# BOOKS ON THE HISTORY OF MEDICINE

## WELLCOME HISTORICAL MEDICAL MUSEUM RESEARCH STUDIES IN MEDICAL HISTORY

Crown Quarto Size. Cloth Binding.

THE authors of these unique volumes have rescued from the oblivion of the past much mediæval medical history which, otherwise, would have been unavailable, or accessible only with difficulty.

The contents of these volumes are fascinating to all interested directly or indirectly in medicine, and are of outstanding value to students and research workers in medical history.

The quality of production is in harmony with the excellence of the subject matter, and each book is abundantly illustrated.

**De Arte Phisicali et de Cirurgia** of Master John Arderne, Surgeon of Newark, dated 1412. Translated by Sir D'Arcy Power, K.B.E., from a transcript made by Eric Millar. (Wellcome Historical Medical Museum, Research Studies in Medical History, No. 1.) London, John Bale, Sons & Danielsson, Ltd. 1922.

60 pages. 14 plates in colour and monochrome.

10s. 6d. net; post free, 11s. 3d.

"Mr. Henry S. Wellcome has increased the already heavy debt of gratitude owed him by historical students by causing to be published a translation of the old Newark practitioner's *De Arte Phisicali et de Cirurgia*. The editor and translator is Sir D'Arcy Power, which is a concise way of saying that text, notes and introduction leave nothing to be desired. The translation is of an illuminated MS. from an early fifteenth century hand, preserved in the Royal Library, Stockholm. The editor says that it 'omits much, adds something, and takes out entirely the personal element and quaint touches which make the original manuscript such excellent reading.' Sir D'Arcy Power is much too modest in the appraisement of his literary wares; indeed, any one of the thirteen beautiful plates with which the volume is embellished established a better claim to be called picturesque than most historical monographs."—*British Medical Journal*.

"This translation has been carried out by Sir D'Arcy Power, K.B.E., F.R.C.S., from a transcript made by Mr. Eric Millar, M.A., from a replica of the Stockholm manuscript in the Wellcome Historical Medical Museum. Born in 1307, Arderne practised in Newark from 1349 until 1370, when he came to London. He was essentially an operating surgeon whose practice lay amongst the nobility, wealthy landlords and higher clergy. He was evidently a sound practical surgeon and

" well abreast of knowledge of surgical craft in his days. The manuscript, which " is here given, is an epitome in Latin made some years after Arderne's death. The " present volume contains thirteen plates and a coloured frontispiece, and the " numerous and unique illustrations mirror well the quaint ingenuity of those " responsible for art in the fourteenth century. The book will afford fascinating " reading, and will assuredly stimulate interest in the study of medical and surgical " lore of bygone days."—*Medical Times*.

" This excellent rendering of the text into modern English makes this volume " a most convenient peep-hole into mediæval medicine."—*Times*.

**Magistri Salernitani Nondum Cogniti.** A Contribution to the History of the Medical School of Salerno by Doctor Pietro Capparoni, General Secretary of the "Istituto Storico Italiano dell' Arte Sanitaria," Counsellor of the "Società Italiana di Storia delle Scienze mediche e naturali." With a foreword by Sir D'Arcy Power, K.B.E. (Wellcome Historical Medical Museum, Research Studies in Medical History, No. 2.) London, John Bale, Sons & Danielsson, Ltd. 1923.

68 pages. 28 plates in colour and monochrome.

15s. net; post free, 15s. 9d.

" This book constitutes a valuable contribution to the history and diplomacies " of the Medical School of Salerno. When on military duty in Salerno in 1916, " Dr. Capparoni had an opportunity of studying a very rare manuscript belonging to " the Library of St. Matthew's Cathedral, and from this was gleaned much information " not hitherto known relating to this medical school, which has been incorporated " in the present volume. Sir D'Arcy Power points out that a medical school was " founded at Salerno in the twelfth century. This school increased until the " fourteenth century, after which it gradually diminished in importance until it was " summarily suppressed by Napoleon in 1811. This book, which is the second " volume of Research Studies in Medical History issued by the Wellcome Historical " Medical Museum, is illustrated by a coloured frontispiece and twenty-seven unique " and exquisitely executed plates, and cannot fail to attract the attention of keen " students of medical history, all the more so if they are interested in medical " archæology."—*Medical Times*.

" Everything connected with Salerno is of interest to the medical profession, " and we congratulate Dr. Capparoni on having made some notable additions to " the already published and valuable researches of De Renzi and Piero Giacose, the " fruit of his study of a MS. belonging to the Library of the Cathedral of Salerno. " Before entering on a description of the MS. and his researches therein, Dr. Capparoni " gives a most interesting historical review of Salerno and its medical school, which " probably began somewhere about the eleventh century, though there had been " a hospital as early as the year 820. He gives his readers a number of illustrations, " reproduced from photographs of various leaves of the MS. and of other documents " in the Cathedral of St. Matthew. Dr. Capparoni has conferred a real benefit " upon all those interested in the history of medicine, and altogether the book is a " joy both to read and to look at."—*Lancet*.

**The Iconography of Andreas Vesalius** (André Vésale), Anatomist and Physician. 1514-1564. Paintings—pictures—engravings—illustrations—sculpture—medals. With notes, critical, literary and bibliographical, by M. H. Spielmann, F.S.A. (Wellcome Historical Medical Museum, Research Studies in Medical History, No. 3.) London, John Bale, Sons & Danielsson, Ltd. 1925.

244 pages. 68 plates in addition to text illustrations.

30s. net, post free.

The Iconography of Vesalius was for many years a mixed question of debate in artistic and medical circles, and everyone, except perhaps the owners of certain of the "portraits," will welcome the critical and authoritative contributions to the question which Mr. M. H. Spielmann has now made. Vesalius, by the publication of his "De humani corporis fabrica," in 1543, laid the foundation of genuine anatomy and freed medicine from the trammels of authority. The general opinion of men of science was voiced by Sir Arthur Keith when he wrote that "in the quality of his work Vesalius is akin to Shakespeare." In characteristic fashion he continues: "Now and again there is born into the world a man who, turning his back on the lore of his forefathers, seeks for his information direct from the book of nature. Vesalius was one of these; he read and translated for his fellows the text of the human body from the original imprint. He studied the dead body to learn how the living body moved and had its being. Vesalius breathed life into the dead human body; in this act he still stands supreme."

"The work is in every way worthy of the distinguished anatomist; we doubt whether so complete an iconography of any one individual has ever before been compiled. Mr. Spielmann has omitted nothing which can throw light on his subject. He deals with portraits in oils, pictures, engravings, illustrations, sculpture and medals; there are numberless illustrations, most admirably reproduced, and an iconographic bibliography which is a model of what such things should be, while Mr. Spielmann's critical and literary notes are of extreme interest."—*Lancet*.

"Mr. Spielmann's iconography is a large and admirably produced volume, a credit to all concerned. It represents a world's tribute, which under the direction of Prof. Paul Heger, of Brussels, would have appeared earlier but for the war, with contributions from other writers. These contributors, still identified with it, have left the work in Mr. Spielmann's hands, and hence it appears a critical, biographical, bibliographical and artistic volume on a subject of front-rank importance."—*Graphic*.

"We have here illustrated and critically described some twenty-nine portraits of Vesalius in oil, a number of pictures in which he figures, reproductions of title-pages of his works now so rare, about fifty engravings, illustrations of sculptures and portrait medals. There is also a bibliography and a list of artists. The work is altogether a most interesting as well as valuable monograph that should find a place in every public and medical library."—*Glasgow Herald*.
