been faid of our Lofs of People, and without having Recourfe to other Reafons that will hereafter appear, it muft be evident to every candid and judicious Reader, that our Colonies are fo far froin beiag the Caufes of Depopulation, that they are quite the contrary. By our having Plantation; we preferve our People and their Pofterity. They remain as much our Subjects there as if they had remained at home, and as will be thewn hereafter, not only remain Subjects, but become more ufeful Subjects. Upon this Principle was built the Toleration of religious Opinions in our Firft Settlements, and in confequence of this moft of the Brownilts who had retired to Holland and Zealand quitted thofe Countrics and went to take the Benefit of that Toleration into New England. In order to receive farther Satisfaction upon this Head, William Pena's excellent Difcourfe on Plantations may be confulted, as alfo Sir Jofiah Child's Remarks in his Difcourfe on Trade, and a Treatife on the fanue Subject by Johnua Gee.

[^270]:    8 It muft give no fmall Pleafure to a curious and judicious Enquirer to refiect upon and inreftigate thofe Points in order to fatisfy his own Mind, as to the Manner with which they are brought about. It is from hence that our Planters in general, their Survants and Slaves, are fupplied with Apparel of all Kinds, with moft Sorts of Furniture, with a vaft Variety of Tools and Inftruments for their feveral Occupations; which of courfe gives Bufinefs and Bread to our Artificers and Manufacturers. The directing and collecting of thefe employs Merchants, Factors, and their Servants All the Trades that are coonected with building, rigging, and fupplying Materiats of every Kind for Ships and fitting out Seamen are indebted to the fame Caufes for their Subfiftence. The Freight alfo both out and home: is a Matter of great Confequence, amounts often to as much and fometimes more than the Value of the Gools. The Provifions and other Neceffaries confumed by the Seamert ia thefe long Voyages, with many more Articles which would be tedious to enumerate, concur to promote and to reward almont every Species of Induftry exercifed amongt us. All this arifes chiefly from the Difference of Soil and Climate, and from the Remotenefs of our Plantations; "and that thefe are not fallacious Suggeftions or plaufible Conjectures, the Rife of our Cuftoms, the Improvement of our I,ands; the Numbers of our Ships, and the gradual Increafe of our Flecta, are Teftimonies that leave us not a Shadow of Doubt, but on the conrary demonftrate clearly that this Reprefentation is in all Refpects founded in Truth.
    n Amongt many other Articles that are the Product of our Colonies, and fent from hence jnto other Parts of the World are Tobacco; Sugars, Rice, Cotton, \&se. to a very great Value; which being the Returns of our own Goods nnd Mananfactures are clear Gain to this Nation, and

[^271]:    - The Spwinh Hiftorians fay, that the Egyptian Hercules built Cadiz, and that the Grecian Hercules came-with the Argonauts, and built a City here. The very learned Bochart derives the Name of this Promontory Calpe from the Phoetician Word Galpha, which fignifies a hollow Vef. fel. The pearnied Reader, if he defires to enquire farther in regard to its Antiquity may conful Strabous. Geograph. lib. i. p. 5 1. lib. iii. p. 139, 140. 148. 170. Mela de fitu Orbis, lib. ii. cap 8. Plin.-Hifl. Nat. lib. iii. cap. 1. or if he would fee the Subject at One View, Cellarii Ceographia Antiqua, lib. ii. cap. i. p. 90 . The Arabs call it Gebal al Tharek, from Tharek bet Ziad, General of the Moors, who conquered Spain under the Caliphat of Walid the Son of A'b dalmalek in the Year of the Hegira 92.

[^272]:    b The Air of Gibraltar is jufly celebrated as remarkabiy wholefone, but its Thinnefs renders it lefs fo to Perfons of confumptive or broken Conftitutions. In the Summer and Autumn the Weather is very fultry and clofe, and the Inhabitants are likewife expofed to Thuader and Lightning. The Levant Winds are violent, but do not continue long. The Bock in Puie Places refemblei Portland Stone, in many is true Lime Stone, and ia others there is a Kind of coarfe Marble. There are many Caves, fome of them very capacious, in that of St. Michael towards the Southern Extremity of the Promontory, Five hundred Spaniards concealed themelves, having taken an Oath to become Mafters of the Place or perina, as they did. The Mountain had many more Trees upon it formerly than at prefent, particularly Locußf or Carob Trees, by the Help of which the Spaniards before-mentioned afcended, and therefore they were deffrosed, and the Soldiers have alfo cut down Numbers on the Summit for Firing, fo that at prefent except ia the Gardene, there are few.

[^273]:    c The old Town extended farther to the North and higher up the Mountain, conffifting of many more Houfes than the prefent. There was a Parifh Church, feveral Convents, and many Chapels both within and without the Town. It made a very pleafing Appearance from the Bay, but after all was but a poor Place. It was probably both larger and betrer in the Time of the Moors, for apon their Foundations the Spaniards built, and there are fill the Remains of many Moorifh Structures all over the Mountain, fome of which even now convey very clear Ideas both. of Streagth and Magnificence. The prefent Town has a Church for the Service of the Garrifon and Proteftant Inhabitants; but the Parifh Church remains in the Hands of the Papifts conformable to the Capitulation. All poffible Attention hath been hewn to the Eafe and Convenience of the People confifteat with the Safety of the Place, and for the neceffary Accommodation of thofe who are to defend it. The Town is now well fecured from the Attacks of the Spaniards on the Land Side, if they fhould again befiege it, and in regard to the Bay, fuppofing an Enemy's Fleet there, befides the natural Defence of mallow Water and Rocks, which will always keep Ships of War at a Diftance, they muft even there be expofed to the Fire of the Ramparts, on which there are mounted between Three and Four hundred Pieces of Cannon befides Mortars.

    - The old Mole was built by the Spaniards to cover their Veffels. Our Battery ereCted thereon was exceedingly ferviceable in both Sieges, and of courfe the Enemy did their utmont to deftroy it, and not altogether withour Effect. Since the laft Siege however it hath been exceedingly improved, the Head taken down, carried out Thirty Yards farther into the Sea, the Gun Batiery new confructed and rendered more commodions, with the Addition of a Platform for Mortars. The new Mole is abouit Two thoufand Five hundred Yards diftant, and is a very capital and elegant Work. The Bay of Gibraltar is a very fine Body of Water in which our Squadron may lie in great Safery, as in the Midft of it there is no Ground to be felt at a hundred Fathoms. It is every Way advantageous to the Place, affording a moft pleafing and delightful Profpect, the Breezes from it are very refrefhing, and it contributes likewife to the Subfiftence of the Inhabitants by fupplying them with Plenty of different Sorts of fine Fifh. The Town of Old Gibraltar on the oppofite Side is diftant fomewhat more shan a League.

[^274]:    - This famous Strait which makes fo great a Figure in ancient Hiftory is ftiled in Latin Fretum Herculeum, or fometimes Gaditanum, by the Spaniards Eftrecho de Gibraltar. Diodoras Siculus and other ancient Witers are very copious on the Subjeet, and un their Authority an Opinion hath been propagated that Hercules placed fomewhere hereabouts Twu Columns with an Infcription, purporting that it was impoffible to pafs further. But where he placed thefe Columns is a Matter of great Doubt, except to the People of Cadiz who actually fhew them. The Tradition that they were there is indeed ancient, but as for the Two Pillars that are now newn Father Labat (Voyages en Efpagne et Italie, tom. i. p. 383.) who actually faw them at the Beginning of the prefent Century, afferts that they were no more than the Bodies of Two old Windmills. The moft probable Opiaion is that the T'wo Mountains Calpe in Europe and Abyla in Africa were from their Figures Riled the Columns of Hercules, and it is not unilikely that from the blowing of the Weft Winds which hindered the Entrance into the Strait, the Notion arofe in early Times, that it was impaffable. The Reader wiono would inveftigate this Matter still farther, as from thence great Lights may be derived in refpect to the Navigation of the Ancients, may confult Diod. Sicul. lib. v. cap. 20. Strabonis Geograph. lib. iii. p. 308. Arrian de Expedit. Alex. Magn. lib. ii. p. 126. Appian. de Bello Hilp. p. 425. Apollodor. p. 1250 The Arabians call this Strait Bab al Zocak, i. e. the Gate of the Road, and the Turks call it Bab Bogazi, Jiterally the Throat of Paffage, which with them is the common Name of all Straits, but thicy call it alfo Sebtah Bogazi, that is, the Strait of Ceuta.

[^275]:    It is but juft to obferve that this very important Conqueft was plavaed by Two of our moft able Admirals Sir George Rooke and Sir John Leake, who knew its Value, more efpecinlly at that critical Conjuneture when there was the utmoft Neceffity of obtaining a Port in Spain, and of all its Ports for the Purpofe of the War, this was the molt commodious. As it was planned by Admirals, it was entirely executed by Seamen, and conducted with great Judgment: By a furious Camnonade in which the Fleet expended Fifteen thoufand Shot, the Enemy were driven from their Works. This gave an Opportunity to the Captains Hicks and Jumper to pu/h on Shore, and with an Intrepidity celebrated even by the French Writers, fealed a Redoubt ncar Europa Point, of which they kept Poffefion notwithfanding the Governor Don Diego de Salinas fprung a Mise under it by which Two Lieutenants and Fifty Men were killed, and Sixty more wounded. It was on a Sunday, and mol of the Women were at their Deyomins in a Chapel without the Town, which threws the Inhabiante into fach Conftrnation that they conftrained. the Governor to capitulate. Afrer the Reduction of Gibraltar, the Fleet food over to the Barbary Conf, with a Defign of making themfelves abfolutely Mafters of the Straits, by prevailing upon the Garrifon of Ceuta to declare for Charles the Third; but the Marquis de Gironella. who was then Governor rejected the Propofal, and the Fleet having taken in Water failed in fearch of the Enemy, Life of Sir John Leake, p. 83; 84. Memoirs du Regne de Philipe V. par Je M. de Sainte Philippe, vole in P. 271, 272.. Hure Daniel. Hiftoire. de Erabce, tom. 2. p. 218, 219.

[^276]:    e As Cindadella was for a long Series of Years the Seat of Government and the Center of Commerce in this Inland; fo it is generally allowed that the Inhabitants borh of the Town and of the Termino are the moft civilized and polifhed of any in the Country, which hath been juftly afcribed to their Intercourfe with other Nations, and to that fmall Degree of Trade with Majorca and other Places that they ftill retain, and which from the Appearance of their Exchange and the Circumftances of fome of its principal Inhabitants appears to have been much more extenfive in former Times. It hath therefore been the Opinion of fome Britifh Merchants that if a civil Government of a Mayor and Aldermen was eftablifhed here, and Matters of Commerce decided by a Court of Merchants; the commercial Spirit of the People might be revived, more efpecially if it was declared a free Port under fuch Regulations as thofe of Leghorn or Marfeilles. It is alfo conceived that this would have a very beneficial Effect in exciting Induftry amongt the People in this Diftrict, which is ftill the moft numerous after that of Mahon. See Gee's Trade and Navigation of Great Britain confidered, chap. 33. See alfo as to its Commerce in the laft Century, Roberts' Map of Commerce, chap. ceix.
    ${ }^{5}$ It is obfervable that all the Towns in thefe Termino's are built upon Eminences, by which they are rendered both healthy and pleafanta The Communication however between them was very difficult as well as dlfagreeable, and in fome Places dangerous till Mr. Kane, who commanded here feveral Years, made a noble Road as Atrait as the Situation of the Country would allow from Ma-

[^277]:    ${ }^{1}$ While the French were Mafters of this Place they took Pains to perfusde the States of Italy that they were their Delivercrs. 'They infifted that Gibraltar and Minorca in the Hands of Great Britain were to be confidered as Badges of Slavery, that by the Reduction of Minorca they had removed One and had a Title to expect the Affifance of the Italian Powers to make themfelves Mafters of the other, and by this Means the Mediterranean would be catirely free, and by the proper Arrangement of a naval Force the Englidh excluded, the Entrance into that Sea. To fupply the Want of Facts, as to the Tyranny which the Englinh had exercifed over the Italian States, they fuggefted that their Moderation was the Effect of Negligence, and not underftanding the Extent of that Power which they had in their Hands: All this and much more the Reader may find in the following Trcatife, "Eflay Politique fur hes"Avantages que la France peut retirer de la Conquête de l'ille Minorque. A Citadella, "757, 12 mon ".

[^278]:    2 The Dutch havefor the fame Purpofe made a Settlement at the Cape of Good Hope, which, by the Affitance of fome Hundreds of French Refagees, they have from an inhofpitable Wildernefs rendered

[^279]:    c This Orehil, which the French call Orfeille, both Corruptions of the Italian Word Roccella, grows of all the Rocks in the Canary Ilands, from whence they ufually export Two thoufand Five hundred Quintals every Year, muft of which is bought for the London Market at Four Pounds a Quintal. It likewife grows on the Rocks in Binbary, and very probably onthe Rocks here, but being much of the fame Colour with them is fuldom difcovered but by fuch as are well acquainted with it. Mr. Nieuhoff, a very fenfible Dutchman, who was here in 1658, (Sce Churchill's Voyages, vol. ii. p. 193) tells us, that the Ifland of St. Helena produces nothing valuable except a very fine red Co'our, which feems to fupport my Conjeclure, though it maj alf ithave another Meaning. The beft Method for preparing Orchil is to be found in an Italian Bowis intitled Del' Arte Pintor:a, p. 210.

[^280]:    ${ }^{d}$ It is generally afferted that this IMand was difcovered by Juan de Nueva, a Gentlcman of Galicia, in the Service of Portugal, on the 21 ft of May A. D. 1502 , but there is Reafon to think it was feen by Vafquez de Gama in his Firft Voyage Four Years before. The Portugucfe left here Hogs, Poultry, and planted fome Fruit Trees, which was their ufual Cuftom. They were however fo far from making a Settlement, except that now and then they feft fome fick Men there, that they made a Point of driving. out a few Negroes that took Shelter therein. A. D. 1588 it was vifited by our famons Circumnavigator Capt. Cavendifh, who hath given a very good Account of it. It was allo vifited by Sir James Lancalter, who made the Firf Voyage in the Eaft India Company's Service. The Portuguefe erected a Chapel in which they depofited Inflructions for their homeward-bound Ships. Other Nations followed their Example, but upon their taking away the Dutch Letters, the Seamen of that Nation were fo exafperated that they demolifhed the Chapel and deftroyed moft of the Trees. But about 1643 Two great Porti afe Carracks being wrecked here, their Crews got on Shore, and once more replenimed the Illand with Cattle, Hogs, Goats, \&cc. and it was not long after that.we took Polleffion of and fettled it.

[^281]:    - The Dutch, who were very well acquainted with this Inand affert, that in the Clefts between the Rocks there are Veins of very valuable Kinds of Boles or liarth. Some of the Nature of the Terra Lemnia, and not at all inferior to it. Some in the Rucks towards the South-

[^282]:    - The piincipal Objeils here confidered are the Situation of the Company's Poffeffions, their Extent and Condition, the Time and Manner in which they were acquired, the particular Pur-

[^283]:    c We werc in Polfeffion of the Illand, Town, and Haven, many Years before they turned much to our Advantage, owing to a Variety of Accidents, but more efpecially to an ill-judged War with the Mogul, and to our Difputes with the Dutch. Thefe produced two Invafions, which the Strength of the Place enabled us to repel. But when once our Prefidents began to have a truc Notion of the Company's Intereft, and in confequence of this encouraged Trade, received Strangers kindly, and treated the Inhabitants with Juftice and Lenity, the Number of Pcople gradually increafed. There is a general religious Toleration of Portuguefe, Moors, Perfees, Gentoos, and other Nations, fo that every Man is tree in Opinion, fecure in his Perfon and fafe in his Property. The State of this IMand therefore candidly confidered is a decifive Proof of his Effects that might be produced by the Excellence of our Government in any Part of India.

[^284]:    a The Porterguefe came into Poffeffion of Bombar and the Intands dependant upon it, A. D. $15:-$ They hit drom for above a Century with very litte Improvement, except maintaining a Multitude of Paidts, and carrying on but very little Trade, fo that it was confidered as of no great Confequence to the Crown when it was given up to us. We did notenter into Poffefion till the Year 1605. The Preaty of Marriage, by the Eleventh Article of which :he Ceffion was made, was dated the z zd ut Juni rour. The Fiect and Forces fent by King Charles under the Command of the Earl of Malburough and Sir Abrabam Shipman the next Year, coft the Crown One hundred 'Ihoufand Pounds, and when we did get Poffeffon we were defrauded of Sallet aud Campar, hecaufe not mentioned by Name, though included as Royaltics belonging to Bombay and inferted in the Map which was delivered to the King. The Grant of the Crown to the Company bears Date the 27 th of March 1668 . We had from that I'criod continual Difputes with the Poituguefe, till they were difposemed of Salfit and the other Mlands by the Marattahs, which Conqueit however could not deftroy our previous Claim of Right.

    - The Crown and the Company were equally detions that a Court of Juftice fhould be eftablifhed here conformable to our Laws. 'The Mayor's Court was accordingly erected by Letters Patent in the 'rhirtecoth of Ceorge I and again by the like lower in the Firft of his late Maiefty's Reign. It is at prefent cftablifhed by virtue of Letters latent catad the lighth of J.:nuary, in the Twenty-fixth of his late Majefty, all exprefing the great Confequetice of maintaining Order, Jultice, and Equity amongft the Inhabitants; and if by any Kegulations thefe can be more effectually fecured, there is no Doubt that the Crown, shich is the Fommin of Juflice, will affurd all necelfary Aflifance to the Company to acoler thufe unde their Jmildionion happy.

[^285]:    ${ }^{1}$ The City of Surat fands upon the River Tappi. The Port is at Suhali. It rofe into Confequence from its happy Situation, which drew to it the Commerce of all that Part of India, and our Factory was fixed therc A. D. 16I2. Befides this it was the Place from which the Moors embarked for Mecca, which alfo caufed a great Refort thither. Aurengzebe when he became Mafter of it, furrounded it with a Wall, built a Fortrefs, and hept a Fleet to protect the Inhabitants from Pirates, allotting the Revenue arifing from a lirge Dititit of Lauds for the contant Support of this Force On the Declenfion of the Empire Things fell here as in othel liaces into great Confufion, fo that compelled by the Depredations committed on our Trade from thence, we made ourfelves Mafters of is in our own Defence. The M.gal recognized this A'tion and inade a Grant to the Company, 4 th September 1759, of the C:.ftle and of the Office of Deroga or Admiral of the Fleet, with the Tanka or Salary of two Lacks of Rupees for its Maintenance, to which with the Lands before-meutioned we have a legal riule. The Rents of thofe Lands affinned for the Support of the Governor and the Salary of the Deroga are ill paid, and the Marattahs have an Agent to receive their Chout or Propurtion of the Revenue, to prevent their harrailing the Inhabitants. But under all thefe Difadvantages the holding this City is of fome Confoquence as well as Credit to the Company. The Inveltments are chiefly in fuch Coods as are fit for the Guinea Trade, and in large Quantities of Cotton for the Bengal and China Markets. Confiderable Merchants here buy up Europcan Commodities which they fend into the interior Parts of India, and there is good Ground to hope, if the Counary Govermanent was once well fettled, the Commerce of Surat would fpeedily revive.

[^286]:    : The Company had formerly a very confiderable and profitable Trade in Perfia, for the Management of which they had Factorics at If paban and fome other Places, but particularly at Gombron or Giambron on the Coaft, where they annually fold from Five Hundred to a Thoufand Bales of Cloth. This Commerce was very much decayed when the French under the Count d'tilaing plundered the Factory A. 1). 1760, and it has not been judged expedient to refettle it. The only Place in the Gulph in which we have now any Settement is Bufforah, which belongs to the Giand Signior, where we flill vend fome Woollen-goods. There is alfo a great Refort to this l'ort hom 'iangal, Surat, and other l'laces as well as Bombay, and thefe Veffels pay a Confulage to the "c:? fy for their Protection. There is Reafon to hope, that if the Affairs of tel tia were once mure in a fettled Condition our Commerce there might revive. A Ship is fent - buec in 'Pwo Years to Mocha on the Coalt of Arabia from Rombay to purchafe betueen Three and four thoufand bales of Coffee, eac! Bale being above Thrce hunced Weight.

[^287]:    ${ }^{\text {h }}$ The Cargoes ufually expores! from Bombay confift of Rice, Cocos, that is, Cuconuts, which are a great Commodiry, (ardamoms, Pepper, and other Goods collected from different Parts of the Maiabar Conft. From Gambron or Bufforah they bring lling or. Affafeidida, red E:arth, Sulphur, Dates d:y and wet, Almonds, Raifins, and feveral rich Drugs. Mochat and Mufcat afford the fame Kind of Goods, and frequently a Balance in Money. From Scindy they bring Putchnk, Rice, fome Piece Goods and Leather. The Cargo of the China Ship confifts in Tea, raw and wrought Silks, China-ware, Sugar and Sugar-candy, the beft Part of which is again re-exported to fome or other of the Places before mentioned.

[^288]:    i Cine of the moft famous of thefe lirates in our Times was Angria, whofe Anccitors for a Conturg hat excreifed the fame Profetion, being otiginally Subiects to Seva Kajah. This Man
     Twnty or Thit: Miles of Bombay, but a Peritory alfo on the Continent One hundred Miks lu"; ad. Sixty buail. Governor Leon after an u!ficcefstul Attempt concluded a Treaty with him $\therefore$ ]). 17:5, whih lie bruke. Alniral Mathews was not more happy in 1723. After this A:rpia whe the Deptood Indimman, fereral Dutch ships, and fome Places on the Coaft from the Poitugude. He was at length totally iuined by the worthy Admiral Watfon in February 1756, whir tow by Storm his Fortyefs of Gerah, and deltroyed his naval Power, which confifted of Fifieen Grabs, which canied Six and Nine Pounders, Five Ketches, f wo Ships of Forty Cinns, and about Forts Callivats and other fmall Craft.

    * Tin:s lland of Salfet, exclufive of the finaller Illes that lie about it, is twice the Size of Bomber, tharated from it ty a Gut of the Som not a Gunhot over, and extending northwards towacis: lise Comtinent, from which it is exparated by another very narrow Strait. It is a very phanant fruitful llac, and it it was in the Ilands of indultrious Inhabitnnts the Produce of it would De very conliderable. It is at pectent peopled chictly by half-caft Portuguefe Farmers, who remsincul these atier it tell into the Hands of the Marattahs. They raife a fall Quantity of Rice, but what they chictly depend upon for their Snbliftence is rearing Poustry, Hogs, \&c. and cuitivatiag Cirecns and Roots with which they daily fupply the Inhabitants of Fombay, who would be gricvority diftedfed if deprised of thele Provilions, as they fometimes were by the l'ontrapuefe, wio in the Time of Governor Plipps entered into an Alliance with Angria and gave Slacher to his Veffels when chaced by thofe of the Company.

[^289]:    ${ }^{1}$ The moft proper Method of explaining what is faid in the Text will be to gire the State of the Bombay Account from May 1769, to May 1770, which Nood thus. The Number on the civil Eftablifhment was Ninety-fix, the Charges 124,4281. the Miiitary F.ftablinment confifted of 1883 Europeans, and 6301 Seapoys: Total of the Military Charges 182,369 l. Fortifications and Buildings 78,827 l. Total of the Charges 385,6241 . Civil and Military Stores 133.625 1. Goods for Europe 295,4291. Debts due to the Company 289,792 1. Balance in the Treafury 49,2421. Inveftments 117,0861. Annual net Receipts of the Revenue 66,5661 . (In 1767 it yielded near 80,000 l.) Value of the Ships 74.83 z l. Of the Elephants, $\& \mathrm{cc} .10981$ of the Plate, Hourhold Furniture 15,037 1. Of the Slaves 196 1. Of the Company's Plantations 29,058 1.

[^290]:    : The only Way to underftand this Subject thoroughly is to look back to and con@der the former State of Things, when we fhall find that the Sovereigns of India were not fo weak, or the Europeans fo potent as in fuccecding Times, their Maritime Skill and Power being very much improved by their carrying on this Commerce. The Inhabitants of thefe Eaftern Countries are on the other Hand in all Refpects very much declined. The Portuguefe when they firft vifited Mofambique found Pilots there fo well acquainted with Aftronomy and Navigation as to be able to conduct them through the Indian Seas. The Chinefe before this Time carried on a Commerce, and fettled Colonics in different Parts of the Indies. Nations Itillmore remote vifited the Peninfula of Malacca, but gave over that Trade as foon as they heard of the Europeans. The Ship Timber of thefe Countries is excellent, and though their Veffels are not fo neat and elegant as ours, yet they are large and ftrong, and will laft (or as the Sailors phrafe it will reign) a Century. Their Boats are fo commodious for landing laffengers and Goods, that at Madrafs and Pondicherry the Europeans employ them in preference to their own. The Merchants in different Parts of India are, or at lealt were very cxtenfive Traders; and many of them immenfely rich. Their

    Vol. II.
    4 H
    Abilities

[^291]:    Abilities fo confpicuous that we conflantly ufe them as Brokers in tranfacting our Bufinefs. But in refpect to Policy, the Art of War, and civil Prudence we are certainly their Superions. By the Firft we have created fome, and availed ourfelves of every Opportunity to increafe our Strength. By the Help of the Second, that is by our Military Difcipline, we have made Ufe of them to fubdue themfelves, and in virtue of the laft, by treating them with Juftice and Lenitt, paying them regularly, and affording them Protection, we have fecured, and hall, while we purfue this Conduct, be always able to fecure the Advantages we have gained.

[^292]:    b If we reflect a little on the Defcription given in the Text we fhall find it a Kind of hiforical Type of the different Circumfances of this Settlement. The old Square Fort, which from North to South meafured One hundred and Eight Yards, and only One hundred from Eaft to Weft, points out the Condition we were in when this was fufficient for the Refidence of our Factory, the Reception of our Merchandize, and the Security of our Concerns. The White Town, which is fometimes called The Outer Fort from the Strength and Difpofition of its Fortifications, exhibits an Idea of the Growth of our Power; as the Extent of the Black Town, and its numerous Inhabitants, very clearly demonfrate the Confidence of the Natives in our Protection. Taken altogether we may juftly fay that this noble Eftablifhment, by its Splendour and Strength, reflects great Credit on the Company, and at the fame Time does Honour to the Nation under whofe Aufpice that Company is maintained in fo flourifhing a Condition.

[^293]:    c The Situation of Fort St. George and its Dependencies will, if maturely confidered, appear to be equally commodious and well chofen, inafmuch as it is in the Centre of the Conft of Coromandel, which it may at prefent be faid to command. It was this very Circumftance that made St. Thomas, which is little more than a Mile to the South of it, when in the Hands of the Portuguefe, the greateft Mart in thefe Parts, and as fuch chofen by the French before they fettled at Pundicherry. Madrafs was taken, as we have mentioned above, on the Tenth of September 1747, Mr. Morfe being then Prefident. The Siege before it in the laft War was raifed the 16th of February 1759, after the French had continued Nine Weeks before the Place, by the wife Conduct and intrepid Behaviour of the prefent Lord Pigot, and Sir Willinm Draper. In its prefent State it is found equally convenient for managing the Inland Trade, and maintaining the aeceflary Correfpondence with all the great manufacturing Cities in the Carnatic.

[^294]:    d The Piefident of Madrafs and his Council having the Direction of all the Commerce carried on from thence, we may well conccive muft require a great Number of Perfons in different Stations to affift them. The Oeconomy of the Company's Concerns in refpect to Cuftoms, Rents, \&c is a very confiderable-1)epartment, to which we may add the Diftribution of Juftice and the inrernal Police of to large a Place and its Dependencies. Befides all thefe the political Adminiftration is now become of the higheft Confequence, for the Support of which a very refpectable Military Eitablithment is abfolutely neceeflary. This, if I am rightly informed, confifts of between Four and Five thoufand Europeanns, and upwards of Sixtecn thoufand black Infantry, regularly paid, and very exactly difciplined. A great Part of thefe are employed in the Garrifons of the ftrong Places, and in covering the Frontiers of the Carnatic, by which Means the Peace of the Country, the Authority of the Subahdar, and the Safety and Security of the Company's Affairs are very effectually provided for.
    e It is generally allowed that Fort St. David was One of the faireft and fineft Fortifications ever erected by the Europeans in the Indies. Jt תood Five Lengues South from Pondicherry, and the Chief of the Fattory refiding there carried on a large Trade in Piece Goods, and in the Commodities of the Country. The French attacked it with great Vigour on the 19th of December 1747, but by the Affiftance of the Subahdar of Arcott's Troops they were repulfed and forced to make a precipitate Retreat to Pondicherry. In the fucceeding War we were not fo fortunate, fince after a Sicge of Twelve Days it was taken on the 2d of June 1758, by reafon, as it was faid, that the Works were not Bomb Proof, and that the Garrifon was in want of Frefh Water. Goudalore, a Place of no Strength, furrendered at the fame Time, and the French detroyed both.

[^295]:    f In confequence of a Treaty between the Nizam of the Decan and Colonel Forde, dated $24^{\text {th }}$ May 1759, a Grant was made' to the Company of the whole Sircar of Mafulipatnam, with Eight Diftricts, as well as the Sircar of Nizampatnam, and the Diftriets of Condavir and Walcalmanner as an Iuiam or free Gift in the fame Manner they had been held by the French, and in Contideration of the Affiftance given by the Company's Troops to difpoliefs them. The Nabob or Suba of Arcott, by his Sunnud, bearing Date the 16 th of October 1763 , confirmed to the Company all the ancient Grants of which thcy were poffeffed, adding to thefe many more as a Jaghire, and afterwards granted an Augmentation of thefe, amounting in the Whole to Twenty-four Difticts, comprehending 2201 Villages, by his Sunnud of the 29th of Ottober 1763 ; which Grant was confirmed by the Firman of Shah Aalum, the prefent Mogul, dated the 12 th of Augult 1765, for the invariable and never-failing FriendMip of the Englinh Company to hold for ever and ever. The Five Northes n Sircars, which as is mentioned in the Text, had been in the Poffeffion of the French, "were granted by the Subahdar of the Decan, and his Grant confirmed by the Firman of the Mogul, dated the fame Day with the former, as an Iniam or free Gift. The Company, therefore have the cleareft legal Title to thefe Lands, that is, the Rents and Cuftoms iffuing from them, fpecifically mentioned in thofe Grants.

[^296]:    - The Seafons in thefe Provinces, though they may be faid in general to be regular, yet are neverthelefs fubject annually to fome Variations. In that Part within the Torrid Zone the Rains are heavier, with lefs Intermiffion, and laft longer than in thofe larts that are in the Temperate, whence Patna the Capital of Bahar is efteened more healthy and pleafant than Dacca, which was formerly the Capital of Bengal. Befides fome Places are incommoded from the particular Circumflances of Situation, as is the Cafe of Calcutta, from a Lake at a fmall Diftance, which however it is faid might be drained at no great Expence, and which in the Firft Settiement was prohably overlonked in favour of other Conveniencies. However the Excellence of the Fruits, the Richnefs of the dyeing Woods brought from thence, and the great Fecundity of the Women Speak fufficiently in Praife of the Climate, the Diverfity of which moft certainly contributes not a little to the vaft Variety of the Productions of this Country.
    c In the Country about Patna, they grow very good Wheat, and might have a great Deal more if Rice was not generally preferred. Of this they raife fuch valt Quantities that we find the Word Gunge added to the Name of many of their Towns, which implics that fuch a Place is a Corn Market. About Fifteen Miles North from Muxadavad there is a Place called Bugwan Gola, that is, the Granary of Bugwan, allowed to be the greateft Mart for Grain in Indeftan, the Duties upon which, though very low, amounted annually to Three Lacks or upwards of Thirtyfeven thoufand Pounds. Befides Rice this Country produces a vaft Abundance of Chee which is Kind of boiled Butter, and is a great Ingredient all Indian Cookery. To this we maymaddimmenfe Quantities of Oil extracted from the Seeds or Graiss of the Plant Sefamum ufed in 1.amps, in Food, and in Phyfic. Of all thefe great Cargoes were fent annually to the Coafts of Coromandel, the Illand of Ceylon, to the Maldives, and even into the Gulph of Perfia as well as into other Parts of the Indies, and though at prefent decayed, this Commerce might be eafily revived whenever Peace and regular Government takes a Place in thofe diftracted and impoverilhed Countrics, and their Inhabitants Ihall be reftored to a Capacity of Correfponding with other Nations

[^297]:    - In order to explain what is faid in the Text, it may be proper to mention that large Boats放arrying Two hundred Tons of Salt Petre come many hundred Miles down the Stream from Patna at the proper Seafon of the Year for loading the Ships. Befides the many Rivers and Branches of Rivers that interfect the Country, there are large and deep Canals dug with infivite Labour to connect thefe Streams, and facilitate Water Carriage from One great Town to mother, which hews how fully this Country was once inhabited, and by how induftrious a People. In the great Rivers, and particularly in the Ganges there are many, and fome large and beautiful Ilands, which though now overgrown with Wood and Receptacles only for Rhinoceros's and Tygers were formerly well cultivated, and might be fo again, if Peace with a mild and fettled Government were once reftored.
    e What hath been faid in the Text will fufficiently explain to the intelligent Reader the true Sources of the Opulence of this Country, which hath been defervedly, as well as emphatically Atiled The Paradise of Nations. A fine Climate, a rich Soil, and an induftrious Pcople made the whole World, comparatively fpeaking, tributary to Bengal, and thereby furnifhed her without the Affitance of Mines, with immenfe Treafures, Her Commerce with Europe alone produced from the Englifh, Dutch, French, Portnguefe, and Danesupwards of a Million Sterling annually. Her Trade to the Gulphs of Perfia and Arabia, by which fhe fupplied not thofe Countries only but Turky, Georgia, Armenia, and Leffer Afia brought in valt Sums. Iler Exports to the Eaftern Parts of the Indies, even as far as the Philippines, were continual Sources of Riches increafed by the Coalt Trade with Coromandel and Malabar as high as Scindi, and Atill farther fwelled by the Crowds of Merchants who came to purchafe her Commodities and Manufactures from all Parts of Indoftan, and from the Kingdom of Aflam. Abounding in herfelf with all the Necef-

[^298]:    b. In the Text we have fpecified the Number of the Company's. Troops as thoy food A: D: 2770, and the total Fxpence of this Eftablifhment amounted to $1,093,006$ 1. The Number of Serrants on the Civil Eftablifhment were One hundred Seventy-four, and the Expences incurred for their Support amounted to 265,9841 . The whale Revenues of the Dewanuee in the fame: Year were 3,561,5391. and the net Receipt, all Charges of Collection deducted; 2,027,2321. ouks of this taking the Civil and Military Eftablifhments, and the Expences on Fortifications, which together amounted to $1,8 \times 6,615$. the Refidue will appear to be no more than 207,617 . 1 .

[^299]:    - The Inand of Sumatra lies open on the North to the Gulph of Bengal. On the Wen lie a Range of Inhuds of differcnt Sizes at the Diftance of Eight, Ten, and Twelre Leagues, which hrealit the W'.les of the Occan, and yet have large and deep Openings between them which aftord convenient Paffages for Ships of any Size. On the South it is divided from the Nand of Java by the Streights of Sunda; as on thejEaft it is from the Peninfula of Malacca by the Streights of that Name, which are in fome Places not above Eight Lengues broad; to the South Eaft lies the Ille of Banca with the Streights of the fame Appellation, and on the fame Side, though at 2 much larger Diftance lics the great Inand of Borneo. Sumatra flretches from North Eaft to South Weft. Mr. de Line makes it larger than both the Britifh Ines, but as its greatef Length is Seven hundred, its greateft Breadth at the South Weft End farce Two hundred Miles, and narrowing all the Way from thence to the Point of Acheu in the North Eaft, we may vencure to affirm that it is lefs than Creat Britain.

[^300]:    b This facious Ine many conceive to have heen the Ophir of Solomon, the Taprobana of the Greeks, and the Serendiu of the Oriental Writers, while others contend that all thefe Appellations belong to the Ifland of Ceylon. The Cafe feems to be this, the Nations of the remoter Indies brought their Spices and other rich Commodities to Sumatra. Thither reforted the Merchants of the exterior Indies from Ceylon, where having acquired thofe Commodities. by the Exchange of their own, they returned Home, and difpofed of them to the Traders from Tyre, afterwards to the Egyptians, Greeks, and Romans, who from thence confuunded thefe Illands. Sumatra continued the Center of Eaftern Commerce, when the Portugucfe firft difcovercd it, and the City of Achen retained the Remains of it even in the Beginning of this Century. When therefore we matarely confider the Defcription of this Inand, confider alfo what in paft Times it hath been, and difcern from thence by Reflection what it may again be, it will furely appear a Miatter of great Confequence to this Nation that we have a confiderable Settlement thereon.

[^301]:    - Befides Gold this Country hath alfo Mines of Copper, Iead, Tin, Iron, and Sulphur. The Tree that produces Camphire is called by the Natives Ciphura, and is a lind of Laurel, when it is Six Yeas old thev cut it down, as finding by lixpelience the Refin then becomes lefs wdoriferous. In Borneo, the 'Iree which produces Camphire is called Sladi, and is a differnt Kind of Lairel. The Tree which produces it in Japan is called by the Iuhabitants Kus no ki, and it is from this that the Camphire is made which is brought to liurope. let the Japonefe eftemOne hundred Weight of the Sumatra Camphire worth Five or Six hundred of their own. The Iutch carry it thither, and when mixad bring it Home. The Venctians polffed for a Tong time the Art of refining Camphire, which is now practifed with great Pıofit in jolland, and there is no Doubt it might as well be done here. If we may truft to the Oriental and lortuguefe Wiiters, Sandal or White Sanders of the very befl kind grow here, as alfo Alocs, the moft valunble of all Woods, and which bears a great l'rice in China. The bett Gum Benjamin or Benzoin grows about Barros, and is brought to liurope by the Dutch. Ambengris is frequently found upon the Coafts of Sumatra, and there is no Reafon to doubt that many other valuable Drugs might by a diligent Search be difcovered in this Cuuntry.

[^302]:    ${ }^{d}$ An Account of the early Tranfactions of the Finglin at Achen may be found in the Firft Volume of Purchas's lilgrims, from whence a tulemble Idea may be formed of the Riches of that Country. In A. D. 1685 we , together with the French and Danes, were expelled from Bantam, and very foon after we formed our Firft Eftablihment at Bencoolen, and erefted York Fort to protect the Sertlement. When the Conduct of the then Eaft India Company was enquired into they were highly commended for the valt Expence they beftowed in fortifying there, but at the fame time cenfured for not taking the like Precautions at loleron, where there were but Twelve Perfons when the Dutch difpoffeffed them of that valuable Spice 1Aand. Fort Marlborough was built Four Miles to the South of Bencoolen, and from the Caufes before affigued proved very unwholefome, but upon cutting duwn and entirely grubbing the Wovils abuut it, the Place, as I am informed by lerfons who have refided there, is become much more healthy. It ftands Two Niles South Weft from the old Factury at York Fort in the Latitude of $4^{\circ}$. S. but the Longitudewas not afcertained till the Tranfit of Venus was obferved by feveral Gentlemen there oth June, A. D. 1769 , when it was determined to be $6 \mathrm{~h} .46^{\prime} .5^{\prime \prime}$. or $\mathrm{IO}^{\mathrm{r}} .42^{\prime \prime} .45^{\prime \prime}$. E. from London. It remained a peculiar Sabordinate to Yort St. George to the 30 hh Juñe, A. D. 1760, when it wis erefted into a Prefidency. The Southern Subordinates extend to $5^{\circ} .30^{\prime}$. S. Latitude, and the Northern in like mantier to Manduta River in $2^{\circ} .45^{\prime}$. Fort Marlborough was taken from us by the French in February, A. D. 17.00, and was recovered in the Spring of 1762. By the Eleventh Article of the Treaty of l'aris, in A. D. 1763, Natal and Tappanooly, which they had likewife taken, were reftored.

[^303]:    2 The inquifitive Reader, who thall be inclined to go deeper inro this Subject, which indeed deferves great Confideration, may confult J. Leonis Africani de totius Africæ defcriptione !!ea novem, 8 vo. Defcription de l'Afrique, par O. Dapper. fol. Nouvelle Relation de l'Afrique $\mathbf{O}$ centale, parle Pere Labat, 12 mo . 5 tom. Atlas Maritimus, fol. p. 236-276. Wood's Sun

    ${ }^{6}$ The French Writers alfert that the Normans fettled on the Wen Coaß of Africa in A. D. 3364. The Portuguefe began their Difcoweries under the Aufpice of the Iofant Don Henry, and toobled the Cape Bojedor A. D. 1415. Vafquez de Gama doubled the Cijje of Good Hope A. D. 1497. The Englifh are allowed to have traded on the Conft of Guinee A. D. 155 . The The Dutch began their Commerce thither about A. D. 1609, but their Wen India Company to Fow. If.

[^305]:    - Cape Blanco lies in Twenty Degrees Thirty Minutes North Latitude, from thence the Coaft turns Eaftward, making a deep Bay, in the Bottom of which lies the IMand of Argouin, enhuut Three Miles long and Two broad, and at the Diftance of Two Miles from the Continent. Rio de Ouro lies to the South almoft under the Tropic of Cancer. Port Andric, or as the French fpell it Portendric, is, as we have faid in the Text, a very poor Place in a rocky Bay, of which they took Poffeffion, and built a miferable Fort, which they abandoned as ufelefs after the Ceffion of Senegal. The Gum Coaft begins at Cape Blanco, and is fupplied from Three Forefts, Sahal, Lebiar, and Afatek, belonging to Three Arab Tribes, who draw from them a confiderable Revenue. Thefe Forefs are about Ten Leagues from each other, and about the fame Diflance from Port Andric, much pearer to the Factories belonging to Senegal, by which Means that valuable Trade ceaters there.

[^306]:    ' The Ine on which our Fort ftands in the-River of Senegal, is in the Latitudé of Sixteen De-grees or thereabout, the Ine of Goree in $14^{\circ} .40^{\prime}$. North Latitude. James Fort in the River of: Gambia in Thirteen Degrees Twenty Minutes nearly. The Gum from: whence this Coaft derives its Denomination, is fometimes called Gum Arabic, and fometimes Gum Senega.. The Reafon of the Firt Name was its being imported from Arabia and Egyptinto Europe, and is generally efteemed to be the Produce of the Acacia vera. But from the great Quantities brought from the Forefts before-mentioned, it acquired the Name of Gum Senega. There are Two Sorts. of it, which feem to differ oaly in Colour, the Onebeing White, the other Red. We will give the Reader a more fatisfactory Account than hath hitherto appeared from a Perfon perfectly well acquainted with thefe Forefts. "The Woods where the Gum Senega grows begin about Ten © Leagues E. S. E. from Portendaric, and from thence Itretch a great Way to the Eaft ward. "The Tree or rather large Buhh that produces this Gum is an Evergreen Thorn, the Seafor. " when it is gathered is in the Months of December, January, February, and iNarch, according, " as the Seafon is early or late. The Quantity produced depends upon the Seafon. The Years " when they have the greateft Crops are when it rains plentifully, and when the. Locufts come " immentiately after, and devour all the Leaves of the Gum Trees. This it feems prevents. -thofe Juices of which the Gum is compofed from being drawn out of the Trunk and Branches " into the Leaves; wher it in ripe for gathering it burlts the Eark of the Tree and forms into "clear Balls about the Size of a Pigeon's Egg. But the Azanaga in order to procure a greater "Quantity help it out by making an Incifion in the Bark with their long Knives." Immenfe . Quantities of this Gum, which the Natives frequently ufe for Food, are confumed in Europe in . Medicine, in feveral Trades, and in fome Manufactiures, to which it is abfolutely neceffary. A. D. $177^{1}$ there were Forty-three Englifh Ships on this Coaft, who befides Three thoufand Three hundred and Ten Slaver, brought from thence Four hundred Tons of Gum Senega.

[^307]:    i The numerous Difficultics and perpetual Hazards to which Ships trading on this Coun are cominually expofd, and their having no Affiftance or Protection but what arifes from their own Furce, makes the Refort hither a Thing almoft incredible. The ships howewer being properly equiped, well manned, under the Command of Officers of great Chution and longs lixperience, have thane Danger: annually for the Sake of Profit. They are however fonctimes cut off, and Mutimes atrende $\mathrm{j}_{\mathrm{i}}$ ith much Bloodhed are more frequent. Yet in the Milft of thefe Embaraffments the Tre.de to this Conf is conftantly increafing; fo that in 1771 the Number of Ships employed theicon were Sixty-three, and the Number of Slaves purchafed by them 'Jwenty-threc thoufand Three hundred and One.
    ${ }^{6}$ The lvory bought upon this and upon the other Coafts, for in fmaller or greater Quantiises it is botight on all of them, confilts of larger and leffer Teeth. But vilicre they come from is hadly; known, except that they are browght from the interior lart of the Country. The former are fuppofed to be the Tceth of old Elephants, the latter of young, or fometines the Sea-- $\therefore . . .0$, which are remarkably white and fine, but brittle. The red Woul is excellent in its Kind, and other Drugs for Dyeing might be cafily had, fince the Ufe of many of them is known even to the Natives. The Gold is cither wrought for the Ornaments buth of Men and Women in fmall Picces. L.ump or Rock Gold, which they pretend is brought from the Mines of a larger Size, but from it; being frequently mixed there is great Reafon to doubt that it has been melted and caft. The greateft l'art however is in I)uft, in the fallifying of which they are very dextrous, which villeinous Art they have been taught by the Furopeans. On the Whole of this Coalt, A. D. 7771 , there came but Four Ships, and thefe carricd away a Thoufand and Fifty-one Slaves.

[^308]:    1 The conftant, regular, and increafing Demands of this Trade have had wonderful Fffects upon our Manufaetures, and have kept Multitudes emplojed in them, which will be more cafily conceived, if we confider in a few Infances only what go to make up their Cargres, which are compofed of Woollen, Silk, Linnen, Cotton Goods of many Sorts, Leather, Bralr, Steel, Iron, Glafs, Earthen Ware, Fire Arms, Gunpowder, \&c. In A. D. I771 there were employed in this Trade One hundred and Seven Ships from Livcrpool, Fifty-cight from London, Twenty-five from Briftol, Five from Lancafter, befides feveral fmall Veffels, in the Whole Onc hundred and Ninetyfive Ships, of the Burden altogether of Fifry thoufand Tons, exclufive of Veflels emplojed in the fame Trade from the Plantations. The (Uantity of Ealt India Manufactures expoited is alfo very great, and for their more effectual Supply in them, fpecial Powers have been granted io the Lial India Company within thefe few Years. To the Articles already mentioned of their Imports, we may add Rice, Ilides, Wax, different Kinds of rich Gums, Ebony, and other fine Woods, and a Variety of valuable Drugs, which fufficiently juftify what hath been faid on this Subject in the 'rext.

[^309]:    - We have already in a former Chapter faid fo much of the Genius and Charaeter of Henry the Sevcrith, that it nay fuffice to fay here, that he granted his Letters Patent to John Cabot and his Thrce Sons for the making Difcoveries in Parts unknown, which bear Date the Fifit of: March in the Eleventh Year of his Keign, A. D. 1495. They did not however fail from Brifol till Two Years after, and on the 24 th of June 1497 firft faw the Continent of Amenter; as we learn from Fabian in hie Chronicle, who lived at the Time. Vafquez de Gama doubled the Cape of Good Hope on the rgth of November in the fame Year. Columbus failing from the Illand of Trinidada firft difcovered the Continent of America in the Month of Auguft 1408 . Tha curious Reader, who is defirous of feeing the Hiftory of thefe early Difcoveries, may peiule Eden, Haklupt, an 1 l'urchas's Collections.

[^310]:    a This valt inland Scal was entered by Captain Hudfon on the 24 th of June A. D. rfro. The: Mouth of the Streight lies in $61^{\circ}$ N. Lat. and in Lon. $64^{\circ} \mathrm{W}$. The oppofite Mouth is in. $62^{\circ} 42^{\prime} \mathrm{N}$. Lat. and in $77^{\circ} 45^{\prime} \mathrm{W}$. Lon. They are about Forty Miles broad, and Four hundred and Twenty long. The Coafts of this Sea are about Three thoufand Miles. The Charter bears Daie the 22d May, in the 22d Year of the Reign of Charles II. A. D. 1669, it was granted to Prince Rupert, the Duke of Albemarle, the Earl of Craven, \&c. exprefly for the Difcovery of a North-went Paffage. The Settlements by the Company are, the Prince of Walee's: Fort on Churchill Kiver, in $59^{\circ} \mathrm{N}$. Lat. a ftrong well-built Fort, and their chief Factory: York Fort, in Nelfon River, $57^{\circ} \mathrm{N}$. Lat. At the River Aibany, $52^{\circ} \mathrm{N}$. Lat. fat Moofe River, $5 \mathrm{I}^{\circ}$ N. Lat. and a fmall Houle at Slude River, in $52^{\circ}$ N. Lat. The Number of Perfuns maintained in thefe Pofts is about One hundred and Twenty, molt of them hired from Orlmey, from Five to Twenty Pounds a-year, according to the Length of Time for which they indent. The llkeNumber of Men they employ on board their Ships, of whieh they fend Two, Three, or Four annually. They pals the Straits in the Beginning of Augnt, and return in Seprember. The Navigation is very fafe, not a Ship being loft in Twenty Years. Their Exports are faid tobe between Three and Four Thoufand Pounds; and their Two-Half-yearly Sales amount, if we can depend on Mr. Dobbs, to near Fifty Thoufand Pounds. Thefe confin in Beaver, Deer Skins, Whatebone, Caftor, Quills, and Feathers, If the Trade was laid' open, it is faid ourExports thither might be exccedingly enlarged, a very extenfive and lucrative Fighery carried on, much greater Quantities of Eurs and Peltry imported, and that many other Bevefits.might acrue...

[^311]:    - We know To little of this Country of New Mritain, that we cannot fo much as tell whether it is 2 Coatiuent, or compofed of feveral Illands, the latter being at lealt as probable as the former. It is not always the Beauty or the Fertility of a diftant Country that fhould recommend it to, a trading Nation; and of this we may affert New Britain to be a Proof; for; without exporting any Thing thither, without having any Settement, there hath been brought from thence to the Value of Fifty thoufand Pounds in one Summer. The Ekimaux, whe fometimes vift Newfoundland, have their Habitations in this Country: They live in the open Air during the Summer, and in Caverns during the Winter. It is worth Obfervation, that thefe People are completely cloathed. They have Shists made from Fifh-guts, Breeches of Skins with the Hair turned in wards, a Kind of Coat or Cloak of Bears Skin, and their Shocs or Boots of Seal Skins, whence* their Skin is of the fame Colour with ours. If thefe People were civilized, might they not wear our coarfe Cloths, Hofe, and Jinnen ? and might they not pay us in Furs and Peltry, in Whalebone, WFhak and Seal Oil and Scal Skins? and would not this be a profitable Trade ?

[^312]:    c This Inand of Newfoundland is generally fuppofed to be as latge, if not larger than Ireland: : and the Firft Accounts of it were fo flattering, that many Attemprs were made to fertle thereon: Lord Baltimore obtained a Grant of the South-enf Corner of the Ine, buitt a good Houfe there, and went over thither with his Family, but removed afterwards to the Continent. The Truth is, thofe Accounts were falfe, for though the Summers are fometimes hot;' no Grain comes; or at leaft very rarely comes to Perfection. Sir Jofiah Child hath fhewn, that planting that Inand is not the Intereft of this Country.. The Commodore of the King's Squadron for the Protection of the Fihery is, during the Time of his Refidence, Covernor of Newfornelland. Difputes among the Finhermen are fettled by the Mafter who arrives frefin-the Seafon in each of their mumerous Havens, and who for that Year is ftiled Lord of the Harbour. A Gentleman upon whofe Knowledge, Accuracy, and Verncity I can depend;'informs me, that in A. D. 1769 the Total of the Imports amounted to 3710 I . and of the Exports to $1,011,0851$. In the fugceeding: Year, A. D. 1770 , the Number of Topfail Vellels entered inwards amounted to 146 , and of ; Sloops and Schooiers $50 ;$ and there were cleared outwards 127 Topfails, and 3 x Sloops and: Schuosers.

[^313]:    d The great Utility of this Fifhery was very early feen, and very vigor:n? purfued, for © hundred and Seventy Years ago, that is, in the Beginning of the Reign of King Jime-I. wi.h Two hundred and Fifty Sail employed therein. It is computed, that I int.: Quintais of wet Fifm make One Quintal of dried Cod. Befides, the Livers of every, Hun inc. quiutals m.: c : Hoghead of Oil; and exclufive of thefe, there are many leffer Advaniages : tion of the Expence. The Fithery, as we have faid in the Text, produces a itetilly in diftir. ent Seafons, but it is judged to be a tery good One when it produces Thice-i:nj cired thoutatad Quintals of FiM, and Three thoufand Barrels of Oil, both equally laleable ana valuable Con:modities. As every Ship carries Twelve, and each of their Buars Eight Men, dia; as thele return home in Six Months, there caanot be 2 more noble Nurfery for Seamen. The Artificer: and Traders employed in building, vitualling, and repairing thele Veffels are ver: numerous in the refpective Ports from which they fail. Thefe Circumftaoces juftify the partic:alit Altention paid by Government to this Eranch of the public Service, in refpect to whinh, hat thr; may be well informed, an annual and very diftinct Account, by which the whole is feca an One View, is delivered by the proper Officer to the Governor of Newfoundland, what is, to the Commodore of his Majefty's Squadron.

[^314]:    c The Immenfity of this Country is fuch, that though fo long known to and in part poffefed by Europans, we have thill but very imperfect Notions of the interior Parts. This will be e:afily comprehended, if we reflect that upwards of One hundred Millions of Inhabitants would not render it fo populous as Great Britain. Yet it muft be allowed that it hath come into our Hands with grat Idvantage. We found in it many thoufand People, Natives well accultomed to and fettled in the Country, and now tolerably reconciled to our Govermment, the Bencfits of which they fiel a:dacknowledge. There is ikoom enough for the different Nations of Indians, who with propur Care and Management may be rendered of great Utility. The Lakes and Water Communiations of all Kinds ought to be diligently explored, as they feem intended by Nature to ficilitate au Intercoufe between the People fituated in the different Parts of this vaft Contincht. The Indians aport that the Lake of Aniniboils iai the me ft northern Part of this Counary is Six hundrol Leagues in Circumference, that the 'Soil about it is fertile, and the Air temperate. If they are to he ciedited it is the Source of all the great Rivers and Lahes, viz. the River of Buorbon, or as we nile it Nelfon's River, falling into Hudfon's Bay, the River of St. Lawrence, which fa!!, int: the Oem, the Mifilfippi, which difcharges itfelf into the Biay of Mexico, the Miflouri, a wi: grest Riset which falls into the former, and another large River running Lirectly Wedl. aipucent the Fithery is a very great Object, as in the Gulph of St. Lawrence and on the Coan oi Labradur they take valt Numbers ni Whales, Porpoifes, Scals, Sturgeon, feveral Sorts of Cid, Sahon, and other Fifh. Agriculture ahto makes a gicat Progrefs, and the Peltry and Fit: Trades daty increafe. The Total of the Exports in the lear 1709 umounted to Ope humdre! Seve: haran! Nime hundred Seventy fix Pounds. The Number of Toplail Velfels
     and Twenty two Slonp: in: A. D. 1770.

[^315]:    f Sir Wrilliam Alcxander's Graint bears Date the Tenth of September 162 I . The Content for this Country between us and the French continued about a Century and a Half. We may afcribe to this, at leart in fome legree, the fine Defcriptions given of it both by Englifh and Fronch Writers. The batter fit a great Value on the lurs and Peltry furnithed to them by the Indians, they cifemed the Mafts and Ship Timber to be the beft in the World, and they fooke in very high Terms of the rich Me:adows and Paltures, and of their fine arable Land, which on both Sides of the Bay of Fundy may be very true. Fut from the Accidents of War and fone other Caufes the bitifin Inhabitants have not been hitherto fo fuccefsful as very probably they will be in Time, for in Countrics like this Plantations do nut fucceed the worfe from their being made llowly, and with due Conlideration, as appears from the Want of Wood at Halifax. The total Exports, A. D. $17(1)$, were 1.f,012 I. of which 7,30 I. onls, to Great Britain. In the fucceeding Year there were entered inwards 27 Topfails, and 13 : Sloops; cleared outwards 3 I Ships, and 16: Sloops.

[^316]:    * The mof Eaftern of the New England Provinces and neareft to Nova Scotia is that of Maia To the South of this lies Maflachufet's Bay, South from that Connecticur, adjoining to which is Rhode Illand. New Hamphire lies on the Well and alfo the North of Mafl.chufet's Bay, improved of late and become very populous. Thefe Provinces by their original Charters had very extenfive Powers. But a Quo Warranto being brought, Judgment was given againdt thofe of New Hamphire and Maffacbufet's Baly. After the Revolution they had a new Charter, by which the Appoiatment of the Governor and fuperior Officers is in the Crown. The People choofe the Affembly, and the Affembly nominate the Council, on which however the Governor hath a Negative. Coanceficut and Rhode Illand fubmitting there was no Judgment againt their Charters, in coufequence of which they choofe their Guvernors as well as their Affemblies. The principal Phace in the Province of Main is York. In New Hamphire the Port is Pifcataqua in Maffachufet's Bay, Falmouth, Salem, a:a trafton. In Rhode Inand the principal Place is Newport, in the Province of Connecticut; the Ports are New Haven and New Londun. In all of thefe, A. D. 1769, the Total of the Exports amounted to 531,1621 . and in the fucceeding Year therc were entered invards 504 Ships, and 2288 Sloogs and Scheoners; cleared outwards 577 Ships, and 2458 -siloops and Schoopers.

[^317]:    ${ }^{h}$ In the difturbed State of our Affairs during the latter Part of James the Firf, and the Whole of his Sun Charles the Firfts Reign, the Swedes intruded themfelves into a Part of this Country, and ware fuon followed by the Dutch, with whom they united. The Civil War in England gave the latter an Opportunity of eftablining a regular Colony under the Direction and at the Expence of the Weil India Company, to whom the States General granted what they were pleafed to flite the New Netherlands. The Englifh always kept up their Claim, and the Inhabitants of Connceticut fetted a l'art of Long lland. After the Reftoration, King Charles granted this Country to James Duke of York, and a Squadron with a fmall Body of Land Forces was fent to reduce it. The Dutch Governor Stuyvefant would have defended himfelf, but the Inhabitants finding that they were not to be deprived of their Properties, fubmitted and forced him to furrender. The Articles of Capitulation were figned Aug. 2\%, 1664. In the Second War the Dutch recovered this Country as cafily as they loft it, but by the Treaty of Weftminfier it was exchanged for Surinam. The City of New. York is feated in $41^{\circ} .42^{\prime}$. North Lat. The Road before it ${ }^{n}$ though incommoded with Ice in very hard Winters, is notwithftanding always open. This with wher Circumftances, fome of which are mentioned in the Text, renders it a Place of great Relort and very extenfive Commerce. They export to the Weft Indies, Bread, Peas, Rye, Meal, Indian Corn, Horfes, Shecp, Becf, Pork, and at leaft Eighty thoufand Barrels of Flour; their Returns are Rum, Surar, and Melaffes. They feod Provifions to the Spanifh Main. They have a confiderable Share in the Logwood Trade, Wheat, Flour, Indian Corn, and Lumber they. fend to Lifbon and Madcira. They have alfo a Correfpondence with Hamburgh and Holland, and fead large Quantities of Flax Seed to lrcland. The Total of their Exports, A. D. 1760, amounted to 246,522 . In the fucceciling Year the Ships entered inwards were 106, Sloops 431.; cleared outwards Slijps 188, Sloops 424.

[^318]:    ${ }^{1}$ The Duke of York as Proprietor of the Province Jant mentioned, by a Deed, dated the 24 th of June 1664, granted the Southern l'at of it to Sir George Caricret and Lord Derkeley of suatton, which J'art was called New Jerfer. Ten Years after this the Two londs Popiciors, with the Confent of the Duke, divided this Country into Ealt Jerfey under Sir George Cateret, and Weft Jerfey under Lord Berkeley. The Duke of York notwithtanding this refumed for a hort Space the Government of Weft Jerfey, but by a new Deed in the Year 1680, revived and confirmed the former Divifion, by which Weft Jerfey was reitored to Lord Berkelej. Thefe Proprietors afterwards afigned their Rights to others; and the Inhabitants frequently falling out with the Governors they fent over, and the Affignees of the original Proprictors difagrecing amonght themfelves, the latter by a folemn AAt, April 17th 1702 , refigned both Provinces to the Queen, referving however the Property in the Soil, \&c. Since this Period it hath been a Royal Covernment, though fometimes the fame Perfon hath been Governor of New York and the berfeys. It hath been already obferved, that a great Part of their Trade is carried on by the Way of New York, to which we muft alfo add, that Part of it is now car ried through the Chauncl of Philaselphia, which will account for what we have to Cay farther. The Exports, A. D. 176), amounted to no more than 253: l. all for the Britin or forcign Welt Indics. In A. D. 1770, there were entered iawards 'I'wo Ships and 41 Sloups; cleared outwards Two ships and 47 Sloops.

[^319]:    k The Grant from King Charles II. of Penfylvania, for fu it is filed in that Grant, bears Date the $4^{\text {th }}$ March 1080 . The Duhe of York by a Deed of Sale dated the 24 h Ai.guft, A. D. 1683, difpofes to him the Town and County of Newcaltle, which as Part of the New Netherlands was in the Duke's Grant; and by another Deed bearing the fame Date he yields to him the Counties of Kent and Suffex, the Three upper Counties which compofe Peufylvania proper, viz. Philadelphia, Buckingham, and Chefter. Thefe produce immenle Quantities of Grain, Hemp, Flax, \&ce. The lower Counties abound in Black Cattle, Sheep, and Hogs. This enables them to export prodigious Quantitics of Provifions of all Kinds to the Britifh, French, and Dutch Ifands in America, they likewife track in other Articles to Virginia, Maryland; and Carolina. They carry Curn, Beef, Pork, Strong Beer, and Spirits to Newfoundhand. They havelikewife an annual Intercourfe with the Canaries, Madeira, and Azores Illands; and carry Corn and Fith from : Newfoundland to Spain and Porrugal, and bring Furs, l'cliry, Naval Stores, Hemp, and Flax to Great Britain aud Ireland. They deal alfo in Ship-tuilding for. Sale to the Amount of feveral

    Thoufand-

[^320]:    m The making a Settlement on the Continent of North America, was a Project of the great Sir Walter Raleigh, for the carrying of which into Execution himfelf and fome other Perfons of Diftinction were affociated in a Charter, dated the 25 th of March 1584 . The Queen gave the Country the Name of Virginia, but the Firt Settlement was made or rather attempted in a Part of the Country which is now called Carolina. The Firft Entrance into what is now called Virginia, was A. D. 1606, and the Firft Settlement made in James's River. For the Support of this Colony a Company was erexted, the necelfary Expence being too great to be fupported by private Perfons. But Mifunderftandings happening and the Planters complaining of great Hardhips, King Charles the Firft diffolved the Company in 1626 , and directed the public Concerns to be managed by a Governor, Council, and Affombiy. "Ihe Lintrance into Chelapeak Bay is between Cape Henry and Cape Charles, through a Stait of about Seven Leagues in Breadth. but the Bay is wider within. It runs Northward Lopwards of it wo hundred Miles, and is navigable for large Veffels slmoft to its Head, being One ol the lariref, moft beautiful, and fafeft Harbours in the World. The Rivers that fall into it have been mentioned in the Text, and the Tracts of Land between them are fiied Necks. That betwecn Porowmack, ant! 1:ipahennock, is called the Northern Neck, and is the Property of Lord Fairtax, whu reliles there at prefent. 'Ihere is no doubt that this Colony might furnifh many ufeful Commuditics, to the Mother Country, fuch as Hemp, Flax, Pitch, Tar, Turpentine, and other naval Stores, ii the Inhabitants were not more inclined to Tobacco, for which the Soil of this and its Sifter Pruvince is by far the fitteft in America. The Fear that it will be worn out feems not to te weil founded, for the very finef 'lubacco is not produced from the richeft Land, but owes the Excellence of its Flavour to a proper Choice in the Seed and Kilful Management. Belides this the Notion entertaine! by fome, as if the Exportation of late Years of conliderable Cargocs of Wisi.t from Virginia amounted to a Proof that their Lands will no longer bent Tobicco, is at leatt, if I am rightly informed, a manileft Miftake; the Cafe being in fact no more than this; when they find their Ground begins to fail, they take a Crop of Whent, perhaps another of Outs, tiey then fallow it, next by Cowpenning manure it, and by this Method render it fit to prodnce Tobacco again. The Trade therein hath been for about Forty Years paft under the moft excellent Regulation with refpect to the Public as well as the Planters. It is computed that they export from Virginia and Maryland from Seventy to Ninety thoufand IIogheads annually, which is a prodigious Benefit to the Revenue and the Nation. Their Exports A. D. 1769 amounted m 728,9281. In A. D. 1770 there were entered inwards 296 Ships; Sloups 317 ; cleared outwards Ships 298, Sloops 306.

[^321]:    a The Firft Charter granted by King Charles the Second to Edward Earl of Clarendon and ethers, was dated 27 th March 1663 . The Second Charter was in 1665 . The Form of Government was in many Refpects different from that of other Colonies. The Lords Proprietors had a Power of conferriag Honours, though not with the fame Titles as in Fingland, and they accordingly made Landgraves and Caffiques. But through internal Difturbinces, and the external Preffure of an Indian War, the Ifeirs and Affigns of the original Proprictors found it expedient to furrender their Charter, A. D. 1728. (the late Earl of Granville excepted) fince which it hath been divided into Two l'rovinces, each of which is a Royal Government. The Firft Englifh Settlement on the Continent was at Roanoake now in this Province which being deferted there is a Tradition in refpect to the poor l'eople left there, that they intermarried with the Indians, fome of whom even to this Time are proud of their Defcent. The diffcrent Sorts of Land in this Country, and the Excellence of its Climate render it fit for a great Varicty of Improvements, many of which already have, and others certainly will take Place.

[^322]:    Amongh thefe we may reckon Silk, for which in all Refpects there cannot be a more favourablesituation. Their Exports A. 1). 17 69 amounted to 68,117 I. In A. D. 1770 there were entered. inwards 94 Ships, 379 Sloops; clewed outwards Ships 99, Sloops 386.

[^323]:    b The Advantages that might be derived from this Country were forefeen, and fome of them pointed out long before they actually took Place, which ought to render us lefs diffident in refpect to the Benefits promifed from our new Colonies. Rice was intruduced here a little before the Beginning of the prefent Centary by mere Accident. Indigo is of a much later Date, though the Plant now moft cultivated is a Native of the Country. Both thefe Improvements have been very wifely encouraged from Home. The Firft by relaxiag the Act of Navigation, and the Second by granting a Bounty. Thefe Staples fuit very well tingether, which is a Matter of great Confequence. We may however juftly entertain farther Expectations from the great Extent of Territory, the Nature of the Climate, the Vaffety of Soils, and the Sonveniency of Water Carriage through: all Parts of the Colony. To thew the great Progrefs the Inhabitants have made in the Space of Twenty Years palf we flall obferve, that the total Amount of their Exports A. D. 1747 was 161,365 l. In A. D. 1769, 410,270 I. In A. D. 1770 there were entered inwards 186 Ships, Sloops 306; cleared outwards Ships 190, Sloops 302. The Tonnage of the Weffe's employed A. D. 1747 under 9,000. in A. D. 1770 about $30,000$.

[^324]:    c The fetting of Ceorgia was oniginally a Plan for providing an Afylum for the diftreffed, to facilitate which the Crown granted a Charter to feveral refpectable Perfons as Truftees, who undertook this laudable Delign with great Vigour and public Spirit, and were generoully fupported by private Donations and Parliamentary Grants. Yet after Twenty Years Endeavours the Truftees found it expedient to furrender their Charter to the Crown before it expired. This was A. D. 1752, fince which it hath been a Royal Government. The good Effects of this Change were very quickly fett, and have bccome much more confpicuous fince the Acceffion of Covernor Wright who fill pr fides there. In 17 (10 the Colony confifted of 1,152,000 Acres. There is now within the Indian Line $4,570,000$ ricres. and a fill greater Augmentation with many concurrent Adrantages will be made by a frefl Purchafe from the Indians. In 1760 there were exported 65,765 Pounds of Deer Skins, and A. D. $1770,284,840$ Pounds. In A. D. 1760 , 3,283 Barrels of Rice. In A. D. $1770,221,0.9$ Barrels. In A. D. 1760, 11,746 Pounds of Indigo. In A. D. 1770, 22,336 Pounds. The Total of the Exports amounted A. D. 1760 to 20,852 I. in A. D. 1770 to 99,383 I. In A. D. 1760 there were 7 Ships and 30 Sloops. In A. D: 1,70 entered inwards, Ships 28, Sloops 71 ; cleared outwards Ehips 68, Sloops 119.

[^325]:    * There are feveral Hundred Ines, Inets, and Rocks, but only Seven Iflands that are fettled, and thofe but fmall. The Cedars that grow here are much finer and tougher Timber than in any other Part of America, which has thrown the Inhabitants into Ship-building, or rather Sloop-building, in which they are exceedingly expert. But this having occafioned the cutting down a great Deal of Wood, hath had a very bad Effect upon their Climate, by rendering the Weather more unfettled, fo that they now begin to plant again. The lnhabitants are frugal, induftrious, careful, content, and reputed the belt Fifhermen in America, and are alfo very dexterous able Seamen. It hath been fuppofed, and with great Probability, that they might avail themSelves of their Soil and Climate in raifing Wine, Cotton, Cochineal, but more efpecially Silk, as having not ouly great Plenty of Mulberry-trees, but of the Worm. They have no venomous Creatures, but a great many Spiders of a large Size, and which in the Heat of Summer fpin Webs of fo fubftantial a Silk as to catch fmall Birds. The Spermacxii Whale frequents their Rocks, and Ambergris is fometimes thrown upon their Coafts, as it is alfo on thofe of the Bahamas. The Total of their Exports A. D. 1769 were 8013 I. A. D. 1770 there were entered inwards, Ships 4, Sloops 103. Cleared outwards, Ships 4, Sloops 154.

[^326]:    e The Town of Port Royal, as we have already mentioned, food on a Point of Land run. ning far out into the Sea, narrow, fandy, and incapable of producing any Thing. Yet the Excellence of the Port, the Convenience of having Ships of Seven hundred Tons coming clofe up to their Wharfs, and other Advantages, gradually attracted Inhabitants in fuch a Manner, that though many of their Habitations were built upon Piles, there were near Two thoufand Houles in the Town in its moft flourihing State, and which let at high Rents. The Farthquake by which it was overthrown happencd on the 7 th of Junc 1602 , and Numbers of Pcople perifhed in it. This Earthquake was followed by an epidemic Difeafc, of which upwards of Three thoufand died, yet the Place was rebuilt; but the greateft Part was reduced to Afhes by a Fire that happened on the 9th of January 1703, and then the Inhabitants removed montly to Kington. It was however rebuilt for the Third Time, and was rifing towards its former Crandeur, when it was overwhelmed by the Sea, Auguft 20th ${ }^{1722}$. There is, notwithftanding, a fmall Town there at this Day. Hurricanes fince that Time have often happened, and occafioned terrible Devaftations, yet they have been lefs frequent and lefs violent of late Years, and the Climate alfo is faid to be altered for the better.

[^327]:    ' In fome of the latel Maps we find feveral other Towns mentioned, moft of them within Land, but probably not very confiderable. It is to be wifhed that effectual Means were employed to compel the Cultivation of fuch Lands as have been long patented, and that, as we have faid, fmall Plantations were encouraged in order to increafe the Number of white Inhabitants. This might be alfo beneficial in other Refpects. Such fmall Ilanters might find thair Account in raifing Maize and Ric. for Sale, in making Fifm Oil for fome Purpofes, and Oils from Veget..bles for others, making Shingles and Heading, to which we may add breeding Horfes, all of which' might be certainly and eafily done, and fave the Inhabitants Twenty thoufand Pounds, which they pay annually for Things with which they might be much better fupplied at Home. This might, as we have already mentioned, be facilitated by introducing new Staples, by planting Mahogany, which begins to grow Icarce, and raifing Logwood, which Expericnce fhews is very practicable. By the Statute paffed in the Sixth Year of the Reign of his prefent Majefty, chap. 49 the Ports of Kingfton, Savannah la Mar, Montego Bay, and Santa Lucea in this IMand are declared under certain Rellrictions and Limitations free Ports, for any foreign Veffel from any foreiga Colony or. Plantation in America, not having more than One Deck. This Aict is to continue in force to A. D. 1773, and to the End of the then next Seffion of Parliament.

[^328]:    * The following Account of the Exports of this Iland, in A. D. 1770, will contribute more than all that hath been faid, to hew the Importance of Jamaica. They confifted in 2249 Bales of Cotton, which at Ten Pounds per Bale, the Price in the Inand, amounts to 22,4901. 1873 Hundred Weight of Coffee at Three Pounds Five Shillings per Hundred, 6088 1. 2753 Bags of Ginger at Two Pounds Five Shillings per Bag, 61941. 2211 Hides at Seven Shillings per Hide, 773 1. 15,796 Hogheads of Rum at Ten Pounds per Hoghead, 157,960 1. To Ircland 679 Hogheads at Ten Pounds per Hoghead, 67901. Mahogany 15,182 Pieces, and 8500 Feet, :50,000 1. Of Pimento 2,089,734 Pounds Weight, 52,243 l. Sugar 57,675 Hogheads, 6425 Tierces, 52 Barrels, at Seventeen Pounds Ten Shillings per Hogihead, Twelve Pounds per Tierce, and Four Pounds per Barrel, amounting in the Whole to 1,086,620. Sarfaparilla 205 Bags at Ten Pounds per Bag 2250 l. Exports to Great Britain and Ireland 1,391,2101. To North America 146,324 1. To the other IOands 595 l . Total of the Exports 1,538,730 1.

[^329]:    TVe have aiready obferved that the Tord Willoughby of Parbam after the Reftoration was appinted Guvernor of Barbadocs and the Leeward Inands. After his Demife Sir William Stap!eto: was appointed Governor of the latter A. D. 1672, and fixed his Refidence in St. Chiiftewhers. The iroduce of this Mand A. D. 1770 ftood thus. There was exported to (ireat liritam of Cotton 192 Bakes, 566 Bags, $796+1$. 86 Hides 301.25 .858 Hogheads of $1 \mathrm{k}: \mathrm{m}$, of which 97 wete exported fron other Illands, 55801 . to Ireland 1179 Hogheads, 117:01. 17,004 Jugherds, 1814 Tierces, 643 Barrels of Sugar, of which 335 Hogheads and $i r_{1}$ Tierces wete reexported from other Inands, 338,709 l. 10 s . In all 367,0741 : 2 s . To Ninth Anserica to the Amount of 59,794 J. to the other Illands, 61 Hogheads of Rum, 518 I . $\therefore \mathrm{s}$. To Ahica Eight Hogheads of Rum, 68 J.
    i This ple:fant the wasfettled under the Aufpice of Sir Thomas Warner fiom St. Chriftophas. His succeflor Governor Lake was confidered as the Solon of this little Country, in which. i.e difjoted crery Thing with fuch lrudence, Wifdum, and Juttice as procured him a high Reputation with the French as well as Engling. In the Dutch War they met with fome Diftatiance fom the French, but being covered by an Englith Squalron, the Lnemy were obliged i) delift from their intended Invafion after a fanart Engagement in Sight of the Inand. Sir Willian Stapleton fometimes refided bere, and Sir Nathaniel Johnfon conftantly, which cuntributed not a jittle to the Profperity of Nevis, the Inhabitants of which were then computed to Le upwards on Thinty thoufand. In the War immediately after the Revolution they exerted. themflees gallanty, and had Two Regiments of Threc huntred Men each. In that of QueenAnne they behared as vell, though they were not equ.!ly fortunate, for the French landing with a fuperior Force, and having inveigled moft of therr Slaves, they were forced to capitulate. About Four thoufand of thefe Slaves the French carried away and fold to the Spaniards to work in their Mines. The Parliament after making due Enquiry into the Loffes they fuhained voted them about a Third Part of the Sum in which they had fuffered. Thefe Lonfes by War, an epidemic Difcafe, and repeated Hurricancs, exceedingly diminifhed the Number of their People.

[^330]:    h The Inhabitants of Nevis are equally remarkable for the Neatnefs of their Dwellings, and their great Induftry in their Plantations. They exported to Great Britain A. D. ry70, 236 Bags of Cotton amounting to 2,3601. 71 Hogheads of Rum, 710 l. 2329 Hogiheads of Sugar, 40,757 l. 10 s . In the Whole $43,8271.10$ s. To North America, they fend agreat many Barrels of Lemons, a confiderable Quantity of Melaffes, and a great Deal of Rum, amounting in the Whole to 14,155 l.

[^331]:    ${ }^{1}$ This noble Inand like the former was fettled under the Aufpice of Sir Thomas Warner, but made a very llow Progreís at the Beginning from a general Opinion, that as is faid in the Text, there was a total Want of Watcr. By Degrees however the Number of Inhabitants increafed, yet before they had attained a competent Strength they were attacked and reduced by the French in the Reign of Charles the Second. However by the Twelfth Article of the Treaty of Breda, the Inand was reftored, after which the Number of People increafed, and the Country was much improved. In the War in King William's Time General Cudrington defeated all the Defigns of the French againgt it, and even reduced fome of their fmaller Inands. His Son who fucceeded him in the Government of the Leewad Illands made a vigorous Attempt upon Guadaloupe in the Reign of Queen Anne. Since this Time Things have gone on profperoully, and the Spirit, Skill, and Induftry of the Inhabitanrs have been amply rewarded by their Acquilitions, though from Hurricnnes, Droughts, and other Accidents, there is geat lacyuality in their Exports.
    $k$ Lord W'illoughby of Parham, when Governor of Barbadoes and the Leeward Illands, being informed of the languid State of Things in Antigua, procared a Grant and 1.an his Brother thither to take Care of his Property. After his Lordfhip's Death Ciniftopher Codrington, Efy; removed thither from Barbadocs, and by his great Skill and Application contirely changed the Face of Affinn. When he became Governor and Captain ceucral he fixcd :ie Seat of Government here, which was of great Confequence, and fome other intelligent Phatcrs reforting thither the Productions of Antigua in Quantity and Qualiy were gradually inproved. A. D. 1790 they exported to Great Britain 192 Bales, 566 Bags of Cotton, amounting to 50461.735 Hogheads of Rum, 7350 . To lreland 6,492 Hogheads of do. 64,9201, 20, 116 Hogheads, 72 Tierces of Sugar $35^{2,89+1}$. in all to Circat Britain and Ireland $+30,2 \mathrm{Jol}$. To North America to the Amount of $35,55 \mathrm{I}$. 7 s . 6 d . and to the other Ilands 2291. 10 s.

[^332]:    1 In the Year 1632 Sir Thomas Warner fent a fmall Number of his Pcople from St. Chrinn$n^{\prime}$ int's to Montferrat, lying to the South Eaft, being of a round Figure, a little mutatamus $\therefore 14, \ldots 1$, whici owes its Healthinefs and Sccurity to that Circumftance. It was become a vory ropuints and well-improved Settlement when attacked and reduced by the French in the Beginning, of the Reign of King Charles the Second. But being reforcd to its old Matters by the Twarth Article of the Treaty of Breda, it very fpeedily recovered its former Splenduar. When the next Var broke out with France foon after the Revolution, the People of Monterrat acted with great Vignar and Spirit, by which they kept their Encmies at a Diftance. But by thefe extraor.'inary, though honourable Efforts their Num'ers were confidetably diminimed. This expuitd them in the Reign of Queen Anne in be extremely harralfed by the French, and even afte: th: Ceffation of Arms was concluded, Mr. Culfard landed here, and in a great Meafure tuiaed the Illand. For this it was Ripulated in the Eleventh Article of the Treaty of Utrecht, that an Enquiry Mould be made into the Damages which the People of Mon:fand had fufferd. But it does not appear that any fuch Enquiry was cver made, or that phe leall Compcufation was received.
    m The wonderful Efferts of Induftry and Experience in mcliorating the Gifts of Nature have been no-where more confpicuous than in thefe Illands, and particularly in this, by gradually improving their Produce, more efpecially of late Years, fince the Art of Planting hath been reduced to a regular Syfter, and almoft all the Defects of Soil fo thoroughly removed by proper Management and M:nure, that except from the Failure of Seafons, or the Want of Hands, there is Celdom any Fear of a Crop. In A. D. 1750 there was exported from this 1dand to Great

[^333]:    - This fmall Illand is another very fliking Infance of what has been before grferied, that Skill and Induftry will have great Effects whereever exerted with Perfeverance, fance all the Accounts we have of it, as is faid in the Text, agree in their Reprefentation of its being capable of producing nothing more than a bare Subfiftence to a few wretched Inhabitants, and yet we find them by Dint of their own Labour rifing into fome Confideration; for A. D. 1770 they exported 242 Bags of Cotton, amounting to $=420 \mathrm{l}$. Nineteen Hogheads of Rum, 1901. 68 Hoghtads of Sugar, 11901 . in all to Great Britain 3800 l. and to North America 20571.10 s. and they are in a fair Way of producing much more.
    - Thefe Virgin Ifles, as hath been already hinted in the Text, werc for many Years confidered as little intaofit.uble Rochs upon which a few miferable leople, whom their Debrs had,

[^334]:    a The principal Intention in thefe Notes is to authenticate the Hiftory, and to fix the Dates that are mentioned in the Text for the Reader's Eafe and Satisfaction. The Perfons fent from France at the Inftance of Mr. Defnambinc were Meffieurs du Pleflis and l'Olive, and they landed on Guadaloupe Jnly 8 th 1635 . The former of thefe Gentlemen dying, and the latter becoming blind within a Year, the Company conferred the Government of that Illand on the Sieur Anbert, who had been for fome Time an Officer in the Ine of St. Chriftopher. On the other Hand, Mr. Defnambuc appoited his Nephew Monfiear du Parquet, Governor of the Colony that he fettled in Martinico.

[^335]:    b The Firft French Wen India Company was efablimed A. D. 1626 , and they did all they could to fipport the indabinunent: mace by them. At hengh finding themfelves exceedingly involved, thes grante. it. Mr. du Parcuet before-menioned the hlands of Martinico, Grenada, and St. Lacia; and to the Sieur Hovel the hlands of Guadaloupe, Marigalante, Defiderade, and the Saints. To the Commander du loincr, who was Ceand Crofs of the Order of Malta, and at that 'Time Governor General of their Illands, they for: 1 in 'Truft for his Order, heir Part of St. Chriftopher's together with the llands of 'St. Bartholomew, St. Martin, and Santa Cruz, and the Poffemion of them was ratified by the Irench King's Letters Patents. This Fiat Company broke up A.Ban $0.5^{1}$. The Second Freuch Weft India Company was created by Letters Patents, dated the fith fuly, A. D. 1604 , and had an entire Grant of all that the French porfufled on the Continent, as well as in the llands of America, and this new Company was fo well fupported, that in a very floor! Space they equipped upwards of Forty Sail of Ships for different Services. Befiks what is mentioned in the Text, this Company rendered the French Nation many other beneficial Offices, and particularly took entircly out of the Hands of the Dutch, then clofely allied with France, the Trade of the Illands, by which they had been exceedingly enriched. In effecting, fo much they had not only expended their Capital, but had run upwards of a Million of Livess in Debt, which was the Pretence made ufe of for diffolving them, the King reimburfing their Capital aud difuarging their Incumbrance:.

[^336]:    c The Treaty of good Correfpondence and Neutrality concluded between King James II. and Lewis XIV. bears Date the 5 th November 1686 . The Motives were the delivering the Subjects of both Crowns from the Interruptions they met with from Buccancers, "and the fecuring the Trade of their retpective Iflands to the Powers to which they belonged. In A. D. 1718, upon the Surmize of a rich Mine in the lland of St. lacia, the Regent Duke of Orleans made a Grant of that IIland in Property to the Narthal dEftrees. But the Britifl Court expoftulating upon this and hewing clearly, that the Right was in the Crown of Great Britain, that Grant was recalled. His Majelty King George I by Letters Patents, dated 20 th June 1722 , granted this Mand, with St. Vincent, to the Duke of Biontagu, and as we have faid above, to avoid a Quarrel between the 'l'wo Nations, it was afpreed that thofe Jlands fhould not be fettled by either. The compleat Ceffion of the Mands, which are the Sulject of this Chapter, was made in the fulkft and clearcft Terms by the Ninth Article of the laft Peace figned at Parts, 10 th Fedrualy.g A. D. 1763.

[^337]:    d A little Refiection on the Climate, Soil, and natural Productions of thefe Inands might eafily lead to the Defire of making Trials, of what through the Force of Skill and Induftry might be added to their native Stores. But probably here as well as elfe-where, fuch Trials might have been neglected, if Governor Melvil, a Gentleman alike diftinguißhed for the Warmth of his public Spirit and univerfal Bencvolence, had not eftablifhed in this Illand a public Garden for this noble Purpofe, and put it under the Care of Dr. George Young an excellent Bntanift, to whom the Society for th: Encouragement of Arts have defervedly given a Gold Medal, and who hath brought a Certificate from the Chief Magiftrate of St. Vincent, that he had growing in this Garden in the Month of May A.D. 1772 One hundred and forty healthy Plants of the true Cinnamon. He hath alfo in the fame Garden, amongft many other curious Plants, Logwood, Turmeric, Eaft India Mango, Tobago Nutmeg, Sefamum or oily Grain, Caffa Fiftula, Vanelloes, Anatto, China Tallow Tree. He is likewife preparing to carry from hence amongtt many others the following, the Tea Shrub, Sago Palm, Gum Storax Tree, Olives, Camphire Tree, Florida Starry Anni-. feed, Zañt Currant Tree. It would be eafy to expatiate on the Advantages that may probably aife from this Inftitution. At prefeat it is fufficient to have pointed out to whom they will te due.

[^338]:    c There have been fome Douhts raifed as to the Accounts given in the Text of the coming in of the Negroes, on a Suppofition that they might be $\mathrm{S}_{\mathrm{p}}$ anifh Slaves who efaped from the Continent, which however feems lefs probable. They have adopted in fome Degree the Manners of the Natives who are the moif indolent Pcople upon the Einth. . In Conjunction with them they obliged Captain Brathwaite in A. D, 1723 to deffetrom his intended Defign of debarking upon the lland in confequence of the l)uke of Montague's (iaiat, being abundantly fupplied at that Time with Arms and Ammunition from the Freach. They are now reduced to a very low State, but fill they are intited to Jutlice and Humanty, more efpecially when confidered as Subjects of the Crown of Gieat Britain. Force may reftrain, but Kindneis only can fabdue. They raifed Ground Irovifions, Poultry; andother Things for the L'ic of the French, and there feem: to be no Keafon to doubt that by Gentlenefs and gerad 'Trcatment they might be made in like Mancr ufeful to themfelves and to us, and with a very litie Induffry live comfortably and in Peace.
    i What hath been faid of this Inand in refpect to its prefent and future Confecquence to this Cuntry vill be better feewn and more fully corrohonated fiom the State of its Exportations in A. D. 1772, which were Ciston 284 Bags at Mon Pounds per Bag, 2840 1. C iffee 4818 Hun-drud-weight One Quarter Six Ponnd, at Three Pound Five Shillings per Hundred-weight, $15, \leftarrow \div 9$ l. $95.8 \frac{3}{4}$ d. Casao 1000 Hoghteads and One Barrel at Twenty-five Pounds per Homil.ead and Twelve Pounds per Barrel, 25,012 1. Rum 34 ( Hupheads at Ten Pounds per Hogfhend, 3460 1. Sugar, 2866 Hogrheads at 31.10 s . par Hoghead, 50,155 1. - In all to Great Bit
    

[^339]:    * One great Advantage of Dominica lies in the great Variety of its Soils, their different Situations and Expofitions, fo that not only every Thing that grows in the other Illands may with Facility and Certainty be raifed here, but alfo farther Improvements made by the Introduction of valuable Plants from the Spanifh Main, and even thofe of the Eaft Indies. There is a valt Variety of Timber here for a Variety of Purpofes, particularly Rofe Wood, and others proper for the Ufe of Cabinet-makers, as well as for Building, of which due Care ought to be taken. The Rivers afford an Opportunity of confrueting Mills, which is a Circumftance that moft prove very advantageous to the Planters. The native Caribs that fill remain were exceedingly ufeful in many Refpects to the French, in furnifhing Provifions of all Kinds to their Planters; and there feems to be little Reafon to doubt, that being truated with Juftice and Lenity, to which as Men, and Subjects of the Crown of Great Britain, they are furely entitled, they may likewife be made ferviceable to us.
    i The making Dominica an independent Government was certainly intended to promote the Speedy fetting of this. Illand, which undoubtedly was the befl fituared of any in our Poffeffion for a free Port ; and it is hoped that great Advantages may refult from thence, in Proportion as the Number of Inhabitants increafe. The Exportations from hence, A. D. 1770 , were, of Coffee 10,380 Hundred-weight Three Quarters Twelve Pounds, 33,737 1. 15 s. $8 \frac{1}{2}$ d. Cacao, 285 Hogheads, 7125 1. Rum, Thirteen Hogheads, 130 I. Sugar, 307 Hogheads, 53721.10 s. In all to Great Britain, 46,3651 . 5 s. $8 \frac{1}{2}$ d. To North America 16,4961 . 10 3 . In the Whole $62,856 \mathrm{l} .15 \mathrm{~s} .8 \mathrm{~d}$.

[^340]:    *The French were certainly long enough Mafters of this Illand to be able to judge of the Facts mentioned in the Text; and there feems to be no Reafon to queftion their Authority. The Seafonings, as they are called in this Part of the World, are the regular Returns of Rain, for in all the Antilics the Inhabitants reckon only Winter, which is the rainy, and Summer, which is the dry Sealon. The former perhaps might with equal Propriety be called the Spring, and the latter the Autumn. The Rains begin about the Middle, at leaft before the End of July, and laft to December; not that it rains continually, but that there is very feldom a Day without Rain, upon which the Fertility of the Country depends, and thence their Regularity is juflly confidered as a very great Bleffing. The Blaft is a Malady incident to the Sugar Canes both in ours and in the French Mands, the Caufe of which being unknown, no Remedy hath been hitherto tound agaiuft it. As to Hurricanes, the common Opinion in the Weft Indies is, that they happen between the 20th of July and the 15 th of October, which in general may be true ; and it is certainly a very great Happinefs to lie out of the Track of thefe deftructive Tempefts. Thefe Advantages, therefore, taken together, may be juftly confidered as very diftioguihed Recommendations of this 1 Mand.

[^341]:    1 There are many Reafons that may ferve to juflify what is faid in the Text. All the old Writers agree, that though many or moll of the Trees that grow in One grow alfo in the Relt of the Antilles, yet that however there are fome peculiar to ")ne or Two Illands, and inftance more, efpecially in Grenada, Tobago, and St. Croix. It may therefore be very expedient to examine all the different Kinds that grow here, in order to preferve fuch as are moft valuable. Some Caution ought alfo to be ufed in cutting down the reft, fince, before the French prevented them, the inhabitants of Barbadoes cu. great Quantities of Mill Timber here and in the Grenadines, which afterwards they procured as they could from Santa Lucia; and bcing now precluded from that lland, there is the more Reafon for their being furnifhed again from this. To this we may add, that an injudicious and indiferiminate Deftruction of Wood is allowed to have alt red the Seafons in fome of our lllands, which ought to be a Caution in refpect to Grenada, wher:, as we have faid, they are perfectly regular at prefent.

[^342]:    o It was certainly no finall Advantage to us, that when this fine Inand came into our Hands it was already peopled and planted, though it muft be confeffed but very indifferently. It gave us howcver an immediate Opportunity of entering upon Improvements, and to the Honour of our new Settlcrs, it muft be acknowledged they have pufhed on thefe, with equal Induftry and Succefs. All the old Eftates are now in a Condition much fuperior to what they were, and if I am iightly informed the Number of them is increafed One Third. Thofe undor Coffee remain in the fame State they were, except fome that have been converted to Sugar. It may not be amifs to obferve that there is fill about a Third Part of the Illand uncultivated, and though a confiderable Proportion of this being mountainous cannot be improved, yet the Remainder affords Room to hope we may fill fee them carried much farther. The Exports from this Illand from the Fifth of January A. D. $1 ; 70$ to the Fifth of January 1771 were as follows, Cotton, in Bales, 3472 Bags, at 12 l. per Bale and iol. per Bag, 34,852 I. Coffee 15,927 cwt. $1 \mathrm{qr} .13 \mathrm{lb} .49,773 \mathrm{l}$. $1 \mathrm{~s} .3 \mathrm{~d} . \mathrm{Ca}^{2} \mathrm{cao}, 327$ Hhds, 1104 Bags and Barrels, at 2 j l. per Hhd. and 121 . per Barrel, $2 \mathrm{I}, 423$ I. Hides 261 at 7 s . per Hide, gri. 7 s . Rum 1169 Hhds. 11,6001. To Ireland 723 Hhds. 7,2301. Clayed Sugar 2692 Hhds. 35 Tierces, and 30 Barrels, at 201 . per Hhd, 151 . per Tierce and 51 . per Barrel, 54,515 1. Do. Mufcovado, 15,312 Hhds. 322 Tierces, 63 Barrels, at 17 1. 10 s. per Hhd. 12 I. per Tierce and 41 . per Barrel, 272,0761. In all $451,6501.8 \mathrm{~s} .3 \mathrm{~d}$. Imported from the other Illands and exported hither 33261 . 108 To North America $5 \mathrm{I}, 06 \mathrm{ml} .7 \mathrm{~s} .6 \mathrm{~d}$. To the other Inands 6711. io s. Total 506,7091. 15 s .9 d.

    > VOL. II.

[^343]:    p We vifited this Inand very early, Sir Robert Dudley being there in the Reign of Queen Elizabeth. In that of Charles the Firf William Earl of Pembroke procured a Grant of this, with Two other fmall Inands, but died before he was able to carry into Execution his Defign of fettling them. In A. D. 1632 fome Merchants of Zealand fent over a finall Colony thither; and gave it the Name of New Walcheren, but before they were able thoroughly to eftablith themfelves they werc deftroyed by the Indians affifted by the Spaniards. Some Ten Years after James Duke of Courland fent a Colony thither, who fettled themfelves upon Great Courland Bay, and made a confiderable Progrefs in planting. A. D. 1654 Mcffieurs Adrian and Cornclius Lampfins, Two opulent Merchants of Flufhing, fent a confiderable Number of People thither, who fettled on the other Side of the IMand, and lived in Amity with the Courlanders until they learned that the King of Sweden had feized the Perfon of their Duke and difpoffeffed him of his Dominions, when they attacked and forced his Subjects to fubmit. The Duke being afterwards reflored, he obtained from Charles II. a Grant, dated the 17 th of November 1664, of this Illand. In the Finf Dutch War fome Privateers of ours plundered the Dutch Settlement, which Lofs however they quickly repaired. In the Second Dutch War the Count d'Eftrees by order of his Mafter totally ruined it at the Clofe of the Year 1677 , and from that Time it continued wafte till we took Polkiffon of it after the Treaty of Paris.

[^344]:    I In the former Note it hath been fhewn，that though the Dutch were here about Twenty Ycars，yet in that Space their Tenure was but very precarious，however they exported large Quantitites of Tobacco，Sugar，Caffia，Ginger，Cinnamon，Salfafras，Cum Copal，Cacao，Ro－ cou，Indigo，and Cotton，befides rich Woods，Materials for Dycing，Drugs of different Kinds， and feveral Sorts of delicious Sweetments．Sir Jofiah Child however in the Tenth Chapter of his Difcourfe upon Trade hath the following very remarkable laflage refpecting this Inand， ＂The Dutch，fays he，did never much thrive in planting，for I remember they had about ＂Twenty Years paft Tobago，a moff fruitful Inand in the Weft Indies，apt for the Produc－ ＂tion of Sugars and all other Commoditics that are propagated in Barbacoes，and I have heard ＂Planters affirm，better accommodated with Rivers for Water Mills，which are of great Ufe ＂for Grinding of the Canes．This Inand is fill in their Poffeflion，and Corafon and fome others； ＂and about Sixteen or Seventeen Years paft they were fo eager upon the Improvement of ir，that ＂befides what they did in Holland they fet up Bills upon the Exchange of London，prof－ ＂fering great Privileges to any that would tranfport themfelves thither．Notwithfanding all ＂which to this Day that Inand is not the Tenth Part fo well improved as Jamaica hath been ＂by the Englifh within thefe Five Years．＂This nhews what were the Sentiments of the beft Judges in relpect to the Value of this £⿴囗⿰丿㇄心．near One hundred Years ago．

[^345]:    T What is faid in the Text will fufficiently account for our having had confiderable Exports hithe:to from this Inand. Yet in A. D. 1770 they fent to the other Ilands from thence 18 Hhds. and 12 Tierces of Mufcovado Sugar, which amounted to 459 l. exclufive of what went to Grenada, as hath been already mentioned, and the Year following I have been affured they exported hither in Four Ships 1313 Hhds. of Sugar. This laft Year it is faid they have exported 2361 Hogheads.
    ' It is for want of comprehending clearly, or confidering thefe Points attentively, that fome erroneous Notions in reference to thefe new Settlements have been embraced. If thefe had not been obtained, our old Poffeffions could not long have continued in our Hands. The French before the War began were in point of Strength fuperior to us in thofe Parts, and would have been much more fo, when they had added to them thefe Inands. The Neutrality was no Security to us, but a great Advantage to them, for under Colour of that they were actually fetling in St. Vi:cent, St. Lucia, and Dominica. It is clear from Experience that this hath not diminifhed the

[^346]:    we confider the peculiar Circumftances of thefe Inands, and how much it imports us to negleet nothing that may contribute to their Security. The providing an effectual Militia would prevent the Neceffity of fending over regular Troops which is attended with many Inconveniences. The Diftraction on the Firft Appearance of Danger would be as effectually removed by the Confrruction of fuch a Fortrefs, which is no new Thought, though it hath ncver yet been executed. The public Garden would probably difcover that we are really in Poffefion of many of thofe valuable Things for which we envy our Neighbours, and we may be fure that whatever we find growing naturally in the Country may by Skill and Culture be with Facility and Certainty brought to Perfection. Of this we have a clear Inftance in refpect to Indigo, fince the wild Plant which yas long neglected, is now preferred to what was obtained with much Labour and Expence.

[^347]:    2 It may conduce to the clear Underftanding what is delivered in this Chapter, to give a fuccinct Reprefentation of the Advantages thefe Illands enjoy in refpeCt to an extenfive Commerce. Their Situation for an Intercourfe with all Parts of the World is as commodious as can be defired. Our Ports are numerous, happily difpofed, many of them excellent by Nature, fome wonderfully improved by Art, open at all Seatons of the Year, which is not, or at leaft not always the Cafe with fome of our Neigbbours, and moft of them fecure fand eafy of Accefs. The Country abounds with a Variety of rich and valuable Commodities, and fince Trade and Induftry have flourihed, innumerable Madufactures. Our Seamen are on all Hands allowed to be fout, active, and expert. The Genius of the People in Great Britain and Ireland admirably adapted to all the differeat Employments requifite to the Support of a commercial State, all which Circumftances maturely confidered fufficiently hew, that what we advance in the Text is founded on the moft fubftantial Reafons.

[^348]:    b In refpect to the Trade of Ruffa, Sir Jofiah Child in the Preface to his excellent Difcourfe fpeaks of it as at that Tiane in a Manner loft, the Duth having Twenty-two Eail of Shipsemployed there in the Year before he wrote, and we but One; whereas, fays he, in forme: Times we had more than they. It is plain from hence that he confidered our Intercourfe with Ruflia as of great Importance. The Revolutions in Commerce are frequent and great, for which Reafon no abfolute Conclusions can be formed from the State of the Trade between Fwo Nations at any particular Period, even fuppoling, which is rarcly the Cafe, that they could be obtained with the greatelt Certainty. A Century after the Time in which Sir Jofiah wrote Things have worn a very different Afpeet, for A. D. 1764 there wemt fism the lort of lendon only to the Ruffian Ports of l'eterfburg. Nurva, and liga, Eighty-nine Suil of Ships, and from the feveral Ports in the Brition Dominions, or freighted on Britith Aciount, near Two hundred. It was computed in this lear that a Moiety of all the Ships trading to Ruffa were Engilh, and in poine of Tonnage that they amounted to Two Thirds. It was allo computed by the Ruthans themfelves that the Balance of Trade in their Favour, including Cufoms and our Cummerce at Archangel, amounted to Five Milliuns of Rubles.

[^349]:    c The Swedes for a long Courfe of Years faw our Trade and their Interef therein wiha lar. pofition no Way favourabie to us, and perhaps lefs fo to themelves. Ther wete unathe wh work their Mines without Advances from our Merchants, we touk great (s)aminion o! heir Goods, and paid for at leaft Two Thirds of them with ready Moncy. On P'turipics of true Folicy they ought to have cherihed a Commerce fo bencficial, infead of whind thee diud wh $\mathrm{t}: \mathrm{v}$ could to cramp our lenportations, and opprified our Merchants in a Variets of lintances. At the Beginning of Queen Anne's War, A. I. 1703, they puhed Maticrs fo far, upin a Prefumption that we muf be obliged to them for fitth and Tar, and this ton upon their own Terms, that as we have altedy fhewn, fee p. 567 , induced us to take fich pieafures as pioeured us both from our Ameican P'iantations, to ehcir great Prejudiee and our Imolument.
    d In regard to our Comencree with all theic Northern Nations, it is to be ruacmented that we extract from them'Neceflaries, and chicfly fuch as we turn to our Prolit, and therefore we ought not to regret that we pay for them. As they are chiefly employed in our Marint, the Balances thus fanding againf us, though an apparent lofs in that, yet conficicied in another Light, as P'roofs of our increafing Navigaticn, are Regifcrs of our Gains. They were fmaller when our Trade was more confined, they have grown in Proportion to the Extenfion of our Commerce, and the orly Mcans by which we ought to with their Decline in any Degree, muft be from our raifing what we take from them at Home, or bringing them fiom our Colonies.

[^350]:    - The Commerce of thefe great trading Citics ought not in reafon to excite our Envy, for If ace in part fupply the Materials of their Wealth we particijnte in their Profits; any finifter decidents happening to them, mult of courfe decreafe their Deminds from us. Befides we empioy a very contiderable Part of our Imports in our Manufact.res, and the efore have no Caufe to grudge an Expence that turns nitimatciy to our Advantage. The late Reprefentations made by the City of Dantzic in her prefeat Dithefo hath fut this Matter in a ve:y full and true Light, by fhewing in a Multitude of Inftances, that the Declenfion of her Commerce would impair ours.
    ' In the Courfe of this Work we have had frequent Occafions to new the scciprocal Advantages alifing from the Intercounfe between thefe llands and the Dominions of the Houfe of Burgundy in former Times. We have feen that the Flemings have inftrocted us in Agriculture, Manufactures, and Commerce, and that very many of thefe Improvements by which we have grown to be a rich and flourihing Nation, we derive from them. If they have fill the Advantage in refpect to fome Manufactures, it ought to excite our Emulation rather than our Envy. We have already acquired much by copying their Examples, and by giving proper Ensouragement to the Indultry of our oun People we may fill acquire mor.

[^351]:    8 The Articles of our Exports mentioned in the Tcx! are but few, becaufe it would have required a lage to have mentioned them all, fince there is hardly any Thing of our Produce or Manufacture which at fome Time or other we do not fend to Holland. It is owing to the peculiar Situation, indefatigable Induftry, and the commercial Skill of the Duth, that they are enabled to vend in fome shape or other the far greatef liart of the Cionds they take from us, and if by this they are Gainers, we are folikewife. If they did nut difpofe of our Commodities and Manufactures as they do, we could not. Befides with refpect to the imponts many of them are of ufe in our Manufactures, and others are re-exported. The Dutch are cerainly a very fagacious People, efpecially in Commerce, fo that in many Things it wenld be well if we imitated them, but not in all, becaufe we differ from them in our own Pulicy, and in feveral other Circumiltances.
    ${ }^{n}$ It is very certain that in the Reign of Charles the Second our Commerce with France was very detrimental to this Nation, yet whether to fuch a Degree, as fome able Writers afferted, hath been queftioned by Dr. Davenart. Be that as it will the Opinion had its Ufe. The French, theugh fo great Ciainers, firf began to cramp this Trade, by laying heavy Dusies on our Manufactures, and this produced a Petaliation, which with the fuccceding Wars effectually lefened our Correfpondence. We likewife began to fet up many of their Manufachures, which was highly facilitated by the Proteltants, who reiircd hither from the violear l'erfecution raifed againh

[^352]:    k Our Commerce with this Country in the Reign of Queen Anne, in confequence of Mr. Methuen's Treaty, was without queftion very great. But then it is to be conlidered that a Part of our Fxpurts went to fupply our Army, and Part alfo was privately carried into Spain, then in the Hands of an Enemy. It hath fince, in the Opinion of the ableft Judges, declined very much, notwithftanding the common Notions to the contrary. Thefe were chiefly fupported from the Quantitics of Portugal Money brought hither, which it was cencluded was the Cunfequence of a Balance in Trade in our Favour. In Truth, Portugal having a Balance againft her with all the other Na:iuns in Europe, and we having a Balance againft fome of them, that was difcharged to us there, and the Security and Facility of tranfporting Money in our own Ships rendered us the Carriers of a confiderable Part of the Balances due to other Nations, and by which in reality we gained only the Freight. The common Notions however fupported by this Appearance have been very prejudicial, and are in a great Meafure the Source of that Change of Difpofition in the Portuguef. Miniftry, which in Spite of the guod Offices we have rendered them have had very bad Effects in regard to our Merchants there.

    1 What hath been previouly obferved in regard to our Commerce with Ruffia and the other Northern Countries, is to be remembered here, to prevent our apprehending an ultimate Lofs where a great Advantage is not apparent. The Web of Commerce is compofed of many Threads, and fome of thefe are almoft imperceptibly fine. In the prefent Cafe it is evident that we take nothing from Italy, or at leaft very litue, that can be had elfewhere, and that we fend large

[^353]:    Qumritics of our Commodities thither. In refpeet to what we receive from thence, and more epresially silk, turns highty to our Profit by the Emplo ment of a Number of induftrious Perf.nis, and the other Articles are alfo of great Utility in different Manufiktures. The Whole occations a Circulation in Trade, which is a Thing of no fimall Confequence, even if the Balance firuld fluctuate and be fometimes for and fometines againft us.
    m Moft of the Circumftances which are generally allowed to conflitute a bencficial Trade are united in this Commerce. What we fend to and receive from the Dominions of the Grand Signior is on Boand our own Vefkes, and therely an Advantage to our Navigation. We export our Native Commodities and our own Manufiétures, we import raw Materials, which being wronght up here, are in part re-exported. In how extenfive a Manner the good Effects arifing from this late courle are diffufed through all Ranks of People, and how much the landed as well as trading Interells are benefitted thereby, is very clearly explained in the Britifh Merchant, vol. i. p. 135-14t. This fully juftifies what hath been advanced in the Text in reference to the great Importance of this Branch of Trade, and the Expediency of trying every Method to recover, fupport, and extend it. The prob:ble Means of furceeding in fo momentous an Affuir hath been very fully as well, as yery judicioully treated by Sir James Porter in his late Tratife upon this Subject.

[^354]:    ${ }^{n}$ We have heard mach of the Balance of Trade, and of the Neceffity of difonveting it, for which a Variety of Methods have been ponted out, many of them very fpecious, fome to a certain Degree uffil!, but sone of them abfolutely certain or faistattory. The Balance between us and particular Countries can never be known fiom the State of Exports and Imports for atew Years, cven if thefe states could be abfolutely depended upon. The general Balance: therefore

[^355]:    a The Obfervation of Sir William Petty, that the Sea Line of wal the Britith Mands extends to no lefs than Three thoufand Eight hundred Miles, whereas that of the great Kingdom of France is but One thoufand, will convey to an intelligent. Reader a very ftriking Idea of thofe Advantages that we derive from thence. But in early Times, when People were not much ufed to Reflection or Calculation, the very Profpect of their own and their Neigbbour's Situation gave Birth to this Sort of Navigation, and gradually to the Rife of the numerous. Towns upon our Coafts. In all of thefe Children from their earlieft Age have a Propenfity to fomething relative to this Bufinefs, and if their Difpofitions are not diverted to fome other Objects, become Rope-makers, Boat-builders, or Sailors, in this Way efpecially, as being free from all the Terrors and Dangers attending long Voyages, to which however the boldeft and moft experienced adtiet themfelves by Degrees.

[^356]:    - The feveral valuable Commodities for which thefe Inands are junly famous, hecome, by this Diftribution into different and diftant Parts, much more profitable and ufeful to the Inhabitants. For by Means of the Coant Trade wherever they grow they are every where to be found, and this with a very inconfiderable Addition of Expence, which is alfo commonly balanced by the Goods and Manufactures fent to thofe Places in Return. This commodious Diftribution is particularly remarkable in Coals, the Eaft Side of the Illand being fupplied from Newcafle and its Dependencies, the Weft and a great Part of Ireland from Swanfea and Whitehaven. We may fay the fame of Salt, of Corn, Metals, and many other Commodities; but to bring this Matter into a narrow Compafs, and to convince the judicious Reader how well founded our Affertions upon this Head are, let him confider that thefe are our own Productions, brought from different Parts in our own Shipping, in which our own Seamen are employed, and that all the Profite of the Sale, Freight, \&c. centers amongit ourfelves.

[^357]:    c In ancieat Times, and even at the Beginning of the laft Century, the diftant Parts of thefe Inands were very imperfectly known to each other. But as the Coafting Trade hath extended, a perfect Union hath been produced, and People frequently tanfport themfelves and their Goods wherever they are invited by the Hopes of dipofing of them to Advantage. A friking Proof of this arifes from the Cuftom houfe Buoks, which thew that Coafting Veffels arrive at London from upwards of a Hundred different Ports in the Illand of Great Britain ouly. Veffels laden with Uyfters from Cotnwall, and Lobfter Smacks from the Orkneys meet here. At the fame Time we mult remember, that there are many other great Marts, fuch as Leith, Newcaltle, Hull on the Eaft Side, and Glafgow, Liverpool, Chefter, Brifol, \&c. on the Weft Side.
    d The native Riches of this Illand, and their being fo difperfed, as we have reprefented in the Text, might excite an Idea to which its Size is no very formidable Objection, that Great Britain confidered as a Continent in this Refpect refembles China, and is capable of obtaining from its feveral Provinces all the Necelfaries and moft of the Conveniencies of Life. This is a fagral and at the fance Time a very fingular Advantage, which diftingnifhes this from fome other Countries, and particularly from Holland, where they have very little of their own Growth or Produce, from whence it arifes, that a rigid Frugality in its Inhabitants is not only a wofe and prudent, but alfo a very neceffary Point of Pohicy. Whereas with us it is apparently the public Intereft that private Perfons fhould live freely, plentifully, and at their Eafe, for this promoting the conftant and uniform Confumprion of Provifions and Manufactures, encourages Cuhftation, excitcs Induftry, maintains the Navigation of which we are fpeaking, and inftead of impoverifhing, conduces to enriching the People. A Circumfance of very great Importance, wisch merits mature Confideration, and which for this Reafon we Rall hereafer take Occafion mane largely to cfablifi and explain.

[^358]:    e The Commodities of this Country would certainly lofe much of their Value if their Confumption was confined to the Places of their Growth. This Diftribution of them by the Cudn Trade renders them abike benelicial to the Inhabitants of thefe lanands at large, which is fo far from diminithing, that it heightens their l'rice in the very Places where they are proluced. This Pofition, and the Confequences flowing from it, will be very eafily and clearly comprcheaded by an attentive and judicious Reader. Yet it may not be amifs to remark, as ecualiy decilive and fliking in refpect to this Propofition; that the very different Conditions which in feveral l'eriods of Time this Country hath been in, and which in the Courfe of this Work have been carefully defcribed, however iuluenced by other Canfes, arofe immediarely from this Circumitance, which is exceedingly worthy of Confideration. The Romans, equally correct in the whole Esften of their Polisy, were not more attentive to Cuttivation and Pupulation, than vigilani in regard to Communications of every kind; and hence that fourihing State of Britain fo copioully and. fo eleganily difplayed by their Panegyrifls. The Confufion that followed their Expulfion amihilated the Coaf Trade, and thereby introduced Barbarifm and: Famine much fooner than they could be expelled. Hut when the Saxons were united under. one Monarchy, and Peace and a general Correfpondence were reftored, Plenty returned, and for the Protection of the Country nad its. Trade, we find thefe Coafting Veffels, for fuch undoubredly they were, collected and embodied in Fleets, which for their Number feem almoft insredible.

[^359]:    fThe only Method of coming at a clear and thorough Knowledge of Subjects fo complicated as this, is to feparate the pincip.l Members of which they are compofed, leaving the Ren to the Reader's Penctration and Refection. The far grater Part of the Materials employed in the Conftruction of thefe Veffels are of our own Growth, and the Prece of them is apparently a national Advantagc. The Labour employed in fiting and preparing thofe Materials for Ufe, and the Carriage of them by Land being likewife paid for, is no lef. bencficial to Numbers. Neither is this all, for the fubordinate Tradefmen, who live and thrive ty the Inhabitants of fuch Places, though not immediately concerned in their Shipping, yet as they draw their Subfiftence from thofe who are, muft be likewife taken into the Account ; and fo alfo muft be fuch as furnih Provifions of every Kind to thefe Towns, in which, as all who are acquainted with then know, there is a great and continual Confumption.
    E What is faid in the Text is abundantly fufficient to remove with any condid Reader any Difficulty that might arife from the not being able to fate the Number of thefe Velfels, or of the Hunds cmployed on board them with any Degree of Certainty. It would be abfurd in a frofty Night to difpute whether it was Star-light, becaufe the Number of thofe fplendid Luminaries from whence it is derived conid not be exacly fixed. This very Circumftance, by proving their Multiplicity, is a Demonftration of the Faet. Sir Jofiah Child having fhewn that moft of the Rules laid down for finlirg the Balance of Trade, however plaufible, are by no Means conclafive, delivers it as his Opinion, (chap. viii.) that the Increafe or: Deereafe of our Shipping is the fureft Indication of our Succels in Trade. I will not difpute to what Extent this Obfervation may be carried in refpest to forcign Commerce, but in regad to what is the Object of this Chapter it is certainly juft, as the Increafe of Coafting Veflels in our fmall Poris renders it evident that fuch as carry on this Trade are Gainers by it, wtherwife the Number of their Toola, that i., their Ships, would decline, and the Towns decay.

[^360]:    ${ }^{4}$ This Naval Force is, Arictly feaking, our own, arifing from the Intercourfe of the Inhabitants of differrnt Parts o: thefe !lands with each other, and is a Strengih on which we may always rely. The Romans, as we have already fhewn, trutted vel y much to their Navy for the Protection of this lland, and for the-Security of their maritime Provinces on the Continent. Caraufius, who was Admiral of this Fleet, raifed himfelf from that Command to the Yurple. It was not till this Navy was withdrawn, that the Saxons were able to over-run this Country. When they were fully Malters of it, they likewife, as we have hinted before, trufted to their Fleets, and when the Normans were thoroughly fettled they committed the Security of the Sea and Sea Coafts to the Navy of the Ports, as the Reader may fee at large in the learned and judicious Work of the famous.Selden, to which we have fo frequently referred.

[^361]:    ${ }^{1}$ It hath been fully fhewn in the preceding Volume, from a Survey of the Coafts of this Inand, and a very fuccinct Account of their Ports, that no Country in the Word can be betrer fituated either for the carrying on foreign Commerce or of domeftic Traffic by Veffels navigating the whole Extent of its Coafts. All that hath been faid of Great Britain is frietly true of Ireland. It abounds with a vaft Variety of Staple and valuable Commoditics, and thefe are difperfed through the different Parts of the Country fo as to render them mutually dependent upon each other for the Neceffaries, at leaft for the Conveniences of Life. If notwithftanding this there may be a great Difparity in Appearance between fome Parts in comparifon with others, this can ouly arife from the Improvements made in that Kingdom, not being become hitherto univerfal, towards the Accomplifhment of which nothing, could contribute more than the Increafe of its Coafting Trade. 'This we have all the Reafon in the World tw expect from the Spirit of its Inhabitants, from the Progrefs of Trade and Manufactures amonglt them, from the Increafe of their Cities and Ports, as well as of their Shipping, the conftant Care of their Legillature, and the noble Zeal that appears in feveral laudable Societics for promoting and encouraging Induftry of every Kind, by every Means and by every Method that good Senfe and public Spirit can devife.
    $k$ In other Countries this Kind of Navigation may be confidered as a partial, but in thefe lefler Inands becomes the principal, and almoft the only Employment. In many of them, the bad State of their Soil (at lcaft for the prefent) and in moft of them the Scantiatfs of Tcrritory,

[^362]:    2 It is a very curions Oblervation of the judicious Sir William Petty, that confulering the Sen Line of Gitat Britain, Ireland, and the adjacent Mands, and comparing this with the whole Conzent of Acres, the Land would form an Oblong or Parallelogram of Three thoufand Eight hundred Miles long, a:d about Twenij-our Miles broad, and confequently every Pare thereof would

[^363]:    - The Circumf:nces mentoncd in the Text will fufficiently explain to the intelligent Reader, why; n wwhenanding the Fertility of this Country, Inland Trade advanced among its Inhabitants fo llowly. While the lhand remained divided under diffenent sorercignties there could be no Commencation of gtant Extent. Forcign Wars diminifhad both our Commodites and our People, and civil Dilentoons produced continual Ravages and Depopulations; io that in different Perods abot ail our great Tuwns fuffered in a thort Space mone than in may Years could be repaired When !'de Miccinets corled it took up fime Time to extinguifh oht feuds, to extirpate long rooted l'rembices, and to engege thofe who had heen accuitumed to look upon their Neighbours as Encmic;, to converfe and deal with them an Friends. befides there were many other Things wating to an extentive Communication, fu:h as grol Roads, convenient Inns, regular Conveyances by latad and Water, all of which we now indsed fee chablifhed, but we atay eadij conceive that they were chablifhed by Degrecs.

[^364]:    $f$ The Walloons that came over hither fettled at Sandwich, where they taught the Inhabitants many Improvements: In the City of Canterbury, where they introduced Broad Silk Weaving, where it ftill continues to flourith: At Maidfone, where they eflablifhed a Mannfacture of Thread : At Colchefter, where they fixed the Art of making Bays, from wherice inmenfe Profits have accrucd to this Nation: And in the Ciry of Norwich, where in different Branches of the Woollen Manufacture it is faid Two hundred thoufand Perfons are conftantly employed. Thefe Auts fpreading naturally into the adjacent Villages, the Reader will eafily perceive how much they mult have contributed to raifing new and reviving the Splendor of old Towns. Knighthoed being frequently conferred on great Merchants and eminent Traders, rendered thefe Profeffions honourable. Their Children of both Scxes intermarried with the Nobility; the younger Buanches of their Families entered into Tsade. The Pofterity of fome of our great Traders have graduaily reached the higheft Ranks of Nobility ; Circumftances that have rontributed not a litice to the Weifare and Orulence of this Country, and to the Reputation of its Traders in Eu:

[^365]:    : The old Syttem baving loft its legal Si:pport, and all the Frihabitaite of both Inands being 2:knowledged Freemen, took away at leaft in a great Meafure thofe Grounds of Reftraint which hail been impofed on Artificers and Tradefmen. But as many had a prisate lmtereft in fupporting thefe Reftraints, and others had a Reverence for ancient Cuffoms, they werenot eafily or abfolutely exploded, notwithftanding De Witt and Sir Jofiah Child, Men of clear Heads and true public Spirit, kung fince declared agninft them. But Experience hath done more than could be effected either by Argument or Authority. The Towns of Manchefter and Birmingham, with many more that might be mentioned, plainly prove what may be done where Invention and Induftry are allowed full Liberty, and Men are permitted the free Exercife of their Talents of every Kind. The former of thefe furnilbcs a Multitude of Goods (to mention one Infance our of many) for the Supply of our African Cargaes, for obmining which we were formerly obliged to relort to the Eift Indies. The Manufactures of the latter in Metals, through their Cheapnefs and Abundance, have found a Paffage into all Parts of the Globe. The yellow Earthen Ware hath within thefe few Years been brought to fuch Peffection, as to exalt the Villages where it is made into populous Towns, which are increafing daily.

    - The genuine Principles of Agriculture, Commerce, and Manufactures became the immediate Study of this Nation after the Rentoration; and as we have often remarhed, the Treatifes then

[^366]:    1 Thefe Water Roids, for fuch Inland Canals may be properly ftiled, were farce in Contemplation when this Work was undertaken, or even when the Firf Part of it was in the Prefs ; and we might fay the fame of many other Improvements. The Notion that fuch Modes of Conveyance might be highly ufeful was very naturally deduced from the Cheapnefs and Convenience of Water-carriage by navigable Rivers, and the Methods practifed to extend their Ule. It was farther countenanced by the vifible Advantages arifing from fuch Canals in other Countries; and in Cafes of this Nature Experience is certainly the beft Guide. The Troth is, that it fcemed to be the only Improvement wanting to our Syftem of Traffic. To all this we may add, that it hath been undertaken and executed by thofe who may be prefumed to be the beft Judges of their own Interefts. The largeft of thefe Canals, which unites the Rivers Clyde and Forth, anas thereby opens a Communication between the Weft and Eaf Seas, though nothing comparable in Extent and Expence, may poffibly be found as profitable as the famus Canal of Languedoc. But this Time mut decide.

[^367]:    Perfons, reprefented as not only feparate from, but in fome Refpects oppofite to each other. Such Errors as thefe ought to be thoroughly detected, that they may be abfolutely and for cver exploded. The fhortelt and the moft effectual Method of doing this is to make the immediate and indiffoluble Ties by which they are and muft be perpetually connefted vifible to, and if one may fo fpeak, felt by every attentive Reader, fo as never more to be miftaken or forgotten.
    c It may not be amifs, in order to thew that thefe Notions have not been haftily taken upbut have been my invariable Scntimens, to quote what I faid upon this Subject in a Work for the kind Reception of which I am much indebted to the Public near Thisty Years fince. "To " Commerce we owe our Wcalth, for though Labour may improve, though Arms may ex" tend, yet Commerce only can cnrich a Country. It is this that encourages Peoplo not barely " to labour for the Supply of their own Wants, but to have an Eye to thofe of other Nations, " even fuch as are at the greateft Diftance. It is this that eflablikhes and extends Manufactures,
    " and while it employs all Ranks of People, provides fuitable Rewards for their feveral Employ-
    " ments. It is this and this alone that can excite and encourage univerfal Induftry, by providing.
    " that all who take Pains fhall reap Profit and that what railes the Fortunes of Individualis
    " Shall prove at the fame Time and in the fame Degree beneficial to Society; fo that an Appli-
    ${ }^{*}$ cation to their private Interefts in their feveral homeft Employments has at the fame Time all
    ". the Effects, and is in Reality the trueft Tentimony of public Spirit."

[^368]:    ${ }^{4}$ The Faits mentioned in the Text have been mentioned perhaps more than once, but the R"petition of them here is not only necefliry, but in another Refpeft allowable, as they are here applied to a different Purpofe. The leading Principle of the Norman Syftem being to keep the Many in abfolute Subjection to the Few, they were put under Difficulties, and fubjected to perfetual Conltraints in every Station of Life. The Tenure of their Lands was harh andoften precarious, they could derive no Benefits from the Laws but by purchafing Writs from the Crown, and they felt the like Reflraints in every manual Occupation. The Profeffion of Arms w.s alone reputed noble. The Divines amufed themfelves and their Hearers with idle and of en unintelligible Speculations, and the Law was wrapt up in a foreign Language, to which in thofe Days the People werc utter Strangers. In fuch Circumftances it would have been as unreafonable to expect any gieat Exertion of the human Faculties, in refpect to uffeful Employments, as to require a Man to dance when loaded with Chains. The Artift, the Mechanic, the Tradefman were looked upon with Contempt, which was the lefs wonderful, confidering that the Huibandman, of all Subjects the moft ufeful, was little better than a Slave. It was by Example and Experience that our Anceftors were drawn out of this Condition, and of courfe this muft have happened gradually and 几owly, as indeed it did.

[^369]:    - It appears clearly from what is faid in the Text, that the Inhabitants of this Country of ad Ranks have equally fhared in the Bleffings of a frec Government. An Inequality in Station and in Fortune is infeparable from Civil Society, and is alfo attended with many Advantages. By Means of the Noble and the Rich many Arts and Manufactures have been introduccd, encouraged, and brought to Perfection, to which otherwife we had been abfolute Strangers; and thus through the wife Difpofition of Providence, even the Vanities and the Vices of the Opulent become advantageous to the Community. It is impoffible they thould difpenfe or even diffipate their Riches without doing good to Multitudes, and thus what they receive from the Labour of their Tenants is again difperfed amongft thofe who labour for them in many different Ways. In another Refpect alfo they are exceedingly beneficial. The Glare of their Magnificence excites Emulation, and in a free Country like this, where every Man's Confequence depends upon his Property, the Defire of imitating Superiors, and of equalling them by Degrees, is one of the Arongen Incitements to Application and Induftry.

[^370]:    f All this only ferves to fupport the Truth of what we have fo often afferted, that Induftry and this only, is national Wealth. Sir Willism Petty obferved long ago, that if the People of kngland were Seven Millions, and if the Mantenance of cach amounted to Seven Pounds, then the whole Produce or Espence of the Nation amounted to Forty nine or Fifty Millions. The Authors of the Britifh Merchant, who were Men of great Character and confummate judgment, admitred this Cakulation, and added farther, that deducting for the Expence of Lodging and the Contumption of foreign Commodities Twenty Shillings a Head, there will remain Six Pounds, or Forty-two Millions expended in Provifion and Manufactures. But if, as many think, there are at prefent in the Illand of Great Britain nearer Ten Millions, and if, as is generally acknowledged, Expences are much increafed, this will carry the Computation higher.
    : We need only, in order to be convinced that Facts are fairly reprefented in the Text, to enquire into the Dates of our feveral Manufactares, and into the Hiftory of our great trading Towns, which are eafily to be obtained. But this may be ftill more compendioully done, by

[^371]:    Encouragement to exert its Force; and as there are ftill many Parts both of Great Britain and Ircland that are apparently unimproved, we fee phainly that there is nill Room for its Exertion, by which Multitudes veill fall into ufeful and lucrative Employments, and all'the natural Advansages which Nature hath fo bountifully beftowed, will be gradually produced to View, and inseafe the Strength of that Circulationsin which the Health of the Body Politic corifite.

[^372]:    a In refpect to Nations as well as private Perfons, no Situation whatover can exempt them from Sollicitudes, for in this fublunary: State collective Dodies as well as Individuals are liable to Nectefities of dome Kind or other. Thefe, if in narrow or confined Circumfances, are not to be got over but with great Pains and Labour, but if in a profperous Situation, the Means may be quickl; found and caflily applied. In the Courfe of this Work we have endeavoured to point cut many Improvements that may be made, and whaterer Opinion may be entertained of them at prefent, fome of them in a Courfe of Time certainly will be made. In refpect to them all, and of every Propofition of this Nature, the prefent Times are very favourable; the Light of Experience fhinps muth Atrouger thau it did. Our Capirals are large:, and confequently more equal to great Upderrakings, apul what feems conclufive on this Head is the Steadinefs as well as Activity that bath lately been manifen in the Purfuit of feveral arduous and expenfive Undertakings, tending uhimately, to the public Advantage, and get carried on, as we have elfewhere fiewn, at the Cbarge mad at the Rik of private lerfons.

[^373]:    - In order to fecure Suceefs to moy new. Scheme, there are Two Things neceffiry to be mewn, that it is practicable in its Nature, and will be profitable in its Confequences. As to the Firfty. les it be oblerved, that in Mr. King't Calculatiogs, the. Accuracy of which have never jet been queflioned; he afferts, that of Thirsy-nine Millions of Acres in England, Ten Millions, or more than a Fourth, confifted in Heaths, Moors, Mountains, and barren Lands, and this exclufive of Woods, Forefs, Parks, Commons, Roads, \&c. There hath figce that Time, as is admitted in the Text, been many Improvements made. But it will furely be allowed no improbable Aftertion, that One Fiffieth Fart may yet be gained from the unprofitable State in which it is. This, though purchafed by the Nation, would be no Expeate, for Money expended by the.Pubfic, for the immediate Ser vice of the Public, cannot with Bropriety be called Expence. All the Profits in refpect to Grain of different Kinds, Hemp, Flax, Hops, Rape, Saffion, \&as. raifed uppn thefe arable Lands, will all accrue.to the Public, as. well as the Wages carned by thofe emplayed in producing then. Add to this, what is an Argument of the greatef Weight, the beft Judges have given it as their Opioion, that this Extenfion of Culivation in the Manner propoled is the only poffible Means of removing the prefent asiverfal Complaints, and fecuring ue againt them for the furure.
    c The national Interef mof cermiody ing; to have all Kinds of Provifions plentiful and cheap, for Reafons which have been fully explained in a former Chapter. The Notion that Neceffity raill compel People to work in this Country is very ill founded. The. Nature and Coaftitution.

[^374]:    - When we took back on our principal Manufackures in the State they were a Century ago, and confider the prodigioas Adyances that have bete made, it will naturally encourage us to proceed vigoroully in the fame Track. We have improved our Wool in Point of Quantity and Quality to almoft an incredible Degree, and we have likewife a valt Variety of Woullen Mantifactures, yet the light Cloths of France prevail in the Levant, and might certainly be made here as chenp and 'in' as great Perfection: Oar Linnen Manufafture is in a Manner new, and the Growth of oar own Times, yet we ftill lopport a great deal, and the diminifing this Importation is an Object of which we Chould never lofe Sight, the rather becauife by proper Encouragement it is certainly in our Power." We have the M netials' and the Means of making Glats and Soap; of fome Kinds at leaft, mort in our Reach than any other Nation. In our Manufactures in genetal the Ingenuity; Indiffry, and Dexterlity of our Workmen'areimeonteftible, and in the molt complicated the happy Diftribution of their feveral Parts through' feveral flands contributes equally' to their Cheapnefs and to their Perietion. Add to this, what bath been elfewhere mentioned, our extenfive Capitals, and we may fafely affert that it is ip dur Power not paly to puif bit to preferve them againft all our Rivals.

[^375]:    i As to the Poor in ther preicnt State, ticy mun be left to the Regulations of the lau's as they now fland, or as by the Wifdum of the Legidatue they may be aitered. The lite and Incorrigitle merit Puniminent, the Aged, Impotent, and hifirm, national Relice. The Ilimes given in the Text are intended to prevont the hacreafe of the Poor in tuture. Nefec phainly that nothing contributes fo mach to this Mitchicf as the Want of Nomas, and of an canty Conception of the Power and Necefity of Indeftry to prozue Subfilence. If therefure Schor, is were provided, in which Children were taught to read, and the Geombls of we Chriftian Redigion, and at the fame Time employed to work, they would ome into the World much better qualified to live in it than they do at prefent. What they earn might be inconfiderable, when compared with the Expence of thefe Schools, which however need not be great. But whatever their Earnings are, they will be thereby witheld foom Idenefs, initiated to labour, and to the Knowledge of its being the Means of their getting bead, and however finall, it will be an Addition th the public Stock. In refpect to what is propofed in tavour of Peafons advanced in Life, who have brought up Chidren to honelt Employments, the Rewand in the Firn Place is realonatic, and muft probably have good liffects. For no Nation in the World is more ambitious of 1)ifinction than our own, and the Defire of being contideted in their old Age in a confpicuous Poont of Light, and having at the fanc Time a confortable Provifion, would ftimulate their F'eelings through the whole Comfe of their Days, and thercby very oftell put it in their Power to wave that very Limoluasen: which might have been the primitive Object at their Wimes.
